2. (Cassanopis, Ptol. ii. 3, § 17), a place in the most N. part of Britannia Romana, in the territory of the Parisi, whence there was a separate road from the Roman Wall to Eboracum (Itin. Ant. pp. 464, 466.) It is supposed by Camden (p. 871) to be Beverley in Yorkshire; by others it has been variously identified with Patrington, Heborston, Horasea, Kingston, and Flamborough. Some writers distinguish the Pe- turnia of Ptolemy from the Praetorium of the itinerary; and Gale (Itin. p. 24) identifies the former place with Abingdon on the Berewey. [T.H.D.]

3. AD (Praetr., a place in Upper Pannonia, south of the Savus, on the road from Siscia to Sirmium. (Tab. Peuting.; Ptol. ii. 15. § 6.) It was probably a place where a court of justice was held for the inhabitants of the surrounding district, or it contained an imperial palace where the emperors put up when travelling in that country.

4. PRAETORIUM AGGRIPPINENSIS. This Praetorium appears in the Table, and is distinguished by the representation of a large building. D'Anville conjectures that it may have taken its name from Agrippina, the daughter of Germanicus and the mother of Nero, who gave her name to the Colonia Agrippinensis (Cologne). The Praetorium is placed above Lugdunum Batavorum (Leiden) at the distance of 11. D'Anville concludes that it is Roombury near Leiden, where it is said that many Roman antiquities have been found. (Ubert, Gallien, p. 533.)

PRAETORIUM LATOVICORUM, a place in Upper Pannonia, on the site now occupied by Neustadt, on the river Gark. (Itin. Ant. p. 259; Tab. Peuting., calling simply Praetorium.) [L. S.]

PRAETORIUM Messenes (Praetutiana, Pol.; Praetutianae), a tribe of Central Italy, who occupied a district of Picenum, bounded by the river Vannonis on the S. and apparently by the stream called by Pline the Albulia on the N. This last cannot be identified with certainty, and the text of Pline is probably corrupt as well as confused. He appears to place the Albulia N. of the Truentus; but it is certain that the Praetutii did not extend as far as the N. as the latter river, and it is probable that the stream now called the Salinello was their northern limit. We have no account of the origin of the Praetutii, or their relation to the Picentes, from whom they seem to have been regarded as to some extent a distinct people, though more frequently included under the one general appellation. The "Ager Praetutianus" is mentioned by Livy and Polybius, as well as by Pline, as a well-known district, and Ptolemy even distinguishes it altogether from Picenum, in which, however, it was certainly generally comprised. (Pol. iii. 88; Liv. xxi. 9, xxvi. 43; Ptol. iii. 13. s. 18; Ptol. iii. 1. § 58.) But the name seems to have continued in general use, and became corrupted in the middle ages into Pru- tium and Aprutum, from whence the modern name of Abruzzo (now applied to all the northernmost provinces of the kingdom of Naples) is generally thought to be derived. (Blondi Flavii, Italia Illustrate, p. 394.) The chief city of the Praetutii was Inter- amna, called for distinction's sake Praetutianae, which under the name of Ternano is still the chief town of one of the provinces of the Abruzzi. Ptolemy also assigns to them the town of Berega. (Ptol. l. c.) Pline mentions the Ager Palmasis" in close connection with the Praetutii ("Ager Prae- tutianus Palmassiensem," Ptol. l. c.); but this appears to have been only a small district, which was celebrated, as was the Praetutian region generally, for the excellence of its wines. (Plin. xiv. 6. s. 8; Dioscor. v. 19; Sil. Ital. xv. 568.)

PIRAS (Pâs; Eth. Pâstres), a town of Phthiotis in Thessaly, a little S. of Pharasaus. For its position see NARTHACHUM. (Xen. Hell. iv. 3. § 9; Ages. 2. § 5; Steph. B. s. v.)

PIRASACA (Pirasthach, Ptol. vii. 1. § 53), a very extensive and rich town in the centre of Hindostan, along the banks of the Ganges and the Sema, whose chief town was the celebrated Pulikhir. The name of its inhabitants, which is written with slight differences in different authors, is most correctly given as Prassis by Strabo (xv. p. 702, 703), and by Pliny (vi. 19. s. 22), who states that their king supported daily no less than 150,000 foot, 30,000 horse, and 9000 elephants. Dioecesus calls them Prasisi (xvii. 93), as does also Pinterach. (Alex. 62.) In Curtius again they occur under the form of Pharrisii (ix. 2. § 3). It was to the king of the Prasisi, Sandrocto (Chandragupta), that the famous mission of Alexander was made. (Plin. l. c.; Curt. ix. 2; Appian, Syr. 55; Plut. Alex. 62; Justin, xv. 4.) All authors concur in stating that this was one of the largest of the Indian empires, and extended through the richest part of India, from the Ganges to the Parnath. There can be no doubt that Prasisi is a Graecised form for
the Sanskrit Pravechānus (meaning the dwellers in the east). (Böhlen, *Alt Indien*, i, p. 33; Ritter, *Erdeinsel*, vol. v, p. 460.) [V.]

PRASIAE or PRIASIAE (Πρασιάς, Thuc. ii. 94, Aristoph. *Aphidnias*, Scyl. v, p. 17; Ptol. ii, 17. § 10; *Bequri*, Paus.; *Eth. Bequrias*, Paus.; *Pausanias*, Step. B.), a town on the eastern coast of Laconia, described by Pausanias as the farthest of the Eleuthero-Laconian places on this part of the coast, and as distant 200 stadia by sea from Cyphanta. (Paus. iii. 24. § 3.) Scylax (l.c.) speaks of it as a city and a harbour. The name of the town was derived by the inhabitants from the noise of the waves (βραζιανος). It was burnt by the Athenians in the second year of the Peloponnesian War, n. c. 430, (Thuc. ii, 56; Aristoph. *Pac. 242.*) Also in n. c. 414 the Athenians, in conjunction with the Argives, ravaged the coast near Prassiae. (Thuc. vii, 105.) In the Macedonian period Prassiae, with other Laconian towns on this coast, passed into the hands of the Argives (Polyb. iv. 36); whence Strabo calls it one of the Argive towns (viii, p. 368), though in another passage he says that it belonged at an earlier period to the Lacedaemonians (viii. p. 374). It was restored to Laconia by Augustus, who made it one of the Eleuthero-Laconian towns. (Paus. iii. 21. § 7, iii. 24. § 5.) Among the curiosities of Prassiae Pausanias mentions a cave where Io nursed Dionysus; a temple of Asclepius and another of Achilles, and a small promontory upon which stood four brazen figures not more than a foot in height. (Paus. iii. 24. §§ 4, 5.) Leake places Prassiae at St. Andrew in the Thracean; but it more probably stood at Tyras, which is the site assigned to it by Bollayé, Ross, and Curtius. (Leake, *Morea*, vol. ii. p. 454; Bollayé, *Recherches*, *g.v.* p. 102; Ross, *Reisen im Peloponnes*, p. 165; Curtius, *Peloponnesos*, vol. p. 306. [See Vol. i. pp. 727, l, 729, a.]

PRASIAE, a demus in Attica. [Vol. i. p. 231, b.]

PRASHAS LACUS. [CERCINESE.]

PRASHI. [PRASIREA.

PRASODES SINUS (Πρασοδής κόλον, *Ptol. viii. 4. § 4), a gulf which Ptolemy places on the SW. side of the island of Taprobane or Ceylon. No such gulf can now be traced upon the outline of this island; and there would seem to be some confusion between the gulf and a sea to which the geographer gives the same name of *Πρασοδής*, and which he makes extend along the parallel between the island of Menalithas (Zucchaber ?) and the Gulf of Sinus (vii. 2. § 1).] [V.]

PRASUS FROMONTIUM (Πρασούσ Αναμοντιουμ, *Ptol. i. 7. § 2, seq.* viii. 3. § 6), or the C. of Leeks, was a headland in the region 8. of Mesoj, to which the ancient geographers gave the appellation of Barbarica. The position of Prasum is unknown; for it is impossible to identify Prasum, the Green Promontory, with Cape Delgado, i.e. Cape Bender, which, as the name implies, is a mere line upon the water. Neither is it certain that Prasum, although a rocky rock, was a portion of the mainland at all, insomuch as the coast of Zungbar, where Prasum is probably to be found, is distinguished alike by the verdure of its projections and the bright green islands that stretch along and beyond them. Moreover, Agathænæus (p. 57) and Marcus Herculeus (op. *Hudson, Geog. Min.* i. p. 12) mention a sea in this region called, from its colour, Prasides, the Green Harbor, and islands of Zingbar derive their rich verdant appearance from the prevalence of the bombyx or cotton-tree. All that is known of Prasum is that it was 100 or 150 miles S. of the headland of Khatpa, lat. 4° S., and a station for those obscure but active and remunerating trade which Aegypt under the Ptolemies and the Caesars carried on with the eastern emporia of Africa. (Codley, *Claudia Poltemy and the Nile*, pp. 88—90.) [W. B. D.]

PRASUS. [PRASIANUS.]

PRASIA, a people of Aquisani, who surrendered to P. Caesus, Caesar's legatus in n. c. 56. We know nothing about them, and even the name is uncertain, for the MSS. write it in several different ways. (Caes. B. G. iii. 27.) [G. L.]

PRAETIUS LACUS, a lake mentioned only by Cicero (pro *Jul. 27*), and in a manner that affords no indication of its position. But it is probable that it is the same which is called Lacus Aprilis in the Itineraries, and apparently Prilius by Pliny (*Arabius Laucus*), the modern Lago di Castiglione, on the coast of Etruria. (Cluer, *Ital. p. 474.* [E. H. B.]

PREMNIS. [PRIMIS.]

PRESIÆNIUS (Πρεσιασιάνος), an island in the Aegaean sea, one of the smaller Cyclades, lying between Oliaros and Siphnos. (Strab. x. p. 455; Plin. iv. 12. s. 22.)

PRIAÇ (Πριασ, *Gallaecia*, p. 934, b.]

PRIHANSE (Πρικανσε). [Vol. i. p. 316.]

PRIANIAE, a people of Thrace, on the Hellesp. (Plin. iv. 11. s. 18.) Forbiger (vol. iii. p. 1076) conjectures that they may have inhabited the *Praisôntes* mentioned by Herodotus (vii. 108). [T. H. D.]

PRIAPI PORTUS (Πραπαίδος λιμῖν, *Ptol. viii. 4. § 53), a port which Ptolemy places on the NW. side of the island of Taprobane (Ceylon). Manmet imagines that it is represented by the present Negambo. The name may not unnaturally have arisen from the Greeks having noticed at this place the prevalence of the *Lingum* or Phallic worship. [V.]

PRIATUS (Πριατους, *Eth. Priapotouς*), a town of Myasia on the Propontis, situated on a headland on the spur of Mount Pityus. Some said that it was a colony of Miletus, and others regarded it as a settlement of Cyzicus; it derived its name from its worship of the god Priapus. It had a good harbour, and ruled over a territory which produced good wine. (Strab. xiii. p. 587; Thucyd. viii. 107; Pompl. Mel. i. 19; Plin. iv. 24. v. 40; Steph. B. s. r.; Geogr. Rav. ii. 18. v 19; Arrian. *Anaib* i. 12. § 7.) Ruins of Priatus still exist near Karabou. (Richter, *Weltfuhrten*, p. 435; Ruschel, *Lex. Nas.* iv. 1. p. 51.) [L. S.]

PRIENE (Πριένη; *Eth. Prienouς, Prienias*), an Ionic city, near the coast of Caria, on the southeastern slope of Mount Mycale, and on a little river called Gaesen, or Gaesus. It had originally been situated on the coast sea, and had two ports, one of which could be closed (Scylax, p. 37), and a small fleet (Herod. vi. 6); but at the time when Strabo wrote (xii. p. 579) it was at a distance of 40 stadia from the sea, in consequence of the great alluvial deposits of the Mæander at its mouth. It was believed to have been originally founded by Aeprus, a son of Neleus, but received afterwards additional colonists under a Boeotian Polites, whence it was by some called Cadne. (Strab. xiv. pp. 633, 636; Paus. viii. 2. § 7; *Estath. ad Dionys. 825*; *Diog. Laert.* i. 5. 2.) But notwithstanding this admixture of Boeotians, Priene was one of the twelve Iolian cities (Iliad. i 12; Aelian, *I. II.* viii. 5; Vitruv.}
PRIFERNUM, a town of the Vestini, mentioned only in the Tabula, which places it 12 miles from Pitium, the same distance from Amternum, and 7 miles from Aveia. (Tab. Peut.) But the roads in this district are given in so confused a manner, that notwithstanding these data it is impossible to fix its site with any certainty. It is placed by Romanelli (vol. iii. p. 283) in the neighbourhood of Asserigo, but this is little more than conjecture.

PRIMIS MAGNA and PARVA (Πρίμις μεγάλη, Πρίμις μικρά, Ptol. iv. 7. § 19), the names of two towns in Astiopho, situated on the extreme or right bank of the Nile. Primis Magna, called simply Primis by Pliny (iv. 29. s. 35), and Premnis (Πρεμνίς) by Strabo (xxvii. p. 820), was taken by the Roman commander Petronius in the reign of Augustus. After taking Premnis, which is described as a strong place, the Roman commander advanced against Napata. (Strab. L c.) Pedocii places it beyond Napata and just above Meroe. Hence it is known by the name Pedocii. (Comp. Kenrick, Ancient Egypt, vol. ii. p. 464.)

PRIMUPOLE (Πριμυπόλεα, Concil. Chalced. pp. 127, 240; falsely Πριμυπόλεα, Hieroc. p. 682, and Πρυμυπόλεα, Concil. Ephes. p. 528), a town in Pamphylia, the later name of Aspendus. (See Wesseling, ad Hieroc. p. 682.)

PRINASUS (Πρινάσως: Eth. Πρινάσω), a town in Caria, of uncertain site, taken by Philip V., king of Macedonia, and known also by its coins. (Polyb. xvi. 11; Steph. B. s. v.: Steph., p. 89; Cranmer, Asia Minor, vol. ii. p. 217.)

PRINNOESSA, an island off the coast of Lycania, in Arcamania, mentioned only by Pliny (iv. 12. s. 19).

PRINUS. [Mantinea. p. 264.]

PRION (Πριός), a mountain in the island of Cos, which is about 2760 feet high. (Plin. v. 36.) From a scholion (ad Theocr. vii. 45) it might be inferred that Oromened was another name for Mount Prios; but according to another ancient commentator Oromened was either a surname of some divinity, or the name of some wealthy and powerful man. [L. S.]

PRION (Πρίος), a river in Arabia. [Phionote.] PRIONUS MONS (Πριόνωνος βόρα), a mountain in the southern part of Arabia, in the territory of the Adramita, identified by Forster with Râs Broom, a headland forming the termination of a mountain chain and jutting out prominently into the ocean in long. 49°, about 33 miles NE. of Maghida. Prios was a river flowing into the sea near this promontory. (Ptol. vi. 7. §§ 10, 13; Forster, Arabia, vol. ii. p. 204, seq.)

PRISTA (Πρίστα, Ptol. iii. 16. § 10, where, however, some read Πρίστα, called in the Itin. Ant. p. 222, Sexantapirō; in the Not. Iap. Sexantapirō; Prista; and in Prosopón, de Accl. iv. 11, p. 307, Εξάπερποτα, a place in Mesopotamia, on the Danube, the station of the 5th cohort of the 1st Legion Ital. Identified with Routchuck. [T. H. D.]

PRIVERNUM (Πριβέρνου: Eth. Privernas-atis: Piperno Vecchiù), an ancient and important city of the Volscians, afterwards included, with the rest of the territory of that people, in Latium, in the more extended sense of the name. It was situated in the Volscian mountains, or Monti Lepini; but not, like Setia and Norba, on the front towards the plain of the Pontine Marshes, but at some distance further back, in the valley of the Ams suspens. Virgil represents it as an ancient city of the Volscians, and the residence of Metabus, the father of Camillus (Aen. xi. 540); and there is no reason to doubt that it was originally a city of that people. Its name is not indeed mentioned during any of the earlier wars of the Volscians against Rome; but on these occasions the name of the people is generally given collectively, and the brunt of the war naturally fell upon these cities which more immediately adjoined the frontiers of Latium. When the name of Privernum first appears in history it is as a city of considerable power and importance, holding an independent position, and able not only to engage in, but to sustain, a war against Rome single-handed. In B. C. 358 the Privernates drew upon themselves the hostility of Rome by plundering the lands of the Roman colonists who had been recently settled in the Pontine Plains. The next year they were attacked by the consul C. Marcius, their forces defeated in the field, and they themselves compelled to submit (Liv. vii. 15, 16). But though their submission is represented as unconditional (Liv. vii. 15), they continued to form an independent and even powerful state, and only a few years afterwards again ventured to attack the Roman colonies of Norba and Setia, for which they were speedily punished by the consul C. Plantius: their city is said to have been taken, and two-thirds of their territory forfeited. (Id. vii.
43. viii. 1.) This was seen after divided among the Roman plebeians. (Id. viii. 11.) They do not appear to have taken any part in the general war of the Latins and Campanians against Rome; but in n.c. 327 the Privenates again took up arms single-handed, with only the assistance of a few of the Fundani. Notwithstanding this, the war was deemed of sufficient importance to employ two consular armies; and it was not till after a long siege that Privenum was reduced by C. Plantius, the consul of the following year. The walls of the city were destroyed, and the leaders of the defection severely punished; but the rest of the people were admitted to the Roman citizens. It is probably, however, without the right of suffrage, though this also must have been granted then in the year n.c. 316, when the Ufentine tribe was constituted, of which Privenum was the chief town. (Liv. viii. 19—21, ix. 20: Fast. Capit.; Val. Max. vi. 2. § 1; Festus, z. v. Ufentia; Niebuhr, vol. iii. p. 176.) According to Festus (p. 233) it became a Praefectura; but notwithstanding this subordinate condition (which was perhaps confined to the short period before it attained the full franchise), it seems to have been a flourishing municipal town under the Roman government. Its territory was one of those which the agrarian law of Servilius Nullus proposed to assign to the Roman populace (Cic. de Leg. Agr. ii. 25); but though it escaped upon this occasion, it subsequently received a military colony (Lib. Colon, p. 236). The period of this is uncertain: according to Zumpt (de Colon. p. 101) it probably did not take place till the reign of Trajan. In inscriptions it bears the title of a colony; though others term it a municipium; and neither Pliny nor Ptolemy assign it the rank of a colony. (Plin. iii. 5. 9; Ptol. iii. 1. § 63; Zumpt, l. c.) It was noted, as well as the neighbouring Setia, for the excellence of its wine (Plin. xiv. 6. 8), but we hear little of Privenum under the Roman Empire, and have no subsequent account of its fate. From its secluded position, no mention occurs of it in the Itineraries. The ruins of the ancient city, which according to Cluvieres are considerable, are situated about 2 miles N. of the modern Pefpero, on the site still called Pefpero Lecchia. The period or occasion of the abandonment of the ancient site is unknown; but it is certainly erroneous to connect it with a great earthquake which is alleged to have occurred at Privenum (Cic. de Diec. i. 43). On that occasion, we are told, the earth sank down to a great depth,—a phenomenon which may have given rise to a remarkable chasm or cavity still visible in the neighbourhood of Pefpero. The ancient city was more probably deserted in consequence of the ravages of the Saracens in the tenth century, from which all this part of Latium suffered severely (Rampoldi, Corografia d'Italia, vol. iii. p. 238), and the inhabitants sought refuge in more elevated and secure positions, such as that of the modern town of Pefpero. [E. H. B.]

PROBALINTHUS [Marathon.]
PROBATIA. Borrutta, p. 412, b.

PROCHERASIS, the present name of Chalcodon, according to Pliny (v. 32, s. 43).

PROCYTA (Pepychris; Precida), a small island off the coast of Calabria, situated between Cape Misenum (from which it is distant less than 3 miles) and the larger island of Agaronia or Ischia. In common with the latter it is of volcanic formation, and appears to have been subject in ancient times to frequent earthquakes. (Paus. viii. 46, § 2.) Even tell us that it was a mere fragment broken off from the neighbouring island of Agaronia by one of the violent convulsions of nature to which it was subject. But this statement certainly has no historical foundation, any more than another, also recorded by Pliny, that both islands had been thrown up by volcanic action from beneath the sea. Such an event, however true as a geological inference, must have long preceded the historical era. (Strab. i. p. 60, ii. p. 123, v. pp. 248, 258; Plin. ii. 88.) The same phenomena led the poets to associate Precyta with Aenaria or Larinna, in connection with the fable of the giant Typhon [Aenaria], and other monstrous beings, even assigning it a giant of its own, Minas. (Virg. Aen. ix. 715; Sil. Ital. viii. 542, xii. 147; Ovid. Met. xiv. 89.)

Virgil's epithet of "Precyta alta" is less appropriate than usual,—the island, though girt with perpendicular cliffs, being flat and low, as compared either with Ischia or the neighbouring headland of Misenum. There does not appear to have been any town on the island in ancient times. Statius (Silv. ii. 276) terms it a rugged island, and Juvenal (Sat. iii. 5) speaks of it as a wretched and lonely place of residence. At the present day, on the contrary, it is one of the most fertile and flourishing spots in the Neapolitan dominions, its whole area being cultivated like a garden and supporting a population of 4000 inhabitants. It is distant between 2 and 3 miles from Cape Misenum, but only about a mile and a half from the nearest point of the mainland, which is now known as the Monte di Procida. [E. H. B.]

PROCONNEUS (Prokonessos, or Prokonemnos) in Zeuxis, ii. 30, and Hieroc. p. 662,) an island in the western part of the Propontis, between Priapus and Cyzicus, and not, as Strabo (xiv. 599) has it, between Parium and Priapus. The island was particularly celebrated for its rich marble quarries, which supplied most of the neighbouring towns, and especially Cyzicus, with the materials for their public buildings; the palace of Mausolus, also, was built of this marble, which was white intermixed with black streaks. (Vitr. iv. 8.) The island contained in its south-western part a town of the same name, of which Aristea, the poet of the Arimaspeia, was a native. (Herod. iv. 14; comp. Sicyon, p. 35; Strab. l. c.) This town, which was a colony of the Milesians (Strab. xii. 357), was burnt by a Phenician fleet, acting under the orders of Parius. (Herod. vi. 33.) Strabo distinguishes between old and new Proconnesus; and Sicyon, besides Proconnessus, notices another island called Elishinos, with a good harbour. Pliny (v. 44) and the Solonist on Apollom. Rhodius (ii. 278) consider Elishinos only as another name for Proconnessus; but Elishinos was unquestionably a distinct island, situated a little to the south of Proconnessus. The inhabitants of Cyzicus, at a time which we cannot ascertain, forced the Proconnesians to dwell together with them, and transferred the statue of the goddess Diane to their own city. (Pans, viii. 46, § 2.) The island of Proconnessus is mentioned as a bishopric in the ecclesiastical historians and the acts of the Council of Chalcedon. The celebrity of its marble quarries has changed its ancient name into Hermere or Marmora: whence the whole of the Propontis is now called the Sea of Marmora. Respecting some autonomous coins of Proconnessus, see Sestini, Monources, etc. p. 575.

PRODIENA (Prodiana), a town of Phocisotis, in
Thessaly (Strab. ix. p. 434), which Stephanus B. writes Paeona (Παεόνα), and calls by mistake a town of the Malians. In B.C. 191 Paeona, which had been conquered by the Persians, was recovered by the
concerned Achaians. (Livy, xxxvi. 14.) We learn from this passage of Livy that Paeona stood between Pharasois and Thaumaci, and it is accordingly placed by Leake at Glykodokastro. (Northern Greece, vol. i. p. 430.)

PROLAQUEUM (Piraeus), a village or station on the branch of the Flaminia which crossed the Apennines from Nuceria (Νοκερον) to Septempeda (S. Seretino). It was situated at the foot of the pass on the E. side of the mountains, and evidently derived its name from its being at the outlet of a small lake which discharges its waters into the Po-
terea. Clavarius speaks of the lake as still existing in his time; it is not marked on modern maps, but the village of Piraeus still preserves the traces of the ancient name. The Itinerary reckons 16 M. P. from Nuceria to Prolaqueum, and 15 from thence to Septempeda. (Itin. Ant. p. 312; Cluver, Itol. p. 614.)

PROMONA (Προμόνα, Appian, Illyr. 12, 2—28; Punt. Tob.; Geogr. Euv. iv. 16), a town of the Liburni, situated on a hill, and, in addition to its natural defences strongly fortified. Octavius, in the campaign of B.C. 94, surrounded it and the ad-
Fig. 1—Peutinger Table. jacent rocky heights with a wall for the space of 40 stadia, and defeating Titusman, who had come to its relief, forced an entrance into the town, and obliged the enemy to evacuate the citadel. There is every reason to believe that Promona stood on the skirts of the crazy hills, which, with the neighbouring district, now bear the name of Promina. As the Pentinger Table places it on the road from Barum to Salona, it must be looked for on the SW. side of the mountain of Promina, in the direction of Dernia. (Wilkinson, Dalmatia, vol. i. p. 206.) (E. H. B.)

PRONAEA. [NEMEAS.]

PRONI, PRONI, or PRONESUS (Πρόναι, Pol.; Πρόναια, Thuc.; Πρώνεσις, Strab.), one of the four towns of Cephalenna, situated upon the south-east coast. Together with the other towns of Cephalenna it joined the Athenian alliance in B.C. 431. (Thuc. ii. 30.) It is described by Polybius as a small fortress; but it was so difficult to besiege that Philip did not venture to attack it, but sailed against Pale. (Pol. v. 3.) [Pala.]

Livy, in his account of the surrender of Cephalenna to the Romans in B.C. 189, speaks of the Nesiote, Crami, Palenses, and Samai. Now a- we believe that Proni was one of the four towns of Cephalenna, it is probable that Nesiote is a false reading for Promeiteia, which would be the ethnic form of Pronesus, the name of the town of Strabo (x. p. 455). Proni or Pronesus was one of the three towns which continued to exist in the island after the destruction of Same. (Comp. Plin. iv. 12. s. 19.) The remains of Proni are found not far above the shore of Lymena, a harbour about 3 miles to the northward of C. Kapri. (Leake, Northern Greece, vol. iii. p. 56.)

PROPHTHASIA. [BRACIANA.]

PROVONTIS (Προβοντις; Sea of Marmora), the sea between Thrace and Asia Minor, forming an intermediate sea between the Aegean and the Euxine, with the latter of which it communicates through the narrow strait of the Thracian Bosporus, and with the former through the Hellespont. Its ancient name Proventis describes it as "the sea be-

uenta. (Steph. B. s. v. ἀκατίς.) Its distance from Chal-
citis was 40 stadia, and it is said still to bear the name of Prote. [L. S.]
PROTE (Πρῶτος). 1. An island off the western coast of Messenia. [See Vol. II. p. 342, b.] 2. One of the Stocchades off the southern coast of Gaul. [STOCCHADES.]

PROVINCIA. A place in Bithynia, on the road from Nicaea to Ancyra. (Heron. Hieros. p. 573.) It is possibly the same place as Protonarnica (πρωτοναρνικα) mentioned by Ptolemy (c. i. § 15). [L. S.]

PROVINCAI. The part of Gallia which bordered on Italy and was bounded on the south by the Mediterranean were Gallia Provincia (Caes. B. G. i. 19), a term by which Caesar sometimes distinguishes this part of Gallia from the rest, which he calls "omnis Gallia" (B. G. i. 1) or "tota Gallia" (B. G. vii. 66). The Provincia in Caesar's time was bounded on the north by the Rhone from the western extremity of the Lacus Lemannus (Lake of Geneva) to the junction of the Rhone and the Saine. Geneva, which belonged to the Allobroges, was the farthest town in that direction (Geneva). Along the southern side of the Lake of Geneva the limit was the boundary between the Allobroges who were in the Provincia, and the Nantuates who were not. (B. G. iii. 6.) The Alps were the eastern boundary. Ocelum [OCELUM] was in the exterior Provincia or Gallia Cisalpina, and the country of the Vercovii was in the Ulterior Provincia or the Provincia Gallia (B. G. i. 10). On the west the Mons Cevenna (Cevens) southward from the latitude of Lucunanum (Lyons) was the boundary. The Volcan Aquum was within the Provincia, and also the towns of Narbo (Narbonne), Carcass (Carcassone), and Tolosa (Toulouse), as we see from a passage in Caesar (B. G. iii. 20). Part of the Ruteni, called Provinciales (B. G. vii. 7), were in the Provincia; and also the Helvii, who were separated from the Arverni by the Cevena (B. G. vii. 8). The Ruteni who were not in the Provincia, the Gabali, Nitobriges, and Caduci bordered on it on the west.

The Roman troops were in this country during the Second Punic War when Hannibal was on his road to Italy; but the Romans first got a footing there through the body of Massilia, who called for their help in c. 154. In c. 152 the Romans made a settlement, Aquae Sextiae (Aix), which we may conclude to have been the commencement of their occupation of the country east of the Rhone. [GALLIA, Vol. I. p. 933.] The conquest of the Salpes and Vercovii, and of the Allobroges, gave the Romans all the country on the east side of the Rhone. The settlement of Narbo (Narbonne) in c. 118, near the border of Spain and in a position which gave easy access to the basin of the Garonne, secured the Roman dominion on the west side of the Rhone as far as the Pyrenees. But the Romans had many a bloody battle to fight before they were safe on Gallic ground. The capture of Toulouse (Toulouse), the capital of the country, and the Volcan Aquum by the consul Q. Servilius Caepio (in c. 106) extended the limits of the Provincia as far as this rich town. (Dion Cass. Fr. 97, 4.) But the Roman dominion was not safe even in c. 58, when the proconsul Caesar received Gallia as one of his provinces. His subjugation of all Galla, finally secured the Romans on that side. [Vol. I. p. 954, 4c.]

In the division of all Gallia by Augustus the Provincia retained its limits pretty nearly; and it was from this time generally called Narbonensis Provincia, and sometimes Gallia Narbonensis. The names which occur in the writers are: GALATAE, GALATAEA (Vol. I. p. 10, § 1); GALLIAC, GALATIA.

PROVINCIA. Г НАРБОНЕСИЯ, и ГАЛИАНИ ή πειρ ΝΑΡΒΩΝΕΩΝ. There is no doubt that the name Bracata or Bracata is derived from the dress of the Galli ("cos hic sagatos bracatopse versari," Cic. pro Fontio, c. 15), and the word "braca" is Celtic.

Strabo (iv. p. 178) says that the form of the Narbonensis resembles that of a parallelogram; but his comparison is of no use, and it is founded on an erroneous notion of the position of the Pyrenees. [Vol. I. p. 949.] Ptolemy determines the eastern boundary of the Provincia by the west side of the Alps, from Mons Adulas (perhaps Mont St. Gaudard) to the mouth of the Varus (Tar), which separated Narbonensis from Italia. Part of the southern boundary was formed by that part of the Pyrenees which extended from the boundary of Aquitania to the promontory on the Mediterranean where the temple of Venus stood, by which Ptolemy means Capraeae. [PORTES-VENÉRIS.] The rest of the southern boundary was the sea, from the Alpenadim to the mouth of the Tar. The western boundary remained as it was, that is, as the time of Caesar, for Carcass and Tolosa are placed in Narbonensis by Ptolemy and Pliny (iii. c. 4). Pliny places Lugdunum or Convenae, which is on the Garonne and near the Pyrenees, within the limits of Aquitania, and he mentions no place in Aquitania east of Lugdunum [CONVENA]. East of the Convenae and at the foot of the Pyrenees were the Consorani, part of whom were probably in Aquitania and part in Narbonensis [Consolani]. The western boundary of Narbonensis therefore ran from the Pyrenees northward, and passed west of Toulouse. Perhaps it was continued northwards to the Tarus (Taras). We cannot determine the point where the Cevens became the boundary; but if part of the Ruteni were still in the Narbonensis, the boundary may have run along the Tarus to the Cevens and the Mons Les, one of the highest points of the range (La Locére). From the Locére northwards the mountain country borders the Rhone as far as Lugdunum, which was not in Narbonensis. The northern boundary of Narbonensis ran along the Rhone from Lugdunum to Geneva at the west end of the Leman lake. Pliny mentions the Gebenna (Cebenna) and the Jura as northern boundaries of the Provincia; but his notion of the direction of the Jura was not exact, though it is true that the range touches a part of the northern boundary. Ptolemy makes the Adulas the southern limit of the eastern boundary of Belgica (ii. 9, § 5); and Adulas is also the northern limit of the western boundary of Narbonensis. The southern boundary of Belgica from the Adulas westward was the northern boundary of Narbonensis. It is difficult to say whether the geographer is making a boundary of his own or following an administrative division; but we may certainly conclude that Narbonensis contained the middle valley of the Rhone (the Valais), for the Berneuse Alpis which form the northern side of this great valley are a natural boundary, and the Helvetii were not in the Valais [HELVETI]. We may conclude then that the Seduni, Vengri, and Nantuates, who were not within the Provincia as defined by Caesar, were within the limits of the Narbonensis. One of the common roads to Italy was from Octodurus (Moriturgia in the Valais) over the Alpis Vomina (Great St. Bernard). The Narbonensis is thus a natural division comprehending the upper valley of the Rhone, the Leman lake and the source of the Rhone, four-fifths of the Alps, the country on the south side of the Rhone from the lake to
PROVINCIA.

Lyon, and the country south of Lyon. The part of the Provinsia south of Lyon is a valley between the Alps on the east and the Cévennes on the west, which becomes wider as we advance south. On the east side the lower Alps and the Alpine valleys cover a large part of the country. On the west, the Cévennes and the lower ranges connected with them leave a very narrow tract between the Rhone and the mountains till we come to the latitude of Aigues and Nimes. The southern part of the Rhone valley between Massilia and the Pyrenées contains a large extent of level country. The southern part of this great valley is more Italian than Gallic in position, climate, and products. The Rhone, which cuts it into two parts, has numerous branches which join it from the Alps; but the mountain streams which flow into it from the Cévennes are few [Rhodanus].

The rivers of the Provinsia west of the Rhone flow from the Cévennes and from the Pyrenees into the Mediterranean. They are all comparatively small. The Cévennes or Avennes is probably the Cantalacus, as far as we can conclude from the name; the Ledaus is the Lez, which flows by Montpellier; the Avaris (Herault) flows past Agartha (Aigues); the Libra or Liria may be the Liron (Liria); the Obris or Orbis (Orbe); the Narbo or Axas (Aude), which passes Narbonnes; the Ruscino or Tetis (Tet), and the Ticha (Tech), which enters the Mediterranean a few miles north of Portus Veneris (Port Vendre). Between the Var and the Rhone there are very few streams, for the form of the surface is such that nearly all the drainage runs into the Rhone. There is the Argence (Argens), and a few insignificant streams between the Argence and the delta of the Rhone.

The extreme western part of the Provinsia comprehends a portion of the basin of the Garonne, for Toulouse is on this river. The valley of the Aude between the Cévennes and the Pyrenees forms an easy approach from the Mediterranean to the waters of the Garonne and to the Atlantic,—a circumstance which facilitated the commerce between the Mediterranean and the Atlantic, and made this a commercial route at a very early period. [NARBO.]

The coast from the Pyreneum Priscum to a point a few miles south of Massilia forms a great bay called the Gallia Sinus; it is generally flat, and in many places it is lined by marshes and lakes. This part of the coast contains the Delta of the Rhone. East of Massilia the country is hilly and dry. The port of Massilia is naturally a poor place. East is the port of Telo Martius (Toulouse), and a few other ports of little value. Melas's remark (ii. 5) is true: "On the shore of the Provinsia there are some places with some names; but there are few cities, because there are few ports and all the coast is exposed to the Atlantic," says he. There are a few small islands along the eastern coast, the St. Hilaire, Planasia, Leron, and other rocky islets. The dimensions of the Provinsia, according to Agrippa's measurement, are said to be 270 M. P. in length and 248 M. P. in breadth. But we neither know how the measures were taken, nor whether the numbers in Pliny's text (iii. 4) are correct. However we learn that this, like many other parts of the empire, was surveyed and measured under Agrippa's order.

The length of the coast of Narbonensis is above 260 miles. The direct distance from Toulouse to the mouth of the Var is near 300 miles; and from the junction of the Rhone and the St. [Sévres, the direct distance to the sea measured along a meridian is about 180 miles. But these measures give only an imperfect idea of the area of the country, because the outline is irregular. Strabo (iv. pp. 178, 179) has preserved a measurement which has followed a Roman road from the Pyrenées to the Var. The distance from the temple of Aphroditis at the Pyrenées to Narbo is 63 Roman miles; thence to Nemausus 88; from Nemausus through Uergernum and Tarasaco to the warm springs called Sextiae, which are near Massilia, 53; and thence to Antipolis and to the Varus, 73; the whole making 277 miles. Some reckon, he says, from the Aphrodisium to the Varus 2600 stadia, and some add 200 more, for they do not agree about the distance. Two thousand six hundred stadia are 325 Roman miles. When Strabo wrote, the distance along the road from Narbo to the Var was not measured, or he did not know it. The other great road which he describes is a road through the Voucuntii and the territory of Cottii: "As far as Uergernum and Tarasaco the road from Nemausus is the same as the route just described; but from Tarasaco to the borders of the Voucuntii over the Druentia and through Caballio (Cavaillon on the Durance) is 63 miles; and again, from Caballio to the other limit of the Voucuntii toward the land of Cottii to the village Epebrodum (Embroum, Embrun) is 99 miles; then 99 more through the village Brigantium (Brégnan) and Solanomagus and the passage of the Alps (the pass of Mont Genere) to Ocelum [OCELUM], the limit of the land of Cottii; the country from Solanomagus is reckoned a part of Italy, and from there to Ocelum is 27 miles." He says in another place (iv. p. 187) that this road through the Voucuntii is the shorter, but though the other road along the Massiliotic coast and the Ligurian territory is longer, the passes over the hills into Italy are easier, for the mountains in those parts sink lower.

These were the two great roads in the Provinsia. There was a road in the west in the line from Narbo through Carcaso to Alpeum. There was also a road from Arles (Arles) at the bifurcation of the Rhone northward on the east side of the Rhone, through Avarino, Ararius, Valentia, and Vienna (Vienne), to Lugdunum; this was one of Agrippa's roads (Strab. iv. p. 208). There was no road on the opposite side of the river, or no great road, the land on that side not being well adapted for the construction of a road. There were other roads over the Alps. There was a road from Lugdunum and Vienna up the valley of the Isara (Isère) to the Alpes Graiae (Little St. Bernard), which in the time of Augustus was much used (Strab. iv. p. 208); and there was the road from Augustria Pretorius (Aosta) in Italy over the Great St. Bernard to Octodurus (Martigny) and Penni- lucas, at the east end of the Lake of Geneva; and thence into the country of the Helvetii.

Within the limits of Narbonensis there is every variety of surface and climate, Alpine mountains and Alpine valleys, sterile rocky tracts and fertile plains, winter for nine months in the year and summer for as many months. Pliny says of it: "Acrorum cultus, virorum morumque dignatione, amplissima opum, milii provinciarum post Agridentiam et prope Aquae Italiae vereri Carolis et Gallicis." (Pliny, iii. 4.) The climate is only mild in the south part and in the lowlands. As we descend the Rhone a difference is felt. About Avario (Orange) the olive appears, a tree that marks a warm climate. 
the Narbonitis," says Strabo, "has the same natural products as Italy; but as we advance towards the north and the Cenomanon (Cévennes), the land planted with the olive and the fig terminates, but all the other things are grown. The rape also does not ripen well as we advance further north" (iv. p. 178).

Strabo's remark about the olive is true. As we advance from Nîmes by the great road to Clermont Ferrand in the Auvergne, we ascend gradually in a north-west direction to a rocky country well planted with vines, mulberry trees, and olives. After proceeding a few miles further the olives suddenly disappear, a sign that we have passed the limits of the temperature which they require. The country is now an irregular plateau, rocky and sterile, but in parts irrigated with mulberry and olive vines; and there is a little wheat. Before descending to Andusia (Ambrois), which is deep snab in a gorge of the Vardo (Garoon), a few more olives are seen, but these are the last. We are approaching the rugged Cévennes.

The native population of the Province were Aquitanis, Celtae, and Ligneis. The Aquitanis were in the parts along the base of the Pyrenees. The Ligneis in the historical period occupied the south-east part of the Province, north and east of Marselle, and it is probable that they were once on the west side of the Rhone and the Greeks were on the coast, east and west of the city of Massilia (Massilia). After the country was reduced to the form of a Province, the Italians flocked to the Province to make money. They were petty dealers (mercerarii), bankers, and money-lenders (negotiatorii), sheep-feeders, agriculturists, and traders. (Cic. pro P. Quinto, c. 3, pro M. Fonteio, c. 5.)

The wine of Italy was imported into the Province in Cicero's time, and a duty was levied on it, if not at the port, at least in its transit through the country (pro Fonteio, c. 9). Cicero succinctly says, "We Romans are the most just of men, for we do not allow the Transalpine nations to plant the olive and the vine, in order that our olive plantations and vineyards may be worth more" (de Re Publica, iv., 9). It does not appear from Cicero when such a selfish order was made. But the vine is a native of Narbonitis, and the Greeks made wine, as we might safely assume, and they sold it to the Galli. Posidonius, whom Cicero knew, and who had travelled in the country, says that the rich Galli bought Italian wine and wine from the Massaliots. (Posidonius, op. Athen. iv. p. 152.) If any of the Galli got this wine, the Galli of the Province would have it.

This favourite province of the Romans was full of large cities, which under the Empire were ornamented with works both splendid and useful, amphitheatres, temples, theatres, and aqueducts. Many of these buildings have perished, but the magnificent monuments at Arles and Nîmes, and the less striking remains in other cities, show what this country was under Roman dominion.

The tribes or peoples within the limits of the Province are very numerous. Pliny has a long list. On the west side of the Rhone at the foot of the Pyrenees were the Consoari and Sardones or Sordi. North of them were the Volcane Tectosages, whose capital was Tolosa; and the Rutoni Provinciales. The Volcane Arcemici occupied the country east of the Tectosages and extended to the Rhone. The position of the Tascni, a small people mentioned by Pliny, is only a matter of conjecture [TASCONI].

North of the Arcemici only one people is mentioned between the Cévennes and the Rhone, the Helvii (Helvii). The Ardeche (a mountain stream from the Cévennes) flows through their country into the Rhone. But by the valley of the Ardeche that Caesar got over the Cévennes in the way of the Arverni through the snow in the depth of winter (B. G. vii. 8). He could go no other way, for he tells us that he went through the territory of the Helvii.

East of the Rhone the tribes were very numerous for the surface is larger and full of valleys. It has been already observed that the Sedani, Veragri, and Nantuates must have been included in the Narbonensis of Augustus. The Allobrogii occupied the country south-west of Geneva, to the Isere and the Rhone. Pliny's list of names in the Province comprises all Pôdenys, with some slight variations, except the Commes, Elicoci, and Scottii. Some of the names in Pliny are probably corrupt, and nothing is known about some of the peoples. The following are the principal peoples south of the Nantuates and Allobrogii: the Centrones, Gaiocieli, Medulli, Caturiges, Tricori, Segorellauni, Tricastini, Cavares, Vocontii, Vulgientes, Bodiontici, and Alibii, all of them north of the Drunetia or its branches. South of them were the Saiys or Salluvii, the neighbours of Massilia; the Sueci, Oxylii, Deciates, and the Nerusii, who were separated from Italy by the Var.

PRUSA (Προςώπα: Isth. Προςώπαες), generally with the addition of ἐνι or πρὸς τῷ Ὀλυμπῷ, to distinguish it from another place of the same name, was situated at the northern foot of Mount Olympus, in Mysia. Pliny (v. 43) states that the town was built by Hannibal during his stay with Prusias, which can only mean that it was built by Prusias, whose name it bears, on the advice of Hannibal. According to the common text of Strabo (xii. p. 364), it was founded by one Prusias, who waged war against Crossus, for whom Stephanus B. (c. v.) substitutes Cyrus. As no such Prusias is known in the age of Crossus or Cyrus, various conjectures have been made upon the passage of Strabo, but without success. At all events, it is acknowledged by Dion Chrysostomus (Orat. xiiii. p. 585), who was a native of the town, that it was neither very ancient nor very large. It was, however, as Strabo remarks, well governed, continued to flourish under the Roman emperors (Vilin. Epist. x. 85), and was celebrated for its warm baths, which still exist, and bore the name of the "royal waters." (Athen. ii. p. 43; Steph. B. s. v. Οἴομα.) Under the Greek emperors it suffered much during the wars against the Turks (Nicet. Chron. pp. 186, 389); when at last it fell into their hands, it was for a time the capital of their empire under the name of Erusia or Broussa, which it still bears, for it still is one of the most flourishing towns in Asia Minor. (Brown's Travels in Walpole's Turkey, vol. ii. p. 108; Scitton, Mon. Vet. p. 70; Hamilton, Researches, i. p. 71, &c.)

Pôdenys (v. 1, § 13) and Pliny (v. 43) mention a town of the same name on the river Hyphasis or Hypanis, in Bithynia, which, according to Mommsen (cc. 29, 42, 49), had formerly been called Cierca (Kieper), and had belonged to the territory of Heraclea, but had been taken by Prusias, who changed its name. But there seems to be some confusion here between Cierca and Cius, the latter of which is known to have received the name of Prusias from the king of that name. (Strab. xii. pp. 563, 566.)

[L.S.]
PRYMENES or PRYMENES/SUS (Πρυμνεία, Πρυμνέης, Eth. Πρυμνείαν), a small town in central Phrygia. (Ptol. v. 2 § 24; Hieroc. p. 677; Comc. Chalcid. p. 673.) Poescke (Pacokele, ii. c. 15) found an inscription containing the name of this town near Afion Caria-Bireas, Leake (Asia Minor, p. 55) shows that the inscription does not refer to Prymnesia, but to some person whose name ended in mennes. No inference, therefore, can be drawn from it as to the site of that town. Franz (Fünf Inschriften, p. 5) has proved, by incontrovertible arguments from other inscriptions, that Prymnesia must have been situated at Seid-el-Ghaz, between Esli-Shehr and Coniah, where a few remains of an ancient Greek town still exist. (Leake, Asia Minor, p. 21.)

PRYTANIS (Πρυτανάς), a small river in the east of Pontus, which has its sources in the Meskuchi Montes, and flows by the town of Abgales. (Arrian, Peripl. P. E. p. 7: Anonym. Peripl. P. E. p. 15, where it is called Prytanes.) It is perhaps the same river as that called by Scylax (p. 32) Pordanus.

P SACUM (Σακῶς), a promontory on the NW. coast of Crete, forming the termination of Mt. Tityrus, now called C. Spada. (Ptol. iii. 15. § 8.)

PSAMATHUS. [Ταεαρυμ.] PSAPHERIS. [Ατηλία, p. 330, a.]

PSELEI or PSEBO (Ψελεί, Strab. xvii. p. 822; Ψελείς, Stephan. B. s. v.), the modern Persia, one of the enormous lakes S. of Merce, which feed the principal tributaries of the Nile. The 10th parallel of N. latitude nearly bisects the lake Pseleos. According to Stephanus, it was five days' journey from Aethiopia, i.e. from Axum. In the centre of the lake was a populous island—a depot of the ivory trade, and frequented also by the hunters of the Hippopotamus, the hides of which animal were exported to Aegypt, and employed as coverings for shields. On the E. and S. the lake was encompassed by lofty mountains, which abound in mineral wealth (Theophr. de Lapid. p. 695, ed. Schneider), and whose periodical torrents, according to Agatharchides (c. 5, ap. Hudson, Geogr. Min.) poured their waters over the plains of the Troglydotes. [W. B. D.]

PSELICIS (Ψελικής, Strab. xvii. p. 820; Ἱταν. Anton. p. 162; Ψελίκης, Aristid. Aeginia. p. 512), was a town of the region Dodecacchosus situated on the left bank of the Nile. Originally Pselicos was little more than a suburb of the older Aethiopian town Tachompos, but it speedily outgrew its parent, so that in process of time Tachompos was denominated Contra-Pselicis. In B.C. 23 the Aethiopian nation, alarmed by the approach of the Romans to their frontier, harassed the neighbourhood of Philae and Syene, and it became necessary to repel their incursions. C. Petronius, accordingly, who had succeeded Aeclius Gallus in the government of Aegypt, undertook to drive them back, and Pselicis was one of the towns which submitted to him. (Strab. L. e; Dion Cass. iv. 5.) So long as the Achaeans maintained their hold on Northern Aethiopia, Pselicis was the permanent headquarters of a troop of German horse. The modern hamlet of Dalkah occupies a portion of the site of the ancient Pselicis. [W. B. D.]

PSESSI, or PSESII (Ψεσσί, Ptol. v. 9 § 17; ψεσσί, Apollod. ap. Stephan. B. s. v.; in Plin. vi. 7, the old editions have Pessi, but Silius reads Pessii; it appears from an inscription that Pessis is the correct form, Inscr. in Jahn's Jahrbiicher, vol. xxxvi. p. 225), a people in Sarmatia Asiaitica placed by Ptolemy between the lake Mazotis and the Hippicle Montes after the Siracusae.

PSEDOCELELIUS (Ψεδοκελιούς), a town of the Elisari in Arabia Felix, identified by some modern writers with Mochka. (Ptol. vi. 7. § 7.)

PSEDOPENIAS. [Hesperides.]

PSEDOSTOMOS (Ψεδοστόμος πτωσάς, Ptol. vii. 1 §§ 33, 83, 85, 86), a stream of western India, which Ptolemy describes as flowing from Mt. Bettago near Coinabutare to the sea near Muziris (Mangalore). It cannot with certainty be identified with any existing river, especially as along that coast, between lat. 10° and 15°, there are a great number of streams which, flowing but a short distance from their sources, approach the sea, are little better than torrents. [V.]

PSILE, a small island, forming one of a cluster, off the coast of Ionia, opposite to Clazomenae. (Plin. v. 31 s. 38.)

PSILLIS (Ψιλλίς), a small river on the coast of Phrygia, flowing into the Euxine between Artane and Calpe, and affording at its mouth a good road for small vessels. (Strab. xii. p. 543; Ptol. v. 1 § 5; Anonym. Peripl. P. E. p. 2; Plin. vi. 1; Arrian, Peripl. P. E. p. 13, where it is called Philis; Marius, p. 69, where it is written Philius; comp. Stephan. B. s. v. Arcosac.)

PSOPHIS (Ψοφίς, Eth. Ψοφίδιος), a city in the NW. extremity of Arcadia, bounded on the N. by Arcadia, and on the W. by Elis. It was a very ancient place. It is said to have been originally called Erymanthus, and its territory to have been ravaged by the Erymanthian boar. (Paus. viii. 24. § 2; Heant. ap. Stephan. B. s. v. Ψοφίς; Apollod. ii. 5. § 4.) It afterwards received the name of Thegea or Phgeia (Φηγεία, Ψήγεια), apparently from the oaks (Ψηγείοι), which are still found upon the site of the town; though the ancients, as usual, derived the name from an eponymous founder, Phegeus. (Stephan. B. s. v. Ψήγεια, Ψήφις; Paus. l. c.) It was called Psophis by Echephron and Promachus, sons of Hercules, who are said to have come from Sicily and given to the town this name after their mother Psophis. (Paus. l. c.) Psophis, while still called Phgeia, was celebrated as the residence of Alcamen, who fled thither from Argos, after slaying his mother, and married Alphiseboea, the daughter of Phegeus. (Paus. viii. 24. § 8; Dict. of Biogr. s. v. Alcamion.) In consequence of their connection with Alcamon, the Psophidae took part in the second expedition against Thebes, and refused to join the other Greeks in the Trojan War. (Paus. viii. 24. § 10.)

Psophis is rarely mentioned in history. In n. c. 219 it was in possession of the Eleians, and was taken by Philip, king of Macedonia, who was then in alliance with the Achaeans. In narrating this event Polybius gives an accurate description of the town. "Psophis," he says, "is confessedly an ancient foundation of the Arcadians in the district Azanyas. It is situated in the central parts of Peloponnese, but in the western corner of Arcadia, and adjoining the Achaean dwelling furthest towards the west. It also overhangs conveniently the country of the Eleians, with whom the city was then in close alliance. Philip marched thither in three days from Capeihae, and encamped upon the hills opposite to the city, where he could safely have a view of the whole city and the surrounding places. When the king observed the strength of the place, he was at a
loss what to do. On the western side of the town there is a rapid torrent, impassable during the greater part of the winter, and which, rushing down from the mountains, makes the city exceedingly strong and inaccessible, in consequence of the size of the ravine which it has gradually formed. On the eastern side flows the Erymanthus, a large and impetuous river, concerning which there are so many stories.

As the western torrent joins the Erymanthus on the southern side of the city, its three sides are surrounded by rivers, and rendered secure in the manner described. On the remaining side towards the north a strong hill hangs over, surrounded by a wall, and serving the purpose of a well-placed citadel. The town itself also is provided with walls, remarkable for their size and construction." (Polyb. iv. 70.)

From this description it is evident that the Erymanthus on the eastern side of the city is the river of Sopodi; and that the western torrent, which we learn from Pausanias (vii. 24. § 5) bare the name of Arconis, is the river of Glarumottisme. About 300 feet below the junction of these rivers the united stream is joined by a third, smaller than the other two, called the river of Lapset or Spepi, which rises on the frontiers of Cleitor, near Seira. From these three rivers the place is now called Tripolitana. The banks of the Erymanthus and the Arconis are precipitous, but not very high; and between them and the steep summit of the hill upon which the town stood there is a small space of level or gently rising ground. The summit is a sharp ridge, sending forth two roots, one of which descends nearly to the angle of junction of the two streams, the other almost to the bank of the Erymanthus at the eastern extremity of the city. (Leake, Morea, vol. ii. p. 242.)

Philip, in his attack upon Psophis, crossed the bridge over the Erymanthus, which was probably in the same position as the modern bridge, and then drew up his men in the narrow space between the river and the walls. While the Macedonians were attempting to scale the walls in three separate parties, the Eottians made a sally from a gate in the upper part of the town. They were, however, driven back by the Croats in Philip's army, who followed the fugitives into the town. Euripidas and the garrison then retreated into the citadel, and shortly afterwards surrendered to Philip. (Polyb. iv. 71, 72.)

Pausanias saw at Psophis a ruined temple of Aphrodite Erycina, hero of Prometheus and Echephron, the tomb of Alcmene, and near the Erymanthus a temple sacred to that stream. (Paus. viii. 24. § 7.) Leake also noticed a part of a theatre, not mentioned by Pausanias, on the side of the hill towards the Arconis. Nine hundred feet above the junction of the two rivers, and near the walls on the bank of the Erymanthus, Leake also found some remains of a public building, 96 feet in length, below which there is a source of water in the bank. He conjectures that they may be the remains of the temple of Erymanthus.

Psophis was about 2 miles in circumference. The town-walls followed the crest of the ridge to the northward and the bank above the two rivers on the opposite side; and they are traceable nearly throughout the entire circuit of the place. On the north-eastern side of the town, which is the only part not protected by the two rivers or by the precipes at the foot of the hill, there was a double inclosure. Leake could not trace the inclosure of the citadel.

At a distance of 30 stadia from Psophis was Seira (Σείρα), which Pausanias describes as the boundary of the Psophidion and Cleitorii (viii. 23. § 9, 24. § 3). On the road from Psophis to Theopours by Tropaeum, upon the left bank of the Ladon, near which was the grove Aphrodisium, after which came a column with an ancient inscription upon it, marking the boundaries of Psophis and Theopours. (Leake, Morea, vol. ii. p. 240, seq.; Boppaye, Recherches, ge. p. 158; Curtius, Peloponnesos, vol. i. p. 384, seq.)
of these people in his train when he led the way into the depths of the desert which skirts the Lesser Syrtis (Plut. Cat. Min. 56); Lucan, i. 801), and Octavius made use of the serpents on these poison-suckers, it was said, in order to restore his victim, Cleopatra, to life. (Deo Cass. li. 14; comp. Lucan, i. 925.)

LUCAN.

PSYLLIUM (Ψυλλίων, σψυλλευον, or Ψυλλα), a fortified empire on the coast of Byzantium, between Creuses and Tium. (Ptol. v. 1, § 7; Arrian, Perip. P. E. 14; Abydus, Perip. P. E. 5. p. 76; Marcian, p. 70; Steph. B. s. v. Ψυλλα; Tab. Pent. erroneously calls it Scylenum.) [L. S.]

PSYRIA (Ψυρία), a small island in the Aegean sea, to the north-west of Chios, at a distance of 50 stadia from Catana. In Creuses, and being only 40 stadia in circumference. It was a lofty, rocky island, and contained on its south coast a small town of the same name. (Strab. iv. p. 645; Plin. v. 36; Steph. B. s. v.; Hom.Od. iii. 171.) Its modern name is Iosora. [L. S.]

PSYTTALEA (Ψυττάλεα), a small islet off the Attic coast between Piraeus and Salamis. For details see SALAMIS.

PTANDARIS or PTANDARA, a place in Cappadocia on the south-west of Arabusus (H. Ant. pp. 178, 180, 210, 212, &c., where we sometimcs read the ablativr Ptiandari, and sometimes Ptandara). [L. S.]

PTAREONUS (Πταρεών, Arrian, Ind. c. 4), a small tributary of the Upper Indus, which flows into that river a little above Peshawar. Lassen conjectures that it is the present Burnudria. (Lassen, Map of Anc. India.) [Y.]

PTIEA, an ancient name of Ephesus. (Plin. v. 29. s. 31.)

PTIELOS (Πτελέως), a small lake in Mycia, near Ochryzium on the coast of the Hellespont (Herod. vii. 42; Strab. xiii. p. 692; Schol. ad Ptol. v. 2, § 3.)

PTIELEUM. 1. (Πτελεύς; Eth. Πτελέα, Πτελεαῖος, Πτελεές), a town of Thessaly, on the south-western side of Phthiotis, and near the entrance of the Sinus Pagassenaes. It stood between Antroon and Halos, and was distant from the latter 110 stadia, according to Artemidorus. (Strab. iv. p. 433.) It is mentioned by Homer as governed by Proteas, to whom the neighbouring town of Antroon also belonged. (Il. i. 679.) In B. c. 192, Antiochus landed at Pteleum in order to carry on the war against the Romans in Greece (Liv. xxxv. 43.). In B. c. 171, the town, having been deserted by its inhabitants, was destroyed by the conus Licinius. (Liv. xlii. 67.) It seems never to have recovered from this destruction, as Pliny speaks of Pteleum only as a forest ("nemus Pteleum," Plin. iv. s. 8. 15.). The form Pteleus is used by Lucan (vi. 392) and Mela (ii. 3.). Pteleum stood near the modern village of Pteleo, or Pelio, upon a peaked hill crowned by the remains of a town and castle of the middle ages, called Old Pteleo. On its side is a large marsh, which, as Leake observes, was probably in the more flourishing ages of Greece a rich and productive meadow, and hence the epithet of ἀργοκρινής, which Homer (L. c.) has applied to Pteleum. (Leake, Northern Greece, vol. i. p. 341, seq.)

2. A town of Thrilphina, in Elis, belonging to Nestor (Hom. II. ii. 59.4), is said by Strabo to have been a colony from the Thessalian Pteleum. This town had disappeared in Strabo's time; but its uninhabited woody site was called Pteleasium (Strab. viii. pp. 349, 350.).

A fortress in the territory of Etryrae, in Joan. (Thuc. ii. 83.) Pliny (v. 29. s. 31) mentions Pteleum, Helos, and Derinum as Etryrae, but those places are confused by Pliny with the Trip bhylion towns in Homer (L. c.).

PTEBIA (Πτεβία), a name of a town and district in Cappadocia, mentioned only by Herodotus (i. 76), who relates that a great battle was fought in this district between Cyrus and Croesus. Stephans B. mentions Pterium, a town of the Medes, and Pteria, a town of Sime (σει. Πτερωάω).

PTEBON, one of four islands—the other three being Latabania, Caboros, and Sambracate—lying off the coast of the Sile in Arabia, and corresponding in number, and the last of the four in name, with the Sohar islands. (Plin. vi. 28. s. 32; Forster, Arabia, vol. ii. p. 230.)

PTOLEDERMA (Πτολεδέρμα), a town of the Eutresi, in Arcadia, which was deserted in consequence of the removal of its inhabitants to Megalopolis. (Paus. viii. 27. § 3.)

PTOLEMAIS. 1. (Πτολεμαίς) Ptol. iv. 5. § 57), a small town of the Arsinoite nome in Middle Aegypt. It was situated between Hierapolis and Magna Arax, near the point of junction between the Bab Alaeus and the Nile. The modern village of El-Lehain occupies a portion of the site of the Arsinoite Ptolemais.

2. PTOLEMAIS THERON (Πτολ. iv. 5. § 57), a small town of the Arsinoite nome in Middle Aegypt. It was situated between Heracleopolis and Magna Arax, near the point of junction between the Bab Alaeus and the Nile. The modern village of El-Lehain occupies a portion of the site of the Arsinoite Ptolemais. After his second founder, Philadelphus, indeed, before he colonised this outpost of his kingdom, used every effort to persuade the Aethiopian hunters [Elephantophagi] to abstain from the flesh of these animals, or to reserve a portion at least of them for the royal stables. But they rejected his offers, replying that for the kingdom of Aegypt they would not forgo the pleasure of hunting and eating elephants. Hitherto the Egyptians had imported these animals from Asia, the Asiatic breed being stronger and larger than the African. But the supply was precarious; the cost of importation was great; and the Aethiopian forests afforded an ample supply both for war and the royal household. As the depot of the elephant trade, including that also in hides and ivory, Ptolemais attained a high degree of prosperity, and ranked among the principal cities of Aethiopia. From its market it is probable that Carthage also derived its supply of elephants, since about the period of the Ptolemies' reign the Carthaginians employed these animals more frequently in war. (Liv. xvii. Epit.; Florus, ii. 2. § 28.) Ptolemais had, properly speaking, no harbour; and the Aegyptian vessels were compelled to run up to Berenice whenever the N. or E. winds prevailed; in the present day the Red Sea coast at this point is approachable only by boats. The roadway from Ptolemais, however, was partially sheltered from the E. winds by an island covered with olive-trees. In its

Digitized by Microsoft ©
neighbourhood the fresh-water lake Maioli is afforded it a good supply of water and fish. The shell of the true land-tortoise was found at Ptolemais; it is described by Abydenarchus (ap. Geogr. Minor, p. 40, Plin. Nat. Hist. xvi. p. 513), as covered with small lenticular-shaped plates of the whiteness of the pearl-oyster. To ancient geographers the position of Ptolemais was of great importance, being one of the points from which their computations of latitude were made. Modern geographers, however, are not agreed as to the degree in which it should be placed, identifying some with Bos-Asoj, opposite the island of Welledeley, while others (Vincent, Voyage of Nearchus, vol. ii. p. 92) prefer a more southerly site, near the port of Mirza-

Ptolemais (Πτολεμαῖς). 3. (Πτολεμαῖς ἡ Ἑλλησίων, Ptol. i. 16, § 11, iv. 5, § 56; Ἑλλησίων τόπῳ, Strab. xvi. p. 813), a city of Upper Aegypt, NW. of Abydus, and situated on the western side of the Nile. It can hardly be regarded, however, as an Egyptian city, its population and civil institutions being almost exclusively Greek, and its importance derived entirely from the favour of the Ptolemies. The ruins of Ptolemais Hermii are supposed to be at the modern hamlet of Menieh. (Champollion, l'Egypte, vol. i. p. 253, seq.) [W. B. D.] [L. S.]

Ptolemais (Πτολεμαῖς). a small town on the coast of Pamphylia, between the river Melas and the town of Cornesium, is mentioned only by Strabo (xiv. p. 667). Leake (Asia Minor, p. 197) conjectures that Ptolemais did not stand upon the coast, as it is not mentioned in the Statius, but occupied perhaps the situation of the modern Alara, where is a river, and upon its banks a steep hill crowned with a Turkish castle. (Comp. Richter, Wallfahrten, p. 334.)

Ptolemais Ctrenaicae. [Barca.]

Ptolemais Phoeniceae. [Ace.]

Ptolemais (Πτολεμαία). [Mantua, p. 262, b.]

Ptolem. [Borotla, p. 412, a.]

Ptychia. [Corcyra, p. 671, b.]

Publicanos, AD, in Gallia, is placed in the Rhine on a road which leads from Vienna (Vienne) on the Rhone to the Alpis Graia (Little St. Bernard). In following this road Ad Publicanos comes after Mantua [Mantala], and its position is at the commencement of the territory of the Centrones or La Tartessae. Wesseling observes that the name Ad Publicanos indicates a toll place at a bridge. [Pons Aerarum.] D'Anville supposes that Ad Publicanos was at the point where the Arli, a tributary of the little, is crossed, near which there was an ancient Hieropita or Sestimassus, as it was called, such as we find on several Roman roads. This place is now called L'Hôpital de Couflans, and is near the junction of the Arli and the little. Ad Publicanos was probably on the boundary of the Allobroges and Centrones, where some dues would be paid. These dues or customs were established in a period of Gallic history even anterior to the Roman conquest. (Strab. iv. p. 190.) Gallia was leased with these duties, which continued to the time of the French Revolution in 1789. The distance between Mantua and Ad Publicanos is marked xxvii. in the Itin. — which does not agree with the site fixed by D'Anville. Other geographers place Ad Publicanos at the village of les Fontaines. [It. L.]

Punicum (Punicum, Diano), a town of Veneto, in the territory of the Carini (Ptol. iii. 18, s. 22), though Ptolemy assigns it to Istria (Ptol. iii. 1, § 28). It is placed by Pliny between the river Tironus and Tergete, which leaves little doubt that it is the place called Diano, about 16 miles from Trieste, and less than 2 from the sources of the Timavo, which stands on the brow of a steep rocky ridge or slope facing the sea; and the neighbouring district is still noted for its wine, which was famous in the days of Pliny, and was reckoned particularly wholesome, so that Livia the wife of Augustus ascribed the great age to which she attained principally to her use of it. (Phin. xiv. 6, s. 8, xvii. 4, s. 3.) [E. H. B.]

Pulchrum Prom. [Apollinis Prom.]

Pulchrioriae. Inaulae. [Pula.]

Pultovia, a place in Upper Pannonia, on the southwest of Petorion, on the river Pulcina. (H. Hieron. p. 561; comp. Muchar, Noricum, p. 248.) [L. N.]

Punicum (Sta Marinella), a village or station on the coast of Etruria, mentioned only in the Tabula, which places it 6 miles beyond Tyrra (Sta Secora) on the Via Aurelia; and this distance enables us to fix its site at the modern village or hamlet of Sta Marinella, where there are still some traces of a Roman port, and more extensive remains of a Roman villa in the immediate neighbourhood (Tab. Pest.; Nibby, Diatome di Roma, vol. ii. p. 313; Dennis's Etruria, vol. ii. p. 7.) [E. H. B.]

Punicum, called by Peucipus (de Aed. iv. 6. p. 287) Proteco, a town of Muscia Superior, at the mouth of the Pangos (Tab. Pest.). [T. H. D.]

Pulsicnca, a town of the Liburni (Geogr. Bay. iv. 26), which has been identified with Jabukat on the mainland facing the S. of the island of Arb. (Neigebaur, Die Sud-Slaven, p. 225.) [E. B. J.]

Pura. [Gedrosia.]

Purpurariae 1xs, islands off the coast of Mauretania, which are said to have been discovered by Julia (Plin. vi. 57), who established there a manufactory of purple. If his description of them as being 625 M. P. from the Fortunate Islands be received, they cannot be, as D'Anville supposed, Lanzarote or Fuente Ventura, the two nearest of the Canaries to the African continent. Still greater difficulties exist in supposing them to be Madeira and Porto Santo, which are too remote from Julia's kingdom to be the seat of a manufactory of purple carried on by him. Lelewel (Entdeckungen der Carthager und Griechen, p. 140) considers them to be the islands of Lanzarote Sta Clara, with the smaller ones of graciosa and Alegranca. (Renkik, Phoenciae, p. 229; Humboldt, Cosmos, vol. ii. p. 129, trans.) [E. B. J.]

Putellioli (Puelloio, Ptol. Dian Cass.; Po
tollii), a maritime city of Campania situated on the northern shore of the Sinus Cumanus or Crater and on the east side of the smaller bay known as the Sinus Baianus. It was originally a Greek city of the name of Dikanarchia (Δικαναρχία, Strab., Δι-

Kapheia, Steph. B. E. Δικαναρχος and Δικα-
akarchi, Steph. and), was a colony of the neighbouring Cumeae, to which it served as a port. (Strab. v. p. 244.) There can be little doubt of the accuracy of this statement; for Stephanus of Byzantium and Eusebius ascribe its foundation to a colony from Samos; and it is not improbable that in this as in many similar instances, the colony from Cumeae was reinforced by a fresh band of emigrants from Samos (Steph. B. s. v. Poteioi; Euseb. ii. p. 129, ed.}

PUTEOLI.

Seal.). The date assigned to this Samian colony by Kusehuis is as late as n. c. 521. No mention occurs of Dicaearchia in history previous to the conquest of Cumae by the Campanians; from its serving as the port of Cumae it could probably never have taken any active or independent part; but there seems no doubt that it must have become a populous and flourishing town. The name of Dicaearchia continued to be applied to it by Greek writers long after it had assumed the new appellation of Puteoli. (Diod. iv. 22. v. 13, &c.)

The period of this change is uncertain. It is generally said that the Romans bestowed on it the new name when they established their colony there; but there seems good reason to believe that it was considerably more ancient. The name of Puteoli is applied to the city by Livy during the Second Punic War (Liv. xxiv. 7), and there is much probability that the coins with the Oscar inscription "Phistius," sometimes Graciscus into Phistia, belong to Puteoli during the period previous to the Roman colony. (Millingen, Numism. de l' Anc. Italie, p. 201; Fredericks, Ouditische Minzouw, p. 29.) According to the Roman writers the name of Puteoli was derived either from the stem arising from the numerous sulphureous springs in the neighbourhood, or (with more probability) from the walls (putei) or sources of a volcanic nature with which it abounded. (Varro, L. L. v. 25; Fest. s. v. Puteoli; Plin. xxxi. 2; Strab. v. p. 245; Steph. B. s. v. Puteolus.)

The first mention of Puteoli in history is during the Second Punic War, when it was fortified by Q. Fabius in order of the senate, and protected by a strong garrison to secure it from the attempts of Hannibal, n. c. 215. That general, indeed, in the following season made an attempt, though without success, to make himself master of the city, the possession of its port being an object of the greatest importance to him. (Liv. xxiv. 7, 12, 13.) Livy speaks of Puteoli as having first become frequented as a port in consequence of the war; and though this is not strictly correct, as we know that it was frequented long before under the name of Dicaearchia, it is probable that it at first rose to the high degree of commercial importance which it retained under the Romans. Thus in n. c. 212 it became the principal port where the supplies of corn from Etruria and Sardinia were landed for the use of the Roman army that was besieging Capua (Liv. xxv. 22); and the next year it was from thence that Claudius Nero embarked with two legions for Spain. (Id. xxvi. 17.) Towards the close of the war also (n. c. 203) it was at Puteoli that the Carthaginian ambassadors landed, on their way to Rome. (Id. xxx. 22.) It was doubtless the growing importance of this port which led the Romans to establish a colony there in n. c. 194 (Liv. xxxiv. 45; Veil. Pat. i. 15): the date is confirmed by a remarkable inscription of n. c. 105 (Mommsen, Insocr. R. N. 2458), and it seems to have become before the close of the Republic, as it continued under the Empire, one of the most considerable places of trade in Italy. From its being the first really good port on the south of Rome (for Antium could never deserve that epithet) it became in a manner the port of the imperial city, although distant from it not less than 150 miles. Not only did traveller from Rome frequently land at Puteoli and proceed from thence by land to the city, as in the well-known instances of St. Paul (Act. Apgnt. xxxiii. 13) and Cicero on his return to Rome from his quaestorship in Sicily (Cic. pro Pison. 26), but the same course was pursued with the greater part of the merchandise brought from the East, especially with the costly wares sent from Alexandria, and even the supplies of corn from the same quarter. (Strab. xvii. p. 793; Suet. Aug. 98; Senec. Ep. 77.) Strabo speaks of Puteoli as one of the most important trading cities of his time (v. p. 245), and it is evident from the expressions of Seneca (L. c.) that this had not fallen off in the days of Nero. The trade with Alexandria indeed, important as it was, was only one branch of its extensive commerce. Among other things the iron of Iva, after being smelted at Populonium, was brought to Puteoli (Diod. v. 13); and the city carried on also a great trade with the Turdetanians in the south of Spain, as well as with Africa. (Strab. iii. p. 145.) We learn also from an inscription still extant, that its trade with Tyre was of such importance that the Tyrians had a regular factory there (Roeckh, C. I. no. 5532); and it is probable that a number of merchants from Byzantium as resident there. (Mommens, i. R. N. 2488.) Indeed there seems no doubt that it was under the Roman Empire one of the greatest—if not the greatest—emporiums of foreign trade in all Italy. For this advantage it was in a great measure indebted to the excellence of its port, which, besides being naturally well sheltered, was further protected by an extensive mole or pier thrown out into the bay and supported on stone piles with arches between them. Hence Seneca speaks of the population of Puteoli assembling on this mole (or pila) to watch for the arrival of the ships from Alexandria. (Sen. Ep. 77.) Puteoli had peculiar facilities for the construction of this and similar works, from the excellent quality of its volcanic sand, which formed a mortar or cement of the greatest hardness and durability, and wholly proof against the influence of the sea-water. (Strab, v. p. 245; Plin. xxxvi. 13. s. 47.) This kind of cement is still known by the name of Pozzolana.

It was from the extremity of the mole of Puteoli that Caligula carried his celebrated bridge across the bay to the island of Caprae. (Plut. Vit. Aug. 19, 32; Dion Cass. lix. 17; Joseph, Ant. xix. 1. § 1.) It is scarcely necessary to observe that this bridge was merely a temporary structure [Balk], and the remains still visible at Pozzolli which are popularly known as the Bridge of Caligula are in fact the piers or piers of the mole of Puteoli. The construction of this mole is generally ascribed to Augustus, without sufficient authority; but it is probable that it dates from at least as early a period: and we learn that there were in his time extensive docks (navicula) at Puteoli, in which the huge ships that had been employed in bringing the obelisks from Egypt were preserved,—a sufficient proof of the magnitude of these establishments. (Plin. xxxvi. 9. s. 14.) Another proof of the importance of Puteoli is the fact that Claudius established there, as well as at Ostia, a cohort of troops to guard the city against fire, in the same manner as was done at Rome (Suet. Claud. 23). In A. D. 25 Domitian constructed a new line of road leading direct to Puteoli from Sinnusa, where it quitted the Appian Way. (Dion Cass. lixi. 11; Stat. Silv. iv. 3.) Precios to that time its communication with Rome must have been by way of Capua, to which a branch road (not given in the Itineraries) led direct from Puteoli.
Puteoli certainly continued to enjoy under the Empire the rank of a colony. (Plin. iii. 5. s. 9; Orell. Inser. 1694, 3697, &c.) In addition to the original "colonia civium" settled there, as already mentioned, in n. c. 194, it appears to have received a fresh colony under Sulla (Val. Max. ix. 3. § 8; Pint. Sull. 57; Zumpt, de Colon. p. 260), and certainly was again colonised by Augustus. (Lib. Col. p. 236.) The inhabitants had, as we learn from Cicero (Phil. ii. 41), warmly espoused the cause of Brutus and Cassius after the death of Caesar, who may have been one reason why Augustus sought to secure so important a point with a colony of veterans. But, as was often the case, the old inhabitants seem to have continued apart from the colonists, with separate municipal rights, and it was not till the reign of Nero that these also obtained admission into the colony. (Tac. Ann. xiv. 27.) In A. D. 69 the Puteolanii zealously espoused the cause of Vespasian (Tac. Hist. iii. 67), and it was probably in consequence of this that the city afterwards assumed the honorary title of "Colonia Flavia Augusti Puteoli," by which we now designate it in inscriptions. (Orell. Inser. 3698; Zumpt, L. c. p. 395; Mommsen, 2492, 2493.) It is not improbable, however, that it may at the same time have received a fresh accession of colonists.

In addition to its commercial importance, Puteoli, or rather its immediate neighbourhood, became, before the close of the Republic, a favourite resort of the Roman nobility, in common with Baiae and the whole of this beautiful district. Thus Cicero, as we learn from himself, had a villa there, to which he gave the name of Academia, but which he more often mentions merely as his Puteolanaum. (Cic. de Nat. 1, ad Att. i. 4, xiv. 7, xv. 1, &c.) It passed after his death into the hands of Antoninus Verus, and the outbreak of a thermal spring there became the occasion of a well-known epigram, which has been preserved to us by Pliny. (Plin. xxxi. 2. s. 3.) This villa was situated between Puteoli and the lake Avernus; it was subsequently chosen as the place of burial of the emperor Hadrian. (Spart. Hadr. 23.)

We hear little of Puteoli in history during the later periods of the Roman Empire, but there is every reason to suppose that it continued to be a flourishing and populous town. Its mole and port were repaired by Antoninus Pius (Mommsen, Inser. 2490), and numerous inscriptions have been found there, some of which belong to a later period, and attest the continued importance of the city down to the reign of Honorius. (Mommsen, 2494—2500.) But it shared to the full extent in the calamities of the declining empire: it was taken and plundered by Alaric in A. D. 410, and again by Genserici in 453, and by Totila in 543. Nor did it ever recover these repeated disasters. Afterward, for some time been almost deserted, it partially revived in the middle ages; but again suffered severely, both from the ravages of war and from the volcanic eruptions of the Solfatara in 1198, and of the Monte Nuovo in 1538. At the present day Pozzolli, though retaining its episcopal see, and about 8000 inhabitants, is a poor place, and suffers severely from malaria in summer.

It, however, retains many remains of its ancient greatness. Among these one of the most conspicuous is the amphitheatre, on the hill behind the town, which is of considerable size, being larger than that at Pompeii, and calculated to be capable of containing 25,000 spectators. It is in good preservation, and, having been recently excavated and cleared out, affords in many respects a good specimen of such structures. It derives additional interest from being more than once alluded to by ancient writers. Thus Suetonius mentions that Augustus presided at games there, and it was in consequence of an insult offered to a senator on that occasion that the emperor passed a law assigning distinct seats to the senatorial order. (Surt. Aug. 44.) It was there also that Nero entertained Titus, king of Armenia, with magnificent shows both of gladiators and combats of wild beasts. (Dion Cass. lxxiii. 3.) Near the amphitheatre are some ruins, commonly known as the temple of Diana, but which more probably belonged to a range of thermæ or baths; as also several piscinas or reservoirs for water on a great scale, some of which are supposed to have been connected with the service of the amphitheatre. Near them are the remains of an aqueduct, intended for the supply of the city, which seems to have been a branch of that which led from the lake itself to the city itself—the middle cathedral is in great part constructed out of the remains of a Roman temple, which, as we learn from an inscription on the architrave, was dedicated to Augustus by L. Calpurnius. From another inscription we learn that the architect was L. Cecilius Auctus, evidently the same who is mentioned by Strabo as having been employed by Agrippa to construct the tunnel at Postilio. (Mommsen, J. R. N. 2484. 2485; Strab. v. p. 245.) The masonry is of white marble, and there still remain six beautiful Corinthian columns of the same material. Much more celebrated than these are the remains of a building commonly known as the temple of Serapis or Serapeum. The interest which attaches to these is, however, more of a scientific than antiquarian character, from the evidence they afford of repeated changes in the level of the soil on which they stand. (Lyell, Principles of Geology, 8th ed. p. 489, &c.; Daubeny On Volcanoes, p. 206.) The edifice is one of a peculiar character, and the received attribution is very doubtful. Recent researches have rendered it more probable that it was a building intended for the medical use of the town, in which the deities were interred, both save in it, and was adapted both for purposes of worship and for the medical use of the source in question. The general plan is that of a large quadrangular atrium or court, surrounded internally by a portico of 48 columns, with chambers at the sides, and a circular temple in the centre. Not far from the temple of Serapis are the ruins of two other buildings, both of these on lower level beneath: the one of which is commonly known as the temple of Neptune, the other as the temple of the nymphs; but there is no real foundation for either name. We know from Cicero that there was a temple of Neptune at Puteoli, as might naturally be expected at so frequented a seaport, and that its portico fronted the bay. (Cic. Acad. ii. 25.) The remains of the ancient mole have been already mentioned; there are now portions of 16 piers remaining, 13 of which are still visible above water.

On the coast proceeding from Pozzolli towards the Lucrine lake (or rather on the ancient cliff which rises above the low line of coast) are some ruins called (with at least more probability than in most similar cases) those of the villa of Cicero, which was certainly as we learn from Pliny, situated between Puteoli and the Lucrine lake. (Plin. xxxi. 2. s. 3.)
Pylaean

About a mile from Pozzolii to the NE., on a hill between the town and the Loga d'Angano, is the remarkable spot now called the Solfatara, and in ancient times known as the Forum Velani (Hecatontu Agora, Strab.). It is evidently the crater of an extinct volcano, retaining only so much of its former activity as to emit constantly sulphurous gases in considerable quantity, the deposit of which forms large accumulations of sulphur. It is well described by Strabo, in whose time it would seem to have been rather more active than at present, as well as in a more poetical style by Petronius (Carm. B. Civ. 67—75); and is noticed also by Lucilius, who justly points to the quantity of sulphur produced, as an evidence of igneous action, though long extinct. (Strab. v. p. 246; Lucil. Acta. 431.) It does not seem to have ever broken out into more violent action, in ancient, any more than in modern, times; but in the middle ages on one occasion (in 1198) it broke into a violent eruption; and a stream of trachytic lava, which has flowed from the crater in a SE. direction, is probably the result of this outbreak. The effect of the sulphurous exhalations on the soil of the surrounding hills is visible for some distance, and imparts to them a peculiar whiteness of aspect, whence they were called the Leucogaei Colles. (Plin. xvii. 11. s. 29, xxiv. 15. s. 56.) Pliny also mentions in connection with them some mineral springs, to which he gives the name of Leucogaei Fontes. (Id. xxxi. 2. s. 8.) They are probably those now known as the Fiscarelli.

There were two ancient roads leading from Puteoli, the one to Capna, the other to Neapolis. Both of them may still be distinctly traced, and were bordered, for some distance after they quitted the city, with ranges of tombs similar to those found outside the gates of Pompeii, though of course in less perfect preservation. They are nevertheless in many respects of much interest. Pliny mentions the road (which he calls a Via Consularis) that led from Puteoli to Capna; it was the tract on the left of this towards Cumae that was the district properly called the Campe Laborini, or Laboriae, distinguished even above the rest of Campania for its surpassing fertility. (Plin. xviii. 11. s. 29.) Concerning the topography of Puteoli and ruins still remaining at Pozzolii, see Maxzella, Situs et Antiquitas Puteolorum in Graevius and Burneau's Theatours, vol. ix. part iv.; Romellini, Viaggio a Pozzolii, Svo. Naples, 1817; and Jorio, Guida a Pozzolii, Svo. Naples, 1818. (E. B. L.)

Puteolanus Sinus. [Cratera.]

Pupiter, a station in Africa Propra, 12 M. P. from Neapolis (Nabul) (Jen. Anton.; Pecq. Tab.), which has been identified by Barth (Wanderungen, pp. 142, 143) with Haminat. Sir G. Temple (Excursions, vol. ii. p. 10) considers it to be Sagaul (Sagaul, Ptol. iv. 3. § 9), because of the two inscriptions with "Civitas Sagatana," which Shaw found at Haminat. (Trav. p. 163.) (E. B. J.)

Pyclus, Ptol. iii. 17. § 8, a river on the N. coast of Crete, a little W. of Cydonia.

Pydna. [Aetolia.]

Pydna (Πυδνα, Phigaleia; Eth. Pygaleias), a small town on the coast of Euboea, a little to the south of the Epeusus, was said to have been founded by Agamemnon, and to have been peopled with the remnants of his army; it contained a temple of Artemis Munychia. (Xenoph. Hellen. i. 2. § 2; Strab. xiv. p. 639; Step. B. v.; Harpocrates, s. v.; Plin. v. 31; Sylax. p. 37; Pomp. Mela. i. 17; Liv. xxxvii. 6.) Dioscorides (v. 12) commends the wine of this town, which is still celebrated. Chandler (Trav. p. 446) observed its remains on a hill between Epeusus and Scala Novia. (Comp. Leake, Asia Minor, p. 261.)

Pylae. [Thermopylae.]

Pylae Clitiae. [Clicia.]

Pylae Syriae. [Amanides; Issus.]

Pylaea (Πυλαια), a suburb of Delphi, and
the place of meeting of the Amphictyonic Council [Delphi, p. 767, b.]

**PYLENE** (Πυλὴν; *Eth. Πυλήνος*), an ancient town of Aetolia, between the Achelous and the Evenus, mentioned in the Homeric catalogue of the Grecian ships, is placed by Pliny on the Corinthian gulf. It would therefore seem to have existed in later times; although Strabo says that the Achelous, having removed Pylene higher up, changed its name into Prochelous. The site of Pylene is uncertain. (Hom. *H. i*. 639; *Plin. iv*. 31; *sapphica Pylene*; Stat. *Theb*. vi. 102; Steph. B. s. v. P.)

**PYLON** (Πολύων), a town on the Via Egnatia, being the frontier town of Illyria and Macedonia. (Strab. vii. p. 323.) It is not mentioned in the Itineraries.

**PYLÖTUS** (Πυλοτός; Strab., S. of Gortyn, now *Phóra*). (Plin. iv. 12. s. 20; Pashley, *Cret*. vol. i. p. 295.)

**PYLUS** (Πυλος; *Eth. Πυλος*), the name of three towns on the western coast of Peloponnesus.

A town in hollow Eliz, described by Pausanias as situated upon the mountain road leading from Elis to Olympia, and at the place where the Ladon flows into the Peneus (vi. 22 § 5). Strabo, in a corrupt passage, assigns to it the same situation, and places it in the neighborhood of Scollum or Mt. Scolla (μετα του πετρου και του Σαλλιεύτου ἐξωθή). (P. *Phóra* φόντο, Strab. viii. p. 338.) Pausanias (i. c.) says that it was 80 stadia from Elis. Diodorus (xiv. 17) gives 70 stadia as the distance, and Pliny (iv. 5. s. 6) 12 Roman miles. According to the previous description, Pylus should probably be identified with the ruins at *Agrápió-thóri* situated on a commanding position in the angle formed by the junction of the Peneus and Ladon. This site is distant 7 geographical miles from Eliz, which sufficiently agrees with the 80 stadia of Pausanias. Leake, however, places Pylus further S., at the ruins of *Kóloghi*, mainly on the ground that they are not so far removed from the road between Eliz and Olympia. But the fact of the ruins at *Agrapíó-thóri* being at the junction of the Peneus and Ladon seems decisive in favour of that position; and we may suppose that a road ran up the valley of the Peneus to the junction of the two rivers, and then took a route to the right into the valley of the Ladon. (Leake, *Northern Greece*, vol. ii. p. 228, *Peloponnesiaca*, p. 219; *Bohaye, Richerches*, &c. p. 122; Curtius, *Peloponnesiaca*, vol. ii. p. 39.) The Eleian Pylus is said to have been built by the Pylon, son of Cleson of Megara, who founded the Messenian Pylus, and who, upon being expelled from the latter place by Pelasgus, settled at the Eleian Pylus. (Paus. iv. 36. § 1, vii. 22. § 5.) Pylus was said to have been destroyed by Heracles, and to have been afterwards restored by the Eleians; but the story of its destruction by Heracles proper belongs to the Messenian Pylus. Its inhabitants asserted that it was the town which Homer had in view when he asserted that the Alpheus flowed through their territory (Ἀλφῆος, δύτε εἰεῖν δυτίους *Πυλοῖνς* διὰ γαίης, *Il. v*. 543). On the position of the Homeric Pylus we shall speak presently; and we only observe here, that this claim was admitted by Pausanias (vi. 22 § 6), though its probability had been previously pointed out by Strabo (vii. p. 350, seq.). Like the other Eleian towns, Pylus is rarely mentioned in history. In n. c. 402 it was taken by the Spartans, in their invasion of the territory of Elis (Diod. i. 47), and in n. c. 366 (it is mentioned as the place where the democratical exiles from Elis planted themselves in order to carry on war against the latter city. (Xen. *Hell.* vii. 4. § 16)) Pausanias saw only the ruins of Pylus (vi. 22. § 5), and it would appear to have been deserted long previously.

2. A town in Triphylia, mentioned only by Strabo, and named by him *Tρυφιλικός*, *Ἀρκαδικός*, and *Ἀπεραϊωνός*. He describes it as situated 30 stadia from the sea, on the rivers Mamathus and Arcadious, west of the mountain Mounte and north of Lepreum (viii. p. 344). Upon the conquest of the Triphylian towns by the Eleians, Pylus was annexed to Lepreum (viii. p. 355; comp. pp. 339, 343, 344). Leake observes that the village *Tjordadzj*, on the western extremity of Mount Mithune, at the fork of two branches of the river of *At Sildhers*, seems to agree in every respect with Strabo’s description of this town. (Peloponnesiaca, p. 109.)

3. A town in Messenia, situated upon the promontory Coryphasium, which forms the northern termination of the bay of Narrinio. According to the account of Thucydides, the Spartans held 400 stadia of land (Thuc. iv. 3), and according to Pausanias (v. 36. § 1) 100 stadia from Methone. It was one of the last places which held out against the Spartans in the Second Messenian War, upon the conclusion of which the inhabitants emigrated to Cyllene, and from thence, with the other Messenians, to Sicily. (Paus. iv. 18. § 1, iv. 23. § 1.) From that time its name never occurs in history till the seventh year of the Peloponnesian War, n. c. 424, when Demosthenes, the Athenian commander, erected a fort upon the promontory, which was then uninhabited and called by the Spartans Coryphasium (*Koryphasión*), though it was known by the Athenians to be the site of the ancient Pylus. (Thuc. iv. 3.) The erection of this fort led to one of the most memorable events in the Peloponnesian War. Thucydides has given a minute account of the topography of the district, which, though clear and consistent with itself, does not coincide, in all points, with the existing locality. Thucydides describes the harbour, of which the promontory Coryphasium formed the northern termination, as fronted and protected by the island Sphacteria, which stretched along the coast, leaving only two narrow entrances to the harbor,—the one at the northern end, opposite to Coryphasium, being only wide enough to admit two triremes abreast, and the other at the southern end wide enough for eight or nine triremes. The island was about 15 stadia in width, covered with wood, uninhabited and untrodden. (Thuc. iv. 8.) Pausanias also says that the island Sphacteria lies before the harbour of Pylus like Rhenia before the anchorage of Delos (v. 36. § 6). It is almost certain that the fortress erected by the Athenians stood on the site of the ruins of a fortress of the ancient ages, called *Palyos-Ararios*, which has been changed into Narrino by the habit of using the accusative case, εις τον Ἀράριον, and by attaching the final το of the article to the substantive. The distances of 400 stadia from Sparta and 100 stadia from Methone, given respectively by Thucydides and Pausanias, are the correct distances of Old Narrino from those two ancient sites. (Leake, *Peloponnesiaca*, p. 191.) Sphacteria (Σφαχτήρα) is now called *Sphagia*, a name which it also bore in antiquity. (Σφαχία, Strab. viii. p. 339; Phil. *Main. p. 242; *Al. Sphagia*, Xen. *Hell.* vi. 2. § 31; *tree Sphagia*, Plin. iv. 12. s. 58.) The following description will be rendered clearer by the
two accompanying maps, of which the former contains the whole locality, and the latter the fortress of Old Navarino and its immediate neighbourhood on a larger scale.

The chief discrepancy between the account of Thucydides and the existing state of the coast is found in the width of the two entrances into the bay of Navarino, the northern entrance being about 150 yards wide, and the southern not less than between 1300 and 1400 yards; whereas Thucydides states the former admitted only two triremes abreast, and the latter only eight or nine. Therefore not only is the actual width of the two entrances very much greater than is stated by Thucydides, but this width is not in the proportion of the number of triremes; they are not as 8 or 9 to 2, but as 17 to 2. To explain this difficulty Col. Leake supposes that Thucydides was misinformed respecting the breadth of the entrances to the harbour. But to this a satisfactory reply is given by Dr. Arnold, that not only could no common false estimate of distances have mistaken a passage of nearly 1400 yards in width for one so narrow as to admit only eight or nine ships abreast, but still less could it have been supposed possible to choke up such a passage by a continuous line of ships, lying broadside to broadside, which Thucydides tells us the Lacedaemonian commanders intended to do. Moreover the northern entrance has now a shoal or bar of sand lying across it, on which there are not more than 18 inches of water; whereas the narrative of Thucydides implies that there was sufficient depth of water for triremes to sail in unobstructed. The length of

17 stadia, which Thucydides ascribes to Sphacteria, does not agree with the actual length of Sphagia, which is 25 stadia. Lastly Thucydides, speaking of the bay of Pylus, calls it "a harbour of con-

MAP OF PYLUS AND ITS IMMEDIATE NEIGHBOURHOOD.

A. Pylus (Old Navarino).
B. Sphacteria (Sphagia).
C. Lagoon of Osmyn-Aga.
D. Port of Pindo's Hill.
E. Bay of Pylus (Bay of Navarino).
1. Cave of Hermes.
2. Small channel connecting the lagoon of Osmyn-Aga with the Bay of Navarino.

considerable magnitude" (λαξα ἡπτὶ ὁ βυρσός); an expression which seems strange to be applied to the spacious Bay of Navarino, which was not only the largest harbour in Greece, but perfectly unlike the ordinary harbours of the Greeks, which were always closed artificially at the mouth by projecting mole when they were not sufficiently land-locked by nature.

In consequence of these difficulties Dr. Arnold raised the doubt whether the island now called Sphagia be really the same as the ancient Sphacteria, and whether the Bay of Navarino be the real harbour of Pylus. He started the hypothesis that the peninsula, on which the ruins of Old Navarino stand, is the ancient island of Sphacteria converted into a peninsula by an accumulation of sand at either side; and that the lagoon of Osmyn-Aga on its eastern side was the real harbour of Pylus, into which there was an opening on the north, at the port of Voulhí-Kilí, capable of admitting two triremes abreast, and another at the south, where there is still a narrow opening, by which eight or nine triremes may have entered the lagoon from the
great harbour of Navarino. Upon this hypothesis Col. Leake observes, that in itself it is perfectly admissible, inasmuch as there is scarcely a situation in Greece on the low coasts, near the mouths of rivers, where, by the operation of waters salt or fresh, or both united, some change has not taken place since the times of ancient antiquity; and that in the present instance, therefore, there is no great difficulty in imagining that the lagoon may be an ancient harbour converted into a lagoon by an accumulation of sand which has separated it from the sea. But, among the many difficulties which beset this hypothesis, there are two which seem quite fatal to it; one of which has been stated by Mr. Grote and the other by Col. Leake. The former writer remarks that, if the peninsula of Old Navarino was the real ancient Spahcteria, it must have been a second island situated to the northward of Spahctia; and that, consequently, there must have been two islands close together and near the scene. This, as Mr. Grote observes, is quite inconsistent with the narrative of Thucydides, which presupposes that there was only one island—Spahcteria, without any other near or adjoining to it. Thus the Athenian fleet under Eury mechan, on first arriving, was obliged to go back some distance to the island of Prote, because the island of Spahcteria was full of Lacedaemonian hoplites (Thuc. iv. 13); whereas, if the hypothesis of Dr. Arnold were admitted, there would have been nothing to prevent them from landing on Spahctia itself. It is true that Xenophon (Hell. vi. 2. § 3) speaks of Spahctia in the plural, and that Pliny (iv. 12. s. 23) mentions 'tures Spahctiae;' but two of them appear to have been mere rocks. The objection of Col. Leake is still more fatal to Dr. Arnold's hypothesis. He calls attention to the fact that the French Commission observed that the walls of the castle of Old Navarino stand in many parts on Hel lenic foundations, and that in some places three courses of the ancient work remain, consisting of a kind of masonry which seems greatly to resemble that of Messeni a and to be due to the remains of the Heuris of ancient antiquity, some foundations are traced of a more ancient inclosure at the northern end of the peninsula, with a descent to the little harbour of Voidhia Kilia by means of steps cut in the rock. Remains of walls of early date are to be seen likewise towards the southern extremity of the hill, among which is a tumulus,—all tending to prove that the entire peninsula of Navarino was occupied at a remote period of history by an ancient city. This peninsula could not, therefore, have been the ancient Spahcteria, which never contained any ancient town. The only way of reconciling the accounts of Thucydides with the present state of the east is to suppose, with Mr. Grote and Curtius, that a great change has taken place in the two passages which separate Spahctia from the mainland since the time of Thucydides; with the present state of the east is to suppose, with Mr. Grote and Curtius, that a great change has taken place in the two passages which separate Spahctia from the mainland since the time of Thucydides; the mainland to the south of Navarino must have been much nearer than it is now to the southern portion of Spahctia, while the northern passage also must have been both narrower and clearer. (Leake, Moroe, vol. i. p. 401, seq., Peloponnesea, p. 190, seq.; Arnold, Appendix to Thucydides, vol. ii. p. 400, seq.; Grote, Greece, vol. vi. p. 285, seq.; Pezeln, Peloponnesus, vol. i. p. 173, seq.; Babbage, Recherches, p. 113; Expedition Scientifique de la Moroe, vol. i. pl. vii.)

It is unnecessary to relate here the events which followed the erection of the Athenian fort at Pylus, and which terminated with the capture of the Spartans in the island of Spahcteria, as they are given in every Grecian history. The following extract from Col. Leake illustrates the description of Thucydides in the most satisfactory manner: "The level and source of water in the middle where the Lacedaemonians were hitherto permitted to stand; and that the northern end to which they retired,—the landing-places on the western side, to which the Helots brought provisions,—are all perfectly recognisable. Of the fort, of loose and rude construction on the summit, it is not to be expected that any remains should now exist; but there are some ruins of a signal-tower of a later age on the same site. The summit is a pile of rough rocks ending in a peak; it slopes gradually to the shore on every side, except to the harbour, where the cliffs are perpendicular, though here just above the water there is a small slope capable of admitting the passage of a lady of men active in climbing among rocks and difficult places. By this pass it is probable the Messenians came upon the rear of the Lacedaemonians on the summit; for just at the southern termination of the pass there is a passage through the cliffs which border the greater part of the eastern shore of the island, so that by this opening, and along the pass under the rocks to the northward of it, the Messenians had the means of passing unseen from the centre of the island to the rear of the Lacedaemonians on the summit. Though this hill slopes gradually from its rocky peak to the shore on every side except towards the harbour, it does not admit of a landing at its foot, except in the calmest weather; nor is it easily assailed on any side by land, on account of the ruggedness of the summit, except by the means to which the Messenians resorted; so that the words of Thucydides respecting it are perfectly accurate (καὶ δαλασσόμενοι ἀπὸ γῆς καὶ ἐν τῷ ἑρέμῳ οἱ πίπτωσιν). The southern extremity of the island is rocky, steep, and difficult of access, and forms a separate hill; in every other part the ground slopes from the cliffs on the side of the land to the sea; the hill on which the rock of the island, is low; so that when the weather is calm it is more easy in face of an opponent to land, and to make his way towards the island on that side than on the eastern shore, where the cliffs admit of an easy access only in two places, one towards the northern end, the other in the middle of the island, where an opening in the cliffs leads immediately into the most level part of it; exactly in the opening stands a small church of the Panagia. There are also two small creeks adjacent to each other, near the southern end of the eastern side of the island, opposite to Naxia: near these creeks there is a wall. The principal source of water is towards the middle of the island, at an excavation in the rock 20 feet deep, which seems to be more natural than artificial; for below a shallow surface of soil, in which there is a circular peristomium of modern masonry, the excavation in the rock is irregular and slanting. In one or two places there are groves of high bushes, and there are low shrubs in every part of it. It often happens, as it did in the seventh summer of the Peloponnesian war, that a fire, occurring accidentally or of intention, clears the face of the island (excepting that part on which the northern hill exhibits at this moment recent marks of a similar conflagration." (Moroe, vol. i. 408, seq.)

The peninsula of Ceryneian is a precipice on
the eastern side or towards the lagoon; while on the western side or towards the open sea it slopes gradually, particularly on the SW., where Demosthenes succeeded in preventing the inundation, besides the Lacedaemonians. The promontory is higher at the northern end. Below the ruined fortress at the northern end there is a fine cove, called loiodhó-Kílía (Βαιδό-κωλάδι), "the ox's belly," which gives name to the small circular port immediately below it, which has been already spoken of. This cove is 60 feet long, 40 wide, and 40 high, having a roof like a Gothic arch. The entrance is triangular, 30 feet long and 12 high; at the top of the cove there is an opening in the surface of the hill above. This cove was, according to the Peloponnesian tradition, the one into which the infant Hermes drove the cattle he had stolen from Apollo. It is mentioned in the Homeric hymn to Hermes as situated upon the sea-side (v. 341); but in Antoninus Liberalis (c. 23) it is expressly said to have been at Coryphasium. In Ovid (Met. ii. 684) Mercury is represented as beholding from Mt. Cyllene the unguarded cattle proceeding into the fields of Pylos.

The bay of loiodhó-Kílía is separated by a low semicircular ridge of sand from the large shallow lagoon of Osmoyn-Aga. As neither Thyucydides nor Pausanias gives a word about it, the son Nestor upheld the lagoon, which now forms so striking a feature in the topography of this district, we may confidently conclude, with Leake, that it is of recent formation. The peninsula must, in that case, have been surrounded with a sandy plain, as Pausanias describes it; and accordingly, if we suppose this to have been the site of the Homeric PYLUS, the epithet ἱμαθείς, which the poet constantly gives to it, would be perfectly applicable.

The Athenians did not surrender their fortress at PYLUS to the Lacedaemonians in accordance with the treaty made in c. 421 (Thuc. v. 35), but retained possession of it for fifteen years, and only lost it towards the close of the Peloponnesian War. (Diod. xiii. 64.) On the restoration of the Messenians to their country by Epaminondas, Pylos again appears in history. The remains of the walls already described belong to this period. On more than one occasion there was a dispute between the Messenians and Achaeans respecting the possession of this place. (Liv. xxvii. 30; Polyb. xviii. 25.) It was visited by Pausanias, who saw there a temple of Athena Coryphasium, the famous house of Nestor, containing a picture of him, his tomb, and a cove said to have been the stable of the oxen of Nedeus and Nestor. He describes the latter as within the city; which must therefore have extended nearly to the northern end of the promontory, as this cave is evidently the one described above. (Pans. v. 36.) There are imperial coins of this city bearing the epithet Πυλών, belonging to the time of Severus. (Eckhel, vol. ii. p. 277.) It would appear from Leake that the restored city was also called Coryphasium, since he says that "at the time of the Achaean League there was a town of Coryphasium, as we learn from a coin, which shows that Coryphasium was a member of that confederacy." (Peloponnesica, p. 191.)

The modern name Araribo, corrupted, as already said, into Navarrino, is probably due to the Avars, who settled there in the sixth century of the Christian era. The mediaeval castle was built by the widow of the Frankish chieftain William de la Roche. Her descendants sought a more convenient place for their residence, and erected on the southern side of the harbour the Neokastro or modern Navarrino. It commanded the southern end of the harbour, which became more and more important as the northern entrance became choked up. Containing, as it does, the best harbour in the Peloponnesus, Navarrino constantly appears in modern history. It was taken by the Turks in 1500. In 1685 it was wrested from them by the Venetian commander Morosini, and remained in the hands of the Venetians till 1715. In more recent times it is memorable by the great battle fought in its bay, on the 20th of October, 1827, between the Turkish fleet and the combined fleets of England, France, and Russia. (Curtius, Peloponnesos, vol. ii. p. 181.)

It remains to speak of the site of the Homeric Pylos. According to a generally received tradition, Neneus, the son of Poseidon, migrated from Ioleos in Thessaly, and founded on the west coast of the Peloponnesus a kingdom extending westward as far as that of the Atriabae, and northward as far as the Alpheius, or even beyond this river. Neneus incurred the indignation of Hercules for refusing to purify him after the murder of his son Iphitas. The hero took Pylos and killed Neneus, together with eleven of his twelve sons. But his surviving son Nestor upheld the fame of his house, and, after distinguishing himself by his exploits in youth and manhood, accompanied in his old age the Grecian chiefs in their expedition against Troy. Upon the invasion of the Peloponnesians by the Dorians, three generations after Nestor, the Neeleid quitted Pylos and removed to Athens, where they obtained the kingly power. The situation of this Pylos—the Πύλος Νηλείδος, as it was called—was a subject of much dispute among the Grecian geographers and grammarians. Strabo (viii. p. 339) quotes a proverbial verse, in which three towns of this name were mentioned—

etyl Pýlos πρὸς Πλάκον: Πύλος γε μὲν ἄτη καὶ ἄλως,

of which the former baik—iculo Pýlos πρὸς Πλάκον—was at least as old as the time of Aristophanes, when Pylos became famous by the capture of the Spartans at Sphacteria. (Aristoph. Eúv. 1059.) The claims of the Eleian Pylos to be the city of Nestor may be safely set on one side; and the choice lies between the towns in Triphylia and Messenia. The ancient name, naturally derived in favour of the Messenian Pylos, is the opinion of Pausanias (iv. 36), who unhesitatingly places the city of Nestor on the promontory of Coryphasium, although, as we have already seen, he agrees with the people of Elis that Homer, in describing the Alpheus as flowing through the land of the Pylians (Il. v. 545), had a view to the Eleian city. (Pans. vii. 22. § 6.) It is however, much more probable that the "land of the Pylians" was used by the poet to signify the whole kingdom of the Neeleid Pybus, since he describes both Thryossas on the Alpheus and the cities on the Messenian gulf as the extreme or frontier places of Pybus. (Οἰμ. 577. 174. 178. Πύλων ἱμαθείς, Il. xi. 712; νέατα Πύλων ἱμαθείς, Il. ix. 153.)

In this sense these expressions were understood by Strabo (viii. pp. 337, 350). It is curious that Pausanias, who paid so much attention to Homeric antiquities, does not even allude to the existence of the Triphylia Pylos. Pindar calls Nestor "the Messenian old man." (Pyth. vi. 35.)
PYLUS.

mentions Messenia as his birthplace (Panath., § 72); and Phercydes (op. Schol. ad Hom. Od. xi. 289) and Eustathius (ad Od. iii. p. 1454) describes the Messenian Pylus as the city founded by Pylus. This was also the opinion of Diodorus (xv. 66), and of many others. In opposition to their views, Strabo, following the opinion of the Oxyrhynchos, argues at great length that the Triphylian Elis was the city of Nestor. (Strab. viii. pp. 339, seq., 348, seq.) He maintains that the description of the Alpheians flowing through the land of the Pylians (H. v. 545), which, as we have already seen, was the only argument which the Eleians could adduce for their claim, is applicable to the Triphylian Pylus; whereas the poet's mention of Nestor's exploits against the Epieans (H. xi. 670, seq.) is fatal to the supposition of the Messenian city being his residence. Nestor is described as making an incursion into the country of the Epieans, and returning thence with a large quantity of cattle, which he safely lodges by night in the Neleian city. The third day the Epieans, having collected their forces on the Alpheus, Nestor marched forth from Pylus, and at the end of the first day halted at the Minyeus (subsequently called the Aungrus), where he passed the night; starting from thence on the following morning, he arrived at the Alpheus at noon. Strabo argues that neither of these events could have taken place if Nestor had marched from so distant a city as the one at Coryphasium, while they might easily have happened if the Neleian city had been situated at the Triphylian Pylus. Again he argues from the Odyssey that the Neleid Pylus could not have been on the sea-coast, since Telemachus, after he had disembarked at the temple of Poseidon and had proceeded to Pylus, sent a courier to his ship to fetch his companions (Od. iii. 423); and on his return from Sparta to Pylus, he desired Piskratus to turn off to the sea-side, that he might immediately embark, as he wished not to be detained in the city by Nestor. (Od. xv. 190, seq.) These arguments, as well as others, adduced by Strabo, are followed by E. K. Miller (Handbuch, p. 357, seq.), Thrillwall (Hist. of Greece, vol. i. p. 96), and several modern scholars; but Leake, Curtius, and others have adhered, with much greater probability, to the more common view of antiquity, that the Neleid Pylus was situated at Coryphasium. It has been shown that Pylus was frequently used by Homer to signify the Neleid kingdom, and not simply the city, as indeed Strabo himself had admitted when arguing against the claims of the Eleian Pylus. Moreover, even if it should be admitted that the account of Nestor's exploits against the Epieans accords better with the claim of the Triphylian Pylus, yet the narrative of the journeys of Telemachus is entirely opposed to this claim. Telemachus in going from Pylus to Sparta drove his horses thither without changing them, in two days, stopping the first night at Pherae (Od. iii. 485); and he returned from Sparta to Pylus in the same manner. (Od. xv. 182, seq.) Now the Messenian Pylus, Pherae, and Sparta, lie in a direct line, the distance from Pylus to Pherae being about 33 miles by the road, and from Pherae to Sparta about 28 miles. On the other hand, the road from the Messenian Pylus to Sparta, by the valley of the Alpheus into that of the Eurotas; whereas Pherae would have been out of the way, and the distance to it would have been much more than a day's journey. Besides which, the position of the Messenian Pylus, the most striking upon the whole western coast of Peloponnesus, was far more likely to have attracted the Thessalian wanderers from Iolkos, the worshippers of the god Poseidon, than a site which was neither strong by nature nor near the coast.

But although we may conclude that the Messenian Pylus is the city of Nestor, it may admit of doubt whether the city itself existed on the promontory Coryphasium from the earliest times. The Greeks rarely built a city in the earliest period immediately upon the coast, and still more rarely chose a site so bulky supplied with water as Coryphasium, of which the Athenians experienced the inconvenience when they defended it in the Peloponnesian War. There seems much probability in the account of Strabo (viii. p. 359) that the ancient Messenian Pylus was situated at the foot of Mt. Aegaeos, and that upon its destruction some of its inhabitants settled at Coryphasium. If then we suppose the city of Nestor to have stood a little way inland, and Coryphasium to have been its port-town, the narrative of Telemachus' return becomes perfectly clear. Not wishing to lose time at the royal residence, he drives straight to the port and goes quietly on board. Hence, one of Strabo's most serious objections to the Messenian Pylus disappears. Strabo was justified in seeking for a separate site for the city and the port; but he seems to have forgotten the existence of the Old Pylus inland, which he had himself mentioned. (Leake, Morea, vol. i. p. 416, seq.; Curtius, Peloponnesos, vol. ii. p. 174, seq.)

PYRAEI, a people in Illyria (Plin. iii. 23, s. 26; Mela, ii. 3, § 12), perhaps the same as the Piriass of Strabo. [Pleraei.]

PYRAKIA. [Argos, p. 203, a.]

PYRAMUS (Pyrasos), one of the great rivers of Asia Minor, which has its sources in Catanicia near the town of Arabissos. (Strab. i. p. 583, xiv. p. 675.) For a time it passes underground, but then comes forward again as a navigable river, and forces its way through a gulf of Mount Taurus, which so narrow, that a dog can leap across it. (Strab. xii. p. 536.) Pyramus, which until then had been south, now turns to the south-west, and reaches the sea at Mallus in Cilicia. This river is deep and rapid (Tzet. ad Lyoph. 440); its average breadth was 1 stadium (Xenoph. Anab. i. 4, § 1), but it carried with it such a quantity of sand, that, according to an ancient oracle, its deposits were one day to reach the island of Cyprus, and thus unite it with the mainland. (Strab. i. c.; Eustath. ad Dionys. 867.) Stephanus B. (s. v.) states that formerly this river had been called Leucostyx. (Comp. Nepos, p. 40; Polyb. v. 8, § 4; Plin. v. 22; Pomp. Mela, i. 13; Curtius, iii. 73; Ariian, Anab. ii. 5, § 8.) Its modern name is Selim or Avahun. [L. 8.]

PYRANTHUS (Piranthos; Eth. Papanthos), a small town in Crete, near Gortyn, probably the modern Pyrathi. (Steph. B. s. v.; Psyll. Crete, vol. i. p. 291.)

PYRASUS (Pyrasos, Strab. Steph. B. s. r.; Pirasos, Hom. Eth. Papanthos), a town of Phthiostis in Thessaly, mentioned by Homer along with Phylace and Ion, and described by him as Piraastos or Piraastos, a place not far from Corinth. (H. ii. 639.) Pyrasus was situated on the Pagasaean gulf, at a distance of 20 stadia from Thbes, and possessed a good harbour (σπείρα, Strab. ix. p. 433). It had disappeared in the time of Strabo. Its name was...
superseded by that of Demeterium, derived from the temple of Demeter, spoken of by Homer, and which Strabo describes as distant two stadia from Pyrgeia, the most westerly, and Carausus the most easterly, across the flat basin of Beneamum, the name of which is derived from the Greek word πυκνή, from a great configuration which, though the neglect of some shepherds, destroyed its woods, and melted the ore of its mines, so that the brooks ran with molten silver. (Strab. iii. p. 147; Diod. v. 25: Arist. Hist. Aug. 88; Sen. Q. N. 1.) Silius Italicus (I. c.) derives its name from Pyrene, a daughter of the king of the Bearybes; but its true etymology is probably from the Celtic word πυκνός or βρήχος, signifying a mountain. (Cf. Aeschin. Mem. de l'Hist. Nat. de Langueo, ii. 3.) Herodotus seems to have had some obscure intelligence respecting the Pyrenees, as he mentions (ii. 38), a place called Pyrene, near which the Ister had its source. Strabo (iii. pp. 137, 161) erroneously describes the chain as running from S. to N.; but its true direction, namely, from S. to NW., is given by Pliny (iv. 20. s. 34), and Marcian (Herod. p. 38). According to Dioscorides (v. 35) it is 3000 stadia in length; according to Justin (xiv. 1) 600 Roman miles. After the Alps, and the mountains of Sarmania, the Pyrenees were esteemed the highest mountains in Europe (Aratus Meteoron. v. 67: cf. Diod. xiv. 47; Por. monit. xiv. 47: cf. Diod. l. c.), whence they are sometimes described by the poets as covered with eternal snow. (Lucan. iv. 84, seq.) On the side of Gaul they are steep, rugged, and bare; whilst on the Spanish side they descend gradually to the plain, are thickly wooded, and intersected with delightful valleys. (Strab. iii. p. 161.) Their western prolongation along the face Cantabriicum, was called "Situs Vasecum," which derived its name from the Vasecomes, who dwelt there. (Plin. iv. 20. s. 34.) This portion now bears the names of Sierra de Orozano, S. de Arganza and S. de Senos. Still farther W. was Mons Vinimia or Vindius (Olivaio Aug., Plut. vii. 1. § 21; Flor. iv. 12.), which formed the boundary between the Cantabri and Astures. The Pyrenees form several promontories, both in the Mediterranean sea and the Atlantic ocean. (Strab. i. p. 120, iii. p. 160, iv. p. 176, &c.; Mela, ii. 5; Sil. It. iii. 417, seq.) They were rich in mines of gold, silver, iron and lead (Strab. iii. p. 146; Plin. l. c.), and contained extensive forests, as well as the sources of the Garumna, the Iberus, and a number of smaller rivers. (Strab. l. c., and iv. p. 182.) Only three roads over them were known to the Romans: the Carausian road from Garumnaria far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the Bilbasa or Puentaebria; the most easterly which was also the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now Junquera); and one which lay between these two, leading from Caesaraugusta to Beneamum (now Briurgo). (Itin. Ant. pp. 390, 352, 455; Strab. iii. p. 160; Liv. xxi. 23, &c.) Respecting the present condition of the Pyrenees, the reader may consult, in MS. Miliano, Dizionario, ii. pp. 187, 238. seq.; Huber, Sitzn. aus Spanien, Göt. 1833; and Ford, Handbook of Spain, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer watering-places and sensual, the Spanish side is rude, savage, and Iberian, the lair of the annaguer and wild bird and beast." [T. H. D.]

PYRENEI PORTUS. [Indigetes.]

PYRENEI PLEMTOMONTIUM. [Hispania, Vol. i. p. 108.]

PYRETUS (Piperis), called by the Scythians Πύρη, described by Herodotus (iv. 48) as a large river of Scythia, flowing in an easterly direction and falling into the Danube. The modern Truth.

PYRGI (Πυργίος; Eth. Pyrgensis; Santa Severa), a city on the coast of Etruria, situated between Asinum and Castrum Novum, and distant 34 miles from Rome (Itin. Ant. p. 290.) It was rather more than 6 miles (50 stadia) from Caere, of which it served as the port (Strab. v. 226), but it is probable that it was not originally designed for that purpose, but grew up in the first instance around the temple of Eileithyia, for which it continued to be celebrated at a much later period. (Strab. l. c.; Diod. xvi. 14.) The foundation of this temple is expressly ascribed to the Pelasgius, and the pure Greek form of the name certainly tends to corroborate this statement. It is probable that both Pyrgi and the neighbouring Caere were originally Pelasgian settlements, and that this was the cause of the close connection between the two, which led to Pyrgi ultimately passing into the constitution of the more important city of the interior. Virgil calls it an ancient city (Pyrgi veteres, Aen. x. 184), and represents it as one of the Tuscan cities that sent assistance to Aeneas. But the only mention of Pyrgi in history during the period of Etruscan independence is in n. c. 384, when the treasures of its temple attracted the cupidity of Dionysius of Syracuse, who made a piratical descent upon the coast of Etruria, and, landing his troops at Pyrgi in the night, surprised and plundered the temple, from which he is said to have carried off spoils to the value of 1000 talents. (Diod. xvi. 14; Strab. v. 226; Arist. Oecon. ii. 21; Poly. aen. v. 2, 21.) The amount of the booty seems incredible, but the temple was certainly very wealthy; and it would seem that the people of Pyrgi had given some excuse for the aggression, by themselves taking an active part in the piracies carried on at this period by the Etruscans in general. Servins, indeed, represents it as bearing the chief part in those depredations; but this may probably be an exaggeration. (Serv. ad Aen. x. 184.)
PYRGUS.

PYRGUS (Πυργος; Eth. Πυργος), a town of Caria, of uncertain site. (Steph. B. s. v.; Plin. v. 28, s. v. PYRGUS.)

PYRGUS. (Πυργος; Eth. Πυργος), a town of Caria, of uncertain site. (Steph. B. s. v.; Plin. v. 28, s. v. PYRGUS.)

CICERO, a people dwelling on the Hebrus in Thrace, mentioned by Pliny, iv. 11, s. 18. (T. R.)

PYRHHA (Πυρηθα; Eth. Πυρηθαος). 1. A town on the coast of the deep bay on the west of the island of Lesbos, which had so narrow an entrance that it was called the Enurips of Pyrrha. It was situated at a distance of 80 stadia from Mytilene and 100 from Cape Malea. (Athos. iii. p. 58; Strab. xiii. p. 517.) In the Lesbian revolt the town sided with Mytilene, but was reconquered by Pachus. (Thoc. iii. 18, 23, 35; comp. Scylax, p. 36; Steph. B. s. v.)

In Strabo's time the town no longer existed, but the suburbs and port were still inhabited. Pliny (v. 39) reports that Pyrrha had been swallowed up by the sea. The bay of Pyrrha is now called Coloni.

2. A small town on the Maeander, opposite to Miletus; it was 50 stadia distant from the mouth of the river. (Strab. xiv. p. 636; Plin. v. 29; Schol ad Plat. v. 2. § 5.)

PYRIEUM. [AMBROGIA, p. 120, a.]

PYREEII CASTA (Πυρακχατα). 1. A fortress in the N. of Laconia, was probably at or near the junction of the Oenus and Eurutus, and is supposed to have been so named from having been the place of encampment of Pyrrhus, when he invaded Laconia in n. c. 272. (Polyb. v. 19; Liv. xxxv. 27; Leake, Peloponnesianz, p. 345.)

2. In Greek Illyria. (Vol. i. p. 523, a.)

PYRHRICUS (Πυρρηχος), a town of Laconia, situated about the centre of the promontory extending in Cape Taeanum, and distant 40 stadia from the river Scyras. According to some it derived its name from Pyrrhus, the son of Achilles, according to others from Pyrrhus, one of the Curetes. Silenus was also said to have been brought up here. It contained temples of Artemis Astrateia and of Apollo Amazonom, — the two surnames referring to the tradition that the Amazons did not proceed further than this place. There was also a well in the agora. The ruins of this town have been discovered by the French Commission near the village of Kirelo, where they found the well of which Pausanias speaks, the torso of a female statue, the remains of baths, and several Roman ruins. Leake observes that the distance of 40 stadia from the Scyras to Pyrrhicus must be measured, not from the mouth of that river, as Bobhaye proposes, but from near its sources.

Augustus made Pyrrhicus one of the Elephanto-Laconian towns (Paus. iii. 21. § 7, iii. 23. §§ 1—3; Bobhaye, Recherches, etc. p. 88; Leake, Peloponnesianz, p. 174; Curtius, Peloponnesum, vol. ii. p. 276.)

PYRHRICUS. [PERITHEUM.]

PYRSTAE (Πυρστατα), according to Strabo (v. 3141), a tribe of Pamnons, but undoubtedly the same people as the Illyrian PYRSTAE. (L. S.]

PYTHIUM (Πυτθος), a town of Perrheia in Thessaly, situated at the foot of Mount Olympus, and forming a Triopolis with the two neighbouring towns of Ascorus and Doliche. Pythium derived its name from a temple of Apollo Pythius situated on one of the summits of Olympus, as we learn from an
QUADRA'TAE.

689

A.D. 180 the emperor Commodus renewed the peace with them (Dion Cass. lxxii. 2; Lamprid. Com. 3; Herodian, i. 6), but they still continued their raids into the Roman empire (Eutrop. ix. 9; Vopisc. Aurel. 18; Ann. Marc. xvii. 12, xxix. 6). Towards the end of the fourth century the Quadri entirely disappear from history; they had probably migrated westward with the Suevi, for Quadri are mentioned among the Suevi in Spain. (Hieron. Ep. 9.) According to Ammianus Marcellinus (xvii. 12) the Quadri resembled in many respects the Germans, for they usually kept up a coat of mail consisting of linen covered with thin plates of iron; they had in war generally three swift horses for every man, to enable him to change them, and were on the whole better as skirmishers than in an open battle in the field. Pottemy (l. c.) mentions a considerable number of towns in their country, such as Eburodunum, Meliodunum, Caridoris, Medosalum, &c.; the Celtic names of which suggest that those districts previous to the arrival of the Quadri had been inhabited by Celts, who were either subdued by them or had become amalgamated with them. The name Quadri itself seems to be connected with the Celtic word col, cold, or cool, that is, a wood or forest, an etymology which receives support from the fact that Strabo (vii. p. 290), the first ancient author that notices them, mentions them under the name of Κόλδωμος. Tacitus evidently regards them as Germans, but Latham (ad Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilhelm, Germania, p. 233, fol.)

2. A fort in Upper Pannonia, on the road between Arrabona and Carnuntum, not far from the banks of the Danube. (It. Ant. p. 247) Muchar (Noricum, p. 264) identifies it with a place between Oeser and Oroescevar, now occupied by a large farm of Count Zitsi.

[GEOR.]

QUADRATAE, a village or station in Gallia Cisalpina, on the road from Augusta Tarriacum to Ticinum. The Itinerary places it 22 or 23 miles from the former city and 16 or 19 from Rigomagus (Itin. Ant. pp. 340, 356; Itin. Hier. p. 557); but the latter station is itself of uncertain site. Quadratae must have been situated between Chironia...
QUADRIBURGIIUM.  

and Crescentino, near the confluence of the Isar and Danube with the Po; but the exact site has not been determined. Though the name is not mentioned by any of the geographers, it would seem to have been in the later ages of the Empire a place or station of importance, as we learn from the Notitia that a body of troops (Sarmatiae Gentiles) was permanently stationed there. (Notit. Dign. vol. ii. p. 121)  [E. H. B.]

QUADRIBURGIIUM. Aemansius Marcelliunus (xviii. 2) mentions Quadruburgium among the fortresses on the Rhine which Julian repaired: "Civitates occupates sunt septem, Castra Herculis, Quadruburgium, Trèvescinum, Novesium, Bonna, Antinumeum et Brigicum." There is however some corruption in the passage (note of Lindenbroc). The places seem to be mentioned in order from north to south. D'Anville conjectures that Quadruburgium is the same place as Bargainium (Burgina- tum), following Cluver and Alting. (Ukert, Gallien, p. 528.) Other geographers conjecture solely from the resemblance of name that it may be Quaduburg, not far from Cluver, which appears to have been a Roman place, for Roman coins and inscriptions have been found there. (G. L.)

QUARIATES, [QUADRIATES.]

QUARQUERNI, a people in Istria, of uncertain site. (Plin. iii. 19. s. 23.)

QUARQUERNI. [QUERQUERNI.]

QUARTENSIS LOCUS, a place mentioned in the Not. Imp. as under the command of the governor of Belrigia Secunda: "Praefectus classis Sarmirnic in loco Quartensi sive Hornesia." The place seems to be "Quartus" on the Sarmirnic, which keeps the ancient meaning. The word "quarto" indies a distance of in from some principal place, it being usual for chief towns to reckon distances along the roads which led from them to the limits of their territory. This principal place to which Quartensis belonged was Bagacum (Barrai), and the distance from Quartus to Bagacum is four Gallic leagues. The great Roman road from Durocoritgium (Reims) to Bagacum passed by Quartus. "Quartensis" is the adjective of a form "Quartus" or "Quarta," and Quartus occurs in an old record of the year 1125: "Altare de qua: sup. Sambron." which is the church of Quartus. (G. L.)

QUERQUERNI (Plin. iii. 3. s. 4; Querquerni, Insr. ap. Gentor, p. 243. 2; Quercurni, Kowarskoi, Pol. ii. 6. § 47), a people in the NW. of Hispania Tarraconensis, a subdivision of the Gallicie Brittanii.

QUERFETULA (Eth. Querquetulains; Kop- kovolenes, Dionys.), an ancient city of Latium, mentioned only by Pliny among the pappit Allames, or extinct communities of Latin, and by Dionysius among the Latin cities which constituted the league against Rome. (Plin. iii. 5. s. 9; Dionys. v. 61.) Neither passage affords the slightest clue to its position, and the name is not elsewhere mentioned; indeed, it seems certain that the place was not in existence at a later period. It is undoubtedly erroneous to connect (as Gill has done) the name of the Porta Querquetulana at Rome with this city (Becker, Rom. Geschichte, vol. i. p. 170); and we are absolutely in the dark as to its position. It has been placed by Gill and Nibby at a place called Corvinoa, about miles NE. of Gabii and the same distance from Hadrian's villa near Tivoli; but this is mere conjecture. (Gill, Top. of Rome, p. 369; Nibby, Diuturna, vol. ii. p. 668.)  [E. H. B.]

RABBATH-AMMON. [PHILADELPHIA.]

RABBATH-MOAB, a town in the country of Moab, stated by Stephans, who is followed by Re- krab, Rab, Raber, and other moderns, to be identical with Ar of Moab, the classical Araphopolis. This identification is almost certainly erroneous; and indeed it is very doubtful whether a Rabbath did exist at all in the country of Moab. All the notices of such a name in the Bible are identified with Rabbath-Ammon, except in Joshua (xiii. 25), where Aror is said to be "before Rab- bath," which may possibly be Rabbath-Ammon, and certainly cannot, in the absence of other ancient evidence, be admitted to prove the existence of a Rabbath in Moab. There is, however, some evidence that such a town may have existed in that country, in the modern site of Ithba, marked in Zimmermann's map about halfway between Kerak (Ker or Moab) and the Arnon (Arnon), and by him identified with Araphopolis, which last, however, was certainly identical with Ar of Moab, and lay further north, on the south bank of the Arnon, and in the extreme border of Moab (Num. xxii. 15, xvii. 55). [AREOPOLIS.] Rabbath is placed by Backhurst 3 miles north of Kerak (Syrria, p. 377); and is doubtless the site noticed in Ahublea's Tabula Syriaca as Rabbath and Mab (30). Ithba and Mangius

* For those articles not found under RA, Ri-, Rr-, Rk-, see Ith-, Rih-, Rihe-, &c.
passied it two hours north of Kerak. "The ruins," they say, "are situated on an eminence, and present nothing of interest, except two old ruined Roman temples and some tombs. The whole circuit of the town does not seem to have exceeded a mile, which is a small extent for a city that was the capital of Moab, and which bore such a high-sounding Greek name." (Journal, June 5, p. 457.) They must not be held responsible for the double error involved in the last cited words, regarding the etymology of the name Areopoli, and its identity with Rabbath, which are almost universal. [G. W.]

RAMATH, RAMATHE.

ram者, a town in the south-east of Noricum, on the great road leading from Celcia to Poctovium, between the rivers Savus and Dravus. (It. Ant. p. 129; It. Hieros. p. 561.) Tab. Peut.) Munchar (Noricum, p. 240) looks for its site near Mount Studenta; but other geographers entertain different opinions, and nothing certain can be said. [L. S.]

RAMATH or RAMATH, a town mentioned by Isidore in the district of Parthia called Apavartene. It is probably the same place as the Ramage of Potomey (Psayai, vi. 5, § 4). It is not clear whether there exist at present any remains of this town, but it must have been situated to the E. of Nikhapat, between that town and Herod. [V.]

RAMATHAYA. [Rapava.]

RAMAH (Pdr.) 1. A city of the tribe of Benjamin, mentioned with Gibeah and Beeroth (Josh. xviii. 25), and other towns in the same district, and with Bethel, as in or near Mount Ephraim. (Judges, iv. 5.) From xix. 13 of Judges it would appear to have been not far north of Jerusalem, and lying near to Gibeah of Benjamin. Being a border city between the kingdoms of Israel and Judah, it was fortified by Baasha king of Israel, "that he might not suffer any to go out or come in to Asa, king of Judah." (1 Kings, xv. 17, comp. xii. 27.) It is placed by Eusebius 6 miles north of Jerusalem, over against Bethel (Onomast. s. v.), and by S. Jerome 7 miles from Jerusalem near Gabaa, and was a small village in his day. (Comment. in Hos. cap. v., in Sophon. cap. i.) Josephus places it 40 stadia from Jerusalem. (Ant. viii. 12, § 3.) Its site is still marked by the miserable village of Er-Râm, situated on a hill on the east of the Nablus road, 2 hours north of Jerusalem, and half an hour west of Jepo, the ancient Gibeah. Its situation is very commanding, and it retains a few scattered relics of its ancient importance. (Robinson, Bibl. Res. vol. ii. pp. 315, 316.)

— 2. See also Ramathia and Ramoth. [G. W.]

RAMATHIA-LEHI, or simply LEHI (translated in LXX. ᾿Αραμαθία ἅρμαθια), where Samson slew the Philistines with the jaw-bone of an ass. (Judges, xv. 14—19.) The name Ramathia appears so like an abbreviation or corruption — perhaps a corruption — of this name, that it may well be identified as the scene of this slaughter. And here probably was the Ramath in the Tannitite toparchy in which Eusebius and S. Jerome found the Ramathiam Sophim of Sammel, and the Arimathiae of the Evangelists, which they place near to Lydda in the plain. (S. Matth. xxvii. 57; S. Mark, xxv. 42; S. Luke, xxxii. 50; S. John, xix. 38, Ἀρμαθαία; Eusebius, Onomast. s. v. Ραμαθία Sophim; S. Jerome, Epist. Psaiiie, p. 673.) Dr. Robinson, indeed, contravenes all these positions; but his arguments cannot prevail against the admitted facts, "that a place called Ramathium or Ramathia did exist in this region, somewhere not far distant from Lydda" (Bibl. Res. vol. iii. p. 40), and that no other place can be found answering to this description but Ramleh, which has been regarded from very early times as the place in question. The facts of Ramleh having been built by Suliman, son of the khilf Abd-el-Molik, after the destruction of Lydda in the early part of the 8th century, and that the Arabic name signifies the "sand," will not seriously militate against the hypothesis with those who consider the great probability that the khilf would fix on an ancient, but perhaps neglected, site for his new town, and the common practice of the Arabs to modify the ancient names, to which they would attach no meaning, to similar sounds intelligible to them, and in this instance certainly not less appropriate than the ancient name; although the situation of the town "on a broad low swell in the sandy though fertile plain," would satisfy the condition required by its presumed ancient designation. (Bibl. Res. vol. iii. p. 25—43.) It may be questioned whether the name of Ramathia, mentioned with those of Apheirena and Lydda, as taken from Samaritans and added to Judaea (1 Maccab. xi. 34; Josephus, Ant. 2. §§ 3, 4, § 9), derived its name from this or from one of the other Ramahs, in Benjamin. [G. W.]

RAMATHIA (Psawatà), the form in which Josephus represents the name of Samuel's native city, Ramathaim Sophim (LXX. ᾿Αραμαθία Σωφία) of Mount Ephraim (1 Sam. i. 1), perhaps identical with Ramah, where was his ordinary residence (vii. 17, viii. 4, xix. 18—24, xxv. i), but distinct from the Ramah above named. Ancient tradition has fixed this city at Nebi Samuel, i.e. "The Prophet Samuel," a village situated on a very high and commanding hill, two hours to the NNW. of Jerusalem, where the place of his sepulture is shown. Eusebius and S. Jerome, however, found it in the western plain, near Lydda (Onomast. s. v. Aramatha Sophim; see RAMATH-LEHI). Dr. Robinson has stated his objections to the identification of Ramathaim Sophim with Nebi Samuel, and has endeavored to fix the former much further to the south, on the hill called Soba, a little to the south of the Jaffa road, about 3 hours from Jeru-salem; while Mr. Wolcott has carried it as far south as the vicinity of Hebron. (Robinson, Bibl. Res. vol. ii. pp. 139—144, 330—334, Bibl. Sacra, vol. i. pp. 1—4.) These objections are based on the hypothesis that the incidents attending Saul's election to the kingdom, narrated in 1 Sam, ix. x., took place in Ramah of Samuel, of which, however, there is no evidence; and his difficulty would press almost with equal weight on Soba, as the direct route from Soba to Gibeah (Jebus) would certainly not have conducted Saul by Rachel's sepulture. Neither can the district of Mount Ephraim be extended so far south. Indeed, this last seems to be the strongest objection to Nebi Samuel, and suggests a site further north, perhaps Ram-al-Ulub, in the same parallel of latitude as the other Ramah and Bethel, which were certainly in Mount Ephraim. (Judges, iv. 5.) On the other hand, the name Ramah, signifying "a height," is so remarkably applicable to Nebi Samuel, which is evidently the site of an ancient town, which could not, as Dr. Robinson suggests, have been Mispa, that it would be difficult to find a position better suited to Ramathaim Sophim than that which tradition has assigned it. [Mizpah.] [G. W.]
RAMATHAIM-ZOPHIM.

RAMATHAIM-ZOPHIM. [Ramathaim.] RAMBRA'ICIA (Pauvaviana, Arrian, Amb. vi. 21), a village of the Orites, the first which was taken by Alexander the Great in his march westwards from the Indus. There can be no certainty as to its exact position, but the conjecture of Vincent seems well grounded that it is either the Ram-magar or the Ram-mgar of the Agioi Akbari. (Vincent, Voyage of Arachus, vol. i. p. 185.)

RAME, a place in Gallia Narbonensis, which the Romans fixed on the road between Embrosulmum (Embruvia) and Brigantium (Brigantium). D'Anville says that there is a place called Rame on this road near the Durance, on the same side as Embruvia and Brigantium, and at a point where a torrent named Bises joins the Durance.

[G. L.]

RAMISTA or RESISTA, a place in Upper Pamphylia, on the road running along the river Satus to Nissa (I. Hieros. p. 561; Geogr. iv. 19; Tab. Pent.) its site has not yet been ascertained with certainty.

RAMOTH, identical in signification with Rám and Ramah, equivalent in Hebrew to "an eminence," and hence a generic name for towns situated on remarkable heights, as so many in Palestine were. Besides those above named [Ramah; Ramathaim; Ramathaim], a Ramah in the tribe of Asher, not far from Tyre; and another in Naphtali (Josh. xix. 29, 36) in the north, and a Ramath in the tribe of Simeon, appropriately called "Ramath of the South" (ver. 8), to which David sent a share of the spoils of Ziklag (1 Sam. xxx. 27), and yet a Ramoth in Issachar, assigned to the Levites of the family of Gershom. (1 Chron. vi. 74.) More important than the foregoing was—

RAMOTH-GILEAD (Ramoth el Gaza), a city of the tribe of Gad, assigned as a city of refuge, first by Moses and subsequently by Joshua. (Deut. iv. 45; Jos. xxv. 1. Apian.) It was also a Levitical city of the family of Merari. (Josh. xxii. 38.) The Syrians took it from Ahiah, who lost his life in seeking to recover it. (1 Kings. xxii. 36.) Euclus places it 15 miles west of Philadelphia (Inmacst. s. v., where S. Jerome erroneously reads east: Roland, p. 966), in the Perea, near the river Jabok. Its site is uncertain, and has not been recovered in modern times.

[R. W.]

RANILUM, a town in the interior of Thrace. (Tab. Pent.)

RAPHANAE (Papala), a maritime town of Syria, only once named by Josephus, who states that the Sabbath river flowed between Areca and Raphanaea. (II. J. vii. 5. § 1.) [Raphanites.]

[R. W.]

RAPHIA (Paphia, Paphia), a maritime city in the extreme south of Palestine, between Gaza and Rhmomora, a day's march from both, reckoned by Josephus, Polybius, and others, as the first city of Syria. (Joseph. B. J. iv. xi. § 5; Polyb. v. 80.) It was taken from the Egyptians by Alexander Jannaeus, and held by the Jews for some time. It was one of the ruined and depopulated cities restored by Gabinius. (Ant. xii. 13. § 3, 15. § 4, xiv. 5. § 3.) It is mentioned also by Strabo (xiv. p. 759) and in the Itinerary of Antoninus, between the above-named towns. Coins of Raphia still exist, and it was represented by its bishop in the council of Ephesus, and in those of Constantinople, A. D. 536 and 533. (Roland, s. v. pp. 967, 968; Le Quien, Oriens Christianus, vol. iii. pp. 629, 630.) It was in the neighborhood of this city that a great battle was fought between Ptolemy Philopator and Antiochus the Great, in which the latter was routed with immense loss. (3 Maccab. ii. 2; Polyb. v. 80, 86; Hieron, ad Don. cap. xi.) Its site is still marked by the name Refah, and two ancient granite columns in situ, with several prostrate fragments, the remains apparently of a temple of considerable magnitude. (Iby and Manges' Journal, October 8.)

[R. W.]

RAPHTANA, a town on the river Margus in Moesia Superior, now Alexithmia. (Itin. Hieros. p. 560.)

RAPRAUA (Parparua, Marvian, Periphi. ii. § 32, ed. Müller), a small place on the coast of Gadesia, between the river Arabis and the Pertus Mulierum. It is probably the same as that called by Ptolemy Sagrariva (Parparua, vi. 21. § 2). It may be doubted whether it can now be recognised, unless indeed the name has been preserved in that of Arabat, a bay in the immediate neighbourhood. (See Müller, ad Arrian. Indic. § 26.)

[R. W.]

RAPHAELIA (Paepaelia, Pol. vii. 1. § 30), a place which Ptolemy calls the metropolis of the Caspian in India intragang. Its exact situation cannot be determined; but there can be no doubt that it was in Western India, not far from the Vindob. Me. Lassen places it a little S. of Ajmira.

[R. W.]

RASENA. [ETRURIA, pp. 855, 859.]

RATAE. [Itin. Ant. pp. 477, 479; Père, Pol. ii. 3. § 20, where some real Pâye], a town of the Coritani in the interior of Britannia Romana, and on the road from London to Lincoln. It is called Ratcorion in the Geogr. Rav. (v. 31). Camden (p. 557) identifies it with Leicester.

[R. T. H. D.]

RATANEOUM (Plin. iii. 22. s. 25; Paterom, D. Cass. iv. 11), a town of Dalmatia, which was burnt by its inhabitants, when it was taken by Germanicus in the reign of Augustus. (Dion Cass. c. l.)

RATIANA (Pararrea, Procop. de Aed. iv. 6. p. 290; Pararia Mosch, Pol. iii. 9. § 4, viii. 11. § 5; Parapia, Hieroc. p. 655; Parapia, Theophact. i. § 8; Ratianus, Geogr. Rav. iv. 7), a considerable town in Moesia Superior on the Danube, and the head-quarters of a Roman legion; according to the Itinerary (p. 219), the Leg. xiv. Germania, according to the Not. Imp. (c. 30), the Leg. xiv. Germania. It was also the station of a fleet on the Danube (ibid.). Usually identified with Arza-Palatena. [R. T. H. D.]

RATIATUM. [Patarow], a town of the Pictores (Pol. ii. 7. § 6). Ptolemy mentions it before Linnatorum, and places it north of Linorum, and further west. Some editions of Ptolemy place Ratiatum in the territory of the Lemovices, but this is a mistake. In the records of a council held at Orleans in A. D. 511, the bishop of the Pictavi signifies himself "de civitate Ratiatia." The name was retained in that of the Pagi Ratiatensis, from which comes the modern name of Pagae de Retz. Gregory of Tours speaks of Ratiatum as "infra terminum Pictavorum qui adjacat civitatii Namneticae." The district of Retz was taken from the diocese of Poitiers and attached to the diocese of Nantes in the time of Charles the Bald. (Delye (Mem. de l'Acad. des Inscrip. ton. xix. p. 729) fixes Ratiatum at the site of the two churches of St. Pierre and St. Op-
RAPINUS.

part of the Teut, which are near Mackwood, and on the Teut, a small river in the department of L'Aude. The Teut enters the sea near Boulogne, opposite to the Isle Noirmoutier (D'Arville, Notice, &c.; Ubert, Gallien, p. 393). [G. L.]

RAPINUS. [ROYOMAGUS.]

RAUDA (Padua, Ptol. ii. 6 § 50), a town of the Vaezii in Hispania Tarraconensis, on the road from Asturica to Caesar Augustus (Itin. Ant. p. 440), now Rou, on the Douro. (Comp. Flores, Esp. Soc. vii, p. 924, Att. 173 T. H. D.)

RAVEXNA (PRAVEXNA, Strab.; PRAVEXNA, Ptol. et al.: Et. Ravennas -atia: Ravenna), one of the most important cities of Gallia Cisalpina, situated a short distance from the sea-coast, at the southern extremity of the extensive range of marshes and lagoons, which occupied the whole coast of Venetia from thence to Alitum. (Strab. v. p. 213; Itin. Ant. p. 126.) It was 53 miles N. of Ariminum. Though included within the limits of Cisalpine Gaul, according to the divisions established in the days of Strabo and Pliny, it does not appear to have ever been a Gallic city. Strabo tells us that it was a Thessalian colony, which probably meant that it was a Pelasgic settlement, and was connected with the traditions that ascribed to the Pelasgi the foundation of the neighbouring city of Spina. [SPINA.] But they subsequently, according to the same writer, received a body of Umbrian colonists, in order to maintain themselves against the growing power of the Etruscans, and thus became an Umbrian city, to which people they continued to belong till they passed under the Roman government. (Strab. v. pp. 214, 217.) Pliny, on the other hand, calls it a Sabine city,—a strange statement, which we are wholly unable to explain. (Plin. iii. 15. s. 20.) It seems probably that it was really an Umbrian settlement, and retained its national character, though surrounded by the Ligurian Gauls, until it received a Roman colony. No mention of the name is found in history till a late period of the Roman Republic, but it appears to have been then already a place of some consequence. In B. C. 82, during the civil wars of Marius and Sulla, it was occupied by Metellus, the lieutenant of the latter, who made it the point of departure from whence he carried on his operations. (Appian, B. C. i. 89.) Again it was one of the places which was frequently visited by Caesar during his command in Gaul, for the purpose of raising levies, and communicating with his friends at Rome (Cic. ad Att. viii. 1, ad Pan. i. 9, viii. 1); and just before the outbreak of the Civil War it was there that he established his head-quarters; from whence he carried on negociations with the Senate, and from whence he ultimately set out on his march to Ariminum. (Id. ib. ii. 32; Caes. B. C. i. 5; Suet. Caes. 30; Appian, B. C. ii. 32.) Its name again figures repeatedly in the civil wars between Antony and Octavius, especially during the war of Perus (Appian, B. C. iii. 42, 97, v. 33, 50, &c.); and it is evident that it was already become one of the most important towns in this part of Cisalpine Gaul.

It is uncertain at what period Ravenna received a Roman colony. Strabo speaks of it as having in his time, as also at Ariminum, received a body of Roman colonists (v. p. 217); but the date is not mentioned, and it certainly did not, like Ariminum, pass into the condition of a regular Colonia, numerous inscriptions being extant which give it the title of a Municipium. It is probable that the settlement alluded to by Strabo took place under Augustus, and it is certain that it was to that emperor the city of Ravenna was indebted for the importance which it subsequently enjoyed during the whole period of the Roman Empire. The situation of the city was very pecuiliar. It was surrounded on all sides by marshes, or rather lagoons, analogous to those which now surround the city of Venice, and was built, like that city, actually in the water, so that its houses and edifices were wholly constructed on piles, and it was intersected by all directions by canals, which were crossed either by bridges or ferries. The lagoons had a direct communication with the sea, so that the canals were scourcd every day by the fl nx and reflux of the tides,—a circumstance to which Strabo attributes, no doubt with justice, the healthiness of the city, which must otherwise have been uninhabitable from malaria. (Strab. v. p. 213; Jornand. Get. 29; Sidon. Apoll. Epist. i. 5; Procop. B. G. i. 1; Claudian, de Vi. Cons. Hon. 495.) The old city had a small port at the month of the river Bedessus, mentioned by Pliny as flowing under its walls (Plin. iii. 15. s. 20); but Augustus, having determined to make it the permanent station of his fleet in the Adriatic, constructed a new and spacious port, which is said to have been capable of containing 250 ships of war (Jornand. l. c.), and was furnished with a celebrated Pharos or lighthouse to mark its entrance. (Plin. xxxvi. 12. s. 18.) This port was near 3 miles distant from the old city, with which it was connected by a long causeway; a considerable town rapidly grew up around it, which came to be known by the name of Portus Classatis or simply Classis; while between the two, but nearer to the city, there arose another suburb, scarcely less extensive, which bore the name of Caesarea. (Jornand. l. c.; Sidon. Apoll. l. c.; Procop. B. G. ii. 29; Geogr. Rav. iv. 31.) In addition to these works Augustus constructed a canal, called from him the Fossa Augusta, by which a part of the waters of the Pado was carried in a deep artificial channel under the very walls of Ravenna and had their outlet at the port of Classis. (Plin. iii. 16. s. 20; Jornand. l. c.)

From this time Ravenna continued to be the permanent station of the Roman fleet which was destined to guard the Adriatic or Upper Sea. Ptolemais was of that on the Lower (Tac. Ann. iv. 5, Hist. ii. 100, iii. 6, 40; Steph. Aug. 49; Veget. de R. Mil. v. 1; Not. Dig. ii. p. 118); and it rose rapidly into one of the most considerable cities of Italy. For the same reason it became an important military post, and was often selected by the emperors as their head-quarters, from which to watch or oppose the advance of their enemies into Italy. In A. D. 193 it was occupied by Severus in his march upon Rome against Didius Julianus (Spartian, Did. Jul. 6; Dom Cass. lxxvii. 17); and in 298 it was there that Pupienus was engaged in assembling an army to oppose the advance of Maximinus when he received the news of the death of that emperor before Aquileia. (Herodian, viii. 6, 7; Capit. Maximi. 24, 25, Max. et Balb. 11, 12.) Its strong and secluded position also caused it to be selected as a frequent place of confinement for prisoners of distinction, such as the son of the German chieftain Arminius, and Marobodus, chief of the Suevi. (Tac. Ann. i. 58, ii. 63; Suet. Tib. 20.) The same circumstances at a later period led to the selection by the feeble and timid Honorius as the place of his
residence; his example was followed by his successors; and from the year 404, when Honorius first established himself there, to the close of the Western Empire, Ravenna continued to be the permanent imperial residence and the place from whence all the laws and rescripts of the emperors were dated. (Jornand. Get. 29; Gibbon, c. 30.) Even before this period we are told that it was a very rich and populous city, as well as of great strength (Zosim. ii. 10): it was the capital of Picenum (as that name was then used) and the residence of the Consularis or governor of that province. (Orell. Inscr. 3649; Böcking, ad Not. Deipn. ii. pp. 359, 443.) But the establishment of the imperial court there naturally added greatly to its prosperity and splendour, while its inaccessible situation preserved it from the calamities which at this period laid waste so many cities of Italy. Yet Ravenna as a place of residence must always have had great disadvantages. Sidonius Apollinaris, who visited it late in the fifth century, complains especially of the want of fresh water, as well as the muddiness of the canals, the swarms of grats, and the croaking of frogs. (Sidon. Apoll. Ep. i. 5, 8.) Martial, at a much earlier period, also alludes to the scarcity of fresh water, which he jestingly asserts was so dear that a cistern was a more valuable property than a vineyard. (Martial, lib. iv. v. 20.)

After the fall of the Western Empire Ravenna continued to be the capital of the Gothic kings. Odoacer, who had taken refuge there after repeated defeats by Theodoric, held out for near three years, but was at length compelled to surrender. (Jornand. Get. 57; Cassiod. Chron. p. 619.) Theodoric himself established his residence there, and his example was followed by his successors, until, in 539, Vitiges was after a long siege compelled by famine to surrender the city to Belisarius. (Procop. B. G. ii. 28 29.) It now became the residence of the governors who ruled a part of Italy in the name of the Byzantine emperors, with the title of exarchs, whence the whole of this province came to be known as the Exarchate of Ravenna. The Byzantine governors were in a state of frequent hostility with the Lombard kings, and were gradually stripped of a large portion of their dominions; but Ravenna itself defied their arms for more than two centuries. (Procop. B. G. vi. 49.) It was besieged by Lodovico about 750, and its capture is dated 750. (Vand. i. 28) but it was not till the reign of his successor Aetopius that Ravenna itself fell into the hands of the Lombards. But the exact date, as well as the circumstances of its final conquest, are uncertain. (Gibbon, c. 49.)

The situation of Ravenna at the present day presents no resemblance to that described by ancient writers. Yet there is no doubt that the modern city occupies the same site with the ancient one, and this at least is mainly due to natural causes. The accumulation of alluvial deposits, brought down by the rivers and driven back by the waves and tides, has gradually filled up the lagoons that surrounded and canals that intersected the city; and the modern Ravenna stands in a flat and fertile plain, at a distance of 4 miles from the sea, from which it is separated by a broad sandy tract, covered in great part with a beautiful forest of stone pines. Though Ravenna is one of the most interesting places in Italy for its medieval and early Christian antiquities, it presents few remains of the Roman period, and those for the most part belong to the declining years of the Empire. A triumphal arch, known by the name of Porta Aurea, was destroyed in 1585; it stood near the modern gate called Porta Adriana. Several of the ancient basilicas date from the Roman period; as does also the sepulchral chapel containing the tomb of Gallia Placidia, the sister of Honorius, and mother of Valentinian III. A portion of the palace of Theodoric still remains in its original state, and the mausoleum of that monarch, just without the walls, is a monument of remarkable character, though stripped of its external ornaments. An ancient basilica, still called S. Apollinare in Classe, about 3 miles from the southern gate of the city, preserves the memory and marks the site of the ancient port and suburb of Classe; while another basilica, which subsisted down to the year 1513, bore the name of S. Lorenzo in Cesarea; and thus indicated the site of that important suburb. It stood about a quarter of a mile from the south gate of the city, between the walls and the bridge now called Ponte Nuovo. This bridge crosses the united streams of the Rono and Montone, two small rivers which previously held separate courses to the sea, but were united into one and confined within an artificial channel by Clement XII. in 1736. The Rono, which is the southernmost of the two, is probably the same with the River of Pliny; indeed, Pliny says that it was in his time still called Bedena. Hence the Montone must be identified with the Virrus of the same author. The Anemo, which he places next in order, is clearly the same now called the Amon or Lamone, which flows under the walls of Faenza. (Plin. iii. 15. s. 20; Cluver, Ital. p. 300.)

The natural causes which have produced these changes in the situation and environs of Ravenna were undoubtedly in operation from an early period. Already in the fifth century the original port constructed by Augustus was completely filled up, and occupied by orchards. (Jornand. Get. 29.) But Ravenna at that period had still a much frequented port, where the fleets of Belisarius and Nares could ride at anchor. The port of Classe itself is now separated from the sea by a strip of sandy and marshy plain about 2 miles broad, the greater part of which is occupied by a forest of stone pines, which extends for many miles along the sea-coast both to the north of Ravenna. The existence of this remarkable strip of forest is attested as early as the fifth century, the name of Pineta being already found in Jornandes, who tells us that Theodoric encamped there when he besieged Odoacer in Ravenna. (Jornand. 57.) But it is probable that it has extended its boundaries and shifted its position as the land has gradually gained upon the sea.

The territory of Ravenna was always fertile, except the sandy strip adjoining the sea, and produced abundant crops of rice and other water plants, which the ancients cultivated on this coast. The climate of Ravenna, which is mild and dry, is one of the most favourable in Italy for its viticultural and horticultural antiquities. At present it is much inferior to its former state, having been abandoned during the Middle Ages.
RAURANUM.

BEATE. 693

17), and in some inscriptions, Polemeny mentions two towns of the Rauraci, Rauritica Augusta and Argentovaria [Augusta Rauriacorum; Argentovaria]. Augusta is August near Bâle, in the Swiss Canton of Bâle, and Argentovaria may be Artzenheim. The position of these places helps us to form a measure of the extent of the territory of the Rauraci, which may have nearly coincided with the bishopric of Bâle.

The Rauraci joined the Helvetii in their emigra-
tion, b. c. 58. [HELVET.] [G. L.]

RAURANUM, in Gallia, is placed by the Table and the Antonine Itinerary in the direction of the road from Lutetiam Santonum (Saintes) to Limonum (Politiers). It is Raurana in the Table, but the same Rauranum occurs in a letter of Paulinus to Ausonius (Ep. IV. ad Auson. v. 249), who places it "Pic-
tonics in arvis." The place is Rom or Reum, near Chenay, nearly due south of Politiers. (D'Anville, Notice, &c.; Ubert, Gallien, p. 392.) [G. L.]

RAURARIS. [AURARIS.]

BEATE (Pedre, Strab, Pedros, Dionys.: Eth. Tauravice, Tauravice). It was this migration of the Sabines, that was, one of the most considerable that be-
longed to that people. It was situated on the Via Salaria, 48 miles from Rome (Itin. Aut. p. 306), and on the banks of the river Velinus. All writers agree in representing it as a very ancient city; ac-
cording to one account, quoted by Dionysius from Zenodotus of Troezen, it was one of the original abodes of the Umbrians, from which they were ex-
peled by the Pelagi; but Cato represented it as one of the first places occupied by the Sabines when they descended from the neighbourhood of Amster-
num, their original abode. (Dionys. ii. 49.) What-
ever authority Cato may have had for this statement, there seems no reason to doubt that it was substan-
tially true. The fertile valley in which Reate was situ-
ated lay in the natural route of migration for a people descending from the highlands of the central Apennines: and there is no doubt that both Reate and its neighbouring town were in historical times occu-
pied by the Sabines, or more certainly, by the process of the expulsion of the Aborigines. who, according to Dionysius, previously occupied this part of Italy, and whose ancient metropolis, Laster, was only 24 stadia from Reate. (Dionys. i. 14, ii. 49.) Silius Italicus appears to derive its name from Rica, and calls it consecrated to the Mother of the Gods; but this is probably a mere poetical fancy. (Sil. Ital. viii. 415.) No mention of Reate occurs in history before the period when the Sabines had been subjected to the Roman rule, and admitted to the Roman Franchise (n. c. 290); but its name is more than once incidentally noticed during the Second Punic War. In n. c. 211 Han-
nilbar passed under its walls during his retreat from Rome, or, according to Coelius, during his advance up that city (Liv. xxvi. 11); and in n. c. 205 the Reatini are specially mentioned as coming forward, in common with the other Sabines, to furnish volun-
teers to the armament of Scipio. (Id. xxvii. 45.) We are wholly ignorant of the reasons why it was reduced to a subordinate condition of a Praecen-
tura, under which title it is repeatedly mentioned by Cicero, but we learn from the great orator himself, under whose especial patronage the inhabitants were placed, that it was a flourishing and important town. (Cic. in Cat. iii. 2, pro Scaur. 2, § 27, de Nat. Deor. ii. 2.) Under the Empire it certainly ob-
tained the ordinary municipal privileges, and had its own magistrates (Zumpt, de Col. pp. 98, 188; Gruter, Insocr. p. 354, 3, §c.;) under Vespasian it received a considerable number of veteran soldiers as colonists, but did not obtain the rank of a title of a Colonia. (Lib. Col. p. 257; Orell. Insocr. 3683; Gruter, Insocr. p. 538. 2; §c.)

The territory of Reate included the whole of the lower valley of the Velinus, as far as the falls of that river; one of the most fertile, as well as beau-
tiful, districts of Italy, whence it is called by Cicero the Ecatine Tempe (ad Att. iv. 15.) But the pec-
ular natural character of this district was the Rauranum, or "thick forest," for it is, I think, the forest with their neighbourhood of Interamnus, (Var. R. R. iii. 2. § 3.) The valley of the Velinus below Reate, where the river emerges from the narrow mountain valley through which it has hitherto flowed, and receives at the same time the waters of the Salto and Ta-
ranu, both of them considerable streams, expands into a broad plain, not less than 5 or 6 miles in breadth, and almost perfectly level; so that the waters of the Velinus itself, and those of the smaller streams that flow into it, have a tendency to stag-
ivate and form marshes, while in other places they give rise to a series of small lakes, remarkable for their picturesque beauty. The largest of these, now known as the Lago di Pio di Lugo, seems to have been the one designated in ancient times as the Lacus Velnus; while the fertile plains which ex-
tended from Reate to its banks were known as the Rosei or more properly Roseae Campi, termed by Virgil the "Rosea rara Velnina." (Virg. Aen. vii. 712; Cic. ad Att. iv. 15; Varro, R. R. i. 7, § 10, ii. 1. § 16, iii. 2. § 10; Plin. nat. hist. 4. 6. 3.) But this broad and level valley is at an elevation of nearly 1000 feet above that of the Nar, into which it pours its waters by an abrupt descent, a few miles above Interamnus (Terma); and the stream of the Velinus must always have constituted in this part a natural cascades. These waters, however, are so strongly impregnated with carbonate of lime, that they are continually forming an extensive deposit of travers-
tine, and thus tending to block up their own channel. The consequence was, that whenever their course was artificially regulated, and their channel kept clear, the valley of the Velinus was inundated, while on the other hand, if these waters were carried off too rapidly into the Nar, the valley of that river and the territory of Interamnus suffered the same fate. The first attempt to regulate the course of the Vel-
inus artificially, of which we have any account, was made by M. Curius Dentatus, after his conquest of the Sabines, when he carried off its waters by a deep cut through the brow of the hill overlooking the Nar, and thus gave rise to the celebrated cascade now known as the Falls of Terma. (Cic. ad Att. iv. 15; Serv. ad Aen. vii. 712.) From the ex-
pressions of Cicero it would appear that the Lacus Veilinus, previous to this time, occupied a much larger extent, and that a considerable part of the valley was then first reclaimed for cultivation. But the expedient thus resorted to did not fully accomplish its object. In the time of Cicero (B.C. 54) fresh disputes arose between the citizens of Reate and those of Interamnus; and the former appealed to the great orator himself as their patron, who pleaded their cause before the arbiters appointed by the Roman senate. On this occasion he visited Reate in person, and inspected the lakes and the channels of the Velinus. (Cic. pro Scaur. 2, § 27, ad Att. iv. 15.) The result of the arbitration is
unknown; but in the reign of Tiberius the Realines had to contend against a more formidable danger, arising from the project which had been suggested of blocking up the outlet of the Lacus Velinus latterly called the Retinae by a measure which, as they justly complained, would undoubtedly have inundated the whole valley. (Tac. Ann. i. 79.) Similar disputes and difficulties again arose in the middle ages; and in A.D. 1400 a new channel was opened for the waters of the Velinus, which has continued in use ever since.

No other mention occurs of Reate under the Roman Empire; but inscriptions attest its continued municipal importance: its name is found in the Itineraries (Itin. Ant. p. 306), and it early became the seat of a bishop, which it has continued ever since. Throughout the middle ages it was, as it still continues to be, the capital of the surrounding country. No ancient remains are now visible at Reate.

The territory of Reate was famous in ancient times for its breed of mules and asses; the latter were particularly celebrated, and are said to have been sometimes sold for a price as high as 300,000 or even 400,000 sesterces (Varr. R. R. ii. s. § 3; Plin. viii. 43. s. 65), though it is difficult not to suppose that some error in these numbers. Q. Axius, a friend of Varro, who had a villa on the Lacus Velinus, and extensive possessions in the Reate territory, is introduced by Varro in his dialogues De Re Rustica, as discoursing on the subject of breeding horses, mules, and asses. (Varr. R. R. ii. 1. § 8; Strab. v. p. 228.) It was at this villa of Q. Axius that Cicero lodged when he visited Reate. (Cic. de att. iv. 15.) The Septem Aqae, mentioned by him in the same passage, and alluded to by Suetonius (i. 107) were evidently some springs or sources, of which the supply one of the small lakes in the valley of the Velinus. [L. H. B.]

RECHIUS. [Bolbe.]

REDINTINUM (Pétrórouotov), a town in the northern part of the country occupied by the Marcomanni (Bolithie), is mentioned only by Ptolemy (ii. 11. § 29). Some geographers regard it as having occupied the site of the modern Prague, and others identify it with Boruse; but nothing certain is known about the matter. [L. S.]

REDONES (Périvouéoues), in the Celtic galatia Lugudunensis of Ptolemy (ii. 8. § 12), are placed by him west of the Semones and along the river Liger. Their capital is Condacte (Remues). But the Redones were not on the Loire. Pliny (iv. 18) enumerates the Redones among the peoples of Gallia Lugudunensis; "Diaibundi, Redones, Turomes." After the bloody fight on the Sambre (u. c. 57) Caesar sent P. Crassus with a single legion into the country of the Veneti, Redones, and other Celtic tribes between the Scine and the Loire, all of whom surrendered. (B. G. ii. 54.) Caesar here enumerates the Redones among the maritime states whose territory extends to the ocean. In B.C. 52 the Redones with their neighbours sent a contingent to attack Caesar during the siege of Alesia. In this passage also (B. G. vii. 75), the Redones are enumerated among the states bordering on the ocean, which in the Celtic language were called the Armorice States. D'Anville supposes that their territory extended beyond the limits of the disease of Remoes into the dioceses of St. Malo and Nantes. Their chief town, Remues, is the capital of the department of Ille-et-Vilaine. [G. L.]

REGENUM, a northern tributary of the Damie, the modern Regen in Bavaria, is noticed only once, (Geogr. Rav. iv. 23.) [L. S.]

REGIA ('Prýia, Ptol. ii. ii. § 10). 1. A place in the interior of Hibernia, no doubt so named by the Romans from its being a royal residence, the presence of which was unknown to the Gauls. It was perhaps seated on the river Culmore, in the neighbourhood of Omagh.

1. (Eúra 'Prýia, Ptol. i. c.), another place of the same description, conjectured to have been on the river Dur. [T. H. D.]

3. Regia Carissa. [Cari.a.]

REGIANA (call'd by Ptol. ii. 4. § 13, 'Prýia; comp. Geogr. Rav. iv. 44, and Regins, Plin. iii. 3), a town of Bactria, on the road from Hissalas to Ephratamus (Itin. Ant. p. 415. iii. Ural. Dac. xi. 15) with Puebla de la Regina, where there are Roman remains. [T. H. D.]

REGIANUM (Pýysavos, Ptol. iii. 10. § 10), a place on the Danube in Moesia Inferior. It is probably the same place as the Augusta of the Itinerary (p. 220; comp. Toub. Pest.) and the 'Aýgýovatou of Procopius (de Aed. iv. 6); in which case it may be identified with Cotuszla at the confluence of the Ogreistul and Danube. [T. H. D.]

REGILLUS (Pýyalou, a town of Lugdunensis; mentioned by several ancient writers as the place of residence of Attus or Attius Cladius, who migrated to Rome about B.C. 505, with a large body of clients and followers, where he adopted the name of Appius Claudius and became the founder of the Claudian tribe and family. (Liv. ii. 16; Dionys. v. 40; Suet. Tib. 1; Serv. ad Aen. vii. 706.) About 60 years afterwards C. Cladius, the uncle of the decemvir Appius Claudius, withdrew into retirement to Lugdunensis, as the native place of his forefathers (Culmore, Itin. Ant. p. 415. iii. Ural. Dac. xi. 15). The name is not noticed on any other occasion, nor is it found in any of the geographers, and we are wholly without a clue to its position. [E. H. B.]

REGLILLUS D'ACUBUM (Pýyalou lávhois, Dionys.: Lago di Cornafelle), a small lake at Latium, at the foot of the Tuscan hills, celebrated for the great battle of the Romans and the Latins under C. Marius, in B.C. 496. (Liv. ii. 19; Dionys. vi. 3; Cic. de nat. D. ii. 2. iii. 5; Plin. xxix. 2. i. Varr. M. i. 12; Virg. Aen. i. 58; Diod. v. 11.) Hardly any event in the early Roman history has been more disguised by poetical embellishment and fiction than the battle of Regillus, and it is impossible to decide what amount of historical character may be attached to it; but there is no reason to doubt the existence of the lake, which was assigned as the scene of the combat. It is expressly described by Livy as situated in the territory of Tusculum ("ad lacum Regillum in agro Tusculano," Liv. ii. 19), and this seems decisive against the identification with the small lake called the sabot de St. Pratessade, about a mile to the N. of La Colonna; for this lake must have been in the territory of Labicum, if that city be correctly placed at La Colonna (Labićum), and at all events could hardly have been in that of Tusculum. Moreover, the site of this lake being close to the Via Labicana would more probably have been indicated by some reference to that high-road than by the vague phrase "in agro Tusculano." A much more plausible suggestion is that of Griol, that it occupies the site of a volcanic crater, now drained of its waters, but which was certainly once occupied by a lake, at a place called Cornufelle, at the foot of the hill on which
REGINA, in Gallia Lugdunensis, is placed in the Table on a road from Condatis (Rennes). The first station is Fanum Martis, and the next is Regina, 39 Gallic leagues from Condatis. D'Aubuville fixes Regina as Erigues on the coast, between S. Brieuc and S. Malo. [FANUM MARTIS.] [G. L.]

REGINUM, a town in the northern part of Vindelicia, on the southern bank of the Danube, on the road leading to Vindonissa. This town, the modern Ronchin, is a thermal bath not mentioned by the Roman historians, but it was nevertheless an important frontier fortress, and, as we learn from inscriptions, was successively the station of the 1st, 3rd, and 4th Italian legions, and of a detachment of cavalry, the Ala II. Valeria. The town appears to have been of considerable importance, and to have contained among its inhabitants many Roman families of distinction. (Itin. Ant. p. 250; Tab. Peut., where it is called Castra Regina; comp. Roger, Der Oberdonndreis Bogern, iii. p. 38;其次是 [L. S.]

REGIS VILLA (Ρηχειοιωλια, Strab.), a place on the coast of Etruria, which, according to Strabo, derived its name from its having been the residence of King Regis, a cousin of Alexander the Great, who lived on the neighbouring Pelasgi in this part of Etruria. (Strab. v. p. 225.) None of the other geographers mentions the locality; but Strabo places it between Casa and Grauvaces; and it is therefore in all probability the same place which is called in the Maritime Itinerary REGEA, and is placed 3 miles S. of the river Armenta (Flora) and 12 miles from Grauvaces. (Itin. Marit. p. 499.) The site is now marked only by some projecting rocks called Le Merelle. (Denis's Etruria, vol. i. p. 398; Westphal, Gesch. d. Ant. 1830. p. 30.)

REGISTUS or RESISTUS. (Bisanthe.)

REGIUM LEPIDI or REGIUM LEPIDUM (Ρηχειοι Δημος, Strab.; Ρηχειοι Δημην, Ptol.; Phth. Regiensis: Reggio), sometimes also called simply REGIUM, a town of Gallia Cispadana, situated on the Via Aemilia, between Mutina and Parno, at the distance of 17 miles from the former and 18 from the latter city. (Itin. Ant. pp. 99, 127; Strab. v. p. 216.) We have no account of its foundation or origin; but the name would raise a presumption that it was founded, or at least settled and enlarged, by Aemilinus Lepidus when he constructed the Aemilian Way; and this is confirmed by a passage of Festus, from which it appears that it was originally called Forum Lepidi. (Fest. s. v. Rhegium. p. 270.) The origin of the appellation of Regium, which completely superseded the former name, is unknown. It did not become a colony like the neighbouring cities of Mutina and Parno, and evidently never rose to the same degree of opulence and prosperity as those cities, but became, nevertheless, a flourishing municipal town. It is repeatedly mentioned during the civil war with M. Antonius, both before and after the battle of Mutina (Cic. ad Fam. xi. 9, xii. 5); and at a somewhat earlier period it was there that M. Brutus, the father of the murderer of Caesar, was put to death by Pompey in n. c. 79. (Oros. v. 22; Plut. Pomp. 16.) Its name scarcely occurs in history during the Roman Empire; but its municipal consideration is attested by inscriptions, and it is mentioned by all the geographers among the towns on the Via Aemilia, though probably by Strabo with those of the second class. (Strab. v. p. 216; Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; Orell. Inscr. 3983, 4133; Tac. Hist. ii. 50; Phelegon, Macrob. 1.) Polemy alone gives it the title of a Colonia, which is probably a mistake; it was certainly not such, if the time of Pliny, nor is it so designated in any extant inscription. Zonaras, however, supposes, that it may have received a colony under Trajan or Hadrian. (Zumpt, de Colon. p. 403.) St. Ambrose notices Regium as well as Placentia and Mutina among the cities which had fallen into great decay before the close of the fourth century. (Ambros. Ep. 39.) It was not long before this that an attempt had been made by the emperor Gratian to repair the desolation of this part of Italy by settling a body of Gothic captives in the territory of Regium, Parma, and the neighbouring cities. (Ammian. xxxii. 9. § 4.) The continued existence of Regium at this period is proved by the Itineraries and Tabulae (Itin. Ant. pp. 283, 287; Itin. Hier. p. 616; Tab. Peut.), and it is mentioned long after the fall of the Western Empire by Paulus Diaconus among the "locupletissimur urbis" of Aemilia. (P. Diacon. Hist. Lang. ii. 18.) In the middle ages it rose to a great degree of prosperity, and Reggio is still a considerable town with about 16000 inhabitants. Its episcopal see dates from the fifth century.

The tract called the Campli Machi, celebrated for the excellence of its wool, was apparently included in the territory of Regium Lepidum. [E. H. B.]

REGNI (Ρηχειοι, Ptol. ii. 3. § 28), a people on the S. coast of Britannia Romana, seated between the Cantii on the E. and the Belgae on the W., in the modern counties of Surrey and Sussex. Their chief town was Noviomagus. (Comp. Camden, p. 179.) [T. H. D.]

REGNUM, a town of the Belgae, on the S. of Britannia Romana, and seemingly a place of some importance, since there was a particular road to it. (Itin. Ant. p. 477.) Camden (p. 133) identifies it with Ringwood in Hampshire. Horsley, on the contrary (p. 441), conjectures it to have been Chichester; but, though Roman antiquities have been found at Chichester, its situation does not suit the distances given in the Itinerary. [T. H. D.]

REHOB (Reoβ, al. Padée, al. Ere头), a town in the tribe of Asher, occupied by the Canaanites. (Josh. xix. 28; Judg. i. 31.) A second city of the
same name is reckoned among the 22 cities of the same tribe (Jos. xix. 30); but neither of these can be identified with the Rhoob (Pokal) noticed by Euse¬
bius, 4 miles distant from Syrionpogis. [G. W.]

REHOBOT (translated Ἱερώβωτα in L. & N.), one of the wells dug by Isaac in the country of Gerar,—after Esek (contention) and Sitnah (hated),—for which the heathen did not strive: so he called it Rehoboth: "And he said, For now the Lord hath made room for us, and we shall be fruitful in the land." (Gen. xxvi. 18, 20—22.) There was a town in the vicinity of the well, the traces of which were recovered, with the well itself, by Mr. Robinson in 1844. "About a quarter of an hour beyond Shibah, we came to the remains of what must have been a very well-built, called now Rehoveh. This is undoubtedly the ancient Rehoboth, where Abraham, and afterwards Isaac, digged a well. This lies, as Rehovot did, in the land of Gerar. Outside the walls of the city is an ancient well of living and good water called Bu-Rehoveh. This most probably is the site, if not the well itself, digged by Isaac." (Williams's Holy City, vol. i. Ap. 1844, p. 165.) [G. W.]

REI APOLLINARI (Rize), in Gallia Narbonensis. Among the Oppida Latina of Gallia Narbonensis, or those which had the Latinitas, Pliny (iii. 4. 4) enumerates "Alebec Reiorum Apollinarium." The old reading, "Alebecerium Apollinarium," is a blunder made by joining two words together, which has been corrected from the better Mss., from the inscription Col. Aed. Apolinaris, and from the Table, which has Reis Apollinaris. The place may have taken its name from a temple of Apollo built after the town became Roman. The name Alebece may be corrupt, or it may be a variation of the form Albaici or Albeiici. [A. B. C.] As Pliny calls the place an Oppidum Latinum, we might suppose that it was made a colonia after his time, but the name Col. Jul. Aug. Apolinar. Reior, which appears in an inscription, shows it to have been a colony of Augustus.

Riz is in the arrangement of Digne in the department of Bouches Alpes. There are four columns standing, near the town, which may be the remains of the town. The bases and the capitals are marble: the shafts are a very hard granite, and about 18 feet high. There is also a small circular building consisting of eight columns resting on a base, but it has been spoiled by modern hands. There now stands in it a rectangular altar of one block of white marble, which bears an inscription to the Mother of the Gods and the Great Goddess. At Riz there have been discovered an enormous quantity of fragments of granite columns, and it is said that there have been a circus and a theatre in the town. (Guide du Voyageur, Richard et Hoepgart, p. 792.) [G. L.]

RIBEMOITLA (called Remetolnion in Geogr. Rav. iv. 7.), a place in Moesia Superior on the Danube. (Tab. Peut.) [T. H. D.]

REMI (Pyno), a people of Gallia Belgica (Pol. ii. 9. § 12) along the Sequana (Seine). Their capital was Durocortorum (Reima). This is Ptolemy's description (ii. 9. § 12).

Cæsar (B. G. ii. 3) says that the Remi were the nearest to the Celtae of all the Belgae, and he makes the Sequana and Martrona (Marne) the boundary between the Belgae and the Celtae. The Sequana were the neighbours of the Remi. (B. G. ii. 12.) When Cæsar had entered the country of the Remi from the south (n. c. 57), he came to the Axona (Aine), which he says is on the borders of the Remi. Eight miles from the Aine and north of it was Bibras, a town of the Remi. The Remi then extended leas far north as the Aine, and beyond it. Their capital, Durocortorum, is between the Aine and the Axona.

When the Belgae in the beginning of n. c. 57 were collecting their forces to attack Cæsar, the Remi were traitors to their country. They submitted to the Roman procusus and offered to supply him with corn, to give hostages, to receive him in their towns and to help him against the rest of the Belgae and the Germans with all their power. (B. G. ii. 3.) The Suessioni who were in political union with the Remi joined the Belgae. When the great meeting of the Gallic states was held at Bibras in n. c. 57, to raise troops to attack Cæsar at Axona, the Remi did not come, and they continued faithful to Cæsar. When Cæsar entered Gallia in n. c. 58, the Aedui and the Sequani were the leading nations; but when the Sequani were humbled, the Remi took their place, and those nations that did not like to attack themselves to the political party of the Aedui, joined the Remi. Thus the Aedui were the first of the Gallic political communities and the Remi were the second. (Cæs. B. G. vi. 12.) Even the Carnutes, a Celtic people, had attached themselves to the Remi. (B. G. vi. 4.) Cæsar rewarded the fidelity of the Remi by placing the Suessioni in dependence on them (vii. 6.).

Pliny (iv. 17) mentions the Remi as one of the Foederati Populi of Belgium. When Strabo wrote (p. 194) the Remi were a people in great favour with the Romans, and their city Durocortorum was the occasional residence of the Roman governors. [Durocortorum.]

Locean (Pharsal. i. 424) has a line on the Remi:

"Optimus eurusso Locucus rhemusque lacertos."

But the military skill of the Remi is otherwise unknown. They were a cunning people, who looked after themselves and betrayed their neighbours. [G. L.]

REPHAIM VALLIS (γελος Πολυο, Ευσκ Πολυο, κοιλια των Πυραων, LXX. κ. Γραντος, Joseph.), a valley mentioned in the north border of the tribe of Judah, the south of Benjamin (Jos. xx. 18, xviii. 18), in the vicinity of Jerusalem. It is translated "the valley of the giants" in the authorised version, except in 2 Sam. v. 18, 22, where we find that the valley of Rehobam was a favourite camping ground for the Philistines, soon after David had got possession of the stronghold of Sion; and in Joth. xviii. 1, where it is represented as a fruitful corn-bearing tract of land, well answering to the wide valley, or rather plain, immediately south of the valley of Illinom, traversed by the Bethlehem road, which is commonly identified by travellers as the "valley of the giants," although Eusebius places it in Benjamin (Onomast. s. v.).
REPHIDIM.

It evidently derived its name from the Rehob, a family of the Amalekites (Gen. xiv. 5) settled in Ashteroth Karnaim, supposed by Reland to be of the race of the Geophyraei, who came with Cadmus from Phoenicia to Greece. (Herod. v. 57; Reland, Fulaest. p. 141, comp. pp. 79, 965.) The Philistines who are said to have encamped there may have bequeathed its name to the valley. [G. W.]

REPHIDIM (Ῥεθίδιος), the eleventh encampment of the Israelites after leaving Egypt, the next before Sinai, "where was no water for the people to drink." (Num. xxxii. 14.) Moses was accordingly instructed to smite the rock in Horeb, which yielded a supply for the needs of the people, from whose murmuring the place was named Massah and Meribah. Here also it was that the Israelites first encountered the Amalekites, whom they dis- counted; and here Moses received his father-in-law Jethro. (Exod. xvii.) Its position, Dr. Robinson surmises, must have been at some point in Wady-es-Sheikh, not far from the skirts of Horeb (which he takes to be the name of the mountain district), and about a day's march from the particular mountain of Sinai. Such a spot exists where Wady-es-Sheikh issues from the high central granite cliffs; which locality is much more described by Burckhardt, and Dr. Wilson, who agrees in the identification, and names the range of rocky mountains Wadi el-Azizi. He says that "water from the rock in Horeb could easily flow to this place." (Robinson, Bib. Res. vol. i. pp. 178, 179; Burckhardt, Travels in Syria &c. p. 488; Wilson, Lands of the Bible, vol. i. p. 254.) Dr. Lepsius controverts this position and proposes El-Heessan, only a mile distant from the convent-mountain of Pharán, as the Rephidim (= "the resting-place") of the Exodus. This is at the foot of Gebel Serjed, which he regards as the mountain of the law, and finds the stream opened by Moses "in the clear-running and well-flavoured spring of Wadi Férân, which irrigates the fertile soil of El-Heessan, and causes it to exhibit all the riches of the gardens of Parán for the space of half a mile." (Lepsius, A Tour from Thebes to the Peninsula of Sinai, pp. 74-82.) [G. W.]

REGERIONUM (Ῥεγεριών, Ptol. ii. 3, § 7), a town of the Naxians in the province of Naxia in the SW. part of Britainia Barbarica, which seems to have been seated at the S. extremity of the Sinus Regiogum (Loch Rann) near Stenain. Camden identifies it with Burnegy (p. 1203). [T. H. D.]

REGERIONUS SINUS (Ῥεγεριώνος κόσμος, Ptol. ii. 3, § 1), a bay in the country of the Naxians, so named from the town of Regerionum (p. v.). Now Loch Ryan, formed by the Mull of Galloway. (Horsley, p. 375.) [T. H. D.]

REISAIJNA. [Ριθσαϊμα.] RESAPHA et BEZETH (Ῥεσαπά), a city of Syria, reckoned by Ptolemy to the district of Palmynæa (v. 15, § 24), the Risa of the Ptolemaic Tables, 21 miles from Sura; probably identical with the Rossaf of Abulfeda (Tab. Syr. p. 119), which he places near Bakka, not quite a day's journey from the Ephrathites. It is supposed to be identical with the Reseph of Scripture (Psea., LXX.), taken by Semacheri, king of Assyria, as he boasts in his inscription lent to Herodotus. (2 Kings, xix. 12.) It has been identified with Serapiopolis, without sufficient reason. (Mannert, Geographie von Syrien, p. 413.) [G. W.]

REUDIGNI, a German tribe on the right bank of the river Allis, and of the Longobard, which may have derived its name from the surrounding marshy district, or from red or red. (Tit. Germ. 40.) Various conjectures have been hazarded about their exact abodes and their name, which some have wished to change into Ruedingi or Dumingi, so as to identify them with the later Thuringi; but all is quite uncertain. [G. L.]

REUVESIO (Ῥευέσσιον), in Galilia, is the city of the Vellavi, or Vellusani, as the name is written in Ptolemy (ii. 7. § 20). Revesio is the name of the place in the Table. In the Not. Province, it is written Cevitas Vellavorum. Mabillon has shown that the place called Civitas Vetus in the middle ages is S. Paulien or Paulian, and the Civitas Vetus is supposed to be the ancient capital of the Vellavi. S. Paulien is in the department of Haute Loire, north of Le Puy. [G. L.]

RHA (Ῥα ποταμών, Ptol. v. 9, §§ 17, 19, 21, vi. 14. §§ 1, 4; Amm. Marc. xxii. 8. § 28; Paus. Agathem. ii. 10; Volus.) a river of Asiatic Sarmatia, which according to Ptolemy (i. c.), the earliest geographer who had any accurate knowledge of this longest of European streams, had its twin sources in the E. and W. extremities of the Hyperborean mountains, and discharged it into the Hyrcanian sea. The affluents which Ptolemy (vi. 14. § 4) describes as falling into it from the Rhyunicus Montes, and which must not be confounded with the river Rhyamus (Ῥυμμοῦς), are the great accession made to the waters of the Volga by the Kama in the government of Kasan. Ammianus Marcellinus (i. c.) says that its banks were covered with the plant which bore the same name as the river — the "rha" or "rheum" of Dioscorides (ρά, ρήον, ii. 11) and "rhaouma" of Pliny (xxvii. 169), or officinal rhubarb. (Comp. Fereis, Nat. Med. vol. ii. pt. 1. p. 1343.) The old reading Rha in the text of the Vossianus Mela (iii. 5. § 4) has been shown by Tschacke (ad loc.) to be a mistake of the earlier editors, for which he substitutes Casius, a river of Albania. The Oares (Ὠάρες, Herod. iv. 123, 124), where, according to the story of the Syrian expedition, the erection of eight fortresses was supposed to mark the extreme point of the march of Darius, has been identified by Klaproth, and Schafarik (Slav. Alt. vol. i. p. 499) — who mentions that in the language of some tribes the Volga is still called "Rhan" — with that river. [E. B. J.]

RHABERNI (Ῥαβερνίοι), a people of Arabia Deserta, next to the Agabeni, who were on the confines of Arabia Felix. (Ptol. v. 19. § 2.) Above them were the Masari; the Orenchi lay between them and the NW. extremity of the Parthian Gulf. Mr. Forster justly remarks that "the description of Ptolemy rather indicates the direction, than defines the positions of these several tribes." (Geog. of Arabia, vol. ii. p. 238.) [G. W.]

RHA/BDIUM (Ῥαβδίουμ, Procop. B. P. ii. 19, de Aedific. ii. 4), a strongly fortified height, in an inaccessible part of Mesopotamia, two days' journey from Durn in the direction of Persia. The works were placed on the brow of very steep rocks which overlook the surrounding country. Justimian added additional works to it. It has not been identified with any modern place. [V.]

RHACALANE. [Ῥακαλανί.] RHACATEAE (Ῥακαταί), a German tribe mentioned by Ptolemy (ii. 11. § 26) as occupying, together with the Teracataei, the country on the south of the Quadi, on the frontiers of Hannouna;
but nothing further is known about either of them. [L. S.]

RHACOTIS. [Alexandria, p. 95.]

RHAEBA (Paus. Pol. ii. 2 § 10), a town in the island of Hellespont, according to Camden (p. 1507) Rhedon in Queen's County. [T. H. D.]

RHADESTUS. [Bianth.] RHAETEA (Parka), a place in the Arcadian district of Cyzium, at the confluence of the Gortynius and Alpheius. (Paus. viiii. 28 § 3.)

RHACETIA (Parkia). The name of this country, as well as of its inhabitants, appears in ancient inscriptions invariably without the h, as Raetia and Raeti, while the Mss. of Latin authors commonly have the forms Rhaetia and Rhaeti,—a circumstance which goes far to show that the more correct spelling is without the h. Rhaetia was essentially an Alpine country, bordering in the north on Vindelicia, in the west on the territory inhabited by the Helvetii, in the south on the chain of the Alps from Mons Adula to Mons Ossa, which separated Raetia from Italy, and in the east on Noricum and Venetia; hence it comprised the modern Grisons, the Tyrol, and some of the northern parts of Lombardy. This country and its inhabitants did not attract much attention in the ancient times until the reign of Augustus, who determined to reduce the Alpine tribes which had until then maintained their independence in the mountains. After a struggle of many years Raetia and several adjoining districts were conquered by Drusus and Tiberius, B. C. 15. Raetia, within the boundaries above described, seems then to have been constituted as a distinct province (Suet. Aug. 21), Vell. Pat. ii. 39; Liv. Epit. 136; Aurel. Vict. Epit. 1). Vindelicia, in the north of Raetia, many times likewise appears as a separate province; but towards the end of the first century A. D. the two provinces appear united as one, under the name of Raetia, which accordingly, in this latter sense, extended in the north as far as the Danube and the Rhine. At a still later period, in or shortly before the reign of Constantine, the two provinces were again divided, and ancient Raetia received the name Raetia Prima, its capital being called Curia Rhaetorum (Cury); while Vindelicia was called Raetia Secunda. The northern boundary line between the two is not accurately defined by the ancients, but it is highly probable that the Alpine chain extending from the Lake of Constance to the river Inn was the natural line of demarcation: it should, however, be observed that Procopii (p. 12) includes under the name of Raetia all the country west of the river Lecus as far as the sources of the Danubius and Rhenum, while he applies the name Vindelicia to the territory between the Rhine and the Osmus.

Ancient Raetia or Raetia Proper was throughout an Alpine country, being traversed by the Alpine chains and Mons Adula. It contained the sources of nearly all the Alpine rivers watering the north of Italy, such as the Addus, Narus, Olibus, Clemis, Minus, and others; but the chief rivers of Raetia itself were the Athesis with its tributary the Isernus (or Irgamus), and the Aenus or Osmus. The magnificent valleys formed by these rivers were fertile and well adapted to agricultural pursuits; but the inhabitants depended mainly upon their flocks (Strab. xvi. 316), and the fertility of the valley was of course much less, which was not at all inferior to that grown in Italy; so that Augustus was particularly partial to it (Strab. iv. p. 200, Plin. xiv. 3, 5; Var. Georg. ii. 96; Colum. iii. 2; Martial, xiv. 100; Suet. Aug. 77).

Besides this Raetia produced abundance of wax, honey, pitch, and cheese, in which considerable commerce was carried on.

The ancient inhabitants of Raetia have in modern times, coming more than ordinary nearer from their supposed connection with the ancient Etruscans, been more frequently noticed than the Romans who had originally inhabited the plains of Lombardy, but were compelled by the invading Gauls to quit their country and take refuge in the Alps, whereby they were cut off from their kinsmen, who remained in Italy and finally established themselves in Etruria. [Justin, xx. 5; Plin. iii. 24; Steph. B. s. r. "Paroli."] This tradition derives some support from the fact recorded by Dionysius of Halicarnassus (i. 24) that the Etruscans in Etruria called themselves Easena, which is believed to be only another form of the name Raetia. A decision of this question is the more difficult because at the time when the Romans conquered Raetia the bulk of its inhabitants were Celts, which in the course of a few centuries became entirely Romanised. But, assuming that the Raetii were a branch of the Etruscan nation, it is not very likely that the Romans who conquered them should have gone back to the Alps across which they had come into Italy; it seems much more probable to suppose that the Etruscans in the Alps were a remnant of the nation left behind there at the time when the Etruscans originally migrated into Italy. But, however this may be, the anxiety to obtain a key to the mysteries of language of the Etruscans has led modern inquirers to search for it in the mountains and valleys of ancient Raetia, for they believed it possible that some Etruscan dialect was still preserved as a remnant in the body of the population in the time of Augustus consisted of Celts, who soon after their subjugation adopted the language of the conquerors, there may still exist some traces of its original inhabitants in the names of places, and even in the language of ordinary life. In the districts where the nation has remained purest, as in the valley of Engadin and in the Gröndtberth, the language spoken at present is a corruption of Latin, the Romanasch as it is called, intermixed with some Celtic and German elements; and it is generally believed to be neither Celtic, nor German, nor Latin, and are therefore considered to be Etruscan. Several names of places also bear a strong resemblance to those of places in Etruria; and, lastly, a few ancient monuments have been discovered which are in some respects like those of Etruria. The first who, after many broad and unfounded assertions had been made, undertook a thorough investigation of these points, was L. Steub, who published the results of his inquiries in a work "über die Uberreste Racketes und ihren Zusammenhang mit den Etrusern," Munich, 1843, Svo. A few years ago another scholar, Dr. W. Freund, during a residence in Raetia collected a vast number of facts, well calculated to throw light upon this obscure subject, but the results of his investigations have not yet been published.

As to the history of the ancient Raetians, it has already been intimated that they became known to the Romans in the second century B. C. They were a war-like and adventurous, an enterprising people, who indulged their propensity to rob and plunder even at the time when they were subject to Rome, and when their rulers had made a great road through their country into Noricum (Dion Cass. liv. 22;
RHAGAE.

Hor. Carm. iv. 14. 15). Like all mountainous, they cherished great love of freedom, and fought against the Romans with rage and despair, as we learn from Florus (iv. 12), who states that the citizen women, who also took part in the war, after having spent their arrows, threw their own children in the faces of the Romans. Still, however, they were obliged to yield, and in n. c. 15 they were finally subdued, and their country was made a Roman province. During the later period of the Empire their territory was almost entirely depopulated; but it somewhat recovered at the time when the Ostrogoths, under Theodoric, took possession of the country, and placed its administration in the hands of a Dux (Epit. L. & Severini, 29; Cassiod. Var. iv. 4). After the death of Theodoric, the Boesarii spread over Rhaetia and Noricum, and the river Licus became the boundary between the Alemani in Vindelicia, and the Bokarii in Rhaetia. (Egin. Vit. Carol. M. 11.) The more important among the various tribes mentioned in Rhaetia, such as the Lepontii, Vindemi, Caluccones, Vencones, Sarunetes, Isacci, Binexentes, Gexauni, Tri- dentini, and Euganet, are discussed in separate articles. The Pedae Cospi are a rather important portion of the few towns of the country; the others are known almost exclusively through the Itineraries, two roads having been made through Rhaetia by the Romans, the one leading from Augusta Vindelicorum to Commur, and the other from the same town to Veroia; Paulus Diaconus, however, mentions a few towns of the interior which were not situated on these high-roads, such as the town of Malia, which was destroyed in the eighth century by the fall of the mountain, and the village of which is now occupied by the town of Meran. [L. S.]

RHAGAE (Paya, Arrian, Anab. iii. 30; Strab. xi. pp. 514, 524; Payae, Isidor. Char. § 7; Paya, Steph. B. s. v.; Paya, Ptol. vi. § 4; Rhages, Tobit, i. 14: Eth. Payavos), a great town of Media Magna, which is first known to us in history as the place to which the Jewish exiles were sent. (Tobit, i. 14, iv. 20, ix. 2.) It was situated in the eastern part of the country towards Parthia, one day's journey from the Persian Camp in the mountains, and 10 days' march from Ecbatana (Hamadan). The name of the place is stated by Strabo to have been derived from the frequent earthquakes to which it had been subject, but this is contrary to all probability (Strab. xi. p. 514); he adds, also, that, like many other places in the neighbourhood, it had been built (or rather rebuilt) by the Greeks (p. 524). In later times it appears to have been rebuilt by Seleucus Nicator, who called it Europas. (Strab. i. c.) Still later it appears to have been again rebuilt by one of the house of Arsaces, who named it in consequence Arsacia. (Strab. i. c.; Steph. B. s. v.) In modern times the ancient name has returned; and the ruins of Rhey, which have been visited and described by many travellers, no doubt represent the site of the ancient Rhagae. (Ker Porter, Travels, vol. i. p. 358.) Pliny mentions a town of Parthia, which he calls Apameak Rahagae (vil. 14. § 17). Some geographers have confused this with the town, as Rhagae; but the inference is rather that it is not. [V.]

RHAGIANA. [Rigahae.]

RHAMANITAE. 1. (Paquavtai, Strab. xvi. p. 782), supposed by Mr. Forster to be identical with the Rahanitae of Ptolemy (Paqavota, vi. 7. § 24), whom that geographer places under Mount Climax. He says "their common position, north of Mount Climax, coincides with the Pompeian map which the Pompeian names to argue the identity" (Geog. of Archia, vol. i. p. 68, note); but it is by no means clear that the Rahanitae lay near Mount Climax. All that Strabo says of them is, that Marsaba, the limit of the expedition of Aeolus Gallus, the sieve of which he was forced to raise for want of water, lay in the country of the Rahanitae; but nothing in geography is more difficult to determine than the situation of that town. [Marsaba.]

2. A people of the same name is mentioned by Pline, as existing on the Persian Gulf, identical with the Anartii of Ptolemy and the Epifamanitae. [G. W.]

RHAMIDAVA. [Dacta, p. 744, b.]

RHAMNUS. 1. (Pavmuouos, Pavouos, Eth. Pavmuouos, Pevouos), a demus of Attica, belonging to the tribe Aeantis (Steph. B., Harpoct., Suid., s. c.), which derived its name from a thick prickly shrub, which still grows upon the site. (Pavmuouos, contr. of Pavmuos from Pavmuos.)

The town stood upon the eastern coast of Attica, at the distance of 60 stadia from Marathon, and upon the road leading from the latter town to Oropus. (Pans. i. 33. § 2.) It is described by Scylax (p. 21) as a fortified place; and it appears from a decree in Demosthenes (pro Cor. p. 238, Peiske) to have been regarded as one of the chief fortresses in Attica. It was still in existence in the time of Pline ("Rhamnus pagus, locus Marathon," iv. 7. § 11). The name of the town is sometimes mentioned by Pausans for the birthplace of the orator Antiphon (Dict. of Biogr. s. r.), but it was widely celebrated in antiquity on account of its worship of Nemesis, who was hence called by the Latin poets Rhamnusia virgo and Rhamnusia dea. (Catull. Ixxxvi. 71; Claud. B. Get. 631; Or. Met. iii. 406; Trist. v. 8. § 9; Stat. Silv. iii. 5. § 5.) The temple of the goddess was at a short distance from the town. (Pans. l. c.; comp. Strab. i. p. 399.) It contained a celebrated statue of Nemesis, which, according to Pausans, was the work of Pheidias, and was made by him out of a block of marble which was brought with them for the construction of a trophy. The statue was of colossal size, 10 cubits in height (Hesych. s. v.; ZenoB. Prah. v. 82), and on its basis were several figures in relief. Other writers say that the statue was the work of Agoracritus of Paros, a disciple of Pheidias. (Strab. i. p. 396; Plin. xxxvi. 5. 4. § 17, Sicil.) It was however a common opinion that Pheidias was the real author of the statue, but that he gave up the honour of the work to his favourite disciple. (Suid. s. e.; ZenoB. l. c.; Tzetz. Chil. vii. 960.) Rhamnus stood in a small plain, 3 miles in length, which, like that of Marathon, was shut out from the rest of Attica by surrounding mountains. The town itself was situated upon a rocky peninsula, surrounded by the sea for two-thirds of its circumference, and connected by a narrow ridge with the mountains, which closely approach it on the land side. It is now called Oropo-Kastro. (Oeobou-Kartos, a corruption of Oeobou-Kartos, Oeobou-Kartos, a name frequently applied in Greece to the ruins of Hellenic fortresses.) It was about half a mile in circuit, and its remains are considerable. The principal cistern was situated upon the narrow ridge already mentioned, and is still preserved; and adjoining it is the southern wall,
about 20 feet in height. At the head of a narrow

glen, which leads to the principal gate, stood the

ruins of the temple of Nemesis upon a large arti-

craft platform, supported by a wall of pure white

marble. But we find upon this platform, which

formed the στάμνος or sacred enclosure, the remains of
two temples, which are almost contiguous, and

nearby though not quite parallel to each other.
The larger building was a peripteral hexastyle, 71 feet
long and 33 broad, with 12 columns on the side, and

with a pronaos, cela, and posticum in the usual manner.
The smaller temple was 21 feet long by 24 feet broad, and consisted only of a cela, with a portico containing two Doric columns in

antae. Among the ruins of the larger temple are

some fragments of a colossal statue, corresponding in

size with that of the Hellenistic Nemesis; but these

fragments were made of Attic marble, and not of

Parian stone as stated by Pausanias. It is, how-

ever, not improbable, as Leake has remarked, that

the story of the block of stone brought by the Per-
sians was a vulgar fable, or an invention of the

period of the Persian War, from which Pausanias may have derived it.

Among the ruins of the smaller temple was found a

fragment, wanting the head and shoulders, of a

statue of a human size in the archaic style of the

Athenian school. This statue is now in the British

Museum. Judging from this statue, as well as from

the diminutive size and rude architecture of the

smaller temple, the latter appears to have been

the more ancient of the two. Hence it has been

inferred that the smaller temple was anterior to the

Persian War, and that it was destroyed by the Persians

just before the battle of Marathon; and that the

larger temple was erected in honour of the goddess,

who had taken vengeance upon the insolence of the

barbarians for outraging her worship. In front of

the smaller temple are two chairs (ζηρόντος) of white

marble, upon one of which is the inscription Νεμέουσα

Σατρατα τάν ἄθερεν, and upon the other Θεία Σατρά

τάν ἄθερεν, which has led some to suppose that

the smaller temple was dedicated toThemis. But

it is more probable that both temples were dedi-
cated to Nemesis, and that the smaller temple was

erected in ruins before the larger was erected. A dif-
ficulty, however, arises about the time of the destruc-
tion of the smaller temple, from the fact that the

forms of the letters and the long vowels in the inscrip-
tions upon the chairs clearly show that those inscrip-
tions belong to an era long subsequent to the battle

of Marathon. Wordsworth considers it ridiculous to

suppose that these chairs were dedicated in this temple

after its destruction, and hence conjectures that the

temple was destroyed towards the close of the Pe-

on-Persian War by the Persian allies of Sparta.

(Leake, Remains of Attic, p. 105, seq., 2nd ed.,

Northern Greece, vol. ii. p. 343, seq.; Wordsworth,

Athens and Attica, p. 34, seq.; Uncited Antiq-

guates of Attica, c. vi. p. 41, seq.)

2. A harbour on the W. coast of Crete near the

promontory Chersonesus. (Ptol. iii. 17, 2.)

Pliny, on the contrary, places it in the interior of

the isle (iv. 12, s. 20).

BILLIPEAN AUTHORITIES. [Rhapt.]

BILATAPA (Cf. Párra, Ptol. i. 19, § 1, 14, § 4; Peripl.

Mar. Eryth. p. 10), was, according to the author of the

Biblioth. Histor. et la major part of the

the most distant station of the

Araban trade with Aegypt, Aethiopia, and

the ports of the Red Sea. Its correct lat. is 15° 5'.
The name is derived from the peculiar boats in use

there. These are termed by the natives down

(EAHSII), and, like the modern boats of Pota on the

Mozambique coast, were frequently of 100 or 120

tons burden. But whether vessels of this size or merely

canoes, all the craft at this part of the E.

coast of Africa were formed of the hollowed trunks of
trees and joined together by cords made of the

fibres of the cocoanut instead of iron or wooden

pins, and hence the Greeks gave them, and the

harbour which they principally frequented, the name of

" the sewed " (τὰ παττά). Ptolemy speaks (i.

17, § 7, iv. 7, § 28, vii. 3, § 6, i. 17, § 12, &c.) of

a promontory RHAPTIA, a river RHAPTUS, and a

tribe " of this name RHAPSI. All these may

probably be referred to the immediate neigh-

bourhood of the town Rhapta, since the emporium

was doubtless the most striking object to the cara-

vans trading there and to the Greek merchants

accompanying the caravans. The promontory was

one of the numerous bluffs or headlands that give to

this portion of the E. coast of Africa the appear-

ance of a saw, the shore-line being everywhere

indented with sharp and short projections. The

river was that between which Pausanias was derived.

The principal temple, which Pausanias saw in

Attica, belonged to the Cretan school. This statue

is now in the British Museum.

A great and similar statue of the goddess was

erected in honour of the goddess, who had taken

vengeance upon the insolence of the barbarians for

outraging her worship. In front of the smaller

temple are two chairs (ζηρόντος) of white marble,

upon one of which is the inscription Νεμέουσα

Σατρατα τάν ἄθερεν, and upon the other Θεία Σατρά

τάν ἄθερεν, which has led some to suppose that

the smaller temple was dedicated to Themis. But

it is more probable that both temples were dedi-
cated to Nemesis, and that the smaller temple was

erected in ruins before the larger was erected. A dif-
ficulty, however, arises about the time of the destruc-
tion of the smaller temple, from the fact that the

forms of the letters and the long vowels in the inscrip-
tions upon the chairs clearly show that those inscrip-
tions belong to an era long subsequent to the battle

of Marathon. Wordsworth considers it ridiculous to

suppose that these chairs were dedicated in this temple

after its destruction, and hence conjectures that the

temple was destroyed towards the close of the Pe-

on-Persian War by the Persian allies of Sparta.

Northern Greece, vol. ii. p. 343, seq.; Wordsworth,

Athens and Attica, p. 34, seq.; Uncited Antiq-

guates of Attica, c. vi. p. 41, seq.)

2. A harbour on the W. coast of Crete near the

promontory Chersonesus. (Ptol. iii. 17, 2.)

Pliny, on the contrary, places it in the interior of

the isle (iv. 12, s. 20).

BILLIPEAN AUTHORITIES. [Rhapt.]
RHAPPTUM.

Rhodian chiefs. From Rhapta they exported ivory (inferior to that of Aulicus), tortoise-shell (the next best in quality to that of India), rhinoceros-horn, and nauplius (a shell probably used in dyeing). These commercial features are nearly repeated at the present day in this region. The African still builds and mans the ship; the Arab is the navigator and superscarpo. The ivory is still inferior in quality, being for the most part found in the woods, damaged by rain, or collected from animals drowned by the overflow of the rivers at the equinoxes. The hawksbill turtle is still captured in the neighborhood of the river Gorgiad, and on the shore opposite the island of Pata. (See Vincent, Voyage of Nearchus, vol. ii. pp. 169–183; Cooley, Claudius Ptolemy and the Nile, pp. 68–72.) [W. B. D.]

RHAPPTUM PROMONTORIUM.

[RHAPTA.]

RHAPTTUS FLUVIUS. [RHAPTA.]

RHASTIA (Pausina), a town in the country of the Troeeci in Galatia, in Asia Minor, which is noticed only by Ptolemy (v. 4, § 9). [L. S.]

RHATOSTATHYBIUS (Patzostathibios, Ptol. ii. 3, § 3), a river on the W. coast of Britannia Romania, according to Camden (p. 733) the Taf. [T. H. D.]

RHAUSUS (Pausinos, Seyl. p. 19; Polyb. xxxi. 1, § 1, xxxiii. 13: Eih. Pausinos, fam. Pausias, Steph. B. s. v.). From the story told about the Cretan bees by Antenor in his "Cretica" (op. Ael. N. A. xvi. 85, comp. Diod. v. 70), it seems that there were two cities of this name in Crete. The existence of two places so called in the island might give rise to some such legend as that which he mentions. Pasley (CRETE, vol. i. p. 235) fixes the site of one Rhacena at Hagios Myron, between Cossus and Gortyna, and from its proximity to Mt. Ida infers that it is the more ancient. [E. B. J.]

COIN OF RHAUSUS.

RHEBAS (Pappas), a very small river on the coast of Bithynia, the length of which amounts only to a few miles; it flows into the Euxine, near the entrance of the Bosporus, north-east of Chalcedon, and still bears the name of Rhea. (Seylax, p. 34; Diyas. Per. 794: Ptol. v. I. § 5; Arrian, Perip. F. E. p. 13; Marchant, p. 69; Tha. vi. 1; Steph. B. s. v.). This little river, which is otherwise of no importance, owes its celebrity to the story of the Argonauts. (Orph. Agy. 711; Apollon. Rhod. ii. 650, 789.) It also bore the names of Rheasus and Rheas (Pinn. L.; Solin. 43), the last of which seems to have arisen from a confusion with the Rhessus mentioned by Homer. [L. S.]

RHEHONE. [REDONE.]

RHEGIMUM (Rhygos: Etyh. Rhygos, Rhegimus: Reggio), an important city of Magna Graecia, situated near the southern end of the Bruttian peninsula, on the E. side of the Sicilian straits, and almost directly opposite to Messana in Sicily. The distance between the two cities, in a direct line, is only about 6 geographical miles, and the distance from Rhegium to the nearest point of the island is somewhat less. There is no doubt that it was a Greek colony, and we have no account of any settlement previously existing on the site; but the spot is said to have been marked by the tomb of Jocasta, one of the sons of Aeolus. (Heracid. Polit. 25.) The foundation of Rhegium is universally ascribed to the Chalcidians, who had, in a year of famine, come over a tenth part of their citizens to Apollo; and these, under the direction of the oracle at Delphi, proceeded to Rhegium, whether they were also invited by their Chalcidian brethren, who were already established at Zancle on the opposite side of the strait. (Strab. vi. p. 257; Heracid. L. C.; Diod. xiv. 40; Thuc. vi. 4; Sclyn. Ch. 511.) With these Chalcidians were also united a body of Messenian exiles, who had been driven from their country at the beginning of the First Messenian War, and had established themselves for a time at Macistus. They were apparently not numerous, as Rhegium always continued to be considered a Chalcidian city; but they comprised many of the chief families in the new colony; so that, according to Strabo, the presiding magistrates of the city were always taken from among these Messenian citizens, down to the time of Amazias, who himself belonged to this dominant caste. (Strab. vi. p. 257; Paus. iv. 23, § 6; Thuc. vi. 4; Heracid. L. C. 1.) The date of the foundation of Rhegium is uncertain; the statements just mentioned, which connect it with the First Messenian War would carry it back as far as the 8th century B.C.; but they leave the precise period uncertain. Pausanias considers it as founded after the end of the war, while Antiochus, who is cited by Strabo, seems to refer it to the beginning; but his expressions are not decisive, as we do not know how long the exiles may have remained at Macistus; and it is probable, on the whole, that we may consider it as taking place shortly after the close of the war, and therefore before 729 B.C. (Paus. L. C.; Antioch. ap. Strab. L. C.). In this case it was probably the most ancient of all the Greek colonies in this part of Italy. Various etymologies of the name of Rhegium are given by ancient authors; the one generally received, and adopted by Arcaleus (op. Strab. L. C.), was that which derived it from the burning sand of the coasts of Sicily and Italy, which was generally ascribed to an earthquake. (Diod. iv. 85; Justin. iv. 1, &c.) Others absurdly connected it with the Latin regim (Strab. L. C.), while Heracleides gives a totally different story, which derived the name from that of an indigenous hero. (Heracid. Polit. 25.)

There seems no doubt that Rhegium rose rapidly to be a flourishing and prosperous city; but we know almost nothing of its history previous to the time of Amazias. The constitution, as we learn from Heracleides, was aristocratic; the management of affairs resting wholly with a council or body of 1000 of the principal and wealthiest citizens. After the legislation of Chana das at Catana, his laws were adopted by the Rhegiens as well as by the other Chalcidian cities of Sicily. (Heracid. L. C.; Arist. Pol. ii. 12, v. 12.) The Rhegiens are mentioned as affording shelter to the Inquisite Pheocas, who had been driven from Corsica, previous to the foundation of Vella. (Herod. i. 166, 167.) According to Strabo they extended their dominion over many of the adjoining towns, but these could only have been small places, as we do not hear of any colonies of importance founded by the Rhegiens; and their territory extended only as far as the Halieus on the E.
RHEGIUM.

where they adjoined the Lucrian territory, while the Lucrian colonies of Melissa and Heliopomium prevented their extension on the N. Indeed, from the position of Rhegium it seems to have always maintained closer relations with Sicily, and taken more part in the politics of that island than in those of the other Greek cities in Italy. Between the Rhegienses and Lucrians, however, there appears to have been a constant spirit of enmity, which might be readily expected between two rival cities, such near neighbours, and belonging to different races. (Thuc. iv. 1. 24.)

Rhegium appears to have participated largely in the political events introduced by the Pythagoreans and even became, for a short time after the death of Pythagoras, the head-quarters of his sect (Jamb. Vit. Pyth. 33, 130, 251); but the changes then introduced do not seem to have been permanent.

It was under the reign of Anaxilas that Rhegium first rose to a degree of power far greater than it had previously attained. We have no account of the circumstances attending the elevation of that despot to power, an event which took place, according to Diodorus, in B. C. 494 (Diod. xi. 48); but we know that he belonged to one of the ancient Messenian families, and to the oligarchy which had previously ruled the state. (Strab. vi. p. 257; Paus. iv. 23 § 6; Arist. Pol. v. 12; Thuc. vi. 4.) Hence, when he made himself master of Zanee on the opposite side of the straits, he gave to that city the name of Messana, by which it was ever afterwards known. [Messenia.] Anaxilas continued for some years ruler of both these cities, and thus was undisputed master of the Sicilian straits: still further to strengthen himself in this sovereignty, he fortified the rocky promontory of Scyllium, and established a naval station there to guard the straits against the Tyrrhenian pirates. (Strab. vi. p. 257.)

He meditated also the destruction of the neighbouring city of Locri, the perpetual rival and enemy of Rhegium, but was prevented from carrying out his purpose by the intervention of Hieron of Syracuse, who espoused the cause of the Locrians, and whose enmity Anaxilas did not choose to provoke. (Schoeck. and Mommsen. Diet. Pyth. ii. 34.) In course of his daughter's marriage, indeed, married to the Syracusan despot, whose friendship he seems to have sought assiduously to cultivate.

Anaxilas enjoyed the reputation of one of the mildest and most equitable of the Sicilian rulers (Justin, iv. 2), and it is probable that Rhegium enjoyed great prosperity under his government. At his death, in n. c. 476, it passed without opposition under the rule of his two sons; but the government was administered during their minority by their guardian Micythus, who dethroned ever after Rhegium and Messana for nine years with exemplary justice and moderation, and at the end of that time gave up the sovereignty into the hands of the two sons of Anaxilas. (Diod. xi. 48, 66; Herod. vii. 170; Justin. iv. 2; Macrob. Sat. i. 11.) These, however, did not hold it long; they were expelled in n. c. 461, the revolutions which at that time agitated the cities of Sicily having apparently extended to Rhegium also. (Diod. xi. 76.)

The government of Micythus was marked by one great disaster; in n. c. 473, the Rhegienses, having sent an auxiliary force of 3000 men to assist the Tarentines against the Iapygians, shared in the great defeat which they sustained on that occasion [Tarentum]; but the statement of Diodorus that the barbarians not only pursued the fugitives to the gates of Rhegium, but actually made themselves masters of the city, may be safely rejected as incredible (Diod. xi. 52; Herod. vii. 170; Diod. Bibl. Hist. of Greece, vol. v. p. 319.) A story told by Justin, that the Rhegienses being agitated by domestic dissensions, a body of mercenaries, who were called in by one of the parties, drove out their opponents, and then made themselves masters of the city by a general massacre of the remaining citizens (Justin, iv. 3), must be placed (if at all) shortly after the expulsion of the sons of Anaxilas; but the whole story has a very apocryphal air; it is not noticed by Polybius, whom, it is certain that the old Chalcidice citizens continued in possession of Rhegium down to a much later period.

We have very little information as to the history of Rhegium during the period which followed the expulsion of the despots; but it seems to have retained its liberty, in common with the neighbouring cities of Sicily, till it fell under the yoke of Dionysius. In B. C. 427, when the Athenians sent a fleet under Laches and Charoedeus to support the Leonines against Syracuse, the Rhegienses espoused the cause of the Chalcidice cities of Sicily, and not only allowed their city to be made the head-quarters of the Athenian fleet, but themselves furnished a considerable auxiliary force. They were in consequence engaged in continual hostilities with the Locrians. (Diod. xii. 54; Thuc. iii. 86, 1. 24, 25.) But they pursued a different course on occasion of the great Athenian expedition to Sicily in B. c. 415, when they refused to take any part in the contest; and they appear to have persevered in this neutrality to the end. (Diod. xiii. 5; Thuc. iv. 24, 170.)

It was not long after this that the increasing power of Dionysius of Syracuse, who had destroyed in succession the chief Chalcidice cities of Sicily, became a subject of alarm to the Rhegienses; and in n. c. 399 they fitted out a fleet of 50 triremes, and an army of 6000 foot and 600 horse, to make war upon the despot. But the Messenians, who at first made common cause with them, having quickly abandoned the alliance, they were compelled to desist from their projected war. (Diod. xiv. 40.)

It was not long after this that the increasing power of Dionysius of Syracuse, who had destroyed in succession the chief Chalcidice cities of Sicily, became a subject of alarm to the Rhegienses; and in n. c. 399 they fitted out a fleet of 50 triremes, and an army of 6000 foot and 600 horse, to make war upon the despot. But the Messenians, who at first made common cause with them, having quickly abandoned the alliance, they were compelled to desist from their projected war. (Diod. xiv. 40.)

The latter, who was meditating a great war with Carthage, was desirous to secure the friendship of the Rhegienses; and his proposals of a matrimonial alliance were rejected with scorn; he in consequence concluded such an alliance with the Locrians, and became from this time the implacable enemy of the Rhegienses. (Ib. 44, 107.)

It was from hostility to the latter that he a few years later (n. c. 394), after the destruction of Messana by the Carthaginians, restored and fortified that city, as a post to command the straits, and from which to carry on his enterprises in Southern Italy. The Rhegienses in vain sought to forestall him; they made an unsuccessful attack upon Messana, and were foiled in their attempt to establish a colony of Xanians at Mylae, as a post of offence against the Messenians. (Ib. 87.)

The next year Dionysius, in his turn, made a sudden attack on Rhegium itself, but did not succeed in surprising the city; and after ravaging its territory, was compelled to draw off his forces. (Ib. 90.)

But in n. c. 389 he resolved to design on a larger scale, and laid regular siege to the city with a force of 20,000 foot, 1000 horse, and a fleet of 120 triremes. The Rhegienses, however, opposed a vigorous resistance: the fleet of Dionysius suffered severely from a storm, and the approach of winter at length compelled him
RHEGIUM.

Rhegium was now restored to the survivors of its former inhabitants (Pol. i. 7; Liv. xxxi. 31; Appian, l. c.); but it must have suffered severely, and does not seem to have again recovered its former prosperity. Its name is hardly mentioned during the First Punic War, but in the second the citizens distinguished themselves by their fidelity to the Roman cause, and repeated attempts of Hannibal to make himself master of the city were uniformly repulsed. (Liv. xxiii. 30, xxxiv. 1. xxvi, 12, xxxix. 6.) From this time the name of Rhegium is rarely mentioned in history under the Roman Republic; but we learn from several incidental notices that it continued to enjoy some degree of independence, and was referred to by a "sedentaria civitas," though bound, in common with other cities in the same condition, to furnish an auxiliary naval contingent as often as required. (Liv. xxxi. 31, xxxv. 16, xxxvi. 42.) It was not till after the Social War that the Rhegiens, like the other Greek cities of Italy, passed into the condition of Roman citizens, and Rhegium itself became a Roman Municipium. (Cic. Verr. iv. 60, Phil. ii. 3, pro Arch. 3.) Shortly before this (n. c. 91) the city had suffered severely from an earthquake, which had destroyed a large part of it (Strab. v. 258; Jul. Obseq. 114): but it seems to have, in great measure, recovered from this calamity, and is mentioned by Appian towards the close of the Republic as one of the eighteen flourishing cities of Italy, which were promised by the Triumphs to the veterans as a reward for their services. (Appian, B. c. iv. 3.) Rhegium, however, had the good fortune to escape on this occasion by the personal favour of Octavian (Tib. 86); and during the war which followed between him and Sextus Pompeius, n. c. 38—36, it became one of the most important posts, which was often made by Octavian the head-quarters both of his fleet and army. (Strab. vi. 258; Appian, B. c. vi. 81, 84; Dion Cass. xlviii. 18, 47.) To reward the Rhegiens for their services on this occasion, Augustus increased the population, which was in a declining state, by the addition of a body of new colonists; but the old inhabitants were not expelled, nor did the city assume the title of a Colonia, though it adopted, in gratitude to Augustus, the name of Rhegium Julia. (Strab. l. c.; Pol. iii. 1. § 9; Orell. Insocr. 3838.) In the time of Strabo it was a populous and flourishing place, and was one of the few cities which, like Neapolis and Tarentum, still preserved some remains of its Greek civilisation. (Strab. vi. pp. 253, 259.) Traces of this may be observed also in inscriptions, some of which, of the period of the Roman Empire, present a curious mixture of Greek and Latin, while others have the names of Roman magistrates, though the inscriptions themselves are in Greek. (Morisani, Insocr. Regiae, 4to. Neap. 1770, pp. 83, 126, &c.; Boeckh, C. I. 5760—5768.)

Its favourable situation and its importance, as commanding the passage of the Sicilian straits, preserved Rhegium from falling into the same state of decay as many other cities in the south of Italy. It continued to exist as a considerable city throughout the period of the Roman Empire (Plin. iii. 3. s. 10; Pol. l. c.; Itin. Ant. pp. 112, 115, 490), and was the termination of the great highway which led through the southern peninsula of Italy, and formed the customary mode of communication with Sicily. In A. D. 410 Rhegium became the limit of the progress of Alaric, who after the capture of Rome advanced through Campania, Lucania,
and Bruttium, laying waste those provinces on his march, and made himself master of Rhegium, from whence he tried to cross over into Sicily, but, being frustrated in this attempt, retired his steps as far as Consentia, where he died. (Hist. Miscell. xiii. p. 535.) Somewhat later it is described by Cassiodorus as still a flourishing place (Var. xii. 14), and was still one of the chief cities of Bruttium in the days of Paulus Diaconus. (Hist. Lang. ii. 17.) During the Gothic wars after the fall of the Western Empire, Rhegium bears a considerable part, and was a strong fortress, but it was taken by Totila in A.D. 549, previous to his expedition to Sardinia. (Procop. B. G. i. 8. in. 18, 37, 38.) It subsequently fell again into the hands of the Greek emperors, and continued subject to them, with the exception of a short period when it was occupied by the Saracens, until it passed under the dominion of Robert Guiscard in A.D. 1060. The modern city of Reggio is still a considerable place, with a population of about 10,000 souls, and is the capital of the province of Calabria Ultra; but it has suffered severely in modern times from earthquakes, having been almost entirely destroyed in 1783, and again in great part overthrown in 1814. It has no remains of antiquity, except a few inscriptions, but numerous coins, urns, mosaics, and other relics have been brought to light by excavations.

Rhegium was celebrated in antiquity as the birthplace of the lyric poet Ibycus, as well as that of Lycus the historian, the father of Lycephon. (Suid. s. v. Τιθόκος; I. s. v. Αιοκός.) It gave birth also to the celebrated sculptor Pythagoras (Dogg. Lexit. viti. i. § 47; Paus. vi. 4. § 4); and to several of the minor Pythian poets, whose names are enumerated by Iamblichus (Vit. Pyth. 267), but none of these are of much note. Its territory was fertile, and noted for the excellence of its wines, which were especially esteemed for their salubrity. ( Athen. i. p. 26.) Cassiodorus describes it as well adapted for vines and olives, but not suited to corn. (Var. xii. 14.) Another production in which it excelled was its breed of mules, so that Anaxilas the despot was repeatedly driven from Olympic games with the horses drawn by mules (ἀτρόφος), and his son Leopron obtained the same distinction. One of these victories was celebrated by Simonides. (Heracld. Polit. 25; Athen. i. p. 3; Pollux, Onomast. v. 75.)

Rhegium itself was, as already mentioned, the termination of the line of high-road which traversed the whole length of Southern Italy from Capua to the Sicilian strait, and was first constructed by the praetor Popillius in B.C. 134. (Orell. Inscr. 3508; Mommsen, Inschr. R. N. 6278; Ritschel, Mon. Epig. pp. 11, 12.) But the most frequent place of passage for crossing the strait was Messana, in ancient as well as in modern times, not at Rhegium itself, but at a spot about 9 miles further N, which was marked by a column, and thence known by the name of Columna Rhegina. (Htin. Ant. pp. 98, 106, 111; Pinn. iii. 5. s. 10; Ἠ Ἰππικών στῆλα, Strab. v. p. 257.) The distance of this from Rhegium is given both by Ptolemy and Strabo at 123 miles or 100 stadium, and the latter places it only 6 stadium from the promontory of Casys or Punta del Pezzo. It must therefore have been situated in the neighbourhood of the modern village of Villa San Giovannii, which is still the most usual place of passage. But the distance from Rhegium is overestimated by both geographers, the Punta del Pezzo itself being less than 10 miles from Reggio. On the other hand the inscription of La Polita (Forum Popilia) gives the distance from the place of passage, which it designates as "Ad Statuam," at only 6 miles. (Mommsen, Inschr. R. N. 6276.) Yet it is probable that the spot meant is really the same in both cases, as from the strong current in the straits the place of embarkation must always have been nearly the same.

[C. E. B.]

COIN OF RHEGNUM.

RHEGMA (Ῥηγμα), the name of a lake or lagoon formed by the river Cydnus in Cicia, at its mouth, about 5 stadia below Tarsus; the inhabitants of this city used it as their port. (Strab. xiv. p. 572; Stadtnam. Mar. Mag. §§ 155, 156, where it is called Ρηγματος; Ht. Hieros. p. 579.) The two last authorities place the Rhegma 70 stadia from Tarsus, which may possibly refer to a particular point of it, as the Rhegma was very extensive.

[L. S.]

RHEGMEA [ΈΡΗΓΜΑΝΤΑΙ.] RHEMIAE (Ῥημαία, Bückh, Inschr. no. 4590), a town of Amausitis, as appears from an inscription by Burchhardt (Travel. p. 69) at Deir-el-Lobein, situated three-quarters of an hour from the modern village of Rima-el-Lahf, where there stands a building with a flat roof and three receptacles for the dead, with an inscription over the door. (Bückh, Inschr. 4587—4589; comp. Buckingham, Arab Tribes, p. 256.)

[R. B. J.]

RHEITHRIUM. [Ἰθηκά, p. 98, a.]

RHEITI. [Ἀτικά, p. 528, a.]

RHEILI. [Ῥηηλί.] RHEINIA. [Ῥεινία, p. 760.]

RHEINUS (Ῥηηνός), one of the largest rivers in Europe, is not so long as the Danube, but as a commercial channel it is the first of European rivers, and as a political boundary it has been both in ancient and modern times the most important frontier in Europe. The Rhine rises in the mountains which belong to the group of the St. Gotthard in Switzerland, about 4° 30' N. lat. There are three branches. The Vorder-Rhein and the Mittel-Rhein meet at Dissentz, which is only a few miles from their respective sources. The united stream has an east by north course to Reichenau, where it is joined by the Hinter-Rhein. At Chur (Curiam), which is below the junction of the Hinter-Rhein, the river becomes navigable and has a general northern course to the Bodensee or Lake of Constance, the Laus Breguntinus or Venetus. This lake consists of two parts, of which the western part or Untersee, is about 50 feet lower than the chief part, called the Lake of Constance. The course of the Rhine from the Untersee is westward, and it is navigable as far as the falls of Schaffhausen, which are not mentioned by any of the ancient geographers. It is interrupted by a smaller fall at Laufenburg, and there is a rapid near Rheinfelden, 10 miles below Laufenburg. The course is still west to
Rhenus.

Basle (Basilia), where the Rhine is about 800 feet above the sea, and here we may fix the termination of the Upper Rhine. The drainage of all that part of Switzerland which lies north of the Lake of Geneva and the Bernese Alps is carried to the Rhine by the Ave, which joins it on the left bank at Coblenz, one of the Roman Confluentes. From Basle the Rhine has a general north course to Bonn, where it enters the low country which forms a part of the great plain of Northern Europe. This may be called the Middle Rhine. In this part of the course the river receives few streams on the left bank. The chief river is the Mosel (Mosella), which joins it at Coblenz (Confluentes). On the right bank it is joined by the Neckar (Nicer), the Main (Moenus), which joins it at Mainz (Moguntiacum), and the Lahn (Lungana), which joins it at Niederlahnstein.

Below Bonn the river still has a general north course past Cologne (Colonia Agrippinensis) as far as Wiesbaden, where it is joined on the right bank by the Luppe (Luppa), and then the narrow Rhine, the Neckar, and the Mosel (Valesia), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Mosa (Moss). The Mosa itself divides several times after its junction with the Waal. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. The main branch is called the Waal (Vahalis), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcu...
divides into two branches at the head of the Batavorum Insula. The branch which flows along the German bank keeps its name and its rapid course to the Ocean. The branch which flows on the Gallic bank is broader and less rapid: this is the Vallatis (Waal), which flows into the Mosas. (Hist. v. 23.) [Batavorum Insula.] He knows only two outlets of the Rhine, and one of them is through the Mosas. The Rhine, as he calls the eastern branch, is the boundary between Gallicia and Germania. East of this eastern branch he places the Frisi (Ann. i. 72); and here he agrees with Pliny, who places them between the Middle Rhine and the Ems. Accordingly the Rhenum of Tacitus is the Rhenum of Mela and Pliny.

This third branch of the Rhine seems to be that which Tacitus calls the work of Drusus (Ann. ii. 6), and which Suetonius (Claudius, c. 1) mentions without saying where it was: "Drusus trans Rhenum fossas novi et immensi operis effect; quae nunc adhuc Drusinae vocantur." Germanicus in his expedition against the northern Germans (Tac. Ann. ii. 6), ordered his fleet to assemble at the Batavorum Insula, whence it sailed through the Fossa Drusiana, and the lakes into the Ocean and to the river Ambia (Ems). This course was probably taken to avoid the navigation along the sea-coast of Holland. On a former occasion Germanicus had taken the same course (Ann. i. 60), and his father Drusus had done the same.

Poeleny (ii. 9. § 4), who wrote after Tacitus and Pliny, is acquainted with three outlets of the Rhine. He places first the outlet of the Mosas in 24° 40' long., 53° 20' lat. He then comes to the Batavi and to Lugdunum, where he places it in 26° 30' long., 53° 20' lat. The western mouth of the Rhine is in 26° 45' long., 55° 20' lat. The middle mouth is in 27° long., 53° 30' lat.; and the eastern mouth in 28° long., 54° 30' lat. His absolute numbers are incorrect, and they may be relatively incorrect also. His western outlet is a little east of Lugdunum, and this should be the Old Rhine or Rhine Proper. The middle mouth is further east, and the eastern mouth further east still. The eastern mouth may be the Ems, but it is difficult to say what Poeleny's middle mouth is. Gosselin supposes that Poeleny's western mouth may have been about Zandvoord. He further supposes that the Middle Mouth according to his measures was about the latitude of Bokkum, about 4 leagues above Zandvoord, and he adds that this mouth was not known to those writers who preceded Poeleny, and we may conjecture that it was little used, and was the first of the outlets that ceased to be navigable. The third mouth he supposes to correspond to the passage of the Vlie. But nothing can be more vague and unsatisfactory than this explanation, founded on Poeleny's measurements and pure conjecture. So much as this is plain. Poeleny does not reckon the Mosas as one of the outlets of the Rhine, as the Roman writers do; and he makes three outlets besides the outlet of the Mosas.

This country of swamps, rivers, and forests through which the Lower Rhine flowed has certainly undergone great changes since the Roman period, owing to the floods of the Rhine and the inundations of the sea, and it is very difficult, perhaps impossible, to make the ancient descriptions agree with the modern localities. Still it was a fixed opinion that the Rhine divided into two great branches, as Caesar says, and this was the division of the Rhine from the Waal at Panzerden, or wherever it may have been in former times. One of the great outlets was that which we call the Munas that flows by Rotterdam; the other was the Rhine Proper that entered the sea near Leiden, and it was the stream from Panzerden to Leiden that formed the boundary between Gallicia and Germania. (Servius, ad Aeneid. viii. 757.) Poeleny places all his three outlets in Gallicia, and it is the eastern mouth which he makes the boundary between Roman Gallia and Great Germania. (ii. 11. § 5.) Tacitus says that the Ems (Emsel), which he makes this river from Arnhem to the outlet of the Emsel the eastern limit of Roman Gallia in his time. This may be so, but it was not so that Pliny and Tacitus understood the boundary. Whatever changes may have taken place in the Delta of the Rhine, D'Anville's conclusion is just, when he says that we can explain the ancient condition of the places sufficiently to make it agree with the statements of the ancient authors.

The floods of the Rhine have been kept in their limits by embankments of earth which begin at Wesel, in the Prussian province of Isselburg, and extend along the Rhine and its branches to the sea. The Romans began these works. In the time of Nero, Pompeius Paullinus, to keep his soldiers employed, finished an embankment ("agger") on the Rhine which Drusus had begun sixty-three years before. (Tac. Ann. xiii. 53.) It has sometimes been supposed that this "agger" is the "moles" which Civilis broke down in the war which he carried on against the Romans on the Lower Rhine. (Tac. Hist. v. 19.) The consequence of throwing down this "moles" was to leave nearly dry the channel between the Batavorum Insula and Germania, which channel is the Proper Rhine. The effect of throwing down the "moles" was the same as if the river had been driven back ("velut abasato amme"). This could not have been effected by destroying an embankment; but if the "moles" of Drusus was a dike which projected into the river for the purpose of preventing most of the water from going down the Vlie, and for maintaining the channel of earth which is on the north side of the Batavorum Insula, we can understand why Civilis destroyed and why Drusus had constructed it. Drusus constructed it to keep the channel full on the north side of the Batavorum Insula, and to maintain this as a frontier against the Germans; and so we have another proof that the Rhine Proper or the Middle Rhine was the boundary between Gallicia and Germania in this part, as every passage of Tacitus shows in which he speaks of it. Civilis destroyed the "moles" to stop the Romans in their pursuit of him; for they were on the south side of the island, and had no boats there to make a bridge with. Ukert understands it so, and he is probably right.

Another great Roman work in the Delta of the Rhine was the canal of Corbul. The Roman conquerors left durable monuments of their dominion in all the countries which they invaded, even in the watery regions of the Rhine, where they had to fight with floods, with the tempests of the ocean, and with people whose home was in the marshes and forests.

The Rhine was the great frontier of the Romans against the German tribes. All the cities on the west or Gallic side, from Leiden to Batave, were either of their foundation or were strengthened and fortified by them. In the time of Tiberius eight legions guarded the frontier of the Rhine.
This article may be read with the articles Bata- 
vorm Insula, Flevo Lacus, Fossa Corniul- 
aris, Mosc, Mosella, and Gallia Transalpina. 
(D'Anville, Notice, &c.; "Rhenus"; "Penny Cy-
clopædia," art. "Rhine"; and Ukert, Gallien, 
who has collected all the ancient and many modern au-
thorities.) 

[ G. L. ]

Rhenus (Reno), a river of Gallia Cispadana, 
and one of the southern tributaries of the Padus. 
(Plin. iii. 16. s. 20.) It flowed within about a mile 
of the walls of Bononia (Bologna), on the W. side 
of the city, and is celebrated in history on account 
of the interview between Antony, Octavian, and Le-
pidus, which is generally believed to have taken place 
in a small island formed by its waters. [Bononia.] 
It has its sources in the Apennines nearly 50 miles 
above Bologna, and is a considerable stream, though 
called by Silius Italicus "parvus," to distinguish it 
from its far greater namesake, the Rhine. (Sil. Ital. 
viii. 599.) In the time of Pliny it is probable that 
it discharged its waters into the principal channel 
of the Padus, but at the present day they are turned 
aside into an artificial channel before reaching that 
river, and are thus carried into the arm now known 
as the Po di Primauro. Hence the mouth of that 
branch of the Po is now called the Fosco del Reno. 
Pliny tells us that the reeds which grew on the banks 
of the Rhenum were superior to all others for making 
arrows. (Plin. xvi. 36. s. 65.) 

[ E. B. ]

Rhesaena ('Pirsaus, Plutol. v. 15. § 13; "Pirsaús, 
Steph. B. s. v.; Amm. Marc. xcvii. 5; Bassiana, 
Tab. Peut.; Rasin, Notit. Imp.; Eth. "Pirșuvatî, 
Steph. B. s. v.), a town of considerable importance 
at the northern extremity of Mesopotamia; it was si-
terated near the sources of the Chaburas (Khabûr), 
on the great road which led from Carrizas to Nisipho-
rum, about 88 miles from Nisibis and 49 from 
Dara. (Procop. B. P. ii. 19, de Aedif. ii. 2.) It 
was near this town that Gardian the Younger fell 
in a battle with the Persians. (Amm. Marc. L. c.) A 
coin exists of the emperor Decius, bearing the legend 
CEI. KOA. PHCAHINCION, which may in all 
probability be referred to this town. In the Notit. 
Imp. the place is subject to the government of the 
Dux Osrohoetae (Notit. Dign. ed. Bocking, i. p. 400), 
and a bishop of Bassiana is mentioned among those 
who subscribed the edict at the Council of Nicaea. 
Under Theodosius, the town appears to have been 
partially rebuilt, and to have received the title of 
Theodosiopolis. (Hieroel. p. 793.) There can be 
no doubt that it is at present represented by 
Ras-el-Ain, a considerable entrepôt of commerce 
in the province of Diarbekr. It was nearly de-
stroyed by the troops of Timur, in A. D. 1393. 
(D'Herbelot, Dict. Orient. i. p. 140, iii. p. 112; 
Niebuhri. ii. p. 990.)

Coin of Rhesaena.

Rhetcio, a mountain of Germany, mentioned 
only by Pomp. Mela (iii. 3), along with Mount 
Tannus. As no particulars are stated it is impos-
sible to identify it, and German writers are so divided 
in their opinions that some take it to be the 
name of the Siebengebirge, near Bonn, while others 
identify it with a mountain in the Tirol. [L. S.]

Rhidalagus (Curt. vi. 4. § 7), a river of Hyrcan-
ian, which flows from the mountains NW. to the 
Caspian. Alexander crossed it on his march 
in pursuit of Dareius. It appears to be the same as 
the Chaetres of Ammianus (xxiii. 24), and may 
perhaps be represented by the present Ajdju. [V.]

Rhincocura or Rhincocolura (Pont.
ophorus, Polyb. Plutol. Joseph.; "Povokoróupor, 
Strah.: Eth. "Povokoróuporí, "Povokoróuporí), 
a maritime city on the confines of Egypt and Palestine, 
and consequently reckoned sometimes to one country, 
sometimes to the other. Strabo, going south, reckons 
Gaza, Rebecca, Rhincocolura (xvi. p. 759); Polybius, 
going north, reckons it to Egypt, calling the city 
Rhaphip the first city of Coele Syria (v. 80). Ptolemy 
also reckons it to Egypt, and places it in the district 
of Cassiotis (iv. s. 12), between Ostracine and An-
theod. The Itinerarium Antonini (p. 151) places it 
xxii. M.P. south of Baia, and the same distance 
north of Ostracena. The following curious account of 
its origin and history is given by Diodorus Siculus. 
Actianes, king of Aethiopia, having conquered 
Egypt, with a view to the suppression of crime in 
his newly-acquired dominion, collected together all 
the suspected thieves in the country, and, after judicial 
conviction, cut off their noses and sent them to 
colonise a city which he had built for them on the 
extremity of the desert, called, from their mischab, 
Rhincocolura (qαύα ἰδαν κόλωρον καταστάτη, ἀν. ρ. κόλ-
ωροτάτη), situated on the confines of Egypt and Syria, 
next the shore; and from its situation destitute of 
water, there only reeds grew on the banks of its 
mains. (v. 80.) Strabo copies this account 
of its origin (L. c.); Seneca ascribes the act 
to a Persian king, and assigns the city to Syria 
(De Ira, iii. 20). Strabo (xvi. p. 781) mentions 
it as having been the great emporium of Indian and 
Arabian merchandise, which was discharged at 
Leuce Come, on the eastern coast of the Red Sea, 
whence it was conveyed, via Petra, to Rhincocolura, 
and thence dispersed to all quarters. In his day, 
his state, the trade of commerce flowed chiefly down 
the Nile to Alexandria. The name occurs in Jos-
ephus, but unconnected with any important event. 
It is known to the ancient ecclesiastical writers as 
the division between the possessions of the sons 
of Noah. S. Jerome states that the "River of Egypt," 
flowed between this city and Pelusinum (Rieland, 
Talass. p. 285, 286, 969—972); and in one pas-
sage the LXX. translate "the River of Egypt" by 
Rhincocura. (Isod. xvii. 12.) It is re-
markable that this penal colony, founded for muti-
lated convicts, should have become fruitful in colonies; 
and its worthy and exemplary bishop Melas, in 
the time of the Arian persecution, who was succeeded 
by his brother Solon, became the founder of a succession 
of religious men, which, according to the testimony 
of Sozomen, continued to his time. (Hist. Eccles. 
vii. 31.) Rhincocura is now El-Arish, as the 
z z 3
River of Egypt is Ῥήπιον-.metamodel. The village is situated on an eminence about half a mile from the sea, and is for the most part enclosed within a wall of considerable thickness. There are some Roman ruins, such as marble columns, &c., and a very fine well of good water. (Irby and Mangles, Travels, p. 174, October 7.)

[RHIFE. [G.W.]

RHIPEI MONTES (τὰ Πεσσαία ἄγρα), a name applied by Greek fancy to a mountain chain whose peaks rise to the N. of the known world. It is probably connected with the word πρως, or the chill rushing blasts of the Boeotian mountain wind or "tramontana" of the Greek Archiplego, which was conceived to issue from the coves of this mountain range. Hence arose the notion of the happiness of those living beyond these mountains—the only place exempt from the northern blasts. In fact they appear in this form of Πρως, in Aelian (Fragm. p. 89, ed. Wecker), a lyric poet of the 7th century n. c., who is the first to mention them. The contemporary writers Daresates of Sigeum (ap. Steph. B. s. v. Τραυματία, &c.), and Hellemanus of Lesbos (ap. Clem. Alex. Strom. i. p. 305) agree in their statements in placing beyond the fabled tribes of the N. the Rhipean mountains from which the north wind blows, and on the other side of these, on the sea-coast, the Hyperboreans. The legends connected with this imagined range of mountains lingered for a long period in Greek literature, as may be seen from the statements of Hecataeus of Abdera (ap. Achim. H. A. xi. 1) and Aristotle (Met. i. 13; comp. Soph. Oed. Col. 1248; Schol. ad loc.; Strab. vii. pp. 295, 299). Herodotus knows nothing of the Rhipean mountains or the Alps, though the positive geography of the N. begins with him. It would be an idle inquiry to identify the Rhipean range with any actual chain. As the knowledge of the Greeks advanced, the geographical "mythus" was moved further and further to the N. till it reached the 48th degree of latitude N. of the Marotic lake and the Caspian, between the Don, the Volga, and the Jaxik, where Europe and Asia melt as it were into each other in wide plains or steppes. These "mountains of the wind" followed in the train of the meteorological "mythus" of the Hyperboreans which wandered with Hermes far to the W. Geographical discovery embodied the picture which the imagination had formed. Poseidonius (ap. Athen. vi. p. 223, d) seems to have considered this range to be the Alps. The Roman poets, borrowing from the Greeks, made the Rhipean chain the extreme limit to the N. (Verg. Georg. i. 240; Propert. i. 6. 3; Sil. It. xi. 459); and Lucan (iii. 273) places the sources of the Tanais in this chain. (Comp. Mela, i. 19, § 18; Plin. iv. 24; Amm. Mar. xxii. 8, § 58; Procop. B. G. iv. 6; Sil. Apoll. ii. 345; Jornand. Got. 16; Oros. i. 2). In the earlier writers the form is Ripuri, but with Pliny and those who followed him the p becomes aspirated. In the geography of Ptolemy (iii. 5, §§ 15, 19) and Marcian (Periploc. § 39, ed. Dilot) the Rhipean chain appears to be that pleasantly rising ground which divides the rivers which flow into the Baltic from those which run to the Euxine. [E. B. J.]

RHISPÀ (Προκά), a place in Upper Pomdia, of uncertain site (Ptol. vi. 13; 4; Orelli, Inscript. n. 4991), though it is commonly identified with Curç. (Schönwiesner, Antiquitates Sabauriae, p. 41.) [L. S.]

RHITHYMNA (Ῥηθύμνα), a town of Crete, which is mentioned by Ptolemy (iii. 17, § 7) and Pliny (iv. 29) as the first town on the N. coast to the E. of Amphimallus, and is spoken of as a Cretan city by Steph. B., in whose text its name is written Rhithymna (Ῥηθύμνα: Edh. Περαγμάτης, Περιμάσα). It is also alluded to by Lycurgus (76). The modern Rhithymnos or Retimo retains the name of the ancient city upon the site of which it stands. Eckel (Vimi Tel. Ancodoti, p. 155; comp. Rasch, vol. iv. pt. i. p. 1024) first assigned to Rhithymna its ancient coins; maritime emblems are found on them. (Taschler, Creti, vol. i. p. 101.) [E. B. J.]

COIN OF RHITHYMNA.

RHUM ("Flowe"). 1. A promontory in Achaia. [Vol. I. p. 13, a.,] 2. A town in Messenia, in the Thuriate gulf, and also the name of one of the five divisions into which Crephontes is said to have divided Messenia. (Strab. viii. pp. 360, 361.) Strabo describes Rhium as over against Taenarum (Ἀπειρακέαν Ταίνωρ), which is not a very accurate expression, as hardly any place on the western coast, except the vicinity of Cape Aristas, is in sight from Taenarum. (Leake, Morea, vol. i. 459.)

RHUSIANA. [Προυσάλα].

RHIZA (Ῥίζα, Ptol. vi. 21, § 2; Πίγουρα, Marcian, Periploc. § 33, ed. Miller), a town on the coast of Credonia, in the immediate neighbourhood of the most western mouth of the Indus. The differences between Ptolemy and Marcian with regard to distances do not seem here reconcilable. [V.]

RHIZENA (Ῥιζήνα, Theb. B. s. v.), a town of Crete of which nothing is known; there is an "eparkhia" now called Rhizona-kastron, but it is a mere guess to identify it with this. [E. B. J.]

RHIZON (Ῥίζων, Polyb. ii. 11; Strab. vii. p. 316; Liv. xiv. 26; Theb. B. s. v.; Pígouros, Ptol. i. 17, § 12; Rhizium, Plin. iii. 26; Strab. vii. pp. 314, 316; Pol. ii. 17, § 5). A town of Dalmatia, situated upon a gulf which bore the name of Rhizonicus Sinus (Ῥιζωνικὸς ἱματαῖος, Strab. vii. pp. 314, 316; Pol. ii. 17, § 5). The Illyrian queen, took refuge in this her last stronghold, and obtained peace upon the conqueror's terms. Scylax (p. 9) has a river Rhizos (Ῥίζος, comp. Polyb. i. 2; Polyb. ap. Steph. B. e. v.; Bondi), but this can be no other than the Bocce di Cattaro, celebrated for its grand scenery, which gives this gulf with its six mouths the appearance of an inland lake, and hence the mistake of Scylax, and Polybius, who says that Rhizos was at a distance from the sea. In Riumo, standing on rising ground at the extremity of a beautiful bay that runs to the N. from Perasto, are remains of the Roman colony. A Mosaic pavement and coins have been found there. Near Riciano is a cavern from which a torrent runs in winter, and falls into the bay, but it is not known whether this be the Dalmatian cavern mentioned by Pliny (ii. 44). It is here that Cadmus is said to
have retired among the Eneeaeus. (Sclav. i. c.) Whether the Phoenicians had reached the E. shore of the Adriatic does not appear, but it could only be from traces of Phoenician settlements that this term was assigned to their wanderings. (Wilkinson, Dal- matia, vol. i. p. 381; Neigerlaus, Die Siid-Slaven, p. 57.)

RHIZONICUS SINUS. [Rhizon.] RHIZOPHAGI AETHIOPES ('Ppôsôphagos, Dio- dor. iii. 23; Strab. xvii. p. 770, seq.; Ptol. iv. 8, § 29), one of the numerous tribes of Aethiopiam, whom the Greeks named after the diet peculiar to them. The root-eating Aethiopians dwelt above Meroë, on either bank of the Astaboras (Tacoæze), and derived their principal sustenance from a kind of cake or polenta, made from the reeds and bulrushes that covered that alluvial region. The roots were first scrupulously cleansed, then powdered between stones, and the pulp thus obtained was dried in the sun. The Rhizopaghi are described as a mild and harmless race, living in amity with their neighbours, and, probably because they had nothing to lose, unmolested by them. Their only foes were lions, who sometimes commited the greatest havoc among this unarmed race; and their best friends, according to Diodorus (comp. Agatharch. op. Hudson, Geog. Græc. Min. p. 37), were a species of root-eating water-crickets, which at the summer solstice (ζυγὸς τῶν ἀντιλόπων τοῦ κόσμου) assailed the lions in such numbers, that they fled from the marshes, and permitted the Rhizopagoi to recover their losses. The site mentions on its place under the name of Heila, which is probably only a corruption of the right name, which still exists in the form of Rizh, though the place is also called Arrish. * (Comp. Procop. de Aed. i. 4; Ptol. v. 6, § 10; [L. S. F.])

RHIZUS (Τῆς, a port-town of Pontus, at the mouth of the river Rhizus, about 120 stades to the east of the river Calos, and 30 stades west of the mouth of the Ascarus. In the time of Procopus (Bell. Goth. iv. 2) the place had risen to considerable importance, so that Justinian surrounded it with strong fortifications. The Table mentions on its site a place under the name of Reia, which is probably only a corruption of the right name, which still exists in the form of Rizh, though the place is also called Arrish. * (Comp. Procop. de Aed. i. 4; Ptol. v. 6, § 10; [L. S. F.])

RHIZUS (Τῆς, Euth. Β' Ρζοντορ) a town of Magnesia in Thessaly, whose inhabitants were transported to Demetrias upon the foundation of the latter city. (Strab. iv. pp. 436, 443; Steph. B. v. n. Plin. iv. 9, s. 16.) We learn from Scylax (p. 24) that Rizhus was outside the Pagassaean gulf upon the exterior side; but its exact position is uncertain. Latke places it at the ruins eastward of Nechori (Northern Greece, vol. iv. p. 385.)

RHOOCA (Ροκα), a town of Crete, where there was a temple of Artemis Rhoea. (Tian. s. c. 229.) Ptoeocoe (vol. ii. p. 247) found remains at the village which still bears the name of Rhoeaka, to the S. of the ancient Methymna; and there can be little doubt, but that this is the site of Rhocea, which, as is shown by Aelian (N. A. xiv. 20), was near Methymna (Höck, Kreta, vol. i. p. 391; Pashley, Creta, vol. ii. p. 41.)

RHODA or RHODUS (Ρόδα, Steph. B. s. v.; Rhoda, Meda, ii. 6; Liv. xxxiv. 8; Ptole, Strab. vi. p. 654; Eustath. ad Dion. Or. ver. 504; called by Ptol. ii. 6. § 20, 'Ρόδον, where we should probably read 'Ρόδα πόλεως), a Greek emporium on the coast of the Indigetae in Hispania Tarraconensis, founded according to Strabo (I. c.) by the Rhodians, and subsequently taken possession of by the Massiliots. It is the modern Rosas; but tradition says that the old town lay towards the headland at San Pedro de Roda. (Ford, Handbook of Spain, p. 249; comp. Menas. Rhod. i. 29; Marca, Hist. iii. 18; Martin, Hist. Rom. ii. p. 218; Florence, Med. iii. p. 114; Monnet. i. p. 148.)*

RHODANUS (Ροδανός: Rhône). The Rhone rises in Switzerland, in a glacier west of the pass of St. Gotthard and south of the Gallenstock, a mountain above 12,000 feet high. It has a general course, first SW., then W. by S. as far as Martigny, the Octodurus of Caesar (B. G. iii. 1). The course from Martigny to the Lake of Geneva forms nearly a right angle with the course of the river above Martigny. The length of the valley through which the Rhone flows to the Lake of Geneva is above 90 miles. This long valley called Wallis, or the Val- lats, is bounded by the highest Alpine ranges: on the north by the Bernese Alps, which contain the largest continuous mass of snow and ice in the Swiss mountains, and on the south by the Lepontian and Pennine Alps. The Lake of Geneva, the Lacus Lemanus of the Romans [Lemanus], which receives the Rhone at its eastern extremity, is more than 1200 feet above the surface of the Mediterranean.

The Lake of Geneva lies in the form of a crescent between Switzerland and Savoy. The convex part of the crescent which forms the north side is above 50 miles in length; the concave or southern side is less than 50 miles in length. The widest part, which is about the middle, is 8 or 9 miles. The greatest depth, which is near some high cliffs on the south coast, is stated variously by different authorities, some making it as much as 1000 feet. The Rhone enters the lake at the east end in a muddy stream, and the water flows out clear at the western extremity past Geneva, an ancient city of the Allobroges. [GENEVA.]

Below Geneva the Rhone runs in a rapid course and in a SW. direction past Fort l'Ecluse. Fort l'Ecluse is at the point described by Caesar (B. G. i. 9) where the Jura overlies the course of the Rhone. [HELVENTI.] The river then runs south past Segestel, and making a bend turns north again, and flowing in an irregular western course to Lyons (Lugdunum) is joined there by the Saône, the ancient Arar [ARAR; LUGDUNUM]. The length of the course of the Rhone from the Lake of Geneva to Lyons is about 130 miles. The Saône, as Caesar says, is a slow river, but the current is very plain only under the bridges in Lyons. The Rhone is a rapid stream, and violent when it is swelled by the rains and the waters from the Alpine regions.

From Lyons the Rhone flows in a general southern course. The direct distance is about 470 miles from Lyon to Arles (Arelate) where the river divides into two large branches which include the island of Camargue. The whole course of the Rhone from the ice-fields of Switzerland to the low shores of the Mediterranean is above 500 miles.

The valley of the Rhone below Lyon is narrow on the west bank as far as the junction of the Ar- dèche, and it is bounded by high, bare, and rocky heights. Some of the hill slopes are planted with vines. All the rivers which flow into the Rhone from the highlands on the west are small; they are the Arèche, Caze, Gardon (Vando), and some smaller streams. The left bank of the Rhone from
RHODANUS.

Lyons downwards is generally flat, but there are several parts where the rocks rise right above the water, and in these places the railway from Lyons to Marseille is cut in the rocks close to the river. At St. Andel, a small town on the west bank above the Ardeche, the plain country begins on the west side of the Rhone. On the cast side the hills are seen in the distance. From one of the middle-aged towers built on the amphitheatre of Arles, there is a view of the great plain which lies all round that city to the north, west, and east, and stretches southward to the coast of the Mediterranean. The two large alluvial beds of the Rhone on the east side are the Isère (Isarn) and the Durance (Dementia).

The Rhone was earlier known to the Greeks and Romans than any other river we may mention of Western Europe. The oldest notices of this river must have come from the Phoenicians and the Greeks of Massilia. What Avienus has collected from some source (Or. Marit. 623–659) is unintelligible. Pliny (iii. 4) very absurdly derives the name Rhodanus from a town which he names Rhoda; but the name Rhodanus is older than any city, and, like the names of other European rivers, it is one of the oldest memorials that we have of the languages of the West. Polybius (iii. 47) supposes that the Rhone rose farther west than it does, but he knew that it flowed down a long valley (σημείωμα) to the west, though he does not mention the Lake of Geneva. Ptolemy (ii. 10), the latest of the classical geographers, had no exact notion of the sources of the Rhone, though the Romans long before his time must have known where to look for them. He makes the sources of the Arar come from the Alps, by which the Jun is meant, and in this statement and what he says of the course of the Arar and Dubis he may have taken another of the larger rivers of Western Europe. The blunders about the sources of this river are singular. Melas (iii. 3) mentions the Danubius and Rhodanus among the rivers of Germany; and in another passage he says that it rises not far from the sources of the Ister and the Rhenus (ii. 5).

There is much difference in the statements about the number of the mouths of the Rhone. Timaeus, quoted by Strabo (p. 183), says that there were five outlets, for which Polibius reproves Timaeus, and says there were only two. Polybius (iii. 41) names the eastern branch the Massilia, Ardeche, as cited by Strabo, made five mouths. Strabo does not state how many he supposed that there were. He says that above the mouths of the Rhone, not far from the sea, is a lake called Stomalimne, which some make one of the outlets of the Rhone, and those particularly do who enumerate seven outlets of the river. But he shows that this was a mistaken opinion. Caesar built ships at Arlethe when he was going to besiege Massilia, and he brought them down the river to that city, and by their eastern branch, as we may assume.

The Rhone was navigated by the people on its banks at the time when Hannibal with his army came to cross it, and much earlier. Polibius is the earliest extant writer who has given us any precise information about this river. Hannibal (n. c. 218) crossed it at a point above the division of the stream, and of course higher than Arles, for we assume that the bifurcation was not higher than that city in his time, if it ever was. (Polyb. iii. 45.) He probably crossed the river at Beaucaire and below the junction of the Gardon. He then marched northwards on the east side of the river to the Insula Allobrogum. Much has been written on this passage of Polibius and by Livy (xxi.), who also describes the same passage. (The March of Hannibal from the Rhone to the Alps, by H. L. Long, Esq. 1891; Ukert, Gallien, p. 561, &c., and the most modern writers quoted by each other.)

Pliny (iii. 4) enumerates three mouths of the Rhone. He calls the two smaller: "Libya." (if the reading is right); one of these is the Hispaniensis, or, which we may assume to be the nearest to Spain; the other is Metapinnus, and the third and largest is the Massaliot. Some modern maps represent three mouths of the river. Ptolemy (ii. 10) mentions only a western and an eastern mouth, and he makes a mistake in placing the Fossae Mariana (Fossae Marianae) near the western mouth. The channels of the Rhone below Arles have not been changed in some parts, even in historical periods, and the bed of the river above Arles has not always been where it is now. But there is no evidence for any great changes in the river's course since the time when Polibius wrote, though it is certain that the alluvium brought down the river must have enlarged the Delta of the Rhone.

The canal of Maris, which was on the east side of this outlet of the Rhone, is described under Fossa Mariana. The stony plain is described under Lapidea Campi. [G. L.]

RHODANUSIA. Pliny (iii. 4) mentions Rhoda in Gallia Narbonensis as a colony of the Rhodii. He places it on the coast east of Agatha (Aegode), and says that it gave the name to the Rhodians.

RHODANUSIA. Hieronymus, in his Prologue to the Second Epistle to the Galatians, copies Pliny. This may be the place which Stephanus (s. v. Ροδανωνια) names Rhodanusia, and calls "a city in Massilia;" but it was one of the territory must be meant. The passage in Strabo (iv. p. 180) την Εις Ροδανωνιαν αραθηναι των, in which he intends to speak of one of the Massilian settlements, is corrupt. Ca-saubon (Comment. in Strab. p. 83) sometimes thought that we ought to read την υπ' Ροδανωνιαν και Αραθηναι των. Groskurd (Strab. Transl. i. p. 310) thinks that Pliny has called this place Rhoda because he founded it with Rhode or Rhodius in Ileria, which he does not mention. He observes that Scaurus (v. 208), Stephanus, and Solinus Apollinaris (i. 5) rightly name it Rhodanovis, and that Strabo wrote it so. But it is by no means certain that Strabo did write it so. Groskurd's argument is this: there never was a town Rhoda in Gallia, and Strabo mentions the Ilerian Rhode or Rhodius. Since then Strabo is acquainted with both places, he has not made a mistake like Pliny; rather must we with Vossius (Note on Melos, ii. 6) alter the corrupt Ροδανωνιαν into Ροδανωνια; and Kotay is mistaken in rejecting Πολιορκεί as not genuine. We know nothing of this Gallio Rhoda or Rhodanovis. The place is gone and has left no trace.

RHODE. [RHODANUSIA.] RHODE FLUVIUS. [SAGARIS.]

RHODIA (Ῥοδία; Eub. Ροδίες), a town of Lycia, situated in the mountains on the north of Corydalias. (Steph. B.L. s. v.; Ptol. v. 3 § 6; Phot. Cod. 176.) At the time when Col. Leake wrote his work on Asia Minor (p. 186) the site of this town was not yet ascertained, and Sir C. Fellow did not examine the district, but the inscriptions which have since been found fix its site at the place now called Eski Hisar. (Spratt and Forbes, Tru-
RHODIUS, 713

chain of mountains, the highest point of which was called Atabyris or Atabyreion, and the towns were all situated on the coast. Mount Atabyris is 4560 feet above the level of the sea, and on the top of it stood a temple of Zeus Atabyreus. Rhodes was believed to have at one time risen from the sea, and the Telchines, its most ancient inhabitants, are said to have immigrated from Crete. (Pind. Olym. vii. 23, &c.; Plin. ii. 87; Aristid. Orat. xxxiii. p. 653, ed. Dind.; Strab. l. c.; Diod. v. 55.) The Telchines, about whom many fabulous stories are related, are said to have been nine in number, and their sister Halia or Amphitrite became by Teucer the mother of six sons and one daughter, Rhodes, from which in the end the island received the name it still bears. Others, however, with better reason, derive the name Rhodes from böcos, a rose, for the rose appears as a symbol on coins of the island, so that Rhodes would be "the island of Roses." (Eckhel, vol. ii. p. 602; Sestini, Num. i. p. 382.) These most ancient and fabulous Telchines are said to have perished or been driven from the island during an immigration, and Helios then created a new race of inhabitants, who were called after him Heliaedes; they were seven in number, and became ancestors of seven tribes, which partly peopled Rhodes itself and partly emigrated to Lesbos, Cos, Caria, and Egypt. The Heliaedes are said to have greatly distinguished themselves by the progress they made in the sciences of astronomy and navigation. (Pind. l. c. 160, &c.; Diod. v. 56; Conon, Narrat. 47; Strab. xiv. p. 654.) After this various immigrations from foreign countries are mentioned: Egyptians under Damon, Phocionics under Caudins, Thessalians and Carians, are each said to have furnished their contingent to the population of Rhodes. Whatever we may think of these alleged immigrations, they can have but little affected the national character of the Rhodians, which in fact did not become fixed until a branch of the Doric race took possession of the island, after which event the Doric character of its inhabitants became thoroughly established. Some Dorians or Heraclidæ appear to have been settled there as early as the Trojan War, for the Heraclid Telphæans is described as having sailed to Troy with nine ships. (H. ii. 653; Diod. iv. 58, v. 59; Apollod. ii. 8 § 2.) After the Trojan War Aethæmenes, a Heraclid, from Argos, led other settlers to Rhodes. (Strab. xiv. p. 653; Diod. xv. 59; Apollod. iii. 2 § 1; comp. Thuc. vii. 57; Aristid. Orat. xiv. p. 839.) After this time the Rhodians quietly developed the resources of their island, and rose to great prosperity and influence.

The three most ancient towns of the island were Lindus, Ialysus, and Camiros, which were believed to have been founded by three grandsons of the Heliad Ochmus bearing the same names, or, according to others, by the Heraclid Telphæans. (Diod. iv. 58, v. 57.) These three towns, together with Cos, Cnidus, and Halicarnassus, formed what was called the Doric hexapolis, which had its common sanctuary on the Triopian headland on the coast of Caria, Apollo being the tutelary deity of the confederation. (Herod. i. 144.) The rapid progress made by the Rhodian towns in a comparatively early period is sufficiently attested by their colonies in the distant countries of the west. Thus they founded settlements in the Balearic islands, Rhodes on the coast of Spain, Parthenope, Salapia, Siris, and Sybaris in Italy, and Gela in
RHOUS.

Siely; while the countries nearer home were not neglected, for Sall in Cilicia, and Gagae and Corydalia in Lydia, were likewise Rhodian colonies. But notwithstanding this early application to navigation and commerce, for which Rhodes is so admirably situated between the three ancient continents, the Rhodians were not ranked with the great maritime powers of Greece. Herodotus speaks of them only as forming a part of the Doric confederacy, nor does Thucydidus mention their island more frequently. The Rhodians, in fact, did not attain to any political eminence among the states of Greece until about B.C. 408, when the three ancient towns conjointly built the town of Rhodos at the extremity of the island, and raised it to the rank of a capital. During the first period of the Peloponnesian War the towns of Rhodes paid tribute to Athens, and were reluctantly compelled to serve against Syracuse and Gela in Sicily (Thuc. vii. 57.) but in B.C. 412 they joined the Peloponnesians. The popular party being favourable to Athens, soon afterwards attempted a reaction, but it was crushed (Diod. xiii. 38, 45). In B.C. 396, however, it was recovered with increased power. From that time the waters of Rhodes, the Rhodians again embraced the cause of Athens (Diod. xiv. 79; Plut. vi. 7, § 6); but the democracy which was now established was ill managed, and did not last long; and as early as B.C. 390, the exiled aristocrats, with the assistance of Sparta, recovered their former ascendency. (Aristot. Polit. v. 4, 2; Xenoph. Hellen. iv. 8, § 20, &c.; Diod. xiv. 97.) The fear of Sparta's growing power once more threw Rhodes into the hands of the Athenians, but soon after the battle of Leuctra the change again took place; at least the Thracian, in B.C. 364, were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and Byzantium over to their own side. During the Social War, from B.C. 357 to 355, the Rhodians were arrayed against Athens, being instigated by the dyshist of Caria and his successor Artemisia. But as they became alarmed by the growing power of the Carian dynasty, they solicited the protection of Athens through the influence of Demosthenes. (Demos. de Rhod., sect. i. 12.) During all this period, the government throughout this period was oligarchical, which accounts for the insolent conduct of Hesilochus, as described in Athenaeus (x. p. 444). Rhodes furnished Darius, the last king of Persia, with one of his bravest and ablest generals in the person of Memnon, who, if he had had the sole direction of affairs, might have checked the victorious career of Alexander, and saved the Persian empire. But as it was, Rhodes, like the rest of Greece, lost its independence, and received a Macedonian garrison (Curt. iv. 5). The expansion of this garrison after the death of Alexander was the beginning of a glorious epoch in the history of Rhodes; for during the wars against the successors of Alexander, and especially during the memorable siege of the city of Rhodes by Demetrios Poliorectes, the Rhodians gained the highest esteem and regard from all the surrounding princes and nations. During the period which then followed, down to the overthrow of the Macedonian monarchy, Rhodes, which kept up friendly relations with Rome, acted a very prominent part, and extended its dominion over a portion of the opposite coasts of Caria and Lycaia—a territory which is hence often called the Περας των Ρωσιων [Περακα]—and over several of the neighbouring islands, such as Kasus, Carpathus, Telos, and Chalke. After the defeat of Persians the Romans deprived the Rhodians of a great amount of territory and power, under the pretence that they had supported Macedonia; but the anger of Rome was mollified upon the war against Mithridates the Rhodians defended themselves manfully against the Pontian king. During the civil war between Caesar and Pompey they sided with the former, and their adherence to him led them, after his death, to resist Cassius; but the republican, after defeating them in a naval engagement, entered the city of Rhodes by force, and having put to death the leaders of the hostile party, carried off all the public property, even the offerings and statues of the gods, of which the Rhodians were exceedingly proud (see Diod. xiv. v. 73; Plut. Brut. 30; Dion Cass. xvi. 32). This calamity in B.C. 42 broke the power of the Rhodians, but it still remained one of the great seats of learning. Tiberius, before his accession to the imperial throne, resided at Rhodes for several years. The emperor Claudius deprived it of all political independence (Dion Cass. i. 24); but although he afterwards restored its liberty, it was at all times a very precarious possession, being taken away by the fleet of Nicias, 412, and by the fleet of the emperors suggested (Tac. Ann. xii. 58; comp. Suet. Aug. vi. 13). In the arrangements of Constantine, Rhodes, like other islands, belonged to the provincia insularum, of which it was the metropolis (Hierocles, p. 683, &c.). During the middle ages it continued to enjoy a considerable degree of prosperity, and was the last place in Western Asia that yielded to the Mohammedans.

The great prosperity which the Rhodians enjoyed during the best period of their history is shown in the first place in their extensive navigation and commerce, and in the second to their political institutions. In respect to the former they were particularly favoured by the situation of their island, and during the Macedonian and Roman periods no Greek state could rival them in the extent and organisation of their commerce; their sailors were regarded as the best, and their laws relating to navigation were thought models worthy of being adopted by the Romans. The form of government of the Rhodians was of a mixed character, and founded on a republican basis, but their democracy was tempered by an admixture of oligarchy. Such at least we find it during the Macedonian period, at a time when the ancient Doric institutions had given way to a form of government more suited to the actual circumstances. (Strab. xii. p. 575, xiv. p. 652; Cic. de Re Publ. i. 31; Dion Chrys. Orat. xxxi.; Aristol. Orat. xiv. p. 851.) The sovereign power belonged to the assembly of the people, who had the final decision of everything; but nothing was brought before it which had not previously been discussed by the senate or Βουλή. (Polyb. xvi. 33, xxiii. 3, xxvii. 6, xxviii. 15, xxix. 5; Cic. de Re Publ. iii. 35.) The executive was in the hands of two magistrates called περανόια, each of whom governed for six months in the year as eponymus. Next to these, the admirals (παροχοι) possessed the most extensive power. Other officers are mentioned in inscriptions, but their character and functions are often very obscure. The Rhodian constitution had its safest foundation in the character and habits of the people, who, although the vicinity of Asia had a considerable influence and created a love of splendour and luxury, yet preserved many of their ancient Doric peculiarities, such as earnestness, perseverance, valor, and patriotism, combined with an
RHODUS.

Considerable time. The present town of Rhodes contains very few remains of the ancient Greek city. (Comp. P. D. Paunzen, Descriptio Rhodi Muced. Act. 1818; H. Rost, Rhodos, ein Hist. Arch. Fragment, Altona, 1823; Th. Meneg, Fargische von Rhodos, Köln, 1827; Rottier, Descript. des Monuments de Rhodes, Bruxelles, 1828; Ross, Reisen auf den Griech. Inseln, iii. pp. 70—113, which contains a good account of the middle-age history and the present condition of the island and city with maps and plans; Seestini, Mon. Vet. p. 91.)

L.S.}

C O I N O F R H O D U S.

RHODUSSA, an island off the southern coast of Caria, near the entrance of the port of Panormus. (Plin. v. 35; Stadtnsm. Mar. Mag. p. 248, where the name is written 'Rotonos.) It is marked in modern charts by the name of Liniosa or Keraphus.

L.S.

RHODUSSAE, a group of small islands in the Propontis, south of Phytyma, is mentioned only by Pliny (v. 44).

L.S.

RHOE (Ῥῶ), a place on the coast of Bithynia, 20 stadia to the east of Calpe, on a steep promontory, contained a road fit only for small vessels. (Arrian, Peripl. P. E. p. 13; Anonym, Peripl. P. E. p. 3.)

L.S.

RHOETACES. [ALBANIA, p. 89, b.]

RHOETEUM (Ῥοῖτειον or Ροῖτος θεόν), a promontory, or rather a rocky headland, running out in several points in Asia or Treas, at the entrance of the Hellespont, now of Thion; it contained a small town of the same name situated on an eminence. The place is very often mentioned by the ancients. (Herod. vi. 43; Strab. p. 32; Strab. xii. p. 595; Steph. B. s. v.; Pomp. Mela, i. 18; Plin. v. 33; Thucyd. iv. 52, viii. 101; Appollon. Rh. i. 929; Tryphiod. 216; Virg. Am. vi. 595; Liv. xxxvii. 37.) The promontory is now called Intephe, and the site of the ancient town is believed to be occupied by Patras. (Köcher, Walfahrer, p. 475; Leuk. Asia Minor, p. 275.)

L.S.

RHIGANA (Ῥηγάνα), Ptol. vi. 8. § 7; Marchan, Peripl. i. § 28, ed. Müller), a small place on the coast of Carmania, between the promontories of Carpella and Alambater. It is perhaps the same place as the Gogana of Arrian. [GOGANA.] [V.]

RHOGANDANXI (Ῥογάνδανξι, Ptol. vii. 4. § 9), a tribe of ancient Cyprus, at the southern end of the island. Ptolemy mentions that in this part of the island there were the best pastures for the elephants, which is the case, too, at the present time. [V.]

RHOGHE (Ῥόγη), an island off the coast of Lycia, not far from the entrance of the Phoenicians Portus. (Plin. v. 35; Steph. B. s. v.; Stadtnsm. Mar. Mag. §§ 217, 218, where it is called Iphohe, 'Ρόγη.)

L.S.

RHOGONIS (Ῥηγόνις, Arrian, Ind. c. 39), a river of ancient Persia, which flows into the Persian

Digitized by Microsoft®
Gulf in lat. 29° 20', long. 48° 25' E. It was little better than a torrent, and is now doubtless marked by the present Bender-rik. Ptolemy (vi. 4, § 2) and Arrianus (xxiii. 6) call it Rhogomnus (Προγομνήν), and Marcianus (Peripl. i. § 24, ed Müller) Rhogomanus (Ῥώγομανός). (Vincent, vol. i. p. 401: Thevenet, v. p. 535.)

RHOSCUS (Ῥόσκος), a place on the coast of Pamphylia, near the mouth of the Cestus, is mentioned only in the Stadasmus (§§ 199, 200).

RHYSOLOCIUM or RHYSOLOGIA (Ῥυσολογία), a small place in the country of the Teyck-samy in Galatia, on the road from Ancyra to Causarea Mazaica, not far from the river Halys. (It. Ant. pp. 143, 206; Ptol. v. 4, § 8, where some read Ῥυσολογία or Ῥυσολογιακόν; It. Hieros. p. 575, where it is called Ῥοσολοδαικα.) [L. S.]

RHOSUS. [Issus.]

RHÜXOLAN. [Rókólan.]

RHÜANA (Ῥούανα), an inland town of Arabia, placed by Ptolemy (vi. 7, § 33) in long. 57°, lat. 22°. Apparently not far distant from the SW. bay of the Persian Gulf, and either of Larn (L. S.).

RHÜBON, RHÜDON (Ῥούμον ἢ Ῥόδον), Ptol. iii. 5, § 2; Ῥούμων ἢ Ῥόδων, Marcian. Herod. Peripl. § 39, ed Müller), a river of European Sarmatia which took its source in the Alani Montes and discharged itself into the Venedicus Sinus. Scharfarik (Slav. Alt. vol. i. p. 497) has identified it with the Diana, which, taking a direction generally W., falls into the Gulf of Rhy in below Fort Damumande, after a course of 655 miles. This same toponym is connected with the mythical Eridanus, and the trees that went amber, with the Rhodan of Marcian (Rhushon appears to be a corrupted form), which Sabius, a commentator upon Virgil, a.d. 1544, calls Rhodanus. The amber could be brought by land, or by water from the coasts where it was collected to the Diana, and thence by boats conveyed to the Borysthenes and the coasts of the Euxine. The name "Eri-danus," closely connected with Rhodanus, is composed of the words "Rha" and "Dai," roots which, in several of the Indo-European assemblages, signify "river," as far instance in "Rha," the old name for the Volga, and Danubius, Tanais, Donapris, Danastis, and the like.

[ E. B. J.]

RHÜBRIKATUS (Ῥούβρικατος, Ptol. iev. 3, § 5), a river of Numidia, the same as the Ufeb of the Peut. Tab., which flowed 5 M. P. to the E. of Hippo Regius, now called the Sebouse (Barth, Wanderuag. p. 70).

RHÜDIAE or RUDIAE (Ῥούδια, Ptol.; Ῥοῦδα, Strab.; Ῥοῦδα, Ptolemy; Ῥοῦδα, Strabo), an ancient city of the Salienii, in the interior of the Roman province of Calabria, and in the immediate vicinity of Lupiae (Lecce). (Strab. vi. p. 281; Ptol. iii. 1, § 76.) Strabo calls it a Greek city (Ῥωδία Ἐλασσώς); but we have no other indication of this fact, and all the other notices we find of it would lead us to infer that it was a native Salentine or Messapian town. Under the Romans it appears to have enjoyed municipal rank (an inscription has "Municipes Rodimi," Orb. 3358), but in other respects it was a place of little importance, and derived its sole celebrity from the circumstance of its being the birthplace of the poet Ennius. (Strab. l.c. Mel. i. 4, § 7; Pl. Ital. xii. 393; Cie de tr. iii. 42.) That author is repeatedly termed a Calabrian (Hor. Carm. iv. 8; Ovid. A. A. iii. 409; Sil. Ital. l. c.; Acron, ad Hor. l. c.), and these passages confirm the accuracy of Ptolemy, who assigns Ennius to the Salentine, and therefore to the Calabrians according to the Roman use of the name. Pliny and Mela, on the contrary, enumerate Rudiae among the towns of the Pedculi together with Bariun and Egnatia, and the latter author expressly excludes it from Calabria (Plin. iii. 11. 16; Mel. l. c.). But it seems impossible to reconcile this statement with that of Strabo, who places it near Lupiae, in the interior of the peninsula, or with the actual situation of Rudiae, which is clearly ascertained at a place still called Ruggio, though now uninhabited, about 200 miles from Lece, where the inscription above cited was discovered, as well as several others in the Messapian dialect, and many vases and other objects of antiquity. The identity of this place with the municipal town of Rudiae can therefore admit of no doubt; nor is there any reason to question the fact that this was also the birthplace of Ennius: but considerable confusion has arisen from the mention in the Tabula of a place called "Rudac," which it places 12 miles W. of Robi, on the road to Canusium. As this place would have been within the limits of the Roman Empire, it has been supposed by some writers to be the same with the Rudiae of Pliny and Mela, and therefore the birthplace of Ennius: but the claims of Ruggio to this distinction appear unquestionable. (Galaeto, de Sit. Inpagg. p. 77; Bomann., vol. ii. pp. 93—102; Mommsen, Inter Ital. Dialette, p. 58.)

The Rudiae or Rudiae of the Tabula, which is otherwise quite unknown, must have been situated somewhere in the neighbourhood of the modern Ambra.

[ E. H. B.]

RHÜS. [Megara, p. 313, b.]

[ T. H. D.]

RHÜTUIAE. [Rótuá.] RHÜMMICI MONTES (Ῥούμμικαὶ Ἑπείρου, Ptol. vi. 14, §§ 4, 10, 11), a mountain chain of Asiatic Sar- matia, of which no nearer indication can be given than that it belongs to the great meridian chain, or rather assemblage of nearly parallel mountain chains, of the Euxine.

The river RHÜMMUS (Ῥοῦμμος Ῥάμμας, Ptol. vi. 14, §§ 2, 4), which has been a sore puzzle to geographers, took its source in these mountains and discharged itself into the Caspian between the Rha (Volga) and the Daia (Ural). In the present day there is, W. of the embouchure of the Ural to the great delta of the Volga, only one small stream which reaches the Caspian, under the name of the Naryn Chora (Goehl, Reise in die Steppen, vol. ii. p. 342). This river is probably the Ruminus of Ptolemy. (Humboldt, Aera Centale, vol. ii. p. 187.)

[ E. B. J.]

RHÜNDACUS (Ῥοῦνδακός), an important river in the province of Hellasponthus, which has its sources at the foot of Mount Olympus in Phrygia Epictetus, near the town of Acmi. (Sclav. p. 33; Plin. vi. 10; Pom. Mela, i. 19; Strab. xii. p. 357.) According to Pliny, it was at one time called Leucus, and had its origin in the lake of Miletopolis; but this notion is incorrect. The river flows at first in a north-western direction, forming the boundary between Myasa and Bithynia, through the lake of Apollonia, and in the neighbourhood of Miletopolis receives the river Megeticus, and discharges itself into the Propontis opposite the island of Bithynicus.
RHYPES.  

The Scholaria on Apollonius Rhodius (i. 1165) states that in later times the Rhynchos, after receiving the waters of the Megistus, was itself called Megistus; but Eustathius (ad Hom. H. xiii. 771) asserts as if in his time it still bore the name of Rhynchos. According to Valerius Flaccus (iii. 35) its yellow waters were discernible in the sea at a great distance from its mouth. In n. c. 73 Lucullus gained a victory over Mithridates on the banks of this river. (Plut. Luc. 11; comp. Polyb. v. 17; Ptol. v. 1 §§ 4, 8; Steph. B. s. v.) The Rhynchos is now called Lapid, and after its union with the Megistus (Naupliki) it bears the name of Mih-\textit{tikos} or \textit{Mikatiko}. (See Hamilton's Researches, ii. 17.)

RHYPES (Πρή\textit{θα}, Πρα\textit{τα}, Steph. B. s. v.; \textit{Eth. Prē\textit{θ}, Prē\textit{tōs}), a city of Achaia, 30 stadia W. of Aegium, was originally one of the twelve Achaean cities. It had ceased to be a member of the League in the time of Polybius, who mentions Leontium in its place. Rhypes, however, continued to exist down to the time of Augustus; but this emperor transferred its inhabitants to Patrae, and its territory (Πρη\textit{θας}, or Πρ\textit{τας}) was divided between Aegium and Pharse. Its ruins were seen by Pausanias in a short distance south of the river, mentioned from Aegium to Patrae. We learn from Strabo that this town was mentioned by Asclepius as \textit{ne\text{\'}πα\text{\'}ιας Πρ\textit{θας}}, or "Rhypes stricken by the thunderbolt." It was the birthplace of Mycællus, the founder of Croton. (Herod. i. 143; Paus. vii. 6 § 1, viii. 18 § 7, vii. 23 § 4; Strab. viii. pp. 386, 387.) In the territory of Rhypes there was a demus called 

\textit{Lecur\text{\'}um} (Locutor, Strab. p. 387), and also a sepulcher named \textit{Erinom} (Epie\text{\'}um, or Epie\text{\'}um Asaphe), which is mentioned by Theocritus, and which is described by Pausanias as 60 stadia from Aegium. (Thuc. vii. 34; Paus. vii. 22 § 10; Plin. iv. 6.)

The geographers of the French Commission place Rhypes at some ruins on the right bank of the river Tholo, where it issues into the plain; and the distance of the position on the Tholo from 

\textit{Vostita} (Aegium) is that which Pausanias assigns as the interval between Aegium and Rhypes. But Leake, thinking it highly improbable that two of the chief cities of Achaia should have been only 60 stadia from each other, suspects the accuracy of Pausanias, or his text, as to the distance between Rhypes and Aegium. He accordingly places Rhypes further W. on the banks of the river of Saimenika, and supposes Erinom to have been its port and to have been situated immediately above it at the harbour of \textit{Lambiri}. The position of \textit{Lambiri} answers very well to that of Erinom; but the reason given by Leake does not appear sufficient for rejecting the expression of Pausanias as a confusion between Aegium and Rhypes. (Leake, Peloponnesiacs, p. 408, seq.; comp. Curtius, Peloponnesia, vol. i. p. 458, seq.)

RHYT\textit{Hium} (Πρ\text{\'}τ\text{\'}ωρ, Steph. B.; Plin. iv. 20; \textit{Eth. Pr\text{\'}t\text{\'}ωρ}), a town of Crete which Homer (ii. 648) couples with Phææus as "well-peopled cities." The city belonged to the Gortynians (Strab. x. p. 479; Nicias, \textit{Diog. xii. 283}). The corrupt reading \textit{P\text{\'}t\text{\'w}ρων} in Steph. B. (z. v. Ζη\text{\'}ρων) should be emended into \textit{Ρ\text{\'}t\text{\'}ρων}. (Hick, Kreto, vol. i. p. 414.) The city must have existed on the coast or to the close which leads from Kastelland to Haghia Dēka, but Pashley (Cret. vol. i. p. 293) could find no vestiges of antiquity in the neighbourhood.  

[R. E. J.]

RIBLAH (Pau\text{\'}d\text{\'}ayā), a city "in the land of Hamath," where Jehoshah or Shallum was cast into chains by Pharaoh Necho, and where Necho had been subsequently given judgment on Zedekiah, (2 Kings, xxiii. 33, xxx. 6.) We find Nebuchadnezzar there again, after an interval of 30 years, when the last remnant was carried captive and slain there. (Jerem. vii. 27.)

RICCIAVM, in North Gallia. The Table has a road from Divodurum (Metz) to Augusta Trevirorum (Trier). From Divodurum to Caramusca is xlix., from Caramusca to Ricciaum x., and from Ricciaum to Augusta x. D'Anville guessed Ricciaum to be \textit{Remich} on the Mosel; but it is only a guess. There is evidently an error in the Table in the distance between Divodurum and Ricciaum, which is a great deal too much. The geographers have handled this matter in various ways. (Caramusca.) (See also Ucket, Gallien, p. 512, and the note.)

RICINA. 1. (Eth. Ricenensis: Ru, near Mecara), a municipal town of Picenum, situated on a hill above the right bank of the river Potentia (Potenza), about 15 miles from the sea. Pliny is the only geographer that mentions it (iii. 13, s. 19); but the "ager Ricenensis," as noticed by the Tabula of Liber Coloniarum (p. 226), and we learn from an inscription that it received a colony under the emperor Severus, and is assumed in consequence the title of "Colonia Helvia Ricina" (Orell. Inscr. 915; Cluver. Ital. p. 759.) Its ruins are still visible, and include the remains of a theatre and other buildings. They are situated about 3 miles from Mecara, and 6 from Recanati, which has preserved the traces of the ancient name, though it does not occupy the ancient site. (Holken Not. du Nord, p. 137.) The Tabula correctly places it at a distance of 12 miles from Septempeda (S. Severina). (Tab. Pent.)

2. A small town on the coast of Liguria, mentioned only in the Tabula, which places it on the coast to the E. of Genoa. It is commonly identified with Reca, a town about 12 miles from Genoa, but the Tabula gives the distance as only 7, so that the identification is very doubtful. (Tab. Pent.; Geogr. Rav. iv. 32.)

RICINA (\textit{P\text{\'}hr\text{\'}a}, Ptol. ii. 3 § 11), one of the Ebeneans iuxae or \textit{Hebræi}. 

RIGODUNUM, a place on the Moselle (Mosel), "protected either by mountains or the river." (Tacitus, Hist. iv. 71.) In the war with Civilis this place was occupied by Valentinius with a large force of Treviri. Civilis, who was at Mainz, marched to Rigodulum in three days (tertius castris) and stormed the place. On the following day he reached Colonia Trevirorum (Trier). It is supposed that Rigodulum may be \textit{Racol} on the Mosel. Lipsius assumes Rigodulum to be \textit{Ratul} near Confluences (Coblenz), but that is impossible. Ammianus Marcellinus (xv. 6) places Rigodulum near Confluences, but his authority is small; and there may be some corruption in the text.  

[R. G. L.]
been Ridbe-colter or Rizot; others identify it with Richmond.

ROTMAGUS, a village of Cisalpine Gaul, forming a station on the road from Ticinum (Pavia) to Augusta Taurinorum (Torino). It is placed by the Itineraries 36 M. P. from Launolone (Lonello), and 36 M. P. from Augusta or Taurini; these distances coincide with the site of Trino Vecchio, a village a little to the S. of the modern town of Trino, on the left bank of the Po (Itin. Ant. p. 339; Cluver, Ital. p. 293; Walckenaer, Geogr. des Deux. vol. iii. p. 238.)

[E. H. B.]

ROTIMAGUS (Remagen), on the Rhine. The Table places it between Bonna (Bonn) and Antoninna (Andernach), viii. from Bonna and ix. from Antoninna. The Antonine Itin., which omits Rotimagus, makes the distance xvii. from Bonna to Antoninna. Remagen is on the Rhine and on the north side of the Ahr near its junction with the Rhine. Ukert (Gallien, p. 318, note) speaks of a milestone found at Remagen with the inscription "a Col. Agripp. m. p. xxx." [G. L.]

RIMMON (Euphran), a city of the tribe of Simeon (Josh. xix. 7). mentioned by Zechariah as the extremity of the land of Judah (xiv. 10). Placed by Eusebius S. of Dara, 16 miles from Eleutheropolis. (Onomast. s. v. Euphran, Euphras.) He places another town of the same name 15 miles north of Jerusalem. (ib. s. v. Euphras.) [G. W.]

RIEHE, in North Gallia, a name which appears in the Table on a road which passes from Augustomagus (Sodbé) through Calagum (Clalig). Caligae comes after Augustomagus, but the distance is not given.

A road, which appears to be in the direction of a Roman road, runs from Clalig to Orbi, a few miles north of the Seine; and D'Anville thinks that the name Orbi and the distance from Riehe to Condite (Monte rest-sur-Torne) enable us to fix Riehe at Orbi. [Condite, No. 2; Calagum.] [G. L.]

RIHA (Plin. iii. i. s. 3, according to the Codex Reg., though the common reading is Ripgara), a place in Hispania Boetica, which according to Razonico (Disquisit. Pila, ii. p. 11) occupied the site of the modern Castro del Riha. (Comp. Ukert, vol. ii. part i. p. 380.) [T. H. D.]

RIHA, a river on the E. coast of Thrace. (Plin. iv. 11, s. 18.) Reichards conjectures it to be the Rames.

[RIHARDIR (Polyb. op. Plin. v. 1), a harbour on the W. coast of Mauretania, which may be identified with the Acila of the Ship-journal of Hanno (Aspra, Peripil. § 5, ed. Müller). It now bears the name of Ayunder, signifying in the Beryber language (Paradis, Dictionnaire Berbère, p. 110) "a fortress," and is described as being the best roadstead along the coast of Morocco. Ayander or Santa Cruz, which was called Guerguesbon in the time of Leo Africanus, was walled round and strengthened by batteries in 1503 by Emanuel, king of Portugal; but was taken from the Portuguese by the Moors in 1536. (Jackson, Marocco, p. 113; Journ. of Geog. Soc. vol. vi. p. 292.) [E. B. J.]

RIHYMNNA. [RIHYMNNA.]

RIITUM (Pirittuo), a place in the south-west coast of Lower Pannonia, situated close to the Danube, and on the road leading to Taurismun. (Itin. Ant. p. 242; Ptol. ii. 16. § 5; Tab. Peut.) It contained a garrison of Dalmatian cavalry. (Not. Imp., where the name is miss-spelt Rictum.) According to Muchart (Varitxum, i. p. 265), its site is now occupied by the town of Titel.

[L. S.]

RODOUMNA. (POSOQJLA), in Gallia, is one of the towns of the Segusians. (Ptol. ii. 8. § 14.) Rodumna appears in the Table on a road which leads to Lugdunum (Lyons) through Forum Segusianorum. Rodumna is Roanne on the west bank of the Loire, which gave name to the former district of Lyonensis.

[G. L.]
SITUATION.

Rome was seated on the Tiber, and principally on its left bank, at a distance of about 15 miles from its mouth. The observatory of the Collegio Romano, which is situated in the ancient Campus Martius, lies in 41° 53' 52" N. lat., and 12° 28' 40" long. E. of Greenwich.

Rome lies in the vast plain now called the Campagna, which extends in a south-easterly direction about 90 miles from Cephe Larino, a little S. of Civita Castellana, to the Circenian promontory; whilst its breadth is determined by the mountains on the N. and by the Mediterranean on the S.W., in which direction it does not exceed about 27 miles in its greatest extent. Looking from any of the heights of Rome towards the E., the horizon is bounded from the N. almost to the S. by a nearly continuous chain of mountains, at a distance varying from about 10 to 20 miles. This side offers a prospect of great natural beauty, which, to the lover of antiquity, is still further enhanced by the many objects of classical interest which it presents. In the extreme north, at a distance of about 20 miles, lies the round and isolated mass of Soraco. Then follows the picturesque chain of the Sabine Apennines, in which the peaked and lofty summit of Lucretius, now Monte Generaro, forms a striking feature. A few miles farther S., at the spot where the Anio precipitates its waters through the chain, lies Tibur, embosomed in its grey and sombre groves of elives. More southward still, and seated on the last declivities of the Sabine mountains, is the "frigidum Praeneste," celebrated for its Nymphaeum and its temple of Fortune (Cic. Div. iii. 41), and, like the neighbouring Tibur, one of the favourite resorts of Horace. (Od. iii. 4) A plain of 4 or 5 miles in breadth now intervenes, after which the horizon is again intercepted by the noble form of Mons Albanus (Monte Carlo), which closes the line of mountains towards the S. This mass is clearly of volcanic origin, and totally unconnected with the Apennines. The mountain, however, presents many historical recollections. Its summit was crowned by the temple of Jupiter Latialis, the common sanctuary and meeting place of the Latin cities, conspicuous from the surrounding plain, and even visible to the mariner. Beneath lay Alba Longa with its lake; at its southern foot Larantium, and on its northern declivity Tusculum, consecrated by the genius and philosophy of Cicero. To the S. and SW. of Mons Albanus there is nothing to obstruct the view over the undulating plain till it sinks into the sea; but on the W. and NW. the prospect is bounded to a very narrow compass by the superior elevation of Mons Janiculus and Mons Vaticinus.

The plain marked out by these natural boundaries is intersected by two considerable rivers, the Tiber and the Anio. The former, at first called Albula, and afterwards Tiberia or Tbris (Liv. i. 3; Plin. iii. 5. s. 9; Virg. Aen. viii. 330, &c.), entering the plain between Soraco and the Sabine mountains, and deflected by Mount Albanus, turns to the W. and NW. The Tiber, a distance of about 3 miles from Rome, it receives the Anio flowing from the eastward, and then with increased volume passes through the city and discharges itself into the sea at Ostia. The course of the Tiber marked the limits of Etruria: the angular territory between it and the Anio is attributed to the Sabines; whilst on the southern side the line of the Anio and of the Tiber formed the boundary of Latium.

The Campagna of Rome consists of undulating ridges, from which scanty harvests are gathered; but the chief use to which it is applied is the pasturing of vast herds of cattle. These, with the picturesque herdsman, mounted on small and half wild horses and armed with long pikes or lances, are almost the only objects that break the monotony of a scene where scarce a tree is visible, and where even the solitary houses are scattered at wide intervals. Yet anciently the Campagna must have presented a very different aspect. Even within sight of Rome it was thickly studded with cities at first as flourishing as herself; and in those times, when "every road of ground maintained its man," it must have presented an appearance of rich cultivation.

Such is the nature of the country in the immediate neighbourhood of Rome. The celebrated group of
seven hills—the site on which the eternal city itself was destined to rise—stands on the left bank of the Tiber. To the N. of them is another hill, the Mons Pincius or Collis Hortorum, which was excluded from the ancient city, but part of it was enclosed in the walls of Aurelian. The Tiber, at its entrance into Rome, very nearly approaches the foot of this hill, and then describes three bold curves or reaches; first to the SW., then to the SE., and again to the SW. The distance from the spot where the Tiber enters the city to the SW. point of the Aventine is, in a direct line, about 2 miles. At the extremity of the second, or most eastern reach, it divides itself for a short space into two channels and forms an island, called the Insula Tiberina. At this spot, at about 300 paces from its eastern bank, lies the smallest but most renowned of the seven hills, the Mons Capitolinus. It is of a saddle-back shape, depressed in the centre, and rising into two eminences at its S. and N. extremities. On its N. or rather NE. side, it must in ancient times have almost touched the Collis Quirinalis, the most northerly of the seven, from which a large portion was cut away by Trajan, in order to construct his forum. The Quirinalis is somewhat in the shape of a hook, running first to the SW., and then curving its extreme point to the S. Properly speaking, it is not a distinct hill, but merely a tongue, projecting from the same common ridge which also throws out the adjoining Viminal and the two still more southern projections of the Esquiline. It will be seen from the annexed plan, without the help of which this description cannot be understood, that the Quirinal, and the southernmost and most projecting tongue of the Esquiline, almost meet at their extremities, and enclose a considerable hollow which, however, is nearly filled up by the Viminal, and by the northern and smaller tongue of the Esquiline. These two tongues of the Esquiline were originally regarded as distinct hills, under the names of Cispius, the northern projection, and Op-
plus the southern one; but they were afterwards considered as one hill, in order not to exceed the prescriptive number of seven. S. of the Esquiline lies Mons Caletus, the largest of the seven; and to the W. of it Mons Aventinus, the next largest, the NW. side of which closely borders on the Tiber. In the centre of this garland of hills lies the lozenge-shaped Mons Palatinus, facing on the NW. towards the Capitoline, on the NE. towards the Esquiline, on the SE. towards the Caelian, and on the SW. towards the Aventine.

It may be observed that, of the seven hills above described, the Quirinal and Viminal are styled colles, whilst the others, though without any apparent reason for the distinction, are called montes. It cannot depend on their height, since those called colles are as lofty as those dignified with the more imposing name of montes; whence it seems probable that the difference originated in the ancient traditions respecting the Septimontium.

A less important eminence, called Velia, which was not reckoned as a distinct hill, projected from the NE. side of the Palatine towards the Esquiline, and separated the two valleys which in after times became the sites of the Forum Romanum and of the Colosseum. The Germanicus, in another period, was a further offshoot, or spur, of the Palatine, on its western side.

On the opposite bank of the Tiber, Mons Vaticanos and Mons Janiculus rise, as before remarked, to a considerably greater height than the hills just described. The former of these lies opposite to the Pincian, but at a considerable distance from the river, thus leaving a level space, part of which was called the Ager Vaticanus, whilst the portion nearest the river obtained the name of Prata Querentia. To the S. of Mons Vaticanos, and close to the river, at the extreme western point of its first reach, the Mons Janiculus begins to rise, and runs almost straight to the S. till it sinks into the plain opposite to Mons Aventinus. The open space between this hill and the southernmost curve of the Tiber formed the Regio Transiberina.

The sinuous course of the river from the Pincian to the Capitoline left a still more extensive plain between its left bank and the hills of Rome, the northern and more extensive portion of which formed the Campus Martius, whilst its southern part, towards the Capitoline, was called the Prata Flaminia.

From the preceding description it will be perceived that the Capitoline, Aventine, Caelian, and Palatine were completely isolated hills, separated from one another by narrow valleys. Those valleys which lay nearest the Tiber seem, in their original state, to have formed a marsh, or even a lake. Such was the Vallis Murcia, between the Palatine and Aventine, in later times the seat of the Circus Maximus; as well as the low ground between the Palatine and river, afterwards known as the Velabrum and Forum Boarium; and perhaps even part of the Forum Romanum itself. Thus, in the combat between the Romans and Sabines, on the spot afterwards occupied by the forum, the affrighted horse of Mettius Curtius, the Sabine leader, is described as carrying him into a marsh. (Liv. i. 12.)

Now, there are grounds for believing that the Tiber, in the neighbourhood of Rome, formed at a very remote period an arm of the sea, as pure marine sand is often found there. (NiEhlar, Lect. on Ethnogr. vol. ii. p. 59.)

In order to assist the reader in forming a clear idea of the nature of the Roman hills, we shall here insert a few measurements. They are taken from a paper by Sir George Schubberg in the "Philosophical Transactions," An. 1777 (vol. lxvii. pt. 2. p. 594), and have been esteemed the most accurate. (Becker, Handbuch, vol. i. p. 86, note.) Other measurements by Calandrelli are also annexed. The latter are according to the Paris foot, which equals 12.785 inches English.

In ancient times, however, the hills must have appeared considerably higher than they do at present, as the valleys are now raised in many places from 15 to 20 feet above their former level, and in some parts much more. (Lamisden, Ant. of Rome, p. 137.) This remark is more particularly applicable to the forum, which is covered with rubbish to a great depth; a circumstance which detracts much from the apparent height of the Capitoline; whose sides, too, must formerly have been much more abrupt and precipitous than they now are. The much superior height of the Janiculum to that of any of the hills on the W. bank of the Tiber, will have been remarked. Hence it enjoyed a noble prospect over the whole extent of the city and the Campus Martius, beyond, to the mountains which bound the eastern horizon. The view has been celebrated by Martial (iv. 64), and may be still enjoyed either from the terrace in front of S. Pietro in Montorio, or from the spot where the Fontana Paolina now pours its abundant waters:

"Hinc septem dominos videre montes
Et totum ilceet aetemaram Roman,
Albanos quoque Tusculanque colles
Et quodcumque jacet sub urbe triges."

**CLIMATE.**

The climate of Rome appears to have been much colder in ancient times than it is at pres.
sent. Dionysius (xii. 8) records a winter in which the snow lay more than 7 feet deep at Rome, when houses were destroyed and men and cattle perished.

Another severe winter, if it be not the same, is mentioned by Livy (v. 13) as occurring B.C. 398, when the Tiber was frozen over and the roads rendered impassable. (Cf. xl. 45, &c.) A very severe winter is also alluded to by St. Augustine (de Civ. Dei. iii. 17). That such instances were rare, however, appears from the munificence with which they are recorded. Yet there are many passages in the classics which prove that a moderate degree of winter weather is not unusual, or rather that it was of ordinary occurrence. Thus Pliny (xxvii. 2) speaks of long snows as being beneficial to the corn; and allusions to winter will be found in Cicero (ad Qu. Fr. ii. 12), Horace (Od. i. 9, iii. 10), Martial (iv. 18), and in numerous other passages of ancient writers. At the present time the occurrence of even such a degree of cold as may be inferred from these passages is extremely rare. One or two modern instances of severe winters are indeed recorded; but, generally speaking, snow seldom falls, and never lies long upon the ground. The change of climate in this change of climate accounted for by Dr. Arnold as follows: "Allowing that the peninsula form of Italy must at all times have had its effect in softening the climate, still the woods and marshes of Campania Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighbourhood of Rome. Besides, even in the Apennines, and in Etruria and in Latium, the forests occupied a far greater space than in modern times; this would increase the quantity of rain, and consequently the volume of water in the rivers; the floods would be greater and more numerous, and before man's dominion had completely subdued the whole country, there would be a large accumulation of water in the low grounds, which would still further increase the coldness of the atmosphere." (Hist. of Rome, vol. i. p. 449.)

But if the Roman climate is ameliorated with regard to the rigour of its winters, there is no reason to believe that the same is the case with regard to that unhealthy state of the atmosphere called malaria. In ancient times, Rome itself appears to have been tolerably free from this pestilence, which was confined to certain tracts of the surrounding country. This may have been partly owing to its denser population; for it is observed that in the more thickly inhabited districts of Rome there is even at present but little malaria. Strabo, speaking of Latium, observes that only a few spots near the coast were marshy and unhealthy (v. p. 231), and a little farther on gives positive testimony to the healthiness of the immediate neighbourhood of Rome (ἔρεγέν τις ἐστι πεδία, τά μέν πρός τήν Ρώμην αναύσατα καὶ τά προστάτα αὐτής, τά δὲ πρός τήν Δικατανν. τά μέν οὖν πρός τήν Δικατανν ἅγιοι εἶσαι ξεφειάζων, τά δέ ἄλλα εἰδώλα τα καὶ παραπληγίως ἐγκατέτειναι, ib. p. 239).

To the same purpose is the testimony of Livy, who represents Camillus describing the hills of Rome as "consolamentum urbem," and of Cicero (de Re publica, ii. 63), "locumque delicat et contubernalium atque in regis postentium subsanem: colles enim sunt, qui cum perfantar ispi, tunc aequorum umbrae valvillae." It is surprising how Becker (Handbuch, p. 82) can interpret Cicero's meaning in this passage to be that the lower parts of Rome were unhealthy, when it is obvious that he meant just the reverse, — that the higher parts of the hills secured their healthiness. Little can be inferred with regard to any permanent malaria from the altars which we are told were erected to the goddesses Orbuna and Febris on the Esquiline and in other places. (Cic. N. D. ii. 25; Plini. ii. 5; Valer. Max. ii. 5, § 6.) Even the most healthy spots are not always exempt from fevers, much less a populous city during the heats of autumn. The climate of Rome is at present reckoned unhealthy from June till October; but Horace dreaded only the autumnal heats. (Od. ii. 14-15; Sat. ii. 6. 19.) The season is more severe than it is found in his Epistle to Mucceus, where he places it at the rising of the fig:

"dum fiesc prima coloque
Designatorem decorat litteris aureis." (Ep. i. 7. 5.)

In the same epistle (v. 10) he seems to expect as a usual occurrence that the Alban fields would be covered with snow in the winter.

PART I. HISTORY OF THE CITY.

I. TRADITIONS RESPECTING THE FOUNDATIONS OF ROME.

The history of the foundation of Rome is lost in the darkness of remote antiquity. When the greatness of the city, and its progress in arts and letters, awakened curiosity respecting its origin, authentic records on the subject, if indeed they had ever existed, were no longer to be found. Hence a licence of conjecture which has produced at the least no fewer than twenty-five distinct legends respecting the foundation of Rome. To record all these, many of which are merely variations of the same story, would be beside the purpose of the present article. The student who desires a complete account of them will find them very clearly stated in Sir G. Cornewall Lewis's Inquiry into the Credibility of the early Roman History (vol. i. p. 394, seq.), and also, though not so fully, in Niebuhr's History of Rome (Eng. Trans. vol. i. p. 214, seq.), chiefly derived from the following ancient writers respecting the subject, however, and the frequent allusions to it in the classical writers, will not permit us to pass it over in perfect silence; and we shall therefore mention, as compendiously as possible, some of the principal traditions.

All the theories on the subject may be reduced to three general heads, as follows:—I. That Rome was founded in the age preceding the Trojan War. II. That it was founded by Aeneas, or other persons, a little after the fall of Troy. III. That Romulus, grandson of Numitor, king of Alba Longa, was its founder, several centuries after the Trojan War.

Many who held the first of these opinions ascribed the building of Rome to the Pelasgs, and thought that its name was derived from the force (βόσιν) of their arms. (Plut. Rom. 1.) Others regarded it as having been founded by an independent Italian tribe, and called Valeria, a name of the same import, which, after the arrival of Evander and other Greeks, was translated into Rome. (Niebuhr, Hist. vol. i. p. 214.) A more prevalent tradition than either of the preceding was, that the city was first founded by the Arcadian Evander, about sixty years before the Trojan War. The fact that Evander
settled on the Palatine hill seems also to have been sometimes accepted by those who referred the real foundation of Rome to a much later period. The tradition respecting this settlement is interesting to the topographer, as the names of certain places at Rome were said to be derived from circumstances connected with it. The Palatium, or Palatine hill, itself was thought to have been named after the Arcadian town of Pallantium, the name having been dropped in the course of time; though others derived the appellation in different ways, and especially from Pallas, the grandson of Evander by his daughter Dyne and Hercules (Paus. viii. 43; Dionys. i. 32.) So, too, the Porta Carmentalis of the Servian city derived its name from a neighbouring altar of Carmenta, or Carmenta, the mother of Evander. (Dionys. L. c.; Virg. Aen. viii. 338.) Nothing indeed can be a more striking proof of the antiquity of this tradition, as well as of the deep root which it must have taken among the Roman people, than the circumstance that to a late period divine honours continued to be paid to Carmenta, as well as to Evander himself. Another indication of a similar tendency was the belief which prevailed among the Romans, and was entertained even by such writers as Livy and Tacitus, that letters and the arts of civilisation were first introduced among them by Evander. (Liv. i. 7; Tac. Ann. xi. 14; Plut. Q. R. 56.)

The greater part of those who held the second opinion regarded Aeneas, or one of his immediate descendants, as the founder of Rome. This theory was particularly current among Greek writers. Sometimes the Trojans alone were regarded as the founders; sometimes they are represented as uniting in the task with the Aborigines. Occasionally, however, Greeks are substituted for Trojans, and the origin of Rome is ascribed to a son of Ulysses and Circe; may, in one case Aeneas is represented as coming into Italy in company with Ulysses. But though this view was more particularly Grecian, it was adopted by some Latin writers of high repute. Saltust (Cat. 6) ascribes a Trojan origin to Rome; and Propertius (iv. 1), without expressly naming Aeneas as the founder, evidently refers its origin to him:

"Hec quaedamque vides, hoops, qua maxima Roma est,
Ante Phrygum Aeneas collis et harta fuit;"

though in the same passage he also refers to the occupation of the Palatine hill by Evander. One very prevalent form of this tradition, which appears to have been known to Aristotle (Dionys. i. 72), represents either a matron or a female slave, named Iomé, as burning the ships after the Trojans had landed. They were thus compelled to remain; and when the settlement became a flourishing city, they named it after the woman who had been the cause of its foundation.

The third form of tradition, which ascribed the origin of Rome to Romulus, was by far the most universally received among the Romans. It must be regarded as ultimately forming the national tradition; and there is every probability that it was of native growth, as many of its incidents serve to explain Roman rites and institutions, such as the worship of Vesta, the Lares, Larentia, Lemuria, Arval Brothers, &c. (Lewis, vol. i. p. 409.) The legend was of high antiquity among the Romans, although inferior in this respect to some of the Greek accounts. It was recorded in its present form by Fabius Pictor, one of the earliest Roman annalists, and was adopted by other ancient antiquarians and historians (Dionys. i. 79.). Nay, from the testimony of Livy we may infer that it prevailed at a much earlier date, since he tells us (s. 23) that an image of the she-wolf suckling the two royal infants was erected near the Ficus Lavinia by the curule aediles, B.C. 296.*

* It has been conjectured that this was probably the same statue mentioned by Cicero (De Div. i. 12, Cat. iii. 8), and described as having been struck by lightning; but this can hardly be the case, as the image described by Cicero stood in the Capitol. A bronze statue answering Cicero's description is still preserved in the Capitoline Museum at Rome, which is regarded by Niebuhr as a genuine relic (Hist. vol. i. p. 210), and has been immortalised in the verses of Byron. A modern critic finds it a production too clumsy for the state of Roman art at the time assigned by Livy, and thinks that the holes in the hind-leg of the wolf were not produced by lightning, but arise from a defect in the casting. (Braun, Ruins and Museums of Rome, p. 81.)

Fabius Pictor, however, who mentions this statue in the passage cited from his work by Dionysius (L. c.), expressly remarks the primitive nature of its workmanship, - χάλκην τοιοῦτον παλαια ἐργασίας,—though considerably less than a century must have elapsed between his time and the date of its erection. It was rude, therefore, even when compared with the state of Roman art towards the end of the third century B.C., though it had been erected only at the beginning of that century. Mommase is inclined to believe that the Capitoline wolf is the genuine one erected by the Oculii and described by Livy, from the circumstance of its having been found near the arch of Severus. (De Comitio Rom., in the Annali dell' Instituto, 1844, vol. xvi. p. 300.) Whoever has seen the group will perhaps at all events agree with Winckelmann that the twins are evidently of a different period from the wolf.
kept in so far as they may serve to ascertain the era of Rome. The account which has the most preten-
sions to accuracy is that given by Dionysius (I. 65, 70, 71) and by Diodorus (Fr. liv. viii. vol. iv. p. 21, Dipont). The sum of the reigns here given, allowing five years for the reign of Numitor, who died in the seventh
year after the taking of Troy, is 432 years —
that is, down to the second year of Numitor, when Rome was founded by Romulus, in the first year of the 7th Olympiad. Now this agrees very closely with Varro's era for the foundation of Rome, viz., 753 B.C. For Troy having been taken, according to the era of Erastathes, in 1184 B.C., the differ-
ce between 1184 and 753 leaves 431 years for the duration of the Alban kingdom.
Varro's date for the foundation of Rome is that
generally adopted. Other authorities place it rather later: Cato, in 751 B.C.; Polybius, in 750; Fulvius Pictor, in 747.
This is not the place to enter into the question
whether these dates of the Alban kings were the
invention of a later age, in order to satisfy the re-
quirements of chronology. It will suffice to remark
that the next most prevalent opinion among these
Romans who adopted the main points of this tradition
assigned only three centuries to the Alban kings
before the foundation of Rome. This was the opinion of
Virgil (Aen. i. 272).—
"Hie jam tercentum totas regnabitur amos,"
—of Justin, of Trogus Pompeius (xliii. 1), and of
Liv. (i. 29), who assigns a period of 4/40 years
for the existence of Alba, and places its destruction
a century after the foundation of Rome. At all
events the preponderance of testimony tends very
strongly to show that Rome was not founded till several centuries after the Trojan War. Termeus
seems to have been the first Greek writer who
adopted the account of the foundation of Rome by
Romulus. (Nieberh, Hist. vol. i. p. 218.)
II. THE CITY OF ROMULUS.
The Roman historians almost unanimously relate
that Rome, originally consisted of the city founded by
Romulus on the Palatine. (Liv. i. 7; Fl. Kell. i. 1.
Tac. Ann. xii. 24; Dionys. i. 88; Gell. xiii. 14; Ov. Tr. iii. i. 29, &c.) The ancient settlement of Ev-
der on the same hill, as well as a city on the Capit-
toline called Saturnia (Varc. L. L. v. § 42, Mill.;
 Festus, p. 322, Milli.), and another on Mons Janici-
cus called Aenea or Antipolis (Dionys. i. 73; Plin.
vn. 9.), must be supposed to have disappered at the
time of its foundation, if indeed they had ever existed.
It seems probable enough, as Dionysius says, that
villages were previously scattered about on the
seven hills; but the existence of a place called Va-
tea or Vatican, on the right bank of the Tiber, and
of a Quirinum on the Quirinal, rests solely on the
conjecture of Niebuhr (Hist. vol. i. p. 223, seq.,
289, seq., Eng. Trans.)
Pomerium.—Tacitus has given in the following
passage the fullest and most authentic account of
the circuit of the Romanic city: " Sed intium con-
demni, et quod pomerium Romulus posuerit, nescor
haud sublunari rec. Egitur a foro Boario, ubi
aerenum tauri simulacrum adscriptum, quia id generus
animalium aratro subjicit, suculi designandi oppidi
coeptus, ut magnum Herculis aram amplectereere.
Inde certe spatii interjecti lipes, per ima montis
Palatini ad aram Consii max ad Curias Vetere,
tum ad saltem Lurum; forumque Romanum ut
Capitolium non a Romulo sed a Tito Tatito additor
urbis credidere." (Ann. xii. 24.)
According to this description, the point where
the forum of the pomerium commenced was marked by
the statue of a bull, whence the name of the Forum
Boarium was by some writers afterwards derived.
The Forum Boarium lay under the westernmost
angle of the Palatine; and the forum probably
began a little beyond the spot where the Arcus
Argentarius now stands, close to the church of S.
Giorio in Velabro, embracing the altar of Hercules,
or Ara Maxima, which stood in the same forum:—
"Constituitque sili, quam Maxima dicitur, aram,
Hic ubi pars urbis de bone nomen habet." (Ov. Fast. i. 158.)
Hence it proceeded along the north side of the
Vallis Muricia (Circus Maximus), as far as the
Ara Consi. According to Becker (Handbuch, p. 98,
de Muria, &c. p. 11), this altar must be sought
towards the lower end of the Circus, near the
southernmost angle of the Palatine; but he gives
no authority for this opinion, which is a mere assum-
tion, or rather a petito principi; from the passage
quoted, it appears, he thinks that this must necessarily be referred to the spot indicated.
(Haudb. p. 468, and p. 665, note 1438.) But there
is nothing at all in the words of Tacitus to warrant
this inference; and there seems to be no good reason
why we should dispute the authority of Tertullian,
from whom we learn that the Ara Consi stood near
the first meta of the circus, and therefore somewhere
near the middle of the SW. side of the Palatine
("et nunc ara Consolae in circu defossa est ad primas
metas," de Spect. 5). Hence, after turning of course,
the southernmost point of the Palatine, where the
Septizonium of Severus afterwards stood, the
pomernium proceeded through the vallet between
the Palatine and Caelius (Via de S. Gregorio) to the
Curiae Vetere. The situation of this last place has
been the subject of much dispute. Niebuhr (Hist.
vol. i. p. 288), though with some hesitation (ib. note
735), and Bunsen (Beschreibung, vol. i. p. 138),
place the Curiae Vetere near the baths of Titus on the
Esquiline; and they are followed by Müller (Latera-
res, vol. ii. p. 143). This view appears, however, to
be founded on no authority, except that of the modern
writers Blondus Flavius and Lucas Faunus, who
state that the part of the Esquiline called Carinae,
and even the baths of Titus themselves, were
designated in ancient notarial documents as "Curia
Vetere." But, first, it is highly improbable that
Tacitus, in his description, should have taken so long
a stride as from the Ara Consi, in the middle of the
SW. side of the Palatine, to the Esquiline, without
mentioning any intervening place. Again: if the
line of the pomerium had proceeded so far to the N.,
it must have embraced the Velux as well as the Pa-
latine, as Bunsen assumes (l.c.); and this must have
destroyed that squareness of form which, as we shall
see further on, procured for the city of Romulus the
appellation of "Roma Quadrata." That the furrow
was drawn at right angles following the natural line
of the hill we are assured by more than one au-
tority (pecurinam et arenam, s. P. i. xlvii. 23); from
Dionys. i. 88; antiquissimum pomerium, quod a
Romulo instituto est, alpabini montis radiucus
terminabatur, Gell. xiii. 14). But, further, it may
be shown from satisfactory testimony that the Curiae
Vetere were not seated on the Esquiline, but between
the Palatine and Caecilia. Thus the Notitia, in de-
ROMA.

scribeing the 10th Regio, or Palatium, marks the boundaries as follows, taking the reverse direction of that followed by Tacitus: "Continent casam Romuli, aedem Matris Deum et Apollinis Rhamnus, Peutapylum, domum Augustinianum et Thiberianum, Augurinorum, aereum Palatinum, aedem Jovis Victoriae, domum Domit, Curiam Veterem, Fortunam Respicien-tem, Septizonium Divi Severi, Victoriaem Germanici-inam, Lupercal." The Curiae Veteres are here mentioned in the singular number; but there is some authority for this deviation. Thus Ovid (Fast. iii. 139) says:—

"Janus tunc regis posita viret arbore Phoebi;
Ante tuas fit idem, curia Priscia, fores,"

where the Curia Prisca is identified with the Curiae Veteres by the following passage in Macrobius:—

"Eodem quoque ingrediente in semine tain in Regia Curiaeque atque flaminum dominus, laurus veteres novis lauris mutabantur." (Sat. i. 12.) Now, in order to determine the precise situation of the Curia Vetii of the Notitia, it must be borne in mind that the "Domus Augustaniana," or palace of Augustus, occupied a considerable portion of the NE. side of the Palatine, commencing at the N. corner, as will be shown in treating the topography of the later city, and ending probably opposite to the arch of Titus, where the entrance was situated. Proceeding eastward, along the same side of the hill, we find enumerated the Auguratorium and Area Palatina. Then follows the temple of Jupiter Victor, which we must not confound, as Becker does (Handb. p. 100, cf. p. 422, note 847; see Preller, Regionae, p. 186), with that of Jupiter Stator, since the latter, according to the Notitia, lay rather more northwards in the 4th Regio, and probably on or near the Summa Sacra Via. That of Jupiter Victor, then, must have lain to the E. of the palace, and, as there is but a short space left on this side of the hill, it is probable that the Domus Dionis must be placed at least at its extreme NE. angle, if not on the side facing the Caelian. The Curia Vetus, of course, lay more to the S., and perhaps towards the middle of the E. side of the Palatine. Its site near the temple (or statue) of Fortuna Respiciens is confirmed by the Basilica Capitolina, which mentions in the 10th Regio a "Vicus Curiam" near to the mother of Fortuna Respiciens. (Gruter, Inser., ed.) The fourth point mentioned by Tacitus — the Aedes Larum — lay on the Summa Sacra Via, and therefore at about the middle of the NE. side of the Palatine hill. ("Aedem Larum in Summa Sacra Via," Mon. Auct.; "Auncus Martius (habitavit) in Summa Sacra Via, ubi aedes Larum est," Solin. i. 24.) At this point the historian finishes his description of the pomoerium of Romulus, and proceeds to say that the forum and Capitol were believed to have been added to the city not by that monarch but by Titus Tatius. Hence he is charged with leaving about a third of the pomoerium undefined; and, in order to remedy this defect, Becker (de Maria, &c., p. 14, Handb. p. 102), not without the sanction of other critics and editors, proposes to alter the punctuation of the passage, and to read "tum ad sacellum Larum forumque Romanum; et Capitolion non a Romulo," &c. But in truth little is gained by this proceeding — only the short space from the arch of Titus to the N. point of the Palatine, whilst the remaining part of the line from thence to the Forum Boarium still remains undescribed. But what is worse, even this little is gained at the expense of truth; since, strictly speak-
Boarium." Bamse, however, has assumed from the omission that the line of wall never proceeded beyond the Sacellum Larum, and that, indeed, it was not needed; the remaining space being sufficiently defended by a marsh or lake which surrounded it. (Bsehr, vol. i. p. 138.) But, as the Sacellum Larum lay on high ground, on the top of the Velian ridge, this could not have been a reason for not carrying the wall further; and even if there was a marsh lower down, we cannot but suppose, as Becker observes (de Muse, p. 14), that the planners must have been curtailed to its termination, indeed the Porta Romonal, one of the gates of the Roman city, lay, as we shall presently see, on the NW. side, a little to the N. of the spot whence Tacitus commences his description; and if there was a gate there, à forteri there was a wall.

The line described by Tacitus is that of the furrow, not of the actual wall; but, in the case at least of a newly founded city, the wall must have very closely followed this line. The space between the furrow — the wall being inside — was the pomœrium, literally, "behind the wall" (post moerum = murum); and this space could not be ploughed or cultivated. The line of the furrow, or boundary of the pomœrium, was marked by stones or cippi. The name pomœrium was also extended to another open space within the walls which was kept free from buildings. The matter is very clearly explained by Livy in the following passage: — "Pomœrium, verbiæ solemn intuentes, postmoerium interpretantur esse. Est autem magis circa murum basin, quem in condendis urbis olim Etrusci, quam murum dum tatur essent, certis circa terminis inaugurato consecratam: ut neque interiore parte addiximus moenibus contumacentur, quae num velgu etiam conjungunt; et extraeuncus puri aliquid ab humano cultu pataret soli. Hoc spatio, quod neque habitati neque arari fas erat, non magis quod post murum esset, quam quod murus post id, pomœrium Romani appellatur: et in urbibus incremento sperant, quantum moenia processura erant, tantum termini hic concurrerat profecerantur" (i. 44). Every city founded, like Rome, after the Etruscan manner, had a pomœrium. The rites observed in drawing the boundary line, called "primigenium salus" (Paul. Diaec. p. 236, Mill.), were as follows: the founder, dressed in Galabanian fashion (cincto Gabino), yoked to a plough, on an auspicious day, a bull and a cow, the former on the off side, the latter on the near side, and, proceeding always to the left, drew the furrow marking the boundary of the pomœrium. There was a mystical meaning in the ceremony. The bull on the outside denoted that the males were to be dreadful to external enemies, whilst the cow inside typified the women who were to replenish the city with inhabitants. (Iuv. Lydus, de Mens. iv. 50.)

The furrow represented the ditch; the cibs thrown up, the wall; and persons followed the plough to throw towards those cibs which had fallen outwards. At the places left for the gate, the plough was lifted up and carried over the podane space. (Varr. L. L. v. 143, Mill.; Plut. Q. R. 27, Rom. 11.) The whole process has been summed up in the following vigorous words of Catu: — "qui urbeum novum conset, tauro et vacca atet; ubi araverit, murum faciat; ubi portum vult esse, aratum susstulat et portet, et portam vocet." (Ap. Iulian. xv. 2, 3.)

The religious use of the pomœrium was to define the boundary of the mappa urbana, or city auspices. (Varr. L. c.) So Gellius, from the books of the Roman augurs: "Pomœrium est locus intra agrum effatum per tolûs urbium circumcinctum post muras regionibus certis determinatus, qui factum urbani auspiciis." (xiii. 14.) From this passage it appears that the pomœrium itself stood within another district called the "ager effatus." This was also merely a religious, or augural, division of territory, and was of five kinds, viz. the ager Romanus, Gabinius, peregrinus, hosticus, and iucundus, or the Roman, Eabinius, foreign, hostile, and doleful territories. (Varr. v. 33, Mill.) These agric or territories were called "effati," because the augurs declared (effati sunt) after this manner the bounds of the celestial auguries taken beyond the pomœrium. (id. iv. § 53, Mill.) Hence in this sense the Ager Romanus is merely a religious or augural division, and must not be confounded with the Ager Romanus in a political sense, or the territory actually belonging to the Roman people. It was the territory declared by the augurs as that in which alone augurs were to be held, or be allowed to exercise their functions and try cases, or, as being the foreign and military affairs; and hence the reason why we find so many accounts of generals returning to Rome to take the auguries afresh. (Liv. viii. 30, x. 3, xiii. 19, &c.)

It is impossible to determine exactly how much space was left for the pomœrium between the furrow and the wall. In the case of the Roman city, however, it was probably not very extensive, as the nature of the ground, especially on the side of Mons Caelius, would not allow of any great divergence from the base of the hill. Besides, there was the line of the foreign and military city, as we shall see further on, was approached by steps, and must therefore have stood upon a height. There seems to be no good authority for Niebuhr's assumption (Hist. vol. i. p. 287, seq.) that the original city of Rome was defended merely by the sides of the hill being escarp, and that the line of the pomœrium was a later enlargement to enclose a suburb which had sprung up round about its feet. It is surprising how Niebuhr, who had seen the ground, couldn't imagine that there was room for such a suburb with a pomœrium. Besides, we are expressly told by Tacitus (L. c.) that the line of the pomœrium which he describes was the beginning of building the city (initium condendi). Indeed Niebuhr seems to have had some extraordinary ideas respecting the nature of the ground about the Palatine, when he describes the space between that hill and the Caelius, now occupied by the road called Via di S. Gregorio, as "a wide and commodious plain." (Hist. i. 590, ed. 381.) An obscure tradition is mentioned indeed by Greek writers, according to which there was a Roma Quadrata distinct from and older than the city of Rome (Πρὸ δὲ τῆς μεγάλης ταύτης Ρώμας, ἡ ἐκτὸς Ρώμαυδος περὶ τὴν Φαυστίνην οἰκίαν ἐν ἑρεὶ Παλατίνης, τετραγώνως ἐκήθη τῇ Ρώμῃ παρὰ Ρώμαυς τοῖς παλαιότεροις τοῖσιν; Dion. Cass. Fr. Fab. 3, 3, p. 10, Str.; cf. Tzetzes, ad Lycurg. v. 1232.) But, as Becker observes (Handb. 726, ROMA.
ROMA.

p. 106), we should infer from these words that the
Rome alluded to was not on the Palatine, but on
some other hill Plutarch, indeed, also alludes to
the same tradition (Roms. 9), and describes Romulus
as building this Roma Quadrata and afterwards en-
larging it. We also find some obscure hints to the
same purpose in Latin authors. Thus Solinus: "Nam
ut affirmat Varro, autor diligentissimus, Romam
decidit Romulus, Marte genitus et Rhea Silvia, vel
ut nonnulli, Marte et Ilia, dictum est primum
Roma quadrata, quod ad aequilibrium fort poster.
Ea isejat a silva, quae est in area Apollinis, et ad supercilium scalarum Caci habet terminum, ubi
tugurium fuit Faustuli." (i. 2). Now we must not
take the whole of this account to be Varro's, as
Becker does. (De Maris, &c. p. 18, seq., Handb.
p. 106). All that belongs to Varro seems to be
taken from a passage still extant respecting the
parentage of Romulus (L. L. v. § 144, Mull.), and
the words after "vel ut nonnulli," &c. belong to
Solinus himself. Varro, therefore, is not, as Becker
asserts, a witness to Rome having been called
quadrata. The following passage in Festus, how-
ever, manifestly alludes to another sense of Roma
Quadrata, namely, as a certain hallowed place
which every city built with Etruscan rites possessed,
and in which were deposited such things as were
considered of good omen in founding a city, and
which are described by Ovid (Fast. iv. 821; cf.
Plut. Rom. 11): "Quadrata Roma in Palatio ante
templo Apollinis dictura, ubi reposita sunt quae
solem boni omnis gratia in urbe confusa adhiberi,
quia saxo munitis est initio in speciem quadratam.
Eius loci Ennius mementit, cum ait: 'et quis est
exact Romae regnare quadrata'" (p. 258, Mull.).
The place here described was, in fact, the monus
of the Romulan city. The words of Solinus, though
we are ignorant of the exact position of the places
which be mentions, seem to denote too large an area
as to be reconciled with the description of Festus.
In confirmation of the latter, however, Becker (Handb.
p. 102) adduces a fragment of the Capitoline plan
(Bellori, Tab. xvi.), with the imperfect inscription
REA APO (area Apollinis), and, on the space beside
it, a plan of a square elevation with steps at two of
its sides. This, he observes, exactly answers to the
description of Festus, being a "lucus saxo munitus
in speciem quadratam;" and the area Apollinis was
naturally before his temple. That the whole of
the Romulan city, however, was also called quadrata,
is evident, not only from a passage of Dionysius
before cited, where he speaks of the temple of Vesta
being outside of the Rome called Quadrata (701 τῆς
τέτραγωνου καλουμένης Ρώμης, ἑν ἐκάσων
ἐμπίστευκατα, ἐστὶ συνεπί, ii. 65), but also from the
multilated fragment of Ennuius, quoted by Festus in
the passage just cited. It is without sense as it
stands, and Müller's emendation appears certain:
"Et qui se sperat Romae regnare quadratae,"
where the meaning is inapplicable to a mere munus,
and must be referred to the entire city.

Gates of the Palatine city. — It was required that
in a town built, like Rome, with Etruscan rites,
there should be at least three gates and three
temples, namely, to Jupiter, Juno, and Minerva
(Serv. ad Aen. i. 422); and we learn from Pliny
(ii. 9) that the city of Romulus had, in fact, three
if not four gates. In the time of Varro, three gates
existed at Rome besides those of the Servian walls,
and two of these can be referred with certainty to
the Palatine city. "Practerea intra muros video
portas dici. In palatio Munatius, a munitor, quod
ad pons in buca circum antiquum operum, 
 gerçekleştiril. Alteram Romanae ab Roma dictam,
quae habets gradus in Nova Via ad Vulpiae sacellum.
Tortia est Januliana dicta ab Jano; et ite ibi postum
Jani signum; et iustitium a Poenipio, ut
scribit in Annal. Pi. ut sit aperta spera, nisi
quem bello sit nusquam." (L. L. v. §§ 164, 165,
Mull.). The gate here called Mucio by Varro is
the same as that called Mungio by other writers, by an
error of interchange of s and g, as in Caes for
Caes, Cernus for Cernus, &c. Thus Varro him-
self, as cited by Nonius (xii. 51. p. 531, m.), is made
to call it Mungio. In Paulus Diaconus (p. 144, Mull.)
we find the adjective form Munigonia, erroneously
formed, however, from Mungius, the name of a man;
and lastly, the form Mugonia in Solinus (i. 24).

The most important passage for determining
the situation of this gate is Livy's description (i. 12)
of the battle between the Sabines and Romans. The
former occupy the Capitoline hill, the latter are ar-
rayed in the valley beneath. The Romans mount
to the attack, but are repulsed and driven back
with the "old gate" ("ad veterem portum") of the
Palatium. Romulus, who is stationed on the high
ground near it (the summit of the Velia), vows to
erect on this spot a temple to Jupiter, under the
name of "Stator," if he arrest the flight of the
Romans. At this time the Sabines had driven back
the Romans to the extremity of what was after-
wards the forum, and their leader Metius Curtius
had even penetrated nearly to the gate of the Pal-
atum. The Romans, however, rally; the Sabines
are repulsed, and the combat is renewed in the
valley between the two hills. Dionysius confirms
the site of the gate by describing it as leading to
the Palatium from the Summa Sacra Via; which
street, as will be seen when we come to describe the
topography of the later city, crossed the ridge of
the Velia at this spot (Pālāntium ἐκ τῆς ἑραίας
διόπτου, i. 50). The spot is further identified by a
graphic passage in Ovid, where the citizen who
serves as Cicerone to his book conducts it from
the fora of the Caecears along the Sacra Via, and,
having crossed the eastern extremity of the Forum
Romanae, arrives at the temple of Vesta; then pro-
ceding onwards up the Sacra Via, first points out
the former residence of Numa, and then, turning
to the right, indicates the gate of the palace:
"Paruit et ducedus, 'Hae sunt fora Caesaris, inquit;
Hae est a sacrī quae via nomen habet.
Hic locus est Vesta, quae Palladi servat et ignem;
Hic fuit antiqui regia parva Numae.'
Inde petens dextram, 'Porta est, aut, ista Palati?'
Hic Stator; hoc primum condita Romae loco est."
(Tivst. iii. l. 27.)

The site of the temple of Jupiter Stater here given
is confirmed by other writers. Thus it is described
by Livy (i. 41) as near the palace of Tarquinii
Priscus, from the windows of which, overhauling
the Nova Via, Tusquilli addressed the people. Now,
as will be shown in its proper place, the Nova Via
ran for some distance parallel with the Sacra Via,
and between it and the Palatine, and, at its highest
point near this gate, was called "Summa," like the
Sacra Via. Thus Solinus (i. 24): "Tarquinii
Priscus ad Magnusiam Portam super Summan
3 A 4

Digitized by Microsoft®
Novam Viam (habitavit)." The site of the temple of Jupiter Stator near the Summa Sacra Via is sufficiently certain without adopting the proof produced by Becker from the equestrian statue of Cloelia, the history of which he completely misunderstands. The passage from Pliny (xxiv. 13) which he quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publilius, who disputed with Cloelia the honour of having sworn the Tiber, and escaped from the custody of Porserna. Indeed, the two rival legends seem to have created some confusion among the ancients themselves; for there was a dispute in each passage of Plutarch whether the existing statue was that of Cloelia or Valeria. (Popid. 19.) Becker confounds these two statues, and asserts (note 155) that Pliny, as well as Dionysius, speaks of the statue of Cloelia as no longer existing in his time. But Pliny, on the contrary, in the very chapter quoted, mentions it as still in being: "Cloelieae etiam statua est equestris." It was the statue of Valeria that had disappeared, if indeed it had ever existed, except in the mind of Dionysius. Pliny, therefore, must share the castigation bestowed by Becker on Plutarch and Servius for their careless topography: whose assertion as to the existence of the statue in their time he will not believe, though the latter says he had seen it with his own eyes (ad Aen. vin. 646). The only ground which Becker has for so peremptorily contradicting these three respectable authorities is a passage in Dionysius (v. 35); who, however, only says that when he was at Rome the statue no longer stood in its place (ratusque ... atque ... posuit), and that on inquiry he was told that it had been destroyed (hippaviesby) in a fire that had raged among the surrounding houses. But Dionysius may have been misinformed; or perhaps hippaviesby is to be taken in its literal sense, and the statue was only removed for a while out of sight. We may assume, therefore, that it had been restored to its original position in the period which elapsed between Dionysius and Pliny, and that it continued to adorn the Summa Via for several centuries after the time of the former writer.

The preceding passages abundantly establish the site of the Porta Magensa at that spot of the Palatine which faces the Summa Sacra Via, or present arch of Titus; nor does it seem necessary, by way of further proof, to resort to the far-fetched argument adduced by Becker from the nature of the ground (Handb. p. 113), namely, that this is the only spot on the N.E. face of the hill which offers a natural ascent, by the road (Via Faleriensis) leading up to the Convent of S. Bonaventura. That road, indeed, has all the appearance of being an artificial rather than a natural ascent, and may have been made centuries after the time of Romulus. Unfortunately, too, for Becker's round assertion on this subject (Handb. p. 109), that we must ab initio embrace as an incontrovertible principle that gates are to be sought only where the hill offers natural ascents, we find that the only other known gate, the Porta Romana, was, on his own showing, accessible only by means of steps. For the site of the gate Varro is again our principal authority. We have seen in the passage before quoted from that author that it opened into the Nova Via, near the Sarnelli Valvupiae, by means of steps. Varro again alludes to it in the following passage: "Hoc sacrificium (to Arca Larentia) fit in Velabro, qua in Novam Viam exitur, ut ait quidam, ad sepulcrum Aciae, at quod ibi prope factum Exii Manlius Servilius sacerdoti, sibi aterque bona urbem antiquam fuerat non longe a Porta Romana, de qua in prælia libro dixi." (L. J. vi. § 24, Mill.) The site of the Sarnelli Valvupiae cannot be determined; but the Velabrum is one of the most certain spots in Roman topography, and is still indicated by the church which bears its name, S. Giorgio in Velabro. We learn from both these passages of Varro—for Sca. liger's emendation of Nova Via for Novallia in the former is incontrovertible—the exact site of the Porta Romana. Becker, though he allowed it was performed in the Velabrum near the spot where the Nova Via entered it, and as the Porta Romana was not far from this place, it follows that it must have been at the lower end of the street or in the infima Nova Via. Varro's account is confirmed by Festus (p. 262, Mill.), who, however, calls the gate Romans instead of Romanaula: "Sei porta Romana instituta est a Romulo minus clivo Victorias, qui locus grandibus in quadam forumatus est: appellatur autem Romans Romana, quia eadem erat Romam." Here the same steps are alluded to that are mentioned by Varro. The Clivus Victoriæ was that part of the NW, declivity of the Palatine which overhung the Nova Via. It was so named either from a temple of Victory seated on the top of the hill ("in iuxta Victoriae, quae est in Palatio, pertulere demav." Liv. xxiv. 14), or more probably—as this temple was not dedicated by L. Postumius till n. c. 295—from an ancient grove, sacred by its name to Victory, on this side of the Palatine, near the Lupercal (Dionys. i. 32), the tradition of which, though the grove itself had long disappeared, probably led to the temple being founded there.

The Romanic city must undoubtedly have had at least a third gate, both from the testimony of Pliny and because it cannot be supposed that its remaining two sides were without an exit; but there is no authority to decide where it lay. Becker thinks that it was seated at the southernmost part of the hill; but this, though probable enough, is nothing more than a conjecture. A scene of incendio, alluded to by Varro, was most probably as old as the time of Romulus, though it certainly never belonged to the Palatine city. Its situation and true nature will be discussed presently. We find, however, a gate called Ferentiana mentioned by Plutarch (Rom. 20), who relates that Romulus, after the murder of Tatius, which was followed by visible signs of the divine anger, purified Rome and Laurentum by rites which still continued to be observed at that gate. We also find an account in Festus (p. 213) of a Porta Piarulnaria, which was so called "propter aliqua piscata quae ibidem fiant," and some have assumed (r. Müller, ad Fest. i c.) that these two gates were identical. It is well known that the Roman gates had sometimes two names; and this seems especially probable in the case of those which had some religious ceremony connected with them. Becker (Handb. p. 177) rejects, however, with something like indignation the idea that such a gate could have belonged to the Romanic city; for he constantly alludes to it in the Liber Puerelor, or alter the text of Plutarch, his usual expedient. Altogether, however, it does not seem quite so improbable that it may have been the third and missing gate of Romulus, since its name indicates its site near the S. extremity of the Palatine, just where we are in want of one.
III. PROGRESS OF THE CITY TILL THE TIME OF SERVITUS TULLIUS.

We can only pretend to give a probable account of the progress of the city under the first five kings. The statements on the subject in ancient authors are divergent, though the contradiction is by no means apparent than real. In the course of his reign Romulus added to his original city on the Palatine, the Capitoline hill, then called Saturius, the Caelian, then called Querquetulans, and the Aventine. But we must distinguish the nature of these additions. Dionysius (ii. 37) represents the Capitoline and Aventine as enclosed by Romulus with a strong fortification consisting of a ditch and palisades, chiefly as a protection for herdsmen and their flocks, and not as surrounded with a wall, like the Filiae Maiorum, but it is evident from the account of the attack by the Sabines on the Capitoline (Liv. i. 11) that it must have been regularly fortified, and have had a gate. Romulus had already marked it out as the arx or citadel of his future city; and when he had defeated the Caeninenses and slain their king, he carried thither and dedicated the first spolia opima at an oak-tree held sacred by the shepherds, but which now became the site of the temple of Jupiter Feretrius (ib. c. 10). When Livy tells us that this was the first temple consecrated at Rome, he probably means with the exception of those which were usually erected at the foundation of every city. That the Capitoline was a much more important hill in the time of Romulus than the Aventine and Caenian is also shown by the fact of his opening upon it the asylum for slaves and fugitives, in order to increase the population of his city. This asylum was situated somewhere in the hollow between the two eminences of the Capitoline, and the site retained till a late period the name of "Inter duos lucos" (ib. c. 10; Dionys. H. L. i. 3; Var. L. L. v. 13, 230; Plut. Rom. 9; Ov. Fast. iii. 431, &c.).

The Capitoline hill, or Mons Saturnius, appears then to have been a real addition to the Romulian city; but the Aventine seems to have remained down to the time of Ancus Martius a mere rudely fortified enclosure for the protection of the shepherds. Various etymologies, all perhaps equally unsatisfactory, have been invented for the name of Aventina. One legend derived it from an Alban king so called, who was buried on the hill (Liv. i. 3; Var. L. L. v. § 43, Müll.; Paul. Diaec. p. 19, Müll.), another from a descendant of Hercules, mentioned by Virgil (Aen. vii. 656). Servius in his commentary on this passage makes Aventinus a king of the Alergines, but adds from Varro that the Aventine was assigned by Romulus to the Sabines, who named it after the Aveni, one of their rivers. This account is not found in the remains which we possess of Varro, who, however (c. l.), adds a few more etymologies to that already given. Of these, taken from Nævius, derives the name of the hill from the birds (aves) that resorted thither from the Tiber, to which Virgil also seems to allude (Aen. viii. 233). Varro himself thinks that it was so called "ab adventu," because, being formerly separated from the other hills by a marsh or lake, it was necessary to go to it in boats; whilst others derived the name "ab adventu hominum," because, having upon it a temple of Diana common to all the Latin people, it was a place of great resort. But these various etymologies only prove that nothing certain was known.

The preponderance of authority tends to show that the Caelian hill was also colonised in the time of Romulus. Caelius Vibennaus, or Caelus Vibenna, an Etruscan general who came to the assistance of Romulus against Tatius and the Sabines, had this hill assigned to him and settled upon it with his army; whence it derived its name of "Caelius," it having been previously called Querquetulans from its woods of oak. (Var. L. L. v. § 46; Plut. Rom. ii. 36; Paul. Diaec. p. 44, Müll.) The traditions respecting the incorporation of this hill are, however, very various. Some authors relate that it was added by Tullus Hostilius (Liv. i. 30; Entrop. i. 4; Aur. Vict. Virt. Ill. 4), others by Ancus Martius (Cic. Rep. ii. 18; Strab. v. p. 234); whilst some, again, place the arrival of Caesars as low down as the reign of Tarquinius Priscus. (Tac. Ann. iv. 65; Festus, p. 355, Müll.) The last account probably arose from some confusion between the arrival of the Tuscanus under Romulus, and a subsequent one under the Tuscan king Tarquinius. But the sacred books relating to the Argive chapels established by Numa mention the hill under the name of Caelius (Var. ib. § 47), and it therefore seems probable that the arrival of Vibenna must be placed under Romulus. This Tuscan settlement appears, however, not to have been permanent. After the death of their leader a portion of his followers incurred the suspicion of the Romans, and were removed from the hill to a less defensible position on the plain, apparently between the Palatine and Capitoline, where they founded the Vicus Tuscius; whilst the remainder were transferred to the adjoining hill called Caeluulus (Var. ib. § 46). Whence also Propertius:

"Et tu, Roma, meis tribunisti præmia Tusciis
Unde hodie vicus nonima Tuscius habet; Tempore quo socii venit Lycomedius armis,
Atque Sabina feri contudit arma Tarti."—

(iv. 2. 49.)

Here the Tuscan general is named Lycomedius, which seems to be derived from Lucumo, the name given to him by Dionysius (ii. 42, 43), and which was probably only an appellative for an Etruscan prince. The hill having been vacated by this removal of the Tuscanus, was again colonised under a subsequent king; which in some degree reconciles the conflicting accounts; but all we are sure of is, that in the reign of Tiberius an attempt was made to change its name again, and to call it Mons Augustus, either because Tiberius had laid out a great deal of money there in repairing the damage occasioned by a fire, or from a decree of the senate, which appointed that name to be used because a statute of Tiberius had been saved from the flames. (Tac. Ann. iv. 64; Suet. Tib. 48.) But this name never came into common use.

Legend of Tarpea. — Porta Jovis and Temple of Juno. — The story of Tarpeia involves two or three points of topographical interest. It shows that the Capitoline hill was regularly fortified, and had a gate. The deed of Tarpeia, whether impious or patriotic, for there are two versions of her history, occasioned a change in the name of the hill. It had previously been called Mons Saturnus, from Saturn, to whom it was sacred ( Fest. p. 322); and there was a tradition that some Eleusins, who had been dismissed from the army of Hercules on his return from his western expedition, had been attracted to settle upon it by the resemblance of its name to that of Kôpios, a mountain of their own country. (Dionys. i. 34.) After the foundation of the Capitol
its appellation, as we shall have occasion to relate further on, was again altered to that to which it ever afterwards continued to bear; yet one part of the southern portion of the hill still retained the name of Capite Tarpeia, from the vestal having been buried on it. (Vari. L. L. v. § 41, Mill.)

Doumas (ii. 40) adopted the account of Pho, who attributed the death of Tarpeia to a patriotic attempt to defeat the Sabines, in preference to that of Fabius, which brands her with disloyalty. The latter, however, seems to have obtained most currency among the Romans; and Propertius even derives the name of the hill from her father, Tarpeius, who composed this Tarpeian garrisons.—"He Tarpeio more est cognomen adopto."

which Tarpeian turpe sequestrum," v. 4. 43,—whilst he brands the tomb of the vestal with infamy. ("Tarpeiae turpe sepulcrum," v. 4. 1.)

The obscure legend of the Porta Pandana, which existed somewhere on the Capitol in the time of Varro (L. L. v. § 42), is also connected with the story of Tarpeia; and Tatius is said to have stipulated, in the treaty which he made with Romulus, that this gate should always be left open. (Fest. p. 356, and Paul. Diaec. p. 220, Mill.) According to Varro, the incredible account of Lucanians (i. 13), it was a gate of the old Saturnian city, and was originally called Porta Saturnia; nor is the version of Polybeus more satisfactory (Stratag. viii. 35), who refers the story of the Porta Pandana to the treaty with the Gauls, by which the Romans engaged always to leave one gate open, but, in order to evade the consequences, built it in an inaccessible place.

After peace had been concluded between Romulus and Tatius, they possessed two distinct but united cities,—the former reigning on the Palatine, the latter on the Capitoline, and dwelling on the spot where the temple of Juno Moneta afterwards stood (Flut. Rom. 2; Sol. i. 21.) When Tacitus says, in the passage before cited, that Tatius added the Capitoline to the city, we are perhaps therefore to understand that he built upon it and made it habitable, whilst previously it had been only a sort of military outpost. The valley between the two hills formed a kind of natural akandatory place. The gate called Janus, mentioned by Varro in the passage cited from him when treating of the Romulean gates, seems undoubtedly to have belonged to the Sabine town. Niebuhr, who is followed by Bunsen (Beesch. vol. i. p. 143.), is of opinion (Hist. i. 292) that it was built by the two cities as a barrier of their common liberties; that it was open in time of war in order that succour might pass from one to the other, and shut during peace, to prevent the quarrels which might arise from unrestricted intercourse, or as a token that the cities, though united, were distinct. Becker, on the other hand, denies that it ever was a gate at all, maintaining that it only got that name catachrestically, from the temple which it subsequently formed being called "Porta Belli" (pp. 118, 119, and note 167). But there seems to be ample evidence that it was originally a gate. Varro, in the passage cited, evidently considered it as such; and it is also mentioned by Macrobius as a real gate, though the situation which he assigns to it will hardly be allowed even by those who give the greatest extention to the walls of the Romulean city ("Cum bello Sabino—Romani portam, quae sub radiis collis Viminalis erat, quae postea ex eventu Janualiis vocata est, claudiere festinatum,"

We may learn from Ovid, not only its real situation, but also that it was the very gate which Tarpeia betrayed to the Sabines. The passage fixes its site so accurately, and consequently also that of the temple of Janus,—an important point in Roman topography,—that it is necessary to quote it at length:

"Proserat ora deus. Tune sic ego nostra resolve,

On voces eliicente dei:

Quaum tot sint Jani cur stas sacratus in uno,

Hic 1. teempita foro juncta duobus basset?

Ille nundas move prophazem ad pectora barbarm

Pratimas Oebali retulit arma Tatii,

Utque levis custos, aramilis capta Sabiniis,

Ad summate Tatum duxert arcis iter.

Inde, velat nunc est, per quem descenditis, input,

Arbus in valles et fora erunt cvas.

Et jam configurat portas, Saturnus eujus

Dapserat oppesitas insidiosa seras.

Cum tanto veritus committere nunquam pugnam

Ipsa meae movi callidus aris opus,

Oraque, qua polliens ope suni, fontana reclusa

Samque repentins exhilarat aquas.

Ante tamen callidis subjecyi sulphura venis,

Clandest ut Tatius servitus humor iter.

Crujas ut milites paesis percepsit Sabiniis,

Quae factum, tuto reedita forma facta est.

Ave sacri paedati est, percno cajens sacello,

Hinc adeo flammis cum atque fara suae!"

(Fast. i. 255. seq.)

We see from these lines, that the gate attacked by the Sabines lay at the bottom of a path leading down from the Capitoline, which path still existed in the time of Ovid, and was situated between the forum of Caesar and the Forum Romanum. The gate was consequently at the bottom of the NE. slope of the Capitoline hill, a little to the N. of the present arch of Septimius Severus. We also learn that a small temple or sacellum was dedicated to Janus at this spot. Whether the ancient gate was incorporated in this temple, or whether it was pulled down, or whether the temple was erected by the side of the gate, cannot be determined; but at all events Ovid's account was commemorated by the title of Porta Januaria. It is no objection to Ovid's account, as far as the topographical question is concerned, that it differs from the one usually received, which represents the Sabines as successful through the treachery of Tarpeia, and not as repulsed through the intervention of Janus. He seems to have combined two different legends; but all that we are here concerned for is his accurate description of the site of the temple, and consequently of the gate.

Its site is further confirmed by Procopius (B. G. i. 25. p. 122, Dind.), who mentions it as situated a little beyond the statues of the three Fates, as will appear in the second part of this article. The temple was dedicated by the peace-loving Numa, who made the opening and shutting of it the sign of war and peace. (Liv. i. 19.)

Niebuhr, therefore, besides assigning an inadmissible and even absurd meaning to this custom, has forestalled its date, when he mentions it as coming into use at the union of the two independent cities.

After writing what precedes, the compiler of this article met with an essay by Dr. Th. Mommsen, published in the Annali dell' Instituto for the year 1844 (vol. xvi.), and entitled De Comito Romanum, in which he wrote (p. 306, seq.) considers that he has irrefragably established that the temple of
ROMA.

Janus was not situated in the place here assigned to it, but in the Forum Olitorium outside the Porta Carmentalis. As the opinion of so distinguished a scholar as Mommsen is entitled to great attention, we shall here briefly review his arguments. They may be stated as follows. That the temple of Janus was in the Forum Olitorium may be shown from Tacitus, "Saturnalia," (ad Forum Olotorium C. Duilius straxerat (dedicavit Tiberius)."

(Annn. ii. 49); and also from Festus: "Religioni est quibusdam porta Carmentalis egregie et in aede Jani, quae est extra eam, senatorum laberi, quod ea egressi sex et treque Fibi apud Cremaram omnes interfecti sunt, cum in aede Jani S.C. factum esset, ut proficiscerentur." (p. 283, Milli). But this temple was undoubtedly the same as the famous one founded by Numa, and built could only have restored, not built it; since it can be shown that there was only one Temple of Janus at Rome before the time of Domitian. Thus Ovid (as may be seen in the passage before quoted) asks Janus,—

"Cum tot sint Jani eur stas sacratus, in uno, Hic ubi juncta foris tempia duobus labes ?"

The same thing appears from the following passage of Martial (x. 28. 2), which shows that, before Domitian erected the Janus Quadrifrons in the Forum Transitorium, the god had only one little temple:—

"Peryvius exiguo habitabas ante Penates Plurima qua medium Roma terebat iter."

The same situation of this only temple is also testified by Servius (ad Aen. vii. 607): "Sacrarium (Jani) Numa Pomplius fecerat.—Quid Numa in- stituetat, tempum est ad Forum Transitorium." And again "Sacrarium hoc Numa Pomplius fecerat, circa inum Argiletum juxta theatrum Marcelli." Thus the situation of the sole temple of Janus is proved by the preponderance of the best authority, and does not rest on mere conjecture.

In these remarks of Mommsen's we miss that accuracy of interpretation which is so necessary in treating questions of this description. The word "straxerat," used by Tacitus, denotes the erection of a new building, and cannot be used of the mere restoration of an ancient one. Nor, had there been no other temple of Janus, would it have been necessary to designate the precise situation of this by the words "apud Forum Olitorium." Again, the words of Ovid refer, not to one temple, but to one Janus, which, however, as we have seen, was converted into a sort of small temple. "When there are so many Jani, why is your image consecrated only in one?" This, then, was not a temple in the larger sense of the word; that is, a building of such a size as to be fit for assemblies of the senate, but merely the little sacellum described by Ovid. Let us hear Mommsen's own description of it, drawn from this passage, and from that of Martial just quoted:

"Fuit enim Jani aedes (quod lucentississime apparat ex Ovidii verbis supra laudatis) non nisi Janus alices, sive bifrons sive quadrifrons, Dei status ornatus, Eu, quam Numa fecit, forint exaeversis apud portam Carmentalem applicatus, quo translatum omnes qui a Campo Martio Praeque Olotorio venientes Bearium Romanumipetebant." (p. 307).—But—overlooking the point how the building of Numa could have been attached to a gate erected in the time of Servius—how is it possible to conceive that, as Mommsen infers from the words of Festus, the senate could have been assembled in a little place of this description, the common thoroughfare of the Romans? Besides, we have the express testimony of Livy, that the Senator Consultum, sanctioning the departure of the Fabii, was made in the usual place for the meetings of the senate,—the Curia Hostilia. "Con- sul e Curia egressus, contaminata Fabiorum armigine, qui in vestibulis rebus, neque tamen inexpectatae, seque, etiam ad certe rumores, areat sarat, (dedicavit Tiberius)."

Certainly a better witness on such a point than Festus; whose account, therefore, is overthrown, not only by its inherent improbability, but also by the weight of superior authority. All that we can infer from his words is, that the temple of Janus, outside the Porta Carmentalis, was sufficiently large to hold an assembly of the senate; but this circumstance itself is sufficient proof that it could not have been the original little temple, or sacellum, of Numa. There are other objections to the account of Festus. It was not omnious, as he says, to go out at the Carmental gate, but to go out through the right arch of the gate ("in sefeliae a nox Jono portae Carmentalis perfecti, ad Cremaram famen perpetuam," Ib. c. 49). If the whole gate had been secured, how could a sacred procession like that of the virgins from the temple of Apollo to that of Juno Regina, described by Livy (xxvii. 37), have passed through it? Nor can it be told without suspicion, and after the reading; what refers to the Porta Carmentalis, as sense, or to aedes Jani, as grammar, requires. Further, it would be contrary to the usual custom, as Becker correctly remarks (Handbuch, p. 139, note), for the senate to assemble outside of the gates to deliberate on a domestic matter of this nature. Then, with reference to Ovid's description, he could not have mentioned the sacellum of Janus as adjoining two forn, had it stood where Mommsen places it, where it would have been separated from the Forum Romanum by the whole length of the Vicas Jugarius. Besides, it is plain from the passage of the Fasti before quoted that the original temple stood at the foot of a clivus, or descent from the Capitoline. Yet Mommsen puts it at the very top of the hill over the Carmental gate ("in ipso monte"), p. 310, vide his plan at the end of the volume), where the hill is most abrupt, and where there could not possibly have been any clivus, and the Porta Januaria at the bottom of the one. The remark, too, that the reading, "ardus in valles et forn clivus erat," is not a mere conjecture of Becker, as Mommsen seems to think (p. 310), but the common reading; and that to substitute "per forn" instead would make evident nonsense. Nor in that case do we see how the temple could have been "apud Forum Olitorium," as Tacitus says, even if "apud" only means near, not at: and still less how it could have adjoined the theatre of Marcellus ("juxta theatrum Marcelli"), as indicated by Servius. What has been said will also be sufficient to refute the last named commentator in stating this to be the original temple. He has evidently confounded the two.

We can therefore only agree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this occasion. "At quod somnivavit de aede Jani sine simulacro (p. 259), quod Festum, quod Servium gravissimi errores in omnibus (p. 139, n. 254, seq.), id est, homini philosophia ruinae (p. 502). It appears, we trust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The explanation we have already given, that Ovid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we
see no reason why Janus, a very ancient Latin divinity, and to whom the Mons Janiculus appears to have been sacred before the building of Rome, should not have been honoured with a regular temple beside the fifth after the nahu, was the index of peace and war. As the question, however, is connected with the situation of the Arigletum and Forum Caesaris, we shall have occasion to revert to it, and have mentioned it here only because the legend of Tarpeia, and consequent building of the temple, are closely connected with the history of the city.

Romulus, after his mysterious disappearance, was deified under the name of Quirinus, and his successor, Numa, erected a temple to the new God on the Quirinal. (Dionys. ii. 63; Ov. Fast. ii. 509.) This hill, which was previously named Agonum (Fest. p. 254; Dionys. ii. 37), appears in the time of Numa to have been divided into four distinct eminences, each named after some deity, namely, Quirinalis, Salutaris, Mucialis, and Latarius (Varr. L. L. v. § 51, Mill.). But from what deity the name of Mucialis was derived remains inexplicable.

The name of Quirinalis, which, however, some derive from the Quirites, who had come with Tatius from Cares, and settled on the hill (Varr. and Fest. ii.), maintained itself probably as the name of the city three temples.

The temple of Quirinus probably stood near the present church of S. Andrea del Vercato. This question, however, as well as that concerning the sites of the other three temples, will recur when treating of the topography of the city. Numa, who was himself a Sabine, also founded a capitol (Hieron. i. p. 298), subsequently called, by way of distinction, *vetus Capitolum*, on the Quirinal, which hill had been chiefly colonised by his countrymen. (Dionys. ii. 63; Ov. Fast. ii. 509.) Numa could not have been applied to it till after the foundation of the Roman Capitol, and originally it was the *aer* of the city, containing the three usual temples of Jupiter, Juno, and Minerva. (Varr. L. L. v. § 158, Mill.) This ancient temple of Jupiter is alluded to by Martial (v. 22, 4), and probably stood on the southern part of the Quirinal on the present height of Montecapitana.

Tullus Hostilius is said to have added the Caelian hill to the city after the destruction of Alba Longa, when the population of Rome was doubled by the inhabitants of Alba being transferred thither; and in order to render the Caedian still more thickly inhabited Tullus chose it for his own residence. (Liv. i. 30; Enrolq. i. 4; Victor, Vir. Ill. 4.) The two accounts of the incorporation of this hill by Romulus and Tullus contain, as we have before remarked, nothing contradictory; otherwise, Dionysus Halicarnassensis would hardly have committed himself by adopting them both (i. 56, 50, iii. 1). The first Tuscan settlement had been transferred to another place. But when Cicero (de Rep. ii. 18) and Strabo (v. p. 234) state that the Caedian was added to the city by Ancus Martius, this is a real divergence for which we cannot account; as the hill could hardly have been incorporated by Tullus and again by Ancus.

Ancus is also said, by the two authorities just quoted, to have added the Aventine; and there is no improbability in this, for Romulus never made it a part of the old city, and we learn from Plutarch (Num. 15) that it was uninhabited in the time of Numa. We must remember that the earlier enclosures were made rather to assert a future claim to the ground when the number of citizens was in-

creased, than that they were absolutely wanted at the time of making them (Crescentia interim urbis, munitionibus alia atque alia aptetndo loca; quam in spem magis futuram multitudine, quam ad quod tandem laboravit se, v. Vit. L. iv. 6). But the fortification accounts of Ancus having added the Aventine is confirmed by Dionysus (iii. 43) and by Livy (i. 33), who state that it was assigned to the citizens of the conquered Pomerium.

Yet the history of the Aventine is more mysterious than that of any other of the Roman hills. At the end of the third century of the city we find it, as an ager publicus, taken possession of by the patricians, and then, after a hard contest, parcelled out among the plebeians by a Lex Hostilia (Dionys. v. 31, 32; cf. Liv. iii. 31, 32), by whom it was afterwards principally inhabited. It remained excluded from the pomerium down to the time of Claudius, though the most learned Romans were ignorant of the reason. After some further victories over the Latins, Ancus brought many thousands more of them to Rome; yet we can hardly understand Livy's account (i. c.) that he located them in the Vallis Murcia; not only because that spot seems too limited to hold so large a number, but because it became the Aventine, a name already to have been designed, and even perhaps begun, at that spot. (Dionys. iii. 68.) At all events they could not have remained there for any length of time, since Livy himself mentions that the circus was laid out by Tarquinius Priscus (i. 35). The fortifying of the Janiculum on the right bank of the Tiber, the building of the Sabinean bridge to connect it with Rome, and the foundation of the port of Ostia at the mouth of the river, are also ascribed to Ancus Martius, as well as the fortifications of Baianus, of an earlier date (Dionys. ii. 68; cf. Liv. iii. 31, 32; Dionys. 44, 45; Victor, Vir. Ill. 5; Flor. i. 4.)

The circuit of Rome, then, at the time of the accession of Tarquinius Priscus, appears to have embraced the Quirinal, Capitoline, Paithene, Aventine, and Caelian hills, and the Janiculum beyond the Tiber. The Viminal and Esquiline are not mentioned as having been included, but there can be no doubt that they were partially inhabited. Whether the first named hills were surrounded with a common wall, as appears, the other two were not, and whatever their extent, seem to have been of a very rude and primitive description. (τείχη—αυτογένεα και φανερα τας ὑπαγωγις των, Dionys. iii. 67.)

Tarquinius does not appear to have made any additions to the city, but he planned, and perhaps partly executed, what was of much more utility, a regular and connected wall to enclose the whole city. (Liv. i. 36, 38; Dionys. iii. 67.) Nay, according to Victor (Vir. Ill. 6), he actually completed this wall, and Servius only added the upper (ib. e. 7.) The reign of Tarquinius was indeed a remarkable epoch in the architectural progress of the city. We must remember that he was of Tuscan birth, and even of Greek descent; and therefore it is natural to suppose that his knowledge of architecture and of the other arts of civilised life was far superior to that of the Romans and Latins; and hence the improvements which he introduced at Rome. It is satisfactory to discover and point out undervalued coincidences of this description, which greatly add to the credibility of the narrative of ancient writers, since there is too much disposition at the present day to regard them as the inventors or propagators of mere baseless fables. Tarquinius also constructed those wonderful sewers for draining the Velabrum and
ROMA. 733

Aventine, are entirely excluded. Various conjectures have been proposed to account for these omissions. Some have imagined that the Capitol was excluded because the division of Servius regarded only the plebeian tribes, and that the Capitol was inhabited solely by patricians. Becker (Handb. p. 186), rightly observing that most of the hill, which he prefers to it, seems hardly better founded, namely, that the hill, as being the citadel, was occupied with public buildings to the exclusion of all private ones, or, at all events, as being common to all, could not be incorporated with any one region. But this would have been a better reason for the exclusion of the Quirinal, which was at that time the proper capitol of the city; nor does it seem to be a fact that private buildings were excluded from the Capitol. Various reasons have also been assigned for the exclusion of the Aventine: the principal of which are, the unfavourable angles which had appeared upon it to Remus, and the circumstance of its containing a temple of Diana, which was common to all the Latin nation, and therefore prevented the hill from being made a portion of the city.

But if we attentively read the account given by Varro of the Servian Regions (L. L. v. §§ 41–54, v. 49, Mill.), we shall perceive that the division was entirely guided by the distribution of the Argive chapels, instituted probably by Numa; though Varro does not explain why they should have had this influence. After giving an account of the Capitoline and Aventine, he proceeds to say (§ 45): "Reliqua urbis loca olim discrata, quom Arcorum sacraria in septem et xx. partibus sunt disposita. Argos dictus patratus a principibus qui cum Hercule Argivo venerit Romam et in Saturnia subsiderunt. Equis prima sunt in Regio Suburana, secunda Exquirina, tertia Collina, quarta Palatina." He then proceeds to enumerate the sacraria or chapels in each regio, mentioning six in each, or twenty-four in all, though he had called them twenty-seven in the passage just quoted.

The obvious meaning of this passage is, that the other parts of the city were formerly separated (i.e. from the Capitoline and Aventine) at the time when the Argive chapels were distributed into twenty-seven parts of the city. Becker, in our view, has not sufficiently explained this hypothesis; but other scholars put a different interpretation on the passage. Thus Bunsen (Beschreibung der Stadt Rom, vol. i. p. 147), whose general view of the matter seems to be approved of by Becker (Handb. p. 127, note 183), takes Varro’s meaning to be, that the remaining parts of the city did not originally form each a separate district, like the Capitol and Aventine, but were divided into smaller parts, with different names. This view has been already condemned by Müller (ad loc.), and indeed its improbability is striking; but it requires a somewhat minute examination of the passage to show that it is altogether untenable. Livy also mentions these chapels as follows: "Multa alicia sacrificia locuplex sacris sacris dedicatis, quae Argos pontifices vocant, dedicavit (Numa)." (i. 21.) Now Bunsen is of opinion that the statements of Livy and Varro are inconsistent, and that whilst the former under the name of Arges means places, the latter alludes to things. In conformity with this view he proceeds to construe the passage in Varro as follows: "The name of Argives is derived from the chiefs who came with the Argive Hercules to Rome and settled in Saturnia. Of these parts of the city we find first described (viz. in the Sacris Argeorum)
the Suburn Region, as second, &c." ("Den Namen
Argier leitet man ab von den Anführern die mit
dem Argiver Hercules nach Rom kamen, und sich in
Saturnia niederließen. Von diesen Stadttheilen
finden sich am besten verschiedene (nämlich in den Secret
Arceums) die Suburnische Region, als zweite,
&c." (Bezskr. i. 690, cf. p. 148.) But to say
that the name of Argives was derived from other
Argives can hardly be what the author intended.
Besides, the sense is disjointed; for the relative quae
(wrongly translated "of these parts of the city")
cannot be made to refer to an antecedent that is
separated from it by a long sentence. As the text
stands, quae must necessarily refer to Argos in the
sentence immediately preceding. It might be thought
that this sentence has been interpolated, since Varro
called an Argive Argoes, not Argus. * Itaque dici-
nmus:'hic Argus' cum hominemdicimicus; cum opidiun,
Gracaeume 'hoc Argo,' cum Latine, 'Argo.' (L. L.
ix. § 89, Mill.) We see from this passage that the more
ancient Latin name for the town of Argos was Argei
(masc. plur.), and hence it might be inferred to be
Livy's meaning that the chapels were called Argoes
or Argoea, not Argus. But Argoes, in still more
ancient meaning, is-Argei, name of that of Varro, was also the name
for Argives as we find from a verse which he quotes
from Ennius (vii. § 44):

"Libaque, factores, Argaeos et tutulates;"

whereas we are disposed to think that the name of
Argeis, however anomalous the usage may appear,
was really applied to these chapels, just as a modern
Italian calls a church S. Pietro or S. Paolo, and
that the meaning of Varro in the second sentence of
the passage quoted, is: "It is thought that these
Argi (i.e. the sacrae or so-called) were named
after the chiefs who came to Rome with the Argive
Hercules;" in which manner Varro would coincide
with Livy in making these Argei placea. How else,
too, shall we explain Ovid (Fast. iii. 791):

"Itur ad Argoes, qui sita sunt pagina dicit?"

And in like manner Marsius Salvius, quoted by
Gellius (N. A. x. 13): "Atque etiam cum (Fla-
mulca) it ad Argoes."

A passage which throws a gleam of light upon the matter;
though, with more grammatical nicety than knowl-
dge of antiquity, he has adopted, apparently from
the Greek, a neuter form unknown to any other
writer: "Argeo loco appellantur Romane, quod in
his septu essei quidam Argeorum illustres viri,"
(p. 19, Mill.) Hence it appears that these chapels
were the (repeated) burial places of these Argive
heroes, and their masculine appellation thus gains
still further probability. "E quae," &c. would mean,
therefore, that the different Servian Regions were
marked off and named according to these chapels.

We have already remarked that though Varro
mentions 27 of these chapels, he enumerates only
21. Hence Becker (Handb. p. 386), as well as
Bunsen, are of opinion that the three odd ones
were upon the Capitol. The only reason assigned
for this conjecture is that the hill had three
natural divisions two heights with a depression
between them. But if we have rightly explained
Varro's meaning, it is impossible that the Capitol
should have had any of these chapels. Bunsen,
however, goes still further, and, connecting the
chapels with the Argive men of straw which were
annually precipitated into the Tiber, thinks that
their number might have been 30, allotting the
remaining three to the ancient Capitol on the Qui-
rinal, although Varro had already accounted for
his usual number of 27 in that district. (Beskr. i.
149.) However, it is not at all improbable that the
tradition of the Argive manokin was connected
with that of the chapels, since it may be inferred
from the context of the passage in Varro, explaining
the line of Ennius before quoted, that they were
instituted by Numa. Thus the preceding line (§ 43),
"mensas constituit idemque anicia," refers to
Numa's institutions, which is again alluded to in § 45,
"evendum Pompalium ait fecisse flaminum." In § 44
Varro describes the custom regarding the men of
straw as follows: "Argi ad Argis; Argi fino o
scirposa, simulacra hominis xenii; eo quotannis de
pote subiicie a sacerdotibus publice deiis solent in
Tiberim." The origin of the custom is variously ex-
plained; but the most probable account is that it
was intended to commemorate the abolition by
the Argives of human sacrifices once offered to Saturn,
for which these men of straw were substituted.
None of the MSS. of Varro, however, gives the number
of 27 or 30; though the latter was introduced into the
text by Althus from the account of Dionysius (i. 39),
Hesiod, and others. Hence there is a strong
apparent contraction of the principles of sound criticism to reduce the
number of chapels given by Varro (v. § 45) from 27
to 24, instead of increasing them to 30; as they
would then not only correspond with the number of
these Argive manokin, but also with that of the
chapels which Varro separately enumerates.

Septimontium.—The Septimontium seems also to be
in some degree connected with these Argive chapels
and the Servian divisions of the city. The word septi-
montium had two meanings, and was signified both by
the complex of seven hills on which Rome stood, and a festival
(Septimontiale sacrum, Suet. Dom. 4) celebrated
in commemoration of the traditions connected with them.
Now it is remarkable that Antistius Labeo, quoted
by Festus (p. 348, Mill.) in his account of the places
where this festival was celebrated, omits all mention
of the Capitoline and Aventine, just as they seem to
have been left out of Numa's town and the regions of
Servius subsequently formed according to it: "Septi-
montium habuit Parthia, Antistius, in imaginibus
seriae: Palatio, cum sacrificio quod fit, Palatium
dictur. Velae, cui item sacrificium Fagnatuli, Sub-
uriae, Ceramulo, Oppio Caelio monte, Cispio monti." There
were Argive chapels at all these places, and
hence a strong presumption that the festival of
the Septimontium was founded by Numa, the author
of most of the ancient Roman solemnities. That Labeo
considered the places he enumerates to be hills is
evident, not only as a direct inference from the term
Septimontium itself, but also from his express words,
"hinc montibus feriae," "there are holidays on
the hills here recited." Moreover, we know as a certainty
that five of the places mentioned were hills, namely,
the Palatium, Velia, Oppius, Cispus, and Caedus,—
strong presumption that the others also were
heights. Yet Niebuhr (Hist. i. 359), Bunsen,
(Beskr. i. 685), and Becker (Handb. p. 124),
assume that one or two of them were not hills at all.
The places about which there can be any doubt are
Fagnatuli, Suburiae, and Cispio. Respectively, it is
no doubt at all; it was certainly a valley. Now
the Fagnatula was a ridge of the Esquiline containing
the Lucus Fagnatul his. It was the residence of
Tarquinius Superbus: Esquilis (habitatur) supra
clivum Pullum, ad Fagnatulan heam" (Solin. i.
25). But if the grove was above the clivus it must

Digitized by Microsoft®
have been on a height. Servius had occupied a residence not far from it, over the Clivus Urbins (ib., Liv. i. 48), and it was probably situated at or near the spot now occupied by the church of S. Martina. There is not the slightest ground for Niebuhr's assumption (Hist. i. 390) that the Fagutal was what he calls "the plain" between the Caelian and Palatine. The Cermalus or Germanus— for originally e and g were the same letter— was, like the Velia, only a distinct portion of the Palatine hill. ("Hue (Palatio) Cermalum et Velias con-
junxerant," Varr. v. § 64, Miliu.) Peller (Regiones, p. 180) considers the Germanus to be that side of the Palatine which overhangs the Velabrum between the modern churches of S. Giorgio in Velabro and S. Anastasia; and it is not improbable, as Becker conjectures (p. 418), that the hill formerly projected further to the W. than it now does, and descended in shelves or ledges. It does not appear on what grounds Niebuhr (L.c.) assumed the Germanus to be a "spot at the foot of the Palatine." It contained the Lupercal, which, being a cave or grotto, must have been excavated in a hill or cliff, as indeed Dionysius states in his description of it: ἔκ τοῦ ἀγάλματος ἡλέγεται σταύρον ὑπὸ τῷ οἴκῳ τύχης (l. 32).

All the places, then, enumerated by Labeo appear to have been heights, with the exception of the Su-
barium. But on counting the names, we find that he mentions eight places instead of seven, or one more than is required to make a Septimontium. Hence Niebuhr (ib. p. 389) omitted the Suburatorum— not, however, because it was situated in the plain,— and was followed by Bunsen (Beschr. i. 141), who after-
wards altered his mind, and struck out the Caelius (ib. p. 683; and this last opinion is also followed by Becker (Handb. p. 124) and Müller (ad Fest. P. 541). The chief reason assigned for this view is that a principal part of the first region (Suburana) was called Caelsiumantium,— a name afterwards pre-
served as that of one of the regions of Augustus; and on comparing this name with that of Septim-
ontium it is inferred that, like the latter, it must have indicated a distinct and independent city union, and could not therefore have been included in any ante-
Servian union. But if there had been any distinct and independent township of this kind, we must surely have heard of it in some of the ancient authors. We do not know when the term Cael-
siumantium first came into use; but it is not improbable that it arose from another small hill, the Caelius Minor or Caelium, having been annexed to the larger one. Martial mentions them both in the fol-
lowing lines:

"Dum per limita te potentatum
Subatrix toga vestitam, vagumque
Maior Caelsium et minor fatigat."— (xii. 18.)

We learn from Varro that the junction of these two
hills had taken place in or before his time: "Caels-
ium cum Caelsio nunc conjunctum" (L. L. v. § 46, Miliu), though popular use, as we see from the lines of Martial, sometimes still continued to regard them as distinct; nor can we tell for what purpose they had been united. Little can be inferred from the order in which the hills are mentioned in the text of Festus, as the sequence entirely diverges, or from the circumstances that Caelsium is called "mons" and Oppius not, unless we leave out "Caelsiol," or from the omission of Caelius in some of the MSS. of Paulus Diaconus. On the whole it seems most

probable that Suburana may be the redundant word; unless indeed we might suppose that there were two Fugutals or groves of Jupiter, and that Suburana was inserted here to define the place of the one which overhung it.

Becker regards the Septimontium not as a proper city festival, but as commemorating traditions con-
connected with the site of Rome long previous to the
building of the city. In confirmation of this he re-
fers (Handb. p. 125) to a passage in Varro (L. L. v. § 41, Miliu) and another in Festus (p. 321), where it is said that a people of Bute, called Sacarni, drove the Ligurians and Sicilians out of Septimontium; and a third passage is adduced from Servius (ad Aen. xi. 317) to prove that the Sicilians once occupied the site of Rome; that they were expelled thence by the Ligurians, and the Ligurians in their turn by the Sacarni. Now, without entering into the historical questions con-
ected with these obscure traditions, it may be al-
lowed in general to be probable enough that such
traditions were ancient; and when, as we have ven-
tured to assume, Numa instituted the festival, he
made them the basis of it; just as he instituted the
Argive chalices and the twenty-four manokinias to
commemorate the tradition of the Argive chiefs and
their abolishment of human sacrifices. But the fest-
ival, nevertheless, was a proper city festival. Becker
urges (Handb. p. 124) that the Septimontium de-
scribed by Labeo could not have been in commemo-
ration of a city union immediately preceding that of
Servius, because it included the Oppius and Cispius,
which were first added to the city by Servius. A
great deal depends upon what we understand by
the words "added to the city" ("zur Stadt geogen"). To say that they were not included in the walls
and agger afterwards completed by Servius would be a
more plausible theory; but they must have been inhabited
and formed part of the city before his time, since
there were Argive chalices upon them (Varr. v. § 50); and these chalices, as we have seen, formed
the basis of the city union formed by him. The
festival must certainly have been post-Romulian,
since some of the names of places where it was cer-
elbrated were not known before the time of Romulus.
Caelsium occupied the Caelian hill in his reign;
the name of Germanus is said to be derived from
the twins (germanico) Romulus and Remus, who
were landed there (Varr. v. § 54); whilst Oppius and Cispius are said by Festus (p. 348, Miliu), on
the authority of Varro, not to have been so named
till the reign of Titus Hostillus. But as they are
mentioned by those names in the sacred books of the
Argives (Varr. v. § 50) it is probable that they
were so called at least as early as the time of
Numa.

Such, then, was the ancient Septimontium. The
walls of Servius included a different group of seven
hills which came to be regarded by the later Romans
as the real Septimontium. They are those already
described at the beginning of this article, namely,
the Quirinal, Vinicinal, Esquiline, Caelian, Aventine,
Capitoline, and Palatine.

IV. PROGRESS OF THE CITY TILL THE TIME OF AUGUSTUS.

Having thus brought down the history of the city
to the foundation of the Servian walls, we shall pro-
ced to sketch its progress to the time of Augustus,
and then till the walls of Aurelian. The former walls
marked the rise and consolidation of a city, which,
though soon to become formidable to its neighbours, was not yet secure from their attacks. The latter, enclosing an area more than twice as large as that defended by the Servian walls, betokened the capital of a large state, which, after having, like the mistress of the world, been beginning to totter under the weight of its own greatness, and found itself compelled to resort to the same means of defence which had protected its infancy — no longer, however, to ward off the attacks of its immediate neighbours, but those of the remotest tribes of Asia and Europe. Thus the history of the city, during this period of eight centuries, reflects in some degree the history of the Roman people, and exhibits the varying fortunes of the greatest of all human empires. Unfortunately, however, the materials even for a slight sketch of so vast a subject and so long a period are scanty and inadequate; nor, even were they more abundant, would our present limits allow more than an attempt to draw such an outline as may serve to illustrate the topography of the city.

Tarquin the Proud, the last of the Roman kings, seems to have effected little for the city, except by completing or improving the works of his predecessors. Of these the most important was the temple of the Capitoline Jupiter, which was completed to the temple's limits, the building of which would be found in the second part of this article. The expulsion of the Tarquins (n. c. 510) restored to the Roman people the use of the Campus Martius. This ground, which from the earliest times had probably been sacred to Mars (Dion. v. 13), had been appropriated by the Tarquins, and at the time of their expulsion was covered with the crops which they had sown. The abode nature of this property prevented its distribution among the people, like the other royal properties; but the ancient basis of streets was there preserved, and the ancient streets were disregarded, and houses were erected even over the ancient streets. Hence down to the time of Augustus, and perhaps later, the city, according to the forcible expression of Livy (v. 55), resembled in arrangement rather one where the ground had been seized upon than where it had been distributed. It may be inferred from a statement of Cornelius Nepos, as quoted by Pliny, that the greater part of the city was roofed with shingles. (Scandalum contextum fuisse Romam, i.e. the greater part of the roofs had been covered with shingles). (Corn. Nep. anctor est, xvi. 15.) Livy indeed mentions the public distribution of tiles, but these perhaps may have been applied to other purposes besides roofing, such as for making the floors, &c.; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more extensively used in building than is customary in modern times. Within a year the new city was in readiness; and it must have been on a larger scale than before the Gallic invasion, since it had acquired a great accession of inhabitants from the conquered towns of Veii, Capena, and Falisci. Those Romans who, to avoid the trouble of building, had occupied the deserted houses of Veii, were recalled by a decree by which those who did not return within a fixed time were declared guilty of a capital offence. (Liv. vi. 4.) The walls of Rome seem to have been left unimpaired by the Gauls, notwithstanding Plutarch's assertion to the contrary. (Cass. 32.) We nowhere read of their being repaired on this occasion, though accounts of subsequent restorations are frequent, as in the year B.C. 351 (Liv. vii. 20), and again in 217, after the defeat at Trasimenen. (Id. xxii. 8.) Nothing can convey a higher notion of Roman energy than the fact that in the very year in which the city was thus rising from its ashes, the Capitol was supported by a substructure of square and solid masonry, of such massiveness as to excite wonder even in the Augustan age. (Liv. i. c.; Plut. xxii. 2.)

The censorship of Appius Claudius Cæcus, B.C. 412, formed a marked epoch in the progress of the city. By his care Rome obtained its first aqueduct, and its first regularly constructed high-road, the Aqua and Via Appia. (Liv. iv. 29.) But the open Porta Collina. (Liv. vi. 41.) The time during which they held it is variously given at from six to eight months. (Polyb. ii. 22; Flor. i. 13; Plut. Cam. 30; Serv. Aen. viii. 632.) Their attempt on the Capitol was an affront to the Sabines. They set fire to and otherwise devastated the city; but perhaps we are not to take literally the words of Livy and other writers, to the effect that they completely destroyed it (v. 42, 43; Flor. i. 13; Plut. Cam. 21). It is at least apparent, from Livy's own narrative (c. 55), that the Curia Hostilia was spared; and it seems probable that the Gauls would have preserved some of the houses for their own Occupations. We may, however, conclude, that the destruction was very great and terrible, as otherwise the Romans would not have discussed the project of emigrating to Veii. The firmness and judicious advice of Camillus persuaded them to remain. But the pressing necessity of the case, which required the new buildings to be raised with the greatest haste, was fatal to the beauty and regularity of the city. People began to build in a promiscuous manner, and the materials, afforded at the public expense, were granted only on condition that the houses should be ready within a year. A general plan was laid down; each man built as he pleased; the ancient lines of streets were disregarded, and houses were erected even over the ancient streets. Hence down to the time of Augustus, and perhaps later, the city, according to the forcible expression of Livy (v. 55), resembled in arrangement rather one where the ground had been seized upon than where it had been distributed. It may be inferred from a statement of Cornelius Nepos, as quoted by Pliny, that the greater part of the city was roofed with shingles. (Scandalum contextum fuisse Romam, i.e. the greater part of the roofs had been covered with shingles.) (Corn. Nep. anctor est, xvi. 15.) Livy indeed mentions the public distribution of tiles, but these perhaps may have been applied to other purposes besides roofing, such as for making the floors, &c.; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more extensively used in building than is customary in modern times. Within a year the new city was in readiness; and it must have been on a larger scale than before the Gallic invasion, since it had acquired a great accession of inhabitants from the conquered towns of Veii, Capena, and Falisci. Those Romans who, to avoid the trouble of building, had occupied the deserted houses of Veii, were recalled by a decree by which those who did not return within a fixed time were declared guilty of a capital offence. (Liv. vi. 4.) The walls of Rome seem to have been left unimpaired by the Gauls, notwithstanding Plutarch's assertion to the contrary. (Cass. 32.) We nowhere read of their being repaired on this occasion, though accounts of subsequent restorations are frequent, as in the year B.C. 351 (Liv. vii. 20), and again in 217, after the defeat at Trasimenen. (Id. xxii. 8.) Nothing can convey a higher notion of Roman energy than the fact that in the very year in which the city was thus rising from its ashes, the Capitol was supported by a substructure of square and solid masonry, of such massiveness as to excite wonder even in the Augustan age. (Liv. i. c.; Plut. xxii. 2.)

The censorship of Appius Claudius Cæcus, B.C. 412, formed a marked epoch in the progress of the city. By his care Rome obtained its first aqueduct, and its first regularly constructed high-road, the Aqua and Via Appia. (Liv. iv. 29.) But the
war with Pyrrhus which soon ensued, and afterwards the still larger and more destructive ones waged with the Carthaginians, prevented the progress which might have been anticipated from these beginnings. The construction of a second aqueduct, the Anio Vetus, in the censorship of Man. Curias Dentatus and L. Papirius Cursor, B. c. 272, testifies, however, that the population of the city had not ceased to increase. The censor C. Flaminius constructing the Flaminian Way, as well as the circus which bore his name. (Liv. Epit. xx.; Paul Dic. p. 89.) But it was the conquests of the Romans in Lower Italy, in Sicily, and Greece, which first gave them a taste for architectural magnificence. The first basilica was erected at Rome in the year B. c. 184, and was soon followed by others, as there will be occasion to relate when we come to speak of the forum. But it was not till ten years later that the city was first paved by the care of the censors Q. Fulvius Flaccus and A. Postumius Albinius. They also paved the public highways, constructed numerous bridges, and made many other important improvements, both in the city and its neighbourhood. (Liv. xli. 27.) Yet, notwithstanding these additions to the public convenience and splendour, the private houses of the Romans continued, with few exceptions, to be poor and inconvenient down to the time of Sulla. The house of a magnificus, on the Palatine, seems to have exhibited one of the earliest examples of elegant domestic architecture. (Cic. de Off. i. 59.) This was pulled down by Scaurus in order to enlarge his own house. The latter seems subsequently to have come into the possession of Clodius (Ascon. ad Cic. Mil. Arg.), and its magnificence may be inferred from the circumstance that he gave 14,800,000 sesterces for it, or about 150,000 l. (Plin xxxvi. 24. s. 2.) Indeed, as we approach the imperial times, the dwellings of the leading Romans assume a scale of extraordinary grandeur, as we see by Pliny's description of that of Crassus the orator, who was censor in B. c. 92. It was also on the Palatine, and was remarkable for six magnificent lotus-trees, which Pliny had seen in his youth, and which continued to flourish till they were destroyed in the fire of Nero. It was also distinguished by four columns of Hymettian marble, the first of that material erected in Rome. Yet even this was surpassed by the house of Q. Catulus, the colleague of Marius in the Cimbrian war, which was also adorned to increase: In the still more magnificent house of C. Aquilus on the Viminal, a Roman knight, distinguished for his knowledge of civil law. (Plin. xvii. 1.) M. Livius Drusus, tribune of the people in B. c. 93, also possessed an elegant residence, close to that of Catulus. After his death it came into the possession of the wealthy M. Crassus, of whom it was bought by Cicero for about 30,000 l. (ad Fam. v. 6). It seems to have stood on the N. side of the Palatine, on the declivity of the hill, not far from the Nova Via, so that it commanded a view of the forum and Capitol. It was burnt down in the Claudian riots, and a temple of Freedom erected on the spot; but after the return of Cicero was restored to him, rebuilt at the public expense. (Cic. ad Att. ii. 24. Fam. v. 6; Vell. Pat. ii. 45; Dion Cass. xxxvii. 17, xxxix. 11, 20; App. B. C. ii. 15, &c.) The house of Lepidus, consul in B. c. 77, was also remarkable for its magnificence, having not only columns, but even its thresholds, of solid Numidian marble. (Plin. xxxvi. 8.) The luxury of private residences at Rome seems to have attained its acme in those of Sallust and Lucullus. The distinguishing feature of the former, which lay on the Quirinal, was its gardens (Horti Sallustiani), which probably occupied the valley between the Quirinal and Pincian, as well as part of the latter hill. (Becker, Handb. p. 583.) The house of Lucullus, the conqueror of Mithridates and Tiganes, was situated on the Pincian, and was also surrounded with gardens of such remarkable beauty, that the desire of possessing them, which they awakened in the breast of Messalina, caused the death of their subsequent owner, P. Valerius Asiaticus. (Tact. Ann. xi. 1; Dion Cass. ix. 31.) From this period they formed one of the most splendid possessions of the imperial family. (Plut. Lucull. 39.) The ambitious designs entertained by the great leaders of the expiring Republic led them to court public favour by the foundation of public buildings rather than to lay out their immense wealth in adorning their own residences. The house inhabited by Pompey in the Cænae was an hereditary one; and though, after his triumph over Mithridates and the pirates, he rebuilt it on a more splendid scale and adorned it with the beaks of ships, yet it seems even then to have been far from one of the most splendid in Rome. (Plut. Pomp. 40 seq.) On the other hand, he consulted the taste and convenience of the Romans by building a theatre, a curia, and several temples. In like manner Caesar, at the height of his power, was content to reside in the ancient Regia; though this indeed was a sort of official residence which his office of Pontifex Maximus compelled him to adopt. (Suet. Cæs. 46.) But he formed, and partly executed, many magnificent designs for the embellishment of the city, which his short tenure of power prevented him from accomplishing. Among these were a theatre of unexampled magnitude, to be hollowed out of the Tarpeian rock; a temple of Mars, greater than any then existing; the foundation of two large public libraries; the construction of a new forum; besides many other important works, both at Rome and in the provinces. (Suet. Cæs. 26. 44; App. B. C. ii. 102, &c.) The firm and lengthened hold of power enjoyed by Augustus, and the immense resources at his disposal, enabled him not only to carry out several of his uncle's plans, but also some new ones of his own; so that his reign must be regarded as one of the most important epochs in the history of the city of Rome. The foundation of new temples and other public buildings did not prevent him from repairing and embellishing the ancient ones; and all his designs were executed with so much magnificence that he could boast in his old age of having found Rome of brick and left it of marble. (Suet. Aug. 28.) In these undertakings he was assisted by the taste and magnificence of his son-in-law Agrippa, who first founded public and gratuities baths at Rome (Dion Cass. liv. 29); but as we shall have occasion to give an account of these works, as well as of those executed by Pompey and Caesar, in the topographical portion of this article, it will not be necessary to enumerate them here; and we shall proceed to describe the important municipal reforms introduced by Augustus, especially his new division of the city into Vicl and Regions.

Regions of Augustus.—Although Rome had long outgrown its limits under Servius Tullius, yet the municipal divisions of that monarch subsisted till the time of Augustus, who made them his model, so far as the altered circumstances of the city would allow.
permit. Servius had formed the different Vici into religious corporations somewhat analogous to our parishes, with an appointed worship of the Lares, and proper feasts or Compitata. During the Republican period these corporations became a kind of political clubs, and were often made the engines of designing demagogues. (Vitell. Reg. viii. 81.) Augustus, in his new distribution, also adapted the scheme of embodying the Vici as religious corporations, and for this purpose erected chapels in the crossways, and set up images of the gods vicini, as the Apollo Sundialarius and the Jupiter Tragedocus. (Suet. Aug. 57.) Many laves of these statues have been discovered. By the term Vici we are to understand a certain collection of houses insulated by streets running round all its sides; whence the term came also to be applied to the streets themselves ("altus vicus appellantium, cum id genus adecimiforun defuntur, quae continentia sunt in oppida, quaeve itineribus regionibusque distributa inter se distant, nominibusque dissimiliibus discrimini causae sunt disparitatis," Fest. p. 371, et ibi Müll.) Compitum, which means properly a cross-road, was also, especially in ancient times, only another name for Vici; and thus we find Pliny describing Rome as divided into Compita Larum instead of Vic(i) (iii. 9). The Vici and Compita, regarded as streets, were narrower than the Vici and Plateae. (Suet. Aug. 45; Ann. Marc. xxviii. 4, § 29.) They were named after temples and other objects. The Vici were composed of two classes of houses called respectively insulae and domus. The former were so called because, by a law of the XII. Tables, it was ordained that they should be separated from one another by an interval of 2½ feet, called ambitus, and by later authors circuitus (Var. L. l. v. § 22, Müll.; Paul. Diaec. p. 16, 111 Müll.) This law, which seems to have been designed for purposes of health and for security against fire, was disregarded during the Empire, but again enforced by Nero when he rebuilt the city (Tac. Ann. xv. 43); and there is an ordinance on the subject by Antoninus and Venus (Dig. viii. 2. 14). By insulae, therefore, we are to understand single houses divided by a small space from the neighbouring ones, not a complex of houses divided by streets. The latter division formed a Vici. Yet some insulae were so large and disposed in such a manner that they almost resembled Vici (vide Fest. p. 371, et ibi Müll.). The insulae were inhabited by the unskilled and lower classes, and were generally let out in floors (" casa quaedam victi," Dig. xix. 2. 30.). It appears from the same authority that they were formed by persons who undertook them; but sometimes the proprietors kept stewards to collect their rents. Insulae were named after their owners, who were called "domini insularum" (Suet. Cest. 41, Tib. 48). Thus we hear of the insula Encarpiana, Critonia, Arriana, &c. (vide Gruuter, 611. 13.; Marat. 948. 9.) Rent was high (Juv. iii. 166), and investments in houses consequently profitable, though hazardous, since the principle of insurance was altogether unknown. (Gell. xvi. 1, 2.) Crassus was a great speculator in houses, and was said to possess nearly half Rome. (Plut. c. 2.) The domus, on the contrary, were the habitations or palaces of the rich and great, and consequently much fewer in number than the insulae, the proportion in each region being as 1 to 25 or 30. The domus were also commonly insulated, but not by any special law, like the insulae. They were also composed of floors or stages, but were occupied by a single family (Uctron. 77); though parts of them, especially the pastica, were sometimes let out (Plaut. Trin. 1. 2. 157; Suet. Nero, 44, Vitell. 7).

The number of insulae and domus in each Vici would of course vary. Augustus appointed that each should be under the government of magistrates elected from its plebeian inhabitants ("magistri e plebe," &c.), and weighed each with its own genus, as "numero" to the original meaning of the householder composing a Vici, (Suet. Aug. 30.) Hence Livy calls them "infinim genus magistratum" (xxixv. 7.). They were called Magistri, Magistri Vicorum, Curatores Vicorum, and Magistri Larum, and their number varied from two to four in each Vici. In the Basis Capitolina each Vici has 4 Magistri; but the Notitia and Curiam mention 48 Vico-magistri in each Region, without reference to the number of Vici. On certain days, probably the Compitalia (Ascon. ià Cl. Phil. p. 7.), these magistrates were allowed to assume the toga praetexta, and to be attended by two lictors; and the public slaves of each Region were at their command, who were commonly at the disposal of the aediles in case of fire. (Dion Cass. lv. 8; Liv. l. c.) The principal duties of their office were to attend to the worship of the Lores, the vestal virgins, and the public deities Stata Mater and Vulcanaus Quietus, to whom, as protectors against fire, chapels were erected, first in the forum, and afterwards in the different streets. (Fest. p. 317, Müll.; cf. Preller, Regionem, p. 84.) A certain number of Vici, varying according to the Notitia and Curiam from 7 to 78 constituted a Regio; and Augustus divided Rome into 14 of these Regions. (The 4 Servian Regions were abolished in the first 6 of Augustus. In determining the boundaries of the Regions Augustus seems to have caused them to be measured by feet, as we see them enumerated in the Notitia and Curiam. The limits appear to have been marked by certain public buildings, not by cippi. We may safely assume that Augustus included the suburbs in his city, but not within a pomorum, since the Porticus Octaviae is mentioned, as being outside of the pomorum, although it is lay far within the 9th Region. (Dion Cass. lv. 8.) These limits appear at first to have been distinguished only by numbers; and officially they were perhaps never distinguished otherwise. Some of the names of Regions found in the Notitia and Curiam are post-Augustan, as those of Isis and Serapia and Forum Pacis. The period when names were first applied to them cannot be determined. They are designated only by numbers in Tacitus and Frontinus, and even in the Basis Capitolina which belongs to the time of Hadrian. We find, indeed, in Sozomenus "Regio Palatin," which seems to have been such as appears at first to have been distinguished only by numbers; but so also he says "Regio Marti Campi," which never was a Region (Ces. 39, Nero, 12); and in these instances Regio seems to be used in its general sense.

The boundaries of the Regions cannot be traced with complete accuracy; but, as it is not our intention to follow these divisions when treating of the topography of the city, we shall here insert such a general description of them as may enable the reader to form some notion of their situation and relative size. Regio 1, or Porta Capena, embraced the
suburb lying outside of that gate, to the E. of the baths of Antoninus. It contained 10 Vici, and among its principal objects were, the temple of Mars, the arch of Drusus, and the sepulchre of the Scipios. 

Regio II., or Caelimontana, lay to the N. of this, and comprehended the whole extent of the Caelian hill. It had 7 Vici, and among its monuments may be mentioned the Arcus Dolabella and the aqueduct of Nero. Regio III., called Iais and Serapsis, lay to the N. of the Caelimontana, and embraced the valley of the Colosseum, and that southern portion of the Esquiline anciently known as Mons Oppius. It comprehended 12 Vici, and its principal objects were, the Faustina, the Flavian amphitheatre, and the Basilica Serapis. Regio IV., called Templum Pacis and Sacra Via, was situated to the W. of that of Iais and Serapsis, and comprehended the Velian ridge and the greater part of the valley between the Palatine, Esquiline, Viminal, and Quirinal, to the exclusion, however, of that western portion which lay immediately under the Capitoline. Yet it embraced the buildings on the N. side of the forum, including the temple of Faustina, the Basilica Paulli, and the Area Velaturn. It had 17 Vici, and its chief objects were, the Colosseum, since it included the Colossus and the Meta Sullana, both which objects stood very near that building. Its principal monuments, besides those already mentioned, were the temple of Venus and Roma, and the basilica of Constantine. It embraced the Subura, the greater portion of the Sacra Via, and the Forum Transitorium, and contained 8 Vici. Regio V., or Esquilia, included the northern portion of the Esquiline (Mons Cipius) and the Viminal besides a tract of columns lying between the E. of the Servian walls and agger. Thus it extended so far as to embrace the Amphitheatrum Castrense, which adjoins the modern church of S. Croce in Gerusalemme, and the so-called temple of Minerva Medica, near the Porta Maggiore. It had 15 Vici, and among its remaining principal objects were the gardens of Maecenas, the arch of Gallienus, and the Nymphaeum of Alexander Severus. Regio VI., called Alma Semita, embraced the Quirinal, and extended to the E. so as to include the Prenestian camp, on the right bank of the Tiber, and its chief objects were the baths of Diocletian, the house and gardens of Sallust, and the ancient Capitol. Regio VII., or Via Lata, was bounded on the E. by the Quirinal, on the N. by the Pincian, on the S. by the Servian wall between the Quirinal and Capitoline, and on the W. by the road called Via Lata till it joined the Via Flaminia—a point which cannot be accurately ascertained. The Via Lata was the southern portion of the modern Corso, and probably extended to the N. nearly as far as the Anxur of columns. The Regio comprehended 15 Vici. Being without the Servian walls, part of this district was ancienly a burying place, and the tomb of Bibulus is still extant. Regio VIII., or Forum Romanum Magnum, was one of the most important and populous in Rome. The ancient forum obtained the name of "Magnanum," after the building of that of Caesar. (Dion Cass. xiii. 22.) This Region, which formed the central point of all the rest, embraced not only the ancient forum, except the buildings on its N. side, but also the imperial fora, the Capitoline hill, and the valley between it and the Palatine as far as the Velabrum. It contained 34 Vici, among which were the densely populated ones Jugarius and Tuscus. The monuments in this district are so numerous and well known that it is unnecessary to specify them. Regio IX., called Circus Flaminius, comprehended the district lying between the Via Lata on the E., the Tiber on the W., the Capitoline hill and Servian wall on the S.; whilst on the N. it seems to have extended as far as the present Piazza Navona and Piazza Colonna. It contained 35 Vici, and among its objects of interest may be named the circus from which it derived its name, the three theatres of Balbus, Pompey, and Marcellus, the Pantheon, and many other celebrated monuments. The Campus Martius, or northern part of the area between the hills and the Tiber, was not comprehended in the 14 Regions, and seems to have consisted of the Palatine hill and its dérivités. It had 20 Vici. Its boundaries are so well marked that we need not mention its numerous and well-known monuments till we come to describe its topography. Regio XI., or Circus Maximus, derived its name from the circus, which occupied the greater part of it. It comprehended the valley between the Palatine and Aventine, and also apparently the northern dérivités of the latter hill, as far as the Porta Trigemina. On the N., where it met the Region of the Forum Romanum, it seems to have included the Velabrum. It contained 19 Vici according to the Notitia, 21 according to the Curiosum. Regio XII., called Piscina Publica, was bounded on the W. by the Aventine, on the N. by the Caelian, on the E. by Regio I., or Porta Capena, and on the S. it probably extended to the line of the Aurelian walls. It had 17 Vici, and its most remarkable monument was the baths of Caracalla. Regio XIII., or Aventinum, included that hill and the adjoining parts of the Tiber E. of the Porta Trigemina. It had 17 Vici according to the Notitia, 18 according to the Curiosum. Regio XIV., Transisterium, or Trasteverinum, comprehended all the suburb on the W., or right bank of the Tiber, including the Vatican, the Janiculum, with the district between the river and the Tiber, and the Insula Tiberina. This, therefore, was by far the largest of all the Regions, and contained 78 Vici.

Municipal Regulations of Augustus.—All these Regions were under the control of magistrates chosen annually by lot. (Suet. Aug. 30.) The government of the Regions was not corporative, like that of the Vici, but administrative; and one or more Regions seem to have been intrusted to a single magistrate chosen among the aediles, tribunes, or praetors. (Pflexor, Regionum, p. 77.) The supreme administration, however, was vested in the Praefectus Urbi. At a later period other officers were interposed between the praefect and these governors. Thus the Basius Capitolinus mentions a Curator and Decennarius in each Region. Subsequently, however, the latter office seems to have been abolished, and the Notitia and Curiosum mention two curators in each Region. There were also subordinate officers, such as praefectores or criens, and a number of imperial slaves, or libetini, were appointed to transact any necessary business concerning the Regions. (Pflexor, p. 79.)

One of the chief objects of Augustus in establishing these Regions seems to have been connected with the organization of the city police. For this purpose he established 7 Cohortes Vigilium, whose stations were so disposed that each cohort might be available for two Regions. Each was under the command of a tribune, and the whole was superintended by a Praefectus Vigilium. (Suet. Aug. 30;
of wood and stone for building, which the constant fires and continual falling and pulling down of houses render necessary; for even pulling down and rebuilding in order to gratify the taste is but a sort of voluntary ruin. Moreover the abundant mines and forests, and the rivers which serve to convey materials, afford wonderful means for these purposes. Such is the Anio, flowing down from Alba (Fucensis), a Latin city lying towards the territory of the Marsians, and so through the plain till it falls into the Tiber: also the Nar and the Tenes, which likewise run through the city. The flames of these duties had anciently been performed by certain triumvirs, called from their functions Nocturni, who were assisted by public slaves stationed at the gates and round the walls. The same office was, however, sometimes assumed by the asides and tribunes of the people. (Paulus, L. c.) The vigiles were provided with all the arms and tools necessary for their duties: and from a passage in Petronius (c. 79) seem to have possessed the power of breaking into houses when they suspected any danger. The strength of the vigiles amounted at last to 7000 men, or 1000 in each cohort. Augustus also established the Cohortes Praetoriae, or imperial guard, of which 9 cohorts were disposed in the neighbourhood of Rome, and 3 only, the Cohortes Urbanae, were permitted within the city. (Tac. Ann. iv. 5; Suet. Aug. 49.) These cohorts of Augustus were under the command of the Praefectus Urbii. (Tac. Hist. iii. 64.) It was his successor, Tiberius, who, by the advice of Sejanus, first established a regular Praetorian camp at Rome, a little to the eastward of the agger of Servius, and placed the bands under the command of a Praefectus Praetoriae. (Tac. Ann. iv. 2; Suet. Tib. 37.) Augustus also paid considerable attention to the method of building, and revived the regulations laid down by P. Rutilius Rufus with regard to this subject in the time of the Gracchi (Suet. Aug. 69); but all we know of these regulations is, that Augustus forbade houses to be built higher than 70 feet, if situated in a street. (Strab. v. p. 253.) The height was subsequently regulated by Nero and Trajan, the last of whom fixed it at 60 feet. (Ann. Vict. Epit. c. 13.) Yet houses still continued to be inconveniently high, as we see from the complaints of Juvenal, in the time, probably, of Domitian, and dangerous alike in case of fire or falling, especially to a poor poet who lived immediately under the tites: —

nos urbem colimus tenue tibicene fultam
Magna parte sui; nam sic labentibus obstat
Villices, et veteris riaene quum text hiatum
Securus pendente jubet dormire ruina.
Vivendum est ilic ubi milia incendia, nulli
Necet metus. Jan posset aquam, jam frivola
transfert
Uralegon: tabulata tibi jam terra foment.
Tu nescis; nam si gradibus trepidatur ab imis
Illiuns ardebit, quem tegula sola tutur.
A pluvia, molles nbi residunt ova columbace.

(iii. 193.)

Augustan Rome. — Strabo, who visited Rome in the reign of Augustus, and must have remained there during part of that of Tiberius, has left us the following lively picture of its appearance at that period: "The city, having thus attained such a size, is able to maintain its greatness by the abundance of provisions and the plentiful supply
so rich and so close to one another that they might appear to exhibit the rest of the city as a mere supplement. Hence this place is considered the most honourable and sacred of all, and has been appropriated to the monuments of the most distinguished men and women. The most remarkable of these is that called the Mausoleum, a vast mound near the river raised upon a lofty base of white stone, and covered to its summit with evergreen trees. On the top is a bronze statue of Augustus: whilst under the mound are the tombs of himself, his relatives, and friends, and at the back of it a large grove, affording delightful promenades. In the middle of the Campus is an enclosed space where the body of Augustus was burnt, also constructed of white stone, surrounded with an iron rail, and planted in the interior with poplar trees. Then if we proceed to the ancient forum, and survey the numerous basilicas, porticoes, and temples which surround it, and view the Capitol and its works, as well as those on the Palatine and in the portico of Livia, we might easily be led to forget all other cities. Such is Rome (v. pp. 235. 236).

In spite, however, of this glowing picture, or rather perhaps from the emphasis which it lays on the description of the Campus Martius, whilst the remains of the city are hitherto without few facts to touch, it may be suspected that in the time of Augustus the ancient part of Rome, with the exception of the immediate vicinity of the forum and Capitol, did not present a spectacle of any great magnificence. The narrowness and irregularity of the streets, the consequence of the hasty manner in which the city was rebuilt after its destruction by the Gauls, still continued to disfigure it in the time of Augustus, as is shown by a passage in Livy (v. 53), already cited (cf. Tacitus, Ann. xv. 38; "Obnoxia urbe artis Itinertiae, humeque et iliae flexis, atque enormissimis vicis, qualia retus Roma fuit—that is, before the fire). This defect was not remedied till the fire. That great fire in the reign of Nero, which forms the next remarkable epoch in the history of the city.

V. THE CITY TILL THE TIME OF AURELIAN.

Fire under Nero.—There had been a destructive fire in the reign of Tiberius, which burnt down all the buildings on the Caelian and Esquiline (Ann. xiv. 64); but this was a mere trifle compared with the extensive conflagration under Nero. The latter, the most destructive calamity of the kind that had ever happened at Rome, is unequivocally said by Suetonius (Nero, 38) to have been caused by the wilful act of the emperor, from disgust at the narrow and winding streets. Nero is represented by that historian as contemplating the flames with delight from the tower of Mausolus on the Esquiline, and as converting the awful reality into a sort of dramatic spectacle, by singing as the fire raged, in proper scenic attire, the Sack of Troy; nor does the more judicious Tacitus altogether reject the imputation (Ann. xv. 38, seq.) The fire commenced at the lower part of the Circus Maximus, where it joins the Caelian and Palatine, in some shops containing combustible materials. Thence it spread through the whole length of the circus to the Forum Boarium, and afterwards over the whole Palatine till it was arrested at the foot of the Capitol. It lasted six days and seven nights, and its extent may be judged from the fact that out of the fourteen Regions three were completely destroyed, and seven very nearly so, whilst only three escaped altogether untouched.

The three Regions utterly destroyed must have been the xith, xiiith, and xivth, or those called Cirius Maximus, Palatinum, and Templum Pacis. The forum must have suffered considerably, but the Capitol seems to have escaped, as the Capitoline temple, after its first destruction in the time of Sulla, was entirely till burnt by the Vitellians. The narrow and crowded streets, and the irregular Vicus of which ancient Rome was composed, render it impossible to arrest the conflagration. Nero was at Antium when it broke out, and did not return to Rome till the flames were threatening his own palace, which he had not the power to save. This was the Domus Transitoria, the domain of which he had extended from the Palatine to the gardens of Maecenas on the Esquiline. What chiefly directed suspicion against Nero, as having wilfully caused the fire, was the circumstance of its breaking out a fresh in the Aemilian property of his minister Tigidius.

Much irreparable loss was occasioned by this fire, such as the destruction of several time-honoured fames, of many master-pieces of Greek art, besides a vast amount of private property. Among the venerable temples which perished on this occasion, were that of Minerva, erected by Servius Tullius, the altar of Mars, and the temple of Hercules in the Forum Boarium, the temple of Jupiter Stator, founded by Romulus, those of Vesta and of the Parnes Populi Romani, and the Regia of Numa. Yet, on the other hand, the fire made room for great improvements. Nero caused the town to be rebuilt on a regular plan, with broad streets, open spaces, and less lofty houses. All the buildings were isolated, and a certain portion of each was constructed with Alban or Gabiniun stone, so as to be proof against fire; to guard against which a plentiful supply of water was laid on. As a means of escape and assistance in the same calamity, as well as for the sake of ornament, Nero also caused porticoes to be built at his own expense along the fronts of the insulae. He supplied the proprietors with money for building, and specified a certain time by which the houses were to be completed (Tac. Ann. xv. 38—43; Suet. Nero, 38). Thus Rome sprung a second time from her ashes, in a style far greater splendid than before. The new palace, or domus aurea, of the emperor himself kept pace with the increased magnificence of the city. Its bounds comprehended large parks and gardens, filled with wild animals, where solitude might be found in the very heart of the city; a vast lake, surrounded with large buildings, filled the valley in which the Flavian amphitheatre was afterwards erected; the palace was of such extent as to have triple porticoes of a thousand feet; in the vestibule stood a colossal figure of Nero himself, 120 feet in height; the ceilings were panelled, the chambers gilt, and inlaid with gems and mother-of-pearl; and the baths flowed both with fresh and sea water. When this magnificent abode was completed, Nero vouchsafed to honour it with his qualified approbation, and was heard to observe, "that he was at last beginning to lodge like a man." (Suet. Nero, 31; Mart. de Spect. 2.)

Changes under subsequent Emperors.—The two predecessors of Nero, Caligula and Claudius, did not effect much for the city; and the short and turbulent reigns of his three successors, Galba, Otho, and Vitellius, were characterised rather by destruction than improvement. Caligula indeed perfected some of the designs of Tiberius (Suet. Cal. 3 n 3.
The Latin title "Roma" is visible in the document. The text discusses the reign of Claudius and the construction of several beautiful fountains. The section continues with a detailed narrative about the Colosseum and its significance. The text also mentions the destruction of the city and the emigration of people. The passage concludes with a discussion of the restoration of the city by Aurelian. The text includes various Latin nouns, verbs, and adjectives, but the overall meaning is clear: the gradual decline and fall of the city, marked by decline in its previous glory and the emigration of its inhabitants.
the partner and rival of Constantine, resided at Rome during the six years of his reign, and affected to prize the elegance of the ancient metropolis; whilst his lust and tyranny, supported by squandering its treasures, created more disgust among the Romans than the absence of their former sovereigns. Manius, however, adorned the city which he polluted by his vices, and some of his works are among the last monuments worthy to be recorded. He restored the temple of Venus and Rome, which had been damaged by a fire, and erected that magnificent basilica, afterwards dedicated in the name of Constantine, whose three enormous arches may still be viewed with admiration. (Aur. Vict. Conz. c. 40. § 26.) The final transfer of the seat of empire to Byzantium by Constantine gave the last fatal blow to the civic greatness of Rome. Yet even that emperor presented the city—we can hardly say adorned it—with a few monuments. One of them, the arch which records his triumph over Maxentius, still subsists, and strikingly illustrates the depth of degradation to which architectural taste had already sunk. Its beauty is derived from the barbarous pallage of former monuments. The superb sculptures which illustrated the acts and victories of Trajan, were ruthlessly and absurdly converted to the use of Constantine; whilst the original sculptures that were added, by being placed in juxtaposition with those beautiful works, only serve to show more forcibly the hopeless decline of the plastic arts, which seem to have fallen with paganism.

Rome in the Time of Constantius II. — From this period the care of the Romans was directed rather towards the preservation than the adornment of their city. When visited by the Second Constantius A.D. 357, an honour which it had not received for two and thirty years, Rome could still display her ancient glories. The lively description of this visit by Ammianus Marcellinus, though written in a somewhat inflated style, forms a sort of pendant to Strabo's picture of Rome in the age of Augustus, and is striking and valuable, both as exhibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age regarded its monuments as a kind of Titanic relics, which it would be hopeless any longer to the styled to the use of Constantine; whilst the historian, the "seat of empire and of every virtue, Constantius was overwhelmed with astonishment, when he viewed the forum, that most conspicuous monument of ancient power. On whatever side he cast his eyes, he was struck with the thronging wonders. He addressed the senate in the Curia, the people from the tribunal; and was delighted with the applause which accompanied his progress to the palace. At the Circensian games which he gave, was pleased with the fame which it had not received for two and thirty years, Rome could still display her ancient glories. The lively description of this visit by Ammianus Marcellinus, though written in a somewhat inflated style, forms a sort of pendant to Strabo's picture of Rome in the age of Augustus, and is striking and valuable, both as exhibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age regarded its monuments as a kind of Titanic relics, which it would be hopeless any longer to

The Barbarians at Rome. — After two sieges, or rather blockades, in 408 and 409, by the Goths
under Alaric, Rome was captured and sacked on a third occasion in 410 (A. D. 1164)—the first time since the Gallic invasion that the city had actually been in the hands of an enemy. But though it was plundered by the Goths, it does not appear to have sustained much damage at their hands. They evacuated it on the sixth day, and all the mischief they seem to have done was the setting fire to some houses near the Salarice gate, by which they have until, which unfortunately agreed to and destroyed the neighbouring palace of Sallust (Procop. B. i. 12.) Nearly half a century later, in the reign of Maximus, Rome was again taken, and sacked by the Vandals, under Genesic, A. D. 455. This time the pillage lasted a fortnight; yet the principal damage inflicted on the monuments of the city was the carrying off by Genesic of the various tiles of gilt bronze which covered the temple of the Capitolium Jupiter (Ib. 5). That edifice, with the exception, perhaps, of Belisarius, who restored it, appears to have remained in much the same state as after its last rebuilding by Domitian; and though paganism had been abolished in the interval, the venerable face seems to have been respected by the Roman Christians. Yet, as may be perceived from an edict of the emperor Majorian, A. D. 457, the inhabitants of Rome had already commenced the disgraceful practice of destroying the monuments of their ancestors. The zeal of the Christians led them to deface some of the temples; others, which had not been converted into Christian churches, were suffered to go to ruin, or were converted into quarries, from which building materials were extracted. Petitions for that purpose were readily granted by the magistrates; till Majorian checked the practice by a severe edict, which reserved to the emperor and senate the cognisance of those cases in which the destruction of an ancient building might be allowed, imposed a fine of 50 lbs. of gold (2000£ sterling) on any magistrate who granted a license for such dilapidations, and condemned all subordinate officers engaged in such transactions to be whipped, and to have their hands amputated (Vor. Maj. lit. vi. p. 35: "Antigaram aedem dissipatur speciosa constructio, et ut eum aliquid reparetur magna diramuntu, &c.)

In the year 472, in the reign of Olybrius, Rome was for the third time taken and sacked by Ricimer; but this calamity, like the two former ones, does not appear to have been productive of much damage to the public monuments. These relics of former glory were the especial care of Theodoric, the Ostrogoth, when he became king of Italy, who, when he visited the capital in the year 500, had surveyed them with admiration: "The Gothic kings, so injuriously accused of the ruin of antiquity, were anxious to preserve the monuments of the nation when they had subdued. The royal edicts were framed to prevent the abuses, the neglect, or the depredations of the citizens themselves; and a professed architect, the annual sum of 200 lbs. of gold, 25,000 tiles, and the receipt of estates from the Imperial part, who was assigned for the ordinary repairs of the walls and public edifices. A similar care was extended to the statues of metal or marble, of men or animals. The spirit of the house, which have given a modern name to the Quirinal, was applauded by the barbarians; the bronze elephants of the Via Sacra were magnificently restored; the famous heifer of Myron deceived the cattle as they were driven through the forum of Peace; and an officer was created to protect these works of art, which Theodoric considered as the noblest ornament of his kingdom." (Gibbon, Decline and Fall, vol. v. p. 21, ed. Smith; cf. Eryc. de Olovo, Th. 67.) The letters of Cassiodorus, the secretary of Theodoric, show that Rome had received little or no injury from its three captures. The Circens Maximus was uninjured, and the Ludic Circenses were still exhibited there (Iariz. iii. 51); the thermes and aqueducts were intact (Ib. vi. 6); the Claudian aqueduct was in play, and disdained itself on the top of the Arverne, and was a valley (Ib.). That the aqueducts were perfect also appears fromProcopius (B. G. i. 19), who says that in the subsequent siege under Vitiges, the Goths broke them down, to deprive the inhabitants of their supply of water. The theatres had suffered only from the effects of time, and were repaired by Theodoric (Cassiod. ib. iv. 51.)

In the year 536 the Gothic garrison, with the exception of their commander Louteria, who preferred captivity to flight, evacuated Rome on the approach of Belisarius, the lieutenant of Justinian. Belisarius entered by the Asinarian gate, and, after an alienation of sixty years, Rome was restored to the imperial dominion. But in a few months the city was beleaguered by the numerous host of Vitiges, the newly elected king of the Goths; and its defence demanded all the valor and ability of Belisarius. For this purpose he repaired the walls, which had again fallen into decay. Regular bastions were constructed; a chain was drawn across the Tiber; the arches of the aqueducts were fortified; and the mole of Hadrian was converted into a citadel. That part of the wall between the Flaminian and Pincian gates, called muro torto, was alone neglected (Procop. B. G. i. 14, sqq.), which is said to have been regarded both by Goths and Romans as under the peculiar protection of St. Peter. As we have before said, the Goths invested the city in six divisions, from the Porta Flaminia to the Porta Praenestina; whilst a seventh encampment was formed near the Vatican, for the purpose of commanding the Tiber and the Milvian bridge. In the general assault which followed, a feint was made at the Salarice gate, but the principal attacks were directed against the mole of Hadrian and the Porta Praenestina. It was on this occasion that at the former point the finest statues, the works of Praxiteles and Lysippus, were converted into warlike missiles, and hurled down upon the besiegers. When the ditch of St. Angelo was cleansed in the presence of Urban VIII., the Stepping Fann of the Barberini Palace was discovered, but in a sadly mutilated state. (Winkelmann, Hist. de l'Art, vol. ii. p. 52, seq.) But the assault was not successful, and after a fruitless siege, which lasted a year, the Goths were forced to retire.

After the recall of Belisarius the Goths recovered strength and courage, and, under Totila, once more threatened the walls of Rome. In 544 Belisarius was again despatched into Italy, to retrieve the faulty and the neglected works of the Arverne; but on this occasion he was deserted by his usual fortune, and, after a fruitless attempt to relieve the city, was compelled to retreat to Ostia. (Procop. B. G. iii. 19.) In December, 546, the Goths were admitted into the city by the treachery of some Isaurian sentinels posted at the Asinarian gate. Rome was again subjected to pillage, and appears to have suffered more than on any former occasion. A third part of the walls was destroyed in different places, and a great many houses were burnt.
Tottila threatened to destroy the finest works of antiquity, and even issued a decree that Rome should be turned into a pasture. Yet he was not deficient in magnani-

mity and clemency, and he revealed the repositories of Belisarius, who warned him not to spoil his fame by such wanton barbarity. Upon Tottila's marching into Lucania, Belisarius, at the head of 1000 horse, cut his way through the Goths who had been left to guard the city. He repaired with rude and hetero-
geneous materials the walls which had been de-
molished; whilst the gates, which could not be so suddenly restored, were guarded by his bravest sol-
diers. Tottila returned to Rome by forced marches, but was thrice repulsed in three general assaults. Belisarius, however, being commanded by Justinian to proceed into Lucania, left a garrison of 5000 of his best troops at Rome under the command of Diogenes. The city was again betrayed by some Isaurians in 549, who opened the gate of St. Paul to Totila and his Goths. Totila, who seems now to have considered himself as in confirmed possession of Italy, no longer entered any cities or destroyed the edifices of Rome, which he regarded as the capital of his kingdom, and he even exhibited the equestrian games in the Circus. (Procop. B. G. iv. 22.) But in 552 he was defeated and slain by the eunuch Nurses in the battle of Tagina. Nurses then marched to Rome, and once more sent its keys to Justinian, during whose reign the city had been no fewer than five times taken and recovered. (Ib. 26–33; Theoph. Chron. vol. i. p. 354, ed. Bonn.) Rome under the Lombards. Towards the close of the sixth century Rome had touched the lowest point of degradation. The Roman citizens lived in continual fear of the attacks of the Lombards; the inhabitants of the surrounding country, who no longer dared to devote themselves to the pur-

porses of agriculture, took refuge within the walls; and the Campagna of Rome became a desert, exhaling infectious vapours. The indigence and the celibacy of a great part of the inhabitants produced a rapid decrease of population, though their scanty numbers did not protect them from famine. The edifices of Rome fell into decay; and it is commonly believed that Pope Gregory the Great, who filled the papal chair from 590 to 649, purposely defaced the temples and mutilated the statues,—a charge, however, which rests on doubtful evidence, and which has been strenuously repelled by Gregory's biographer Platina (ap. Boyle, Gregorio Fer.). Bar-
gæus, in his epistle on the subject (in Grevius, Theana. Ant. vol. iv.), says that the Circus Maximus, the baths and theatres, were certainly overthrown designately, and that this is particularly evident in the baths of Caracalla and Diocletian (p. 1885). He attributes this, as a meridt, to Gregory and one or two subsequent popes, and assigns as a reason that the baths were nothing but schools of licen-

tiousness (p. 1889, seq.). It seems more probable, however, that the destruction of the baths arose from the failure of the aqueducts—a circumstance which would have rendered them useless—and from the expense of keeping them up. Bargæus himself attributes the ruin of the aqueducts to the latter cause (p. 1891); but they must also have suffered very severely in the Gothic wars. Hence perhaps the huge foundations of the thermae, having be-

come altogether useless, began to be used as stone quarries, a circumstance which would account for the appearance of Wilful damage. That ruin had made great progress at Rome before the time of Gregory, is manifest from some passages in his own works in which he deprecates it. Thus in one of his homilies he says, "Qualis res nunc est Roma, caras spicinms. Immensas doooribus multipliciter attrarit, desolatione civium, impressione hostium, frequenter ruinaram." And again: "Quid autem ista de hominibus dicitum, cum ruinis crebrecentibus ipse quoque destruer sedificia videmus?" (Hom. 18 in Ezech. ap. Donatumn, de Urbe Roma, i. 28, sub fin.) He would hardly have written thus had he himself been the cause of these ruins. The charge probably acquired strength from Gregory's avowed antipathy to classical literature.

Whilst the dominion of Italy was divided between the Lombards and the exarchs of Ravenna, Rome was the head of a duchy of almost the same size as her ancient territory, extending from Viterbo to Terracina, and from Narni to the mouth of the Tiber. The fraticide Constans II. is said to have entertained the idea of restoring the seat of empire to Rome (a. d. 662). (Hist. Misc. ap. Minaritori, scrp. R. i. p. 137.) But the Lombard power was too strong; and, after a visit of a few days to the ancient capital, he abandoned it for ever, after pillaging the churches and carrying off the bronze roof of the Pantheon. (Schlosser, Gesch, d. bilder-stärmenden Kaisers, p. 80.) In the eighth century the Romans revived the style of the Re-

public, but the Popes had become their chief ma-
gistrates. During this period Rome was constantly harassed and suffered many sieges by the Lombards under Luitprand, Astolphus, and other kings. In 846 the various measure of its calamities was filled up by an attack of the Saracens—as if the former mistress of the world was destined to be the butt of wandering barbarians from all quarters of the globe. The disciples of Mahomet pillaged the church of St. Peter, as well as that of St. Paul outside the Porta Ostien
sis, but did not succeed in entering the city itself. They were repulsed by the vigilance and energy of pope Leo IV., who repaired the ancient walls, raised fifteen towers which had been overthrown, and enclosed the quarter of the Vatican; on which in 852 he bestowed his blessing and the title of Città Leonina, or Leonine city (now the Borgo di S. Pietro), (Anastasius, V. Leon. iv.) In the period between 1081 and 1084 Rome was thrice fruitlessly besieged by the emperor Henry IV., who, however, by means of corruption at last suc-
cceeded in gaining possession of it; but the ruins of the Septizodium, defended by the nephew of Pope Gregory VII., resisted all the attacks of Henry's forces. Gregory shut himself up in the castle of S. Angelo, and invoked the assistance of his vassal, Robert Guiscard. Henry fled at the approach of the warlike Norman; but Rome suffered more at the hands of its friends than it had ever before done from the assaults of its enemies. A tumult was excited by the imperial adherents, and the Saracens in Robert's army, who despaired both parties, seized the opportunity for violence and plunder. The city was freed; a great part of the buildings on the Campus Martius, as well as the spacious district from the Lateran to the Colosseum, was consumed, and the latter portion has never since been restored. (Matutern, iii. c. 57; Donatus, iv. 8.) But Rome has suffered more injury from her own citizens than from the hands of foreigners; and its ruin must be chiefly imputed to the civil dissensions.
the Roman, and to the use which they made of the ancient monuments to serve their own selfish and mercenary purposes. The facts of the Guelphs and Ghibellines, of the Colonna and Urzini, which began in the tenth century and lasted several hundred years, must have been very destructive to the city. In these sanguininary quarrels the ancient statues were converted into castles; and the multitude of the latter may be estimated from the fact that the senator Bramacalone during his government (1252—1258) caused 140 towers, or fortresses, the strongest of the monasteries to be demolished in Rome and its neighbourhood; yet subsequently, under Martin V., we still hear of forty-four existing in one quarter of the city alone. (Matthew Paris, Hist. Maj. p. 741, seq.) Some of these were erected on the most celebrated buildings, as the triumphal monuments of Caesar, Titus, and the Antonines. (Montfaucon, Diot. Ital. p. 186; Anonymous, ib. p. 283.) But still more destructive were the ravages committed on the ancient buildings during times of peace. The beautiful sculptures and architectural members, which could no longer be imitated, were seized upon and appropriated to the adornment of new structures. We have seen that this barbarous kind of spoliation was exercised as early as the reign of Constantine, who applied the sculptures of some monument of Trajan’s to adorn his own triumphal arch. In after ages Charlemagne carried off the columns of Rome to decorate his palace at Arc-la-Chapelle (Siebert, Chron. in Bosquet, Historiens de France, v. p. 572); and several centuries later Petrarch lamented that his friend and patron, Robert, king of Sicily, was following the same pernicious example. (“Itaque nunc, heu dolor! heu scelus indignum! de vestris marmoreis columnis, de liminius templorum (ad quae non ex orbe toto concursus devotissimus fiebat), de imaginibus sepulcrorum sub quibus patrum vestrorum venerabiles cinis erat, ut religias sileam, desidia Aepolis adornator,” Petrav. Opp. p. 536, seq.) It would be endless to recount the depredations committed by the popes and nobles in order to build their churches and palaces. The abbé Barthélemy (Mem. de l’Acad. des Insr. xxvii. p. 585) mentions that he had seen at Rome a manuscript letter relating to a treaty between the chiefs of the factions which desolated Rome in the 14th century, in which, among other articles, it is agreed that the Colosseum shall be common to all parties, who shall be at liberty to take stones from it. (De Staël; Vie de Petrarch, i. 528, note.) Sixtus V. employed the stones of the Septizonium in building St. Peter’s. (Greg. Leti, Vita di Sisto V. iii. p. 50.) The nephews of Paul III. were the principal destroyers of the Colosseum, in order to build the Farnese palace (Muratori, Ann. d’Italia, xiv. p. 374); and a similar approach was profferably applied to those of Urban VIII. (“Quod non fecerunt Barbari, fecer-Barbaramii,” Gibbon, viii. p. 284, note.) But even a worse species of desecration than this was the destruction of the magnificent marble columns, by converting them into lime. Poggio complains (A. D. 1434) that the temple of Concord, which was almost perfect when he first came to Rome, had almost disappeared in this manner. (“Capitulio contiguum forum versus superest portiones acedis Concordiae, quam cum primam ad urbem accessit, vidi rem integrum, omne marmore admodum speciosum; Romam postmodum, ad calicem, aestem totam et porticos partem, disjectus columnarum, sunt demoli-ti, de Vos Fort. p. 12.) And the same practice is repopulated in the verses of Aeneas Sylvius, afterwards Pope Pius II.—

“Sed tunc his populi, muris defossa vetustis, Calici in obsequium marmora dura copti.

Impera tercentum si sic gens egerit annos, Nullum hic indicium nobilitatis erit.”

(In Mabillon, Nova Ital. i. 97.)

The melancholy progress of the desolation of Rome might be roughly traced from some imperfect memorials. The account of the writer called the Romance of the Church of S. Anciano is interestingly illustrative of the state of Rome early in the 9th century, which has been published by Mabillon (Anal. iv. p. 502), and by Hainel (Arch. phil. Philol. u. Pædag. ii. p. 115), exhibits a much more copious list of monuments than that of another anonymous writer, who compiled a book De Mirabilibus Romae, in the 12th or 13th century. (Montfaucon, Darr. Ital. p. 283, seq.; Nibby, Elogia. Lett. di Roma, 1820, Fase. iv.—iv.) Several passages in the works of Petrarch exhibit the neglected and desolate state of Rome in the 14th century,—the consequence of the removal of the holy see to Aig- non. Thus, in a letter to Urban V., he says: “Jacent domus, labant maestia, templum ruunt, sacra pereunt, calcantur leges.” And a little after: “Lateranum humni jacet et Ecclesiarum mater omnium tectus earens ventis paet ac pluvius,” &c. (Cf. ibid. ix. seq. 1.) Yet the remains of ancient Roman splendour were still considerable enough to excite the wonder and admiration of Manzel Chrysoloras at the commencement of the 15th century, as may be seen in his epistle to the emperor John Palaeologus, (subjoined to Codinus, de Antig. C. P. p. 107, seq.) Much destruction must have been perpetrated from this period to the time, and even during the life, of Poggio. But the progress of desolation seems to have been arrested subsequently to that writer, whose catalogue of the ruins does not exhibit a great many more remains than may yet be seen. Care is now taken to arrest as far as possible even the inevitable influence of time; and the antiquarian has at present nothing to regret except that mere active means are not applied to the disinterment of the ancient city. The funds devoted to the re-erection of a magnificent basilica far without the walls, and on so unworthy a site that the very monks are forced to desert it during the heats of summer, might, in the eye at least of transmontane taste, have been more worthily devoted to such an object.

VII. Population of Rome.

Before we close this part of the subject it will be expected that we should say something respecting the probable amount of the population of Rome. The inquiry is unfortunately involved in much obscurity, and the vagueness of the data upon which any calculation can be founded is such that it is impossible to arrive at any wholly satisfactory conclusion. But the latitude hence allowed may be judged from the fact that the estimates of some of the best modern scholars are about four times as great as those of others; and whilst Dureau de la Maille, in his Économie politique des Romains (p. 331, seq.), sets down the population at 562,000 souls, Locke, in his Romische Geschicht (vol. i. pt. ii. p. 383, seq.), estimates it at 2,265,000; and Lipsius, in his work De Magnitudine Romana (iii. 3), even carried it up to the astounding number of 8,000,000. But this is an absurd exaggeration; whilst, on the
ROMA.

oder hand, the estimate of Durenae de la Malle is undoubtedly much too low.

The only secure data which we possess on the subject are the records of the number of citizens who received the congiaria or imperial largesses, for it is only during the imperial times that we can profess to make any calculation. We learn from the Monumentum Anagyrumum that Augustus, in his 12th consulsit, distributed a pecuniary gift to 320,000 of the plebs urbana. ("Consul xii. trecentis et viginti milibus plebei urbanae sexagesimo denarios viritum diei," tab. iii.) The recipients of this bounty were all males and probably formed the whole free male population of Rome, with the exception of the senators, knights, and aliens. Women and boys of a tender age did not participate in these distributions. It had been customary for the latter to be admitted to participation after the age of ten; but Augustus appears to have extended his liberality to still younger children. ("Ne minores quidem pueros praeteriti, quavnominis ab undecimo aetatis anno accipere consentiens," Suet. Aug. 41.) The distributions of corn seem to have been regulated on stricter principles, as these were regular, not extra-ordinary like the largesses. From these the children were probably excluded, and there was, perhaps, a stricter inquiry made into the titles of the recipients. Thus we learn from the Mon. Anagyrumum that those who received corn in the 13th consulsit of Augustus amounted to rather more than 200,000. (Cf. Dion Cass. iv. 10.) From the same document it appears that three largesses made by Augustus, of 400 sesterces per man, were never distributed to fewer than 250,000 persons. ("Quae mens congiaria pervenerant ad hominum millia numquam minus quingunqutae et ducenta," Bk., where Hieck, Rom. Gesch. i. pt. ii. p. 388, by erroneously reading sestertium instead of hominum, has increased the number of recipients to 625,000.) From a passage in Spartan's life of Septimius Severus (c. 23) it would seem that the number entitled to receive the distributions of corn had increased. That author says that Severus left at his death wheat enough to last for seven years, if distributed according to the regular canon or measure of 75,000 modii daily. Now, if we calculate this distribution according to the system of Augustus, of five modii per man monthly, and reckon thirty days to the month, then this would leave the number of recipients at 450,000 (75,000 x 30 = 2,250,000 + 5 = 450,000). According to these statements we can hardly place the average of the male plebian population of Rome during the first centuries of the Empire at less than 350,000; and at least twice as much again must be added for the females and boys, thus giving a total of 1,050,000. There are no very accurate data for arriving at the numbers of the senators and knights. Bunsen (Beschr. i. p. 184), without stating the grounds of his calculation, sets them down, including their families, at 10,000. But this is evidently much too low an estimate. We learn from Dionysius Halicarnassensis (vi. 13) that in the annual procession of the knights to the temple of Castor they sometimes mustered to the number of 5000. But this must have been very far from their whole number. A great many must have been absent from sickness, old age, and other causes; and a far greater number must have been in the provinces and in foreign countries, serving with the armies, or employed as publicans, and in other public capacities. Yet their families would probably, for the most part, reside at Rome. We see from the complaints of Horace how the equestrian dignity was prostituted in the imperial times to liberti and aliens, provided they were rich enough for it. (Epod. iv. in Memm.; cf. Juv. i. 28.) We should, perhaps, therefore, believe the mark in fixing the number of knights and senators at 15,000. If we allow a wife and one child only to each, this would give the number of individuals composing the senatorial and equestrian families at 45,000, which is a small proportion to 1,050,000 freemen of the lower class. It may be objected that marriage was very much out of fashion with the higher classes at Rome during the time of Augustus: but the omission was supplied in another manner, and the number of kept women and illegitimate children, who would count as population just as well as the legitimate ones, must have been considerable. In thiscalculation it is important not to underrate the numbers of the higher classes, since they are very important factors in estimating the slave population, of which they were the chief maintainers. The preceding sums, then, would give a total of 1,095,000 free inhabitants of Rome, of all classes. To these are to be added the aliens residing at Rome, the soldiers, and the slaves. The first of these classes must have been very numerous. There must have been a great many provincial persons settled at Rome, for purposes of business or pleasure, who did not possess the franchise, a great many Greeks, as tutors, physicians, artists, &c., besides vast numbers of other foreigners from all parts of the world. The Jews alone must have formed a considerable population. So large, indeed, was the number of aliens at Rome, that in times of scarcity we sometimes read of their being banished. Thus Augustus on one occasion expelled all foreigners except tutors and physicians. (Suet. Aug. 42.) According to Seneca, the greater part of the inhabitants were aliens. "Nonnum hominum genus concurrerit in urbem et virtutibus et vitis magna praemia pomerent. Unde dano quisque eiat, quareet; vidichis magisern partem esse, quae relictis sedibus suis venerit in maximum quidem et pulcherrimum urbem, non tamen suarn." (Cons. ad Helc. c. 6.) In this there is no doubt some exaggeration; yet we find the same complaints reiterated by Juvenal:

"Jam pridem Syrum in Tiberim defluxit Oronites."

"Hic alta Sicyne, ast hic Anydore relieta.

Hic Andro, ille Same, hic Tralibius ant Alabandis,

Equilias distinque petunt a Vinime collem,

Viscera magnarn dumnum, dominique futuri" (iii. 62, seq.).

It would perhaps, then, be but a modest estimate to reckon the aliens and foreigners resident at Rome, together with their wives and families, at 100,000. The soldiers and the vigilae, or police, we can hardly estimate at less than 25,000; and as many of these men must have been married, we may reckon them, with their families, at 50,000. Hence 100,000 aliens and 50,000 military, &c., added to the foregoing sum of 1,095,000, makes 1,245,000 for the total miscellaneous free population of Rome.

There are great difficulties in the way of estimating the slave population, from the total absence of any accurate data. We can only infer generally that it must have been exceedingly numerous; and that this is evident from many passages of the ancient authors.
The number of slaves kept as domestic servants must have been exceedingly large. Horace mentions (Sat. i. 3, 12) that the singer Tigellius had sometimes as many as 200 slaves; but when he was taken with a sudden fit of economy, he reduced them to the very modest number of 10. No doubt, however, he was a first-rate vocalist, and, like his brethren in modern times, a man of fortune. Tullius the practor, who was a stinging cur, when he went to Tibur, had 5 slaves at his heels to carry his cooking utensils and wine. (Ib. i. 6, 107.) Horace himself, who of course was mainly a man as Tigellius, when he sat down to his frugal supper of cakes and vegetables, was waited upon by 3 slaves; and we may presume that these did not compose his entire household. (Ib. v. 115.)

In the reign of Nero, 400 slaves were maintained in the palace of Pedanius Secundus, who were all put to death, women and children included, because one of them had murdered his master. (Tac. Ann. xiv. 42, seq.) The slaves no longer consisted of those born and bred on the estates of their masters, but were imported in multitudes from all the various nations under the wide-spread dominion of the Romans. (Postquam vero nationes in familiis habebant, quibus diversi utrns, externa sacra, aut nulla sunt, colluvium istam non nisi metu coerceris.) (Ib. c. 44.)

The case of Pedanius, however, was no doubt an extraordinary one. It cannot be imagined that the plebs urbana, who received the public rations, were capable of maintaining slaves; nor probably are many to be assigned to the aliens. But if we place the patrician and equestrian families at 15,000, and allow the moderate average number of 30 slaves to each family, this would give a total number of 450,000. Some also must be allowed to the richer part of the plebs—to persons who, like Horace, were not patrician nor equestrian, yet could afford to keep a few slaves; as well as to the aliens resident at Rome, so that we can hardly compute the number of domestic slaves at less than 500,000. To these must be added the public slaves at the disposal of the various municipal officers, also those employed in handicraft trades and manufactures, as journey-men carpenters, builders, masers, bakers, and the like. It would not perhaps be too much to estimate these at 300,000, thus making the total slave population of Rome 800,000. This sum, added to that of the free inhabitants, would give a total of 2,045,000.

The Notitia et Curiositas state the number of insulae at Rome at 46,002, and the number of domus at 1790, besides baldas, lupanaria, military and police stations, &c. If we had any means of ascertaining the average number of inhabitants in each insula, it would afford a valuable method of checking the preceding computation. But here again we are unfortunately reduced to uncertainty and conjecture. We may, however, pretty surely infer that each insula contained a large number of inmates. In the time of Augustus, the yearly rent of the coenacula of an insula usually produced 40,000 sesterces, or between 300l. and 400l. sterling. (Dig. 19. tit. 2. s. 30, ap. Gibbon, ch. 31, note 70.)

Petronius (c. 93, 97), and Juvenal (Sat. iii. passim) describe the crowded state of these lodgings. If we take them at an average of four stories, each accommodating 12 or 15 persons, this would give say 50 persons in each insula; and even then the inmates, men, women and boys, would be paying an average yearly rent of about 74l. per head. The inmates of each domus can hardly be set down at less, since the family, with tutors and other hangings on, may perhaps be fairly estimated at 20, and the slaves in each domus at 40. We learn from Valerius Maximus (iv. 4. § 8), that sixteen men of the celebrated Gens Aelia lived in one small house with their families; but this seems to have been an exceptional case even in the early times, and cannot be adopted as a guide under the Empire. Now, taking the insulae actually inhabited at 40,000—since some must have been let, or under repair—and the inhabited domus at 1500 = 61,500, and the number of inmates in each at 50, we should have a total population of 2,075,000, a sum not greatly at variance with the amount obtained by the previous method. But the reader will have seen on what data the calculation proceeds, and must draw his own conclusions accordingly. (Cf. Bunsen, Beschreibung der Stadt Rom, p. 183, seq.; Duclerce de Malle, Economie politique des Romains t. p. 340, seq.; Mommsen, Die Römischen Tribus, p. 187, seq.; Heck, Römische Geschichte, i. p. xi. p. 383, seq.; Zumpt, Uber den Stand der Bevölkerung im Alterthum, Berlin, 1841: Gibbon, Decline and Fall, vol. iv. p. 87, seq., with the note of Smith.)

PART II. TOPOGRAPHY.

Having thus given an account of the rise and progress, the decline and fall of the Roman city, we shall now proceed to describe its topography. In treating this part of the subject we shall follow those divisions which are marked out either by their political importance or by their natural features rather than be guided by the arbitrary bounds laid down in the Regions of Augustus. The latter, however convenient for the municipal purposes which they were intended to serve, would be but ill calculated to group the various objects in that order in which they are most calculated to arrest the attention of the modern reader, and to fix them in his memory. We shall therefore, after describing the walls of Servius Tullius and those of Aurelian, proceed to the Capitol, one of the most striking objects of ancient Rome, and then to the Forum and its environs, the remaining hills and their valleys, with the various objects of interest which they present.

1. WAllS AND GATes OF S ervius Tullius.

At the commencement of the Roman Empire the walls of Servius Tullius could no longer be traced. Instead of dreading the assaults of the surrounding petty nations of Italy, Rome had now extended her frontiers to the Euphrates and the Atlantic; her ancient bulwarks were become entirely useless, and the increase of her population had occasioned the building of houses close to and even over their remains; so that in the time of Dionysius of Halicarnassus, who came to Rome in the reign of Augustus, it was difficult to discover their course (iv. 13). To attempt now to trace their exact outline would therefore be a hopeless task. The remains of the agger of Servius are still, however, partly visible, and the situation of a few of the ancient gates is known with certainty, whilst that of others may be fixed with at least some approach to accuracy from notices of them contained in ancient authors. It is from these materials that we must endeavour to reconstruct the line of the Servian walls, by first determining the probable sites of the gates, and by then drawing the
ROMA.

wall between them, according to indications offered by the nature of the ground. We learn from Cicero that Servius, like Romulus, was guided in the construction of his wall by the outline of the hills: "Cuibus (urbs) est est tractatus ductusque muri quam Romuli tum etiam relique muri spatia definitur etiam partem arduus praeruptique montibus, ut unus aditus, qui esset inter Esquilmum Varrinalcemque montem, maximo aggere objecto fossa circumgertur vastissima; atque at its minuta arx circumjuncta adruo et quasi circunscio saxo nitetur, ut etiam in illa tempestate horribili Gallici adventus incolumnes atque intacta permanetv." (De Rep. ii. 6.) Becker (de Muris, p. 64, Hamb, p. 129) asserts that Cicero here plainly says that Servius erected walls only where there were no hills, or across the valleys, and concludes that the greater part of the defences of the city consisted of the natural ones offered by the hills alone. Becker, however, appears to have formed no very clear ideas upon the subject; for notwithstanding what is here said, we find him a few pages further on, conducting the line of wall not only along the height of the Quirinal, but even over the summit of the Capitoline hill itself! (Hamb. pp. 131, 136, de Muris, pp. 65, 70.) Neither his first, or theoretical, nor his second, or practical, view, is correct. The former is in direct contradiction to his authority; for Cicero says that the other kings did like Romulus; and he, as we have seen, and as Becker himself has shown, walled in his city all round. Cicero says, as plainly as he can speak, that there was a wall, and that it was defined along its whole extent ("definitus ex omni parte") by the line of the hills. If it did not run along their summits, we cannot explain Pliny's assertion (iii. 9.) that the agger equalled the height of the walls ("Namque eum (aggerem) muros sequavit qua maxime patet hab (urba) aditus plano; etiam minuta erat praeecessis muriis, aut abruptis montibus, &c.,) since it would be a no great extolling of its height to say that it was raised to the level of a wall in the valley. Cicero, however, notices two exceptions to the continuous line, and the fact of his pointing these out proves the correctness of the wall in the remainder of the circuit. The first exception is the agger just mentioned, upon the top of which, however, according to Dionysius (ix. 68), there seems also to have been a sort of wall, though probably not of so great a height as the rest, at least he uses the comparative when speaking of it: τάκετε ἀγειμάρ σφηκόμενον (iv. 54.) The second exception was the Arc, or Capitoline hill, which, being on its western side much more abrupt and precipitous than the other hills, was considered as sufficiently defended by nature, with a little assistance from art in escaping its sides. That there was no wall at this spot is also proved, as Niebuhr remarks (Hist. vol. i. p. 396) by the account of the Gauls scaling the height. (Liv. v. 47; comp. Bunbury, Class. Miss. vol. iii. p. 347.) The Capitoline, therefore, must have been the spot to which Dionysius alluded, when he said that Rome was partly defended by its hills, and partly by the Tiber (ix. 68.) as well as Pliny in the passage just cited, where we must not infer from the plural (montibus) that he meant more than one hill. This is merely, as in Dionysius also, a general mode of expression; and we have before observed that Pliny's own account shows that the wall crowned the hills. Lastly, had there been no wall upon them, it is difficult to see how there could have been gates; yet we find Becker himself placing gates at spots where, according to his theoretical view, there could have been no wall. Niebuhr (I. c.), who, like Becker, does not confuse the escarpment to the Capitol, but thinks that the greater part of the city was fortified solely by the steepness of its hills, places towers, walls, and gates just in the right ascents; but this view, improbable in itself, and unsupported by any authority, cannot be maintained against the express testimony of Cicero. There seems, however, to have been an interior fortification on the E. side of the Capitoline, protecting the ascent by the clivus, as we shall see in the sequel. It was probably intended to secure the citadel, in case an enemy succeeded in forcing the external walls. We have seen before that the hill was fortified by Romulus; but whether these were interior fortifications, as well as those on the Palatine, were retained by Servius, it is impossible to say.

We may assume then that the wall of Servius, or his predecessor,—which seems to have been built of stone ("muro lapideo," Liv. i. 15),—surrounded the whole city, with the exception of the Capitoline hill and a small part defended by the Tiber,—thus justifying the noble lines of Virgil (Georg. ii. 553.)—

"rerum facta est pulcerrima Roma.
Septemque msa sibi muro circundidit arces."

Our next task will be to determine the outline of this wall by means of the site of the different gates; though, of course, where the outline of the hills is well defined this alone will be a guide. The situation of two of the gates may be considered certain,—that of the Porta Collina, at the N. extremity of the agger, and that of the Esquilin at its southern end. Taking, therefore, the former as a starting-point, and proceeding continually to the left, we shall make the circuit of the whole city, till we again arrive at the Porta Collina.

This, the most northerly of all the gates, lay near the point where the Via Salaria branches off from the Via Nomentana. For this is the first gate to the W. was probably the Porta Salutaris, so named, probably, from its being on that division of the Quirinal which in the time of Numa and in the sacred books of the Argives was called Collis Salutaris, from an ancient saeculum of Salus which stood upon it (Varr. L. L. v. § 51.) When Paulus Diaconus tells us (p. 327, Mill.) that it was named after the temple of Salus, he seems to be alluding to the later and more famous temple dedicated by C. Junius Bubulcus in n. c. 303, which we shall have occasion to describe in the sequel; but it is probable that it obtained its name, as we have said, at a much earlier period. As the new temple probably stood at or near the site of the ancient one, and as the Notitia in describing the 6th Regio, or Alta Semita, takes this temple for a starting point, and, proceeding always in a circuit to the left, arrives at last at the baths of Diocletian, it may be assumed that this gate was the first important object westward of the baths. It seems to have spanned a Clivus Sahtula, which Ca- nina (Roma Antica, p. 187) places, with much probability, in the Via delle Quattro Fontane, where it ascends from the Piazza Barberina. (Cf. Praexter, Regionem, p. 134.)

The next gate to the left seems to have been the Porta Sanqualias, so named from the temple of Sansus. (Paul. Diaec. p. 344, Mill.) This was the same
divinity as Deus Fidius (Fest. p. 241, Mill.), whose
sacellum is mentioned by Livy (viii. 20) as situated
near the temple of Quirinus. It is also recorded in
the fragments of the Argive books as seated on the
Colis Macras (Varro. L.L. v. § 62, Mill.), which hill
comes next in order after the Colis Saliunaris. We
have already mentioned the temple of Quirinus as
having been situated near the present church of
S. Andrea and it may therefore be assumed that the
Porta Sanquiniis spanned the ascent to it or near
the modern Via della Dataria.

Between the Porta Sanquiniis and the Capitoline hill
there were probably two gates; at all events there
must undoubtedly have been one in the very narrow
ravine which in early times separated the Capitoline
from the Quirinal, and which afforded the only
outlet from the neighbourhood of the forum. This
was, perhaps, the Porta Ratumena, which we
learn from Pliny (vii. 65: "unde postea nomen est")
and Plutarch (Prol. 13: παρ' την πόλιν, ἢ νῦν
Ρατομέων καλοστι;) was still existing in their time.
Becker, indeed, disputes the inference of its existence
from Pliny's words, and disbelieves the assertion of Plu-
tarch. But there is nothing at all incredible in the fact,
and therefore no reason why we should disbelieve it.
We know, from the example of London and other cities,
that a gate, and especially the name of a gate marking
its former site, may remain for ages after the wall
in which it stood has been removed. Even the local
tradition of its name would have sufficed to mark its
site; but it seems highly probable, from the nature of
the ground where it stood, that the gate itself had
been preserved. The road through so narrow a gorge
could never have been disturbed for building or other
purposes: and it is probable that the gate remained
standing till the ravine was enlarged by cutting away
the Quirinal in order to make room for Trajan's
forum. We learn from the passages just cited, as
well as from Festus (p. 274), that the gate derived
its name from a charioteer, who, returning victorious
from the Circensian games at Veii, was thrown out
of his chariot and killed at this spot, whilst the
affrighted horses, thus freed from all control, dashed
up the Capitoline hill, and, as the legend runs, did not
finish their mad career till they had thrice made the
circuit of the temple of Jupiter Capitolinus. (Plin.
viii. 65.) So remarkable an omen would have been
quite a sufficient ground in those days for changing
the name of the gate. But it matters little what
faith we may be disposed to place in the legend; for

even if it was an invention, it must have been framed
with that regard to local circumstances which would
have lent it probability, and no other gate can be
pointed out which would have so well suited the
tone of the story. Its existence at this spot is
further confirmed by the tomb of Bibulus, one of the
few remaining monuments of the Republic, which
stands in the Macol dei Corvi, and by the discovery
of the remains of another sepulchral monument a little
further on, in the Via della Pedacchia. It is well
known that, with a few rare exceptions, no interments
were allowed within the walls of Rome; the tomb of
Bibulus must therefore have been a little without
the gate, and its front corresponds to the direction
of a road that would have led from the forum into
the Campus Martius (Canina. Roma Antica, p. 218).
Bunsen, however, is of opinion (Bescher. vol. iii. p. 45)
that it lay within the walls, and infers from the inscrip-
tion, which states that the ground was presented as
a burial-place to Bibulus and his descendants by the
Senate and people "honoris virtilisque causa," that
he was one of those rare exceptions mentioned by
Cicero (Leg. ii. 23) of persons who obtained the
privilege of being buried within the city. A more
unfortunate conjecture was hardly ever hazarded.
Becker has justly pointed out that the words of the
inscription merely mean that the ground was pre-
sented to Bibulus, without at all implying that it was
within the walls; and an attentive consideration of the
passage in Cicero will show that it could not
possibly have been so. Ever since the passing of the
law of the XII. Tables against interment within the
walls, Cicero could find only one example in which it
had been set aside, namely, in honour of C. Fa-
brucius. Now if Bibulus had lived in the period
between the constitution of the Dictatorship and the
final abolition of the Republic, we could not have
failed to hear of an individual who had achieved so
extraordinary a mark of distinction; and if, on the
other hand, he lived before that work was written,
—of which there can scarcely be a doubt,—then
Cicero would certainly have mentioned him.

Besides the gates already enumerated between the
spot from which we started and the Capitoline hill,
there seems also to have been another for which we
can find no more convenient site than the SW. side
of the Quirinal, between the Porta Ratumena and
Porta Sanquiniis, unless indeed we adopt the un-
probable conjecture of Preller (Schneidewin's
Philologus, p. 84), that the Ratumena was one of the
gates of the fortification on the Clivus Capitolinus,
and that the Porta Fontinalis was the gate in the
gorge between the Quirinal and the Capitoline. This
latter gate is mentioned by Paulus Diaconus (p. 83,
Mill.), in connection with a festival called Fontinalis.
It is also mentioned by Varro (L.L. vi. § 22, Mill.
and other writers; and we learn from Livy (xxvii.
10) that a portico was constructed from it to the
altar of Mars, forming a thoroughfare into the
Campus Martius. The same historian again mentions
the Ara Marsis as being in the Campus (xl. 45), but
there is nothing to indicate its precise situation.
Numa instituted a festival to Mars, as a pledge of
union between the Romans and Sabines (Fest. p. 372,
Mill.), and it was probably on this occasion that the
altar was erected. It is impossible to place any gate
and portico leading from it in the short strip of wall
on the S. side of the Capitoline, and therefore its
site was perhaps that already indicated. The altar
must have stood at no great distance from the gate, and
could hardly have been so far to the W. as the
ROMA.

Plutarch Canin.a, bave line must situated altar to round by we from furum. of were than cundo jicrviae Festus another Orosius " (R. I. B. 2) This new thorough had early become very thickly inhabited, as is evident from the many porticoes, theatres, temples and other buildings, which are mentioned there (see Preller, Regimen, p. 156, seq.) But Livy's narrative of the trial of Manlius (vi. 20) is one of the most striking proofs of the situation of the P. Flumentana, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. summit of the Capitoline hill. A spot near the place where the Circus Flamininus afterwards stood was at that time used for the assemblies of the Comitia Centuriata, by which Manlius was tried. From this place both the Capitol and the Arx were visible; and Manlius had produced a great effect upon his judges by calling upon them to pronounce their verdict in the sight of those very gods whose temple he had preserved; "Ut Capitolum atque arcem inuentes, ad deos immortales versi, de se judicarent." In order to deprive him of this appeal the tribunes adjourned the assembly to a spot just outside the Porta Flumentana, called " lucus Postelinius," whence the Capitol could not be seen (" unde conspicus in Capitolium non esset "). A glance at any map of Rome will show that this was the only spot in the Campus Martius where the temple, from its being hidden by the SW. summit, which we assume to have been the Arx, was concealed from view. The tribunes would doubtless have been glad to conceal the Arx also, had it been in the power; but an appeal to the Arx alone would have lacked the effect of the re-ligio which swayed so much with the superstitious Romans. They were no longer in the presence of those rescued deities in whose sight Manlius had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's text, by reading Flumentaria for Flumentana, or seek to place the scene of the trial at another spot, since the Comitia Centuriata were usually assembled in the Campus.

The ancient topographers, as well as the modern Italians (Iribby, Murra, loc. p. 152; Canina, Indicazioni Topografiche, pp. 34. 632, ed. 1850), place another gate, the PORTA TRIUMPHALIS, between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequently mentioned in classical authors, but unfortunately in such a manner that no decided inference can be drawn respecting its situation. Hence various theories have been advanced on the subject, which have led to warm controversies. The German school of topographers, though not united among themselves, have agreed in departing from the Italian view, chiefly because it appears to them absurd to imagine that there could have been three gates in so short a piece of wall. If, however, as it will be shown to be probable, the Porta Triumphalis was opened only on occasions of state, there necessary to be very little force in this objection. Bunsen and his followers allow that it formed a real entrance into the city, but strangely enough make it lead into the Circus Maximus; whilst Becker, on the other hand, holds that it was no gate at all properly of the Tiber once actually flowed through this gate (" Flumentana Porta Romae appellata, quod Tiberis partem ex fluxisse affirmat," p. 89, Müh.) The site is further confirmed by a passage in Varro alluding to the populousness of the suburb just outside the gate; "Nam quod extra urbem est acriflicium, nihil magis ideo est villa, quam eorum aedificia qui habitant extra portam Flumentanam, est in Aquiliniis." (R. I. B. 2) This new thorough had early become very thickly inhabited, as is evident from the many porticoes, theatres, temples and other buildings, which are mentioned there (see Preller, Regimen, p. 156, seq.) But Livy's narrative of the trial of Manlius (vi. 20) is one of the most striking proofs of the situation of the P. Flumentana, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. summit of the Capitoline hill. A spot near the place where the Circus Flamininus afterwards stood was at that time used for the assemblies of the Comitia Centuriata, by which Manlius was tried. From this place both the Capitol and the Arx were visible; and Manlius had produced a great effect upon his judges by calling upon them to pronounce their verdict in the sight of those very gods whose temple he had preserved; "Ut Capitolum atque arcem inuentes, ad deos immortales versi, de se judicarent." In order to deprive him of this appeal the tribunes adjourned the assembly to a spot just outside the Porta Flumentana, called " lucus Postelinius," whence the Capitol could not be seen (" unde conspicus in Capitolium non esset "). A glance at any map of Rome will show that this was the only spot in the Campus Martius where the temple, from its being hidden by the SW. summit, which we assume to have been the Arx, was concealed from view. The tribunes would doubtless have been glad to conceal the Arx also, had it been in their power; but an appeal to the Arx alone would have lacked the effect of the religio which swayed so much with the superstitious Romans. They were no longer in the presence of those rescued deities in whose sight Manlius had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's text, by reading Flumentaria for Flumentana, or seek to place the scene of the trial at another spot, since the Comitia Centuriata were usually assembled in the Campus.

The ancient topographers, as well as the modern Italians (Nibby, Murra, loc. p. 152; Canina, Indicazioni Topografiche, pp. 34. 632, ed. 1850), place another gate, the PORTA TRIUMPHALIS, between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequently mentioned in classical authors, but unfortunately in such a manner that no decided inference can be drawn respecting its situation. Hence various theories have been advanced on the subject, which have led to warm controversies. The German school of topographers, though not united among themselves, have agreed in departing from the Italian view, chiefly because it appears to them absurd to imagine that there could have been three gates in so short a piece of wall. If, however, as it will be shown to be probable, the Porta Triumphalis was opened only on occasions of state, there necessary to be very little force in this objection. Bunsen and his followers allow that it formed a real entrance into the city, but strangely enough make it lead into the Circus Maximus; whilst Becker, on the other hand, holds that it was no gate at all properly
so called, but a mere triumphal arch situated in the Campus Martius. The theory of Bunsen necessarily rests on the assumption of a different line of wall from that laid down in the "proceeding accounts," and as another line is also adopted by Niebuhr (Hist. ii. p. 397, Ethnogr. ii. p. 49), it will be necessary to examine this point before proceeding to the question of the gate. Niebuhr and Bunsen are, however, far from coinciding. The line drawn by the former proceeds along the banks of the river; that drawn by the latter runs from the Porta Carmentalis to the N. angle of the Circus Maximus, and, adopting the NW. front of the circus, or what was called the "sacred way," as far as Porta Pulcherrima, proceeds onwards to the Aventine, thus shutting the greater part of the Forum Bovarium out of the city. Both these theories, however, agree in so far as they assume an enceinte continue, or continued line of wall; and therefore, if this notion can be shown to be false, both fall to the ground. Now it can be proved on the very best evidence that there was no wall in this part of the city, which was defended solely by the Tiber. We have already adduced a passage from Dionysius in confirmation of this statement; and the same author in another passage repeats the same thing in so plain a manner that there can be no reasonable doubt of the fact: ἐδέσαν ἡ πόλις ἄνων κατά κράτος ἄτεχιστος ὡστα ἐκ τῶν παρὰ τὸν πυταιμὸν μερῶν (v. 23). But Dionysius does not stand alone. We have Livy also as a voucher for the same fact, who, in narrating the enterprise of Porsena against Rome, observes that the citizens regarded some parts of their city as secured by the wall, and other parts by the Tiber. "Alaeque, auresque, ali Tiberi objecto videulantur" (ii. 10). The same fact appears, though not in so direct a manner, from the same author's account of the procession of the virgins from the temple of Apollo, outside the Carmental gate, to that of Juno Regina on the Aventine, to which we have before briefly alluded. The route is described as follows: "A porta (Carmentali) Jugario vico in forum venera. Inde vico Tusco Velabroque per Bovarium forum in clivum Publicum atque aedem Juno Reginae rectum est" (xxvii. 11). Now the small space allotted by Bunsen to the Forum Bovarium must have been inside of the wall, since the temples of Fortune and Mater Matuta, which stood upon it (Liv. xxxii. 27), were within the Porta Carmentalis (id. xxv. 7). The procession, then, after passing through that forum, must have gone out of the city at another gate,—Bunsen's Firmen- tata,—and have entered it again by the Trigemina, before it could reach the Clivus Publicus,—facts which are not mentioned by Livy in his very precise description of the route.

Having thus shown on the best evidence that no wall existed at this point, it would be a mere waste of time to refute arguments intended to show that it possibly might have existed,—such as whether a wall with a gate would keep out an inundation, whether the Flibii went over the Subiciam bridge, and others of the like sort, which would have puz- zled an ancient historian. We will therefore proceed to examine Becker's hypothesis, that the Porta Triumphalis was a fortification, not a gate at all, but nothing more than an arch in the Campus Martius, a theory which is also adopted, though with some little variation, by Peller (Regiom. p. 162, and Aschberg, p. 239).

Becker places this arch at the spot where the Campus Martius joins the Regia called Circus Flaminius, and takes it to be the same that was rebuilt by Domitian (of course he must mean rebuilt, though it is not very clearly expressed, De Muris, p. 92, Humb. p. 153). His conjectural position on the following lines in a poem of Martial's (viii. 65) in which he describes the erection of this arch and of some other buildings near it:—

"Haece est digna tuis, Germancio, porta triumphis,
Hos aditus urbem Martinus habere decet."

Becker, however, is totally unable to prove that this arch and the temple of Fortuna Redux near it were even in the Campus Martius at all. Thus he says (Humb. p. 642): "It is indeed expressly said that the Ara of Fortuna Redux was in the Campus Martius; but it becomes probable from the circumstance that Domitian built here, and, as we have conjectured at p. 153, close to the Porta Triumphalis, a temple to the same goddess."

The argument then proceeds as follows: "We know from Martial that Domitian built a temple to Fortuna Redux where her altar formerly stood, and also a triumphal arch near it. We do not know that this altar was in the Campus Martius, but it is probable that it was, because Domitian built this temple close to it, and also close to the arch, which, as I conjectured, was the Porta Triumphalis!"

There is, however, another passage of Martial, either overlooked or ignored by Becker, which tends very strongly to show that this arch of Domitian's really was in the Campus Martius, but at quite a different spot from that so conveniently fixed upon by him. It is the following (x. 6):—

"Felices quibus urna dedit spectacula curseum
Solibus Arctois sideribusque ducem.
Quando erit ille dies quo Campus et arbor et
omnis
Lucebit Latia culta fenestra nara?
Quando mores dulces, longuaque a Caesarum
pulvis,
Totaque Flaminia Roma videnda via?"

There can be no doubt that these lines refer to the same triumphal entry of Domitian's as those quoted by Eutropius, but pretty plainly show, as Ca- nibius, without any view to the question, justly observes (Indicazione, s. c. p. 437), that the arch and other monuments stood on the Via Flamina, and therefore at a very considerable distance from the spot assigned to them by Becker.

This arch having broken down, Peller comes to the rescue, and places the Porta Triumphalis near the Villa Publica and temple of Bellona, close to the Via Lata. For this site he adduces several plausible arguments: near the temple of Bellona was the piece of ager hostilis, where the Fetales went through the formalities of declaring war; as well as the Columna Bellonica, whence a lance was thrown when the army was going to take the field; also a Senaculum "citra aedem Bel- lonne," in which audience was given to foreign ambassadors whom the senate did not choose to admit into the city. The Villa Publica also served for the reception of the latter, and probably also of Roman generals before their triumph, and of all who, being cum insignis, could not cross the pomerium, and therefore in the ordinary course took up their abode there. After this ceased to exist, the Dit- bitorium was n-ved in its stead, in which Claudius passed some nights, and in which probably Ver- pasian and Titus slept before their triumph. This
spot therefore had the significance of a kind of outpost of the city.

As this theory is evidently framed with a view to the triumph of Vespasian and Titus, and as the account of that triumph is also one of the main arguments adduced by Becker for his Porta Triumphalis, it will be necessary to examine it. The narrative of Josephus runs as follows (Bell. Jud. vii. 5 § 4, p. 1305, Huds.): "The emperor and his son Titus spent the night preceding their triumph in a public building in the Campus Martius, near the temple of Isis, where the army was assembled and marshalled. At break of day the emperors came forth and proceeded to the Porticus Octaviae (near the theatre of Marcellus), where, according to ancient custom, the senate were assembled to meet them. Vespasian, after offering the usual prayer, and delivering a short address, dismissed the troops to their breakfast, whilst he himself returned to the gate named after the triumphal processions that used to pass through it. Here the emperor breakfasted, and, having put on the triumphal dress, and sacrificed to the gods whose shrines were at the gate, caused the pageant to proceed through the circi." Becker concludes from this narrative that the Porta Triumphalis and Porticus Octaviae formed a town, in the limits of the Campus Martius, and near the public building where the emperor had slept. A further proof is, he contends, that the procession went through the circi, which must mean the Circus Flaminius and Circus Maximus; and that this was so may be shown from Plutarch (Aem. Paull. 32), who says that Paulinus went through the Circi, and in another passage expressly relates (Lucull. 37) that Lucullus adorned the Circus Flaminius with the arms, &c. which he had taken, which it would be absurd to suppose he would have done unless the procession passed through that circus. Then comes the supposition we have already noticed, that the procession of Vespasian passed through the arch erected by his younger son Domitian some years after his father's death. After passing through the Circus Flaminius, Becker thinks that the procession went through the P. Carmentalis, and by the Vicus Jugarius to the forum, along the latter sub iteroris, and finally through the Vicus Tuscanus, the Velabrum, and Forum Boarium, into the Circus Maximus. Having conducted the emperors thus far, Becker takes leave of them, and we remain completely in the dark as to the manner in which they got out of the circus and found their way back again to the forum and Capitol, the usual destination of triumphant generals.

Admitting that Becker has here given a true interpretation of the text of Josephus, as it stands, we shall proceed to examine the conclusions that have been drawn from it, beginning with those of Preller. That writer has very properly assumed (Regionen, p. 240) that if the triumphal arch did not actually cross the pomerium it led at all events into a territory subject to the jurisdiction of the city, into which it was unlawful for a general cum imperio to pass without the permission of the senate. Had not this been so the whole business would have been a mere vain and idle ceremony. The account of Vespasian's triumph seems indeed a little repugnant to this view, since he met the senate in the Porticus Octaviae, which on this supposition was considerably beyond the boundary, and which he had therefore crossed before he had obtained authority to do so. Still more repugnant is Dion's account of the triumph of Tiberius, who, we are told, assembled the senate at the same place precisely on the ground that it was outside of the pomerium, and that consequently he did not violate their privileges by assembling them there (εἰ τε τὸ Ὄκταοναί τινς βουνὴ ἡμῶν διὰ τὸ εἶναι τούτων ἐλεήμονες, iv. 8). But as these instances occurred in the imperial period, they may be said with Becker (Handb. p. 151, note) that the ceremony no longer had any meaning, we will go back for an example to the early ages of the Republic. First, however, we must demand the acknowledgment that the triumphal gate passed by Vespasian was the same, or at least stood on the same spot, as that which had been in use from time immemorial. We cannot allow it to be shifted about like a castle on a chessboard, to suit the convenience of commentators; and we make this demand on the authority of Josephus himself in the very passage under discussion, who tells us that it took its name from the circumstance, that the triumphal processions had always passed through it (καὶ τοῦ πυρεπαθείν οὗτος ἦν τῶν δραμάν τῆς προσφορας ἀπ' αὐτῶν τετυχομένων). Now Livy, in his account of the triumph of the consuls Valerius and Horatius, relates that they assembled the senate in the Campus Martius to solicit that honour; but when the senators complained that they were overawed by the presence of the military, the consuls called the senate away into the Porta Flaminia, to the spot occupied in the time of the historian by the temple of Apollo. ("Consules ex composito edem biduo ad urbem accesserunt, senatumque in Maritimum Campum evocaverunt. Ut quin de rebus a se gestis agerent, questi primores Patrum, senatorum inter milites dedita opera terrae causa habebant. Itaque ex Porta Flaminia se numinis rebus, in Porta Flaminia, ut multosedes Apollinis (jam tum Apollinaris appellabant) evocaverunt senatum," iii. 63.) This temple was situated close to the Porticus Octaviae (Becker, Handb. p. 605), and therefore considerably nearer the city than the spot indicated either by Becker or Preller. The consuls therefore must have already passed beyond the Porta Triumphalis before they began to solicit the senate for leave to do so! Becker, however, has been more careful, and has not extended the jurisdiction of the city beyond the walls of Servius, at this part of the Campus, before the time of the emperor Claudius. But what results from his view? That the whole affair of the Porta Triumphalis was mere farce,—that it led nowhere,—that the triumphant general, when he had passed through it by permission of the senate, was as much outside the city boundary as he was before. But that it afforded a real entrance into the town clearly appears from the passage in Cicero's oration against Piso (c. 23), "Qua ego Caesalmon- tana porta introitae disixtem, sponsumine me, ni Esquilina introitesse, homo propitiousse haeceitis. Quasi vero id aut ego seire debuerim, aut vestrum quispium audiret, aut ad rem pertinent quae tu porta introieris, modo ne triumphali; qua portae Macedonius semper proconsulis ante te patuit." The Porta Triumphalis being here put on a level with the Caesalmoniana and Esquilina, the natural conclusion is that, however, it afforded an actual, though not customary, entrance within the walls. We further learn from the preceding passage that this same Porta Triumphalis had been open to every proconsul of Macedonia before Piso, including of course L. Aemilius Paulus, who triumphed over Persus B. C. 167.
(Liv. xiv. 39), thus establishing the identity of the gate to at least that period.

But to return to Becker's explanation of the passage of Josephus. Admitting Plutarch's account of the triumphs of Paulinus and Lucullus, namely, that they passed through the Circus Flaminius, yet what does this prove? how is it connected with the Porta Triumphalis? These generals may have marshalled their processions in the Campus and passed through the Circus Flaminius in their way to the Porta Triumphalis. The procession would have been equally visible in the Campus as if the usual spectators; and just as the Lord Mayor's show may, or might, be seen at Westminster as well as in the city. It is possible indeed that in the case of Vespasian there was no procession till he arrived at the gate; but it does not necessarily follow that the same line was always precisely observed. In truth we may perceive a difference between the expressions of Josephus and those of Plutarch. The former says that Vespasian went διὰ τῶν δεάτρων; whilst Plutarch says, of Paulinus, that he marshalled the triumphal procession δίκτυα ἐν τῷ κόλπω καὶ κόλπων ἐν τῶν μεγάλις, that he adorned τὸν φλαμίνιον πετάρ

δρομον. Here the circi are precisely designated as hippodromes; but Josephus uses the general term δεάτρων, which may include theatres of all kinds. Now we will suggest a more probable route than that given by Becker, according to which the pageant must have crossed the forum twice. After coming out at the further end of the circus, Vespasian turned down to the left, between the Palatine and Cæsarian, the modern Via di S. Gregorio. This would bring him out opposite his own magnificent amphitheatre, the Colosseum, then in course of construction. Even if it had not risen much above its foundations, still its ample area by means of scaffoldings, would have accommodated a vast number of spectators; and as to Vespasian personally, it would have imparted no small relief to his triumph to pass through so magnificent a work of his own creation. Hence his road lay plain and direct over the Summus Scena Via to the forum and Capitolium.

Now, taking all these things into consideration, we will venture to suggest a very slight change in the text of Josephus, a change not so great as some of these often proposed by Becker upon much smaller occasions, and which will release us from a great deal of perplexity. The alteration is that of an Ν into a Π, a very slight one in the usual character; and, by reading αἰερ[ha] for αἰερ[ha], we would make Vespasian depart from the Porticus Octavia towards the gate which had always been used for triumphs, instead of retracting his steps towards one of which nobody can give any account, but whatever may be thought of the individual case of Vespasian, still we hold it to be incontestable that the ancient Porta Triumphalis, against which the sole objection seems to be that it was near two other gates, is to be sought in that part of the Servian wall between the P. Carmentalis and the P. Flaminum. The objection just alluded to would indeed have some force, if we could suppose, with Becker (Hist., vol. iv. p. 534), that the Porta Triumphalis, just like an ordinary one, lay always open for common traffic. But it is surprising how anybody could come to that conclusion after reading the passages which Becker has himself cited from Suetonius, Tacitus, and Dion Cassius, or that in Cicero's oration against Piso before quoted. The first of these authors relates that after the death of Augustus the senate voted, or proposed to vote, that, as an extraordinary mark of honour, his funeral should pass through the triumphal gate, preceded by the Chivas of Victory which stood in the curia: "Ut consensuerit quidam funus triumphali portae descendere, praecedente Victoria, quae est in Curia" (Appl. 100; cf. Tac. Ann. i. 8.; and Dion says (Iri. 42.) that this was actually done, and the body burned in the Campus Martius. Now if the Porta Triumphalis had been an ordinary gate and common thoroughfare, what honour would there have been in passing in procession through it? The modern spectator has discovered that any distinctions had been confounded. Wherefore Preller (Regimmen, p. 240) has rightly come to the conclusion that it was usually kept shut.

Between the Capitoline and the Aventine, along the banks of the river, the wall, as we have shown, was discontinued, but it was recommenced at the spot where the latter hill approaches the Tiber. This may be shown from the well-ascertained position of the Porta Trigemina, which, as we learn from a passage in Florus, lay just under the Clivus Publicius, at the northernmost point of the hill ("in ceptit dissipati Appia (aqua) into Publicio Clivo ad Portam Trigeminam," Apq. 13); and the Clivus Publicius, as we know from a passage in Livy respecting the procession of the virgins before alluded to, formed the ascent to the Aventine from the Forum Boarium (4°: in civitie Tusco Velabroque per Bevarium forum in clivium Publicum atque adem Junoniam Reginae perrectum," xix. 37). There are some difficulties connected with the question of this gate, from its being mentioned in conjunction with the Pons Publicius; but there will be occasion to discuss the situation of that bridge in a separate section; and we shall only remark here that the narratives alluded to seem to show that it was at no great distance from the gate. It is probable that the latter derived its name from its having three Juni or archways.

A little beyond the Porta Trigemina most topographers have placed a Porta Navalis, which is mentioned only once, namely, by P. Diaconus in the following passage: "Navalis Porta a vicinio Navalium dicta" (p. 179, Mill.), where we are told that it derived its name from the vicinity of the government dockyards. It has been assumed that these docks lay to the S. of the Aventine, in the plain where Monte Testaccio stands; but Becker has the merit of having shown, as will appear in its proper place, that they were in the Campus Martius. There was, however, a kind of emporium or merchant dock, between the Aventine and Tiber, and, as this must have occasioned considerable traffic, it is probable that there was a gate leading to it somewhere on the W. side of the hill, perhaps near the Priorato, where there seems to have been an ascent, but whether it was called Porta Navalis it is impossible to say. The writer of this article is informed by a gentleman well acquainted with the subject, that traces of the Servian wall have very recently been discovered at the NW. side of the Aventine, below S. Sabina and S. Alessio.

The line of wall from this point to the Caelian hill cannot be determined with any certainty. Round the Aventine itself it doubtless followed the configuration of the hill; but its course from the S. point of the Aventine has been variously laid down. Hence the question arises whether it included the nameless height on which the churches of S. Sabina
and S. Sabba now stand. It seems probable that it must, at all events, have included a considerable portion of the valley, for it proceeded along the valley, it would have been commanded by the hill; and indeed the most natural supposition is that it enclosed the whole, since the more extended line it would thus have described affords room for the several gates which we find mentioned between the Porta Trigemina and the Porta Capena near the foot of the Caelian.

Among these we must, perhaps, assume a Porta Minucia or Minutus, which is twice mentioned by Paulus (pp. 122, 147), and whose name, he says, was derived from an ara or sacellum of Minucius, whom the Romans held to be a god. We hear nowhere else of such a Roman deity; but we learn from Pliny (xviii. 4) that a certain tribunal of the people, named Minutius Augurinus, had a statue erected to him, by public subscription, beyond the Porta Trigemina, for having reduced the price of corn. This occurred at an early period, since the same story is narrated by Livy (iv. 15—16) n. c. 346, with the additional information that it was Minutius who procured the condemnation of the great corn monopoliser, Maelius, and that the statue alluded to was a gilt bull. It is possible therefore that the gate may have been named after him; and that from the extraordinary honours paid to him, he may have come in process of time to be vulgarly mistaken for a deity. If there is any truth in this view, the gate may be placed somewhere on the S. side of the Aventine.

In the mutilated fragment which we possess of Varro's description of the Roman gates (L. L. v. § 163, Mull.) he closes it by mentioning three, which it is impossible to place anywhere except in the line of wall between the Aventine and Caelian. He had been speaking of a place inhabited by Ennius, who lived on the Aventine (Hieron. Chron. 134, vol. i. p. 369, Bonc.), and then mentions consecutively a Porta Naevia, Porta Rauduscull, and Porta Lavernalis. He must therefore be enumerating the gates in the order from W. to E., since it would be impossible to find room for three more gates, besides those already mentioned, on the Aventine. The P. Naevia, therefore, probably lay in the valley between that hill and the adjoining height to the E. It could not have been situated on the Aventine itself, since the Basis Capitolina, mentions in the 12th Regio, or Piscina Publica, a vicus Porta Naevia, as well as another of Porta Rauduscull. But the exact position of the latter gate, as well as of the Porta Lavernalis, is impossible to determine further than that they lay in the line of wall between the Aventine and Caelian.

After so much uncertainty it is refreshing to arrive at last at a gate whose site may be accurately fixed. The Porta Capena lay at the foot of the Caelian hill, at a short distance W. of the spot where the Via Latina diverges to the right. The latter road issued from the P. Capena, and the discovery of the first milestone upon it, in a vineyard a short distance outside of the modern Porta di S. Sebastiano, has enabled the topographer accurately to determine its site to be at a spot now marked by a post with the letters F. C. 300 yards beyond the Via S. Gregorio, and 1480 within the modern gate. That it was seated in the valley, appears from the fact that the River Herculanum, probably a branch of the Anca Marcia, passed over it; which, we are expressly told, lay too low to supply the Caelian hill. (Front. Ag. 18.) Hence Juvenal (iii. 11):—

"Substituíst ad veteres arcus madidamque Capemani;"

where we learn from the Scholia that the gate, which in later times must have lain a good way within the town, was called "Arcus Stillans," so Martial (iii. 47):—

"Capena grandi porta qua Pruitt gutta."

A little way beyond this gate, on the Via Appia, between its point of separation from the Via Latina and the P. S. Substantia, there still exists one of the most interesting of the Roman monuments—the tomb of the Scipios, the site of which is marked by a solitary cypress.

From the Porta Capena the wall must have ascended the Caelian hill, and skirted its southern side; but the exact line which it described in its progress towards the agger can only be conjectured. Becker (Handb. p. 167), following Plate and Bunsen, draws the line near the Ospedale di S. Giovanni, thus excluding that part of the hill on which the Lateran is situated, although, as Canina observes (Indizizatione, p. 56), this is the highest part of the hill. There was perhaps a gate at the bottom of the present Piazza di Navicella, but we do not know its name; and the next gate respecting which there is any certainty is the Porta Caellimontana. Bunsen (Beachr. i. p. 638) and Becker, in conformity with their line of wall, place it by the hospital of S. Giovanni, now approached by the Via S. Quattro Coronati, the ancient street called Caput Africae. The Porta Querquetulana, if it was really a distinct gate and not another name for the Caellimontana, must have stood a little to the N. of the latter, near the church of S. Pietro e Marcellino, in the valley which separates the Caelian from the Esquiline. This gate, which was also called Querquetulana, is several times mentioned, but without any more exact definition. (Plin. xvi. 15; Festus, p. 261.) The Caelian hill itself, as we have before remarked, was anciently called Querquetulana. From this point the wall must have run northwards in a tolerably direct line till it joined the southern extremity of the agger, where the Porta Esquiline was situated, between which and the Querquetulana there does not appear to have been any other gate. The Esquiline, like the others on the agger, is among the most certain of the Roman gates. We learn from Strabo (v. p. 237) that the Via Labicana proceeded from it; whilst at a little distance the Praenestina branched off from the Labicana. It must therefore have lain near the church of S. Vito and the still existing arch of Gallienus; but its exact site is connected with the question respecting the gates in the Aurelian wall which corresponded with it, and cannot therefore at present be determined. The site of the Porta Collina, the point from which it was started, is determined by the fact mentioned by Strabo (Ib. p. 228) that both the Via Salaria and Via Nomentana started from it; and it must consequently have stood near the northern corner of the baths of Diocletian at the commencement of the present Via del Macao. We learn from Paulus Diacoerus (p. 10) that this gate was also called Agnensis and Quirinalis. Agnens, as we have said, was the ancient name of the Quirinal hill.

The Porta Collina, then, and the Porta Esquiline were seated at the northern and southern extremities of the Palatine.
of the agger. But besides these, Strabo (II. p. 234) mentions another lying between them, the Porta Viminalis; which is also recorded by Festus (p. 376) and by Frontinus (Ag. 19). It must have lain behind the SE. angle of the baths of Diocletian, where an ancient road leads to the rampart, which, if prolonged, would pass to the Porta Claudia of the walls of Aurelian, just under the southern side of the Castra Praetoria. It is clear from the words of Strabo, in the passage just cited (πόδα μένων διὰ τὸ χωματί τριτῆ εἰσι πόλεως δύοιμαν το Οἰκισμάτων λαβον), that there were only three gates in the agger, though some topographers have contrived to find room for two or three more in this short space, the whole length of the agger being but 6 or 7 stadia (Strab. I. c.; Dioneys. x. 68), or about 2/3 of a mile. Its breadth was 50 feet, and below it lay a ditch 100 feet broad and 30 feet deep. Remains of this immense work are still visible near the bath of Diocletian and in the grounds of the Villa Negroni, especially at the spot where the statue of Rome now stands.

Survey under Vespasian and Circumference of the City. — In the preceding account of the gates in the Servian wall we have enumerated twenty, including the Porta Triumphalis. Some topographers have adopted a greater number. If we consider that there were only nine or ten main roads leading out of ancient Rome, and that seven of these issued from the three gates Capena, Esquiline, and Collina alone, it follows that five or six gates would have sufficed for the main entrances, and that the remainder must have been unimportant ones, destined solely to afford the means of convenient communication with the surrounding country. Of those enumerated only the Collina, Viminalis, Esquiline, Caelimontana, Capena, Trigiliana, Carmentalis, and Latumena seem to have been of any great importance. Nevertheless it appears from a passage in Pliny (iii. 9) that in his time there must have been a great number of smaller ones, the origin and use of which we shall endeavour to account for presently. As the passage, though unfortunately somewhat obscure, is of considerable importance in Roman topography, we shall here quote it at length: "Urbem tres portas habentem familiis relinquit, aut (ut plurimus tradentur) et sevens; quorum ejus ellegens ambitus Imperatoris Censoriorumque Vespasiani anno conditae dcccxxvil. pass. xiii.ccc. Complex monetae septem, ipsa dividitur in regiones quatuordecim, compita Larim cccc. Eijusdem spatium, mensura currente a millario in capite Romanii fori statuto, ad singulas portas, quae sunt hodie numero triginta septem, id ut duodecim semel numeretur, praeter capturcem ex veteribus septem, quae in deserrmin, efficit passum per circunviam xxx.ccc. cccc. Ad extrema vero tractum cum castra Praetoris ad caedem milliario per vias omnium viarum mensura collictus paulo amplius septuaginta millia passuum." Now there seems to be no reason for doubting the correctness of this account. Pliny could have had no reason for exaggeration against, which in the account of the Romanian gates, he carefully guards himself. Again, he seems to have taken the substance of it from the official report of a regular survey made in his own time and in the reign of Vespasian. The only room for suspicion therefore seems to be that his text may have been corrupted, and that instead of thirty-seven as the number of the gates we should insert some smaller one. But an examination of his figures does not tend to show that they are incorrect. The survey seems to have been made with a view to the three following objects: 1. To ascertain the actual circumference of the city, including all the suburbs which had spread beyond the walls of Servius. It is well known that on the map the limits of the city as well as the walls ("murum moenia amplius est; Flor. i. 4, iv.), and therefore this phrase, which has sometimes caused embarrassment, need not detain us. Now the result of this first measurement gave 13,200 passus, or 131 Roman miles—a number to which there is nothing to object, as it very well agrees with the circumference of the subsequent Aurelian walls. 2. The second object seems to have been to ascertain the actual measure of the line of street within the old Servian walls. The utility of this proceeding we do not immediately recognise. It may have been adopted out of mere curiosity; or more probably it may have been connected with questions respecting certain privileges, or certain taxes, which varied according as a house was situated within or without the walls. Now the sum of the measurements of all these streets, when put together as if they had formed a straight line ("per directum"), amounted to 30,765 passus, or 30 Roman miles. 3. Such we take to be the meaning of "per directum," the terms are used to hold it to mean that the distance from the millarium to these gates was measured in a straight line, as the crow flies, without taking into the calculation the windings of the streets. But in that case it would surely have been put earlier in the sentence "mensura currente per directum ad singulas portas." This, however, would have been of little consequence except for the distinction drawn by Becker (Handb. p. 185, note 279), who thinks that the measurement proceeds on two different principles, namely per directum, or as the crow flies, from the millarium to the Servian gates, and, on the contrary, by all the windings of the streets from the same spot to the furthest buildings outside the walls. Such a method, as he observes, would afford no true ground of comparison, and therefore we can hardly think that it was adopted, or that such was Pliny's meaning. Becker was led to this conclusion because he thought that "per vias omnium viarum" stands contrasted with "per directum;" but this contrast does not seem necessarily to follow. By view here Pliny seems to mean all the roads leading out of the thirty-seven gates; and by "ad extrema tectorum per vias omnium viarum" is signified merely that the measure was further extended to the end of the streets which lined the commencements of these roads. Such appears to us to be the meaning of this certainly somewhat obscure passage. Pliny's account may be checked, roughly indeed, but still with a sufficient approach to accuracy to guarantee the correctness of his text. If a circumference of 131 miles yielded 70 miles of street, and if there were 30 miles of street within the Servian walls, then the circumference of the latter would be to the former as 3 to 7, and would measure rather more than 5 miles. Now this agrees pretty well with the accounts which we have of the size of the Servian city. Becker, following the account of Timmycles (ii. 13), but without allowing for that part of the walls of Aurelian described as unmarked, with the whole circuit of which walls Dionysius (iv. 13, and ix. 68) compares those of ancient Rome, sets the latter down at 43 stadia, or 53 miles. On Nolfi's great plan of Rome they are given at a meas-
Respecting the gates called **Ferentina** and **Piacul- laris** we have before offered a conjecture. [See p. 728.] The **Porta Metia** tests solely on a false reading of Phantus. (Cos. ii. 6. 2. Pseud. i. 3. 57.) On the other hand, a **Porta Catulania** seems to have really existed, which is mentioned by Paulus Dia- conus (p. 45.) in connection with certain sacrifices of red-coloured dogs. This must be the sacrifice alluded to by Ovid (Fast. iv. 905), in which the entrails of a dog were offered by the flamen in the Lucus Robinus.

It is also mentioned in the Fasti Praenestini, vii. Kal. Mai, which date agrees with Ovid's: "Fe- riae Rubigo Via Claudia, ad miliumarum v., ne ro- bigo formentis nocet." But this is at variance first, with Ovid, who was returning to Rome by the Via Nomentana, not the Via Claudia, and secondly, with itself, since the Via Clodia did not branch off from the Via Flaminia till the 10th milestone, and, consequently, no sacrifice could be performed on it at a distance of 5 miles from Rome. However this discrepancy is to be reconciled, it can hardly be supposed that one of the Roman gates derived its name from a trifling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to sacerdotal customs, as seems to have been sometimes the case, and in the present instance to denote the gate leading to the spot where the annual rite was performed. Paulus Diaconus also mentions (p. 37) a **Porta Collatina**, which he affirms to have been so called after the city of Collatia, near Rome. But when we reflect that both the Via Tiburtina and the Via Praenestina issued from the Porta Esquilina, and that a road to Collatia must have run between them, the impossibility of a substantive Porta Collatina is at once apparent. The **Duodecim Portae** are placed by Bunsen (Beechr. p. 638) in the wall of the Circus Maximus; but as it appears from Pliny (L. c.) that they stood on the ancient line of wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not see the force of Pliny's celebrated discovery that the Duodecim Portae must have been a place at Rome, because Julius Osequinus says that a mile brought forth three; which it might very well have done at one of the gates. Becker's opinion (Handb. p. 180) that it was an arch, or arches, of the Aqua Appia seems as unsounded as that of Bunsen (vide Preller, Regiones, p. 193). It is mentioned by the Notitia in the 11th Regio, and therefore probably stood somewhere near the Aventine; but its exact site cannot be determined. It seems probable, as Preller remarks, that it may have derived its name from being a complex of twelve arched thoroughfares like the **Epheätzisi** of the Pelasgicun at Athens.

**Transtiberine Wall.** — Ancus Marcus, as we have related, fortified the **Janiculum**, or hill on the right bank of the Tiber commanding the city. Some have concluded from Livy (i. 33): "Janiculum quoque adjectum, non inopia locorum, sed ne quando ea arx hostium esset. Il in non murum solum, sed etiam ob commoditatem his, praepe Sublilio tum primum in Tiberi facto conjuncti urbi".

---

*Note: The text is a portion of a longer passage discussing the history and geography of ancient Rome, focusing on the city's gates and urban planning.*
II. WALLS AND GATES OF AURELIAN AND HONORIUS.

In the repairs of the wall by Honorinus all the gates of Aurelian vanished; hence it is impossible to say with confidence that any part of Aurelian's wall remains; and we must consider it as represented by that of Honorius. Procopius (B. G. ii. 24) asserts that Tota destroyed all the gates; but this is disproved by the inscriptions still existing over the Porta S. Lorenzo, as well as over the closed arch of the Porta Maggiore; and till the time of Pope Urban VIII. the same inscription might be read over the Ostensionis (P. S. Paolo) and the ancient Portuenses. It can hardly be imagined that these inscriptions should have been preserved over restored gates. The only notice respecting any of the gates of Aurelian on which we can confidently rely is the account given by Ammianus Marcellinus (xxvii. 4 § 14) of the carrying of the Egyptian obelisk, which Constantinus II. erected in the Circus Maximus, through the Porta Ostensionis. It may be assumed, however, that their situation was not altered in the new works of Honorius. By far the greater part of these gates exist at the present day, though some of them are now walled up, and in most cases the ancient name has been changed for a modern one. Hence the problem is not so much to discover the sites of the ancient gates as the ancient names of those still existing; and these do not admit of much doubt, with the exception of the gates on the eastern side of the city.

Procopius, the principal authority respecting the gates in the Aurelian (or Honorian) wall, enumerates 14 principal ones, or πορεία, and mentions some smaller ones by the name of μπελτεία (B. G. i. 19). The distinction, however, between these two appellations is not very clear. To judge from their present appearance, it was not determined by the size of the gates; and we find the Pinciana indifferently called πορεία and μπελτεία. (Urliech, Class. Max. vol. iii. p. 196.) The conjecture of Nibby (Maro, &c. p. 317) may perhaps be correct, that the μπελτεία were probably those which led to the great highways. The unknown writer called the Anonymous Einsiedelensis, who flourished about the beginning of the ninth century, also mentions 14 gates, and includes the Pinciana among them; but his account is not clear.

Unlike Tota, Aurelian did not consider the Tiber a sufficient protection; and his walls were extended along its banks from places opposite to the spots where the walls which he built from the Janiculum began on the further shore. The wall which skirted the Campus Martius is considered to have commenced not far from the Palazzo Farnese, from remains of walls on the right bank, supposed to have belonged to those of the Janiculum; but all traces of walls on the left bank have vanished beneath the buildings which extended from the Tiber to the Tiberina. It appears that the walls on the right and left banks were connected by means of a bridge on the site of the present Ponte Sisto — which thus contributed to form part of the defences; since the arches being secured by means of chains drawn before them, or by other contrivances, would prevent an enemy from passing through them in boats into the interior of the city: and it is in this manner that Procopius describes Belisarius as warding off the attacks of the Goths (B. G. i. 19).

From this point, along the whole extent of the Campus Martius, and as far as the Porta Flaminia, the walls appear, with the exception of some small posterns mentioned by the Anonymous of Einsiedeln to have had only one gate, which is repeatedly mentioned by Procopius under the name of Porta Aurelia (B. G. i. 19, 22, 28); though he seems to have been acquainted with its later name of Porta S. Petri, by which it is called by the Anonymous (ib. iii. 36). It stood on the left bank, opposite to the entrance of the Pons Aelius (Ponte di S. Angelo), leading to the mausoleum of Hadrian. The name of Aurelia is found only in Procopius, and is somewhat puzzling, since there was another gate of the same name in the Janiculum, spanning the Via Aurelia, which, however, is called by Procopius (ib. i. 18) by its modern name of Pancratiana; whilst on the other hand the Anonymous appears strangely enough to know it only by its ancient appellation of Aurelia. The gate by the bridge, of which we trace no remains, may possibly have derived its name from a Nova Via Aurelia (Grauter, Inscr. cccvii. 6), which passed through it; but there is a sort of mystery hanging over it which is not easy to clear up. (Becker, Handb. p. 196, and note.)

The next gate, proceeding northwards, was the Porta Flaminia, which stood a little to the east of the present Porta del Popolo, erected by Pope Pius IV. in 1561. The ancient gate probably stood on the declivity of the Pincianum (in χώρα κομοδίας, Procop. B. G. i. 23), as the Goths did not attack it from its being difficult of access. Yet Anastasius (Vit. Gregor. II.) describes it as exposed to inundations of the Tiber; whence Nibby (Maro, &c. p. 304) conjectures that its site was altered between the time of Procopius and Anastasius, that is, between the sixth and ninth centuries. Nay, in a great inundation which happened towards the end of the eighth century, in the pontificate of Adrian I., the gate was carried away by the flood, which bore it as far as the arch of M. Aurelius, then called Tres Fasciculata, and situated in the Via Flaminia, where the street called della Vite now runs into the Corso. (ib.) The gate appears to have retained its ancient name of Flaminia as late as the 15th century, as appears from a life of Martin V. in Muratori (Script. Ital. t. iii. pt. ii. col.

for

from 3

Maggiore, 

we

does not mention from what gate the road to Tibur 

was issued in his time. Niebuhr has otherwise followed 

Fabbetti and Paile in assuming that the later or 

originally proceeded from the Porta Viminallis, which, 

as we have seen, stood in the middle of the agger of 

Servius, and that it passed through the walls of 

Aurelian by means of a gate now blocked up, but 

still extant, just at the angle where those walls join on 

to the Castra Praetoria.

Assuming this to have been the original Tiburtina, 

Niebuhr (followed by MNI Bumon and Urlich) considers the Porta Porta Praeneste to have been the 

Praenestina, and the Porta Maggiore to have been the 

Labicana; but that when the gate adjoining the Praetorian camp was blocked up, the road to 

Tivoli was transferred to the Porta S. Lorenzo, and that to Praeneste to the gate next in order, which 

thus acquired the name of Praenestina instead of its 

former one of Labicana (Beschreibung, p. 657, seq). 

To this suggestion there appear to be two principal objections brought forward by M. Becker, neither of 

which M. Urlich has answered the former, supposing 

the Via Tiburtina to have been so transferred, which 

taken alone might be probable enough, there is 

no apparent reason why the Via Praenestina should 

have been also shifted, instead of the two 

together forming an entire and unbroken road from 

the Via Labicana, certainly seems to imply that that road in his time 

separated from the Praenestina immediately after 

leaving the Esquiline gate; but there is no improbability in the suggestion of M. Becker, that its 

course was altered at the time of the construction of 

the new walls, whether under Aurelian or Honorius, 

doctrine of the principal roads may have taken place 

at that time, of which we have no account, and on 

which it is impossible to speculate. Westphal, in his 

Römische Campagne (p. 78), has adopted nearly 

the same view of the case: but he considers the Via 

Labicana to have originally had a gate assigned to 

it, which was afterwards walled up, and the road 

carried out of the same gate with the Via Praene 

stina. The only real difficulty in the ordinary view 

of the subject, supported by M. Becker, appears to
be that, if the Via Tiburtina always issued from the Porta S. Lorenzo, we have no road to assign to the now closed gate adjoining the Praetorian camp, nor yet to the Porta Viniminalis of the Servian walls, a circumstance certainly remarkable, as it seems unlikely that such an opening should have been made in the agger without absolute necessity. On the other hand, the absence of all mention of that gate prior to the time of Maro would lead one to suspect that it was not one in the principal outlets of the city; and a passage from Ovid, quoted by M. Becker, certainly affords some presumption that the road from Tilur, in ancient times, actually entered the city by the Porta Esquillina (Fast. v. 684). This is, in fact, the most important, perhaps the only important, point of the question; for if the change in the names had already taken place as early as the time of Procopius, which Niebuhr himself seems disposed to acknowledge, it is hardly worth while to inquire whether the gates had borne the same appellations during the short interval from Honorius to Justinian" (Class. Min. vol. iii. p. 369, seq.).

The Porta Tiburtina (S. Lorenzo) is built near an arch of the Aquae Marcia, Tepola, and Julia, which here flow over one another in three different canals. The arch of the gate corresponds with that of the aqueduct, but the latter is encumbered with rubbish, and therefore appears very low, whilst the gate is built on the rubbish itself. As the inscriptions on it appeared on several of the other gates, we shall here insert it: S.P.Q.R. Imp. D.D. NV. invictissimae principibus Arcadio et Honorio victoribus et triumphatoribus semper Augg. ob instauratos urbis eternae novos portas ac torres egressa immensis rudibus ex suggestione V.C. et industriis comites et magistrorum urbsique militiae Fl. Stilichonis ad perpetuam nominis eorum simulacra constituit curante Fl. Macroboio Longiniano V.C. Praef. Urb. D. N. M. Q. eorum. In like manner the magnificent double arch of the Aqua Claudia and Anio Nurus, which flows over it, was converted into the Porta Praenestina (Maggiore). The right arch, from the city side, is walled up, and concealed on the outside by the Honorian wall.

Just beyond the gate is the curious tomb of EURYSACES, the baker, sculptured with the instruments of his trade, which was brought to light in 1836, by the pulling down of a tower which had been built over it in the middle ages. Over the closed Honorian arch was the same inscription as over the Porta Tiburtina. On the aquedoct are three inscriptions, which name Claudius as its builder, and Vespasian and Titus as its restorers. The gate had several names in the middle ages.

Hence the wall follows for some distance the line of Porta Claudia till it reaches its easternmost point; when, turning to the S. and W., and embracing the curve of what is commonly called the Amphitheatrum Castrense, it reaches the ancient PORTA ASINARIA, now replaced by the Porta di S. Giovanni, built a little to the E. of it in 1574, by Pope Gregory XIII. It derived its name from spanning the Via Asinaria (Festus, p. 282, Mill.), and is frequently mentioned by Procopius. (B. G. i. 14, iii. 29, &c.) In the middle ages it was called Lateranensis from the neighbouring palace of the Lateran.

After this gate we find another mentioned, which has entirely vanished. The earliest notice of it appears in an epistle of Gregory the Great (ix. 69), by whom it, is called PORTA METRONIS; whilst by Martinus Polonus it is styled Porta Metroni or Metroniti, and by the Anonymous, Metronia. (Nibby, Muru, &c. p. 365.) It was probably at or near the point where the Murrana (Aqua Crabra) now flows into the town. (Nibby, &c.; Piale, Porte Metr. p. 11.)

The two next gates were the PORTA LATINA and PORTA APPIA, standing over the roads of those names, which, as we have before said, diverged from one another at a little distance outside the Porta Capena, for which, therefore, these gates were substitutes. The Porta Latina is now walled up, and the road to Tusculum (Frascatti) leads out of the Porta S. Giovanni. The Porta Appia, which still retained its name during the middle ages, but is now called Porta di S. Sebastiano, from the church situated outside of it, is one of the most considerable of the gates, from the height of its towers, though the arch is not of fine proportions. Nibby considers it to be posterior to the Gothic War, and, of Byzantine architecture, from the Greek inscriptions and the Greek cross on the key-stone of the arch. (Mura, &c. p. 370.) A little within it stands the so-called arch of Drusus.

A little farther in the line of wall to the W. stands an arched gate of brick, ornamented with half columns, and having a heavy architrave. The Via Ardeatina (Fest. p. 282, Mill.) proceeded through it, which issued from the Porta Raudesculana of the Servian walls. (Nibby, p. 201, seq.) We do not find this gate named in any author, and it was probably walled up at a very early period. The last gate on this side is the PORTA OSTENSIS, now called Porta di S. Paolo, from the celebrated basilica about a mile outside of it, now in course of reconstruction in the most splendid manner. The ancient name is mentioned by Ammianus Marcellinus (xviii. 4), but that of S. Pauli appears as early as the sixth century. (Procop. B. G. iii. 36.) It had two arches, of which the second, though walled up, is still visible from the side of the town, though hidden from without by a tower built before it. Close to it is the pyramid, or tomb, of Cecinius, one of the few monuments of the Republic. It is built into the wall. From this point the walls ran to the river, including Monte Testaccio, and then northwards along its
banks, till they reached the point opposite to the walls of the Janiculum. Of this last portion only a very small portion is now visible.

On the other side of the Tiber only a few traces of the ancient wall remain, which extended lower down the stream than the modern one. Not far from the river lay the Porta Portuensis, which Urban VIII. destroyed in order to build the present Porta Portese. This gate, like the Ostiense and Prænestina, had two arches, and the same inscription as that over the Tiburtina. From this point the wall proceeded to the height of the Janiculum, where stood the Porta Aurelia, so named after the Via Aurelia (vetus) which issued from it. We have already mentioned that its modern name (Porta di S. Pancrazio) was in use as early as the time of Procopius; yet the ancient one is found in the Anonymous of Einsiedlen, and even in the Liber de Mirabilibus. The walls then again descended in a N.E. direction to the river, to the point opposite to that whence we commenced this description, or between the Parnese Palace and Porta Sisifo. It is singular that we do not find any gate mentioned in this portion of wall, and we can hardly conceive that there should have been no exit towards the Vatican. Yet neither Procopius (B. G. i. 19, 23) nor the writers of the middle ages recognise any. We find, indeed, a Transiberine gate mentioned by Satrianius (Socr. 19) as built by Septimius Severus, and named after him (Septimiana); but it is plain that this could not have been, originally at least, a city gate, as there were no walls at this part in the time of Severus. Becker conjectures (de Muris, p. 129), Handb. p. 214) that it was an archway belonging to some building erected by Severus, and that it was subsequently built into the wall by Aurelius or Honorius; of the probability of which conjecture, seeing that it is never once mentioned by any author, the reader must judge.

III. THE CAPITOL.

In attempting to describe this prominent feature in the topography of Rome, we are arrested on the threshold by a dispute respecting it which has long prevailed and still continues to prevail, and upon which, before proceeding any further, it will be necessary to declare our opinion. We have before described the Capitoline hill as presenting three natural divisions, namely, two summits, one at its N.E. and the other at its S.W. extremity, with a depression between them, thus forming what is commonly called a saddle-back hill. Now the point in dispute is, which of these summits was the Capitol, and which the Ara? The unfortunate ambiguity with which these terms are used by the ancient writers, will, it is to be feared, prevent the possibility of ever arriving at any complete and satisfactory solution of the question. Hence the conflicting opinions which have prevailed upon the subject, and which have given rise to two different schools of topographers, generally characterised at present as the German and the Italian school. There is, indeed, a third class of writers, who hold that both the Capitol and Arx occupied the same, or SW. summit; but this evidently absurd theory has now so few adherents that it will not be necessary to examine it. The most conspicuous scholars of the German school are Niebuhr, and his followers Bunsen, Becker, Preller, and others; and these hold that the temple of Jupiter Capitolinus was seated on the SW. summit of the hill. The Italian view, which is directly contrary to this, was first brought into vogue by Nardini in the last century, and has since been held by most Italian scholars and topographers. It is not, however, so exclusively Italian as is generally supposed, for it has been adopted by some distinguished German scholars, among whom may be named Gattling, and Braun, the present accomplished Secretary of the Archaeological Institute at Rome.

Every attempt to determine this question must now rest almost exclusively on the interpretation of passages in ancient authors relating to the Capitoline hill, and the inferences to be drawn from them; and the decision must depend on the preponderance of probability on a comparison of these inferences.

Hence the great importance of attending to a strict interpretation of the expressions used by the classical writers will be at once apparent; and we shall therefore preface the following inquiry by laying down a few general rules to guide our researches.

Preller, who, in an able paper published in Schneide-<A1>rusin's Philologus, vol. i., has taken a very moderate and candid view of the question, consoles himself and those who with him hold the German side, by remarking that no passage can be produced from an ancient and trustworthy writer in which Capitolium is used as the name of the whole hill. But if the question turns on this point — and to a great extent it certainly does — such passages may be readily produced. To begin with Varro, who was both an ancient and a trustworthy writer. In a passage where he is expressly describing the hills of Rome, and which will therefore admit neither of misapprehension nor dispute, Varro says: "Septimio nomeate ab aetate montibus, quos poenae muris comprehendi. E quo Capitolium dictum, quod hic, quem fundamenta fedenitar aedes Jovis, caput humanum dicitur inventum. Hic mons ante Tarpeius dictus," &c. (L. L. v. § 41, Mill.) Here Capitolium can signify nothing but the Capitoline hill, just as Palatium in § 53 signifies the Palatine.

In like manner Tacitus, in his description of the Roman plebeian pomerium before cited; "Pomumum Romanum et Capitolium non a Romulo sed a Tito Tatio additus urbi credideri" (Ann. xii. 24), where it would be absurd to restrict the meaning of Capitolium to the Capitol properly so called, for Tatius dwelt on the Arx. So Livy in his narrative of the exploit of Horatius Cocles: "Si transitum a tergo reliquissem, jam postea in Palatium Capitolique, quam in Ianiculo, fore" (i. 10), where its union with Palatium shows that the hill is meant; and the same historian, in describing Romulus consecrating the spolia opima to Jupiter Feretrius a couple of centuries before the Capitoline temple was founded, says, "in Capitolium esscedit" (i. 10). The Greek writers use το ταπαλανοι in the same manner: Ἡμις καὶ το ταπαλανοι ταξιν — Τάτιος δι το ταπαλανοι. (Dionys. ii. 60.) Hence we deduce as a first general rule that the term Capitolium is sometimes used of the whole hill, but cannot in every case be so interpreted.
to signify the whole hill, they are nevertheless frequently employed in a stricter sense to denote respectively one of its summits, or rather, the temple of Jupiter Capitolinus and the opposite summit; and in this manner they are often found mentioned as two separate localities opposed to one another: "De arce capta Capitolique occupato — mittii veniam." (Liv. iii. 18.) "Est autem etiam aedes Veiovis Romae inter arcem et Capitolium." (Gell. N. A. v. 12.) On this point also it would be easy to multiply examples, if it were necessary.

The preceding passages, which have been purposely selected from prose writers, suffice to show how loosely the terms Arx and Capitolium were employed; and if we were to investigate the language of the poets, we should find the question still further embarrassed by the introduction of the ancient names of the hill, such as Mons Tarpeius, Rupes Tarpeia,
In this interpretation of the narrative some things are omitted which are necessary to the proper understanding of it, and others are inserted which are by no means to be found there. Dionysius does not say that Herodion landed at the spot where the Capitol lies, and where the hill is only a stade from the river, but that he landed at that part of Rome where the Capitoline hill is, at the distance of not quite a stade from the river. Secondly, Becker assumes that φροινος is the Capitol, or, as he calls it, by begging the whole question, "the western height." But his greatest misrepresentation arises from omitting to state that Dionysius, as his text stands, describes the Carmental gate as left open in public view, which guarded the approach to the Capitoline hill, of course on its E. side, or towards the forum, where alone it was accessible. Thus Solinus: "Isthm (Herculis comites) et montem Capitolium Saturnium nominatum, Castelli quoque, quod excubatur, pertam Saturnium appellaverant, quae postmodum Pandana vocitata est" (i. 13). We also learn from Festus, who mentions the same castrum, or fort, that it was situated in the lower part of the Clivus Capitolinum. The Saturni quoque dicentur, qui castrum in imo clivo Capitolinum incellerat (p. 322, Mill.). This, then, was the φροινος first captured by Herodion, and not, as Becker supposes, the Capitol; and hence, as that writer says, he pressed on to the western height, which, however, was not the Capitol but the Arx. When Dionysius says of the latter that it adjoined, or was connected with, the Capitolium, this was intended for his Greek readers, who would otherwise have supposed, from the fashion of their own cities, that the Arx or Acropolis formed quite a separate hill.

The story of Herodion, then, instead of being "alone decisive," and which Becker (Warung, pp. 43, 44) called upon Braun and Preller to explain, before they ventured to say a word more on the subject, proves absolutely nothing at all; and we pass on to the next, that of Postius Cominius and the Gauls. "The messenger climbs the rocks at the spot nearest the river, by the Porta Carmentalis, where the Gauls, who had observed his footsteps, afterwards make the same attempt. It is from this spot that Manlius casts them down" (p. 399). This is a fair representation of the matter; but the question remains, when the messenger had climbed the rock was he in the Capitol or in the Arx? The passages quoted as decisive in favour of the former are the following: "Inde (Cominius) qua proximum fuit a ripa, per praecipitum ecce neglectum hostium custodiae saxum in Capitolium evenit." (Liv. v. 46.) "Galii, seu vestigio notato humano, seu sua sponte animadverso ad Carmentis saxorum adscensum sequendum — in summum evasere " (ib. 47). Now, it is plain, that in the former of these passages Livy means the Capitoline hill, and not the Capitol strictly so called; since, in regard to a small space, like the Capitol Proper, it would be a useless and absurd distinction, if it lay, and was known to lie, next the river, to say that Cominius mounted it "where it
was nearest to the river. "Concilium in Capitolium ex icti" is here equivalent to "Romulis in Capitolium ascendit," in a passage before cited. (Liv. i. 10.) Hence, to mark the spot more precisely, the historian inserts "ad Carmentis" in the following chapter. There is nothing in the other authorities cited in Becker's note (no. 750) which yields a conclusion either one way or the other. We might, with far superior justice, quote the following passage of Cicero, which we have alluded to on another occasion, to prove that the attempt of the Gauls was on the "Arx" or citadel: "Atque ut sua munite Arx circumjecta arduo et quasi circumoeide saxo nitentur, ut etiam in ilia tempestate horribili Gallici adventus incolumis atque intacta permanerit" (De Rep. ii. 6).

But, though we hold that the attempt was really on the Arx, we are nevertheless of opinion that Cicero here uses the word only in its general sense, and thus as applicable to the whole hill, just as Livy uses Capitolium in the preceding passage. Hence, Mercatoriall (vol. iv. p. 430) and M. F. Preller (l.c.) have justly regarded this narrative as affording no evidence at all, although they are adherents of the German theory. We may further observe, that the house of Manlius was on the Arx; and though this circumstance, taken by itself, presents nothing decisive, yet, in the case of so sudden a surprise, it adds probability to the view that the Arx was on the southern summit.

We now proceed to the next illustration, which is drawn from the account given by Tacitus of the attack of the Vitellians on the Capitol. Becker's interpretation of this passage is so full of errors, that we must follow him sentence by sentence, giving, first of all, the original description of Tacitus. It runs as follows: "Cito agmine forum et imminentia fere templo praecertacere erat aciem per adversam collum usque ad prumas Capitolinae arcis fores. Erant antiquitus porticus in lateri clivi, dextrae subeuntibus; in quorum tectum egessi saxis tegnrisque Vitellianos obvixerant. Neque illius murus nisi gladius armata et arma super fores, sed missa ita longum videbatur. Faces in prominentem porticum jeere et circumdactur ignis; ambituque Capitolii fores penetratus, ni Salius revabus undique statutus, decora majorum in ipso aditus vicini objecisset. Tum diversos Capitolii aditus invasit, iusta lucem asyl. et qua Tarpeia rupes centum gradibus aditus. Improvisa uraque vis: propri atque accur. per asylum ingrediebat. Nec satis potarum scandescentes peri conuncta acediae, quae, ut in multis, in altum clita solum Capitolii æquabat. Hic magnum ignem tectis oppugnatorum inferens, aut obsecat, quae cerebro fama est, quae nitentes ac progressus depulerent. Inde lausps ignis in porticus oppositas aedibus: mox sustinentes fastigium aqualis veterem lignum tranxiturn flammam alerunturque. Sic Capitolium clausis foribus indefessum et indeprensum confagrat."

"The attack," says Becker, "is directed solely against the Capitol; that is, the height containing the temple, which latter is the object on the occasion (p. 390). This is so far from being the case, that the words of Tacitus would rather show that the attack was directed against the Arx. The temple is represented as having been shut up, and another attacked nor defended: "clausis foribus, indefessum et indeprensum confagrat." Such a state of things is inconceivable, if, as Becker says, the attack was directed solely against the Capitol. That part of the hill was evidently deserted, and left to its fate; the besieged had concentrated themselves upon the Arx, which thus became the point of attack. By that unfortunate ambiguity in the use of the word Capitolium, which we have before pointed out, we find Tacitus representing the gates of the Capitolium as having been burnt ("ambustas que Capitolii fores") which, if Capitolium meant the same thing in the last sentence, would be a direct contradiction, as the gates are there represented as having been burnt. In the first passage he means the gates of the fortification which enclosed the whole summit of the hill; and in the second passage he means the gates of the temple. The meaning of Tacitus is also evident in another manner; for if the Vitellians were attacking the temple itself, and burning its gates, they must have already gained a footing on the height, and would consequently have had no occasion to seek access by other routes — by the steps of the Rupes Tarpeia, and by the Lupus Asylus. Becker proceeds: "Tacitus calls this (i.e. the height with the temple), indifferently Capitolina Arx and Capitolium." This is quite a mistake. The Arx Capitolina may possibly mean the whole summit of the hill; but if it is to be restricted to one of the two eminences, it means the Arx proper rather than the Capitol. "The attacking party, it appears, first made a lodgment on the Chivus Capitolins. Here the portico on the right points distinctly to the SW. height. Had the portico been to the right of a person ascending in the contrary direction, it would have been separated from the besieged by the street, who could not therefore have defended themselves from its roof." If we thought that this argument had any value we might adopt it as our own: for we also believe that the attack was directed against the SW. height, but with this difference, that the Arx was on this height, and not the Capitol. But, in fact, there was only one principal ascent or cirrus, — that leading towards the western height; and the only thing worth remarking in Becker's observations is that he should have thought there might be another Chivus Capitolinus leading in the opposite direction. We may remark, by the way, that the portico here mentioned was probably that erected by the great-grandson of Cn. Scipio. (Vell. Pat. ii. 3.) "As the attack is here fruitless, the Vitellians abandon it, and make another attempt at two different approaches ("diversos aditus"); at the Lupus Asylus, that is, on the side where at present the broad steps lead from the Palazzo de' Conservatori to Monte Caprino, and again where the Centum Gradus led to the Rupes Tarpeia. Whether these Centum Gradus are to be placed by the church of St. Maria della Consolazione, or more westward, it is not necessary to determine here, since that they led to the Caffarelli height is undisputed. On the side of the asylum (Palazzo de' Conservatori) the danger was more pressing. Where the steps now lead to Monte Caprino, and on the whole side of the hill, were houses, which were exposed to its summit. These were set on fire, and the flames then caught the adjoining portico, and lastly the temple."

Our chief objection to this account is, its impossibility. If the Lupus Asylus corresponded to the steps of the present Palazzo de' Conservatori, which is seated in the depression between the two summits, or present Piazza del Campidoglio, then the besiegers must have forced the passage of the Chivus Capitolins, whereas Tacitus expressly says that they were repulsed. Being repulsed they must have retreated.
not however so mutilated but that the sense is plain—"Nihilurant furustum locum [cum altera parte] Capitolii conjungi" (p. 343), where Miller remarks, "non multum ab Ursini suplemento discedere libuit."

Becker then proceeds to argue that the temple of Juno Moneta was built on the site of the house of M. Marius Capitolinus, which was on the Arx (Liv. v. 47; Prist. Cam. 36; Dion Cass. Fr. 31, &c.;) and we learn from Ovid (Fast. i. 637) that there were steps leading from the temple of Concord, to that of Juno Moneta. Now as the former temple was situated under the height of Arauceli, near the arch of Severus, this determines the question of the site of Juno Moneta and the Arx. Ovid's words are as follows:—

"Candida, te niveo point lux proxima temple
Qua fert sublimines alta Moneta gradus;
Nunc bene propheticorum Latium, Concordia, tur-
num," &c.

This is very obscure; but we do not see how it can be inferred from this passage that there were steps leading from one temple to the other. We should rather take it to mean that the temple of Concord was placed close to that of Moneta, which latter was approached by a flight of lofty steps. Nor do we think it very difficult to point out what these steps were. The temple of Juno was on the Arx; that is, according to our view, on the SW. summit; and the lofty steps were no other than the Centum Gradus for ascending the Rupes Tarpeia, as described by Tacitus in the passage we have just been discussing. Had there been another flight of steps leading up to the top of the Capitoline hill, the Vitellians would certainly have preferred them to clambering over the tops of houses. But it will be objected that according to this view the temple of Concord is placed upon the Arx, for which there is no authority, instead of on the forum or circus, for which there is authority. Now this is exactly the point at which we wish to arrive. There were several temples of Concord, but only two of any renow, namely, that dedicated by Furius Camillus, B. C. 367, and that dedicated by Sulla after his German triumph, which is the one of which Ovid speaks; and another dedicated by the consul Opinius after the sedition and death of Gracchus. Appian says that the latter temple was in the forum; η δὲ βωλή καὶ νέον Οπινίου στόχον εν ἀγορᾷ προσ-
έταξαν εὐγέμοιν (B.C. 1. 26). But in ordinary lan-
guage the circus formed part of the forum; and it would be impossible to point out any place in the forum, strictly so called, which it could have occupied. It is undoubtedly the same temple alluded to by Varro in the following passage:—"Saneumul super
Graccestasia ubi aediis Concordiae et basilica Opinius"
(LL. L. v. p. 156, Mill.); from which we may infer that Opinius built at the same time a basilica, which adjoined the temple. Becker (Handb. p. 309) denied the existence of this basilica; but by the time he published his Warum he had grown wiser, and quoted in the Appendix (p. 58) the fol-
lowing passage from Cicero (p. Stat. 67):—"L. Op-
nius eunus monumentum celebrissimum in foro, se-
pulum desertissimum in litoro Dyrracchino est relictum;" maintaining, however, that this passage related to Opinius' temple of Concord. But Urichs (Rom. Top. p. 26), after pointing out that the epithet celeberissimum, "very much frequented," suited better with a basilica than with a temple, produced
two ancient inscriptions from Marini's Alti de Fratelli Arcelli (p. 212); in which a basilica Oppinia is recorded, and Becker, in his Antwor (p. 33), confessing that he had overlooked these inscriptions, retracted his doubts, and acknowledged the existence of a basilica. According to Varro, then, the Aedes Concordiae and basilica of Oppinia were close to the semicircular; and the illustration of the semicircular was perhaps by Fortuns between the Capitol and forum: "Unum (Seminaculum) ubi nunc est aedio Concordiae, inter Capitolium et Forum" (p. 347, Mill.). This description corresponds exactly with the site where the present remains of a temple of Con- cord have unanimously agreed to exist: remains, however, which are supposed to be those of the temple founded by Camillus, and not of that founded by Oppinia. According to this supposition there must have been two temples of Concord on the forum. But if these remains belong to that of Camillus, who shall point out those of the temple erected by Oppinia? Where was its site? What its history? When was it demolished, and its place either left vacant or occupied by another building? Appian, as we have seen, expressly says that the temple built by Oppinia was in the forum; where is the evidence that the temple of Camillus was also in the forum? There is positively none. Plutarch, the only direct evidence as to its site, says no such thing, but only that it looked down upon the forum: "σπουδαστα- της μιν Ομώς ιερόν, οποιερ θάτο ο Κάμιλλος, εις την άγαθον και εις της έκκλησεως ιππον επι των γεγενεσίων ιερουσαμι" (Camill. 42). Now αγαθόν means to view from a distance, and especially from a height. It is equivalent to the Latin prospicere, the very term used by Ovid in describing the same temple:—

"Xane bene prospice Latiam, Concordia, turbam.

"These expressions, then, like Ovid's allusion to the "somptibus gravis" of Moneta, point to the Arx as the site of the temple. It is remarkable that Lucan (Pharr. i. 195) employs the same word when describing the temple of Jupiter Tumans, erected by Augustus, also situated upon the Arx, or Tepae Tarpeia:

"—— O magna qui moenia prospicis urbis Tarpeia de rupe Toman.

"This temple indeed, has also been placed on the clivus, on the authority of the pseudo-Victor, and against the express evidence of the best authorities. Thus an inscription in Gruter (Lxi. No. 5), consisting of some lines addressed to Fortuns, likewise places the Jupiter Tumans on the Tarpeian rock:—

"Tu quae Tarpeia coloris vicina Tonanti

Votorum vindex semper Fortunam orcurm," etc.

Suetonius (Aug. c. 29 and 91), Pliny (xxvi. 6) and the Mon. Anwem, place it "in Capitolio," meaning the Capitoline hill. It has been absurdly imagined that it was on the clivus, because Dion says that those who were going up to the great temple of Jupiter met with it first, —"∈τεταμένοι οι άποπτες ενεκτάλων ευθεία-χάλων (liv. 4), which they doubt would do, since the ends are lost to the western height.

On these grounds, then, we are inclined to believe that the temple of Concord erected by Camillus stood on the Arx, and could not, therefore, have had any steps leading to the temple of Juno Moneta. The latter was likewise founded by Camillus, as we learn from Livy and Ovid:—

"Arce quaeque in summa Junemi templ(a) Monetae

Ex veto memorant facta, Camille, tuo;

"Ate domus Manili fuerunt" (Fast. vi. 183),

and thus these two great works of the dictator stood, as was natural, close together, just as the temple of Concord and the basilica subsequently erected by Oppinia also adjoined one another on or near the clivus. It is no objection to this view that there were another small temple on the Arx, which had been vowed by the praetor Manlius in Gaul during a session of the soldiers. The vow had been almost overlooked, but after a lapse of two years it was re-collected, and the temple erected in discharge of it. (Liv. xxii. 53.) It seems, therefore, to have been a small affair, and might very well have coexisted on the Arx with another and more splendid temple.

But to return to Becker's arguments. The next proof adduced is Caligula's bridge. "Caligula," he says, as Bunsen has remarked, "caused a bridge to be thrown from the Palatine hill over the temple of Augustus (and probably the Basilica Julia) to the Capitoline temple, which is altogether inconceivable if the latter was on the height of Araceli, as in that case the bridge must have been conducted over the forum" (p. 393). But here Becker goes further than his author, who merely says that Caligula threw a bridge from the Palatine hill to the Capitoline:—"The Palatine by its height, therefore, was the Palatium Capitoliumque conjunctum" (Suett. Col. 22). Becker correctly renders Palatium by the "Palatine hill," but when he comes to the other hill he converts it into a temple. Suetonius offers a parallel case of the use of these words in a passage to which we had occasion to allude just now, respecting the temple of Jupiter Tumans: —"Templum Apollinis in Palatino (extraxit), needit Tonantis Jovis in Capitoli" (Aug. 29); where, if Becker's view was right, we might by analogy translate,—"he erected a temple of Apollo in the palace.

The next proof is that a large piece of rock fell down from the Capitol ("ex Capitulis") into the Vicus Jugarius (Liv. xxxv. 21); and as the Vicus Jugarius ran under the S. summit, this shows that the Capitoline temple was upon it. But pieces of rock fall down from hills, not from buildings, and, therefore, Capitolium here only means the hill. In like manner when Livy says (xxxvii. 28), "substructionem super Aequinumium in Capitoli," it is plain that he must mean the hill; and consequently this passage is another proof of this use of the word. The Aequinumium was in or by the Vicus Jugarius, and could not, therefore, have been on the Capitol properly so called, even if the latter had been on the S.W. height. Becker wrongly translates this passage,—"a subtraction of the Capitol over the Aequinumium" (p. 393). Then comes the passage respecting the statue of Jupiter being turned towards the east, that it might behold the forum and curia; which Becker maintains is impossible—"a statue erected on the height of Araceli." Those who have seen the ground will not be inclined to coincide in this opinion. The statue stood on a column (Dion Cass. xxxvii. 9; Cic. Dei. i. 12; cf. Id. Cat. iii. 8), and most probably in front of the temple —it could hardly have been placed behind it; and therefore, if the temple was on the S. height, the statue must have been at the extremity of it; a site which certainly would not afford a very good view of the forum. Next the direction
of the Clivus Capitolinus is added, which ran to the Western height, and must have led directly to the temple, whence it derived its name. But this is a complete begging of the question, and the clivus more probably derived its name from the hill. If the direction of the clivus, however, proves anything at all—and we are not disposed to lay much stress upon it—it rather proves the reverse of Becker's case. The clivus was a continuation of the Sacra Via, by which, as we shall have occasion to show when treating of that road, the augurs descended from the Arx after taking the auguries, and by which they carried up their new year's offerings to king Tatius, who lived upon the Arx; and hence In its literal language the clivus itself was called Sacra Via. (Varro, L.L. v. § 47, Mill.; Festus, p. 290, id.). Lastly, "the confined height of Aracelli would not have afforded sufficient room for the spacious temple of Jupiter, the Area Capitolina, where meetings of the people were held, and at the same time be able to display so many other temples and monuments." There is some degree of truth in this observation, so far at least as the Area Capitolina is concerned. But when we come to describe the temple properly, the quantities with which is necessary to the complete understanding of the present question, though Becker has chosen to omit it, "as lying out of the plan of his book" (p. 396), we shall endeavour to show how this objection may be obviated. Meanwhile, having now discussed all Becker's arguments in favour of the SW, summit as the site of the Capitoline temple, it will be more convenient shortly to review the whole question, and to adduce some reasons which have led us to a directly contrary conclusion. In doing this we do not presume to think, with Becker, that we have "completely decided" the question. It is one, indeed, that will not admit of complete demonstration; but we venture to hope that the balance of probability may be shown to predominate very considerably in favour of the NE. height.

The greater part of Becker's arguments, as we trust that we have shown, prove nothing at all, while the remainder, or those which prove something, are based against him. We must claim as our own the proof drawn from the storm of the Capitol by the Vitellians, as described by Tacitus, as well as that derived from Mons Tarpeius being the name of the SW. height, and that from the westerly direction of the Clivus Capitolinus. Another argument in favour of the NE. height may be drawn from Livy's account of the trial of Manlius Capitolinus, to which we have already adverted when treating of the Forta Flumentana [supra, p. 721], and need not here repeat. To these we shall add a few more drawn from probability.

Tatius dwelt on the Arx, where the temple of Juno Moneta afterwards stood. (Plut. Rom. 29; Solinus, l. 21.) "This," says Becker (p. 358), "is the height of Aracelli, and always retained its name of Arx after the Capitol was built, since certain sacred customs were attached to the place and apellation." He is here alluding to the Arx being the auguraculum of which Festus says: "Auguraculum appellant antiqui quam in orce suisse arbitrabantur" (p. 18, where Müller observes; "non tam æcrum quam in orce suisse arbitratur auguraculum"). The templum, then, marked out from the Arx, from which the city auspices were taken, was defined by a peculiar and appropriate form of words, which is given by Varro, (L.L. vii. § 8, Mill.) It was bounded on the left hand and on the right by a distant tree; the tract between was the templum or teacum (country region) in which the omens were observed. The augur who inaugurated Numa led him to the Arx, seated him on a stone, with his face turned towards the South, and sat down on his left hand, capite velato, and with his litus. Then, looking forwards over the city and country—"prospectu in urben agrumque capto"—he marked out the temple from east to west, and determined in his mind the sign (signum) to be observed as far as ever his eyes could reach: "quo longissime conspectum oculi ferebant." (Liv. i. 18; cf. Cic. de Off. iii. 16.) The great extent of the prospect required may be inferred from an anecdot related by Valerius Maximus (vii. 2, § 1.), where the augurs are represented as ordering Claudius Centunamus to lower his lofty dwelling on the Caelian, because it interfered with their view from the Arx,—a passage, by the way, which shows that the auguries were taken from the Arx till at all events a late period of the Republic. Now, supposing with Becker, that the Arx was on the NE. summit, that sort of project would the augurs have had? It is evident that a large portion of their view would have been intercepted by the huge temple of Jupiter Capitolinus. The SW. summit is the only portion of the hill which, in the words of Livy, would afford a noble prospect, "in urben agrumque." It was doubtless this point to which the augur conducted Numa, and which remained ever afterwards the place appointed for taking the auguries. Freiler is of opinion that Augustus removed them to a place called the Augustorium on the Palatine. (Philologus, i. p. 92.) But the situation laid down for that building scarcely answers to our ideas of a place adapted for taking the auguries, and it seems more probable that it was merely a place of assembly for the college of augurs.

Another argument that has been added in favour of the SW. summit being the Arx, is drawn from its proximity to the river, and from its rocky and precipitous nature, which made it proper for a citadel. But on this we are not inclined to lay any great stress. Other arguments in favour of the Italian view may be drawn from the nature of the temple itself; but in order to understand them it will first be necessary to give a description of the building. The most complete account of the Temple of Jovis Capitolini is that given by Dionysius (iv. 61), from which we learn that it stood upon a high basis or platform, 8 plethra, or 800 Greek feet square, which is nearly the same in English measure. This would give about 200 feet for each side of the temple, for the length exceeded the breadth only by about 15 feet. These are the dimensions of the original construction; and when it was burnt down a generation before the time of Dionysius,—that is, as we learn from Tacitus (Hist. iii. 72), in the consobrinship of L. Scipio and Norbanus (n. c. 83),—it was rebuilt upon the same foundation. The materials employed in the second construction were, however, of a much richer description than those of the first. The front of the temple, which faced the south, had a portico consisting of three rows of columns, whilst on the thanks it had only two rows: and as the back front is not said to have had any portico, we may conclude that there was nothing on this side but a plain wall. The interior contained three cells
parallel to one another with common walls, the central one being that of Jove, on each side those of Juno and Minerva. In Livy, however (vi. 4), Juno is represented as being in the same cella with Jupiter. But though the temple had three cells, it had but one *fistulaeum*, or pediment, and a single roof.

**TEMPLE OF JUPITER CAPITOLINUS.**

From a Coin of Vespasion.

Now the first thing that strikes us on reading this description is, that the front being so ornamented, and the back so very plain, the temple must have stood in a situation where the former was very conspicuous, whilst the latter was but little seen. Such a situation is afforded only by the NE. summit of the Capitol. On this site the front of the temple, being turned to the south, would not only be visible from the forum, but would also present its best aspect to those who had ascended the Capitoline hill; whilst on the other hand, had it stood on the SW. summit, the front would not have been visible from the forum, and what is still worse, the temple would have presented only its rude and unadorned back to those who approached it by the usual and most important ascent, the Clivus Capitolinus. Such a state of things, in violation of all the rules which commonly regulate the disposition of public buildings, is scarcely to be imagined.

We will now revert to Becker's objection respecting the *Aera Capitolina*. It must be admitted that the dimensions of the temple would have allowed but little room for this area on the height of Aenacid, especially as this must have contained other small temples and monuments, such as that of Jupiter Feretrius, &c. Yet the Capitol area, we know, was often the scene not only of public meetings but even of combats. There are very striking indications that this area was not confined to the height on which the temple stood, but that it occupied part at least of the extensive surface of lower ground lying between the two summits. One indication of this is the great height of the steps leading up to the vestibule of the temple, as shown by the story related by Livy of Aemilius, the ambassador of the Latins, who being refused by Manlius and the fathers for his insolence, rushed blindly from the vestibule, and falling down the steps, was either killed or rendered insensible (xvi. 4). That there was a difference in the level of the Capitol may be seen from the account given by Paterculus of Sibipio Nasica's address to the people in the sacelion of the Gracchi. Standing apparently on the same lofty steps,—*ex superi rec parte Capitolinis summum gradum insistens* (ii. 3).—Nasica invited by his words the senators and knights to attack Grassus, who was standing in the area below, with a large crowd of his adherents, and who was killed in attempting to escape down the Clivus Capitolinus. The area must have been of considerable size to hold the *catuerae* of Gracchus; and the same fact is shown by several other passages in the classics (Liv. xxv. 3, xiv. 36, &c.). Now all these circumstances suit much better with a temple on the NE. summit than with one on the opposite height. An area in front of the latter, besides being out of the way for public meetings, would not have afforded sufficient space for them; nor would it have presented the lofty steps before described, nor the ready means of escape down the clivus. Then, these, are the reasons why we deem the NE. summit the more probable site of the Capitoline temple.

We have already mentioned that this famous temple was at least planned by the elder Tarquin; and according to some authors the foundation was completely laid by him (Dionys. iv. 59), and the building continued under Servius (Tac. Hist. iii. 72). However this may be, it is certain that it was not finished till the time of Tarquinius Superbus, who tasked the people to work at it (Liv. i. 56); but the tyrant was expelled before it could be dedicated, which honour was reserved for M. Horatius Pulvillus, one of the first two consuls of the Republic (Polyb. iii. 22; Liv. ii. 8; Plut. Popul. 14). When the foundations were first laid it was necessary to exaugurate the temples of other deities which stood upon the site destined for it; on which occasion Terminus and Juventas, who had altars there, alone refused to move, and it became necessary to enclose their shrines within the temple; a happy emblem for the future greatness of the city! (Liv. v. 94; Dionys. iii. 69.) It is a well-known legend that its name of Capitolium was derived from the finding of a human head in digging the foundation (Varr. L. L. v. § 41, Mill.; Plin. xxvii. 4, &c.) The image of the god, originally of clay, was made by Tarquin of Fregellae, and represented him in a sitting posture. The face was painted with vermilion, and the statue was probably clothed in a tunic palmata and toga picta, as the costume was borrowed by triumphant generals. On the aeratorium of the pediment stood a quadriga of earthenware, whose portentous swelling in the furnace was also regarded as an omen of Rome's future greatness (Plin. xxvii. 4; Plut. Popul. 13). The brothers C. & Q. Ogulnius subsequently placed a bronze quadriga with a statue of Jupiter on the roof; but this probably did not supersede that of clay, to which so much ominous importance was attached. The same aediles also presented a bronze threshold, and consecrated some silver plate in Jupiter's cella (Liv. x. 23; cf. Plaut. Trin. i. 2. 46.) By degrees the temple grew exceedingly rich. Camillus dedicated three golden *paterae* out of the spoils taken from the Etruscans (Liv. vi. 4), and the dictator Cincinnatus placed in the temple a statue of Jupiter Imperator, which he had carried off from Praeneste (Id. vi. 29). At length the pediment and columns became so encumbr'd with shields, ensigns, and other offerings that the censors M. Fulvius Nobilior and M. Aemilius Lepidus were compelled to rid the temple of these superfluous ornaments (Id. xl. 51).
his own. (Plut. Popul. 15; Suet. Caes. 15; Dion Cass. xxvii. 44; Cic. Verr. iv. 31, &c.) On this occasion Sulla followed the Roman fashion of despoiling Greece of her works of art, and adorned the temple with columns taken from that of the Olympian Zeus at Athens. (Plut. xxxvi. 5.) After its destruction by the Vitellians, Vespasian restored it as soon as possible, but still on the original plan, the haruspices allowing no alteration except a slight increase of its height. (Tac. Hist. iv. 53; Suet. Vesp. 8; Dion Cass. lxvi. 10, &c.) The new building, however, stood but for a very short period. It was again destroyed soon after Vespasian’s death in a great fire which particularly desolated the 9th Region, and was rebuilt by Domitian with a splendour hitherto unequalled. (Suet. Dom. 15; Dion Cass. lxvi. 24.) Nothing further is accurately known of its history; but Domitian’s structure seems to have lasted till a very late period of the Empire.

The Area Capitolina, as we have already seen, was frequently used for meetings oricontiums; but besides these, regular comitia were frequently held upon it. (Liv. xxxv. 3, xxxiv. 53, xiii. 16, xiv. 36; Plut. Paul. Aem. 30; App. B. C. i. 15, &c.) Here stood the CURIA CALABRA, in which on the Calends the pontifices declared whether the Nones would fall on the fifth or the seventh day of the month. (Varr. L. L. vi. § 27, Miull.; Macrobr. Sat. i. 15.) Here also was a CASA ROMULI, of which there were two, the other being in the 10th Region on the Palatine; though Becker (Handschr. p. 401 and note) denies the existence of the former in face of the express testimony of Macrobius (l.c.) Seneca (Contra Hei. 9); Vitruvius (ii. 12); Martial (viii. 80); Conon (Narrat. 48), &c. (v. Preller in Schneidewin’s Philologiae, i. p. 83.) It seems to have been a little hut or cottage, thatched with straw, commemorative of the lowly and pastoral life of the founder of Rome. The area had also rostra, which were mentioned by Cicero (ad Brut. 3).

Besides these, there were several temples and escula on the NE. summit. Among them was the small temple of JUPITER FERETRIS, one of the most ancient in Rome, in which spolia opima were dedicated first by Romulus, then by Cossus, and lastly by Marcellus (Liv. i. 10; Plut. Marcell. 8; Dionys. ii. 34, &c.) The last writer, in whose time only the foundations remained, gives its dimensions at 10 feet by 5. It appears, however, to have been subsequently restored by Augustus. (Liv. iv. 20; Mom. Aegypt.) The temple of FIDES, which stood close to the great temple, was also very ancient, having been built by Numa, and afterwards restored by M. Aemilius Scarturus. (Liv. i. 21; Cic. N. D. ii. 23, Off. iii. 29, &c.) It was roomy enough for assemblies of the senate. (Val. Max. iii. 2. § 17; App. B. C. i. 16.) The two small temples of MENS and of VENUS ERYCINA stood close together, separated only by a trench. They had both been vowed after the battle at the Tarsimene lake and were consecrated two years afterwards by Q. Fabius Maximus and T. Ociusinus Crassus. (Liv. xxii. 10, xxiii. 51; Cic. N. D. ii. 23.) A temple of VENUS CAPITOLINA and VENUS VICTRIX are also mentioned, but it is not clear whether they were separate edifices. (Suet. Cal. 7, Gall. 18; Fast. Ami. VIII. Id. Oct.) We also hear of two temples of JUPITER (Liv. xxxv. 41), and a temple of Ops (xxxix. 22). It by no means follows, however, that all these temples were on the Capitol, properly so called, and some of them might have been on the other summit, Capitolium being used generally as the name of the hill. This seems to have been the case with the temple of FORTUNE, respecting which we have already cited an ancient inscription when discussing the site of the temples of Concord and Jupiter Tenens. It is perhaps the temple of Fortuna Primigenia mentioned by Plutarch (Fort. Rom. 10) as having been built by Servius on the Capitoline, and allowed to apparently by Clemens. (Protev. iv. 51, p. 15, Sylb.) The temple of HONOS AND VIRTUS, built by C. Marius, certainly could not have been on the northern eminence, since we learn from Festus (p. 34, Miull.) that he was compelled to build it low lest it should interfere with the prospect of the augurs, and he should thus be ordered to demolish it. Indeed Propertius (iv. 11. 43) mentions it as being on the Tarpeian rock, or southern summit:—

"Foodaque Tarpeio conopia tendere saxo
Jura dare et statuas inter et arma Mari."

Whence we discover another indication that the anagurumolium could not possibly have been on the NE. height; for in that case, with the huge temple of Jupiter before it, there would have been little cause to quarrel with this bagatelle erected by Marius. It must have stood on a lower point of the
hill than the altarumculum, and probably near its declivity. The building of it by Marius is testified by Vitruvius (iii. 2, 5), and from an inscription (Orelli, 543) it appears to have been erected out of the spoils of the Cimbri and Teutonic war. We learn from Cicero that this was the temple in which the first senatus consultum was made decreeing his recall. (Sext. 54, Planc. 32, de Div. i. 28.)

We have already had occasion to allude to the temple erected by Augustus to Jupiter Tonans. Like that of Fortune it must have stood on the SW. height and near the top of the ascent by the Clivus, as appears from the following story. Augustus dreamt that the Capitoline Jove appeared to him and complained that the new temple seduced away his worshippers; to which having answered that the Jupiter Tonans had been merely placed there as his janitor or porter, he caused some bells to be hung on the pediment of the latter temple in token of its janitorial character. (Suet. Aug. 91.) That the same emperor also erected a temple to Mars Ultor on the Capitol, besides that in his forum, seems very doubtful, and is testified only by Dom Cassius (v. 100). Domitian, to commemorate his preservation during the contest with the Vitellians, dedicated a sacellum to Jupiter Conservator, or the Preserver, in the Velabrum, on the site of the house of the Medus, or sacristan, in which he had taken refuge; and afterwards, when he had obtained the purple, a large temple to Jupiter Custos on the Capitol, in which he was represented in the bosom of the god. (Tac. B. ii. 74; Suet. Dom. 5.) We also hear of a temple of Beneficence (Eupodis) erected by M. Aurelius. (Dom. lxxi. 54.)

But one of the most important temples on the SW. summit or Arx was that of Juno Moneta, erected, as we have said, in pursuance of a vow made by Camillus on the spot where the house of M. Marlius Capitolinus had stood. (Liv. v. 28.) The name of Moneta, however, seems to have been conferred upon the goddess some time after the dedication of the temple, since it was occasioned by a voice heard from it after an earthquake, advising (monens) that expiation should be made with a pregnant sow. (Cic. de Div. i. 45.) The temple was erected in B. c. 344. The Roman mint was subsequently established in it. (Liv. vi. 20; cf. Suidas, Monêta.) It was rebuilt B. c. 173. (Liv. xiii. 7.) Near it, as we have before endeavoured to establish, must be placed the temple of Concord erected by Camillus and restored by Tibullus; as well as the other smaller temple to the same deity, of no great renown, dedicated during the Second Punic War, B. c. 217. (Liv. xxi. 36.)

Such were the principal temples which occupied the summit of the Capitol hill. But there were also other smaller temples, besides a multitude of statues, sacellae, monuments, and offerings. Among these was the temple of Vesta, which stood in the place called "inter duos lucos" between the Capitol and the Tiberian height. An ara Jovis Pictoris and aedes Venerei Calvæae must also be reckoned among them. (Ovid. F. v. 357; Lactant. l. 20.) Among the statues may be mentioned those of the Roman Kings in the temple of Fides (App. B. C. i. 16; Dion. xxi. 43), and on the hill the two colossal statues of Apollo and Jupiter. The former of these, which was 30 feet high, was brought by M. Lucullus from Apollonia in Pontus. The Jupiter was made of Sp. Carvus's out of the armour and helmets of the conquered enemies, and was of such a size that it could be seen from the temple of Jupiter Latarius on the Alban Mount. (Plin. xxxiv. 18.) It would be useless to run through the whole list of objects that might be made out. It will suffice to say that the area Capitolina was so crowded with the statues of illustrious men that Augustus was compelled to remove many of them into the Campus Martius. (Suet. Cal. 34.)

We know only of one profane building on the summit of the Capitol hill—the Tabularium, or record office. We cannot tell the exact site of the original one; but it could not have stood far from the Capitol temple, since it appears to have been burnt down together with the latter during the civil wars of Sulla. Polybius (iii. 26) mentions the earlier one, and its burning, alluded to by Cicero (N. D. iii. 30, pro Rabir. Perd. 3), seems to have been effected by a private hand, like that of the Capitol itself. (Tac. Hist. iii. 72.) When rebuilt by Q. Lutatius Catulus it occupied a large part of the eastern side of the depression between the two summits of the Capitol, behind the temple of Concord, and much of it still exists under the Palazzo Senatore. In the time of Poggio it was converted into a salt warehouse, but the inscription recording that it was built by Catulus, at his own expense (de suo) was still legible, though nearly eaten away by the saline moisture. (De Variet. Fort. lib. i. p. 8.) This inscription, which was extant in the time of Nardini, is also given by him (Rom. Ant. iii. p. 300) and by Gruter (clexx. 6; cf. Orelli, 31), with slight variations, and shows that the edifice, as rebuilt by Catulus, must have lasted till the latest period of the Empire. It is often called aerarium in Latin authors. (Liv. iii. 69 &c.)

**ARCH OF TABULARIUM.**

We shall now proceed to consider some of the most remarkable spots on the hill and its declivities. And first of the Asylum. Becker (Handb. p. 387) assumes that it occupied the whole depression between the two summits, and that this space, which by modern topographers has been called by the unclassical name of Intermonium, was called "inter duos lucos." But here his authorities do not bear him out. Whether the whole of this space formed the original asylum of Romulus, it is impossible to say; but it is quite certain that this was not the asylum of later times. It would appear from the description of Dionysius (v. 15) that in its original state (ἐν τῷ τάφῳ, τ. τ. λ.) the grove may have extended from one summit to the other; but it does not appear that it occupied the whole space. It was convenient for Becker to assume this, on account of his interpretation of the passage in Tacitus respecting the
assault of the Vitellians, where he makes them storm the SW. height from the grove of the asylum, which he places where the steps now lead up to the Palazzo de' Conservatori. But, first, it is impossible to suppose that in the time of Vitellius the whole of this large area was a grove. Such an account is inconsistent with the buildings which we know to have been erected on it, as the Tabularium, and also with the probable assumption which we have ventured to propose, that a considerable part of it was occupied by the Area Capitolina. But, secondly, the account of Tacitus, as we have already pointed out, is quite incompatible with Becker's view. The Vitellians, being repulsed near the summit of the Clivus, retreated downwards, and attempt two other ascents, one of which was by the Lucus Asyli. And this agrees with what we gather from Livy's description of the place: "Locum, qui nunc septum descendendibus inter duos lucos est, asylum aperit" (i. 8.) Whence we learn that the place called "inter duos lucos" contained the ancient asylum, the enclosure of which asylum was seen by those who descended the "inter duos lucos." Thirdly, the asylum must have been near the approach to it; and this, on Becker's own showing (Handl. p. 415), was under the NE. summit, namely, between the career and temple of Concord and behind the arch of Severus. This ascent has been erroneously called Clivus Asyli, as there was only one clivus on the Capitoline hill. But it is quite impossible that an ascent on this side of the hill could have led to a Lucus Asyli where the Palazzo de Conservatori now stands. It was near the asylum, as we have seen, that the fire broke out which destroyed the temple of Jupiter Capitolinus; and the latter, consequently, must have been on the NE. summit. With respect to the asylum, we need only further remark, that it contained a small temple, but to what deity it was dedicated nobody could tell (rapu eii tò tòu katojssunv,殴noe δι' δυα θεών ή δαμαίων οικίων πατρίς εἰπειν, Dionys. ii. 15); and he was therefore merely called the divinity of the asylum (Στύρα κοινάσσα, Plut. Rom. 9).

Another disputed point is the precise situation of the Rupes Tarpea, or that part of the summit whence criminals were hurled. The prevalent opinion among the older topographers was that it was either at that part of the hill which overhangs the Piazza Montanara, that is, at the extreme SW. point, or farther to the W., in a court in the Via de Tor de' Specchi, where a precipitous cliff, sufficiently high to cause death by a fall from it, bears at present the name of Rupae Tarpea. That this was the true Tarpeian rock is still the prevalent opinion, and has been adopted by Becker. But Dureau de la Malle (Mémoire sur la Roche Tarpeéenne, in the Méin. de l'Acad., 1819) has pointed out two passages in Dionysius which are totally incompatible with this site. In describing the execution of Cassius, that historian says that he was led to the precipice which overhangs the forum, and cast down from it in the view of all the people (τούτο το τέλος της δικης λαύσεως, ἀγγαντις οι τοις ακρα τον ἄκτον επ' τον υπερείκων της ἀγαφᾶς κρυμμον, ἀπάνων ὄρφων, ἢφανος κατά της πέτρας, viii. 78, cf. vii. 35, seq.). Now this could not have taken place on the side of the Tor de Specchi, which cannot be seen from the forum; and it is therefore assumed that the true Rupes Tarpea must have been on the E. side, above S. Maria della Consolazione. The arguments adduced by Becker to controvert this assumption are not very convincing. He objects that the hill is much less precipitous here than on the other side. But this
ibility that among a people like the Romans a public execution would take place at a public and conspicuous spot. The **Centum Gradias**, or Hundred Steps, were probably near it; but their exact situa-
tion it is impossible to point out. The other objects on the Clivus and slopes of the hill will be described in the next section.

**IV. THE FORUM AND ITS ENVIRONS.**

The forum, the great centre of Roman life and business, is so intimately connected with the Capitol that we are naturally led to treat of it next. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Velia begins to ascend, by the remains of the temple of Antoninus and Faustina. At the time of the battle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, however, have been neither a thick wood nor an absolute swamp, or the battle could not have taken place. After the alliance be-
tween the Sabines and Romans this spot formed a sort of neutral ground or common meeting-place, and was improved by cutting down the wood and filling up the swampy parts with earth. We must not, indeed, look for anything like a regular forum before the reign of Tarquinius Priscus; yet some of the principal lines which marked its subsequent ex-
tent had been traced before that period. On the E. and W. there are marked by the nature of the ground; on the S. by the ascent of the Velia, on the latter by the Capitoline hill. Its northern boundary was traced by the road called **Sacra Via**. It is only of late years, however, that these boundaries have been recognised. Among the earlier to-
ographers views equally erroneous and discordant

prevailed upon the subject; some of them extending the forum lengthways from the Capitoline hill to the summit of the Velia, where the arch of Titus now stands; whilst others, taking the space between the Capitoline and temple of Faustina to have been its breadth, drew its length in a southerly direction, so as to encroach upon the Velabrum. The latter theory was adopted by Nardini, and prevailed till very recently. \(\) **Piale (Del Foro Romano, Rome, 1818, 1832)** has the merit of having restored the correct general view of the forum, though his work is not always accurate in details. The proper limits of the forum were established by excavations made between the Capitol and Colosseum in 1827, and following years, when M. Fea saw opposite to the temple of Antoninus and Faustina, a piece of the pavement of the **Sacra Via**, similar to that which runs under the arch of Severus. (Bunsen, *Le For. Rom., expliqué*, p. 7.) A similar piece had been previously discovered during excavations made in the year 1742, before the church of *S. Adriano*, at the eastern corner of the **Via Bonella**, which Fea-
roni (Vestigie di Roma antica, p. 75) rightly con-
sidered to belong to the **Sacra Via**. A line pro-
longed through these two pieces towards the arch of

**Severus will therefore give the direction of the street, and the boundary of the forum on that side.**

The southern side was no less satisfactorily deter-
mimed by the excavations made in 1835, when the *Basilica Julia* was discovered; and in front of its
steps another paved street, enclosing the area of the forum, which was distinguishable by its being paved with sides of the ordinary tiles. This street continued eastwards, past the ruin of the three columns or temple of Castor, as was shown by a similar piece of street pavement having been discovered in front of them. From this spot it must have proceeded eastwards, past the church of S. Maria Liberatrice, till it met that portion of the Via Sacra Via which ran in a southerly direction opposite the temple of Faustina (S. Lorenzo in Miranda), and formed the eastern boundary of the forum. Hence, according to the opinion now generally received, the forum presented an oblong or rather trapezoidal figure, 671 English feet in length, by 202 at its greatest breadth under the Capitol, and 117 at its eastern extremity. (Bunsen, Les Forum de Rome, p. 15.)

Sacra Via.—The SACRA VIA was thus intimately connected with the forum; and as it was both one of the most ancient and one of the most important streets of Rome, it will demand a particular description. Its origin is lost in obscurity. According to some accounts it must have been already in existence when the battle before alluded to was fought, since it is said to have derived its name of the “Sacred Way” from the treaty concluded upon it between Romulus and Tatius. (Donnys, ii. 46; Festus, p. 290, Müller.) This, however, seems highly improbable; not only because the road could hardly have existed at so early a period, when the site of the forum itself was in so rude a state, but also because a public highway is not altogether the place in which we should expect a treaty of peace to be concluded. The name of the comitium has also been derived, perhaps with no greater probability, from the same event. It is more likely that the road took its origin at a rather later period, when the Sabine and Roman cities had become consolidated. Its name of SACRA VIA seems to have been derived from the sacred purposes for which it was used. Thus we learn

from Varro (L. L. § 47, Müller) that it began at the sacellum of the goddess Strenia, in the Carinæ; that it proceeded thence as far as the arx, or citadel on the Capitoline hill; and that certain sacred offerings, namely, the white sheep or lamb (ovis idulia), which was sacrificed every ides to Jove (Ovid, F. i. 56; Macrobius, S. i. 15; Paul. Diacon. p. 104, Müller), were borne along it monthly to the arx. It was also the road by which the augurs descended from the arx when, after taking the auguries, they proceeded to inaugurate anything in the city below. It likewise appears that Titus Tatius instituted the custom that on every new year’s day the augurs should bring him presents of verbenæ from the grove of Strenia, or Strenna, to his dwelling on the arx ("ab exortu poene urbis Martini Streniarum usus adiuvit, auctoritate regis Tatii, qui verbenas felicis arboris ex loco Streniarum anni novi auspiciæ primus acceptit," Symm. Epist. x. 35). This custom seems to have been retained in later times in that known as the augurium salutaris. (Cic. Leg. ii. 8; Tac. Ann. ii. 25; Lucian, Pseudol. 8.) Hence perhaps the appellation of "sacra;" though the

THE FORUM IN ITS PRESENT STATE.
whole extent of road was called Sacra Via only in sacerdotal language, between which and the common usage we have already had occasion to note a diversity when giving an account of the Servian gates. In common parlance only that portion of the road was called Sacra Via which formed the ascent of the Velia, from the forum to its summit ("Hujus Sacras Viae pars habe soli vulgo nota quae est a foro ensi, primum clivo." Varr. l. c.). Hence by the poets it is sometimes called "Sacer Clivus;" "Indo sacro veneranda petes Palatia clivo." (Mart. i. 70. 5); and—

"... quandoque trahet feroces Per sacer clivum, imerita decoros Fronde, Sicambros." (Her. Od. iv. 2. 34)

compared with—

"Intactus aut Britannus ut descendereat Sacra catenatus via." (Id. Epod. vii. 7.)

(Comp. Ambrosch, Studien und Andeut. p. 78, seq.) The origin of the vulgar opinion is explained by Festus in the following passage: "Haque nocte extensus quidem, ut vulgos opinatur, sacra appellanda est, a regia ad domum regis sacrificium constituit, sed eum ad regis domum vel ad Strisienas, et rursus a regia usque in arcem" (p. 290, Mull.). Whence it appears that only the part which lay between the Regia, or house of the pontifex maximus, and that of the rex sacrificulus, was commonly regarded, and probably for that very reason, as "sacra." This passage, however, though it shows plainly enough that there must have been a space between these two residences, has caused some embarrassment on account of a passage in Dion Cassius (liv. 29), in which it says that Augustus presented the house of the rex sacrificulus (τὸ βασιλεία τῶν ἱερῶν) to the Vestals because it adjoined their residence (ὕδατοιον ἅπατε). And as we know from Pliny (Ep. vii. 19) that the Vestals dwelt close to the temple, it seems impossible, if Dion is right, that there should have been an street lying between the two places mentioned. But the matter is plain enough; though Becker (de Muris, pp. 30—33, Handb. pp. 226—257) wastes several pages in most far-fetched reasonings in order to arrive at a conclusion which already lies before us in a reading of the text of Dion for which there is actually MS. authority. Augustus was chosen pontifex maximus (ἔρχεσθαι), not rex sacrificulus, as Dion himself says in this passage. But the two offices were perfectly distinct ("Regem sacrificium creavit. Id sacer- dotium pontifici subjecerat," Liv. ii. 2). Augustus would hardly make a present of a house which did not belong to him; and therefore in Dion we must read, with some MS., τὸ βασιλεία τῶν ἱερῶν, for ἱερῶν: Dion thus, in order perhaps to convey a lively notion of the office to his Greek readers, designating the Roman pontifex maximus as "king of the priests," instead of using the ordinary Greek term ἔρχεσθαι. The matter therefore lies thus. Varro says that in ordinary life only the clivus, or ascent from the forum to the Summa Sacra Via, obtained the name of Sacra Via. Festus repeats the same thing in a different manner; designating the space so called as lying between the Regia, or house of the pontifex maximus, and that of the rex sacrificulus. Whence it follows that the latter must have been on the Summa Sacra Via. It can scarcely be doubted that before the time of Augustus the Regia was the residence of the pontifex maximus. The building appears to have existed till a late period of the Empire. It is mentioned by the younger Pliny (Ep. iv. 11) and by Plutarch (Qu. R. 97, Rom. 18) as extant in their time, and also probably by Herodian (i. 14) in his description of the burning of the temple of Peace under Commodus. After the expulsion of the kings, the rex sacrificulus, who succeeded to their sacerdotal prerogatives, was probably presented with one of the royal residences, of which there were several in the neighbourhood of the Summa Sacra Via; that being the spot where Ancus Marcus, Tarquinius Priscus, and Tarquinius Superbus had dwelt. (Liv. i. 41; Solin. i. 23, 24; Phln. xxxiv. 13.) We cannot tell the exact direction in which the Sacra Via traversed the valley of the Colosseum and ascended to the arch of Titus, nor by what name this part of the road was commonly called in the language of the people; but it probably kept along the base of the Velia. At its highest point, or Summa Sacra Via, and perhaps on the site afterwards occupied by the temple of Venus and Rome, there seems to have been actually a market for the sale of fruit, and also probably of nick-tacks and toys. "Summa Sacra Via, ubi poma veneranda." (Varr. R. i. 2.) Hence Ovid (A. A. ii. 265.):—

"Rure suburbano poteris tibi dicere missa Ilia, vel in Sacra sinit licet emta Via."  

Whilst the nick-tacks are thus mentioned by Property (ii. 17. 11.):—

"Et modo parvois cani de flabella superbas Et manibus dura frigius habere pilae, Et cupit iratum tales me poscere eburnos Quaeque niten Sacra vilia dona Via."  

The direction of the Sacra Via is indicated by Horace's description of his stroll: "Iam forte Via Sacra," (C. S. i. 9.) He is going down it towards the forum, having probably come from the villa of Maecenas, on the Esquiline, where he is interrupted by the eternal bane whom he has pilloried. The direction of his walk is indicated by his navailing excuse that he is going to visit a sick friend over the Tiber (v. 17) and by the arrival at the temple of Vesta (v. 35). The Sacra Via having been thus quitted and the forum left on the right. The two extremities of the street, as commonly known, are indicated in the following passage of Cicero: "Hoc tamen miror, cur tu hunc poenitendum inrasce, qui longissinae a te absitut. Equidem, si quando ut fit, jactor in turba, non illum accuso, qui est in Summa Sacra Via, cum ego ad Fabium Fornicum impellor, sed erat qui in me ipsum incurrit atque incidit" (p. Planc. 7.) The Fornix Fabius, as it will be seen hereafter, stood at the eastern extremity of the forum; and Cicero has made the most of his illustration by taking the whole length of the street. Beyond this point, where it traversed the N. side of the forum, we are at a loss to tell what its vulgar appellation may have been; and if we venture to suggest that it may have been called "Janus," this is merely a conjecture from Horace (Epist. i. 1. 54), where "haec Janus summum ab imo" seems to suit better with a street — just as we should say, "all Lombard street" — than with two Jani, as is commonly interpreted, or than with a building containing several floors let out in counting houses. (Cf. Sat. ii. 3. 18.) This view is supported by the Scholia on the first of these passages, where it is said:
ROMA.

"Janus autem hic platea dicitur, ubi mercatores et senatores sortis causa convenire solent." In fact it was the Roman Chagte. The ascent from the forum to the summit of the Capitoline hill, where the Sacra Via terminated, was, we know, called Clivus Capitolinus. It only remains to notice Becker's dictum (de Muris, p. 23) that the name of this street should always be written Sacra Via, and not in reversed order Via Sacra. To the exceptions which he noted there himself, he adds some more in the Handbuch (p. 219, note), and another from Seneca (Contr. xxvii. p. 299, Bip.) in his Adlocutio; and Uricha (Röm. Topogr. p. 8) increases the list. On the whole, it would seem that though Sacra Via is the more usual expression, the other cannot be regarded as uncritical.

Vicus Jugarius—Of the name of the street which ran along the south side of the forum we are entirely ignorant; but from it issued two streets, which were among the most busy, and best known, in Rome. These were the Vicus Jugarius and Vicins Tuscus. We have before had occasion to mention that the former ran close under the Capitoline hill, from the forum to the Porta Capitanealis. It was thought to derive its name from an altar which stood in it to Juno Jaga, the presiding deity of wedlock. (Paul. Diaec. p. 104, Müller.) It does not appear to have contained any other sacred places in ancient times; but Augustus dedicated in it altars to Ceres and Ops Augusta. (Fast. Ausic. iv. 6d. Aug.) At the top of the street, where it entered the forum, was the fountain called Laurus Servilius, which obtained a sad notoriety during the prosecutions of Sulla, as it was here that some of the accusation-senators were exposed. (Cic. Rosc. Am. 32; Senec. Prov. 3.) M. Agrippa adorned it with the effigy of a hydra. (Pestas, p. 290, Müller.) Between the Vicus Jugarius and Capitoline hill, and close to the foot of the latter, lay the Aequinamodium (Liv. xxxviii. 28), said to have derived its name from occupying the site of the house of the demagogue, Sp. Maelius, which had been razed (Varr. L.L. v. 157, Müller; Liv. iv. 16). It served as a market-place, especially for the sale of lambs, which were in great request for sacrifices, and probably corresponded with the modern Via del Monte Torpeo. (Cic. Div. ii. 17.)

Vicus Tuscus.—In the imperial times the Vicins Jugarius was bounded at its eastern extremity by the Basilica Julia; and on the further side of this building, again, lay the Vicins Tuscus. According to some authorities this street was founded in B.C. 507, being assigned to such of the Etruscans in the vanquished host of Aruns as had fled to Rome, and felt a desire to settle there (Liv. iv. 15; Dioys. v. 36); but we have before related, on the authority of Varro and Tacitus, that it was founded in the reign of Romulus. These conflicting statements may, perhaps, be reconciled, by considering the later settlement as a kind of second or subsidiary one. However this may be, it is with the topographical facts that we are here more particularly concerned, about which Donysius communicates some interesting particulars. He describes the ground assigned to the Tuscan as a sort of hollow or gorge situated between the Palatine and Capitoline hills; and in length nearly 4 stadia, or half a Roman mile, from the forum to the Circus Maximus (v. 36). We must presume that this measurement included all the windings of the street; and even then it would seem rather exaggerated, as the whole NW. side of the Palatine hill does not exceed about 2 stadia. We must conclude that it was continued through the Velabrum to the circus. Its length as Canina observes (For. Rom. p. 1. p. 67) is a proof that the forum must have extended from NW. to SE., and not from NE. to SW.; as in the latter case, the space for the street, already too short, would have been considerably curtailed. This street, probably from the habits of its primitive colonists, became the abode of fishmongers, fruitiers, bird-fanciers, silk-mercers, and perfumiers, and enjoyed but an indifferent reputation ("Tusci turba impia vicis," Hor. Ep. ii. 3. 29.) It was here, however, that the best silks in Rome were to be procured ("Nec nisi prima velit de Tusco verica vicis," Mart. ii. 27. 11). In fact it seems to have been the great shopping street of Rome; and the Roman gentlemen, whose ladies, perhaps, sometimes induced them to spend more than what was agreeable there, vented their ill humour by abusing the tradesmen. According to the scholiast on the passage of Horace just cited, the street was also called Vicins Turarins. This appellation was doubtless derived from the frankincense and perfumes sold in it, whence the allusion in Horace (Ep. i. 1. 267):—

"Ne capsa correctus aperta
deferar in vicum vendentem tus et odorum.
Et piper, et qui-quadam chartis amicitar ineptia."

Being the road from the forum to the circus and Aventine, it was much used for festal processions. Thus it was the route of the Pompeii Circensius, which proceeded from the Capitol to the forum, and by the Vicus Tuscanus and Velabrum to the circus. (Dionys. vii. 72.) We have seen that the procession of the virgins passed through it from the temple of Apollo outside the Porta Carmentalis to that of Juno Regina on the Aventine. Yet notwithstanding these important and sacred uses, it is one of the charges brought by Cicero against Verres that he had caused it to be paved so villanously that he himself would not have ventured to ride over it (Verres. 28.) We see from this that: a statue of Vertumnus, the national Etruscan deity, stood at the end of the street next the forum. Becker (Handbuch, p. 308) places him at the other extremity near the Velabrum. But all the evidence runs the other way; and the lines of Propertius (iv. 2, 5), who puts the following words into the god's mouth, are alone sufficient to decide the matter (Clasa. Mar. vol. iv. p. 444):—

"Nec me tua juvant, nec templo laetor eterno Romanum satis est posse videor forum."

Comitium.—Having thus described the streets which either encircled the forum or afforded outlets from it, we will now proceed to treat of the forum itself, and the objects situated upon and around it, and endeavour to present the reader with a picture of it as it existed under the Kings, during the Republic, and under the Empire. But here, as in the case of the Capitol, we are arrested in the outset by a difficult investigation. We know that a part of the forum, called the comitium, was distinguished from the rest by being appropriated to more honourable uses; but what part of the forum it was has been the subject of much dispute. Some, like Canina, have considered it to be a space running parallel with the forum along its whole southern extent; whilst others, like Bunsen and Becker, have thought that it formed

3 to 4
a section of the area at its eastern extremity, about one-third of the whole forum. An argument advanced by Becker himself (Handb. p. 278) seems decisive against both these views, namely, that we never hear any building on the S. side of the forum spoken of as being on the comitium. Yet in spite of this just remark, he ends by adopting the theory of Bunsen, according to which the comitium began at or near the ruin of the three columns and extended to the eastern extremity of the forum: and thus both the temple of Vesta and the Regia must have stood very close to it. The two chief reasons which seem to have led him to this conclusion are, the situation of the rostra, and that of the Tribunal Praetoris. Respecting the former, we shall have occasion to speak further on. The argument drawn from the latter, which is by far the more important one, we shall examine at once. It proceeds as follows (Handb. p. 280): "The original Tribunal Praetoris was on the comitium (Liv. vi. 15, xxix. 16; Geil. xx. 1, 11, 47 (from the XII. Tables); Varro, L. L. v. 32. p. 154; Plaut. Pseud. iii. 6. 11; Macrobr. Sat. ii. 12), which, however, is also mentioned as being merely on the forum. (Liv. xi. 9, 44.) But the tribunal was the Puteal Libonis or Scutatorium, and this is expressly mentioned as being near the Forum Fabius, the Atrium Vestae, the rostra, and lastly the aedes Divi Julii (Porphyry, ad Hor. Ep. i. 19. 8: Schol. Crug. 16. Id. ad Sat. ii. 6. 35; Fest. p. 333; Schol. ad Pers. Sat. iv. 49); consequently the comitium also must have been close to all these objects."

We presume that Becker's meaning in this passage is, that the original tribunal was on the comitium, and that it was afterwards moved into the forum. It could hardly have been both on the comitium and forum, though Becker seems to hint at such a possibility, by saying that it is "also mentioned as being merely on the forum;" and indeed there seems to be no physical impossibility in the way, since it is evident that the tribunal at first was merely a movable chair ("dictator—stipatus ex multitudine, silla in comito posta, viatorum ad M. Manilium," which agrees instant ad tribunal venit, Liv. vi. 15). But if that was his meaning, the passages he cites in proof of it do not bear him out. In the first Livy merely says that a certain letter was carried through the forum to the tribunal of the praetor, the latter of course being on the comitium ("ane literae per forum ad tribunal praetorius latae," xxvii. 50). The other two passages cited contain nothing at all relative to the subject, nor can there be any doubt that in the early times of the Republic the comitium was the usual place on which the praetor took his seat. But that the tribunal was moved from the comitium to the forum is shown by the scholiasts on Horace whom Becker quotes. Thus Porphyry says: "Puteal autem Libonis sedes praetoris fuit prope Accum Fabianum, dictumque quod a Libone titi primum tribunal et subsidia locata sint." Primus here is not an adjective to be joined with tribunal—i.e., that the first or original tribunal was placed there by Libo; but an adverb—"first the tribunal was placed first there by Libo." The former version would be nonsense, because Libo's tribunal could not possibly have been the first. Besides the meaning is unanimously shown by the Schol. Crug.: "puteal Libonis; tribunal: Quod autem sit Libonis, haec summit, quod est primus tribunal in foro statuert." If the authority of these scholiasts is suspicious as to the fact of this removal, though there are no apparent grounds for suspicion, yet Becker at all events is not in a condition to invalidate their testimony. He has quoted them to prove the situation of the pontifex; and if they are good for that, they are also good to prove the removal of the tribunal. Yet with great inconsistency, he tacitly assumes that the tribunal had always stood in its original place, that is, on the comitium, and by the puteal, contrary to the express evidence that the latter was on the forum. ("Puteal locus erat in foro," Sch. Crug. ad Sat. ii. 6. 35.) Libo flourished about a century and a half before Christ. [See Dict. of Biogr. Vol. II. p. 729.] Now all the examples cited by Becker in which the tribunal is alluded to as being on the comitium, are previous to this date. The first two in note 457 might be passed over, as they relate not to the prae tor but to the dictator and consuls; nevertheless, they are both anterior to the time of Libo, the first belonging to the year n. c. 382 and the second to 204. The passage from Gellius "ad praetorem in comitium," being a quotation from the XII. Tables, is of course long prior to the same period. The passage in Varro (§ 155), which describes the name of comitium from the designation of comitium pontificum (coire) for the decision of suits, of course refers to the very origin of the place. A passage from Plautus can prove nothing, since he died nearly half a century before the change effected by Libo. The passage alluded to in Macrobius (ii. 12) must be in the quotation from the speech of C. Titius in favour of the Lex Faninia: "Ine ad comitium vadant, ne formam faciant; veniant in comitium tristes, &c." But the Lex Faninia was passed in n. c. 164 (Macrobius. ii. 13); or even if we push the passage a few years later, in n. c. 160, still before the probable date of Libo's alteration; who appears to have been tribune in n. c. 149. Thus the argument does not merely break down, but absolutely recoils against its inventor; for if, as the Scholia Crucianum inform us, Libo moved the tribunal from the comitium to the forum, and placed it near the puteal, then it is evident that this part of the area could not have been in use as a comintium during the century. The comitium, then, being neither on the south nor the east sides of the forum, we must try our fortune on the north and west, where it is to be hoped we shall be more successful. The only method which promises a satisfactory result is, to seek it with other objects with which we know it to have been connected. Now one of these is the Vulcanae. We learn from Festus that the comitium stood beneath the Vulcanae; "in Vulcanae, quod est supra Comitium" (p. 290, Mull.). In like manner Bo-rrius describes the Vulcanae as standing a little above the forum, using, of course, the latter word in a general sense for the whole area, including the comitium: "et tali usque egit eius epi. opus," &c. (Vitruv. v. 1. 7). But the Vulcanae was of much smaller area than the comitium, and we find in the connection Marullus ("tactum de caelo aedem in campo Vulcanae," Liv. xxiv. 10). That the Vulcanae was merely an open space is manifest from its appellation of area, and from the accounts we read of rain falling upon it (Liv. xxix. 46, xl. 19), of buildings being
Hence, we are led to suppose that the comitium occupied a considerable part of the N. side of the forum; but its exact limits, from the want of satisfactory evidence, we are unable to define. It must have been a slightly elevated place, since we hear of its having steps; and its form was probably curvilinear, as Pliny (xxiv. 12) speaks of the statues of Pythagoras and Alcibiades being at its horns ("in cornu Comitii"); unless this merely alludes to the angle it may have formed at the Curia. It has been sometimes erroneously regarded as having a roof; a mistake which seems to have arisen from a misinterpretation of a passage in Livy, in which that author says that in B. C. 208 the comitium was covered for the first time since Hannibal had been in Italy ("Ex anno primum, ex quo Hannibal in Italian venisset, comitium tectum esse, memoriae proditum est," xxvii. 36). Hence, it was thought, that from this time the comitium was covered with a permanent roof. But Pline (dei Foro Rom. p. 15, seq.) pointed out that in this manner there would be no sense in the words "for the first time since Hannibal was in Italy," which indicate a repeated covering. The whole context shows that the historian is alluding to a revived celebration of the Roman games, in the usual fashion; and that the covering is nothing more than the relia or canvas, which on such occasions was spread over the comitium, to shade the spectators who occupied it from the sun. That the comitium was an open place is evident from many circumstances. Thus, the prodigious rain, which so frequently falls in the narrative of Livy, is described as wetting it (Liv. xxxiv. 45; Jul. Obseq. c. 103), and troops are represented as marching over it. It was here, also, that the famous Ruminalis Arbor grew (Tac. Ann. xiii. 58), which seems to have been transplanted thither from the Palatine by some juggle of Attius Navius, the celebrated augur (Plin. xv. 20; ap. Bunsen, Les Forum de Rom. p. 45, seq.), though we can by no means accede to Bunsen's emendation of that passage.

The principal destination of the comitium was for holding the comitia curiata, and for hearing lawsuits ("Comitium ab eo quod colabant eo, comitiis curiatis, et litium causa," Vac. L. L. v. § 155, Mull.), and it must, therefore, have been capable of containing a considerable number of persons. The comitia centuriata, on the other hand, were held in the Campus Martius; and the tributa on the forum proper. The curiata were, however, sometimes held on the Capitol before the Curia Calabra. The comitium was also originally the proper place for contiones, or addresses delivered to the assembled people. All these customs caused it to be regarded as more honourable and important than the forum, which at first was nothing more than a mere market-place. Hence, we frequently find it spoken of as a more distinguished place than the forum, and seats upon it for viewing the games were assigned to persons of rank. Its distinction from the forum, as a place of honour for the magistrates, is clearly marked in the following passage of Livy, describing the alarm and confusion at Rome after the defeat at Trasimene: "Rome ad primum numinent clamor ejus cum ingenti terrore ac tumultu concursus in forum populi est factus. Matronae vagae per vias, quae repes clades adita, quae facta excercti esset, obvius praeceps, quae suis frequentis contiones modo turbab in comitium et curiam versus magistratus vocaret." &c. (xxii. 7). But when we
cupied by the magistrates it appears to have been open to the people. Thus, the senate being assembled in the curia to hear the ambassadors of those male prisoners at the battle of Cannae, the people are represented as filling the comitium: "ubi is finem fecit, extemplo ab ea turba, quae in comitio erat, clamor tellus est sublatus, manusque ad certam tendentes, &c." (ll. xxii. 60.) Being the place for the continuos of course had a suggestion, or or, from which speeches were delivered; but we shall have occasion to describe this and other objects on and around the comitium and forum when we arrive at them in their chronological order.

It was not till after the preceding account of the comitium had been committed to paper that the writer of it met with the essay on the comitium by Mommsen in the "Annali dell' Instituto" (vol. xvi.), to which reference has before been made. The writer was glad to perceive that his general view of the situation of the comitium had been anticipated, although he is unable to concur with Mommsen respecting some of the details, such as the situation of the Curia Hostilia, of the temple of Jutus, of the Forum Caesaris, and some other objects. In refuting Becker's views, Mommsen has used much the same arguments, though not in such detail, as those just adduced; but he has likewise thought it worth while to refute an argument from a passage in Herodian accidentally adduced by Becker in a note (p. 332). As some persons, however, may be disposed to attribute more weight to that argument than we do ourselves, we shall here quote Mommsen's refutation: "M. Mommsen probat alterum, quod Aqu. p. 332, n. 612, affirmat, argumentum desuntum ex narratione Herodiani, i. 9. Severum in somnio viisse Pertinacem eum vectum dixit "missus es in 'Roma' iemps odo; qui cum venisset, et tui hic vexillum et tui hic 'Anguis, qui dixit non deracinales praeter sensui et similia." Argum. eodem subisse Severo inique valet etiam missus est. Non intelligo cur verba iniqua -- et ceteris referantur ad tui hic vexillum neque ad tui hic Anguis, quod multo est similem. Nam ut optimum quid in foro inane videatur qui rerum Romanarum potius sint, etiam de comitio et tempore inepte haec dicentur; accedit quod, si ad tui hic Anguis ait non poterint, Severus ibi constitutum esse dixisset, neque in foro mediet. Nullis igitur idoneis argumentis toplihi Gennani comitium earn partem fore esse statuerunt quae Velius subjacebat." (p. 289).

So much for the negative side of the question; on the positive side Mommsen adduces (p. 299) an argument which had not occurred to the writer of the present article in proof of the position above indicated for the comitium. It is drawn from the Sacrum Clauacinae. That shrine, Mommsen argues, stood by the Tabernae Nova, that is, near the arch of Severus, as Becker has correctly shown (Handb. p. 321) from Liv. iii. 48; but he has done wrong in rejecting the result that may be drawn from the comparison of the two legends; first, that the comitium was so called because Romanus and Tatius met upon it after the battle (p. 273); second, that the Romans and Sabines cleansed themselves, after laying aside their arms, at the spot where the statue of Venus Cluacina afterwards stood (Plin. xv. 18. s. 36): whence it follows that the statue was on the comitium. A fresh confirmation, Mommsen continues, may be added to this discovery of the truth. For that the Tabernae were on the comitium, and not on the forum, as Becker supposes, is pretty clearly shown by Dionysius (την τε 'Αγοραν εν δακατοσω και ἐκκλησίαις, και τις διὰς ἑπιτελων πολιτικά πράξεις, ἐκκόσων ἐκδόμησες, ἐργαστηρίως τε καὶ τοὺς διὸς κόμων περιλαβόν. iii. 67).

We are not, however, disposed to lay any great stress on this argument. We think, as we have already said, that Varro's etymology of the comitium, from the political and legal business transacted there rendering it a place of great resort, is a much more probable one; since, as the forum itself did not exist at the time when Romanus and Tatius met after the battle, it is at least very unlikely that any spot should afterwards have been marked out upon it commemorative of that event. It is, nevertheless, highly probable that the statue of Cluacina stood on the comitium, but without any reference to these traditions. We do not, however, think that the tabernae occupied the comitium. By 'Agora Diony-
sius means the whole forum, as may be inferred from περιλαβόν.

The Forum under the Kings.---In the time of Romanus, then, we must picture the forum to ourselves as a bare, open space, having upon it only the altar of Saturn at about the middle of its western side, and the Vulcanal on its NW. side. Under Numa Pomphilus it received a few improve-

ments. Besides the little temple of Janus, which
did not stand far from the forum, but of which we had already had occasion to speak, when treating of the Porta Janualis in the first part of this article, Numa built near it his Regia, or palace, as well as the celebrated temple of Vesta. Both these objects stood very near together at the SE. extremity of the forum. The Aedes Vestae was a round building (Testus, p. 255; Plut. Num. 11), but no temple in the Roman sense of the word; since it had been purposely left uninaugurated, because, being the resort of the vestal virgins, it was not deemed right that the senate should be at liberty to meet in it (Serv. Aen. vii. 153). Its site may be inferred from

TEMPLE OF JANUS. (From a Coin.)

TEMPLE OF VESTA. (From a Coin.)
several passages in ancient authors. Thus we learn from Dionysius (ii. 66) that it was in the forum, and that the temple of the Dioscouri, whose site we shall point out further on, was subsequently built close to it (Id. vi. 13; Mart. i. 70. 2). It is also said to have been near the lake, or fountain, of Juturna. (Val. Max. i. 8. 1; Ov. F. i. 707.) All these circumstances indicate its site to have been near the present church of St. Maria Liberatrice; where, indeed, the graves of twelve mortal virgins, with inscriptions, were discovered in the 16th century. (Aldrovandi, Memorie, n. 3; Lucio Fanno, Antich. di Roma, p. 206.) In all its subsequent restorations the original round form was retained, as symbolical of the earth, which Vesta represented (Ov. F. vi. 265). The temple itself did not immediately abut upon the forum, but lay somewhat back towards the Palatine; whilst the Regia, which lay in front, and a little to the E. of it, marked the boundary of the forum on that side. The latter, also called Atrium Vestae, and Atrium Regium, though but a small building, was originally inhabited by Numa. (Ov. ib. 265; Plut. Numa, 14, &c.) That it lay close to the forum is shown by the account of Caesar's body being burnt before it (App. B. C. ii. 148); and, indeed, Servius says expressly that it lay "in radicibus Palatii paucique Romani fori" (ad Aen. viii. 363). At the back of both the buildings must have been a sacred grove which ran towards the Palatine. It was from this grove that a voice was heard before the capture of the city by the Gauls, bidding the Romans repair their walls and gates. The adimonition was neglected; but this impunity was subsequently expiated by building at the spot an altar or sacellum to Aius Loquens. (Civ. Div. i. 45.)

Tullius Hostilius, after the capture of Alba Longa, adorned the forum with a curia or senate-house, which was called after him the CURIA HOSTILLIA, and continued almost down to the imperial times to be the most usual place for holding assemblies of the senate. (Varr. L. L. v. § 155, Müll.; Liv. i. 30.) From the same spoils he also improved the comitium: "Fecitque idem et sepetit de mambalis comitium et curiam" (Cic. Rep. ii. 17); whence we can hardly infer that he surrounded the comitium with a fence or wall, but more probably that he marked it off more distinctly from the forum by raising it higher, so as to be approached by steps. The Curia Hostilia, which from its pre-eminence is generally called simply curia, must have adjoined the eastern side of the Vulcanal. Niedbahr (Beschr. vol. iii. p. 60) was the first who indicated that it must have stood on the N. side of the forum, by pointing out the following passage in Pliny, in which the method of observing noon from it is described:—

"Duodecim tabulis ortus tautum et occasum nominatur; post aliquot annos adscendit et meridies, accessus consulium id pronunia curia, et atra rostra et graecostasis prospeet id solem." (vii. 60.) Hence, since the sun at noon could be observed from it, it must have faced the south. If its front, however, was parallel with the northern line of the forum, as it appears to have been, it must have looked a little to the W. of S.; since that line does not run due E., but a few degrees to the S. of E. Hence the necessity, in order to observe the true meridian, of looking between the Graecostasis and rostra. Now the Graecostasis at a period of course long after Tullius Hostilius, and when mid-day began to be observed in this manner—was a lofty substruction on the right or W. side of the curia; and the rostra were also an elevated object situated directly in its front. This appears from the passage in Varro just alluded to:—

"Aut hone (curiam) rostra: quibus loci id vocabant, quod ex hostibus capta fixa sunt rostra. Sub dextra hujus (curiae) a comitio locus substructus, ubi nationes subissent legati, qui ad senatum essent missi. Is graecostasis appellatus, a parte ut multum in Senaculum suo sit proximus, ubi aedae Concordiae et Basilica Opinionis." (L. L. v. § 155, 156.) When Varro says that the Graecostasis was sub dextra curiae, he is of course looking towards the south, so that the Graecostasis was on his right. This appears from his going on to say that the senaculum lay above the Graecostasis, and towards the temple of Concord; which, as we have had occasion to mention, was seated on the side of the Capitoline hill. It further appears from this passage that the Graecostasis was a substruction, or elevated area (locus substructus) at the side of, or adjoining the comitium (comp. Plin. xxxiii. 6); and must have projected in front of the curia. The relative situation of these objects, as here described, is further proved by Pliny's account of observing midday, with which alone it is consistent. For, as all these objects faced a little to the W. of S., it is only on the assumption that the Graecostasis lay to the W. of the curia, that the meridian sun could be observed with accuracy from any part of the latter between the Graecostasis and rostra.

A singular theory is advanced by Mommsen respecting the situation of the Curia Hostilia, which we cannot altogether pass over in silence. He is of opinion (L. c. p. 289, seq.) that it lay on the Capitoline hill, just above the temple of Concord, which he thinks was built up in front of it; and this he takes to be the reason why the curia was rebuilt on the forum by Sulla. His only authority for this view is the following passage in Livy:

"(Censorum) et clivum Capitolinum silice sternendum envenerunt et porticum ab aede Saturni in Capitolinum ad Senaculum ac super ilid Curiam" (xii. 27). From these words, which are not very intelligible, Mommsen infers (p. 292) that a portico reached from the temple of Saturn to the senaculum, and thence to the curia above it, which stood on the Capitol on the spot afterwards occupied by the Temple of Tabularium (p. 292). But so many evident absurdities follow from this view, that Mommsen, had he given the subject adequate consideration, could hardly, we think, have adopted it. Had the curia stood behind the temple of Concord, the ground plan of which is still partly visible near the arch of Severus, it is quite impossible that, according to the account of Pliny, mid-day could have been observed from it between the rostra and Graecostasis, since it would have faced nearly to the east. Mommsen, indeed (p. 296), asserts the contrary, and makes the Curier Mamertinus and arch of Titus lie almost due N. and S., as is also shown in his plan at the end of the volume. But the writer can affirm from his own observation that this is not the fact. To a person standing under the Capitol at the head of the forum, and opposite to the column of Phocas, the temple of Faustina bears due E. by the compass, and the arch of Titus a few degrees to the S. of E. To a person standing by the arch of Severus about the assumed site of the curia, the arch of Titus would of course bear a little more S. still. Something must be allowed for variation of the
Here the senaculum is represented, not as a place in which the senate assembled previously to deliberation, but as one in which it actually deliberated. It is impossible, however, that this could have been so. For in that case what would have been the use of the curia? in which the senate is constantly represented as assembling, except in cases where they held their sittings in some other temple. Besides we have no accounts of the senaculum being an inaugurated place, without which it would have been unlawful for the senate to deliberate in it. Nicostratus therefore, who, from his name, seems to have been a Greek, probably confounded the senaculum with the curia, and other temples in which the senate assembled; and at all events his account cannot be set against the more probable one of Varro and Valerius Maximus.

There is, however, one part in the account of Festus, which seems to set the matter in a different point of view. The words, "in quo solemnit magistratus D.T. cum senatibus delibebar," seem to point to the senaculum not as a place where the senators deliberated among themselves, but where they conferred with the magistrates; such magistrates we may suppose as were not entitled to enter the curia. Such were the tribunes of the people, who, during the deliberations of the senate, took their seats before the closed doors of the curia, and in other places, at the decrees of the Fathers before they became laws, we may easily imagine that it was sometimes necessary for the tribunes and senators to confer together, and these conferences may have taken place at the senaculum ("Tribunis plebis intrare curiam non licebat: ante valvis aetem positis subsellis, decreta patrum attentissima cura examinant; ut, si qua ex eis improbus. rata esse non sinceret. Itaque veteribus senatus consultis T. littera subscribi solebat: exta nota significabatur, is tribunos quoque confundtis," Val. Max. ii. 2 § 7.) In this manner the senaculum would have answered two purposes; as places in which the senators met previously to assembling in the curia, and as a sort of neutral ground for conferences with the plebeian magistrates.

With regard to the precise situation of the senaculum belonging to the Curia Hostilia, we can hardly assume, with Mommsen, that it occupied the spot on which the temple of Concord and the curia were afterwards actually built; nor do the words of Varro and Festus, "Senaculum ubi aedibus Concordiae," seem to require so very rigorous an interpretation. It is sufficient if it adjoined the temple; though it is not improbable that the latter may have encroached upon some part of its area. After the temple was erected there still appears to have been a large open space in front of it, part of the ancient senaculum, but which now seems to have obtained the name of "Arca Concordiae." Its identity with the senaculum appears from its adjoining the Vulcaean, like the latter: "in arca Vulcani et Concordiae sauguisem pluit," (Liv. xi. 19.) "in arca Vulcani per balum, in arca Concordiae tacidem diebus sauguisem pluit," (Jul. Obsq. 59.) The temple of Concord became a very usual place for assemblies of the senate, as appears from many passages in ancient authors, (Cic. Phil. ii. 7; Lapii. Alex. 28, &c.); From the area a flight of steps led up to the residue of the temple: "(Equites Romani) qui frequentissimi in gradibus Concordiae steterant." (Cic. Phil. vii. 8.) According to Macrobius the temple of Saturn also had a senaculum...
("Habet arum et ante semantulum," i. 8). This must have been near the sepulchrum of the Curia Hostilia, but could hardly have been the same. If Macrobins is right, then Festus is wrong in limiting the sepulchrum to three; and it does not seem improbable that the areum near temples, where the senate was accustomed to meet, may have been called sepulchrum.

To Ancus Marcius we can only ascribe the Carpuc Mamertinus, or prison described by Livy as overhanging the forum ("media urbe, immo media fora," i. 33). It is still to be seen near the arch of Severus, under the church of S. Giuseppe dei Fa-legenari.

We have before remarked that a new architectural era began at Rome with the reign of Tarquinius Priscus; and if he had not been interrupted by wars, he would doubtless have carried out many of those grand schemes which he was destined only to project. He may almost be called the founder of the forum, since it was he who first surrounded it with private houses and shops. According to Varro (ap. Maccob. § i. 8), he also founded the Temple of Saturn on the forum at the spot where the altar stood; though, according to another account, it was begun by Tullius Hostilius. At all events, it does not seem to have been dedicated before the expulsion of the kings (Maccob. L. c.), and according to Livy (i. 21), in the consilium of Sempronios and Mucunus, b. c. 497. According to Becker (Handb. p. 312) the ruin of the three columns under the Capitol are remains of it, and this, he asserts, is a most decided certainty, which can be denied only by persons who prefer their own opinion to historical sources, or wilfully shut their eyes. It appears to us, however, judging from these very historical sources, that there is a great deal more authority for the Italian view than for Becker's; according to which the temple of Saturn is the ruin of the eight columns, at the foot of the clivus. All the writers who speak of it mention it as being at the lower part of the hill, and beneath the clivus, while the three columns are a good way up, and above the clivus. Thus Servius (Aen. ii. 115, viii. 319) says that the temple of Saturn was "ante clivum Capitolini;" and in the Origa gentis Romanae (c. 3) it is said to be "sub clivo Capitolino." In like manner Varro (L. L. v. § 42, Mill.) places it "in fascibus (notulis Saturni);" and Dionysius, πολις της ἀγορᾶς φόρους εἰς τὸ Καπιτόλιον (i. 34). Festus (p. 322, Müll.) describes the ara as having been "in imo clivo Capitolino." Moreover, the miliarium aureum, which stood at the top of the forum (Plin. iii. 9) was under the temple of Saturn: "ad miliarium aureum, sub aedem Saturni" (Tai. H. i. 27); "sub aedem Saturni; ad miliarium aureum " (Suet. Otho. c. 6). Further, the Monumentum Ancyrarum mentions the Basilica Julia as "inter aedem Castorii et aedem Saturni." Now what has Becker got to oppose to this overwhelming mass of the very best evidence? His objections are, first, that Servius (Aen. ii. 116) mentions the temple of Saturn as being "juxta Concordiae templum;" and though the eight columns are near the temple of Concord, yet they cannot, without awkwardness, be called juxta! Secondly, the Notitia, proceeding from the Carcer Mamertinus, names the temples in the following order: Templum Concordiae et Saturni et Vespasiani et Titii. Now, as the three columns are next to the temple of Concord, it follows that they belong to the temple of Saturn. The whole force of the proof here adduced rests on the assumption that the Notitia mentions these buildings precisely in the order in which they actually occurred. But it is notorious that the authority of the Notitia in this respect cannot be at all depended on, and that objects are named in it in the most preposterous manner. We need no other witnesses to this fact than Becker himself, who says of this work, "Propterea cavendum est diligenter, ne, quoties plura simul tempia nominantur, codem ea ordine juxta suas arbitrium." (De Muris, &c., p. 12, note.) But thirdly, Becker proceeds: "This argument obtains greater certainty from the inscriptions collected by the Anonymus of Einsiedlen. Fortunately, the entire inscriptions of all the three temples are preserved, which may be still partly read on the ruins. They run as follows: Senatus populusque Romanus incendio consumptum restituit Divo Vespasiano Augusto, i. v. q. r. imp. Caess. Severus et Antoninus pui felic Aug. restitue-unt.ijp.q.r. aedem Concordiae vetustate collapsam in meliorum faciem opere et cultu splendidore restituerunt." Now as the whole of the first inscription, with the exception of the last three words, "Divo Vespasiano Augusto," are still to be read over the eight columns, and the letters ETTIVMAR, a fragment of "restituerunt" in the second inscrip-

**Tabularium and Temples of Vespasian, Saturn and Concord.**
tion, over the three columns, Becker regards the order of the Notitia as fully confirmed, and the three temples to be respectively those of Concord, Vespasian and Titus, and Saturn.

With regard to these inscriptions all are agreed that the third, as here divided, belongs to the temple of Concord; but with regard to the proper division of the first two, there is great difference of opinion. Bunsen and Becker divide them as above, but Canina (Foro Rom. p. 179) contends that the first finishes at the word "restitutum," and that the words from "Divo Vespasiano" down to "restitutum" form the second inscription, belonging to the temple of Vespasian and Titus. In the original codex containing the inscriptions, which in the library of Kinnelben, they are written consecutively, without any mark where one begins and another ends; so that the divisions in subsequent copies are merely arbitrary and without any authority. Now it may be observed that the first inscription, as divided by Canina, may still be read on the architrave of the eight columns, which it exactly fills, leaving no space for any more words. Becker attempts to evade this difficulty by the following assertion: "There is no room," he says (Handb. p. 357), "for the dedication 'Divo Vespasiano,' on the front of the temple; and although it is unusual for one half of an inscription to be placed on the back, yet on this occasion the situation of the temple excuses it." We are of opinion, then, that the whole of the words after "restitutum" down to the beginning of the inscription on the temple of Concord, belong to the temple of Vespasian, or that of which three columns still remain. Another proof that the words "Divo Vespasiano Augusto" could never have existed over the temple with the eight columns is that Peggius (de Variet. Fort. p. 12), in whose time the building was almost entire, took it to be the temple of Concord, which he could not have done had the dedication to Vespasian belonged to it. (Busby, in Class. Misc. iv. p. 27, note.) Thus two out of Becker's three arguments break down, and all that he has to adduce against the mass of evidence, from the best classical authorities, on the other side, is a still and pedantic interpretation of the preposition *jacto* in such a writer as Suetonius! Thus it is Becker himself who is amenable to his own charge of shunting his eyes against historical evidence. His attempt to separate the altar from the temple (Handb. p. 313), at least in locality, is equally unfortunate.

The remains of the temple of Saturn, or the portico with the eight columns at the head of the forum, are in a rude and barbarous style of art, some of the columns being larger in diameter than others. Hence Canina infers that the restoration was a very late one, and probably subsequent to the removal of the last of empire to Constantinople. From the most ancient times the temple of Saturn served as an aerarium, or state treasury, where the public money, the military ensigns, and important documents were preserved (Liv. iii. 69; Plut. Q. R. 42; Macrobr. i. 8; Solin. i. 12, &c.). On account of its Grecian origin sacrifices were performed at the altar of Saturn after the Greek rite, that is, capite aperto, instead of capite recto as among the Romans (Macrobr. L. c.).

Adjoining the temple of Saturn was a small cela, or Aedes of Ors, which served as a bank for the public money. The Fasti Amaturnini and Capronarum mention it as being "ad Forum," and "in Vico Jugario," which determines its position here (Calend. Amt. Dec.; Cal. Capron. Aug.). It is several times alluded to by Cicero; "Pecunia utinam ad Opia maneret" (Phil. i. 7, cf. l. 14). Before the temple stood a statue of Silvanus and a sacred fig-tree, which it was necessary to remove in a. c. 435, and the temple was divided by a curtain. (Plin. xv. 20.) Behind the temple, in a small lane or Angiportus, and about midway up the ascent of the cibus, was the Porta Stercoraria, leading to a place where the ordure from the temple of Vesta was deposited on the 15th of June every year. (Varr. L. l. vi. § 32, Mull.; Festus, p. 344.) This custom seems to have been connected with the epitaph of Stercutus applied to Saturn by the Romans, as the inventor of applying manure to the fields (Macrobr. Set. i. 7). Between the Porta Stercoraria and the Ars Saturna there was a Sacellum Ditis, in which wax masks were suspended during the Saturnalia. (Ib. 11.)

But the most important alteration made by Tarquinus Priscus with regard to the forum was the causing of porticoes and shops to be erected around it (Liv. i. 35; Dionys. iii. 67). This gave the forum a fixed and unalterable shape. We may wonder at the smallness of its area when we reflect that this was the great centre of politics and business for the mistress of the world. But we must recollect that its bounds were thus fixed when she herself was not yet secure against the attempts of surrounding nations. As her power and population gradually increased various means were adopted for procuring more accommodation—first, by the erection of spacious basilicas, and at last, in the imperial times, by the construction of several new fora. But at first, the structures that arose upon the forum were rather of a useful than ornamental kind; and the shops of Tarquin consisted of butchers' shops, schools, and other places of a like description, as we learn from the story of Virginia. These Ta

![TEMPLE OF SATURN.](image-url)
and the Veteres of course on the south side. This relative situation is also established by the accounts which we have of basilicae being built either on or near their sites, as will appear in the sequel. Their arrangement cannot be satisfactorily ascertained, but of course they could not have stood before the curia and comitium. In process of time the forum began to put on a better appearance by the conversion of the butchers' shops into those of silversmiths ("Hoc interno primum forensis dignitatis crevit, atque ex tabernis lanienis argentariae factae," Varro in Non. p. 532, M.). No clue, however, is given to the exact date of this change. The earliest period at which we read of the argentariae is in Livy's description of the triumph of Papias Cursor, B. C. 306 (ix. 40). When the comitia were declared it seems to have been customary for the argentarii to close their shops. (Varr. L. L. vi. § 91, Mill.) The tabernae were provided with Maeniana or balconies, which extended beyond the columns supporting the porticoes, and thus formed convenient places for beholding the games on the forum (Festus, p. 134, Mill.; Isid. Orig. xv. 3, 11.) These Maeniana appear to have been painted with subjects. Thus Cicero: "Demostravi digito pictum Gallium in Mariano scuto Cimbrico sub Novis" (de Or. ii. 66). Pliny mentions another picture, or rather caricature, of a Gaul sub Vesticem, and also a figure of an old shepherd with a stick. The latter appears to have been considered by the Romans as a valuable work, as some of them asked a German ambassador what he valued it at? But the barbarian, who had no taste for art, said he would not have it as a gift, even if the man was real and alive (xxxv. 8). According to Varro, quoted by the same author (ib. 37), the Maeniana sub Veteribus were painted by Scarpion.

Another service which Tarquin indirectly rendered to the forum was by the construction of his cloaca, which had the effect of thoroughly draining it. It was now that the LACUS CURTIUS, which had formerly existed in the middle of the forum, disappeared ("Curtium in locum palustrum, qui tum fuit in foro, antequam cloaca sactae functae, occasisset," Piso ap. Varr. L. L. v. § 149, seq. Mill.) This, though not so romantic a story as the self-immolation of Curtius, is doubtless the true representation; but all the three legends connected with the subject will be found in Varro (l. c.). It was perhaps in commemoration of the draining that the shrine or sacellum of VENUS CLAUCINA was erected on the N. side of the forum, near the Tabernae Nova, as appears from the story of Virginia snatching the butcher's knife from a

Every year the people used to throw pieces of money into it, a sort of augurium salutis, or new year's gift for Augustus. (Suet. Aug. 57.) Close to it grew a fig-tree, a vine, and an olive, which had been fortuitously planted, and were sedulously cultivated by the people; and near them was an altar, dedicated to Vulcan, which was removed at the time of the great at Caesarean funeral. (Plin. xv. 20; cf. Gruter, Inscr. lxi. 1, 2.)

Servius Tullius probably carried on and completed the works begun by his predecessor around the forum, just as he finished the walls; but he does not appear to have undertaken anything original excepting the adding of a lower dungeon, called after him Tulliunum, to the Mamertine prison. ("In hoc (carere) pars quas sub Tulliunum, also quod addidit a Tullio regi." Varr. L. L. vi. § 131.) This remains to the present day, and still realises to the spectator the terrible description of Sallust (Cat. 55).

The Roman Cicoroni point out to the traveller the Scalae Gemoniae inside the Mamertine prison, where there are evident remains of an ancient staircase. But it appears from descriptions in ancient authors that they were situated in a path leading down from the Capitol towards the prison, and that they were visible from the forum. (Dei Cass. lvi. 5; Valer. Max. vi. 9, § 13; Tac. Hist. iii. 74.) Traces of this path were discovered in the 16th century (Luc. Fauns, Aut. de Roma, p. 32), and also not many years ago in excavating the ground by the arch of Severus.

It does not appear that any additions or improvements were made in the forum during the reign of Tarquinius Superbus.

The Forum during the Republic. — One of the earliest buildings erected near the forum in the republican times was the temple of CASTOR AND POLLUX. After the battle at lake Regillus, the Diescuri, who had assisted the Romans in the fight, were seen refreshing themselves and their horses, all covered with dust and sweat, at the little fountain of Juturna, near the temple of Vesta. (Dioys. vi. 13; Val. Max. i. 8. § 1; Cic. N. D. ii. 2, &c.) A temple had been vowed to these deities during the Latin War by Postumius the dictator; and this spot where that this apparition had been observed was chosen for its site. It was dedicated by the son of Postumius B. C. 484. (Liv. ii. 42.) It was not a temple of the largest size; but its conspicuous situation on the forum made it one of the best known in Rome. From the same circumstance the flight of steps leading up to it served as a kind of suggestum or rostra from which to address the people in the forum; a purpose to which it seems to have been sometimes applied by Caesar. (Dion Cass. xxxviii. 6; cf. Cic. p. Sest. 15; Appian, B. C. iii. 41.) The temple served for assemblies of the senate, and for judicial business. Its importance is thus described by Cicero: "In aedibus Castoris, ceieberrimo clarissimoque monumento, quod templum in culinis quotidianoque spectatu populi Romani est positum; quo saepenumero senatus convocatur; quo maxinarum rerum frequentissimae quotidianae adhesiones fluunt" (in Verr. i. 49). Though dedicated to the twin gods, the temple was commonly called only Aedes Castoris, as in the preceding passage: whence Bibulus, the colleague of Caesar in the aedileship, took occasion to compare himself to Pollux, who, though he shared the temple in common with his brother, was never once named. (Suet. Caes. 10.)

It was restored by

SHRINE OF CLAUCINA. (From a Coin.)

shop close to it. (Liv. iii. 48; cf. Plin. xv. 36.) The site of the Lucus Curtius after its disappearance was commemorated in another manner. Having been struck with lightning, it seems to have been converted into a dry puteal, which, however, still continued to bear the name of Lucus Curtius (cf. Varr. v § 150):

"Curtius ille lacus, siccus qui sustinet aras,
Nunc solida est tellus, sed lacus ante fuit."

(Ov. Fast. vi. 397.)
Metellus Dalmaticus (Circ. Scarr. 46, et ibi Aspar) and afterwards rebuilt by Tiberius, and dedicated in his and Drusus's name. A.D. 6. (Suet. Tib. 20; Dion Cass. lv. 27.) Caligula connected it with his palace by breaking through the back wall, and took a foolish pleasure in exhibiting himself to be adored between the statues of the twin deities. (Suet. Cal. 22; Dion Cass. lix. 28.) It was restored to its former state by Claudius (Id. lx. 6). We learn from Dio Cassius that the Roman knights, to the number sometimes of 5000, in commemoration of the legend respecting the foundation of the temple, made an annual procession to it from the temple of Mars, outside of the Porta Capena. On this occasion, dressed in their state attire and crowned with olive, they traversed the city and proceeded over the forum to the temple (vi. 13). Its neighbourhood was somewhat contaminated by the offices of certain persons who trafficked in slaves of bad character, who might be found there in shoals. ("Num molestis feram si mihi non reddiderit nomen aliquis ex his, qui ad Castoris negotiationes, nequam mancipia ementes vendentesque, quorum tabernae pessimorum servorum turbae returias sunt," Senec. de Sapiens. 13; cf. Plaut. Cenc. iv. 1. 20.) The three elegant columns near the forum, under the Palatine, are most probably remains of this temple. We have seen in the preceding account that it stood close to the forum, as well as to the temple of Vesta, a position which precisely agrees with that of the three columns. None of the other various appropriations of this ruin will bear examination. Poggio (de Var. Fort., p. 22) absurdly considered these columns to be remains of Caligula's bridge. By the earlier Italian topographers they were regarded as belonging to the temple of Jupiter Stator; but it has been seen that this must have stood a good deal higher up on the Velia. Nardini thought they were remains of the comitium, and was followed by Hiby (Foro Rom., p. 69) and Burgess (Antiq. of Rome, i. p. 365). We have shown that the comitium was not at this side of the forum. Canina takes them to have belonged to the Curia Julia (Foro Rom., parte i. p. 132), which, however, as will appear in its proper place, could not have stood here. Bunsen (Les Forum de Rome, p. 58) identifies them with a temple of Minerva, which, as he himself observes (p. 59), is a "denomination entierement nouvelle," and indeed, though new, not true. It arises from his confounding the Chalcidicum mentioned in the Monumentum Augustanum with the Atrium Minervae mentioned by the Notitia in the 8th Region. But we have already observed that the curia and Chalcidicum, which adjoined it, would be quite misplaced here. The Curiosum, indeed, under the same Region, mentions besides the Atrium Minervae a Templum Castorun et Minervae, but this does not appear in the Notitia. Bunsen was more correct in his previous adoption of the opinion of Fea, that the columns belonged to the temple of Castor. (Bullettino dell' Inst. 1833; cf. Baubury in Class. Mus. iv. p. 19.)

The capture of the city by the Gauls, n. c. 390, which, as we have before said, inflicted so much injury that the Romans entertained serious thoughts of migrating to Veii, must of course have occasioned considerable damage in the vicinity of the forum. The Curia Hostilia, however, must have escaped, since Livy represents the senate as debating in it respecting this very matter (v. 55). Such shops and private houses as had been destroyed were probably restored in the fashion in which they had previously existed. It was now that the little temple to Aesc Loquens, or Locutus, to which we have before alluded, was erected on the Nova Via, not far from the temple of Vesta (ib. 50). From this period the forum must have remained without any important alterations down to the time of M. Porcius Cato, when basilica first began to be erected. During this interval all that was done was to adorn it with statues and other ornaments, but no building was erected upon it; for the small ex vota temple to Concord, which appears to have been made of bronze, erected on the Vulciatal by the noble C. Flavius, n. c. 303 (Id. ix. 46), can hardly come under that denomination. It was probably also during this period that the Graecostasis,

**Columns of the Temple of Castor and Pollux.**
Ascon. but pronounced to by (From though, 785 ROMA.

suggested the comitium before the curia—a position which they continued to occupy even after the time that new ones were erected by Julius Caesar. (Dion Cass. xiii. 49; Ascon, ad Cic. Milon. 5.) The rostra were a temple, or place consecrated by auguries ("Restriisque earum (navium) suggestum in foro extractum, adornari placent: Restrique id templum appelletum," Liv. viii. 14; comp. Cic. in Pison. 10.) They are distinguished by Dion Cassius (i. 34) from those erected by Caesar, by the epithet of Bisma δυνατορυχός, and by Suetonius by that of vetera. (Suet. Aug. 100.) It may be inferred from a passage in a letter of Fronto to the emperor Antoninus, that the rostra were not raised to any very great height above the level of the comitium and forum ("Nec tantulo superiore, quanto rostra foro et comitium excelsior; sed altiores antennae sunt prora vel potius carina," lib. i. ep. 2). When speaking from the rostra it was usual in the mere ancient times for the orator to turn towards the comitium and curia,—a custom first neglected by C. Licinius Crassus in the consulship of Q. Maximus Scipio and L. Mancinus, who turned towards the forum and addressed himself to the people (Cic. Am. 25); though, according to Plutarch (Gracc. 5), this innovation was introduced by C. Gracchus.

have thrown a shadow towards the career in the evening.

Another celebrated monument of the same kind was the Dutilian column, also called Columna Rostrata, from its having the heads of ships sculptured upon it. It was erected in honour of C. Dutilius, who gained a great naval victory over the Cartaginians, b.c. 260. According to Suetonius (Gracq. iii. v. 29) there were two of these columns, one on or near the rostra, the other in front of the circus. Pliny, indeed (xxxiv. 11), and Quintilian (Instr. i. 7) speak of it as "in foro;" but forum is a generic name, including the comitium as a part, and therefore, as used by these authors, does not invalidate the more precise designation of Servius. The basis of this column was found at a great distance from the arch of Severus (Cacioccinio, Columnae Rostratae Inscript. Explicatio, p. 3, ap. Canina, Foro Rom. p. 301, note), a fact which confirms the position which we have assigned to the comitium and curia. The inscription in a fragmentary state is still preserved in the Palazzo de' Conservatori.

The erecting of columns in honour of military achievements came very early into use at Rome, and seems to have preceded the triumphal arch. The first monument of this sort appears to have been the column on the forum called the Columna Maenia, commemorative of the victory gained by C. Maenius over the Latins, b.c. 338. (Liv. vii. 13.) Livy, indeed, in the passage cited says that the monument was an equestrian statue; whilst Pliny on the other hand (xxxiv. 11) states that it was a column, which is also mentioned by Cicero. (Sat. 58.) Næbulus would reconcile both accounts, by assuming that the statue was on a column. (Hist. vol. iii. p. 145.) Pliny in another place (vii. 60) says that the column afforded the means of determining the last hour of the day ("A columna Maeniam ad carcerem inclinato sidere supremae praemittabat (accessus)"); but it is very difficult to see how a column standing on the forum could

ROMA. 785

ROSTRA. (From a Coin.)

On the forum in front of the rostra stood the statue of Marsyas with uplifted hand, the emblem of civic liberty. (Serv. ad Aen. iv. 58; cf. Macrob. Sat. iii. 12.) Here was the great resort of the consuls, and also of the Roman consuls. Hence Martial (ii. 64. 8):—

"Ipsi potest fieri Marsya canidicus.”

Horace (Sat. i. 6. 120) has converted the pointed finger of the Satyr into a sign of scorn and derision against an obnoxious individual:—

"—obeadus Marsya, qui se Vultum ferre negat Norviam posse minoris.”

It was here that Julia, the daughter of Augustus, held her infamous erogies, in company with the
vilest of the Roman prostitutes. (Senee. Bon. vi. 32; Plin. xxi. 6.) The account given by Servius of this statue has been the subject of much discussion, into which the limits of this article will not permit us to enter. The whole question has been exhaustively discussed by Cremer. (Studii i. p. 282, seq.; cf. Savigny, Gesch. des Rom. Rechts, i. 52.)

Near the postra were also the statues of the Tarpeian Syrinx (Plin. xxxiv. 11), which are apparently the same as the three Maenads or Tates, mentioned by Procopius. (B. Goth. i. 25.) These also were at the head of the forum, towards the temple of Janus, a position which points to the same result as the Dullian column with respect to the situation of the conimbrum.

Livy's description of a great fire which broke out about the forum b. c. 211 affords some topographical particulars: "Interdict horas sermons memorabilis est. Quae pridie Quinquatrus fuit, pluribus simul locis circa forum incendium ortum. Eodem tempore septem Tabernae, quae postea quinque, et argaritiae, quae nunc Novae appellabantur, arsere. Comprehensa postea privataaeduficia, neque enim tum basilicae erant: comprehensae Lautumiae, forumque piscatorium, et atrium region. Aedibus Vestae visus est ex tabernae (xxxvi. 27). At this fire, wilfully occasioned, broke out in several places, and as the Curia Hostilia does not seem to have been endangered, we may perhaps conclude that the Septem Tabernae here mentioned were on the S. side of the forum. The argaritiae afterwards called Novae were undoubtedly on the N. side, and, for the reason just given, they perhaps lay to the E. of the curia, as the fire seems to have spread to the eastward. It was on the N. side that the greatest damage was done, the fire spreading to the Lautumiae and Forum Piscatorium. The Septem Tabernae appear to have been the property of the state, as they were rebuilt by the censors at the public expense, together with the fish-market and Atrium Region ("Loca verunt inde reficienda quae circa forum incendio consumpta erant, septem tabernas, macellum, atrium region," id xxvii. 11). This passage would seem to show that the reading quinque (tabernae) in that previously cited is corrupt. Murcius has observed that defraudatio was "sparsa per curiam," which in others was contracted into v., and thus taken for a numeral. (Becker, Handb. p. 297, notes.) Hence we may infer that the Veteres Tabernae on the S. side of the forum were seven in number, and from the wool posta applied to them, whilst nunc is used of the Novae, it might perhaps be inferred that the distinctive appellation of Veteres did not come into use till after this accident.

It also appears from this passage, that there were no basilicas at Rome at this period. It was not long afterwards, however, namely b. c. 184, that the first of these buildings was founded by M. Porcius Cato in his censorship, and called after him Basilica Portia. In order to procure the requisite ground, Cato purchased the houses of Maenius and Titius in the Lautumiae, and four tabernae. (Liv. xxxix. 44.) Hence we may infer that the Lautumiae lay close at the back of the forum; which also appears from the circumstance that Maenius, when he sold his house, reserved for himself one of its columns, with a balcony on the top, in order that he and his posterity might be able to view from it the gladiatorial shows on the forum. (Ps. Ascon. ad Cic. Div. in Cneid. 16; cf. Schoel. ad Hor. Sat. i. 3. 21.) This column must not be confounded with the monument called the Columna Maenias, which stood on the forum. The Basilica Portia must have stood close to the curia, since it was destroyed by the same fire which consumed the latter, when the body of Cholion was burned in it (Ascon. ad Cic. pro Cl. Anti. Arg. p. 54, Orelli); but it must have been on the eastern side, as objects already mentioned filled the space between the curia and the Capitoline hill.

The Forum Piscatorium stood close behind it, since Plautus describes the unsavoury odours from that market as driving away the frequenters of the basilica into the forum:

"Tum piscatores, qui praebent populio piscis foelidae Quo adhuc quadrupedant crucians castancia Quorum osos subbasilicae omnes abstigat in forum." (Capt. iv. 2. 33.)

In the time of Cicero, the tribunes of the people held their assemblies in the Basilica Portia. (Plut. Cato Min. 5.) After its destruction by fire at the funeral of Cholion it does not appear to have been rebuilt; at all events we do not find any further mention of it.

The state of the forum at this period is described in a remarkable passage of Plautus; in which, as he himself afterwards indicates, he indicates the different localities by the characters of the men who frequented them (Curt. iv. 1): "Qui pejorum conveniret voluptatem mitto in comitium;

Qui mendacem et gloriosum, apud Claudianae sacrum

Ditis damnosos maritos sub basilica querito;

Hicdem crunt scrota exoleta, quoque stipulare solent;

Symbolarum collatorae apud Forum Piscatorium;

In foro infimo boni homines atque dilectos amabant

In medio propter canalem, ibi ostentatorum meri;

Confidentes garrulique et malevoli supra lacum,

Qui alteri de nihilu audacter dicunt contumeliam

Et qui ipsi iubent habend, quod in se possit Vere dicere.

Sub Veteribus ibi sunt, qui donique acquisitum

foenere

Pone aedem Castoris ibi sunt, subito quibus cedens

males;

In Tusco Vico ibi sunt homines, qui ipsi se aeere

venditant.

In Velabro vel pistorem, vel lanium, vel arsispicae,

Vel qui ipsi vortant, vel qui aliis erogantur evo-

bant.

["Ditis damnosos maritos apud Leneclidam Oppian."]

Such is a picture as Greene might have drawn of Paul's, or Ben Jonson of Moor Fields. The good men walking quietly by themselves in the obscurest part of the forum, whilst the flash gentlemen without a denarius in their purses, are strutting conspicuously in the middle; the gourmand gathering round the fish-market and clubbing for a dinner; the gentlemen near the Lusus Curtius a regular set of scandal-mongers, so ready to speak ill of others, and so wholly unconscious that they live in glass-houses themselves; the pejorist witness proving about the comitium, like the man in Westminster Hall in former days with a straw in his shoe; the tradesman in the Vicus Tuscanus, whose spirit of trading is so inbred that he would sell his own very self; all these sketches from life present a picture of manners in "the good old times" of the Roman Republic, when Cato himself was censor, which shows that human nature is very much the same thing in all ages and countries. In a topographical point of view there is little here but
what confirms what has been already said respecting the forum and its environs; except that the usurers sub Veteribus show that the bankers' shops were not confined to the N. side of the forum. What the \textit{canali} was in the middle of the forum is not clear, but it was perhaps a drain. The passage is, in some places, probably corrupt, as appears from the two close lines respecting the \textit{maritii Ditii}, the second of which is inexplicable, though they probably contain some allusion to the Saeclum Ditii which we have mentioned as adjoining the temple of Saturn. Mommsen, however (\textit{I. c. p. 297}), would read "dites damnosos marito," &c., taking these "dites" to be the rich usurers who resorted to the basilica and lent young men money for the purpose of corrupting city wives. But what has tended to throw doubts upon the whole passage is the mention of the basilica, since, according to the testimony of Cicero (\textit{Brut.} 15), Plautus died in the very year of Cato's censorship. Yet the basilica is also alluded to in another passage of Plautus before quoted; so that we can hardly imagine but that it must have existed in his lifetime. If we could place the basilica in Cato's sedileless instead of his censorship, every difficulty would vanish; but for such a view we can produce no authority.

Mommsen (\textit{ib. p. 301}) has made an ingenious, and not improbable attempt to show, that Plautus, as he becomes a good poet, has mentioned all these objects on the forum in the order in which they actually existed; whence he draws a confirmation of the view respecting the situation of the comitium. That part of the forum is mentioned first as being the most excellent. Then follows on the \textit{left} the Sacrum Chalcineum, the Basilica Porcia, and Forum Piscatorium, and the Forum Inclunum. Returning by the middle he names the canali, and proceeds down the forum again on the \textit{right}, or southern side. In the "malevoli supra lacum," the Lucus Servilicus is alluded to at the top of the Vicus Jugarius. Then we have the Veteres Tabernae, the temple of Castor, the Vicus Tuscius, and Velabrum. The Basilica Porcia was soon followed by others. The next in the order of time was the \textit{Basilica Fulvia}, founded in the censorship of M. Acemilius Lepidus, and M. Fulvius Nobilior, n. c. 179. This was also "post Argentariss" Novus (\textit{Liv.} xxi. 31), and must therefore have been very near to the Basilica Porcia. From the two censores it was generally called \textit{Basilica Aemilia et Fulvia} (\textit{Varr. L. L. vi. § 4, Miull.}) All the subsequent embellishments and restorations appear, however, to have proceeded from the gens Aemilia. M. Acemilius Lepidus, consul with Q. Lutatius in n. c. 78, adorned it with bronze shields bearing the effigies of his ancestors. (\textit{Plin. xxx. 4.}) It appears to have been entirely rebuilt by L. Acemilius Paullus, when ædile, n. c. 53. This seems to have been the restoration alluded to by Cicero (\textit{ad Att. iv. 16}), from which passage — if the punctuation and text are correct, for it is almost a locus desperatus — it also appears that Paullus was at the same time constructing another and magnificent basilica. Hence a difficulty arises respecting the situation of the latter, which we are unable to solve, since only one \textit{Basilica Paulli} is mentioned by ancient authors; and Plutarch (\textit{Caes. 29}) says expressly that Paullus expended the large sum of money which he had received from Caesar as a brieve in building on the forum, in place of the Basilica Fulvia, a now one which bore his own name. (\textit{Cf. Appian, B. C. ii. 26.}) It is certain at least that we must not assume with Becker (\textit{Pompeii, p. 303}) that the latter was but a poor affair in comparison with the new one because it was built with the ancient columns. It is plain that in the words "nihil gratius illo monumento, nihil gloriosius," Cicero is alluding to the restoration of the ancient basilica, since he goes on to mention it as one which used to be extolled by Atticus, which would not have been possible of a new building; and the employment of the ancient columns only added to its beauty. The building thus restored, however, was not destined to stand long. It seems to have been rebuilt less than twenty years afterwards by Paullus Acemilius Lepidus (\textit{Dion Cass. xxix. 42}); and in about another twenty years this second restoration was destroyed by a fire. It was again rebuilt in the name of the same Paullus, but at the expense of Augustus and other friends (\textit{Ib. iv. 24}), and received further embellishments in the reign of Tiburz, A. d. 22. (\textit{Ibid. Ass. iii. 72.}) It was in this last phase that Pliny saw it when he admired its magnificence and its columns of Phrygian marble (\textit{xxvi. 24}).

\section*{Basilica Aemilia. (From a Coin.)}

The third building of this kind was the \textit{Basilica Sempronia}, erected by T. Sempronius Gracchus in his censorship, n. c. 169. For this purpose he purchased the house of Scipio Africanus, together with some adjoining butchers' shops, behind the Tabernae Veteres, and near the statue of Vertumnus, which, as we have said, stood near the forum at the end of the \textit{Vicus Tuscius}. (\textit{Liv. vii. 16.}) This, therefore, was the first basilica erected on the S. side of the forum. We hear no further mention of it, and it therefore seems probable that it altogether disappeared, and that its site between the \textit{Vicus Tuscius} and \textit{Vicus Jugarius} was subsequently occupied in the imperial times by the Basilica Julia.

The \textit{Lautumiae}, of which we have had occasion to speak when treating of the Basilica Porcia, was not merely the name of a district near the forum, but also of a prison which appears to have been constructed during the Republican period. The Lautumiae are first mentioned after the Second Punic War, and it seems very probable, as Varro says (\textit{L. L. v. § 151, Miull.}), that the name was derived from the prison at Syracuse; though we can hardly accept his second suggestion, that the etymology is to be traced at Rome, as well as in the Sicilian city, to the circumstance that stone quarries formerly existed at the spot. The older topographers, down to the time of Dunsen, assumed that Lautumiae was only another appellation for the Carcer Mamertinus, a misconception perhaps occasioned by the abruptness with which Varro (\textit{I. c.}) passes from his account of the Tullianum to that of the Lautumiae. We read of the latter as a place for the custody of hostages and prisoners of war in \textit{Liv.} (\textit{xxxii. 26, xxxvii. 3}); a purpose to which neither the size nor the dungeon-like con-

\section*{BASILICA AEMILIA. (From a Coin.)}

\section*{THE THIRD BUILDING OF THIS KIND WAS THE BASILICA SEMPRONIA, ERECTED BY T. SEMPRONIUS GRACCHUS IN HIS CENSORSHIP, N. C. 169. FOR THIS PURPOSE HE PURCHASED THE HOUSE OF SCIPIO AFRICANUS, TOGETHER WITH SOME ADJOINING BUTCHERS' SHOPS, BEHIND THE TABERNAE VETERES, AND NEAR THE STATUE OF VERTUMNUS, WHICH, AS WE HAVE SAID, STOOD NEAR THE FORUM AT THE END OF THE VICUS TUSCIUS. (\textit{LIV. XIV. 16.}) THIS, THEREFORE, WAS THE FIRST BASILICA ERECTED ON THE S. SIDE OF THE FORUM. WE HEAR NO FURTHER MENTION OF IT, AND IT THEREFORE SEEMS PROBABLE THAT IT ALTOGETHER DISAPPEARED, AND THAT ITS SITE BETWEEN THE VICUS TUSCIUS AND VICUS JUGARIUS WAS SUBSEQUENTLY OCCUPIED IN THE IMPERIAL TIMES BY THE BASILICA JULIA.

THE LAUTUMIAE, OF WHICH WE HAVE HAD OCCASION TO SPEAK WHEN TREATING OF THE BASILICA PORCIA, WAS NOT MERELY THE NAME OF A DISTRICT NEAR THE FORUM, BUT ALSO OF A PRISON WHICH APPEARS TO HAVE BEEN CONSTRUCTED DURING THE REPUBLICAN PERIOD. THE LAUTUMIAE ARE FIRST MENTIONED AFTER THE SECOND PUNIC WAR, AND IT SEEMS VERY PROBABLE, AS VARRO SAYS (\textit{L. L. V. § 151, MIULL.}), THAT THE NAME WAS DERIVED FROM THE PRISON AT SYRACUSE; THOUGH WE CAN HARDLY ACCEPT HIS SECOND SUGGESTION, THAT THE ETYMOLOGY IS TO BE TRACED AT ROME, AS WELL AS IN THE SICILIAN CITY, TO THE CIRCUMSTANCE THAT STONE QUARRIES FORMERLY EXISTED AT THE SPOT. THE OLDER TOPographers, DOWN TO THE TIME OF DUNSEN, ASSUMED THAT LAUTUMIAE WAS ONLY ANOTHER APPellation FOR THE CARCER MANERNITus, A MISCONCEPTION PERHAPS OCCASIONED BY THE ABRuptNESS WITH WHICH VARRO (\textit{I. C.}) PASSES FROM HIS ACCOUNT OF THE TULLIANUM TO THAT OF THE LAUTUMIAE. WE READ OF THE LATTER AS A PLACE FOR THE CUSTODY OF HOSTAGES AND PRISONERS OF WAR IN \textit{LIV.} (\textit{XXXII. 26, XXXVII. 3}); A PURPOSE TO WHICH NEITHER THE SIZE NOR THE DUNGEON-LIKE CON-

3 E 2
that its name may have been afterwards changed to that of "Basilia Argentaria," perhaps on account of the silversmiths' and bankers' shops having been removed thither from the Forum. That a Basilia Argentaria, about the origin of which nobody can give any account, existed just at this spot is certain, since it is mentioned by the Notitia, in the 8th Regia, when proceeding from the forum of Trajan, as follows: "Cohorntum sextum Vigilum, Basilicam Argentarium, Templum Concordiae, Umbilicum Romanum," &c. The present Salita di Marforio, which runs close to this spot, was called in the middle ages "Clivus Argentarius," and a whole plot of buildings in this quarter, according to the Mirabilia (Monti. Diar. Ital. p. 293), with the temple of Vespasian, which, as we shall see in the sequel, stood next to the temple of Concord, bore the name of "Insula Argentaria" (Becker, Handb. p. 413, seq.).

In the same year the forum was adorned with the triumphal arch called Forum Fabius or Fabianus, erected by Q. Fabius Allobrogicus in commemoration of his triumph over the Allobroges. This was one of the earliest, though not precisely the first, of this species of monuments at Rome, it having been preceded by the three arches erected by L. Stertinius after his Spanish victories, of which two were situated in the Forum Boarium and one in the Circus Maximus. (Liv. xxxiii. 27.) We may here remark that fornius is the classical name for such arches; and that the term arcus, which, however, is used by Seneca of this very arch (Cont. xxv. 1), did not come into general use till a later period. The situation of this arch is indicated by several passages in Roman authors. We have already cited one from Cicero (p. Pene. 7), and in another he says that Memmius, when coming down to the forum (that is, of course, down the Sacra Via), was accustomed to bow his head when passing through it ("Ita sibi ipsum magnum videre Memmiun, ut in forum descendens caput ad fornicem Fabii demitteret," de Orat. ii. 66). Its site is still more clearly marked by the Pseudo-Asconius (ed. Cassel. ii. 51) as being close to the Regia, and by Porphyrio (ad Hor. Epist. i. 19, 8) as near the Puteal Libonis.

The few other works about the forum during the remainder of the Republican period were merely restorations or alterations. Sulla when dictator seems to have made some changes in the cursus (Plin. xxxiv. 12), and in n. c. 51, after its destruction in the Civilian riots, it was rebuilt by his son Fanatus. (Dion Cass. xl. 50.) Caesar, however, caused it to be pulled down in n. c. 45, under pretext of having vowed a temple to Felicitas, but in reality to efface the name of Sulla. (Id. xiv. 5.) The reconstruction of the Basilica Fulvia, or rather the superseding of it by the Basilica Pauli, has been already mentioned.

It now only remains to notice two other objects connected with the Republican Forum, the origin of which cannot be assigned to any definite period. These were the Schola Xanthia and the Janus. The former, which lay back considerably behind the temple of Saturn and near the top of the Clivus Capitolinus, consisted of a row of arched chambers, of which three are still visible. They appear from inscriptions to have been the offices of the scribae, copyists, and praecoeres of the nobles, and seem to have belonged to Cicero. (Philipp. ii. 7, p. Sest. 12.) Another row was discovered in 1835, at the side of the temple of

PITEAL LIBONOS OR SCHIRONIUM.

Sext. 8, &c.) The tribunal of the praetor urbano seems, however, to have remained on the forum. Besides these we also find a TRIBUNAL AUREUM mentioned on the forum, which seems to have stood near the temple of Castor (Civ. p. Sext. 13, in Plut. 5, p. Clinton. 34), and which, it is conjectured, was erected by the consul M. Aurelius Cotta n. c. 74. These tribunals were probably constructed of wood, and in such a manner that they might be removed on occasion, as for instance, when the whole area of the forum was required for gladiatorial shows or other purposes of the like kind; at least it appears that the tribunals were used for the purpose of kindling the fire in the curia when the body of Clodius was burnt in it. (Ascon. ad Civ. Mixt. Avg. p. 34.)

In the year n. c. 125 the TEMPLE OF CONCORD was built by the consul L. Opimius on the Clivus Capitolinus just above the semicircle (Var. L. L. v. § 156, Mil.); but, as we have already had occasion to discuss the history of this temple when treating of the Capitol and of the semicircle, we need not revert to it here. At the same time, or a little afterwards, he also erected the BASILICA OPIMIA, which is mentioned by Varro in close connection with the temple of Concord, and must therefore have stood on its northern side, since on no other would there have been space for it. Of this basilica we hear but very little, and it seems not improbable

ROMA.
Vespasian and against the wall of the Tabularium, with a handsome though now ruined portico before them, from which there was an entrance into each separate chamber. From the fragments of the architrave an inscription could still be deciphered that it was dedicated to the Caesars — Tiberius, Germanicus, and Caligula (Pforo Rom. p. 207, Bullet. d. Inst. 1835.) These discovery tackles remarkably with the following passage in Varro: "Et quominum (at aitum) Dei facientes adjutat, prius invocabo esse; nec in Hostilia et Cestius, Musas, sed xii. deos consensit; neque tamen eos urbano, quorum imagines ad forum avatorae stant, sex xares et feminae totoide, sed illis xii. deos, qui maxime agricolanm duces sunt." (H. R. ii. 1.) We may, however, infer that the inscription was posterior to the time of Varro, probably after some restoration of the building; since in his De Lingua Latina (viii. § 71) he asks: "Item quominum, si sit analogia, cui appellant omnes nudes Deum Consensum et non Deorum Consentium?" whereas in the inscription in question we find it written "Consensum." We may further remark that the form of these passages would sanction the including of the whole Clivus Capitolinus under the appellation of "forum." With respect to the Janii on the forum, it seems rather perversional whether there were three of them. There appear to have been two Janii before the Basilica Pauli, to which the money-lenders chiefly resorted. (Schol. ad Hor. Ep. i. 1. 54.) But when Holace (Sat. ii 3. 18) says —

"— postquam omnis res met Massum
Ad medium fracta est,"

he probably means, as we said before, the middle of the street, and not a Janus which lay between two others, as Becker thinks must necessarily follow from the use of the word medici. (Handb. p. 327, note.)

The Forum under the Empire. — The important alterations made by Julius Caesar in the disposal of the forum were the foundation of its subsequent appearance under the Empire. These changes were more or less capricious, but adaptations suited to the altered state of political society and to Caesar's own political views. But the dagger of the assassin terminated his life before they could be carried out, and most of them were left to be completed by his successor Augustus. One of the most important of these designs of Caesar's was the building of a new curia or senate-house, which was to bear his name. Such a building would be the badge of the senate's servitude and the symbol of his own despotic power. The former senate-house had been erected by one of the kings; the new one would be the gift of the first of the emperors. We have mentioned the destruction of the old curia by fire in the time of Sulla, and the rebuilding of it by his son Faustus; which structure Caesar caused to be pulled down under a pretence, never executed, of erecting on its site a temple of Felicitas. The curia founded by Pompey near his theatre in the Campus Martius—the building in which Caesar was assassinated — seems to have been that commonly in use; and Ovid (Met. xv. 801), in describing that event, calls it simply Curia:—

"neque cum locus ullus in urbe
Ad facius diramque placet, nisi Curia, caedem."

We may suppose that when Caesar attained to supreme power he was not well pleased to see the meetings of the senate held in a building dedicated by his great rival.

A new curia was voted a little before Caesar's death, but he did not live to find it; and the Monumentum Augustanum shows that it was both begun and completed by Octavius.

Respecting the site of the Curia Julia the most discordant opinions have prevailed. Yet if we accept the information of two writers who could not have been mistaken on such a subject, its position is not difficult to find. We learn from Pliny that it was erected on the comitium; "Idem (Augustus) in Curia quaeque quam in Comitio consecrat, duas tabulas impresseret partiti" (xxxi. 10); and this site is confirmed by Dom Cassius: "vii. deos
lctitiae, ex utroque spatii partem per Angliam angustiam, aperte effusum,(xvii. 19). It is impossible to find any other spot for it on the comitium than that where the old curia stood. Besides the anotlar last quoted expressly informs us that in consequence of some profanities that occurred in the year before Caesar's murder it had been resolved to rebuild the Curia Hostilia (sal dii
Tovei to v. deompertrvium to Oeslum auroc
claudercum effusum, ii. xiv. 17.) At the time when this decree was made Caesar was himself pen
tife maxime; it would have been a flagrant breach of religion to neglect a solemn vow of this description; and we cannot therefore accept Becker's assertion that this vow was never accomplished. (Handb. p. 331, note 608.) We cannot doubt that the curia erected by Augustus was in pursuance of this decree, for Caesar did not live even to begin it (*Curiam et continem ei Chalcetidum — fecit. Mon. Anecr.) but though the senate-house was rebuilt, it was no longer named Hostilia, but, after his new founder, Julia. Now what has Becker got to oppose to all this weight of testimony? Solely a passage in Gellius,—which, however, he misapprehends,—in which it is said, on the authority of Varro, that the new curia had to be inaugurated, which would not have been the case had it stood on the ancient spot (*Tum adscriptis (Varro) de locis in quibus senatus consilium fieri jure possedit, dominum conflatumque, nisi in loco per agrumres constituto, quod ad modum appellavit, senesque consultum factum est, juxta id non fuisse. Properas et in Curia Hostilia et in Pompeia, et post in Julia, cum profusa ea loca fuisse, templum esse per agrumres constituata.*) (xvii. 7. § 7.) But Becker has here taken only a half view of these agrural rites. As a temple could not be built without being first inaugurated, so neither could it be pulled down without being first exaugurated. This is evident from the accounts of the exauguration of the fames in order to make room for the temple of the Capitoline Jupiter. ("Et, ut libera a careris religiosissimus area esset tesa Jovis templique ejus, quod inacissur, exaugurare fane acceletque statut, quae aliquot inibi a Tatius rege, consecrata inauguraturque postea fuenrunt," Liv. i. 55, cf. v. 54; Dion. Halic. iii. 69.) When Caesar, therefore, pulled down the curia of Faustus he first had it exaugurated, by which the site again became a locus profanus, and would of course require a fresh inauguration when a new temple was erected upon it. The curia was in use in the time of Tiberius (v. i. 11) must have been the Curia Julia; and the following lines seem to show that it had risen on the site of the ancient one:—

"Curia praetexta quae nam metet alta Senatu
Pellius hahuit, rustica corda, Patres."

A further confirmation that the new curia stood on the ancient spot is found in the fact that down to the latest period of the Empire that spot continued to be the site of the senate-house. The last time that mention is made of the Curia Julia it is in the reign of Caracalla as consul (senatus) at Perusia. In Curia Julia vobis vocatur, sed in Capitolio convocavit, Suet. Cal. 60); and as we know that the curia was rebuilt by Domitian, the Julia must have been burnt down either in the fire of Nero, or more probably in that which occurred under Titus. It is not unlikely, as Becker supposes (Handb. p. 347), that Vespasian and Titus would have suffered an old and important building like the curia to lie in ashes whilst they were erecting their new circus, theatre and baths. The new structure of Domitian, called Senatus in the later Latin ("Senatum dicè et pro loco et pro hominibus," Gell. xvi. 7), is mentioned by several authorities (Hieronym. an. 92. i. p. 443, ed. Rom. Cassiod. Chron. ii. p. 197; Catal. Imp. Vener. p. 243.) The place of this senatus is ascertained from its being close to the little temple of Janus Geminus, the index belli pacisque (pater de tueore in tuo) in vet. a po or p. b. vulpetr. Prop. B. G. i. 25); and hence from its situation, it was sometimes called "Curia Palmatia" (Vopisc. Asrel. 41. Tacit. 3.) The same situation is confirmed by other writers. Thus Dion Cassius mentions that Didius Julianus, when he first entered the curia as emperor, sacrificed to the Janus which stood before the doors (Ixxii. 13). In the same manner we find it mentioned in the Notitia in the viii th Regnum. That it occupied the site of the ancient church of S. Martina, subsequently dedicated to and now known as S. Maria Maggiore, is confirmed by an inscription (Gruter, clxx. 5) which formerly existed in the Ambone, or hemicycle, of S. Martina, showing that this hemicycle, which was afterwards built into the church, originally formed the Secretarium Senatus (Urichs, Rom. Top. p. 57, seq.; Preller, Regiuncam, p. 142.) The Janus temple seems to have been known in the middle ages under the appellation of templum fatale, by which it is mentioned in the Mirabilla Urbis. ("Justa cum templum fatale, qui quod planum refugi. inter a. e. S. Adriana," ib.) In the same neighbourhood was a place called in the later ages "Al Palaman," which also connects the senatus with this spot, as being both near to that place and to the Arcus Severi. Thus Ammianus: "Deinde ingressus urbem Theodoricus, venit ad Senatum, et ad Palman populo aloquatur," &c. (Exc. de Otho, 66.) And in the Acta SS., Mai. vii. 12: "Ligeraretur ei manus a targo et decollaverant extra Capitolium et extrahereque jactaverunt cam iuxta arcum triumphi ad Palaman." (cf. Anastas. I. Sist. c. 45.) The appellation "ad Palaman" was derived from a statue of Claudius II. clothed in the tunica palmata, which stood here: "Hic totius orbis judicium in Rostris posta est columna cum palmata statua superfixa." (Trebl. Pollio, Claud. c. 2.) We cannot doubt, therefore, that the curia or senatus built by Domitian was near the arch of Severus; which is indeed admitted by Becker himself (Handb. p. 358). But, from his having taken a wrong view of the situation of the comitium, he is compelled to maintain that this was altogether a new site for it; and hence his curia undergoes no fewer than three changes of situation, receiving a new one almost every time that it was rebuilt, namely, first, on the N. side of his comitium, secondly on the S. side, and thirdly near the Arcus Severi, for which last site the evidence is too overwhelming to be rejected. We trust that our view is more consistent, in which the senate-house, as was most probable, appears to have always retained its original position. And this result we take to be no slight confirmation of the correctness of the site which we have assigned to the comitium. In their multitudinous variations, Bunsen and Becker are sore puzzled to find a place for their second curia—the Julia—on their comitium, to which the passages before cited from Pliny and Dion inevitably fix them. Bunsen's strange notions have been sufficiently refuted by Becker (Handb. p. 358), and we need not therefore examine them here. But though Becker has succeeded in overthrowing the hypothesis of his predecessor, he has not been able to establish one of his own in its place. In fact he gives it up. Thus he says (p. 335) that, in the absence of all adequate authority, he will not venture to fix the site of the curia; yet he thinks it probable that it may have stood where the three columns are; or if that will not answer, then it must be placed in the (in) Vatic. The emperor's complaint of the want of authorities is unfounded. If he had correctly interpreted them, and placed the comitium in its right situation, and if he had given due credit to an author like Dion Cassius when he says (Lc.) that it was determined to rebuild the Curia Hostilia, he had not needed to go about seeking for impossible places on which to put his Curia Julia.

There are three other objects near the forum into which, from their close connection with the Basilica Julia, we must inquire at the same time. These are the CHALCIDICON, the CHALCIDICON GAVECASTES, and a TEMPLE OF MINERVA. We have already seen that the first of these buildings is recorded in the Monumentum Agrestorum as erected by Augustus adjoining the curia; and the same name is also mentioned by Dion Cassius among the works of Augustus: τό το Αθάνακαι τό Χαλκιδικον άνοικτον, καὶ το βολετρηριαν, το ισθιολιοτο τον πατρον αυτοτον γενειοκατω, καθισκον (ii. 22). But regarding what manner of thing the Chalcidicum was, there is great diversity of opinion. It is one of those names which have never been sufficiently explained: but it was perhaps a sort of portico, or covered walk (deambulatorium), annexed to the curia. Bunsen, as we have mentioned when treating of the temple of Castor in the preceding section, considers the Athenaecum and Chalcidicum to have been identical; and as the Notitia mentions an Atrium Minervae in the 8th Region, and as a Minerva Chalcidica is recorded among the buildings of Domitian, he assumes that these were the same, and that the unlucky ruin of the three columns, which has been so transeunted by the topographers, belonged to it. In all which we can only wonder at the uncritical spirit that could have suggested such an idea; for in the first place the Monumentum Agrestorum very distinctly separates the aedes Minervae, built by Augustus, from the Chalcidicum, by mentioning it at a distance of five lines apart; secondly, the aedes Minervae is represented to be on the Aventine, where we find one mentioned in the Notitia (cf. Ov. Fast. vi. 728; Festus, e. Quinquatras, p. 257; Miik.), and consequently a long way from the curia and its adjoining Chalcidicum; thirdly, they are also mentioned separately by Dion Cassius in the passage

3 E 4
Before closing, whose text is not to be capriciously modified with by reading, to the Athenian to the east of the entrance, in order to prop a theory which cannot support itself. We need not, therefore, enter further into this view. That of Becker (Handb. p. 335) seems probable enough, that the Chalcidicum usurped the place of the semicolumnum of the curia, though we should be more inclined to say that of the Graceostasis, as the position of the latter seems at all events to have shifted about this period. We learn from Pliny (xiii. 6) that in his time it no longer stood "supra Comitia, in such a place seems to have existed in the latest period, and is mentioned in the Notitia (Regia viii.), under the altered name of Graceostadium, close to the Basilica Julia, though the MSS. vary with regard to the position. It had probably, therefore, been removed before the time of Pliny to the south side of the forum, and perhaps at the time when the new curia and Chalcidicum were built. If this was so, it would tend to prove that the comitium did not extend across the whole breadth of the forum. The entire image of the Notitia must have been of a later period.

Another change in the disposition of the forum, with reference to the politics of the times, which was actually carried out by Caesar in his lifetime, was the removal of the ancient rostra. The comitium, which may be called the aristocratic part of the forum, had become in a great measure deserted. The popular business was now transacted at the lower end of the forum; and Caesar, who counted the mob, encouraged this arrangement. The steps of the temple of Castor had been converted into a sort of extempore rostra, whence the demagogues harangued the people, and Caesar himself had sometimes held forth from them. (Dion Cass. xxxviii. 6; cf. C. c. Sedat. 15; App. B. C. iii. 41.)

Dom Cassius expressly mentions that the rostra were changed by Caesar (xiii. 49). The change is also mentioned by Asconius: "Erant enim incommoda rostra non in loco quo nunc sunt sed ad Comitium prope juncta Curia" (ad C. c. Mil. 5), where, by the way, the undoubted mention of the curia, he must of course have meant the curia cistinum in his time, which was the Julia; and this shows that it stood on the ancient site of the Hostilia. Another proof that the rostra were moved in Caesar's lifetime may be derived from Livy (Epit. xxvi.): "Caesares corpus a plebe ante rostra crenatum est." For, as Appian (B. C. ii. 148) indicates the place in another manner, and says that the burning of the body took place before the Regia, it is plain that the rostra mentioned in the Epitome just cited must have been very near the Regia. But we have seen that the ancient rostra were on the comitium, at the other end of the forum. There are other passages from which we may arrive at the exact situation of the new rostra. Thus Suetonius, in his account of the funeral of Octavian, the sister of Augustus, says that Drusus also on that occasion pronounced a panegyric from the new rostra, or those commonly used, as we must conclude from the words prefixed to them without any distinctive epithet ("pro rostris Philaro, Canina (Fbrb Rom. p. 129) adopted the common reading, with the omission of sub, because he imagined that "sub Vetricerni" must mean "under some old building," instead of its being a designation for the S. side of the forum. And Cicero, when pronouncing one of his invectives against Antony from the rostra, bids his audience look to the left at the gilt equestrian statue of Antony, which, it appears from what Cicero says, stood before the temple of Castor. (Phil. vi. 5.) From a comparison of all these passages we may state with precision that the new rostra were established by Caesar on the SE. side of the forum, between the temple of Castor and the Regia, a spot which, as we have said, had previously become the regular place for the comitia. But, as this was on Becker's comitium,—his lower end of the forum being taken for granted,—we could not of course admit that this was the place on which the new rostra were erected, and he is therefore obliged to place them a great deal higher up towards the Capitol, and to the W. of the temple of Castor. As, however, in questions of this sort, one error always begets another, he is thus puzzled to account for the circumstance how Cicero, speaking from these rostra, could allude to the statue of Antony as being on his left (Handb. p. 337); and, in order to avoid this, asserts that Dion Cassius was mistaken, in saying that the rostra were removed in Caesar's lifetime. It must be the old rostra, those on the (his) comitium, before which Caesar's body was burnt, and then everything goes right. Unfortunately, however, the testimony of Dion is confirmed by the expressive silence of the Monumentum Africanum. That record, in which Augustus so ostentatiously reites his buildings, his repairs, and his alterations, says not a word about the rostra. We have seen a little while ago that Becker contradicts himself respecting the Curia Julia, and now he contradicts both that author and the Monumentum Africanum, and solely because he has adopted a wrong site for his comitium. How shall we characterize a topographical system which at every turn comes into collision with the best authorities? On the other hand, if there is any truth in the system we have adopted, all the merit we can claim for it is derived from paying due respect to these authorities, and implicitly following what they say, without presuming to set our own opinion above their teaching. Before we quit this subject it may be as well to say that, though these new rostra of Caesar's became the ordinary suggestam, or platform, for the orators, yet the old ones do not appear to have been demolished. We have before seen, from a passage in Trebellius Pollio, that the old rostra ad Palmam, or near the arch of Severo, existed in the time of Claudius ii.; and the Notitia and Curiae expressly mention three rostra on the forum, which may have a little furthering the common reading of this passage is "pro Rostris veteribus," that is, from the old rostra on the comitium; and we shall see further on that the old rostra appear to have existed after the erection of the new. It is not, however, probable that they would be used on this occasion, even if they were ever used at all; and we see from Dion Cassius's account of the
that an elevated terrace, presenting the segment of a circle, which was excavated at this part of the forum some years ago, is the actual rostra (Indicazione, p. 270, ed. 1850, and his Dissertation "Sui Resti del Foro Romano" in the Atti dell' Accademia Rom. di Archeologia, viii. p. 107, seq.; cf. Becker, Handbuch, p. 359). It seems also to have been here that Augustus received the homage of Tiberius, when the latter was celebrating his German triumph: "arcus princeps in Capitolium secteret, descendit e cura, sequae praebenti pati ad genua submissit." (Suet. Tib. 20.) The scene is represented on the large Vienna Cameo. (Eckhel, Pierres grassetes, 1; Mongez, Iconogr. Rom. 19, vol. ii. p. 62.) If these inferences are just the ancient rostra would appear to have been used occasionally after the erection of the new ones.

The Statues of Sulla and Pompey, of which the former appears to have been a gilt equestrian one, were re-erected near the new rostra, as they had formerly stood by the old ones. After the battle of Pharsalus they were both removed, but Caesar replaced them. Besides these there were two Statues of Caesar, and an equestrian Statue of Octavian. (Dion Cass. xlii. 18. xliii. 49, xlv. 4; Suet. Caes. 75: App. B. C. l. 97.)

Caesar also began the large basilica on the S. side of the forum, called after him the Basilica Julia; but, like most of his other works, lie left it to be finished by Augustus ("Forum Jullium et Basilicam quae fuit inter aedem Castoris et aedem Saturni, octo proftigataque opera a patre meo perfecta," Mun. Anec. 1.). Its situation is here so accurately fixed that it cannot possibly be mistaken, namely, between the temple of Saturn, which, as we have seen, stood at the head of the forum, and the temple of Castor, which lay near that of Vesta; and the Notice indicates the same position; so that it must have been situated between the Venus Jogarius and Venus Tuscus. It has been seen before that this was the site of the ancient Basilica Sempronia, a building of which we hear more during the imperial times; whence it seems probable that it was either pulled down by Caesar in order to erect his new basilica upon the site, or that it had previously given to ruin. And this is confirmed by the fact that, in the excavations made in 1780, it was ascertained that the basilica was erected upon another ancient foundation, which Canina erroneously supposed to have been that of the comitium. (Fredenheim. Exposed d'une Découverte faite dans le Forum Romanum, Strasbourg, 1796; Fca, l'Avv. di Notizie e della Basilica Giulia ed alcuni Siti del Foro Romano, ap. Canina, Foro Romano, p. 118.) In some excavations made in 1835 near the column of Phocas, another proof of the site of the basilica was discovered. It was the following fragment of an inscription, which taken by itself seems too mangled and imperfect to prove anything:

... A ... ASILICA ... ER REPAHATA ... SET AGFICICT.

It was re-located, however, that this must be the fragment of an inscription discovered in the 16th century at this spot, which is recorded by Gruter (clxxi. 7) and by Panvinius in his Descriptio Urbis Romae (Gravius, iii. p. 300). The two inscriptions, when put in juxta-position, appear as follows:

GARINIUS VETITUS
PROPHANUS, V. C. PRAEF. VEB
STATUM QVAE BASILICA
IULIA A SE NOVITRE
REPAHATAE, ORNAMENTO
ESSET ADIECT
DEDIC. XV. KAL. FEBRARI
... PVLPLICVM
CORNELIO ANXYLLNO II
ET. AVIMP. FRONTE 
COS.

thus leaving no doubt that they were the same. (Bollettino dell' Inst. Marzo, 1835) Panvinius, whose work was written in 1538, as appears from the dedicatory epistle, says that the inscription was found "paulo ante in foro Romano prope collunam," that is, the column of Phocas. The basis on which it stood must therefore have been again covered with rubbish, till the inscription was re-discovered in its more imperfect form after a lapse of nearly three centuries. Anulinsus and Fronto were consulted a. D. 199, and consequently in the reign of Septimius Severus, when the basilica appears to have been repaired.

Alltogether, therefore, the site of the basilica may be considered as better ascertained than those of most of the important monuments. It must have been bounded on the E. and W., like the basilica Sempronia, by the Vicus Tuscanus and the Vicus Jugarius. It appears from the Monumentum Anecrom, that the original building, begun by Caesar, and completed by Augustus, was burnt down during the reign of the latter, and again rebuilt upon in a larger scale, with the design that it should be dedicated in the names of his grandsons Caius and Lucius ("Et censum basilicam consumptum incendio amphiato ejus solo sub titulo nominis filiorum [meorum] incheavi et, si virus non perficiessem, perfici ab heredibus [meis jussi]."

But, from a supplement of the same inscription recently discovered, it appears that Augustus lived to complete the work ("Opera fecit nova—forum Augustum, Basilicam Julianum," etc.; Franz, in Gerhard's Archiologia, Vol. No. ii. 1843). Nevertheless it seems to have anciently borne the names of his grandsons: "Quaem eiainm opera sub nomine alieno, nepotum sedicet et uxoris sororius facit: ut porticus basilicanque Lucii et Gaii. &c." (Suet. Aug. 29.) The addition which Augustus mentions having made to the building ("amphiato ejus solo") may probably have been the portico here mentioned. In A. D. 252 it was again destroyed by fire, and was rebuilt by Diocletian (Catal. Imp. Vienn. p. 247, Rec.)

The Basilica Julia was chiefly used for the sittings of law-courts, and especially for the cause centumvirates (Pra. Epist. v. 21, 11. 14.) Its immense size may be inferred from another passage in Pliny (vi. 53), from which we learn that in 180 it was divided into 4 concilia, or courts, with 4 separate tribunals, and numerous benches of advocates, besides a large concourse of spectators, both men and women, were accustomed to assemble here. The 4 tribunals are also mentioned by Quintilian (In. Or. xii. 5, 6).
ROMA.

The funeral of Caesar was also that of the Republic. After his death and apotheosis, first an ALTAR and then an AEDICULA JUILLA were erected to him, on the spot where his body had been burnt (Boucicata, in the forum, where the piers are), Dion Cass. xiv. 51: καὶ ἔρρην οἱ ἐν τῇ ἱγρα καὶ ἐν τῇ τάφῳ ἐν ψευκτενία προκαταλαβόντως, I. xlvii. 7: "Aedem Divi Iuli—seu, Mon. Anoncry.

We also find mention of a column of Numidian marble nearly 20 feet high, erected to him on the forum by the people, with this inscription: "Parente Patriae," (Suet. Caes. 88.) This, however, seems to have been the same monument sometimes called ara Sertorius; we must therefore conclude that this was the place where the altar was set up by the people, and subsequently the temple by Augustus. But this has been the subject of a warm controversy. Bunsen placed the temple on the Velian ridge, so that its front joined the Saglia Via where it crosses the eastern boundary of the forum, whilst Becker (Homob. p. 336) placed it on the forum itself, so that its back joined the same road. The authorities are certain in favour of the latter view; and the difficulties raised by Ulrichs (Rom. Top. p. 21, seq.), who came to the rescue of Bunsen's theory, arise from the mistake shared alike by all the disputants, that this end of the forum was the comitium. Ulrichs might have seen that this was not so from a passage he himself quotes (p. 22) from the Fasti Amatunini, X. Kal. Sept., showing that the temple stood on the forum ("DivusJulius Forum"). He seeks, however, to get rid of that passage by an unfortunate appeal to the Schol. Curs. ad Hor. S. i. 6, 35, in order to show that after the time of Caesar there was no longer any distinction made between the forum and comitium, since the puteal is there named as being on the forum, instead of on the comitium as Ulrichs thinks it should be. But this is only trying to support one error by another, since we have already shown that the puteal really was on the forum and not on the comitium. We need not therefore meddle with this controversy, which concerns only those who have taken a wrong view of the comitium.

We will, however, remark that the passage adduced by Becker in his Antecost, p. 41, from the Scholiast on Persius (v. 49), where the puteal is mentioned as "in portici Julia ad Fabianum arcum," confirms the sites of these places: from which passage we also learn that the temple had a portico. Vitruvius says (iii. 3) that the temple, which must have been a small one, was of the order called periptera pycnostyla, that is, having columns all round it, at a distance of one diameter and a half of a column from one another. It must have been raised on a lofty base or substraction, with its front towards the Capitol, as we see from the following verses of the same poet (Ex Paut i. 285):

"Fraterbus assimilis, quos proxima templorum
Divus ab excelsa Julius aede videt."

This substraction, or κορύφη, as it is called by Dion, served, as we have seen, for a third rostra and, after the battle of Actium, was adorned by Augustus with the beams of the captured Egyptian ships, from which time it was called ROSTERIA JULIA.

Such were the alterations made by Julius Caesar in the forum, and by Augustus in honour of his adoptive father. The latter also made a few other additions. He erected at the head of the forum, under the temple of Saturn, the MILLIARIUM AUREUM, which we have before had occasion to mention. (Dion Cass. iv. 8; Suet. Otho, 6; Tac. H. i. 27.) It was in shape like a common milestone, but seems to have been of bronze gilt. Its use is not very clear, as the milestones along the various roads noted the distances from the gates. But when we recollect that Augustus included a great extent of new streets in his Regions, it seems not improbable that it was intended as a measure of distances within the city; and indeed we find that it was made the starting point in the survey of the city under Vesparian. (Pin. iii. 9.) Hence it might be regarded, as Pinarch says (Gall. 24), the common centre at which all the roads of Italy terminated. The UMBILICUS ROMAE which Becker confounds with it (p. 344) appears to have been a different thing, as the Notitia mentions both of them separately under Regio viii. The piece of column excavated near the arch of Severus must have belonged to this umbilicus, or to some other monument, not to the milliarius, which appears from the Notitia and Curiosum to have retained till a late period its original position near the temple of Saturn at the head of the forum.

We also read of VOETIUM AUGUSTORI triumphal arch erected on the forum in honour of Augustus, but its position is nowhere accurately defined; though from some Scholia on Virgil (v. 606) cited by Mai, it is supposed to have been near the temple of Julius (Cantina, Foro Rom. p. 139 note.)

THE MILLIARIUM.

DIVUS AB EXCELSA JULIUS AEDE VIDEI.
ROMA.

The Arcus Tiberii, another triumphal arch, dedicated to Tiberius, was erected at the foot of the Clivus Capitolinus near the temple of Saturn, in commemoration of the recovery of the Roman standards lost with the army of Varrus. (Tac. Ann. ii. 41.) Tiberius also restored the temple of Castor in the name of himself and of his brother Drusus, as well as the temple of Concord, as we have before had occasion to remark.

Under the following emperors down to the time of Domitian we do not read of many alterations on the forum. The fire of Nero seems to have chiefly destroyed its lower part, where the temple of Vesta and the Regia lay; the upper portion and the Capitol appear to have escaped. The Curia Julia was probably burnt down in the fire which occurred in the reign of Titus; and at all events it was certainly rebuilt by Domitian. The celebrated Statue of Vinc-
tory, consecrated in the curia by Augustus, appears, however, to have escaped, since Domitian expressly says that it existed in his time, and we find it mentioned even later. (Suet. Aug. 100; Dion Cass. l. ii. 22; Herodian, v. 5.) It was this statue, or more correctly perhaps the altar which stood before it, that occasioned so warm a contention between the Christian and heathen parties in the senate in the time of Tiberius and Valentinian II., the former being led by Ambrosius, the latter by Symmachus, the prefectus urbi. (Symmachus. Epist. x. 61; cf. Ambros. Epist. ad calam. Symm. ed. Par. t. i. p. 740, ii. pp. 473, 482; Gibbon, Decline and Fall, vol. iii. p. 409, seq., ed. Smith.) Ambrose is said to have obtained its removal; though this, perhaps, relates only to the altar, since the statue is mentioned by Claudian as still existing in the time of Honorius. (De VI. Cons. Hon. v. 597):—

"Adulti ipsa suis ales Victoria templis
Romanae tutela togae: quae divite pena
Patricii reverenda foveat sacraria coeptus."[1]

Domitian had a peculiar predilection for two deities, Janus and Minerva. He erected so many archways all over the city that an ancient pasquinade, in the form of a Greek pun, was found inscribed upon one of them:—  
"Janus arcusque cum quadrigris et insignibus triumphorum per Regiones urbis tautos ac tot extraxit ut calidum Graece in sericum sit. (Suet. Dom. 13; cf. Dion. Cass. lvi. 1.) Among other temples of Minerva he is said by some authorities to have erected one on the forum between those of Vesta and Castor. (Becker, Handb. p. 356.) But there seems to have been hardly room for one at this spot; and, as we have before remarked, the Statua does not mention it. Domitian also built, in honour of his father and brother, the Temple of Vespasian and Titus, next to the temple of Concord. The three columns on the Clivus Capitolinus most probably belong to it. The opinion that the eight Ionic columns are remains of this temple has already been discussed.

Such was the state of the forum when the colossal equestrian Statue of Domitian was erected on it near the Lacus Curtius. Statius (Silvae i. 1) has written a small poem on this statue, and his description of it affords many interesting topographical particulars, which fully confirm what has been already said respecting the arrangement of the forum:—

[1] Quae superimposito moles geminata colossae
Stat Latium complexa forum? coelone peractum

ROMA.

Fluxit opus? Siculis in conformata campanis
Edilis, laurum Soterem Brontenque religuit?

Par operi sedes. Hinc obvia limina pandit,
Qui fessus bellis, adscitae munere prophii,
Primus hic castoris ostendit in aethera divis.

At laterum pias hima Julia tecta tenetur
Ilidem belli genticis regia Panelli.
Terga pater blandigea vident Concordia vultu.
Ipsa autem puro celsum caput aere septus
Templa superfulges, et prospectare videris
An nova contempit surgunt palatia fannnis
Pulcrus; an tacita vignet face Troicos ignis
Atque exploratur jam landet Vesta ministraet," &c.

The statue, therefore, must have faced the east, with the head slightly inclined to the right, so as to behold the temple of Vesta and the Palatine. Directly in front of it rose the temple of Divus Julius; on the right was the Basilica Julia, on the left the Basilica Aurelia; whilst behind, in close juxtaposition, were the temples of Concord and of Vespasian and Titus. The site of the statue near the Lacus Curtius is indicated in the poem (v. 75, seq.).

The next important monument erected on the forum after the time of Domitian appears to have been the Temple of Antoninus and Faustina, considerable remains of which still exist before and in the walls of the modern church of S. Lorenzo in Miranda. It stood at the eastern extremity of the N. side of the forum. These remains, which are now sunk deep in the earth, consist of the proemus or vestibule, composed of eight columns of cipollino marble supporting an architrave, also part of the cela, built of square blocks of piperino. The architrave is ornamented with arabesque candelabra and griffins. On the front the inscription is still legible:—

DIVO . ANTONINO . ET

TEMPLE OF ANTONINUS AND FAUSTINA.

But as a temple was decreed both to Antoninus Pius and his wife, the elder Faustina (Capitol, Anton. P. c. 6, 13), and to the younger Faustina, their daughter (ib. c. 26), and as divine honours were also rendered after his death to M. Aurelius Antoninus, the husband of the latter, it becomes doubtful to which pair the temple is to be referred (Nibby, Foro Rom. p. 183). It seems, however, most probable that it was dedicated to Antoninus Pius and the elder Faustina. It is stated by Pirro Ligorio (ap. Canini, Foro Rom. p. 192) that in the excavations made here in 1547, the basis of a
statue was discovered with an inscription purporting that it was erected by the guild of bakers to Antoninus Pius. In the time of Tiberius the temple was a great deal more perfect than it is now, and had an atrium in front, in the middle of which stood the bronze equestrian statue of M. Aurelius, which now adorns the Capitol. (Architettura, lib. iv. c. 90.) The inscription in Gruter (vol. 6) probably belonged to the pedestal of this statue. It was found in the Sacra Via in 1562. Some difficulty, however, arises with regard to this account, since from various other sources we learn that the statue stood for a long while before the church of St. John Lateran. From Zaischler's account of the curve, or court, it would appear that the building lay some distance back from the Sacra Via.

In the reign of Commodus a destructive fire, which lasted several days, occasioned much damage in the neighbourhood of the forum, and destroyed among other things the temple of Vesta. (Herod. iii. c. 14.) According to Dion Cassius the same fire extended to the Palatine and consumed almost all the records of the empire (lib. xxvii. 24). It was on the same occasion that the shop of Galen, which stood on the Sacra Via, was burnt down, and also the libraries of the Palatine Library, as he himself assures us. (De Compos. Medic. lib. i. c. 1.)

This damage seems to have been repaired by Septimius Severus, the munificent restorer of the Roman buildings, who with a rare generosity commonly refrained from inscribing his own name upon them, and left their honours to the rightful founders. (Romane omnes aedes publicas, quae vitio temporum labebantur, instauravit: masquem prope nonomnem inscripta, servatis tamen ubique titulis coelitorum, "Spart. Sec. c. xliii.). Of the original monuments erected by that emperor the principal one was the Augusteum, or triumphal arch, which still exists in good preservation at the top of the Roman forum. The inscription informs us that it was dedicated to Severus, as well as to his two sons, Caracalla and Geta, in his third consulate and the 11th year of his reign, consequently in A. D. 203.

Between the temple of Concord and the arch, the church of SS. Sergi e Bacco was built in the middle ages, with its tower standing upon the arch. It appears from a medal of Caracalla that a chariot with six horses and persons within it stood on the summit of the arch, and other persons on horseback at the sides, supposed to be the emperor's sons. It was erected partly in front of the temple of Concord, so as in some degree to conceal the view of that building, and thus to disfigure the whole arrangement of the edifices at this part of the forum. Originally it does not seem to have spanned any road, as the latest excavations show, but it stood somewhat off, and above the level of the forum, and that the two side arches were approached by means of steps. (Casina, Fondo Rom., p. 202.) The paved road that may be now seen under it must have been made at a later period. It would be quite a mistake to suppose that the Sacra Via passed under it. This road (here the Clivis Capitolina) began to ascend the hill in front of the temple of Saturn and under the arch of Tiberius.

We shall here mention three other statues which stood in this neighbourhood, since they serve to confirm the topography of it as already described. Pliny mentions three Statues of the Sibyl as standing near the rostra. ("Exquerunt et Sibyllae in una Rosa esse non miror, tues sint licet," xxxiv. 11.) That he meant the ancient rostra is evident from his going on to say that he considered these statues to be among the earliest erected in Rome. At a late period of the Empire these seem to have obtained the name of the Fates (Machai or Parcae). They are mentioned by Pausanias, in a passage before alluded to, as in the vicinity of the curia and temple of Janus (εχει δε τον νεφον ιν αυτο ην του βουληστηρον ολίγων υπερβαίνει τα επιστάμα τε γεωργίαν τα τοις μεγιστάν μνημονίαι καλεῖν. B. G. i. 25.) A whole street or district in this quarter seems to have been named after them, since both the modern church of S. Adriano, at the eastern corner of the Via Lateranæ, and that of SS. Cosma e Damiano, which stands a little beyond the temple of Faustina, and consequently out of the proper boundaries of the forum, are said to have been founded in it. ("Fecit ecclesiam beato Adriano martyri in tribus Fatis," Anastas. V. Honor. i. p., 11.)

ROMA.

ARCH OF SEPTIMIUS SEVERUS.
ROMA.

121, Blanck; "In ecclesia vero beatorum Cosmae et Damianii in tribus Fatis," &c. Id. V. Hadr. 1b. p. 254.) Hence perhaps the name of tephrum fitalae applied to the temple of Janus.

The last object which we shall have to describe on the forum is the COLUMN OF PHOECAS. Whilst the glorious monuments of Julius and Augustus, the founders of the empire, have vanished, this pilar, erected in the year 608 by Smaragdus, exarch of Ravenna, to one of the meanest and most hateful of their successors, still rears its head to testify the low abyss to which Rome had fallen. It appears from the inscription, which will be found in Cimiez (Foro Rom. p. 213) and Bunsen (Becker, vol. iii. p. 271), that a gift statue of Phoecas stood upon the summit. The name of Phoecas has been erased from this column, probably by Heracleus; but the date sufficiently shows that it must have been dedicated to him. Previously to the discovery of this inscription, which happened in 1813, it was thought that the column belonged to some building; and indeed it was probably taken from one, as the workmanship is much superior to what could have been executed in the time of Phoecas. Byron alludes to it as the "ruin of a higher temple." In the excavations made in 1816, at the expense of the duchess of Devonshire, the pedestal was discovered to be placed on a raised basis with steps of very inferior workmanship. (Murray's Handbook of Rome, p. 62.) It may be remarked that this column proves the forum to have been in its ancient state, and unencumbered with rubbish, at the commencement of the 7th century. Between this pillar and the steps of the Basilica Julia are three large bozes intended for statues.

V. THE IMPERIAL FORA.

Forum Julia.—As Rome increased in size, its small forum was no longer capable of accommodating the multitude that resorted to it on mercantile or legal business; and we have seen that attempts were early made to afford increased accommodation by erecting various basilicae around it. Under the Empire, when Rome had attained to enormous greatness, and the edifices were constructed by various emperors; as the Forum Caesars or Julianum, the Forum Augusti, the Forum Nervae or Transitorium, and lastly the Forum Trajani. The political business, however, was still confined to the ancient forum, and the principal use of the new fora was as courts of justice. Probably another design of them was that they should be splendid monuments of their founders. In most cases they did not so much assume the aspect of a forum as that of a temple within an enclosed space, or templum,—the forum of Trajan being the only one that possessed a basilica. From this characteristic of them, even the magnificent temple of Peace, erected by Vespasian without any design of its being appropriated to the purposes of a forum, obtained in after times the names of Forum Vespasiani and Forum Pacis.

The first foundation of this kind was that of Caesar, enclosing a TEMPLE OF VENUS GENETRIX, which he had vowed before the breaking out of the Civil War. After the battle of Philippi the whole plan of it was arranged. It was dedicated after his triumph in c. 45, before it was finished, and indeed so hastily that it was necessary to substitute a plaster model for the statue of Venus, which afterwards occupied the cella of the temple. (Plin. xxxv. 43.) Caesar did not live to see it completed, and it was finished by Augustus, as we learn from the Monumentum Augustanum. We are told by Appian (B. C. ii. 102) that the temple was surrounded with an open space, or tetrastich, and that it was not destined for traffic but for the transaction of legal business. As it stood in the very heart of the city Caesar was compelled to lay out immense sums in purchasing the area for it, which alone is said to have cost him "super h. s. millies," or about 900,000£ sterling. (Suet. Cass. 26; Plin. xxxvi. 24.) Yet it was smaller than the ancient forum, which now, in contradistinction to that of Caesar, obtained the name of Forum Magnum. (Dion Cass. xxii. 22.)

No vestige of the Forum Julium has survived to modern times, and very various opinions have been entertained with regard to its exact site; although most topographers have agreed in placing it behind the N. side of the Forum Romanum, but on sites varying along its whole extent. Nardini was the first who pointed to its correct situation behind the church of St. Martinus, but it was reserved for Canina to advance the proof.

We must here revert to a letter of Cicero's (ad Att. iv. 16), which we had occasion to quote when speaking of the restoration of the Basilica Aemilia under the forum of the Republic. It has an important passage with regard to the situation of the Forum Julium, but unfortunately so obscurely worded as to have proved quite a riddle to the interpreters. It appears to have been written in B. C. 54, and runs as follows: "Paulinus in medio foro basilicae Jam paene textus iidem antiquis columnis; idam antiquam quam locum facit magnis excelsis columnis. Quid queras? nihil gratias ille monumento, nihil gloriosius. Itaque Caesares amici (me diuo et Oppiium, dirumparia licet) in monumentum illud, quod tu tollere landibus solas, ut forum laxaremus et usque ad aitrium Libertatis explicaremus, contemplationem sexcentis h. s. Cum privatis non poteris transigii minus pecunia. Efficiemus rem gloriosissimam: nam in Campo Martio sepa tributis comitis marmoreo mmans et texta factori exque ingenioso excelsum fundamentum," &c. Dr. Bunsen has given two different interpretations. He first imagined (Handb. p. 302, seq.) that Cicero was speaking only of two buildings: the Basilica Aemilia, which Paulinus was restoring, and a new basilica, which the same person was building with Caesar's money, and which was afterwards named the Basilica Julia. But before he had finished his work he altered his mind, and at p. 460 pronounces his opinion that Cicero was speaking of no fewer than four different edifices: 1st, the Basilica Paulii ("Paulus—Columnus"); 2nd, the Basilica Julia ("Julium—gloriosius"); 3rd, the Forum Julium ("Ilique—pecunia"); 4th, the Septa Julia ("Efficiemus," &c.). With all these views, except the second, we are inclined to agree; but we do not think it probable that Paulinus would be constructing two basilicas at the same time; nor do we perceive how a new one only then in progress could have been a monument that Atticus had been accustomed to praise. The chief beauty of the basilica of Paulus was derived from its columns ("Name inter magnificis dicamus basilicam Paulii columnas e Phrygibus mirabilibus," Plin. xxxvi. 24. s. 1); and though it had undergone two or three subsequent restorations before the time of Pliny, we are nevertheless inclined to think that the columns praised by him were the very same.
which Atticus had so often admired. However this may be, we see through the obscurity of Cicero's letter the rough sketch of a magnificent design of Caesar's, which had not yet been perfectly matured. The whole space from the back of the Basilica Aemilia as far as the Septa Julia in the Campus Martius was to be thrown open; and perhaps even the excavation of the extremity of the Quirinal, ultimately executed by Trajan, may have been comprised in the plan. Cicero is evidently half ashamed of this vast outlay in favour of Caesar, and seeks to excuse it with Atticus by leading him to infer that it will place his favourite monument in a better point of view. When Cicero wrote the plan was evidently in a crude and insipid state. The first pretence put forth was probably a more external extension of the Forum Romanum; but when Caesar a few years later attained supreme power the new foundation became the Forum Julia. In his position some caution was requisite in these affairs. Thus the curia of Faustus was pulled down under pretence of erecting on its site a temple of Felicia—a compliment to the boasted good fortune of Sulla, and his name of Felix. But instead of restoring the curia Julia. The vacancy in the sums mentioned by Cicero and Saturninus probably arose from the circumstance that as the work proceeded it was found necessary to buy more houses. If this buying up of private houses was not for the Forum Julia, for what purpose could it possibly have been? The Curia Julia stood on the site of the Curia Hostilia, the Basilica Julia on that of the Scupulorum, and we know of no other buildings designed by Caesar about the forum.

With regard to the situation of the Atrium Libertatis, to which Cicero says the forum was to be extended, we are inclined to look for it, with Becker, on that projection of the Quirinal which was subsequently cut away in order to make room for the forum of Trajan. The words of Livy, "Censors exstemplo in atrium Libertatis ascendendarunt" (xlix. 16), seem to point to a height. A fragment of the Capitoline plan, bearing the inscription Libertatis, seems to be rightly referred by Curtius to the Basilica Ulpia. (Forum Rom. p. 185; cf. Becker, Ant. civ. p. 29.) Nor is our conjecture respecting the site of the Atrium Libertatis correct; it would have been occupied by the forum of Trajan and its appurtenances; and it therefore appears probable that the Atrium was comprehended in the Basilica Ulpia. Nor is this a more unfounded guess, since it appears from some lines of Sidonius Apollinaris (Epig. 2), that in his time the Basilica Ulpia was the place where slaves received their manumission. And that the old Atrium Libertatis was devoted to manumissions and other business respecting slaves appears from several passages of ancient authors. Thus Livy: "Postremae ex descensus est, ut ex quattuor urbibus tribunus unam palam in Atrium Libertatis sortirentur, in quam omnes, qui servitutem survivissent, confinirent" (xiv. 15). And Cicero: "Sed quae noster urbs, quae sunt habitatores nume in Atrio Libertatis? Quibusnam de servis? &c." (Mil. 22). Lastly, it may be mentioned that the following fragment of an inscription was found near the church of S. Martina, and therefore near this spot:

\[\text{SAPATVS PUBLY SVGRE [ROMANY] LIBERTAT.} \]

The preceding letter of Cicero's points to the Forum Julia as closely adjoining the Basilica Aemilia, and there are other circumstances that may be adduced in proof of the same site. Ovid (Fasti. i. 258) alludes to the temple of Iuno, standing between two fora, and these must have been the Forum Romanum and the Forum Caesarianum. Pliny's story (xvi. 86) of the lotus-tree on the Vulcanal, the roots of which penetrated to the forum of Caesar, whatever may be its absolute truth, must at all events have possessed sufficient probability to be not actually incredible; and there is no situation for Caesar's forum which tallies with that story better than that here assigned to it with relation to the temple of Iuno on the Capitoline. Becker, as well as many other writers, were evidently mistaken; our Vulcanal need not have been distant more than about 30 yards from the Forum Julia; that of Becker lies at about five times that distance from it, and would render Pliny's account utterly improbable.

Palladio mentions that in his time considerable remains of a temple were discovered behind the place where the statue of Marforio then stood, near the church of S. Martina, which, from the cornice being adorned with sculptures of dolphins and tridents, he thought was one dedicated to Neptune. But as we have no accounts of a temple of Neptune in this neighbourhood, and as these emblems would also suit the sea-born goddess, it seems probable that the remains belonged to the temple of Venus Genitrix. This is still more strikingly confirmed by Palladio's account of its style of architecture, which was precansen, as we know that of Venus to have been. (Archit. lib. iv. 31; comp. Vitruv. iii. 23.)

We can hardly doubt, therefore, that the forum of Caesar lay on this spot, as is indicated by so many various circumstances. The only objection that has been urged against it is the following passage of Servius, which places the ARGELITUM, a district which undoubtedly joined the Forum Julia, in quite a different part of the town: "Sunt genisse bellii portae—Sacrarium hoc Nuna Pompeius fecerat circa innum Argelatum juxta theatrum Marcelli, quod fuit in duobus brevisissimis tempore. Dubius autem proprium Janum bifrontem. Postea captis Fafis-21 evitata Tuscania, invenit simulacrum Jurni trium frontes, ut demonstrate unde castrum Numa instituuerat transitum est ad forum Transitorium et quattuor portarum innum templum est institutum" (ed Virg. Aen. vi. 607). That the Argelitum adjoined the forum of Caesar is evident from the following epigram of Martial's (i. 117. 8):

"Quod quaeris propius petas libeert
Arj. mempte solis sublig letum;
Capra Caesarea est forum taberna
Scipio postibus hymne et insi totis
Omnis ut cito perplexus poetas.
Iste me pote, ne me Attretum;
Hoc nomen dominum gerit tabernae."
taking of Falisci, or rather Falerii, and the erection of a Janus Quadrifrons on the Forum Transitorium, which did not exist till many centuries afterwards? Livy also indicates the Janus-temple of Numas as being in the Argeturnum ("Janum ad isthmum Argeturnum indicem pacis bellicique fest," i. 19); whence we must conclude that it was a district lying on the N. side of the forum. We do not think, however, with Becker (Handb. p. 261), that any proof can be drawn from the words of Virgil (Aen. viii. 345, seq.), where, with a poetical license, the various places are evidently mentioned without regard to their order. But how far the district called Argeturnum may have been encroached upon by the imperial fora it is impossible to say.

The forum of Caesar must have been very splendid. Before the temple of Venus stood a statue of the celebrated horse which would suffer nobody but Caesar to mount him, and whose fore-feet are said to have resembled those of a human being (Suet. Caesar. 61; Plin. viii. 64). The temple was adorned with pictures by the best Greek artists, and enriched with many precious offerings (Plin. viii. 59, 57, xxxvii. 5, &c.). It was one of the three fora devoted to legal business, the other two being the Forum Romanaum and Augustus:—

"Caesus, inquis, agam Cicerores discerunt ipsa
Atque erat in triplici par mildi nemo foco.

(Mart. iii. 38. 2.)"

Whether it was ever used for assemblies of the senate seems doubtful; at all events the passage cited by Becker (Handb. p. 369) from Tacitus (Ann. xvi. 27) proves nothing, as the word curia there seems to point to the Curia Julia. Of the subsequent history of the Forum Caesarius but little is known. It appears to have escaped the fire of Nero; but it is mentioned among the buildings restored by Diocletian after the fire under Carinus ("Opera publica arsena- runt Senatorum, Forum, Caesarius postrum, Basileum Julianum et Graecostadium, Catal. Imp. Venum, where, according to Pfeiffer, Reg. p. 143, we must read "Forum Caesarius, Atrium Minervae.") It is mentioned in the Orcho Romanae, in the year 1143, but may then have been a ruin.

Forum Augusti.—This forum was constructed for the express purpose of affording more accommodation for judicial business, which had now increased to such an extent that the Forum Romanaum and Forum Julianum did not suffice for it. It included in its area a Temple of Mars Ultor, vowed by Augustus in the civil war which he had undertaken to avenge his father's death:—

"Mars aedes, et satia seclerato sanguine ferrum,
Neque favor causa pro meliora turcs.
Templa fero, et, me victorem, vocaules Ultor.
Voverat, et fuso hostis ab hoste restit.

(Ov. Fast. v. 57. 3, seq.)"

This temple was appointed to be the place where the senate should consult about wars and triumphs, where provinciarum cum imperio should be conferred, and where victorious generals should deposit the insignia of their triumphs (Suet. Aug. 29). The forum was constructed on a smaller scale than Augustus had intended, because he could not obtain the consent of some neighbouring householders to part with their property (ib. 56). It was opened for business before the temple was finished, which was dedicated n. c. 1 (ib. 29; Vell Pat. ii. 100). The forum extended on each side of the temple in a semicircular shape (Palladio, Archit. iv.), with porticoes, in which Augustus erated the statues of the most eminent Roman generals. On each side of the temple were subsequently erected triumphal arches in honour of Germanicus and Drusus, with their statues (Tac. Ann. ii. 64). The temple is said to have been very splendid (Plin. xxxvi. 54), and was adorned, as well as the forum, with many works of art (Jb. vii. 53, xxxiv. 18, xxxv. 10; Ov. Fast. v. 555, &c.).

The Sulii were accustomed to banquet here; and an anecdote is recorded of the emperor Claudius, that once when he was sitting in judgment in this forum, he was so attracted by the savoury odour of the dinner preparing for these priests, that he quitted the tribunal and joined the party. (Suet. Claud. 33.) This anecdote has partly served to identify the site of the temple, an inscription having been discovered on one of the remaining walls in which the Sulii and their M anusones are mentioned (Cninna, Foro Rom. p. 150).

The remains of three of the columns, with their entablature, of the temple of Mars Ultor are still to be seen near the place called the Arco de' Pantani. It must therefore have adjoined the back of the Forum Caesarius. These three columns, which are tall and handsome, are of the Corinthian order. All we know respecting the history of the Forum Augusti is that it was restored by Hadrain (Spart. Hadr. 19). The church of S. Basilio was probably built on the site of the temple (Ordo Rom. 1143; Mobil. Mus. Ital. ii. p. 143).

MARS ULTO R.
In the middle ages this Janus-temple appears to have borne the name of Nothae Ark.

In the time of Pope Paul V. considerable remains existed of the pronaos, or vestibule of this temple of Minerva, consisting of several columns with their entablature, with the following inscription: IMP. NERVA. CAESAR. AVG. PONT. MAX. TRIB. POT. II. IMP. IV. TRUCOS. (Canina, Foro Rom, p. 171.)

Paul took these columns to adorn his fountain, the Acqua Paola, on the Janiculum. In the Via Alessandrina there are still remains of them, all of peperino which formed the enclosure of the forum, together with two large Corinthian columns half buried in the earth, now called the Colonnaccio. Their entablature is covered with mutilated reliefs, and over them is an Attic, with a figure of Minerva, also in relief. The situation of the forum of Nerva, and the remains of it existing in his time, are described by Palladio (Architettura, lib. iv.), also by Da Pétrac (tom. vi), who observes, that it was then the most complete ruin of a forum in Rome. The Colonnaccio are represented by Gainacci, Antichità di Roma, p. 55; Descodetz, p. 159, seq.; Oechebe, p. 39. There is a good description of the fora of Augustus and Nerva by Niebuhr in the Beschreibung Roms, vol. iii. p. 275.

Forum Trajan. - Thus between the Capitoline and Palatine hills, the Velian ridge and the ascent of the Quirinal, the valley was almost filled with a splendid series of public places, which we might imagine could hardly be surpassed. Yet it was reserved for that great man to complete the forum, still more magnificent than any of the preceding ones, for the construction of which the Quirinal itself was forced to yield up part of its mass. Previously to the time of Trajan which hill was connected with the Capitoline by a sort of isthmus, or slender neck; the narrow and uneven defile between them was covered with private houses, and traversed only by a single road of communication between the forum and Campus Martius. But on the western side of this defile lay one of the handsomest quarters of Rome, containing the Septa Julia, the Flaminian circus, the theatres of Balbus, Pompeo, and Marcellus, together with those temples and porticoes which so much excited the admiration of Strabo, and which he has described in a passage quoted in the former part of this article. The design of the forum of Trajan was, therefore, to connect this quarter of the town with the imperial fora in a manner not unworthy of the magnificent structures on either side of it. This gigantic work, a portion of which still remains, though the greater part has disappeared under the united influences of time and barbarism, is supposed to have been projected, and even begun, by Domitian. (Au. Vict. Cass. 13; Hircion, p. 443, R.; Cassid. Chron. ii. p. 197.) It was, however, executed by Trajan, with the assistance of the celebrated architect Apollodorus of Damascus. (Onis Cass. xix. 4.) But no ancient author has left us a satisfactory description of it, and we are obliged to make out the plan, as best we may, from what we can trace of the remains; a task somewhat aided by the excavations made by the French when they had possession of Rome at the commencement of the present century. (See Tournon, Etudes Statist. Rome, tom. ii. p. 253, pl. 28, 29; Fea, Notizie degli scavi nell' Antico Teatro Flavio e nel Foro Trajano, Rom. 1813; Bunsen, Lez Forum de Rome, 2me partie, p. 24, seq.) This immense work consisted of the following parts:

1. The forum, properly so called, a large open area immediately adjoining the NW. sides of the fora of Caesar and Augustus, and filling the whole space between the Capitoline and Quirinal, much of the latter hill, indeed, and some of the former, having been cut away in order to make room for it. This part, which was called the area or atrium fori (Goll. xii. 24; Ann. Marc. xvi. 10), contained, in the middle, an equestrian statue of Trajan, and was adorned with many other statues. The SW. and NE. sides of this square there swallow away that has been cut away from the hills, was occupied with semi-regular buildings. There are still large remains of that under the Quirinal, which are vulgarly called the baths of Paulillus Aemilius. The lower part of this edifice, which has only been built open within the last few years, consists of quadrangular niches, which probably served as little shops; above them was a vaulted portico, with rooms and staircases leading to the upper floors. Piranesi and other topographers conjectured that there was another similar building on the side of the Capitol, at the place called the Chiavi d'Oro; but Canina was the first to demonstrate its existence in his Indicazione Topografica. Along the front of each of the crescents thus formed there seems to have been a portico, which gave the forum its proper rectangular form. The forum was thus divided into three parts, through both the exterior ones of which there was a road for carriages, as appears from traces of pavements whilst the square, or middle division, was paved with flag-stones. In the middle of this square there seems to have been a triumphal arch, vestiges of which were discovered in the time of Flaminio Vacca (Memorie, no. 40), forming the principal entrance on the side of the imperial fora.

2. Next to the forum on the NW. side is the basilica Ulpia, which extended across it lengthways, and thus served to form one of its sides. The basilica was called Ulpia from Trajan's family name. The plan of the middle part is now laid entirely open. It seems to have been divided internally by four rows of columns, thus forming five aisles, with circular apsidas or cippoidicas at each end. During the ex-
excavations the bases of these columns were discovered partly in their original situation. But it is doubtful whether the fragments of columns of gray granite now seen there belonged to the interior of the basilica; it is more probable that they had columns of *giello antico* and *pammezzato*, remains of which have been found (Nibby, *For. Trajani*, p. 353). The floor was paved with slabs of the same marbles. It is supposed from the authority of two passages in Pausanias to have had a bronze roof (v. 12, x. 5). On the side which faced the forum were three magnificent entrances, a large one in the middle and two smaller on each side, decorated with columns, as may be seen on medals.

BASILICA ULPIA.

On the NW. side of the basilica stood, and still stands, the **Column of Trajan**, the finest monument of the kind in the world. This column was intended to answer two purposes: to serve as a sepulchre for Trajan, and to indicate by its height the depth of soil excavated in order to make room for the forum and its buildings. The latter object is expressed by the inscription, which runs as follows:—

**SENATVS POPVLVSQUE ROMA**

(From *Ann. Vict. Epit.* 13; Dion Cass. Ixxviii. 16). The height of the column, including the pedestal, is 127 ½ English feet. The diameter at the base is between 12 and 13 feet, and rather more than a foot less at the top. The shaft consists of 19 cylindrical pieces of white marble, in which steps are cut for ascending the interior. On the top was a statue of Trajan, now replaced by that of St. Peter, erected by Pope Sixtus V. When the tomb beneath was opened by the same pontiff, in 1585, it was discovered to be empty. Round the column runs a spiral band of admirable reliefs, representing the wars of Trajan against Decebalius, and containing no fewer than 2500 human figures. The height of the reliefs at the bottom is 2 feet, increasing to nearly double that size at the top; thus doing away with the natural effect of distance, and presenting the figures to the spectator of the same size throughout. The best descriptions of this magnificent column will be found in Fabretti, *De Columna Trajani*, Rome, 1690, with plates by Pietro Santi Bartoli; Piranesi, *Trofeo, o sia magnifica Colonna Coelide*, &c., with large folio drawings; De Rossi, *Columna Trajana designata*.

The column stood in an open space of no great extent, being 66 feet long and 56 broad. This space was bounded on its two sides by porticoes with double columns. In the NW. side of the basilia, the *Bibliotheca Graeca and Latina*, as indicated by Sidonius:—

"Cum meis poni statuum perennem Nerva Trajanus titulis videre Inter auctores utriusque lixam Bibliothecae."—(ix. *Epigr.* 16.)

*It is remarkable, however, that the library is called by A. Galli, "Bibliotheca templi Trajani" (vi. 17).
3. There are evident traces that Trajan's forum extended still farther to the NW., though it is doubtful whether this extension was owing to Trajan himself or to Hadrian. Excavations in this direction have brought to light enormous granite pillars belonging probably to the temple which Hadrian dedicated to Trajan (apart. Ital. 19), and which is mentioned in the Notitia in conjunction with the column. This is further confirmed by some inscriptions bearing the name of Hadrian which have been discovered in this quarter. (Busen, Les Forum Romains, ii, 26, partie, p. 35.) Thus the space occupied by these noble structures extended from the fora of Caesar and Augustus almost to the Via Lata, or to the modern Piazza degli Apostoli.

How long the forum of Trajan existed is uncertain. The Anonymous of Einsiedlen mentions it in the way from Porta Nomentana to the Forum Romanum. In the Mirabilia it seems to be spoken of as a thing that has disappeared.

VI. The Palatine and Veiia.

After the Capitol and forum, the Palatine hill is undoubtedly the most interesting spot at Rome, both from its having been the cradle of the eternal city, and also the seat of its matured power—the residence of the emperors when these emperors ruled the world, or, in the words of Tacitus, "ipsa imperii urbs" (H. ii. 70),—a circumstance from which it has given name to the residences of subsequent princes. (Dion Cass. lli. 16.) In treating of the topography of this region, and indeed of that of the remainder of the city, we shall not endeavour to observe a chronological order, as was desirable in treating of the forum, in order that the reader might gain a clear idea of its appearance in the various periods of Roman history; but shall follow the most convenient method without regard to the dates of the different objects mentioned. We have already described the situation and height of the hill. The latter, however, cannot be very accurately given, as the soil is covered to a great depth with rubbish, the sole remains of those magnificent edifices which adorned the Circus Maximus. Indeed, in the Vigna del Collegio Inglese, these ruins assume something of a more definite form; but the gigantic arches and terraces at that part, though they may still excite our wonder, are not sufficiently perfect to enable us to trace any plan of the buildings which they once formed. However, they must all have been subsequent to the time of Nero; since the ravages of the fire under that emperor were particularly destructive on the Palatine hill. Hence the chief topographical interest attaches to the declivities of the hill, which present more facilities for ascertaining spots connected with and sanctified by the early traditions of the city,—of which several have already been discussed, as the Porta Romana and Clivus Victoriae, the Porta Magnoia, the Caria Veteres, &c.

We have already seen that the declivity towards the Capitoline hill was called GIEMALUS or CERIMALUS; but though in ancient times this was regarded as a separate hill, the reason is not clear, since it by no means presents any distinct features, like the Veiia. Here was the LUPERCAL, according to tradition a grotto sacred to Pan ever since the time of the Arcadians (Dionys. l. 32, 79), and near it the Ficus RIMINALIS, or sacred fig-tree, under which Romulus and Remus were discovered suckled by the wolf. It is difficult to determine the exact spot of the Lupercal. Evander points it out to Aeneas as lying "gelida sub rupe" (Virg. Aen. viii. 343), and Dionysius (l. c.), describes it as on the road (κατα την θεον) leading to the Circus Maximus; and his authority is preferable to that of Servius, who describes it as "in Circio" (ad Aen. viii. 90). Its most probable site therefore is at the western angle of the hill, towards the circus. Its situation is in some degree connected with that of the CASA ROMULI. The description of the 10th Regio, or Palatine, in the Notitia begins at the Casa Romuli, and proceeding round the base of the hill to the N. and E. ends, in coming from the circus, with the Lupercal; whence it is plain that the Casa Romuli must have stood a little to the N. of it. Plutarch notices the Casa Romuli, which was also called Tagurium Faustuli, in the following manner: Ρομουλος δε (σημειον) πατ θεον λατρευνουσι Βαλβανοθεης Αρτης ουσιν δε εινα νηα της εις των ηπατο- στομων τω μεγας κε Παλατην καταβαση (Rom. 20). Here the expression Καλυς Αρτης is puzzling, as an equivalent name does not occur in any Latin author. Properly Αρτη signifies the sea-shore, and cannot therefore be applied to the banks of the Tiber; nor, in prose at least, to an inland bank. Hence Preller is inclined to think that it is merely Plutarch's awkward translation of the Roman name for a place called Palatia Rupes, which obtained this appellation after the Lupercal had been restored by Augustus and adorned with architectural elevations. (Regionen, p. 181.) But Plutarch was surely master of his own language; and though he was not much a very profound scholar, yet as he lived some time in Rome and occupied himself with studying the history and manners of the people, we may perhaps give him credit for knowing the difference between rupes and litus.

It seems more probable therefore that the Roman
name of the place alluded to was Pulcrem Littus than Patera Rupes (though unfortunately we do not find it mentioned in any Latin author), and that, like the Casa Romuli and Lupercal, it was a traditio-
amely, the history of Romulus and Remus itself. According to that story, we must recollect that the Tiber had overflowed its banks and formed a lake here, and that the cradle was tossed ashore at the foot of the Palatine; whence the name littest, which is frequently used of the shores of a lake, might without impropriety be applied to this spot. The Babuvi or steps mentioned by Plutarch in the preceding passage were of course a more recent work, but their date cannot be fixed. Propertius (t. 1. 9) seems to allude to them in the following passage as existing even in the time of Romulus and Remus:—

"Qua gradibus domus ista Remi se sustulit ohm
Unus erat fratrwn maxima regna focus."

But though we can hardly imagine their existence at that time, yet the passage at all events suffices to prove the existence of the steps in the time of Augustus. Becker, however, will by no means allow this. (Handb. p. 420 and note.) Plutarch goes on to say that in the neighbourhood of the Casa Romuli there existed a cherry-tree said to have sprung from the lance hurled by Romulus from the Aventine to the Palatine; and that the tree withered and died from the roots having been injured when Caius Caesar (Caligula) caused the steps to be made there. (Tav. de Kaiurjpio, òi òa, òi aivdavca òiçpoxeixvOov ov ov avvOxtoOov avrov Öv aivrov xovtOav ev yapv xOov òiçpoxeixvOov aivtOov Àvvrjv.) Hence Becker draws the conclusion that this was the origin of the steps, and that they did not exist before the time of Caligula. But this is by no means a necessary consequence from Plutarch's words, since eivdovtOav often signifies to repair or make better. We find the same steps mentioned by Solinus under the name of Selse Calci: "Ad supercilium scalarum Caci habet terminum (Solum Quadrata), ubi tu-
gurium fuit Faustuli. Id Romulus manstantiv," Scs. (i. 18). It cannot be doubted that these are the same steps mentioned by Propertius and Plutarch. Ger-
hard proposed to emend this passage by reading Caci for Caci; an emendation of which Becker of course approved, as it suits his view that the steps did not exist before the time of Caligula. But unfortunately he was not aware of a passage in Diodorus Siculus which also mentions these steps in a manner con-
miratory of the account of Solinus and Propertius; poi de Kaiurjpio ev yap 7paov òiçpoxeixvOov ov ov avvodatov avrov xovtOav ev yapv xOov òiçpoxeixvOov aivtOov Àvvrjv. (iv. 21). And as Diodorus wrote in the age of Augustus, the existence of the steps before the time of Caligula is thus proved.

An Aedes Romuli is also mentioned on the Ger-
marus in the sacred books of the Argives quoted by Varro (L. L. v. § 54, Musli); but it is not found in any other author, and hence it may appear doubtful whether it is not the same as the Casa Romuli. The round church of S. Todesa on the W. side of the Palatine has frequently been identified with this Aedes Romuli, and it is very probable that it was built over the remains of some ancient temple; but it is too far from the circus to have been the Casa Romuli, which lay more towards S. Anastasias. Besides the Casa seems to have been nothing more than a little thatched hut; of which, as we have seen, there appears to have been a duplicate on the Capitol.

In the dearth of any more accurate information we cannot fix the situation of those venerable relics of Roman antiquity more precisely than may be gathered from the preceding general indications. M. Valerius Messala and C. Cassius Longinus, who were censors in B.C. 154, projected, and even began, a theatre at this spot, which was to extend from the Lupercal on the Germinalis towards the Palatine. But this scheme was opposed by the rigid morality of Scipio Nasica, and all the works were put up to auction and sold. (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Appian, B. C. i. 28.) The Lupercal is mentioned in the Monumenta Augustam, as recon-
structed by Augustus, whence Cassius inferred that the ancient one must have been destroyed when this theatre was commenced. (Indicatio Topogr. p. 460, 1850.) The Casa Romuli is represented by Fabius Pictor, as translated by Dionysius of Halic-
carnassus (i. 79), to have been carefully preserved in his time, the damage occasioned by age or tem-
pests being made good according to the ancient pattern. Whether the building mentioned in the Notitia was still the same it is impossible to say.

We have already noticed, when treating of the city of Romulus, the SANCTUARY OF VENUS as most probably sacred to her, and the CIVES VICTORII on the NW. slope of the Palatine. At or near this spot an Aedes Matris Deum was erected n. c. 191, to contain the image of the Mater Idaea, which Scipio Nasica had brought from Asia thirteen years before. (Liv. xxxvi. 35; Cic. Har. R. 12.) It must have been to the N. of the Casa Romuli, since it is mentioned after it in the Notitia, when proceeding in that direction, yet at some distance from the N. point of the hill, be-
tween which and the temple the Domus Tiberiana must have intervened. It is recorded as having been twice burnt down; once in v. c. 110, when it was rebuilt by Metellus (Jul. Obs. 99), and again in A. D. 2, in the same fire which destroyed the palace of Augustus, by whom it was restored. (Val. Max. i. 8. § 11; Dion Cass. iv. 12; Mon. Ancyp.) It must also have been destroyed in the conflagration under Nero, and again rebuilt. Becker (Handb. p. 421) observes that its front must have faced the E., as the statue of the Magna Mater Idaea is described by Dion Cassius as looking that way (xiv. 43). But this, relates only to the temple, and we fancy that there is some reason to believe, from a passage in Martial, that the temple was a round one, and could not therefore be properly said to face any way. In this passage two temples are mentioned (i. 70. 9)—

"Flecte vias hac qua malidi sunt tecta Lyaei
Et Cybeles picto stat Corybante tholus."

Becker observes (p. 422) that the age and situation of the temples here mentioned cannot be determined, as they occur nowhere else; and this seems to be true of the temple of Bacchus; but there appears to be no reason why the THOLUS CYBELES, which Becker writes Torus, without any apparent meaning—may not have been the Aedes Matris Deum before referred to. The description of the road to the house of Proculus given in this epigram suits the situation of this temple; and the house itself is mentioned as "nec praeor quam Phoebas amat." Now, the temple of Apollo, built by Augustus, lay close to that of the Idaean Mother, as we shall see presently; and,
indeed, they are mentioned in one breath in the Nōtītia. ("Aedem Matris Deum et Apollinis Ihamnus.") That this Thoüs Cybeles may have been the temple which once occupied the site of the present circular church of S. Teodoro before referred to, we can only offer a conjecture; its situation, at least, admirably corresponds with that of the temple of the Idaean Mother.

We find a temple of this deity, as well as one of JUVENTAS mentioned in the Monumenta Antiqua (tab. iv. l. 8) as erected by Augustus on the Palatine. The first of these may, however, have been only a restoration of the ancient temple. We can hardly conclude from the word fēci that it was an entirely new and separate structure; since we find the same word used in that record with relation to other edifices which were among the most ancient in Rome, and of which it is not likely that there should have been duplicates; such as the temple of Jupiter Feretrius in the Capitol, that of Quirinus, that of JUNO Regina in the Aventine, and others. In these cases it seems probable that the edifices were in such a ruinous state from long neglect that Augustus found it necessary to rebuild them from their foundations; which would justify the use of the word fēci instead of restit. But hardly the regarding of them as entirely new temples. The great care used by Augustus in restoring the ancient temples is alluded to by Horace (Od. iii. 6). The temple of Juventas may possibly have been new; at all events it could hardly have been the one dedicated by C. Licius Lucullus about the same time as that of the Mater Magna Italia, since the former was in the Circus Maximus. (Liv. lxxvi. 56; cf. Cic. Brut. 18, ad Att. i. 18.)

What the Pentapylum may have been which is mentioned in the Notitia between the temple of Apollo and the palace of Augustus, it is difficult to say, except that it was probably a building with five gates. Pleeër (Region. p. 183) cites a passage from an anonymous describer of the Antiquities of Constantinople in Banduri (Imp. Orient. i. p. 21), in which a building in that city called Tetraplus, which was used for depositing and bewailing the corpse of the emperor, or of that of any member of his family, is mentioned; and as this building is said to have been imitated from one at Rome, Pleeër thinks it highly probable that the Pentapylum in question may have afforded the model, and been used for a similar purpose.

Of the temples of JUPITER VICTOR and JUPITER STATOR — the former near the Nova Via and Porta Magistioris, the latter farther off towards the Sacra Via — we have already spoken when describing the Roman e city; besides which there seems to have been a temple of JUPITER PROPONATOR, probably of the time of the Antonines, known only from an inscription. (Gruter. ec. 2; Orell. 42; Canina, Indicisnones, p. 460.) We have also had occasion to mention the CURIAE VETERES and the sacellum of FORTUNA RESPICIENTI. Other ancient buildings and shrines on the Palatine, the sites of which cannot be exactly determined, were the CURIA SAILORUM (Palatinorum), where the anciens and the litus Romanii were preserved, probably not far from the temple of Vesta ( Dionys. i. 70; Cic. Div. i. 17; Gruter, Insr. exchii. 5; Orell. 2244); a fanum, or ARA FERMIS (Cic. Leg. i. 11: Val. Max. ii. 5, § 6; Plin. ii. 5), an ancient sacellum of the Dea Vespasia, the appeasing deity of cremnial quarrels (Val. Max. ii. 1, § 6), and an 'Aphroditea, or TEMPLE OF VENUS (Dion Cass. lixxiv. 3). When the Romans began to improve their domestic architecture, and to build finer houses than those which had contented their more ancient ancestors, the Palatine, from its excellent and convenient situation, early became a fashionable quarter. We have already alluded slightly to some of the more noted residences on this hill. The house of VITRUVIUS VACCUS is one of the most ancient which we find mentioned in this quarter. It was pulled down in B. C. 330 in consequence of the tramonous practices of its owner; after which the site remained unbuilt upon, and obtained the name ofVATCI PRATAS (Liv. viii. 19: Ps. Cic. p. Dom. 38); but how long it remained in this state it is impossible to say. The PORTICUS CATULI rose on the Palatine from a similar cause. Its site had previously been occupied by the house of M. Fulvius Flaccus, which persisted in the sedition of C. Gaius — the house was then razed, and the ground on which it stood called FLACCIANA AREA, till this portico was erected on it by Q. Lutatius Catulus, after the battles with Sextus Pompeius (Liv. vi. 3, § 1; Ps. Cic. p. Dom. 43.) In the site stood the HOUSE OF CICERO which he bought of Crassus, — probably not the celebrated orator, — the fate of which we have already related. It seems to have been on the NE. side of the Palatine, as Cicero is described by Phutarch as traversing the Sacra Via in order to arrive at the forum (Cic. 22); and Vettius calls Cicero "vicinus consulis," that is, of Caesar, who then dwelt in the Regia (ad Att. ii. 24). CATILINA'S HOUSE was also on the Palatine, and was annexed by Augustus to his residence. (Suet. Brum. 17.) Here also was a HOUSE OF ANTONIUS, which Augustus presented to Agrrippa and Messala (Dion Cass. liii. 27); and also the HOUSE OF SCAURUS, famed for its magnificence. (Cic. Saur. 27; Plin. xxxvi. 3.)

With the reign of Augustus a new era commenced for the Palatine. It was now marked out for the imperial residence; and in process of time, the buildings erected by successive emperors monopolised the hill, and excluded all private possessions. Augustus was born in this Region, at a place called AD CAPITA BEULUA, the situation of which we are unable to determine (Suet. Aug. 5). In early times he occupied the orator C. Licinius Calvus "juxta forum super scalaris anabarias" (ib. 72); but neither can the site of this be more definitely fixed. Hence he removed to the Palatine, where he first occupied the HOUSE OF HORTENSIUS, a dwelling conspicuous neither for size nor splendour. (ib.) After his victory over Sextus Pompeius, he appears to have purchased several houses adjoining his own, and to have vowed the TEMPLE OF APOLLO, which he afterwards built (Vell. Pat. ii. 81; Dion Cass. lxxix. 15.) This temple, the second dedicated to that deity at Rome — the earlier one being in the Circus Flaminius — does not, however, appear to have been begun till after the battle of Actium, or at all events the plan of it was extended after that event. It is well known that after that victory Augustus dedicated a temple to the Lenicadian Apollo near Actium, and in like manner the new structure on the Palatine was referred to the same deity; whence the phrases "Actus Apollo" (Verg. Aen. viii. 704; Prop. iv. 6, 67), and "Phoebus Naivalia" (a"—un Naivalia stant sacra Palatia Phoebas, Prop. iv. 3.) It was dedicated in B. C. 27. It was surrounded with a portico containing the Bibliothecae Graeca.

as its successor, the domus aurea, seems to have occupied as large an extent of ground, and to have reached from the Palatine to the gardens of Meleconis and the agger of Servius on the Esquiline. (Suet. Nero, 31; Tac. Ann. xvi. 39.) The Afrera Domus was a specimen of immense extravagance. Its atrium or vestibule was placed on the Velia, on the spot where the temple of Venus and Rome afterwards stood, and in it rose the colossal statue of Nero, 120 feet high, the base of which is still visible at the NW. side of the Colosseum. We may gain an idea of the vastness of this residence by comparing the prose description of Suetonius with the poetic one of Martial, when we shall see that the latter has not abused the privilege of his calling. (Suet. Nero, 31; Mart. de Spoct. 2.) It was never perfectly finished, and Vespasian, as we have said, restored the ground to the public. We know but little of the arrangement of the buildings on the Palatine itself under Nero, except that the different parts appear to have retained their former names. Domitian added much to the palace, now again confined to this hill, and fitted it up in a style of extraordinary magnificence; but, though we frequently hear of single parts, such as baths, diaetae, a portico called Scilitis, a dining-room dignified with the appellation of Coenatio Jovis, &c., yet we are nowhere presented with a clear idea of it as a whole (cf. Plut. Popul. 15; Plin. xxxv. 5, s. 38; Capit. Port. 11; Mart. viii. 36; Stat. Silv. iii. 4. 47, iv. 2. 18, &c.). The anxiety and terror of the tyrant are strikingly depicted in the anecdote told by Suetonius (Dom. 14), that he caused the walls of the portico in which he was accustomed to walk to be covered with the stone, or crystallised gypsum, called pheugites, in order that he might be able to see what was going on behind his back. It is uncertain where the Adonaea, or gardens of Adonis, lay, in which Domitian received Apollonias of Tyana, and which are marked on a fragment of the Capodimonte plan (Bellori, tab. xi.). Of the history of the palace little more is known. Several accounts mention the domus aurea as having been burnt down in the reign of Trajan (Oros. vii. 12; Hieron, an. 105, p. 447, Rone.), and the palace which succeeded it appears to have been also destroyed by fire in the reign of Commodus (Dion Cass. lxiii. 24; Herodian, i. 14.)

At the southern extremity of the Palatine, Septimius Severus built the septizonium, considerable remains of which existed till near the end of the 16th century, when Pope Sixtus V. caused the pillars to be carried off to the Vatican. Representations of the scenes will be found in Du Pérac (tav. 13) and Gamucci (Antichità di Roma, p. 303, Sesto Port. Magnificiente, t. 45). The name of the building, which, however, is very variously written in the MSS. of different authors, is by some supposed to have been derived from its form, by others from the circumstance of seven roads meeting at this spot. It seems not improbable that a similar place existed before the time of Severus, since Suetonius mentions that Titus was born near the Septizonium (c. 2), though topographers, but without any adequate grounds, have assigned this to the 3rd Region. It has been inferred from the name that the building had seven rows of columns, one whore another; but this notion seems to be without foundation, as the ruins never exhibited traces of more than three rows. The tomb of Severus must not be confounded with it, which, as we learn from Suetonius, was on the Via Appia, and built so as to resemble the Septizonium. The same author informs us (Sce. 24) that the design of Severus was to make the Septizonium an atrium of the palace, so that it should be the first object to strike the eyes of those coming from Africa, his native country. But the true nature and destination of the building remain enigmatical.

We know of no other alterations in the palace except some slight ones under the emperors Elagabalus and Alexander Severus. The former consecrated there the temple of Heliodabulis (Lampr. Helig. 3; Herodian, v. 5), and opened a public bath, also destined apparently as a place of licentiousness (Lampr. lb. 8). Of the buildings of Alexnder Severus we hear only of a diaeta, erected in honour of his mother Julia Mammaea, and commonly called "ad Mammam" (Id. Al. Sev. 26). These diaetae were small isolated buildings, commonly in parks, and somewhat resembled a modern Roman casino or pavilion (Plin. Ep. ii. 17, v. 6). It is also related of both those emperors that they caused the streets of the Palatine to be paved with porphyry and verde antico (Lampr. Hel. 24, Al. Sev. 25). The Palatium was probably inhabited by Maxentius during his short reign, after which we hear no more of it. That emperor is said to have founded baths there. (Catal. Imp. Vene. t. ii. p. 248, Rone.)

The Victoria Germanica, the only object recorded in the Notitia between the Septizonium and the Esquiline, and which must therefore have stood on the side next the circus, was probably one of those numerous monuments erected either in honour of Germanicus, of which Tacitus speaks (Ann. ii. 83), or else to Caracalla, who likewise bore the name of Germanicus (Prelser, Regionen, p. 187).

We have already treated generally of the Velia and Sacra Via, and of some of the principal objects connected with them, as well as of the Nova Via under the Palatine. The Nova Via was not a very important road, and we have little more to add respecting it. It seems to have begun at the Porta Mugionis, where, like the Sacra VIA, at the same spot, it was called lumen Nova Via (Solin. i. 17). From this place it ran almost parallel with the Sacra Via, and between it and the hill, as far as its northern point, where it turned to the S., and still continued to run along the base of the Palatine as far at least as the Porta Romana (near S. Giorgio in Velabro). Some, indeed, carry it on as far as the Circus Maximus (Canina, Indic. Top. p. 331); a view which does not
Carinae, sufficiently indicates the locality; and we are of opinion, with Becker, that Bunsen arrived at a very probable conclusion in identifying this temple with the present circular vestible of the church of SS. Cosma e Damiano. Yet, if we assume with those writers that this was the only temple of the Penates on the Velia, and consequently the spot on which the house of Publicola stood, I must confess that we see considerable force in the objection of Canina, that such a situation does not correspond with the descriptions given by Cicero, Livy, and other writers. All those descriptions convey the idea that Publicola's house stood on a somewhat considerable, though not very great, elevation. Thus Dionysius characterizes the spot as λόφον ὑπερικιµένων τῇ ἄγραφῃ ὑφηλὸν ἔπεικος καὶ περίτοιον ἐπέλεξείµενον (v. 19). And Cicero says of the house: "Quod in exquiro loco conjectus aedificaret" (Rep. ii. 31). A still more decisive passage is that of Livy: "Aedificavit in summa Vela" (ii. 7).

For how can that spot be called the top of the Vela, which was evidently at the bottom, and, according to Becker's own showing, in a district called sub Vela? His attempts to evade these difficulties are feeble and unsatisfactory (de Muris, p. 45). Yet they are not incapable of solution, without abandoning Nieder's theory respecting the Vela, which we hold to be the true one. There were in fact two temples of the Penates on the Vela, namely, that identified by Bunsen with SS. Cosma e Damiano, and another "in Sumana Vela," as Livy says; which latter occupied the site of the residence of Tullus Hostilis, and of the subsequent one of Valerius Publicola. Thus Solinus: "Tullus Hostilus in Vela (ibidavit), ubi postea Deum Penatunm aedes facta est" (i. 22). We cannot determine the length of this postea; but it was most probably after the time of Publicola, and perhaps a great deal later. But the other temple was certainly older, as it is mentioned in the sacred books of the Argives (op. Varro, L. L. v. § 54: "In Vela apud aedem Deum Penatunm"); and thus it is plain that there must have been two temples of the Penates on the Vela. Tullus Hostilus is the Sacellum Larrus mentioned by Tacitus, in describing the pomerium of Romulus (Ann. xii. 24); and this is another proof that there were two temples; for it is impossible to imagine that the pomerium could have extended so far to the N. as the church of SS. Cosma e Damiano. The situation of this sacellum would answer all the requirements of the passages before cited. For there is still a very considerable rise from the forum to the arch of Titus, near to which the sacellum must have stood, which rise was of course much more marked when the forum was in its original state, and some 20 feet below its present level. Indeed the northern angle of the Palatine, which Canina supposes to have been the Vela, does not present any great difference of height; and thus the objections which he justly urges against the aedes near the temple of Faustina do not apply to one on the site that we have indicated. Besides it appears to us an insuperable objection to Canina's view that he admits the spot near the temple of Faustina to have been called Sub Vela, though it is separated by a considerable space, and by the intervening height, from the N. angle of the Palatine, which is the only natural site of sub Vela, ubi nunc aedes Victoriac est," is too confused and imperfect to draw any satisfactory conclusion from it. By all other authorities the
Aedus Victoriae is said to be not at the foot of the Velia, but on the summit of the Palatine.

But there is another argument brought forwards by Canina against the height in question being the Velia. He observes that the area on which the temple of Venus and Rome stands is divided from the Palatine by the Sacra Via, and hence could not have belonged to the Velia; since the Sacra Via, and all the places on the opposite (northern) side of it, were comprehended in the 1st Regio of Servius, or the Suburanus, whilst the Palatine, including the Velia, were contained in the 4th Regio (Indicez. Topogr. p. 402, or, of his). Now if this were so, it would certainly be a fatal objection to Niebuhr's view; but we do not think that any such thing can be inferred from Varro's words. In describing the 1st Regio, in which a place called Cerelios was included, he says, "Cereliosia a Carinarum juncto dictus Carinae, postea Cerialia, quod hic oritur caput Sacrae Viae ab Sternaiae sacello," &c. (I. L. v. § 47.) The passage is obscure, but we do not see how it can be inferred from it that the Sacra Via formed the boundary between the 1st and 4th Servian Regions. Varro seems rather to be explaining the origin of the name Cerialia, which he connects with the Sacra Via, but in a manner which we cannot understand. The Sacra Via traversed the highest part of the ridge, and thus on Canina's own showing must have included some part of it in the 4th Region, making a division where no natural one is apparent, which is not at all probable. Besides, if this height was not called Velia, what other name can be found for it? And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very heart of the city, should have been without a name.

Assuming the Velia, therefore, to have been that rising ground which lies between the valley of the forum on the one hand, and that of the Colosseum on the other, we shall proceed to describe its monuments.

The Aedes Penatium, before referred to as standing on the declivity of the ridge, or Sub Velia, and described by Dionysius (i. 68), seems to have been one of the most venerable antiquity. In it were preserved the images of the household gods said to have been brought from Troy, having upon them the inscription ΔΕΑΝΑΣ, which has given rise to so much controversy; namely, whether it is a scribe's error for ΡΗΣΑΝ, that is RENASCI = Renatus, or whether it should have been ΔΙΔ ΜΑΓΝΗΣ (Diis Magnis), &c. &c. (See Ambrosch, Stud. u. Auct. p. 471, seq.; Clausen, Aeneas u. die Penaten, ii. p. 624, n. 1116; Hertzberg, de Dii Rom. Patriis, lib. ii. c. 18.) We shall here follow our usual rule, and give Dionysius credit for understanding what he was writing about, as there does not appear to be any grave objection to doing so; and as he immediately adds, after citing the above epigraph, that it referred to the Penates (ΔΕΑΝΑΣ ἐπιγραφήν ἐνσουαι, διδολομά
cοιν

The Italian writers regard it as the temple of Renus.

We do not find any large buildings mentioned upon the Velia till the time of Nero, who, as we have seen, occupied it with the vestibule of his palace. A considerable part of it had perhaps been a market previously. Close to its NW. foot, immediately behind the Aedes Penatium just indicated, Vespasian, after his triumph over Jerusalem, built his celebrated Temple of Peace, to which we have already had occasion to allude, when describing the imperial fora.

(Rom. 13. vii. 5, § 7; Suet. Vesp. 9; Dion Cass. lxxxv. 15.) It stood in an enclosed space, much like the temple of Venus Genetrix in Caesar's forum, or that of Mars Ultor in the forum of Augustus; and hence, though not designed like them as a place for legal business, it was nevertheless sometimes called Forum Pacis. The temple was built with the greatest splendour, and adorned with precious works of art from Nero's palace, as well as with the costly spoils brought from the temple of Jerusalem, which made it one of the richest and most magnificent sanctuaries that the world ever beheld. (Joseph. l. c. Plut. xxvii. i. 3, 4, xxxvi, 24; Herod. ii. 3.) Hence its attraction and notoriety gave a new name to the 4th Region, in which it stood, which was previously called "Sacra Vias," but now obtained the name of "Templum Pacis." The exact site of this temple was long a subject of dispute, the older topographers maintaining that the remains of the three vast arches a little to the E. of the spot just described, and now universally allowed to belong to the basilica of Constantine, were remnants of it. PIRANESI raised some doubts on the point, but NIBBY was the first who assigned to these two monuments their true position (Poro Rom. p. 189, seq.); and his views have been further developed and confirmed by Canina. (Indicez. Topogr. p. 131, seq.) As Becker has also adopted the same conclusion, it will be not necessary to state the grounds which led to it, as they would occupy considerable space; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annexed to the temple was a library, in which the learned were accustomed to meet for the purposes of study and literary intercourse. (A. Gell. v. 41, a.vi. 8.)

The temple was burnt down little before the death of Gam Disease, (p. 23; Dion Cass. li. 24; Herodian, i. 14; Gaieon, de Comp. Med. i. 1.) It does not appear to have been restored, but the ruins still remained undisturbed, and the spot is several times mentioned in later writers under the name of Forum Pacis, or Forum Vespasianum (Ann. Marc. xvi. 10; Propoc. B. G. iv. 21; Symm. Ep. i. 78; Catal. Imp. Vien. p. 243.)

The three arches just alluded to as standing near the temple of Peace, and apparently at the commencement of a road branching off from the Sacra Via, belonged, as is almost universally admitted, to the Basilica of Constantine, and contemporaneously with Maxentius, and dedicated after his victory in the name of Constantine. Their architecture has all the characteristics of a basilica, and could not possibly have been adopted to a temple. (Canina, Indicez. p. 124.) The first notice which we find of this building is in Aurelius Victor (Caesar. 40, 26), who mentions it as having been erected by Maxentius; and this account is confirmed by an accident which happened in 1828, when on the falling in of a part of an arch a coin bearing the name of Maxentius was discovered in the monument. (Becker, iii. 298.) In the Cat. Imp. Vien. p. 243, it is mentioned as occupying the site of the so-called basilica of Constantine ("birea piperataria, or spice warehouses of Donian" "birea piperataria ubi modo est Basilica Constantiniana et Forum Vespasianum"). These spice warehouses must have been the same that are related by Dion Cassian (lxxxv. 24) to have first caught the flames when the temple of Peace was burnt, A.D. 192, and are described as τὰς ἀναφάγας τῶν τῆς Ἀρδηής καὶ τῶν Αὔγυπτικῶν φλωρίων; whence, as the fire spread towards the Palatine, it may be presumed that they stood on the site of the basilica.
Between the basilicas of Constantine and the Colosseum, and consequently on the eastern side of the Velian height, Hadrian built the splendid Temple of Roma and Venus, commonly called at a later period Temple Urbs, considerable remains of which still exist behind the convent of S. Francesca Romana. In the middle ages it was called Templum Concordiae et Pietatis (Mirabilia Rom. in Effemerid. Letter. i. p. 385); the older topographers gave it various names, and Nardini was the first to designate it correctly. The remains exhibit the plan of a double temple, or one having two cellae, the semicircular tribunes of which are joined together back to back, so that one cells faced the Capitol and the other the Colosseum; whence the description of Prudentius (Contra Symm. i. 214):—

"Atque Urbis Venerisque pari se culmine tollunt
Templa, simul geminis addentur tur' dataus."

The cela facing the Colosseum is still visible, but the other is enclosed in the cloisters of S. Francesca. In them were colossal statues of the goddesses in a sitting posture. Hadrian is related to have planned this temple himself, and to have been so offended with the free-spoken criticisms of the ancient architect Apollodorus upon it that he caused him to be put to death. (Dion Cass. lxix. 4.) Apollodorus is related to have particularly criticized the extravagant size of the two goddesses, who he said were too large to quit their seats and walk out of the temple, had they been so minded. The temple was of the style technically called "pseuido-dipteros decostylas," that is, having only one row of ten columns, but at the same distance from the cela as if there had been two rows. With its porticoes it occupied the whole space between the Sacra Via and the street which ran past the front of the Basilica Constantini. For a more detailed description of it see Nibby, Foro Romano, p. 209, seq., and Canina, Edificj di Roma, classe ii. A ground plan, and elevations and sections of it as restored, will be found in Burgess, Antiquities and Topography of Rome, i. pp. 268, 280. Servius (ad Aen. ii. 227) speaks of snakes on the statue of Roma similar to those on that of Minerva. From some coins of Antoninus Pius the temple appears to have been restored by that emperor. Silver statues were erected in it to M. Aurelius and Faustina, as well as an altar on which it was customary for brides to offer sacrifice after their marriage. (Dion Cass. lxi. 31.) It was partly burnt down in the reign of Maxentius, but restored by that emperor.

The Arch of Titus, to which from its conspicuous position we have so frequently had occasion to allude, stood close to the SW. angle of this temple, spanning the Sacra Via at the very summit of the Velian ridge. Its beautiful reliefs, which are unfortunately in a bad state of preservation, represent the Jewish triumph of Titus. The arch could not have been completed and dedicated till after the death of that emperor, since he is called Divus in the inscription on the side of the Colosseum, whilst a relief in the middle of the vault represents his apotheosis. It has undergone a good deal of restoration of a very indifferent kind, especially on the side which faces the forum. During the middle ages it was called Septem Lucernae and Arcus Septem Lucernarum, as we see from the Anonymous.

We shall here mention two other monuments which, though strictly speaking they do not belong to the Palatine, yet stand in such close proximity to it that they may be conveniently treated of in this place. These are the Arch of Constantine and the Meta Sudans. The former, which stands at the NE. corner of the Palatine, and spans the road now called Via di S. Gregorio, between that hill and the Campus, was erected, as the inscription testifies, in honour of Constantine's victory over Maxentius. It is adorned with superb reliefs relating to the history of Trajan, taken apparently from some arch or other monument of that emperor's. They contrast strangely with the tasteless and ill-executed sculptures belonging to the time of Constantine himself, which are inserted at the lower part of the arch. This monument is in a much better state of preservation than the arch of Titus, a circumstance which may perhaps be ascribed to the respect entertained for the memory of the first Christian emperor. For detailed descriptions and drawings of this arch see Niebuhr (Beschr. iii. p. 314, seq.), Canina (Edifici Antichi, classe xii.), Overbeke (Reues de l'An. Rome, ii. t. 8, 9), Piranesi (Ant. Rom. i.).

The Meta Sudans, so called from its resemblance to the metae of the circus, was a fountain erected by Domitian, remains of which are still to be seen.
between the arch of Constantine and the Colosseum. (Hier. p. 443, Bonc.; Cassius. Chron. ii. p. 198.) It stands in the middle of a large circular basin, which was discovered in the last excavations at that spot, as well as traces of the conduit which conveyed the water. A meta sudans is mentioned in Seneca (Ep. 56), whence we might infer that the one now existing superseded an earlier one (v. Becaule, iii. 312, seq.; Canina, Indicaz. p. 119).

ARCH OF CONSTANTINE.

VII. THE AVENITIE.

We have already adverted to the anomalous character of this hill, and how it was regarded with suspicion in the early times of Rome, as ill-omened. Yet there were several famous spots upon it, having traditions connected with them as old or older than those relating to the Palestine, as well as several renowned and antique temples. One of the oldest of these legendary monuments was the altar of Evander, which stood at the foot of the hill, near the Porta Trigemina. (Dionys. i. 32.) Not far from it, near the Salineae, was the cave of Cacus, a name which a part of the hill near the river still retains. (Salinian, i. 8; cf. Virg. Aen. viii. 190, seq.; Ovid, Fast. i. 531, seq.) Here also was the altar said to have been dedicated by Hercules, after he had found the cattle, to Jupiter Inventor. (Dionys. i. 39.) A spot on the summit of the hill, called Remoria, or Remuria, preserved the memory of the auspices taken by Remus. (Paul. Dial. p. 276; Dionys. i. 85, seq.) Niebuhr, however, assumes another hill beyond the basilica of St. Paolo, and consequently far outside the walls of Aulician, to have been the place called Remoria, destined by Remus for the building of his city. (Hist. i. p. 223, seq. and note 618.) Other spots connected with very ancient traditions, though subsequent to the foundation of the city, were the Arnumidum and the Laurentum. The Arnumidum, or Arnumidium, at first indicated only a festival, in which the soldiers, armed with avelia, performed certain military sports and sacrifices; but the name was subsequently applied to the place where it was celebrated. (Varr. L. L. v. § 153, vi. § 22, Mill.; Liv. xxvii. 37; Plut. Rom. 23.) Plutarch (L. c.) says that king Tarius was buried here; but the Laurentum, so named from its grove of laurels, is also designated as his place of sepulture. (Varr. L. L. v. § 152; Plin. xiv. § 40; Dionys. iii. 43; Festus, p. 360.) There was a distinction between the Laurentum Majus and Minus (Cal. Capraun. Id. Aug.); and the Basis Capitoлина mentions a Vicus Loci Maioris and another Locii Minoris. The same document also records a Vicus Arunulstii. A name dedicated an altar to Jupiter Eligius on the Aventine. (Varr. L. L. vi. § 54; Liv. i. 20; cf. Ov. F. iii. 295, seq.); and the Calendars indicate a sacrifice to be performed there to Consus (Fast. Capraun. XII. Kal. Sep.; Fast. Arunulstio. Pr. Id. Dec.;) but this is probably the same deity whose altar we have mentioned in the Circes Maximus.

The Temple of Diana, built by Servius Tullius as the common sanctuary of the cities belonging to the Latin League, with money contributed by them, conferred more importance on the Aventine (Varr. L. L. v. § 43; Liv. i. 45; Dionys. iv. 26). This temple was compared with, and is said to have been suggested by, that of the Ioviens for building the Artemisium, or temple of Diana, at Ephesus. It has been justly observed that Rome's supremacy was tacitly acknowledged by the building of this temple on one of the Roman hills (Liv. i. c.; Val. Max. vii. 3. § 1). Dionysius informs us that he saw in this temple the original stele or pillar containing the Foedus Latinum, as well as that on which the Lex Iulia was engraved. It appears, from Martial (vi. 64. 12), to have been situated on that side of the Aventine which faced the Circus Maximus, and hence it may have stood, as marked in Butala's plan, at or near the church of S. Prisca (cf. Canina, Indicazione, p. 532). We may further observe that Martial calls the Aventine "Colis Diana," from this temple (vii. 73, xii. 18, 3). We learn from Suetonius that it was rebuilt by L. Cornificius, in the reign of Augustus (Aug. 29). That emperor does not appear to have done anything to it himself, as it is not mentioned in the Monumentum Ancyranum.

Another famous temple on the Aventine was that of Juno Regina, built by Camillus after the conquest of Veii, from which city the wooden statue of the goddess was carried off, and consecrated here; but the temple was not dedicated by Camillus till four years after his victory (Liv. v. 22, seq.; Val. Max. ii. 8. § 3). Hence, probably, the reason why "cupressus simulacra," or images of cypress, were subsequently dedicated to this deity (Liv. xxvi. 37; Jul. Obs. 105); although a bronze statue appears to have been previously erected to her. (Liv. xxxi. 62.)

We have already seen from the description of the procession of the virgins in Livy (xxvii. 37) that the
temples was approached by the Clivus Publicius, which ascends lay at the northern extremity of the Aventine, near the Porta Trigemina; but its situation cannot be accurately inferred from this circumstance. The Clivus Publicius, made, or rather perhaps widened and paved, by theaediles L. and M. Publicili Malleolii, was the main road leading up the hill. (Festus, p. 259; Varr. L. L. v. 8 158). From the Ap. 5.5) Camilla places the temple near the church of St. Sabina, where there are traces of some ancient building (Indicazione, p. 536). This is one of the temples mentioned as having been rebuilt by Augustus (Mon. Ancyr. tab. iv.).

From the document last quoted it would appear that there was a TEMPLE OF JUPITER ON THE AVENTINE; and its existence is also testified by the Fasti Ausonianii mentioned as being in the Lateran. Major. The Temple of Minerva, also mentioned in the Mon. Ancyr. as having been repaired by Augustus, is better known, and seems to have been in existence at all events as early as the Second Punic War, since on account of some verses which Livius Andronicus had written to be sung in celebration of the better success of the war, this temple was appointed as a place in which scribes, as it appears poets were then called, and actors should meet to offer gifts in honour of Livius. (Festus, p. 383.) From an imperfect inscription (Gruter, xxv. 5) it would appear that the temple was near the Armilustrum, and indeed it is named in conjunction with it in the Notitia.

There was a part of the Aventine called the Saxum, or Saxum Sacrarium (Cic. Dom. 53), on which Remus was related to have stood when he took the auguries, which must therefore be considered as identical with, or rather perhaps as the highest and most conspicuous part of the place called Remurium, and consequently on the very summit of the hill. Hence Ovid (Fast. v. 148, seq.):—

"—interea Diva canenda Bona est.
Est moles nativa, loco res nominia fecit.
Appellant Saxum; pars bona montis ca est."

On this spot was erected a Temple of the Bona Dea, as Ovid proceeds to say "leitner acclivi jugo." From the expression jugum, we may conclude that it lay about the middle of the hill; but Hadrian removed it (Aedem Bona Deae transtulit, Spart. Hadr. 19), and placed it under the hill; whence it subsequently obtained the name of Templum Bona Deae Subsaxoneae, and now stood in the 12th Region, or Piscina Publica, Varr. It is mentioned in the Notitia, probably under the SE side of the Aventine. For a legend of Hercules, connected with the rites of the Bona Dea, see Propertius (v. 9) and Macrobius (Sat. i. 12).

Besides these we find a Temple of Lux and one of Libertas mentioned on the Aventine. The former of these is not to be confounded with the temple of Diana, as Bansen has done (Becker. iii. p. 412), since we find it mentioned as a substantive temple in several authors. (Liv. xlv. 2; Aur. Vict. Vitr. Ill. 65; Fast. Praen. Frd. Kol. Apr. 4: Ll.5ae in Aventino, Feuill. and Antist. we find, under Id. Aug., "Dianae in Aventino.") It probably stood on the side next the circus. The Temple of Libertas was founded by T. Sempronius Gracchus, the father of the conqueror of Beneventum; the latter caused a picture representing his victory to be placed in the temple. (Liv. xxiv. 16.) Some difficulty has been occasioned by the manner in which the restoration of this temple by Augustus is mentioned in the Monimentum Ancyrarum, namely, "Aedes Minervae et Junonis Reginarum et Jovis Libertatis in Aventino (fecit)" (tab. iv. l. 6). In the Greek translation of this record, discovered in the temple at Ancyr, and communicated by Hamilton (Researches in Asia Min. ii. n. 102), the words "Jovis Libertatis" are rendered Διός Ελευθερίου, whence Franz assumed that the Latin text was corrupt, and that we ought to read "Jovis Liberatoris." (Gerhard's Archiologia, Zeitung, no. ii. p. 25.) But there is no mention of any such temple at Rome, though Jupiter was certainly worshipped there under the title of Liberator (see the section on the Circens Maximus); whilst the existence of a temple of Libertas on the Aventine is attested not only by the passage just cited from Livy, but also by Paulus Diaconus. ("Liberatis templum in Aventino fuerat constructum," p. 121.) Hence it seems most probable that the Greek translation is erroneous, and that the reading "Jovis Libertatis" is really correct, the copula being omitted, as is sometimes the case; for example, in the instance "Honoris Virtutis," for Honoris et Virtutis, &c. And thus, in like manner, we find a temple of Jupiter Libertas indicated in inscriptions belonging to municipal towns of Italy (v. Orell. Iscrer. no. 1249, 1282; cf. Becker, Handb. Nachträg. p. 721; Zumpt, i. Mon. Ancyr. Commentar. p. 69). Another question concerning this Templum Libertatis, namely, whether there was an Atrium Libertatis connected with it, has occasioned much discussion. The Atrium Libertatis mentioned by Cicero (ad Att. iv. 16), the situation of which we have examined in a preceding section, could not possibly have been on the Aventine; yet the existence of a second one adjoining the temple of Libertas on that hill has been sometimes assumed, chiefly from Martial (ix. 3). The question turns on the point whether the words "Domus alta Remi," in that epigram, necessarily mean the Aventine; for our own part we think they do not. The question, however, is somewhat long; and they who would examine it more minutely may refer to Becker (Handb. p. 458, seq.; Urichs, Küm. Topogr. p. 31, seq.; Becker, Antwurt, p. 23, seq.; Camma, Indicazione, p. 536, seq.; Urichs, Antwurt, p. 3, seq.)

As the Basilica Capitolina names among the Vici of the 15th Region, a Vicus Fidus and a Vicus Fontvae Deae, we may perhaps assume that there were temples to these deities on or near the Aventine; but nothing further is known respecting them. The Notitia mentions on the Aventine, "Thermæ Sibyranæ et Declanæ." The former of these baths seem to have been built by Trajan, and dedicated in the name of his friend Licinius Sura, to whom he was partly indebted for the empire. ("Hic ob hono- rem Surae, cujus studio imperium arripuerat, lavacra conduit," Aur. Vict. Epit. 13; cf. Doss Cass. lviii. 13: Spart. Adri. 2, seq.) The dwelling of Sura was on that side of the Aventine which faced the Circus Maximus and probably, as we have said, near the temple of Diana:

"Quique videt propius Magni certamina Cirie
Laudat Aventinæ vicinas Sura Dianæ." (Mart. vi. 64. 12.)
Whence we may perhaps conclude that the baths also were near the same spot (v. Preller, Regiones, p. 290; Canina, Indices, p. 533, seq.), where they seem to be indicated by the Capitoline plan (Bellori, tav. 4) and by traces of ruins. The baths of Decius are mentioned by Eutropius (ix. 4). Near the same spot appears to have been the House of Trajan before he became emperor, designated in the Notitia as Privata Tragiani, in which neighbourhood an inscription relating to a Domus Ulpianus was found. (Gruter, lxxv. 16.) Hence we may conclude that under the Empire the Aventine had become a more fashionable residence than during the Republic, when it seems to have been principally inhabited by plebeian families. The residence of Emnius, who, as we have said, possessed a house here, was, however, sufficient to enoble it.

The narrow strip of ground between the hill and the Tiber also belonged to the district of the Aventine. In ancient times it was called "Extra Portam Trigeminam," and was one of the busiest parts of the city, in consequence of its containing the emporium, or harbour of discharge for all laden ships coming up the river. Here also was the principal corn-market, near the Bona Portica, and a notable wine-vault. A Venetian merchant, the Augustus of the Aventine, is mentioned as the possessor of this place in the Menexon. (Varr. L. l. v. 43, seq. Mill.; Prop. v. 9. 5; Ov. Fast. vi. 399, &c.) Its situation between the Vicus Tuscus and the Forum Boarium is ascertained from the descriptions of the route taken by triumphal and festal processions. (Varr. L. l. vi. § 24; Ov. Fast. vi. 399, &c.) Its breadth, that is, its extension between the Vicus Tuscanus and the Forum Boarium, cannot be accurately determined, but seems not to have been very great. Its termination on the S. was by the Arcus Argentarius, close to the modern church of S. Giorgio in Velabro, which marked the entrance into the Forum Boarium. This site of the Velabrum is also proved by testimonies which connect it with the Nova Via, the Porta Romana, and the sepulchre of Acca Larentia. (Varr. L. l. vi. § 24, Mill.; cf. Cic. ad Brut. 15; Macrobi. S. i. 10.) It is uncertain whether the Sacellum Volcrius, which also lay on the Nova Via, should be assigned to the Velabrum or to the Palatine. (Varr. l. b. v. § 164; Macrobi. l.)

ROMA.
There was also a Velabrum Minus, which it is natural to suppose was not far distant from the Velabrum Maius. Varro says that there was in the Velabrum Minus a lake or pond formed from a hot spring called Lactolae, near the temple of Janus Geminus (Ib. § 136); and Paulus Diaconus (p. 118) describes the Latnuae as being "locus extra urbem." Hence it would seem that the Janus Geminus alluded to by Varro, must have been the temple near the Porta Carmentalis; but both the spring and the lake had vanished in the time of Varro, and were no longer anything but matters of antiquity.

The Arcus Argentarius already mentioned as standing near the church of S. Giorgio in Velabro appears, from the inscription, to have been erected by the Negotiates and Argentarius of the Forum Boarium in honour of Septimius Severus and his family. (Gruter, cxxv. 2; Orell. 913.) Properly speaking, it is no arch, the lintel being horizontal instead of vaulted. It is covered with ill-executed sculptures. Close to it stands the large square building called the Janus Quadrifrons, vaulted in the interior, and having a large archway in each front. The building had an upper story, which is said to have been used for mercantile purposes. The architecture belongs to a declining period of art, and the arch seems to have been constructed with fragments of other buildings, as shown by the inverted bas-reliefs on some of the pieces. (Beschr. iii. p. 339.) The Notitia closes the description of Regio xi. by mentioning an "Arcus Constantiani," which cannot, of course, refer to the triumphal arch on the other side of the Palatine. The conjecture of Bunsen, therefore (Beschr. Anh. iii. p. 669), does not seem improbably probable, that this Janus was meant; and from its style of architecture it might very well belong to the time of Constantine.

The Forum Boarium, one of the largest and most celebrated places in Rome, appears to have extended from the Velabrum as far as the ascent to the Aventine, and to have included in breadth the whole space between the Palatine and Circus Maximus on the E. and the Tiber on the W. Thus it must not be conceived as a regular forum or market surrounded with walls or porticoes, but as a large irregular space determined either by natural boundaries or by those of other districts. Its connection with the river on the one side and the circus on the other is attested by the following lines of Ovid (Fast. vi. 477):—

"Pouribus et Magno juncta est celeberrima Circum Area qua poasito de bove nomen habet."

Its name has been variously derived. The referring of it to the cattle of Hercules is a mere poetical legend (Prop. v. 9. 17; seq.) and the derivation of it from the statue of a bronze bull captured at Aeagni and erected in this place, though apparently more plausible, is equally destitute of foundation, since the name is incontestably much older than the Macedonian War. (Plin. xxxiv. 5; Ov. l. c.; Tac. Ann. xii. 24.) It seems, therefore, most probable, as Varro says (L. l. v. § 146; cf. Paul. Dia. p. 50), that it derived its name from the use to which it was put, namely, from being the ancient cattle-market; and it would appear from the inscription on the Arcus Argentarius before alluded to that this traffic still subsisted in the third century. The Forum Boarium was one of the most celebrated places and monuments of the ancient times. Amongst the most famous were those of Hercules, Fortuna, and Mater Matuta; but unfortunately the positions of them are not very precisely indicated. There seems to have been more than one Temple of Hercules in this district, since the notices which we meet with on the subject cannot possibly be all referred to the same temple. The most ancient and important one must have been that connected with the Magna Ara Herculis, which tradition represented as having been founded by Evander. ("Et magna arca famuque, quae praestant Hercules Arcas Evander sacra verat," Tac. Ann. xxv. 41; cf. Ib. xii. 24; Solin. i. 10.) This appears to have been the Hercules styled triumphalis, whose statue, during the celebration of triumphs, was clothed in the costume of a triumphant general; since a passage in Pliny connects it with that consecrated by Evander. ("Hercules ab Evandro sacrares at produnt, in Foro Boario, qui triumphalis vocatur atque per triumphus vestitur habitu triumphali," xxxiv. 16.) It was probably this temple of Hercules into which it was said that neither dogs nor flies could find admittance (H. x. 41; Solin. i. 10), and which was adorned with a painting by Pacuvius the poet (Plin. xxxv. 7). A Round Temple of Hercules, also in the Forum Boarium, seems to have been distinct from this, since Livy (x. 23) applies apparently the epithet "rotunda" to it, in order to distinguish it from the other. ("Insignem supplicationem fecit certamen in sacello Pudicitiae Patricea, quae in Foro Boario est ad aedem rotundam Herculis, inter matronas erat."—Caninia (Indicazione, p. 338) assumes from this passage that the temple to which it refers must have been in existence at the time of the consecration alluded to, namely, B. c. 297; but this, though a probable inference, is by no means an absolutely necessary one, since Livy may be merely indicating the locality as it existed in his own time. The former of these temples, or that of Hercules Triumphalis, seems to be the one mentioned by Macrobius (Sat. iii. 6) under the name of Hercules Victor; and it appears from the same passage that there was another with the same appellation, though probably of less importance, at the Porta Trigemina. Besides these we hear of a "Hercules Invictus" by the Circus Maximus (Fast. Anton. Prist. Id. Aug.), and of another at the same place "in aedem Pompeii Magni" (Plin. xxxiv. 8. 57), which seems to refer to some Aedes Herculis built or restored by Pompey, though we hear nothing more of any such temple. Hence there would appear to have been three or four temples of Hercules in the Forum Boarium. The conjecture of Becker seems not improbable that the remains of a round temple now existing at the church of S. Maria del Solé, commonly supposed to have belonged to a

**TEMPLE OF HERCULES.**
temple of Vesla, may have been that of Hercules, and the little temple near it, now the church of S. Maria Egiziaca, that of Pudicitia Patricia. (Handb. P. 25.) This question is, however, in some degree connected with another respecting the sites of the Temples of Fortuna and Mater Matuta. Canina identifies the remains of the round temple at the church of S. Maria del Sole with the temple of Mater Matuta; whilst the little neighbouring temple, now the church of S. Maria Egiziaca, he holds to have been that of Fortuna Virilis. His chief reason for maintaining the latter opinion is the following passage of Dionysius, which points, he thinks, to a temple of Fortuna Virilis, built by Servius Tullius close to the banks of the Tiber, a position which would answer to that of S. Maria Egiziaca:—

It should be premised that Canina does not hold the two temples in question to have been in the Forum Boarium, but only just at its borders. ("Corrispondanze da vicino al Foro Boario," Indicata. p. 383.) The temple of Fortuna Virilis here mentioned by Dionysius was, he contends, a distinct thing from the temple of Forti Fortuna, which he allows lay outside of the city on the other bank of the Tiber (p. 506). Indeed the distinction between them is shown from the circumstance that their festivals were celebrated in different months: that of Fortuna Virilis being in April, that of Forti Fortuna in June. (Comp. Ov. Fast. iv. 143, seq., with the Fasti Præcentini in April: "Frequenter mulieres supplicant . . . Fortunae Virilis hinnuiores." Also comp. Ov. Fast. vi. 773, seq., with the Fasti Amatironia, VIII. Kol. Jul.: "Fori Fortuna Transtiberi, ad Milliar. Prim. et Sext.") Now these passages very clearly show the distinction between Fortuna Virilis and Forti Fortuna; and it may be shown just as clearly that Dionysius confounded them, as Plutarch has also done. (De Fort. Rom. 5.) Servius Tullius, as Dionysius says, built a temple of Fortuna in the Forum Boarium; but this Fortuna was not distinguished by any particular epithet. Dionysius gives her none in the passage cited; nor does any appear in passages of other authors in which her temple is mentioned. Thus Livy: "De manibus duos fœnissit in foro Boario ante Fortunæ sœdem et Matris Matutae, numnum in Maximo Circo fecit." (xxxiii. 27.) So also in the passages in which he describes the fire in that district (xxiv. 47, xxv. 7). One of the two temples of Fortuna built by Servius Tullius was then that of the Forum Boarium, as shown in the preceding passages from Livy and from Dionysius: that the other was a temple of Forti Fortuna and not of Fortuna Virilis appears from Varro: "Dies Fortis Fortunæ appellatus ab Servio Tullio Rege, quod est fanum Fortis Fortunæ secundum Tiberiam extra Urbem Romam dedicavit Junio moe." (L. L. vi. § 17, Mill.) Hence it is plain that both Dionysius and Plutarch have made a mistake which foreigners were likely enough to fall into. Temples being generally named in the genitive case, they have taken fortis to be an adjective equivalent to virilis or virilis (v. Bunsen, Beschr. iii. Nachtr. p. 665; Becker, Handb. p. 476, note 998), and thus confounded two different temples. But as this temple of Forti Fortuna was "extra Urbem," it could not have been the same as that with which Canina identifies it, which, as Livy expressly says, was known in portum Carmen deum (xxxv. 7). The site of the temple of Fortuna Virilis cannot be determined, and Bunsen (I. c.) denies that there was any such temple: but it seems probable from the passage of Ovid referred to above that there was one, or at all events an altar; and Plutarch (Quaest. Rom. 75) mentions a Tēxus £'ιρηνιο.' On the other hand, there seem to have been no fewer than three temples of Forti Fortuna on the right bank of the Tiber. First, that built by Servius Tullius, described by Varro as "extra Urbem secundum Tiberim." Second, another built close by that of Servius by the consul Sp. Carvilius Maximus (64 B.C.): "De religione aurea aedem Fortis Fortunæ de manibus faciendum locavit, prope aedem ejus Deae ab urbe Servii Tullii dedicavit." (Liv. x. 46.) Third, another dedicated under Tiberius (A.D. 16) near the Tiber in the gardens of Caesar, and hence, of course, on the right bank of the river; "aecus Fortis Fortunae, Tiberim justa, in horis quo Caesar dictator populo Romano legaverat." (Tac. Ann. i. 41.) That the Horii Caesars were on the right bank of the Tiber we know from Horace (S. i. 9. 18) and Plutarch. (Brut. 20.) The temple built by Servius must also have been on the right bank, as it seems to be referred to in the following passage of Donatus:—

"Fori Fortuna est cujus diem festum coluit qui ante arce aliquo vivunt: Injus nedes trans Tiberim est." (ad Terent. Thurn. v. 6. 1.) The same thing may be inferred from the Fasti Amatironia:—"Forti Fortuna Transtiber; ad Milliar. Prim. et Sextum." (I. V. Kol. Jul.) The temple in the gardens of Caesar seems here to be alluded to as at the distance of one mile from the city, whilst that of Servius, and the neighbouring one erected by Carvilius appear to have been at a distance of six miles. But this need not excite our suspicion. There are other instances of temples lying at a considerable distance from Rome, as that of Fortuna Muliebris at the fourth milestone on the Via Latina. (Fest. p. 542; cf. Val. Max. i. 8. § 4, v. 2. § 1; Liv. ii. 40, &c.) It would appear, too, to have been some way down the river, as it was customary to repair thither in boats, and to employ the time of the voyage in drinking (Fast. vii. 777: —

"Pars pede, pars etiam celeri decurrie cymbra"

Nec pacutae potes inde redire domum.

Multaque per medias vina bilabantur aquas.

We have entered at more length into this subject than its importance may perhaps seem to demand, because the elegant remains of the temple now forming the Armenian church of S. Maria Egiziaca cannot fail to attract the notice of every admirer of classical antiquity that visits Rome. We trust we have shown that it could not possibly have been the temple of Fortuna Virilis, as assumed by Canina and others. The assumption that the neighbouring round temple was that of Mater Matuta may perhaps be considered as disposed of at the same time. The only grounds for that assumption seem to be its vicinity to the supposed temple of Fortuna Virilis. Livy’s description (xxxiii. 27) of the two triumphal arches erected in the Forum Boarium before the two temples appearing to indicate that they lay close together.

With regard to the probability of this little church...
TEMPLE OF PUDICITIA PATRICIA.

having been the temple of PUDICITIA PATRICIA, it might be objected that there was in fact no such temple, and that we are to assume only a statue with an altar (Sachau, Gesch. d. S. Rom. i. p. 365). Yet, as Becker remarks (Handb. p. 480, note 100), Livy himself (x. 25) not only calls it a sucelenum, a name often applied to small temples, but even in the same chapter designates it as a templum ("Quam se Virginia, et patriciam et pudicum in Patriciae Pudicitiae templum ingressam vero gloriaretur"); and Propertius (ii. 6. 25) also uses the same appellation with regard to it. On the other hand some have fixed on S. Maria in Consuetudinem as the site of this temple, but with little appearance of probability. Becker seeks in the church just named the temple of Fortuna built by Servius Tullius in the Forum Boarium. The church appears to have been erected on the remains of a considerable temple, of which eight columns are still perceptible, built into the walls. This opinion may be as probable as any other on the subject; but as on the one hand, from our utter ignorance of the site of the temple, we are unable to refute it, so on the other we must confess that Becker's long and laboured argument on the subject is far from being convincing (Handb. p. 481, seq.). The site of the Temple of Mater Matuta is equally uncertain. All that we know about it is that it was founded by Servius Tullius, and restored by Camillus after the conquest of Veii (Liv. v. 17), and that it lay somewhere on the Forum Boarium (Ovid, Fast. vi. 471). If we were inclined to conjecture, we should place both it and the temple of Fortuna near the northern boundary of that forum; as Livy's description of the ravages occasioned by the fire in that quarter seems to indicate that they lay at no great distance within the Porta Carminealis (xxiv. 47, xxv. 7). The later history of both these temples is unknown.

In the Forum Boarium, near the mouth of the Cloaca Maxima, was also the place called Doliola, mentioned in the former part of this article as regarded with religious awe on account of some sacred relics having been buried there, either during the attack of the Gauls, or at a still more ancient period. (Liv. v. 40; Varr. L.L. v. § 157, Mill.) When the Tiber is low, the mouth of the Cloaca Maxima may be seen from the newly erected iron bridge connecting the Ponte Rotto with the left bank. The place called Ad Rusta Gallica where it is said that the bodies of the Gauls were burnt who died during or after the siege of the Capitol, has also been assumed to have been in this neighbourhood because it is mentioned by Varro (llb.) between the Aeuminielium and the Doliola (cf. Liv. v. 48, xxii. 14). But such an assumption is altogether arbitrary, as Varro follows no topographical order in naming places. Lastly, we shall mention two objects named in the Notitia, which seem to have stood on the Forum Boarium. These are the Apollo Coeliscepex, and the Hercules Olivarius, apparently two of those statues which Augustus dedicated in the different Vicus. Becker (Handb. p. 493) places them in the Velabrum, and thinks that the epitaph of Olivarius was derived from the oil-market, which was established in the Velabrum (Plaut. Capt. iii. 1. 29), but it seems more probable that it denoted the crown of olive worn by Hercules as Victor (Preller, Regionen, p. 194). The Forum Boarium was especially devoted to the worship of Hercules, whence it seems probable that his statue stood there; besides both that and the Apollo are mentioned in the Notitia in coming from the Porta Trigemina, before the Velabrum.

Before we quit the Forum Boarium we must advert to a barbarous custom of which it appears to have been the scene even to a late period of Roman history. Livy relates that after the battle of Cannae a Gallic man and woman and a Greek man and woman were, in accordance with the commands of the Sibyline books, buried alive in a stone sepulchre constructed in the middle of the Forum Boarium, and that this was not the first time that this barbarous and un-Roman custom had been practised (xxiii. 57). Dion Cassius advert to the same instance in the time of Fabius Maximius Verrucosus (Fr. Vales. 12), and Pliny mentions another which had occurred even in his own time ("Boario vero in foro Graecum Graecamque defossos, aut aliarium gentium, cum quibus tum res eiset, etiam nostras actas vidit," xxviii. 3; cf. Plut. Q. R. 83). It may also be remarked that the first exhibition
of gladiatorial combats at Rome took place on the Forum Boarium, at the funeral of the father of Marcus and Decimus Brutus, n. c. 264. (Val. Max. ii. 4 § 7.)

The valley between the Palatine and Aventine, occupied by the Circus Maximus was, as we have had occasion to mention in the former part of this article, in earlier times called VALLIS MURCIA, from an altar of the Deus Murcia, or Venus, which stood there. He who mounts the enormous mass of ruins which marks the site of the imperial palace on the S. side of the Palatine hill may still trace the extent and configuration of the circus, the area of which is occupied by kitchen gardens, whilst a gas manufactury stands on the site of the carceres. The description of the circus itself will be reserved for a separate section devoted to objects of the same description, and we shall here only treat of the different monuments contained in it as a Region or district.

The whole length of the circus was 31 stadia, or nearly half a mile, the circular end being near the Septizonium, and the carceres or starting place nearly under the church of S. Anastasia, where the circus adjoined the Forum Boarium. Its proximity to the latter is shown by the circumstance that the Maxima Ara Herculis before alluded to is sometimes mentioned as being at the entrance of the Circus Maximus, and sometimes as on the Forum Boarium (\textit{Ingens ara Herculis Magna magnum est Maximu;} \textit{Sene. ad Ann. i. 171;} cf. Dionys. i. 49; Ovid, \textit{Fast.} i. 581; Liv. i. 7, &c.) The large Temple of Hercules must undoubtedly have been close to this altar, but on the Forum Boarium.

The Vallis Murcia contained several old and famous temples and altars, some of which were included in the circus itself. Such was the case with the altar or \textit{Sacellum} of Murcia herself (\textit{Iutumnus Circus ad Muricem vocatur — ibi sacellum etiam nunc Muricane Venere,} Varr. \textit{L. L.} vii. § 154, Mill.); but its exact site cannot be determined. Consus had also a subterranean altar in the circus, which was opened during the games and closed at other times. It is described by Tertullian as being "ad primas metas," and therefore probably at a distance of about one-third of the whole length of the circus from the carceres, and near the middle of the S. side of the Palatine hill. (Tert. \textit{de Spect.} 5; Varr. \textit{L. L.} vi. § 20, Mill.; Tac. \textit{Ann.} xi. 24; Plut. \textit{Roma.} 14.)

But the chief temple on the circus was the \textit{Temple of the Sun,} to which deity it was principally consecrated (\textit{Circus Nol principaliiter consecratur: curus aedes medio apatio et effigies de Favitio aedis cmicat,} Tert. \textit{Spect.} 8). Tacitus mentions the ancient temple as being "apud Circus" (\textit{Ann.} xv. 74), and from a comparison of these passages we may conclude that it stood in the middle of one of its sides, and probably under the Aventine. The \textit{Notitiae} and \textit{Curiosum} mention it ambiguously in conjunction with a \textit{Temple of Luna,} so that it might possibly be inferred that both deities had a common temple (\textit{Templum Solis et Lunae,} \textit{Reg.} xi.). It seems, however, more probable that there were two distinct temples, as we frequently find them mentioned separately in authors, but never in conjunction. It is perhaps the same temple of Luna which we have already mentioned in the Aventine, in which case it might have been situated on the declivity of that hill facing the circus, and behind the temple of Sol. Luna, like Sol, was a Circensian deity, both performing their appointed services in quadrignae. (\textit{Juli. Lydus, de Mens.} i. 12; Tert. \textit{Spect.} 9; Cass. \textit{Var.} iii. 51.) The situation of the Temple of Mercury, mentioned next to the two preceding ones in the \textit{Curiosum,} may be determined with more accuracy. We may believe an account recorded by Nardinus (\textit{Rom. Ant.} lib. vii. 12) on the occasion of a certain Francesco Passeri, respecting the discovery of the remains of a small temple of that deity in a vineyard between the Circus Maximus and the Aventine. The remains were those of a little tetra-style temple, which was identified as that of Mercury from an altar having the caduceus and pateras sculptured on it. The temple is represented on a medal of M. Aurelius, who appears to have restored it. The site agrees with that described by Ovid (\textit{Fast.} v. 669):—

"Templa tibi possecre patres spectantia Cireum Idibus: ex illo est hac tiba festa dies,"

A comparison of this passage with Livy, "aedes Mercurii dedicata est Idibus Muis" (ii. 21), shows that the same ancient sanctuary is alluded to, the dedication of which caused a dispute between the consuls, b. c. 495 (\textit{ib.} c. 27). We next find mentioned in the \textit{Notitiae} an \textit{Aedes Matris Deum,} and another of \textit{Jovis Arboratorius,} for which we should probably read "Laboratoris." The \textit{Magna Mater} was one of the Circensian divinities. Her image was exhibited on the spina (Tert. \textit{Spect.} 8), and it would seem that the host also had a temple in the vicinity. Of a temple of Jupiter Liberator we know nothing further, though Jove was certainly worshiped at Rome under that name (Tac. \textit{Ann.} xv. 64, xvi. 35), and games celebrated in his honour in the month of October. (\textit{Calend. Vindob.} ap. Peller, \textit{Reg.} p. 192.)

Next to these an \textit{Aedes Diitis Patris} is named in the \textit{Notitiae,} but does not appear in the \textit{Curiosum.} Some writers would identify Disparter with \textit{Summanus,} quasi \textit{Summus Mininun} (v. Gruter, \textit{MNV.} 7; Mart. \textit{Capell.} ii. 161); but there was a great difference of opinion respecting this old Sabine god, and even the Romans themselves could not tell precisely who he was. Thus Ovid (\textit{Fast.} vi. 725):—

"Teddisita, quisquis is est, Summano templum ferulant
Tunc cum Romanis, Pyrre, timidos eras."

The temple to him here alluded to was, however, certainly near the Circus Maximus, since Pliny mentions some annual sacrifices of dogs as made "inter aedem Juventas et Summan" (xix. 4); and that the Temple of Juventas was at the Circus Maximus we learn from Livy: "Juvent-\textit{aetum aedem in Circ Maximo C. Licinins Lucullus trinuvir dedicavit;}" (\textit{Fast.} vii. 56 cf. \textit{Calend. Amer.} \textit{XII. Kal. Jul.}, "Summano ad Circ. Max."), the temple of Summanus, therefore, must have been dedicated during the war with Pyrrhus, and that of Juventas in b. c. 192.

Close to the \textit{W.} extremity of the circus, and towering as it were over the carceres, from its being built apparently on the slope of the Aventine (\textit{intep aedivis \textit{Dymanos tae \textit{tropæum}}, Dio. \textit{vii.} 94), stood a famous \textit{Temple of Ceres,} dedicated also to \textit{Liber and Libera.} Thus Tacitus, relating the dedication of the temple by Tiberius, it having been restored by Augustus, says: "\textit{(Ubi, Liberique et Ceres,}

\textit{juxta Circum Maximum, quam A. Postumius dictator voraverat (dedicavit)}" (\textit{Ann.} ii. 49). It is mentioned by other writers as "ad Circum Maximum;" wherein Canina's identification of it with the church of \textit{S. Maria in Cosmedin} seems improbable (\textit{Indicat.})
ROMA.

p. 498), since that building is at some little distance from the circus, and certainly does not stand on higher ground. The temple of Ceres contained some sacred works of art (Plin. xxxiv. 10. s. 36. § 99), especially a picture of Dionysus by Aristides, which Strabo mentions that he saw (viii. p. 381), but which was afterwards destroyed in a fire which consumed the temple.

We also find a Temple of Venus mentioned at the circus, founded by Q. Fabius Gurges, b. c. 295, very appropriately out of the money raised by fines levied on certain matrons for incontinence. (Liv. x. 31.) It seems to have been at some distance from the Forum Boarium, since the censors M. Livius and C. Claudius contracted for the paving of the road between the two places. (Id. xxix. 37.) Yet we have no means of defining its site more accurately, nor can we even tell whether it may not have been connected with the altar of Venus Murcia before mentioned. But the Temple of Flora, founded by the aediles L. and M. Publicius, the same who constructed the clivus or ascent to the Aventine which bore their name, must have lain close to that ascent, and consequently also to the temple of Ceres just described; since Tacitus, after relating the re dedication of the latter under Tiberius, adds: "estemque in loco solum Florae (dedicavit), ab Lucio et Marco Publicius aediliciis consueturum." (Ann. ii. 49.) The Publicius applied part of the same money—raised by fines—with which they had constructed the clivus, in instituting floral games in honour of the divinity which they had here consecrated, as we learn from the account which Ovid puts into the mouth of the goddess herself (Fast. v. 283).

These are all the temples that we find mentioned in this quarter; but before we leave it there are one or two points which deserve to be noticed. The Cave of Cacus was reputed to have been near the Clivus Publicius. Solinus mentions it as being at the Sulinae, near the Porta Trigemina (I. 8); a situation which agrees with the description in Virgil of the meeting of Aeneas and Evander at the Ara Maxima of Hercules, from which spot Evander points out the cave on the Aventine (Ann. viii. 190, seq.):—

"Iam primum saxia suspensam hanc adspice rupe," &c.

Of the Duodecem Portae mentioned in the Notitia in this Region we have already spoken [Part II. p. 757].

IX. THE CAELIAN HILL.

The Caelian presents but few remains of ancient buildings, and as the notices of it in the classics are likewise scanty its topography is consequently involved in considerable obscurity. According to Livy (i. 30) Tullius Hostilius fixed his residence upon it; but other accounts represent him as residing on the Velia. (Cic. Rep. ii. 31.) We find a Sacellum Dianae mentioned on the Caelioliad—an undefined part of the eastern ridge (de Har. Resp. 15); another of the Dea Caena in "Caelio monte" (Macro. s. i. 12); and a little Temple of Minerva Capta situated on the declivity of the hill:—

"Caelia ex alta qua Mons descendit in sequam, Hic uti non plana est, sed prope plana via est, Parva licet videas Captae debhra Minervae." (Ov. Fast. iii. 537, seq.)

Hence it was probably the same ancient sanctuary, called "Minervium" in the sacred books of the Argives, which lay on the northern declivity of the Clauini towards the Tabernula ("Circa Minervium qua et Caelio monte in Tabernula est," Varr. L. L. v. § 47), and probably near the modern street Via della Navicella.

The most considerable building known on the Caelioli in later times was the Temple of Divus Claudius, begun by Agrrippina, destroyed by Nero, and restored by Vespasian. (Suet. Ves. 9; Aur. Vict. Caes. 9.) The determination of its site depends on the question how far Nero conducted the Aqua Claudia along the Caelioli, since we learn from Frontinus that the arches of that aqueduct terminated at the temple. (Front. Ag. 20, 76.) These Aras Neoroinian (also called Caelioli montani, Gruter, Inscr. clxxxvii. 3) extend along the ridge of the narrow hill, supposed to be the Caelioli, from the Porta Maggiore to the Santa Scala opposite the Lateran, where they are interrupted by the piazza and buildings belonging to that basilica. They recommence, however, on the other side in the Via di S. Stefano Rotondo, and proceed with a small gap as far as that church. There are further traces of them on the W. side of the arch of Dolabella; and the opinion of Canina seems the most probable enough, that they terminated near the garden of the convent of SS. Giovanni e Paolo, and that the remains of a huge substruction at this spot belonged to the temple of Claudius. (Indicez. p. 73, seq.) Canina is further of opinion that the Aqua Claudia was distributed a little beyond this spot, and that one of the uses to which it was applied by Nero was to replenish his lake, which occupied the site of the Flavian amphitheatre. Others, however, are of opinion that the aqueduct did not proceed beyond the church of S. Stefano Rotondo, and therefore that the temple of Claudius stood near that spot, or that the church may even have been built on its foundations. But there are no sufficient grounds for arriving at any satisfactory conclusion on these points, and altogether the view of Canina is perhaps the more probable one.

The Arch of Dolabella, just alluded to, appears from the inscription on it to have been erected in the consulsipship of Dolabella and Silanus, A. D. 10. Its destination has been the subject of various conjectures. Some have imagined it to be a restoration of the Porta Caelimontana; but this can hardly be the case, since, if the Servian wall had run in this direction, half of the Caelian hill would have been shut out of the city. On the other hand, its appearance excludes the notion of a triumphal arch; and it could not originally have formed part of an aqueduct, since it was erected previously to the construction of the Aqua Claudia. It seems most probable therefore that it was designed as an entrance to some public place; but there are appearances that Nero subsequently conducted his aqueduct over it. (Canina, Indicez. p. 77.) The road which led up to it from the Via di S. Gregorio seems in ancient times to have been called Clivus Scavius. It is mentioned under that name in the Epistles of St. Gregory (vii. 13), and the Anonymous Eunapidennius calls it Clivus Tauri, which is probably a scribal error.

Next to the temple of Claudius, the Notitia mentions a Macellum Magnum, probably the market recorded by Dion Cassius as founded by Nero (την ἀγορὰν των ἀφών, τὸ μακελείον ἀργομασίων, καν.
Nardini, who is followed by Canina (Indicazioni, p. 83), is of opinion that the church of S. Stefano Rotondo was part of the macellum, perhaps a slaughter-house with a dome, and surrounded with porticoes.

MACELLUM.

The Casta Peregrina recorded in the Notitia are not mentioned by any author except Ammianus Marcellinus, who relates that Claudomar, when conquered by Julian, was conducted to and died in this camp on the Caelian (xvi. 12, ext. 1). The name, however, occurs in inscriptions, and sometimes in connection with a temple of Jupiter Redux, as in that found in the church of S. Maria in Domenica (Gruter, xxii. 3; Orb. 1256). These inscriptions also mention a Præfectura Peregrinorum, the nature of whose office we are unacquainted with; but it seems probable that he was the commander of the foreign troops stationed in this camp. Near the same church were found several little marble ships, apparently votive offerings, and one which stood a long while before it gave to the church and to the surrounding place the name of della Navicella.

An Islet, or temple of Isis, is mentioned by Treb. Pollio (XXX. Tyron. 25) on the Caelian, but it occurs nowhere else. It was probably one of the many temples erected to this goddess by Caracalla (Lamp. Corac. 9). The spring called the Aqua Mercurii recorded by Ovid near the Porta Capena (Fast. v. 673) was rediscovered by M. Fea in 1828, in the vigo of the Pabiri Camillidiosi of S. Gregorio. On the Caelian was also the Campus Martialis in which the Esquiline were held in March, in case the Campus Martius was overflowed (Ovid, Fast. v. 673; Paul. Dec. p. 161). Its situation rests chiefly on conjecture; but it was probably near the Lateran; where the neighbouring church of S. Gregorio, now S. Maria Immaculata, was called in the middle ages "in Campo Marzo" (Canina, Indicazioni, p. 84.)

In the Imperial times the Caelian was the residence of many distinguished Romans; and it is here that Martial places the "limina potentiorum" (xvi. 8). We have already had occasion to allude to the House of Claudius Centumalus on this hill, which was of such an extraordinary height that the augurs commanded him to lower it; but this was during the Republic. Under the Empire we may mention the House of Manilia, a Roman knight of Fortune, and praefectus fabrum of Caesar in his Gallic wars, the splendour of which is described by Pinyi (xvi. 7), and improved by Catullus (xiv. 4). Here also was the House of Annii Verpi, the grandfather of Marcus Aurelius, in which that emperor was educated, situated near the house of the Laterani (Jul. Capit. M. Ant. 1). It appears it has been surrounded with gardens; and according to the Italian writer Vacca (Mem. 18) the noble equestrian statue of Marcus Aurelius which now adorns the Capitol was discovered in a vineyard near the Scala Sallustiana. On the same hill were the Aediles Victriciani (Victrix), and Commodus sought refuge from the uneasy thoughts which tormented him in the palace, but where he could not escape the snares of the assassin (Lampr. Comm. 16, 1; Jul. Capit. Vert. 5). But the most remarkable of all these residences was the Palace of the Lateran, characterised by Juvenal (x. 18) as the "exigeans Lateranorum asides," the residence of the consul Paulius Lateranus, whose participation in Piso's conspiracy against Nero cost him his life (Tac. An. xv. 49, 60). After this event the palace of the Laterani seems to have been consecrated, and to have become imperial property, since we read Septimius Severus presenting it to his friend Laterani, probably a descendant of the family to which it had once belonged (Ann. Vict. Epit. 20). Subsequently, however, it appears to have been in the possession of the emperor Constantine, who erected upon its site the celebrated basilica which still bears the name of the Lateran, and presented it to the bishop of Rome (Nicom. vii. 49). The identity of the spot is proved by several inscriptions found there, as well as by the discovery of chambers and baths in making the façade of the modern basilica (Venti, "Rom. Ant. P. I." 8; Canina, Indicazioni, p. 85). The Domus Philippii mentioned in the Notitia was probably the private house of the emperor of that name. Lastly, we may mention that on the Caelian was the house of Symmachus, the strenuous defender of paganism in the reign of Valentinian (Symm. Epit. III. 12, 88, viii. 18, 19).

There are a few other objects on the Caelian mentioned in the Notitia, some of which, however, hardly admit of explanation. Such is the Atrium or Aratri Cyclopi, respecting which we cannot say whether it was a cavern, or an area surrounded with porticoes. Whatever it was it seems to have stood on the S. side of the hill, since the vici Al Cyclopi in the 1st Region, or Porta Capena, was probably named after it (Preller, Reg. p. 119). The Capit. Africam of the Notitia, which likewise appears in several inscriptions (Orbel. 2685, 2934, 2935), is thought to have been a street in the neighbourhood of the Colosseum, since the Anonymous Eunudissennus mentions it between the Meta Sudans and the church of SS. Quattro Coronati; whence it is held to have corresponded with the modern street which bears the name of that church (Nebly, Mar. Rom., p. 173; note 146; Urlichs, Rom. Topogr. p. 101). Becker observes (Handb. p. 508), that the name does not appear in any earlier writer, and connects it with some building founded by Septimius Severus, in order to strike his countrymen, the Africans, who arrived at Rome by the Via Appia; though, as Urlichs observes, they must have gone rather out of their way "to be imposed upon." Varro mentions a Vicus Africam on the Esquiline, so named because the African hostages in the Punic War were said to have been detained there ("Exquisibus vicis Africae, quod obisibi ex Africa bello Punico dicitur custodi")." (L. L. v. 15). Hence it is very probable that Catullus (Indicazioni, p. 97), that the head, or beginning, of this street stood at the spot indicated by the Anonymous, namely, near the Colosseum, when it ran up in the direction of the Esquiline, although Becker (Handb. p. 560) denies that the Capit. Africam had any connection with the Vici Africani. The Arbor Santae is inexplicable.
They probably disappeared during the Civil Wars, in which the Roman temples seem to have suffered both from neglect and spoliolation; for in the time of Cicero the Syracusan spolioli still existed in the temple (in Verr. iv. 54). It appears to have been burnt in the fire of Nero, since it is mentioned as having been restored by Vesuvius. (Plin. xxxv. 37.)

According to Aurelius Victor (Vit. Ill. 92) the annual procession of the Roman knights to the temple of Castor started from this temple of Honos and Virtus, whereas Dionysius (xi. 13) names the temple of Mars as the starting-place. Becker (Handb. p. 511) regards the discrepancy between these accounts as tending to prove the correctness of his assumption that the temples must have lain close together. That one of the accounts is erroneous is a more probable conclusion, and it is a certain one that it is fallacious to draw any topographical deductions from such very shadowy premises. The true site of the Temple of Mars has been ascertained as satisfactorily as that of the monuments which do not actually speak for themselves; such, we mean, as the Colosseum, Trajan's column, the Pantheon, and others of the like description. There can be no doubt that the temple of Mars, instead of being close to the Porta Capena, or at S. Sisto, as Becker places it (Handb. p. 513), lay on the Via Appia, at the distance of about 1½ miles from that gate. The proofs are overwhelming. In the first place an inscription, still preserved in the Vatican, recording the leveling of the Circus Marcellus, was found in the Vigna Nave, outside of the Porta Appia (the modern S. Sebastiano). Secondly, another inscription, in the Palazzo Barberini, recorded by Fabretti (Inscr. p. 724, no. 443), Marini (Fratr. Arr. p. 8), and others, testifies that Servlia Marcellina gave a piece of ground to the Collegium of Asculapius and Hygia for a small temple, close to the temple of Mars, between the first and second milestone on the Via Appia, on the left-hand side in going from the city. Thirdly, both the Notitia and Curiosum place the Aedes Martis at the extremity of the first Regio, close to the Flumen Almus. The Auro flow outside the Porta Appia, near the Vigna Nave:—

"Est locus ante urbem, qua primum nascitur ingens / Appia, quaque Italie genitus Almus Cybele / Postic, et Idaea jam non reminiscitur annos."

(Stat. Silv. v. I. 222.)

A brook now flows between the Porta S. Sebastiano and the church of Domine quo vadis, which, with great probability, has been identified with the Almo. (Chir. vol. i. p. 191; p. 192; vol. ii. p. 104; Ital. Ant. p. 17.) Fourthly, the same locality is indicated by several documents of the middle ages. Thus, in the Acts of the Martyrs:—

"Tunc B. Stephano ductus a milites foras muros Appiae portae ad T. Martis" (Act of S. Stephano and S. Julius).

"Diacoex dumrunt in clivum Martis ante templum et ibidem decollatus est" (Act of S. Siphone).

And the Mirobolus (in Mostfianus, Diur. Ital. p. 283):—

"Hae cunt loca qua ineuntur in passionibus sanctorum foris portam Appiam, ubi beatus Syrus decollatus fuit, et ubi Dominus apparuit Petro, Domine quo vadis. Hii templum Martis intus portam, arcus Syllae." Now, the passages in the classics which relate to the subject do not run counter to these indications, but, on the contrary,
tend to confirm them. Appian (B. C. iii. 41) mentions a temple of Mars 15 stadia distant from the city, which would answer pretty nearly to the distance of between 1 and 2 miles given in the inscription quoted. Ovid says (Fast. vi. 191):

"Lux eadem Marti festa est; quem prospicit extra.

Apressum tecta Porta Capena vice."

The word prospicit denotes a long view; and as the temple of Mars stood on a hill, as is evident from the Clivus Martis, it might easily be visible at the distance of a mile or two. The words of Statius ("qua primum asceitur," &c.) must be corrupt, being both tautological and contrary to fact. The paving of the road from the Porta Capena to the temple would not have been worth twice recording by Livy, had it lain only at a distance of some 300 yards (x. 23, xxxviii. 28). The only way in which Becker can escape from the legitimate conclusion is by assuming two temples of Mars in this quarter; in which few, we suspect, will be inclined to follow him, and which may be regarded as equivalent to a confession of defeat. (Becker, Handb. p. 511, seq.; Ante, p. 63, seq.; Urichs, Rom. Topogr. p. 105, seq.; Preller, Regionen, p. 116, seq.; Canina, Indicazioni, p. 56, seq.)

Close to the Porta Capena and the temple of Honos et Virtus lay the VALLEY OF EGERIA with the LECUS and ALDES CAMENARIUM, the traditional spot where Numa sought inspiration and wisdom from the nymph Egeria. (Liv. i. 21; Plut. Numa. 13.) In the time of Juvénal, whose description of the spot is a little classics for its topography, the grove and temple had been profaned and let out to the Jews:

"Substitit ad veters arces maadamque Cape- nam
Hic ubi nocturnae Numa constituxbat amnæce.
Nunc sacri fontis nemus et delubra locantr
Judaæos, quorum cuphisus foemineque supplex.
Omnis enim populo mercedem pendere jussa est
Ator, et ejus miscitul sita Cenamis.

In vallem Egeriae descendimus et splicamus
Dissimiles veris. Quanta praestantius esset
Numen aquae, viridi si margine clauderat
undas
Herio, nec ingenium vidarent marmoræ to-
plum." (Sat. iii. 10, seq.)

It is surprising how Becker could doubt that there was an Aedes Camenarum here, since it is not only alluded to in the preceding passage, but is also expressly mentioned by Pliny (xxxiv. 10.) The modern Cicerone point out to the traveller as the valley of Egeria a pretty retired spot some distance outside of the PORTA S. SEBASTIANO, in the valley called La Caffarella, near which are the remains of a little temple, called by some the temple of Honos et Virtus, by others a temple of Bacchus, with a grove said to be sacred to the latter deity. But though at present our imagination would more gladly fix on this spot as the scene of the conference between Numa and his nymph, and though respectable authorities are not wanting in favour of this view (Vennu, Descr. di Rom., ii. p. 18; Guattani, Rom. Descr. ii. p. 45), yet the preceding passages, to which may be added Symmachus ("Sed enim proper cas (aedes Honos et Virtutis.) Camenarum religio sacro fonti advertitur," Epist. i. 21) and the Notitia, which places the temple of the Camenarum close to that of Honour and Valour, are too decisive to allow us to do so; and we must therefore assume the valley of Egeria to have been that near the church of S. Sisto, opposite to the baths of Caracalla. The little fountain pointed out as that of Egeria in the valley Caffarella, is perhaps the remains of a nymphaeum. Here was probably a sanctuary of the Almo, which waters the valley.

Near the temple of Mars, since it is mentioned in the Notitia in conjunction with it, lay the Temple of TEMPESTAS, built by L. Cornelius Scipio, the victor of Aleria, in commemoration of the escape of the Roman fleet from shipwreck off the island of Corsica, as appears from the inscription on his tomb. The temple and the occasion of its foundation are alluded to by Ovid (Fasti, vi. 193) in the following lines:

"Te quaque, Tempestas, meritum delubra fate-
mur,
Cum paene est Corsis obtusa classis aquis."

But of the Temple of MINERVA, also mentioned at the same time with that of Mars, we know nothing more. Near the last was preserved the LAPIS MANALIS, a large cylindrical stone so called from manare, "to flow," because during seasons of drought it was carried in procession into the city, for the sake of procuring rain. (Mart. Dine, p. 128; Varr. ap. Nat. xv. p. 375, Gerl.)

Close to the Porta Capena, and probably outside of it, lay one of the three SENACULUM mentioned by Festus; but the only time at which we find meetings of the senate recorded there is during the year following the battle of Cannae, when they appear to have been regularly held at this place. (Liv. xxiii. 32.) During the same period the tribunal of the praetor was erected at the PISCINA PUBLICA. This last object, which seems to have been a swimming-place for the people in the Republican times (Festus, p. 213), gave name to the 12th Regio, which adjoined the 1st, or that of Porta Capena, on the W. (Anm. Marc. xvii. 4; cf. Cic. ad Quinl. Fr. iii. 7.)

The pond had, however, vanished in the time of Festus, and its exact situation cannot be determined. There are several other objects in this district in the like predicament, such as the LACUS PROMETHEI, the BALNEUM TIBORIUM, and others mentioned in the Notitia. The Thermæ Commodiana and Severiana will be considered under the section which treats of the thermae. The MUTATORIM CAESARI, perhaps a kind of imperial villa (Orell. Reg. p. 115), appears to have been situated near the modern church of S. Eufemia. (Montfaucon, op. Urichs Rom. Topogr. p. 112.) The three TRIUMPHAL ARCHES of TRAJAN, VEITUS, and DRUSUS, mentioned by the Notitia in the 1st Regio, probably spanned the Via Appia in the space between the temple of Mars and the Porta Capena. The arch still existing just within the PORTA S. SEBASTIANO is generally thought to be that of Drusus, the father of the emperor Claudius. ("Praeterea SENATUS, inter alia complura, marmoreum arcum cum tropicis via Appia decravit (Drusus)," Suet. Claud. 1.)

For many miles the tombs of distinguished Romani skirt both sides of the Via Appia; and these remains are perhaps better calculated than any other object to impress the stranger with an adequate idea of Rome's former greatness. For the most part, however, they lie beyond the bounds of the present subject, and we shall therefore content ourselves
with mentioning a few which were contained within the actual boundaries of the city. They appear to have commenced immediately outside the Porta Capena ("An in egressus porta Capena, cum Calatini, Scipionum, Serviliorum, Metellorum sepulcra vides, miseris putas illos?" Cic. Tuscul. i. 7); and hence many of them were included in the larger circuit of the walls of Aurelian. The tomb of Horatia, slain by the hand of her victorious brother, seems to have been situated just outside the gate. (Liv. i. 26.) Fortunately the most interesting of those mentioned by Cicero—the Tomb of the Scipios—is still in existence. It was discovered in 1780 in the Vigna Sassi, on the left-hand side of the Via Appia, a little beyond the spot where the Via Latina branches off from it, and about 400 paces within the Porta S. Sebastiano. Its entrance is marked by a single tall cypress tree. In Livy's time the tomb was still adorned with three statues, said to be those of Publius and Lucius Scipio, and of the poet Ennius, who was interred in the sepulchre of his patrons. (Hieron. Chron. p. 379, R onc.) It was here that the sarcophagus of L. Scipio Barbatus, consul in B. C. 298, now preserved in the Vatican, was discovered, together with several monumental stones with inscriptions relating to other members of the family, or to their connections and freedmen. The originals were carried off to the Vatican and copies inserted in their stead. The most remarkable of these inscriptions are that of Scipio Barbatus; of his son Lucius Cornelius Scipio, the conqueror of Corsica, consul in B. C. 259; of Publius Scipio, son of Africanus Major, whose feeble state of health is alluded to by Cicero (Cato Maj. 11), and whose touching epitaph shows that he died young; of L. Cornelius Scipio, grandson of the conqueror of Spain, gathered to his fathers at the early age of 20; and of another of the same name, the son of Asiacicus, who died aged 33, whose title to honour is summed up in the laconic words, "Pater regem Antiochum subjicit." A complete account of this tomb will be found in Visconti (Mon. degli Scipioni, Rom. 1785) and in the Beschreibung Roms (vol. iii. p. 612, seq.), where the various epitaphs are given.

Also on the left-hand side of the Via Appia in going from the Porta Capena was the Mausoleum of Septimius Severus, which he caused to be erected for himself in his lifetime, in imitation of his Septizonium, but probably on a reduced scale. (Spart Getul. 7.) In the same neighbourhood are some of those Columbaria, or subterranean chambers, which formed the common resting-places for the ashes of persons of a lower condition. One of these, not far from the tomb of the Scipios, is said to contain the remains of the courtiers and domestics of the Caesars, from Julius to Nero. Among others there is an inscription to M. Valerius Creticus, with a bust. The walls, as well as a large pit in the middle, are hollowed throughout with vaulted recesses like large pigeon-holes,—whence the name,—in which are contained the ashes of the dead. The Mausoleum of Caecilia Metella, which stands on the Via Appia, about 2 miles outside the Porta S. Sebastiano, though it does not properly belong to our subject, demands, from the magnificence of its construction, as well as from Byron's well-known lines (Childe Harold, canto iv.), a passing word of notice here.

The remaining part of the district, or that forming the 12th Regio, and lying to the W. of the Via Appia, does not present many monuments of interest. The most striking one, the Thermae Antoninianae, or baths of Caracalla, will be spoken of under its proper head. We have already treated of the Bona Dea Subsaxanea and of the Isium. Close to the baths just mentioned Caracalla built the street called Nova Via, reckoned one of the handsomest in Rome. (Spart. Carac. 2: Aur. Vict. Caes. 21.) Respecting the Fortuna Mammosa, we know nothing more than that the Basis Capitolina mentions a street of the same name in this neighbourhood. In the later period of the Empire this district appears to have contained several splendid palaces, as the Septem Domus Parthorum, the
DOMUS CLONIS, and DOMUS CORNIFICIES. The Domus Parthorum and Clonis seem to have been some of those palaces erected by Septimius Severus, and presented to his friends. (Ann. Vict. Epit. 20.)

Cilon is probably the same person mentioned by Dion (lxxvii. 4), Spartan (Carac. 3), and in the Digest (i. 12. 1, and 15. 4.). The Parthi seem to have been Parthian nobles, whom Severus brought with him to Rome, and of whose luxurious habits Tertullian has drawn a characteristic picture. (De Hab. M. 7.)

The Private Adrians and the Domus Cornificies (Cornificiae) mentioned in the Notitia, lay doubtless close together. The former must have been the private residence of Hadrian, where M. Antoninus dwelt after his adoption by that emperor. (Jul. Capit. M. Anton. 5.) M. Antoninus had a younger sister named Cornificia, to whom the house bearing her name doubtless belonged. (Ib. c. 1; Preller, Regionen, p. 198.)

XI. The Esquiline and its Neighbourhood.

The Esquiline (Esquilia, or in a more ancient form Esquilina) was originally covered with a thick wood, of which, in the time of Varro, the only remains were a few sacred groves of considerable extent, the rest of the hill having been cleared and covered with buildings. (Varr. L. L. v. § 49, Müh.) Yet the derivation of the name of the hill from asculetum seems to have been unknown to antiquity, and is a mere conjecture of Müller's (ad loc.); the ancient etymology being derived either from asculetum regis, because Servius Tullius had fixed his palace there, or from asculetum, because the hill was first cleared and settled by that king. (Varr. I. c., On. Fast. iii. 245.)

We have already described the Esquiline as throwing out two tongues or projections, called respectively, in the more ancient times of Rome, Oppius and Cornius. Their relative situation is indicated in the following passage of Festus: "Oppius autem appellatus est, ut al Varro rerum humanarum L. viu., ab Opta Oppio Tusculano, qui in praeeds Tusculanorum misus ad Romanum Tuscanum, dum Tullius Hostilius Vesu oppinguerat, continuavit in Carnius et ibi castum habuerat. Similiter Cispium a Lucio Cipso Anagnino, qui eundem rei causa cum partem Esquilurnum, quae jacet ad vicum Patricium versus, in qua regione est aedn Metitis, tuitus est." (p. 348, Mühll.) Hence we learn that the Cispium was that projection which joined the Vicus Patricius, and must consequently have been the northern one, since the Vicus Patricius is known to have corresponded with the modern streets called Via Urbana and Via di S. Petronianus, which traverse the valley lying between the Viminal and the Esquiline. The following passage of Paulinus Diaconus shows that the Vicus Patricius must have lain in a valley: "Patricius vicum Romae dietus est, quod ibi patricii habitaverunt, jubente Servio Tullio, ut, si quid motiusurus adversus ipsum, ex locis superioribus opprimentur." (p. 221, Mühll.); and its identity with the modern streets just mentioned appears from Anastius (Vita P. L.): "Hic ex rea ut beatae Prassedis dedicavit ecclesiæ thernmas Novati in vicu Patricii in honorem sororis suis sanctae Potentiaene." (p. 14.) This church of S. Petronianus still exists in the street of the same name. It is also mentioned by the Anonymous of Einsiedel, in whose time most of the streets still bore their ancient names, as being "in vice Patricii." That the Cispium was the smaller and more northern tongue likewise appears from the sacred books of the Argives (q. v. Varr. L. L. v. § 90), which, in proceeding northwards from the Caelian, first name the Oppius, which had four sacra or chapels, and then the Cispium, which, being the smaller hill, had only two, namely, the Lucas Peticum and the Aedes Junceanæ Lucinae.

From the passage of Festus just quoted, it appears that part of Mona Oppius bore the name of Carinæ, and this appellation continued to exist when the names Oppius and Cispium had fallen out of use and been succeeded by the general name of Esquilia. Yet it is one of the contested points of Roman topography whether the Carinae formed part of the hill. The Italians still cling to the ancient opinion that under that name was comprehended the low ground from the Forum Trajani to the Colosseum. Becker (Handb. p. 322, 323) partly adopted this view, but at the same time—
extended the district so as to embrace the western extremity of the Oppius; whilst Urlichts, on the contrary, confined the Carinae entirely to that hill. (Bescbr. vol. iii. part ii. p. 119, seq.) That the Italian view is, at all events, partly erroneous, can hardly admit of a question. Besides the preceding passage of Festus, which clearly identifies the Carinae as part of the Oppius, there are other places in ancient writers which show that a portion at least of the district so called lay on a height. Thus Dionysius, speaking of the Tigidulum Sororini, says that it was situated in the lane which led down from the Carinae to the Vicus Cyprius ( libr. 21. p. 119, seq.) That the Italian view, taken by Urlichts (L. C.) of the construction of the temple on the hill, is not necessary mean "up to;" but it might just as well be said that it means "down to," in a passage quoted a little while ago from the same author respecting the situation of the Carinae and the Vicus Cyprius. In both cases it simply means "to." It will be perceived that Dionysius is here at variance with the authorities before quoted respecting the site of the temple. If the appellation of the Carinae extended over some part of the adjacent valley it is possible that Dionysius, as a foreigner, might have been unaware of that fact, and have attached the name only to the more striking part of the district which lay on the hill. And there is a passage in Varro, a very obscure one indeed, from which it might be inferred that part of the Ceroliensis, which seems to have been the name of the valley between the Caelian, the Esquiline, and the Velian ridge, had likewise borne the name of Carinae ("Ceroliensis a Carinarum junctu dictus Carinae, postea Cerolina, quod hinc oritur caput Sacri Vincæ," L. C. v. § 47.). These passages would seem to indicate that the temple of Tellus lay in the valley between S. Maria de' Monti and the Tor de' Conti, where indeed we find traces of the name; since the churches of S. Salvatore and of S. Pantaleone, the latter of which still exists near the Via del Colosseo, bore in the middle ages the epithet of "in Tellure." Passages are also adduced from the Acts of the Martyrs to show that the temple of Tellus stood opposite to that of Pallas in the Forum Transitorium. (Clementianus praecepti ei caput amputari ante templum in Tellure, corpusque ejus projici ante Pallalis aedem in locum supradictum, Act. S. Gordian.) Hence it seems not improbable that the district of the Carinae, in which the temple undoubtedly stood, may have extended over a considerable part of the valley; but the passages relating to the subject are far from being decisive; and the question is one of that kind in which much may be said on both sides.

Two striking legends of early Roman history are connected with the Esquiline and its vicinity; that of the murder of Servius Tullius by his inhuman daughter, and that of the Tigrilium Sororini, or typical yoke, by passing under which Hecatius expiated the murder of his sister. We have before related that Servius Tullius resided on the Esquiline, and that he was the first to clear that hill and make it habitable. It was on his return to his residence on it, after his ejection from the curia by his son-in-law, Tarquinius Superbus, that he was murdered by the hirelings of that usurper. Livy's account of the
transient is clear and graphic, and the best guide to the topography of the neighbourhood. The aged monarch had reached the top of the Vicus Cyprius ("ad summum Cyprium vicum") when he was overtaken and slain. His daughter followed in her carriage, and, having arrived at the summit, stood a little before the time when Livy wrote, she was just turning to the right in order to ascend the Clivus Urbis, which led to the summit of the Esquiline, when the affrighted driver reined his horses, and pointed out to Tullia the bleeding corpse of her murdered father; but the fiend-like Tullia bade him drive on, and arrived at home bespattered with the blood of her parent. From this unnatural deed the street which was the scene of it obtained the name of Vicus Scleratus (i. 48). The question that has been sometimes raised whether Tullia was returning to her father's or her husband's house, does not seem to be of much importance. Solinus, indeed (i. 25), represents Servius Tullius as residing "sura clivum Urbium," and Tarquinius Superbus, also on the Esquiline, but, "sura clivum Pullium ad Fagutalem lucum." The house of the latter therefore must have been upon the Oppius, on which the Lucus Fagutalis was situated, and most probably upon the southern side of it; but he may not have resided here till after he became king. On the other hand, as Tullia is represented as turning to the right in order to ascend the Clivus Urbis to the royal residence, it is plain that the Vicus Cyprius must have lain on the north side of one of the tongues of the Esquiline; and as we are further informed by Dionysius, in a passage before quoted (iii. 22), that there was a lane which led down from the Carinae, or western extremity of the Oppius, to the Vicus Cyprius, the conclusion is forced upon us that the palace of Servius Tullius must have been situated upon the eastern part of the northern side of the Oppius, and that consequently the Vicus Cyprius must have corresponded with the modern Via di S. Lucia in Selci. The Summus Cyprius Vicus was evidently towards the hermae valley, the lowest part, or one of the tongues of the Esquiline; and hence the Clivus Urbis and the residence of Servius may be placed somewhere near the church of S. Martino. Before the usurpation of Tarquin, he and his wife may have resided near his father-in-law, or even under the same roof; or, what is still more probable, Tullia, as Ovid represents her ("patriae initia Penates," Fast. vi. 602), was proceeding to take possession of her father's palace, since his deposition had been effected in the senate before his murder. Urlich (Röm. Topogr. p. 119) admits that the Vicus Cyprius answered to the Via di S. Lucia, yet holds that Servius resided on the Cipsius; a view utterly irreconcilable with the fact that the Clivus Urbis and palace lay on the right of that street. The passages before adduced prove the direction of the Vicus Cyprius as clearly as any locality in Rome can be proved which depends for its determination solely on notices in the classics. Yet Becker shuts his eyes to this satisfactory evidence, and maintains that the Vicus Cyprius corresponded with the modern Via del Colosseo (Antecort, p. 79); although in that case also it would have been impossible for Tullia to have ascended the Esquiline by turning to the right. The only ground he assigns for this incomprehensible view is an arbitrary estimate of the distances between the objects mentioned in Regio IV. of the Notitia, founded also on the assumption that these objects are enumerated strictly in the order in which they actually followed one another. But we have already shown from Becker himself that this is by no means always the case, and it is evidently not so in the present instance; since, after mentioning the Tigillum Sororium, which lay in or near the Suburra, the order of the passages already given, and proceeds onwards to the Colosseum, and then again at the end of the list reverts to the Suburra. The chief objection to placing the Vicus Cyprius under this side of the Oppius is, as Mr. Bunbury observes (Class. Mus. vol. v. p. 227), that it would thus seem to interfere with the Suburra. But this objection is not urged either by Becker or Urlich; and indeed the Suburra, like the Velabrum, seems to have been a district rather than a street, so that we may conceive the Vicus Cyprius to have run through it.

The position of the Tigillum Sororium is determined by what has been already said; namely, in a narrow street leading down from the Carinae to the Vicus Cyprius. It seems to have been a wooden beam erected across the street. As it is mentioned in the Notitia, this monument, connected with one of Rome's early legends, must have existed down to the 5th century; and indeed Livy (i. 26) informs us that it was constantly repaired at the public expense. We learn from Dionysius (iii. 22) and Festus (p. 297, Müll.) that on each side of it stood an altar; one to Juno Sororilla, the other to Janus Curius.

Having had occasion to mention the Suburra, it may be as well to describe that celebrated locality before proceeding further with the topography of the Esquiline. We have already seen from Varro that it was one of the most ancient districts in Rome; and its importance may be inferred from its having given its name to the 1st Servian Region. We have also alluded to a passage in the same author (L. L. v. § 48, Müll.) which shows it to have been originally a distinct village, called Succusus or Pagus Succusatus, lying under the Carinae. Varro adds, that the name still continued to be written A. or A. in the sense of a; a statement which is confirmed by the fact that in inscriptions the Tribus Suburana is always denoted by the abridged form TUN. SVE. (Cf. Festus, s. v. Suburra, p. 309, Müll.; Quintil. Inst. Or. i. 7. § 29; Mommsen, Die Röm. Tribus, p. 79, seq.) A piazzza or place under the church of S. Pietro in Vincoli still bears the name of Suburra; and the church of S. Agata over the Via de' Serpentini, which skirts the eastern foot of the Quirinal hill, bore in the middle ages the name of "in Suburra" or "sub Suburra." Hence it seems probable that the Suburra occupied the whole of the valley formed by the extremities of the Quirinal, Viminal, and Esquiline; and must consequently have been, not a street but, a region of some extent; as indeed we find it called by Gregory the Great in the 6th century ("in regione urbis illa quae Suburra dicitur," Dial. iii. c. 30). But that it extended westward as far as the Forum Transitorium, a supposition which seems to rest solely on the order of the names in the 4th Region of the Notitia, we can hardly conceive. We have shown that the district between the back of the imperial fora and the western extremity of the Esquiline may perhaps have formed part of the Carinae; but it can hardly have been called both Carinae and Suburra. The latter seems to have properly begun at the point where the Quirinalis approaches the extremity of the and Oppus;
this seems to have been the spot called by Martial
the primae fontes of the Subura (ii. 17):—

"Tomatrix Suburae facinus sedet primis,
Crucenata pendent qua flagella tortorum
Argique letum multus obiisdt autu."

Juvenal (v. 106) represents the Clasca Maxima
as penetrating to the middle of the Subura,
and this fact was established by excavations made in
the year 1743. (Ficoroni, Visitatio di Roma, ap.
Bunbury, Class. Mag. vol. v. p. 219.)

From its situation between the imperial fora and
the eastern hills, the Subura must have been one of
the most frequented thoroughfares in Rome; and
hence we are not surprised to find many allusions to
its dirt and noise. It was the peculiar aversion of
Juvenal,—a man, indeed, of many aversions ("Ego
vel Prochytam pareaono Suburae," Sat. iii. 5); a
trait in his friend's character which had not escaped
the notice of Martial (xii. 18):

"Dum in forisita iniquitus erras
Clanosa, Juvenalis, in Subura."

The epithet clanosa here probably refers to the
cries of itinerant chapmen: for we learn from other
passages in Martial that the Subura was the chief
place in which he used to market (vii. 31, x. 94.
&c.; cf. Juv. xii. 136, seq.) It appears also to have
been the abode of prostitutes (vi. 66; comp.
Hor. Epod. v. 58). It was therefore what is com-
monly called a low neighbourhood; though some
distinguished families seem to have resided in it,
even Caesar himself in his early life (Suet. Caes.
46), and in the time of Martial, L. Arrunius Stella
(xii. 3, 9). The Suburanenses, or inhabitants of the
Subura, kept up to a late period some of the ancient
customs which probably belonged to them when
they formed a distinct village; especially an annual
contest with the Sacravenses, or inhabitants of the
Sacra Via, for the head of the horse sacrificed to
Mars in the Campus Martius every October. If
the Suburanenses gained the victory they fixed the
head on a tower in the Subura called Torus Manilia,
whilst the Sacravenses, if successful, fixed it on the
Regia. (Festus, s. e. October Equus, p. 178, Mill.; Paul. Disc. p. 131.)

Throughout the time of the Republic the Esquiline
appears to have been by no means a favourite or
fashionable place of residence. Part of it was occu-
pied by the Campus Equuslinus, a place used as a
burying-ground, principally for the very lowest class of
persons, such as paupers and slaves; whose bodies
seem to have been frequently cast out and left to rot
here without any covering of earth. But under the
Empire, and especially the later period of it, many
palaces were erected on the Esquiline. Maecenas
was the first to improve it, by converting this field of
death, and probably also part of the surrounding
neighbourhood,—the pauper burial-ground itself
appears to have been only 1000 feet long by 300
depth,—into an agreeable park or garden. Horace
(S. i. 8, 14) mentions the laying out of these cele-
brated Horti Maecenatiae:

"Nunc licet Esquiliis habitare salubrius atque
Aggere in apico spatiiari, qua modo tristes
Albis inornem spectabant ossibus agrum."

It appears from these lines that the Campus Esqui-
linus adjoined the agger of Servius Tullius, which,
by the making of these gardens, was converted into
a cheerful promenade, from which people were no
longer driven by the disgusting spectacle of mould-
ering bones. The Campus Equuslinus being a
cemetery, must of course have been on the outside
of the agger, since it was not lawful to bury within
the pomerium; and Varro (L.L. v. § 25) mentions
it as "ultra Equulinas," by which he must mean the
Servian Region so called, which was bounded by the
agger. Its situation is also determined by a passage
in Strabo (v. p. 257), where the Via Labicana,
which issued from the Esquiline gate at the southern
extremity of the agger, is said to leave the
campus on the left. It appears to have also been
the place of execution for slaves and ignoble crimina-
lis (Suet. Claud. 25; Tac. Ann. ii. 32. xv. 60; Plaut.
Mil. ii. 4, 6; ed. Ritshcl). There does not seem to
be any authority for Becker's assumption that the whole of the Esquiline outside of the Ser-

vian walls was called Campus Equuslinus (Hornbl.
p. 554), nor that after the laying out of the gardens
of Maecenas the ancient place of execution was trans-
ferred to the Sessorium, near S. Croce in Gerus-
elunam. Part of the campus was the field given, as
the scholiast on Horace says, by some person as a
buriyng-place. The Sessorium mentioned in the
Excerpta Valesiana de Odoacre (69) was a palace;
and though Theodoric ordered a traitor to be be-
headed there it can hardly have been the ordinary
place of execution for common malefactors. Besides
the Sessorium mentioned by the scholiasts on Horace
(Epod. v. 100, Sat. i. 8, 11) was close to the
Esquiline gate, a full mile from S. Croce, and seems,
therefore, to have been another name for the Campus
Equuslinus, if the scholiasts are right in calling it
Sessorium. The executions recorded in the passage
before quoted from Suetonius and Tacitus took place
long after the gardens of Maecenas were made; yet
when Tacitus uses the words "extra Portam Equi-

lumina," there can be no doubt that he means just
without the gate. It would be a wrong conception of
the Horti Maecenatis to imagine that they resem-
bled a private garden, or even a gentleman's park.
They were a common place of recreation for the
Roman populace. Thus Juvenal describes the agger
as the usual resort of fortune-tellers. (S. vi. 588.)
We see from the description of Horace that not even
all the tombs had been removed. Catania comes
there to perform her incantations and evoke the
manes of the dead; at sight of which infernal rites
the moon hides herself behind the sepulchres (v. 35):

"Innamaque rubenter,
No fret his testis, post magna latere sepulcura."

Such a place, therefore, might still have been used
for executions; though, doubtless, bodies were no
longer exposed there, as they had formerly been.
These "magna sepulcrum" would also indicate that
some even of the better classes were buried here;
and the same thing appears from Cicero. (Phil. i. 7.)

The Horti Maecenatis probably extended within
the agger towards the baths of Titus, and it was in
this part that the House of Maecenas seems to have
been situated. Close to these baths, on the N.E. side, others, built by Trajan, existed in ancient
times, although all traces of them have now vanished.
They have sometimes been confounded with those of
Titus; but there can be no doubt that they were
distinct and separate foundations. Thus the Notitia
tions in the 3rd Region the "Thermae Titianae
et Traianae," and their distinction is also shown...
by the inscription of Urus Tegatus: Thermiss Triani Thermiss agrigetae et Titii, &c. (Gruter, dexter: vii. 1). The site of the baths of Trajan, close to the church of S. Martino, may be determined from another inscription found near that church, in the pontificate of Paul III., which records some improvements made in them; as well as from a notice by Anastasius, in his Life of Symmachus (p. 88, Blanck), stating that the church alluded to was erected "juxta Thermiss Triani." It is a very common opinion that the house of Maccenas occupied part of the site of the baths of Titus, and this opinion is as probable as any other. It was a very lofty building. Horace describes it as a "moderum propinquant nubibus arduis" (Od. iii. 20, 10), and from its situation and height must no doubt have commanded a view of Tibur and its neighbourhood; though we do not draw that conclusion from the immediately preceding lines, where we think the far better reading is, "Ut semper nudum Tibum;&c., the seaper belonging to "uidum," and not to "contemplare" (cf. Tate's Horace, Petr. Diss. p. 24). We have before related how Nero beheld the fire of Rome from the house of Maccenas. Suetonius, in his account of that scene, calls the house "turris Maccenateana" (Xero, 38), by which, perhaps, we are not to understand a tower, properly so called, but a lofty superstructure of several stories over the lower part of the house (Becker, Charikles, l. p. 195). Maccenas bequeathed his house and gardens to Augustus; and Tiburinus lived there after his return from Rhodes, and before he succeeded to the empire (Suet. Tib. 15). The subsequent history of the house is unknown; but, as we have said, it may probably have been included in the baths of Titus.

Close to the gardens of Maccenas lay the Horti Lamiani (Phil. Jud. vol. ii. p. 597, Mang.), belonging perhaps, to the Aedius Lanius celebrated by Horace (Od. i. 26, &c.). We learn from Valerius Maximus (iv. 4. 8) that the ancient family of the Aelii dwelt where the monument of Marcus afterwards stood; whence it seems probable that the Horti Lamiani may have belonged to E. of those of Maccenas, towards the church of S. Bibiana. It was here that the body of Caligula was first hastily buried, which was afterwards burnt and reinterred by his sisters (Suet. Cal. 59).

There appear to have been several more gardens between the Porta Esquiline and the modern Porta Maggiore; as the Horti Pallantiani, founded apparently by Pallus, the powerful freedman of Claudius (Tac. Ann. xi. 29; Suet. Claud. 28; Plin. Ep. viii. 6); and which, from several passages of Frontinus (Ap. 19, 19, seq.) appear to have been situated between P. Magnoleto, the Marian monument, and the church of S. Bibiana. Frontinus also mentions (Ag. 68) certain Horti Epaphroditianii, perhaps belonging to Epaphroditus, the libertus of Nero, who assisted in putting that emperor to death (Suet. Ner. 49, Dom. 14; Tac. Ann. xv. 55); as well as some Horti Torquatianii (c. 5), apparently in the same neighbourhood. The Campus Viminalis sub Aggerre of the Notitia was probably an exercise ground for the Pretorian troops on the outside of the agger near the Porta Viminalis. Hence the eastern ridge of the Viminal and Esquiline beyond the Servian walls must have been very open and airy.

The Esquiline derives more interest from its having been the residence of several distinguished poets and authors than the most splendid palaces could have conferred upon it. Virgil dwelt upon the Esquiline close to the gardens of his patron Maccenas. Whether Horace also had a house there cannot be said; but he was certainly a frequent guest with Maccenas; he loved to sanction on "the sunny agger," and we have certainly seen close to the tomb of his munificent benefactor at the extremity of the hill (Suet. V. II. 20). Propertius himself informs us that his abode was on the Esquiline (iii. 23, 23); where also dwelt the younger Pliny, apparently in the house formerly belonging to the poet Ps. Albanius (Plin. Ep. iii. 21; Mart. x. 19). Its precise situation will be examined a little further on, when treating of the Lucus Orpheus.

The Esquiline and its neighbourhood did not contain many temples of note. That of Telius, already adverted to, was the most important one; the rest seem for the most part to have been remarkable for antiquity than for size or beauty. We have already adverted to the ancient sacellum mentioned here by Varro (L. L. v. 49, seq); as the Lucus and Sacellum of Jupiter Faustulus, on the southern side of the Oppius; the Lucus Esquilinus, probably near the Esquiline gate; a Lucus Poetelius; a Lucus Muffitis, with an acedi, lying near the Vicus Patricius (Festus, s. v. Septimiano, p. 351, Mill.); and a Lucus of Juno Lucina, where, according to Pliny (xvi. 85), a temple was built to that goddess, n. c. 374; although it would appear from Dionysius (iv. 15) that there must have been one there previously in the time of Servius Tulius. An inscription relating to the temple was found in 1770, in digging the foundations of the monastery delle Paolotti, in the road which separated the Oppius and Cipus. We learn from Ovid (Fast. ii. 435) that the grove lay beneath the Esquiline; but as it appears from Varro that the temple stood on the Cipus, whilst the stone with the inscription in question was found on the side of the Oppius: it is probable that it may have rolled down from the monastery of the Filippine on the opposite height (Nibby, Rom. nel Anno 1838, p. 670; Urielius, Rom. Top. p. 120; Canina, Indice p. 131). The sacred square of the Esquiline began, probably lay on the S. side of the Carine, near the Colosseum. It seems not improbable that the Lucus Veneris Libitinae may also have been situated on the Esquiline, on account of the neighbourhood of the Campus Esquilinus; but there are no authorities by which its site can be satisfactorily determined. It was the great magazine for funeral paraphernalia (cf. Dionys. iv. 15; Festus, s. v. Rustica Vindula, p. 265; Plut. Q. R. 23). On the Esquiline were also Altars of Mala Fortuna and of Ferbes, the latter close to the Marian monument (Cic. N. D. 20; Plin. ii. 5; Vol. Max. ii. 5, § 6). We may likewise mention a Temple of Fortuna Respiciens (Plut. Fort. R. 10), of Fortuna Sear in the Vicus Sandalarius (Inscr. op. Grac. Theor. iii. p. 288; Plin. xxxvi. 46), and one of Diana in the Vicus Patricius, from which men were excluded (Plut. Q. R. 3). The Hercules Victor or Hercules Sculptor of the Nottia was perhaps only a statue. We shall close this list by mentioning a Temple of S. Petrus, near the Horti Pallantiani, several times alluded to by Pliny; of Isis Patricia, probably in the Vicus Patricius; and of Minerva Medica, commonly identified with the ruins of a large circular building in a vineyard near the Porta Maggiore. This building bore, in the middle ages, the name of Le Galuze, whence Canina is of opinion that it was the place where the emperor Gallienus
was accustomed to divert himself with his court. (Treb. Poll. Gall. Duo, c. 17.) The temple of Minerva Medica mentioned in the Notitia may probably have stood in the neighbourhood; but the building in question seems too large to be identified with it.

Among the profane monuments of this district we have had occasion to mention once or twice an object called the Thorii of Maruis. Valerius Maximus relates that Marius erected two Thorii (vi. 9, § 14); and that these must have been on the Esquiline appears from a passage of the same author (ii. 5, § 6), quoted a little while ago respecting the site of the altar of Febris. A building which stands at the junction of the Via di S. Bibiana and the Via di P. Maggiore a little way outside the ancient Porta Esquiline bore during the middle ages the name of Temple Marii, or Cumbrum, and was adorned with those sculptured trophies which were removed in the pontificate of Sixtus V. to the balustrade of the Piazza del Campidoglio, where they still remain. (Ordo Rom. an. 1143, ap. Malb. Ann. Ital. ii. p. 141; Poggio, de var. Fort. p. 8, ed. Par. 1723.) There can be no doubt, however, that the building so called was no temple, but the castellum of an aqueduct, and is in all probability the object mentioned in the Notitia as the Nymphaeum Divi Alexandre. It must have been one of the principal castellia of the Aqua Julia, and from the trophies which stood in the neighbourhood having been applied to its adornment it was mistaken in a later age for a temple erected by Marius. (Canina, Indicar. p. 156, seq.; Piller, Regiones, p. 131.)

Between this Nymphaeum and the Porta Esquiline stands the Arcus Gallieni, which must have spamed the ancient Via Praenestina. It is a simple arch of travertine, and we learn from the inscription upon it, which is still legible, that it was erected by a certain M. Aurelius Victor in honour of the emperor Gallienus and his consort Salonina. Originally there were smaller arches on each side of it (Spec. Rom. Magn. tab. 24), but at present only the middle one remains.

Close to this arch and between it and the basilica of S. Maria Maggiore, lay the Forum Esquillini and Maecenian Livianum. This position of the maecenium is certain. The basilica just named was built "juxta Maecenam Liviam." (Amastas, V. Librii und V. Sist. III.) That it was close to the arch of Gallienus appears from the Ordo Romanus. ("Intran sub arcum (Gallieni) ubi definit Maecennam Liberaliam (Livianum) prope templum Marii quo dedit Cimbrum." Ann. 1143, p. 141.) And the church of S. Ivo close to the arch was designated as "in Maecel." (An. Fabius, Ant. R. ii. c. 6.) But it is a more difficult question to determine whether the Forum Esquillini and Maecenian Livianum were distinct objects or one and the same. We know that the Forum Esquillini was in existence in B. C. 88, since it is mentioned by Appian (B. C. i. 58) as the scene of the struggle between Marius and Sulla. Hence Nibby (Roma nell'Anno 1838, tom. ii. p. 23), assuming that the maecenium and forum were identical, regarded it as founded by M. Livius Salinator, who was censor with Claudius Nero, B. C. 204. But this view is unsupported by any authority, nor is it probable that the forum had two appellations; whence it seems most likely that the maecenium was quite a distinct and adjoining market founded by Augustus, and named after his consort Livia. (Piller, Regiones, p. 131.)

There was also a Porticus Liviae somewhere on the Esquiline, named in the Notitia in the 3rd Region after the baths of Titus. It was a quadrangular peristyle (περίσταυρος), built by Augustus, B. C. 14, on the site of the house of Vettius Pollio, which he had inherited. (Dion Cass. liv. 23.) As the same author (v. 8) calls it a τεμενόν, we may conclude that it contained the Temple of Concord mentioned by Ovid. (Fast. vi. 633.) It is alluded to by Strabo (v. p. 236), and by both the Pliny's. (xiv. 3; Ep. i. 5; cf. Becker, Handb. p. 542, Antw. p. 78.) We also read of a Porticus Julia, built in honour of Caius and Lucius Caesar (Dion Cass. liv. 27, as eneamed by Merkel ad Ov. Fast. p. 231), but its situation cannot be determined.

Near the church of S. Croce in Gerusalemme, towards the side of the Porta Maggiore, lie the ruins of a large building already alluded to, which in the middle ages bore the name of Sessorium. We have remarked that in the Excerpta Valesiani at the end of Ammianus Marcellinus it is called a palace ("in palatio, quod appellatur Sessorium," de Oadoe, 69). It is identified by a passage in Anastasius stating that the church of S. Croce was erected there. (Fiti. Silvest. p. 43, Blanck.)

Also near the same church, but on the other side of it, and built into the wall of Aurelian, are the remains of a considerable amphitheatre which are usually identified as the Amphitheatrum Cassianum of the Notitia. Becker, however (Handb. p. 552, seq.), denies this identity, his chief objection being the great space which the 5th Region must have occupied if this building is included in it, and holds that the true Amphitheatrum Cassianum must have been near the Castra Praetoria. There are, however, no traces of the remains of an amphitheatre in that direction, and Becker acknowledges (Handb. p. 558) that he is unable to give any name to that of S. Croce. But there could not have been many structures of this description in Rome, and on the whole it seems more likely that Becker, to conclude with Piller (Regiones, p. 132) that the one in question was the Castrense; especially as we know from Procopius (B. G. i. 22, seq.) that there was a vivarium, or place for keeping wild beasts used in the sports of the amphitheatre, close to the Porta Praenestina.

In the valley under this amphitheatre were the Gardens and Circus of Elagabalus (Lampr. Helv. 14, 25), where the obelisk was found which now stands on the promenade on the Pincian (Liborio, Sui Cerchi, p. 3; Canina, Indic. p. 178). Just outside the Porta Maggiore is the curious Monument of Eurybiades the baker, which has been spoken of above, p. 760.

The remaining monuments in the district under consideration are few and unimportant. The Apollo Sandalarius mentioned in the Notitia in the 4th Region was one of those statues which Augustus erected in the different Vic. (Suet. Aug. 57.) We have said that the temple of Fortuna Seca stood in the Vicus Sandalarius; and as this temple was included in the domain of the golden house of Nero (Vit. sxxi. 46) we may conclude that it was in or near the Circus of Bessus, or the Flavia (p. 176). The Colosseum will be described in a separate section. The 3rd Region, in which it was situated, must doubtless have contained a splendid Temple of
ISIS AND SERAPIS, from which the Region derived its name, but the history of the temple is unknown. The same remark applies to the MONETA mentioned in this Region, which seems to have been the imperial mint. (Vell. Hist. p. 124.) It is mentioned in inscriptions of the time of Trajan. (Marini, Atti, etc. p. 488.) The SUMMUM CHORAGIUM is inexplicable. The LAECUS PASTORUM OR PASTORIS was a fountain near the Colosseum, as appears from the Acta Sactiorum (in Euseb.); the DOMUS BRUTTI PRAEFENTIIS probably lay on the Esquiline. Marcus Aurelius afforded Commodus with the daughter of Brutus Praesens. (Capitol. M. Anton. Ph. c. 27.) A PORTICO CLAUDI stood at the extremity of Nero's golden house, not far from the colossus of that emperor:—

"Claudia diffusa uti porticus explicat umbras
Ultima para aulae deficientis est." (Mart. de Spec. 2.)

It is mentioned by the Anonymous Eusebiensis and in the Mirobilia under the name of "Palatium Claudi," between the Colosseum and S. Pietro in Vincoli. The LUDUS MAGNUS was a gladiatorial school apparently near the Via di S. Giovanni. (Canina, Indice p. 108.) The SCOLA QUASTORUM ET CAPITATORVM OR CAPITATORVM seems to have been an office for the scribes or clerks of the quaestors, as the Schola Xanthia on the Capitol was for those of the curule aediles. The Capitators were those officers who had charge of the copiae or capulae, that is, the bowels with handles used in sacrifices (Varr. L. L. v. § 121); but where this schola may have been, cannot be said. The CASTRA MISCENTIUM were the city station for what we may call the marines, or soldiers attached to the fleet and naval station at Misenum, established by Augustus. (Tac. Ann. iv. 5; Suet. Aug. 49.) This camp appears to have been situated near the church of S. Vito and Via Merulana, where also there was an aedicular of Neptune. (Canina, Indice, p. 110.) The BALNEUM DAPHNIDES, perhaps alluded to by Martial (iii. 5. 6.), was probably near the Subura and Carinae. Lastly the LAECUS ORPHAL, or fountain of Orpheus, seems to have lain near the church of S. Lucio, which bore the eponym Rigo, or, as the Anonymous calls it, in Orbea. It is described in the LIVES of Martial, in which he desires Thalia to carry his book to Pliny (x. 19. 4. seq.)—

"I, perfer, brevis est labor peractae
Altum vincere tumultum Suburanae.
Illic Orphaca proteus videbis
Udi vertice lubricum theatris,
Mirantesque feras avemque regis
Raptum quae Phryga pertulit Tonanti.
Illic parva tui domus Pedonis
Caclata est aquae minore pennas."

From this description it would appear that the fountain was in a circular basin—for such seems to be the meaning of "adum theatrum," because a statue of Orpheus playing on the lyre stood high in the midst of the basin, wet and shining with spray, and surrounded by the fascinated beasts as an audience. (Becker, Huntb. p. 559, note.) The situation of the fountain near the church mentioned is very clearly indicated in these lines. As Martial lived on the southern extremity of the Quirinal the way from his house to that spot would of course lie through the Subura. At the top of the street lead-    

ing through it, which, as we have seen, must have been the Vicus Cyprius, a short but steep ascent brought the pedestrian to the top of the Esquiline, where the first object that met his eyes was the fountain in question. The locality is identified by another poem of Martial's addressed to Paulus, who also lived on the Esquiline (v. 22. 4):—

"Alta Suburani vincenda est semita elivi
Et numquam sicco sororide saxa gradu;
where we must not take Clivus Suburanus to be the name of a road, like Clivus Capitolinus, Publicius, &c., but merely a synonymous appellation with what Martial calls "altus transeum" in the other poem. It may be further observed that this situation of the fountain agrees with the order of the Notitia, where it is named immediately before the Macellum Livianum. Close to it lay the small house formerly inhabited by Petrus Albionanus, and in Martial's time the residence of his friend the younger Pliny.

XII. THE COLLES, OR THE VIMINAL, QUIRINAL, AND PINCIAN HILLS.

We have already remarked that the three northernmost hills of Rome were called Colles, in contradistinction to the other, which were called Montes. Only two of the former, the Viminal and Quirinal, were enclosed within the walls of Servius Tullius, and considered as properly belonging to the city; but part of the Pincian was included within the walls of Aurelian.

The COLLES VIMINALIS, the smallest of the three hills, is separated from the Esquiline by the valley through which ran the Vicus Patricius, and by a hollow running towards the rampart of Servius. On the other side, towards the Quirinal, is another valley, which divides it from that hill, at present traversed by the streets called Via de' Serpentari and Via di S. Vitale. The most northern part of the valley, through which the latter street runs, was the ancient VALLIS QUIRINI (Juv. ii. 133). The hill derived its name from the osiers with which it was anciently covered ("dictum a vimento collem," Id. iii. 71); and upon it was an ALTAR OR JUPITER VIMINALIS, answering to the Jupiter Fagutalis of the Esquiline. (Varr. L. L. v. § 5; Fest. p. 373.) The Viminal was never a district of much importance, and seems to have been chiefly inhabited by the lower classes. The only remarkable building which we find recorded on it is the splendid PALACE OR C. AQUILUS (Plin. xvii. 2). The existence of some baths of Agrippina upon it rests only on traditions of the middle ages. The baths of Ducetian, which lay on the ridge which united the Viminal and Quirinal, will be described in the section on the thermae. The MACELLUM OF NARNIA lay without the Porta Viminalis. (Paul. Diaec. p. 163.)

After the Palatine and Capitoline hills, the QR-    

INAL was the most ancient quarter of the city. As the seat of the Sabine part of the population of Rome, it acquired importance in the period of its early history, merely to-day it did not retain when the two nations had become thoroughly amalgamated. The Quirinal is separated from the Pincian on the N. by a deep valley; its western side is skirted by the Campus Martius; the manner in which it is parted from the Viminal by the Vallis Quirini has been already described. The street which ran
through this last valley was called Vicus Longus, as we learn from the Anonymous of Einsieden, who mentions the church of S. Vitalis as situated "in vice longa." We find its name recorded in Livy (x. 23), and Valerianus Maximus (ii. 3. § 6). Of the different ancient divisions of the Collis Quirinalis and of the origin of its name, we have already spoken in the former part of this article.

The Quirinal abounded in ancient fanes and temples. One of the earliest foundations of this sort was the Temple of Quirinus, erected by Numa to Romulus after his apotheosis. The first practical notice that we find of it is, however, in n. c. 435, when Livy (iv. 21) records a meeting of the senate in it; a fact which shows that it must have been a considerable building. A new one was dedicated, probably on the same spot, by L. Papirius Cursor, n. c. 292. (Liv. x. 46; Plin. vii. 60.) This structure appears to have been burnt in n. c. 48, and we do not hear of its re-erection till n. c. 15, when Augustus rebuilt it, as recorded in the Monumentum Aurelium, and by Dion Cassius (liv. 19). Yet in the interval between these dates we find it alluded to as still existing (Id. xliii. 45; Cie. ad Att. xiii. 28), whence we may conclude that it had been only partially destroyed. Dion (liv. 19) describes the new structure of Augustus as having 76 columns, equalising the years which he had lived. Hence, it appears to have been the same building as that adduced by Vitruvius (iii. 2. 7) as an example of the d\textit{ipteros octastilos}; for that kind of temple had a double row of columns all round; namely, two rows of 8 each at the front and back; and, without counting the outside ones of these over again, two rows of 11 each at the sides (32 + 44 = 76). This noble portico appears to have been the same alluded to by Martian as the ressort of the idlers of the vicinity (ix. i. 9). Topographers are universally agreed that it was situated on the height over S. Vitale in the neighbourhood of S. Andrea del Noviziato. (Becker, \textit{Handb.} p. 573; Urlich, \textit{Beschr.} iii. 2, 366; Ca\textit{rina, Indic.} p. 185.) There appears to have been also a \textit{Saccelium Quirinale} near the Porta Collina.

All the more interesting traditions respecting the Quirinal belong to the reign of Numa. One of the residences of that Sabine monarch was situated on this hill (\textit{Plat. Num.} 14; Solin. i. 21), where he also founded a citadel, or capitol; and where his successor Tullus Hostilius, in pursuance of a vow made in the Sabine War, repeated, as it were in duplicate, Numa's peculiar institution of the Sabine worship (Liv. i. 27; Dionys. ii. 70). All these things show very clearly the distinction between the Roman and Sabine cities during the reigns of the first monarchs. On the Quirinal, the Sabine temples were connected with the worship of Quirinas, as, in the Roman city, they were to that of Mars ("\textit{Quid de ancilibus vestris, Mars Gravide, tuque Quirine pater (loquar)?}" Liv. v. 52); and the priests were called, by way of distinction, Salii Agonenses, or Collini, from the name of the hill ("In libris Salliorum quorum cognomen Agonensium," \textit{Varr. L. L. vi.} § 14; cf. Dionys. l. c., where, however, he erroneously speaks of a \textit{Apolax Collini}.)

Next to the temple of Quirinus, proceeding in a western direction, as we infer from the order in which the objects are mentioned in the \textit{Curiosis} (the \textit{Notitia} somewhat differs), stood a \textit{State of Mamurris}; and, then, after an interval occupied in later times by the baths of Constantine,—the site of the present \textit{Palazzo Rospiogiuri},—followed the \textit{Vetus Capitolium}, or citadel of Numa. Whether Mamurris was another name for Mammers, the Sabine god of war, of which, according to Varro (\textit{L. L. v.} § 75), the Roman name of Mars was only a corruption, or whether it was the name of the reputed maker of the ancles (Paul. Diaec. p. 141, Mull.), matters but little; the statue is equally connected with the ancient Sabine rites, and therefore one of the most venerable objects in the city. We find \textit{Clavis Mamurri} mentioned in the middle ages in the neighbourhood of S. Vitale (Anastas. V. \textit{Inoc.} l. p. 64, Blanch.), which no doubt took its name from this statue, whence we may infer that it stood near the temple of Quirinus; since the church of S. Vitale and that of S. Andrea, where the temple stood, are close together.

We have remarked in the former part of this article that the ancient Capitol of Numa probably stood on the height of \textit{Magnanapoli}. It contained, like the Palatine before it and the Capitoline subsequently, a temple to the three divinities, Jupiter, Juno, and Minerva, as we learn from Varro:—"\textit{Clivos proximus a Flora susus versus Capitolium vetus, quod ibi sacrilium Jovis, Janonis, Minervae: et id antiquus quam exhis, quae in Capitolio facta}" (\textit{L. L. v.} § 158). Its site may be determined by that of another ancient sanctuary, the \textit{Temple of Flora}. In the order of the \textit{Cursusum and Notitia} that temple stands between the Capitolium Vetus and the temple (or temples) of Sulis and Scapula. The temple of Sulis must undoubtedly have been situated near the Porta Salutaris, which, as we have before remarked, took its name from that sanctuary; and we must consequently seek for the temple of Flora on the W. side of the Quirinal, or that which faced towards the Campus Martius. That it stood on this side is confirmed by what Martial says respecting the situation of his house, which, as we learn from one of his epigrams, lay near the temple of Flora (v. 22. 2):—

"\textit{Sed Tiburtinae sum proximus sceola piae}
\textit{Qua videt antiquam rustica Flora Jovem.}" (\textit{Cf. vi. 27.}) From which we also learn that the temple of Flora could not have been very far from that of Jupiter in Numa's Capitol; as indeed likewise appears from the passage of Varro before quoted, with the addition that it must have lain on a lower part of the hill. But as Martial's house is thus shown to have been near the temple of Flora, so also that it was on the W. side of the hill appears from another epigram (i. 108. 2)—

"\textit{At mea Vipsanis spectant coena laurus}
\textit{Factas in hac ego sum jam regio senex.}" It can hardly be doubted that this passage contains an allusion to some laurel trees growing near the Porticus Vipsania, erected, as will appear in a subsequent section, near the Via Lata by Agrrippa, whose family name was Vipsanias. This portico is plainly alluded to in another passage of Martial (iv. 18), under the name of Vipsaniae Columnae. There is nothing surprising in Martial's indicating a locality by certain trees. In ancient Rome they were noted to ancient Rome trees were noted and claimed a considerable share of public attention, as we have already seen with regard to several that grew in or about the forum. Two laurel trees grew before the imperial palace (\textit{Tert. Apol.} 35); and in front of the temple of Quirinus
just described were two sacred nyphs, which were characterised by distinctive appellations as patricia and plebeia. But, to have faced the Porticus Vipsania, Martial's house must not only have been situated on the western side of the Quirinal, but also towards its southern extremity; which likewise appears from what has been said in the preceding section respecting the route followed by his friend Pliny being through the Subura and Vicus Cyprian; for this would have been a roundabout way had Martial dwelt towards the northern part of the hill.

All these circumstances tend to show that Numa's Capitol must have stood on the spot before indicated, and the temple of Flora a little to the N. of it. The part of the hill which it occupied was probably that called Latiaris in the Argive fragments. The part styled Collis Salutaris must have been that near the gate of the same name, derived from the ancient Sacellum of Salus, which stood near it; in place of which a regular Temple of Salus was dedicated by C. Junius Bubbleus, n. c. 203 (Liv. ix. 43. x. 1), and adorned with paintings by Fabius Pictor. These were still to be seen in the time of Pliny, when the temple was destroyed by fire in the reign of Claudius (xxxv. 7; cf. Val. Max. viii. 14. § 6).

Cicero's friend Atticus lived close to the temple of Salus ("—tuae vicinis Saularis," ad Att. iv. 1), and at the same time near that of Quirinus: "Certe non longa a tuae ineditis inambulantia post excessum sumnum Romulus Proculo Julio dixit, se deum esse et Quirinum vocare, templumque sali dedicari in eo loco jusserat." (De Leg. i. 13.) The vicinity of the temples is likewise indicated in another passage relating to a statue of Caesar, which had been erected in that of Quirinus: "De Caesare vicino scripsam ad te, quia cognoram ex tuis literis; eos omnium Quirino mala quam Saluti" (ad Att. xii. 43.). Hence the sites of the two temples in question are still further established. For as that of Salus lay on the N. side of the hill, near the Porta Salutaris, and that of Quirinus some 200 yards to the S. of it, at the church of S. Andrea, so we may assume that the house of Atticus lay between the two, and he would thus be a close neighbour to both.

Another ancient sacellum on the Quirinal was that of Semis Dianus or Dianus Fidius. We have shown, when treating of the Servian gates, that the Porta Sanquallis took its name from this sacellum; and Livy (vii. 20) describes it as facing the temple of Quirinus. Hence it must have stood on or near the site of the Palazzo Quirinale, between the temple of Salus and that of Flora. "It had a perforated roof, for the deity loved the open air, whence its title of Dian; and some thought that no oath by this god should be sworn under a roof." (Var. L. l. v. § 66.) Sanquallis was an old Sabine deity, and his temple at Rome appears to have been founded by Tullus. (Or. Post. vi. 213; Proq. v. 9. 74; Ter. Tull. ad Nat. ii. 9.) Its antiquity is attested by the circumstance that the distaff and sandals of Tanag, the wife of Tarquinius Priscus, are recorded to have been preserved in it, and are said to have been in existence down to the time of Augustus. (Plin. viii. 74; Plut. Q. R. 30.) It appears to have been rebuilt by Tarquinus Superbus, but its dedication was reserved for Sp. Postumius. (Dornys. ix. 60.) The part of the hill where it stood must have been the Collis Martialis of the Argive fragments. (Var. L. l. v. § 52.)

There were several Temples of Fortuna on the Quirinal, but they do not seem to have been of much importance; and the notices respecting them are very obscure. Iturvius (iii. 2) mentions three which stood close together at the Porta Collina, belonging perhaps to those alluded to by Ovid under the name of Fortuna Publica (Fast. iv. 375. v. 720) and by Livy, who mentions a temple of Fortuna Primigenia on the Quirinal hill (xxxv. 53). There was also an Altar of Fortuna in the Vicus Lengus. (Plut. Fort. Rom. 10.)

In the street just named stood also a Sacellum Publiliae, founded by Virginus, the daughter of Anius, after the quarrel between the matrons in that of Pudicitia Patellia alluded to in a former section (Liv. x. 23). Outside of the Porta Collina was a temple of Venus Erxina, near which the Ludii Apollinares were held when the circus had been overthrown by the Tiber. (Livy xxx. 38; Appian, B.C. i. 93.) Of the Temple of Serapis, mentioned in the Notitia along with that of Salus, nothing further is known, except that from the fragment of an inscription found near the church of S. Agnita alla Subura, where possibly the temple may have stood, it may be inferred that it was dedicated by Caracalla. (Gruter. lxxxv. 6; Preller, Reg. p. 124.)

These are all the ascertained temples that lay on the Quirinal; for it is a disputed point whether we are to place on this hill the splendid Temple of Sol, erected by Aurelian. (Aur. Vict. Caes. 25; Eutrop. ix. 15 (9); Vopisc. Aurel.) Altogether, however, the most probable conclusion is that it stood there and Becker's objections admit of an easy answer (Hannb. p. 987, seq.). By those who assume it to have been on the Quirinal it is commonly identified with the remains of a very large building, on the declivity of the hill, in the Colonna gardens, on which spot a large Mithraic stone was discovered with the inscription "Soli Invicto." (Vignoli, de Colonna Autonoiniana, p. 174.) This position may be very well reconciled with all the ancient accounts respecting the temple. Becker objects that it is mentioned in the Notitia in the 7th Region (Via Latina). But this Region adjoined the western side of the Quirinal, and the temple of the Sun may have been recorded in it, just as many buildings on the declivity of the Aventine are enumerated in the 11th Region, or Circus Maximus. In the Catalogus Imperatorum Vienae, (ii. p. 246, Ronce.) it is said of Aurelian, "Tempulum Solis et Castra in Campo Agrippae dedicavit;" and it will appear in the next section that the Campus Agrippae must have been situated under this part of the Quirinal. Becker assumes from the description given by Vopiscus of his ride with Tiberianus, the conversation during which was the occasion of his writing the Life of Aurelian, that the temple in question could not have been so near the Palatine as the spot indicated ("ibi quam animus a causis atque a negotiis publicis solutus ac liber vaqueret, servorum mulsum a Patulo usque ad Hortos Valerianos instituit et in ipso praecepte de vita principium. Quamque ad templum Solis veniisse ab Aureliano principe consecratum quod ipse nominatum ex eis oderior sancunnem diceret, quesivit;" &c. Vopisc. Aurel. 1). We do not know where the Horti Varianae lay; they might possibly, as assumed by Preller, have been identical with those of L. Annius Varus, since, in the possession of Valerianus Annius (Tae. Anu. xi. 1),

ROMA.
through these continued to bear in general the name of Lucullus. But Becker interprets the passage wrongly when he thinks that the temple of Sol lay beyond these gardens: on the contrary, the passing that temple gave rise to the conversation, which lasted till Vopiscus and his friend arrived at the Horti Valeriani, wherever these may have been; and if they were on the Pincian, the temple of Sol, in the locality indicated, would have been on the road to them from the Palatium. Lastly, we may observe that the Quirinal had, in very early times, been dedicated to the worship of Sol, who was a Sabine deity (Varro, *L. L.* v. § 74); and there was a PULVINAR SOLIS in the neighbourhood of the temple of Quirinus. (Quint. *Inst. Or.* i. 7; *Fast. Capr. Id. Aug.*; cf. Urichs, *Becker*, iii. 2. p. 386; *Casina, Indice*, p. 210, seq.; Preller, *Regionen*, p. 137.)

Such were the sanctuaries of the Quirinal. The ancient topographers, who are followed by the modern Italians, have assigned two ciri to this quarter: the CIRCUS FLORAC near the temple of the same name, and the CIRCUS SULLUSTIE in the garden of the Emperor Sallust, between the Quirinian and Pincian. The former has certainly been invented by misconstruing an inscription relating to the games of Flora in the Circus Maximus. (Becker, *Handb.*, p. 673.) It is more doubtful whether a Circus Sullustian may not have existed. We have seen from a passage of Livy that the Ludi Apollinares were performed outside the Porta Collina when the overflow of the Tiber prevented their performance in the usual place; and, according to Caesius (Indicez. p. 199), traces of a circus are still visible in that locality. But none is mentioned in the catalogues of the regions, nor does it occur in any ancient author. The HORTI SALLUSTIIANI, however, undoubtedly lay in the valley between the Quirinal and Pincian, but their exact extent cannot be determined. They were formed by Sallust the historian with the money which he had extorted in Numidia. (Dion. Cass. xliii. 9.) The house of Sallust lay near to the (subsequent) Porta Salaria, as we learn from Procopius, who relates that it was burnt in the storm of the city by Abaric, and that its half-com- 

mented remains still existed in his time. (B. V. i. 2.)

The Anonymous of Einsiedeln mentions the THEMAR SALLUSTIANAE near the church of *S. Sermazirona*; and the older topographers record that the neighbourhood continued to be called Salastriacum or Salustium even in their days. (Andr. Fulvius, *de Urb. Ant.* p. 140; Luc. Fauno, *Annt. di R.* iv. 10. p. 120.) Becker (*Handb.* p. 585) raises a difficulty about the situation of these gardens from a passage in Tacitus (*Hist.* iii. 82), which, however, presents none if rightly understood. The Flavian troops which had penetrated to the gardens of Sallust on their *left* were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. *Ann.* xiii. 49.)

The Horti Sallustiani subsequently became imperial property, though in what manner is unknown. The first notice which we find of them as such occurs under Nero in the passage just cited from Tacitus. Several emperors are described as residing in them, as Vespasian, Nerva, and Aurelian. (Oian *Cass.* lxi. 10; Vopisc. *Aen.* 49; Hieron. p. 443, Rom.)

Also close to the Porta Collina, but inside and to the right of it, lay the *Camps Nervae*, im-

mediately under the agger. The spot obtained its name from being the place where Vestal Virgins convicted of unchastity were buried alive; for even in this frightful punishment they retained their privilege of being interred within the walls. Dionysius attributes the introduction of this mode of execution to Tarquinius Priscus; and, according to Livy, the first example of its application was in the case of Minucia, B.C. 348. Dionysius, however, calls the first vestal who suffered Minucia. (Dionys. *ii.* 67, iii. 67; Liv. *viii.* 15; Plut. *Aemul.* 10.)

The emperors appear to have shared with the vestals the privilege of intramural interment, al-
though they did not always avail themselves of it. Indeed, according to Hieronymus (vol. i. p. 449, Rom.), Trajan was the only emperor buried within the walls; but this statement is certainly erroneous, since Domitian erected a magnificent mausoleum for the Flavian family somewhere between the gardens of Sallust and the spot subsequently occupied by the baths of Diocletian. It is the object mentioned under the name of "Gem Flavia" in the *Notitia*, and is alluded to in several epigrams of Martial, in one of which he designates it as being near his own dwelling (v. 64. 5):—

"Tum vicina judent nos vivere Mansolen,
Quum doceant ipsos posses perire deo."

(Cf. ixi. 2 and 35; *Stat. Silv.* iv. 3. 18.) It was commonly called TEMPLEM GENTIS FLAVIAE, as appears from Suetonius (*Dom.* 17); but the same passage shows it to have been a sepulchre also, since the ashes of Julia, the daughter of Titus, as well as those of Domitian himself, were deposited in it. (Cf. Becker, *de Matri* &c. p. 69.) It was erected on the site of the house in which Domitian was born, designated as being AD MALEM PINICUM (Suet. *Dom.* 1); which name occurs again in the *Notitia*, and could not, therefore, have been applied to the whole Region, as Preller supposes (*Regionen*, p. 69), but must have denoted some particular spot, perhaps a vicus, called after a pomegranate tree that grew there. We have already adverted to the importance attached to trees growing within the city.

The only other object that remains to be noticed on the Quirinal is the Praetorian Camp, since the baths of Diocletian will be described under the proper head. We have related in the former part of this article that the Castra Praetoria were established in the reign of Tiberius outside the Porta Collina, to the eastward of the agger. They were arranged after the usual model of a Roman camp, and were enclosed within a brick wall, of which there are still some remains. (Casina, Indicez. p. 194.) They were included within the wall of Aurelian, which preserved their outline. We need only add that the 6th Region of Augustus, of which the Esquiline formed the principal part, was called ALTA SEMITA, from a road which ran along the whole back of the hill, answering to the modern Strada di Porta Fia.

The Pincian Hill presents but few objects of importance. Its earlier name was COLIS HORTORUM, or HORTIFORUM, derived from the gar-

dens which covered it; and it was not till a late period of the empire that it obtained the name of Mons Pinsius, from a magnificent palace of the Pincian family which stood upon it. (Urichs, *Becker*, vol. i. part. ii. p. 572; *Rom. Top.* p. 186.)

This DOMUS PINSIANA is rendered interesting from
its having been the residence of Belisarius during his defence of Rome. It is the same building mentioned by Procopius under the name of Flaminia (Procop. B. G. ii. 8; 9; Anastasius, V. Silver, pp. 104, 106, Blanch.) The part of the hill included within the later city was bounded by the wall of Aurelian, by the valley which separates the Pincian from the Quirinal, and by the Campus Martius on the west.

The most famous place on the Pincian was the Gardens of Lucullus. Their situation is determined by a passage in Frontinus, from which we learn that the arches of the Aqua Virgo began under them. (Ap. 2.) This must have been in the street called the Campus Martius, since the name of that street is still in existence from that spot to the Fontana di Trevi. (Carina, Indic. p. 935.) The early history of these gardens is obscure. They were probably formed by a Lucullus, and subsequently came into the possession of Valerius Asiaticus, by whom they were so much improved that Messalina's desire of possessing them caused the death of Valerius. (Tac. Ann. xi. 1, 32, 37.) They appear to have been also called after him "Horti Asiatici" (Becker, Handb. p. 591), and it is possible, as we have said before, that they may sometimes have borne the name of "Horti Valerianii." They were the scene of Messalina's infamous marriage with Silius (Lucr. S. x. 334) and of her death by the order of Claudius. (Tac. Ann. xi. 37.) The gardens remained in the possession of the imperial family, and were reckoned the finest they had. (Plut. Lucull. 39.) The family of the Domitii, to which Nero belonged, had previously possessed property, or at all events a sepulchre, on the Pincian; and it was here that the ashes of that emperor were deposited. (Suet. Ncr. 50.) Popular tradition places it on that part of the hill which overhangs the church of S. Maria del Popolo near the gate of the same name.

XIII. THE CAMPUS MARTIUS, CIRCUS FLAMINIUS, AND VIA LATA.

The whole plain which lies between the Pincian, Quirinal, and Capitoline hills on the E. and the Tiber on the W.—on which the principal part of modern Rome stands,—may be designated generally by the name of CAMPUS MARTIUS, though strictly speaking it was divided into three separate districts. It is narrow at the northern part between the Pincian and the river, but afterwards expands to a considerable breadth by the winding of the Tiber. It is terminated by the approach of the latter to the Capitoline hill, between which and the stream a part of the Servian wall forming its southern boundary anciently ran. It was cut through its whole length by a straight road, very nearly corresponding with the modern Corso, running from the Porta Flaminia to the foot of the Capitol. The southern part of the district lying between this road and the hills formed, under the name of Via Lata, the 7th of the Augustan Regions; but how far it extended to the N. cannot be determined. From its northern boundary, wherever it may have been, to the Porta Flaminia and beyond that gate, the road before described was called Via Flaminia. The southern portion of the Campus Martius lying between the same road and the Tiber, as far N. as the modern Piazza Navona and Piazza Colonna, constituted the 9th Region of Augustus, under the name of CIRCUS FLAMINIUS.

In the earlier times all this district between the hills and the river was private property, and was applied to agricultural purposes. We have already related in the preceding chapter the early history of the expulsion of the Tarquins, the Campus Martius was assigned, or rather perhaps restored, to the public use. But the southern portion of the plain appears still to have belonged to private owners. The most considerable of these possessions was the PRATA FLAMINIA, or CAMPUS FLAMINIUS, which, however, must soon have become public property, since we find that assemblies of the people were held here under the decemvirs. (Livy. iii. 54.) Among these private estates must have been the AGER CATI, in which was a fountain whence the stream of the Tiber flowed on its course to the sea. It had been formed the southern boundary of the proper Campus Martius ("Petronia amnis est in Tiberim fluenta, quam magistratus aurispicio transunt cursu in Campo quid agere voluit," Fest. p. 250; cf. Paul. Diaec. p. 45); also the CAMPUS TIBERINUS, the property of the vestal Taricia, or Suffletia, who presented to the people. (Plin. xxxiv. 11.)

We shall begin the description of this district from its southern side; that is, from the Servian wall between the Capitoline hill and the Tiber. Immediately before the Porta Carmentalis lay the Forum Olitorium. It was, as its name implies, the vegetable market. (Var. lll. v. § 146.)

The ELEPHANT HERRARIUS, or bronze statue of an elephant, which stood near the boundary of the 8th Region (v. Notitia) has by some topographers been connected with this forum, merely, it would seem, from the epithet hevvarius; but the wall must have made here a decided separation between the 8th and 9th Regions. There were several temples in the Forum Olitorium, as those of Spe, of Juno Sospita, of Pietas, and of Janus. The Temple of Spe5 was founded by M. Attilius Calatinus in the First Punic War. (Tac. Ann. ii. 49; Cic. N. D. ii. 23; Liv. xxxi. 62.) It was destroyed in the great fire which devastated this neighbourhood during the Second Punic War (Liv. xxiv. 47), and though soon rebuilt, was again burnt down in B. C. 30; after which the restored temple was dedicated by Germanicus. (Tac. l. c.) The Temple of Juno was consecrated by C. Cornelius Cethegus in B. C. 195. There is a confusion in Livy between the names of Sospita and Mattia applied to this deity (xxxii. 30, xxxiv. 53); and it is difficult to decide which epithet may be the correct one. The Temple of Pietas is connected with the well-known legend of the Roman daughter who nourished her father (or mother) when in prison with the milk of her breast, and is said to have resided on the spot where the temple was erected. (Festus, p. 209; Val. Max. ii. 5 i. 5.) It was dedicated in B. C. 180 by the son of M. Acilius Glabrio, in pursuance of a vow made by his father, on the day when he engaged king Antiochus at Thermopylae. (Liv. xi. 34.) It was pulled down in order to make room for the theatre of Marcellus. (Plin. vii. 26.) There appears, however, to have been another temple of Pietas in the Circus Flaminiae. (Juv. Obs. 114.) Close by was the Temple of Janus, to which we have already adverted in the former part of this article. The greater portion of the Forum Olitorium must have been occupied by the THEATRE OF MARCELLUS, of which we shall speak in another section; and it may therefore be doubted whether it continued to serve the purposes of a market when the theatre was
ROMA.

On the Forum Olitorium also stood the Colonna Lactaria, so called because children were provided with milk at that spot. (Paul. Diaec. p. 118.) The supposition that there was likewise a Forum Piscarium in this neighbourhood rests only on a doubtful reading in Varro. (Liv. iv. § 14.)

In the first line Becker (Handb. p. 607) reads "a tergo," with Merkel, instead of "a templo," which is the reading of Heinsius, and of most editions, and thus places the area behind the temple. But this was not the usual situation for an area, and there is express authority that the temple stood before the temple. (Paul. Diaec. p. 28; Serv. l.c., where Becker admits that we should read "ante pedem" for "ante pedem"). The other point respecting the site of the temple depends on whether "summus circus" means the part where the carceres were, or the circular end. Becker adopts the former meaning, and consequently places the temple of Bellona at the eastern end of the circus, and that of Hercules Custos at the western end. Urichs reverses this order, and quotes in support of his view Salmasius, ad Soliot. p. 639, a.: "Paras circi, ubi metae ultimae superior dicitur; inferior ad carceres." (An. p. 81.) This is a point that is not altogether established; but Becker's view seems in this case the more probable one, as will appear a little further on, when we come to treat of the Villa Publica.

The Circus Flaminius itself, which will be described in another section, lay under the Capitol, on which side its carceres were, and extended in a westerly direction towards the river. Between it and the theatre of Marcellus lay the Porticus Octaviae,—which must be carefully distinguished from the Porticus Octavia, built by Octavian,—the enclosing Temples of Juppiter Stator and Juno. This portico occupied the site of a former one built by Q. Caecilius Metellus, after his Macedonian triumph, and called after him Porticus Metelli. It seems most probable that the two temples before alluded to were in existence before the time when Metellus erected his portico; but the notices on this subject in ancient authors are obscure and contradictory. (Becker, Handb. p. 608, seq.) There can be no doubt, however, that the Porticus Octaviae superseded that of Metellus. (Plin. xxxiv. 14; cf. Plut. C. Gracch. 4.) It was erected by Augustus, and dedicated in the name of his sister; but at what date is uncertain. (Suet. Aug. 29; Ov. A. A. iii. 391.) It contained a library, which was destroyed in the great fire in the reign of Titus, with all its literary treasures. (Dion Cass. xix. 43, lxvi. 24; Suet. H. Gramm. 21.) This library was probably in the part called the "Schola in porticibus Octaviae," and, like the Palatine library, was sometimes used for assemblies of the senate. (Plin. xxxv. 10. s. 114, xxxvi. 5, s. 22. s. 28; Dion Cass. iv. 8.) Hence, it was even called Octavia Curia, and sometimes Octaviae Opera. The church of S. Angelo in Pecoraria now stands opposite to its principal entrance towards the river.

Close to the Porticus Octaviae, on its western side, lay the Porticus Philippi, enclosing a temple of Hercules Musarum. This temple was built by M. Fulvius Nobilior, the conqueror of the Aetolians (Cic. p. Arch. 11), and rebuilt by L. Marcius Philippus, the step-father of Augustus, who also surrounded it with the portico. (Suet. Aug. 29.)

The name of the temple does not signify, as Becker supposes (Handb. p. 613), that it was dedicated to Hercules and the Muses, but to Hercules as leader of the Muses (Μουσασεύρης), the genitive, Musarum, depending on Hercules, as appears from coins of the gens Pomponia, where he is represented in that character, with the legend HERCULES MUSAEM, as well as from an inscription in Gruter (misc. vol. ii. 311).
5) Hercule. Mysarum. Pythiius (Urbich, Röm. Topogr. p. 140, and Anted. p. 32). Indeed Eumeneus expressly says that Fulvius Nobilior when in 373. (Suet. Claud. ii. 51.) was the comer of Musaeum."

(pro Inst. Schol. Aug. p. 195, Arzet.); and we learn from Ovid that the statue of Hercules represented him with a lyre (Fast. vi. 810): —

"Annuit Alcides, incerpuitque lyram."

The vicinity of the temple and portico is indicated in Marial (v. 49. 8).

It is supposed that the Theatre Balbi lay close to the western side of this portico, and another更为 remote, opposite the round end of the circus, or rather to the north of it, the Théâtre Pompei; of which latter there are still some remains at the Palazzo Pio. Pompey's theatre must have lain close to the boundary between the Campus Martius and Circus Flaminius since Pliny mentions that a colossal statue of Jupiter, erected by the emperor Claudius in the Campus, was called Pompeianum from its vicinity to the theatre ("Talis in Campo Martio Jupiter a Divo Claudio Caeare diecutus, qui vocatur Pompeianum a vicinitate theatris," xxxv. 18).

The same thing might also be inferred from Cicero ("Quid enim loci natura afferte potest, it in portico Pompei potius quam in Campo ambulamus," de Fato, 4). Hence it would appear that the boundary of the two districts, after proceeding along the northern side of the Circus Flaminius, took a north-westerly direction towards the river. The Porticus Pompei adjoined the scene of his theatre, and afforded a shelter to the spectators in the event of bad weather. (Vitruv. v. 9.) But what conferred the greatest interest on this group of buildings was the Curia Pompei, a large hall or hexastyle in the portico itself, sometimes used for the representation of plays as well as for assemblies of the senate. It was here that Caesar was assassinated, at the base of Pompey's statue; an event which caused it to be regarded as a locus sacerdorum, and to be walled up in consequence. (Cic. Div. ii. 9; Dion Cass. xiv. 16. 52; Suet. Caesar. 80. 88; Plut. Brut. 14. Cas. 66. &c.). The statue of Pompey, however, was first taken out by order of Augustus, and placed under a marble arch or Janus, opposite the portico. (Suet. Aug. 31.) It is a question whether the portico styled Hecateystyle, from its having a hundred columns, was only another name for the portico of Pompey, or quite a distinct building. It is sometimes mentioned in a manner which would seem to intimate that it was identical with the Porticus Pompei. Thus both are said to have had groves of plane-trees (Iopp. ii. 32. 11), and to have been consumed in one and the same fire. (Hieron. Chron. p. 475, Roca.) The following lines of Martial, however, appear to show that they were separate, but adjoining buildings. (ii. 14. 6). —

"Inde petam centum pendente tecta columnis; / Ilinc Pompeii dux mensaque duplex."

These lines, and from two fragments of the Capitoline Plan, Caiuna has correctly inferred that there were two distinct porticoes, and that the Hecateystyle adjoined the N. side of that of Pompey. (Indici. p. 573.) Pompey also built a private dwelling-house near his theatre, in addition to the house which he possessed in the Carinae. The former of these seems to have been situated in some gardens.

(Phyt. Pomp. 40. 44.) We find other Horti Pompeii mentioned with the epithet of superiores, probably from their lying on the Vician hill. (Ascon. ad Cic. Millum. Arg. p. 57, and 25. p. 50, Orell.)

Near the theatre of Pompey was also the Porticus Octavia, which, as we have said, must be carefully distinguished from the Porticus Octaviae. It was a double portico originally erected by Ca. Octavia after his triumph over Perseus. It was likewise called Corinthia, from its columns being adorned with bronze capitals. (Flin. xxxiv. 7: Vell. Pat. ii. 1; Fest. p. 178.) Augustus rebuilt it, but dedicated it again in the name of its founder. Also near the theatre was the Triumviral Arch of Tiberius, erected by Claudius. (Suet. Claud. 17.)

Other temples in the district of the Circus Flaminius, besides those already enumerated, were a Temple of Diana, and another of Juno Regina, — different from that of Juno in the Porticus Octaviae, — both dedicated by M. Aemilius Lepidus, n.c. 179. (Liv. xl. 52.) An Aedes Fortunae Equestries vowed by Q. Fulvius Flaccus in a battle against the Celtibiers, n. c. 176. (Liv. xl. 40. 44. xiii. 5. ii.) It stood near the theatre of Pompey in the time of Vitruvius (iii. 3. 28. Schm.), but seems to have disappeared before that of Tacius. (Ann. iii. 1.) A Temple of Mars, founded by D. Julius Brutus Calabria (Flin. xxxvi. 5. s. 26); one of Neptune, cited as "delubrum Ca. Domitii" (Fbr.; Gruter, Inscri. cccxxxiv. 5); one of Castor and Pollux (Vitriv. iv. 8. 4); and probably also one of Vulcan. (Fast. Capreri. X. Kal. Sep.) Some of these last, however, were perhaps mere socclla in the circus itself.

A few profane objects will close the list of public buildings in this quarter. The Stabula iv. Facstum of the Notitia must have been the stables in which the horses of the four factions or colors of the circus, alabata, prasina, russata, and veneta, were kept. Domitian added two more colors, the aurata and purpurea, and another reading of the Curatunm mentions six stables, whilst the Notitia certainly erroneously — names eight; but it seems most probable that there were only four. (Preller, Regionen, p. 167.) Some of the emperors paid great attention to these stables. Tacitus represents Vitellius as building some (Hist. ii. 94); and Caligula was constantly dining and spending his time in the stables of the Green Faction. (Suet. Cal. 55.) The four in question were probably situated under the Capitol, near the carceres of the Circus Flaminius. Between the Porticus Philippus and the theatre of Balbus lay two Ptolemaeum Minoceum, styled respectively Vetus and Frumentaria, both built by Miuncius who was consul in B. c. 111. (Vell. Pat. ii. 8.) The Frumentaria appears to have been the place in which the teteserae were distributed to those entitled to share the public gifts of corn. (Appal. de Mun. extr. p. 74. 14. Eim.; cf. Cic. Phil. ii. 34; Lampr. Comm. 16.) The Crypta Balbi mentioned in the Notitia was probably a peculiar species of portico, and most likely attached to the theatre of Balbus. A crypta differed from a portico by having one of its sides walled, and by being covered with a roof, in which were windows. (Urbich, Boeses, vol. iii. pt. ii. p. 62.)

Such were the public buildings in the district called Circus Flaminius; immediately to the N. of which lay the Campus Martius, sometimes called merely Campus. The purposes to which this plan
was applied were twofold; it served for gymnastic and warlike exercises, and also for large political assemblies of the people, as the comitia and contiones. At first it must have been a completely open field with only a few scattered sacred places upon it; and it was not till the 6th century of the city that regular temples began to be built there. By degrees it became covered with buildings, except in that part devoted to the public games and exercises, and especially the equitaria, or horse-races, instituted by Romulus in honour of Mars. (Varr. L. L. vi. § 13; Paul. Dia. p. 81.) The spot where the last place is indicated by Ovid (Fast. iii. 519):—

"Altera graminis spectabilis Equitaria campo
Quam Tiberis currat in latus argutus aquos.
Qui tamen ejecit si forte tuebitur Anda
Caesius accepit pulverulentus aquos."

The part of the Campus the side of which may be said to be "pressed upon" by the stream of the Tiber, is that lying between Piazza Navona and the bridge of S. Angelo, where the ground forms an angle nearly right. It is probable that a temple was also the bathing-place of the Roman youth. (Hor. Od. iii. 7. 25; Comp. Cic. pro Clod. 15.)

Some writers have assumed that this spot was regarded as forming a distinct division called Campus Minor, whilst the remainder of the plain was called Campus Major. (Prellet, Regiones, p. 156; Urichs, Rom. Marsfeld, p. 19; Canioa, Indice, pp. 384, 412.) But this distinction does not appear to rest on adequate authority. It is derived from a passage in Catullus: "Te campo quassivimus, minore..."

The ancient loci religiosi on the Campus Martius were the following:—The PALLS CAPRAE, or CAPRAE, where Romulus is said to have disappeared during the holding of an assembly of the people; its situation is unknown; but it does not seem impossible, as Prellet suggests (Regiones, p. 137), that its site may have been marked by the AEDICULA CAPRAE, mentioned in the Notitia in the 7th Region, and that it may consequently have lain somewhere under the Quirinal. (Liv. i. 16; Ov. Fast. ii. 489, &c.) A place called TARENTUM, or TERTENTUM, which appears to have been volcanic (campus ignifer), with a subterranean ARA DIVIS PATAVET ET PROSEERITAE, where the ludi sacrae were performed. The legend of Valesius and his children, and an account of the preparations of the games, will be found in the Dictionary of Antiquities, p. 716. We are here only concerned for the situation of the place, which is very variously assigned by different writers. Urichs placed it in the Forum Boarium, which, however, must be wrong, as it was undoubtedly in the Campus Martius (Val. Max. ii. 4. § 5; Festus, p. 329), though at one extremity of it. (Zos. ii. 4.) Hence Becker placed it near the mausoleum of Augustus, being led to this conclusion by the Sibyline oracle recorded by Zosimus (l.c.):—

"Priamus in peditum para Thymbraio aptatos ubi
Orpheus syneutatis."

Becker refers the word syneutatis in this passage to pediow, and hence selects the northern part of the Campus for the site of Tarentum, as being the narrowest. But it may equally well refer to ubiop; and the narrowest part of the Tiber in its course through the Campus Martius — taking that appellation in its more extended sense—is where it is divided by the Insula Tiberina. Other passages adduced are undeceptive, as those of Ovid (Fast. i. 501) and Seneca (de Mort. Claudi. 13); and it is therefore through Prellet (Regiones, Anhang, p. 241) pronounces against Becker's site, we must leave the question undetermined.

The ARA MAETIS, near which, when the comitia were ended the newly-elected censors took their seats in curule chairs, was probably the earliest holy place dedicated to the god on the Campus which bore his name. We have already observed, when treating of the Porta Fontinalis, that it must have been near that gate, and that it was perhaps erected by Numa. There was also an Aedes MAETIS on the Campus, probably at the spot where the equitaria were celebrated. (Bion Cass. liv. 24; Ov. Fast. ii. 855.) It seems to have been a distinct temple from that already mentioned in the Circus Flaminius. The site of the Temple of the LAres PREMARINII, dedicated by the censor M. Aemilius Lepidus, b.c. 179, in pursuance of a vow made by L. Aemilius Regillus after his naval victory over the fleet of Antiochus, cannot be determined (Liv. xii. 32; Macrobi. Sat. i. 10); but it may probably have stood, as Prellet conjectures, near the Navalia. The Aedes JUTERBAE, built by Q. Lutatius Catulus towards the end of the Republic, stood near the arches of the Aqua Virgo, and consequently near the Septa. (Serv. ad Aen. xii. 139; Ov. Fast. i. 463; Cic. pro Cluent. 36.)

Such was the Campus Martius down to the imperial times; when the great works undertaken there by Julius Caesar and Augustus gave it quite a new appearance. But, before we proceed to describe these, we must say a few words respecting the Navalia, or government dockyards. The older topographers placed them under the Aventine, from confounding them with the Emporium or commercial dock. Pila and others pointed out the incorrectness of this view; but errs himself in placing the Navalia on the opposite bank of the Tiber, from his ignorance of certain passages which determine them to have been in the Campus Martius. These passages, which were first adduced by Becker (de Muria. loc. p. 96, Handb. p. 159), are the following:—"Sepa unica imperii populi Romani, L. Quinctius, trans Tiberim contra eum ipsum locum, ubi nunc Navalia sunt, quatuor jugernum colebat agrum, quae prata Quinctia vocantur." (Liv. iii. 26.) This passage shows the Navalia to have been on the left bank of the Tiber, opposite some fields called Quinctia; and the following one from Pliny fixes the situation...
of these fields in the district called Vaticanus: "Arani quater sua jugera in Vaticanò, quae prata Quineta appellantur. Cincinnati visitor attulit dictaturam" (xxvii. 4). That the Navalia were in the Campus Martius may also be inferred from Livy (xlv. 42): "Naves regiae capitae de Macer- doniis insitutae ante magnitudinis in Campo Martio subductae sunt"; and from Plutarch's account of the return of the younger Cato from Cyprus, in which he relates that although the mae- strates and senate, as well as a great part of the Roman population, were ranged along both banks of the Tiber in order to greet him, yet he did not stop the course of his vessels till he arrived at the Navalia (Cat. Min. 39); a circumstance which shows that this arsenal must have lain towards the upper part of the stream's course through the city. Hence, though we cannot define the boundary between the Janiculum and the Vatican, nor consequently the exact situation of the Prata Quinca, yet the site fixed upon by Becker for the Navalia, namely, between the Piazza Navona and Porto di Ripetta, seems sufficiently probable. Becker is disposed to place them rather lower down the stream, but without any adequate reason (Regimen, Anh. p. 242).

It was Caesar who began the great changes in the Campus Martius to which we have before alluded. He had at one time meditated the gigantic plan of diverting the course of the Tiber from the Milvian bridge to the Vatican hill, by which the Agor Vaticanus would have been converted into a new Campus Martius, and the ancient one appropriated to building; but this project was never carried into execution. (Cic. ad Att. iii. 33.) The only building which he really began in the Campus was the Septa Julia. It has been said, when treating of the Porta Flumentana, that a spot near the Circum Flaminius was appropriated to the holding of the Comitia Centuriata. In early times it was enclosed with a rude kind of fence or boundary, probably of hurdles; whence, from its resemblance to a sheep-fold, it obtained the name of Ovile, and subsequently of Septa. (Liv. xxvi. 22; Juv. vi. 528; Serv. ad Vign. Ec. i. 34.) For this simple and primitive fence Caesar substituted a marble building (Septa magnorum), which was to be surrounded with a portico a mile square, and to be connected with the Villa Publica. (Cic. ad Att. iv. 16.) It was probably not much advanced at the time of Caesar's assassination; since we find that it was continued by the triumvir Lepidus, and finally dedicated by Agrippa (Dion Cass. lxi. 23); but whether it was completed on the magnificent plan described by Cicero cannot be said. Its situation may be deter- mined by a passage in Frontinus, in which he says that the arches of the Aqua Virgo ended in the Campus Martius in front of the Septa. (Ag. 22.) These arches, which, as we have seen before, began under the gardens of Lucullus on the Pincian, were conducted to the baths of Agrippa. Donati men- tion that remains of them were discovered in his time in front of the church of S. Ignazio (near the Collo- gio Romano). (De Urb. R. iii. 18.) This coincides with remains of the portico of the Septa existing under the Palazzo Borghia and church of S. Maria in Via Lata in the Corso (Canina, Indic. 400); and we may therefore conclude that the Septa Julia stood at this spot. The portico must have enclosed a large open space where the assemblies were held, and in which theatrical shows, and on one occasion even a naumachia, were exhibited. (Suet. Aug. 43, Col. 18, Ner. 12; Dion Cass. iv. 8, lix. 10.) There was of course a suggestion or rostra, for haranguing the people. (Dion Cass. lvii. 1.) The Septa were destroyed in the great fire under Titus (Dion Cass. lvii. 24), but must have been restored, since, in the time of Domitian, when they had lost their political importance, they appear to have been used as a market, in which the most valuable objects were exposed for sale. (Mart. ii. 60.) They appear to have undergone a subsequent restoration under Hadrian. (Spart. Hadr. 19.)

The Villa Publica adjoined the Septa Julia, and must have been on its S. side, since it is described by Varro (R. R. iii. 2) as being "in Campo Marzo extenso," and must consequently have lain between the Septa and the Circus Flaminius, near the Palazzo di Venezia. The original one was an ancient and simple building, and is mentioned by Livy (iv. 22) as early as the year B.C. 436. It was used by the consuls for the luring of troops, and by the censors for taking the census (Varr. l. c.); also for the reception of foreign ambassadors to whom it was not thought advisable to admit into the city, and of Roman generals before they obtained permission to enter the gates in triumph (Liv. xxx. 21, xxxii. 24. Sc.). It was the scene of the massacre of the four Marian legions by Sulla (Val. Max. ix. 2, § 1; Liv. Epit. ixxxvii.; Strab. v. 249.) A passage in Lactan respecting this horrible transaction confirms the position of the Villa Publica close to the Septa (§ 196):—

"Tunc flos Hesperiae, Latii jam sola juvenus Concordit et insenere maculavit Ovilia Romae "

And another passage in Plutarch shows that it must have adjoined the Circus Flaminius on the other side (Ov. m. n. Ann. et ut quosque et tantum 2600 pisitos regem etiam vidos latus c. egressim quae sibi spectabiles aedibus of portico, velut diripitantem, et quam lades aedificium. Circa 193.) This is the spot where the cures of the Messalae were heard; and this circumstance would rather lead us to suppose that the temple in question was situated at the eastern end, or towards the curvatures, of the Circus Flaminius, since the Septa and Villa Publica must have lain towards that end of it nearest to the Capitol. The simple building described by Varro must have been that which rebuilt in the censorship of S. Adelis Paetus and C. Cornelius Cethegus, b. c. 194. Caesar could hardly have done anything to it, since a coin of C. Fonteius Capito, consul in b. c. 33, testifies that the latter either restored or rebuilt it.

The name of M. Vipsanius Agrippa, the son-in-law of Augustus, is connected with the principal changes and the most important buildings in the Campus Martius. The latter consisted of the Pan- theon, the thermes, a portico, and the large structure called the Diriburium. The Campus Agrippae and its buildings will be described when we come to treat of that part of the district under consideration called Via Lata.

The Pantheon of Agrippa, which is still in so good a state of preservation that it serves for public worship, is one of the finest monuments of ancient Rome. An inscription on the frieze of the portico testifies that it was erected by Agrippa in his third consulate; whilst another below records repairs by the emperors Septimus Severus and Caracalla. From
E. CASSIUS states that it received the name of Pantheon because it contained the images of many gods (iii. 27), which, however, seem to have been those of the deities mythically connected with the Julian race, and among them that of Caesar himself. The temple is circular, and its magnificent portico with triple row of columns, though perhaps not quite in harmony with the main building, cannot fail to excite the admiration of the beholder. It owes its excellent state of preservation partly to the solidity of its construction, partly to its having been consecrated as a Christian church as early as the reign of Placida, under the title of S. Maria ad Martyres, or della Rotonda. To the lover of the fine arts it is doubly interesting from containing the tomb of Raphael. Some architects have thought that it was not originally intended for a temple, but as part of the baths; a notion, however, that is refuted by passages in ancient writers, where it is styled *templum* (Plin. xxxvi. 5. s. 38; Macrob. Sat. ii. 13). The Pantheon stood in the centre of the Campus Martius, taking that name in its widest sense. The *thermae*, of which only a few unimportant remains exist, adjoined it on the S., and must have extended to near the Hexastyle. The *diri-teria* was a large building destined, according to Becker (*Handb.* p. 638), to the examination of the voting tablets used in the comitia, in order to determine the result of elections, and must therefore have been situated near the *septa*. It seems to have been left unfinished at Agrippa's death, and was dedicated by Augustus, B. C. 7. Its vast unsupported roof was one of the wonders of Rome, and, when destroyed in the fire of Titus, could not be replaced. (Dion Cass. iv. 8; Plin. xvi. 40.) In hot weather Caligula sometimes converted it into a theatre (Dion Cass. lix. 7). The portico which Agrippa erected in the Campus Martius appears to have been called *porticus* *ARGONAUTARUM*, from its being adorned with a picture of the Argonauts, and was erected in commemoration of Agrippa's naval victories (Dion Cass. lii. 27; Mart. iii. 20. 11). Becker (*Handb.* p. 637) contends that this was the same building called Basilica Neptuni by Spartan (*Hadr*. 19), and *Porcia* *Neptuni* by Dion Cassius (lxxi. 24). But a basilica is not equivalent to a portico, nor can we imagine that Dion would have used the term *Porcia* *Neptuni* of a portico; whence it seems more probable, as assumed by Canina (*Indic.* p. 406) and other topographers, that Agrippa also erected a *temple* of *Neptune*, which was connected with, or probably surrounded by the portico. Nardini and Canina—the latter from recent researches—are of opinion that the eleven columns now existing in the front of the *Deipnus di Terra* in the *Piazza di Pietra*, near the Antonine column, belonged to this temple. Of a *porticus* *MELEAGRI* mentioned in the *Notitia* in connection with that of the *Argonautaurum*, we know nothing further.

Augustus also erected a few monuments on the Campus Martius. Among them was the *solarium* Augusti, an obelisk which now stands on *Monte Citorio*, which served as a gigantic gnomon, and, on an immense marble flooring that surrounded it, exhibited not only the hours, but also the increase and decrease of the days (Plin. xxxvi. 15). In the northern part of the Campus, between the *Via Flaminia* and the *Tiber*, he caused to be constructed during his life-time that superb *mausoleum*, a description of which by Strabo has already been cited in the former part of this article. This district had for some time previously served as a burying place for the most distinguished persons. Among others buried near this spot were Sulla, Caesar together with his aunt and daughter, and the two consuls *Hirtius* and *Pansa*, who fell at *Mutina*. Several members of the family of Augustus had been entombed in the mausoleum before the ashes of Augustus himself were deposited within it; as Marcellus, Agrippa, Octavia, and *Drusus* (Dion Cass. lii. 30; Virg. *Aen.* vi. 873, seq.; *Ov. Cons. ad Lat.* 67). By the time of *Hadrian* it was completely filled; which caused him to build a new one on the opposite side of the river (Dion Cass. lxxix. 23). There are still considerable remains of the monument of Augustus. The area on which the sepulchre of the Caesars stood is now converted into a sort of amphitheatre for spectacles of the lowest description: sine transit gloria mundi. It is doubtful whether a third building of Augustus called *porticus ad nationes*, or *XIV. Nationes*, stood in the Campus Martius or in the *Circus Flamininus*. It appears to have been near the theatre of Pompey, and contained statues representing different nations (Plin. XXXVI. 5. s. 4; *Serv. ad Aen.* viii. 721.)

Near the *mausoleum* appears to have been a portico called *via Tecules*, the origin of which is un-
known. Its situation near the place assigned to determined by the following passage in Seneca's *Apocolocyntosis*: "injęcto litt (Claudio) manum Talithybus deorum nutitus et trabit capite obvoluta, ne quis eum possit migrasse, per Campum Martium; et inter Tiberim et Via Tectam descendit ad inferos." (p. 389, Bisp.). If this descent to the infernal regions was at the subterranean altar of Pluto and Proserpine before mentioned, it would go far to fix the situation of the Tarentum in the northern part of the Campus; but this, though probable, is not certain. The Via Tecta is mentioned once or twice by Martial (ii. 3, viii. 75).

Among the other monuments relating to Augustus in the Campus Martius, was an *Ara Pacis*, dedicated to Augustus on his return from Germany, e. c. 13. (Dion Cass. liv. 25; Ov. Fast. iii. 584; Fast. Praen. III. Kal. Feb.) The *Ara Fortunae Redux* was another similar altar (Dion Cass. liv. 19); but there is nothing to prove that it was on the Campus Martius.

In the reign of Augustus, Statilius Taurus erected an *Amphitheatre* on the Campus,—the first built of stone at Rome; but its situation cannot be determined. (Dion Cass. lii. 23; Suet. Aug. 29.)

A long interval ensued after the reign of Augustus before any new public buildings were erected on the Campus Martius. Caligula began, indeed, a large amphitheatre near the Septa; but Cladius caused it to be pulled down. Nero erected, close to the baths of Agrippa, the *Thermæ Neronianæ*, which seem to have been subsequently enlarged by Alexander Severus, and to have obtained the name of *Thermæ Alexandrinæ*. The damage occasioned in this district by the fire of Nero cannot be stated, since all that we certainly know is that the amphitheatre of Statilius Taurus was destroyed in it (Dion Cass. lixi. 18). The fire under Titus was considerably more destructive in this quarter (ib. lxxvi. 24); but the damage appears to have been made good by Domitian. Among the buildings restored by him on this occasion we find the *Temples of Isis and Serapis* mentioned; but we have no accounts respecting their foundation. Their site may, however, be fixed between the Septa Julia and the baths of Agrippa, near the modern church of *S. Maria sopra Minerva*. Thus Juvenal (vi. 527):—

"A Meroe portabit aquas, ut spargat in aedem

Isidis, antiquo quae proxima surgit Ovili."

(Cf. Joseph. R. Jud. vii. 5, § 4.) It was near the spot indicated that the celebrated group of the Nile was discovered which now adorns the Vatican (Braun, *Museums of Rome*, p. 160), together with several other Egyptian objects (Flaminio Vacca, *Mem. nos. 26, 27; Bartoli, Mem. no. 112, &c.). Alexander Severus devoted much attention to these temples (Lampr. A. Siv. 26), and they must have existed till a late period, since they are enumerated in the *Notitia*. Domitian also restored a temple of Minerva which stood near the same spot, the *Minerva Chalcedon* of Cassiodorus (*Chron. sub Domit.*) and of the *Notitia*. (Matt. Dier. Ital. p. 292.) It must have been the temple originally founded by Pompey in commemoration of his eastern victories, the inscription on which is recorded by Pliny (vii. 27). It was from this temple that the church of *S. Maria* (just mentioned derived its epithet of *sopra Minerva*; and it seems to have been near this spot that the celebrated statue of the Giustiniani Palace, now in the *Braccio Nuovo* of the Vatican, was discovered; though according to other, but less probable, accounts, it was found in the circular temple next the *Porta Maggiore* (Braun, *Museums*, &c. p. 154). Some topographers assume that the temple built by Pompey was a different one from the above, with the barbarous title of Minerva Campensis, but in the same neighbourhood; which does not seem probable (Canina, *Indicas*, p. 405).

Domitian also founded in the Campus Martius an *Odeum* and a *Stadium* (Suet. Dom. 5), which will be described in the proper sections. The situation of the former cannot be determined. The Stadium, in all probability, occupied the site of the *Piazza Navona*, the form of which shows that it must have been a circus. The name of *Navona* is a corruption of in *Apane*, and important remains of this Stadium...
ROMA.

were in existence in the time of the Anonymous of Einsiedeln (Preller, Regiones, p. 171). The assumption that this place was occupied by a stadium built by Alexander Severus — in which case that of Domitian must be sought in some other part of the Campus — rests only on traditions of the middle ages (Canina, Indici, p. 392).

Trajan is said to have built a theatre in the Campus Martius, which, however, was destroyed by Hadrian. (Spart. Hadri. 8.) The same emperor probably erected what is called in the Notitia the Basilica Marcianæ (Marciana), which was probably a temple in honour of his sister, Marciana. The Antonines appear to have adorned this quarter with many buildings The Basilica Matidiæ (Matidae) was perhaps erected by Antoninus Pius, and consecrated to Matidia, the wife of Hadrian; as well as the Hadrianium, or temple to Hadrian himself, also mentioned in the Notitia. (Preller, p. 175.) The Templum Antonini and Columna Cochlae were the temple and pillar erected in honour of M. Aurelius Antoninus. (Capitol, M. Ant. 18; Aur. Vict. Epit. 16.) All these buildings stood near together in the vicinity of the Piazza Columna, on which the column (Columna Antoniniana) still exists. For a long while this column was thought to be that of Antoninus Pius, and was even declared to be such in the inscription placed on the pedestal during the pontificate of Sixtus V. But the sculptures on the column were subsequently perceived to relate to the history of Antonine the philosopher; and this view was confirmed not only by the few remaining words of the original inscription, but also by another inscription found in the neighbouring Piazza di Monte Citorio, regarding a permission granted to a certain Ardrastus, a freedman of Septimius Severus and Caracalla, to erect a small house in the neighbourhood of the column, as curator of it. This inscription, which is now preserved in the corridor of the Vatican, twice mentions the column as being that "Dvri Marci." (Canina, Indici, p. 417, seq.) The column is an imitation of that of Trajan, but not in so pure a style of art. Both derive their name of cochlae from the spiral staircase (cochlea, κοχλαίας) in the interior of them. (Isid. Orig. xv. 2, 38.) The Columna Antonini Pii was a large pillar of red granite, erected to

still preserved in the garden of the Vatican. (Canina, Indici, p. 419.) The sculptures on the pedestal represent the Apotheosis of Antoninus Pius and Faustina.

The Thermæ Commodianæ and Alexandræ will be treated of in the section on the baths. After the time of Alexander Severus we find but few new buildings mentioned in this district. Gordian III. is said to have entertained the design of building an enormous portico under the Pincian hill, but it does not appear that it was ever executed. (Capitol. Gord. III. c. 32.) Respecting the Porticus Flaminia, see the article PORTICUS FlAMINIA. Some porticoes near the Pons Aelius, which appear to have borne the name of Maximiæ, were terminated by the Triumphant Arch of Gratian, Valentinian, and Theodosius; the inscription on which will be found in the Anonymous of Einsiedeln, and in Gruter (cclxxi. 1). Claudius, who was prefect of the city under Valentinian I., erected a portico near the baths of Agrippa, which he called Porticus Boni Eventus, after a neighbouring temple with the same name (Ann. Mar. xxix. 6 § 19); but with regard to this temple we have no information.

We shall now proceed to that part of the district under consideration comprised in the 7th Region of Augustus, and subsequently called Via Lata, from the road which bounded its western side, and which formed the northern extremity of the Via Flaminia. The most important topographical question connected with this district is the situation of the Campus Agrippae, and the buildings connected with it. We have already shown from the situation of Martial's house, as well as from the probable site of the temple of Sol, that the Campus Agrippae must have lain under the western side of the Quirinal, and not under the Pincian, where Becker places it. It is probable, too, that it lay on a line with the Pantheon and thermae of Agrippa, although divided from them by the Via Lata; and hence Canina correctly describes it as facing the Septa (Indici, p. 215), whilst Uricchi and Proler, in like manner, place it between the Piazza degli Apostoli and the Fontana Trevi. (Beccrev. vol. iii. pt. iii. p. 112; Regiones, p. 138.) The Campus Agrippae contained gardens, porticoes, and places for gymnastic exercises, and was, in short, a kind of Campus Martius in miniature. It was also a favourite lounge and promenade. (A. Gell. xiv. 5.) It appears from a passage in Dion Cassius, that the Campus was not finished before Agrippa's death, and that it was opened to the public by Augustus, (ib. 8.) It contained a Porticus Polacca, so named after Agrippa's sister Pola or Polla; which is probably the same as that alluded to by Martial, in some passages before quoted, under the name of Vipsania. The latter name seems to be corrupted in the Notitia into Porticus Gypsauni. Becker (Handb. p. 596) would identify the Porticus Polae with the Porticus Europae, but they seem to be different structures. (Uricchi, Rom. Topogr. p. 139.) The latter, which derived its name from a picture of the rape of Europa, is frequently mentioned by Martial (ii. 14, iii. 26, xl. 1). Its situation cannot be determined; but most topographers place it in the Campus Martius, among the other buildings of Agrippa. (Canina, Indiciæ, p. 406; Uricchi, Rom. Marsfeld, p. 116.) It appears from the Notitia that the Campus Agrippae contained Castra, which, from the Catalogus Imperati. Vением. (i. ii. p. 246, loc. cit.), appear to have been dedicated by Aurelian; but the Porticus Vipsania served as a
sort of barracks as early as the time of Gallia. (Tac. 
H. i. 31; Plut. Galb. 25.)

Several objects mentioned in this district are
doubtful as to site, and even as to meaning, and are
not important enough to demand investigation. It
contained TRiUMPHAL ARCHES of Claudius
and M. Aurelius. The latter subsisted in a
tolerably perfect state near the Piazza Fiana in
the Corso, till the year 1662, when pope Alexander VII.
caused it to be pulled down. Its relics still adorn
the staircase of the Palazzo de’ Conservatori. (Ca-
nina, Indicez. p. 220.)

ARCH OF AURELIUS.

We shall conclude this section with noticing a
very humble but very useful object, the FOR-
M SCARUM. Bacon was an article of great consump-
tion at Rome. It was distributed, as well as bread,
among the people, and its annual consumption in
the time of Valentinian III. was estimated at
3,628,000 pounds. (Gibbon, Decline and Fall,
vol. iv. p. 55, ed. Smith.) The custom of distribu-
ting it had been introduced by Aurelian. (Vopisc.
Aurel. 25.) A country in which hogs-flesh is the
cheapest meat betrays a low state of farming. The
swine still abound in Italy: but in ancient times the
Roman market was principally supplied from the
forests of Lucania. The market was important enough
to have its special tribune, and the “pig-
men of the eternal city” (“Porcinari Urbis aeternae”) were
considered such a useful body that peculiar privileges were granted to them. (Cod. xi. tit. 16; 
cel.xxx. 4.) The market is alluded to in a sort of
proverbial manner by Philostratus (Eratn 7e kal
koua 9e;"<i>δια</i> εν των αρχαίων Herocic. 
p. 253, 19, ed. Kayser.) It is supposed to have
stood near the present church of S. Croce dei
Luchesii, which was substituted for that of S. 
Nevdo in Porciibus. (Cannina, Indicez. p. 209; 
Preller, Regionen, p. 139.)

XIV. THE TRANSIBERINE DISTRICT.

Although the district beyond the Tiber formed
one of the 14 Regions of Augustus, and although
part of it may perhaps have been enclosed with a
wall as early as the time of Ancus Marcus, and was
certainly included in that of Aurelian, yet, while it
was considered a part of Rome, it never belonged to
the Urbs, properly so called. The distinction be-
tween Roma and Urbs was at least as old as the
time of Augustus, and was thus laid down by
Alfenus Varus: “Ut Alfenus ait, Urbs est Roma,
quae munro cingeretur; Roma est etiam, qua con-
tinentiaaedificiaessent.” (Digest. l. tit. 16. l. 57.)
This circumstance rather tends to strengthen Nibouh’s
opinion that Ancus Marcus only built a citadel on
the Janiculum, without any walls extending to the river. [See above, Part II. Sect. I. sub fin.]
The district in question is naturally divided into three
parts, the Mons Janiculum (or Janiculum), the
Mons Vaticanus,—each with their respective plains
toward the river,—and the Isula Tiberina. We
shall begin with the last.

We have already mentioned the legend respecting
the formation of the INSULA TIBERINA through the
corn belonging to the Tarquins being thrown into
the river. In the year B.C. 291 the island became sacred to Aesculapius. In consequence of a
pestilence an embassy was despatched to Equidurus
to bring back to Rome the image of that deity;
but instead of the statue came a snake, into which it
was perfectly known that the god himself had en-
tered. As the vessel was passing the Tiberine
island the snake swam ashore and hid itself there; in
consequence of which a TEMPLE OF AESCULAPIUS
was built upon it, and the island ever afterwards
bore the name of the god. (Liv. Epit. xi.: Or.
Met. xv. 739; Val. Max. i. 8. § 2; Dionys. v. 13;
Suet. Claud. 25.) Sick persons resort to this
Temple for a cure, but it does not appear that there
was any hospital near it, as was the case at Epi-
daurus. There is no classical authority for the
fact that the sides of the island were afterwards
walled round in the shape of a ship, with the prow
against the current, typifying the vessel which
brought the deity; but it is said that vestiges of
this substructure are still visible. (Cannina, Indicez. 
p. 574.) The island also contained a TEMPLE OF 
JUPITER and a TEMPLE OF FAUNUS, both dedi-
cated in a. c. 193. (Liv. xxxvii. 42. xxxiv. 53.)
The temple of Jupiter appears to have adjoined that
of Aesculapius. (Liv. Fast. i. 293.) It is concluded, from the
following verses of Ovid, that the temple of Faunus must have stood on the upper
part of the island (Fast. ii. 193):—

"Idibus agris peis funtanae altaria Fau
Hic, ubi discretus insulta rumpit aquas;"
but this, though a probable, is not a necessary in-
ference. Semo Sancus, or Des Fidins, seems also to have had a saeculum here, as well as TIBERINUS,
as the river-god is called in the Indigittaria, or
religious books. (Fast. Annict. VI. Id. Dec.)
By a curious error the early Christian writers com-
ounded the former deity with Simon Magus, and
thought that he was worshipped on the island. (Just. Mart. 
Apol. 2; Euseb. H. Eccl. ii. 12.)

After the building of the two bridges which connected
the island on either side with the shore, it seems to have
obtained the name of “INTER DUOS Pontes” (Plut. 
Publ. 8); and this part of the river was long famous
for the delicious poke caught in it; which owed their
flavour apparently to the rich feeding afforded by
the proximity of the banks. (Plut. Popl. 8; 
Macrobi. Sat. ii. 12.) In the Acta Martyrum the island
is repeatedly styled Insula Lycostea; it is at present
called Isola di Bartolomeo, from the church and
convent of that name.

The JANICULUM begins at that point opposite the
Campus Martius where the Tiber reaches farthest

ROMA.
to the W., whence it stretches in a southerly direction to a point opposite the Aventine. The masculine form of the name (Janiculum), though employed as a substantive by some modern writers, seems to rest on no classical authority, and can only be allowed as an adjective form with mens or collis. (Becker, Handb. p. 653.)

The name Janiculum is usually derived from Janus, who is said to have had an arx or citadel here. (Ov. Fast. i. 245; Macrobr. Sat. i. 7.) As the ridge runs in a tolerably straight line nearly due S. from the point where it commences, the curve described by the Tiber towards the E. leaves a considerable plain between the river and the hill, which attains its greatest breadth at the point opposite to the Forum Boarium. This was the original REGIO TRANSITERINA. It appears to have been covered with buildings long before the time of Augustus, and was principally inhabited by the lower classes, especially fishermen, tanners, and the like, though it contained some celebrated gardens. Hence the Ludi Paeoniorii were held in this quarter. (Ov. Fast. vi. 257; Fest. pp. 210, 238; R. A. i. 291). It lies in an ancient Ghetto, or Jewish quarter, which now lies opposite to it. (Phil. de Vitr. ii. p. 568, Manegy.)

The Regio Transiberina contained but few temples or other public buildings. Of the temple of FORS FORTUNA we have already spoken when discussing the question respecting that of Pudicitia Patricia [supra, p. 814]. Of other loci religiosi in this quarter little more is known than the name. Such was the LUCUS FURINAE, mentioned in the narratives of the death of C. Gracchus. (Ann. Vict. V kra. iii. 63; Plut. C. Gracch. 17.) Cicero connected this grove with the Enmenades, or Faries (Vat. Deor. iii. 18): but there is no account of those Attic deities having been naturalised at Rome, and we should rather infer from Varro that the grove was consecrated to some ancient indigenous goddess. (L. L. vi. § 19, Mill.) It was a universal tradition that Numa was buried in the Janiculum (Dionys. ii. 76; Plut. Num. 22; Val. Max. i. § 12.) Cicero, in a corrupt passage, places his tomb "hand procul a FOANTI AEA" or (Foris Aris) (de Leg. ii. 22); but of such a deity or altar we have no further account. We may perhaps conjecture that the CAMPUS DAURIUM mentioned by Paulus Diaconus (p. 64, Mill.) as "trans Tiberinum" but though the names of these goddesses are also found in an inscription (Gruner, lxxviii. 14), what they were cannot be told. Lastly, as the Basis Capitolina records a VICUS LARUM RURALUM in this district, we may conclude that they had a saccellum here.

Among the profane places trans Tiberinum were the MLLA PLATA and the field called CODETA. The former—the land given to Mucius Scaevola by the Senate as a reward of his bravery (Livy ii. 13)—may, however, have lain beyond the district now under consideration, and probably farther down the Tiber. The Codeta, or Ager Codetanus, was so named from a plant that grew there resembling a horse's tail (coda) (Paul. Dic. pp. 38 and 58, Mill.),—no doubt the EQUSITETIS, or EQUSITETIS PULPESTRUM OF LINNÆUS. ("Invia et equitatis est, a summitudine equinum setae," Plin. xvi. 67, s.f.)

There seems to have been a Codeta Major and a Minor, since Suetonius relates that Caesar exhibited a naval combat in the latter, where he had raised a lake ("in minere Codeta defossione"") (Cæs. 33). Don Cassius, on the other hand, represents this

namachia as taking place in the Campus Martius (xiii. 23). Becker (Handb. p. 656, note) would reconcile these divergent accounts by assuming that the Codeta Minor lay in the Campus Martius, and the Codeta Major opposite to it, on the other side of the Tiber. (Cf. Feiler, Regiones, p. 218.) But there seem to be some grave objections to this assumption. It is not probable that two places bearing the same name should have been on different sides of the river, nor that there should have been a marshy district, as the Codeta evidently was, in the Campus Martius, in the time of Caesar. Besides, had the latter contained a place called Codeta Minor,—which must have been of considerable size to afford room for the exhibition of a naval combat,—we should surely have heard of it from some other source. Becker adduces, in proof of his view, another passage from Suetonius (Ib. c. 44), from which it appears that Caesar contemplated building a magnificent temple of Mars on the site of the lake, after causing it to be filled up; a project, however, which does not seem to have been carried into execution. Becker assumes that this temple must of course have been in the Campus Martius; though on what grounds does not appear, as we have already seen that there was a temple of Mars a long way outside the Porta Capena, besides a subsequent one in the form of Augustus. We are, therefore, of opinion, that the word Apeth, in Dion Cassius, must be a mistake either of his own, or of his copyists, and that the Campus Codetanum of the Notitia must have lain rather beyond the city, on the right bank of the Tiber. (Cf. Canina, Indic. p. 566, seq.)

Near the same spot must have been the Horridus Caesaris, which Caesar bequeathed to the Roman people. (Suet. Cæs. 83; Tac. Ann. ii. 41; Cic. Phil. ii. 42.) According to Horace, they must have lain at some distance:

"Trans Tiberín longe cubat is, prope Caesarius bortos."

(Sat. i. 9. 18.)

And it may be inferred from the situation of the TEMPLE OF FORS FORTUNA, which we have already discussed [supra, p. 814], that the port must have been at about a mile's distance from the Porta Portunensis. (Fast. Amitt. VIII. Kol. Jul.) It seems probable that they were connected with the Nemus Caesarium, where Augustus exhibited a namachia, and where a grove or garden was afterwards laid out. ("Navalis proeli spectaculum populo dedicavit_trans Tiberinum in quo nemus Caesarum," Mom. Ancyr.) This would rather tend to confirm the view that the codeta was in this neighbourhood. In Tacitus (Ann. xii. 56: "Ut quondam Augustus structo cis Tiberinam stagno") we are therefore probably to read usis for cis, which ancient form seems to have been retained in designating the Transiberine district ("Diebatur cis Tiberinum et usis Tiberinum," Aug. Gall. xii. 13: cf. Varr. L. L. v. § 83, Mill.; Pompon. Dig. i. tit. 2. 12. § 51.) The Nemus Caesarium seems to have been so called from Cais and Lucius Caesar. (Diod. Cass. 25.) We are not told that it occupied the site of the lake excavated for the namachia, but was planted round it as we learn from Tacitus ("...apud
nemus quod navali stagna circumspexit Augustus," Ann. xiv. 15). There are several passages which show that the lake existed long after the time of Augustus. Thus Statius (Sile. iv. 4. 5):—

"Continue dextras flavi pete Tybridis oras,
Lydia qua penitus stagna navale coercet
Ripa, suburbarumque vadum praetextar hortis."

This passage likewise confirms the situation of the lake on the right, or Etruscan, bank (Lydia ripa) with the Nemos round it (cf. Suet. Tib. 72). It was used by Titus to exhibit a navamachia (Suet. Tit. 7; Dion Cass. I. c.), and remains of it were visible even in the time of Alexander Severus (Id. iv. 10). Although the passage in the Monnemaldium Augustam in which Augustus mentions this lake or basin is rather mutilated, we may make out that it was 1800 feet long by 1200 broad.

The Notitia mentions five NAUMACHIAE in the 14th Region, but the number is probably corrupt, and we should read two. (Prelier, Regionum, p. 206.)

We know at all events that Domitian also made a basin for ship-fights in the Trajantibine district. (Suet. Dom. 4.) The stone of which it was constructed was subsequently employed to repair the Circus Maximus (Th. 5). That it was in a new situation appears from Dion Cassius (in kaiwp yivn xaiwp, lxvii. 8). It probably lay under the Vatican, since St. Peter's was designated in the middle ages as "agnus Naumachia." (Fl. Eflor. Instaur. R. i. 24.

Anclr. IV. Lea. III. p. 506, Blanch., Mont. Dine. Ital. p. 291.) The navamachia ascribed to the emperor Philip (Aur. Viet. Cas. 28) was perhaps only a restoration of this, or of that of Augustus.

Among other objects in the district of the Janiculum, we need only mention the HORTI GETAI and the CAstra LECTICARORVM. The former were probably founded by Septimius Severus, and inherited by his son Geta. We know at all events that Severus founded some baths in this district (Spart. Sept. v. 19; cf. Becker, de Muris, p. 127) and the arch called PORTA SEPTIMIANA; and it likewise appears that he purchased some large gardens before his departure into Germany. (Spart. lb. c. 4.)

The Lecticariorum were either sedan-chairmen, or men employed to carry biers, and their castra means nothing more than a station for them, just as we hear of the Castra Tabelliariorum, Victiminariorum, &c. (Prelier, Regionum, p. 218.)

The MONS or COLLIS VATICANUS rises a little to the N.W. of the Mons Janiculum, from which it is separated only by a narrow valley, now l'alé d'Inferno. The origin of the name of this district, at present the most famous in Rome, cannot be determined. The most common derivation of it is from a story that the Romans gained possession of it from the Etruscans through an insular response ("Vatum respondos expulsis Etruscis," Paul. Dac. p. 379.) We have already remarked that there is no ground for Niebuhr's assumption respecting the existence here of an Etruscan city called Vatica or Vaticum (see p. 724). This district belonged still less than the Janiculum to the city, and was not even included in the walls of Aurelian. It was noted for its unhealthy air (Tac. ii. 93), its unfruitful soil (Cic. de Leg. Agr. ii. 35), and its excorable wine. ("Vaticana bibis, bibis venenum," Mart. vi. 92. 93; cf. x. 43.) In the Republican times the story so beautifully told by Livy (ii. 26) of the great dictator L. Quinctius Cincinnatus who was sent as dictator here whilst cultivating his farm of four acres, the PRATA QUINTICL, lends the only interest to the scene, whether it may belong to the romance of history or not. There were no buildings in this quarter before the time of the emperors, and almost the only one of any note in all antiquity was a sepulchre—the MAUSOLEUM or MOLES HADRIAN, now the Castello di S. Angelo. (Dion Cass. lxxix. 23;
These gardens of the Donian family are frequently mentioned in inscriptions; and those who are curious respecting their history will find a long account of them in Pullet's Regionen (p. 207, seq.). They appear to have existed under the same name in the time of Aurelian. (Vopisc. Aurel. 49.) In the same district were also the Horti Agrippiniae. These came into the possession of her son, Ca- figula, who built a circus in them, afterwards called the Circus Neronis. It will be treated of in another section; and we shall only mention here that this was the place in which the Christians, having previously been whipped in the tuna ca moleata or picata, were burnt, to serve as torches for the midnight games. (Tac. Ann. xv. 44.)

Both the gardens mentioned came into the possession of Nero, and may therefore have also been called Horti Neronis. (Tac. IB. and c. 59.)

The neighbourhood seems to have been a chosen spot for the sepulchres of the great. One of them, a pyramid larger than the still existing monument of Cestius, existed till the end of the 15th century, and was absurdlv regarded sometimes as the sepulcreum Scipionis Africani. It appears from notices belonging to the middle ages that on or near the spot where St. Peter's now stands, there was anciently a Temple Apollinis, or more probably of Sol. (Anas- tasius, Vit. Silvestri, p. 42; Monti. Diarr. i. p. 155.)

Having thus gone over the various districts of the city, and noted the principal objects of interest which they contained, we shall now proceed to give an account of certain objects which, from their importance, their general similarity, and the smallness of their number, may be most conveniently ranged together and treated of in distinct sections. Such are,—(1) the structures destined for public games and spectacles, as the Circi, Theatres, and Amphitheatres; (2) the Thermæ or Baths; (3) the Bridges; and, (4) the Aqueducts.

The general characteristics of these objects have been already fully described in the Dictionary of Antiquities that it will be unnecessary to repeat the descriptions here, and we shall therefore confine ourselves to what may be called their topographical history; that is, an account of their origin and progress, their situation, size, and other similar particulars.

XV. THE CIRCI, THEATRES, AND AMPHITHEATRES.

Horse and chariot races were the earliest kind of spectacle known at Rome. The principal circus in which these sports were exhibited, and which by way of pre-eminence over the other cannot, ultimately, to be distinguished by the title of Circus Maximus, was founded, as we have already related, by the elder Tarquin, in the valley between the Palatine and Aventine. That king, however, probably did little more than level and mark out the ground; for certain spaces around it were assigned to the patricians and knights, and to the 30 curiae, on which, at the time of the games, they erected their own seats or scaffold, called spectaculo and fori. (Liv. i. 35; cf. Dionys. iii. 68.) According to Livy, the same custom continued to prevail under Tarquiniius Superbus (ib. c. 56); though Donatus expressly states that monarch as surrounding the circus with per-
part of the building. ( Dion Cass. l. 10.) Augustus rebuilt the Palatine, or place on which the images of the gods were laid, and erected the first obelisk between the vettii. (Mon. Ancyr.; Suet. Aug. 45; Plin. xxxvi. 14. s. 3.) The side towards the Aventine was again burnt in the reign of Tiberius (Cass. Antiq. xxvi. 14.) Claudius or Titus improved the appearance of the circus by substituting marble carceres for those of tufo, and vettii of gilt bronze for the previous ones of wood. He also appropriated certain seats to the senators. (Suet. Claud. 21.) We have seen that the fire of Nero broke out in the circus, whence it is natural to conclude that it must have been completely destroyed. Yet it must have been soon restored, since Nero caused his ridiculous triumphal procession to pass through it, and hung his triumphant wreaths round the obelisk of Augustus. (Dion Cass. lvi. 21.) The effects of another fire under Domitian were repaired with the stone from his mausoleum, and it was now, perhaps, that 12 carceres were first erected. (Suet. Dom. 5, 7.) We read of another restoration on a still more magnificent scale by Trajan. (Dion Cass. lvii. 7.) During the celebration of the Ludi Apollinares in the reign of Antoninus Pius, some of the rows of seats fell in and killed a large number of persons. (Capitol. Anton. P. 9; Catal. Imp. Flavia. ii. p. 244.) We know but little more of the history of the Circus Maximus. Constantine the Great appears to have made some improvements (Anast. Cass. 40. § 27), and we hear of the games being celebrated there as late as the 6th century. (Cassiod. V. r. iii. 51.) The circus was used for other games besides the chariot races, as the Ludus Trojai, Certamen Gymnicae, Vronatio, Ludi Apollinares, &c. The number of persons it was capable of accommodating is variously stated. Pliny (xxxvi. 24. s. 1) states it at 260,000. One codex of the Notitia mentions 485,000, another 385,000; the latter number is probably the more correct. (Preller, Regionen, p. 191.) The circus seems to have been enlarged after the time of Pliny, in the reign of Trajan. The Circus Flamininus was founded in B.C. 229 by the censor of that name. (Liv. Epit. xx.; Cass. Chron. p. 178.) We have but few notices respecting this circus, which lay under the Capitoline, with its carceres towards the hill, and its circular end towards the river. The Ludi Flamines, and those called Taurii, were celebrated here (Val. Max. i. 7. § 4; Varr. L. L. v. § 154), and Augustus afforded in it the spectacle of a crocodile chase. (Dion Cass. iv. 10.) It also served for meetings of the people, which had previously been held in the Prato Flaminius. (Liv. xxvii. 21; Cic. ad Att. l. 3.) We find no mention of the Circus Flamininus after the first century of our era; and in the early part of the 9th century it had been so completely forgotten that the Anonymous of Einsieelden mistook the Piazza Navona for it. Yet remains of it are said to have existed till the 16th century, at the church of S. Caterina de' Fornari and the Palazzo Mattei. (And. Fulvio, Ant. Urb. lib. iv. p. 254; Lucio Fauno, Ant. di Roma, iv. 23. p. 138.)

What is sometimes called by modern topographers the Circus Agonalis, occupied, as we have said, the site of the Piazza Navona. But the Agonalis was certainly not celebrated as a circus, and there are good reasons for doubting whether this was a circus at all. Its form, however, shows that it was a place of the same kind, and hence Becker's conjecture seems not improbable (Handb. p. 670), that it was the Stadium founded by Domitian. The Grecian foot-races had been introduced at Rome long before the time of Domitian. Both Caesar and Augustus had built temporary stadia in the Campus Martius (Suet. Caes. 39; Dom. liii. 1.), and Domitian seems to have constructed a more permanent one. (Suet. Dom. 5; Cassiod. Chron. t. ii. p. 197.) We are not indeed told that it was in the Campus Martius, but this is the most probable place for it; and the Notitia after mentioning the three theatres and the Odeum in the 9th Region names the Stadium. It is also mentioned in conjunction with the Odeum by Ammianus Marcellinus (xvi. 10. § 14). It is discriminated from the cirii by Lampridius: "Oanes de circo, de theatre, de studio—maestriatic collegii." (Heliog. 26.) In the middle ages it seems to have been called "Circus Alexandrinus," an appellation doubtless derived from the neighbouring thermae of Alexander Severus. By the Anonymous Einsiedlen- sius it was confounded, as we have said, with the Circus Flamininus.

Putting this on one side, therefore, the third circus, properly so called, founded at Rome, would be that which Caligula built in the gardens of his mother Aureliana in the Vatican. (Plin. xvi. 40, xxxvi. 11; Suet. Claud. 21.) From him the place subsequently obtained the name of Calanum (Dion Cass. lxxi. 14), by which we find it mentioned in the Notitia. (Reg. xiv.) This circus was also used by Nero, whence it commonly obtained the name of Circus Neronis. (Plin. l.c.; Suet. Ner. 22; Tac. Ann. xiv. 14.) In the middle ages it was called Palatinum Neronis. Some writers assume another circus in this neighbourhood, which Canini (Indice. p. 590) calls Circus Hadriani, just at the back of the mausoleum of that emperor; but this seems hardly probable. (Cf. Uliichs, in Class. Mus. vol. iii. p. 202.) The chief passage on which this assumption is founded is Procopius, de Bell. Goth. ii. 1 (Preller, Regionen, p. 212).

A fourth circus was that of Maxentius about two miles east of the Via Appia, near the tomb of Caecilia Metella. It used to be commonly attributed to Caracalla; but an inscription dug up in 1825 mentions Bonulus, the son of Maxentius (Orell. Inscrip. 1069); and this agrees with the Catalogus Imperatorum Vincensium, which attributes the building of a circus to Maxentius (ii. p. 248, Rome). This building is in a tolerable state of preservation; the spina is entire, and great part of the external walls remains; so that the spectator may here gain a clear idea of the arrangements of an ancient circus.

A complete description of it has been published by the Rev. Richard Burgess (London, Murray, 1828). The fifth and last of the circuses at Rome, which can be assumed with certainty, is the Circus Helioagallari, which lay near the Amphitheatrum Castrense, outside the walls of Aurelian. (Uliichs, Rom. Topogr. p. 126, seq.; Becker, Antwort, p. 81.) We have already said that the existence of a Circus Floraee in the 6th Region, is a mere invention; and that of a Circus Sallustii, in the same district, rests on no satisfactory authority.

Although theatrical entertainments were introduced at Rome in the time of Circesund, the city possessed no permanent theatre before the Thermae Pomp.
viciously to this period, plays were performed in wooden theatres, erected for the occasion. Some of these temporary buildings were constructed with extravagant magnificence, especially that of M. Aemilius Scænus in B.C. 59, a description of which is given by Pliny (xxxvi. 24. s. 7). An attempt, to which we have before alluded, was indeed made by the censor Cassius, B.C. 154, to erect a stone theatre near the Lupercal, which was defeated by the rigid morality of Scipio Nasica (Vell. Pat. i. 15; Val. Max. ii. 4 § 2; Liv. Epit. xivii.; Oros. iv. 21). A good deal of this old Roman feeling remained in the time of Pompey; and in order to overcome, or rather to evade it, he dedicated a temple to VENUS VICTRIX on the summit of his theatre, to which the rows of seats appeared to form an ascent (Tac. Ann. xiv. 20; Tert. de Spect. 10; Plin. viii. 7). Gelius places the dedication of the theatre in the third consulship of Pompey, which is at variance with the other authorities (N. A. x. 1). We have spoken of its situation in a preceding section, and shall refer the reader who desires any further information on this head to Canina (Indicac. p. 368, seq.), who has bestowed much labor in investigating the remains of this building. There is great discrepancy in the accounts of the number of spectators which this theatre was capable of accommodating. According to Pliny, in whose MSS. there are no variations, it held 40,000 persons (xxxvi. 24. s. 7); and the account of Tacitus of the visit of the German ambassadors seems to indicate a large number ("Intravere Pompeii theatrum, quo magnitudinem populi viserint," Ann. xiii. 54). Yet one of the codices of the Notitia assigns to it only 22,888 seats, and the Curiosum still fewer, or 17,550. It was called theatrum lapidum, or marginem, from the material of which it was built; which, however, did not suffice to protect it from the ravages of fire. The scena was destroyed in the reign of Tiberius, and rededicated by Claudius (Tac. Ann. iii. 72; Dion Cass. lx. 6). The theatre was burnt in the fire under Titus, and again in the reign of Philip; but it must have been restored on both occasions, as it is mentioned by Ammianus Marcellinus among the objects most worthy of notice in his account of the visit of Constantinus II. (xvi. 10). We learn from the Catalogus Imperatorum, that it was then repaired by Diocletian and Maximian; and it was also the object of the care of Theodoric (Casiod. Var. iv. 51).

The THEATRE OF BALBUS, dedicated in B.C. 12 (Suet. Aug. 29; Dion Cass. liv. 25), was a building of much less importance, and but few accounts have been preserved of it; yet it must have lasted till a late period, as it is recorded in the Notitia. According to the Curiosum it accommodated 11,600 persons; whilst the MSS. of the Notitia mention 11,510 and 808. The Theatre of Marcellus was begun by Caesar (Dion Cass. xiii. 49), and dedicated by Augustus, B.C. 12, to the memory of his nephew, Marcellus. (Mon. Angr.; Suet. Aug. 29; Dion Cass. liv. 26.) We have already mentioned its situation in the Forum Boarium; and very considerable remains of it are still to be seen in the Piazza Montanara. Its arches are now occupied by dirty workshops. It does not seem to have enjoyed so much celebrity as Pompey's theatre. According to the Curiosum it was capable of accommodating 20,000 spectators. The scene was restored by Vespasian (Suet. Fl. Sym. 19); and Lampridius mentions that Alexander

Severus contemplated a renovation of the theatre (Alex. 44.)

Some of the MSS. of the Notitia mention four theatres, including, of course, the Odeum, which was a roofed theatre, intended for musical performances. According to the most trustworthy accounts, it was built by Domitian, to be used in the musical contests of the Capitoline games which he instituted (Suet. Dom. 4; Cassiod. Chron. p. 197, Romans): and when Dion Cassius (lxix. 4) ascribes it to Trajan, we may perhaps assume that it was finished or perfected by him. Nero appears to have first introduced musical contests (Tac. Ann. xiv. 20), but the theatre in which they were held was probably a temporary one. The Odeum was capable of holding 10,000 or 12,000 persons. It is mentioned by Ammianus Marcellinus (xvi. 10).

The Amphitheatre of Statiliius Taurus was the first permanent building of that kind erected at Rome. After the chariot races, the gladiatorial combats were the most favourite spectacle of the Romans; yet it was long before any peculiar building was appropriated to them. We have already related that the first gladiators were exhibited in the Forum Boarium in B.C. 264; and subsequently these combats took place either in the circus or in the Forum Romanum; yet neither of these places was well adapted for such an exhibition. The former was
inconvenient, from its great length, and the metare and apitae were in the way: whilst the latter, besides its moral unsuitableness for such a spectacle, became by degrees so crowded with monuments as to leave but little space for the evolutions of the combatants. The first temporary amphitheatre was the wonderful one built of wood by Caesar's partisan, C. Scribonius Curio. It consisted of two separate theatres, which, after dramatic entertainments had been given in them, were turned round, with their audiences, by means of hinges or pivots, and formed an amphitheatre (Plin. xxxvi. 24. s. 8).

Caesar himself afterwards erected a wooden amphitheatre (Dion Cass. xliii. 22); but that of Statilius Taurus was the first built of stone, and continued to be the only one down to the time of Vespasian. We have mentioned that it was in the Campus Martius. It was dedicated in the fourth consulship of Augustus, B.c. 30. (Dion Cass. li. 23; Suet. Aug. 29.) The amphitheatre erected by Nero in the Campus Martius was a temporary one of wood. (Suet. Nero, 12.) The amphitheatre of Taurus, which does not appear to have been very magnificent (Dion Cass. lix. 10), was probably destroyed in the fire of Nero; at all events we hear no more of it after that event. The Amphitheatrum Flavium,

erected by Vespasian, appears to have been originally designed by Augustus. (Suet. Vesp. 9.) It stood on the site previously occupied by the lake of Nero, between the Velia and the Esquiline. (Mart. Spec.

2. 5), and was capable of containing 87,000 persons. (Notitia, Reg. iii.) A complete description of this magnificent building will be found in the Dictionary of Antiquities, and need not be re-

peated here. It was not completely finished till the reign of Domitian; though Titus dedicated it in the year 80. (Suet. Tit. 7; Aur. Vict. Cass. 9. 7.) In the reign of Macrinus it was so much damaged by a fire, occasioned by lightning, that it was necessary to exhibit the gladiatores and venationes for several years in the Stadium. (Dion Cass. lxxxviii. 25.) The restoration was undertaken by Elagabalus, and completed by Alexander Severus. (Lampr. Hist. 17. Alex. 24.) It suffered a similar calamity under Decius (Hieron. Chron. p. 475); but the damage was again made good, and venationes, or combats with wild beasts, were exhibited in it as late as the 6th century. In the middle ages it was converted into a fortress; and at a later period a great part of it was destroyed by the
Roma.

Romans themselves, in order to build the Cancel-leria and the Palazzo Farnese with the materials. Enough, however, is still left to render it one of the most striking and important monuments of imperial Rome. Its name of Colosseum, first mentioned by Bede (ap. Ducauge, Gloss. ii. p. 407, ed. Bas.)

ELEVATION OF COLOSSEUM.

under the form Colgaeus, was either derived from the vast size of the building, or, more probably, from the colossus of Nero, which stood close to it. (See Nibby, Dell Anfiteatro Flavio, in the Appendix to Nardini, i. p. 238, which contains the best history of the building down to modern times.) Of the Amphitheatrum Castrense, near S. Croce, we have already spoken [p. 827].

XVI. THE THERMAE, OR BATHS.

We, of course, propose to speak here only of those large public institutions which were open either gratis or for a mere trifle to all, and of which the first were the Thermae Agrippae, near his Pantheon. The thermae must not be regarded as mere batheaa, or places for bathing. They likewise contained gymnasiae, or places for gymnastic exercises; hereaeae, or rooms for the disputations of philosophers; as well as apartments for the delivery of lectures, &c. The thermae of Agrippa do not seem to have been so splendid as some of the subsequent ones; yet, though they suffered in the fire under Titus, they were preserved till a late period, and are mentioned more than once by Martial (iii. 20. 13, 36. 6). The Thermae Neronianae were erected by Nero very near to those of Agrippa (Tac. Ann. xiv. 47; Sueb. Nero. 12). After their restoration by Alexander Severus, who appears, however, to have also enlarged them (Lamprid. Alx. 25), they obtained the name of Thermae Alexandriniæ (Cassiod. Chron. vol. ii. p. 194, Rom.). They must have lain between the Piazza Navona and the Pantheon, as they are twice mentioned by the Anonymous of Einsiedlen between the latter building and the Circus Flaminius, which was the name he applied to the Piazza Navona. Hence the probability that the place just named was the Stadium of Nero. The Thermae Neronianæ are frequently mentioned in a way that indicates considerable splendour (Mart. ii. 38. 8, vii. 34. 5; Stat. Silv. i. 5. 62); but their name was obliterated by that of the Thermae Alexandriniæ, by which they appear in the Notitia.

The third baths erected at Rome were the Thermae Titii, on the Esquiline, near the Flavian amphitheatre. (Mart. Spect. 2). There are still considerable remains of these baths; but the plan of them is difficult to make out, from their having been erected on the site of a large previous building. Canina's account of them is the best (vide Memorie Romane di Antichità, vol. ii. p. 119, Indice. p. 101). The site on which they stood was perhaps previously occupied by the golden house of Nero. Near them stand the Thermae Traiani, which Canina has correctly distinguished from those of Titus (Treiler, Regionen, p. 126; Becker, Handb. p. 687). They are named in the Notitia as distinct,

The emperor Commodus, or rather his freedman Cleander in his name, is related to have built some baths (Lampr. Comm. 17; Herod. i. 12); and we find the Thermae Commodianæ set down in the 1st Region in the Notitia; whilst, by the Anonymous of Einsiedlen, on the contrary, they are three or four times mentioned as close to the Rotunda. Their history is altogether obscure and impenetrable. The Thermae Severianæ are also recorded in the Notitia in the 1st Region in connection with the Commodianæ. They are mentioned by Lampridius (Scever. 19); but no traces of them remain.

The Thermae Antoninianæ or Caracallae present the most perfect remains of any of the Roman baths, and from their vastness cannot fail to strike the spectator with astonishment. The large ball was regarded in antiquity as inimitable. (Sparr. Carac. 9, Scever. 21) They were dedicated by Caracalla; but Elagabalus commenced the outer porticoes, which were finished by Alexander Severus. (Lampr. Hel. 17, Alx. 25.) They are situated under the church of S. Balbina, on the right of the Via Appia.

But the largest of all the baths at Rome were the Thermae Diocletianæ. Unfortunately they are in such a ruined state that their plan cannot be traced so perfectly as that of the baths of Caracalla, though enough remains to indicate their vast extent. They are situated on the inside of the agger of Servius, between the ancient Porta Collina and Porta Vincolana. Vopiscus mentions them in connection with the Bibliotheca Ulpia, which they contained (Prob. 2). These were followed by the
Thermæ Constantinianaæ, the last erected at Roma. They are mentioned by Aurelius Victor as an "opus casertis baud multo dispar" (Cas. 40. 27). In the time of Da Pécæ, there were still some vestiges of them on the Quirinal, on the site of the present Palazzo Rospigliosi; but they have now entirely disappeared. At one time the colossal figures on Monte Caucalo stood near these baths, till Sixtus V. caused them to be placed before the Quirinal palace. Tradition connects them with the Equi Tircudatis Regina Armeniorum, mentioned in the Notitia in the 7th Region; in which case they would belong to the time of Nero. On the other hand they claim to be the works of Phidias and Praxiteles; but there is no means of deciding this matter.

Besides the baths here enumerated, the Notitia and Curiosum mention, in the 13th Region, but under mutilated forms, certain Thermæ Surranaæ et Deicæ, to which we have already alluded in the 5th Section. They do not, however, seem to have been of much importance, and their history is unknown.

XVII. THE BRIDGES.

Roma possessed eight or nine bridges; but the accounts of them are so very imperfect that there are not above two or three the history of which can be satisfactorily ascertained. The Pons Sublicius, the oldest and one of the most frequently mentioned of all the Roman bridges, is precisely that whose site is most doubtful. It was built of wood, as its name imports, by Ancus Marcius, in order to connect the Juriculum, which he had fortified, with the city. (Liv. i. 33; Dionys. iii. 43.) It was considered of such religious importance that it was under the special care of the pontifices (Varr. L. L. v. § 83), and was repaired from time to time, even down to the reign of Antoninus Pius. (Capitol. Ant. P. 8.) Nay that it must have existed in the time of Constantine is evident, not only from its being mentioned in the Notitia, but also from the fact of a bridge at Constantinople being named after it, no doubt to perpetuate in that city the remembrance of its sacred character. (Descr. Const. Reg. xiv.) Yet the greatest difference of opinion prevails with regard to its situation; and as this question also involves another respecting the site of the Pons Aemilius, we shall examine them both together.

Pons Sublicius, Restored by Canina.

We shall first consider the circumstances under which the Sublician bridge was built; and then inquire into the passages in ancient authors regarding it. Whether Ancus Marcius likewise built walls on the right bank of the Tiber when he built the bridge is, as we have before observed, very problematical. seeing that in his time there were none on the left bank, and therefore there could have been no impediment to his choosing whatever site he pleased for his bridge, due regard being paid to the nature of the ground. But, as before the time of Tarquiniius Priscus, the district about the Forum Boarium and circus was little better than a swamp, it does not seem probable that such a spot should have been selected as the approach to a bridge. The ground beyond the subsequent Porta Trigemina lies higher and drier, and would consequently have afforded a more eligible site. Then comes the question whether, when Servius Tullius built his walls he included the Sublician bridge within them, or contrived that it should be left outside of the gate. As the intention of walls is to defend a city, it is evident that the latter course would be the safer one; for had the bridge afforded a passage to a spot within the walls, an enemy, after forcing it, would have found himself in the heart of the city. And if we examine the passages in ancient authors relating to the subject we shall find that they greatly preponderate in favour of this arrangement. Polybius expressly says that the bridge was ποτὶ τὴν παλαιὰν, before or outside of the city (vi. 55). Becker, indeed (p. 697), would rob τῆς of its usual meaning here, and contends that the expression cited is by no means equivalent to ποτὶ τὴν παλαιὰν ή ἐγὼ τῆς παλαιὰς; but he does not support this assertion with any examples, nor would it be possible to support it. The narratives of the flight of Caius Gracchus likewise prove that the bridge must have been outside of the town. Thus Valerius Maximus: "Pomponius, quo in (Gracchus) facilitas evabert, conlatum sequantium agmen in Porta Trigemina aliquid und acerrima pugna inbibit — Lectorum autem in notu Sublicio constituat, et cum, donec Gracchus transiit, ardeo spiritus sui sepult (iv. 7. § 2). In like manner the account of Aurelius Victor (Vir. Ill. c. 65) plainly shows that Gracchus must have passed the gate before he arrived at the bridge. There is nothing in Livy's narrative of the defence of the bridge by Horatius Cocles to determine the question either one way or the other. An inference might perhaps be drawn from a passage in Seneca, compared with another in Plautus, in favour of the bridge being outside of the Porta Trigemina: " In Sublicium Pontem meum transfer et inter egerit me asioe: non ideo tamen me despiciam, quod in illierno numero consideri, qui manum ad stipem perrigat." (Sen. de i. 1. 22.)

As the Pons Sublicius is here shown to have been the haunt of beggars, so Plautus intimates that their station was beyond the P. Trigemina (Copt. i. 1. 22): — "Ire extra Portam Trigeminam ad sacrum licet."

When the Tiber is low the piles of a bridge are still visible that existed just outside of the Porta Trigemina, near the Porti di Ripa Grande (Canina, Indicac. p. 557); and the Italian topographers, as well as Bunsen, have assumed them to be the re-

Digitized by Microsoft®
nains of the Sublician bridge; whilst Becker, in his De Maris, held them to belong to the Pons Aemilius. That writer in the treatise alluded to (p. 78, seq.) made three assertions respecting the Aemilian bridge: (1) That it was not the same as the Sublician; (2) that it stood where the Sublician is commonly placed, i.e., just below the Porta Trigemina; (3) that it was distinct from the Pons Lapidus, or Lepidi. But in his Handbuch, published only in the following year, he rejected all these assertions except the first.

According to the most probable view of this intricate and much disputed question at which we can arrive, the matter appears to us to have stood as follows: the Pons Sublicius was outside of the Porta Trigemina, at the place where remains of a bridge still exist. The reasons for arriving at this conclusion have been stated at the beginning of this discussion. Another bridge, of stone, also called Sublician, was erected close to it to serve the purposes of traffic; but the wooden one was still preserved as a venerable and sacred relic, and as indispensable in certain ancient religious ceremonies, such as the precipitating from it the two dozen men of straw. But the stone bridge had also another name, that of Lapidus, by a way of distinction from the wooden bridge.

Becker is of opinion that the notion of Aethicus, or Julius Orator, that Pons Lapidus was only a vulgar error for Pons Lepidi, is a "false fœtidiones conjectura," and we think so too. We do not believe that the bridge ever bore the name of Lepidius. We may see from the account given of the wooden bridge by Dionysius, that, though preserved in his time, it was useless for all practical purposes (iii. 45).

We may be sure that the pontifices would not have taken upon themselves the repairs of a bridge subject to the wear and tear of daily traffic. Ovid (Fast. v. 622) adverts to its existence, and to the sacred purposes to which it was applied:

"Tune quoque priscorum virgo simulacra virorum
Mittere ruberco scirpe ponte solet."

The coexistence of the two bridges, the genuine wooden Sublician, and its stone substitute, is shown in the following passage of Plutarch: οὐ γάρ ἐμπίθην, ἀλλ’ ἑπάρτων ἥξεως ῾Ρομαίους τὴν καταλείψας τῆς ξολίνης γεφέρας ... Ἡ δὲ λαβθὴν πολλοὶ ὅστερον ἀξιογάθρῃ ἅρμονιον ὑπ’ Αἰαίλιον ταμείωτων. (Num. 9.) Still more decisive is the testimony of Servius: "Cum per Sublicium pontem, hoco est lignae, qui modo lapideus dicitur, transire conaretur. (Porsena)" (ad Aen. viii. 646). There must certainly have been a strong and practicable bridge at an early period at this place, for the heavy traffic occasioned by the neighbourhood of the Emporium; but when it was first erected cannot be said. The words of Plutarch, ὑπ’ Αἰαίλιου ταμείωτων, are obscure, and perhaps corrupt; but at all events we must not confound this notice with that in Livy respecting the building of the Pons Aemilius; the piles of which were laid in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, b.c. 179, and the arches completed some years afterwards, when P. Scipio Africanus and L. Mummius were censors (xl. 51). There is no proof that the Ponte Kotto is the Pons Aemilius; but Becker, in his second view, and Canina assume that it was; and this view is as probable as any other.

INSULA TIBERINA, WITH THE PONS FABRICIUS AND PONS CESTIUS.

There were several bridges at Rome before the Pons Aemilius was built, since Livy (xxxi. 21) mentions that ten were carried away by the stream in B. C. 193; and these could hardly have been all, or he would undoubtedly have said so. The Insula Tiberina was, in very early times, connected with each shore by two bridges, and hence obtained the name of Inter Duos Pontes. (Plut. Popid. 8; Macrob. Sat. ii. 12.) That nearest the city (now Ponte Quattro Capi) was the Pons Fabricius, so named from its founder, or probably, its restorer,

L. Fabricius, as appears from the inscription on it, and from Dion Cassius (xxvii. 45). It was the favourite resort of suicides:

"— justit sapientem passere barbarum
Atque a Fabricio non tristem ponte reverti."

(Hor. S. ii. 3. 36.)

The bridge on the farther side of the island (now Ponte S. Bartolomeo) is commonly called Pons Cestius, and appears to have borne that name in
the middle ages. In the inscription, however, where it is still extant upon it, it is called Pons Gratianus, and its restoration by Valentinian, Valens, and Gratian is commemorated (Canina, Indic. p. 576; cf. Ann. Mar. xxvii. 3; Symm. Epist. v. 76. x. 45). Besides these bridges we find four others recorded in the summary of the Notitia, namely, the Aelius, Aurelius, Probi, and Milvius. The last of these lay two miles N. of Rome, at the point where the Flaminian Way crossed the Tiber, and has been already described in this dictionary. Pons Milvius. The Pons Aemilius (now Ponte S. Angelo) was built by Hadrian when he founded his mausoleum, to which it was directly connected. (Frontinus, Hist. iv. 14.) In the time of the Anonymous of Einsiedlen, who has preserved the inscription, it was called Pons S. Petri. But before the time of Hadrian there was a bridge which connected the district of the Vatican with the city near the gardens of Caligula and Nero, of which still exist near S. Spirito. This is probably the bridge which is called in the Mirabilia Pons Nerontianus, and by the ancient topographers Pons Vatianus. The Pons Triumphalis has also been sometimes identified with this bridge; but Piranesi, who is followed by Bunsen, places the Pons Triumphalis above the Aelian bridge; and it is said that there are still remains of one of the piles near Tor di Nona. But in the time of Precopus these had disappeared, and the Pons Aelianus formed the only communication between the city and the Vatican district.

The Pons Aurelius was most probably the present Ponte Sisto, leading to the Janiculum and the Porta Aurelia. It appears to have been called Pons Antoninus in the middle ages. What the Pons Primai may have been is impossible to say. Becker assigns the name to the bridge by the Porta Trigemina, but merely because, having denied that to be the Sublicius, he has nowhere else to place it. Canina, on the contrary (Indic. p. 609), places it where we have placed the Pons Aurelius.

XVIII. Aqueducts.

In the time of Frontinus there were at Rome nine principal aqueducts, viz., the Appia, Anio Vetus, Marcia, Tepula, Julia, Virgo, Aelietina, Claudia, Anio Novus; and two subsidiary ones, the Augusta and Rimens Herculanum. (Ag. 4.) Between the time of Frontinus and that of Piranesi their number had considerably increased, since the latter historian relates that the Goths destroyed 14 aqueducts that were without the walls. (B. G. i. 19.) The Notitia enumerates 19, viz. the Trajana, Annia, Attica, Marci, Claudia, Herculea, Ceriala, Julia, Augustea, Appia, Aelietina, Cininiana, Aurelia, Damascus, Virgo, Tepula, Severiana, Antoniniana, Alexandrina. To enter into a complete history of all these would almost require a separate treatise; and we shall therefore confine ourselves to a statement of those important particulars concerning them, relating to those readers who are desirous of more information on the subject in the Dictionary of Antiquities, art. Aqueducts.

The Aqua Appia was, as we have already related, the first aqueduct conferred on Rome by the care of the censor Appius Claudius Caecus, after whom it was named. It commenced on the Via Praenestina, between the 7th and 8th milestone, and extended to the Suburbium, near the Porta Trigemina. The whole of it was underground, with the exception of sixty passus conducted on arches from the Porta Capena. Its water began to be distributed at the imus Clivus Publicani, near the Porta Trigemina. (Front. Ag. 5.)

The Anio Vetus was commenced by the censor M. Curius Dentatus in B.C. 273, and completed by M. Fulvius Flaccus. (Ib. 6; Ann. Vict. Vitr. Ill. 33.) It began above Tibur, and was 43 miles long; but only 221 passus, or less than a quarter of a mile, was above ground. It entered the city a little N. of Porta Maggiore.

The Aqua Marcia, one of the noblest of the Roman aqueducts, was built by Q. Marcus Aemilius Scaurus, in pursuance of the wishes of the Senate, B.C. 144. It began near the Via Valeria at a distance of 36 miles from Rome; but its whole length was nearly 62 miles, of which 6915 passus were on arches. Respecting its source, see the article Fucinus Lacus (Vol. I. p. 918.) It was lofty enough to supply the Mons Capitolinus. Augustus added another source to it, lying at the distance of nearly a mile, and this duct was called after him, Aqua Augusta, but was not reckoned as a separate aqueduct. (Frontin. Ag. 12.; Plin. xxxi. 24; Strab. v. p. 240.)

The Aqua Tepula was built by the censors Cn. Servilius Caepio and L. Cassius Longinus, B.C. 127. Its source was 2 miles to the right of the 10th milestone on the Via Latina.

The preceding aqueduct was united with Agrippa with the Aqua Julia, which began 2 miles farther down; and they flowed together as far as the Piscina on the Via Latina. From this point they were conducted in separate channels in conjunction with the Aqua Marcia, so that the Aqua Julia was in the uppermost canal, the Marcia in the lowest, and the Tepula in the middle. (Front. Ag. 8, 9, 19.) Remains of these three aqueducts are still to be seen at the Porta S. Lorenzo and Porta Maggiore.

The Aqua Virgo was also conducted to Rome by Agrippa in order to supply his baths. According to Frontinus (Ag. 10) its name was derived from its source having been pointed out by a young maiden, but other explanations are given. (Plin. xxxi. 25; Cassiod. Var. vii. 6.) It commenced in a marshy district at the 8th milestone on the Via Collatina, and was conducted by a very circuitous route, and mostly underground, to the Pincian hill; whence, as we have before mentioned, it was continued to the Campus Martius on arches which here, under the gardens of Lucullus, they had united to the only aqueduct on the left bank of the Tiber which is still in some degree serviceable, and supplies the Fontana Trevi.

The Aqua Aelietina belonged to the Transiberine Region. It was constructed by Augustus, and had its source in the Lacus Aelietinus (now Lago di Martignano), lying 6} miles to the right of the 14th milestone on the Via Claudia. Its water was bad, and only fit for watering gardens and such like purposes. (Front. 11.)

The Aqua Claudia was begun by Caligula, and dedicated by Claudius, A.D. 50. This and the Anio Novus were the most gigantic of all the Roman aqueducts. The Claudia was derived from two abundant sources, called Caerulia and Curtius, near the 86th milestone of the Via Sublacensis, and in its course was augmented by another spring, the Albudinus. Its water was particularly pure, and the best after that of the Marcia.

The Anio Novus began 4 miles lower down the Via Sublacensis than the preceding, and was the
The longest and most lofty of all the aqueducts, being 58,700 passus, or nearly 59 miles, long, and its arches were occasionally 109 feet high. (Front. 15.) This also was completed by the emperor Claudius, as appears from the inscription still extant upon its remains over the Porta Maggiore; where both the river and the city are on the same arch, the Anio Novus flowing over the Claudine. Hence it was conducted over the Caetian hill on the Arcus Neronianum or Caelimontani, which terminated, as we have already said, near the temple of Claudius.

As Procopius mentions fourteen aqueducts, five new ones must have been added between the time of Frontinus and of that historian; but respecting only two have we any certain information. The first of these is probably the Aqua Traiana, which we first recorded upon coins of Trajan, and which is also mentioned in the Acta Martyr. S. Anton. The water was taken from the neighbourhood of the Locus Subatinius (Logar o Bucchioni), and, being conducted to the height of the Janiculum, served to turn the mills under that hill. (Procop. R. G. i. 19.) This conduit serves to convey the Acqua Paola, which, however, has been spoilt by water taken from the lake. It was also called Cimuria.

The Aqua Alexandrina was constructed by the emperor Alexander Severus for the use of his baths. (Lamprid. Alex. c. 25.) Originally it was the same as that now called Acqua Felice, but conducted at a lower level.

The Aqua Severiana is ascribed to have been made by the emperor Septimius Severus for the use of his baths in the 1st region; but there is no evidence to establish its execution.

The Aqua Antoniniana was probably executed by Caracalla for the service of his great baths in the 12th region; but this also is unsupported by any satisfactory proofs. (Cassin, Indice, p. 620.) The names and history of a few other aqueducts which we sometimes mention are too obscure to require notice here.

It does not belong to this subject to notice the Roman Viae, an account of which will be found under that head.

Sources and Literature of Roman Topography.

With the exception of existing monuments, the chief and most authentic sources for the topography of Rome are the passages of ancient authors in which different localities are alluded to or described. Inscriptions also are a valuable source of information. By far the most important of these is the Monumentum Antoninianum, or copy of the record left by Augustus of his actions; an account of which is given elsewhere. [Vol. 1. p. 134.] To what is there said we need only add that the best and most useful edition of this document is that published at Berlin with the emendations of Franz, and a commentary by A. W. Zumpt. (1845, 4to, pp. 120.) Another valuable inscription, though not nearly so important as the one just mentioned, is that called the Basis Capitolina (Gruner, ccl.), containing the names of the Vici of 5 Regions (the 1st, 10th, 12th, 13th, and 14th), whose curatores and vicомнistris erected a monument to Hadrian. It will be found at the end of Becker's Handbuch, vol. i. We may also mention among sources of this description the fragments of Calendars which have been found in various places, and which are frequently useful by marking the sites of temples where certain sacrifices were performed. For the most part the original marbles of these fragments have disappeared, and the inscriptions on them are consequently only extant in MS. copies. One of the most ancient monuments of this kind is the Fasti Maffeiornum or Calendarium Maffeianum, so called from having been preserved in the Palazzo Maffei. With a few lacunae, it contains all the twelve months; but what little information that is to be found in it, besides the principal festivals, relates chiefly to Augustus. The next in importance is the Fasti Praenestini, discovered at Praeneste (Palestrina) in 1774. Verrius Flaccus, the celebrated gram- marian, arranged and annotated it, caused it to be cut in marble, and erected it in the forum at Praeneste. (Suet. ill. Gramm. c. 17.) Only four or five months are extant, and those in an imperfect state. The Calendarium Amittinum was discovered at Ariminum in 1703, and contains the months from May to December, but not entire. The calendar called Fasti Capranicorum, so named from its having formerly been preserved in the Palazzo Capranica, contains August and September complete. Other calendars of the same sort are the Antatimum, Venncinum, &c. Another lapidary document, but unfortunately in so imperfect a state that it often serves rather to puzzle than to instruct, is the Capitoline Plan. This is a large plan of Rome cut upon marble tablets, and apparently of the age of Septimius Severus, though with subsequent additions. It was discovered by the architect Giovanni Antonio Dosi, in the pontificale of Pins IV., under the church of SS. Cosmo e Damiano; where, broken into many pieces, it was used as a covering of the walls. It came into the possession of Cardinal Farnese, but was put away in a lumber room and forgotten for more than a century. Being rediscovered, it was published in 1673, in 20 plates, by Giovanni Pietro Bellori, librarian to Queen Christine; and subsequently at the end of the 4th volume of the Theaurus of Graevius. The original fragments were carried to Naples with the other property of the Farnese family, and were subsequently given by the king of Naples to Pope Benedict XIV. 1742. Benedict presented them to the Capitoline Museum at Rome, where they now appear on the wall of the staircase; but several of the pieces had been lost, for which copies, after the designs of Bellori and marked with a star, were substituted. On these fragments the plans of some ancient buildings may be made out, but it is very seldom that their topographical connection can be traced.

Amongst the literary records relating to Roman topography, the first place must be assigned to the Notitia. The full title of this work is: Notitia Dignitatum stratorum Imperii in Partibus Orientis et Occidentis: and it is a statistical view of the Roman empire, of which the description of Rome forms only a small portion or appendix. It cannot be later than the reign of Constantine, since no Christian church is mentioned in it, and indeed no building later than that emperor; nor, on the other hand, can it be earlier, since numerous buildings of the 3rd century, and even some of Constantine's, are named in it. The design of it seems to have been, to name the principal buildings or other objects which marked the boundaries of the different Regions; but we are not to assume that the Altars are always named in the order in which they occurred, which is far from being the case. This
catalogue has come down to us in various shapes. One of the simplest and most genuine seems to be that entitled Currorum Urbis Romae Regionum XIII, emend. Breviarvis suis, the MS of which is in the Vatican. Some of the other MSS. of the Notitia seem to have been interpolated. The spelling and grammar betray a late and barbarous age; but it is impossible that the work can have been composed at the time when the MS. was written.

Besides these there are two catalogues of the so-called Regionaria, Publicus Victor, and Sextus Rufus, which till a very recent period were regarded as genuine, and formed the chief basis of the works of the Italian topographers. It is now, however, universally allowed that they are compilations of a very late date, and that even the names of the writers of them are forgeries. It would be too long to enter in this place into the reasons which have led to this conclusion; and those readers who are desirous of more information will find a full and clear statement of the matter in a paper of Mr. Burn- bury's in the Classical Museum (vol. iii. p. 373, seq.).

The only other authorities on Roman topography that can be called original are a few notices by travellers and others in the middle ages. One of the principal of these is a collection of inscriptions, and of routes to the chief churches in Rome, discovered by Mabillon in the monastery of Einsiedeln, whence the author is commonly cited as the Ano-

nymus Einsiedelensis. The work appears to belong to the age of Charlemagne, and is at all events older than the Lexicon city, or the middle of the 9th century. It was published in the 4th vol. of Mabillon's Analecta; but since more correctly, according to the arrangement of Gustav Haelen, in the Archiv für Philologie und Pädiegr. vol. v. p. 115, seq. In the Routes the principal objects on the right and left are mentioned, though often lying at a considerable distance.

The treatise called the Milialitium Roman., pre-

fixed to the Chronicon Romanuli Salvaini in a MS. preserved in the Vatican, and belonging ap-

parently to the 12th century, seems to have been the first attempt at a regular description of ancient Rome. It was compiled from statistical notices, narratives in the Acta Martyrum, and popular legends. It appears, with variations, in the Liber Convenis of Cencius, and in many subsequent ma-

nuscripts, and was printed as early as the 16th century. It will be found in Montfaucon's, Dictionat Italian. p. 283, seq., and in Nibby's Epiglomeri Let-

torae, Rome, 1820, with notes. A work ascribed to Martinius Polonius, belonging probably to the latter part of the 13th century, seems to have been chiefly founded on the Mirabilia. Accounts of some of the gates of Rome will be found in William of Malabrugus's work De Gestis Regum An-
glorum (book iv.).

The Florentine Poggio, who flourished in the 15th century, paid great attention to Roman anti-

tiquities. His description of Rome, as it existed in his time, is mere sketch, but elegant, scholar-like, and touching. It is contained in the first book of his work entitled De Variarum Fortunarum Urbis Romanae, and will be found in Salicrur, Nov. The-

sars, Ant. Rom. vol. i. p. 501. A separate edition of his work was also published in Paris, 1723.

His predecessor, Petrarca, has given a few par-

culars respecting the state of the city in his time; but he treats the subject in an uncritical manner.

The traveller Kiriacus, called from his native town Anconitiius, who accompanied the emperor Sigismund, passed a few days in Rome during the time that Pegius was also there, which he spent in collecting inscriptions, and noting down some re-

marks. His work, entitled Kiriaci Anconitani Itinerarium, was published at Florence in 1742.

Such are the chief original sources of Roman toponography. The literature of the subject is abund-

antly copious, but our space will permit us to do little more than present the reader with a list of the principal works. The first regular treatise on the antiquities of Rome was that of Biondo Flavio (Bion-

dus Flavius) (1388-1463), who was at once a man of business and a man of letters. His work entitled Roma Instaurata, a gigantic step in Roman toponography, was published by Froben at Basel, 1513, fol. An Italian translation by Lucio Fauno, but imperfect, appeared at Venice in 1548. Towards the end of the 15th century, Julius Romonius Lactus founded the Roman Academy. Lactus was an enthu-

iastic collector of inscriptions, but his fond-

ess for having them was such that he sometimes inveterated what he failed in discovering, and he is accused of having forced the inscription to the statue of Claudian found in the forum of Trajan. (Tiraboschi, Storia della Lett. vol. ii. lib. iv.) His book, De Romanne Urbis vesturate, is uncritical, and of small value. Janus Parrhassius had a little previously published the pseudo-Victor. To the same period belong the De Urbis Romana Collecteian of the bishop Fabricius Varranus, a compilation chiefly borrowed from Biondo, and published, like the work of Lactus, in the collection of Mazoche, Rome, 1513, 4to. Bernardo Rucerrelli, a friend of Lorenzo de' Medici, commenced a description of Rome, by way of com-

mentary on the so-called Victor. It was never com-

pleted, and the MS., which is of considerable value, was first printed among the Florentine "Scrittori," in an Appendix to Murator's collection (vol. ii. p. 753).

The next work that we need mention is the Anti-
quitates Urbis Romae of Andreas Fulvius, Rome, 1527, fol. Bresc. 1543, 8vo. This production is a great step in advance. Fulvius procured from Raphael a sketch of the 14 Regions, according to the restoration of them by himself, but it does not seem to have been preserved. In 1554 the Mila-

nese knight Bartholomæus Marlianus published his Urbis Romae Topographica, a work in many points still unsurpassed. An augmented and much improved edition was published in 1544; but that of 1588 is a mere reprint of the first. It will also be found in the Theatrarum of Graevius, vol. ii. Mar-

liano was the first to illustrate his work with plans and drawings, though they are not of a very ac-

prentice. Lucio Fauno's Della città di Roma, published at Venice in 1548. It con-

tains a few facts which had been overlooked by his predecessors. The celebrated hermit Onuphrius Pan-

vinius of Verona, published at Venice in 1535 his Commentarium Reipublicae Romanae Libri III. The first book, entitled Antiquae Urbis Inago, which is the topographical part, is written with much learning and acuteness. It was intended merely as a preface to a complete description of Rome according to the Regions of Augustus, but the early death of Pan-

vinius prevented the execution of this plan. His work is the most important of the whole collection of Murator, in so far as it is a more or less complete record of the old topography. It was Panvinius who first published Sex-

tus Rufus, and he also greatly augmented Publius
Victor. George Fabricius, of Chemnitz, author of *Antiquitatum Libri II.*, Basle, 1550, accused Panvinius of stealing from him; but if such was the case, he greatly improved what he purloined. Jean Jacques Boissard, of Besançon, published at Frankfort in 1597 a *Topographia Romanae Urbis*, which is not of much value; but the sketches in his collection of inscriptions have preserved the aspect of many things that have now disappeared. The next work of any note is the *Roma Vetus et Recens deissas.* The Jesuit Alex. Donatus of Sienna, in which particular attention was paid to the illustration of Roman topography by passages in ancient authors. It was published at Rome, 1638, 4to, and also in the *Sceusoria* of Graevius, vol. iii. But this production was soon obscured by the more celebrated work of Fanninio Nardini, the *Roma Antica*, which marks an epoch in Roman Topography, and long enjoyed a paramount authority. So late as the year 1818, Hobhouse characterised Nardini as “to this day the most serviceable conductor.” (Hist. Illustrations of Child Harold, p. 54.) Yet, in many respects, he was an incompetent guide. Hobhouse himself, who took the works of the pseudo-Regiarii for the foundation of his book; and it is even affirmed that, though he lived in Rome, he had never visited many of the buildings which he describes. (Bunsen, Vorrede zur Beschreibung, p. xxxi.) His work was published at Rome, 1668, 4to; but the best edition of it is the 4th, edited by Nibby, Rome, 1818, 4 vols. 8vo. There is a Latin translation of it in Graevius, vol. iv. In 1689, Raphael Fabretti, of Urbino, secretary to Cardinal Ottoboni, published a valuable work, *De Aquaeclutioni*, which will also be found in the same volume of Graevius.

Towards the end of the 17th century two learned French Benedictines, Malbion and Montfaucon, rendered much service to Roman topography. Malbion first published the *Anonymus Einsiedlensis* in his *Analecta* (vol. iv, p. 50, seq.) Montfaucon, who spent two years and a half in Rome (1699—1700), inserted in his *Diarium Italicum* a description of the city divided into twenty days. The 20th chapter contains a copy of the *Mirabilia*. In 1687 Olaus Borrichius published a topographical sketch of Rome, according to the Regions. It is in the 4th volume of Graevius, *Topographia Illustrata*. The first volume is entitled *Accuratissima Descriptions Topographicae de Antiquitatis de Roma* (Roma, 1763, 2 vols. 4to.), a book of more pretensions. Venuii took most of his work from Nardinii and Piranesi, and the new matter that he added is generally erroneous. The 4th edition by Stefano Piale, Rome, 1824, is the best. Francesco Ficoroni’s *Vestigia et Rarietà di Roma Antica* (Roma, 1744, 4to) is not a very satisfactory performance. The most useful portions of it have been inserted in the *Miscellanea de Fea* (part i, pp. 118—178). The work of our countryman Andrew Lombsen, *Rerum Romanae et Antiquitatis Roma et eius Edition* (London, 1797, 4to) was, in its day, a book of some authority. Many valuable observations on Roman topography are scattered in the works of the learned Gaetano Marini, and especially in his *Atti de’ fratelli Arrai*; but he treated the subject only incidentally. The same remark applies to Visconti. The *Roma descrita et illustrata* (Roma, 1806, 2 vol. 4to), of the Abbate Guattani is the parent of most of the modern guide books. Antonio Nibby has published several useful works on Roman topography, which, if sometimes deficient in accurate scholarship, display nevertheless considerable acuteness and knowledge of the subject. His principal works are, *Del Foro Romano, della Via Sacra*, &c., Roma, 1819, 8vo.; *Le Mura di Roma, disegnate da Sir W. Gell, illustr. da A. Nibby*, Roma, 1820; and his *Roma Antica*, published in 1838. Sir Wm. Gell’s *Topography of Rome and its Vicinity* (2nd Edit., revised and enlarged by Bumpcr, London, 1846) contains some useful information. The *Miscellanea filologica, critica ed antiquaria* (Rome, 1790), and the *Nuova Descrizione di Roma* (Rome, 1820, 3 vols. 8vo.), by Carlo Fea, are useful works. Hobhouse’s Historical Illustrations of Child Harold, with Dissertations on the Ruins of Rome (London, 2nd ed. 1818, 8vo.) are chiefly valuable for their account of the gradual destruction of the city. The works of two other Englishmen are now out of date viz. Edward Burton’s *Description of the Antiquities of Rome* (1824; London, 1828, 2 vols. 8vo.), and the Rev. Richard Burgess’s *Topography and Antiquities of Rome* (London, 1831, 2 vols. 8vo.). Fawkes’s *Italy* is of little service to Rome. Sachse’s *Gravellona* of Trividio Base, and *Pius VII’s Italy* are of some use. The account of Rome, 1824—1828, 2 vols. 8vo., though still in respect a useful production, must now be regarded as superseded by more recent works.

We are now arrived at the Beschreibung der Stadt Rom, which may be said to commence the modern epoch of Roman topography. This work was projected in 1817 by some German literati then residing at Rome, among whom were the present Chevalier Bunsen, and Ernst Platner, Eduard Gerhard and Wilhelm Röbelt. They were joined by the celebrated historian B. G. Niebuhrl who undertook the superintendence of the ancient part; for the scheme of the book embraced a complete description of the modern city, with all its treasures of art, besides an account of ancient Rome. It is, however, of course only with the latter that we are here concerned, which was undertaken by Niebuhrl, Bunsen, and subsequently L. Urlichs. Niebuhrl’s connection with the work was not of long duration, and only a few of the descriptions are from his hand, which form the most valuable portion of the book. The views of the German scholars therefore constitute the revised form of Roman topography. They seemed to have come to Rome with the express design of overturning the paper city, as their ancestors many centuries before had subverted the stone one. In extent and accuracy of erudition they were far superior to their Italian antagonists; but this advantage is often more than counterbalanced by that want of sober and critical good sense which so frequently mars the productions of German scholars. They have succeeded in throwing doubt upon a great deal, but have established very little in its place. To the German historians belongs the merit of having re-established the true situation of the forum, which may be considered as the most important step in the modern topography of Rome. The German views respecting the Capitol, the comitum, and several other important points, have found many followers; but to the writer of the present article they appear for the most part not to be proved; and he has endeavoured in the preceding pages to give his reasons for that opinion.

It cannot be denied, however, that the appearance of the Beschreibung did good service to the cause of Roman topography by awakening a sharper and more extended spirit of inquiry. The first volume
appeared at Stuttgart in 1829, the last in 1842. As a literary production—we are speaking of course of the ancient parts—it is of little service to the scholar. The descriptions are verbose, and the ancient ones being intermingled with the modern have to be sought through a voluminous work. A still graver defect is the almost entire absence, especially in the earlier volumes, of all citation of authorities.

At this period in the history of Roman topography W. A. Becker, paid a short visit to Rome. Becker took up the subject of his researches as a point of national honour; and in his first tract, De Romae Vetreris Mitis atque Portae (Leipzig, 1842), devoted two pages of the preface to an attack upon Canina, whom he suspected of the grave offence of a want of due reverence for German scholarship. But with an inborn pugnacity his weapons were also turned against his own countrymen. Amid a little faint praise, the labours of Bunsen and Urlich's were censured as incomplete and unsatisfactory. In the following year (1843) Becker published the first volume of his Handbuch der Römischen Alterthümer containing a view of the topography of Rome. A review of his work by L. Pfeiffer, which appeared in the Neue Jenaische Allgemeine Literatur-Zeitung, though written with candour and moderation, seems to have sung Becker into fury. He answered it in a pamphlet entitled Die Römische Topographie in Rom, eine Warnung (Leipzig, 1844), in which he accused Pfeiffer of having taken up the cudgels in favour of Canina, though that gentleman is a moderate adherent of the German school of topographers. Nothing can exceed the arrogant tone of this pamphlet, the very title of which is offensive. It was answered by Urlich in his Römische Topographie in Leipzig (1845), in which, though Becker well deserved castigation, the author adopted too much of the vituperative and personal tone of his adversary. The controversy was brought to a close by a reply and rejoinder, both written with equal bitterness; but the dispute has served to throw light on some questions of Roman topography. In a purely literary point of view, Becker's Handbuch must be allowed to be a very useful production. His views are arranged and stated with great clearness, and the constant citation of authorities at the bottom of the page is very convenient to the student. The writer of this article feels himself bound to acknowledge that it would not have been possible for him to have prepared it without the assistance of Becker's work. Nevertheless he is of opinion that many of Becker's views on the most important points of Roman topography are entirely erroneous, and that they have gained acceptation only from the extraordinary confidence with which they are asserted and the display of learning by which they are supported. Amongst other German topographers we need only mention here L. Pfeiffer, who has done good service by some able papers and by his useful work on the Regions of Augustus (Die Regimen der Stadt Rom, Jena, 1846, 8vo.). We may add that the English reader will find a succinct and able sketch of the views of the German school, and particularly of Becker, in a series of very valuable papers by Mr. Bunbury, published in the Classical Museum (vols. iii. iv. and v.). We shall close this list with the names of two modern Italian topographers. Between the years 1820 and 1833, Stefano Viale published some very useful dissertation on various points of Roman topography, among which the following may be particularly mentioned: Delle Porte settentrionali del Recinto di Servio; Delle Porte orientali, delle meridionali, e di quelle del Monte Aventino dela stessa cinta; Della grandezza di Roma al tempo di Plinio; Del Foro Romano; Delle Mura Aureliane; e degli antichi Arsenali detti Narrenia, &c. But at the head of the modern Italian school must be placed the Commedatore, Luigi Canina, who has a real enthusiasm for his subject, which, from his profession, he regards from an architectural rather than a philological point of view; and this, combined with the advantages of a residence at Rome, goes far to compensate the absence of the profounder, but often unwieldy, erudition of the Germans. The later editions of his works have been freed from some of the errors which disfigured the early ones, and contain much useful information, not unmixed sometimes with erroneous views; a defect, however, which in a greater or less degree must be the lot of all who approach the very exacting and very debatable subject of Roman topography. Canina's principal works are the Indicazione topografica di Roma antica, 4th ed. Rome, 1850, 8vo.; Del Foro Romano e sue Adiacenze, 2nd ed. 1845; and especially his magnificent work in four large folio volumes entitled Gli Edifici di Roma antica, with views, plans, and restorations.

It now only remains to notice some of the principal maps and other illustrations of Rome. The Florentine San Gali, who flourished in the 15th century, drew several of the most remarkable monuments. The sketches and plans of Antonio Labacco, executed at the beginning of the 16th century, are valuable and very debatable subject of Roman topography. This plan, if ever executed, is no longer in existence; but a description of it will be found in a letter addressed by Castiglione to Pope Leo X. (Published in the works of Castiglione, Padua, 1733. There is a translation of it in the Beschreibung, vol. i. p. 266, seq.) Serlio of Bologna, architect to Francis I, gave many plans and sketches of ancient Roman buildings in the 3rd book of his work on architecture (Venice, 1544, fol.), to which, however, he added restorations. Leonardo Bufalini's great plan of Rome, as it was in 1551, is most important for Roman topography. It was drawn on wood in 24 plates; but unfortunately all that now remains of it is an imperfect copy in the Barberini palace. Pirro Ligorio and Bernardo Gamucci published several views in Rome about the middle of the 16th century. In 1570 appeared the great work of Palladio, Libri IV. dell'Architettura. &c. (Venice, fol.), in the 4th book of which are several plans of ancient temples; but the collection is not so rich as that of Serlio. Scamozzi's Disegni sopra le Antichità di Roma (Venice, 1582, fol.) contains some fine views, but the letter-press is insignificant. In 1574 Fulvius Urbinas assisted the Parian architect Du Pérac in drawing up a plan of the restored city, which was published in several sheets by Giacomo Lauro. It is erroneous, incomplete, and of little service. Of much more value are the views of ancient monuments published by Du Pérac in 1573, and republished by Lossi in 1773. In the time of Du Pérac several monuments were in existence which have now disappeared, as the forum of Nerva, the Septizonium, and the trophies of Marius. The sketches of Pietro Santi Bartoli, first published in 1714, are clever but full of mannerism.
ROMATNUS.
Antoine Desgeletz, sent to Rome by Colbert, published at Paris in 1682 his work in folio, entitled Les 
E'difices antiques de Rome mesurés et dessinés. The measurements are very correct, and the work indispensable to those who would thoroughly study Roman architecture. Nolli's great plan of Rome, the first that can be called an accurate one, appeared in 1748. In 1784 Piranesi published his splendid work the Antichità Romane (Rome, 4 vols. folo.), containing the principal ruins. It was continued by his son, Francesco Piranesi. The work of Mich. d'Overbeke, Les restes de l'ancienne Rome (à la Haye, 1678, 2 vols. large fol.), is also of great value. In 1822 appeared the Antichità Romane of Luigi Rossini (Rome, 1822, large fol.). To the plans and restorations of Canina in his Edifici we have already alluded. His large map of Rome represents the most peculiar views, but will be found useful and valuable. Further information on the literature of Roman topography will be found in an excellent preface to the Description by the Chevalier Roumen.

[ T. H. D. ]

ROXOLANI.

COIN OF ROME.

ROMATTNUS. [Concordia.]

ROMECHIUM, a place on the E. coast of the Bruttian peninsula, mentioned only by Ovid, in his description of the voyage of the Epidaurian serpent to Rome (Ovid. Met. xvi. 705). The geography of the passage is by no means very precise; but according to local topographers the name of Romechi is still retained by a place on the sea-coast near Roscella, about 12 miles N. of the ruins of Locri (Romanelli, vol. i. p. 156. Quattromani, Not. ad Borri Calabr. iii. 13.)

[ E. H. B. ]

ROMULA, a place in Upper Pannonia, on the road leading from Aemona along the river Savus to Sirmium. (It. Ant. p. 274: Tab. Ptolemy.) It is perhaps the modern Carlsbad, the capital of Carthusia. [L. S.]

ROMULA. [Dacia, p. 744. b.]

ROMULEA (Pomalia, Steph. B.: Bisaccio), a city of Samnium, mentioned by Livy (x. 17), as being taken by the Roman consul P. Decius, or according to others by Fabius, in the Third Samnite War, B. C. 297. It is described as being a large and opulent place; but seems to have afterwards fallen into decay, as the name is not noticed by any other writer, except Stephanius of Byzantium, and is not found in any of the geographers. But the Itineraries mention a station Sub Romanula, which they place on the Appian Way, 21 miles beyond Aequamnum, and 22 miles from the Poins Auda (Itin. Ant. p. 120). Both these stations being known, we may fix Romanula, which evidently occupied a hill above the road, on the site of the modern town of Bisaccio, where various ancient remains have been discovered. (Romanelli, vol. ii. p. 348; Cuvier. Ital. p. 1204. Pristilli, Via Appia, iv. 5.) [E. H. B]

ROSCIANUM (Rossano), a town of Bruttium, situated on a hill about 2 miles from the sea-coast, on the gulf of Tarentum, and 12 miles from the mouth of the Crathis. The name is not found in the geographers, or mentioned by any earlier writer; but it is found in the Itinerary of Autiowinus, which places it 12 miles from Tauris, and is noticed by Procopius during the Gothic wars as a strong fortress, and one of the most important strongholds in this part of Italy. (Itin. Ant. p. 114; Procop. B. G. iii. 30.) It was taken by Totila in A. D. 548, but continued throughout the middle ages to be a place of importance, and is still one of the most considerable towns in this part of Calabria. [E. H. B.]

ROSTRUM NEMAVIAE, a place in the central part of Vinulicia, on the river Wirio. (It. Ant. pp. 297, 298.)

ROTONMAGUS (Paradoceas), in Gallia Lugdunensis, is mentioned by Ptolemy (ii. 8. § 8) as the capital of the Venelocasae, as the name is written in some editions. [Vellucasses.] In the Table the name is written Rattomagus, with the mark which indicates a capital town; and in the Antonine Itin. it occurs in the corrupted form Latomagus, on the road which runs from a place called Caroccinum. Anmians (xv. 11) speaks of it in the plural number Rotomagi. There are said to be coins with the legend Ratumaece. Rotomagus is Rouen on the north side of the Seine, and the capital of the department of Seine Inferieure. The old Gallic name was shortened to Rotomum or Rodomum, and then to Rouen, as Rodunna has been shortened to Ronnae. The situation of Rouen probably made it a town of some importance under the Roman Empire, but very few Roman remains have been found in Rouen. Some Roman tombs have been mentioned. [G. L.]

ROXOLANI (ReoAdara), a people belonging to the Sarmatian stock, who first appear in history about a century before Christ, when they forced the Goths occupying the steppes between the Doniper and the Don. (Strab. iv. pp. 214. vii. pp. 294, 306, 307, 309; Plin. iv. 12; Ptol. iii. 5. §§ 19, 24, 25.) Afterwards some of them made their footing in Dacia and behind the Carpathians. Strabo (vii. p. 306) has told the story of the defeat of the Roxolani and their leader Tasius by Diophantus, the general of Nithiades, and takes the opportunity of describing some of their manners which resembled those of the Sarmatian stock to which they belonged. Tacitus (Hist. i. 79) mentions another defeat of this people, when making an irruption into Moesia during the short lease of the Mostian's title. From the inscription (Orelli, Inscri. 750) which records the honours paid to Pius Silvanus, it appears that they were also defeated by him. Haddian, who kept his frontier quiet by subsidising the needy tribes, when they complained about the payment came to terms with their king (Spartian, Hadr. 6) — probably the Kasparasans of the inscription (Orelli, Inscri. 833). When the general rising broke out among the Sarmatian, German and Sthyrian tribes from the Rhine to the Tanais in the reign of M. Aurelius, the Roxolani were included in the number. (Jul. Capit. M. Anton. 22.) With the inroads of the Goths the name of the Roxolani almost disappears. They probably were partly exterminated, and partly united with the kindred tribes of the Alani, and shared the general fate when the Huns poured down from the interior of Asia, crossed the Don, and oppressed the Alani, and, later, with the help of these, the Ostro-Goths.

It has been assumed that the name of the Rho-

CALANI (PaxAAdona, Ptol. iii. 5. § 24) is not dif-

ferent from that of the Roxolani who, according to
RUADITAE. [Marmarica, p. 278, a.]

RUADITAE (Ital. Podia, Pudia, Rubi, Rubius, Rubia), a city of Apulia, situated on the branch of the Appian Way between Caesarea and Butinum, and about 10 miles distant from the sea-coast. It is mentioned by Horace, as one of the places where Marcenes and his companions slept on the journey from Rome to Brandusium. (Hor. Sat. i. 5. 94.) The distance from Caesarea is given as 23 miles in the Antonine Itinerary, and 30 in the Jerusalem Itinerary, which is the more correct, the direct distance on the map being above 28 miles. (Rin. Ant. p. 116; Hin. Hier. p. 610.) Neither Strabo nor Ptolemy notices the existence of Rubi, but the inhabitants are mentioned under the name of Rubustini by Piny, among the municipal towns of Apulia, and the "Rubustinus Ager" is enumerated in the Liber Coloniarum among the "Civitates Apuliae." (Plin. iii. 11. s. 16; Lib. Colon. p. 262.) An inscription also attests the municipal rank of Rubi in the reign of the younger Gordian. (Mommsen, Insr. R. N. 624.)

The singular ethnic form given by Piny is confirmed by the evidence of coins which have the name PYBASTEINN at full. These coins show also that Rubi must have received a considerable amount of Greek influence and cultivation; and this is still more strongly confirmed by the discoveries which have been recently made by excavations there of numerous works of Greek art in bronze and terra cotta, as well as of vast numbers of painted vases, of great variety and beauty. These, however, like all the others found in Apulia and Lucania, are of inferior execution, and show a declining state of art as compared with those of Nola or Volci. All these objects have been discovered in tombs, and in some instances the walls of the tombs themselves have been found covered with paintings. (Romanehi, vol. ii. p. 172; Bollett. dell' Inst. Arch. 1829, p. 175, 1834, pp. 36, 164, 228, &c.) The modern town of Rura is still a considerable place, with an episcopal see. (E. H. B.)

COIN OF RUBI.

RUBICON (Puvivicus), a small river on the E. coast of Italy, flowing into the Adriatic sea, a few miles N. of Ariminum. It was a trifling stream, one of the least considerable of the numerous rivers that in this part of Italy have their rise in the Apennines, and discharge their waters into the Adriatic; but it derived some importance from its having formed the boundary between Umbria, or the part of the Gaulish territory included in that province, and Cispadane Gaul, properly so called. Hence, when the limits of Italy were considered to extend only to the frontiers of Cispadane Gaul, the Rubicon became on this side the northern boundary of Italy. (Strabo v. p. 217; Plin. iii. 15. s. 20; Lucan. i. 215.)

This was the state of things at the outbreak of the Civil War between Caesar and Pompey; Cispadane Gaul was included in the government of the former, and the Rubicon was therefore the limit of his province; it was this which rendered the passage of this trifling stream so momentous an event, for it was, in fact, the declaration of war. Caesar himself makes no mention of its passage, and it is difficult to believe that he would have set out on his march from Ravenna without being fully prepared to advance to Ariminum; but the well-known story of his halt on its bank before his decision and ultimate decision, is related in detail by Suetonius and Plutarch, as well as by Lucan, and has given a proverbial celebrity to the name of the Rubicon. (Suet. Ces. 31; Plut. Ces. 32; Appian, B. C. ii. 35; Lucan, i. 185, 213-227.) The river is alluded to by Cicero a few years later as the frontier of Taul; and M. Antonius was ordered by a decree of the senate to withdraw his army across the Rubicon, as a proof that he abandoned his designs on the Gaulish province. (Cic. Phil. vi. 5.) Strabo still reckons the Rubicon the limit between Gallia Cisalpina and Umbria; but this seems to have been altered in the division of Italy by Augustus; and though Piny alludes to the Rubicon as "quodam fines Italiane," he includes Ariminum and its territory as far as the river Crustumius, in the 8th Region or Gallia Cispadana. (Plin. l.c.; Ptol. iii. 1. § 23.) Its name, however, was not forgotten; it is still found in the Tabula, which places it 12 miles from Ariminum (Tab. Peut.), and is mentioned by Sidonius Apollinaris. (Ep. i. 3.) But in the middle ages all trace of it seems to have been lost; even the Geographer of Ravenna does not notice it, notwithstanding its proximity to his native city.

In modern times the identification of this celebrated stream has been the subject of much controversy, and cannot yet be considered as fully determined. But the question lies within very narrow compass. We know with certainty that the Rubicon was intermediate between Ariminum and Ravanenna, and between the rivers Sapio (Savin), which flowed some miles S. of the latter, and the Ariminum or Mareconia, which was immediately to the N. of the former city. Between these two rivers only two streams now enter the Adriatic, within a very short distance of each other. The southernmost of these is called the Lipit or Lusus, a considerable stream, which crosses the high-road from Rimini to Ravenna about 10 miles from the former city. A short distance further N. the same road crosses a stream now called Fiumicino, which is formed by the united waters of three small streams or torrents, the most considerable of which is the Piacentino (the uppermost of the three); the other two are the Riposa or Ripone, called also, according to some writers, the Rugone, and the Plusa, called also the Fiumicino. These names are those attested by the best old maps as well as modern ones, especially by the Aitias of Magini, published in 1620, and are in agreement with the statements of the earliest writers on Italian topography, Flavio Biondo and Leandro Alberti. Cluverius, however, calls the northernmost stream the Rugone, and the one next to it the Piacentino. This joint is, however, of little importance, if it be certain that the two streams always united their waters as they do at the present day before reaching the sea. The question really lies between the Lusus and the Fiumicino, the latter being the outlet both of the Rugone and the Piacentino. A papal bull issued in 1756, pronounced in favor of the Lusus, which has, in consequence, been since commonly termed the Rubicon, and is still called by the peasants on its banks R Rubicon. But it is evident that such an authority has no real
The name of Rigone, applied to one of the three branches of the Fiumicino, would be of more value, if it were certain that this name had not been distorted by antiquarians to suit their own purposes. But it appears that old maps and books write the name Rigone. Two arguments, however, may be considered as almost decisive in favour of the Fiumicino as compared with the Luso: 1st. The distance given in the Tabula of 12 miles from Ariccia, coincides exactly with the distance of the Fiumicino from that city, as stated by Cluverius, who examined the question on the spot; and 2ndly, the redness of the gravel in the bed of the stream, from which it was supposed to have derived its name, and which is distinctly alluded to by Sidonius Apollinaris, as well as by Lucan (Sidon. Ep. i. 5; Lucan, i. 214), was remarked by Cluverius as a character of the Fiumicino, which was wholly wanting in the Luso. The circumstance which has been relied on by some authors, that the latter river is a more considerable and rapid stream than the other; and would therefore constitute a better frontier, is certainly of no value, for Lucan distinctly speaks of the Rubicon as a trifling stream, with little water in it except when swollen by the winter rains.

The arguments in favour of the Fiumicino or Pistello (if we retain the name of the principal of its three confluent) thus appear decidedly to preponderate; but the question still requires a careful examination on the spot, for the statements of Cluverius, though derived from personal observation, do not agree well with the modern maps, and it is not improbable that the petty streams in question may have undergone considerable changes since his time; still more probable is it that such changes may have taken place since the time of Caesar. (Cluver. Ital. pp. 296—299; Biondi Flavii Italia Illustrata, p. 343; Alberti, Descrizione d Italia, p. 246; Magini, Carta di Romagna; Mannert. Geographie von Italien, vol. i. p. 234; Murray's Handbook for Central Italy, p. 104. The older dissertations on the subject will be found in Graevius and Burmann's Theaurus, vol. vii. part 2.) [T. H. B.]

RUBRAE and AD RUBRAS, a town in hispania Baetica, now Cabiza Rubras. (It. Anc. p. 481.) [T. H. D.]

RUBRESUS LACUS. [Atax.]

RUBRICATA (Ρωμηκάτα, Ptol. ii. 6 § 74), an inland city of the Laetiæni in the NE. part of hispania Tarraconensis, on the river Rubricata; according to Reichard, Olesa. [T. H. D.]

RUBRICATUS or -UM (Ρωμηκάτος, Ptol. ii. 6 § 18), a river of hispania Tarraconensis flowing into the Mare Internum a little W. of Barcino, the modern Lobregat. (Mela, ii. 6 § 5; Plin. iii. 3. s. 4.) [T. H. D.]

RUBRICAUS in Numidia. [HIBIUMBUS.]

RUBRUM MADE, or ERYTHRAEUM MADE (§ ρωμηκατος, Hesod. i. 180, 202, ii. 8, 158, 159, iv. 39; Polyb. v. 54 § 12, ix. 43 § 2; Strab. i. pp. 32, 53, 50, 56, xv. pp. 765, 779, xvii. pp. 804, 815; Pomp. Mela, iii. 8 § 1; Plin. vi. 2 s. 7). The sea called Erythra in Herodotus has a wide extension, including the Indian Ocean, and its two gulfs the Red Sea and the Persian Gulf (Perseus Sinus), which latter he does not seem to have considered as a gulf, but as part of a continuous sea-line; when the Red Sea specifically is meant it bears the name of Arabicus Sinus (Arabicus). The thick, willowy masses of coral which form the shores or fringing reefs of the gulf by which the waters of the Indian Ocean advance through the straits of Bab-el-Mandeb, with their red and purple hues, were no doubt the original source of the name. Thus also in Hebrew (Exod. x. 19, xiii. 18; Is. cvii. 7, 9, 22) it was called "yanam zphir," or the "weedy sea," from the coraline forests lying below the surface of the water. Barnes Miamoun (Scosstris) was the first (from 1388 to 1322, n. r.)—so said the priests to whom long ships subjected to his dominion the dwellers on the coast of the Erythraean, until at length sailing onwards, he arrived at a sea so shallow as to be no longer navigable. Didouros (i. 55, 56; comp. Herod. ii. 102) asserts that this conqueror advanced in India beyond the Ganges, while Strabo (xvi. p. 760) speaks of a memorial pillar of Scosstris near the strait of Deir or Bab-el-Mandeb. It appears that the Persian Gulf had been opened out to Phoenician navigation as three places were found there which bore similar if not identical names with those of Phoenicia, Tyvns or Tyrrus, Arabia, and Dana (Strab. xvi. pp. 766, 754, comp. i. p. 42), in which were temples resembling those of Phoenicia (comp. Keurick, Phoenicia, p. 48). The expeditions of Hiram and Solomon, conjoint undertakings of the Tyrians and Israelites, sailed from Ezion Geber through the Straits of Bab-el-Mandeb to Ophir, one locality of which may be fixed in the basin of the Erythraean or Indian Ocean (Orphie. The Lagid kings of Asyquy availed themselves with great success of the channel by which nature brought the traffic and intercourse of the Indian Ocean, within a few miles of the coast of the Interior Sea. Their vessels visited the whole western peninsula of India from the gulf of Barygaza, Gwerrot, and Cambay, along the coasts of Malabar to the Brahmiñcal sanctuaries of Cape Comorin, and to the great island of Taprobane or Ceylan. Nearachus and the companions of Alexander were not ignorant of the existence of the periodical winds or monsoons which favour the navigation between the E. coast of Africa, and the N. and W. coasts of India. From the further knowledge acquired by navigators of this remarkable local direction of the wind, they were afterwards emboldened to sail from Colsis in the straits of Bab-el-Mandeb and hold a direct course along the open sea to Muziris, the great mart on the Malabar coast (S. of Mangalore), to which internal traffic brought articles of commerce from the E. coast of the Indian peninsula, and even gold from the remote Chryse. The Roman empire in its greatest extent on its E. limit reached only to the meridian of the Persian Gulf, but Strabo (i. p. 14, ii. p. 118, xvi. p. 781, xvii. pp. 798, 815) saw in Egypt with surprise the number of ships which sailed from Myos Hormos to India. From the Zend Zendan inscription, and from the geographical nomenclature of Ptolomy, his tabular geography remains an historic monument of the commercial relations between the West and the most distant regions of Southern and Central Asia. At the same time Ptolemy (iv. 9, vili. 3 § 5) did not give up the false of the "unknown southern land" connecting Prasam Prom, with Cattigara and Thinae (Sinamuru Metropolis), and therefore joined E. Africa with the land of Tsin or China. This isthmus-hypothesis, derived from views which may be traced back to Hipharchus and Marinus of Tyre, in which however, Strabo did not include the Indian Ocean a Mediterranean sea. About half a century later than Ptolemy a mitigate, and as it ap-
pursers a very faithful, account of the coast was given in the Periplus of the Erythraean Sea (a work erroneously attributed to Arrian, and probably not anterior to Septimius Severus and his son Caracalla) (comp. Cooley, Claudius Ptolemy and the Nile, p. 56). During the long wars with Persia, the Aegean and Sarmatian population cut off from their ordinary communication with Persia and India, were supplied by the channel which the shores of the Persian Gulf and the Red Sea afforded; and in the reign of Justinian this commerce was very important. After the disturbances caused by the wars of Heraclius and Chosroes, the Arabs or Saracens placed upon the confines of Syria, Egypt, and Persia, had the greatest portion of the rich trade with Aethiopia, S. Africa, and India thrown into their hands. From the middle of the ninth century the Arab population of the Hedjaz maintained commercial relations with the northern countries of Europe and with Madagascar, with E. Africa, India, and China, diffusing their language, their coins, and the Indian system of numbers. But from the time that the Kaliph Al-Mansur closed the canal connecting the Red Sea with the Nile, the important line of communication between the commerce of Aegypt and India and the E. coast of S. Africa has never been restored. For all that concerns the data furnished by the ancient writers to the geographer of the Erythraean sea the Atlas appended by Miller to his Geographia Gracii Minores (Paris, 1855) should be consulted. He has brought together the positions of Agatharchides, Artemidorus, Pliny, Ptolemy, and the Pseudo-Arian, and compared them with the recent surveys made by Morebly, Carless, and others. [E. B. J.]

RUCCONIUM. [Dacia, p. 744, b.]

RUSSIA. [Revesio.]

RF FINI'A (Paftrihaia). Ptolemy (i. 9, § 17) names Neomagus [Novomagus, No. 2.] and Rufiniana as the two towns of the Nemetes, a people on the Rhine in Gallia Belgica. If we place Rufiniana with D'Anville and others at Rupihich in Upper Bavaria and in the present department of Regenwalde, we must admit that Ptolemy has made a great mistake, for Rupihich is within the territory of the Rauraci. But D'Anville observes that it is not more extraordinary to find Rufiniana misplaced in Ptolemy than to find him place Argentoratum in the territory of the Vangiones. [G. L.]

RUFRAE, a town of the Samnites on the borders of Campania, mentioned by Virgil (Aen. vii. 739) in a manner that would lead us to suppose it situated in Campania, or at least in the neighbourhood of that country; while Silus Italicus distinctly includes it among the cities of the Samnites (viii. 565), and Livy also mentions Rufrium (in all probability the same place) among the towns taken from the Samnites at the commencement of the Second Samnite War, B. C. 326. (Livy. viii. 23.) None of these passages afford any clue to its position, which cannot be determined; though it must certainly be sought for in the region above indicated. The sites suggested by Romandli (vol. ii. p. 463) and other local topographers are more conjectures. [E. II. B.]

RUFRIUM. [Rufrae.]

RIGI, RIGI (Po'ou or Pò'ou), an important people in the north of Germany, occupying a considerable part of the coast of the Baltic. (Char. Geog. 43.) Their country extended from the river Vindus in the west to the Wesula in the east, and was surrounded in the west by the Sideni, in the south by the Helvoceni, and in the east by the Sciri, who were probably a Sarmatian tribe. Strabo does not mention them, and Ptolemy (ii. 11. § 14) speaks of a tribe Rousia, who are probably the same as the Rigii. After their first appearance in Tacitus a long interval elapsed during which they are not noticed, until they suddenly reappear during the wars of Attilla, when they play a conspicuous part. (Siden. Apoll. Paneg. ad Arut. 319; Paul. Diae. de Gest. Rom. p. 534, ed. Erasmi.) After the death of Attilla, they appear on the north side of the Danube in Austria and Upper Hungary, and the country there inhabited by them was now called Ruginia, and formed a separate kingdom. (Procop. Bell. Goth. ii. 14, iii. 2; Paul. Diae. Longob. i. 19.) But while in this latter country no trace of their name is yet left, their name is still preserved on their original home on the Baltic, in the island of Rugia, and in the town of Ruggenweide, and perhaps also in Regia and Regenweide. (Comp. Lact. on Tac. l. c., and Ptolemy p. xiv., who strangely believes that the Rigii of Tacitus dwelt on the Gulf of Riga.) [L. S.]

RUGIUM (Ruygvow), a town in the north of Germany on the coast of the Baltic (Ptol. ii. 1. § 27), the site of which seems to correspond exactly with that of the modern Regenweide, on the river Rega, though others seek it elsewhere. (Wilhelm, Germania, p. 273.) [L. S.]

RUNCATAE (Rudici/hii), an Alpine tribe in the north on their behalf the Oerus and Danianus. (Ptol. ii. 13. § 1.) In the inscription of the Alpine trophy quoted by Pliny (iii. 24) they are called Ruscinae. [L. S.]

RURA (Rubor), a river of Western Germany, which flows into the Rhine from the east near the town of Düsseldorf. (Geogr. Rav. iv. 24.) [L. S.]

RURADA (Ruradensis, Rurademia), a place in Hispania Baetica, the name of which appears only upon coins, the present Ruwa near Bezana. (Flor. Esp. Sophr. vii. p. 98.) [T. H. D.]

RUSABER (Ylib. vi. 1; 'Povsabedr), Ptolemy iv. 1. § 7; R. v. 1. § 7;记, Auton), a colony of the Marcinia, situated near Metagotria Pron, which appears sometimes to have been called from the town Rusadar (Ptol. iv. 1. § 12). It is represented by the "baris" of Metilla, or Spanish penal fortress, on the right formed between C. Tres Forcas and the Milicia. [E. B. J.]

RUSAZUS. [Maeretania, p. 298, b.]

RUSCINO (Rousin, Rousinik, Rous'in), a city of the Volcae Tectosages in Gallia Narbonensis. (Ptol. ii. 11. § 9.) When Hannibal entered Gallia by the Pyrenees, he came to Illiberis (Elsa), and thence marched past Ruscino (Liv. xxi. 24). Ruscino stood on a river of the same name (Ptol. Strabo), "there was a lake near Ruscino, and a swampy place a little above the sea full of salt and containing mullets (kostepti), which are dug out; for if a man digs down two or three feet, and drives a Trident into the muddy water, he may spear the fish, which is of considerable size: and it feeds on the mud like the eels." (Strab. iv. p. 152.) Polybius (xxiv. 10, ed. Bekker) has the same account of the river and the fish, which, however he says, feed on the plant argostis. (Athen. viii. p. 332.) The low tract which was divided by the Ruscino is the Cyneicus Litus of Avienus (Or. Mar. v. 565). "post Pyreneum jugum, Jacret arenae littoris Cyneetic, Easque late sulcat annis Roschinus."
RUSSELLAE.

Mela (ii. 5) names the place a Colonia, and so the title appears on coins, Col. RUS. LCG. VI. Pliny calls it "Oppidum Latinorum." It seems to have been a Colonia Latina.

The name is incorrectly written Ruscione in the Antonine Itin. and in the Table. It is placed between Combusta (Combruta) and Illiberis, and it is represented by Castell-Roussillon or the Tour de Roussillon on the Tet, the ancient Ruscinus, a short distance from Perpiñan, the capital of the French department of the Pyrénées Orientales. Perpiñan lies on the high-road from France into Spain, and there is no other great road in this part of the Pyrenees.

Ruscino is named Roscellona in middle age documents, and from this name the modern name Roussillon is derived. Roussillon was a province of the ante-revolutionary history of France, and it corresponds to the modern department of Pyrénées Orientales.

The river Ruscino or Ruscinus is the Tels of Mela (ii. 5), the Tet; and we may probably conclude that the name is derived from Telis. Telis rises in the Pyrenees, and flows past Perpiñan into the Mediterranean, after a course of about 70 miles. Sometimes it brings down a great quantity of water from the mountains. [G. L.]

RUSSELLAE (Ρωουλλα; Eth. Russellians: Roselle), an ancient and important city of Etruria, situated about 14 miles from the sea, and 3 from the right bank of the river Ombrone (Umbro). In common with several of the ancient Etruscan cities, we have very little information concerning its early history, though there is no doubt of its great antiquity and of its having been at a very early period a powerful and important city. There is very probability that it was one of the twelve which formed the Etruscan League (Müller, Etruskier, vol. i. p. 346). The first mention of it in history is during the reign of Tarquinius Priscus, when it united with Clusium, Arretium, Volaterrae, and Vetulonia, in declaring war against the Roman king, apart from the rest of the confederacy,—a sufficient proof that it was at that time an independent and sovereign state. (Dionys. iii. 51.) From this time we hear no more of it until the Romans had carried their arms beyond the Cisintian forest, when, in B.C. 301, the dictator M. Valerius Maximus carried his arms, apparently for the first time, into the territory of the Russellae, and defeated the combined forces of the Etruscans who were opposed to him. (Liv. xii. 4. 5.) A few years later, in B.C. 294, the consul L. Postumius Megellus not only had the ability to carry the territory of Ruscellae, but took the city itself by storm, taking more than 2000 of the inhabitants captive (Uli. xii. 37). No other mention of it occurs during the period of Etruscan independence; but during the Second Punic War the Ruscellani are mentioned among the "populi Etrusci" who came forward with voluntary supplies to equip the fleet of Scipio (B.C. 205), and furnished him with timber and corn (Id. xxxviii. 45). It is evident that at this time Russellae was still one of the principal cities of Etruria. We find no subsequent notice of it under the Roman Republic, but it was one of the places selected by Augustus to receive a colony (Plin. iii. 5. s. 8; Zumpt. de Colon. p. 347); notwithstanding which it seems to have fallen into decay; and though the name is mentioned by Ptolemy (iii. 1. § 48) we meet with no later notice of it in ancient times. It did not, however, altogether cease to exist till a much later period, as it retained its episcopal see down to the twelfth century, when it was transferred to the neighboring town of Groseto. (Repeti. Diz. Top. vol. ii. pp. 526, 822.)

The site of Russellae is now wholly desolate and overgrown with thickets, which render it very difficult of access. But the plan may be distinctly traced, and the line of the ancient walls may be followed in detached fragments throughout their entire circuit. It stood on the first top of a hill of considerable elevation, about 6 miles from the modern city of Groseto, overlooking the broad valley of the Ombrone and the level plain of the Maremma, which extends from thence to the sea. The walls follow the outline of the hill, and enclose a space of about 2 miles in circuit. They are constructed of very rude and massive stones, in some places with an approach to horizontal structure, similar to that at Volterra and Populonia; but in other places they lose all traces of regularity, and present (according to Mr. Dennis) a strong resemblance to the rudest and most irregular style of Cyclopian construction, as exemplified in the walls of Thebes in Arcadia. (Dennis's Etruria, vol. ii. pp. 248, 249.) The sites of six gates may be traced; but there are no indications of the manner in which the gateway itself was formed. Within the walls are some fragments of rectangular masonry and some vaults of Roman construction. It is remarkable that no traces of the necropolis—so often the most interesting remnant of an Etruscan city—have yet been discovered at Russellae. But the site is so wild and so little visited, that no excavations have been carried on there. (Dennis, L. e. p. 254.)

About 2 miles from the ruins, and 4 from Groseto, are some hot-springs, now called I Bagni di Roselle. On a hill immediately above them are the mediæval ruins of a town or castle called Moscona, which have been often mistaken for those of Russellae. (Dennis, L. c.)

RUSGUÑIA (Itin. Ant.; Povertovos, Plut. iv. 2. § 6), a town of Mauretania, and a colony, which lay 15 M. P. to the E. of Icosium. Its ruins have been found near Cape Mapas or Temenestus (Barth, Wanderungen, p. 55). For an account of these, see Anthol. 1837, No. 222. [E. B. J.]

RUSICADE (Plut. v. 3; Mela, i. 7. § 1; Portus Latina, Plut. iv. 3. § 3; Basriade, Itin. Ant., Pent. Tab.), the harbour of Cirta in Numidia, and a Roman colony, at the mouth of the small river Thapsus (Vib. Seq. de Flum. p. 19; U. Sefot), and probably therefore identical with the THAPSIA (Thaia), a harbour-town of Scylax (p. 56). Its site is near Stora; and the modern town of Philippeville, the Râs-Skedïâ of the Arabs, is made in part of the materials of the old Basriade (Barth, Wanderungen, p. 60). [E. B. J.]

RUSINAVA. [DACIA, p. 744, b.]

RUSIE (Pent. Tab.; Posidonia al. Povertovos, Plut. iv. 3. § 10), a town of Numidia between Acholla and Lissia, near the CAJAT VADORUM (Corippos, Jos. Ann. i. 366; C. Kâbûbûdah), and the see of Felgentius, well-known in the Pelagian controversy; he was expelled from it by the Vandal Thrasimund. Barth (Wanderungen, p. 177) found remains at Schelba. [E. B. J.]

RUSTPINUM (Povertovos, Strab. xvii. p. 831; Ruspina, Anet. B. Afr. 6; Plin. v. 3; Pent. Tab.), a town of Africa Proper, where Caesar defeated Scipio, and which he afterwards made his position while waiting for reinforcements. It is probably the
same place as the Thurenia of the Cosus-describers (Stadiasmus, § 114, ed. Müller), near the ruins of Lepcis Parva. [E. B. J.]

RUSTICIANA (Postvaricata, Pol. ii. § 7), a city of the Vettones in Lucania, on the right bank of the Tarnus. Variously identified with Corvachna and Galatea. (It. Ant. p. 432.) [T. B. D.]

RUSCUCCIUS, RUSSCUCCIUS (Plin. v. 1; It. Ant.; Postvaricata, Pol. iv. § 8), a town of Mauretania, which Claudius made a municipality (Plin. l. c.), but which was afterwards a colony (H. A. N. U.). Barth (Wanderungen, p. 60) has identified it with the landing-place Delphi in Algeria, where there is good anchorage. [E. B. J.]

RUTENI (Postvaricata), and Postvaricata in Ptolomy (ii. 7, § 21), who places them in Gallia Aquitanica. Pliny (iv. 19) says that the Ruteni border on the Xarthonensis Province and Strabo (iv. 191) places them and the Gabales or Galales next to the Xarthonensis. Their country was the old province of Rouergue, which extended from the Ceyzernes, its eastern boundary, about 90 miles in a western direction. The chief town was Rhodois. The modern department of Aveyron comprehends a large part of the Rouergue. There were silver mines in the country of the Ruteni and their neighbours the Gabales [Galalis], and the flux of this country was gold.

The Avreni and Ruteni were defeated by Q. Fabius Maximus, n. c. 121, but their country was not reduced to a form of a Roman province (Dios. B. G. i. 45). In Caesar's time part of the Ruteni were included in the Province under the name of Ruteni Provinciales (B. G. vi. 5, 7). Verrucatorix in n. c. 52 sent Lucertius of the Cadurci into the country of the Ruteni to bring them over to the Gallic confederation, which he did. Caesar, in order to protect the Province on this side, placed troops in the country of the Ruteni Provinciales, and among the Volcae Arecomici and Tolosates. Pliny, who enumerates the Ruteni among the people of Aquitania, also mentions Ruteni in the Xarthonensis (Dios. i. 4), but he names the town Sulcitium (Mazagan), the Ruteni Provinciales of course were nearer to the Tectosages than the other Ruteni, and we may perhaps place them in that part of the departments of Aveyron and Tarra which is south of the Tarins (Tarra). It may be conjectured that part of the Ruteni were added to the Province, either after the defeat of the Ruteni by Maximus, or after the conquest of Tolosa by Caepio (M. C. G. 106.) [G. L.]

RUTULI. [Rugii.]

RUTUBA (Royi), a river of Liguria, which rises in the Maritime Alps, near the Col de Tende, and flows into the sea at Finolghia (——, B. G. ii. 5). Its mouth is far south of Pliny (iv. 5), who places it apparently to the W. of Albium Internulum, whereas it really flows on the E. side of that town; Lucan also indicates it among the streams which flow from the Apennines (i. 422), and gives it the epithet of "cavus," from its flowing down a deep bed or ravine. From the mention of the Tiber just after, some writers have supposed that he must mean another river of the name; but there is no reason to expect such strict geographical order from a poet, and the mention of the Murra a few lines lower down sufficiently shows that none such was intended. Yalias Snoumenier (p. 17), who makes the Rutuba fall into the Tiber, has obviously misunderstood the passage of Lucan.[E. B. H.]

RUTUBIS (Polyb. ap. Plin. v. 1; Postvaricata, Pol. ii. 5, § 1), a part of Mauretania, which must be identified with the low rocky point of Mazugan. The town situated upon this was the last possessed by the Portuguese in Morocco, and was abandoned by them in 1763. (Jackson, Morocco, p. 104; Journal of Geography, Soc. vol. vi. p. 306.) [T. B. D.]

RUTULI (Postvaricata), a people of ancient Italy, who, according to a tradition generally received in later times, were settled at a very early period in a part of Latium, adjoining the sea-coast, their capital city being Ardea. The prominent part that they and their king Turnus bear in the legendary history of Aeneas and the Trojan settlement, especially in the form in which this has been worked up by Virgil, has given great celebrity to their name, but they appear to have been, in fact, even according to these very traditions, a small and unimportant people. Their king Turnus himself is represented as dependent on Latium; and it is certain that in the historical period Ardea was one of the cities of the Latin League (Dions. vi. 61), while the name of the Rutuli had become merged in that of the Latin people. Not long before this indeed Livy represents the Rutuli as a still existing people, and the arms of Tarquinii Superbus as directed against them when he proceeded to attack Ardea, just before his expedition. (Liv. i. 56, 57.) According to this narrative Ardea was not taken, but we learn from much better authority (the treaty between Rome and Carthage preserved by Polybios, ii. 22) that it had fallen under the power of Turnus before the close of the monarchy, and it is possible that the extinction of the Rutuli as an independent people may date from this period. The other mention of the Rutuli which can be called historical is that their name is found in the list given by Cato (ap. Priscian. iv. 4 p. 629) of the cities that took part in the foundation of the celebrated temple of Diana at Aricia, a list in all probability founded upon some ancient record; and it is remarkable that they here figure as distinct from the Ardeates. There were some obscure traditions in antiquity that represented Ardea as connected with the Rutuli by a direct bond of blood (Ap. Rh. G. v. pp. 310, 331). But the whole subject of these there are regarded by Niebuhr as tending to prove that the Rutuli were a Pelasgic race. (Niebu. ii. 14, vol. ii. p. 21.) Schwegler, on the other hand considers them as connected with the Etruscans, and probably a relic of the period when that people had extended their dominion throughout Latium and Campania. This theory finds some support in the name of Turnus, which may probably be connected with Tyrrhenos, as well as in the union which the legend represents as subsisting between Turnus and the Etruscan king Menenius. (Schwegler, Rom. Gesch. vol. i. pp. 310, 331.) But the whole subject is mixed up with fablia and poetical invention, so that it is impossible to feel confidence in any such conjectures. [E. B. H.]

RUTUNIUM (It. Ant. p. 469), a apparently a town of the Carnania in the W. part of Britannia Roman. Camden (p. 651) identifies it with Ruitum in Shropshire, Holyoake (p. 418) with Wem. [T. H. B.]

RUTUPHAE (Postvaricata, Pol. ii. § 3, § 57; in the Tab. Peut. and Not. Imp. Rutupae; in the It. Ant. Rutupae, also Portus Rutupensis and Portus Rutupianus: Adj. Rutupium, Luc. Phars. vi. 67, Liv. pro. 141), a town of the Caetani on the E. coast of Britannia Prima, now Richborough in Kent. Rutupae and Portus Rutupensis were probably distinct, the former being the city, the latter its harbour at some little distance. The harbour was probably
SYSSADIUM.

Stoner, not Sandwith; which latter town seems to have sprung up under the Saxons, after Rutupiae had begun to fall into decay, and was indeed probably built with materials taken from it. According to Camden (p. 244) the etymology of the name of Rutupiae is analogous to that of Sandwith, being derived from the British Rhythrafeth, signifying "sandy bottoms"; a derivation which seems much more probable than that from the Rutani, a people who occupied the district in France now called La Rognois. The territory around the town was styled Rutupinus Ager (Ausan. Parent. xviii. 5) and the coast Rutupianus Litus (Luc. I. c.). The latter was celebrated for its oysters, as the coast near Margate and Reculver is to the present day. Large beds of oyster-shells have been found in the neighborhood, at a depth of from 4 to 6 feet under ground. The port is undoubtedly that mentioned by Tacitus (Agric. 38), under the erroneous name of Trutulensi Portus, as occupied by the fleet of Agricola. It was a safe harbour, and the usual and most convenient one for the passage between the two countries. (Annum. Marc. xx. 1, xxvii. 8, § 6.) The principal Roman remains at Richborough are those of a castrum and of an amphitheatre. The walls of the former present an extensive ruin, and on the N. side are in some places from 20 to 30 feet in height. Fragments of sculptured marbles found within their circuit show that the fortification must have contained some handsome buildings. The foundation walls of the amphitheatre were excavated in 1849, and are the first remains of a walled building of that description discovered in England. There is a good description of Richborough, as it existed in the time of Henry VIII., in Leland's Itinerary (vol. vii. p. 128, ed. Hearne). Leland mentions that many Roman coins were found there, which still continues to be the case. Other Roman antiquities of various descriptions have been discovered, as pottery, fibulae, ornaments, knives, tools, &c. Rutupiae was under the jurisdiction of the Comes litonis Saxonic, and was the station of the Legion Ilia Augusta. (Nottin, c. 52.) A complete account of its remains will be found in Reach smith's Antiquities of Richborough.

SYSSADIUM (Psiodidion Υψος, Potl. iv. 6, § 8).—"a mountain of interior Libya, from which flows the Scathec (Gambia), making near it the lake Chiona; the middle of the mountain (or lake?) 17° E. long., 11° N. lat." (Potl. l. c.) This mountain terminated in the headland also called Ryssadium (Psiodidion άυγον), the position of which is fixed by Potemny (iv. 6, § 6) at 8° 30' E. long., and 11° 30' N. lat. We assume, with Rennell and Leake, that Aresinarrin is C. Ferde, a conjecture which can be made with more confidence because it is found that Potemny's difference of longitude between Aresinarrin and Carthage is very nearly correct,—according to that assumption this promontory must be looked for to the N. of the mouth of the Gambia. The mountain and lake must be assigned to that elevated region in which the Senegal and the Gambia take their rise, forming an appendage to the central highlands of Africa from which it projects westwards, like a vast promontory, into the Great Sahara.

[Σ. B. J.]

SABA. 861

SABA, SABAEE (Σαββε or Σαβαί: Plth. Σαβαζος, fam. Σαβαία), were respectively the principal city and nation in Yemen, or Arabia Felix. [ARABIA.] Ancient geographers differ considerably as to the extent of territory occupied by the Sabaeans, Erastosenes assigning to it a much larger area than Pliny, while the difference may perhaps be reconciled by examining their respective accounts.

Our knowledge of the Sabaeans is derived from three sources: the Hebrew Scriptures, the Greek historians and geographers, and the Roman poets and encyclopædists, Pliny, Solinus, &c. The Arabian geographers, also, throw some light upon this ancient and far-extending race.

1. In the Hebrew genealogies (Genesis, x. 6, xxv. 5) the Sabaeans are described as the descendants of Cush, the son of Ham. This descent was probably not so much from a single step, as from several branches of Hamite origin; and as the tribes of the Sabaeans were numerous, some of them have proceeded immediately from Cush, and others from later progenitors of the same stock. Thus one tribe descended from Saba, the son of Cush, another from Jokshan, Abraham's son by Keturah; a third from Sheba, the son of Rehaim—the Pe 圭 of the LXX. (Compare Psal. lxxii. 10; Isai. xlv. 14; Ezekiel, xviii. 22, 23, xxxvii. 13.) The most material point in this pedigree is the fact of the pure Semitic blood of the Sabaeans. The Hebrew prophets agree in celebrating the stature and noble bearing, the enterprise and wealth of this nation, therein concurring with the expression of Agatharchides, who describes the Sabaeans as having σαβαστα ἄνθρωπος. Their occupations appear to have been various, as would be the case with a nation so widely extended ("Sabaei ad utraque maria prorecti," Plin. vi. 28, s. 32): for there is no doubt that in the south they were actively engaged in commerce, while in the north, on the borders of Idumea, they retained the predatory habits of nomads. (Job, ii. 15.) The "Queen of the South," for whom Saba is the name, was probably an Arabian sovereign. It may be observed that Yemen and Saba have nearly the same import, each signifying the right hand; for a person turning his face to the rising sun has the south on his right, and thus Saba or Yemen, which was long regarded as the southern limit of the habitable zone, is the left-hand, or southern land. (Comp. Herod. iii. 107—113; Forster's Geogr. of Arabia, vol. i. pp. 24—38.) A river Saba, in Carmania (Mela, iii. 8, § 4), and a chain of mountains Saba, at the entrance of the Persian Gulf (Arian. Periplus. M. Eryth., ἐπι μαγετα Αγανιτα Σαβα; comp. Potl. vi. 7, § 23), apparently indicate an extension of the Sabaeans beyond Arabia Proper. That they reached to the eastern shore of the Red Sea is rendered probable by the circumstance that a city named Saba or Sabe stood there, about 36 miles S. of Pithom, in lat. 14° N. (Potl. vi. 7, § 38, v. 22, § 14.)

2. The first Greek writer who mentions the Sabaeans by name is Erastosenes. His account, however, represents a more recent condition of this nation than is described by Artemidorus, or by Agatharchides, who is usually the principal authority in his narrative of the Sabaeans. On the other hand, Diodorus Siculus professes to have compiled his
accounts of them from the historical books of the Egyptian kings, which he consulted in the Alexandrian Library. (Diod. iii. 38, 40.) There can be little question that Herodotus, although he does not name the Sabaeans, describes them in various passages, when speaking of the Arabian, the southernmost people of the earth. (Herod. ii. 156, iii. 107.)

The commerce of Yemen with Phoenicia and Egypt under the Pharaohs would render the name of the Sabaeans familiar in all the havens of the Red Sea and the eastern Mediterranean. The Egyptians imported spices largely, since they employed them in embalming the dead; and the Phoenicians required them for the Syrian markets, since perfumes have in all ages been both favorite luxuries and among the most popular medicines of the East. At the time when Ptolemy wrote (in the second century A.D.) their trade with Syria and Egypt, as the carriers of the silks and spices so much in request at Rome, brought the Sabaeans within ken of the scientific geographer and of the learned generally.

3. Accordingly, we meet in the Roman poets with numerous, although vague, allusions to the wealth and luxury of the Sabaeans. "Molles," "divites," "beat," are the epithets constantly applied to them. (See Catull. xi. 5; Propert. ii. 10. 16, ib. 29. 17, ii. 13. 8; Virgil, Georg. i. 57, ii. 150, Aeneid. i. 416; Horace, Carm. i. 29. 2, ii. 12. 24; id. Epist. i. 6. 6, ib. 7. 36; Statius, Silv. iv. 8. 1; Senec. Hercules, Oct. v. 376.) The expedition of Arch Gallus, indeed (p. c. 24), may have tended to bring Southern Arabia more immediately under the notice of the Romans. But their knowledge was at best very limited, and rested less on facts than on rumours of Sabaean opulence and luxury. Pliny and the geographers are rather better informed, but even they had very erroneous conceptions of the physical or commercial character of this nation.

Not until the passage to India by the Cape had been discovered were Sabaeans or Yemen really explored by Europeans.

Assuming, then, that the Sabaeans were a widely-spread race, extending from the Persian Gulf to the Red Sea, and running up to the borders of the desert in the Arabian peninsula, we proceed to examine the grounds of their reputation for excessive opulence and luxury. A portion of their wealth was undoubtedly native; they supplied Egypt and Syria from the remotest periods with frankincense and aromatics; and since the soil of Yemen is highly productive, they took in exchange, not the corn or wine of their neighbours, but the precious metals. But aromatics were by no means the capital source of their wealth. The Sabaeans possessed for many centuries the keys of Indian commerce, and were the intermediate factors between Egypt and Arabia, as these countries were then unable to carry on trade in the agency for Europe. During the Pharaonic eras of Egypt, no attempt was made to disturb the monopoly of the Sabaeans in this traffic. Ptolemy Philadelphia (n. c. 274) was the first Egyptian sovereign who discerned the value of the Red Sea and its harbours to his kingdom. He established his Indian emporium at Nysos-Hormus or Arisino, and under his successors Berenice, which was connected with Coptos on the Nile by a canal, shared the profits of this remunerative trade. But even then the Sabaeans lost a small portion only of their former exclusive advantages. They were no longer the carriers of Indian exports to Egypt, but they were still the importers of them from India itself. The Egyptian fleets proceeded no further than the haven of Salbathar or Maribah; while the Sabaeans, long prior even to the voyage of Nearchus (n. c. 330), ventured across the ocean with the monsoon to Ceylon and the Malabar coast. Their vessels were of larger build than the ordinary merchant-ships of the Greeks, and under the influence of the Indian air were no longer long and intrepid as the Greeks, who, it is recorded, shrank back with terror from the Indian Ocean. The track of the Sabaeans navigators lay along the coast of Ge- dro sia, since Nearchus found along its shores many Arabic names of places, and at Possana engaged a pilot acquainted with those seas. In proportion as luxury increased in the Syro-Macedonian cities (and their extravagance in the article of perfumes alone is recorded by Athenaeus, xii.), and subsequently in Rome, the Indian trade became more valuable to the Sabaeans. It was computed in the third century of the Empire, that, for every pound of silk brought to Italy, a pound of silver or even gold was sent to Arabia; and the computation might fairly be extended to the aromatics employed so lavishly by the Romans at their banquet and funerals. (Comp. Petronius, c. 64, with Plutarch, Sulla, c. 38.)

There were two avenues of this traffic, one overland by Petra and the Elamitic gulf, the other up the Red Sea to Arisino, the Ptolemaic canal, and Alexandria. We may therefore fairly ascribe the extraordinary wealth of the Sabaeans to their long monopoly of the Indian trade. Their country, however, was itself highly productive, and doubtless, from the general character of the Arabian peninsula, its southern extremity was densely populated. The Sabaeans are described by the Hebrew, the Greek, and the Arabian writers as a numerous people, of lofty stature, implying abundance of the means of life; and the recurrence of the name of Saba throughout the entire region between the Red Sea and Currnax shows that they were populous and powerful enough to send out colonies. The general barrenness of the northern and central districts of Arabia drove the population down to the south. The highlands that border on the Indian Ocean are distinguished by the plenty of wood and water, and wherever the air is temperate, the animals are numerous (the horses of Yemen are strong and serviceable), and the fruits delicious. With such abundance at home the Sabaeans were enabled to devote themselves to trade with undivided energy and success.

Nothing more strikingly displays the ignorance of the ancient geographers as regards Sabaea than their descriptions of the opulence of the country. Their narratives are equally pompous and extravagant. According to Agatharchides and Diodorus, the odour of the spice-woods was so potent that the inhabitants were unable to stay in their houses, and were forced by the soothing perfumes by the ill odours of burnt goats'-hair and asphaltite. The decorations of their houses, their furniture, and even their domestic utensils were of gold and silver; they drank from vases blazing with gems; they used cinnamon chips for firewood; and no king could compete in luxury with the merchant-princes of the Sabaeans. We have only to remember the real or imputed sumptuousness of a few of the Dutch and English East India Companies' merchants in the 18th century, while the trade of the East was in a few hands, in order to appreciate the worth of these descriptions by Agatharchides and Diodorus.

The delusions of the ancients were first dis-
SABA.

Adkamitae is described by Diodorus (iii. 46) as situated upon a lofty wooded hill, and within two days' journey of the frankencense country. The position of Saba is, however, quite uncertain: Mannert (Geogr. der Griech. u. Kön. vol. vi. p. 66) places it at the modern Saude; other geographers identify it with Mareb (Makala); and again Sabatha, both from its site in the interior and its commercial importance, seems to have a good title to be considered as Saba (Σαβα in Agatharchides) or Sheba, the capital of the Sabaeans.

2. (Σαμη, Ptol. vi. 7, §§ 38, 42; Plin. vi. 23. s. 34), was also seated in the interior of the Sabaean territory, 26 miles NE. of Aden. Niebuhr (Descript. de l'Ara- bie, vol. ii. p. 60) identifies it with the modern Sabaia.

3. (Σαμη, Strab. xvii. p. 771; Σαβα, Ptol. iv. 7. § 8), on the western shore of the Red Sea, was the capital city of the Sabaeanse, and its harbour was the Sabaicenum Os (Σαβαίον λιθος, Strab. xvii. p. 770). The position of Saba, like that of so many Aethiopian races and cities, is very uncertain: some writers place it at the entrance of the Arabian gulf (Heeren, Hist. Rer. Researches, vol. i. p. 333); others carry it up as high as the bay of Adul, lat. 15° N. Bruce (Travels, vol. iii. p. 144) identifies the modern Azab with the Sabaeas, and places it between the tropics and the Abyssinian highlands. Cumbes and Tamisier (Voyages, vol. i. p. 89) consider the island Massowa to have a better claim: while Lord Valentia (Travels, vol. ii. p. 47) finds Sabae at Port Mornington. But although neither ancient geographers nor modern travellers are agreed concerning the site of the Aethiopian Sabaeas, they accord in placing it on the sea-coast of the Kingdom or island of Meroe, and between the Siam Avallites and the bay of Adul, i.e. between the 12th and 15th degrees of N. latitude. On the opposite shore were seated the Sabaeanse of Arabia, and as there was much intercourse between the populations of the opposite sides of the Red Sea, the Aethiopian Sabaeans may have been a colony from Arabia. Both races are described as lofty in stature and opulent (Psaln lxix. 1; Kings, x. 1; Isaiah, xiv. 14), and this description will apply equally to the Sabaeans who dwelt in the spice country of Arabia, and to those who enjoyed almost a monopoly of the Libyan spice-trade, and were not far removed from the gold-mines and the emerald and topaz- quarries of the Aegyptian and Aethiopian mountains. The remarkable personal beauty of the Sabaeans is confirmed by the monuments of Upper Nubia, and was probably reported to the Greek geographers by the slave-dealers, to whom height and noble features would be a recommendation. The Sabaeans, at least in earlier periods, may be regarded as one of the principal tribes of the Aethiopian kingdom of Meroé. [Meroe.]

Josephus (Antiq. ii. 5) affirms that the Queen of Sheba or Saba came from this region, and that it bore the name of Saba before it was known by that of Meroé. There seems also some affinity between the word Saba and the name or title of the kings of the Aethiopian, Sabao-

[SABADIBAE.]

[W. B. D.]

SABADIBAE (Σαβαδιβαί, προκαθέστωτα), Ptol. vii. 2. § 28), three islands, mentioned by Polyaenus, in the neighbourhood of the Aurora Chersonesus in India extra Gangas. From the great resemblance of the name, it is not unlikely that he has confounded it with that of the island of labadins (or Sabadins), now Jara, which he mentions in his next section. [IAD.]
SABAGENA (S bitchynv, Zeotichyv, or Zbibyv), a town in Lesser Armenia, is mentioned only by Ptolemy (v. 7, § 10) as belonging to the prefecture of Lavinia. [L.S.]

SABBATI (S bitchyv), a German tribe placed by Ptolemy (ii. 11, § 11) above the Sixones in the Cimbrian peninsula, the modern Schleswig. In the absence of all further information about them, it has been inferred, from the mere resemblance of name, that they dwelt in and about the place called Sibgbolus in the island of Labend. [L.S.]

SABOTHIA (S ovapio), an important town in the north of Upper Pannonia, was situated in a plain between the river Arado and the Deserta Belorum, on the road from Cernova to Postassium. The town, which seems to have been an ancient settlement of the Boii, derived its importance partly from the fertility of the plain in which it was situated, and partly from the fact that it formed a kind of central point at which several roads met. The emperor Claudius raised it to the rank of a Roman colony, whence it received the surname of Claudia. (Plin. iii. 27; Ptol. ii. 15, § 4.) In this town Septimius Severus was acclaimed Augustus (Aurel. Vict. Epit. 19), and the emperor Valentinian resided there some time. (Amm. Marc. xxx. 3.) Owing to this and other circumstances, the town rose to a high degree of prosperity during the latter period of the Roman Empire; and its ancient greatness is still attested by its numerous remains of temples and aqueducts. Many statues, inscriptions, and coins also have been found at Stein am Anger, which is the modern name, or, as the Hungarians call it, Sombathe. (It. Ant. pp. 233, 261, 262, 434; Orelli, Inscript. n. 200 and 1789; Schlosser, Antiquitates Sabatiae, p. 45; Muchar, Novorum, i. p. 167.) [L.S.]

SABARIUS SINUS. [INDICUS OCACEUS.]

SABATA or SABATIA (Plln. vi. 27, s. 31), a town of Assyria, probably the same place as the S a b a d o d of Zosimus (ii. 23), which that writer describes as 90 stadia from the ancient Seleucia. It is also mentioned by Abulfeda (p. 253) under the name of Saba.

SABATIA VADA. [VADA SABATIA.]

SABATINUS LAUCUS (Sabata Aweq, Strab. Lago di Bracciano), one of the most considerable of the lakes of Etruria, which, as Strabo observes, was the most southerly of them, and consequently the nearest to Rome and to the sea. (Strab. v. p. 226.) It is, like most of the other lakes in the same region, formed in the crater of an extinct volcano, and has consequently a very regular basin-like form, with a circuit of about 29 miles, and is surrounded on all sides by a ridge of hills of great elevation. It is probable that it derived its name from a town of the name of Sabata, which stood on its shores, but the name is not found in the geographers, and the only positive evidence of its existence is its mention in the Tabula as a station on the Via Claudia. (Tab. Pent.) The lake itself is called Sabata by Strabo, and Sabata by Festus, from whom we learn that it gave name to the Sabatine tribe of the Roman citizens, one of those which was formed out of the new citizens added to the state in B.C. 387. (Liv. vi. 4, 3; Fest. s. v. Sabatia, pp. 342, 343.) Silinus Ital. shows Sabata or Sabatia in the plural (vii. 492), probably including under the name the much smaller lake in the same neighborhood called the Locus Auriatianus or Lago di Martignano. The same tradition was reported of this lake as of the Cuminum, and of many others, that there was a city swallowed up by it, the remains of which could still occasionally be seen at the bottom of its clear waters. (Soran. de Mor. Pont. 41, where we should certainly read Sabata for Saboros.) It abounded in fish and wild-fowl, and was even stocked artificially with fish of various kinds by the luxurious Romans of late times. (Columell. viii. 16.)

The Tabula places Sabata at the distance of 36 miles from Rome, but this number is much beyond the truth. The true distance is probably 27 miles, which would coincide with a site near the W. extremity of the lake about a mile beyond the modern town of Bracciano, where there are some ruins of Roman date, probably belonging to a villa (Tab. Pent.; Holsten. Not. ad Cluver. p. 44; Westphal, Rom. Kampagnen, pp. 156, 158.) The town of Traccianza, which now gives name to the lake, dates only from the middle ages and probably does not occupy an ancient site. [E. II. B.]

SABATUS. 1. (Sabato), a river of Samnia, in the country of the Hirpini, and one of the tributaries of the Calor (Calore), with which it unites under the name Beneventum. [CALOR.] The name of the river is not found in any ancient author, but Livy mentions the Sabatini among the Campanians who were punished for their defence to Haemul in the Second Punic War. (Livy. xlv. 33, 34.) These may mean generally the people of the same name, but the river, which is now known, as supposed by Cluver, a town of the same name on the banks of the river. (Cluver. Ital. p. 1193.)

2. (Savo), a river of Bruttium, on the W. coast of the peninsula, flowing into the sea between Amantea and Cupo Sutero. Its name is known only from the Itineraries, from which we learn that it was crossed by the high-road to Rhegium 18 miles S. of Cassantia (Cosenza), a distance which, combined with the name, clearly identifies it with the modern Sareto. (Itin. Ant. pp. 105, 116.) It is generally identified by geographers with the Ocinarus of Lycophron, on the banks of which the Greek city of Teina was situated; but this assumption rests on no sufficient grounds. [TEINA.] [E. H. B.]

SABBATIA or SABBATIA. [VADA SABA-

SABBATIA (Zebitchyv, Ptol. vi. 7, § 38; Sabatha, Plin. vii. 28. s. 32), was the capital of the Adrameite, a Sabaeum tribe inhabiting the S. coast of Arabia Felix (lat. 14° N.). [ADRAMITE.] Its inhabitants are called Sabatiane by Festus Avienus (Isner. Orb. Terr. v. 1136). Sabatia was seated far inland, on the coast of a navigable river (Prior?) — an unusual circumstance in that region, where the streams are brief in their course and seldom navigable. (Vest. Mar. Eryth. p. 15.) If it really contained sixty temples within its walls, Sabatia must have ranked second to none of the cities of Arabia. Its monopoly of the Indian trade doubtless rendered it a wealthy and important place. At no other haven on the coast were the spices, gums, and silks of India permitted to be landed; if exposed to sale elsewhere, they were confiscated, and their vendors punished with death. They were conveyed up the river to Sabatia in boats made of leather, stained over wooden frames. One gate alone — probably for the convenience of detecting fraud — of Sabatia was assigned to this branch of commerce; and after the bales had been examined, the goods were not handled over to their owners until a tithe had been deducted for a deity named Sabes (— dominus), and also a portion for the king.
SABINI

Geographers attempt to identify Sabitha with Maris (Marsh), and the proofs of their identity are unsatisfactory; and it may even be questioned whether Sabitha be not an elongated form of Saba, a common appellation for cities in Arabia Felix. The Kašároav of Strabo (xxvi. p. 768) is supposed by his translator Groskurd (vol. iii. p. 287) to be an error for Σαβηνα, and the latter to be a form of Sabitha. [See Maria, Vol. ii. p. 274]  

[S. B. D.]

SABINI (Sabini), a people of Central Italy, who inhabited the rugged mountain country on the W. of the central chain of the Apennines, from the sources of the Nar and Vettius to the neighbourhood of Raste, and from thence southwards as far as the Tiber and the Anio. They were bounded on the N. and W. by the Umbrians and Etruscans, on the E. by Picenum, from which they were separated by the main ridge of the Apennines; on the S. by the Vestini, the Marsi and Asquenici, and on the S. by Latium. Their country thus formed a narrow strip, extending about 85 miles in length from the lofty group of the Apennines above Narnia, in which the Nar takes its rise, to the junction of the Tiber and Anio, within a few miles of Rome. The southern limit of the Sabines had, however, undergone many changes; in Pliny's time it was fixed as above stated, the Anio being generally received as the boundary between them and Latium; hence Pliny reckons Fidenae and Notium Sabine cities, though there is good ground for assigning them both in earlier times to the Latins, and Potency again includes both them in Latium. Strabo, on the other hand, describes the Sabine territory as extending as far as Notium, by which he probably means to include the latter city; while Eutropus, which was only about 3 miles W. of Notium, seems to have been universally considered as a Sabine city. (Strab. v. p. 228; Plin. iii. 5, s. 9, 12, s. 17; Pol. iii. i. § 62.) In like manner Pliny includes the important city of Tibur among the Sabines, though it was certainly commonly reckoned a Latin city, and never appears in the early history of Rome in connection with the Sabines. The fact appears to be, that the frontier between the Sabines and Latins was in early times constantly fluctuating, as the Sabines on the one hand were pressing down from the N., and on the other were driven back in their turn by the arms of the Romans and Latins. But on the division of Italy into regions by Augustus, the Anio was established as the boundary of the First Region, and for this reason was considered by Pliny as the limit also between the Latins and Sabines. (Plin. l. c.) It is remarkable that no name for the country is found in ancient writers, standing in the same relation to that of the people which Samnium does to Samnites, Latium to Latini, &c.: it is called only "the land of the Sabines" (Sabiniorem ager, or Sabini aeger, Liv. i. 36, ii. 16, &c.; Tac. Hist. iii. 78), and Roman writers would say "in Sabine versari, in Sabinos proficisci," &c. The Greeks indeed used Σαβηνα for the name of the country (Strab. v. pp. 219, 228, &c.; Steph. Byz. s. v.), which is called to the present day by the Roman peasants La Sabina, but we do not find any corresponding form in Latin authors.  

All ancient authors agree in representing the Sabines as one of the most ancient races of Italy, and as constituting one of the elements of the Roman people, at the same time that they were the progenitors of the far more numerous races which had spread themselves to the E. and S., under the names of Picentes, Veligni, and Samnites, the last of whom had in their turn become the parents of the Frenzani, the Lucanians, Apulians and Bruttians. The minor tribes of the Marsi, Marrucini and Vestini, were also in all probability of Sabine origin, though we have no distinct testimony to this effect [Marsi]. These various races are often comprehended by modern writers under the general name of Sabellian, which is convenient as an ethnical designation; but there is no ancient authority for this use of the word, which was first introduced by Niebuhr (vol. p. 91). Pliny indeed in one passage says that the Samnites were also called Sabelli (Plin. iii. 12. s. 17), and this is confirmed by Strabo (v. p. 270). Sabellus is found also in Livy and other Latin writers, as an adjective form for Samnite, though never for the name of the nation (Liv. viii. 1, x. 19); but it is frequently used, especially by the poets, simply as an equivalent for the adjective Sabine. (Verg. G. ii. 167, Aen. vii. 665; Hor. Carm. iii. 6, 57; Juv. iii. 169.)  

But notwithstanding the important position of the Sabines in regard to the early history and ethnology of Italy, the Sabine language and the use of the Sabine script remain almost a question of complete obscurity as to their own origin or affinities. Strabo calls them a very ancient race and autochthons (v. p. 228), which may be understood as meaning that there was no account of their immigration or origin which he considered worthy of credit. He distinctly rejects as a fiction the notion that they or their Samnite descendants were of Laconian origin (ib. p. 250); an idea which was very probably suggested only by fancied resemblances in their manners and institutions to those of Sparta (Dionys. ii. 49). But this notion, though not censured by any historian of authority, was carefully thrown up by the Roman poets, who frequently allude to the Lacedaemonian descent of the Sabines (Ovid. Fast. i. 269, iii. 250; Sil. Ital. ii. 8, viii. 412, &c.), and adopted also by some prose writers (Plut. Rom. 16; Hygin. Ap. Serv. ad Aen. viii. 638). A much more important statement is that preserved to us by Dionysius on the authority of Zenodotus of Teosce, which represents the Sabines as an offshoot of the Umbrian race (Dionys. ii. 49). The authority of Zenodotus is indeed in itself not worth much, and his statement as reported to us is somewhat artificial, but many authorities would lead us to the same conclusion, that the Sabines and Umbrians were closely cognate races, and branches of the same original stock. We learn from the Eugubine tables that Sancus, the tutelary divinity of the Sabine nation, was an object of especial worship with the Umbrians also; the same documents prove that various other points of the Sabine religion, which are spoken of as peculiar to that nation, were in fact common to the Umbrians also (Kienitz, Philol. Abh. 1880, p. 80). Unfortunately the Sabine language, which would have thrown much light upon the subject, is totally lost; not a single inscription has been preserved to us; but even the few words recorded by ancient writers, though many of them, as would naturally be the case in such a selection, words peculiar to the Sabines, yet are abundantly sufficient to show that there could be no essential difference between the language of the Sabines and their neighbours, the Umbrians on the one side, and the Oscans on the other (Kienitz, l. c.; Donaldson, Farronimnus, p. 8). The general similarity between their dialect and that of the Oscan was probably the cause that they adopted with facility in the more southern regions of Italy, which they had conquered,
the language of their Ocean subjects; indeed all the extant inscriptions in that language may be considered as Sabellio-Ocean, and have probably received some influence from the language of the conquered, though we have no means of estimating its amount. The original Sabines appear to have early lost the use of their own language, and adopted the general use of Latin; which, considering the rugged and seceded character of their country, and their primitive habits of life, could hardly have been the case, had the two languages been radically distinct.

On the whole, therefore, we may fairly conclude that the Sabines were only a branch of the same great family with the Oscans, Latins, and Umbrians, but apparently most closely related to the last of the three. Their name is generally derived from that of Sabus, who is supposed to have been a son of Sancus, the chief tutelary deity of the nation. (Cato, ap. Dionys. ii. 49; Sil. Ital. viii. 422; Serv. ad Aen. v. 638.) But another etymology given by ancient writers derives it from their religious habits and devotion to the worship of the gods. (Varr. ap. Fest. p. 343; Plin. iii. 12. s. 17.) This last derivation in fact comes to much the same thing with the preceding one, for the name of Sabus (obviously a mythological personage) is itself connected with the Greek ἅρως, and with the word “serum” found in the Euganean tables in the sense of venerable or holy. But if Sabus is with the Latin “sancus,” “sanctum,” “sacrum,” &c. (Donaldson, &c.)

The original abode of the Sabines was, according to Cato, in the upper valley of the Aternum, about Amiurum, at the foot of the loftiest group of the Apennines. We cannot indeed understand literally, at least as applying to the whole nation, his assertion (as quoted by Dionysius) that they proceeded from a village called Tetrinia, near Amiurum (Cato, ap. Dionys. i. 14. ii. 49); though this may have been true of the particular band or clan which invaded and occupied Rome. But there is no reason to doubt the general fact that the Sabines, at the earliest period when their name appears in history, occupied the lofty mountain group in question with its adjacent valleys, which, from the peculiar configuration of this part of the Apennines, would afford natural and convenient outlets to their migrations in all directions. (Apenninus.)

The sending forth of these migrations, or national colonies, as they may be called, was connected with an ancient custom which, though not unknown to the other nations of Italy, seems to have been more peculiarly characteristic of the Sabines—the Ver Sacrum or “sacred spring.” This consisted of dedicating, by a solemn vow, usually in time of war or famine, all the produce of the ensuing year, to some deity; Mancers or Mars seems to have been the one commonly selected. The cattle born in that year were accordingly sacrificed to the deity chosen, and the earliest years of the ensuing year, to some deity; Mancers or Mars seems to have been the one commonly selected. The cattle born in that year were accordingly sacrificed to the deity chosen, while the children were allowed to grow up to man's estate, and were then sent forth in a body to find for themselves new places of abode beyond the limits of their native country. (Strab. v. p. 250; Fest. s. v. Memerlinii, p. 158. Socratii, p. 321, Ver Sacrum, p. 379: Socratii, ap. Not. p. 522; Varr. R. R. iii. 16. § 29. Liv. xxii. 9. 10.)

Such colonies were related by tradition to have given origin to the nations of the Picentes, the Samnites, and the Hirpini, and in accordance with the notion of their consecration to Mars they were reported to have been guided by a woodpecker, or a wolf, the animals peculiarly connected with that deity. (Strab. v. pp. 210, 250; Fest. pp. 106, 212.)

We have no statements of the period at which these successive emigrations towards the E. and S. took place; all that is known of the early history of the towns to which they gave rise will be found in the respective articles, and we shall here content ourselves with tracing that of the Sabines themselves, or the people to whom that appellation continued to be confined by the Romans.

These, when they first emerged from their upland valleys into the neighbourhood of Rome, found that city, as well as the surrounding territory, in the possession of a people whom Dionysius calls Aborigines, and who, finding themselves unable to withstand the pressure of the Sabines, withdrew, after the capture of their capital city of Latina towards the lower valley of the Tiber, where they settled themselves in Latium, and finally became one of the constituent elements of the Latin people. (Cato, ap. Dionys. i. 14. ii. 48. 49.) Meanwhile the Sabines, after they had firmly established themselves in the possession of Rome and its neighbourhood, gradually pressed on towards the S. and W., and occupied the whole of the hilly and rugged country which extends from Rome to the plain of the Tiber, and from the neighbourhood of Orculum to that of Tibur (Tegea). (Dionys. ii. 49.) The conquest and colonisation of this extensive tract was probably the work of a long time, but at the first dawn of history we find the Sabines already established on the left bank of the Tiber down to within a few miles of its confluence with the Anius; and at a period little subsequent to the foundation of Rome, they pressed on their advanced posts still further, and established themselves on the Quirinal hill, at the very gates of the rising city. The history of the Sabines under Titus Tatius, of the wars of that king with Romulus, and of the settlement of the Sabines at Rome upon equal terms with the Latin inhabitants, so that the two became gradually blended into one people, has been so mixed up with fables and distorted by poetical and mythological legends, that we may well despair of recovering the truth, or extricating the real history from the maze of various and discordant traditions; but it does not the less represent a real series of events. It is an unquestionable historical fact that a large part of the population of the city was of Sabine origin, and the settlement of that people on the Quirinal is attested by numerous local traditions, which there is certainly no reason to doubt. (Schweiger, Rom. Gesch. vol. i. pp. 249, 478, &c.)

We cannot attempt here to discuss the various theories that have been suggested with a view to explain the real nature of the Sabine invasion, and the origin of the legends connected with them. One of the most plausible of these is that which supposes Rome to have been really conquered by the Sabines, and that it was only by a subsequent struggle that the Latin settlers on the Palatine attained an equality of rights. (Ilmen, Researches into the History of the Roman Constitution, p. 44, &c.; Schweiger, vol. i. pp. 491—493.) It cannot be denied that this view has much to recommend it, and explains many obscure points in the early history of Rome; but it may be scarcely regarded as based on such an amount of evidence as would entitle it to be received as a historical fact.

The Sabine influence struck deep into the character of the Roman people; but its effect was especially prominent in its bearing on their sacred
SABINI.

riters, and on their sacred festival as well as religious institutions. This is in entire accordance with the character given of the Sabines by Varro and Pliny; and it is no wonder therefore that the traditions of the Sabines generally ascribed to Numa, the Sabine, the whole, or by far the greater part, of the religious institutions of their country, in the same manner as they did the military and political ones to his predecessor Romulus. Numa, indeed, became to a great extent the representative, or rather the impersonation of the Sabine element of the Roman people; at the same time that he was so generally regarded as the founder of all religious rites and institutions, that it became customary to ascribe to him even those which were certainly not of Sabine origin, but belonged to the Latins or were derived from Alba. (Ambrosios, Studiosa, pp. 141-148; Schweger, R. G. vol. i. pp. 543, 554.)

Throughout these earliest traditions concerning the relations of the Sabines with Rome, Cures is the city that appears to take the most prominent part. Tatius himself was king of Cures (Dionys. ii. 36); and it was thither also that the patricians sent, after the interregnum, to seek out the wise and pacific Numa. (Liv. i. 18; Dionys. ii. 58.) A still more striking proof of the connection of the Roman Sabines with Cures was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as immediately derived from that of Cures. (Liv. i. 13; Vari. L. L. vi. 68; Dionys. ii. 46; Strab. v. p. 228.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from "quiris," a spear, and meant merely "spearmen" or "warriors," just as Quirius was the "spear-god," or god of war, closely connected, though not identical with, Mammes or Mars. It is certain also that this superiority of Cures, if it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconsiderable place. [CURES.]

The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secure the rising city from hostilities with the rest of the nation. Already in the reign of Titus Hostilius, the successor of Numa, we find that monarch engaged in hostilities with the Sabines, whose territory he invaded. The decisive battle is said to have taken place at a forest called Silva Malitiosa, the site of which is unknown. (Liv. i. 30; Dionys. iii. 32, 33.) During the reign of Ancus Marcius, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Colatina and the adjoining territory. (Liv. i. 36-38; Dionys. iii. 55-66.) Cicero also speaks of Tarquinius as having crossed the Sabines from the very walls of the city. (Cic. de gen. ii. 20.) There can be no doubt that they had at this time extended their power to the right bank of the Anio, and made themselves masters of a considerable part of the territory which had previously belonged to the Latins. From this time no further mention of them occurs in the history of Rome till after the expulsion of the kings; but in n. c. 504, after the expulsion of Porcina, a Sabine war again broke out, and from this time that people appears almost as frequently among the enemies of Rome, as the Veientes or the Volscians. But the renewal of hostilities was marked by one incident, which exercised a permanent effect on Roman history. The whole of one clan of the Sabines, headed by a leader named Atta Clavus, disentoming from the policy of their countrymen, migrated in a body to Rome, where they were welcomed as citizens, and gave rise to the powerful family and tribe of the Claudii. (Liv. ii. 16; Dionys. v. 40; Virg. Aen. vii. 708; Tac. Ann. xi. 24; Appian, Rom. i. Fr. 11.)

It is unnecessary to recapitulate in detail the accounts of the petty wars with the Sabines in the early ages of the Republic, which present few features of historical interest. They are of much the same general character as with the Veientes and the Volscians, but for some reason or other seem to have been a much less favourite subject for popular legend and national vanity, and therefore afford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed dispenses of them for the most part in a very summarily manner; but they are related in considerable detail by Dionysius. One thing, however, is evident, that neither the power nor the spirit of the Sabines had been broken; as they are represented in n. c. 499, as carrying their raids up to the very gates of Rome; and even in n. c. 449, when the decisive victory of M. Horatius was followed by the capture of the Sabine camp, we are told that it was found full of booty, obtained by the plunder of the Roman territories. (Liv. ii. 16, 18, &c. iii. 26, 30, 38, 61—63; Dionys. v. 37—47, vi. 31, &c.) On this, as on several other occasions, Eretum appears as the frontier town of the Sabines, where they established their head-quarters, and from whence they made incursions into the Roman territory.

There is nothing in the accounts transmitted to us of this victory of M. Horatius over the Sabines to distinguish it from numerous other instances of similar successes, but it seems to have been really of importance; at least it was followed by the remarkable result that the wars with the Sabines, which for more than fifty years had been of such perpetual recurrence, ceased altogether from this time, and for more than a century and a half the name of the Sabines is scarcely mentioned in history. The circumstance is the more remarkable, because during a great part of this interval the Romans were engaged in a fierce contest with the Samnites, the descendants of the Sabines, but who do not appear to have maintained any kind of political relation with their progenitors. Of the terms of the peace which subsisted between the Sabines and Romans during this period we have no account. Niebuhr's conjecture that they enjoyed the rights of isopolity with the Romans (vol. ii. p. 447) is certainly without foundation; and they appear to have maintained a position of simple neutrality. We are equally at a loss to understand what should have induced them at length suddenly to depart from this policy, but in the year n. c. 319 we find the Sabines once more in arms against Rome. They were, however, easily vanquished. The consul M'. Curius Dentatus, who had already put an end to the Third Samnite War, next turned his arms against the Sabines, and reduced them to submission in the course of a single campaign. (Liv. Epit. xi.; Vict. Flor. iii. 33; Oros. iii. 22; Flor. i. 15.) They were severely punished for their defection; great numbers of pri-
soners were sold as slaves; the remaining citizens were admitted to the Roman franchise, but without the right of suffrage, and their principal towns were reduced to the subordinate condition of Praefecturae. (Vell. Pat. i. 14; Festus, s. v. Praefecturae; Serv. ad Aen. vii. 709, whose statement can only refer to this period, though erroneously transferred by him to a much earlier one.) The right of suffrage was, however, granted to them about 20 years later (u. c. 268); and from this time the Sabines enjoyed the full rights of Roman citizens, and were included in the Sergian tribe. (Vell. Pat. l. c.; Cic. prov. sulb. 13, in P. R. iii. 15.) This circumstance at once separated them from the cause of the other nations of Italy, including their own kinsmen the Samnites, Picentes, and Peligni, during the great contest of the Social War. On that occasion the Sabines, as well as the Latins and Campanians, were arrived on behalf of Rome.

The last occasion on which the name of the Sabines as a people is found in history is during the Second Punic War, when they came forward in a body to furnish volunteers to the army of Scipio (Liv. xxviii. 45.) After their incorporation with the Roman state, we scarcely meet with any separate notice of them, though they continued to be regarded as among the bravest and hardiest of the subjects of Rome. Hence Cicero calls them " florem Italicq ac robur rei publicae." (Pro Ligur. 11.)

Under the Empire their name did not even continue to be used as a territorial designation. Their territory was included in the Fourth Region by Augustus. (Plin. iii. 12. s. 17.) It was subsequently reckoned a part of the province of Valeria, and is included with the rest of that province under the appellation of Picenum in the Liber Colonorum. (Lib. Col. pp. 253, 257. &c.; P. Dac. Hist. Lang. ii. 20; Mommsen, ad Lib. Col. p. 212.) But though the name of the Sabines thus disappeared from official usages, it still continued in current popular use. Indeed it was not likely that a people so attached to ancient usages, and so primitive in their habits, would readily lose or abandon their old appellation. Hence it is almost the only instance in which the ancient name of a district or region of Italy has been transmitted without alteration to the present day; the province of La Sabina, in the division of the two which the States of the Church are divided, and is comprised within nearly the same limits as it was in the days of Strabo. (Rampoldi, Diz. Corvog. d’Italia, s. v.)

The country of the Sabines was, as already mentioned, for the most part of a rugged and mountainous character; even at the present day it is calculated that above two-thirds of it are incapable of any kind of cultivation. But the valleys are fertile, and even luxuriant; and the sides of the hills, and lower slopes of the mountains, are well adapted for the growth both of vines and olives. The northernmost tract of their territory, including the upper valleys of the Nar and Velinus, especially the neighbourhood of Nursia, was indeed a cold and bleak highland country, shut in all sides by some of the highest ranges of the Apennines; and the whole broad tract which extends from the group of the Monte Velino, S. of Reate, to the front of the mountain ranges that border the Campagna of Rome, is little more than a mass of broken and rugged mountains, of little elevation to the more central ranges of the Apennines, but still far from inconsiderable. The Monte Gravara (the Mons Lucertulis of Horace), which rises directly from the plain of the Campagna, attains to an elevation of 4285 English feet above the sea. But the isolated mountain called Monte Terminillo near Leomessa, N.E. of Rieti, which forms a conspicuous object in the view from Rome, rises to a height of above 7000 feet, while the Monte Velino, S. of Rieti, on the confines of the Sabines and the Vestini, is not less than 8180 feet in height. The whole of the ridge, also, which separates the Sabines from Picenum is one of the most elevated of the Apennines. The Monti della Sabina, in which the Nurs takes its rise, attain the height of 7200 feet, while the Monte Vettore and Pizzo di Sessa, which form the continuation of the same chain towards the Gran Sasso, rise to a still greater elevation. There can be no doubt that these lofty and rugged groups of mountains are those designated by the ancients as the Mons Fiscellus, Tetrica (" Tetricus horrentes rupes," Virg. Aen. vii. 713), and Severus; but we are unable to identify with any certainty the particular mountains to which these names were applied. The Sabines seem to have possessed all these qualities in so high a degree that they became, as it were, the types of them among the Romans. Cicero calls them " severissimi homines Sabini," and Livy speaks of the " disciplina tetrica ac tristissimum Sabinorum." (Cic. in Vatin. 15, pro Ligur. 11; Liv. i. 18.) Cat. also described the severe and frugal mode of life of the early Romans as inherited from the Sabines (op. Serv. ad Aen. viii. 638). Their frugal manners and moral purity continued indeed, even under the Roman government, to be an object of admiration, and are often introduced by the poets of the Empire as a contrast to the luxuries and dissoluteness of the capital. (Her. Carm. iii. 6. 38 - 44, Epod. 2. 41, Epist. ii. 1. 25; Propert. iii. 24. 47; Juvi. iii. 168.) With these qualities were combined, as is not unfrequently found among secluded mountaineers, an earnest piety and strong religious feeling, together with a strenuous attachment to the religious usages and forms of worship which had been transmitted to them by their ancestors. The religion of the Sabines does not appear to have differed essentially from that of the other neighbouring nations of Italy; but they had several peculiar divinities, or at least divinities unknown to the Latins or Etruscans, though some of them seem to have been common to the Umbrians also. At the head of these stood Sancus, called also Semo Sancus, who was the tutelary divinity of the nation, and the reputed father of their mythical progenitor, or eponymous hero Sabus. He was considered as the peculiar guardian of oaths, and was thence generally identified by the Romans with Dains Fidus; while others, for less obvious reasons, identified him with...
SABINI.

Herodot. (Ovid. Fast. vi. 215; Sil. Ital. viii. 420; Lactant. i. 15; Augustin, Civ. Dei, xviii. 19; Ambrosch. Studien, p. 170, &c.) Among the other deities whose worship is expressly said to have been introduced at Rome by the Sabines, we find Sol, Feronia, Minerva and Mars, or Maners, as he was called by the Sabines and their descendants. (Varr. L. L. v. 74.) Minerva was, however, certainly an Etruscan divinity also; and in like manner Vefovis, Ops, Diana, and several other deities, which are said to be of Sabine extraction, were clearly common to the Latins also, and probably formed part of the mythology of all the Italian nations. (Varro, l. c.; Augustin, C. D. iv. 23; Schwegler, Rom. Gesch, p. 250; Ambrosch, l. c. pp. 141—176.) On the other hand Quirinus was certainly a Sabine deity, notwithstanding his subsequent identification with the deified Romulus. His temple, as well as that of Sancus, stood on the Quirinal hill, to which indeed it probably gave name. (Varr. L. L. v. 51; Ambrosch, pp. 149, 169.)

Connected with the religious rites of the Sabines may be mentioned the various precautions attached to magical incantations, which they continued to practise down to a late period, as well as their descendents the Marsi and other Sabelian tribes. (Hor. Epod. 17, 28, Sat. i. 9. 29.) They were noted also for their skill, or pretended skill, in divination by dreams. (Fest. p. 335.)

The rites of augury, and especially of auspices, or omens from the flight of birds, were also considered to be essentially of Sabine origin, though certainly common in more or less degree to the other nations of Central Italy. Attius Nonius, the celebrated augur in the reign of Tarquin the Elder, who was regarded by many as the founder of the whole science of augury (Cic. de Div. ii. 38), was a Sabine, and the institution of the "auspicia majora" was also referred to Numla. (Cic. de Rep. ii. 14.)

The Sabine language, as already observed, is known to us only from a few words preserved by ancient writers, Varro, Festus, &c. Some of these, as "multa," "albus," "imperator," &c., are well known to us as Latin words, though said to have originally passed into that language from the Sabines. Others, such as "hirpus" or "ipurus" for a wolf, "entr" or "quiris" (a spear), "nar" (sulphur), "rubus" (a hill), &c., were altogether strange to the Latin, though still in use among the Sabines.

A more general peculiarity of the Sabine dialect, and which in itself proves it to have been a cognate language with the Latin, is that it inserted the digamma or :frame at the commencement of many words instead of the rough aspirate; thus they said "aires," "fedus," "festis," "fostia," &c., for the Latin "hircus," "helus," "hostis," &c. (Varro, L. L. v. 97; Fest. pp. 84, 102; Kienze, Philob. Abhandl. pp. 70—76; Mommsen, U. L. Dialekte, pp. 335—359.) The two last authors have well brought together the little that we really know of the Sabine language. It is not quite clear from the expressions of Varro how far the Sabine language could be considered as still existing in his time; but it seems probable that it could no longer be regarded as a living language, though the peculiar expressions and forms referred to were still in use as provincialisms. (Kienze, l. c.)

The Sabines, we are told, dwelt principally in villages, and even their towns in the earliest times were unwalled. (Strab. v. p. 228; Dionys. ii. 49.) This is one of the points in which they more thought to resemble the Macedonians (Phil. Rom. 16); though it probably arose merely from their simplicity of manners, and their retaining unchanged the habits of primitive mountaineers. In accordance with this statement we find very few towns mentioned in their territory; and even of these Reate appears to have been the only one that was ever a place of much importance. Intercorea, about 14 miles higher up the valley of the Velinus (the name of which is still preserved in Antraco), seems never to have been a municipal town; and it is probable that the whole upper valley of the Velinus was, municipally speaking, included in the territory of Reate, as we know was the case with the lower valley also, down to the falls of the river, which formed the limit of the territory of the Sabines on this side; Interamna, as well as Narrina and Oriculum, being included in Umbria. Falacies, the birthplace of Vespanius, situated near the sources of the Velinus, was certainly a mere village; as was also Formi (Cirista Tomannus), situated in the cross valley which led from Intercorea to Antraco, and marked the line of communication between the valley of the Velinus and that of the Aternum. Aternum itself, though situated in the valley of the Aternum, so that it would seem to have more naturally belonged to the Vestini, was certainly a Sabine city (Plin. iii. 12. a. 17; Strab. v. p. 228), and was probably, next to Reate, the most considerable that they possessed.

Nursia, in the upper valley of the Nar, was the chief town of the surrounding district, but was never a place of much importance. The lower country of the Sabines, between Reate and Rome, seems to have contained several small towns, which were of municipal rank, though said by Strabo to be little more than villages. Among these were Forum Novum, the site of which may be fixed at Escoreo, on the banks of the Imole, and Forum Dechi, the situation of which is wholly unknown. Both these were, as the names show, Roman towns, and not ancient Sabine cities; the former appears to have replaced the Sabine Casperilia, which was probably situated at Aspro, in the same neighbourhood. On the other hand Cures, the supposed metropolis of the Sabines that had settled at least at this rank, though not a place of much importance. The same was the case with Eretum, which was, as already observed, the last of the strictly Sabine towns in proceeding towards Rome; though Pliny includes Nomentum and Fidenae also among the Sabines. Besides these there were two towns of the name of Trebula, both of which must probably be placed in the southern part of the land of the Sabines. Of these Trebula Mutusca (the Mutuscae of Virgil, Aen. vii. 711) is represented by Monte Leone, about 13 miles S. of Rieti, and on the right of the Salarian Way; while Trebula Supervia may perhaps be placed at S. Antina near Stroncone, in the hills W. of Rieti. Lastly, Varla, in the valley of the Anio, 4 miles above Tibur, still called Vicivarro, would appear to have been certainly a Sabine town; the whole valley of the Digenta (Licanza), with its villages of Mandela, Digenta, and Fanum Vacuana (the well-known neighbourhood of Horace's Sabine farm), being included among its dependencies. (Digentia.)

The territory of the Sabines was traversed throughout its whole extent by the Latin Way, which was from an early period one of the great thoroughfares of Italy. This proceeded from Rome...
direct to Reate, and thence ascended the valley of the Velinus by Interocera and Falicenum, from whence it crossed the ridge of the Apenines into the valley of the Truentus in Picenum, and thus descends to Asculum and the Adriaeum. The stations between Rome and Reate were Eretum, which may be fixed at Grotta Marozza, and Vicus Novus, the site of which is marked by the Osteria Nuova, or Osteria dei Massacce, 32 miles from Rome. (Westphal, Rom. Komp. p. 128.)

SABIAN. Notwithstanding its mountainous character the Sabine territory was far from being poor. Its productions consisted chiefly of oil and wine, which, though not of first-rate quality, were abundant, and supplied a great part of the quantity used by the lower classes at Rome. (Hor. Carm. i. 9, 7; 20 f.; Juv. iii. 83.) The Sabine hills produced also in abundance the plant which was thence known as Sabina herba (still called Savin), which was used for the natives for incense, before the more costly frankincense was introduced from the East. (Plin. xvi. 20 s. 33; xvii. 11. s. 61; Virg. Col. 402; Ovid, Fast. i. 342.) The neighbourhood of Reate was also famous for its breed of mules and horses; and the mountains afforded excellent pastureage for sheep. The wilder and more inaccessible summits of the Apenines were said still to be frequented by wild goats, an animal long since extinct throughout the territory of Italy. (Var. R. B. ii. 1. § 3, 3. § 3.)

SABIS (Sabion), a small river of Carnia, which is mentioned by Mela in connection with two other small streams, the Andanus and Coros (iii. 8). It is also noticed by Pliny, who places it in the neighbourhood of Hamnuna (Omnue, viii. 23. s. 27). Plutarch speaks of a town in Carnia of the same name with this river (vi. 8. § 14.).

SABINE (Sambra), a river of Belgica, which joins the Mosa (Maas) at Charleroi. Caesar (b. c. 57) marched against the Nervii and their confederates from the south, and he found the enemy posted on the north side of the Sabis (v. Gr. ii. 16). In this battle the Belgae were defeated with great slaughter.

SABONES, in Gallia Belgica, is placed by the Antoine Itin. on a road from Colonia Trajana (Kelis) to Juliumicum (Julières) and Colonia Agrippinensis (Cologne). Sabiones is supposed to be a place named Int-Sandnt near Straden, a town on the river Niers, a branch of the Maas. See Mediolanum in Gallia, No. 3.

SABOCT (Sabonc), in Germania Superior. Plut. iii. 5. § 20, a people of European Sarmatia, who, from the termination "zabo" = "bank," so often occurring in Russian and Polish local names, must be looked for in the basin of the river Saven, one of the largest affluent of the Vistula, and which drains a greater part of Galicia. (Scharf, Slav. Alt. vol. i. p. 206.)

SABOR, a place in Hispania Baetica, in the mountains above Malaga, near Canneb; known only from inscriptions. (Carter, Travela, p. 252; Ubert, vol. ii. pt. i. p. 350.)

SABRICA, a people who dwelt, according to Curtius, in the south-western part of the Punjab, near the neighbourhood of the Isnaa Patallae (ix. 8. § 4). They are mentioned in connection with the Pushtisi as forming part of the realm of Musceaus. (Arrian, Anab. iv. 15; Ptolem. xvi. 102.)

SABRATA (Saphara), in Ptol. iv. 3. § 41; Plin. v. 4. s. 5; Solin. 37; Itin. Antoni.; Ptol. Tab.; Sabrata, Procop. de Aed. vi. 4; Sabratha, Stadium, §§ 99, 100), a Punician town (Sic. ital. iii. 256) on the coast of N. Africa between the Syrtes. The name, which is of Phoenician origin and occurs on coins (Movers, Die Phöniz. vol. ii. p. 491), received the Gracianic form ARASTONUM; for although Pliny (l. c.) distinguishes the two towns they are undoubtedly the same places. It became afterwards a Roman colonia, and was the birthplace of Flavius Domitilla, the first wife of Vespasian, and mother of Titus and Domitian. (Sueton. Vespas. 3.) Justinian fortified it (Procop. l. c.), and it remained during the middle ages one of the most frequented markets on this coast, to which the natives of central Africa brought their grain. (comp. Ibn Abe El-Alamen, Journal Asiatique, 1844, vol. ii. p. 358.) Barth (Wanderungen, p. 277) has given an account of the extensive ruins of Sabrata, which he found to the W. of Tripoli, at Tripoli Vecchio, or Sardara-each-Scharaia, lat. 32° 49', long. 26° 26'. (Smith, Mediterraneo, p. 456.)

SABRINA (called by Ptolemy Sabrana, ii. 3. § 3; probably also the Sarua of the Geog. Rav. v. 31), a river on the W. coast of Britannia Romana, which falls into the sea near Venta Siluro, now the Severn. Its mouth formed an estuary of the same name. (Comp. Tac. Ann. xii. 31.) (T. H. D.)

SABRI (or Sabri) is placed in Armenia Minor, at the east of Antiochans. (R. Ant. p. 209; Holm. Imp. c. 27.) In the Peuting. Table it is called Saba.

SACA. (Sycithia.)

SACALA (or Saka), a desert spot on the seashore of Gedrosia which was visited by the fleet of Nearchus (Arrian, Ind. c. 22). It is not satisfactorily identified with any modern place. (Vincent, Voyage of Nearchus, i. p. 202.)

SACANI. (Namattia.)

SACAPENAE. (Sacasceni.)

SACASCENAE (Sacascenar, Strab. ii. p. 73, xi. pp. 509, 511, 529; Th. Sacasceni, Plin. vi. 11), a province of Armenia, on the borders of Gogarana, which it separated from the valley of the Araxes, and which extended to the river Cyrus. St. Martin (Mem. sur l'Armenie, vol. i. pp. 143, 209, 210) identifies it with the Armenian province of Soumdik, which was governed up to the 12th century by a race of princes who traced their descent to Haig, first king of Armenia, and who in the 9th century had political relations with the Byzantine court. (Const. Porph. de Caeren. Auth. Byz. vol. i. p. 397.) The Sacapene of Ptolemy (v. 13. § 9) appears to be the same as this province.

SACASTENAE (Sacastane), a district of the interior of Dracania, which was occupied by the Sace or Scythians, who appear to have descended through the Punjáb, and to have settled there. (Isidor. Maza. Puth. c. 18.) According to Strabo (v. 5) it bore the same name of Patamastane. It has been supposed that the modern name of this country, Sogastan or Sawatan, is derived from Sacastane (Wahl, l'ordre u. Mittel-Asien, i. p. 569; comp. Ritter, viii. p. 120). Four towns, Baida, Min, Palaceni, and Sigal, are mentioned in it; of these, Min may
SACCASENA.

be compared with Min-nagara, a town on the Indus belonging to the same people. (Arian, Peripol. Mar. Eryth. § 88.) [MINNAGARA.]

[S. L.]

SACCASENA, a place in Capпадocia, probably in the neighbourhood of the modern Urgub or Urgup. (It. Ant. p. 296.)

SACCOPODES (Σακκοπόδης), according to Strabo, a name given to the people of Adiabene in Asyria (xvi. p. 745). There has been a great dispute among learned men as to this name, which does not appear to be a genuine one. Bochart has suggested Saccopodes (Σακκοπόδης). On the whole, however, it would seem that the emendation of Strabo is the best, who reads Σακκοπόδης. (Groskurd, ad Strab. vol. iii. p. 223.) [V.]

SACER MONS (τὸ Τέρων δρός) was the name given to a hill about 3 miles from Rome, across the Anio and on the right of the Via Nomentana. It is mentioned only on occasion of the two secessions of the plebeians from Rome: the first of which, in B.C. 494, was terminated by the dexterity of Menenius Agrippa, and gave occasion to the election of the first tribunes of the people. (Liv. ii. 32; Dionys. vi. 45; Appian. B. C. i. 1.) In memory of this treaty and the "Lex Sacenta" which was passed thereon, a cairn was erected on the spot, which thenceforth always bore the name of "the Sacred Mount." (Dionys. vi. 90; Appian, I.c.) The second occasion was during the Decemvirate: when the plebeians, who had at first seceded only to the Aventine, on finding that this produced no effect, withdrew to the Sacred Mount (Liv. iii. 52). Cicero, on the contrary, represents the secession on this occasion as taking place first to the Sacred Mount, and then to the Aventine (Cic. de R. P. ii. 37).

Hardly any spot in the neighbourhood of Rome, not marked by any existing ruins, is so clearly identified by the descriptions of ancient writers as the Sacer Mons. Both Livy and Cicero concur in placing it 3 miles from Rome, across the Anio; and the former expressly tells us that the plebeians, on the second occasion, proceeded thither by the Via Nomentana, which was then called Ficalensis (Liv. ii. 32, iii. 52; Cic. Brut. 14, pro Cornel. ap. Ascon. p. 76). Now the third mile along the Via Nomentana brings us to a point just across the Anio; and on the right of the road at this point is a hill overlooking the river, in some degree isolated from the plateau beyond, with which it is, however, closely connected, while its front towards the valley of the Anio is steep and almost precipitous. On its E. side flows a small stream, descending from the Casale dei Pazzi (apparently the one known in ancient times as the Rivus Ullmannus); so that the position is one of considerable strength, especially on the side towards Rome. The site is now uninhabited, and designated by no peculiar appellation. (Nibby, Dictinm di Roma, vol. iii. pp. 54, 55.) [E. H. B.]

SACHALITAE (Σαχαλίται), a people upon the S. coast of Arabia Felix (Pol. vi. 7. §§ 11, 24, 25), and upon the bay called after them Sachalites Sinus (Σαχαλίτις χώρος). Respecting the position of this bay there was a difference of opinion among the ancient geographers, Marinus placing it towards the west, and Polyden towards the east, of the promontory Syagrus (Ρας Φαρτάκ). (Pol. ii. 17. § 2, comp. vi. 7. §§ 11, 46.) Marinus (p. 23) agrees with Polyden; and says that the bay extended from this promontory to the mouth of the Persian gulf (comp. Steph. B. s. r. Σαχαλίτις χώρος). Arian

SACRIPTORIUS. 871

(Peripl. Mar. Eryth. p. 17. § 29) on the other hand agrees with Marinus, and places the bay between Canes and the promontory Syagrus. (See C. Miller, ad Arian, L. c.)

SACILI or SACILI MARTIALIUM (Plin. iii. 3. s. 3; called by Ptolemy Ζακανιτις, ii. 4. § 11), a town of the Turdini in Hispania Baetica, at a place near Perabolus, now called Alcurena. (Morales, Antig. p. 96: Flores, Esp. Sorg. p. 147.) [T. H. D.]

SACORA (Σακορα), a town in the interior of Paphlogonia, is mentioned only by Ptolemy (v. 4. § 5). [L. S.]

SACORSA (Σακορσα), a town in the interior of Paphlogonia, is mentioned only by Ptolemy (v. 4. § 6). [L. S.]

SACRANIA, was the name given by a tradition, probably of very ancient date, to a conquering people or tribe which invaded Latium at a period long before the historical age. Festus represents them as proceeding from Baete, and expelling the Siculi from the S. of Italy, where Rome afterwards stood. He tells us that their name was derived from their being the offspring of a "ver sacrum." (Fest. s. r. Scaranii, p. 321.) It hence appears probable that the Sacranii of Festus were the same tribe as the people called Aborigines by Dionysius (i. 16) [Aborigines], or were at least one clan or tribe of that people. But it is very doubtful whether the name was ever really used as a national appellation. Virgil indeed alludes to the Sacranii as among the inhabitants of Latium in the days of Aeneas (Sacraniaco aedis, Aen. vii. 796), but apparently as a small and obscure tribe. Servius in his commentary on the passage gives different explanations of the name, all varying from one another, and from that given by Festus, which is the most distinct statement we have upon the subject. In another passage (ad Aen. xi. 317) Servius distinguishes the Sacranii from the Aborigines, but little value can be attached to his statements on such subjects. [E. H. B.]

SACRARIA [Clittumnus].

SACRIPORTUS (τὸ Τερόν ἄλφα), Appian, B. C. i. 87, a place in Latium, between Signia and Praeneeste, celebrated as the scene of the decisive battle between Sulla and the younger Marius, in which the latter was totally defeated, and compelled to take refuge within the walls of Praeneeste, B.C. 62. (Livy, v. 70. § 28; Appian, B. C. i. 87; Flor. iii. 21. § 29; Vict. I. iv. 68. 75; Lucan, ii. 134.) The scene of the battle is universally described as "apud Sacrportum," but with no more precise distinction of the locality. The name of Sacrropertus does not occur upon any other occasion, and we do not know what was the meaning of the name, whether it was a village or small town, or merely a spot so designated. But its locality may be approximately fixed by the accounts of the battle: this is described by Appian as taking place near Praeneeste, and by Plutarch (Sull. 28) as near Signia. We learn moreover from Appian that Sulla, having besieged and taken Setia, the younger Marius, who had in vain endeavoured to relieve it, retreated step by step before him until he arrived in the neighbourhood of Praeneeste, when he halted at Sacrropertus; and gave battle to his pursuer. It is therefore evident that it must have been situated in the plain between Praeneeste, between that city and Signia, and probably not far from the opening between the Aventine hills and the Volsene mountains, through which must have lain the line of retreat of Marius.
but it is impossible to fix the site with more precision.

SACRUM FORM. 1. (φo lepbr apaipíyelov, Strab. iii. p. 137), the SW. extremity of Lusitania; according to Strabo (c. e.), the most W. point, not only of Europe, but of the known world; the present Cape St. Vincent. Strabo adds that the surrounding district was called in Latin "Cuneas." Strabo also says that the geographer Artemidorus, who had been there, compared the promontory with the bow of a ship, and said that there were three small islands there; which, however, are not mentioned by any other writer, nor do they now exist. (Cf. Mela, ii. 1; Plin. iv. 22. s. 35, &e.)

2. (φo lepbr aüparov, Ptol. ii. 2. § 6) the SE. point of Illyria, now Carnsore Point. [T. H. D.]

SACRUM FORM. (φo lepbr aüparov, Ptol. iii. 5. § 8), the western point of the Achelous Dyos-

SACRUM FORM., a promontory of Lybia upon the borders of the Pamphylia, opposite the Chelidoninae Insulae, whence the promontory is called by Livy Chelidonium Prom. [For details, see Vol. i. p. 606, b.]

SADACORA (Σαδακορα), a town of Cappadocia, situated on the great road from Coropassus and Garabora to Mazaca. (Strab. xiv. p. 663.) [L. S.]

SADAME (Itin. Aut. p. 230; in Geog. Rv. 4. 6, written Sodama), a town in the NE. part of Thrace, on the road from Haidrianopolis to Devletus, its distance from the latter, according to the Itinerary, being 18,000 paces. This would give as its site the present town of Karnarv, situated near the source of a small river which runs through a narrow valley and falls into the Black Sea at Cape Zaitun. But according to Reichard it was in the neighbourhood of Omar-Fachi, which is perhaps the Sarbosam of Vandencomte. [J. E.]

SADOS (Σαδος), a small river of the Auren Chersonesos, which fell into the Bay of Bengal (Ptol. vii. 2. § 3). It has been supposed by For- linger to be the same as the present Sundoway. Ptolemy mentions also in the same locality a town called Sados, which was, in all probability, on or near the river. [V.]

SAELINII. [Ant. Soc. Vol. i. p. 249.]

SEÆPÆNUM or SEÆPÆNUM (the name is variously written both in MSS. and even inscriptions, but Saepinum is probably the most correct form; Zai- navor, Ptol.: E.th. Saepinas; Altilia near Sepino), a city of Samnium, in the country of the Pertri, on the E. slope of the great group of the Monte Ma- taro, and near the sources of the Tamaro (Tamarina). It seems to have been in early times one of the chief towns of the Samnites, or rather one of the few which they possessed worthy of the name. From its posi-
tion in the heart of their country it was or it near the municipal towns of Samnium; and it is certain from inscriptions that it did not bear the title of a Colonia. (Plin. iii. 12. s. 17; Ptol. iii. 1. § 67; Ovill. Insocr. 140; Mommsen, Insocr. R. N. 4918, 4929, 4934, &e.) Its name is mentioned also in the Tabula, which places it 50 M. from Bene-

SAPINUM, the intermediate station being placed called Sirpium, the site of which is unknown. (Tab. Pont.)

Saepinum became an episcopal see before the fall of the Roman Empire; it had, however, fallen into great decay in the time of the Lombards, but was reepeopled by Roncealdus, duke of Beneventum (P. Disc. v. 30), and survived till the 9th century, when it was taken and plundered by the Saracens; after which it seems to have been abandoned by the inhabitants, who withdrew to the site occupied by the modern town of Sepino, about 2 miles from the site of the ancient one. The ruins of the latter, which are now called Altilia, are evidently of Roman date, and, from their regularity and style of construction, ren-
der it probable that the town was entirely rebuilt at the time of the establishment of the Roman colony, very probably not on the same site with the ancient Samnite city. The existing walls, which remain in almost complete preservation throughout their whole circuit, and which, as we learn from an inscription over one of the gates, were certainly erected by Nero (Mommsen, I. R. N. 4922), enclose a perfect square, with the angles slightly rounded off, and four gates, placed at the four cardinal points, flanked by massive square towers. The masonry is of reticulated work, with square uprights of massive stone. Within the enclosure are the remains of a theatre, besides the substructions and vestiges of several other buildings, and numerous fragments of an archi-
tectural character, as well as inscriptions. Of these last the most interesting is one which is still extant at the gate leading to Bovianum, and has reference to the fleets which then, as now, passed annually backwards and forwards from the thorny plains of Apulia to the upland pastures of Samnium, espe-
cially of the Matres; and which appear to have even then followed the same line of route: the tratturo or ancient track still in use passing through the ruins of Altilia. (Craven's Abruzzi, vol. ii. pp. 130—135; Romanelli, vol. ii. pp. 444—448; Momms-
en, I. R. N. 4916.) [E. H. B.]

SAEPONE, an inland town of Hispania Baetica, near Cortes in the Sierras de Ronda. (Plin. iii. 1. s. 3.)

SEÆTABIÇULA (Σαιταβίζουα, Ptol. ii. 6. s. 62), a town of the Contestani in Hispania Tarra-

SEÆTÀS, or SEÆTÀS, or SEÆTÀS (Σαιτατος, Strab. iii. p. 160), a town of the Contestani in Hispania Tarraconensis. There was a Roman munici-
pium in the jurisdiction of Cartago (Mur. Insocr. ii. p. 1183. 6), and had the surname of Augustanorum. (Plin. iii. 3. s. 4.) It lay upon an eminence (Sil. Ital. iii. 372) to the S. of the Siuro, and was famed for its flax and linen manu-
facture. (Plin. xix. 2. s. 1; Catull. xii. 14, &c.) New Jataeci. (Cf. Laborde, Itin. i. p. 266; Marca, Hyp. ii. 6. p. 118.) [T. H. D.]

SEÆTÀS, or SEÆTÀS, or SEÆTÀS (Σαιτατος, Ptol. ii. 6. § 14), a river S. of the Siuro in the territory of the Contestani, on the E. coast of His-

SEÆTIAN. [SYTHIA.]

SEÆTÀS. [META.]
SAGALASSUS.

SAGALASSUS (Σαγαλασσός : Eit. Σαγαλασσιονις or Σαγαλασσης), an important town and fortress near the north-western frontier of Pisidia, or, as Strabo (xii. p. 569) less correctly states, of Isauria, while Ptolemy (v. 3. § 6) erroneously mentions it among the towns ofLycaonia. (Comp. Steph. B. s. v.) Alexander the Great took the town by assault, having previously defeated its brave Pisidian inhabitants, who met the aggressor drawn up on a hill outside their town. (Arrian, Anab. i. 28.) Livy (xxxviii. 15), in his account of the expedition of Qn. Maullius, describes Sagalassus as situated in a fertile plain, abounding in every species of produce; he lists its characterises its inhabitants as the bravest of the Pisidians, and the town itself as most strongly fortified. Maullius did not take it, but by ravaging its territory compelled the Sagalassians to come to terms, to pay a contribution of 50 talents, 20,000 medimni of wheat, and the same quantity of barley. Strabo states that it was one of the chief towns of Pisidia, and that after passing under the dominion of Amyntas, tetrarch of Lycaonia and Galatia, it became part of the Roman province. He adds that it was only one day's march from Apamea, whereas we learn from Arrian that Alexander the Greats was five days on the road between the two towns; but the detention of the latter was not occasioned by the length of the road but by other circumstances, so that Strabo's account is not opposed to that of Arrian. (Comp. Polyb. xxix. 19: Plin. v. 24.) The town is mentioned also by Hierocles (p. 699), in the Ecclesiastical Notices, and the Acts of Councils, from which it appears to have been an episcopal see.

The traveller Lucas (Triis Voyages, i. p. 181, and Second Voyage, i. c. 34) was the first that reported the existence of extensive ruins at a place called Aglauanum, and the resemblance of the same led him to identify these ruins with the site of the ancient Sagalassus. This conjecture has since been fully confirmed by Arundell (A Visit to the Seven Churches, p. 132, foll.), who describes these ruins as situated on the long terrace of a lofty mountain, rising above the village of Aglauanum, and consisting chiefly of massy walls, heaps of sculptured stones, and innumerable sepulchral vaults in the almost perpendicular side of the mountain. A little lower down the terrace are considerable remains of a large building on a large paved oblong area, full of fluted columns, pedestals, &c., about 240 feet long; a portico nearly 300 feet long and 27 wide; and beyond this some magnificent remains either of a temple or a gymnasium. Above these rises a steep hill with a few remains on the top, which was probably the acropolis. There is also a large theatre in a fine state of preservation. Inscriptions with the words Σαγαλασσιων πολεω leave no doubt as to these noble remains belonging to the ancient town of Sagalassus. (Comp. Hamilton, Researches, vol. i. p. 486, foll.; Fellows, Asia Minor, p. 164, foll.)

[S.]

SAGANUS (Σαγανος, Marctian, Peripl. p. 21., ed. Hudson), a small river on the coast of Carmania, about 200 stadia from Harmazma. It is mentioned also by Ptolemy (vi. § 8. 4), and Pliny (vi. 25). It is probably the same stream which is called by Amianus Marcellinus, Saganis (xxiii. 6). Vincent thinks that it may be represented by a small river which flows into the Persian Gulf, near Casroon. (Voy. of Nearcsea, vol. i. p. 370.)

[S.]

SAGAPOLIA (Σαγαπολια or Σαγαπολα ης, Pot. iv. 6. §§ 8. 14. 16. 17.), a mountain of Interior Libya, from which flows the Subus, the position of which is fixed by Ptolemy (l. c.) 15° E. longer, 20° N. lat. It may be assumed that the divergent which Ptolemy describes as ascending to this mountain from the Niger is one of the tributaries which flow into the Drijda or Quorra, from the highlands to the N. of that river (comp. Journ. Geog. Soc. vol. ii. p. 13.)

[E. B. J.]

SAGAIBAUCAE. [Sagaaull.]

SAGARIS, a river of European Sarmatia (Ov. ex Ponto iv. 1047), which has been assumed, from the name, to have discharged itself into the Sinus Sagarius. (Pline. ii. 26.)

[SAGARTII. [Persis.]

SAGIDA (Σαγίδα or Σαγηδα, Potl. vii. i. § 71), a metropolis of Central India, which is perhaps the same as the present Sahgarpur, near the sources of the river Samos. [V.]

SAGAS (Σαγας, Strab. vi. p. 261), a river of Bruttium, on the E. coast of the peninsula, to the S. of Caunaon, between that city and Locri. It is celebrated in history for the great battle fought on its banks, in which an army of 130,000 Saronians was said to have been totally defeated by 10,000 Locrians; an event regarded as so extraordinary that it passed into a kind of proverb for something that appeared incredible, though true. (Αληθεστα των ερι Σαγας, Suid. s. v.; Strab. vi. p. 261; Civic. de N. D. iii. 5; Justin. x. 3; Plin. iii. 10. s. 15.) The victory was ascribed by the Locrians to the direct intervention of the Dioscuri, to whom they in consequence erected altars on the banks of the river, which were apparently still extant in the time of Strabo. It was added that the news of the victory was miraculously conveyed to the Greeks assembled at Olympia the same day that the battle was fought. (Strab. L. c.; Civic. de N. D. ii. 2.) But notwithstanding the celebrity thus attached to it, the date and occasion of the battle are very uncertain; and the circumstances connected with it by Strabo and Justin would lead to opposite conclusions. [Crotona.]

The date assigned by Heyne is n. c. 560, while Strabo certainly seems to imply that it took place after the fall of Sybaris in n. c. 510. (Grote's Greece, vol. iv. p. 552, note.) But whatever uncertainty prevailed concerning the battle, it seems certain that the Sagras itself was a well known stream in the days of Strabo and Pliny, both of whom concur in placing it to the N. of Locri and S. of Caunaon, and as the latter city was a colony and perhaps a dependency of Crotona, it is probable that the battle would be fought between it and Locri. Unfortunately the site of Caunaon cannot be determined [Caunaon], and we are therefore quite at a loss which of the small streams flowing into the sea between Locri and the Punta di Silla should be identified with the celebrated Sagas. The Alero has been generally fixed upon by local writers, but has really no better claim than any other. (Romanelli, vol. i. p. 161; Swinburne's Travels, vol. i. p. 340.)

[SAGRUS (Σαγρος : Sangro), one of the most considerable of the rivers of Samnium, which has its sources in the lofty group of the Apennines S. of the Lago di Fucino, and has a course of above 70 miles from thence to the Adriatic. It flows at first in a SE. direction, passes under the walls of Ausdina as well as of the modern Castel di Sangro, and in this part of its course flows through a broad and level, but upland valley, bounded on both sides by lofty
mountains. After passing Audaena it turns abruptly to the NE., and pursues this course till it reaches the sea. In the lower part of its course it enters the territory of the Frenutani, which it traverses in its whole breadth, flowing into the sea between Histoumum and Ortona. Strabo indeed represents it as forming the boundary between the Frenutani and the Peliugii, but this is certainly a mistake, as the Peliugii did not in fact descend to the sea-coast at all, and Ortona, one of the chief towns of the Frenutani, was situated to the N. of the Sagrus. (Strab. v. p. 242; Polt. iii. 1. § 19; where the name is erroneously written Σαγιωτα.) The upper valley of the Sagrus, with its adjoining mountains, was the territory of the Samnite tribe of the Caraceni. (Polt. iii. 1. § 66.)

SAGUNTIA. 1. (Σαγουρία, Polt. ii. 4. § 13.), a town in the SW. part of Hispania Baetica. (Liv. xxxiv. 12: Plin. iii. 1. s. 3.) Now Iligon or Iligone, NW. from Medina Sidonia, where there are many ruins. (Morales, Antiq. p. 87; Flores, Esp. Sagg. x. p. 47.)

SAGUNTUM (Σαγουρενα, Polt. ii. 6. § 63), also called SAGUNTUS (Mela. i. 6; Σαγουρασ, Steph. B. s. a.), a town of the Eleutani or Selecati in Hispania Tarraconensis, seated on an eminence on the banks of the river Pallantia, between Sueco and Tarraco, and not far from the sea. Strabo (iii. p. 159) erroneously places it near the mouth of the Jberus, though it lies near 100 miles to the SW. of it. The same author states that it was founded by Greeks from Zacynthus; and we find that Stephanus calls it Zacauba and Zaceduus, Livy adds that the founders were mixed with Etruschi from Adea (Liv. xii. 7); whence we sometimes find the city called Asouma Saguntus. (Sil. Ital. i. 332.) At the time of its foundation, or at least in its later periods, the tribe of the Herculani, the inhabitants of this town, were powerful and possessed of great wealth. (Herod. ii. 263, 505.) Saguntum lay in a very fertile district (Polib. xvii. 2), and attained to great wealth by means of its commerce. It was the immediate cause of the Second Punic War, from its being besieged by Hannibal when it was in the alliance of the Romans. The siege is memorable in history. The town was taken, after a desperate resistance, in n. c. 218, and all the adult males put to the sword; but how long the siege lasted is uncertain. (Liv. xxi. 14, 15; Cf. Sil. Ital. i. 271, seq.) Eight years afterwards Saguntum was recovered by the Romans. The Carthaginians had partly destroyed it, and had used it as a place for the custody of their hostages. (Polib. iii. 98; Liv. xxiv. 42.) The city was restored by the Romans and made a Roman colony. (Liv. xxviii. 39; Plin. iii. 3. 4.) Saguntum was famous for its manufacture of earthenware cups (calices Saguntini) (Plin. xxxv. 12. s. 46; Mart. iv. 46, xiv. 108), and the first crown in the neighbourhoud were considered very fine. (Plin. xv. 18. s. 19.) Its site is now occupied by the town of Murciepido, which draws its name from the ancient fortifications (muri veteres). But little now remains of the ruins, the materials having been unsparingly used by the inhabitants for the purpose of building.

The great temple of Diana stood where the convent of La Trinidad now does. Here are let in some six Roman inscriptions relating to the families of Sergia and others. At the back is a water-course, with portions of the walls of the Circeu Maximus. In the suburb Son Saldenc, a mosaic pavement of Baebius was discovered in 1745, which soon afterwards was let go to ruin, like that of Italic. The famous theatre is placed on the slope above the town, to which the orchestra is turned; it was much destroyed by Suchet, who used the stones to strengthen the castle, whose long lines of wall and tower rise grandly above; the general form of the theatre is, however, easily to be made out... The local arrangements are such as are common to Roman theatres, and resemble those of Merida. They have been measured and described by Dein Marti; Ponz, iv. 252, in the Exp. Sagg. viii. 151. (Pond's Handbook for Spain, p. 206.) For the coins of Saguntum see Flores, Jic. ii. p. 560; Monnet, i. p. 49, Supp. i. p. 98. The accompanying coin of Saguntum contains on the obverse the head of Tiberius, and on the reverse the prow of a ship.

COIN OF SAGUNTUM.

SAGUTE SINUS (Poliib. ap. Plin. v. 1), a gulf on the W. coast of Mauretania, S. of the river Lixus, which must be identified with the Emporius Sinus. The Phoenician word "Sacharut" signifies "Emporia," and by an elision not uncommon among the Africans assumed the form under which it appears in Polybius. (Movers, Die Phöniz. vol. ii. p. 541.)

SAGYLIUM (Σαγυλιον), a castle situated on a steep rock in the interior of Fontes, which was one of the strongholds of the Pontian kings. (Strab. xii. pp. 560, 561.)

SAILS (Σαυς, Herod. ii. 28, 59, 152, 169; Strab. xvii. p. 802; Steph. B. s. v.; Mela. i. 9. § 9; Plin. v. 10. s. 11: Eth. Σαυσαρ, senv. Σαυριος), the capital of the Naetian Nome in the Delta, and occasionally of Lower Aegypt also, stood, in lat. 31° 4' N., on the right bank of the Canopic arm of the Nile. The site of the ancient city is determined not only by the appellation of the modern town of Sa-et-Hadjar, which occupies a portion of its area, but also by mounds of rain correspoding in extent to the importance of Sais at least under the later Pharaohs. The city was artificially raised high above the level of the Delta to be out of the reach of the inundations of the Nile, and served as a landmark to all who ascended the arms of the river from the Mediterranean to Memphis. Its ruins have been very imperfectly explored, yet traces have been found of the lake on which the mysteries of Isis were performed, as well as of the temple of Neith (Athene) and the necropolis of the Naetian kings. The wall of
SAIS.

unburnt brick which surrounded the principal buildings of the city was 70 feet thick, and probably therefore at least 100 feet high. It enclosed an area 2325 feet in length by 1960 in breadth. Beyond this enclosure were also two large cemeteries, one for the citizens generally, and the other reserved for the nobles and priests of the higher orders. In one respect the Saits differed from the other Egyptians in their practice of interment. They buried their kings within the precincts of their temples. The tomb of Amasis attracted the attention of Herodotus (ii. 169), and Psammeticus, the conqueror and successor of that monarch, was also buried within the walls of the temple of Neith.

Sais was the residence of the sacred cities of Egypt; its principal deities were Neith, who gave oracles there, and Isis. The mysteries of the latter were celebrated annually with unusual pomp on the evening of the Feast of Lamps. Herodotus terms this festival (ii. 59) the third of the great feasts in the Egyptian calendar. It was held by night; and every one intending to be present at the sacrifices was required to light a number of lumps in the open air around his house. The lamps were small saucers filled with salt and oil, on which a wick floated, and which continued to burn all night. At what season of the year the feast of burning lamps was celebrated Herodotus knew, but deemed it wrong to tell (ii. 62): it was, however, probably at either the vernal or autumnal equinox, since it apparently had reference to one of the capital revolutions in the solar course. An inscription in the temple of Neith declared her to be the Mother of the Sun. (Plutarch, Is. et Osir. p. 334, ed. Wytenbach; Proclus, in Timaeum, p. 30.) It ran thus: "I am the things that have been, and that are, and that will be; no one has uncovered my skirts; the fruit which I brought forth became the Sun." It is probable, accordingly, that the kindling of the lamps referred to Neith as the author of light. On the same night apparently were performed what the Egyptians designated the "Mysteries of Isis." Sais was one of the supposed places of the interment of Osiris, for that is evidently the deity whom Herodotus will not name (ii. 171) when he says that there is a burial-place of him at Sais in the temple of Athene. The mysteries were symbolical representations of the sufferings of Osiris, especially his disembowlement by Typhon. They were exhibited on the lake behind the temple of Neith. Portions of the lake may be still discerned near the hamlet of Sa-el-Hadjar.

Sais was alternately a provincial city of the first order and the capital of Lower Egypt. These changes in its rank were probably the result of political revolutions in the Delta. The nome and city are said by Manetho to have derived their appellation from Saits, a king of the xviiith dynasty. The xxivth dynasty was that of Bocchoris of Sais. The xxvth dynasty contained nine Saite kings; and of the xxviiith Amyrtaeus the Sais is the only monarch: with him expired the Sais dynasty, n. c. 408.

Bocchoris the Wise, the son of Thespactus (Diodor. i. 45, § 2, 79, § 1), the Technetis of Plutarch (Is. et Osir. p. 334; comp. Athen. x. p. 418; Aelian, H. A. xi. 11), and the Aegyptian Phek, was remarkable as a judge and legislator, and introduced, according to Diodorus, some important amendments into the commercial laws of Sais. He was put to death by burning after revolting from Subace the Aethiopian. During the Aethiopian dynasty Sais seems to have retained its independence. The period of its greatest prosperity was between n. c. 697—524, under its nine native kings. The strength of Aegypt generally was transferred from its southern to its northern provinces. Of the Saite monarchs of Aegypt Psammeticus and Amasis were the most powerful. Psammeticus maintained himself on the throne by his Greek mercenaries. He established at Sais the class of interpreters, caused his own sons to be educated in Greek learning, and encouraged the resort of Greeks to his capital. The intercourse between Sais and Athens especially was promoted by their worshipping the same deity — Neith-Athenae; and hence there sprung up, although many centuries later, the opinion that Cecrops the founder of the city of Athens, the establishment of the Greeks at Cyrene was indirectly fatal to the Saite dynasty. Uaphris, Apies, or Hophus, was defeated by the Cyrenians, n. c. 569; and his discontented troops raised their commander Amasis of Siouph to the throne. He adorned Sais with many stately buildings, and enlarged or decorated the temple of Neith; for he erected in front of it propylaeum, which for their height and magnitude, and the quality of the stones employed, surpassed all similar structures in Aegypt. The stones were transported from the quarries of Ef-Mehebath near Memphis, and thence were brought on the colossal figures and androcephaloi that adorned the Dromos. To Sais Amasis transported from Elephanta a monolithic shrine of granite, which Herodotus especially admired (ii. 175). Though the ordinary passage from Elephanta to Sais was performed in twenty days, three years were employed in conveying this colossal mass. It was, however, never erected, and when Herodotus visited Aegypt was still lying on the ground in front of the temple. It measured, according to the historian, 30 feet in height, 12 feet in depth from front to back, and in breadth 21 feet. After the death of Amasis, Sais sank into comparative obscurity, and does not seem to have enjoyed the favour of the Persian, Macedonian, or Roman masters of Aegypt.

Sais indeed was more conspicuous as a seat of commerce and learning, and of Greek culture generally, than as the seat of government. Necheus, one of its kings, has left a name for his learning (Ausan. Epigr. 409), and his writings on astronomy are cited by Piny (ii. 23. s. 21). Pythagoras of Samos visited Sais in the reign of Amasis (comp. Plin. xxxvi. 9. s. 14) and Solon the Athenian conversed with Sonchis, a Saite priest, about the same time (Plut. Solon. 26; Herod. ii. 177; Clon. Fast. Helion, vol. ii. p. 9). At Sais, if we may credit Plato (Timaeus, iii. p. 25), Solon heard the legend of Atlantis, and of the ancient glories of Athens some thousand years prior to Phoroneus and Niobe and Dancalion's flood. The priests of Sais appear indeed to have been anxious to ingratiate themselves with the Athenians by discovering resemblances between Attic and Egyptian institutions. Thus Diodorus (i. 28), copying from earlier narratives, says that the citizens of Sais, like those of Athens were divided into eunapids, or priest-nobles; geonomi, land-owners liable to military service; and sailors or merchant-traders. He adds that in each city the upper town was called Astu. The Greek population of Sais was governed, according to Manetho, by their own laws and magistrates, and had a separate quarter of the city assigned to them. So strong indeed was the Hellenic element in Sais that
it was doubted whether the Saits colonised Attica, or the Athenians Sais; and Diodorus says inconsistently, in one passage, that Sais sent a colony to Athens (ι. 28. § 3), and in another (v. 57. § 45) that it was itself founded by Athenians. The principal value of these statements consists in their establishing the Graeco-Egyptian character of the Saite people.

The ruins of Sais consist of vast heaps of brick, mingled with fragments of granite and Syenite marble. Of its numerous structures the position of one only can be surmised. The lake of Sa-sa-

Hedjjar, which is still truculent, was at the back of the temple of Neith; but it remains for future travellers to determine the sites of the other sacred or civil structures of Sais. (Champollion, L'Egypte, vol. ii. p. 219: Id. Lettres, 50—53; Wilkinson, Med. Egypt and Thebes.)

[SALA (Σαλά).] 1. A river in Germany, between which and the Rhine, according to Strabo (vii. p. 291), Drusus Germanicus lost his life. That the river was on the east of the Rhine is implied also in the account which Livy (Epit. 140) and Dion Cassius give of the occurrence; and it has therefore been conjectured with some probability that the Sula is the same river as the modern Sula; a tributary of the Elbe, commonly called the Thuringen Sula: though others regard the Sula as identical with the Ysel.

2. A river of Germany, alluded to by Tacitus (Ann. xii. 57), who, without mentioning its name, calls it "rheum gigiendo sale feudum." It formed the boundary between the country of the Chatti and Hermunduri and near its banks were great salt-works, about which these two tribes were perpetually involved in war. From this circumstance it is clear that the river alluded to by Tacitus is none other but the Sula in Franconia, a tributary of the Moesus or Meiss, and that the salt-springs are, in all probability, those of the modern town of Kissingen.

3. A town in Upper Pannonia, on the road from Sabaria to Poctovium (Ptol. ii. 15. § 4; It. Ant. p. 262, where it is called Salce; Geogr. Rav. iv. 19, where it is called Salda). Some identify the place with the town of Sula Egerseck, and others with Lucir on the river Sula. (Comp. Muehler, Noricum, i. p. 261.)

4. A town in the south-western part of Phrygia, on the frontiers of Caria and Pisidia, on the north-west of Cilicia. (Ptol. v. 2. § 26.)

5. A town in the north-western part of Armenia Minor, on the eastern slope of Mount Mehos, (Ptol. v. 13. § 10.) [L. S.]

[SALA (Σαλά).] 1. A town in the district of Turdetani in Hispania Baetica between Itucri and Xabirsia. [T. H. D.]

[SALA (Σαλά).] 1. Ptol. iv. 1. § 2; Plin. v. 1)., a town of Mauretania, on the W. coast of Africa, situated near a river of the same name, "noticed by the Romans as the extreme object of their power and almost of their geography." (Gibbon, c. i.) In the Antonine Itinerary the name occurs as Salena, which has been supposed to be a corruption of Sala Colonia; but from the very MS. it appears that the word "cornu" has been inserted by a later hand. (Itin. Anton. ed. Parthey, p. 3.) The modern Sâa ou Saléa, near the mouth of the river Bu-Regrabi, retains the name, though the site of the ancient town must be sought at Rabat, on the S. side of the river, where there are Roman remains. (Barth, Wanderungen, p. 32. L. 50.) [T. B. J.]

[SALACIA, (Σαλακία, Ptol. ii. 5. § 3), a municipal town of Lusitania, in the territory of the Turdetani, to the NW. of Faz Juia and to the SW. of Ebora. It appears from inscriptions to have had the surname of Urba Imperatoria. (Gru- ter, p. 13. 16; Momont, i. p. 4; Sestini, p. 16.) Salacia was celebrated for its manufacture of fine woolen cloths, (Plin. viii. 48. s. 73; Strab. iii. p. 144, with the note of Groskurd.) Now Alacer do Sal. (Flores, Exp. S urg. xiii. p. 119, xiv. p. 241; comp. Mela, iii. 1; It. Ant. pp. 417, 418, and 422.)

[SALAMBOREA (Σαλάμβοραια), a town of Cappadocia, in the district of Garsaritius. (Ptol. v. 6. § 14; Tab. Peut., where it is called Salabe- rna.) [L. S.]

[SALAMIA, [Salamis.]

[SALAMIS, Σαλάμις, Aesch. Pers. 880; Scyl. p. 41; Ptol. v. 14. § 3, viii. 20. § 5; Stadiums, §§ 288. 289; Pomp. Mela, ii. 7. § 5; Plin. v. 35; Horat. Carm. i. 729; Σαλαμιν, Eustath. ad II. ii. 558; Σαλαμίδας, Malaha, Chron. xii. p. 313, ed. Bonn: Etb. Σαλαμίδων, Bckcr, Inschr. nos. 2625, 2638, 2639), a city on the E. coast of Cyprus, 18 M. P. from Tremithus, and 24 M. P. from Chytria. (Pest. Tab.) Legend assigns its foundation to the Arcad Teucer, whose fortunes formed the subject of a tragedy by Sophocles, called Teisoros, and of one with a similar title by Pecucius. (Cic. de Ord. i. 58, ii. 46.) The people of Salamis showed the tomb of the archer Teucer (Aristot. Anthologia, i. 8. 112), and the reigning princes at the time of the Ionian revolt were Greeks of the Teucrid "Gens," although one of them bore the Phoenician name of Simorus (Hirain). (Herod. v. 104.) In the 6th century B.C. Salamis was already an important town, and in alliance with the Battad princes of Cyrene, though the king Evthion refused to assist in reinstating Arceclus III. upon the throne. (Herod. iv. 162.) The descendant of this Evthion—the despot Gorgus—was unwilling to join in the Ionian revolt, but his brother Onesimus shut him out of the gates, and taking the command of the united forces of Salamis and the other cities, flew to arms. The battle which crushed the independence of Cyprus was fought under the walls of Salamis, which was compelled to submit to its former lord, Gorgus. (Herod. v. 103, 104. 108. 110.) Afterwards it was besieged by Anaxicrates, the successor of Cimon, but when the convention was made with the Persians the Athenians did not press the siege. (I. 67. 13.) After the peace of Alcadas the Persians had to struggle for ten years with all their forces against the indefatigable and genic Evagoras, who, having conquered a paragis of this prince addressed to his son Nicocles, which, with every allowance for its partiality, gives an interesting picture of the struggle which the Hellenic Evagoras waged against the Phoenician and Oriental influence under which Salamis and Cyprus had languished. (Comp. Grote, Hist. of Greece, vol. x. c. 11.)
SALAMIS.

Evagoras with his son Phytagoras was assassinated by a eunuch, slave of Nicoceor (Aristot. Pol. v. s. § 10; Diodor. xx. 47; Theopomp. Fr. iii. ed. Didot), and was succeeded by another son of the name of Nicocles. The Graeco-Aegyptian fleet under Megamene and Megabates was utterly defeated off the harbour of Salamis in a sea-fight, the greatest in all antiquity, by Demetrius Poliorcetes, B.C. 306. (Diodor. xx. 45—53.) The famous courtezan Lamia formed a part of the body of Demetrius, over whom she soon obtained an unlimited influence. Finally, Salamis came into the hands of Ptolemy. (Plut. Demetr. 35; Polyen. Stratr. 5.) Under the Roman Empire the Jews were numerous in Salamis (Acts, xiii. 6), where they had more than one synagogue. The farming of the copper mines of the island to Herod (Joseph. Antiq. xx. 14. § 3) may have swelled the numbers who were attracted by the advantages of its harbour and trade, especially its manufactures of embroidered stuffs. (Athien. ii. p. 48.) In the memorable revolt of the Jews in the reign of Trajan this populous city became a desert. (Milman, Hist. of the Jews, vol. iii. pp. 111, 112.) The city was completely destroyed by fire, and was rebuilt by a Christian emperor, from whom it was named CONSTANTIA. It was then the metropolis of the island. Epiphanius, the chronicler of the heretical sects, was bishop of Constantia in A.D. 367. In the reign of Heracles the new town was destroyed by the Saracens.

The ground lies low in the neighbourhood of Salamis, and the town was situated on a bight of the coast to the N. of the river Pedaeus. This low land is the largest plain—SALAMINIA—in Cyprus, stretching inward between the two mountain ranges to the very heart of the country where the modern Turkish capital—Nicosia—is situated. In the Life and Epistles of St. Paul, by Conybeare and Howson (vol. i. p. 169), will be found a plan of the harbour and ruins of Salamis, from the survey made by Captain Grevus. For coins of Salamis, see Eckhel, vol. iii. p. 87. [E. B. J.]

SALAMIS (Σαλαμίς, -ίνος; Eth. and Adj. Σαλαμίνιος, Salaminios; Adj. Σαλαμινιακός, Salaminiacus; Kukuri), an island lying between the western coast of Attica and the eastern coast of Megaris, and forming the southern boundary of the bay of Eleusis. It is separated from the coasts both of Attica and of Megaris by only a narrow channel. Its form is that of an irregular semicircle towards the west, with many small indentations along the coast. Its greatest length, from N. to S., is about 10 miles, and its width, in its broadest part, from E. to W., is a little more. Its length is correctly given by Strabo (ix. p. 393) as from 70 to 80 stadia. In ancient times it is said to have been called Pitnysa (Πιτνύσα), from the pines which grew there, and also Scillas (Σκίλλας) and CYCHREIA (Κυχρεία), from the names of two heroes Scius and Cythereus. The former was a native hero, and the latter a seer, who came from Dodona to Athens, and perished along with Erechtheus in fighting against Eumolpus. (Suid. s.v. 36; Plut. Thes. 17.) The latter name was perpetuated in the island, for Asclepius (Paus. 570) speaks of the άκραι Κυχρεία, and Stephanus B. mentions a Κυχρείον πάγος. The island is said to have obtained the name of Salamis from the mother of Cythereus, who was also a daughter of Aeschylus (Paus. i. 35. § 2.) It was colonized at an early period by the Aeacidae of Aegina. Telemon, the son of Aeacus, fled thither after the murder of his half-brother Phoecus, and became sovereign of the island. (Paus. i. 35. § 1.) He induced the Greeks with 12 Salaminian ships to the Trojan War. (Hom. II. ii. 557.) Salamis continued to be an independent state till about the beginning of the 40th Olympiad (n. c. 620), when a dispute arose for its possession between the Athenians and Megarians. After a long struggle, it first fell into the hands of the Megarians, but was subsequently taken possession of by the Athenians through a strategem of Solon. (Plut. Sol. 8, 9; Paus. i. 40. § 5.) Both parties appealed to the arbitration of Sparta. The Athenians supported their claims by a line in the Ilid, which represents Ajax ranging his ships with those of the Athenians (II. ii. 558), but this verse was suspected to have been an interpolation of Solon or Peisistratus; and the Megarians cited another version of the line. The Athenians, moreover, asserted that the island had been made over to them by Phoibas and Euryaces, sons of the Telamonian Ajax, when they took up their own residence in Attica. These arguments were considered sufficient, and Salamis was adjudged to the Athenians. (Plut. Sol. 10; Strab. ix. p. 394.) It now became a part of Attic deme, and continued incorporated with Attica till the times of Macedonian supremacy. In B.C. 318, the inhabitants voluntarily received a Macedonian garrison, after having only a short time before successfully resisted Casander. (Diod. xviii. 69; Polyen. Strat. iv. 11. § 2; Paus. i. 35, § 2.) It continued in the hands of the Macedonians till B.C. 232, when the Athenians, by the assistance of Aratus, purchased it from the Macedonians together with Munychia and Sunium. Thereupon the Salamisians were expelled from the island, and their lands divided among Athenian cleruchs. (Plut. Arat. 54; Paus. ii. 8. § 6; Bickh. Inscr. vol. i. p. 148, seq.) From that time Salamis probably continued to be a dependency of Athens, like Aegina and Oropus; since the grammarians never call it a δήμος, which it had been originally, but generally a πόλις.

The old city of Salamis, the residence of the Telamonian Ajax, stood upon the southern side of the island towards Aegina (Strab. ix. p. 393), and is identified by Leake with the remains of some Hellenic walls upon the south-western coast near a small port, where is the only rivulet in the island, perhaps answering to the Bocaris or Bocallas of Strabo (ix. p. 394; Leake, Demi, p. 169.) The Bocaris is also mentioned by Lycophiros (451). In another passage, Strabo (ix. p. 424) indeed speaks of a river Cepheius in Salamis; but as it occurs only in an enumeration of various rivers of this name, and immediately follows the Athenian Cepheus without any mention being made of the Eleusinian Cepheus, we ought probably to read with Leake ἐν Κυκραίοις instead of ἐν Σαλαμινί. When Salamis became an Athenian deme, a new city was built at the head of a bay upon the eastern side of the island, and opposite the Attic coast. In the time of Pausanias this city also had fallen into decay. There remained, however, a ruined agora and a temple of Ajax, containing a statue of the hero in ebony; also a temple of Artemis, the trophy erected in honour of the victory gained over the Persians, and a temple of Cythereus. (Paus. i. 35. § 3; 36. § 1.) Pausanias has not mentioned the
A statue of Solon, which was erected in the acropolis, with one hand covered by his mantle. (Dem. de Fals. Leg. p. 420; Aesch. in Tim. p. 52.) There are still some remains of the city close to the village of Ambelokkia. A portion of the walls may still be traced; and many ancient fragments are found in the walls and churches both of Ambelokkia and of the neighbouring village of Kaklos, from the latter of which the modern name of the island is derived. The narrow rocky promontory now called Cape of St. Barbara, which forms the SE. entrance to the bay of Ambelokkia, was the SILEANAE (Σιλεύας) of Aeschylus, afterwards called TROPEA (Τροπεία), on account of the trophy erected there in memory of the victory. (Asch. Pers. 300, with Schol.) At the extremity of this promontory lay the small island of PSYTALEIA (Ψυταλεία), now called Lipsoktali, about a mile long, and from 200 to 300 yards wide. It was here that a picked body of Persian troops was cut to pieces by Aristides during the battle of Salamis. (Herod. viii. 95; Aesch. Pers. 447, seq.; Plat. Arist. 9; Paus. i. 36. § 2, iv. 36. § 3; Strab. ix. p. 393; Plin. iv. 12. s. 20; Steph. B. s. v.)

In Salamis there was a promontory SCRADIUM (Σκραδίον), containing a temple of the god of war, erected by Solon, because he there defeated the MEGARIANS. (Plut. Sol. 9.) Leake identifies this site with the temple of Athena Sciras, to which Adeimantus, the Corinthian, is said to have fled at the commencement of the battle of Salamis (Herod. viii. 94); and, as the Corinthians could not have retreated through the eastern opening of the strait, which was the centre of the scene of action, Leake supposes Sciradum to have been the south-west promontory of Salamis, upon which now stands a monastery of the Virgin. This monastery now occupies the site of a Hellenic building, of which remains are still to be seen.

BUDORUM (Βοῦδορούμ or Βοῦδορόου) was the name of the western promontory of Salamis, and distant only three miles from Nisaea, the port of Megara. On this peninsula there was a fortress of the same name. In the attempt which the Peloponnesians made in B.C. 429 to surprise Peiraeus, they first sailed from Nisaea to the promontory of Budorum, and surprised the fortress; but after overrunning the island, they retreated without venturing to attack Peiraeus. (Thuc. ii. 93, 94, iii. 51; Diod. xii. 49; Strab. xi. p. 446; Steph. B. s. v. Βοῦδορόου.) Salamis is chiefly memorable on account of the great battle fought off its coast, in which the Persian fleet of Xerxes was defeated by the Greeks, B.C. 480. The details of this battle are given in every history of Greece, and need not be repeated here. The battle took place in the strait between the eastern part of the island and the coast of Attica, and the position of the contending forces is

MAP OF SALAMIS.
SALANIANA.

shown in the annexed plan. The Grecian fleet was drawn up in the small bay in front of the town of Salaminis, and the Persian fleet opposite to them off the coast of Attica. The battle was witnessed by Xenes from the Attic coast, who had erected for himself a lofty throne on one of the projecting declivities of Mt. Aegean. Colonel Leake has discussed at length all the particulars of the battle, but Mr. B. Blakeney has controverted many of his views, following the authority of Aeschylus in preference to that of Herodotus. In opposition to Col. Leake and all preceding authorities, Mr. B. Blakeney supposes, that though the hostile fleets occupied in the afternoon before the battle the position delineated in the plan annexed, yet that on the morning of the battle the Greeks were drawn up across the southern entrance of the strait, between the Cape of St. Barbara and the Attic coast, and that the Persians were in the more open sea to the south. Into the discussion of this question our limits prevent us from entering; and we must refer our readers for particulars to the essays of those writers quoted at the close of this article. There is, however, one difficulty which must not be passed over in silence. Herodotus says (viii. 76) that on the night before the battle, the Persian ships stationed about Ceos and Cynosura moved up, and beset the whole strait as far as Manychis. The only known places of these names are the island of Ceos, distant more than 40 geographical miles from Salaminis, and the promontory of Cynosura, immediately N. of the bay of Marathon, and distant more than 60 geographical miles from Salaminis. Both of these places, and more especially Cynosura, seem to be too distant to render the movement practicable in the time required. Accordingly many modern scholars apply the names Ceos and Cynosura to two promontories, the southernmost and south-easternmost of the island of Salaminis, and they are so called in Kiepert's maps. But there is no authority whatever for giving those names to two promontories in the island; and it is evident from the narrative, as Mr. Grote has observed, that the names of Ceos and Cynosura must belong to some points in Attica, not in Salaminis. Mr. Grote does not attempt to indicate the position of these places; but Mr. B. Blakeney maintains that Ceos and Cynosura are respectively the well-known island and cape, and that the difficulty is occasioned, not by their distance, but by the erroneous notion conceived by Herodotus of the real positions of the Persian fleet. (Leake, Demi of Attic, p. 166, seq., and Appendix II. On the Battle of Salaminis; Blakeney, Excerpts in Herodotus, viii. 76, vol. ii. p. 400, seq.; Grote, Hist. of Greece, vol. v. p. 171, seq.)

COIN OF SALAMIS.

SALANIANA, a town of the Callaic Bracarii in Gallaecia (Itin. Ant. p. 427.) Variously identified with Cula Nera, Messmauto, and Portella de Abode.

SALAPIA (Salapia: Eth. Salaniv; Salapi), one of the most considerable cities of Apulia, situated on the coast of the Adriatic, but separated from the open sea by an intervening lagoon, or salt-water lake, which was known in ancient times as the SALAPINA PALUS (Lucan, v. 377: Vib. Sequ. p. 26), and is still called the Lago di Salpi. This lagoon has now only an artificial outlet to the sea through the bank of sand which separates it; but it is probable that in ancient times its communications were more free, as Salapia was certainly a considerable sea-port and in Strabo's time served as the port both of Arpi and Canaszus (Strab. vi. p. 284). At an earlier period it was an independent city, and apparently a place of considerable importance. Tradition ascribed its foundation, as well as that of the neighbouring cities of Canaszus and Arpi, to Dismedes (Vitruv. i. 4. § 12); or, according to others, to a Rhodian colony under Elpias (ib. ib.; Strab. xiv. p. 654).* There is no trace of its having received a Greek colony in historical times, though, in common with many other cities of the Dammian Antonians, it seems to have imbibed a large amount of Hellenic influence. This was probably derived from the Tarantine, and did not date from a very early period.

The name of Salapia is not mentioned in history till the Second Punic War, in which it bears a considerable part. It was evidently one of the cities of Apulia which revolted to Hannibal after the battle of Cannae (Liv. xxii. 61); and a few years after we find it still in his possession. It was apparently a place of strength, on which account he collected there great magazines of corn, and established his winter quarters there in m. c. 214. (Id. xxiv. 20.) It remained in his hands after the fall of Arpi in the following year (Id. xxiv. 47); but in m. c. 210 it was betrayed into the power of Marcellus by Blaesus, one of its citizens, who had been for some time the leader of the Roman party in the place, and the Numidian garrison was put to the sword. (Id. xxvi. 88; Appian, Annib. 45 — 47.) Its loss seems to have been a great blow to the power of Hannibal in this part of Italy; and after the death of Marcellus, n. c. 208, he made an attempt to recover possession of it by stratagem; but the fraud was discovered, and the Carthaginian troops were repulsed with loss. (Liv. xxvii. 1, 28; Appian, Annib. 51.) No subsequent mention of it is found until the reign of Augustus, in the second year of which, when the tide of fortune was beginning to turn in favour of Rome, it was taken by the Roman praetor C. Cosconius, and burnt to the ground (Appian, B. C. i. 51). After this time it appears to have fallen into a state of decay, and suffered severely from malaria in consequence of the exhalations of the neighbouring lagoon. Vitruvius tells us, that as length the inhabitants applied to M. Hostilius, who caused them to remove to a more healthy situation, about 4 miles from the former site, and nearer the sea, while he at the same time opened fresh communications between the lagoon and the sea (Vitruv. i. 4. § 12). We have no clue to the time at which this change took place, but it could hardly have been till after the town had fallen into a declining condition. Cicero, indeed, alludes to Salapia as in his day notorious for its pestilential climate (de Leg. Agr. ii. 27); but this may be understood as relating to its territory rather than the actual town. Vitruvius is the only author who notices the change of site; but if his account can be depended

* Lycophron, on the other hand, seems to assign it a Trojan origin; though the passage, as usual, is somewhat obscure. (Lycoph. Alex. 1129.)
upon, the Salapia mentioned by Pliny and Ptolemy as well as Strabo, must have been the new town, and not the original city of the name. (Strab. iv. p. 284; Plin. iii. 12. s. 17; Ptol. iii. 1. § 16.) The Liber Columbarum also speaks of it as a colony adjoining the sea-coast, which doubtless refers to the new town of the name. This does not, however, seem to have ever risen into a place of much importance, and the name subsequently disappears altogether.

Extensive ruins of Salapia are still visible on the southern shore of the Lago di Salpi, in a tract of country now almost wholly desolate. They evidently belong to a city of considerable size and importance, and must therefore be those of the ancient Apulian city. This is further confirmed by the circumstance that the coins of Salapia, which of course belong to the period of its independence, are frequently found on the spot. (Swinburne's Travels, vol. i. p. 81.)

The site of the Roman town founded by M. Hostilius is said to be indicated by some remains on the seashore, near the Torre di Salpi. (Romanelli, vol. ii. p. 201.)

The lagune still called the Lago di Salpi is about 12 miles in length by about 2 in breadth. At its eastern extremity, where it communicates with the sea by an artificial cut, are extensive salt-works, which are considered to be the representatives of those noticed in the Itineraries under the name of Salaina. It is by no means certain (though not improbable) that these ancient salt-works occupied the same site as the modern ones; and the distances given in the Itineraries along this line of coast, being in any case corrupt and confused, afford no clue to their identification. (Hin. Ant. p. 314; Tab. Peut.) It is probable that the name of Salapia itself is connected with sal, the lagune having always been well adapted for the collection of salt.

The coins of Salapia, as well as those of Apri and Cannusum, have Greek legends, and indicate the strong influence of Greek art and civilization, though apparently at a late period, none of them being of an archaistic style. The magistrates' names which occur on them (ΔΑΣΩΣ, ΠΤΑΛΟΣ, &c.) are, on the contrary, clearly of native origin. (Mommsen, U. J. D. pp. 82, 83.)

COIN OF SALAPIA.

SALARIA. 1. (Σαλάια, Ptol. ii. 6, § 61), a town of the Bastiani, in the SE. part of Hispania Tarraconensis. According to Pliny it was a Roman colony. (Colonia Salariensis, iii. 3. s. 4.) Ukert (ii. pt. 1. p. 407) identifies it with Sabiod, between Ubeda and Baeza.

2. A town of the Ostetani, in the same neighborhood. (Ptol. ii. 6. § 59.) [T. H. D.]

SALAS. [Salas.]

SALASSI (Σαλασσαι), one of the most powerful of the Alpine tribes in the N. of Italy, who occupied the great valley of the Duria or Dora Baltea, now called the Val d'Azza, from the plains of the Po to the foot of the Graian and Pennine Alps. Their country is correctly described by Strabo as a deep and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance at Aosta to its head among the highest ranges of the Alps, must always have been one of the natural inlets into the heart of those mountains: hence the two passes at its head, now called the Great and Little St. Bernard, seem to have been frequented from a very early period. If we may trust to Livy, it was by the former of these passes, or the Pennine Alps, that the Boii and Lingones crossed when they first migrated into the plains of the N. of Italy. (Liv. v. 35.) It was this same pass by which Hannibal was commonly supposed in the days of Livy to have crossed those mountains, while Coelius Antipater represented him as passing the Little St. Bernard, an opinion commonly adopted by modern writers, though still subject to grave difficulties. One of the most serious of these arises from the character of the Salassi themselves, who are uniformly described as among the fiercest and most warlike of the Alpine tribes, and of inveterate predatory habits, so that it is difficult to believe they would have allowed an army like that of Hannibal to traverse their country without opposition, and apparently without molestation. (See Arnold's Rome, vol. iii. p. 481.)

The Salassi are commonly reckoned a Gaulish people, a description which renders it more probable that they were in fact, like their neighbours the Tauni, a Ligurian race. The Ligurians indeed seem, at a very early period, to have spread themselves across the whole of the western chain of the Alps, and the Gaulish tribes which occupied the plains of the Padus passed through their country. But the ethnical relations of all these Alpine races are very obscure. No mention of the Salassi is found in history till n. c. 143, when they were attacked without provocation by the consul Appius Claudius, who, however, punished for his aggression, being defeated with the loss of 5000 men. But he soon repaired this disaster, and having in his turn slain 5000 of the mountaineers, claimed the honour of a triumph. (Dion Cass. Fr. 79; Liv. Epit. liii.; Oros. v. 4.) From this time they appear to have frequently been engaged in hostilities with Rome, and though nominally tributary to the republic, they were continually breaking out into revolt, and ravaging the plains of their neighbourhood, or plundering the Roman convoys, and harassing their troops as they marched through their country. As early as n. c. 100 a Roman colony was established at Eperdela (Jerden), at the mouth of the valley (Vell. Pat. i. 15), with the view of keeping them in check, but it suffered severely from their incursions. Even at a much later period the Salassi plundered the baggage of the dictator Caesar when marching through their country, and compelled Decimus Brutus, on his way into Gaul after the battle of Mutina, to purchase a passage with a large sum of money. (Strab. iv. p. 205.) In n. c. 35 they appear to have broken out afresh into revolt, and for some time were able to defy the efforts of Antonius Varus; but the next year they were reduced by the consul by Valerius Messala (Appian, B. C. xix. 34, 38; Appian, Iphr. 17.) Still, however, their subjection was imperfect, till in n. c. 25 Terentius Varro was sent against them, who having compelled the whole nation to lay down their arms, sold them without distinction as slaves. The number of captives thus sold is said to have amounted to...
SALESSI.

36,000 persons, of whom 8000 were men of military age. The tribe of the Salassi being thus extirpated, a Roman colony was settled at Praetoria Augusta (Aosta), and a highroad made through the valley. (Dion Cass. liii. 25; Strab. iv. p. 205; Liv. Epit. cxxv.) The name of the Salassi, however, still remained, and is recognised as a geographical distinction both by Pliny and Tolemeny, but no subsequent trace of them is found among the subsequent tribes. (Plin. iii. 17. s. 31; Tolidi. iii. 1. § 34.)

One of the main causes of the disputes between the Salassi and Romans had arisen from the gold-washings which were found in the valley, and which are said to have been extremely productive. These were worked by the Salassi themselves before the Roman invasion; but the Romans seem to have early taken possession of them, and they were farmed out with the other revenues of the state to the Publicans. But these were, as might be expected, involved in constant quarrels with the neighbouring barbarians, who sometimes cut off their supplies of water, at other times attacked them with more open violence. (Strab. iv. p. 205; Dion Cass. Fr. 79.)

The line of road through the country of the Salassi, and the passes which led from Augusta Praetoria over the Pennine and Granian Alps, are described in the article ALPS [Vol. i. p. 110]. [E. H. B.]

SALENTARAE (Σαλεντάραι, Tolidi. vi. 11. § 6), a tribe of the Battirians who lived along the banks of the Oxus. Forbiger suspects that they are the same as the Saraparae, noticed by Pliny (vi. 16. s. 18). [V.]

SALATHUS (Σαλάθος, Tolidi. iv. 6. § 5), a river on the W. coast of Africa, with a town of the same name. This river, which took its rise in Mt. Mandras, is represented by one of the Wadys, which flows into the sea in the district occupied by the ancient Autocholen, on the coast to the N. of Cape Mitrik. [E. B. R.]

SALEUS, a town on the coast of Hispamia Tarraconensis, mentioned in the Ora Marit. of Avienus (v. 518). [T. H. D.]

SALDA, a town in the south of Lower Pannonia, on the southern bank of the Savus, and on the great highroad from Siscia to Sirmium. (Tob. Pent.; Geogr. Eav. iv. 19, where it is called Sulmod.) It is very probably the same as the town of Salis (Σαλίς) mentioned by Ptolemy (ii. 16. § 33). The site is commonly believed to be occupied by the modern Salcata. [L. S.]

SALDAE (Σαλδάε, Strab. xvii. p. 831; Tolidi. iv. 2. § 9, viii. 13. § 9; Plin. v. 1; Itin. Anton.; Pelt. Tob.), a town on the coast of Mauretania Caesariensis, with a spacious harbour, which was in earlier times the E. boundary between the dominions of Juba and those of the Romans. (Strab. l. c.) Under Augustus it became a Roman "colonia." (Plin. l. c.) In later times it was the W. limit of Mauretania Sitifensis, against Mauretania Caesariensis in its more contracted sense. It is identified with Bitiyyah, the flourishing city of the Kaliphat, taken by Pedro Navaro, the general of Ferdinand the Catholic, after two famous battles, A. D. 1510 (comp. Prescott's Ferdinand and Isabella, vol. ii. p. 457), or the C. Bonie of the French province. (Barth., Wanderungen, p. 62.) [E. B. J.]

SALDA'A, a town of Moesia (Theod. i. 29. § 10, i. 8), which was ravaged by the Avians in their wars with the emperor Maurice (Le Bas, Bas Empire, vol. x. pp. 248, 369). Schafarik (Slav. Allc. vol. ii. p. 158) has fixed the site at the ruins Dibetrick upon the Danube. [F. B. J.]

SALEUBA. 1. A small river in the territory of the Turduli in Hispamia Baetica, probably the same called Zalokia, (with var. lect. ) by Tolemeny (iv. 4. § 7). Now Rio Verde.

2. A town at the mouth of the preceding river (Zalokia, Tolid. ii. 4. § 11), of no great importance (Mela. ii. 6; Plin. iii. 1. s. 3), near the present Maribella. [C.AE.SARAGU.SSTA.] [T. H. D.]

SALE, a town on the S. coast of Thrace, near the W. mouth of the Hebrus, and nearly equidistant from Zon and Doriscus. It is mentioned by Herodotus (vii. 59) as a Samothracian colony. [J. F.]

SALEM. [JERUSALEM.]

SALENI, a people of Hispania Tarraconensis, probably in Cantabria, mentioned by Mela (iii. 1). They are perhaps the same as the Zaloi of Tolemy (ii. 6. § 34). [E. H. D.]

SALENTINI or SALLENTINI (both forms seem to rest on good authority), (Σαλεντίνοι), a people of Southern Italy, who inhabited a part of the peninsula which forms the SE. extremity, or as it is very often called the heel, of Italy. Their territory was thus included in the region known to the Greeks by the name of Iapygia, as well as in the district called by the Romans Calabria. Strabo remarks that the peninsula in question, which he considers as bounded by a line drawn across from Tarentum to Brundusium, was variously called Messapia, Iapygia, Calabria, and Salentini; but that some writers established a distinction between the names. (Strab. vi. p. 282.) There seems no doubt that the names were frequently applied irregularly and vaguely, but that there were in fact two distinct tribes or races inhabiting the peninsula, the Salentine and the Calabrians (Strab. vi. p. 277), of whom the latter were commonly known to the Greeks as the Messapians (CALABRIS). Both were, however, in all probability kindred races belonging to the great family of the Pelasgian stock. Tradition represented the Salentines as of Cretan origin, and, according to the habitual form of such legends, ascribed them to a Cretan colony under Idomeuæus after the Trojan War. (Strab. vi. p. 282; Virg. Aen. iii. 400; Fest. s. v. Salentini, p. 329; Var. ap. Prob. ad Virg. Ecl. vi. 31.) They appear to have inhabited the southern part of the peninsula, extending from its southern extremity (the Capo di Leuca), which was thence frequently called the Salentine promontory ("Salentium Promontorum," Mela. ii. 4 § 8; Plin. iii. 1. § 13), to the neighbourhood of Tarentum. But we have no means of distinguishing accurately the limits of the two tribes, or the particular towns which belonged to each.

The name of the Salentines does not seem to have been familiarly known to the Greeks, at least in early times: as we do not hear of their name in any of the wars with the Tarentines, though from their position they must have been one of the tribes that early came into collision with the rising colony. They were probably known under the general appellation of Iapyginæ, or confounded with their neighbours the Messapians. On the contrary, as soon as their name appears in Roman history, it is in a wider and more general sense, no doubt, than is implied in the geography. They are, as it were, absorbed in the name of the Salentini as according to the Samnite alliance in n. c. 306, when the consul L. Volumnius was sent into their country, who defeated them in several battles, and took some of their towns. (Liv. iv. 42.) It is almost impossible to believe that the Romans
had as early as this pushed their arms into the Iapygian peninsula, and it is probable that the Salentines are here confounded with the Peucetians, with whom, according to some accounts, they were closely connected. (Plin. iii. 11. s. 16.) But the name is used with still greater laxity shortly after, when Livy speaks of Thraces as "urbem in Salleutinis" (s. 2), if at least, as there seems little doubt, the place there meant is the well-known city of Thorii in Lucania [Thorii].

The name of the Salentines does not again occur in history till the Fourth Samnite War, when they joined the confederacy formed by the Samnites and Tarentines against Rome; and shared in their defeat by the consul L. Aemilius Barbusa in n. c. 281, as we find that general celebrating a triumph over the Tarentines, Samnites, and Salentines. (Fast. Capit. ann. 473.) For some time after this the appearance of Pyrrhus in Italy drew off the attention of the Romans from more ignoble adversaries, but when that monarch had finally withdrawn from Italy, and Tarentum itself had fallen into the hands of the Romans, they were left at leisure to turn their arms against the few tribes that still maintained their independence. In n. c. 267 war was declared against the Salentines, and both consuls were employed in their subjugation. It was not likely that they could offer much resistance, yet their final conquest was not completed till the following year, when both consuls again celebrated triumphs "de Messapiis Salentinsisque." (Fast. Capit.; Zonar. viii. 7; Liv. Epit. xv; Florus, i. 20; Eutrop. ii. 17.)

All the Roman writers on this occasion mention the Salentines alone; the triumphal Fasit. However, recording the name of the Messapians in conjunction with them, and it is certain that both nations were included both in the war and the conquest, for Brundisium, which is called by Florus "caput regionis," and the occupation of which was evidently the main object of the war (Zonar. i. c.), seems to have been at that period certainly a Messapian city. The Salentines are again mentioned as revolting to Hannibal during the Second Punic War (n. c. 213), but seem to have been again reduced to subjection without difficulty. (Liv. xxv. i, xxvii. 36, 41.) From this time their name disappears from history, and is not even found among the nations of Italy that took up arms in the Social War. But the "Salentinus ager" continued to be a recognised term, and the people are spoken of both by Pliny and Strabo as distinct from their neighbours the Calabrii. (Strab. vi. p. 277; Plin. iii. 11. s. 16; Pth. iii. i. § 13; Mel. ii. 4; Cic. pro Rosc. Am. 46.) The "region Salentina" is even mentioned as a distinct portion of Calabria as late as the time of the Lombards. (P. Dial. Hist. Lang. i. 21.)

The physical character and topography of the country of the Salentines are given in the article Calabria. The following towns are assigned by Pliny to the Salentines, as distinct from the Calabrians, strictly so called: Alcetum, Basta, Neetum, Unxentum, and Veretum. All these are situated in the extreme southern end of the Iapygian peninsula. The list given by Ptolemy nearly agrees with that of Pliny; but he adds Rhiniae, which was considerably further N., and is reckoned on good authority a Calabrian city [Rihia]. The place he calls Banota is probably the Basta of Pliny. To these inland towns may probably be added the seaports of Callipolis, Castrominus, and perhaps Hydruntum also, though the last seems to have early received a Greek colony. But it is probable that at an earlier period the territory of the Salentines was considerably more extensive. Stephens op Byzantium speaks of a city of the name of Salentia, from which was derived the name of the Salentines, but no mention of this is found in any other writer, and it is probably a mere mistake. [E. H. B.]

SALERNUM (Salarium; Etr. Salertimnus: Salarumo; a city of Campania, but situated in the region of Neapolis, called the gulf of Posidonia, which now derives from it the name of the Gulf of Salerno. We have no account of its origin or early history, but it has been supposed that it was like the neighbouring Marrina a Tyrrhenian or Pelasgic settlement [Marzina]; but there is no authority for this, and its name is never mentioned in history previous to the settlement of a Roman colony there. But when this was first decreed (in n. c. 157, it was not actually founded till n. c. 194). Livy speaks of the place as Castumn Salerni, whence we may infer that there was at least a fortress previously existing there (Liv. xxxii. 29, xxxiv. 45; Vell. Pat. i. 14; Strab. v. p. 251.) The Roman colony was established, as we are expressly told by Strabo, for the purpose of holding the Picentines in check; that people having actively opposed the cause of Hannibal during the Second Punic War (Strab. l. c.) Their town of Picentum being destroyed, Salernum became the chief town of the district; but it does not appear to have risen to any great importance. In the Social War it was taken by the Samnite general C. Papius (Appian, B. C. i. 42); but this is the only occasion on which its name is mentioned in history. Horace alludes to it as having a mild climate, on which account it had apparently been recommended to him for his health (Hor. Ep. i. 15. 1.) It continued to be a municipal town of some consideration under the Roman Empire, and as we hear from inscriptions retained the title of a Colony (Plin. iii. 5. s. 9; Pth. iii. i. § 7; Iun. Ant.; Tab. Pont.; Mommsen, Inscri. R. N. pp. 9—12.) But it was not till after the Lombard conquest that it became one of the most flourishing cities in this part of Italy; so that it is associated by Paulus Diaconus with Caprea and Neapolis among the "epidemissimae urbes" of Campania (P. Dial. Hist. Lang. i. 17.) It retained this consideration down to a late period of the middle ages, and was especially renowned for its school of medicine, which, under the name of Schola Salernitana, was long the most celebrated in Europe. But it seems certain that this was derived from the Arabs in the 10th or 11th century, and was not transmitted from more ancient times. Salerno is still the see of an archbishop, with a population of about 12,000 inhabitants, though greatly fallen from its medieval grandeur.

The ancient city, as we learn from Strabo (v. p. 250.), stood on a hill some distance from the sea, and this is confirmed by local writers, who state that many ancient remains have been found on the hill which rises at the back of the modern city, but no ruins are now extant. (Romanelli, vol. iii. p. 612.) From the foot of this hill a level and marshy plain extends without interruption to the mouth of the Silarus, the whole of which seems to have been included in the municipal territory of Salernum, as Lucan speaks of the Silarus as skirting the cultivated land near the city (Lan. viii. 429). The distance from Salernum itself to the mouth of the
SALMENA. 883

J. F. Fabr. vi. viro civitat. Saliniens. . . Alpium maritimorum patroon optimo." Some place Salines at Castellam in the diocese of Senec in the Maritime Alps, where there are salt springs, and where Strabo’s inscription is said to have been found. D’Anville places it at Scilla in the diocese of Frejus, near Faniitas (Fyrgence); and he observes that all the old Inns of this country preserve their names. (D’Anville, Notice, &c.; Ubert, Gallien, p. 438.) [G. L.]

SALINAE (Σαλιναί), Ptol. ii. 3. § 21), a town of the Catayuchlani or Ceptaciani, towards the E. coast of Britannia Romana. Camden (p. 339) identifies it with Salisbury or Sandby, near Patton in Bedfordshire; others have sought it in the S. part of Lincolnshire. [T. H. D.]

SALINUM (Σαλινό), a place on the right bank of the Danube, a little below Aquincum, on the road from this town to Mursa in Lower Pannonia. (Ptol. ii. 16. § 4; It. Ant. p. 245, where it is called Vetus Salina.) On the Pent. Table we find in that spot the corrupt name Vetasilium. Its site must have been in the neighbourhood of the modern Hanzabek.

SALICANUS. [Stallicanus,]

SALIOCLITA, in Gallia, is placed by the Antonine Itin. on the road from Gerunam (Orleans) to Lutetia (Paris). It is Scala, a little south of Etampes, on the Jutine, a branch of the Seine. The Itin. makes the distance the same from Gerunam, and Lutetia, which we must take to be La Cite de Paris; but there is an error in the Itin., as D’Anville shows, in the distance from Salolcitas to Lutetia, and he proposes to correct it. [G. L.]

SALISSO, in north Gallia, is placed by the Antonine Itin. on a road from Augusta Treverorum (Trier) to Bingen (Bingen). The places reckoned from Augusta are Badobrica xviii., Salises xxii, Bingen xxiii. This Badobrica is not the place described under the article Badoberica (Boppard). These Gallic leagues xxvii, stand at a little distance from Trier to Bingen considerably. The site of Salises is uncertain. [G. L.]

SALLAECUS (Σαλλαέκος, Ptol. ii. 5. § 8), a town in the S. of Lusitania. [T. H. D.]

SALLENTINI. [Salentini,]

SALLUNTUM. [Dalmatia,]

SALMANTICA (Σαλμαντικά), Ptol. ii. 5. § 9, in the Itin. Ant. called Salamitica; in Polyaeus Strait viii. 48, Salamantica), an important town of the Vettones in Lusitania, on the S. bank of the Duria, on the road from Emerita to Caesaraugusta. It is incontestably identical with the Salamantici of Polybius (iii. 14), and the Hardimantia or Holmantia of Livy (xxi. 5); cf. Nonius, Hisp. e. 38. It is the celebrated modern town of Salamanca, where the piers of a bridge of twenty-seven arches over the Tormes, built by Trajan, are still in existence. (Cf. Miiano, Diccin. vii. p. 402; Flores, Exp. Sogr. xiv. p. 267.)

SALMONA, a branch of the Mosel (Mosel).

"Nec fastiditae Salimonse usurpo fluores,"

(Amonos, Mosell. 366.)

The Salmo is the Salmo, which flows into the Mosel, near the village of Nemagens. [G. L.]
SALMONE.

SALMONE (Σαλμώνη, Steph. B. s. v.; Strab. 11. 68: Euth. Σαλμωνέα, Σαλμωνέα, Steph. B.; the form Σαλμωνεία presupposes a form Σαλμώνων, which probably ought to be read in Diodorus instead of Σαλμώνα), an ancient town of Pisatis in Elis, said to have been founded by Salmoneus, stood near Hereclia at the sources of the Enipens or Barabinus, a branch of the Alpheius. Its site is uncertain. (Strab. viii. p. 556; Dion. L. c.; Apollod. i. 9. § 7; Steph. B. l. c.)

SALMONE. [SAMVMICM PEOIMONTHTUM.]

SALMYSA (Σαλμίσα, Steph. B. l. c.), a city of Spain near the Pillars of Hercules; perhaps in the Campus Spartianus near Carthago Nova, if the reading of Braunsius in Oppian (Cyrop. iv. 222) is correct. (Comp. Ubert. ii. pt. i. p. 412) [T. H. D.]

SALMYDESUS (Σαλμιδέας ήτοι Σαλμιδεύς, Plut. ii. 11. § 4; Halicarnass. Plin. iv. 11. s. 18: Mela, ii. 2. § 5), a coast-town or district of Thrace, on the Euxine, about 60 miles NW. from the entrance of the Bosporus, probably somewhere in the neighbourhood of the modern Midye. The eastern shores of the Haemus here come very close to the shore, which they divide from the valley of the Helorus. The people of Salmydessus were thus cut off from communication with the less hazardous portions of Thrace, and hence notorious for their savage and inhuman character, which harmonised well with that of their country, the coast of which was extremely dangerous. Aeschylus (Prom. 726)* describes Salmydessus as "the rugged jaw of the sea, hostile to sailors, step-mother of ships;" and Xenophon (Anab. vii. 5. § 12, seq.) informs us, that in his time its people carried on the business of wreckers in a very systematic manner, the coast being divided into portions by means of posts erected along it, and to whose inhabitants each portion was assigned having the exclusive right to plunder all vessels and persons cast upon it. This plan, he says, was adopted to prevent the bloodshed which had frequently been occasioned among themselves by their previous practice of indiscriminate plunder. Strabo (vii. p. 319) describes this portion of the coast of the Euxine as "desert, rocky, destitute of harbours, and completely exposed to the north winds," while Xenophon (l. c.) characterises the sea adjoining it as "full of shoals." The earlier writers appear to speak of Salmydessus as a district only, but in later authors, as Apollodorus, Pliny, and Mela, it is mentioned as a town.

Little is known respecting the history of this place. Herodotus (iv. 93) states that its inhabitants, with some neighbouring Thracian tribes, submitted without resistance to Darius when he was marching through their country towards the Danube. When the remnant of the Greeks who had followed Cyrus the Younger entered the service of Scuthes, one of the expeditions in which they were employed under Xenophon was to reduce the people of Salmydessus to obedience; a task which they seem to have accomplished without much difficulty. (Anab. l. c.)

SALO, a tributary of the Ierus in Celtiberia, which flowed past the town of Bibillis (whence Justin, xiii. 3, calls the river itself Bibilis) and entered the Eurus at Alleron. (Mart. iii. 110, 103, iv. 55.) Now the Xalon. [T. H. D.]

SALODURUM, in Gallia, is placed in the Antonine Itin. x. from Petinesca [Petinesca], and the distance from Salodurum to Augusta Rauracorum (August near Basle) is xxii. Salodurum is Soloturn, as the Germans call it, or Soletore, and though the distance between Basle and Soloturn is somewhat less than that in the Itins, this may be owing to the passage over the hills which separate the estates of Basle and Solothurn. It is said that there are Roman remains at Soletore, and an inscription of the year B. C. 219, "Vico Salo," has been found there. Salodurum is one of the towns of the Helvetii with a Celtic termination (dur). Cluver conjectured that Pedenn's Ganodurum (Ganodurum) might be Salodurum. (D'Anville, Notice, &c.; Ubert, Gallien.)

SALOE (Σαλος, Paus. vii. 24. § 7), or Sale (Plin. iii. 31), a small lake of Lydia at the foot of Mount Salmydessus, on the site of Tarentas or Sipylos, the ancient capital of Macedonia, which had probably perished during an earthquake. (Strab. i. p. 58, xii. p. 579.) The lake was surrounded by a marsh; and the Phyrites, which flowed into it as a brook, issued at the other side as a river of some importance. [L. S.]

SALOMACUM or SALAMOCUM, is placed by the Antonine Itin. on a road from Aquea Tarbellitica (Diana) to Burdigala (Bordeaux). Salomecum is the next place on the road to Burdigala; it is a distance of sixty miles. The distance and the name Salso show that Sales is Salomecum. [G. L.]

SALONA, SALON'XAE (Σαλώνα, Σαλωνα, this latter is the more usual form, as found in Inscriptions, Orelli, Inscrip. nos. 502, 3833, 4995; and on coins, Bashe, vol. iv. pt. i. p. 1557; Euth. Σαλωνέας, Σαλωνέας, a town and harbour of Dalmatia, which still bears its ancient name, situated on the SE. shore of the Gulf of Salona between the Adriatic breaks (Con. di Castello), on the N. of the river Iader (il Giadro). Lucan's description (vii. 104) —

* qua meris Adriaci longis fert una Salona
Et tepidum in molles Zephyros excurrunt Iader —

agrees with its oblong form, still traceable in the ruins, and with the course of the river. Though the public buildings and houses of ancient Salona have been destroyed, enough remains of the wall to show the size, as well as position, of the city; and the arch of the bridge proves that the course of the river is unchanged. The city consisted of two parts, the eastern and the western; the latter stands on rather higher ground, sloping towards the N., along which the wall on that side is built. Little is known of Salona before the time of Julius Caesar; after the fall of Dalmatium it became the chief town of Dalmata, and the head-quarters of L. Catullinus Metellus, B.C. 117. (Appian. Ille. 11.) It was besieged a second time, and opened its gates to Cn. Casinum, n. c. 78. (Entrop. vi. 4.; Ortes. v. 23.) When the Pompeyan fleet swept the Ilonian gulf from Corea to Salona, M. Octavius, who commanded a squadron for Pompeius, was compelled to retreat with loss from before this stronghold of
the massive structure of the palace for shelter; the settlement swelled by the arrival of their countrymen became a Roman city—founded in honor of Aspalathum, and paid an annual tribute of 2,40 pieces of gold to the Eastern emperors. (Const. Porph. l. c.)

The palace is nearly a square, terminated at the four corners by a quadrangular tower. According to the latest and most accurate admeasurements, the superficial content, including the towers, occupies a space of a little more than eight acres. (Willkinson, Dalmatia, vol. i. pp. 114—115.) The entire building was composed of two principal sections, of which the one to the S. contained two temples—one dedicated to Jupiter the other to Asculapius—and the private rooms of the emperor. Two streets intersected each other at right angles, nearly in the centre of it; the principal one led from the Porta Aurea, the main entrance on the N. front, to a spacious court before the vestibule; the other ran in a direct line from the W. to the E. gate, and crossed the main street just below the court. What remains is not enough to explain the distribution of the various parts of the interior.

By a comparison of what existed in his time with the precepts of Vitruvius, Adams (Antiquities of Diocletian's Palace, 1764) has composed his ingenious restoration of the palace. (Comp. Gibbon, c. xiii.) All the gates, except the Porta Argeata, were defended by two octagonal towers; the principal or "golden gate" still remains nearly perfect. The temple of Jupiter is now the "Dunum," and that of Asculapius is a baptistery dedicated to St. John. Diocletian's palace marks an era;—columnar was so combined with arched architecture, that the arches were at first made to rest upon the entablature, and afterwards were even forced immediately to spring from the abacus, in violation of the law of statics, which requires undiminished and angular pillars under the arch; at length the entablature itself took the form of an arch. (Müller, Ancient Art, § 193.) But although this architecture offends against the rules of good taste, yet these remains may serve to show how directly the Saracen and Christian architects borrowed from Roman models many of the characteristics which have been looked upon as the creation of their own imagination. (Comp. Hope, Architecture, vol. i. c. viii.; Freeman, History of Architecture, p. 152.) A plan of the palace of Diocletian, taken from Adams, will be found in Ferguson's Handbook of Architecture, vol. i. p. 356, accompanied by an account of the general arrangements of the building. [E.B.J.]

SALITJINUM, an ancient city of Etruria, mentioned only by Livy (v. 31, 32), who speaks of the Salinates as assisting the Volscians in their war against Rome in b. c. 389. It is clear from the manner in which they are here spoken of that they were an independent people, with a considerable territory and a fortified city; and the manner in which they are associated with the powerful Volscians would lead to the inference that they also must have been a people of considerable power. Yet no subsequent mention of their name is found, and all trace of their existence is lost. Adams conjectures that Salinium occupied the site of the

SALONIA.
modern Oviedo, the name of which is evidently a corruption of Urbo Vetus, the form used by Paulus Diaconus in the seventh century (P. Diaec. iv. 33); there is, therefore, little doubt that the site was one of a more ancient Etruscan city; and its proximity to Volterra renders it probable enough that it may have been Salpina. But no reliance can be placed upon any such conclusion. (Nebhur, vol. ii. p. 493.)

SALSAS or SALSA, a river of Catalonia, noticed by Pliny (vi. 25). Reischard imagines that this is the same stream as that called by Marcian, Cathraps (p. 21, ed. Hudson), and by Ptolemy, Araps or Cathraps (vi. 8. § 4) ; and he identifies it with the modern Schir; but this seems very doubtful. [V.]

SALSALAE, in Gallia. Mela (ii. 5) describes the Salian Fons as not sending forth fresh water, but water saltier than the sea. He places the Fons south of the lake Rubresas, and near the shore which he calls Lunicae (LUCVATE). Salsalae is in the Antonine Itin. on the road from Narbo to the Pyrennees. Salsalae is Sali LOCAC or Salges, where there is a salt-spring. Near the Fons, says Mela, is a plain very green with fine and slender reeds, under which is water. This is the place, he says, where fish are got by striking down with a prong or something of the sort; and this is the origin of the fables told by the Greeks and some Romans about fishes being dug out of the ground. He alludes to Polybius (xxiv. 10). [T. G. L.]

SALSUMFLUXEN, a tributary of the Baetis in Hispania Baetica, between Attaguna and Attubis. (Hirtius, B. A. c. 78.) Variously identified with the Guadajoz and Salado. [T. H. D.]

SALVS. [STACHIR.]

SALTIATES (Σαλτιάτας, Strab. iii. p. 144), according to Strabo a people of Spain celebrated for their woolen manufacture. But we must probably read in this passage Σλατιατας. [T. H. D.]

SALTIGA (Σαλτίγα, Ptol. ii. 6. § 61), a town of the Batitani in Hispania Tarraconensis. [T. H. D.]

SALTOPYRGUS. [TEGLICIUM.]

SALURNIS (Siburni), a town in Rhenitia, on the river Athensis, in the north of Tricentum, is mentioned only by Paulus Diaconus. (Hist. Langob. iii. 29.) [L. S.]

SALUTARIIS PIRIGRA. [PIRIGRA, p. 623.]

SALVIA (Σαλβία), a town in the north-eastern extremity of Lower Italy, on the right bank of the Danube. (Ptol. ii. 16. § 4; Itin. Ant. pp. 266, 267.) According to the Notitia Imperii, where it is called Sclava, it contained a garrison of a body of horsemen. The site of this place cannot be ascertained with certainty. [L. S.]

SALYES (Σαλίς), SALYI, SALUVII, or SALYIES (Steph. Byz. s. c.), a Ligurian people in Gallia. There are other varieties of the writing of the word. The early Greeks gave the name of Ligys to these Salies; and their territory, which was in the possession of the Massilians, when Strabo wrote, was originally called Ligyatic. (Strab. iv. p. 203.) The geographer means to say that the old Greeks were not acquainted with the name of Salyes, but only with the name of the nation to which they belonged. Livy (v. 34) speaks of the Phocianas who founded Massilia being attacked by the Salyes, for in his time the name Salyes was familiar to the Romans.

Strabo speaks of the Salyes in his description of the Alps. He makes their country extend from Antipolis to Massilia, and even a little further. They occupied the hilly country which lies inland and some parts of the coast, where they were mingled with the Greeks (iv. p. 203). They extended west as far as the Rhone. The Salyes had also the country north of Massilia as far as the Durance (Duranci), a distance of 500 stadia; but on crossing the Durance at Cabello or Caballon (Curcadum) a man would be in the country of the Cavares (Strab. iv. p. 185), who extended from the Durance to the Isara (Isare). [CAVARES.] Strabo adds that the Salyes occupy both plains and the mountains above the plains. In this passage (Oi μν οδός Σαλίσων εκ αβρίων) Gersdorff (Transit. Strab. vol. i. p. 318) has altered Σαλίσων into Σαλαβαραμ, and so he has spoiled the meaning. Ukert has defended the true reading, though he has not correctly explained ου αβρίων. The Salyes occupied the wide plains east of Tarascon and Arles, one of the best parts of the country between the Durance and the Mediterranean; and so Strabo could correctly say that the Volcaet Tectosages who reach to the Rhone had the Salyes extending along their border and opposite to them on the other side of the river, and the Cavares opposite to them (north of the Durance).

The Salyes are sometimes distinguished from the Ligures, as when Strabo (iv. p. 178) speaks of the coast which the Massilians possess and the Salyes as far as the Ligys to the parts towards Italy and the river Varus, the boundary of the Narbonites (Provincia Narbonensis) and Italy. Livy also (xxxi. 26) speaks of P. Cornelius Scipio sailing along the coast of Eturia and of the Ligures, and then the coast of the Salyes till he came to Massilia. This shows that the Ligurians of Gallia, or the country west of the Volcan, became known to the Romans by the name of Salyes. Strabo's remark that these Salyes, whom the early Greeks named Ligures, were called Celtigauges by the later Greeks, may explain how Livy or his Epitomiser has called the Salyes both Ligurians ("Transalpini Ligures," Epit. 47) and Galli (Epit. 60). They were a mixed race of Galli and Ligures.

The Salyes were a warlike people. They had both cavalry and infantry, distributed into ten tribes or divisions. They were the first of the Transalpine nations which the Romans subdued. (Florus, iii. 2.) The Romans fought for a long time with the Ligurians east of the Itar, and with the Salyes west of it, for these people being in possession of the sea-coast closed against the Romans the way into Spain. They plundered both by sea and land, and were so formidable that the road through their land was hardly safe for a large army. After eighty years of fighting the Romans with difficulty succeeded in getting a road of 12 stadia in width allowed for the free passage of those who went on the public service.

Livy (xxxi. 10) tells us that in the Second Punic War the Insulare, Ceneonani, and Boii stirred up the Salyes and other Ligurians to join them; and all together under Hamilcar attacked Placentia. There is no ground, as Ukert remarks, to alter the reading "Salyes," for we see no reason why the Salyes as well as other Ligurians or mixed Ligurians should not and the enemies of Rome. Both the Ligurians and the Cisalpine Gauls dared the arms and the encroachment of the Romans. The alliance with
SAMARIA.

Samaica.

Massilia first brought the Romans into the country of the Salies; and in n. c. 154 the Oxybii and Deciates, or Deciates, who were threatening Massilia, were defeated by the consul Q. Opimins. The Salies or Salluvii are not named on this occasion by the historians, and the Deciates and Oxybii, who were certainly Ligurians, may have been two smaller tribes included under the general name of Salies or Salluvii. [Deciates; Oxybii.] The name of Fulvius Flaccus in n. c. 125 defeated the Salies, and in n. c. 123 the consul C. Sextius Calvinus completed the subjugation of this people, and founded Aquae Sextiae (Aix) in their territory.

Ptolemy (ii. 10. § 15) enumerates Tarascon, Glanum, Arelatum (Arelate) Colonia, Aquae Sextiae Colonia, and Erasingum as the towns of the Salies, Tarascon, Glanum (St. Rémy), Arelate, and Erasingum [ERIAGINUM] all lie west of Aquae Sextiae (Aix) and of Marseille; and we may conclude that the country of the Salies is the western half of the tract between the Var and the Rhone, and between the Durance and the Mediterranean.

The tribes east of the Salies, the Albici, Suetri, Nerusi, Oxybii, and Deciates, and there may be some others [COMMONT], were perhaps sometimes included under the name of the more powerful nation of the Salies; but Strabo's statement does not appear to be strictly correct, when he makes the Salies extend along the coast to Antipolis. The coast immediately west of the Var belonged to the Deciates and Oxybii. Pliny says "Ligurum celeberrimi ultra Alpes, Salluvii, Deciates, Oxybii" (iii. 5); the three tribes of Transalpine Ligures whose names occur in the history of the Roman conquest of this country.

In Pliny's list of the Coloniae in the interior of Narbonensis east of the Rhone there is "Aquae Salluvii Sallavium," and we may conclude that the head-quarters of the Salies or Salluvii and the name in the plain country above Aix and thence to Arles. Owing to their proximity to the Greeks of Massilia they would be the first of the Ligures or the mixed Gauli and Ligurians who felt the effect of Greek civilization, and there can be no doubt that their race was crossed by Greek blood. Possessing the town of Arles, at the head of the delta of the Rhone, they would have in their hands the navigation of the lower part of the river. The history of this brave and noble people is swallowed up in the blood-stained annals of Rome; and the race was probably nearly extinguished by the consular Calvisi selling them after his conquest. [G. L.]

Samaica (Σαμαίκη, Ptol. iii. 11. § 9), is described by Ptolemy as a στρατηγικώς Thrace, on the borders of Macedonia and the Aegean. [J. R.]

Samachonitis Lacus (Σαμαχώνιτις Λίμνη, al. Σαμαχώνιτας), the name given by Josephus to the small lake of the Upper Jordan, called in Scripture the "waters of Merom," where Joshua routed the army of Jabin, king of Hazor, which city, according to Josephus, was situated above the lake. (Comp. Josh. xi. 5, 7, and Judg. iv, with Josephus, Ant. v. 5. § 1.) He elsewhere describes the lake as 60 stadia long by 30 broad, extending its marshes to a place called Daphne, which Reland is probably right in altering to Dune, i. e. Dan, as Josephus immediately identifies it with the temple of the Golden Calf. [Josephus, B. J. 4. 1. § 1; Reland, Palæst. vol. p. 263.) The name, which is nowhere else found, has been variously derived, but the most probable etymology would connect it in sense with the Hebrew name Merom = aquae superiores, deriving the word from the Arabic "sama'at," altus salt. (Reland, L. c. p. 262.) It is singular that no other notices occur of this lake in sacred or in other writings. Its modern name is Babr-el-Hilah. Poocke writes: "Josephus says the lake was 7 miles long, but it is not above 2 miles broad, except at the north end, where it may be about 4. The waters are muddy and esteemed unhospitable, having something of the nature of the bogs of Northern observations on Palestine, vol. ii. p. 73.) Dr. Robinson "estimated its length at about 2 hours, or from 4 to 5 geographical miles; its breadth at the northern end is probably not less than 4 miles." It had the appearance almost of a triangle, the northern part being far the broadest; " or rather the map gives it in some degree the shape of a pear." (Bibl. Res. vol. iii. pp. 339, 340, Biblioth. Sacra. vol. l. p. 12; Stanley, Sinai and Palestine, vol. iii. p. 523, n. 1.) [G. W.]

Samamyi. [SYRIAC.]

Samaíra. [FEUDIS; SAMAROBERVA.]

Samaíria (Σαμαίρια, LXX., Joseph; χώρα Σαμαίριων, Σαμαρίπη, Apros, Ptol.) The district has been already described in general, under Palæstina [p. 518], where also the notice of Josephus has been cited [p. 532]. It remains to add a few words concerning its extent, its special characteristics, and its place in classical geography. It lay, according to Josephus, "between Judaea and Galilee (comp. St. John, iv. 4), extending from a village called Ginea in the great plain (Esdraelon) to the toparchy of Arrabatta." Ginea there can be no difficulty in identifying with the modern Jenin, at the southern extremity of the plain, on the road from Nobis to Nazareth. The toparchy of Arrabatta, mentioned also by Pliny, is difficult to define: but it certainly lay between Nobis and Jericho, and therefore probably east of the toparchy of Saphna and in the same line of latitude. (Eusebius, Onomast. s. v. Άραβάττα; Reland, Palæst. p. 192.) The northern boundary of Samaria is well defined by a continuous line of hills, which, commencing with Mount Carmel on the W., runs first in a SW. direction and then almost due E. to the valley of the Jordan, bounding the great plain of Esdrason on the S. Its southern boundary is not so distinctly marked, but was probably continuous with the northern limits of the tribe of Benjamin. It included the tribe of Ephraim, and the half of Manasseh on this side Jordan, and, if it be extended as far E. as Jordan, included also some part of Issachar, that skirted these two tribes on the E. Pliny (v. 13) reckons to Samaria the towns Neapolis, formerly called Mamortha, Sebaste, and Gamala, which last is certainly erroneous. [GAMAL.] Ptolemy names Neapolis and Thena (Θηνα, v. 16. § 5), which last is evidently identical with Thamath (Θάμαθ), the tribe of Joseph, mentioned by Eusebius (Onomast. s. c.), and still existing in a village named Thena; 10 miles E. of Neapolis, on the descent to the Jordan. St. Jerome notes that the most precious oil was produced in Samaria (in Hosiam, cap. xii.), and its fertility is attested by Josephus. [G. W.]

Samaria, Sebasté (Σαμάρεια, Σεβαστή), the Hebrew Shechem, the capital city of the kingdom of Israel, and the royal residence of the kings of Om (Cir. of 925), of which here it is said that "he bought the hill Samaria of Shemer for two talents of silver, and built on the hill, and called the name of the city which he built after the name of Shemer, owner of the hill, Samaria." (Heb. Shemeron). (1 Kings, xvi. 24.) Mr. Stanley thinks 3. l. 4
that Omri built it merely as a palatial residence (Jos 19:10). But Dr. Robinson perhaps more justly concludes that it was chosen as the site of the capital, and remarks that "it would be difficult to find in all Palestine a situation of equal strength, fertility, and beauty combined." (Bibl. Res. iii. p. 146.) Its great strength is attested by the fact that it endured a siege from all the power of the Syrian army under Hazael, in the days of Jehoram (2 Chron. 21:16), little more than 30 years after its first foundation, and was not taken notwithstanding the frightful effects of the famine within the walls (2 Kings vii. 24—viii. 20), and when subsequently besieged by the Assyrians (2 Kings v. 27) it was only reduced after a siege of three years (xxvii. 9, 10). After the captivity it was taken by John Hyrcanus, after a year's siege, when he is said to have sapped the foundations of it with water and destroyed all traces of a city. It was subsequently occupied by the Jews until Pompey restored it to its own inhabitants. It was further restored by Gabinius. (Joseph. Ant. xiii. 10, § 3, 15, § 4, xiv. 4 § 4, 5. § 3, xii. 10, § 3, 15, § 4.) It was granted to Herod the Great by Augustus on the death of Antony and Cleopatra, and was by him converted into a Roman city under the name of Sebaste = Augusto, in honour of his imperial patron. (Ant. xv. 3. §§ 3, 7, 8, § 5, B. J.i. 20. § 8.) The town was surrounded with a wall 20 stadia in length; in the middle of the town was a temple built in honour of Caesar, itself of large dimensions, and standing in a temenos of I, stadium-square. It was colonized with 6,000 veterans and others, to whom was assigned an extremely fertile district around the city, (B. J. i. 21. § 2.) Dr. Robinson imagines that it was in this city that Philip first preached the Gospel, and that the church was founded by the apostles St. Peter and St. John (Acts, viii. 5, &c.); but considering the absence of the article in the original, supplied in the English translation, and comparing the passage with the identical expression in St. John (iv. 5), it is more probable that the same town is intended, viz. Sychar, or Neapolis, the chief seat of the Samaritan worship. Nor does the expression in Acts (viii. 14), that "Samaria had received the word of God," militate against this view; for here also the country may be very well understood, and it is well remarked by Dr. Robinson that "it is sometimes difficult to distinguish whether, under the name Samaria, the city or the region is meant." (Bibl. Res. iv. p. 146.) It is most probable, however, that the sacred writers would have used the classical name then in vogue had they had occasion to mention the city. Septimius Severus placed a colony there in the beginning of the third century (Ulpian, quoted by Robinson, L. c. p. 148, n. 1), and it was probably at that time an episcopal see; for its bishop, Marius or Marium, was present at the Council of Nicea and subscribed its acts. (Le Quien, Oriens Christianus, vol. iii. col. 540—552.) The tradition which assigns Solon as the first of the poets of ancient Samaria is most, I believe, a mistake; and the epithet of "a gateway of Israel" or "a gateway of the Ammonites," which is given above, is the result of misinterpretation and mockery. It is first found in St. Jerome (Comment in Osee, i. 5), who also places there the boundary of Ohabah and Abelsha (Comment. in Ab. diam, i. 1, Epitaph. Paulae, c. 6), and militates against Josephus, whose statement, however, is inadmissible. (MACHARIUS.) The modern village which represents in its name and site the magnificent city of Herod the Great is situated on an isolated hill 6 miles N. of Nablus, reckoned by Josephus a day's journey from Jerusalem. (Ant. xv. 11.)

SAMAROBA, a town of Hyrcania, mentioned by Strabo (xi. p. 508). It is no doubt the same as that called Samarane by Polyenus (v. 9, § 2), and by Ammianus Marcellinus, Samaana (xxiii. 6). It cannot be identified with any modern place. (V.)

SAMAROBROVA, in Gallia, the ford or passage of the Samara, was a town of the Ambiani on the Samara (Samo). Caesar held a meeting of the states of Gallia at Samarobriva in the autumn of B.C. 54, before putting his troops in winter-quarters. Caesar himself stayed at Samarobriva, as his narrative shows (B. G. v. 24, 46, 47, 53), and as appears from those letters of Cicero addressed to his friend Tertius, who was about Caesar at that time (ad Fam. vii. 11, 12, 16). Polyenus mentions Samanoba as the chief town of the Ambiani (iii. 9. § 8). The town afterwards took the name of "Amelani urbs inter alias eminens" (Ann. Marc. xv. 11), or "Civitas Ambanorum" in the Notitia Prov. Gallia. The name of Samarobriva appears in the Antonine Itin. and in the Table; but the Itin. has Ambiani also. There seems no reason for fixing Samarobriva at any other site than Amienna, though some geographers would do so. (G. L.)

SAMBANA (Σαμόνα), a small place mentioned by Diodorus Siculus (xvii. 27). There can be little doubt that it is the same as the Sabata of Pliny (v. 27. § 31). It was situated about two days' journey N. of Sittake and of E. of Artemis. (V.)

SAMBASTAE (Σαμβασταί), one of the many small tribes in the district of Patalaune mentioned by Arrian (vi. 13) as noticed by Alexander and his troops near the mouths of the Indus. It has been conjectured that the modern parts of Scevan or Schean indicate the site of the chief fortress of this people; and Barnes appears to believe that this is the same place noticed by Curtius (ix. 8) as a strong-hold of the Brahmans (Barnes, Travels in Bukhara, iii. p. 57.)

SAMBACITANUS SINUS, in Gallia, is placed in the Maritime Itin. between Forum Julii and Heraclea. It is the gulf of Grimaud. (G. L.)

SAMBROCA (Σάμβροκα, Pol. ii. 6. § 2.), a river of Hispania Tarraconensis, which entered the sea between the Pyrenees and the Iberus. Uberti (ii. pt. i. p. 292) takes it to be the same river called Alba by Pliny (iii. 8. 4); the modern Ter. (T. I. D.)
SAMBULOS. [Bagistanus Mons.]

SAMBUS (Σάμσος), a small river which forms one of the tributaries of the Jumna. It is mentioned by Arrian in his list of Indian rivers (Ind. c. 4).

V.

SAME or SAMOS (Σάμος; Eth. Σαμαίος; Same), the most ancient city in Cephalonia, which is described in the poems of Homer. [Cephalenia.] The city stood upon the eastern coast, and upon the channel separating Cephalonia and Ithaca. (Strab. x. p. 455.) Along with the other Cephalonian towns it joined the Athenian alliance in b. c. 431. (Thuc. ii. 36.) When M. Fulvius passed over into Cephalonia in b. c. 189, Samos at first submitted to the Romans along with the other towns of the island; but it shortly afterwards revolted, and was not taken till after a siege of four months, when all the inhabitants were sold as slaves. (Liv. xxxvii. 28, 29.) It appears from Livy's narrative that Same had two citadels, of which the smaller was called Cycyas; the larger he designates simply as the major arx. In the time of Strabo there existed only a few vestiges of the ancient city. (Strab. L.c.; comp. Plin. iv. 12. s. 19.)

Same has given its name to the modern town of Same, and to the bay upon which it stands. Its position and the remains of the ancient city are described by Leake. It stood at the northern extremity of a wide valley, which borders the bay, and which is overlooked to the southward by the lofty summit of Mount Aenos (Elato). It was built upon the north-western face of a bicipital height, which rises from the shore at the northern end of the modern town. The ruins and vestiges of the ancient walls show that the city occupied the two summits, an intermediate hollow, and their slopes as far as the sea. On the northern of the two summits are the ruins of an acropolis, which seems to have been the major arx mentioned by Livy. On the southern height there is a monastery, on one side of which are some remains of a Hellenic wall, and which seems to be the site of the Cycyas, or smaller citadel. There are considerable remains of the town walls. The whole circuit of the city was barely two miles. (Leake, Northern Greece, vol. iii. p. 55.)

COIN OF SAME.

SAMIA. [Samicum.]

SAMICUM (Σάμικοι; Eth. Σαμικεῖα), a town of Triphylia in Elis, situated near the coast about half-way between the mouths of the Alpheus and the Neda, and a little north of the Anigrus. It stood upon a projecting spur of a lofty mountain, which here approaches so near the coast as to leave only a narrow pass. From its situation commanding this pass, it is probable that a city existed here from the earliest times; and it was therefore identified with the Arene of Homer (II. ii. 591, xi. 723), which the poet places near the mouth of the Minyeus, a river supposed to be the same as the Anigrus [Arene.] According to Strabo the city was originally called SAMOS (Σαμοί), from its being situated upon a hill, because this word formerly signified "heights." Samicum was at first the name of the fortress, and the same name was also given to the surrounding plain. (Strab. viii. pp. 346, 347; Paus. v. 5. § 3.) Pausanias speaks (v. 6. § 1) of a city SAMIA (Σαμία), which he apparently distinguishes from Samicum; but Samicum is the only place mentioned in history [see some remarks under MACISTUS.] Samicum was occupied by the Aetolian Polyperchon against the Arcadians, and was taken by Philip, b. c. 219. (Paus. v. 6. § 1; Polyb. iv. 77, 80.) The ruins of Samicum are found at Khainatia (written Xainatía), which is only the name of the guarded pass. The ruined walls are 6 feet thick, and about 1 ½ mile in circumference. They are of the second order of Hellenic masonry, and are evidently of great antiquity. The towers towards the sea belong to a later age.

Near Samicum upon the coast was a celebrated temple of the Samian Poseidon, surrounded by a grove of wild olives. It was the centre of the religious worship of the six Triphylian cities, all of whom contributed to its support. It was under the superintendence of Macistus, the most powerful of the Triphylian cities. (Strab. viii. pp. 344, 346, 347.) In a corrupt passage of Strabo (p. 344) this example is said to be "the 16th stadean equivalent from Leporun and the Anigros (i.e. the Alpheus)"; for the latter name we ought to read Alpheus and not Anigros, as some editors have done.

In the neighbourhood of Samicum there were celebrated medicinal springs, which were said to cure cutaneous diseases. Of the two lagoons which now stretch along the coast, the larger, which extends as far as the mouth of the Alpheus, begins at the northern foot of the hill upon which Samicum now stands; the southern extends along the precipitous sides of the hill, which were called in antiquity the Achaean rocks. (Strab. viii. p. 347.) The river Anigros flows into the latter of these lagoons, and from thence flows out into the sea. The lagoon is deep, being fed with subterraneous sources; in summer it is said to be very fetid, and the air extremely unwholesome. Strabo relates that the waters of the lake were fetid, and its fish not eatable, which he attributes to the Centaurs washing their wounds in the Anigros. Pausanias mentions the same circumstances; and both writers describe the efficacy of the water in curing cutaneous diseases. There were two caves, one sacred to the nymphs Anigrides (Ανιγρίδες, Paus.; Ανιγρίδας, Strab.), and the other to the Centaurs; the former was the more important, and is alone mentioned by Pausanias. It was in the cave of the Anigrides that the persons who were going to use the waters first offered up their prayers to the Nymphs. (Strab. viii. pp. 346, seq.; Paus. v. 5. §§ 7-11.) These two caves are still visible in the rocks; but they are now accessible only by a boat, as they are immediately above the surface of the lake. General Gordon, who visited these caverns in 1835, found in one of them water distilling from the rock, and bringing with it a pure yellow sulphur. (Leake, Morea, vol. i. p. 54, seq., Peloponnesiac, p. 108; Bobbeye, Reccherches, &c., p. 133, seq.; Curtius, Peloponnesos, vol. ii. p. 79, seq.)

SAMINTHUS (Σαμινθός), a town in the Argeia, on the western edge of the Argive plain, which was taken by Agis, when he marched from Phlius into the territory of Argos in b. c. 418. (Thuc. v. 58.) Its position is uncertain. Leake, who supposes Agis to have marched over Mt. Lycreium and the adjoining hills, places it at Koutzopodhi (Morea,
SAMMONIUM.

vol. ii. p. 415), and Ross at the village of Phœmis, on the southern side of Mt. Tricarum, across which is the shortest pass from the Phœmis into the ancient plain. (Ptolem. p. 27.)

SAMMONIUM. [S. AMMONIUM]

SAMMONIUM (s. Samnium, Pol. Strab. Ech. Samn. pl. Samnites, Samn. Pol. Strab., &c. Samn., Pat.), one of the principal regions or districts of Central Italy. The name was sometimes used in a more extensive, sometimes in a more restricted, sense, the Samnites being a numerous and powerful people, who consisted of several distinct tribes, while they had founded other tribes in their immediate neighborhood, who were sometimes called Samnites, under the same appellation, though they did not properly form a part of the nation. But Samnium proper, according to the more usual sense of the name (exclusive of the Frentani, but including the Hirpini), was a wholly inland district, bounded on the W. by the Marsi, Peligni, and Frentani, on the E. by Apulia, on the S. by Lucania, and on the SW. and W. by Campania and Latium.

I. GENERAL DESCRIPTION.

The territory thus limited was almost wholly mountainous, being filled up with the great mountain masses and ramifications of the Apennines, which in this part of their course have lost even more than elsewhere the character of a regular chain or range, and consist of an irregular and broken mass, the configuration of which it is not very easy to understand. But as the whole topography of Samnium depends upon the formation and arrangement of these mountain groups, it will be necessary to examine them somewhat in detail.

1. In the northern part of the district, adjoining the Marsi and Peligni, was a broken and irregular mass of mountains, containing the sources of the Saguus (Sangro), and extending on both sides of the valley of that river, as far as the frontiers of the Frentani. This was the land of the Caraceni, the most northerly of the Samnite tribes, whose chief city was Antìdena, in the valley of the Saguus, about 5 miles above Castel di Sangro, now the chief town of the great district.

2. The valley of the Saguus was separated by a mountain pass of considerable elevation from the valley of the Vulturnus, a river which is commonly considered as belonging to Campania; but its sources, as well as the upper part of its course, and the valleys of all its earliest tributaries, were comprised in Samnium. Asernia, situated on one of these tributaries, was the principal town in this part of the country; while Venafrum, about 15 miles lower down the valley, was already reckoned to belong to Campania. This portion of Samnium was one of the richest and most fertile, and least mountainous of the whole country. From its proximity to Latium and Campania, the valley of the Vulturnus was one of the quarters which was most accessible to the Roman arms, and served as one of the highways to the enemy's country.

3. From Asernia a pass, which was probably used from very early times, and was traversed by a road in the days of the Roman Empire, led to Bovianum in the valley of the Tifernus. This city was situated in the very heart of the Samnite country, surrounded on all sides by lofty mountains. Of these the most important is that on the SW., the Monte Matese, at the present day one of the most celebrated of the Apenines,

but for which no ancient name has been preserved. The name of Mons Tifernus may indeed have been applied to the whole group; but it is more probable that it was confined, as that of Monte Biferno is at the present day, to one of the offshoots or minor summits of the Matese, in which the actual sources of the Tifernus were situated. The name of Matese is given to an extensive group or mass of mountains filling up the whole space between Boviano (Bovianum) and the valley of the Vulturnus, so that it sends down its ramifications and underfalls quite to the valley of that river, whence they sweep round by the valley of the Calvis, and thence by Morvone and the road to the highest summit, the Monte Miletto, SW. of Boviano, rises to a height of 6744 feet. This rugged group of mountains, clothed with extensive forests, and retaining the snow on its summits for a large part of the year, must always have been inaccessible to civilisation, and offered a complete barrier to the arms of an invader. There could never have been any road or frequented pass between that which followed the valley of the Vulturnus and that which led from the eastern base of the Matese, to the valley of the Calvis, to that of the Tifernus. This last is the line followed by the modern road from Naples to Campobasso.

4. N. of Boviano the mountains are less elevated, and have apparently no conspicuous (or at least no celebrated) summits; but the whole tract, from Boviano to the frontier of the Frentani, is filled up with a mass of rugged mountains, extending from Asurnone and the valley of the Sangua to the neighbourhood of Campobasso. This mountainous tract is traversed by the deep and narrow valleys of the Trigno (Triunus) and Biferno (Tifernus), which carry off the waters of the central chain, but without affording any convenient means of communication. The mountain tracts extending on all sides of Bovianum constituted the country of the Pentii, the most powerful of all the Samnite tribes.

5. S. of the Matese, and separated from it by the valley of the Calvis (Calvus), is the group of the Mons Taranus, still called Monte Taburano, somewhat resembling the Matese in character, but of inferior elevation as well as extent. It formed, together with the adjoining valleys, the land of the Caudini, apparently one of the smallest of the Samnite tribes, and the celebrated pass of the Caudine Forks was situated at its foot. Closely connected with Mount Taburano, and in a manner dependent on it, though separated from it by the narrow valley of the Iscario, is a long ridge which extends from Arpaja to near Capua. It is of very inferior elevation, but rises boldly and steeply from the plain of Campania, of which it seems to form the natural boundary. The extremity of this ridge nearest to Capua is the Mons Tifata, so celebrated in the campaigns of Hannibal, from which he so long looked down upon the plains of Campania.

6. At the eastern foot of Mount Taburano was situated Beneventum, the chief town of the Hirpini, and which, from its peculiar position, was in a manner the key of the whole district inhabited by that people. It stood in a plain or broad valley formed by the junction of the Calvis with its tributaries the Satitana and Tamarus, so that considerable valleys opened up from it in all directions into the mountains. The Calvis (Cala) is not only the most considerable of the tributaries of the Vulturnus, but at the point of its junction with that river, about 20 miles below

SAMNIUM. 891

SAMNIUM.

Benvenuto, is little if at all inferior to it in magnitude and volume of waters. The Calor itself rises in the lofty group of mountains between S. Angelo dei Lombardi and Eboli. This group, which is sometimes designated as Monte Itrino, and is the most elevated in this part of the Apennines, sends down its waters to the N. in the Calor and its tributary the Sabatia; while on the E. it gives rise to the Anfusus, which flows into the Adriatic sea, after traversing more than two-thirds of the breadth of Italy, and on the S. it is the Staurus Sabines, usually by a much shorter course into the Gulf of Salerno. From this point, which forms a kind of knot in the main chain of the Apennines, the mountains sweep round in a semicircle to the NE. and N. till they reach the head waters of the Tamaris, and adjoin the mountains already described in the neighbourhood of Bojano and Campobasso. In this part of its course the main chain sends down the streams of the Ufita and the Mascano on the W. to swell the waters of the Calore, while on the E. it gives rise to the Cerballus or Cervaro, a stream flowing into the Adriatic.

7. From the Monte Itrino towards the E. the whole of the upper valley of the Anfusus was included in Samnium, though the lower part of its course lay through Apulia. The exact limit cannot be fixed,—the confines of the Hirpini towards Apulia on the one side, and Lucania on the other, being, like the boundaries of Samnium in general, almost wholly arbitrary, or marked by any natural limit. It may be considered, indeed, that in general the mountain country belonged to Samnium, and the lower falls or hills to Apulia; but it is evident that such a distinction is itself often arbitrary and uncertain. In like manner, the rugged mountain chain which extends along the right bank of the Anfusus appears to have been included in Samnium; but the line of demarcation between this and Lucania cannot be determined with accuracy. On the other hand, the detached volcanic mass of Mona Vultur, with the adjacent city of Venusia, was certainly not considered to belong to Samnium.

II. HISTORY.

All ancient writers agree in representing the Samnites as a people of Sabine origin, and not the earliest occupants of the country they inhabited when they first appear in history, but as having migrated thereto at a comparatively late period. (Varr. L. L. vii. 29; Appian, Samn. Pr. xiv. 5; Strab. v. p. 259; Fest. a. e. Samnites, p. 328; A. Gall. xi. 1.) This account of their origin is strongly confirmed by the evidence of their name; the Greek form of which, Zawvtra, evidently contains the same root as that of Sabini (Sera-niata or Sif-niata, and Sub-ini or Suf-ini); and there is reason to believe that they themselves used a name still more closely identical. For the Oscean form "Safinim," found on some of the denarii struck by the Italian allies during the Social War, cannot refer to the people who, so called, as they were, was long before incorporated with the Romans, and is, in all probability, the Oscean name of the Samnites. (Mommsen, Unter Ital. Dialekte, p. 293; Friedländer, Oskische Münzen, p. 78.) The adjective form Sabellus was also used indifferently by the Romans as applied to the Sabines and the Samnites. [SADINI.]

The Samnite emigration was, according to Strabo (v. p. 250), one of those sent forth in pursuance of a vow, or what was called a "ver sacrum." It was, as usual, under the special protection of Mars, and was supposed to have been guided by a bull. (Strab. l. c.) It is probable from this statement that the emigrants could not have been numerous, and that they established themselves in Samnium rather as conquerors than settlers. The previously existing population was apparently Oscean. Strabo tells us that they established themselves in the land of the Oscans (l. c.); and this explains the circumstance that throughout the Samnite territory the language spoken was Oscean. (Liv. x. 20.) But the Oscans themselves were undoubtedly a separate tribe with the Sabines [ITALIA]; and whatever may have been the circumstances of the conquest (concerning which we have no information), it seems certain that at an early period both branches of the population had completely coalesced into one people under the name of the Samnites.

The period at which the first emigration of the Samnites took place is wholly unknown; but it is probable that they had not been long in possession of their mountainous and inland abodes before they began to feel the necessity of extending their dominion over the more fertile regions that surrounded them. Their first movements for this purpose were probably those by which they occupied the hilly but fertile tract of the Frentani on the shores of the Adriatic, and the land of the Hirpini on the S. Both these nations are generally admitted to be of Samnite origin. The Frentani, indeed, were sometimes reckoned to belong to the Samnite nation, though they appear to have had no political union with them [FRENTANI]; the Hirpini, on the contrary, were generally regarded as one of the component parts of the Samnite nation; but they appear to have been originally a separate colony, and the story told by Strabo and others of their deriving their name from the wolf that had been their leader, evidently points to their having been the result of a separate and subsequent migration. (Strab. v. p. 250; Serv. ad Aen. xi. 785.) The period of this is, however, as uncertain as that of the first settlement of the other Samnites; it is not till they began to spread themselves still further both towards the S. and W., and press upon their neighbours in Lucania and Campania, that the light of history begins to dawn upon their movements. Even then their chronology is not clearly fixed; but the conquest and occupation of Campania may be placed from about 440 B.C. to 420 B.C., and was apparently completed by the last of the three dates. [CAMPANIA.] That of Lucania must probably be placed somewhat later; but whatever were the causes which were at this time urging the movements of the Sabellian tribes towards the S., they seem to have continued steadily in operation; and within less than half a century (c. 410—360) the Samnites spread themselves through the whole of Lucania, and almost to the southern extremity of Italy. [LUCANIA.] The subsequent fortunes of these conquerors, and their contests with the cities of Magna Græcia, do not belong to our present subject, for the Lucanians seem to have early broken off all political connection with their parent nation, the Samnites, just as the latter had done with their Sabine ancestors. This laxity in their political ties, and want of a common bond of union, seems to have been in great measure characteristic of the Sabellian races, and was one of the causes which undoubtedly directed the way of their final subjection under the Roman yoke. But the Samnites seem to have retained possession, down to a much later period, of
the tract of country from the Silans to the Sarums, which was subsequently occupied by the Picentini. (Syllax, p. 3. § 11; Niebuhr, vol. i. p. 94.) They certainly were still in possession of this district in the Second Samnite War; and it is probable that it was not till the close of their long struggles with Rome that it was wrested from them, when the Romans transplanted thither a colony of Picentines, and thus finally cut off the Samnites from the sea. On the side of Apulia the progress of the Samnites was less definite; and it does not appear that they established themselves in the permanent possession of any part of that country, though they were certainly pressing hard upon its frontier cities; and it was probably the sense of this and the fear of the Samnite arms that induced the Apuliuns early to court the alliance of Rome. The Samnite nation, when it first appears in Roman history, seems to have consisted of four different tribes or cantons. Of these the Pentri and the Hirpini were much the most powerful; so much so indeed that it is difficult to understand how such petty tribes as the Caraceni and Cadini could rank on terms of equality with them. The Frentani are frequently considered as forming a fifth canton; but though people was certainly of Samnite race, and must have had and regarded themselves as an integral part of the Samnite nation, as he describes the Samnites as occupying a considerable part of the coast of the Adriatic (Peripl. p. 5. § 15), they seem to have already ceased to form a part of their political body at the time when they first came into contact with Rome. [Frentani.] We have no account of the nature and character of the political constitution that bound together these different tribes. It seems to have been a mere federal league, the bonds of which were drawn closer together in time of war, when a supreme general or commander-in-chief was chosen to preside over the forces of the whole confederacy, with the title of Emührator, the Subelian form corresponding to the Latin Imperator. (Liv. ix. 1; Niebuhr, vol. i. p. 107.) But we find no mention, even on occasions of the greatest emergency, of any regular council or deliberative assembly to direct the policy of the nation; and the story told by Livy of the manner in which Hierennius Pontius was consulted in regard to the fate of the Roman army at the Vulsurna, seems to negative the supposition that any such body could have existed. (Liv. ix. 3; see also viii. 39.)

The first mention of the Samnites in Roman history, is in B. c. 354, when we are told that they concluded a treaty of alliance with the republic, the progress of whose arms was already beginning to attract their attention (Liv. vii. 19; Diod. xvi. 45). It is probable that the Samnites, who were already masters of Aesernia and the upper valley of the Vulsurna, were at this time pushing forward their arms down the course of that valley, and across the mountain country from thence to the Liris, then occupied by the Volscii, Aurunci, and other tribes, of Ausonian or Oscan origin. It was not long before these onward movements brought them into collision with the Romans, notwithstanding their recent alliance. Among the minor tribes in this part of Italy were the Sidicini, who, though situated on the very borders of Campania, had hitherto preserved their independence, and were not included in the Campanian people [Sidicini]. This petty people having been assailed by the Samnites, upon what cause or pretext we know not, and finding themselves unable to cope with such powerful neighbours, invoked the assistance of the Campanians. The latter, notwithstanding their connection with the Sammites, readily espoused the cause of the Sidicini, but it was only to bring the danger upon their own heads; for the Campanians now turned their arms against the Campanians, and after occupying with a strong force the ridge of Mount Tifata, which immediately overlooks Capua, they descended into the plain, defeated the Campanian in a pitched battle at the very gates of Capua, and shut them up within the walls of the city (Liv. viii. 29). In this extremity the Campanians in their turn applied for assistance to Rome, and the senate, after some hesitation on account of their recent alliance with the Samnites, granted it (76, 30, 31). Thus began the First Samnite War (n. c. 343), the commencement of that long struggle which was eventually to decide whether the supremacy of Italy was to rest with the Romans or the Samnites.

This first contest was, however, of short duration. In the first campaign the two consuls M. Valerius Corvinus and A. Cornelius Cossus gained two decisive victories; the one at the foot of Mount Gaurus, the other near Satula. The first of these, as Niebuhr observes (vol. iii. p. 311), was as it may be seen, the first trial of arms between the two rival nations, and might be taken as a sort of omen of the ultimate issue of the contest. A third battle near Suessula, where the remains of the army that had been defeated at Mount Gaurus, after having been reinforced, again attacked Valerius, terminated in an equally decisive victory of the Romans; and both consuls triumphed over the Samnites (Liv. vii. 32—33; Fast. Capit.). The next year the military operations of the Romans were checked by a mutiny of their own army, of which the commons at Rome took advantage; and the city was divided by dissections. These causes, as well as the increasing disaffection of the Latins, naturally disposed the Romans to peace, and a treaty was concluded with the Samnites in the following year, n. c. 341. The account which represents that people as humiliated and suing for peace, is sufficiently refuted by the fact that the Romans abandoned the Sidicini to their fate, and left the Samnites free to carry out their own devices against that unfortunate people (Liv. viii. 1, 2).

The peace which terminated the First Samnite War renewed the alliance previously existing between the Romans and the Samnites. In consequence of this the latter took part in the great war with the Latins and Campanians, which almost immediately followed, not as the enemies, but as the allies, of Rome; and the Roman armies were thus enabled to reach Campania by the circuitous route through the country of the Sidicini, and the latter, at the head of the valley of the Vulsurna (Liv. viii. 6). During the fifteen years that followed, down to the renewal of the contest between Rome and Samnium, the course of events was almost uniformly favourable to the former power. The successful termination of the war with the Latins and Campanians, and the consolidation of the Roman power in both those countries had added greatly to the strength of the republic; and the latter had followed up this advantage by the reduction of several of the smaller independent tribes in the same neighbourhood—the Ausones, Sidicini, and the Privernates, who appear on this occasion as independent of, and separate from, the
SAMNIUM.

other Volscians [Pirvem]. But the power of the Volscians seems to have been by this time very much broken up; and it was apparently during this interval that the Sammites on their side carried on successful hostilities against that people, and wrested from them or destroyed the cities of Sora and Freghellae in the valley of the Libri, while they threatened Fabrisateria with the same fate (Liv. viii. 19, 23, x. 1). This movement, however, failed. The Sammites on their side could not view with indifference the reduction of the Sidici, and it was evident that a fresh rupture between the two nations could not be long delayed (Id. vii. 17, 19). The attention of the Sammites was, however, drawn off for a time by the danger that threatened them from another quarter, and they joined with their kinsmen the Lucanians to oppose the arms of Alexander, king of Epirus, who was advancing from Paeonius into the heart of the country. Both Sammites and Lucanians were defeated by him in a pitched battle; but he subsequently turned his arms towards the south, and his death in B.C. 326 relieved the Sammites from all apprehension in that quarter. (Liv. viii. 17, 24.)

The same year (B.C. 326) witnessed the outbreak of the Second Samnite War. The immediate occasion of this was the assistance furnished by the Sammites to the Greek cities of Palapalae and Neapolis against which the Romans had declared war, when the Sammites and Nolians (who were at this time in alliance with Samgium) threw into their cities a strong body of auxiliaries as a garrison. They did not, however, avert the fall of Palapalae: while Neapolis escaped a similar fate, only by expounding the alliance of Rome, to which it ever after steadily adhered (Liv. viii. 22—26). The Romans had about the same time secured a more important alliance in another quarter; the Lucanians and Apulians, with whom, as Livy remarks, the republic had previously had no relations, either friendly or hostile, now concluded an alliance with Rome (Ib. 25). The Lucanians indeed were soon persuaded by the Tarentines to abandon it again (Ib. 27), but the Apulians continued steadfast; and though it is evident that the whole nation was not united, and that many of the chief towns took part with the Sammites, while others continued to side with Rome, yet such a division must have been to the greatest disadvantage. Hence throughout the war we find the contest divided into two portions, the Romans on the one side being engaged with the Sammites on the frontiers of Campania, and in the valley of the Vulturnus, from whence they gradually pushed on to the heart of Samgium; and on the other carrying on the war in Apulia, in support of their allies in that country, against the hostile cities supported by the Sammites. It is evident that the Frentani must have at this time already separated themselves from the Sammite alliance; otherwise it would have been impossible for the Romans to march their armies, as we find them repeatedly doing, along the coast of the Adriatic into Apulia. (Liv. ix. 2, 13.)

The first operations of the war were unimportant; the Romans conquered some small towns in the valley of the Vulturnus (Liv. viii. 25); and we are told that Q. Fabius and L. Papirius gained repeated victories over the Sammites, so that they were soon said for peace, but obtained only a truce for a year, and, without observing even this, resumed the contest with increased forces. (Ib. 50, 36, 37.) It is evident therefore that no real impression had been made upon their power. Nor did the victory of A. Cornelius Arriva in the following year (B.C. 322), though it again induced them to sue for peace without success, produce any permanent effect; for the very next year (B.C. 321) the Sammites under the command of C. Pontius were not only able to take the field with a large army, but inflicted on the Romans one of the greatest blows they had ever sustained in the celebrated battle of the Candian Forks. [Caudium.] There can be little doubt that the circumstances and character of that disaster are greatly disposed in the accounts transmitted to us; but, whatever may have been its true nature, it is certain that it caused no material interruption of the Roman arms, and that, after repulsing the treaty or capitulation concluded by the consuls, the Romans renewed the contest with unimpaired vigour. It is impossible here to follow in detail the operations of the succeeding campaigns, which were continued for seventeen years with many fluctuations of fortune. The disaster at Caudium shook the faith of many of the Roman allies, and was followed by the defection even of their own colonies of Satricum, Freghellae, and Sora. Some years later (B.C. 315) the capture of Saticula by the Romans and of Piaetia by the Sammites shows that both armies were still engaged on the very frontiers of Samgium; while the advance of the Sammites to the pass of Lantulae, and the victory which they there a second time obtained over the Romans (Liv. ix. 22, 23; Diod. xix. 72), once more gave a shock to the power of the latter, and, for a moment endangered their supremacy in Campania. But they speedily recovered the advantage, and the victory gained by them at a place called Cinna (of uncertain site) decided the submission of the revolted Campanians. (Liv. ix. 27; Diod. xix. 76.) Their arms had meanwhile been successful in Apulia, and had ultimately effected the reduction of the whole province, so that in B.C. 316 the consul Q. Aemilius Barbula was able to carry the war into Lucania, where he took the town of Nerusium. (Liv. ix. 20.)

The decisive victory of the consuls of B.C. 314 had also for the first time opened the way into the heart of Samgium, and they laid siege to Boquvianum, the capital of the Pentri. The next year was marked by the fall of Nola, followed by that of Atina, and Calabia (Cajacse); and it seemed probable that the war was at length drawing to a close in favour of the Romans, when the outbreak of a fresh war with the Etruscans in B.C. 311 divided the attention of that people, and, by occupying a large part of their forces in another quarter, operated a powerful diversion in favour of the Sammites. To these additional enemies were added the Umbrians as well as the Marsi and Peligni; yet the Romans not only made head against all these nations, but, at the same time carried their victorious arms into the heart of Samgium. Boquvianum, the capital city of the Pentri, was twice taken and plundered, once in 311 by C. Junius, and again in 305 by T. Mummius. At the same time Sora and Arpinum were finally added to the Roman dominion. These successive defeats at length compelled the Sammites to sue for peace, which was granted them in B.C. 304; but on what terms is very uncertain. It seems impossible to believe that the Romans, as asserted by Livy, who had restored them their ancient treaty of alliance, and it is probable that in some form consented to acknowledge the supremacy of Rome. (Liv. ix. 45; Dionys. Exc. p. 2331; Niebuhr, vol. iii. 269.)
But the peace thus concluded was of short duration. Little more than five years elapsed between the close of the Second Samnite War and the commencement of the Third. It might well have been thought that, after a struggle of more than twenty years' duration, the resources of the Samnites, if not their spirit, would have been exhausted; but they seem to have been actively engaged, even before the actual outbreak of hostilities, in organising a fresh coalition against Rome. A new and formidable auxiliary had appeared in a large body of Gauls, which had recently crossed the Alps, and, uniting with their cantons on the Senones, ravaged the plains of Samnium from the N. to the Tiber. Rome was at this time engaged in war with the Etruscans and Umbrians, and the Etruscans hastened to secure the services of the Gauls. Meanwhile the Samnites, deeming the attention of the Romans sufficiently engaged elsewhere, attacked their neighbours the Lucanians, probably with the view of restoring the power in that country of the party favourable to the Samnite alliance. The opposite party, however, called in the Roman consul Q. Fabius, for their assistance, who declared war against the Samnites, and thus began the Third Samnite War, B.C. 298. (Liv. xi. 11.) The contest had now assumed larger dimensions; the Samnites concluded a league with the Etruscans, Umbrians, and Gauls, and for several successive campaigns the operations in Samnium were subordinate to those in the valley of the Tiber. But the territory of Samnium itself was at the same time ravaged by the Roman generals in so systematic a manner, that it is clear they had obtained a decided superiority in the field; and though the Samnites on one occasion retaliated by laying waste the Campanian and Falernian plains, they were soon again driven back to their mountain fastnesses. (Liv. x. 15, 17, 20.) At length, in B.C. 295, the great battle of Sentinum, in which the united forces of the Gauls and Samnites were totally defeated by the Roman consul Q. Fabius, decided the fortune of the war. Gellius Epulonius, the Samnite general, who had been the main organiser of the confederacy, was slain, and the league itself virtually broken up. (Liv. x. 27—30.) Nevertheless the Samnites continued to carry on the war with unabated energy; and in B.C. 293 they raised a fresh army of 40,000 men, levied with solemn sacred rites, and arrayed in a peculiar garb. These circumstances sufficiently prove the importance which they attached to this campaign, yet its result was not more successful than those which had preceded it, and the Samnite armies were again defeated by the consuls L. Papirius Cursor and Sp. Carvilius in two successive battles near Aquilina and Comminum. (Liv. x. 38—45.) The operations of the subsequent campaigns are imperfectly known to us, from the loss of the books of Livy in which they were related; but the next year (B.C. 292) C. Pontius, the victor of the Caudine Forks, reappears, after a long interval, at the head of the Samnite army; he defeated Q. Fabius, but was in his turn defeated in a far more decisive engagement, in which it is said that 20,000 Samnites were slain, and 4000 taken prisoners, including C. Pontius himself, who was lost in triumph by Fabius, and then put to death. (Oros. iii. 22; Liv. Epit. xii.) It is probable that this battle gave the final blow to the Samnite power, yet their resistance was still prolonged for two years more; and it was not till B.C. 290 that they consented to lay down their arms and sue for peace. Even in that year the consuls M. Curius Dentatus could still earn the honour of a triumph, and the fame of having put an end to the Samnite wars after they had lasted for more than fifty years. (Liv. Epit. xii.; Entop. ii. 9.)

The conclusion of the Third Samnite War is regarded by some of the Roman historians as the close of the struggle between Rome and Samnium, and not without reason, for though the name of the Fourth Samnite War is given by modern writers to the war that broke out afresh in B.C. 282, the Samnites on that occasion certainly figure rather as auxiliaries than as principals. They, however, joined the league which was formed by the Tarentines against Rome; and bore a part in all the subsequent operations of the war. They seemed indeed to have at first looked with jealousy or suspicion upon the proceedings of Pyrrhus; and it was not till after the battle of Heraclea that they sent their contingent to his support. (Plut. Pyrrh. 17.) But in the great battle at Asculum the following year (B.C. 278) the Samnites bore an important part, and seem to have sustained their ancient reputation for valor. (Dionys. xx. Pr. Didot.) The departure of Pyrrhus for Sicily shortly after, and his final defeat by M. Curius at Beneventum after his return (B.C. 274), left the Samnites and their allies to bear the whole brunt of the war, and they were wholly unable to contend with the power of Rome. We know nothing in detail of these last campaigns; we learn only that in B.C. 272, just before the fall of Tarentum, the Samnites, as well as their allies the Lucanians and Bruttians, made their final and absolute submission; and the consuls Sp. Carvilius celebrated the last of the long series of triumphs over the Samnites. (Zonar. viii. 6; Liv. Epit. xiv.; Fast. Capit.) A fresh revolt indeed broke out in the N. of Samnium three years afterwards, among the petty tribe of the Caraceni, but was speedily suppressed, before it had attained any more formidable character. (Zonar. viii. 7; Dionys. xx. 9, Pr. Mal.)

We have no account of the terms on which the Samnites were received to submission by the Romans, or of their condition as subjects of the republic. But there can be no doubt that the policy of the dominant people was to break up as much as possible their national organisation and all bands of union between them. At the same time two colonies were established as fortresses to keep them in check: one at Beneventum, in the country of the Hirpini (B.C. 265), and the other at Arethusa, in the valley of the Vulturnus (B.C. 264). All these precautions, however, did not suffice to secure the fidelity of the Samnites during the Second Punic War. After the battle of Cannae (B.C. 216), the Hirpini were among the first to declare themselves in favour of Hannibal, and their example is said to have been followed by all the Samnites, except the Pentrians. (Liv. xxix. 61.) It is singular that this tribe, long the most powerful and warlike of all, should have thus held aloof; but the statement of Livy is confirmed by the subsequent course of the war, during which the Pentrians never seem to have taken any part, while the land of the Hirpini, and the southern portions of Samnium bordering on Lucania, were frequently the scene of hostilities. But the Roman colonies of Eresin and Beneventum never fell into the hands of the Carthaginians; and the latter was through a great part of the war held by one of the Roman generals, as a post of the utmost military importance. In B.C. 214 and again in B.C. 212,
the land of the Hirpini was still in the hands of the Carthaginians, and became the scene of the operations of Hannibal's lieutenant Hamo against Sempronius Gracchus. It was not till b. c. 269 that, Hannibal having been finally compelled to relinquish his hold upon Central Italy, the Hirpini (and appa-
rently the other revolted Samnites also) renewed their submission to Rome. (Liv. xiv. 15.)

From this time we hear no more of the Samnites in history till the great outbreak of the Italian nations, commonly known as the Social War, b. c. 90, in which they once more took a prominent part. They were not indeed among the first to take up arms, but quickly followed the example of the Plebeians and Marsi; and so important an element did they constitute of the confederation, that of the two cons-
suls chosen as the leaders of the allies, one was a Samnite, Caius Papius Matilus. (Diod. xxxvii. 2. p. 559.) Besides Papius, several of the most dis-
tinguished of the Italian generals, Marcus Egnatius, Pontius Telesinus, and Trebatius, were also of Sam-
nite origin; and after the fall of Corfinium, the seat of government and head-quarters of the allies was transferred to the Samnite town of Bovianum, and from thence subsequently to Aesernia. The Sam-

nites indeed suffered severely in the second cam-
paign of the war, being attacked by Sulla, who defeated Papius Matilus, took Acullanum and Bo-

vianum by assault, and reduced the Hirpini to sub-

mission. The other Samnites, however, still held out, and an army which had thrown itself into Nola was able to prolong its resistance against all the efforts of Sulla. Hence at the end of the second year of the war (b. c. 89), when all the other nations of Italy had successively submitted and been admitted to the Roman franchise, the Samnites and Lucanians were still unsubdued, and maintained a kind of guerilla warfare in their mountains, while the strong fortress of Nola enabled them still to maintain their footing in Campania. (Vell. Pat. ii. 17; Liv. Epit. lxxx; Diod. xxxvii. 2. p. 540; Appian, B. C. i. 53.)

In this state of things the civil war broke out between Sulla and Marius altered the nature of the contest. The Samnites warmly espoused the Marian cause, from a natural feeling of enmity to-

wards Sulla, from whose arms they had recently suffered so severely; and so important was the share they took in the struggle that ensued after the return of Sulla to Italy (b. c. 83), that they in some measure imparted to what was otherwise a mere civil war, the character of a national contest. A large number of them served in the army of the younger Marius, which was defeated by Sulla at Sacriportus (Appian, B. C. i. 87); and shortly after-

wards an army, composed primarily of Samnites and Lucanians, under the command of C. Pontius Telesinus, made a desperate attempt to relieve Praeneste by marching suddenly upon Rome. They were met by the army of Sulla at the very gates of the city, and the battle at the Colline gate (Nov. i. b. c. 82), though it terminated in the complete victory of Sulla, was long remembered as one of the greatest dangers to which Rome had ever been ex-
plored. (Vell. Pat. ii. 27; Appian, B. C. i. 93. Plat. Sac. x. 12; Dig. xii. 51; Eutrop. vi. 25.) The war fell in the field, and Sulla displayed his implacable hatred towards the Samnites by putting to the sword, without mercy, 8000 prisoners who had been taken in the battle. (Appian, L. c.; Strab. v. 249; Plat. Sull. 30.) He had already put to death all the Samnites whom he had taken prisoners at the

battles of Sacriportus, alleging that they were the eternal enemies of the Roman name; and he now fol-
lowed up this declaration by a systematic devastation of their country, carried on with the express pur-
pose of extirpating the whole nation. (Strab. L. c.)

It can hardly be believed that he fully carried out this sanguinary resolution, but we learn from Strabo that more than two years afterwards the Samnites were still in a state of almost desolation,—many of what had once been flourishing cities being reduced to the condition of mere villages, while others had altogether ceased to exist. (Strab. L. c.)

Nor is it probable that the province ever really recovered from this state of depression. The rhetor-
elical expressions of Florus point to its being in his day still in a state of almost complete desolation. (Flor. i. 15. § 8.) Some attempts seem indeed to have been made under the Roman Empire to recruit its population with fresh colonists, especially by Nero, who founded colonies at Sacripinus, Telvins, and Aesernia (Lib. Colon. pp. 259, 260, &c.); but none of these attained to any great prosperity, and the whole region seems to have been very thinly populated and given up chiefly to pasturage. Bene-

ventum alone retained its importance, and continued to be a flourishing city throughout the period of the Roman Empire. In the division of Italy under Aug-

gustus the land of the Hirpini was separated from the rest of Samnium, and was placed in the Second Region with Apulia and Calabria, while the rest of the Samnites were included in the Fourth Region, together with the Sabines, Frentani, Peligni, &c. (Plin. iii. 11. s. 16, 12. s. 17.) At a later period this district was broken up, and Samnium with the land of the Frentani constituted a separate province. This is the arrangement which we find in the No-
titia, and it was probably introduced at an earlier period, as the Liber Colonarum in one part gives under a separate head the " Civitates Regionis Sum-
nii," including under that name the towns of the Peligni, as well as the Frentani. (Notit. Dign. ii. pp. 9, 10; Lib. Colon. p. 259.) In another part of the same document, which is undoubtedly derived from different sources, the Samnite towns are classed under the head of Campania; but this union, if it ever really subsisted, could have been but of very brief duration. The " Provincia Samnii" is re-

peatedly mentioned in inscriptions of the 4th cen-
tury, and was governed by an officer styled " Praes-
es." (Mannmsen, Die Lib. Col. p. 206.) The same appellation continued in use after the fall of the Roman Empire, and the name of Samnium as a separate province is found both in Cassiodorus and Paulus Diaconus. (Cassiod. Var. xi. 56; P. Dac. Hist. Lang. ii. 20.) The only towns in it that re-

tained any consideration in the time of the last writer were Aufidena, Aesernia, and Beneventum. The last of these cities became under the Lombards the capital of an independent and powerful duchy, which long survived the fall of the Lombard kingdom in the N. of Italy. But in the revolutions of the middle ages all trace of the name and ancient limits of Samnium was lost. At the present day the name of Samo is indeed given to a province of the Italian kingdom of Naples; but this fanciful designation, recently restored, to the district, which had previously been called the Contado di Molise. This and the adjoining province of the Principato Ultra comprise the greater part of the ancient Sam-

nium; but the modern boundaries have no reference to the ancient divisions, and a considerable portion
of the Samnite territory is included in the *Terra di Lavoro*, while a corner in the NW. is assigned to the *Abruzzi*.

Of the national character of the Samnites we learn little more than that they were extremely brave and warlike, and had inherited to a great degree the frugal and simple habits of their ancestors the Sabines. We find also indications that they retained the strong religious or superstitious feelings of the Sabines, of which a striking instance is given by Livy in the rites and ceremonies with which they consecrated the troops that they levied in B.C. 293. (Liv. x. 38.) But they had almost ceased to exist as a nation in the days of the Latin poets and writers that are preserved to us; and hence we cannot wonder that their name is seldom alluded to. They are said to have dwelt for the most part, like the Sabines, in open villages; but it is evident, from the accounts of their earliest wars with the Romans, that they possessed towns, and some of them, at least, strongly fortified. This is confirmed by the remains of walls of a very ancient style of construction, which are still preserved at Ascrania and Bovianum, and still more remarkably at Aulidenia. (Abeken, *Mittel Italien*, pp. 142, 148.) But from the very nature of their country the Samnites must always have been, to a great extent, a rude and pastoral people, and had probably terrified only a faint stage of civilization, through their intercourse with the Campanians and Apulians.

III. TOPOGRAPHY.

The rivers of the Samnite territory have been already noticed in connection with the mountain chains and groups in which they take their rise. From the purely inland character of the region, none of these rivers, with the exception of the Calor and its tributaries, belong wholly to Samnium, but traverse the territories of other nations before they reach the sea. Thus the Sagrus and Trionus, after quitting the mountains of Samnium, flow through the land of the Frentani to the Adriatic; the Tifernus separates the territory of that people from Apulia, while the Fronto and the Aenudus traverse the plains of Apulia. On the other side of the central chain the Vulturnus, with its affluent the Calor, and the tributaries of the latter, the Sabatini and Taurinum, carry down the whole course of the Apennines of Samnium, which flow to the Tyrrhenian sea.

The topography of Samnium is the most obscure and confused of any part of Italy. The reason of this is obvious. From the continued wars which had devastated the country; and the state of desolation to which it was reduced in the time of the geographers, only a few towns had survived, at least in such a state as to be deemed worthy of notice by them; and many of the names mentioned by Livy and other authors, during the early wars of the Romans with the Samnites never reappear at a later period. It is indeed probable that some of these were scarcely towns in the stricter sense of the term, but merely fortified villages or strongholds, in which the inhabitants collected their cattle and property in time of war. Those which are mentioned by the geographers as still existing under the Roman Empire, or the site of which is clearly indicated, may be briefly enumerated. Aulidenia, in the upper valley of the Sagrus, is the only town that can be assigned with any certainty to the Camerini. In the upper valley of the Vulturnus was Ascrania, the territotory of which bordered on that of Vestafrum in Campania. At the northern foot of the *Monte Matese* was Bovianum; and in the mountain tract between it and the Frentani was Treventum or Tereventum (Trevento). SE. of Bovianum lay Sayepinum, the ruins of which are still visible near Sepino; and at the southern foot of the *Monte Matese*, in the valley of the Vulturnus, Allafiae lay to the NW. of this, in the valley of the Vulturnus, and at the foot of the *Matese* in that direction. In the country of the Hirpini were Beneventum, the capital of the whole district; Acceleunum, near Mirabella, about 15 miles to the SW.; Equus Tunesus, near the frontiers of Apulia; Aquilonia, at Lacedogna, on the same frontier; Abeleunium, near the frontiers of Campania; and Compsa, near the sources of the Aufidus, bordering on Lucania, so that it is assigned by Ptolemy to that country. On the borders of Campania, between Beneventum and the plains, were Caumdium, apparently once the capital of the Caudine tribe; and Saticula, the precise site of which has not been determined, but which must have been situated in the neighbourhood of Mount Tifata. The Samnite Calatia, on the other hand, was situated N. of the Vulturnus, at Ciajizzo; and Competerlia, also a Samnite city, was in the same neighbourhood. The group of hills on the right bank of the Vulturnus, extending from that river towards the Via Latina, must therefore have been included in Samnium; but Teamum and Cales, situated on that highroad, were certainly both of them Campanian towns. It is probable, however, that in early times the limits between Campania and Samnium were subject to many fluctuations; and Strabo seems to regard them as imperfectly fixed even in his day. (Strab. v. p. 249.)

Of the minor towns of Samnium, or those which are mentioned only in history, may be noticed: Debonia (Liv. x. 39), identified, but on very slight grounds, with Civita Vecchia, N. of Boyano; Muragntia (Liv. x. 17), supposed to be Baseline, on the frontiers of Apulia, near the sources of the Frento (Fortore); Romulla, on the frontiers of Apulia, between Acceleunum and Aquilonia; Tri- vium, in the same neighbourhood, still called Trivio; Festa, near Sta. Apoeta dei Goti; on the frontiers of Campania, and the Aufidus, both of them mentioned by Livy (viii. 25) in connection with Allafiae, and probably situated in the neighbourhood of that city; Comumium (Liv. x. 39, 44), of very uncertain site; Aquilonia (Liv. i. c.), also of uncertain site, but which must be distinguished from the city of the same name in the country of the Hirpini; Maronza, noticed by Livy in the Second Punic War, when it was recovered by Marcellus, in B.C. 210 (Liv. xxvii. i); Milae, Fulgialo, and Oclitanum, all of which are noticed only on one occasion (Liv. xxiv. 20), and the sites of which are wholly undetermined.* To these must be added Clavia, Cimeta, Volturna, Palumbium, and Herculaneum, all of them mentioned as towns taken from the Samnites (Liv. ix. 31, x. 15, 45), but of which nothing more is known; Imbrinium (Liv. viii. 30), where Fabius gained a victory over the Samnites in B.C. 323; Cuma, which is repre-

* It has been thought unnecessary to repeat in these and other similar cases the modern sites assigned by Italian or German topographers, where these rest on no other foundation than mere conjecture.
SAMONIUM.

sent to Diodorus as the scene of the decisive victory in B.C. 314 (Diod. xix. 76); and several places of which the names are found only in Virgil and Silius Italicus are assigned to it. Thus Agriphena (Verg. Aen. ii. 394; Sil. Ital. viii. 564), which seem to have been situated on the borders of Campania, so that it is doubtful to which country they are to be assigned. The minor towns of the Hirpini have been already discussed in that article; Panna, or Panna, a name found in Strabo (v. p. 250) as that of a place still existing in his time, is probably corrupt, but we are wholly at a loss what to substitute. On the other hand, inscriptions attest the existence under the Roman Empire of a town called Juravianum, or Juvanum, of municipal rank, which is not mentioned by any of the geographers, but is probably the one meant by the Liber Columbarum, which notices the "Iobanus ager" among the "civilitates Samnii." (Lib. Cod. p. 260.) It was probably situated in the neighbourhood of Sta Maria di Palazzo, a few miles N. of the Sagrum, and on the very frontiers of the Marrucini. (Monumes. Insocr. R. N. p. 271.)

Tifernum is very doubtful (Tifernum); and that of a city of the name of Samnium, though adopted by many local writers (Romanelli, vol. ii. p. 490), certainly rests on no adequate authority.

Samnium was traversed in ancient times by several lines of highway. One of these, following nearly the same line with the modern road from Naples to Aquila, proceeded up the valley of the Vulturnus from Venafrum to Aserrina, thence crossed the mountain ridge to Andulena in the valley of the Sagrus, and from thence again over another mountain pass to Salmo in the land of the Peligni. Another branch led from Aserrina to Boiavrum, and from thence to Egnus Taticus, where it joined the Via Appia or Trajanina. A third followed the valley of the Vulturnus from Aserrina to Alifae, and thence by Telsia to Beneventum. There seems also to have been a cross line from the latter place by Saepinum to Bovianum. (Itia. Inscrip. p. 102; Teah. Post.) But these different lines are very confusedly laid down in the Tabula, and the distances given are often either corrupt or erroneous. The course of the Via Appia, and its branch called the Via Trajanina, through the land of the Hirpini, has been already noticed in that article. [See also Via Appia.]

SAMONIUM, SAMONIUM, SAMONIUM, SAMOINE PROM. (Σαμωνίων, Σαμωνιών, Strab. ii. p. 106, x. p. 474, 475, 478, 489; Σαμωνίων, Acts, xxvii. 7; comp. Prop. iii. 15. § 5; Pomp. Mela, ii. 7. § 12; Plin. iv. 20, s. 21; Stadium. § 318; Eth. Σαμωνιών, Σαμωνιών, Apoll. Hellen. iv. 1693; Dionys. Per. 110; Inscrip. ap.ocking., Corpus, vol. ii. p. 409), the E. promontory of Crete, to which the seamen of the Alexandrian vessel which conveyed Paul to Rome, thinking they could pursue their voyage under the lee of the island, ran down (Acts, l.c.) Much of the modern opinion has been entertained relative to the identification of this celebrated foreland, the position of which would seem to be incontrovertibly ascertained by the existence of the modern name C. Salomon. (Comp. Rück, Kretal, vol. i. p. 427.) But though the name is certainly in favour of this site, the statements of the ancients as to its position, and of the seven islets or rocks which surround it, determine conclusively that it must be C. S. Sidro. It is true that by the recent Admiralty survey it is not quite so far to the E. as C. Salomon (the difference is, however, only a few seconds of longitude); but by its extreme extension from the mainland it would be considered as the principal promontory at the end of the island, and known as the "E. foreland." (Comp. Museum of Class. Antiquities, vol. ii. p. 302.)

Samos or SAMUS (Σαμος; Eth. and Adj. Σαμικος, Samius, Σαμιακος, Samoakos in Steph.; Σάμωνις in the language of the modern Greeks, who call the island Samo, Σαμος; the Turks call it Samum Udası), a large island in that part of the Aegean which is called the Aegean sea, and amongst the most important of the Sporades next after Rhodes. The word denotes a height, especially by the sea-shore. (See Coest. Porphyrog. de Them. 16. p. 41, ed. Bonn.) Hence Samothracia, or the Thracian Samos, which is said by Pausanias (vii. 4. § 3) to have been colonised and named by certain fugitives from the Icarian Samos,—and same, one of the names of Cephallonia, which is inversely connected with it by one of Strabo's conjectures (x. p. 457). How applicable the idea of elevation to the island before us may be seen in the narratives and views given by Dr. Clarke (Travels, vol. ii. p. 192, vol. iii. p. 366), who uses the strongest language in describing the conspicuous height of Samos above the surrounding islands.

The following earlier names of Samos are mentioned by Pliny (v. 37) and other writers,—Parthenia, Anthemus, Melanophilus, Dryusa and Cyparissia. Some of these have evidently arisen from the physical characteristics of the island. Samos was, and is, well-wooded. It is intersected from E. to W. by a chain of mountains, which is in fact a continuation of the range of Mycale, being separated from it only by the narrow channel, hardly a mile in breadth, which the Turks call the Little Bogaz. Here was fought the decisive victory against the Persians, n. c. 475. The Great Bogaz, which is nearly 10 miles in breadth, separates the other extremity of Samos from the comparatively low island of Icaria. The length of Samos, from E. to W., is about 25 miles. Its breadth is very variable. Strabo reckons the circuit at 600 stadia, Pliny at 87 miles, though he says that Isidorus makes it 100. These differences may be readily accounted for by omitting or including Port Vathy, which is a wild-looking bay, though a very serviceable harbour, on the north. Here the modern capital is situated; but in ancient times the bay of Vathy seems to have been comparatively deserted,—perhaps, as Tournefort suggests, because it was peculiarly exposed to pirates, who infested the straits and bays of an island which lay in the route of commerce between the Bosporus and Egypt. What Tournefort tells us of his travels through Samos gives us the idea of a very rugged, though picturesque and productive, island. (Possibly the Palmarums and Panormia of Samos, mentioned by Livy, xxxvii. 11, may have been in the bay of Vathy.) The highest mountain, Mount Kerkes, the ancient Ceretus (Strab. x. p. 488), which is nearly always covered with snow, and reaches the height of 4725 English feet, is towards the west. A ridge, which branches off in a south-easterly direction from the main range, and ends in the promontory of Poseidium, opposite Mycale, was called Ampius, which name seems also to have been given to the whole mountain-system (Strab. xiv. p. 637). The westernmost extremity of the island, opposite which was anciently called Cantabariam, where the cliffs are very bare and lofty. A landslip, which has taken place in 3 M
this part of the island, has probably given rise to the name by which it is now called (δύσικανόν). The position of Samos was necessarily opposite the boundary-line of Caria and Ionia; and its early traditions connect it, first with Carians and Leleges, and then with Ionians. The first Ionian colony is said to have consisted of settlers from Ephialdus, who were expelled from hence by the Argives. However this may be, we find Samos at an early period in the position of a powerful member of the Ionian confederacy. At this time it was highly distinguished in maritime enterprise and more science of navigation. Thucydides tells us (i. 13) that the Samians were among the first to make advances in naval construction, and that for this purpose they availed themselves of the services of Ameinocles the Corinthian shipbuilder. The story of Phily (vii. 57.), that either they or Pericles the Athenian first constructed transports for the conveyance of horses, though less entitled to literal acceptance, is well worthy of mention; and Samos will always be famous for the voyage of her citizen Colanus, who, “not without divine direction” (Herod. iv. 152), first penetrated through the Pillars of Hercules into the Ocean, and thus not only opened new fields of commercial enterprise, but enlarged the geographical ideas of the Greeks by making them for the first time familiar with the phenomenon of the tides.

Under the despot Polycrates, Samos was in fact the greatest Greek maritime power. This famous man, about ten years after the taking of Naxos by Cyrus, held Samos in a position of proud independence, when Lesbos and Chios had submitted to the Persians. He had 1000 bowmen in his pay; he possessed 100 ships of war, and made considerable conquests both among the islands and the mainland. He fought successfully against the Milesians and Lesbians, and made a treaty with Amasis, king of Egypt. Whether we are to take the story in the poetical form in which it is presented to us by Herodotus, or to attribute the change to the more probable motive of self-interest, this treaty was broken off for an alliance with Cambyses. In connection with this monarch’s expedition to the Nile, some Samian maidens were so treacherously treated by Polycrates, that they sought and obtained assistance from Greece. A joint force of Macedonians and Corinthians besieged Polycrates in Samos for forty days; but in this struggle also he was successful. At last his own capacity, acted on by the friends of Grecia, a neighboring strait, brought him to a wretched death on the mainland. The time which succeeded was full of crime and calamity for Samos. In the end, Sibylson, the brother of Polycrates (with whose association with Cambyses is the subject of another romantic story in Herodotus), entered with a Persian army on Samos, and became a titular despot; but not till his native island had been so depopulated as to give rise to the proverb ἑδώρα μετάστασα τὸν Σάμους. For details see the lives of Polycrates and Syros in the Dict. of Biography. It was at this period that Pythagoras, who was a native of Samos, left the island to travel in foreign countries, being partly urged to leave his home according to Plutarch, (Plut. i. 3) through discord under the government of Polycrates, who, however, was a patron of literature, and had Amasis many years at his court. For the chronology of this period see Clinton, Fast. Hell. vol. ii. note B. pp. 260–262.

Samos was now Persian. It was from Samos that Datnis sailed to Marathon, taking Naxos on his way. But the dominion of the Persians did not last long. When their fleet was gathered at Samos again, after the battle of Salamis, to the number of 400 sail, it was in a great measure the urgency of Samian envoy which induced the commanders of the Greek fleet at Delos to go across to the eastern side of the Aegean. Then followed that battle in the strait, which completed the liberation of the Greeks.

In the Ionian confederacy which was organised soon afterwards under Athenian rule, Samos seems to have been the more important of the three islands which were exempted from paying tribute. It was at the instance of her citizens that the common treasure was removed from Delos to Athens. But this friendship with Athens was turned into bitter enmity in consequence of a conflict with Miletus about the territory of Priene. Samos openly revolted; and a large force was dispatched from Athens against it under the command of ten generals, two of whom were Sphocius and Pericles. The latter pronounced in the Ceramicus the funeral oration over those who had fallen in the war which, after a resistance of nine months, reduced Samos to complete submission.

From 439 to 412 Samos remained without fortifications and without a fleet. But about this latter date it became the hinge upon which all the concluding events of the Peloponnesian War really turned. The first movements towards the establishment of an oligarchy at Athens began at Samos through the intrigues of Alcibiades; and yet this island was practically the home of the Athenian democracy during the struggle which ensued. It was at Samos that Alcibiades rejoined his fellow-citizens; and from Samos that he finally sailed for the Aegean in 407. Even till after the battle of Arginusae Samos was, more than any other place, the headquarters and base of operations for the Athenian fleet.

Our notices of the island now become more fragmentary. After the death of Alexander the Great it was for a time subject to the kings of Egypt. (Polyb. v. 35.) Subsequently, it took the part of Antiochus the Great in his war with Rome. It also acted with Mithridates against Rome; but was finally united with the province of Asia n.c. 84. After the battle of Actium, Augustus passed the winter there. Under the Roman emperors it was on the whole a place of no great importance, though it had the honour of being a free state. (Plin. v. 37.) This privilege was taken away under Vesuvian. (Suet. Tra. S.) In the division of the Empire contained in the Syneodesmus we find it placed with Rhodes, Cos, Chios, &c., in the Province of the Islands. In the later division into themes, it seems to be again raised to a distinguished position. It gave its name to a separate theme, which included a large portion of the mainland, and was divided into the two tavors of Ephesus and Adramyttium, the governor having his residence (synagora) at Smyrna; and this arrangement is spoken of in such a way (Const. Porphyrog. de Themat. I. c.) as distinctly to connect it with the ancient renown of Samos.

It would be difficult to follow the fortunes of Samos through the middle ages. (See Finlay’s History of the Byzantine and Greek Empires, vol. ii. p. 112.) There are some points of considerable interest in its modern history. In 1556, after being sacked by the Ottomans, it was given by Selim to the Capitan Paccha Ochiali, who introduced colonists
from various other places; whence the names of some of the modern villages in the island, Metelitonas, Albianitoni, and others were derived. Vourkotes (17) were the names of some islands at the entrance of the strait of Smyrna. Samos was much injured by the ravages of Merozini. In Tournesfort's time the largest part of the island was the property of ecclesiastics; and the number of convents and nunneries was considerable. He reckoned the population to be 12,000; now it is estimated at 50,000, nearly the whole being Christian. Samos performed a distinguished part in the War of Independence. The Turks often attempted to effect surprise by night, but the defences constructed by the Samiotes are still visible on the shore; and the Greek fleet watched no point more carefully than this important island. On the 17th of August, 1824, a curious repetition of the battle of Mycale took place. Formidable preparations for a descent on the island were made by Tahar-Pacha, who had 20,000 land-troops encamped on the promontory of Mycale. Canaris set fire to a frigate near Cape Toulonium, and in the confusion which followed the troops fled, and Tahar-Pacha sailed away. At this time the Logothete Lycurgus was τύπαρος of the island "in the true classical sense of the word," as is observed by Ross, who describes the castle built by Lycurgus on the ruins of a mediaeval fort, adding that he was then (1841) residing with the rank of Colonel at Athens, and that he was well remembered and much regretted in Samos. This island was assigned to Turkey by the treaty which fixed the limits of modern Greece; but it continued to make struggles for its independence. Since 1835 it has formed a separate Beylik under a Phanariot Greek named Stephen Vogorides, who resides in Constantinople with the title of "Prince of Samos," and sends a governor as his deputy. Besides other rights, the island has a separate flag exhibiting the white Greek cross on a blue ground, with a narrow red stripe to denote dependence on the Porte. It does not appear, however, that this government of Greeks by a Greek for the Sultan is conducive to contentment. The present inhabitants of this fruitful island are said to be more esteemed for their industry than their honesty. They export silk, wool, wine, oil, and fruits. If the word Ναμινετ is derived from this place, it is probable that silk has been an object of its industry for a considerable time. Pliny (xxvi. 34) mentions pomegranates among its fruits. At the present day the beans of the carob-tree are exported to Russia, where a cheap spirit for the common people is made from them. We might suppose from the name of Mount Ampelus, that the wine of the island was celebrated in the ancient world; but such a conclusion would be in direct contradiction to the words of Strabo, who notices it as a remarkable fact, that though the wine of the surrounding islands and of the neighbouring parts of the mainland was excellent, that of Samos was inferior. Its grapes, however, under the name of διαμαξέας or άμαξαλλικας, are commended by Athenaeus (xiv. p. 653; see Poll. Onomast. vi. 11), and now they are one of the most valued parts of its produce. Ross saw these grapes (πράσινα) drying in large quantities in the sun; and other authorities speak highly of the Malmsey or sweet muscato wine exported in large quantities from Samos. Its marble is abundant; but it has a greater tendency to split into small fragments than that of Peloponnesus or Paros. A stone found in the island is said by Pliny (xxvi. 40) to have been used for polishing gold. He also mentions in several places (l.c. also xxviii. 55, 77, xxxi. 46, xxxv. 15, 53) the various medicinal properties of its earth. Samian earthenware was in high repute at Rome ("Sami etiam omnium in excelsentia laudantur," Plin. xxxvi. 46), and the name has been traditionally given by modern writers to the "red lustrous pottery" made by the Romans themselves for domestic use. (See Maryatt's Pottery and Porcelain, London 1850, pp. 286, 290.) For the natural flora and Fauna of the island we must be content to refer to Tournesfort, who says, among other facts, that they sometimes swim across it from Mycale, which Chandler describes as a mountain infested with wild beasts. The woody flanks of Μάντης Кερκίς still supply materials for shipbuilding. It is said in Athenaeus (l.c.) that the roses and fruits of Samos came to perfection twice a year; and Strabo informs us that its general fruitfulness was such as to give rise to the proverb φρέμα καὶ δριατοὺς φλια. The archaeological interest of Samos is almost entirely concentrated in that plain on the S., which contained the sanctuary of Hera at one extremity and the ancient city on the other. This plain is terminated at the SW. by a promontory, which from its white cliffs is called δέσποτο κάθο by the Greeks, but which received from the Genoese the name of Cape Colonna, in consequence of the single column of the Heraenm, which remains standing in its immediate neighbourhood. Virgil tells us (Aen. i. 16), that Samos was at least second in the elections of Juno; and her temple and worship contributed much to the fame and affluence of Samos for many centuries. Herodotus says that the temple was the largest he had seen. It was of the Ionic order; in form it was decostyle dipteral, in dimensions 346 feet by 189. (See Leake, Asia Minor, p. 348.) It was never entirely finished. At least, the fluting of the columns was left, like the foliage on parts of our cathedrals, incomplete. The original architect was Eucleus, a Samian. The temple was burnt by the Persians. After its restoration it was plundered by pirates in the Mitridatic War, then by Verres, and then by M. Antony. He took to Rome three statues attributed to Myron: of these Augustus restored the Athene and Heracles, and retained the Zeus to decorate the Capitol. The image of the goddess was made of wood, and was supposed to be the work of Smilis, a contemporary of Diodorus. In Strabo's time the temple, with its chapel, was a complete picture gallery, and the hypaethral portion was full of statues. (See Orig. c. Cels. 4.) In the time of Tacitus, this sanctuary had the rights of asylum. (Ann. iv. 14.) When Pausanias was there, the people pointed out to him the shrub of Agnus Castus, under the shade of which, on the banks of the river Imbrasus, it was believed that Hera was born. (Paus. l.c.) Hence the river itself was called Παρθενες, and the goddess Imbrusia. (Comp. Apoll. Rhod. i. 187, "ώπαισαν το Πηνελοπί τον Πηγάς." The anchor in front of the sanctuary was called όμας Πηνελοπία. (Athen. xv. p. 672.) The temple was about 200 paces from the shore, according to Ross, who found its whole basement covered with a mass of small fragments of marble, among which are portions of the red tiles with which the temple was roofed. He discovered hardly anything of interest, except an inscription with the word ναωνοία. The appearance of the watercourses on the Imbrasus shows that they are often swollen by rains, 3 m. 2
and thus harmonises with the natural derivation of the word. In the plain which extends along the harbour, the waves converge towards the city, but Ross says that there are traces of ancient channels made for the purpose of irrigation. He regards the marshy places near the temple to be the Κάλαμος and the Ελος mentioned by Athenaeus (xiii. p. 572) in connection with the expedition of Pericles. (The former place is likewise referred to by Herodotus, ix. 96.) Across this plain, which is about two miles in length, there is no doubt that a Sacred Way extended from the temple to the city, and that this connected Athens with Eleusis. Somewhere on this line (κατα την δυν δυν εις το Ήραν. Pans. vii. 5. § 6) was the tomb of Rhadine and Leontichus, where lovers used to make their vows; and traces of funeral monuments are still seen at the extremity of the line, close to the city-wall.

The modern town of Χώρα, close to the pass leading through the mountains to Vathy, is near the place through the ancient city, which was situated partly in the plain and partly on the slope of the hill. The western wall runs in a straight line from the mountain towards the sea, with the exception of a bend forwards near the tombs just mentioned. Here is a brackish stream (ἡ γαλωπάδα), which is the Chesius, the second of the three streams mentioned by Pliny. (See Etym. Mag. a. v. Αστυπαλαια.) The southern wall does not touch the sea in all its length, and is strengthened by being raised on vaulted substructions. Here and elsewhere the ruins of Samos touch the question of the use of the arch among the Greeks. On the east side of the city the walls are very considerable, being 10 or 12 feet thick, and about 18 feet high. The masonry is partly quadrangular and partly polygonal; there are round towers at intervals on the outside of the wall, and in one place are traces of a gate. In the eastern part of the city was the steep Citadel of Astypalae, which was fortified by Polycrates (Polyaen. Strat. i. 283, § 2), and here probably was what Suetsouns calls the palace of Polycrates. (Suet. Calig. 21.) In the higher part of the town the theatre is distinctly visible; the marble seats are removed; underneath is a large cistern. The general area is covered with small fragments, many of the best having furnished materials for the modern castle of Lycurgus near the shore on the SE.; and little more remains of a city which Herodotus says was, under Polycrates, the greatest of cities, Hellenic or Barbarian, and which, in the time of comparative decay, is still called by Horace Concinna Samos.

Herodotus makes especial mention of the harbour and of an immense tunnel which formed an aqueduct for the city. The former of these works (τὸ τυχαῖον, as it is now called, from being shaped like a frying-pan) is below Astypalae; and, though it is now accessible only to small craft, its famous miles remain, one extending eastwards from the castle of Lycurgus, the other extending to meet it from the extremity of the city-wall southwards. Here Ross saw subterranean passages hewn in the rock, one of which may possibly be the κρυπτή διώνυς ἐκ τῆς ἀπορρίπτεσ φρουρᾶς ἐν τῇ Ἀθηναιοῖς (Herod. iii. 146), constructed by Maeandrians after the death of Pericles. The tunnel has not been clearly identified; but, from what M. Musurus told Prof. Ross, it is probable that it is where Tournefort placed it, and that it penetrated the hill from Μετέλληνα to Χώρα, and that thence the water was taken into the city by a covered channel, traces of which are main. It is clear that it cannot be in the quarry pointed out to Ross; both because the clearance of the rock is in the wrong direction, and because water from such a height would fall like a cascade on the city.

The authorities, to which reference has been made in this article, are, Tournefort (Voyage du Lévant, 1717, pp. 404—436), who has given a very copious account of the island; and Ross (Reisen auf den Griechischen Inseln des Aegyptischen Meeres, vol. ii. 1843, pp. 139—155), who has examined the sites and remains of the ancient city and Heraeaum more carefully than any one else. (See also Clarke, Travels, vol. ii. pp. 192, 194, vol. iii. pp. 364—367.) Maps of the island will be found in Tournefort and Choisel- Geoffier; but the best delineation of it is given in three of the English Admiralty charts. There is a small sketch of the neighbourhood of the city in Kiepert's Hellas (1841), and a larger one in Ross. In Kiepert's general map the rivers Imbros and Chesius are wrongly placed, and also (probably) the ridge of Ampelus. It is very questionable whether the point called Possession can be where it is (doubtfully) placed in Ross's plan; the position of the little island Narsheis in the strait seems to show that this promontory ought to be further to the east. (See Strab. xiv. p. 657.) A little volume was published in London, and dedicated to James Duke of York, in 1678, entitled "A Description of the present State of Samos, Nicaria, Patmos, and Mount Athos, by Joseph Georges (Προγραφής), Archbishop of Samos, now living in London, translated by one that knew the author in Constantinople." From this book it appears that Dapper has taken much directly, and Tournefort indirectly. Panđka has written a book on Samos (Res Samiorum, Berlin, 1822); and more recently (1856) Guérin has published a work on this island and Patmos.

[Image: COIN OF SAMOS.]

SAMOS, in Triphylia. [SAMICUM.]

SAMOS or SAMIE, in Cephalonia. [SAME.]

SAMOSATA (Σαμοσάτα), a strongly fortified city of Syria, placed by Ptolemy (v. 15. § 11) and Strabo in the district of Commagene. It contained the royal residence, and was a province in the time of Strabo, surrounded by a small but very rich country, and situated at the bridge of the Euphrates. (Strab. xvi. 2. § 3. p. 749.) Its distance from the borders of Cappadocia in the vicinity of Tarsus across Mount Taurus was 450 stadia. (Ib. xiv. 2. § 29, p. 664.) It was besieged and taken by Mark Antony during his campaign in Syria. (Joseph. Ant. xiv. 15. § 8.) Its strategic importance is intimated by Caesennius Paetus, prefect of Syria under Vespasian, who, having represented that Antiochus, king of Commagene, was meditating an alliance with the Parthians to enable him to throw off the Roman yoke, warned his imperial master "that Samosata, the largest city of Commagene, was situated on the Euphrates, and would therefore secure the Parthians an easy passage.
of the river and a safe asylum on the western side." The legate was therefore instructed to seize and hold possession of Samosata. (*B. J.* vii. 7. § 1.) This town gave birth to Lucian, and became famous in the third century in connection with the heretical bishop "Paul of Samosata," who first broached the heresy of the simple humanity of our Lord; and was condemned in a council assembled at Antioch (A.D. 272; *Ench. H. E.* vii. 27, 28). The modern name of the town is *Smyquat* or *Samosat*; about 40 miles S. of the cataracts of the Euphrates, where it passes Mount Taurus, but Pecocke could hear of no ruins there. (Observations on Syria, vol. ii. pt. 1, p. 136.)

**COIN OF SAMOSATA.**

**SAMOTHRA'CE, SAMOTHRA'CA, or SAMOTHRA'CA (Σαμοθρακια; Gr. Σαμοθρακεια; Σαμωθρακεια in Herodotus, who uses the adjective Σαμωθρακικος, and calls the inhabitants Σαμωθρακιους.)**

In Pliny (iv. 23) we find the form Samothrace; in the *Itin. Ant.* (p. 522, Wess.), Samothraca; in *Livy* (xxi. 25, 30, xlv. 45, 46), both Samothraca and Samothrica. Properly it is "the Thracian Samos." Thus Homer it calls sometimes Σωμοθρακικος, sometimes simply Σωμος. Hence the line in Virgil (*Aen.* vii. 205):

"Thracianque Samum quaeris Samothracia fertur." By the modern Greeks it is called Samothraki, and often also Samondraki (ες το μαυριδας), which is merely a corruption of the other, formed in ignorance, after the analogy of Samos and Samothraca — μαυριδας denoting "a spoiléd". An island in the north of the Aegean, opposite the mouth of the Hebrus, and lying N. of Imbrus, and N.E. of Lemnos. Its distance from the coast of Thrace is estimated at 38 miles by Pliny (l.c.), who says its circuit is 52 miles. It is of an oval shape, and, according to the English survey, 8 miles in length and 6 in breadth. It was traditionally said to have been diminished in size, in consequence of an outbreak of waters from the Hellespont; and perhaps some great physical changes took place in this part of the Aegean at a very remote period. (See Admiral Smyth's *Mediterraneum*, pp. 74, 119.) However this may be, Samothraca is remarkable for its extreme elevation. No land in the north of the Archipelago is so conspicuous, except Mt. Athos; and no island in the whole Archipelago is so high, except *Cunda*. The elevation of the highest point, called Saaco by Pliny (l.c.), is marked 5240 feet in the Admiralty Chart (No. 1654). The geographical position of this point (the modern name of which is Mt. Thracia, in 40° 26' 57" N. lat., and 25° 36' 23" E. long. Though there are several anchorages on the coast of Samothrace, there is an entire absence of good harbours, a circumstance in harmony with the expression of Pliny, who calls it "importuosissima omnium." Seylaux, however (p. 250, ed. Gail), mentions a port, which possibly was identical with the harbour *Dentremum* spoken of by Livy. The ancient city (of the same name as the island) was on the north, in the place marked *Palaeopolis* on the chart.

The common name of the Thracian and the Ionian Samos was the occasion of speculation to Strabo and Pausanias. The latter (vii. 4. § 3) says that the Thracian island was colonised by emigrants from the other. The former (x. pp. 457, 472) mentions a theory that it might be named from the Sea, a people of Thrace. *Seymonis Chius* (1622) says, that aid came from Samos to Samothrace in a time of famine, and that this brought settlers from the Ionian to the Thracian Island. The truth seems to be, that *Samos* denotes any elevated land near the sea, and that the name was therefore given to the island before us, as well as to others. (Cephalenia; Samos.) The earlier names of Samothrace were Dardania, Electris, Melite, and Leucasia. Diodorus Siculus (v. 47) speaks of its inhabitants as Autochthons, and dwells on peculiarities of their language as connected with their religious worship. The chief interest of this island is connected with the *Cabeiri*. For these mysterious divinities we must refer to the *Dict. of Biography and Mythology*. Pelasgians are said by Herodotus (ii. 51) to have first inhabited the island, and to have introduced the mysteries.

The lofty height of Samothrace appears in Homer in a very picturesque connection with the scenery of Troy. He describes Poseidon as gazing from this throne on the incidents of the war; and travellers in the Troad have noticed the view of Samothrace towering over Imbrus as a proof of the truthfulness of the Iliad. Bearing in mind this geographical affinity (if we may so call it) of the mountain-tops of Saacle and Ida, we shall hardly be surprised to find *Seymonis Chius* (678) calling Samothrace a Trojan island (*Προπιτος Τρωακος*). The tradition was that Dardanus dwelt there before he went to Troy, and that he introduced the Cabeirean mysteries from thence into Asia.

A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhabitants joined Xerxes in his expedition against Greece; they are spoken of as skilful in the use of the javelin; and a Samothrian ship is said to have sunk an Athenian ship, and to have been sunk in turn by a Cabeirean one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samothracians possessed forts erected on the mainland. (Ib. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. *Pice*, 277, and *Schol.*) Samothrace appears also to have had the rights of asylum; for Persians took refuge there after he was defeated by the Romans in the battle of Pydna. (Liv. xiv. 6.) Germanicus sailed to the island with the view of being initiated; but he was prevented by an omen. (Tac. *Ann.* ii. 54.) St. Paul passed the night at anchor here on his first voyage from Asia to Europe. (*Acts*, xvi. 11.) In Pliny's time Samothrace was a free state (l.c.). In the *Syedoneans* we find it, with Thassos, in the province of Ilyricum. (Wess. p. 640.) In the latter passage described by Constant, Porphyry, (*De Them.* p. 47, ed. Bonn) it is in the Thracian subdivision of the First European or Thracian Theme.

Samothrace appears to have no modern history.
SAMULOCENAE, and no present importance. Pliny (xxxvii. 67) makes mention of a gen which was found there; and in the Middle Ages its honey and goats ore said to have been celebrated. Now travel among the Sumlocenne and have explored and described this island. [J.S.H.]

SAMULOCENAE, according to the Peut. Tab., or more correctly according to inscriptions found on the spot, SUMLOCENNE, was apparently a Roman colony of some importance in the Agri Decumates of Germany. The Table erroneously places the town in Vindolodia, whence some antiquaries have regarded Samulocenae and Sunlocenne as two different places. But there can be no doubt that they were only two forms of the same name belonging to one town, the site of which is occupied by the modern Selchen, near Rottenburg on the Neckar, where many Roman remains, such as coins, inscriptions, and arms, have been found. (Comp. Janmaan, Colonia Sumlocenne, Sch., Stuttgart, 1840, 8vo.; Lochtten, Scharben unter den Römern, p. 107, ed.)

[S. L. S.]

SAMUS. (Samos.)

SAMUS, a river of Hispania Baetica. (Geog. Rav. iv. 45.) Ancient Spanish coins indicate a town of the same name. (Florez, Med. iii. p. 142.)

SAMYDACE (Σαμυδάκης), a town on the coast of Carmania, noticed by Marcian c. (28, ed. Bidot) and Ptolemy (vi. 8. § 7). It has appeared to be placed near the mouth of the river Sumydace. (See also Steph. B. s. r.) It is possible, as suggested by Forbiger, that the river is the same as the present Šahary.

SANJUS (Σανδίς), a town of Phrygia, in the neighborhood of Ludectia. (Strab. xii. p. 576; Hered. p. 666.) In the acts of the Council of Chalcedon (p. 674), it is called Σανδίς πόλις, and is probably mentioned by Ptolemy (v. 2. § 26) under the name of Sanis.

SANSIO, a place in the Agri Decumates, in the south-west of Germany, was situated on the banks of the Rhine, but is mentioned only by Ambros Maccariinus (xxxi. 3), and in such a manner that it is not easy to identify its site; it is possible, however, that the modern Seckingen may correspond with it.

[S. L. S.]

SANDA, a river on the N. coast of Hispania Tarraconensia (Plin. iv. 20. s. 34.) Probably the Muria.

[S. T. H. D.]

SANDALIUM (Σανδάλιον), a mountain fortress of Passia, mentioned only by Strabo (xii. p. 199) and Stephanus B. (s. r.).

[S. L. S.]

SANDAXES (Σανδάξες, Peripl. Mar. Erythr. c. 52). There has been some question whether this is the name of a man or of a place. As the text stands in the Periplus, it would seem to be that of a ruler of the coast-district in the neighbourhood of Bombay. On the other hand, Ptolemy speaks of the same territory under the title of Αμαρια Σανδαξίων; whence Bouye (Etes. and Gruber, Encycl. art. Indus) argues, with strong probability, that the reading in the Periplus is incorrect, and that Ptolemy is right in giving the name of that of a people, rather than of a chief.

[V.]

SANDARACA (Σανδαράκης), a coast-town of Bithynia, at a distance of 90 stadia to the east of the river Osines. (Arrian, Peripl. P. E. p. 14; Anonym. Peripl. P. E. p. 4.)

[S. L. S.]

SANDOBANES. [Albania, Vol. I. p. 89, b.]

[SANDIZETES, according to some editions of Pliny (iii. 28), the name of a tribe in Pannonia on

the river Dravus; but a more correct reading gives the name Annibetes, which is no doubt the same as the Annibetti (Annibertii) mentioned by Strabo (vii. p. 514) among the tribes of Pannonia. [L. S.]

SANJUS, a river of Phrygia. (Strab. vii. 22; Thuc. iv. 109: Steph. B. s. r.), a colony of Andros, situated upon the low, undulating ground, forming the isthmus which connects the peninsula of Acte with Chaledge, through which the canal of Xerxes passed. Masses of stone and mortar, with here and there a large and squared block, and foundations of Hellenic walls, which are found along this Pródaites or neck of land, mark the site of former Sumus, which was within Acte and turned towards the sea of Euboea. (Leake, Northern Greece, vol. iii. p. 143.)

2. It appears from Herodotus (vii. 123; comp. Thuc. v. 18) and the Epitomiser of Strabo (vii. p. 330, Fr. 27), that there was another town of this name in Palene. According to the position assigned to it in the list of Herodotus, the site must be sought for between C. Possidii and the W. side of the Isthmus of Porto. Mela (ii. 3. § 1) is opposed to this position of Sane, as he places it near Caunastreanum Prom. (C. Palliari). [E. B. J.]

SANGALA (Σαγάλα), a place mentioned by Arrian to the NW. of the Malli (or Multae), apparently near the junction of the Hydastus and Acesines (v. 22). There can be little doubt that it is the same place as that noticed by Ptolemy under the name Σαγάλα ἡ κατὰ Εὐδομῆνα (vi. 1. § 40). The position, however, of the latter is assigned with this difference, that it is placed below the junction of the Hydastus and Acesines, whereas the former would seem to have been to the E. of the Hydastes. Barnes has identified Sagala with the present Lahore, which is probably enough (Travels, vol. iii. p. 82). It may be remarked, that the Εὐδομῆνα of Ptolemy ought in all probability to be Εὔδομηνα, the name being derived from the well-known Baptistian river, Eutychenus.

[V.]

SANGARIS (Σαγαρίους : Σαγαρίων or Σάγαρι, ἡ πόλις), one of the principal rivers of Asia Minor, is mentioned in the Iliad (iii. 187, xvi. 719) and in Hesiod (Theog. 344). Its name appears in different forms as Sagaphos (Schol. ad Apollon. Rhod. ii. 724), Sangaris (Constant. Porphyry. i. 5), or Sparis (Ori. I. 10. 17; Plin. vi. 1; Solin 43). This river had its sources on Mount Adorea, near the town of Sangala in Phrygia, not far from the Galian frontier (Strab. xii. p. 543), and flowed in a very tortuous course, first in an eastern, then in a northern, then in a western and lastly again in a northern direction through Bithynia into the Euxine. In one part of its course it formed the boundary between Phrygia and Bithynia; and in early times Bithynia was bounded on the east by the Sangarios. [Bithynesia.]

The Bithynian part of the river was navigable, and was celebrated from the abundance of fish found in it. Its principal tributaries were the Alaman, Bathys, Thymbres, and lastly the (Comp. Pliny, p. 4. 16; Apollon. Rhod. ii. 724; Symm. 234, vell.; Strab. xii. pp. 553, 567; Dionys. Perig. 811; Ptol. v. 1. § 6; Steph. B. s. r.; Liv. xxviii. 18; Plin. v. 43; Amin. Marc. xxi. 9.) [L. S.]

SANYGILA (Σανγύγης), a small place in the east of Phrygia, near Mount Adorea and the sources of the Sangarius. (Strab. xii. p. 543.)

[S. L. S.]

SANTIANA. [Santiana, Const. Porphy. Them. i. p. 28, de Adm. Imp. c. 59, p. 223, Bonn.), a place in

Digitized by Microsoft®
The Santones gave name to that division of France before the revolution which was named Saintonge, the chief part of which is included in the French department of Charente Inferieure. The coast of the territory of the Santones is low and marshy; the interior is generally level and fertile. D'Anville supposed that the territory of the Santones comprehended the diocese of Saintes, and the small province of Asisus on the north-west.

The wormwood of this country is spoken of by various writers, Pliny (xxii. 38), and Martial (Ep. ix. 95):

"Santonica medicata deliti mihi pocula virga."

Martial (xiv. 128) and Juvenal (viii. 145) mention a "cucullus" with the name "Santonicians." It appears that some thick woollen cloths were imported from Gallia into Italy.

Havercamp in his edition of Orosius (vii. 7) gives a coin with the name "Arriva," and on the other side the legend "Santones" in Latin capitals with the figure of a horse in action. He gives also another coin with the same legend; and a third with the abbreviated name "Sant." and the name of "Q. Doci" on it.

SANTONUM PORTUS (Santovium Adsp. Po- lemy in his description of the coast of Celtogalatia Aquitania (ii. 7: 4) proceeds from south to north. Next to the outlet of the Garonne he places Santonum Portus, and next to it Santonum Promontorium (Santonum bay). The outlet of the river Can- telus is placed north of the promontorium. The Ca- rantonum of Ausonius is certainly the Charente [Ca- rantonus]; and Poleney's Canetelus is a different river, or, if it is the same river, he has placed it wrong. It is impossible to determine what is the santonum Portus of Poleney. If it is Rochelle, as some geographers maintain, and if Poleney's Canetelus is the Charente, he has placed their positions in wrong order. It seems very unlikely that Poleney should mention a river between the Garonne and Loire, and not mention the Charente. The only other large river between the Garonne and the Loire is the Sèvre Niortaise, which is north of La Rochelle, and if Poleney's Canetelus is the Sèvre, the Santonum Portus might be La Rochelle. D'Anville supposes san- tonum Portus to be the embouchure of the Seudre, which opens into the sea opposite the southern exten- sity of the Ile d'Oleron; but he does not un- dertake to fix the position of the Santonum Promon- torium. The latitudes of Poleney cannot be trusted, and his geography of Gallia is full of errors. [G.L.]

SANTONUM PROMONTORIUM. [Santo- num Portus.]

SACIC. [Samoethrace.

SACOC PORAS (Sacoepas, Pol. v. 18, § 3), a river of Mesopotamia, mentioned by Poleney, which appears to have had its source in the M. Maximus near Nisibis, and to have flowed to the SW. into the Euphrates. There has been much dispute, as to what river Poleney intended by this name, as at present there is no stream existing which corresponds with his description. Forbiger has conjectured with some reason that it is the same as the Maccas of Xenophon (Anab. i. 5. § 4), which flowed about 35 parasangs to the E. of the Chaboras (Khadhir), and surrounded to the town of Coraeto; Poleney would seem to have confounded it with the Mygdonus. [Mygdonius.]

SAPAEI (Saraeis or Saravia), a Thracian people, occupying the southern portion of the Pan-
SAFAICA.

The name occurs in Annianus Marcellinus (xv. 11), in his description of Gallia. He says of the Rhone that after flowing through the Lake of Geneva⋅⋅⋅ per Sapaudiam tertiam et Sequam.

In the Notit. Imp. we read: "in Gallia Ripense praeecedens militem Barcarionem Ebraduni Sapaudiane," where Ebradunum appears to be Freddum, which is at one end of the Lake of Neufchâtel. In another passage of the Notit. there occurs: "tribunus eborcariorum primae Sapaudiae Flaviae Caienara," or "Culonum," which is Grenoble. Thus Sapaudia extended northward into the country of the Helvetii and southward into the territory of the Allobroges. The name Sapaudia is preserved in Sobaia, or Savoy, but in a much more limited signification; and in the country now called Savoy there is said to be a canton which bears the particular name of Savoy. (D'Anville, Notice, etc.)

SAPPHONAEU, Bussac.

SAPPHO (Σαπφώ), a small village of Parthyene mentioned by Isidorus (Statth. Pith. c. 12). It may be the same place as that called by Ptolemy Σαφά (vi. 9, § 6), which he places in Erycma, close to the Astabani. Forliger identifies it with the modern Shafri.

SAPPHINE (Σαφήνη), a town of Parthyene, which in the time of Strabo was the metropolis of a confederation of several Arab tribes, placed by Ptolemy in long. 80°, lat. 14° 30'; doubtless the capital of the Sapphiriotes (Σαφφηρίων), whom the same geographer places near the Homeritae (vi. 6, § 25), which Bochart identifies with the "Sephar" called by Moses "a mount of the East," and which was the limit of the children of Joktan. (Gen. x. 30.) This forster further identifies with the Mount Climax of Ptolemy, which Niesburg judges to be the Semtara or Nodif of modern Arabia, the highlands of Yemen, on the E. of which some traveller found some ruins, half a day's journey SW. of Jerim, named Sephar, which he says is without doubt Aphet, or Dhafer. (Forster, Geogr. of Arabia, vol. i. pp. 94, 105, 127 notes, 175, vol. ii. pp. 154, 172.) Aphet was the metropolis of the Sabaenes according to the author of the Peripus ascribed to Arrian, and distant 12 days' journey eastward from Musa on the Arabian gulf; Mr. Forster remarks "that the direction and the distance correspond with the site of Dhafer" (vol. ii. p. 166, note *). It is to be regretted that this important and well-marked site has not yet been visited and explored.

[G. W.]

SAPPHRITAE. [Saph.]  
SAPPHIRENE. [Saphirine.]

SAPRA PALUS. [Buces.]

SARACENI (Σαρακενοί). This celebrated name, which became so renowned and dreaded in Europe, is given to a tribe of Arabia Felix by the classical geographers, who do not, however, very clearly define their position in the peninsula, and indeed the country of Saracene in Ptolemy seems scarcely reconcileable with the situation assigned to the Saraceni by the same geographer. Thus he, consistently with Pliny, who joins them to the Nabataei (vi. 28, § 32), places the Saraceni south of the Scitae, who were situated in the neighbourhood of the northern mountains of the Arabian peninsula (vi. 7, § 21); but the region Saracene he places to the west of the black mountains (μέλανα ἰχθὺς)—by which name he is supposed to designate the range of Sinai, as he couples it with the gulf of Pharan—and on the confines of Egypt (v. 17, § 3). St. Jerome also calls this district the "mons desertum Saracenorum, quod vocatur Pharan" (Onomast. s. v. Σαφρή, Choreb), in agreement with which Eusebius also places Pharan near the Saraceni who inhabit the desert (s. v. Ψαφρή). According to the abovementioned geographers, it is in Scripture called Midian (Exod. ii. 15, iii. 1; see Midian), which, however, they place incorrectly on the east of the Red Sea; and the people are identified with the Ishmaelites by St. Jerome (Onomast. l. c.), elsewhere with Kedar (Comment. in Isa. xliii. and in Lec. Heb. ad voc), with the Midianites by St. Augustine (in Num.), with the Scitae by Annianus Marcellinus, who, however, uses the name in a wider acceptation, and extends them from Assyria to the Arabian desert (xvi. 4). Their situation is most clearly described by the author of the Peripus. "They who are called Saraceni inhabit the parts about the neck of Arabia Felix next to Petraea, and Arabia Deserta. They have many names, and occupy a large tract of desert land, bordering on Arabia Petraea and Deserta, on Palæstina and Persis, and consequently on the before-named Arabia Felix." (Marian, apud Geogr. Min. vol. i. p. 16. Hudson.) The fact seems to be that this name, like that of Scitae (with whom, as we have seen, the Saraceni are sometimes identified), was used either in a laxer or more restricted sense for various
wandering tribes. As their nomadic and migratory habits were described by the latter, so their predatory propensities, according to the most probable interpretation of the name, was by the former, for the Arabic verb Saraka, according to lexicographers, signifies "to plunder." (Bochart, Geog. Soc. loc. iv. cap. 2, pp. 213, 214) The derivation of the name from Sarah has been rejected by nearly all critics as historically erroneous; and the fact that the name was in use many centuries before the Roman, and Mohammed, at once negatives the theory that it was adopted by him or his followers, in order to remove the stigma of their servile origin from Hagar the bondwoman. (Roland, Palæstina, p. 87.) This author maintains that "Saracen nil nisi orientales populos notat" deriving the word from the Arabic sharaka = ortus fuit; and as unhappily the Greek alphabet cannot discriminate between sin and shin, and the name does not occur in the native authors, there is nothing to determine the etymology. Mr. Forster, in defence of Bochart's severe sentence, "Qui ad Saram refertum, nugae agunt" (Geog. Soc. i. 2, p. 213), argues for the macrotomic derivation from Sarah, and shows that the country of Edom, or the mountains and territory bordering upon the Saracen of classic authors, are called "the country, mountains, &c. of Sarah" by the Jews; and he maintains that, as this tract derived its name of Edom and Idumea from the patriarch Esau, so did that of Sarah from Sarah the wife of Abraham, the acknowledged mother of the race. (Geog. of Arabia, vol. ii. pp. 17-19.) His attempt to identify the Saraceni with the Amalekites is not so successful; for however difficult it may be to account for the appearance of the latter in the Rephidim (Exod. xvii. 1, 8; Rephidim), which was the country of the Saracen, yet their proper seat is fixed beyond doubt in the south of the promised land, in the hill-country immediately north of the wilderness of Paran, near to Kadesh (Numb. xiii. 29); and it is impossible to understand "the valley" in xiv. 25, and "the hill" in xiv. 45, of Horeb, as Mr. Forster does, since the whole context implies a position far to the north of the district of Horeb, marked by the following stations: Taberah, 3 days' journey from "the Mount of the Lord" (x. 33, xi. 3); Kibroth-hattaavah, Hazeroth, the wild goat of Paran (xi. 34, 35, xii. 16, compare xix. 16-18). It must indeed be admitted that the name of the Amalekites is occasionally used, in a much wider acceptance than its proper one, of all the Edomite tribes, throughout Northern Arabia, as e. g. in 1 Sam. xv. 7; and similarly the name Saracen is extended in Marcan's Periphs, already cited; but it seems more natural to interpret the words Σαραινοὶ Σαρακηνῶν, πάλαισι ἔχοντες παραγγελίας of the general name of several specific tribes, marking common habits or common position rather than common origin, according to the analogy of the Scenitae in old times and of Bedawin = "deserti incolae," in modern times; particularly as it does not appear that the name was ever adopted by the Arabs themselves, who would not have been slow to appropriate an honourable appellation, which would identify them with the great patriarch. That their predatory character had become early established is manifest from the devices adopted by the Emperor Decius in order to repress their encroachments. He is said to have brought lions and lionesses from Africa and turned them loose on the borders of Arabia and Palestine, as far as the Circium Castrum, that they might breed and propagate against the Saracens. (Chron. Alex. in A. M. 5760, Olymp. 257, Ind. xiv. = A.D. 251.) This strong fortress, called byProcopius Ciresium (Κηρησσόν φρούριον), the most remote of the Roman garrisons, which was fortified by Dacletian (Ann. Marc. xxiii. 5), was situated on the angle formed by the confluence of the Alterhas (Khabour) and the Euphrates (it is still called Korkisia), so that it is clear that, in the time of Procopius, the name of Saraceni was given to the Arab tribes from Egypt to the Euphrates. Consistently with this view, he calls Zenobia's husband Odaenathes, "king of the Saracen in those parts" (Bell. Pers. ii. 5, p. 288); and Belisarius' Arab contingent, under their king Areitas (Aretes) he likewise calls Saraceni (ii. 16, p. 308). That Roman general describes them (c. 19, p. 312) as incapable of building fortifications, but enters at plunder, which character again justifies the etymology above preferred; while it is clear from these and other passages that the use of the name had become established merely as a general name, and precisely equivalent to Arab (see Bell. Pers. i. 19, p. 261), and was accordingly adopted and applied indiscriminately to all the followers of Mohammed by the writers of the middle ages. [G. W.]

SARALIUM or SARALUS (Σαράλος), a town of the Decani in Galatia, on the coast of the river Halys. (Tab. Peut.; Pois. v. 9, § 4.)

SARAMENE (Σαραμήνη), a district of Pontus, on the bay of Amius. (Strab. xii. p. 547; comp. Pontus.)

SARRANGA (τὰ Σαραγγα), a small place on the coast of Gedrosia between the Indus and the Arabis. It was visited by Nearchus in his coast voyage to Persia (Arria, Ind. c. 22). It has been conjectured by Müller (Geogr. Graec. Min. i. c., ed. Niria) that it is the same as the Σαραγγα of Ptolemy (vi. 21, § 2).

SARRANGAE. [DRANGIANA.]

SARRANGES (Σαραγγης), a small tributary of the Hydruotes (Irideotis), mentioned by Arrian (Ind. c. 4) in his list of Indian rivers. It is doubtless the Sanscrit Saranga, though it has not been determined to what stream this Indian name applies.

SARAFA (Σαραφα), Strab. xi. p. 500; Σαραφασ, Procop. B. G. iv. 14), a strong position in Iberia, upon the river Phasis, identified with Scharaфанi in Iberia, on the modern road which leads from Mingrelia into Georgia over Suranah. (Comp. Jour. Geog. Soc. vol. iii. p. 34.)

SARAPARAE (Σαραπαρας), Strab. xi. p. 531; Plin. vi. 16. s. 18), a Thracian people, dwelling beyond Armenia near the Guraniti and Medii, according to Strabo, who describes them as a savage, lawless, and mountainous people, who scattered and cut off heads (περιπνηθαται καὶ ἀποκεφαλασται). The latter is said by Strabo to be the meaning of their name, which is confirmed by the fact that in the Persian sar means "head" and para "division." (Anquetil, Sur les anc. Langues de la Perse, in Méin. de l'Acad. f.c. vol. xxxi. p. 419, quoted in Kramer's Strab. vol. ii. p. 500; comp. Groskurd's Strab. vol. ii. p. 534.)

SARAPIONIS PORTUS. [NECIONIS DROMUS.]

SARAPIS INS. (Σαράπιδος νήσοι), an island off the South Coast of Arabia, mentioned by the author of the Periplus ascribed to Arrian (Geogr. Graec. Min. vol. i. p. 19, Hudson) as situated 2000 stadia east
of the seven islands of Zenobia, which are identified with the islands of Kurius Marian. The island of Saravis is therefore correctly placed by D'Anville at Mosca. It is described in the Periplius as about 120 stadia distant from the coast, and about 200 stadia wide. It had three villages, and was inhabited by the sacred estate of the Isthymopagi. They spoke Arabic, and wore girdles of cocoa leaves. The island produced a variety and abundance of tobacco, and was a favourite station for the merchant vessels of Cane. [G.W.]

SARAVIS, a river of Gallia, a branch of the Mosella (Mosel). The rivers place the Pons Saravi on the Saravis, on a road from Divodurum (Metz) to Argentoratun (Strasbourg), and [Pons Saravi.]

The Saravis is mentioned in the poem of Anonius on the Mosella (v. 367):—

"Naviga undosum dudum me mole Saravus
Tota veste volvo, longum qui distulit ammum,
Fessa sub Augustus ut velvet ostita muris."

The Saravis is the Sarre, which joins the Mosel on the right bank a few miles above Augusta Treviorum (Trier). In an inscription the river is named Surca.

SARBACKUM (Σάρβακος, Ptol. iii. 5, § 29), a town of Sarmatis, upon an affluent of the Tanais, probably a Graecised form of the Slavonic Srbac (Scharulik, Slav. Alt. vol. i. pp. 512, 514.) [E.B.J.]

SARDABALE. [Sig[a.]

SARDEMSIS, a southern branch of Mount Tauras on the frontiers of Paphlagonia and Pamphylgia, extending as far as Phaselis; it is also connected with Mount Climax on the frontiers between Mylas and Paphlagonia Proper. (Pomp. Meli. i. 14; Plin. v. 26.)

[S.L.]

SARDENE (Σαρδένις), a mountain of Myasis, on the northern bank of the Hermus, in the neighbourhood of Cyrene; at its foot was the town of Nea-Teichos. (Hom. Ep. i. 3; Vit. Huna. 9.) [L.S.]

SARDIS (Σάρδης or Σάρδος; Eth. Σαρδανός), the ancient capital of the kingdom of Lydia, was situated at the northern foot of Mount Tmolus, in a fertile plain between this mountain and the river Hermus, from which it was about 20 stadia distant. (Arrian, Anab. i. 17.) The small river Pactolus, a tributary of the Hermus, flowed through the agora of Sardis. (Herod. v. 101.) This city was of more recent origin, as Strabo (xxii. p. 625) remarks, than the Trojan times, but was nevertheless very ancient, and had a very strong acropolis on a precipitous height. The town is first mentioned by Aeschylus (Pers. 45); and Herodotus (i. 84) relates that it was fortified by a king Meles, who, according to the Chronicle of Ensebians, preceded Candaules. The city itself was, at least at first, built in a rude manner, and the houses were covered with dry reeds, in consequence of which it was repeatedly destroyed by fire; but the acropolis, which some of the ancient geographers identified with the Homeric Ilyse (Strab. xiii. p. 626; comp. Plin. v. 30; Enstath. ad Ion. Per. 830), was built upon an almost inaccessible rock, and surrounded with a triple wall. In the reign of Argy, Sardes was taken by the Cimmerians, but they were unable to gain possession of the citadel. The city attained its greatest prosperity in the reign of the last Lydian king, Croesus. After the overthrow of the Lydian monarchy, Sardes became the residence of the Persian satraps of Western Asia. (Herod. v. 25; Paus. iii. 9, § 8.) On the revolt of the Ionians, excited by Aristogathis and Histiaeus, the Ionians, assisted by an Athenian force, took Sardes, except the citadel, which was defended by Artaphernes and a numerous garrison. The city then was accidentally set on fire, and burnt to the ground, as the buildings were constructed of easily combustible materials. After this event the Ionians and Athenians withdrew, but Sardes was rebuilt; and the indignation of the king of Persia, excited by this attack on one of his principal cities, determined him to wage war against Athens. Xenophon spent at Sardes the winter preceding his expedition against Greece, and it was there that Cyrus the younger assembled his forces when about to march against his brother Artaxerxes. (Xenoph. Anab. i. 2. § 5.) When Alexander the Great arrived in Asia, and had gained the battle of the Granicus, Sardis surrendered to him without resistance, for which he rewarded its inhabitants by restoring to them their freedom and their ancient laws and institutions. (Arrian, i. 17.) After the death of Alexander, Sardes came into the possession of Antigonus, and after his defeat at Ipsus into that of the Seleucids of Syria. But on the murder of Seleucus Cenerinus, Achaeus set himself up as king of that portion of Asia Minor, and made Sardis his residence. (Polyb. iv. 48, 57.) Antiochus the Great besieged the usurper in his capital for a whole year, until at length Lagonas, a Cretan, scaled the ramparts at a point where they were not guarded. On this occasion, again, a great part of the city was destroyed. (Polyb. vii. 13, &c. viii. 23.) When Antiochus was defeated by the Romans in the battle of Magnesia, Sardes passed into the hands of the Romans. In the reign of Tiberius the city was reduced to a heap of ruins by an earthquake; but the emperor ordered its restoration. (Tac. Ann. ii. 47. Strab. xiii. p. 627.) In the book of Revelation

COIN OF SARDES.
SARDINIA.

(iii. 1, &c.), Sardes was named as one of the Seven Churches, whence it is clear that at that time its inhabitants had adopted Christianity. From Pliny (v. 30) we learn that Sardes was the capital of a conventus; during the first centuries of the Christian era we hear of more than one council held there; and it continued to be a wealthy city down to the end of the Byzantine empire. (Eunap. p. 154; Hieroc. p. 669.) The Turks took possession of it in the 11th century, and two centuries later it was almost entirely destroyed by Tamerlane. (Annae. p. 523; M. Ducas, p. 59.) Sardes is now little more than a village, still bearing the name Sardis, the name of the ruins of the ancient city. These ruins, though extending over a large space, are not of any great consequence; they consist of the remains of a stadium, a theatre, and the triple walls of the acropolis, with lofty towers.

The fertile plain of Sardes bore the name of Sardiana or Ξανδρινος πεδινος, and near the city was the celebrated tomb of Alyattes. Sardes was believed to be the native place of the Spartan poet Alcamen, and it is well known that the two rhapsodists Diodorus and the historian Eunapius were natives of Sardes. (Chandler, Travels in Asia Minor, p. 316, foll.; Leake, Asia Minor, p. 342, foll.; Richter, Walfahrten, p. 511, foll.; Prokesc, Denkwürdigk. vol. iii. p. 31, foll.)

[L. S.]

SARDINIA (ζ Σαρδίνη; Eth. Σαρδονιός, Sardus; Sardina), one of the largest and most important islands in the Mediterranean sea, situated to the S. of Corsica (from which it was separated only by a narrow strait, now called the Strait of Bonifacio) and NW. of Sicily. Its most southern extremity, Cape Spartivento, was distant only 120 geo. miles from Cape Sarrat in Africa.

I. GENERAL DESCRIPTION.

It was a disputed point in ancient times whether Sicily or Sardinia was the largest. Hesiodus calls Sardinia "the largest of islands" (τωρόω δαναεών μεγίστην, i. 170, τωρόν τή μεγίστην, v. 106), but in passages where it is not certain that the expression is to be construed quite strictly. Sclavus, however, distinctly calls Sardinia the largest of all the islands in the Mediterranean, assigning to Sicily only the second rank (Scyl. p. 56. § 115); and Timaeus seems to have adopted the same view (ap. Strab. xiv. p. 634). But the general opinion was the other way: the comic poet Alexus already enumerated the seven great islands, as they were called, placing Sicily first and Sardinia second (Alex. ap. Cost. Porphyry de Prov. ii. § 10); and this view is followed by Sceinmus Chiusus, as well as by the later geographers. (Sceynus. Ch. p. 223; Strab. ii. p. 123; Pinn. iii. 7. s. 13, s. 14; Diod. v. 17.) Diodorus, however, justly remarks, that it is very nearly equal to Sicily in magnitude (Diod. v. 16); and this opinion, which was adopted by Ovlerinus (Sicil. Ant. p. 475), continued to prevail down to a very recent period. But modern researches have proved that Sardinia is actually the larger of the two, though the difference is but trifling. (Smith's Sardinia, p. 66.) Its general form is that of an oblong parallelogram, above 140 geo. miles in its greatest length, by about 60 in its average breadth, which, however, attains to as much as 77 in one part. The measurements given by Pliny, of 188 miles (1489 geo. miles) in length along the E. coast, and 175 on the W., are therefore very fair approximations (Plin. iii. 7. s. 13), while those of Strabo, who calls the island 220 miles in length by 98 in breadth, are considerably overstated. (Strab. v. p. 224.)

Sardinia is a much more fertile and mountainous island than Corsica. It is, however, traversed throughout its whole length from N. to S. by a chain of mountains which commence at the headland called Capo Lungo Sardo, and extend along the eastern side of the island, as far as Capo Carbonara, which forms the SE. extremity of the island. This range, which is composed of granite and other primary rocks, is undoubtedly a continuation, in a geological sense, of the mountains of Corsica, and produces a rugged and difficult country forming much the wildest and most uncivilized part of Sardinia. The mountain summits, however, are far from attaining the same elevation as those of Corsica, the highest point, called Monte Genargento, rising only to 5276 feet, while the Monte di Sta Vittoria, in the same neighbourhood, rises to 4040 feet, and the peak of Liubarru (the most northerly group of the chain) to 3686 feet; but the general elevation of the island (except 3000 feet at Mount Tamarla, the highest part of this mountain district, which may be considered on a rough estimate as comprising about one half of the whole island, are situated three detached groups of mountains; the most considerable of which is that in the SW., which extends from Copo Sportivento to Copo della Frasca on the Gulf of Oristano, and the highest summits of which attain to an elevation of nearly 4000 feet. In the extreme NW. of the island is another isolated range of less extent, called the Monti della Nurra, extending from the Copo della Caccia to the Copo del Falcone. Both these groups are, like the mountains in the E. of the island, composed of primary rocks; but N. of the river Tiso, and extending from thence to the N. coast of the island beyond Sassari, is an extensive volcanic tract, occupied in considerable part by a range of extinct volcanoes, one of which, the Monte Ursica, rises to an elevation of 3450 feet. There is no trace of any volcanic action having taken place within the historical period, but extensive tracts are still covered with broad streams and fields of lava. Notwithstanding this abundance of mountains, Sardinia possesses several plains of considerable extent. The largest of these is that called the Campidano, which extends from the Gulf of Cagliari to that of Oristano, thus separating entirely the range of mountains in the SW. from those in the E. of the island; it is a tract of great fertility. A similar plain, though of less extent, stretches across from the neighbourhood of Alghero to that of Porto Torres, thus isolating the chain of the Monti della Nurra; while several smaller ones are found in other parts of the island. The general character of Sardinia is therefore well summed up by Strabo, when he says, "the greater part of it is a rugged and wild country, but a large part contains much fertile land, rich in all kinds of produce, but most especially in corn." (Strab. v. p. 224.)

The great disadvantage of Sardinia, in ancient as well as modern times, was the insalubrity of its climate. This is repeatedly alluded to by ancient writers, and appears to have obtained among the Romans an almost proverbial notoriety. Mela calls it "soi quam costii melioris, atque ut fecundia, ita penes pestilentis," Strabo gives much the same account, and Martial alludes to it as the most unhealthy climate he had met with (Strab. v. p. 225; Mel. vii. 7. § 19; Paus. x. 17. § 11; Martial, iv. 60. 6;
SARDINIA.

Cic. ad Q. Fr. ii. 3; Tac. Hist. ii. 85; Sil. Ital. xii. 371.) There can be no doubt that this was mainly owing to the extensive marshes, lagoons and swamps, as well as to the malaria, which adhered at the mouths of the rivers; and as these naturally adjoined the more level tracts and plains, it was precisely the most fertile parts of the island that suffered the most severely from malaria. (Strab. l. c.) The more elevated and mountainous tracts in the interior were doubtless then, as now, free from this scourge; but they were inhabited only by wild tribes, and rarely visited by the more civilised inhabitants of the plains and cities. Hence the character of unhealthy was naturally applied to the whole island.

II. History.

The statements of ancient writers concerning the origin of the population of Sardinia are extremely various and conflicting, and agree only in representing it as of a very mixed kind, and proceeding from many different sources. According to Pausanias, who has given these traditions in the greatest detail, its first inhabitants were Libyans, who crossed over under the command of Sardus, the son of a native heroi or divinity, who was identified by the Greeks with Hercules. (Paus. x. 17, § 2.) This Sardus was supposed to have given name to the island, which was previously called, or at least known to the Greeks, by that of Ichnus (Ichnoera), from the resemblance of its general form to the print of a man's foot. (Paus. l. c. § 1; Sil. Ital. xii. 358—360; Paus. Arist. Mirab. 104.) Timaeus, according to Pliny, called it Sandalblotis from the same circumstance (Plin. iii. 12, s. 17); but it is clear that neither of these names was ever in general use. The fact that the earliest population came from Africa is intrinsically probably enough, though little value can be attached to such traditions. Pausanias indeed expressly tells us (l. c. § 7) that the population of the mountain districts (the people whom he calls Ilensee) resembled the Libyans both in their physical characters and their habits of life.

The next settlers, according to Pausanias, were a Greek colony under Aristeus, to whom some writers ascribe the foundation of Caralis; and these were followed by a body of Iberians under a leader named Nora, who founded the city called Nora in the SW. part of the island. Next to these came a body of Greeks from Thea and Attica, under the command of Iolans, who founded a colony at Olbia in the NE. corner of the island. After this came a body of Trojans, a part of those who had escaped from the destruction of their city, and established themselves in the southern part of the island. It was not till long afterwards that they were expelled from there by a fresh body of Libyans, who drove them up into the more rugged and inaccessible parts of the island, where they retained down to a late period the name of Libes (Datis, Paus. x. 17, §§ 2—7; Sil. Ital. xii. 360—368). This population of the mountain tribe of this name is a well attested fact, as they are mentioned by Livy as well as by the geographers; and it is probable that the casual resemblance of name gave occasion to the fable of the Trojan origin. (Libes.) The Iolani or Ilenses, on the other hand, had lost their name in the time of Strabo, and were called, according to him, Daghbiani (Δαγγηβιας, v. p. 225), a name which is, however, not found in any other ancient author.

Another tribe, whose name is found in historical times, is that of the Balari, who, according to Pausanias, derived their origin from a body of mercenaries in the service of Carthage, that had fled for refuge to that city from their own country (Paus. l. c. § 9.) To these must be added the Corii, whose origin is sufficiently indicated by their name. They dwelt in the mountains of the N. of the island (the Montagne di Limbara), and had evidently crossed over from the adjacent island of Corsica, as they are described by Pausanias as having done. (Paus. l. c.)

It is little to attempt to criticise these traditions as these; they are related with many variations by other writers, some of whom term the Libyans, others the Ilenses, the most ancient inhabitants of the island (Diod. iv. 29, v. 15; Mel. i. 7. § 19; Strab. v. p. 225; Sil. Ital. l. c.) and it is clear that the different mountain tribes were often confounded with one another. Strabo alone has a statement that the earliest inhabitants of Sardinia (before the arrival of Iolans) were Tyrrhenians (v. p. 225), by which he must probably mean Pelasgians, rather than Etruscans. We have no account of any Greek colonies in Sardinia during the historical period; though the island was certainly well known to them, and seems to have been looked upon as affording a tempting field for colonisation. Thus we are told by Herodotus that when Phoenicians and Teos were taken by Harpagus (n. c. 545) the project was suggested that all the remaining Ionians should proceed in a body to Sardinia, and establish themselves in that island. (Herod. i. 170.) Again in n. c. 499, Histories of Micerion promisedarius to subdue the whole island for him; and it appears that the project of enquiring there was seriously entertained. (Id. v. 106, 124.) Pausanias indeed represents the Messenians as thinking of enquiring there at a much earlier period, just after the close of the Second Messenian War, n. c. 668 (Paus. iv. 23. § 5); but none of these projects were realised, and it seems certain that there were no Greek settlements in the island at the time when it fell into the hands of the Carthaginians. The Carthaginian conquest is indeed the first fact in the history of Sardinia that can be considered as resting on any sure historical foundation; and even of this the date cannot be fixed with certainty. It is probable indeed that at a much earlier period the Phoenicians had not only visited the coasts of Sardinia for commercial purposes, but had established trading stations or factories there. Diodorus indeed expressly tells us that they planted colonies in Sardinia, as well as in Sicily, Spain, and Attica (Diod. v. 33); and there seems some reason to ascribe to them the first foundation of the important cities of Caralis, Nora, and Sulci. (Movers, i. Phoencier, vol. iii. pp. 558, 573.) But in this case, as in many others, it is impossible to separate distinctly what was done by the Phoenicians themselves and what by their descendants the Carthaginians. It is, however, certain that it was reserved for the latter to form extensive and permanent settlements in the island, and that they reduced the greater part under their authority. According to Justin, the first Carthaginian expedition took place under a leader named Malecous, who was, however, defeated in a great battle by the native barbarians. (Justin, xviii. 7.) The first invasion was conducted by Hasdrubal, the son of Mago, and the elder brother (if we may trust to the accuracy of Justin) of Hamilcar, who was killed at Himera, n. c. 480. Hasdrubal himself, after many successes, was slain in battle; but the Carthaginians seem to have from this time maintained their footing.
SARDINIA.

in the island. (Jd. xii. 1.) The chronology of Justin does not claim much confidence; but it seems probable that in this instance it is not far from correct, and that we may place the Carthaginian conquest about 500–480 B.C. It can hardly have taken place much earlier, as the Ionian Greeks still looked upon the island as open to colonisation in the reign of Darius Hystaspis.

Of the details and circumstances of the Carthaginian war we have no account; but we are told in general terms that they made themselves masters of the whole island, with the exception of the rugged mountain districts which were held by the Ilissenses and Corsi. (Pans. x. 17. § 9; Pol. i. 10.) They founded many towns, and from their superior civilisation struck such deep root into the country, that even in the time of Cicero the manners, character, and institutions of the Sardinians were still essentially Punic. It even appears that a considerable part of the population was of Punic origin, though this was doubtless confined to the towns and the more settled districts in their immediate neighbourhood. (Cic. pro Scarr., §§ 15, 42, 45.) But notwithstanding these clear evidences of the extent of the Carthaginian influence, we have scarcely any account of the long period of about two centuries and a half, during which they continued masters of all the more important portions of the island. An isolated notice occurs in b. c. 379 of a great revolt in Sardinia, the inhabitants of which took advantage of a pestilence that had afflicted the Carthaginians, and made a vigorous effort to shake off their yoke, but without success. (Diod. xvi. 24.) We learn also that already at this period Sardinia was able to export large quantities of corn, with which it supplied the fleets and armies of Carthage. (Diod. xiv. 63, 77.) The story current among the Greeks, of the Carthaginians having systematically discouraged agriculture in the island (Pseudo. Arist. de Mirab. 104), is therefore, in all probability, without foundation.

During the First Punic War (b. c. 259) L. Cornelius Scipio, after the conquest of Aleria in Corsica, directed his course to Sardinia, where he defeated the Carthaginian fleet near Oliba, but did not venture to attack that city. (Zonar. viii. 11.) Having, however, received reinforcements from Rome, he landed in the island, totally defeated the Carthaginian general Hammo, and took the city of Oliba, as well as several minor towns. The next year C. Sulpicius followed up this advantage, and ravaged the greater part of the island, apparently with little opposition. (Zonar. viii. 11, 12; Pol. i. 24; Oros. iv. 7, 8; Flor. ii. 2. § 16; Val. Max. v. i. § 2.)

No real footing was, however, gained by the Romans in Sardinia during the First Punic War; and the peace which put a close to that contest left the island subject to Carthage as before. But a few years afterwards the Carthaginian mercenaries in Sardinia followed the example of their brethren in Africa, and raised the standard of revolt; they were indeed overpowered by the natives, and driven out of the island, but their cause was espoused by the Romans, who undertook to restore them, and threatened the Carthaginians with war if they attempted the restoration of their own dominion in Sardinia. The latter were exhausted with the long and fierce contest with their mercenary troops in Africa, and were in no condition to resist. They consequently submitted to the demands of the Romans, and agreed by treaty to abandon all claims to Sardinia, n. c.
SARDINIA.

sent as proconsul to the island, and after two years of continuous warfare he earned the distinction of a triumph, a sufficient proof of the formidable character of the insurrection. (Eutrop. iv. 25; Ruf. Fest. 4.) Ti. is the last time we hear of any war of importance in Sardinia; but even in the time of Strabo the mountaineers were in the habit of plundering the inhabitants of the more fertile districts, and the Roman praetors in vain endeavoured to check their depredations. (Strab. v. p. 225.)

The administration of the province was entrusted throughout the period of the Republic to a praetor or proconsul. Its general system was the same as that of the other provinces; but Sardinia was in some respects one of the least favoured of all. In the time of Cicero it did not contain a single free or allied city (citius fideverata) (Cic. pro Scarr. § 44): the whole province was regarded as conquered land, and hence the inhabitants in all cases paid the tenth part of their corn in kind, as well as a stipendium or annual contribution in money. (Cic. pro Balb. 18; Liv. xxi. 41.) From the great fertility of the island in corn, the former contribution became one of the most important resources of the Roman state, and before the close of the Republic we find Sardinia, Sicily, and Africa alluded to as the "tria frumentaria subsidia reipublicae." (Cic. pro Lg. Manil. 12; Varr. R. R. ii. Pr. § 3; Valerius Maximus also terms them "benignissimae ubiis nostreac nutrices," vii. 6. § 1.) For this reason, as soon as Pompeius was appointed to the command against the pirates, one of his first cares was to protect the coasts of these three provinces. (Cic. L. L. c.) Among the eminent persons who at different times filled the office of praetor or proconsul in Sardinia may be mentioned the elder Cato in B. c. 198 (Liv. xxi. 8, 27): Q. Antonius Balbus, who was appointed by Marius to the government of the island, but was defeated and killed by L. Philipponis, the legate of Sulla, n. c. 82 (Liv. Epit. lxxvi.); M. Atius Balbus, the grandfather of Augustus, who was praetor in n. c. 62, and struck a corn with the head of Sardus Pater, which is remarkable as the only one belonging to, or connected with, the island (Diog. Dict. Vol. i. p. 450) and M. Aurelianus Scarrus, who was praetor in B. c. 53, and was accused by the Sardinians of oppression and peculation in his government, but was defended by Cicero in an oration of which some fragments are still extant, which throw an important light on the administration of the island. (Cic. pro Scarr. ed. Orell.; Ason. in Scarr.)

In n. c. 46 the island was visited by Caesar on his return from Africa, and the Suscitati severely punished for the support they had given to Naxidius, the admiral of Pompey. (Hirt. B. Afr. 98.) The citizens of Caralis, on the contrary, had shown their zeal in the cause of Caesar by expelling M. Cotta, who had been left by Pompey in charge of the island. (Caes. B. C. i. 30.) Sardinia was afterwards occupied by Menodorus, the lieutenant of Sextus Pompeius, and was one of the provinces which was assigned to the latter by the treaty of Misenum, n. c. 39; but it was subsequently betrayed by Menodorus, and given into the hands of Octavian. (Dion Cass. xlviii. 30, 36, 45; Appian, B. C. v. 56, 66, 72, 89.) It was probably for some services rendered on one or other of these occasions that the citizens of Caralis were rewarded by obtaining the rights of Roman citizens, a privilege apparently conferred on them by Augustus. ("Caralitani civium Romani,"") Plin. iii. 7. a. 13.) This was in the days of Pliny the only privileged town in the island: but a Roman colony had been planted in the extreme N. at a place called Turris Libyana. (Plin. i. c.) Two other colonies were established in the island at a later period (probably under Hadrian), one at Usellis, on the W. coast, the other at Cornus. (Ptol. iii. 3. § 2; Zumpt, de Col. p. 410.)

Under the Roman Empire we hear but little of Sardinia, which continued to be noted chiefly for its abundant supply of corn, and for the extreme unhealthiness of its climate. In addition to the last disadvantage, it suffered severely, as already mentioned, from the perpetual incursions of the wild mountain tribes, whose depredations the Roman governors were unable to repress. (Strab. v. p. 225.) With the view of checking these marauders, it was determined in the reign of Tiberius to establish in the island a body of 4000 Jews and Egyptians, who, it was observed, would be little loss if they should perish from the climate. (Tac. Ann. ii. 85.) We have no account of the success of this experiment, but it would seem that all the inhabitants of the island were gradually brought under the Roman government, at least in the present day even the wildest mountaineers of the interior speak a dialect of purely Latin origin. (De la Marmora, Voy. en Sard. vel. i. pp. 198, 202.) It is clear also from the number of roads given in the Itineraries, as well as from the remains of them still existing, and the ruins of aqueducts and other ancient buildings still extant, that the island must have enjoyed a considerable degree of prosperity under the Roman Empire, and that exertions were repeatedly made for its improvement and defence. It was still considered as a place of exile for political offenders, and nobles who had given umbrage to the emperors. (Tac. Ann. xiv. 62, xvi. 9, 17; Dion Cass. vii. 27; Martial, viii. 32.) Its great importance to Rome down to the latest period of the Empire, as one of the principal sources from which the capital was supplied with corn, is attested by many writers, so that when at length it was occupied by the Vandals, it seemed, says a contemporary writer, as if the life-blood of the city had been cut off. (Procop. ad. Synmach. ii. 942; Salvian, de Prov. vi.)

During the greater part of the Roman Empire Sardinia continued to be united with Corsica into one province; this was one of those assigned to the senate in the division under Augustus (Dion Cass. liii. 12); it was therefore under the government of a magistrate styled proconsul, but occasionally a special governor was sent thither by the emperor for the repression of the plundering natives. (Id. iv. 28; Orell. Inscr. 74, 2577.) After the time of Constantine, Sardinia and Corsica formed two separate provinces, and each had its own governor, who bore the title of Praeses; and was dependent on the Vicarius Urbis Romae. (Not. Dign. i. p. 64; Eicking, ad loc.; Ruf. Fest. 4.) It was not till A. D. 456 that Sardinia was wrested from the Roman Empire by Genseric, king of the Vandals; and though recovered for a time by Marcellinus, it soon fell again into the hands of the barbarians, to whom it continued subject till the fall of the Vandal monarchy in Africa, when Cyrilus recovered possession of the island for Justinian, A. D. 534. (Procop. B. i. 6, 10, 11, ii. 5.) It was again conquered by the Gothic king Totila in A. D. 551 (Id. B.G. iv. 24), but was recovered by Narses after the death of that monarch, and seems from this period to have
SARDINIA.

remained a dependency of the Byzantine Empire down to a late period. But in the 8th century, after having suffered severely from the incursions of the Saracens, it passed for the most part into the hands of that people, though the popes continued to assert a nominal sovereignty over the island.

III. Topography.

The principal physical features of Sardinia have been already described. Of the numerous ranges, or rather groups, of mountains in the island, the ancient name that has been preserved to us is that of the INSANI MONTES (Liv. xxx. 39; Claudian, B. G. 513; τα Μακρυσσά θρύσης, Ptol.), and even of these it is not easy to determine the position with any degree of accuracy; the name was apparently applied to the mountains in the N. and NE. of the island, which seem to have been regarded (though erroneously) as more elevated than those farther S., so that the uncleanness of the southern part of the island was popularly attributed to the abutting out of the bracing north winds by this range of lofty mountains. (Claudian, l. c. 513—515.) From its extent and configuration, Sardinia could not possess any very considerable rivers. The largest were, the Tuverus (Ogios, Ptol.; Th. Zon.). The wide valley rising among the mountains in the NE. of the island, and flows into the Gulf of Oristano on the W. coast; the Sacer Fluvius (τερσός ποταμός, Ptol.), which falls into the same gulf near Neapolis, now called the R. di Pabolillum; the Temus or Termus (Θέμως, Ptol.), still called the Temo, and falling into the sea near Bosa, to the N. of the Thyrus; the Caedricus (Καίδρικος, Ptol.), on the E. coast of the island, now the Flume di Orroes (Σαρός, Ptol.), now the Flamendo, in the SE. quarter of the island. No ancient name has been preserved for the Rio Samassi, which flows into the Gulf of Cagliari, near the city of that name, though it is a more considerable stream than several of those named.

Ptolemy has preserved to us (iii. 3) the names of several of the more important promontories and headlands of the coast of Sardinia; and from its nature and configuration, most of these can be identified with little difficulty. The northern point of the island, opposite to Corsica, was the promontory of Errebatum (Ερρεβάτων ἄκρως, Ptol.), now called the Punta del Falcone, or Lungo Sardo. The NW. point, forming the western boundary of an extensive bay, now called the Golfo del Alcimara, is the Goritunum Prom. (Γοριτιδανον ἄκρως) of Ptolemy: immediately opposite to it lies the Isola dell' Alcimara, the Hercules Insula (Ηρακλέους νήσος) of Ptolemy and Pliny, and one of the most considerable of the smaller islands which surround Sardinia. This headland forms the N. extremity of the ridge of mountains called Monti della Nura; the S. end of the same range forms a bold headland, now called Capo della Caccia, immediately adjoining which is a deep land-locked bay, the Nymphæus Portus of Ptolemy (Νυμφαίως λιμνός), now called Porto Conte. The Hermaeum Prom. (Ερμαιωμαν άκρως) of the same author is evidently the Capo di Manna, about 12 miles N. of the river Tenno; the Corocodes Portus (Κοροκόδαι άκρως), which he places between that river and Tharros, is probably the small bay that is found S. of Capo Mannu. The Prom. Crassum (Παξία άκρως) must be Capo Alano, from whence the coast trends to the S. as far as the Capo di Teulada, the extreme S. point of the whole island, which must be the one called Cher-
SARDINIA.

about 18 miles from its mouth; Usellis, about 15 miles to the S. of the preceding; Valentina, to the SE. of Usellis; and Gerulius Vetus and Nova, both of which were situated between the rivers Temo and Torres.

Of the minor towns mentioned by Ptolemy or the Itineraries, the following may be noticed: 1. On the W. coast, were Titium (Ptol.), which must have been near the Capo Negretto; Osaca or Osaca (Ili.) at Flumentorgia, a few miles W. of Neapolis; and Othoca (Itin. Ant.) apparently the modern Oristano, near the mouth of the river Thuras. 2. On the S. coast, Pupulum (Ptol.) may probably be placed at Massacara, a few miles N. of Suredi; Bithia (Ptol.) at s. Iedora di Teulada; and Tegula (Itin. Ant.) at the Capo di Teulada, the extreme S. point of the island. 3. On the E. coast, Feronia (Ptol.) must have been at or near Posada, 25 miles S. of Olbia, and is apparently the same place called in the Itineraries Portus Lugudonis. The other small places mentioned in the same Itinerary were probably mere stations or villages. 4. On the N. coast, besides the two considerable towns of Tibula and Turris Libysonis, Ptolemy places two towns, which he calls Julioda (probably the same with the Vinola of the Itinerary, still called Torre Vignola) and Plubium, which may probably be fixed at Castel Sardo. The small towns of the interior are for the most part very uncertain, the positions given by Ptolemy, as well as the distances in the Itineraries, varying so much as to afford us in reality but little assistance; and of the names given by Ptolemy, Erycinum, Heraenum, Macopsia, Saralips or Sarula, and Lessa, noted e is mentioned in the Itineraries. The Aegan Lesitanae (Ptol.) are probably the Acqui di Beneventi in the upper valley of the Thyrus; the Aega Hypitanae are those of Fordomianus; and the Aega Neapolitanae the Bagni di Sardara. There remain considerable ruins of a Roman town at a place called Castro on the road from Terranova (Olbia) to Oristano. These are supposed to mark the site of a place called in the Itineraries Lugudone, probably a corruption of Luguado or Lugudonius. In the S.W., portion of the island, also, between Neapolis and Sulci, are considerable Roman remains at a place called Antas, probably the Metalla of the Itineraries. (Itin. Ant. p. 84.)

The Itineraries give several lines of road through the island of Sardina. (Itin. Ant. pp. 78—85.) One of these proceeded from Tibula, at the N. extremity of the island, which was the usual place of landing from Corsica, along the whole length of the E. coast to Caralis. It did not accurately follow the line of coast, though it seldom departed far from it, but struck somewhat inland from Tibula to Olbia, and from thence with some exceptions followed the line of coast. A more cirenition, but probably more frequented, route was that which led from Tibula to Turris Libysonis, and thence along the W. coast of the island by Baia, Cornus, and Tharros to Othoca (Oristano), from which on branch led direct across the island through the plain of the Campidano to Caralis, while another followed nearly the line of the coast by Neapolis to Sulci, and from thence round the southern extremity of the island by Tegula and Nora to Caralis. Besides these, two other cross lines of road through the interior are given: the one from Olbia to Caralis direct, through the mountain country of the interior, and the other crossing the same wild tract from Olbia direct to Othoca. Very few of the stations on these lines of road can be identified, and the names themselves are otherwise wholly unknown. The reader will find them fully discussed and examined by De la Mara Mare (Voy. en Sardegnie, vol. ii. pp. 418—457), who has thrown much light on this Subject; but the results must ever remain in many cases uncertain.

We learn from the geographers that even under the Roman Empire several of the wild tribes in the interior of the island retained their distinctive apppellations; but these are very variously given, and were probably subject to much fluctuation. Thus Strabo gives the names of four mountain tribes, whom he calls Parati, Sessinati, Balari and Acouites (Strab. v. p. 225), all of which, with the exception of the Balari, are otherwise entirely unknown. Pliny mentions only three, the Illenes, Balari, and Coris, which he calls "celeberrim in ea populorum" (Plin. iii. 12. s. 17), and which are in fact all three well known names. The existence of the Illenes under the Empire is also distinctly attested by Pansamias (x. 17. § 7); yet neither their name nor that of the Balari is noticed by Ptolemy, though he gives those of no less than eighteen tribes as existing in his time. These are, beginning at the N. point of the island and proceeding from N. to S.: "the Tibulitii and Cori, the Coracenses; then the Carenes and Cunusitanae; next to these the Salci tani and Luquidones; then the Assarones; after them the Corones (called also Archilenes); then the Hacenses; next to whom follow the Celsius tani and Corpicenses; after them the Scapitani and Siculenses; next to these the Neapolitani and Valenti, and furthest to the S. the Salcitani and Noritani." (Ptol. iii. 3. § 15.) Of these the Corsi are otherwise well known [see above, pp. 908, 909]; the four last names, as well as the Tibulitani and Corones, are evidently derived from the names of towns, and are probably the inhabitants of districts municipally dependent upon them, rather than tribes in the proper sense of the term. The other names are wholly unknown. After the fall of the Western Empire we find for the first time the name of Barbaricini (Baparactori, Procop. B. V. ii. 13) applied to the mountaineers of the interior. This appellation, which appears to be merely a corruption of "Barbari victi," was retained throughout the middle ages, and is still preserved in the name of Barbaria, given to the wild mountain tract which extends from the neighbourhood of Cagliari towards the sources of the Tirso. These mountaineers were not converted to Christianity till the close of the sixth century, and even at the present day retain many curious trus of paganism in their customs and superstitions usages. (De la Mara Mare, vol. i. p. 30.)

IV. NATURAL PRODUCTIONS, ETC.

The chief produce of Sardina in ancient times was, as already mentioned, its corn, which it produced in large quantities for exportation even before the period of the Roman conquest. Its mountain tracts were also well adapted for pasture, and the native tribes subsisted mainly on the produce of their flocks and herds (Plin. v. 15), while they clothed themselves with the skins, whence they were sometimes called "pelliti Sardi." The island also possessed mines both of silver and iron, of which the first are said to have been considerable. (Solin. 4. § 4.) They were undoubtedly worked by the Romans, as we learn from existing traces, and from the name of Metalla given to a place in the S.W. of the island, between Neapolis and Sulci. (Itin.
SARDINIA.

Ant. p. 54; De la Marmora, vol. ii. p. 453.) It had also extensive fisheries, especially of tunny; and of the murex, or shell-fish which produced the purple dye (Suid. s. v.). But its most peculiar natural productions were the wild sheep, or moufflon, called by the Greeks mouvmls (Oeis Ammon Linn.), which is still found in large herds in the more unremunerated parts of the island (Strab. v. p. 225; Pans. x. 17. § 12; Adrian, H. A. xvi. 34), and a herb, called Herba Sardoa, the bitterness of which was said to produce a kind of convulsive grin on the countenances of those that tasted it, which was generally considered as the origin of the phrase, a Sardonic smile (Mans Sardonicus; Ζαρδονικός γιαλας, Pans. x. vol. 1. p. 173, 177); but it contained a venemous spider, apparently a kind of tarantula, called Solifiga, which was peculiar to the island. (Solin. l. c.)

The native population of Sardinia seem to have enjoyed a very evil reputation among the Romans. The haras expressions of Cicero (pro Scorn. 9. §§ 15, 42, &c.) must, indeed, he received with considerable allowance, as it was his object in those passages to depreciate the value of their testimony; but the proverbial expression of "Sardi venales" was generally understood as applying to the worthlessness of the individuals, as well as to the cheapness and abundance of slaves from that country. ("Habes Sar- donis venales, alium aliquo requinier," Cic. ad Fam. vi. 24.) The praetors, even in the days of Augustus, seem to have been continually making inroads into the mountain territories for the purpose of carrying off slaves (Strab. v. p. 253); but as these mountainiers according to Strabo and Diodorus, lived in caves and holes in the ground, and were unacquainted with agriculture (Strab. l. c.; Diod. iv. 30), it is no wonder that they did not make useful slaves.

Of the antiquities found in Sardinia, by far the most remarkable are the singular structures called by the inhabitants Nuraghe or Naraggis, which are almost entirely peculiar to the island. They are a kind of towers, in the form of a truncated cone strongly built of massive stones, arranged in layers, but not of such massive blocks, or fitted with such skill and care, as those of the Cyclopean structures of Greece or Italy. The interior is occupied with one or more vaulted chambers, the upper cone (where there are two, one over the other, as is frequently the case) being approached by a winding stair or ramp, constructed in the thickness of the walls. In some cases there is a more extensive basement, or solid substruction, containing several lateral chambers, all constructed in the same manner, with radially pointed vaultings, showing no knowledge of the principle of the arch. The number of these singular structures scattered over the island is prodigious; above 1200 have been noticed and recorded, and in many cases as many as twenty or thirty are found in the same neighbourhood: they are naturally found in very different degrees of preservation, and many varieties of arrangement and construction are observed among them; but their purpose and destination are still unknown. Nor can we determine to what people they are to be ascribed. They are certainly more ancient than either the Roman or Carthaginian dominion in the island, and are evidently the structures alluded to by the author of the treatise de Mirabolibus, which he describes as Σαλοι, or vaulted chambers, the construction of which he ascribes to Iolani. (Pseud. Arist. de Mirob. 104.) Diodorus also speaks of great works constructed by Daedalus for Ioiaus, which must evidently refer to the same class of monuments. (Diod. iv. 30.) Both traditions are valuable at least as evidence of their reputed high antiquity; but whether they are to be ascribed to the Phoenicians or to the native inhabitants of the island, is a point on which it is very difficult to form an opinion. They are fully de scribed by De la Marmora in his Voyage en Sardeigne, vol. ii. (from which work the annexed figure is taken), and more briefly by Capt. Smyth (Sardinia, pp. 4—7) and Valéry (Voy. en Sardaigne).

The work of De la Marmora, above cited, contains a most complete and accurate account of all the antiquities of Sardinia, as well as the natural history, physical geography, and present state of the island. Its authority has been generally followed throughout the preceding article, in the determination of ancient names and localities. The works of Captain Smyth (Present State of Sardinlia, 8vo. London, 1828), Valéry (Voyage en Corse et en Sardaigne, 2 vols. 8vo. Paris, 1836), and Tyndale (Island of Sardinia, 3 vols. 8vo. London, 1849), though of much interest, are of inferior value. [E. H. B.]
SARDONES. [SARDONES.]
SARDONIX (Σαρδόνιξ), a mountain or chain of mountains in Hindostan, noticed by Ptolemy (vii. 1. §§ 20 and 65). It would seem to have been part of Sardinia, more known by the name of the Vindhyas Mountains. Lassen, in his map, has identified them with the Vindhyapalli Mountains on the right bank of the Narmada (Nerbudda), and Forbiger has supposed them to be the Shutpara Mountains, a continuation of the same chain.

[S.]
SARDONUM or SARDONIUM MARE (τὸ Σαρδονὺ τῆς Πλαταγος, Strab., Pol., but τὸ Σαρβονυντ τῆς Πλαταγος, Herod. i. 160), was the name given by the ancients to the part of the Mediterranean sea adjoining the island of Sardinia on the W. and S. Like all similar appellations it was used with considerable vagueness and laxity; there being no natural limit to separate it from the other parts of the Mediterranean. Eratosthenes seems to have applied the name to the whole of the sea westward of Sardinia to the coast of Spain (ap. Plin. iii. 5. 10), so as to include the whole of what was termed by other authors the MARE HISPANICUM or BALEARIUM; but this extension does not seem to have been adopted. It was on the other hand clearly distinguished from the Tyrrhenian sea, which lay to the E. of the two great islands of Sardinia and Corsica, between them and Italy, and from the Libyan sea (Mare Libyaem, from which it was separated by the kind of strait formed by the Lilybaean promontory of Sicily, and the opposite point (Cape Bon) on the coast of Africa. (Pol. i. 42; Strab. ii. pp. 105, 122; Agathem. ii. 14; Dionys. Per. 82.) Ptolemy, however, gives the name of the Libyan sea to that immediately to the S. of Sardinia, restricting that of Sardonum Mare to the W., which is certainly opposed to the usage of the other geographers. (Pol. iii. 3. § 1.) Strabo speaks of the Sardinian sea as the deepest part of the Mediterranean; its greatest depth was said by Posidonius to be not less than 1000 fathoms. (Strab. ii. pp. 50, 54.) It is in fact quite uninteresting, and the above estimate is obviously a mere guess.

[S.]
SAREPTA (Σαρεφτα), the "Sarepta," a city of the Old Testament (1 Kings xxiii. 9; 10; comp. St. Luke, iv. 26), apparently at the most extreme north (obad. 20), celebrated in the history of Elijah the prophet. It is said by Josephus to be not far from Tyre and Sidon, lying between the two. (Ant. viii. 13. § 2.) Pliny places it between Tyre and Ornithon, on the road to Sidon (v. 19. § 17). In the Itinerarium Hierosolymitanum the name does not occur, but it is described by a periphrasis and placed viii. m. n. from Sidon (p. 583) of The Arabian geographer Sherif Ibn Idris, quoted by Reland, places Zaraphend 20 miles from Tyre, 10 from Sidon. (Palaeotina, p. 985.) It was formerly celebrated for its wine, and is supposed to be intended by Pliny under the name of Tyrian, which he commends with that of Tripolis and Berytus (xiv. 7). Several of the later Latin poets have also sung the praises of the "dulce Bacchi muneris, quae Sarepta ferax, quae Gaza creavit," the quantity of the first syllable being common (ap. Reland, p. 986). The place was noticed by modern travellers. Dr. Robinson found "a large village bearing the name of Sarapend," five hours north of Tyre, three south of Sidon, near the sea-shore, where is a saint's tomb called El-Khadr (= St. George), which he imagined to mark the site of a Christian chapel mentioned by travellers in the middle ages. (Bibl. Res. vol. iii. pp. 412, 413.)

[S.]
SAROPHANTHA. [SAROPHANTHA.]
SAROARUSENE (Σαροαραυσήνη), a district of Cappadocia, on the east of Commagene and near the frontiers of Pontus, containing, according to Ptolemy (v. 6. § 13), the towns of Phraea, Sardes, Gaeanra, Sabalassus, Ariarathus, and Maroaga. (Strab. xii. pp. 534, 537; Plin. vi. 3.) [L.S.]
SARGETIA (Σαργετία; Dion Cass. xivii. 14; Sargeteria, Tacta. Chil. ii. 61; Sarpetio, Tact. Chil. vii. 59), a river of Dacia, upon which stood the royal palace of Decebalus. This river must be identified with the Stred or Onreg, a tributary of the Maroseh, since we know that Sarmingethesia was the residence of Decebalus. (Sarmizegethusia.) (Ukert, vol. iii. pt. ii. p. 603.)

[S.]
SARPIPHI MONTES (τὰ Σαρπίφι Μόντες), a chain of mountains, extending, according to Ptolemy, between Margiana and Ariana, and the watershed of several small streams. They are probably those now called the Hauran. Mament (v. 2. p. 63), has supposed them the same as the Σαρπεφίος (see Dion Cass. xivii. 1099.), but this is contrary to all probability.

[S.]
SARMATIA (L. Ant. p. 203) or SARMATIA (Σαρματία, Ptol. v. 4. § 8), a town in Galatia, on the road from Ancyra to Tavia or Tavium, is supposed by some to be the modern Kurafyekech. [L.S.]
SARMATIA (Σαρματία; Eth. Σαρματιά), the name of a country in Europe and Asia. For the earlier and Greek forms of the word see SARMATICAE.

[S.]
That S-rm is the same root as S-rh, so that Sarmata and Sarmach, Sarmach, Sth, etc., may be, not only the name for the same populations, but also the same name, has been surmised, and that upon not unreasonablae grounds. The name seems to have first reached the Greeks through the Scythians of the lower Dnieper and Don, who applied it to a non-Scythic population. Whether this non-Scythic population used it themselves, and whether it was limited to them by the Scythians, is uncertain. It was a name, too, which the Germand used ; also one used by some of the Parionian populations. It was, probably, the one which the Sarmatians themselves used partially, their neighbours generally, just like Galli, Graeci, and many others.

More important than the origin of the name are the questions concerning (1) the area, (2) the population to which it applied. Our chief authority on this point is Ptolemy; Strabo's notices are incidental and fragmentary.

The area given by Strabo to the Galatian and German, extends as far as the Borysthenes, or even the Don, the Tyrrigetae being the most western of the non-German countries of the south-east, and the Bastarnae being doubtfully,—though, perhaps, German (vii. p. 289). Of a few particular nations, such as the Jazgyges, Hanaxobii, and Roxolani, a brief notice is given, without, however, any special statement as to their Sarmatian or non-Sarmatian affinities. In Asia, the country of the Sarmatian is called the plains of the Sarmatiae, as opposed to the mountains of Caucasus. The immediate size given to Germany by Strabo well nigh obliterates, not only Sarmatia, but Scythia in Europe as well.

Pliny's notices are as incidental as Strabo's, and nearly as brief,—the development of Germany east-
SARMATIA.

wards being also inordinate. He carries it as far as the country of the Bastarnae.
The Germany of Tacitus is bounded on the east by the Sarmatae and Daci. The Sarmatae here are the population of a comparatively small area between the Danube and Thracia, and on the boundaries of Hungary, Moldavia, and Galicia. But they are something more. They are the type of a large class widely spread both eastward and northward; a class of equal value with that of the Germani. This, obviously, subtracts something from the vast extent of the Germania Strabo (which nearly meant Northern Europe); but not enough. The position of the Bastarnae, Pescini, Venedi, and Finni, is still an open question. [SCYTHIA.]

This prepares us for something more systematic, and it is in Ptolemy that we find it. The SARMATAE of Ptolemy fall into (1) the EUROPEAN, and (2) the ASIATIC.

I. SARMATIA EUROPAEAE.

The western boundary is the Vistula; the northern the Baltic, as far as the Venedic gulf and a tract of unknown country; the southern, the country of the Jazyges Metasatae and Dacia; the eastern, the isthmus of the Crimea, the Don, and the parts of Poland and Galicia, Lithuanum, Esthonia, and Western Russia. It includes the Finni (probably a part only), and the Alani, who are Scythians ex nomine (Алакиево). It includes the Bastarnae, the Pescini, and more especially the Venedi. It also includes the simple Jazyges, as opposed to the Jazyges Metasatae, who form a small section by themselves. All these, with the exception of the Finni, are especially stated to be the great nations of Sarmatia (to which are added the Rosolani and Hamazobi), as opposed to the smaller ones.

Of the greater nations of Sarmatia Europaeae, the Pescini and Bastarnae of Ptolemy are placed farther north than the Pescini and Bastarnae of his predecessors. By later writers they are rarely mentioned. [VENEDI.] Neither are the Jazyges, who are the Jazyges Sarmatae of Strabo. These, along with the Rosolani, lay along the whole side (Δικτων και Χωρίων) of the Maceots, say in Khakassia. They are mentioned only in the first. Ha-

Jazyges, and the eastern as the Alyari. Hamazobi is merely a descriptive term. It probably was applied to some Scythian population. Ptolemy writes Hamazobi aut Aorsi, a fact of which further notice is taken below. The Alani, notwithstanding an Άλασιον οἶος, and other complications, can scarcely be other than the Alani of Cau-
casus; the Αλεκτρός Άλασον of the Periplus (L. 302) are undoubtedly Scythians. Nestor, indeed, has a population otherwise unknown, called Uleesi, the cui being non-radical, which is placed on the Dunister. It does not, however, remove the difficulty.

The Pescini were best known as the occupants of one of the islands at the mouth of the Danube. They may also, however, have extended far into Bessarabia. So manifold are the changes that a word with Sarmatian or Scythian inflexion can undergo, that it is not improbable that Pescini may be the modern words Budzick and Besni, Behnajke, Peteknajke, Pecina-vilir (in Norse), Besseni and Besni, (Zeuss, Die Deutschen, f.e. s. v. Pecinaci and Camen). The Pataians were Scythians, who cannot be shown to be of recent origin in Europe. They may, then, have been the actual descendants of the Pescini; though this is not necessary, for they may have been a foreign people who, on reaching the country of the Pescini, took the name; in such a case being Pesci-ini in the way that an Englishman is a Briton, i.e. not at all. The difference between the Pescini and Bastarnae was nominal. Perhaps the latter were Moldavian rather than Bes-samian. The Atmoni and Sasaones of Strabo were Bastarnae.

The geography of the minor nations is more obscure, the arrangement of Ptolemy being somewhat artificial. He traces them in two parallel columns, from north to south, beginning, in both cases with the country of the Venedi, and taking the eastern bank of the Vistula first. The first name on this list is that of the Gythones, south of the Venedi. It is not to be understood by this that the Venedi lay between the Gythones and the Baltic, so as to make the latter an inland people, but simply that the Venedi of the parts about Medelay north of the Gythones of the parts about Elbing. Neither can this people be separated from the Gutenes and Acstii, i.e. the populations of the amber country, or East Russia.

The Finni succeed (Finnes etra Finno). It is not likely that these Finns (if Finns of Finland) can have lived due south of East Russia; though not impossible. They were, probably, on the east.

The Balanes (Slovenes), with the Phrugundiones to the south, and the Avar, at the head of the Vistula, bring us to the Dacian frontier. The details here are all conjectural. Zeus has identified the Balanes with the Borani of Zosimus, who, along with the Goths, the Carpi, and the Urugundi, attacked the empire under Gallus. In Nestor a population called Suli-sci occupies a locality between the Dunister and Dunister; but this is too far east. In Livonia, Henry the Lett gives prominence to the nation of the Solenes, a likelier identification.

For Balanes (supposing this to be the truer reading) the word Polynae gives us the most plausible significance. Nestor uses it frequently. It is Pole, primarily meaning occupantes of plains. Wherever, then, there were plains they might be Polynae; and Nestor actually mentions two divisions of them; the Lekbra, or Poles of the Vistula, and the Polynae of the Dunister.

The Phrugundiones of Ptolemy have always been a cura geographica. Name for name, they are so like Burgundiones as to have suggested the idea of a migration from Poland to Burgundy. Then there are the Urugundi and Burgundi of the Byzantine writers (see Zeus, s. s. e. Borani, Ursu-
gundi), with whom the Poltemaean population is, probably, identical. The writer who is unwilling to assume migrations unnecessarily will ask whether the several Burgundy may not be explained on the principle suggested by the word Polynae, i.e. whether the word may not be the name of more than one locality of the same physical conditions. Probably, this is the case. In the German, and also in the Slavonic languages, the word Fairgani (Fergund, Fergunt, Virgund, Virgundus, and Virungura, means hill-range, forest, elevated tract).
Of these there might be any amount,—their occurrence in different and distant parts by no means implying migrations.

The Avarians may be placed in Gallicia.

South of them come the Onomrones, and the Amanto-Phracti. Are these the Amartes of Caesar? The Amartes of Caesar were on the eastern confines of the Herceyan forest (Bell. Gall. vi. 24, 25), contiguous with the Ducii, a fact which, taken along with the physical conditions of the country, gives us Western Gallicia, or Anatolian Silesia, for the Amarto-Phracti. Then come the Burgiones, then the Arianos (compare with Arosi), then the Saboki, then the Peucines, and then the Besii, along the Cappadocia Mountains. Gallicia, with parts of Volynia, and Podolia give ample room for these obscure, and otherwise unnamed, populations.

The populations of the second column lie to the east of those just enumerated, beginning again with the Venedi (άρρη ους Ομερίδεσ ταῖς), Vihus, Gredno, with parts of Mina, Volynia, Podolia, and Kiev give us an area over which we have six names to distribute. Its southern boundary are the Podolian Uralians (Batkovians).

(1.) The Galatians.—These are carried too far east, i.e. if we are right in identifying them with the Galatians of the Galateia and Golen of the middle ages, who are East Prussians on the Spiridov Lake.

(2.) The Sudeni.—These, again, seem to be the Sudo-vitae (the termination is non-radical in several Prussian names) contiguous with the Galatians, but to the north-east of them. Their district is called Sudovi.

(3.) The Stavni.—Concerning these, we have the startling statement, that they extend as far as the Alani (μήκι τῶν Ἀλανῶν). Is not Αλανος an erroneous name developed out of some form of Галак-σία? The extension of either the Stavni to Caucasus, or of the Alani to Prussia, is out of the question.

(4.) The Ilygiones. —Zeus has allowed himself (ένεκε λαους) to hold that the true form of this word is Ιπείγιας, and to identify this with a name that mountains in so many forms as to make almost any conjecture excusable, — Ιπείγια, Ιπείγια, Ιπείγια, Ιπείγια, Γετεινία, Γετεινία, Γετεινία, Γετεινία, Γετεινία, Γετεινία, all actual forms. The area of the population, which was one of the most powerful branches of the Lithuanian stock in the 13th century, was part of Gredno, Minsk, and Volynia, a locality that certainly suits the Ilygiones.

(5.) The Costoboci in Podolia.

(6.) The Transmontani.— This is a name from the Latin of the Daciants,—perhaps, however, a translation of the common Slavonic Zu-волокасье, i. e. over-the-watered. It was applied, perhaps, to the population on the northern frontier of Dacia in general.

The third list, beginning also with the Venedi, follows the line of the Baltic from Vihus and Courland towards Finland, and then strikes inland, eastwards and southwards. Immediately on the Venedic gulf lie the:

(1) Veltae (Ολβετα). Word for word, this is the Vyta and Wilzi of the middle ages; a form which appears as early as Alfred. It was German, i. e. applied by the Franks to certain Slavonic population. It was also native, its plural being Wladi. Few

nations stand out more prominently than the Wilzi of the Carlingian period. They lie, however, to the west of Prussia, and indeed of Pomorania, from which the Oder divided them. In short, they were in Mecklenburg, rather than in Livonia or Esthonia, like the Veltae of Tacitus. Word for word, however, the names are the same. The synonym for these western Wilte or Wladi was Liut-ici (Lueticz). This we know from special evidence. A probable synonym for the Veltae of Tacitus was also some form of Lit-. This we infer from their locality being part of the present Lithuanian and Lett-land. Add to this that one writer at least (near 825) places Wiizi in the country of Polesy's Veltai. The exact explanation of this double appearance of a pair of names is unknown. It is safe, however, to place the Veltai in Lett-land, i. e. in the southern parts of Livonia, and probably in parts of Lithuanian Proper and Courland. Constantin Porphyrogenous mentions them as Veltini, North of the Veltai —

(2.) The Osii (Oesi), probably in the isle of Oesel. It should be added, however, the root ves- appears frequently in the geography of Prussia. Osillae, Veslum, and for the occupants of Oesel, appears early in mediaeval history.

(3.) The Carbones, north of the Oesi. This is a name of many explanations. It may be the Finn word for forest = Carbo. It may he the root Core-point of the Oesel (-or K-r), which appears in a great number of Finn words,—Corell (Karelian), Car—(in Courland), Kurs—in Kurs-sc, &c. The forms Curones and Cournia (Courland) approach it, but the locality is south instead of north. It more probably = Kar-esii. It almost certainly shows that we have passed from the country of the Slavonians and Lithuanians to that of the Lithuanians, Jorgians, and Finlander.

Then, to the east,—

(4.) The Kar-eotae. —Here the Kar— is the common Finn root as before. Any part of the government of Novgorod or Olometz might have supplied the name, the present Finns of both belonging to the Karelian division of the name (the -el being non-radical). Then:

(5.) The Karesi, and the Karianes (Adam). The Salii, south of the Carpathians, the Azatrysi, then the Aorsi and Pagyrtes, south of whom the Savari, and Borusci as far as the Rhipecan mountains. Then the Akibi and Naksi, south of whom the Vihobes and Idre, and south of the Vihobes, as far as the Alani, the Sturmi. Between the Alani and Hamoboki the Karyones and Sargali. At the bend of the Tanais the Ophobes and Tanatai. There are few points in this list which are fixed. The bend of the Tanais (= Dom) would place the Ophobes in Exeteriusiae. The Borusci, if they reached the Rhipecan mountains, and if these were the Uralians rather than the Valdai range, must have extended far beyond both European and Asiatic Sarmatia. The Savari bear a name very like one in Nestor — the Sjeverov, on the Desna, Sem, and Sala,—a word that may merely mean northern. It is a name that reappears in Cenasias — Sabeiri.

The Aorsi may be the Erosi (the d being infixed) a branch of the Morischans, occupant at the present time of a tract on the Oka. The Po-grityae may have been the tribes on (po = on) the Gerhms, such compounds being common in Slavonic, e. g. Po-labi (on the Elbe), Po-moranien (on the sea), &c. The whole geography, however, is indefinite and uncertain.
SARMATIA.

For Agathrynus, see HUNNI. The Sarmatii are mentioned in Ptolemy.

South of the Tanais came the Osuli (? Sulicii of Nestor), reaching as far as the Roxolani, i.e. occupying parts of Cherson and Euxeneis.

Between the Roxolani and the Hamazobii the Rhakalani and Exobugitae. The statement of Pliny that the Hamazobii were Aorsi, combined with similarity of name between Aorsi and Erasud, will not help us here. The Erasud are in the governments of Pezenta and Tambov; the direction of the Hamazobii is more westward. Rhakalani seems but another form of Roxolani. In Exo-bug-ite the middle syllable may give us the root Bug, the modern name of the Hypanis. It has been surmised that this is the case with Sa-bok-ae, and Costa-boc-i. The locality would suit.

Between the Pencini and Basterma (this difference between two nations otherwise identified creates a complication) lie the Carpmii, above whom the Gerviti and Buditui.

The Carpi must have been near or on the Carpathian Mountains. They appear as a substantive nation in the later history of Rome, in alliance with the Sarmates, &c. of the Dacian frontiers. We have a Victoria Carpica Arpi; Carpmii and Kaepodakai (which Zeuss renders Carpathian Dacians) are several forms of this name [CARPI]. They, along with the Costoboci, Armadoci, and Astingi, appear as the most important frontagers of the Northern Danube.

Between the Bastermae and the Carpathian the Chani, and under their own mountains (єпє тд Ієя єрп) the Amadoci and Novari, and along the lake (marsh) of Byke the Toreckidade, and along the Achilaian Cours (Ахилаїев пролоть) the Tanro-scythe, and south of the Bastarnae in the direction of Dacia the Tagri, and south of them the Tyrangetae.

For Tauroscythe and Tyrangetae, see s. ev. and SCYTHIA.

Tagri looks like a modified form of Zagora (trav-motamine), a common Slavonic geographical name, applicable to many localities.

The Amadoci occupied Ієя єрп, or the Mons Amaducus of Ptolemy. There was also a Αιων Αμαδος. This juxta-position of a mountain and lake (pool, or swamp, or fen) should fix their locality more clearly than it does. Their history connects them with the Costoboci. (Zeuss, s. ev. Costo-boci, Amadoci.) The physical conditions, however, come out less clearly than our present topographical knowledge of Podolia, Miszk, &c. explains.

For the Navari see NEUR.

The name Choni is important. [See HUNNI.]

In Terek-kad-ae and Exo-bug-ite we have two elements of an apparent compound that frequently occurs in Scytho-Sarmatian geography—Тын-гет-ае, &c., Costa-bok-i, Sa-boc-i. The geography is quite compatible in the presence of these elements.

Euxene.—For the Via Gymnias eastwards, the Chromy, the Rhahan, the Tanarac, the Chersones,—the order of the modern names being the Pregel, Menel, Duna, Am, and Nera. For the drainage of the Black Sea, see SCYTHIA.

MOUNTAINS.—Peace, the Montes Amadoci, the Moos Budinars, the Mons Alabinus, the Moos Carpithus, the Venedie mountains, the Rhipaean mountains. None of these are definitely identified. It is difficult to say how Ptolemy named the most important range of so flat a tract as Russia, viz, the Valdai Mountains. On the other hand, the names of his text imply more mountains than really exist. All his mountains were, probably, spurs of the Carpathians, just as in Sarmatia Asiatica they were of Caucasus.

TOWNS.—See SCYTHIA.

II. SARMATIA ASIATICA.

The boundaries are—the Tanais, from its sources to its mouth, European Sarmatia from the sources of the Tanais northwards, the Maeotis and Caucasean Bosporus, the Euxine as far as the river Conus, the range of Caucasus, the Caspian as far as the river Soana, the Volga as far as its bend (Scythia being on the east of that river),—and on the north an Unknown Land. Without knowing the point at which this terra incognita begins, it is impossible to give the northern limits of Sarmatia Asiatica. It is included, however, in the governments of Caucasus, Circassia, Astrakhan, Don Konka, Saratov, Simbirsk, Kazan, VIATIN, KOSTROMA, VIADIMIR (?), Nizhni Novgorod, Rostov (?), Tambov, and Pezenta; all the governments, in short, on the water system of the Volga; a view which makes the watershed between the rivers that empty themselves into the White Sea and the rivers that fall into the Caspian and Euxine a convenient provisional boundary.

For the obscure geography of Asiatic Sarmatia, the bend of the Tanais is our best starting point. To the north of it dwelt the Perierbibi, a great nation; to the south the Iaxamatae, the former in Don Konka, Voronezh, and Tambov, Saratov, the latter in Astrakhan. North of the Perierbibi come the Assei, the Sarodeni, the Zacatae, the Hippophagi Sarmatiae, the Modocae, the Royal Sarmatiae, the Hyperborean Sarmatiae, the Unknown Land. In Kazan and Simbirsk we may place the Cuanicides, and on the east of the Volga the Phitieophagi and Materi. The Νυεικα χαρα must be at the mouth of the Volga. If so, the order in which the names have been given is from north to south, and the Phitieophagi are in Eastern Kazan, the Materi in Saratov.

The remaining populations are all (or nearly all) in the governments of Caucasus and Circassia, in the northern spurs of the Caucasian range. They are the Sireneci, the Passeti, the Thymocae, the Turamnae, the Asturianci, the Arichi, the Zacothi, the Comapoci, the Merti, the Agoratae, the Melanchelae, the Xapothami, the Scymatiae, the Amazes, the Sunami, the Sacani, the Orinaci, the Vali, the Servi, the Tisci, the Dibrusi, the Vodae, the Olondae, the Isomdai, the Gerrbi. The Achaei, Kerketi, Hiesiochi, Suannooolchi, and Sunaraci are truly Caucasian, and belong to the geography of the mountain range rather than the Sarmatian plains and steppes—for such they are in physical geography, and such was the view of Strabo, so far as he noticed Sarmatia at all.

It is difficult to determine the source of Ptolemy's information, difficult to say in what language we are to seek for the meaning of his names. The real populations, as they actually existed, were not very different from those of the Herodotean Scythia; yet the Herodotean names are wanting. These were, probably, Scythian,—the northern populations to which they applied being Ugran. Are the names native? For the parts one north of Caucasus they must be so; indeed it is possible that the greater number of them may be due to a Caucasian source. At the present time, when we are fairly supplied with

3 N 3
data both us to the names by which the populations of the parts in question designate themselves, as well as those by which they are destined by their neighbours, there are no satisfactory identifications at all. There are some that we may arrive at by a certain amount of assumption; but it is doubtful whether this is legitimate. In the names, for instance, beginning with sa- (Sa-boci, &c.) we may see the Slavonic for trans; in those with po- the Slavonic sud — both of which are common in the geographical terminology of the Russians, &c. But these are uncertain as are the generality of the other coincidences.

In Siberia, for instance, a Samoyed tribe is named Motor-si; name for name, this may be Materi; however, it denotes the same population is another question.

Are the Sarmatiae of Ptolemy natural divisions? Subject to an hypothesis, which will be just stated in the present article, the populations on each side of the Lower Vistula, i.e. of West and East Prussia, were the same, is certain; it is certain, at least, that they were so at the beginning of the historical period, and all inference leads us to hold that they were so before. The Vistula, however, like the Rhine, was a good natural boundary.

The Jazyges Metanastae were most probably Sarmatian also. Pliny calls them Jazyges Sarmatiae (iv. 25); the name Metanastae being generally interpreted removed. It is, however, quite as likely to be some native adjective misunderstood, and adapted to the Greek language.

The other Jazyges (i.e. of the Maedica) suggested the doctrine of a migration. Yet, if the current interpretation be right, there might be any amount of Jazyges in any part of Sarmatia. It is the Slavonic for language, and, by extension, for the people who speak a language: "a po Otje rjez, zle wiezet' w Volgi, jazyk swoj Muroma, i Czeremiswi swoj jazyk, o Morwia swoj jazyk."

On the Oka river, where it falls into the Volga, a particular people, the Muroma, and the Tseremenis, a peculiar people, and the Morwins, a peculiar people. "(Zemue, s. v. Otafjynur.) Hence it has at least a Slavonic gloss. On the other hand, it has a meaning in the Magyar language, where Jassyg = bosman, a fact which has induced many scholars to believe that there were Magyars in Hungary before the great Magyar invasion, indeed before the Hun. Be this as it may, the district of the Jazyges metalastae is called the Jassy district at the present moment.

More than one of the Dacian populations were Sarmatian,—the difference between Dacia, the name of the Roman Province, and Sarmatia, the country of an independent and hostile population, being merely political. Indeed, if we look to the distribution of the Sarmatiae, their south-eastern limit must have the parts about Torni. [See SARMATIANS.] Here, however, they were intrusive.

ETHNOLOGY. — The doctrine upon this point is merely stated in the present notice. It is developed in the article on SCYTIA. It is to the effect that, in its proper application, Sarmatia meant one, many, or all of the north-eastern members of the Slavonic family, probably, with some members of the Lithuanic, included.

HISTORY. — The early Sarmatian history is Scythian as well [SCYTIA], and it is not until Pannonia becomes a subject of discussion that the Sarmatian tribes become prominent in history, and, even then, the distribution of the several wars and alliances between the several nations who came under the general denomination is obscure. In doing this there is much that in a notice like the present may be eliminated.

The relations of the Greeks and earlier Romans with Sarmatia were with Scythia and the Getae as well; the relations of the latter being with the provincials of Pannonia, with the Marcomanni, and the Quadi, &c. Both are neighbours to a tribe of Jazyges.

The great Mithridatian Empire, or, at any rate, the Mithridatic Confederation, contained Sarmatians eo nomine, descendants of the Herodotean Sarmatiae. Members of this division it must have been whom the Marcus, the brother of Lucius Lucullus, chastised and drove beyond the Danube, in his march through Moesia. Those, too, it was with whom the Cis-Danubian nations in general were most often in contact,—Jazyges, Roxolani, Catochai, &c., who though (almost certainly) Sarmatian in their ethnological affinities, are not, eo nomine, Sarmatian, but, on the contrary, populations with more or less of an independent history of their own. Thirdly, the Sarmatians, who, in conjunction with the Getae, Dari, Moesians, Thrascians, &c., may have been found in the districts south of the Danube, must be looked upon as intrusive and foreign to the soil on which they are found.

On the other hand, it must be remembered that the Sarmatiae eo nomine fall into two divisions, divided from each other by the whole extent of the Roman province of Dacia, the area of those of the east being the parts between the Danube and the Don, the area of those of the west being the parts between the Danube and the Thess. The relations of the former are with the Scythians, Roxolani, the kings of Pontus, &c., over whom, some years later, M. Crassus triumphed. His actions, however, as well as those of M. Lucullus, so far as they went against the Sarmatiae, were only accidental details in the campaigns by which Moesia was reduced. The whole of the Trans-Danubian frontier of Moesia, east of Viminacium, was formed by Dacia.

The point at which the Romans and Sarmatians would more especially come in contact was the country about Sirmium, where the three provinces of Pannonia, Illyricum, and Moesia joined, and where the pre-eminently Sarmatian districts of the nations between the Danube and Thess lay northwards — pre-eminent Sarmatians as opposed to the Dacians.
on one side, and the Quadi, &c., of the Regnum Vannianum, on the other. In the general Pannonian and Dalmatian outbreak of A. D. 6, the Sarmatians of these parts took a share (Vell. Pat. ii. 110), as they doubtless, did in the immediately previous war of the Marcomanni, under Maroboduus; the Marcomanni, Quadi, Jazypes, and western Daci, and Sarmatae being generally united, and, to all appearances, the members of a definite confederacy.

The Regnum Vannianum gives us the continuation of the history of these populations (A. D. 19—50). It is broken up; Vannium, (the Bas) himself displaced, and Vargrjo and Sido, strongly in the interest of Rome, made kings of the parts between the Marus and Cusus (Moravia) instead. To the Iuncean confederacy (a Ban-at) the Sarmatae and Jazypes supply the cavalry, the occupants of the Banat itself the infantry (Tac. Annal. xii. 29).

For A. D. 55, we find an interesting notice in Tacitus, which gives definite to the Sarmatian Asiatica of Troleny. It is to the effect that, in a war with the Parthians, Pharsamans entered into an alliance with the Alansians of the coast of the Caspian and the Sarmatae Sceotuchi (? Baratcepsi). (Tac. Ann. vi. 33.)

A. D. 69. Two pregnant sentences tell us the state of the Sarmatian frontier at the accession of Galba: “Coratae in nos Sarmentarum ac Sceoturum gentes; nobilitatus clauditus minus Daenia” (Hist. ii. 2). The Suevi (who here mean the Quadi and Marcomanni) and Sarmentae (foot and horse) are united. Daicia, paving the way to its final subjection, the Jazypes seem to fall off from the alliance; inasmuch as they offer their services to Rome, which are refused. The colleague of Sido is now Italicus, equally faithful to Rome. (Hist. iii. 5.) In the following year it is Sarmatae and Daci who act together, threatening the fortresses of Moesia and Pannonia (iv. 54).

An invasion of Moesia by the Roxolani took place A. D. 69. This is a detail in the history of the Eastern branch.

The conquest of Dacia now draws near. When this has taken place, the character of the Sarmatian area becomes peculiar. It consists of an independent strip of land between the Roman Province and Quado-Marcomannic kingdom (Banat); its political relations fluctuating. When Tacitus wrote the Germania, the Gothini paid tribute to both the Quadi and Sarmatae; a fact which gives us a political difference between the two, and also a line of separation. The text of Tacitus is ambiguous; “Partem tributorum Sarmatae, partem Quadi, ut alienigena inpunit” (Germ. 43.) Were the Sarmatae and Quadi, or the Quadi alone, of a different family from that of the Gothini? This is doubtful. The difference itself, however, is important.

There were Sarmatians amongst the subjects as well as the allies of Decebalus; their share in the Dacian War (A. D. 106) being details of that event. They were left, however, in possession of a large portion of their country, i. e. the parts between the Vallum Romanum and the frontier of the Suevi, Quadi, or occupants of Regnum Vannianum; the relations of this to the Roman and non-Roman areas in its neighborhood being analogous to that of the Decumanes Agri, between the Rhine and Upper Dactiae.

In the Marcomannic War (under M. Antoninus) the Sarmatae are as prominent as any members of the confederacy; indeed it is probable that some of the Marcomanni may have been Sarmatae, under another name. This is not only compatible with the undoubtedly German origin of the name Marcomanni (Marchmen), but is a probable interpretation of it. German was the term, it might be, and very likely was, applied to a non German population. There were two Marches: one held by Germans for Rome and against the Sarmatae, the other held by the Sarmatae for themselves. The former would be a March, the other an Ukraine. In the eyes of the Germans, however, the men of the latter would just as much be Marchmen as themselves. What the Germans in the Roman service called a neighbouring population the Romans would call it also. We shall soon hear of certain Borderers, Marchmen, or men of the Ukraine, under the name of Limigantes (a semi-barbarous form from Limes); but they will not he, on the strength of their Latin names, Latins. The Solitudines Sarmatarum of the Roman maps was more or less of a Sarmatian March. The Jazyes and Quadi are (as usual) the important members of the confederacy.

A. D. 270. Aurelian resigns the province of Dacia to the Barbarians; a fact which withdraws the scene of many a Sarmatian inroad from the field of observations,—the attacks of the Barbarians upon each other being unrecorded. Both before and after this event, however, Sarmatia inroads along the whole line of the Danube, were frequent. Sarmatians, too, as well as Daci (Getae) were comprehended under the general name of Goth in the reigns of Decius, Claudius, &c. Add to this that the name of Vandal is now becoming conspicuous, and that under the name of Vandal history we have a great deal that is Sarmatian.

The most important effect of the cession of Dacia was to do away with the great block of Roman, Romanising, or Romanised territory which lay between the Sarmatae of Pannonia and the Sarmatae of Scythia. It brought the latter within the range of the former, both being, then, the frontiers of Moesia. Add to this the fact of a great change in the nomenclature being effected. The German portion of the Marcomanni (Thervings and Grutungs) has occupied parts of Dacia. The members of this section of the German name would only know the Sarmatae as Vandals. Again, the Hun power is developing itself; so that great material, as well as nominal, changes are in the process of development. Finally, when the point from which the Sarmatae come to be viewed has become Greek and Constantinopolitan, rather than Latin and Roman, the names Slavenci and Sveri will take prominence. However, there is a great slaughter of the Sarmatians by Carus, on his way eastwards. Then there is the war, under Constantine, of the Sarmatae of the Border,—the Sarmatae Limigantes,—a Sarmatae, [See Limigantes.] The authors who tell us of this are the writers of the Historia Augusta and Ammianus; after whose time the name is either rarely mentioned, or, if mentioned, mentioned on the authority of older writers. The history is specific to certain divisions of the Sarmatian population. This was, in its several divisions, hostile to Rome, and independent; still, there were Sarmatian conquests, and colonies effected by the transplantation of Sarmatae. One lay so far east as Gaul.

"Arvaque Sarmentarum super metata coloni" (Auct. Mosell.).
applies to one of these. There were more of them. The general rule, however, is that, some particular division of the name takes historical prominence, and that the general name of Sarmatia, as well as the particular Sarmatiae of the parts between Dacia and Pannonia, and those between Scythia and Persia, disappears. [See VANDALIA; THAIMA.

SARMATICA INSULA, an island at that mouth of the Danube called Kalomastum (το καλλιά
cus, Plin. iv. 24. s. 24.) [T. H. D.]

SARMATICAE PORTAE, (αι των 
οροφων της 
Aea, Ptol. v. 9. §§ 11, 15), a narrow pass of the 
Caucacus, whence it is also called Caucaciae Portae. (Plln. vi. 11. s. 12, 15. s. 15.) From its vicinity to the Caspian sea, it was also called by some of the ancients Portae Caspiae, (Suet. Nero, 19), Claudiu 
Casparum (Tac. H. i. 6), and Via Caspia (Id. Amm. 
vi. 33); but Pliny (l. c.) notes this an error; and 
the proper Portae Caspiae were in the Taurus (Forbiger, Geogr. vol. ii. p. 47, note 92). The 
Sarmatiae Portae formed the only road between Sar 
matia and Iberia. Poleney (l. c.) distinguishes 
from this pass another in the same mountain, which 
he calls (του 
Aama 
Πολα (Portae Albaniae), and places the latter in the same latitude as the former, 
namely the 47th degree, but makes its longitude 3 
degrees more to the E. The Albaniae Portae were 
those on the Aazoon, leading over the mountain from 
Bercea to Berdian. At both spots there are still 
traces of long walls 120 feet in height; and on this 
circumstance seems to have been founded a legend, 
prevalent in that neighbourhood, of the 
Black Sea and the Caspian having been at one time connected by such a wall. (Forbiger, Ptol. p. 55, note 13, b.; 

SARMATICI MONTES (Σαρματικα 
υρον), a range of mountains on the eastern frontier of Germany, mentioned only by Poleney (ll. 11. 6. viii. 
10. § 2), according to whom it appears to have 
extended north of the Danube as far as the sources of the 
Vistula, and therefore consisted of the mountain 
in Moravia and a part of the Carpathian. [L. S.]

SARMATICUM MARE (ό 
Σαρματικο 
υσευτον), Ptol. vii. 5. §§ 2, 6), a sea in the N. of Europe, 
colouring the coast of Sarmatia, and which must 
thus have been the 
Baltic (Tac. Germ. 45). But 
sometimes the Black Sea is designated by the poets 
under this name, as by Ovid (ex Pont. iv. 10. 38) 
and by Valerius Flaccus (Sarmatiae Pentus, viii. 
207.) [T. H. D.]

SARMATINA, a town of Ariat, mentioned by 
Ammianus (xxii. 6). It is probably the same 
Sarmazgna of Poleney (vi. 17. § 4), as both he 
and Ammianus place it next to Bitinia, in the same 
province. [V.]

SARMIZEGETUSSA (Σαρμιζ 
γεθουσα, Ptol. 
iii. 8. § 9; Σαρμιζ 
γεθουσων, Dion Cass. viii. 9), one of the most 
considerable towns of Dacia, and the residence of the 
Dacian kings (Basilicae, Ptol. l. c.). It is called Sarmatigae in the Tabula Peut., and Sar 
matigae by the Geogr. Rv. (iv. 7). It is incor 
rectly the same place as that called ται Βασιλεια 
Δασων by Dion Cassius (iv. 10; ivii. 8), who places it 
on the river Sargitca (Jb. c. 14); a situation which 
is also testified by ruins and inscriptions. At a 
later period a Roman colony was founded here by 
Trajan, after he had expelled and killed Decebalus 
king of the Dacians; as is testified by its name of 
Colonia Uplia Traiana Augusta, and may be inferred 
from Ulpan (Dig. 50. tit. 15. 1. 1), from whom we 
also learn that it possessed the jus Italicum. It 
was the head-quarters of the Legio xiii. Gemina 
(Dion Cass. iv. 23), and at first probably there was 
only a Roman encampment here (Id. lvi. 9; Anc. 
Vict. Caes. xiii. 4). Hadrian conferred an aqueduct 
upon it, as appears from an inscription (Gritter, p. 
177. 3; Orelli, No. 812), and that emperor seems to 
have retained the colony, on account of its numer 
ous Roman inhabitants, when he resolved to 
abandon the rest of Dacia to the barbarians. From 
an inscription of this period (III. 472), there would 
appear to have been baths here (Orelli, 794). 
Sarmizegetusa occupied the site of the present 
Forchly (called also Gradische), on the river 
Strel or Stregy, about 5 Roman miles from the Porta 
Ferea, or Vulcan Pass. (Comp. Inscr. Gritter, p. 
272; Orelli, Nos. 831, 3324, 3433, 3441, 3527, 3686, 
tab. 24, 55. &c.; Uberti, iii. 2. p. 616; seq; Zumpt, 

SARSUS, a river of the same name of Sarmatia, 
just mentioned, by Strabo, is called on the map of 
Sarmatia mentioned by Strabo (s. p. 511), which, after 
rising in M. Coronus, flows in a westerly direction 
into the Caspian. Professor Wilson considers that 
it must be either the Atek or the Gurgan. [V.]

SARRNA or SARMIA, is named in the Maritime 
Hist. among the islands of the Ocean between Galia 
and Britannia. Supposed to be Guernsey. [G. L.]

SARTUS (ό 
Σαρτος; Sarvo), a river of Cam 
pagna, flowing into the Bay of Naples. It has 
its sources in the Apennines, above Nuceria (Nectora), 
neat which city it emerges into the plain, and, after 
traversing this, falls into the sea a short distance S. of 
Pompeii. Its present mouth is about 2 miles distant 
from that city, but we know that in ancient times 
flowed under the walls of Pompeii, and entered the sea 
close to its gates. [POMPEII.] The change in its 
course is doubtless owing to the great catastrophe 
of A. D. 79, which buried Pompeii and Herceleum. 
Virgil speaks of the Sarsus as flowing through a plain 
(ipaque ripa asynova Sarsus, Aen. vii. 738); 
and both Silius Italicus and Statius allude to it: its 
placid and sluggish stream. (Sil. Ital. viii. 538; 
Stat. Silv. i. 2. 265; Lucan, ii. 422.) According 

to Strabo it was navigable, and served both for the 
export and import of the produce of the interior to 
and from Pompeii. (Strab. v. p. 247; Plin. iii. 5. 
s. 9; Ptol. iii. 1. § 7; Suet. Clas. Rhet. 4.) Vibius 
Sequester tells us (p. 18) that it derived its name as 
well as its sources from a mountain called Sarus, or 
Sarmatia, evidently the same which rises above the 
modern town of Sorno, and is still called Mono 
Soro or Saruo. One of the principal sources of 
the Sasso does, in fact, rise at the foot of this mountain, 
which is joined shortly after by several confluent, 
the most considerable of these being the one which 
flows, as above described, from the valley beyond 
Nuceria. According to a tradition alluded to by Virgil 
(l. c.), the banks of the Sarsus and the plain 
through which it flowed, were inhabited in ancient 
time by a people called the 
Praestes, whose name is evidently connected with that of the river. They 
are represented as a Pelasgian tribe, who settled in 
this part of Italy, where they founded Nuceria, as 
well as several other cities. (Cono, op. Sert. ad 
Aen. i. c.; Sil. Ital. viii. 537.) But their name seems 
to have quite disappeared in the historical period; 
and we find Nuceria occupied by the Alsaterni, who 
were an Osco-Sabellian race. [NUCERIA.]
in one passage, makes a similar distinction. (Pol. ii. 24; Plant. Mostell. iii. 2. 83.) The Fasti Capito-
lini, also, in recording the conquests of the Sariscites, speak of the two consuls as triumphing "de sar-
natisibus," without any mention of the Umbrians; but the Epitome of Livy, in relating the same event,
classifies them generally among the Umbrians. (Livy. Epit. xv.; Fast. Capit.) The probable conclusion is
that they were a tribe of the Umbrian race; but with a separate political organisation. We have no
particulars of the war which ended in their subjec-
tion, which did not take place till c. 266, so that
they were one of the last of the Italian states that
submitted to the Roman yoke. From this time Sarina was certainly included in Umbria in the
Roman sense of the term, and became an ordinary
municipal town, apparently not of much importance.
(Stраб. v. p. 227; Plin. iii. 14. s. 19.) It derived
its chief celebrity from its being the birthplace of
the celebrated comic poet Plautus, who was born
there about B. C. 254. very shortly after the Roman
conquest. (Hieron. Chroios. ad Ol. 145; Fest. s. v.
Plutus, p. 238.) Its territory consisted of
mountain pastures,— whence it is called by Silini
Italicus "divae lactis" (Sili. Ital. viii. 461),—as well
as forests, which abounded in dormice, so much
prized by the Romans. (Martial, iii. 58. 35.) Va-
rious inscriptions attest the municipal rank of Sar-
ina under the Roman Empire (Orell. Inscr. 4404;
Gruter, Inscr. p. 522. 8, p. 1055. 2); but its name
is not again found in history. In the middle ages
it sank into complete decay, but was revived in the
13th century, and is now a small town of 3600 in-
habitants, which retains the ancient site as well as
name. [E. H. B.]

SARIA (Σάρια, Herod. vii. 122; Steph. B. s. v.),
a maritime town on the Singite gulf between
Singa and Ampelus Prom; now Xartili. (Leake,

SARUENI'TES, the name of an Alpine people (Pлн.
iii. 20. s. 24) in the valley near the sources of the
Rhine. There seems no reason to doubt the correct-
ness of the name, and it may be preserved in Sorgans,
which is north of Char, and between Char and the
Lake of Constance. In a passage of Caesar (B. G. iv.
10) he mentions the Nantuates as a people in the
upper part of the Rhine, above the Helvetii. The
name Nantuates [NANTUATES] is corrupt; and it is
possible that the name Sarunites should be in its
place. [G. L.]

SARUS (Σάρος), one of the principal rivers in the
south-east of Asia Minor, having its sources in Mount
Taurus in Cilicia. It first flows in a south-
eastern direction through Cappadocia by the town of
Comana; it then passes through Cilicia in a south-
western direction, and, after flowing by the town of
Adana, empties itself into the Cilician sea, on the
south of Taurus, after dividing itself into several
branches. (Liv. xxxii. 41.) According to Xenophon
(Απολ. i. 4. § 1) its breadth at its mouth was 3 pletnas
or 300 feet; and Procopius (de Aedif. v. 4) says
it was a navigable river. (Comp. Strab. xii. p. 535; 
Плт. v. 8. § 4; Appian, Syr. 4; Плп. vi. 3; Fa-
stath. ad Dion. Per. 567, who erroneously calls it

SARON. No trace is found in ancient authors of a town
of the name of Sarons; but it is mentioned by the
Geographer of Ravenna (iv. 32.), and seems, there-
fore, to have grown up soon after the fall of the
Roman Empire. [E. H. B.]

SARON. [Sharon.]

SARON. [Saronicus Sinus.]

SARONICUS SINUS (Σαρωνικὸς κόλπος, Ασέ-
χιλ. Aegim. 317; Strab. viii. pp. 335, 369, 374, 
380; Σαρωνικὸς πόρος, Strab. viii. p. 335; Σαρω-
νικὸς πλάγιος, Strab. viii. pp. 335, 369; Σαρω-
νικὸς, Athos, Dioec. Per. 422; also called Σαρωνι-
κὸς κόλπος, Strab. viii. p. 335; Gulf of Eginis),
a gulf of the Aegaean sea, extending from the pro-
montories of Sunium in Attica and Scyllaeum in
Troizenia to the isthmus of Corinth. The length of
the gulf, according to Stryclx (p. 20, Hudson), is 740 stadia.
It washes the coasts of Attica, Megaris, Corinth, Epidaurus and
Troeen, and contains the islands of Aegina and Salamis.
It was said to have derived its name from Saron, a king of Troezen, who was drowned while hunting in
a lagoon on the Troezenian coast called Phoebion and
afterwards Saronis. (Paus. ii. 30. § 7; Etym.
Μ. p. 708. 52; Leake, Morea, vol. ii. p. 448.) A
Trozenian river Saron is also mentioned (Eustath.
ιοίοιδ Ηπαντ. Per. 422), and likewise a town of
the same name. (Steph. B. s. v.) Some derived the
name of the gulf from σαρωνίζω, "an oak." (Plin.
iv. 5. s. 18.)

SARPEDON (Σαρπεδὼν οθ Σαρπέδων ἕκρα),
a promontory on the coast of Cilicia, 80 stadia to
the west of the mouth of the Calycadnus, and 120 from Seleucia.
In the peace between the Romans and Antiochus the Great this promontory and Cape
Calycadnus were made the frontier between the
kingdom of Syria and the free countries of Asia
Minor. (Strab. xiv. p. 670; Плт. v. 8. § 3; Ap-
pyan, Syr. 39; Pump. Mela, i. 13; Liv. xxxviii.
51; Plin. v. 22; Stadium. Mar. Magni, § 163.)
It now bears the name of Lisium-el-Kalije. (Leake,
Asia Minor, p. 203.) [L. S.]

SARPENDONIUM PROM. (Σαρπεδωνίου ἕκρα,
Herod. vii. 58), the NW. extremity of the gulf of
Melas, and due north of the eastern end of the island
of Imbros, now Cape Fauzi. [J. R.]

SARRASTES. [Saruns.]

SARRUM, in Galilia, is placed by the Table be-
 tween Condate (Cognac) [Condate, No. 5] and
Vesunna (Périgueux). It is supposed to be Char-
mans, but the real distances do not agree with the
numbers in the table. [G. L.]

SARS, a river on the W. coast of Hispania Tar-
raconensis, between the Prom. Nerium and the
Minius. (Mela, iii. 1.) Incontestably the modern
Sar, which does not reach the sea, but falls into the
ancient Ulla at Turris Augustus (Tories de Este).
(Comp. Florez, Exp. Sagra. xv. p. 41.) [T. H. D.]

SATHIZA (Σάθιζα, Strab. viii. Ekt. Saracena:
Sarina), a city of Umbria, situated in the Apenines,
not the left bank of the river Sapis (Sivio), about
16 miles above Cassena. It seems to have been in
very early times a powerful and important city, as
it gave name to the tribe of the Sariscites (Σαρι-
σινατος, Pol.), who were one of the most considerable
of the Umbrian tribes. Indeed some authors speak of
them as if they were not included in the Um-
bridian nation at all, but formed a separate tribe with
an independent national character. Thus Polybius,
in enumerating the forces of the Italian nations,
speaks of the Umbrians and Sariscites, and Plautus,
The modern name of the Sarus is Sithum or Sithan.

SARXA, a station on the road from Philippia to Hieracleia (Petu. Tab.), to the N. of the Lake Cerchities, between Styron and Scousassa. Now Zikhan. (Leake, North. Greece, vol. iii. p. 227.) [E. B. J.]

SASIMA (Σασίμα), a town of Cappadocia, 24 Roman miles to the south of Nazianzus; the place contained the first church to which Gregory of Nazianzus was appointed, and he describes it as a most miserable town. (It. Ant. p. 144; It. Hieroc. p. 527; Hierocol. p. 700, with West-selings note.) Some look for its site near the modern Iabirdana. [L. S.]

SASO (Σασοῦ), Ptol. iii. 13. § 47; Σασοῦ. Strab. vi. p. 281), a small, rocky island, lying off the coast of Grecian Illyria, N. of the Acrocorinian promontory, and possessing a landing-place which served as a station for pirates. (Comm. Polyb. v. 110; Meila, ii. 7; Plin. iii. 26, s. 30; It. Anticyr. 429.) It is still called Sasowo, Sasum, or Sasum. [T. H. D.]

SASPITES, or Saspiri (Σασπίτες, Σασπίται, Herod. i. 104, iv. 37, 40, vii. 79; Apoll. Rhod. ii. 397, 1242; Steph. B. s. v.: cf. Amm. Marc. xxii. 8. § 21), a Scythian people, dwelling to the S. of Colchis and N. of Media. According to Herodotus and Stephanus (I. c.) they were an inland people, but Apollonius places them on the sea-coast. They belonged to the 10th satrapy of the Persian kingdom (Herod. iii. 94), and were armed in the same manner as the Colchians, that is, with wooden helmets, small shields of untanned hide, short lances, and swords (Ibid. vii. 79). The Persian scholar on Apollonius derives their name from the abundance of supplies found in their country. The Saspires appear to have inhabited that district of Georgia lying on the upper course of the river Cyrus, in which Tiflis lies, which is still called Tchich Kartveli, and as the district contains several other places, the names of which begin with the syllable Tchich, Ritter conjectures that the Saspires were identical with the eastern Iberians, respecting whom the Greeks invented so many fables. (Iomnell, Geogr. of Herod. p. 503; Ritter, Erdkunde, ii. p. 922; Bihlr, ad Herod. i. 104.) [T. H. D.]

ASSULA, a town of Latium, situated in the neighborhood of Tibur, of which city it was a dependency. It is mentioned only by Livy (vii. 19) among the towns taken from the Tiburtines in n. c. 334, and was probably always a small place. The site has been identified by well preserved ruins of an ancient town, at the foot of the hill of Siciliana, between 7 and 8 miles from Tibur (Tibur). The ruins in question, consisting of a line of walls of polygonal construction, surrounding a hill of small extent, unquestionably indicate the site of an ancient town; but as we know that the Tiburtine territory contained several other towns besides Empulum and Assula, the only two whose names are known to us, the identification of the later territory (Gell. Top. of Rome, p. 394. Nibby, Diomorni, vol. iii. p. 623.) [E. H. B.]

SATACUTIA (Σατακύτια, or Σατακύτια, Ptol. iv. 7. § 17), a place in Achaeia, on the left bank of the Nile, probably near the present Korti, or else somewhat more to the S., near the half destroys village of Ambucito. [T. H. D.]

SATALA (Σατάλα), an important town of Armenia Minor, as may be inferred from the numerous routes which branched off from Thessaloniki and Cappadocia. Its distance from Cesarica was 325 miles, and 124 or 132 from Trapaean. The town was situated on a valley surrounded by mountains, a little to the north of the Euphrates, and was of importance, being the key to the mountain passes leading into Pontus; whence we find that in later times the Legio xv. Apollinaris was stationed there. In the time of Justinian its walls had fallen into decay, but that emperor restored them. (Ptol. i. 15, § 9, v. 7, § 3, viii. 17, § 41; Dom Cass. ixviii., 17, 28, 40; 206, 207, 216, 217; Notit. Imp.; Tapp. Peut.) The site of this town has not yet been discovered with certainty, though ruins found in various parts of the country have been identified with it by conjecture. (Tournefort, Voyages, Letter 21, c. 2, p. 17; Ren nell, Asia Minor, ii. p. 219; Cramer, Asia Minor, ii. p. 152, fol.) [L. S.]

SATARCHAE, a Scythian people on the E. coast of the Tauric Chersonese, who dwelt in caves and hovels on the ground, and in order to avoid the rigour of winter, even clothed their faces, leaving only two small holes for their eyes. (Mel. ii. 1.) They were unaccustomed with the use of gold and silver, and carried on their traffic by means of barter. They are mentioned by Pliny under the name of Scythi Satarchi (iv. 26). According to Ptolemy (iii. 6. § 6) there was a town in the Tauric peninsula called Satarchae (Σατάρχης), which the scholar (ad loc.) says was subsequently called Matarcha (Ματαρχάη) but the account of the Satarchae living in caverns seems inconsistent with the idea of their having a town. Yet Valerius Flaccus also mentions a town—or perhaps a district—called Satarchae, which, from his expression, "distant sua muletra Satarchen," we may conclude to have been rich in herds of cattle. (Argon. vi. 145.) The same poet describes the Satarchae as a yellow-haired race. (Ib.) [T.H.D.]

SATICULA (Σατικοῦλα, Diod.: Eth. Σατικουλός, Steph. B. : Saticulusus, Liv.; but Saticulus, Virg.), a town of Sammum, nearly on the frontiers of Bithynia. It is first mentioned at the outbreak of the First Samnite War (n. c. 343), when the consul Cornelius established his camp there, apparently to watch the movements of the Samnites in that quarter, and from thence subsequently advancing into their territory, was drawn into a conflict, where he narrowly escaped the loss of his whole army, but was saved by the courage and ability of Decius. (Liv. vii. 32, 34.) Again, in n. c. 315, during the Second Samnite War, it was besieged by the Roman fleet of Aemilius. It was considered so sufficient importance to engage a Roman army for nearly a year, when it was taken by Q. Fabius. The Samnites made a vigorous attempt to relieve it, but without effect, and it fell into the hands of the Romans. (Id. ix. 21, 22; Diod. xix. 72.) From this time it continued in their power; and before the close of the war it was one of the places which they determined to occupy with a colony, which was established there in n. c. 313. (Vell. Pat. i. 14; Fest. c. Saticulae, p. 340, M.) Livy does not notice the establishment of a colony there on this occasion, but he afterwards mentions it as one of the "colonies Latinise," which distinguished themselves in the Second Punic War by their zeal and fidelity. (Liv. xxvii. 10.) It is remarkable, however, that a few years before the name of Saticula is found among the towns that had revolted to Hannibal, and were recovered by Fabius in n. c. 215. (Liv. xxxii. 39.) But it appears that all the MSS. have "Aristella" (Aleschfisk, ad loc.); and though this name is otherwise quite unknown, it is certainly not safe to alter

Digitized by Microsoft®
it, when, by so doing, we involve ourselves in a great historical difficulty; for the revolt of one of the Latin colonies is in itself most improbable, and was certainly not an event to be passed over with such slight notice. The territory of Satricum ("ager Satricus") is again noticed during this war in conjunction with that of Trebula (Liv. xxiii. 14); but from the end of the Second Punic War all trace of it disappears. The name is not found in any of the geographers, and its site is extremely uncertain. But the passages in Livy (ix. 21, 22) seem to point to it being situated not far from Plistia, which may very probably be placed at Preza near Sea Aostra dei Goti; while the description of the march of Marcellus in B.c. 216, shows clearly that it must have been situated S. of the Vulturinus, and probably in the valley at the back of Mount Tifata, between that ridge and the underfalls of Mount Taburnus. It may be added that such a position would be a very natural one for the Roman consuls to occupy at the first outbreak of the Samnite wars, from its proximity to Caepurnaeum. SATIRE (Dassaretae, Vol. i. P. 756, a.) SATRIORAE (Satriuris; Tusa or Tusula), a small river in the southern part of Troas, having its sources in Mount Ida, and flowing in a western direction between Hamaxitus and Larissa, discharges itself into the Aegean. It owes its celebrity entirely to the Homeric poems. (II. vi. 34, xiv. 445, xxi. 87; Strab. xiii. pp. 605, 606, who states that at a later time it was called 2Aposeulias.) [L. S.] SATRIAE (Satranis, Herod. vii. 110 — 112), a Thracian people who occupied a portion of the range of the Pangaen, between the Nestus and the Strymon. Herodotus states that they were the only Thracian tribe who had always preserved their freedom; a fact for which he accounts by the nature of their country, — a mountainous region, covered with forests and snow — and by their great bravery. They alone of the Thracians did not follow in the train of Xenexes, when marching towards Greece. The Satrae were in possession of an oracle of Dionysus, situated among the loftiest mountain peaks, and the interpreters of which were taken from among the Bessi, — a circumstance which has suggested the conjecture that the Satrae were merely a clan of the Bessi, — a notion which is rendered more probable by the fact that Herodotus is the only ancient writer who mentions them; whereas the Bessi are repeatedly spoken of. We may infer from Pliny's expression, "Bes- sorum multa nomina" (iv. 11, s. 18), that the Bessi were divided into many distinct clans. Herodotus says that to the Satrae belonged the principal part of the gold and silver mines which then existed in the Pangaen. [J. R.] SATRICUM (Eth. 2Aπτρικός, Satricans: Ca- sale di Conco), an ancient city of Latium, situated on the frontier of the Volscean territory, between the Alban hills and the sea. This position rendered it a place of importance during the wars between the Romans and Volsceans, and it is frequently mentioned in history at that period. It appears to have been originally a Latin city, as Diodorus mentions its name among the reputed colonies of Alba, and Dionysius also includes it in the list of the thirty cities of the Latin League. (Diod. vii. Fr. 3; Dionys. v. 61.) But when it first appears in history it is as a Volscean town, apparently a depen- dency of Antium. It had, however, been wrested from that people by the Romans at the same time with Corioli, Polluscis, &c; and hence it is one of the towns the recovery of which by the Volsceans is ascribed to Coriolanus. (Liv. ii. 39.) It seems to have continued in their power from this time till after the Gaulish invasion, as it is said to have made the head-quarters of the Volsceans and their allies on the outbreak of a war with Rome, and, after their defeat by Camillus, was assaulted and taken by that general. (Id. vi. 7, 8.) It would appear that it must on this occasion have for the first time received a Roman colony, as a few years later (B. C. 381) it is styled a "colonia populi Romani." In that year it was attacked by the Volsceans in con- cert with the Pasciavoli, and, after an obstinate defence, was carried by assault, and the garrison put to the sword. (Id. vi. 22.) It is subsequently mentioned on two occasions as affording shelter to the Volscean armies after their defeat by the Ro- mans (Id. vi. 22, 32); after the last of these (B. C. 377) it was burnt by the Latins, who considered themselves betrayed by their Volscean allies. (Id. 33.) It was not till B. C. 348 that the city was re- built by the Antiates, who established a colony there; but two years later it was again taken by the Ro- mans under M. Valerius Corvus. The garrison, to the number of 4000 men, were made prisoners, and the town burnt and destroyed, with the exception of a temple of Mater Matuta. (Id. vii. 27; Fast. Capit.) A few years later it was the scene of a victory of the Romans, under C. Plautius, over the Antiates (id. viii. 1.), and seems to have been soon after restored, and received a fresh colony, as it was certainly again inhabited at the commencement of the Second Samnite War. In B. C. 520, after the disaster of the Caudine Forks, the Satricans revolted from Rome and declared in favour of the Samnites; but they were soon punished for their defection, their city being taken by the consul Papirius, and the Samnite garrison put to the sword. (Liv. ix. 12, 16; Oros. iii. 15.) From this time it seems to have continued subject to Rome; but its name disappears from history, and it probably sunk rapidly into de- cay. It is incidentally mentioned during the Second Punic War (B. C. 206) on occasion of a prodigy which occurred in the temple of Mater Matuta, already noticed (Liv. xxxviii. 11); but it seems cer- tain that it ceased to exist before the close of the Republic. Cicero indeed alludes incidentally to the name in a manner that shows that the site at least was well known in his time (ad Q. Fr. iii. 1 § 4); but Pliny reckons it among the celebrated towns of Latium, of which, in his days, no vestige remained (Plin. iii. 5. s. 9); and none of the other geographers allude to its name. The site, like that of most of the Latin cities which disappeared at an early period, is a matter of much doubt; but several passages in Livy tend to prove that it must have been situated between Antium and Veiiiae, and its site has been fixed with much probability by Nibby at the farm or casale, now called Conca, about half way between Anco and Vellutri. The site is an isolated hill of tuft, of somewhat quadrangular form, and about 2500 feet in circuit, with precipitous sides, and pre- sents portions of the ancient walls, constructed in much the same style as those of Aredea, of irregular square blocks of tuft. The sites of two gates, one on the E. the other to the W., may also be distinctly traced. There is therefore no doubt that the site in question is that of an ancient city, and the position would well afford with the supposition that it is that of Satricum. (Nibby, Dintorni di Roma, vol. iii. p. 64, a.) [E. H. B.]
SATYRI MONUMENTUM (τὸ Σατυρίου μνήμα, Strab. xi. p. 494), a monument consisting of a vast mound of earth, erected in a very conspicuous situation on a promontory on the E. side of the Cam-

merian Bosporus. 90 stadia S. of Achilleum. It was in honour of a king of Bosporus, whom Dubois de Montpéreux identifies with Satyres I., who reigned B.C. 407–393. (Voyage autour du Caucase, v. p. 48.) The same authority (ib. p. 36) identifies the mound with the hill Koubouba. [T. H. D.]

SATYRI MONUMENTUM (Σατυρίου μνήμα, Ptol. viii. 2. § 30), a promontory on the coast of Sinus (Chinus), forming the southern extremity of the bay Theriaides, and placed by Ptolemy directly under the equator. It is probably the present Cape St. James. (Forbiger, Geogr. ii. p. 477, note 51.) [T. H. D.]

SAVARI. [SABARIA.]

SAUCONIA, [AVAR.]

SAVIA (Σαβία), Ptol. iii. 5. § 22), a people in the N. of European Sarmatia, between the rivers Turuntas and Chusmus. Schafarik (Star. Alterth. i. p. 212) identifies them with the Sjewer, a powerful Slavonian race which dwelt on the rivers Desna, Sem, and Sula, and possessed the towns Tschernigow and Ljubiewzch, both of which are mentioned by Constantine Porphyrogenitus (de Adm. Imp. c. 9). The name of the Sjewer does not occur in history after the year 1024, though their land and castles are frequently mentioned subsequently in Russian annals. (Ibid. ii. p. 129.) [T. H. D.]

SAVINA. [SAMARIA.]

SAVONIA, [ARAB.]

SAVIA (Σαβία), Ptol. ii. 6. § 56), a town of the Peloponnesus in Hungary Tarraconensis, the site of which is undetermined. [T. H. D.]

SAVINATES, a name which occurs in the inscription on the arch of Nova, and is placed next to the Adanates, whom D'Avyille supposes to be the same as the Edenates [EDENATES]. His reasons for placing the Savinates below Embrun and on the Durance, are not satisfactory. He finds a name Savin there, and that is all the proof except the assumption of the correctness of the position which he has assigned to the Adanates, and the further assumption that the two people were neighbours. [G. L.]

SAULOE PARTHAYNISA (Σαούλου Παρθα-
nysa), this curiously mixed name which has passed into treaties of geography from the editions of Hudson in the Geographi Graeci Mimeres of Hudson and Muller, appears to have rested on a bad reading of the Greek text. The amended text of the passage in question is Παρθανήσ Μνήμα τοῦ Σαούλου (Leidor. Stath. Parth. c. 12), which is probably correct (see Geog. Graec. ed. Muller, Paris, 1855.) [V.3]

SAUNARIA (Σαουναιρία), a town of unknown site in Ptol. iii. 8. § 8, is mentioned only by Pto-

lony (v. 6. § 10). [L. S.]

SAUNIUM, a little river on the N. coast of Hungary Tarraconensis, in the territory of the Conceni and Saleni; now Sojia. (Mela. iii. 1.) [T. H. D.]

SAVO, SADO. [SABA.]

SAVO (Sarow), a small river of Campania, which appears to have formed the boundary between that country and Latium, in the most extended sense of the term. It is a small and sluggish stream ("pigor Savus," Nat. Sitae. iv. 3. 66), flowing into the sea between Suessa and the mouth of the Vul-
The Greeks of the Black Sea would take the name from either the Scythians or the Getae; and it is probably to the language of the latter, that the form beloved. Hence, it is a form of Sarmatiae, taken from one of the eastern dialects of Dacia by the Greeks (possibly having passed through a Scythian medium as well) as opposed to Sarmatiae, which is from the western parts of the Dacian area, and adopted by the Romans. Its first and most convenient application is to the Asiatic branch of the Sarmatians. These may be called Sarmatiae as well, as they are by Plonym. On the contrary, it is rare, even in a Greek author, to apply Sarmatio to the Sarmatians of the Pannonian frontier. The evidence as to the identity of the words is superabundant. Besides the internal probability, there is the statement of Piny—"Sarmatiae, Graecis Sarmatiae" (iv. 25).

With the writers of the Augustan age the use of the two forms fluctuates. It is exceptional, however, for a Greek to write Sarmatia, or a Roman Sarmatiae. Exceptional, however, as it is, the change is frequent. Diodorus writes Sarmatiae (ii. 44), speaking of the Asiatic branch; Strabo writes Sarmatiae under the same circumstances; also when following Greek authorities. For the western tribes he writes Sarmatiae.

Ovid uses the term that best suits his metre, giving Sarmatiae the preference, ecateris paribus.

"Sarmatiae majora Geticaeque frequentia gentes." (Trist. v. 7. 13.)

"Jam diti ci Getico Sarmatique inci." (Ibid. v. 12. 58.)

"Stridula Sauromatiae pantra bubulnus agit." (Ibid. iii. 12. 30.)

The Sarmatiae of Herodotus were the occupants of a Adares, a word evidently used in a technical sense, and perhaps the term by which his informants translated the Scythian or Sarmatian equivalents to our word March; or it may = street. The Joshikir country, at the present moment, is divided into four streets, roads, or ways, according to the countries to which they lead. The number of these Adares were two; the first being that of the Sauromatiae, bounded on the south and west by the Tanais and Macotis, and extending northwards fifteen days' journey. The country was treeless. The second Adares, that of the Budini, followed. This was a wooded country. There is no necessity for connecting the Budini with Sarmatiae, on the strength of their both being occupants of a Adares. All that comes out of the text of Herodotus is, that the Scythians near Olbiopisia knew of a Adares of the Sauromatiae and a Adares of the Budini. The former seems to have been the north-eastern part of the Don Kazak country, with a portion of Saratow (iv. 21).

When Darius invaded Scythia, the Sauromatiae, Goi-ki and Budini acted together, and in opposition to the Agathyrsi, Neri, Androphagi, Melanclasi, and Tauri; the former agreeing to help the Scythians, the latter to leave them to their fate. This suggests the probability that, politically, the Adares were con- federate districts (Herod. iv. 119).

The language of the Sauromatiae was Scythian with solecisms, a statement which leads to the strange story of the Amazons (iv. 110—116), with whom the Sauromatiae were most especially con- nected (iv. 117). The women amongst them re- mained unmarried until they had slain an enemy.

The account of Hippocrates is substantially that of Herodotus, except that he especially calls the Sauromatiae European and Scythian; though, at the same time, different from other nations. He makes the number, too, of enemies that the virgins must slay before they can marry, three.

For further details, see Sarmatiae. [R. G. L.]

SAVUS (Zius or Zanos; Save), a great and navigable tributary of the Danube; it has its sources in the Carnian Alps (Plin. iii. 28; Jernand. de Reb. Got. 56), and, flowing in an eastern direction almost parallel with the more northern Draves, reaches the Danube at Singidunum. A portion of its upper course forms the boundary between Noricum and Pannonia, but the whole of the lower part of the river belongs to the southern part of Pannonia, and some of the most important towns of that country, as Siscia, Servitum, and Sirmium, were situated on its banks. (Strab. iv. p. 207, vii. p. 314; Appian, ii. 22; Ptol. ii. 16 § 1, iii. 9 § 1; Justin. xxxii. 3, 8, 16; Claud. de Laud. Stitich. ii. 192.)

SAXA RUBRA (Prima Porta), a village and station on the Flaminian Way, 9 miles from Rome. It evidently derived its name from the reddish of the tufo rocks, which is still conspicuous in the neighbourhood of Prima Porta. The name is written "Ad Rubras" in the Tabulae, while Martial calls the place simply "Rubra," and this form is found also in the Jerusalem Itinerary. (Martial, iv. 64. 13; Itin. Hier. p. 612.) But the proper form of it seems to have been Saxa Rubra, which is used both by Livy and Cicero. The former mentions it during the war of the Romans with the Veientes, in connection with the operations on the Cremera (Livy, ii. 49); and Cicero notices it as a place in the immediate vicinity of Rome, where M. Antonius halted before entering the city. (Cic. Phil. ii. 31.) It was there also that Antonius, the general of Vespasian, arrived on his march upon Rome, when he learnt the successes of the Vitellians and the death of Sabinus. (Tac. Hist. iii. 79.) At a much later period also (n. c. 32) it was the point to which Maxentius advanced to meet Constantine previous to the battle at the Milvian bridge. (Vict. Caes. 40. § 23.) We learn from Martial (l. c.), that a village had grown up on the spot, as would naturally be the case with a station so immediately in the neighbourhood of the city.

On a hill on the right of the Via Flaminia, a little beyond Prima Porta, are considerable ruins, which are believed to be those of the villa of Livia, known by the name of "Ag Gallinas," which was
SCALANDER.

SAXETANUM. Mart.

SAXETANUM, a place in Hispania Baetica (Itin. Ant. p. 403), called S-x (Zeit) by Ptolemy (ii. 4 § 7). Hexi by Mela (ii. 6), and by Plyn (iii. 3) Sexti Firmum Julium. It is the "Eratoshow" of Strabo (iii. p. 156). On the name see Cassanbon (ad Strab. i. p. 30), and Teschnuck (ad Medes, vol. ii. pt. 2. p. 147). Its situation was subsequently called Strabo, (iii. p. 156). Athen. iii. p. 121; Plyn, xxxii. i. 53; Mart. vii. 78, &c. Now most probably Moutrel. (Cf. Flores, Exp. Sophr. xiii. p. 101.)

[T. H. D.]

SAXONES (Zeitovet: Saxones), a German tribe, which, though it acted a very prominent part about the beginning and during the early part of the middle ages, yet is not even mentioned in ancient history previous to A. D. 257. In that year, we are told by Eutropins (vii. 13; comp. Oros. vii. 25), the Saxons and Franks infested the coasts of Armorica and Belgica, the protection of which was intrusted to Carausius. The fact that Pliny and Tacitus do not mention them in the country in which we afterwards find them, does not prove that they did not exist there in the time of those writers. For the inhabitants of the Cumbrian Chersonesus, where subsequently we find the Saxons, are mentioned by those writers only under the general appellation of the Cimbri, without noticing any special tribes under separate names. Ptolemy (ii. 11. § 11; comp. Steph. B. s. v.) is the first authority describing the habitations of the Saxons, and according to him they occupied the narrow neck of the Cumbrian Chersonesus, between the river Albin (Elbe) and Chalusus (Treva), that is, the country now called Holstein. Their neighbours on the south of the Albus were the Chauci, in the east the Suardones, and in the north the Singulones, Angli, and other smaller tribes of the peninsula. But besides this portion of the continent, the Saxons also occupied three islands, called "Saxon Islands," off the coast of Holstein (Zeitovor, Ptol. ii. 11. § 31), one of which was no doubt the modern Helgoland; the two others must either be supposed to have been swallowed up by the sea, or be identified with the islands of Dyckland and Veiehoarde, which are nearer the coast than Helgoland.

The name Saxones is commonly derived from Saca or Sacla, a battle knife, but others connect it with some earth (seuth) or saet, according to which Saxone would describe the people as living in fixed seats or habitations, as opposed to the free or wandering Franks. The former, however, is the more probable origin of the name; for the living in fixed habitations was certainly not a characteristic mark of the ancient Saxons.

They appear to have gradually spread along the north-western coast of Germany, and to have gained possession of a large extent of country, which the Ptolemaic Geography (iv. 17. 18; 23) calls by the name of Saxonia, but which was certainly not inhabited by Saxons exclusively. In A. D. 374 the Saxons, in one of their usual ravaging excursions on the coasts of Gaul, were surrounded and cut to pieces by the Roman army under Valentinian (Oros. vii. 32; Amm. Marc. xxvii. 2. 5; comp. xvi. 4, xxvii. 8; Zosim. iii. 1. 6); and about the middle of the fifth century a band of Saxons led by Hengist and Horsa crossed over into Britain, which had been completely given up by the Romans, and now fell into the hands of the roving Saxons, who com-

connection with other German tribes permanently established themselves in Britain, and there developed the great features of their national character. (Ibeda, Hist. Eccles. i. 12.) As the Romans never invaded the original country of the Saxons, we know of no towns or places in it, with the exception perhaps of the town of Treva (Throuos) mentioned by Ptolemy (ii. 11. § 27). Besides those already mentioned, there are but few ancient writers, who mention the Saxons. They are mentioned, such as Murcian, p. 53; Claud. de Latul. Stid. ii. 255; Sidon. Apoll. vii. 90, 369. Among modern writers the reader may consult Kufuhl, De Saxonicum Origine, Berlin, 1830, 8vo., and the best works on the early history of England and Germany.

[SAXONUM 1'INSULAE. [SAXONES.]

SCALANDER, a town in Moesia Inferior, between Novae and Trassocium. (Itin. Ant. p. 222.) It is called Scaldis (Skedh), and Scaldna, (Scaldin), probably a corruption of Scaaldis saxa, (Scaldin), the modern Skenemera. (Cf. Wesseling, ad Itun. L. c.; Isidor. de Viv. Ill. c. 44; Flores, Exp. Sophr. xiii. p. 69.)

[T. H. D.]

SCALDIS (Schedke, Escout) a river in North Gaelia. Caesar (B. G. vi. 33), the first writer who mentions the Scaldis, says, when he was pursuing Ambiorix, that he determined to go "as far as the Scaldis which flows into the Mosas (Maos) and the extremity of the Ardeums (Ardeums)." All the MSS. quoted by Schneider (B. G. vi. 33) have the reading "Scaliden," "Schaldin," or "Scaladin" and other trifling varieties, except one MS., which has "Sambin:" so that, as Schneider concludes, we cannot doubt that Caesar wrote "Scaldis" in this passage. Pliny (iv. 17) describes the Scaldis as the boundary between the Gallic and Germanic nations, and says nothing of its union with the Mosas: "A Scalid ad Sequanam Belgica;" and "a Scalidi incubunt e terra Texandria pluribus nominibus." Some geographers suppose that the Tabula of Ptolemy was the Scaldis, and others that it was called "Tabula." The passage of Caesar is most easily explained by supposing that he knew nothing of the lower course of the Scalde, and only reported what he heard. It is possible that the East Scalde was once the chief outlet of the Scalde, and it may have had some communication with the channels about the islands between the East Scalde and the lower course of the Mosas, which communication no longer exists. There is at least no reason for taking, in place of "Scaldis," or "Scaldin," the reading "Sabin" (Sabit), from the Greek version of the Commentaries.

The Scalde rises in France, in the department of Aisne. Below Antwerp it enters the sea by two estuaries, the Hand or West Scalde and the East Scalde.

[GL.]

SCAMANDER (Σκαμάνδρος; Mendere Su, or the river of Burnabochi), a famous little stream in the plain of Troy, which according to Homer (ιι. xix. 74) was called Xanthus by the gods and Scamander by men; though it probably owed the
SCAMANDRA. name Xanthus to the yellow or brownish colour of its water (comp. II, vi. 4, xxi. 8). Notwithstanding this distinct declaration of the poet that the two names belonged to the same river, Pliny (v. 33) mentions the Xanthus and Scamander as two distinct rivers, and describes the former as flowing into the Portus Achaeorum, after having joined the Simois. In regard to the colour of the water, it was believed to have even the power of dyeing the wood of sheep which drank of it. (Aristot. Hist. Anim. iii. 12; Aelian, Hist. Anim. viii. 21; Plin. ii. 106; Vitr. viii. 3, 14.) Homer (II. xiii. 147, &c.) states that the river had two sources close to the city of Ilios, one sending forth hot water and the other cold, and that near these springs the Trojan women used to wash their clothes. Strabo (xii. p. 602) remarks that in his time no hot spring existed in those districts; he further asserts that the river had only one source; that this was far away from Troy in Mount Ida; and lastly that the notion of its rising near Troy arose from the circumstance of its flowing for some time under ground and reappearing in the neighbourhood of Ilios. Homer describes the Scamander as a large and deep river (II. xx. 73, xxi. 15, xxi. 148), and states that the Simois flowed into the Scamander, which after the junction still retained the name of Scamander (II. v. 774, xxi. 124; comp. Plin. ii. 106; Herod. v. 65; Strab. xiii. p. 593). Although Homer describes the river as large and deep, Herodotus (vii. 42) states that its waters were not sufficient to afford drink to the army of Xerxes. The Scamander after being joined by the Simois has still a course of about 20 stadia eastward, before it reaches the sea, on the east of Cape Sigeeum, the modern Kuma Kale. Ptolemy (v. 2, § 3), and apparently Pomp. Mela (I. 18), assign to each river its own mouth, the Simois discharging itself into the sea at a point north of the mouth of the Scamander. To account for these discrepancies, it must be assumed that even at that time the physical changes in the aspect of the country arising from the muddy deposits of the Scamander had produced these effects, or else that Ptolemy mistaken a canal for the Scamander. Even in the time of Strabo the Scamander reached the sea only at those seasons when it was swollen by rains, and at other times it was lost in marshes and sand. It was from this circumstance, that, even before its junction with the Simois, a canal was dug which, situated in a deep vale between the sea, south of Sigeeum, so that the two rivers joined each other only at times when their waters were high. Pliny, who calls the Scamander a navigable river, is in all probability thinking of the same canal, which is still navigable for small barges. The point at which the two rivers reach the sea is now greatly changed, for owing to the deposits at the mouth, the coast has made great advances into the sea, and the Portus Achaeorum, probably a considerable bay, has altogether disappeared. Comp. Leake, Asia Minor, p. 289, foll., and the various works and treatises on the site and plain of ancient Troy. [L. S.]

SCAMANDRIA, a small town of Mycia, no doubt situated on the river Scamander in the plain of Troy (Plin. v. 33; Hieroc. p. 662, where it is called Scambriod). Leake, Asia Minor, p. 276] conjectures that it stood on a hill rising below Bu- nerbuacht. An inscription referring to this town is preserved in the museum at Paris (Chosseau-Gauffier, Voyage Pittoresque, tom. ii. p. 288.) [L. S.]

SCAMBOVIDAE. [Athenae, p. 302, a.]

SCAMPAE. [Ilyricum, Vol. Ii. p. 36, b.]

SCANDARIUM. [Cos.]

SCANDEIA. [Cythera.]

SCANDIA (Σκάνδαλια) or SCANDINAVIA. Until about the reign of Augustus the countries north of the Cumbrian Chersonesus were unknown to the ancients, unless we assume with some modern writers that the island of Thule, of which Pytheus of Maspilia spoke, was the western part of what is now sometimes called Scandinavia, that is Sweden and Norway. The first ancient writer who alludes to these parts of Europe, Pomp. Mela, in the reign of Claudius, states (iii. 3) that north of the Alia there was an immense bay, full of large and small islands, between which the sea flowed in narrow channels. No name of any of these islands is mentioned, and Mela only states that they were inhabited by the Hermiones, the northernmost of the German tribes. In another passage (ii. 6) the same geographer speaks of an island in the Sinus Codanus, which, according to the common reading, is called Codonania, or Candinania, for which some have emended Scandinavia. This island is described by him as surpassing all others in that sea both in size and fertility. But to say the least it is very doubtful as to whether he alludes to the island afterwards called Scandia or Scandinavia, especially as Mela describes his island as inhabited by the Tenontes. The first writer who mentions Scandinia and Scandinavia is Pliny, who, in one passage (iv. 27), likewise speaks of the Sinus Codanus and its numerous islands, and adds that the largest of them was called Scandinavia; its size, he continues, is unknown, but it is inhabited by 500 pugi of Helleviones, who regard their island as a distinct part of the world (after terrarum orbis). In another passage (ii. 30) he mentions several islands to the east of Britain, to one of which he gives the name of Scandia. From the manner in which he speaks in this latter passage we might be inclined to infer that he regarded Scandinavia and Scandia as two different islands; but this appearance may arise from the fact that in each of the passages referred to he followed different authorities, who called the same island by the two names Scandia and Scandinavia. Ptolemy (ii. 11, §§ 33, 34, 35) speaks of a group of four islands on the east of the Cumbrian Chersonesus, which he calls the Scandiniae Insulae (Σκανδαλιαι νησια), and of which the lowest and most eastern one is called Scandia, extending as far as the moon of the Vistula. In all these accounts there is the fundamental mistake of regarding Scandinavia as an island, for in reality it is connected on the north-east with the rest of Europe. Pliny speaks of an immense mountain, Scavi, in Scandinavia, which may possibly be Mount Kjolen, which divides Sweden from Norway, and a southern branch of which still bears the name of See-Rygen. The different tribes mentioned by Ptolemy are inhabiting Scandia are the Chediini (Σκανδαλιαι), Phynuam (Φυνωνα), Phraesi (Φρασωνα), Gutei (Γουται), Dauciones (Δαυκωναι), and Levoni (Λευωνι). At a later time, Jornandes (de Reb. Get. p. 81, &c.) enumerates no less than twenty-eight different tribes in Scandinavia. Tacitus does not indeed mention Scandinia, but the Sitones and Suiones (whence the modern name Scandinavia) must unquestionably be conceived as the most northern among the German tribes and as inhabiting Scandia (Gen. 44, 45). It is well known that according to Jornandes the Goth, and according to Paulus Diaconus (v. 2) the
Longobardi, originally came from Scandinavia. It
deserves to be noticed that the southern part of the
supposed island of Scandia, the modern Sweden,
still bears the name Scania, Scone, or Schwon. Pliny
(viii. 16) mentions a peculiar animal called alicis,
and resembling the alicus, which was found only in
Scandinavia. For further discussions about the va-
rious tribes of Scandanavia, which all the ancients
treated as a part of Germania Magna, see Wilhelm,
Germanien, p. 343, &c.; Zemsa, Die Deutschen, 4th
pp. 77, 156, &c.

SCANDIA, a small island in the northern part of
the Aegean sea, between Paphrethos and Sicyos,
now Skandoia. (Plin. iv. 12. s. 23; Mela, ii. 7.
§ 8.)

SCANDINAVIA. [Scandia.]

SCAPPIE HYLE (Σκάππιος Ηλις, Plat. Cim. 4,
de Exilis, p. 605; Marcellin. Vit. Thucyd. § 19),
or the "fuss wood," settled on the confines of Mace-
donia and Thrace, in the aniferous district of Mr.
Panagaeum, to which Thynikades was exiled, and
where he composed his great legacy for all ages —
the history of the war in which he had served as
general. [E. B. J.]

SCAP'TIA (Edh. Σκαπτής, Scaptiensis: Pas-
erano), an ancient city of Latium, which appears
to have ceased to exist at a very early period. Its
name is found in Dionysius among the thirty cities
of the Latin League (Diony. v. 61); and it therefore
seems probable that it was at that time a considerable,
or at all events an independent, town. No mention
of it is subsequently found in history, but after the
great Latin War it was included in one of the new
Roman tribes created on that occasion (n. c. 352),
to which it gave the name of Scaptian. (Fest. s. v.
Scaptila, p. 343; Liv. viii. 17.) No subsequent
mention is found of the town, and it is only noticed
by Pliny among the "clara oppida" of Latium, which
in his time had utterly disappeared (Plin. iii. 5.
s. 9.). Sallus Italicus also alludes to the "Scaptila-
phutes," but in a passage from which no inference
can be derived (viii. 395). The Scapternes no-
ticed by Suetonius (Aug. 40) and elsewhere were
the members of the Scaptian tribe. There is no
real clue to its position; that derived from the
passage of Festus, from which it has been com-
monly inferred that it was in the neighbourhood of
Pedinum, being of no value. The words "quam Pe-
dani incoelebat," found in all the ordinary editions
date as another, are in fact merely a supplement of
Yustinus, founded on an inference from Livy (viii.
14. 17), which is by no means conclusive. (See
Müller's note.) But supposing that we are justified
in placing Scaptia in this neighbourhood, the site
suggested by Nibby, on the hill now occupied by a
farm or casale called Paserano, is at least probable
enough; the position is a strong one, on the point of
one of those narrow ridges with precipitous sides
between two ravines, which abound in this part of the
Campana. It is about 3 miles W. of Galli-
cano, the presumed site of Pedum; and the exist-
ence of an ancient town on the spot is attested by the
fragments of ancient walls, the large, roughly-
shewn masses of which are found worked up into
more recent buildings. Its situation closely resem-
bles that of Gallicano itself, as well as that of
Zagarato, about 3 miles further S. (where there are
also indications of ancient habitation); and the iden-
tification of any of the three can be little more than
conjectural. (Nibby, Dideram, vol. iii. pp. 70,
71.) [E. H. B.]

SCARB.}

SCARABANTIA (Σκαραβάντια, Ptol. ii. 15. § 5),
a town on the western bank of Lake Pelsio in
Upper Pannonia, on the road leading from Carmentum
to Sabaria. (Plin. iii. 27; It. Ant. pp. 253, 261,
262, 266; Tab. Peut.) According to coins and inscriptions found at the place, it was a municipium with
the surname of Flavia Augusta. Hence it ap-
pears that the reading in Pliny, "Scarabantia Julia," is not correct, and that we must read either Scar-
abantia Flavia, or Scarabantia et Julis. Its site is
now occupied by the town of Oedenburg, in Han-
garian Sopron or Soropen. (Comp. Muchar, Norii-
kom, i. p. 168; Schönwinser, Antiquitates Sabari-
rise, p. 51; Orelli, Inscription. n. 4992.) [L. S.]

SCARRIBA, a town in Rhetaia, between Par-
tarium and Veldibaina, on the road leading from
Augusta Vindelicorum into Italy, occupied the site
of the modern Scarschint. (Tabula Peutingeri-
ne.) [L. S.]

SCARDONA (Σκαρδώνα, Ptol. ii. 17. § 3; Pro-
cop. B. G. i. 7. iv. 23; Plin. iii. 26; Grégoir.
Rav. v. 14; Σκαρδων, Strab. vii. p. 315; Sardina,
Pente. Tab.), a town in the territory of the Liburnii
on the Titius, 12 M. P. from where that river meets
the sea. From the circumstance of its having been one of
the three "conventus" of Dalmatia, it must have been
a place of importance, and was used from early times
as a depot for the goods which were transported by
sea to the coast of Greece (Comp. D. B. ii. 126. 261).
The modern Scardona in Ilyric Scardin or Scardin,
retains the name of the old city, though it does not
occupy the site, which was probably further to the
W. (Wilkinson, Dalmatia, vol. i. p. 191.) Pro-
lemiy (i. i. 17. § 13) has an island of the same name
off the Liberian coast,—perhaps the rocky and cu-
risously-shaped island of Pago. [E. B. J.]

SCARIDUS, SCORDUS, SCORDUS MONS (σο
Σκαρίδος Μονος, Polyb. xxvii. 8; Ptol. ii. 16. § 1),
the desolate heights which are mentioned inci-
dentally by Livy (xiiii. 20, xlv. 31) as lying in
the way from Stymbara to Scordra, and as giving
rise to the Orians. They seem to have comprised
the great summits on either side of the
Drile, where its course is from E. to W. (Leake,
Northern Greece vol. iii. p. 477.) In Kiepert's
map (Europäische Turkei) Scaridus (Schar-Dagh)
extends from the Iljubatrin to Salches; over this
there is a "col" from Kalkendelie to Frisiden at
less than 5000 feet above the level of the sea. Ac-
according to the nomenclature of Griesebach, Scaridus
reaches from the Iljubatrin at its NE. extremity to
the SW. and S. as far as the Klissors of Devel; S.
of that point Pindus commences in a continuation of
the same axis. [E. B. J.]

SCARNUNGA, a river of Pannonia, mentioned
only by Jornandes (de Reb. Get. 52), which it is
impossible to identify from the vague manner in
which it is spoken of. [L. S.]

SCARPHE (Σκαρφή), in Boetia. [Eratosth.
L. S.]

SCARPHIA (Σκαρφία, Hom.; Σκαρφέα, Strab., Paus., Steph. B.; Εθ. Σκαρφέα, Σκαρφεια), a town of the Locri Epoenenii, men-
ned by Homer. (H. ii. 532.) According to
Strabo it was 1 stada from the sea, 30 stadia from Thronium, and a little less from some other place of which the name is lost, probably Nicarea.
(Stab. ix. p. 426.) It appears from Pausanias
that it lay on the direct road from Elateia to
Thermopylae by Thronium (viii. 15. § 3), and
likewise from the Thronian Lictoriae, who states that the Quinouian Di-
minutus marched from Elateia by Thronium and

Digitized by Microsoft®
SCARPOXA.

Scarpeia to Heracleia (xxiii. 3). Hence the town may be placed between the modern villages of "Adora and Malea." (Leake, "Northern Greece," vol. ii. p. 178.) Scarpeia is said by Strabo to have been destroyed by an inundation of the sea caused by an earthquake (i. p. 60), but it must have been after- wards rebuilt, as it is mentioned by subsequent writers down to a late period. (Plin. iv. 7, s. 12; Ptol. iii. 15: § 11; Hieroc. p. 643; Geog. Rav. iv. 10; Const. Porphyry, de Them. ii. 3, p. 51; Bonn.) Scarpeia is also mentioned by Lycophr. 1147; Appian, Syr. 19; and Suet. Divodurum (Serv. 3, x. i. § 2. 28). SCARPONA or SCARPORNA, in Gallia, is placed in the Atonine Itin. and in the Table on a road between Tullum (Toût) and Divodurum (Meeus). The two authorities agree in placing it at the distance of x. from Tullum; but the Itin. makes the distance from Scarpina to Divodurum xii., and the Table makes it xiii. The larger number comes nearer to the truth, for the place is ChâRpomme, on the Mosel. An inscription has been found at ChâPsomme, which is called Gachsfeiz in the modern viarum curand. Sabel. V. S. P. M. Scarpo Civit. Lenc; Scarpeia was in the territory of the Lenci. (Leucell.) Jovinus, Equitum Magister, defeated the Athenians near Scarpona in A.D. 366, in the reign of Valentinian and Valens. (Ann. Mare. xxxvii. 2; D'Arville, Notice, &c.; Uxter, Gallicia, p. 506.) [G. L.]

SCENAE (Scenp). 1. A town of Mesopotamia on a canal from the Euphrates, and on the borders of Babylonia, 18 schoolis from Scincia, and 25 days' journey from the passage of the Euphrates at Zenga. (Strab. xvi. 748.) It belonged to the peaceful and nomadic tribe of the Scenitae, and therefore, though called by Strabo ζήλολαγος πελας, was probably only a city of tents, as, indeed, its name implies.

2. SCENAE MANDRAE, a place in Middle Egypt, on the right bank of the Nile, between Aphroditopolis and Babylon, a little SE. of Memphis. (Hist. Ant. p. 169.) It had a Roman garrison, and in later times became the see of a Christian bishop. (Not. Imp.; comp. Wesseling, ad Itin. L. c.)

3. SCENAE VETERANORUM, a place in Lower Egypt, on an arm of the Nile, and on the road from Heliopolis to Vicus Judaeorum. (Hist. Ant. pp. 165, 169.) It lay SW. of Bubastis. [T. H. D.]

SCENTIATAE (Sceniatae), a general name for various Arab tribes in Pliny, often distinguished by some other appellation. Thus, towards the lower part of the Euphrates, beyond the "Attali latrones, Aro- buum gens," he places the Sceniatae (vi. 26), whom he mentions again more fully (c. 28), "Nomadis inde infestatoreque Chaldaorum Sceniatae, ut diximus dulcunt, et ipsi vagi, sed tabernaculis condonantia, quae cociis mutaurant, ubi libit. Deinde Nabataei," &c. Then again below the confines of the Euphrates and Tigris he places the Nomades Sceniatae on the right bank of the river, the Chaldaei on the left. He speaks also of the Sceniatae Salaciae. Strabo also uses the name in the same latitude of application of many various tribes of Arabia, Syria, and Mesopotamia (see Index, s. v.); but Ptolomy assigns them a definite seat near the mountains which stretch along the north of the peninsula, north of the Thadiatae (ad. Oedipae) and Saracen (vi. 7. § 21); and in this vicinity, towards the Red Sea, it is that Amillanus Marcellus places the Sceniatae Arabs, whom posterity called Saracens (xiii. 681). [SARACEN.] The remark of Bochart is therefore borne out by authorities, "ubi Sceniatae Eratosthenes, ibi Saracens polunt Procoepis et Marciucus. Saraceni nimirum a Sceniitis hoc sollem nutunt, quod Sceniitarn nomen est veteris." (Geogr. sec. vi. s. v. 213.) [G. W.]

SCEPHIS (SnEPIS; Eth. Scaphis), a settlement on the SE. of Myaia, on the river Asaphus, 150 stadii to the SE. of Alexandria Troas, and not far from Dictae, one of the highest points of Mount Ida. It was apparently a piece of the highest antiquity; for it was believed to have been founded immediately after the time of the Trojan War, and Demetrius, a native of the place, considered it to have been the capital of the dominions of Aeaces. (Strab. xiii. p. 607.) The same author stated that the inhabitants were transferred by Scamandrus, the son of Hector, and Assenius, the son of Aeaces, to another site, lower down the Asaphus, about 60 stadia from the old place, and that there a new town of the same name was founded. The old town after this was distinguished from the new one by the name of Palaeoscepsis. For two generations the princes of the house of Aeaces maintained themselves in the new town; but the form of government there became an oligarchy. During this period, colonists from Miletus joined there, and the town instituted a democratic form of government. The descendants of the royal family, however, still continued to enjoy the regal title and some other distinctions. (Strab. l. c. comp. xiii. p. 608; xiv. p. 635; Plin. v. 2; Steph. B. s. v.) In the time of Xenophon (Hill. iii. § 13), Scepsis belonged to Mania, a Dardanian princess; and after her death it was seized by Medias, who had married her daughter; but Dercyllidas, who had obtained admission into the town under some pretext, expelled Medias, and restored the sovereign power to the citizens. After this we hear no more of Scepsis until the time of the Macedonian supremacy, when Antigonus transferred its inhabitants to Alexandria Troas, on account of their constant quarrels with the town of Celene in their neighbourhood. Lysimachus afterwards allowed them to return to their ancient home, which at a later time became subject to the kings of Pergamum. (Strab. xiii. p. 592.) This new city became an important seat of learning and philosophy, and is celebrated in the history of the works of Aristotle. Strabo (xiii. p. 608) relates that Neleus of Sceseis, a pupil of Aristotle and friend of Theophrastus, inherited the library of the latter, which also contained that of Aristotle. After Ne- leus' death the library came into the hands of persons who, not knowing its value, and being unwilling to give them up to the library which the Pergamum kings were collecting, concealed these literary treasures in a pit, where they were exposed to injury from damp and worms. At length, however, they were rescued from this place and sold to Apollion of Teos. The books, in a very mutilated condition, were conveyed to Athens, and thence they were car- ried by Bula to Rome. It is singular that Scylax (p. 36) enumerates Scapsis among the Aeolian coast-towns; for it is evident from Strabo (comp. Demosth. c. Aristo. p. 671) that it stood at a considerable distance from the sea. The town of Palace- cepsis seems to have been abandoned entirely, for in Pliny's time (v. 33) not a vestige of it existed, while Scepsis is mentioned by Hierocles (p. 664) and the ecclesiastical notices of bishops. In the neighbourhood of Scepsis there existed very productive silver mines. It was the birthplace of Deme- trius and Metrodorus. The former, who bestowed much labour on the topography of Troas, spoke of

**SCONE, VOL. II.**
a district, Corybia, near Scepsis, of which otherwise nothing is known. Extensive ruins of Scepsis are believed to exist on an eminence near the village of Eskiuphē. These ruins are about 3 miles in circumference, and 8 gates can be traced in its walls. (Forbiger, Handbuch der Alter. Geogr. vol. ii. p. 147.)

SCHEHIA, Strab. xvi. p. 598, 803, a large town like village of Lower Egypt, situated on the great canal which connected Alexandria with the Canopic arm of the Nile, near Andropolis. At Schebia was the general custom-house for goods, ascending or descending the river, and also the station for the splendid vessels in which the prefects visited the upper kingdom; whence it is singular that it is not mentioned by any later writer than Strabo. Mannert (x. pt. i. p. 601) seeks it on the lake of Abyukir; whilst Reichardt, from the similarity of the name, takes it to have been the modern Dyebi. [T. H. D.]

SCHERIA. [CORCYRA.]

SCHINUS, a small island in the Aegaean sea, one of the Sporades, S. of Naxos. (Plin. iv. 12. s. 68.)

SCHISTE (σχίστη), the name of the road leading from Delphi into Central Greece, which was more particularly applied to the spot where the road divided into two, and which was called τριής κέλευθος, reckoning the road to Delphi as one of the three. Of the other two roads, the NE. led to Daulis; the SE. part into two, one leading to Trachis and Leidaeia, the other to Ambrym and Stiris. At the spot where the three roads met was the tomb of Laus and his servant, who were here slain by Oedipus. It must have stood at the entrance of the Ζινωνική Δέρνη, or opening between the mountains Cipyris and Panaeus, which leads to Delphi. The road from this point becomes very steep and rugged towards Delphi, as Pausanias has described it. (Aeschyl. Oed. Tyr. 733; Emp. Phoën. 38; Paus. ii. 2. § 4, x. § 5; Leake, Northern Greece, vol. ii. p. 105.)

SCHIZION (Σχίζωνος), the name of several towns, from the reeds or rushes growing in their neighbourhood. 1. (usually Σχίζωνος), a town in Boeotia, mentioned by Homer (Il. ii. 497), and placed by Stabo upon a river of the same name in the territory of Thebes, upon the road to Athens, and at the distance of 50 stadia from Thebes. (Strab. ix. p. 408; Eustath. ad loc.; Steph. B. s. s.; Nicias, Theocr. 885; Plin. iv. 7. § 142.) This river is probably the stream flowing into the lake of Hylaea from the valley of Morlēi, and which near its mouth is covered with rushes. Niceront is clearly wrong, who makes (I. c.) the Schizonus flow into the lake Copains. (Ullrichs, Reisen, p. 258; Leake, Northern Greece, vol. ii. p. 320.) Schizonus was the birthplace of the celebrated Atalanta, the daughter of Schoenus (Paus. viii. 35. § 10); and hence Statius gives to Schizonus the epithet of "Atalantas." (Stat. Theb. vii. 267.)

2. A town in the centre of Macedonia near Methydrama, which was said to have derived its name from the Boeotian Schoenus. (Paus. viii. 35. § 10; Steph. B. s. v.; Leake, Peloponnesia, p. 240.)

3. A harbour in the Corinthia. [CORNITHUS, p. 683, a.]

4. A river near Maroneia in Thrace, mentioned only by Mela (ii. 2. § 8).

SCHIOUX, a bay on the west coast of Caria, on the south-east of the Cudian Clarenacus, and opposite the island of Syme. (Pomp. Mela, i. 16; Plin. v. 29.) It should be observed, however, that this description of the bay of Schoenus is only conjectural, and based upon the order in which Pliny mentions the places in that locality. [L. S.]

SCIA (Σία: Eth. Σιαεως), a small town in Euboea (Steph. B. s. v. Σιας), probably in the territory of Eretria, since Pausanias (iv. 2. § 3) mentions Sciaum as a district belonging to Eretria.

SCIAS. [MEGALOPOULOS, p. 309, b.]

SCINIUS, a person. [PAPYRUS, p. 635, s. a.]

SCITIUS (Σιτίος: Eth. Σιτιεως: ΣΧιαω), a small island in the Aegaean sea, N. of Euboea, and a little E. of the Magnesian coast of Thessaly, as described by Pliny as 15 miles in circumference (iv. 12. s. 23). It is said to have been originally colonised by Pelasgians from Thrace, who were succeeded by Chalidians from Euboea. (Seym. Ch. 584.) It possessed two towns, one of which was also called Scitus, but the name of the other is unknown. (Seylax, p. 23; Hudson; Strab. ix. p. 436; Ptol. iii. 13. § 47.) It is frequently mentioned in the history of the invasion of Greece by Xerxes, since the Persian and Egeian fleets were stationed near its coasts. (Herod. vii. 176, 179, 182, 183, viii. 7.) It afterwards became one of the subject allies of Athens, but was so insignificant that it had to pay only the small tribute of 200 drachmae yearly. (Fraya, Eleon. Epigr. 52.) The town of Scitus was destroyed by the last Philip of Macedonia, c. 200, to prevent its falling into the hands of Attalus and the Romans. (Liv. xxxi. 28, 45.) In the Mithridatic War it was one of the haunts of pirates. (Appian, Mithr. 29.) It was subsequently given by Antony to the Athenians. (Appian, B. C. v. 7.) Scitus was celebrated for its wine (Athen. i. p. 30, f.), and for a species of fish found off its coasts and called κεφτία. (Athen. i. p. 4, c.; Fulius, vi. 63.) The modern town lies in the SE. part of the island, and possesses an excellent harbour. The inhabitants have only been settled here since 1829, previous to which time their town stood in the NE. part of the island upon a rock projecting into the sea, and accessible only upon one side, as more secure against the pirates. Ross says that the new town stands upon the site of the ancient city, but the latter was not the homonymous capital of the island, which occupied the site of the old town in the NE. part of the island, as appears from an inscription found there by Leake. The ancient city in the NE. of the island, upon which the modern town now stands, is probably the second city mentioned by Scytax, but without a name. (Ross, Wunderung in Griechenland, vol. ii. p. 50; Leake, Northern Greece, vol. iii. p. 111.)

SCIDRUS (Σιδρος: Eth. Σιδριαως, Stephan. B. Supr. 3), a Greek city on the coast of Lucania, on the Tyrrhenian sea, between Pyxus (Buxentum) and Laos. It is mentioned only by Herostratus (vi. 21), but we learn that it was, as well as Laos, a colony of Syracuse, and was one of the places to which the surviving inhabitants of that city retired, after its destruction by the Crotomiats. It does not appear from his expressions whether these towns were then first founded by the fugitives, or had been previously settled as regular colonies; but the latter supposition is much the more probable. It is singular that no subsequent trace is found of Scidrus, its name is never again mentioned in history, nor alluded to by the geographers, with the exception of Stephaniu of Byzantium
SCILLUS.

(a. r.), who calls it merely a "city of Italy." We have therefore no clue to its position; for even its situation on the Tyrrhenian sea is a mere inference from the manner in which it is mentioned by Herodotus in conjunction with Lais. But there exist at Supri, on the Gulf of Policastro, extensive remains of an ancient city, which are generally considered, and apparently not without reason, as indicating the site of Scillus. They are said to consist of the remains of a theatre and other public buildings of this town, as well as of the Albanian near its port. (Antonini, loc. cit., part ii. c. 11; Romanelli, vol. i. p. 377.) This last is a remarkable landlocked basin, though of small extent; and it is singular that, even if the town had ceased to exist, no allusion should be found to the existence of this secure port, on a coast almost wholly destitute of natural harbours. But the high mountains which shut it in and debar it from all communication with the interior probably prevented it from ever attaining to any importance. Supri is at the present day a mere fishing village, about 6 miles E. of Policastro.

[BE. H. B.]

SCILLUS (Σκιλλός; Eth. Σκολλώντιος), a town of Triphylia, a district of Elis, situated 20 stadia south of Olympia. In v. c. 572 the Sciliotes assisted Pyrrhus, king of Pisa, in making war upon the Eleians; but they were completely conquered by the latter, and both Pisa and Scillus were razed to the ground. (Paus. v. 6. § 4, vi. 22. § 4.) Scillus remained desolate till about n. c. 392, when the Lacedaemonians, who had a few years previously compelled the Eleians to renounce their supremacy over their dependent cities, colonised Scillus and gave it to Xenophon, then an exile from Athens. Xenophon resided here more than twenty years, but was expelled from it by the Eleians soon after the battle of Leuctra, n. c. 371. He has left a description of the place, which he says was situated 20 stadia from the Sacred Grove of Zeus, on the road to Olympia from Sparta. It stood upon the river Selinus, which was also the name of the river flowing by the temple of Artemis at Ephesus, and like the latter it was abounded in fish and shell-fish. Here Xenophon, from a tenth of the spoils acquired in the Asiatic campaign, dedicated a temple to Artemis, in imitation of the celebrated temple at Ephesus, and instituted a festival to the goddess. Selinus stood amidst woods and meadows, and afforded abundant pasture for cattle; while the neighbouring mountains supplied wild hogs, roebucks, and stags. (Xen. Anab. v. 3. §§ 7—13.) When Pausanias visited Scillus five centuries afterwards the temple of Artemis still remained, and a statue of Xenophon, made of Pentelic marble. (Paus. v. 6. § 5, seq.; comp. Strab. vii. pp. 344, 387; 1 Pth. de Excit. p. 568.) There are no remains to identify Scillus, but there can be no doubt that it stood in the woody vale, in which is a small village called Roua, and through which flows a river falling into the Alpheius nearly opposite the Clades. (Leake, Morca, vol. ii. p. 213, seq.; Peloponnesian, p. 9; Bohaye, Recherche, g. e. p. 133; Curtius, Peloponneso, vol. ii. p. 91.)

SCINCOMAGUS (Σκινκόμαγος). This place is first mentioned by Strabo (v. 179), who says, when he is speaking of one of the passes of the Alps, that from Ebrotumum (Embrun) on the Gallic side through Brigantium (Brioncusa) and Scincomagus and the passes between them, the limit of the land of Cottius is 99 miles; and at Scincomagus Italy begins; and the distance from

SCIRI. 931

Scincomagus to Oeculum is 27 miles. (See Greskov's note on the passage, Trans. Strab. i. p. 369.) Pliny also (ii. 108) makes Italy cease at the Alps at Scincomagus, and then he gives the breadth of Gallia from Scincomagus to the Pyrenees and Illyria. (See the notes and emendations in Har- douin's edition.) It appears then that Scincomagus was at the foot of the Alps on the Italian side; and if the position of Oeculum were certain, we might probably determine that of Scincomagus, which must be on the line of the passage over the Alps by the Most Grovère. It was a great mistake of Bouche and Harduin to suppose that Scincomagus was the same as Segniss or Sasa. D'Anville guesses that Scincomagus may be a place which he calls "Chamlat de Siquin, at the entrance of the Col de Cestriviers, which leads from the valley of Étance (Cesano) into that of Pra-gelas." As usual, he relies on the resemblance of the ancient and modern names, which is often useful evidence; for "masga" in Scincomagus is merely a common Gallic name for town. D'Anville also supposes that this position of Scincomagus is confirmed by the site of Oeculum, as he has fixed it. [OECULUM.] But all this is vague.

[GL.]

SCIO'NE (Σκιόνη, Herod. vii. 123, viii. 128; Thuc. iv. 120—123, 133, v. 32; Strab. vii. p. 320; Pomp. Mela, ii. 2. § 11; Plin. iv. 17: Eth. Σκιόνων, Herod.; Σκιόνως, Steph. B. c. v.), the chief town on the isthmus of Pallene in Macedonia. Although it called itself Achaean, like many other colonial towns, in defaul of any acknowledged mother-city, it traced its origin to warriors returning from Troy. Under concert with Brasidas the Scionians proclaimed their revolt from Athens, two days after the truce was sworn, March, B. C. 421. Brasidas, by a speech which appealed to Grecian feeling, wound up the citizens to the highest pitch of enthusiasm. The Athenians, furious at the refusal of the Lacedaemonians to give up this prize, which they had gaine after the truce, passed a resolution, under the instigation of Cleon to kill all the grown-up male inhabitants of the place, and strictly besieged the town, which Brasidas was unable to relieve, though he had previously conveyed away the women and children to a place of safety. After a long blockade Scione surrendered to the Athenians, who put all the men of military age to death, and sold the women and children to slavery. The site of this ill-fated city must be sought for between the capes Palae and Posidn. (Leake, Northern Greece, vol. iii. p. 157.)

SCHRAIDUM. [SALAMIS].

SCHIRI or SCHIRI, a population variously placed by various authors. The first who mentions them is Plyn (iv. 13. s. 27), who fixes them in Enitogia, i. e. in the parts to the NE. of the extreme frontier of what he and his contemporaries call Germania, i. e. East Prussia, Courland, Livonia, Esthonia, and part of Pomerania; "quae haec habitabat ad Vistulam usque flavium a Sarmaticis, Veneditis, Schiris, Hierias, traduxit." No other author either mentions the Huri or places the Schir thus far northward.

The most interesting notice of them is in the so-called Oliban inscription (Böckh, Javcr. no. 2058), wherein they are mentioned as dangerous neighbours to the town of Oliba along with the Galatae, the Thiasamatae, the Scytheae, and the Scuduratae (Zeros, Die Deutschen, g. e. p. 243); and, doubtless, the neighbouring town of Oliba was their true locality.

The evidence of Jernandes makes them Alans ("Sciri et Satagarcii eteri. Aegyptum," B C. Get. 49), evidence which is important, since Peria, the notary of the Alan king Candax, was the writer's grandfather. They are made by Sismondi (Corr. vili. 322) part of Attia's army, by Jernandes subjects of Odœar, by Procopius members of the Goth and Alan alliance. They were, almost certainly, a Scythian tribe of Kherson, who during the period of the Greek settlements harassed Obia, and, during the Byzantine period, joined with the other barbarians of the Lower Danubia to attack them. Of these, the chief confederates were the Heruli and Turcilingi; with whom they found their way as far west as Bavaria. The present country of Styria (Styger marca) = the March of the Sciri or Scirca, the change from Sc to Ste being justified by the Bavarian Count von Schiern in one part of a document of the 10th century being made a Comes de Stiria in another.

Add to this the existence of a Nemus Sciritum in Bithynia (Liv. x. 45). [R. G. L.]

SCIRITIS (ἡ Ξηρότης: Eth. Ξηρότης, fem. Ξηρότης), a rugged and barren mountainous district, in the north of Lacia, between the upper Eurotas on the west and the Oenus on the east, and extending north of the highest ridge of the mountains, which were the natural boundary between Lacia and Arcadia. The name probably expressed the wild and rugged nature of the country, for the word signified hard and rugged (σκυρός, σκυρός, σκυρός, ἕμυχνω). It was bounded by the Macedonians on the north, and by the Pharsalians on the west, and was originally part of Arcadia, but was conquered at an early period, and its inhabitants reduced to the condition of Lacedaemonian Perioeci. (Steph. B. s. v. Ξηρός; Thuc. v. 33.) According to Xenophon they were subjected to Sparta even before the time of Lycurgus. (De Rep. loc. c. 12.) They were distinguished above all the other Perioeci for their bravery; and their contingent, called the Ξηροτιτικοί Ἀχίλλεως, 600 in number, usually occupied the extreme left of the Lacedaemonian wing. (Thuc. v. 67, 68.) They were frequently placed in the post of danger, and sometimes remained with the king as a body of reserve. (Xen. Cyg. iv. 2 § 1; Hell. v. 2 § 24; v. 4 § 52; Diod. xvi. 32.) On the first invasion of Lacedaemon by the Thebans the Sciritae, together with the Perioeci of Caryae and Sebasia, revolted from Sparta, in consequence of which their country was subsequently ravaged by the Lacedaemonians. (Xen. Hell. viii. 24 § 1.) The only towns in the Sciritae appear to have been Scirca and Oenae, called by Xenophon. The latter is the only place in the district mentioned in historical times (Oeiμ.). Scirias may perhaps have been the same as Scritium (Σκρητίους), a town of Aegystis. (Paus. viii. 27 § 4; Steph. B. s. v.)

The road from Sparta to Tegea, which is the same as the present road from Sparta to Tripolis, led through the Sciritae. (Lekk. Morea, vol. iii. p. 28; Böhlere, Recherches, p. 75; Ross, Reisen in Peloponnes, p. 178; Curtius, Peloponnesos, vol. ii. p. 263.)

SCOLUS. SCIRONIA SAXA. [Megara, p. 316, b.]

SCIRIA. [Sciri.]

SCIRITANA. A station on the Egyptian road, between Brucida (Pretaba) and Cætra or Parembole. The name is no doubt connected with that of the Scintones (Σκιτόνες), whom Ptolemy (ii. 17, § 8) couples with the Dassaretian Thirustae as Illyrian tribes near Macedonia. [E. B. J.]

SCIRONIA. [Sciriana.] SCIRTONIUM. [Scirittium.]

SCIRUS (Σκίρος, Proop. de Aed. ii. 7), a river of Morea, a western tributary of the Chaboras (Cladion). It flowed from 25 sources, and ran past Edesia. (Chron. Edes., in Asseman, Bibl. Or. i. p. 388.) Its name, which signifies the skipping or jumping (from σκυρός), is said to have been derived from its rapid course and its frequent overflows; and its present name of Duismos means the same thing. [T. H. D.]

SCIRUM. [Attica, p. 526, a.]

SCITTIUM. [Scutis.] SCODRA. (ἡ Σκόδρα, Proop. i. 16. (17.) § 12; Σκόδρα, Hieroc. p. 656; Eth. Scodrunes, Liv. xiv. 26), one of the more important towns of Roman Illyricum (Montenegro), the capital of the Labentes, seated at the southern extremity of the lake Labacis, between two rivers, the Chausilus on the E., and the Barbanma on the W. (Liv. xiv. 31), and at a distance of 17 miles from the sea-coast (Plin. iii. 22. s. 26). It was a very strong place, and Genius, king of the Illyrians, attempted to defend it against the Romans, n. c. 168, but was defeated in a battle under the walls. Pliny erroneously places it on the Drilo (L. c.). At a later period it became the chief city of the province Praevalitana. It is the present Scutari, which is also the name of the lake Labacis. (Wilkinson, Dalmatic and Montenegro, vol. i. p. 476.) [T. H. D.]

SCOLLIS (Σκόλλοις), a mountain between Elia and Achaia, now called Soudaermistikos, 3333 feet high, from which the river Larissas rises, which forms the boundary between Achaa and Elia. Strabo describes it as adjacent to Mount Lampain, which was connected with the range of Erymanthus. (Strab. viii. p. 341.) Strabo also identifies it with the "Oeolian Rock" of Homer. (H. ii. 617; Strab. viii. p. 357; Leake, Morea, vol. ii. pp. 184, 230; Peloponnesiac, p. 203.)

SCOLITI. [Scithia.]

SCOLUM (Σκολος, Thuc. v. 18; Strab. ix. p. 408), a town of Chalcidice near Olympos, mentioned together with Spartoa, in the treaty between Athens and Sparta in the tenth year of the Peloponnesian War. [E. B. J.]

SCOLUM (Σκολος: Eth. Σκόλος, Σκολάτης), a town of Boeotia, mentioned by Homer (H. ii. 497), and described by Strabo as a village of the Panorama below Citharex (ix. p. 408). Pausanias, in his description of the route from Philea to Thbes, says, that if the traveller were, instead of crossing the Aenus, to follow that river for about 30 stades, he would arrive at the ruins of Scolum, where there was an unfinished temple of Demeter and Ceres (ix. 4 § 4). Mardonius in his march from Taenagia to Plataea passed through Scolum. (Herod. ix. 15.) When the Lacedaemonians were preparing to invade Boeotia, n. c. 377, the Thebans threw up an intrenchment in front of Scolum, which probably extended from Mt. Citharon to the Aeuspe. (Xen. Hell. v. 4 § 14, Agrig. 2.) Strabo says that...
Socinus was so disagreable and rugged ('γραφόμενος') that it gave rise to the proverb, "never let us go to Socinus, nor follow any one there" (ix. p. 408). Leake places Socinus just below the projection of Cithaeron, on a little rocky table-hill, overlooking the river, where stands a medeobii dependent on a convent in the Euflethis, called St. Meletius. (Northern Greece, vol. ii. p. 330.)

Scobiria. [Scobiria.] SCOBIRIA, Scobiria Strab. iii. p. 159), an island on the S. coast of Spain in front of the bay which formed the harbour of Cartagia Nova, and 24 stadia, or 3 miles, distant from the coast. It derived its name from the aemebii, tunny-fish, or mackerel, which were found in these great quantities, and from which the Romans prepared their garum. (Plin. xxxi. 8. s. 43.) It was also called Hercules Insula. Now Islotes. [T. H. D.]

Scobiria. [Scobiria.] SCOBIRUS, SCOBIRUS (Σκοβίρος, n. Σκόβιρος, Thuc. ii. ii. 96; Aristot. Meteor. i. 13; Scopins, Plin. iv. 17: Hist. Σκοβίρος, Herod.), an outlying mountain of the chain of Haemus, or that cluster of great summits between Ghiatamalid and Sofia, which sends tributaries to all the great rivers of the N. of European Turkey. As the most central point, and nearly equidistant from the Euxine, the Aegean, the Adriatic, and the Danube, it is probably the Haemus of the traveller's tale in Livy (xl. 21), to which Philip, son of Demetrios, king of Macedo- 

na, made a fruitless excursion with the expec-

tation of beholding from thence at once the Adriatic and the Euxine (Black Sea), the Danube and the Alps. (Leake, Northern Greece, vol. iii. p. 474.) [E. B. J.]

SCOMIUS. [SCOMIUS.] SCOPAS (Σκόπας), an eastern tributary of the Sangarius in Galatia, which according to Ptolemaios (de Aest. v. 4) joined the Sangarius, 10 miles east of the town of Juliaepolis. Pliny (v. 45) calls it Scopos, and according to Ptolemaios this river fre-

quently overflowed the country, which is perhaps alluded to in the Jerusalem Itinerary (p. 574), where a station called Hyeronomous (i. e. ιέρόνομος) is mentioned about 13 miles to the east of Julaepolis. The modern name of the river is Aludan. (Comp. Leake, Asia Minor, p. 79; Eckehl, Doctr. Nom. iii. p. 101.)

SCOPES. [Halonnesius.] SCOPIL. [SCOPIL.]

SCOPIA (Σκοπία ἥμηρα), a headland on the west coast of Caria, to the west of Myopus, and opposite the island of Cos. (Ptol. v. 2. § 10.) Strabo (xiv. p. 658) mentions two headlands in the same vicinity, Astypalaia and Zephyron, one of which may possi-
bly be the same as Scopis. [L. S.]

SCORDISCI (Σκόρδισκοι), a powerful Celtic tribe, in the southern part of Lower Pannonia, between the rivers Savus, Dravus, and Dabubius. They and the Beli were overpowered by the Danians. (Strab. vii. pp. 293, 313.) Some call them an Illyrian tribe, because, living on the borders of Illy-

ricum, they were much mixed up with them. They were in the end greatly reduced by their struggles with the Danians and the Triballii, so that when they came in contact with the Romans they were really subdued. (Appian, Illyr. 3; Liv. xl. 23; Justin. xxxii. 3; Plin. iii. 25; Ptol. ii. 16. § 3.) In Pannonia they were to have gradually become assimilated to the Pannonians, whereas in later times they disappear from history as a distinct na-
tion or tribe. [L. S.]

SCOREDOCUS. [SCYDREUS.]

SCORDUS MONS. [SCARUS.] SCOTANE. [CLEITOR, p. 663, a.]

SCOTTI. The Scotti were the ancient inhabitants of Hibernia, as appears from notices in some of the Latin writers. (Claudian, de IV. Cons. Honor. 33, de Laud. Stil. ii. 251; Oros. i. 2.) For several centuries Ireland was considered as the land of the Scotti, and the name of Scotia was equivalent to that of Hibernia. (Ibid. Orig. xiv. 6; Beda, i. 1, 4; Geogr. Eux. i. 3, v. 32; Alfred the Great, op. Oros. p. 30, &c.) We have no accounts respecting the subdivisions of the Scotti; but perhaps they are to be sought in the names of the Irish counties, as Munster, Leinster, Ulster, Connaught. Ammiannus mentions the Scotti, in conjunction with the Atta-

cotti, as forming formidable devastations (xxvii. 8. § 4). According to St. Jerome (adv. Juv. v. 2. 201, ed. Mart.) they had their wives in common; a custom which Dion Cassius represents as also prevailing among the kindred race in Caledonia (Ixxvi. 12.) At a later period the names of Scotia and Scotti vanish entirely from Ireland, and become the appellations of the neighbouring Caledonia and its inhabitants. This was effected through a migra-

tion of the Scotti into Caledonia, who settled to the N. of the Clyde; but at what time this hap-

dened, cannot be ascertained. Beda (i. 1) states that it took place under a leader called Fenda. The new settlement waged war with the surrounding Picts, and even against the Anglo-Saxons, but at first with little success. (Id. i. 24, iv. 36.) Ut-

limately, however, in the year 839, under king Keneth, they succeeded in subduing the Picts (Fordun, Scot. Hist. ap. Gale, i. 659, seq.,) and the whole country N. of Sceby Frith subsequently obtained the name of Scotiae. (Comp. Zesig, Die Deutschen u. die Nachbarsstate, p. 563; Gibbon, vol iii. p. 265, and notes, ed. Smith.) [T. H. D.]

SCOTTAS. [LAGONIA, p. 113, b.]

SCOTTUSA (Scottus, Scotus). Plin. iv. 17. s. 18: Eth. Scotussaei, Plin. iv. 17. s. 18. a station on the road from Heraclea Sintica to Philippi, which passed round the N. of the lake Cercinian, answering to the place where the Strymon was crossed just above the lake. (Leake, Northern Greece, vol. iii. p. 227.) [E. B. J.]

SCOTTUSA (Σκοτουσσα or Σκοτουσσα), an ancient town of Pelasgiots in Thessaly, lying between Phere and Pharsalus, near the frontiers of Phthiotis. Scottus is not mentioned in Homer, but according to some accounts the oracle of Dodona in Epirus originally came from this place. (Strab. vii. p. 329.) In b.c. 394 the Scottusaei joined the other Thessalians in op-

posing the march of Agesilus through their country. (Xen. Hell. iv. 3. § 3.) In b.c. 367 Scottus was treacherously seized by Alexander, tyrant of the neighbouring town of Pherae. (Diod. xv. 75.) In the territory of Scottus were the hills called Cynoscaphalae, which are memorable as the scene of two battles, one fought in b.c. 364, between the Thebans and Alexander of Pherae, in which Pelopidas was slain, and the other, of still greater celebrity, fought in b.c. 197, in which the last Philip of Macedonia was defeated by the Roman consul Flaminius. (Plut. Polyb. 82; Strab. ii. p. 299; Polyb. xvii. 3. 441; Polyb. xviii. 3. seq. and xviii. 9. seq.) In b.c. 191 Scottus surrendered to Antiochus, but was recovered shortly afterwards, along with Pharsalus and Pherae, by the consul Acilius. (Liv. xiii. 9, 14.) The ruins of Scottus are found at

3 o 3
SCULTEXXA.

P. Plin. [L. Kth.] in vol. 11, p. 27; comp. Wilhelm, Germanien, p. 253.)

SCYLACIUM.

which is unknown. (Ptol. ii. 11. § 27; comp. Wilhelm, Germanien, p. 253.)

SCYDISES (Σκυδίς), a chain of rugged mountains in the east of Pontus, which was connected in the north with the Moschiei Montes on the east, and with Mons Paryadrea on the north-west, while in the south-west it was connected with Anti-

SCULTEXXA (Σκυδίς), a town of Galatia (v. 397, xii. § 8, where it is called Σκυδίς). Modern travellers identify it with the Teuhambé Bel (Wiener Jahrbiicher, vol. ep. 21.)

SCYDIA (Σκύδια: Εθν. Σκυδιός), a town of Emathia in Macedonia, which Ptolemy places between Tyrrisa and Mieza. (Steph. B. s. r. v.)

SCYLA (Σκύλακος), an ancient Pelasgian town of Mycia, on the coast of the Propontis, east of Cyzicus. (Steph. B. s. r. v.) In this place and the neighbouring Placia, the Pelasgians, according to Herodotus (i. 57), had preserved their ancient language down to his time. Sclayx (p. 35) mentions only Placia, but Meina (i. 19) and Piny (v. 40) place both of them as still existing. These towns seem never to have borne of any importance, and were decayed at an early period. (Cramer, Ancient Greece, vol. p. 228.)

SCYLANCUM or SYLLETIUM (Σκυλάντιος, Steph. B., Strab.; Σκυλάδιος, Ptol.: Εθν. Σκυλάντιος: Scylace), a town on the E. coast of Bruttium, situated on the shores of an extensive bay, to which it gave the name of Scylletium Sincs. (Strab. vi. p. 261.) It is this bay, still known as the Gulf of Squillace, which invests the coast of Bruttium on the E. as deeply as that of Hippocratis or Tarvis (the Gulf of St. Eufemia) does on the W., so that they have but a comparatively narrow isthmus between them. (Strab. l. c.; Ptol. iii. 10. s. 15.) BRUTTUM.] According to a tradition generally received in ancient times, Squillium was founded by an Athenian colony, a part of the followers who had accompanied Menestheus to the Trojan War. (Strab. l. c.; Ptol. l. c.; Serv. ad Aen. iii. 533.) Another tradition was, however, extant, which ascribed its foundation to Ulysses. (Cassiod. Histor. 115; Serv. ad Aen. 1155.) According to this, certain ancient inscriptions can be attached to such statements, and there is no trace in historical times of Squillium having been a Greek colony, still less an Athenian one. Its name is not mentioned either by Sclayx or Scevmns Chius in enumerating the Greek cities in this part of Italy, nor is there any allusion to its Athenian origin in Tuscynades at the time of the Athenian expedition to Sicily. We learn from Diodorus (xii. 3) that it certainly did not display any friendly feeling towards the Athenians. It appears indeed, during the historical period of the Greek colonies to have been a place of inferior consideration, and a mere dependency of Crotona, to which city it continued subject till it was wrested from its power by the elder Dumi-

Muss, who assigned it with its territory to the Locrians. (Strab. vi. p. 261.) It is evident that it was still a small and unimportant place at the time of the Second Punic War, as no mention is found of its name during the operations of Hannibal in Bruttium, though he appears to have for some time had his head quarters in its immediate neighbourhood, and the place called Castra Hannibalis must have been very near to Squillium. (Castra Han-

SCULTEXXA, a river of Bociia Caspulana, and one of the principal of the southern tributaries of the Padus. (Pieron iii. 16. 20; P. Diac. Hist. Long. iv. 47.) It crosses the Acarnian Way about 5 miles E. of Mutina (Modena), and falls into the Po a little below Bondeno, being the last of the tributaries of that river which now flow into its main stream. In the lower part of its course it now bears the name of Panaro, but in the upper part, before it leaves the valleys of the Apennines, it is still known as the Scultenna. It has its sources in one of the lowest and most rugged groups of the Apennines, at the foot of the Monte Cimone, and from thence flows for many miles through a deep and winding valley, which appears to have been the abode of the Ligurian tribe of the Frinactes. The district still bears on old maps the title of Frigieno. (Ala-

SCUTUREXXA (Σκυδίς), a town of the Roman consul C. Claudius, in which the former were defeated with great slaughter (Liv. xii. 12, 18); but the site of the battle is not more exactly indicated. Strabo speaks of the plains on the banks of the Sculturexxa, probably in the lower part of its course, as producing wool of the finest quality. (Strab. v. p. 218.)

SCUTUREXXA (Σκυδίς), Pont. i. iii. § 6, viii. § 5; Hieroc.; Niceph. Bryenn. iv. 18; Geogr. Rav. iv. 15; τὰ Σκύδια, Anna Comn. iv. p. 253; Σκυδίς, Procop. de Aed. iv. 4; Orelli, Inscri. 1790: Unckelh.), a town which, from its important position at the delothecher from the Ilyrian into the plains of Paeniae and the Upper Axios, was in all ages the frontier town of Illyrican towards Macedonia. There is no evidence of its ever having been possessed by the kings of Macedonia or Paenia. Under the Romans it was ascribed to Bocetis, as well in the time of Padome as in the fifth century B.C. In a. c. 177 the banks of the Sculturexxa were the scene of a decisive conflict between the Illyrians and the Roman cons-

SCYDISES (Σκυδίς), a chain of rugged mountains in the east of Pontus, which was connected in the north with the Moschiei Montes on the east, and with Mons Paryadrea on the north-west, while in the south-west it was connected with Anti-

Scullexxa (Σκυλάδιος) in vol. 9, p. 454, seq.)

which was wrested from the emperor by the Servians, and became the residence of the Kral (Cantacuzenus, p. 778.) Finally, under Sultan Bayezid, Scupi, or the "Bride of Râmíli," received a colony of Ottoman Turks (Chalcondylew, p. 31). (Lenke, Northern Greece, vol. iii. Carte Italo, tav. 16.)

SCURGUM (Σκύργιος), a town in the north of Germany, in the territory of the Helveroons, between the Viadus and the Vistula, the exact site of
SCYLAX.

NIGALIS. I. In B.C. 124 the Romans, at the instigation of C. Gracchus, sent a colony to Scylaceum, which appears to have assumed the name of Mine- 
vium or Colonia Minervia. (Vell. Pat. i. 15; Mom- 
msen, in Berichte der Sichsischen Gesellschaft der 
Wissenschaften, 1849, pp. 49—51.) The name is 
written by Velleius "Scolaitum," and the form "Sco- 
lacium" is the sole insertion in an inscription of 
Antinous Pus, from which it appears that the place 
must have received a fresh colony under Nero. (Orell 
Inserv. 136; Mommsen, l.c.) Scylaceum appears to 
have become a considerable town after it received 
the Roman colony, and continued thus throughout 
the Roman Empire. (Mel. ii. 4. § 8; Plin. iii. 10. 
§ 15; Ptol. iii. 1, § 11.) Towards the close of this 
period it was distinguished as the birthplace of 
Cassiodorus, who has left us a detailed but rhetorical 
description of the beauty of its situation, and fertility 
of its territory. (Casiod. Vari. xii. 15.)

The modern city of Squillace is a poor place, with 
only about 4000 inhabitants, though retaining its 
episcopal see. It stands upon a hill about 3 miles 
from the sea, a position according with the descrip-
tion given by Cassiodorus of the ancient city, but it 
is probable that this occupied a site nearer the sea, 
where considerable ruins are said still to exist, 
though they have not been described by any modern 
traveler.

The SCYLLÆUS SINUS (Scyllæus,aco) or 
Gulf of Squillace, was always regarded as dan-
gerous to mariners; hence Virgil calls it "navifra-
gum Scyllæum." (Aen. iii. 555.) There is no 
natural port throughout its whole extent, and it 
still bears an evil reputation for shipwrecks. The 
name is found in Aristotle as well as Antiochus of 
Syracuse, but would seem to have been unknown to 
Thucydiades; at least it is difficult to explain other-
wise the peculiar manner in which he speaks of the 
Terasiæan gulf, while relating the voyage of Gy-
 lippus along the E. coast of Brutitum. (Thuc. vi. 
104; Arist. Pol. vii. 10; Antich. ap. Strab. vi. 
p. 254.)

SCYLAX (Scyllas), the chief tributary of the 
Iris in Pontus; it had its sources in the east of 
Galatia, and flowing in a north-western direction, 
emptied itself into the Iris near Eupatorias and 
Magnopolis. (Strab. xii. p. 547.) Its modern name is 
Thtorolc Irenak. (Hamilton, Researches, vol. i. 
p. 365. 374.)

SCYLLAÉUM (Scylarau,α), a promontory, 
and town or fortress, on the W. coast of Brutitum, 
about 15 miles N. of Rhegium, and almost exactly 
at the entrance of the Sicilian strait. The 
promontory is well described by Strabo (vi. 
p. 257) as a projecting rocky headland, jutting 
out into the sea, and united to the mainland by a 
< 2 > narrow neck or isthmus, so as to form two small but 
well sheltered bays, one on each side. There can 
be no doubt that this rocky promontory was the one 
which became the subject of so many fables, and 
which was represented by Homer and other poets as 
the abode of the monster Scylla. (Hom. Od. xii. 
73, &c. 235, &c.; Biogr. Dict. art. SCYLLA.) But 
the dangers of the rock of Scylla were far more 
fabulous than those of its neighbour Charybdis, and 
it is difficult to understand how, even in the infancy 
of navigation, it could have offered any obstacle more 
formidable than a hundred other headlands whose 
names are unknown to fame. (Smyth's Sicily, p. 107.) At a later period Anax-
lus, the despot of Rhegium, being struck with the 
_ "natural" position of the promontory, fortified the 
rock, and established a naval station there, for the 
purpose of checking the incursions of the Tyrrhenian 
pirates. (Strab. vi. p. 257.) In consequence of this 
a small town grew up on the spot; and hence Pliny 
speaks of an "oppidum Scyllæum," but it was pro-
bably always a small place, and other writers speak 
only of the promontory. (Plin. iii. 5. § 10; Mel. ii. 
4. § 8; Ptol. iii. 1, § 9; Steph. Byz. a. v.) At 
the present day the rock is still occupied by a fort, 
which is a post of considerable strength, while a 
small town stretches down the slopes towards the 
two bays. The distance from the castle to the op-
etposite point of the Sicilian coast, marked by the 
Torr of Ferro, is stated by Capt. Smyth at 6047 
yards, or rather less than 31 Eng. miles, but the 
strait afterwards contracts considerably, so that the 
width between the Ponta del Pesco (Caenys Prom.) 
and the nearest point of Sicily does not exceed 3971 
yards. (Smyth's Sicily, p. 108.) [E. H. B.]

SCYLLÆUM (Scyllal), a promontory of Troezenia, 
and the most easterly point of the Pelopon-
nessus, is said to have derived its name from 
Scylla, the daughter of Niusus, who, after betraying 
Megara and Nasa to Minos, was thrown by the 
latter into the sea, and was washed ashore at this 
point. Scyllaena formed, along with the 
other promontory of Sunium in Attica, the 
entrance to the Saronic gulf. It is now called 
Koroskyli; but as Pausanias, in the paraphras from 
Scyllæum to Hermione, names Scyllaena first, and 
then Bucephala, with three adjacent islands, it is 
necessary, as Leake has observed, to divide the 
province thus known as Koroskyli into two parts; the 
bold round promontory to the N. being the true 
Scyllæum, and the whole cape opposite to it 
Bucephala, since the three islands are adjacent to 
the latter. (Paus. ii. 34. §§ 7, 8; Scylax, p. 20; 
Hudson; Strab. viii. p. 373; Thuc. v. 53; Plin. iv. 
5. s. 9; Mela, ii. 3; Leake, Morea, vol. ii. p. 462, 
Peloponnacitca, p. 282; Bobbeye, Rockeche, p. 59; 
Curtius, Peloponneseus, vol. ii. p. 452.)

SCYLLÆICUS SINUS. [SCYLLACTUM.]

SCYRAS. [Lacotia, p. 114, b.]

SCYROS or SYCRUS (Scyros; Eth. Scylas; 
Scyro), an island in the Aegean sea, and one of the 
northern Sporades, was so called from its rugged-
ness. It lay east of Euboea, and contained a town 
of the same name (Stab. iv. p. 436; Scylax, p. 23; 
Ptol. iii. 13. § 47), and a river called Cephasus. 
(Strab. iv. p. 424.) Scyros is frequently mentioned 
in the stories of the mythical period. Here Thetis 
concealed her son Achilles in woman's attire among 
the daughters of Lycomedes, in order to save him 
from the fate which awaited him under the walls 
of Troy. (Apollod. iii. 13. § 8; Paus. i. 22. § 6; 
Strab. iv. p. 436.) It was here also that Tyrrhus, 
the son of Deidamia by Achilles, was brought up, 
and was fetched from thence by Ulysses to the 
Trojan War. (Hom. H. xix. 392, Od. xi. 507; 
Soph. Phil. 239, seq.) According to another tradi-

Digitized by Microsoft®
tion Scyros was conquered by Achilles (Hom. II. i. 668; Paus. i. 22. § 6); and this conquest was connected in the Attic legends with the death of Theseus. After Theseus had been driven out of Athens he retired to Scyros, where he was first hospitably received by Lycomedes, but was afterwards treacherously hurled into the sea from one of the rocks in the island. It was to revenge his death that Pelas sent Achilles to conquer the island. (Plut. Thes. 33; Paus. i. 22. § 6; Polyb. 9. 19.) Scyros is said to have been originally inhabited by Thracians, Carions, and Dolopians; and we know from Timaeides that it was still inhabited by Dolopians, when it was conquered by Cimon after the Persian wars. (Nicolaus Damasc. ap. Steph. B. s. v.; Suidas, chs. 580, seq.; Timoc. i. 93; Dion. xi. 60.) In b. c. 476 an oracle had directed the Athenians to bring home the bones of Theseus; but it was not till b. c. 469 that the island was conquered, and the bones conveyed to Athens, where they were preserved in the Theseum. Cimon expelled the Dolopians from the island, and peopled it with Athenian settlers. (Thuc. ii. 4.; Plut. Thes. 36, Cim. 8; on the date of the conquest of Scyros, which Clinton erroneously places in b. c. 476, see Grote, History of Greece, vol. v. p. 409.) From this time Scyros was subject to Athens, and was regarded even at a later period, along with Lemnos and Imbros, as a possession to which the Athenians had special claims. Thus the peace of Autalikidas, which declared the independence of all the Greek states, nevertheless allowed the Athenians to retain possession of Scyros, Lemnos, and Imbros (Xen. Hell. iv. 8. § 15, v. 1. § 31); and though the Macedonians subsequently obtained possession of these islands, the Romans compelled Philip, in the peace concluded in b. c. 196, to restore them to the Athenians. (Liv. xxxii. 30.) The soil of Scyros was unproductive (Dem. c. Callip. p. 1238; Eustath. ad Hom. II. ii. p. 782; Suidas, s. a.póγα Σκύρου;) but it was celebrated for its breed of goats, and for its quarries of variegated marble. (Strab. ix. p. 457; Athen. i. p. 28, xii. p. 549; Xen. Hell. ii. 15; Plut. xxxvi. 16. s. 26.)

Scyros is divided into two parts by a narrow isthmus, of which the southern half consists of high rugged mountains. The northern half is not so mountainous. The modern town of St. George, on the eastern side of the island, stands upon the site of the ancient town. It covers the northern and western sides of a high rocky peak, which to the eastward falls steeply to the sea; and hence Homer correctly describes the ancient city as the lofty Scyros (Σκύρος ἀνώτατος, II. i. 664). The Heliconian walls are still traceable in many parts. The city was barely 2 miles in circumference. On the isthmus south of Scyros a deep bay still retains the name of Achilli (Ἀχήλλα), which is doubtless the site of the Acheirole, or sanctuary of Achilles, mentioned by Eustathius (ad II. ii. 662). Athens was the divinity chiefly worshipped at Scyros. Her temple stood upon the shore close to the town. (Stat. Achille, i. 285, ii. 21.) Turenne says that he saw some remains of columns and cornices of white marble, close by a forsaken chapel, on the left hand going into the fort of St. George; these are probably remains of the temple of Athena. (Turenne, Voyage, vol. i. p. 334, trans.; Leake, Northern Greece, vol. iii. p. 106, seq.; Fiedler, Reise, vol. ii. p. 65; Ross, Wanderungen in Griechenland, vol. ii. p. 32, seq.)

SCYTHIA.

SCYTHUS (Σκύθος), a tributary of the Alpheus, in southern Arcadia. [Miroslavolas, p. 309, b.]

SCYTHIA (ος Σκύθος, η Σκύθη) Edit. Bezoldus, Scytha), the country of the Scyths, a vast area in the eastern half of Northern Europe, and in Western and Central Asia. Its limits varied with the differences of date, place, and opportunities of information on the part of its geographers. Indeed, to a great extent, the history of Scythia is the history of a Name.—It is obvious that the term came from the Greeks to the Romans; in this respect unlike Sarmata, Dacia, and others, which, in form at least, are Roman rather than Greek. But whence did the Greeks get it? for it is by no means either significant in their tongue, or a Greek word at all. They took it from one or more of the populations interjacent between themselves and the Scyths; these being Thracians, Sarmatians, and Getae. Probably all three used it; at any rate, it seems to have been used by the neighbours of the Greeks of Ophiopolis, and by the Thracians on the frontiers of the Greeks of Macedonia. This is in favour of its having been a term common to all the forms of speech between Macedonia and the Borysthenes. Scyth-, then, is a Sarmatian, Thracian, and Getic term in respect to its introduction into the Greek language. Was it so in its origin? The presumption as well as the evidence is in favour of its having been so. There is the express evidence of Herodotus (iv. 6) that the population which the Greeks called Scythae called themselves Scotti. There is the fact that the Persian equivalent to Scythe was Sakaha. Thirdly, there is the fact that in the most genuine-looking of the Scythic myths there is no such eponymus as Sythya or Scythes, which would scarcely have been the case had the name been native. Scyth-, then, was a word like German or Alaman, as applied to the Deutsche, a word strange to the language of the population designated by it, but not strange to the language of the neighbouring countries. To whom was it applied? To the tribes who called themselves Scoti.

What was the extent of the term? Did it apply not only to the Scotti, but to the whole of the class to which the Scotti belonged? It is safe to say that, at first, at least, there were many congeners of the Scotti whom no one called Scythe. The number, however, increased as the term became general. Did the name denote any populations of a different family from the Scotti? Rarely, at first; afterwards, frequently. If the populations designated by their neighbours as Scythe called themselves by some other name, what was that name? Scotti applied only to a part of them. Had the word Scythe a meaning in any language? if so, what was it, and in what tongues? Both these points will be noticed in the sequel, the questions involved in them being at present premature, though by no means unimportant.

The knowledge of the Scythian family dates from the beginning of Greek literature.

SCYTHIANS ON HISTORY, ETC.—Populations belonging to the Scythian family are noticed by Homer under the names of Abii, Glaucothagi, and Hippemolagi, the habit of milking their mares being as definite a characteristic of a Scythian as anything in the way of manners and customs can be. Hesiod gives us Scythe under that name, noting them also as Hippemolagi. The Scyths of Homer and Hesiod are poetical rather than historical nations. They are associated with the Myrs of Bulgaria (not of Asia),
SCYTHIA.

97

a point upon which Strabo enlarges (viii. 3 § 7, 8). They are Hammaxobii (τὰ Ἡμμαξοβία την ἀκραῖα τῆς θαλάσσης), and ἡμμαξοβία. Aeschylus mentions them as ἐν ἠμμαξοβίᾳ. The apparent simplicity of their milk-drinking habits got them the credit of being men of mild and ino- cent appetites with Ephorus (Strab. vii. p. 302), who contrasts them with the cannibal Samnites. There was also an apparent confusion arising out of the likeness of Nymphal to Νυμφαί (from νύμφος—νύμφος). The Prometheus of Aeschylus is bound to one of the rocks of Caucasus, on the distant border of the earth, and the inaccessible desert of the Scythians.

Such are the Scythae of Aeschylus and Hesiod. The writers of the interval, who knew them as the invaders of Asia, and as historical agents, must have had a very different notion of them. Fragmentary allusions to the evils inflicted during their intrroads are to be found in Callimachus, Archilochus, &c. The notice of them, however, belongs to the criticism of the historical portion of the account of

PLAINS-DANUBIAN SCYTHIANS OF HERODOTUS: SCOLOTI: SCYTHIANS OF HIPPOCRATES.—Much of the Herodotean history is simple legend. The strange story of an intermarriage of the females who, whilst their husbands were in Asia, were left behind with the slaves, and of the rebellion therein originating, had been put down by the expedition, as the part of the returning masters, of the whips with which the backs of the rebels had been previously but too familiar, belongs to the Herodotean Scythians (iv. 1—6). So do the myths concerning the origin of the nation, four in number, which may be designated as follows:—

1. The Account of the Scythians themselves.—This is to the effect that Targitius, the son of Zeus by a daughter of the river Borysthenes, was the father of Leipzoxai, Arpoxai, and Colazoxai. In their reign, there fell from heaven a yoke, an axe (ἐχαίρομαι), a plough-share, and a cup, all of gold. The two elder failed in taking them up; for they burnt when they approached them. But the younger did not fail; and ruled accordingly. From Leip- zoxai descended the Achaedai (Ἀχαείδαι); from Ar- poxai the Catari and Trasipes; from Colazoxai the Paratalai. The general name for all is "Sco- lodi, whom the Greeks call Scythe." This was exactly 1000 years before the invasion of Darius. The gold was sacred; the country large. It ex- tended for nearly the whole of Europe, and to the Great, Middle, and Little Hordes of the Kir- giz; and it must be observed that the words great- est and middle (μεγέστη καὶ μεσή) are found in the Herodotean account. They may be more tech- nical and definite than is generally imagined. In the account there is no Eponymous, no Scythe, or even Scobot. There is also the statement that the Scythians are the youngest of all nations. This they might be, as immigrants.

2. The Account of the continual Greeks.—This is to the effect that Agathyrus, Gelonus, and Scythes (the youngest) were the sons of Hercules and Echidna, the place where they met being the Ilyeae. The son that could draw the bow was to rule. This was Scythes, owing to manoeuvres of his mother. He stayed in the field; the others went out. The cup appears here as an emblem of authority.

3. The Second Greek Account.—This is historical rather than mythological. The Massagetae press the Scythians upon the Cimmerii, the latter flying before them into Asia. This connects the history of the parts about the Bosphorus with Media. The inference from the distribution of the Cun- merian occupancy confirms this account. There were the burial-places of the Cimmerii on the Turas; there was the Cimmerian Bosporus, and between them, with Cimmerian walls, Scythia (ἡ Σκύθεια). This is strong evidence in favour of Scythian ex- tension and Cimmerian pre-occupation.

4. The Account of Aristes of Proconnesus.—This is a speculation rather than either a legend or a piece of history. Aristes (More, History of Greek Literature, v. ii. 469, sq.) visited the country of the Issedones. North of these lay the Ari- naspi; north of the Aminaspi the Monopthalmi; north of the Monopthalmi the Gold-gnading Grif- fins (Πρύντες χρυσοφαλακόσ). and north of these, the Hyperborei. The Hyperborei made no movements; but the Grifins drove the Monopthalmi, the Mono- ptalmithi the Afinaspi, the Aminaspi the Issedones, the Issedones the Scythians, the Scythians the Cimmerians, the Cimmerians having to leave their land, but they, as we learn elsewhere, attack the Medes. (Herod. iv. 5—16). No one had ever been further north than Aristes, an unsafe authority. The information of Herodotus himself is chiefly that of the Greeks of the Borysthenes. He mentions, however, conversations with the steward of one of the Scythian kings.

The Emporium of the Borysthenaei was central to the Scythia of this period. In the direction of the Hypanis, i.e. west and north-west, the order of the population was as follows: the Calipidai and Alazones (Σαλατρες Σκυθίων), sowers and con- sumers of corn; to the north of whom lay the Scytha Aratres, not only sowers of corn, but sellers of it; to the north of these the Neuri; to the north of the Neuri either a desert or a terra incognita (iv. 17, 18). The physical geography helps us here. The nearer we approach the most fertile province of Modern Russia, the more we place the Scythe Aratres, the more the Scythian character becomes agricultural. The Hellenic Scy- thia (Calipidai and Alazones) belong more to Kherson. That the Hellenes Scythe were either a mixed race, or Scythicised Greeks, is unlikely. The doctrine of the present writer is as follows: seeing that they appear in two localities (viz. the Govern- ments of Kherson and Caucasus); seeing that in each of these the population of the later and more historical periods are Scythian (Ptolemy's form for those of Kherson is Alani); seeing that even the Alani of Caucasus are by one writer at least called Ἀλάνι- ερτες Ἀλανοί; seeing that the root Ἀλας might have two plurals, one in -ος and one in -ες, he ends in seeing in the Hellenic Scythians simply certain Scy- thians of the Alani name. Neither does he doubt about Golonii being the same word,—forms like Chuni and Hunni, Arpa and Carpi being found for these party. At any rate, the locality for the Calipidai and Alazones under this name. A possibility that the of the Scythian Greeks and Golonii of Caucasus suits that of the Alans of the fourth and fifth centuries.
SCYTHIA.

The Scythian affinities of the Neuri are implied rather than categorically stated; indeed, in another part there is the special statement that the Tiras rises out of a great lake which separates the Scythian and Neurid countries (τὰς Νευριδικὰς καὶ τὰς Νεο-

Πεδεδὰς τὰς). This, however, need not be made to prove too much; since the Scythians that were conterminous with the Neuri were known by no special name, but simply by the descriptive term Scythe or Norae, [Examplea: Neuri.] In Siberian geography Nargn = marsh. Hence Neuri may be a Scythian gloss. There may also have been more Neuri than one, e.g. on the Nargn of the headwaters of the Dnieper, i.e. of Pisk. A fact in favour of the Neuri being Scythian is the following. The occupants of Volgaya, when its history commences, which is as late as the 13th century, are of the same stock with the Scythians, i.e. Tatarian Turks. Not only is there no evidence of their introductions being recent, but the name Omani (Lygii Omani) appears about the same parts in Ptolemy.

East of the Borysthenes the Agricultural Scythie occupy the country as far as the Panticapae, 3 days distant. Northwards they extend 11 days up the Black River, where they are succeeded by a desert; the desert by the Andropagi, a nation peculiar and by no means Scythian (c. 19). Above the Andropagi is a desert.

The bend of the Dnieper complicates the geography here. It is safe, however, to make Ekat-

Tableinae the chief Georige area, and to add to it parts of Ker, Kheran, and Poltava, the agricultural conditions increasing as we move northwards. The two deserts (ερήμου) command notice. The first is, probably, a March or political frontier, such as Deseret was chosen to have between the Scythian and their neighbours; at least, there is nothing in the conditions of the soil to make it a natural one. It is described as ερήμως ἐπὶ παλαιας. The other is ερήμως ἀλόγως,—a distinction, apparently, of some value. To be natural, however, it must be intrepreted forest rather than steppe. kurak and Tcher-

ingo give us the area of the Andropagi; Kurak having a slight amount of separate evidence in favour of its having been “by no means Scythian” (c. 19).

The Ilvaia, or woodel district of the Lower Dnieper, seems to have been common ground to the Scytheo Georgi and Scytheo Nomades; or, perhaps, it was uninhabited. The latter extend 14 days eastward, i.e. over Taurida, part of Ekatiner stalne, and Don Koukta, to the Gheynia.

The Palaces (τὰ καλλιέρας βασιλεία) succeed; their occupants being the Royal Scythians, the best and most numerous of the name, who look upon the others as their slaves. They extend, southwards, into the Crimea (τας ταϊσσεπας); and, eastwards, as far as the ditch dug by the spire of the blind slaves (the statement that the Scythians blinded their slaves on account of the milk being one of the elements of the strange Servile legend previously noticed), and the Maecotic Emcriyion called Kremm. Some touch the Tarnais.

North of the Royal Scythians lie the Melanchlaeni (A probable translation of Kropalpah = black hunter), a different nation and not Scythian (c. 205), with marshes, and either a desert or a terræ incognita above them. This distinction is, almost certainly, real. At the present moment a population, to all appearances aboriginal, and neither Slavonic nor Scythian (but Ugrian or Finn), occupies parts of

Penza and Tambo! having, originally, extended both further west and further south. To the north the forest districts attain their maximum development. [Melanchlaeni.] The Royal Scythians may have occupied the parts of Mordvin, or.

East of the Tarnais it was no longer Scythia, but the Adyżei of the Sarmatians. [See Sarmatiae; Budini; Geloni; Thyassaetae: Iurcae.] The want of definite boundaries makes it difficult to say where the Iurcace end. Beyond them to the east lay other Scythians, who, having revolted from the Royal, settled there. Up to their districts the soil was level and deep, beyond it rough and stony, with mountains beyond. These are occupied by a nation of Bald-heads, flat-nosed and bearded, Scythians in dress, peculiar in language, collectors of a substance called σκρύς from a tree called ποντικός (c. 23). Their flocks and herds are few; their manners so simple that no one injures them, &c. [Aegippiani; Issedones; Hyperboraei; Animapie.] In the parts about the mountains of the Argippinian trade was carried on by means of seven interpreters.

Let this be the caravan trade of Orenburg, near its terminus on the Volga, and we shall find that seven is about the number of languages that could at the present moment be taught together at a fair in the centre of Orenburg. For the modern Russian take the language of the Sarmatians; for the Scythian that of the modern Tartars. To these we can add four Ugrian forms of speech,—the Tshu-

wash, the Mordvin, the Tseremen, and the Nottik, with the two forms of speech akin to the Ostik and Perman to choose the fifth. From the Tshuwash of Kazan and the Bashkirs of Orenburg have mixed characters at the present time,—Turk and Ugrian.

The present country of the New Scythia was the Ister [Danubius], with its five mouths; and then the Tiras (Dniester), the Hypanis (Bug), the Borysthenes (Dnieper), the Panticaps [see s. e.], the Hypanis [see Cacina], the Gheynia [see s. e.], and the Tarnais [Don]; the feeders of the Ister (i.e. the rivers of the present Danubian Principalities) being the Podna (Scythe, in Groek Puretus), the Tarantsos, the Araranes, the Napariss, and the Ordessos [ce. 47, 48]. To these add, from the country of the Ancient Scythe, the Araranes (c. 49), or modern, Maros or Transylvania. The difference between the ancient and modern names of rivers is nowhere greater than here,—the Maros being the only name now in use which represents the original one; unless we choose to hold that, word for word, Aluta = Araros. Word for word, indeed, Napariss is Dnieper; but then the rivers are different. This creates a grave difficulty in the determination of the language to which the names of the Scythian rivers should be referred. Yet the question is important, inasmuch as, in the names, as they come down to us, we have so many glosses of some language other or another. Upon the whole, however, the circumstances under which they reached Herodotus suggest the notion that they are Scythian: c. e. the express statement that Porta is a Scythian form. Again: Hypanis is, word for word, Kaban,—a word of which the appearance in both Asia and Europe is best explained by supposing it to be Scythian. On the other hand, they are as little significant in the language which, amongst those at present existing, best explains the undoubted Scythian glosses, as they are in the Slavonic, Latin, or Greek.

The physical geography of Herodotean Scythe was a steppe, with occasional districts (chiefly along
the courses of the rivers and at their head-waters) of a more practicable character.

MOUNTAINS.—These were the eastern continuation of the Carpathians, and the hills of the Crimea or Tauris. These were but imperfectly known to Herodotus.

LAKES. [See Exampaeus and Buce.] Towns, exclusively Greek colonies. [See Oldropoli; Panticapaeum.]

Beyond the Sunnomatae (s. v.) lay "other Scythians, who, having revolted from the Royal, reached this country," i.e. some part of Orenburg (c. 22).

Thirdly, there were the Saca, whom we may call the Scythians of the Persian frontier. Their occupancy was the parts conterminous with Bactria, and it was under Darins, the son of Hystaspes, that they, along with the Bactrians, joined in the invasion of Greece. Their dress was other than Bactrian, consisting of a pointed turban, a bonnet, leggings, native bows, daggers, and the axe called σάμαρρα —a word which is probably technical. There were Scylthae Amyrgii, truly, however, Scylthae, inasmuch as the Persians called all the Scythians by the name Saca. Under the reign of Cyrus they were independent. Under Darins, they, along with the Caspian, formed the 15th satrapy (iii. 93). This connects them with their frontiers on the west, rather than the east.

There is no difficulty, however, in fixing them. From Asteroead to Balc they extended along the northern frontier of Persia, in the area, and probably as the ancestors, of the present Tarcomans and Uzbecks. The name Amyrgii will be noticed in the sequel.

The Saca, if not separated from the other Scythians by the greater part of Independent Tartary, were, at any rate, a population that presented itself to the informants of Herodotus under a different aspect. The Saca were what the Persians found on their northern frontier. The eastern Scylthae were the Scythians beyond the Sunnomatae, as they appeared to the occupants of the parts about the Tanais.

It is not difficult to see the effect of these three points of view upon future geographers. With Scythians in Transylavia, Scythians in Orenburg, with Scythians (even though called Saca) in Khurasan and Tarcomania, and with a terra incognita between, the name cannot fail to take upon itself an indeterminate amount of generality. The three isolated areas will be connected; and the historical or ethnological unity will give way to a geographical. At present, however, there is a true unity over the whole of Scythia in the way both of physiognomy and manners. —The physical conformation of the Scythians is not only mentioned incidentally by Herodotus, but in a more special manner by Hippocrates; the Scythian is widely different from the rest of mankind, and is like to nothing but itself, even as is the Egyptian. Their bodies are thick and fleshy, and their limbs loose, without tone, and their bellies the smoothest (?), softest (?), moistest (?) (κοιλας βυστριας) of all bellies as to their lower parts (παρειαν κοιλαιναι αι εσπαρα); for it is not possible for the belly to be dried in such a country, both from the soil and climate, but on account of the fat and the smoothness of their flesh, they are all like each other, the men like the men, the women like the women." (Hippocr. de Aere, &c. pp. 291, 292.)

SCYTHIA. Coming as this notice does from a physician, it has commanded considerable attention; it has, however, no pretensions to be called a description, though this has often been done. In the hands of later writers its leading features become exaggerated, until at length the description of a Scythian becomes an absolute caricature. We may see this by reference to Ammianus Marcellinus and Jornandes, in their accounts of the Huns. The real fact inferred from the text of Hippocrates is, that the Scythians had a peculiar physiognomy, a physiognomy, which the modern ethnologist finds in the population of Northern and Central Asia, as opposed to those of Persia, Caucausus, Western and Southern Europe.

Their general habita were essentially nomadic, pastoral, and migratory; the commonest epithets or descriptive appellations being Αμακόδιαι, Φερρικάκια, Λιονμωρώκια, and the like.

Concerning their Religion, we have something more than a mere cursory notice (iv. 59). (1.) Tabiti (Ταβίτι): This was the Scythian name for the nearest equivalent to the Greek Ηλια (Vesta), the divinity whom they most especially worshipped.

(ii.) Papaes: "Most properly, in my mind, is Zeus thus called." So writes Herodotus, thinking of the ideas engendered by such exclamations as Πάρας. (iii.) Apis: This is the name for earth: as (iv.) Otoxys (Οτώκυς) is for Apollo, and (v.) Artippaea for Aphrodite, and (vi.) Thanimassada for Poseidon, the God of the Royal Scythians most especially. To Otoxys we have the following remarkable inscription (Guæ Inscrip. Antig. p. 56. 2; see Xenos, s. v. Skythen): ΒΕΑΙ. ΣΕΛΕΟΤΩΝΚΤΡΑ (? ΣΕΛΥΝΤΡΑ) ΖΩΝΟΤΒΣΗΟΝ ΤΩΟΡΟΝΗΝ ΜΕΒΡΑ. Μ. ΟΤΑΠΙΟΣ ΠΛΟΚΑΜΟΣ ΝΕΚΣΩΡΟΣ ΑΝΕΟ ΓΗΜΕ. Here the connection is with the Persian god Mitras.

The Scelotii sacrificed to all their gods, but to Mars the most especially; for, besides the deities which have been mentioned under their several Scythian names, Mars and Hercules were objects of particular adoration. The Scythian Vens, too, was the 'Απόστιρος ηλιαίς. To Ares, however, they sacrificed most especially and most generally; for there was a place of worship to him in every νόμος (mark the use of this word, which is applied to the divisions of the Persian empire as well), where horses, sheep, and captives were sacrificed, and where the emblem of the god was an iron sword—even as it was with the Avars of Ammianus and the Huns of Priscus.

Human beings were sacrificed, but no swine. Neither were swine eaten, nor were they tolerated in the country. This is noticed, because in many of the nations of Northern Asia, e. g. the Wotians and others, the hog, even now, is held in abomination, and that by Pagan tribes unmixtured with Mahometanism.

Notwithstanding the praises of the earlier poets, the wars of the "just and illustrous" Scythians were of a piece with the worship of their war-god. They scalped their enemies, and they used their skulls as drinking cups (cc. 64—65). Once a year the monarch of each nome filled a vast vat with wine and apportioned it to the warriors who had killed most enemies during the year. Those whose hands were stained got none, and were disgraced; those who had killed many took a double allowance (cc. 66). Their soothsayers, amongst other superstitions, practised rhombomancy, amongst whom the Enarees
SCYTHIA.

These however, take. The nature of this ἥλεξια νοσοῦς has yet to be satisfactorily explained.

The sacerdotal and regal relations are curious. When the king ails he calls his priests, who tell him that his ailment comes from some one having fore-worn himself in the greatest oath a Scythian can take. This is "by the heart of the king." Take it falsely, and the king will sicken. Upon sickness, however, he sends for the offender, whom the priests have indicated. The charge is denied. Other priests are sent for. If their vaticinations confirm the earlier ones, death and confiscation are the fate of the perjurer. Otherwise, a third set is called. If, these agree in the condemnation of the first, a load of faggots, drawn by bullocks, is brought in, the lying priests have their hands bound behind them, the faggots are set a-light to, the beasts are gathered into a group by the flames of which, then the men are burnt to death, and the bullocks scattered, singed, or burnt to death also. The sons of the offending perjurer are killed, his daughters left unhurt.

Their oaths were made over a mixture of wine and blood. The swearers to them punctured themselves, let their blood fall into a vat of wine, drank the mixture, and dipped in it their daggers, arrows, javelin, and adygos.

The tombs exhibited in their burials was of the same kind. The tombs of the kings were on the Gershms. Thither they were brought to be buried, wherever they might die. They were entombed with sacrifices both of beasts and men, Hippothisia, Anthropothisia, and Suttee—all these characterised the funeral rites of the Scythians ὀικεύεται τοις ἄνθρωποις.

LANGUAGE.—The specimens of this fall into two divisions, the Proper and the Common Names. The former are the names of geographical localities and individuals, in one way or the other, they are numerous; at least they appear so at first. But we rarely are sure that the fact itself coincides with the first presumptions. The names of the rivers have been noticed. Of these of the gods, none have been definitely traced to any known language in respect to their meaning. Neither have they been traced to any known mythology as Proper Names. Next come the names of certain kings and other historical individuals, none of which have given any very satisfactory place for the old Scythian.

With the Common Names (and under the class of Common Names we may place such Proper Names as are capable of being translated) the results improve, though only slightly. Of these terms the chief are the following:—

(i.) Ψαλατσσος = Sacred Wages or τα 'Οσα, the name of a well-head. (See v. s. v.) (ii.) Οὐδῆπος = οὐδεπόρος = Μν.-Killers, a name applied by the Scythians to the Avars. Here ὀπο = name, σόρα = ill (iv. 110). (iii.) Σετεριτα = Murer Marius, applied to the Euxine. This is not from Herodotus, but from Pline (vi. 7). (iv.) Αριανος = Αριάνος, one-eyed = θρων = one, στοων = eye. (Herod. iv. 27) These will be considered under the head of Ethnology.

SCYTHIA.

History.—The Herodotean view of the Scythians is incomplete without a notice of the historical portion of his account; not that the two parts are, by any means, on the same level in the way of trustworthy information. The geography and descriptions are from contemporary sources. The history is more or less traditional. Taking it, however, as we find it, it falls into two divisions:—1. The Invasion of Asia by the Scythians; and 2, The Invasion of Scythia by Darius.

1. Invasion of Asia by the Scythians.—In the reigns of Cyaxares king of Media and of Sadyattes king of Lydia, the Scythians invade Asia, bodily and directly. They had previously invaded the country of the Cimmerians whom they had driven from their own districts on the Maeotis, and who were thus thrown southwards. The Scythians pressed the Cimmerians, the Massagetae the Scythians. Chains of cause and effect of this kind are much loved by historians. It is only, however, in the obscure portions of history that they can pass unchallenged. The Cimmerians take Sardis during the last years of the reign of Aris (n. c. 629.) They are expelled by Alyattes, his son. (Herod. i. 15, 16.) It seems therefore that the Cimmerians were followed up by their ejectors; inasmuch as five years afterwards (n. c. 624) the Scythians themselves are in Media; Cyaxares, who was engaged upon the siege of Nineveh (Ninus), was being called back to oppose them. He is defeated; and the Scythians occupy Asia for 28 years, Cyaxares surviving their departure. From Media they direct their coeurs towards Egypt; from the invasion of which they are diverted by Psammitichus. Their attack upon the temple of the Venus Urania, in Ascension, during their passage through Palestine, along with its mysteries σεσαλως, has been already noticed. The king who led them was named Moiyyes. (Her. i. 105.) They were ejected n. c. 596.

There was a band of Scythians, however, in Media, in the reign of Croesus, n. c. 555, the account of which is as follows. Cyaxares, still reigning, receives a company (εἰμι) of Scythians, as suppliants, who escape (ὑπεξαίρετο) from Lydia into Media. He treats them well, and sends his son to them to learn the use of the bow, along with the Scythian language, 'until he finds that their habits of hunting and robbing are intolerable. This, along with a particular act of atrocity, determines Cyaxares to eject them. They fly back to Alyattes, who refuses to give them up. But Alyattes dies, and the quarrel is entailed upon his son, Croesus. The battle that it led to was fought May 28, n. c. 553, when the eclipse predicted by Thales interrupted it.

The Scythian invasion might easily be known in its general features to both the Greeks of Asia and the Jews; and, accordingly, we find sufficient allusions to an invasion of northern barbarians, both in the Scriptures and in the fragments of the early Greek poets, to justify us in treating it as a real fact, however destitute of confirmation some of the Herodotean details may have been. (See Mure's Critical History, gi. vol. iii. p. 153, seq.) Though frequently revived from his time then.

2. Invasion of Scythia by Darius.—It is, probably, a more accurate piece of history. Darius invades Scythia for the sake of inflicting a chastisement for the previous invasion of Asia. This had been followed, not by any settlement of the Scythians elsewhere, but by a return home. The strange
SCYTHIA.

story of the Servile War of Whips belongs to this period.

When the approach of Darius becomes threatening, the Geloii, Buduni, and Suromatas join with the Scythians in resisting it; the Agathystii, Neuri, Androphagi, Melanchlaeni, and Tauri reserving themselves for the defence of their own territory if attacked (iv. 119). To the three constituents of the confederacy there are three kings, Scopasis, Ianthynus, and Taxacis, each with an allotted district to defend. This was done by means of the grass and tillage, driving off the flocks and herds, and corrupting (we can scarcely translate σερχηῦαν by poisoning) the wells. The points whereon attack was anticipated were the frontiers of the Danube and the Don. These they laid waste, having sent their own wives and children northwards. The first brunt of the war fell upon the Buduni, whose Wooden City was burnt. Darius then moved southward and westward, pressing the other two divisions upon the countries of the Melanchlaeni, Neuri, and Acythynus. The latter warn the Medes against encroaching on the frontier. Ianthynus answers enigmatically to a defiance of Darius. Scopasis tampers with the Ionians who have the custody of the bridge over the Danube. The Medes suffer from dearth, and determine to retreat across the Danube. The Scythians reach the passage before them, and require the Ionians to give it up. And now appears, for the first time, the great name of Miltiades, who is one of the commanders of the guard of the bridge. He advises that the Scythians should be conciliated, Darius weakened. A half-measure is adopted, by which the Scythians are taught to distrust the Ionians, and the Medes escape into Thrace—so ending the Scythian invasion of Darius. (Herod. iv. 120—142.)

Criticism of the Herodotean Account.—The notices of Herodotus upon the Scythe, though full, are excessive rather than systematic. Part of their history appears as Lydian, part as Scythian Proper. There is much legend in his accounts; but the chief obscurities are in the geography. Even here the details are irregular. One notice arises out of the name Scythe, another out of the geography of their rivers, a third out of the sketch of Tauris. [See Taurus and Tauruscynthiae.] In this we hear that Scythia is bounded first by the Agathyrsi, next by the Neuri, then by the Androphagi, and lastly by the Melanchlaeni. The area is four-cornered; the longest sides being the prolongations along the coast and towards the interior. From the Ister to the Borysthenes is 10 days; 10 days more to the Maeotis; from the coast to the Melanchlaeni, 20 days—200 stadia to each day's journey. If this measurement be exact, it would bring Tula, Tumblr, Rhoaz, Sc., within the Scythian area,—which is going too far. The days' journeys inland were probably shorter than those along the coast. The Agathysti were in Trans-Caucasus, on the Marus. The evidence, or want of evidence, as far as the text of Herodotus goes, is the same as it is with the Neuri. Their frontiers were known as Scytalae Aretes, i.e., the generic name was with them specific. Hence any Scythians whatever with a specific name must have been contrasted with them; and this seems to have been the case with the Agathyryns. [Huxley, p. 1097.] Assuming, however, the Agathyrsi to have been Scythian, and to have lain on the Marus, we carry the Herodotean Scythean as far west as the Thessii; nor can we ex-

clude them from any part of Wallachia and Moldavia. Yet these are only known to Herodotus as the country of the Sigynnes. The frontier, then, between the Scytheans and Getae is difficult to draw. Herodotus has no Getae, eo nomine, north of the Danube: yet such there must have been. Upon the whole, we may look upon the Danubian Principalities as a tract scarcely known to Herodotus, and make it Scythian, or Getic, or mixed, according to the evidence of other writers, as applicable at the time under consideration. It was probably Getic in the East, Sarmatian in the West, and Scythian in respect to certain districts occupied by intrusive populations.

Tlueldydes mentions the Getae and Scythians but once (i. 96), and that together. The great alliance that Situles, king of Thrace, effects against Perdiccas of Macedonia includes the Getae beyond Mount Haemus, and, in the direction of the Euxine sea, the Getae who were contiguous (διαφορα) with the Scythians, and whose armour was Scythian (σκύθηκος). They were each archers and horsemen (πολτηροκτητας); whereas the Dii and the mountainers of Rhodope were darters. According to Ovid (Trost. v. 7. 19), the occupants of the level country do so too:—

"Dextera non sequi fixo dare vulnera cultro,
Quem vincitam lateri barbar a ommis habet."

THE SCYTHIANS OF THE MACEDONIAN PERIOD.

Passing over the notices of Xenophon, which apply to Thrace Proper rather than to the parts north of Mount Haemus, and which tell us nothing concerning the countries beyond the Danube,—passing, also, over the notices of a war in which Philip king of Macedon was engaged against Athises, and in which he crossed Mount Haemus into the country of the Triballi, where he received a wound,—we come to the passage of the Danube by Alexander. In the face of an enemy, and without a bridge, did the future conqueror of Persia cross the river, defeat the Getae on its northern bank, destroy a town, and return. (Arrian, Anab. i. 2—7.) This was an invasion of Scythia in a geographical sense only; still it was a passage of the Danube. The Getae of Alexander may have been descendants of the Sigynnes of Herodotus. They were not, eo nomine, Scythians.

When Alexander was on the Danube the famous embassy of the Gaete reached Thessalonica; they had heard of his fame, and came to visit him. They were men of enormous stature, and feared only that the heavens should fail. This disappointed Alexander, who expected that they would fear him. Much has been written concerning the embassy as if it came from Gaul. Yet this is by no means necessary. Wherever there is a Halaz or Galaze in modern geography, there may have been a Galatian locality in ancient; just as, wherever there is a Kerm or Carmanian, there may have been a German one, and that without any connection with the Galli or Germans of the West. The roots G-L and G-R, are simply significant geographical terms in the Sarmatian and Turk tongues—tongues to which the Getic and Scythian may most probably be referred.

Such is the present writer's opinion respecting the origin of the statements that carry certain Gaete as far as the Lower Danube, and replace the Bastarnae, and even the occupants of the Tuna, Germans—not to mention the Carmanii of Asia Minor and Carmanian of Persia. In the present
instance, however, the statement of Strabo is very specific. It is to the effect that the ambassadors to Alexander were Κέλτωι την τον Ἀδριανος (vii, p. 301), and that Ptolemy was the authority. Nevertheless, Ptolemy may have written Γαλατας, and such Galatae may have been the Galatae of the Olbian Inscription. [See Insr. and Scrn.]

The next Macedonian who crossed the Danube with an army is Prexeron; he crossed it on re-crossed it in his retreat, and who owed his life to the generosity of a Getic prince Dromichates. This was about B.C. 312.

Our next authorities (fragmentary and insufficient) for the descendants of the Herodotean Scythians are the occupants of the Greek towns of the Enixine. Even those to the south of the Danube, Galatia, Apollonia, &c., had some Scyths in the neighborhood, sometimes as enemies, sometimes as protectors—sometimes as protectors against other barbarians, sometimes as protectors of Greeks against Greeks, as was the case during the Scythian and Thracian wars of Lysimachus. The chief frontiersmen, however, were Getae. Between Olbia, to the north of the Danube (=Oliopolis of Herodotus), and the native tribes of its neighborhood, the relations are illustrated by the inscription already noticed. (Bickh, Insr. Græc. n. 2053.) It records a vote of public gratitude to Protogenes, and indicates the troubles by which he helped his fellow-citizens. The chief of those arose from the pressure of the barbarians around, by name Saakratas, Thiarontas, Sciri [see Scnri], Galatæ, and Scythæ. The date of this inscription is uncertain; but we may see the import of the observations on the word Galatæ when we find the assumption that they were Gauls of Galilia used as an instrument of criticism:—"The date of the above inscription is not specified; the terror inspired by the Gauls, even to other barbarians, seems to suit the second century B.C. better than it suits a later period." (Gror. Hist. of Greece, vol. ii. p. 644, note.) What, however, if the Galatæ of Wallachia were as little Gaull as the Germans of Persia are Germans, or as Galleæ is the same as Galitia? The present writer wholly disconnects them, and ignores the whole system of hypothetical migrations by which the identity is supported.

A second Olbia in respect to its Helleno-Scythic relations, was Boesorus, or Panthiateneum, a Greek settlement founded from 400 to 350 till the reign of Mithridates. [Panthiateneum]

From Boesorus there was a great trade with Athens in corn, hides, and Scythian slaves,—Scythes, as the name of a slave, occurring as early as the time of Theognis, and earlier in the Athenian drama than those of Davus and Geta (Dacian and Getic) which belong to the New Comedy,—Scythes and Scythæna being found in the Oid.

The political relations were those of independent municipalities; sometimes sovereign, sometimes protectorated. The archons of Boesorus paid tribute to the Scythian princes of their neighborhood, when they were powerful and united; took it, when the Scythians were weak and divided. Under this latter category came the details of the division of the Maestor, viz., Sundi, Tormati, Dandari, Thetes, &c. Of these, Parysaides I. (a Scythic rather than a Greek name) was king, being only archon of his native town. In the civil wars, too, of Boesorus, the Scythians took a part, nor were there wanting examples of Scythian names even in the case of the Panthiateneum potentiates. Eumelus lost his life by being thrown out of a four-wheeled wagon-and-four with a tent on it.

SCYTHIANS OF THE MITHRIDATIC PERIOD, ETC.—The Scyths pressed on Parysaides IV., who called in Mithridates, who was conquered by Rome. The name now becomes of rare occurrence, subordinate to that of the Sarmatae, Daci, Thracians, &c. In fact, instead of being the nearest neighbors to Greece, the Scyths were now the most distant enemies of Rome.

In the confederacy of the Dacian Boerobedites, in the reign of Augustus, there were Scythian elements. So there were in the wars against the Thracian Rhescopiris and the Roxelani. So there were in the war conducted by J. Plautius in the reign of Vespasian, as conducted by the following inscription: REGIUS BASARVARUM ET RHODHIAN- OBIEM FILIOIS DACTOUM . . . REIPVTRVM REMISTIT . . . SCYTHIAM QUOCUM REGE A CHIEFSONES QVE EST ULTRA POLYSTEINEM OBDIBONE SUMMOTO. (Grut. p. 453; Bickh, vol. ii. pt. 1. p. 82; Zeno, s. v. Scythen.)

Though the history of the Scyths, et nomina, be fragmentary, the history of more than one Scythian population under a change of name is both prominent and important. In the article HUNNI reasons are given for believing that the descendants of the Herodotean Acazthys, of Scythian blood, were no unimportant element in the Dacian nationality.

After the foundation of Constantinople the Scythian nations appear with specific histories and names, Hun, Avar, &c.

The continuity of the history of the name of the Herodotean Scythians within the Herodotean area is of great importance; as is the explanation of names like Galatæ and Germani; as also is the consideration of the sources whence the nomenclature and information of the different authorities is derived. It is important, because, when we find one name disappearing from history, and another appearing, there is (according to, at least, the current criticism) a presumption in favour of a change of population. Sometimes this presumption is heightened into what is called a proof; yet the presumption itself is unreal. For one real change of name referrible to an actual change of population there are ten where the change has been merely one in respect to the sources whence the information was derived, and the channels through which it came. This is what occurs when the same country of Deutschland is called Germay by an Englishman, Allemagne in France, Lomagnia in Italy. This we know to be nominal. We ought at least to ask whether it may not be so in ancient history—and that not once or twice, but always—before we assume hypothetical movements and migrations.

Now in the case of Scythia we can see our way to great nominal and but slight real changes. We see the changes of information changed from Greek to Latin, and the channels through which it came. This is what occurs when the same country of Deutschland is called Germany by an Englishman, Allemagne in France, Lomagnia in Italy. This we know to be nominal. We ought at least to ask whether it may not be so in ancient history—and that not once or twice, but always—before we assume hypothetical movements and migrations.
any wholesale change can be proved, or even reasonably supposed. Who can be shown to have eliminated a certain definite Scythian population from any definite Scythian occupancy? With the Greeks and Romans the negative evidence is nearly conclusive to the fact that no such elimination ever took place. That the Barbarians might have displaced each other is admitted; but there is no trustworthy evidence to their having done so in any single instance. All opinions in favor of such changes rest upon either the loose statements of insufficiently-informed writers, or the supposed necessity of accounting for the appearance and change of certain names by means of certain appearances and changes of population.

The bearings of this will appear in the notice of the Ethnology of Scythia. They appear also under Huns.

Of the Sacae, co nomine, the history is obscure. In one sense, indeed, it is a nonentity. There is no classical historian of the Sacae. How far the ethnologist can infer them is a question which will be treated in the sequel.

Of the history of the populations akin to the Sacae, the details are important; but then it is a history of the Massagetae, Parthi, &c., a history full of critical preliminaries and points of inference rather than testimony.

The Scythia of all the authors between Herodotus and Ptolemy means merely the country of the Scyths, the Scyths being such northern nations as, without being, co nomine, Sarmatian, were Hama zobii and Hippemelgi; their habits of milking their mares and travelling in tented wagons being their most genuine characteristic. This it was which determined the views of even Strabo, whose extension of Germanias and Galatia (already noticed) left him no room for a Scythia or even a Sarmatia; Sarmatia, which is to Ptolemy as Germania was to Strabo; for the Sarmatia of Ptolemy leaves no room in Europe for a Scythia; indeed, it cuts deeply into Asiatice Scythia, the only...

SCYTHIA OF PTOLEMY.—The Scythia of Ptolemy is exclusively Asiatice, falling into 1. The Scythia within the Imaus. 2. The Scythia beyond the Imaus. This is a geographical division, not an ethnological one. Scythes Alani are especially recognised as a population of European Sarmatina. As Ptolemy's Sarmatina seems to have been formed out of an extension of the area of the Herodotean Sarmatina, his Scythia seems to have grown out of the eastern Scythe of the Herodotean Scythia, i.e. the Scythe of Orenburg. It did not grow out of the country of the Sacae, inasmuch as they are mentioned separately; even as the Jazagae of the Thesis were separated from the Sarmatians. The compiler, however, of the Herodotean account must make the Sceat Scythes. They may be disposed of first.

The SACE OF PTOLEMY were bounded by the quegias on the west, the Scythes on the north, and the Sere on the east. They were nomads, without towns, and resident in woods and caves. The mountain-range of the Comedson (qy Kaq\htheta\sigmaqmetro) was in their country; so was the Stone Tower (A\thetaq\nuqes Piq\niq\rho\gamma\vomicron). The populations were: 1. The Caratae and Comari along the Jaxartes. 2. The Comedae, on the Comedian mountain. 3. The Massagetae along the range of the Accacatan (Alq\hkappa\ta\gamma\a\ddotaq). In the interjacent country, the Gyraei Scythes; and, 6, the Toormae; south of whom, along the Imaus, 7, the Sythyae. (Prot. vi. 13.)

SCYTHIA INTRA IMAUS.—Bounded on the S. and E. by Sogdiana, Margiana, and the Sace; on the W. by the Caspian and Sarmatia Asiatica; on the N. by a terra incognita; and on the E. by the northern prolongation of the Imaus. (Prot. vi. 14.)

Rivers.—The Ilysmus, the Daix, the Jaxartes, the Iustas, and the Polynticus.

Mountains.—The eastern part of the Montes Hyphasis, the Montes Alanis (observe the reappearance of this name), the Montes Rhymniaca, the Mons Noroccus, the MM. Aspisii, Tapri, Syble, Anarai, all W. of the Imaus.

Populations.—The Alani Scythes (con the confines of the terra incognita), the Subeni, the Alani-sors, S. of whom the Sac, and Massaei, and Syhri; and (along the Imaus) the Tectosages and (on the eastern head-waters of the Khâ) the Rhobesies, S. of whom the A, and then the Panarii, S. of whom, along the river, the district called Cotegomias, S. of which the Coraxi; then the Orgaii, after whom, as far as the sea (i.e. the Caspian, in this chapter called Haryanian), the Erymmii, with the Asiatae on the E. of them, succeeded by the Aorai; after whom the Jaxartes, a great nation along the river of the same name; then S. of the Saetian, the Mologeni and Sameltes, as far as the MM. Rhymniaca. Then, S. of the Massaei and MM. Alani, the Zaratae and Sacae; and further W. and as far as the MM. Rhymniaca, the Typhinae, succeeded by the Telbei, S. of the Zaratae, and the Iastae and Muehteni along the Mons Noroccus; S. of whom the Norossae and Norossi, and the Cachagae Scythe along the Jaxartes. On the W. of the MM. Aspissi, the Aspissi Scythe; on the E. the Galasetophagi Scythe; E. of the MM. Taprii and the Suehi, the Tapirei; and above the MM. Anarai and the Mee Ascatanean, the Scythe Anarai, and the Ascatanea and Abiasae along the Jaxartes, S. of whom the Namaste; then the Sagananae, and, along the Oxus, the Iblibi, with their town Dayaba.

SCYTHIA EXTRA IMAUS was bounded by Scythia intra Imaus, the Sacae, the Terra Incognita, and the Sere. It contained the western part of MM. Auxacae, Cassi and Emodi, with the source of the river Ochardus. (Prot. vi. 13.)

Its Populations were the Abi Scythe, the Hippophagi Scythe, the Chatae Scythe, the Charranactae Scythe; the designation Scythe being applied to each.

Districts.—The Auxacitae, the Cassia (qy Kaq\htheta\sigmaqmetro), the Achasa (qy \hLambda\kaq\rho\theta\sigmaqmetro).

Towns.—Auxacae, Issedon, Scythica, Chaurana, S. eto.

The remarks that applied to the Sarmatia Asiatica of Ptolemy apply here. Few names can be safely identified. Neither is it safe to say through what languages the information came. Some words suggest a Persian, some a Turk source, some are Mongol. Then the geography is obscure. That the range of Pamer was unduly prolonged northwards is evident [imaun]; this being an error of the geographer. The course, however, of the Oxus and Jaxartes may themselves have changed.

The prolongation of the Pamer range being carried in a northern and north-eastern direction, so as to include not only the drainages of the Oxus and Jaxartes, but that of the Balbirs Lake, as we gives us the line of the Imaus; the terra incognita to the
SCYTHIA.

N. being supposed to begin with the watershed of the Irrish, Obi, and other rivers falling into the Arctic Ocean. Within the limits thus described, we may place the Nor-asi and Nor-ossi, on the eastern edge, i. e. in the wastes which, at present, the lakes distinguished by the name Nor occur. It should be added, however, that the syllable is generally final, as in Koko-nor, &c. Still it is a prominent element in compound names, and indicates Mongol occupancy. The Bylitsa may be placed in Bulti-stan, i. e. the country of the Bulti = Little Tibet, the gloss being Persian.

In Ascitangus (the Greek spelling is the more convenient Ascit-ta-n a-n- setTimeout), we have the Turkish tok-ta:n= monastis just as it actually occurs in numerous compounds.

Karait is a name of common application, chiefly to members of the Mongol family.

Mass-atqetes is a term full of difficulty. Can it have arisen out of the compound name Mus-taq?

In Scythia extra Isaacum, the Casia and Achassa (yassa) may be made one and identified with the Cesi of Pilny. The most reasonable explanations of these names is to be found in the suggestion of M. Cunningham's valuable work on Ladoth (p. 4), where the Achassa Region = Ladoth, and the Chatae, and Chorumae Scythae = Chang-thang and Khor respectively.

Roughly speaking, we may say that the country of the Saca was formed by an irregular tract of land on the head-waters of the Oxus and the watershed between it and the Jaxartes, a tract which included a portion of the drainage of the Indus. It is only a portion of this that could give the recognised conditions of Scythian life, viz. steppe and pasture. These might be founded on the great table land of Pomer, but not in the mountain districts. These, however, were necessary for "residences in woods and caves"; at the same time, the population that occupied them might be pastoral rather than agricultural. Still they would not be of the Scythian type. Nor is it likely that the Saca of Ptolemy were so. They were not, indeed, the Saca of Herodotus, except in part, i. e. on the desert of the Persia frontier. They were rather the mountaineers, Bashkans, Bashkans, Bashkans, Astor, Huz-nagor, and Little Tibet, partly Persian, partly Biot (or Tibetan), in respect to their ethnology.

The Scythians beyond the Imaus.—These must be divided between Ladoth, Tibet, Chinese Tartary, and Mongolia in respect to their geography. Physically they come within the conditions of a Scythian occupancy, except where they are true mountain-dwellers. Ethnologically they may be distributed between the Mongol, Biot, and Turk families—the Turks being those of Chinese Tartary.

The Turekian districts of the Oxus, Khiva, the Kirghiz country, Ferghana, Tashkul, with the parts about the Balkash, give us the Scythia within the Imaus. It coincides chiefly with Independent Tartary, with the addition of a small portion of Mongolia and southern Siberia. Its conditions are generally Scythian. In the upper part, however, of the Jaxartes, the districts are agricultural at present; nine-tenths of this area is Turk, part of the population being Nomades, part industrial and agricultural.

The Scythia of the Byzantine Authors.—This means not only Hunns, Avars, Alans, and Sar-matians, but even Germans, Goths, and Vandals.

SCythia.

It is used, however, but rarely. It really existed only in books of geography. Every division of the Scythian name was known under its specific designation.

ETNOLOGY.—If any name of antiquity be an ethnological, rather than a geographical, term, that name is Scythia. Ptolemy alone applies it to an area, irrespective of the races of its occupants. With every earlier writer it means a number of populations connected by certain ethnological characteristics. These were physical and moral—physical, as when Hippocrates describes the Scythian phy- sionomy; moral, as when their nomadic habits, as Hittian and Hippennigoli, are put forward as distinctive. Of language as a test less notice is taken; though (by Herodotus at least) it is by no means overlooked. The division between Scythian and non-Scythian is always kept in view by him. Of the non-Scythic populations, the Sarmatiae were one; hence the ethnology of Scythia involves that of Sarmatio, both being here treated together.

In respect to them, there is no little discrepancy of opinion amongst modern investigators. The first question respecting them, however, has been answered unanimously.

Are they represented by any of the existing divisions of mankind, or are they extinct? It is not likely that such vast families as each is admitted to have been has died out. Assuming, then, the present existence of the conquerors of both the Sarmatiae and the Scythae, in what family or class are they to be found? The Scythae were of the Turk, the Sarmatiae of the Slavono-Lithuanian stock.

The evidence of this, along with an exposition of the chief differences of opinion, will now be given, in order that the reader having reviewed the above, the true import of the Scythian name may be known, in that all the populations whose language is akin to that of the Ottomans of Constantinople, and that as it comprises the Turcomans, the Independent Tartars, the Uzbeks, the Turks of Chinese Tartary, and even the Yakuts of the Lena, along with several other tribes of less importance, we may examine the a priori probabilities of the Scythae having been, in this extended sense, Turks.

The situs of the nations of South-western Russia, &c., at the beginning of the proper historical period, is a presumption in favour of their being so. Of these the best to begin with are the Cumanians (12th century) of Volynia. That they were Turk we know from special statements, and from samples of their language compared with that of the Kirghiz of Independent Tartary. There is no proof of their being new comers, however much the doctrine of their recent-emigration may have been gratuitously assumed. The Uzes were what the Cumanians were; and before the Uzes, the Patzinaks (10th century) of Besarabia and the Dumaubian Principalities were what the Uzes were. Earlier than the Patzinaks, the Chazars ruled in Kherem and Taurida (7th and 8th centuries) like the Patzinaks, in the same category with definitely known Cumanians and Uzes. These four populations are all described by writers who knew the true Turks accurately, and, knowing them, may be relied on. This knowledge, however, dates only from the reign of Justinian (6th century); from the reign, then, of Justinian to the 10th century (the date of the break-up of the Cumanians), the Herodotean Scythia was Turk—Turk without evidence of the occupation being recent.

The Avars precede the Chazars, the Imaus the
SCYTHIA.

Avars, the Alani the Huns. [HUNNI; AVARES]. The migrations that make the latter, at least, recent occupant to be entirely hypothetical. The evidence of the Huns being in the same category as the Avars, and the Avars being Turk, is conclusive. The same applies to the Alani—a population which brings us to the period of the later classes.

The conditions of a population which should, at one and the same time, from Persia and send an offset round the Caspian into Southern Russia, &c., are best satisfied by the present exclusively Turk area of Independent Tarygary.

Passing from the presumptuous to the special evidence, we find that the few facts of which we are in possession all point in the same direction.

Physical Appearance.—This is that of the Kirghiz and Usbecks exactly, though not that of the Ottomans of Rumelia, who are of mixed blood. Allowing for the change effected by Mahomet, the same remark applies to their Mennonites, which are those of the Kirghiz and Tatars.

Language.—The Scythian glosses have not been satisfactorily explained, i.e. Temerinda, Arimaspi, and Xamazines have yet to receive a derivation that any one but the inventor of it will admit. The ọrọ,—however, in ọrọ pata is exactly the case, ọrọ = man, &c., a term found through all the Turk dialects. It should be added, however, that it is Latin and Keltic as well (voir, fear, guer). Still it is Turk, and that unequivocally.

The evidence, then, of the Scythian being Turk consists in a series of small particulars agreeing with the a priori probabilities rather than in any definite point of evidence. Add to this the fact that no other class gives us the same result with an equally small amount of hypothesis in the way of migration and change. This will be seen in a review of the opposite doctrines, all of which imply an unnecessary amount of unproper changes.

The Mongol Hypothesis.—This is Niebuhr's, developed in his Researches into the History of the Scythians, &c.; and also Neumann's, in his Heilken im Skhythenlande. It accounts for the manners and physiognomy, as well as the present doctrine; but for anything else. It violates the rule against the unnecessary multiplication of causes, by bringing from a distant area, like Mongolia, what lies nearer, i.e. in Tarygary. With Niebuhr the doctrine of fresh migrations to account for the Turks of the Byzantine period, and of the extinction of the older Scythians, takes its maximum development, the least allowance being made for changes of name. "This" (the time of Lysimachus) "is the last mention of the Scythian nation in the region of the Ister; and, at this time, there could only be a remnant of it in Budzack" (p. 63).

The Circassian Hypothesis.—This is got at by making the Scythians what the Huns were, and the Huns what the Magyars were—the Magyars being Finn. It arises out of a wrong notion of the name, Hungary, and fails to account for the difference between the Scythians and the nations to their north.

The Circassian Hypothesis.—This assumes an extension of the more limited area of the northern occupants of Caucausus in the direction of Russia and Hungary. Such an extension is, in itself, probable. It fails, however, to explain any one fact in the descriptions of Scythia, though valid for some of the older, and some of the more recent writers.

The Indo-European Hypothesis.—This doctrine takes many forms, and rests on many bases. The

**Vol. II.**
Asparus on the W., and bounded by the mountains of the Chalybes on the S. The Ten Thousand Greeks, in their retreat under Xenophon, were compelled to march four days through their territory. Rennell (Georg. of Herod. p. 243) seeks them in the province of Ares (comp. Ritter, Erdkunde, vol. i. p. 764).

SCYTHOPOLIS. [Bethan.] SCYTHOTAUROB. [Taurocythae.] SEBAGENA (Σεβαγένα), or, as others read, Σεβαγγένα, a town in Cappadocia, of uncertain name (Strab. xiv. p. 671.). It seems to have received its name Sebaste in honour of Augustus; for, until his time, both the island and the town were called Eleusa, Eleausa, or Eleausan (Joseph. Ant. xvi. 4. § 6; Bell. i. 23. § 4; comp. Pol. v. 8. § 4; Herod. p. 704.; Stadion. Mar. Marcell. 6; on which the name Sebaste is called Eusa; Steph. B. s. e. Σεβαστά and Σεβαστία which Pliny (v. 22) still applies to the town, though here erroneously places it in the interior of Cari, Stephanius, in one of the passages above referred to, calls Sebaste or Eleausa an island, and in the other a peninsula, which may be accounted for by the fact that the narrow channel between the island and the mainland was at an early period filled up with sand, as it is at the present,—for the place no longer exists as an island. Sebaste was situated between Corycus and the mouth of the river Lamos, from which it was only a few miles distant. Some interesting remains of the town of Sebaste still exist on the peninsula near Ayash, consisting of a temple of the composite order, which appears to have been overthrown by an earthquake, a theatre, and three aqueducts, one of which conveyed water into the town from a considerable distance. (Comp. Baurath, Larumnia, p. 256, toll.; Leake, Asia Minor, p. 213.)

2. A town in Phrygia Pacatiana, between Alydus and Eumenia, is noticed only by Hierocles, (p. 667) and in the Acts of the Council of Constantinople (iii. p. 674;), but its site has been identified with that of the modern Segikler, where inscriptions and coins of the town have been found. The ancient name of the place is still preserved in that of the neighbouring stream, Sebati Su. (Comp. Hamilton's Researches, i. p. 121, &c.; Arundell, Discoveries, i. p. 136, who erroneously takes the remains at Segikler for those of the ancient Eucarpia.)

3. [Cahira, Vol. i. p. 462.] [L. S.] SEBASTE. [Samaria.] SEBASTEIA (Σεβαστεία), a town in the south of Pontus, on the north bank of the Upper Halys. As it was near the frontier, Pliny (vi. 3) regarded it as not belonging to Pontus, but to Cappadocia in Cappadocia. (Ptol. v. 6. § 10; Hierocl. p. 702; It. Ant. p. 204, 205.) The town existed as a small place before the dominion of the Romans in those parts, but its ancient name is unknown. Pompée increased the town, and gave it the name of Megalopolis (Strab. xii. p. 560). The name Sebaste must have been given to it before the time of Pliny, he being the first to use it. During the imperial period it appears to have risen to considerable importance, so that in the later division of the Empire it was made the capital of Armenia Minor. The identity of Sebaste with the modern Sivas is established partly by the resemblance of the names, and partly by the agreement of the site of Sivas with the description of Gregory of Nyssa, who states that the town was situated in the valley of the Halys. A small stream, moreover, flowed through the town, and fell into a neighbouring lake, which communicated with the Halys (Orat. i. in XL. Mart. p. 501, Orat. ii. p. 510; comp. Basil. M. Epist. viii.). In the time of the Byzantine empire Sebasteia is mentioned as a large and flourishing town of Cappadocia (Nicei. Ann. p. 76; Ducas, p. 31); while Stephanus B. (s. v.) and some ecclesiastical writers refer it to Armenia. (Sosom. Hist. Ecol. iv. 24; Theodoret. Hist. Ecol. ii. 24.) In the Itinerary its name appears in the form of Sebastia, and in Abulfeda it is actually written Siwas. The emperor Justinian restored its decayed walls. (Procop. de Aed. iii. 4.) The town of Siwas is still large and populous, and in its vicinity some, though not very important, remains of antiquity are seen. (Fontanier, Voyages en Orient, p. 179, foll.)

SEBASTOPOLES (Σεβαστοπόλις). I. A town in Pontus Cappadocicus (Ptol. v. 6. § 7), which, according to the Latin Itinerary (p. 205), was situated on a route leading from Tavium to Kars, and was connected by a road with Caesarica (p. 214). Pliny (vi. 3) places it in the district of Cologene, and agrees with other authorities in describing it as a small town. (Hierocl. p. 703; Novell. 31; Gregor. Nyssen. in Macrin. p. 202.) The site of this place is still uncertain, some identifying the town with Cabira, which is impossible, unless we assume Sebastopolis to be the same town as Sebaste, and others believing that it occupied the site of the modern Turshul or Turkal.

2. A town in Pontus, of unknown site (Ptol. v. 6. § 9), though, from the place it occupies in the list of Pontok, it must have been situated in the south of Thumi-siara.

3. About Sebastopolis on the east coast of the Euxine see Dioscorides, and about that in Mysia, see Myrina.

SEBASTIOPOLIS (Hierocl. p. 638), a place in the interior of Thrace, near Philippopolis. [J. R.]

SEBATUM, a town situated either in the southwestern part of Noricum, or in the east of Haeta, on the road from Aemona to Vehovidae (It. Ant. p. 200), seems to be the modern Suchs. (Comp. Mallet, Nat. hist. ii. p. 250.)

SEBENDUNUN (Σεβενδουνος, Ptol. ii. 6. § 71), a town of the Castellani in Hispania Tarraconensis. There is a coin of it in Sestini (p. 164). [T. H. D.]

SEBENNTUS (Σεβενντος, Ptol. iv. 5. § 50; Steph. B. s. v.; Σεβενντη θόλος, Strab. xiv. p. 802; Euth. Σεβεννυτός), the chief town of the Sebennytic nome in the Egyptian Delta, situated on the Sebennytic arm of the Nile, nearly due E. of Sais, in lat. 31° N. The modern hamlet of Sebennou, where some ruins have been discovered, occupies a portion of its site. Sebennytus was anciently a place of some importance, and standing on a peninsula, between a lake (Άγιον Σεβαστοραχόν: Burkus) and the Nile, was favourably seated for trade and intercourse with Lower Aegypt and Memphis. The neglect of the canals, however, and the elevation of the alluvial soil have nearly obliterated its site. (Champollion, l'Egypte, vol. ii. p. 191 seq.)

SEBETHUS. (Fiume della Maddalena), a small river of Campania, flowing into the Bay of Naples immediately to the E. of the city of Neapolis. It is alluded to by several ancient writers in connection with that city (Stab. l. i. 2. 263; Colum. 2. 134)
SEBINUS LACUS.
Vth. Sequest. p. 18), and is generally considered to be the same with the stream which now falls into the sea a little to the E. of Naples, and is commonly called the Fiume della Maddalena. This rivulet, which rises in a fountain or basin called La Botta, about 5 miles from Naples, is now a very trifling stream, but may have been more considerable in ancient times. The expressions of poets, however, are not to be taken literally, and none of the geographers deem the Seclusus worthy of mention. Virgil, however, alludes to a nymph Seclusis, and an inscription attests the local worship of the river-god, who had a chapel (secludia) erected to him at Neapolis. (Gruner, Inscri. p. 94. 9.)

SEBINUS LACUS (Lago d'Isco), a large lake in the N. of Italy, at the foot of the Alps, formed by the waters of the river Ollius (Oglio), which after flowing through the land of the Cannuni (the Val Camonica), are arrested at their exit from the mountains and form the extensive lake in question. It is not less than 18 miles in length by 2 or 3 in breadth, so that it is inferior in magnitude only to the three great lakes of Northern Italy; but its name is mentioned only by Pliny (ii. 103. s. 106, iii. 19. s. 23), and seems to have been little known in antiquity, as indeed is the case with the Lago d' Isco at the present day. It is probable that it derived its name from a town called Sebium, on the site of the modern Isco, at its SE. extremity, but no mention of this name is found in ancient writers. (Cluver, Ital. p. 412.)

SEBRIDAE (Sebrius, Plol. iv. 7. § 33), or SOBRIDAE (Sebrius, Plol. iv. 7. § 29), an Aethiopian race, situated between the Atshabars (Tassasie) and the Red Sea. They probably correspond with the modern Sembar, or the people of the "maritime tract." There is some likelihood that the Sembritate, Sebridae, and Sobaridae are but various names, or corrupted forms of the name of one tribe of Aethiopians dwelling between the upper arms of the Nile and the Red Sea. [W. B. D.]

SEBURII (Seburi, and Seburi, Plol. ii. 6. § 27), a people in the NW. of Hispimna Tarraconensis, on both banks of the Minius, probably a subdivision of the Calchii Bracuini. (Cl. H. D.)

SECELA or SECELLA. [Ziklag.]

SECERALAE, called by the Geogr. Rav. (iv. 42) and in a Cod. Paris, of the Itim. Ant. (p. 398) SECALAE, a town of the Laciitani in Hispanic Tarraconensis, on the road from the Summum Pyreanaum and Juncaria to Tarraco. Variously identified with S. Pere de Serra, Arubias, and San Seloni (properly Santa Colonia Segerra). The last identification seems the most probable. [T. H. D.]

SECLA (Secchia), a river of Gallia Cispalpina, one of the southern tributaries of the Padus, which flows into the Rhone at Montemarina. It is evidently the same stream which is called by Pliny the Gabelus; but the name of Secia, corresponding to its modern appellation of Secchia, is found in the Jerusalem Itinerary, which marks a station called Pons Seica, at a distance of 5 miles from Mutina. (Itim. Hier. p. 606.) The same bridge is called an inscription which records its restoration by Valerian, in A.D. 259, Pons Seculae. (Murat. Inscri. p. 460. 5; Orell. Inscri. 1002.) The Secchia is a considerable stream, having the character, like most of its neighbours, of a mountain torrent. [E. J. R.]

SECOANUS (Σηκοσανος, Steph. s. v.), a river of the Massaliots, according to one reading, but accord-

SEGIAMONCLUM. 947

ing to another reading, a city of the Massaliots, "from which comes the ethnic name Sequianni, as Artemidorus says in his first book." Nothing can be made of this fragment further than this; the name Sequinianas belonged both to the basin of the Rhone and of the Seine. [G. L.]

SEGOR or SICOR (Σεγορ ή Σικόρ λιαμιψ), a port which Poimen (ii. 7. § 2) places on the west coast of Gallia, between the Pactonium or Pactonum Promontorium and the mouth of the Lerbas (Lerba). The name also occurs in Marcellus. The latitudes of Poimen cannot be trusted, and we have no other means of fixing the place except by a guess. Accordingly D'Anville supposes that Segor may be the port of the Subles d'Olonne; and other conjectures have been made. [G. L.]

SEDELALCUS. [Nicolocius.]

SEDETANI. [Edetani.]

SEDIBONIATES, are placed by Pliny in Aquitanis (iv. c. 19). He says, "Aquitanis, unde nomen provinciae, Sedibonitates. Mox in oppidum contribut Convernas, Begeri." The Begeri are the Bigeriones of Cae-ar. [Bigeriones.] We have no means of judging of the position of the Sedibonitates except from what Pliny says, who seems to place them near the Bigeriones and Convernae. [Convernae.]

SEDUNI, a people in the valley of the Upper Rhone, whom Caesar (B. G. iii. 1, 7) mentions: "Nantuates Sedunos Veragrosque," They are also mentioned in the trophy of the Alps (Plin. iii. 20) in the same order. They are east of the Veragi, and in the Taluis. Their chief town had the same name as the people. The French call it Sion, and the Germans name it Sitten, which is the ancient name, for it was called Sedunum in the middle ages. An inscription has been found at Sion: "Civitae Sedunorum Patrons." Sitten is on the right bank of the Rhone, and crossed by a stream called Siunre. The town-hall is said to contain several Roman inscriptions. [Nantuates; Octodurus.] [G. L.]

SEDUS, a German tribe mentioned by Caesar (B. G. i. 51) as serving under Ariovistus; but as no particulars are stated about them, and as they are not spoken of by any subsequent writer, it is impossible to say to what part of Germany they belonged. Some regard them as the same as the Edusones mentioned by Tacitus (Germ. 40), and others identify them with the Phundani whom Pliny says (iii. 11. § 12) places in the Cimbrian Cisalpinae; but both conjectures are mere fancies, based on nothing but a faint resemblance of names. [L. S.]

SEGALLAUXI (Σεγαλαλαυς, Plol. ii. 10. § 11). Tolemomy places them west of the Allobroges, and he names their town Valentia Colonia (Valence), near the Rhone. Pliny (iii. 4) names them Segovellanii, and places them between the Vercelli and the Allobroges; but he makes Valentia a town of the Cavares. [Cavares.] [G. L.]

SEGASAMONCLUM (Σηκασαμονκλονας, Plol. ii. 6. § 53), a town of the Astigiones in Hispanic Tarraconensis. (Itim. Ant. p. 394.) Variously identified with S. Maria de Ribaredonda, Cameno, and Ballescerranes. [T. H. D.]

3 p 2
SEGEDA AUGURINA.

SEGEDA AUGURINA, an important town of the Sicilian region, where the Etruscan and the coast. (Plin. iii. 1. s. 3). Commonly supposed to be S. Inago della Higuera near Etna. [T. H. B.]

SEGELOCUM (Itin. Ant. p. 475, called also AEGELOCUM, ib. p. 478), a town in Britannia Romana, on the road from Lindum to Eboracum, according to the two accounts. (Strab. vi. p. 272. Littlebourn in Y. of Nottinghamshire. [T. H. D.]

SEGESAMA (Σεγέσαμα, Strab. iii. p. 162), or SEGESAMO and SEGISAMO (Itin. Ant. pp. 394, 449, 454; Orell. Inscr. no. 4719), and SEGISA-MONESSES of the inhabitants (Plin. iii. 3. s. 4), a town of the Marabigi or Tarasini in Sicia, now called Sassano, to the W of Brivisceso. (Floræ, Exp. Socr. vi. p. 419. xv. p. 59.) [T. H. D.]

SEGESSERA, in Gallia, is placed in the Table between Corbilium (Corbit) and Andomatus (Lanxres), and the distance of Segessera from each place is marked xxx. The site of Segessera is not certain. Some fix it at a place named Suzannecourt. [Corbilium. [G. L.]

SEGESTA (Σέγεστα: Eth. Σέγεστας, Segestans: Ru. near Calatafimi), a city of Sicily in the NW part of the island, about 6 miles distant from the sea, and 34 W. of Panormus. Its name is always written by the Attic and other contemporary Greek writers ΣΕΓΕΣΤΑ (Σέγεστα: Eth. Σεγεστάς, Thuc. &c.), and it has hence been frequently asserted that it was first changed to Segesta by the Romans, for the purpose of avoiding the ill omen of the name of Egesta in Latin. (Fest. ex. Segesta, p. 340) This story is, however, disproved by its coins, which prove that considerable before the time of Thucydides it was called by the inhabitants themselves Segesta, though this form seems to have been softened by the Greeks into Egesta. The origin and foundation of Segesta is extremely obscure. The tradition current among the Greeks and adopted by Thucydides (Thuc. vi. 2; Dionys. i. 52: Strab. xiii. p. 608), ascribed its foundation to a band of Trojan settlers, fugitives from the destruction of their city; and this tradition was readily welcomed by the Romans, who in an enumerable claim or send an origin with the Segestans. Thucydides seems to have considered the Elyma, a barbaren tribe in the neighbourhood of Egys and Segesta, as descended from the Trojans in question: but another account represents the Elyma as a distinct people, already existing in this part of Sicily when the Trojans arrived there and founded the two cities. [Elyma.]

A different story seems also to have been current, according to which Segesta owed its origin to a band of Phocians, who had been among the followers of Philoctetes; and, as usual, later writers sought to reconcile the two accounts. (Strab. vii. p. 277. Thuc. xii. Thuc. &c.) Another version of the Trojan story, which would seem to have been that adopted by the inhabitants themselves, ascribed the foundation of the city to Egestas or Segestas (the Acestes of Virgil), who was said to be the offspring of a Trojan damsel named Segesta by the river Crimasis. (Serv. ad Aen. i. 550. v. 30.) We are told also that the names of Simon and Scamander were given by the Trojan colonists to two small streams which flowed beneath the town (Strab. xiii. p. 608); and the latter name is mentioned by Diodorus as one still existing a much later period. (Diod. xvi. 44.) It is certain that we cannot receive the statement of the Trojan origin of Segesta as historical, but what-
arms against Syracuse, and the contest between
Segesta and Selinus was almost forgotten in the
more important struggle between those two great
powers. In the summer of b. c. 415 an Athenian
deep, proceeding along the coast, took the small town
of Hycare, on the coast, near Segesta, and made it
over to the Segestans. (Thuc. vi. 62: Diod. xii.
6.) The latter people are again mentioned on more
than one occasion as sending auxiliary troops to
assist their Athenian allies (Thuc. vii. 57: Diod. xii.
7); but no other notice occurs of them. The final
defeat of the Athenians left the Segestans again ex-
posed to the attacks of their neighbours the Selin-
nuntines; and feeling themselves unable to cope
with them, they again had recourse to the Carthagi-
arians, who determined to espouse their cause, and
sent: them, in the first instance, an auxiliary force
of 5000 Africans and 800 Campanian mercenaries,
which sufficed to ensure them the victory over their
rivals, b. c. 410. (Diod. xiii. 43, 44.) But this
was followed the next year by a vast armament
under Thanatos, who, like Libyakarn, and,
proceeding direct to Selinus, took and destroyed the
city. (Ib. 54—58.) This was followed by the
destruction of Himera; and the Carthaginian power
now became firmly established in the western por-
tion of Sicily. Segesta, surrounded on all sides by
this formidable neighbour, naturally fell gradually
into the position of a dependent ally of Carthage.
It was one of the few cities that remained faithful
to this alliance even in b. c. 397, when the great
expedition of Dionysus to the W. of Sicily and the
siege of Motya seemed altogether to shake the power
of Carthage. Dionysus in consequence laid siege
to Segesta, and pressed it with the utmost vigour,
especially after the fall of Motya; but the city was
able to defy his efforts, until the landing of Hi-
silco with a formidable Carthaginian force changed
the aspect of affairs, and compelled Dionysus to
raise the siege. (Id. xiv. 48, 53—55.) From this
time we hear little more of Segesta till the time of
Agathocles, under whom it suffered a great calamity.
The despot having landed in the W. of Sicily on his
return from Africa (b. c. 307), and being received
into the city as a friend and ally, suddenly turned
upon the inhabitants on a pretence of disaffection,
and put the whole of the citizens (said to amount
to 10,000 in number) to the sword, plundered their
wealth, and sold the women and children into
slavery. He then changed the name of the city to
Dicaeopolis, and assigned it as a residence to the fugitives and deserters that had gathered around
him. (Diod. xx. 71.)

It is probable that Segesta never altogether recovered
this blow; but it soon resumed its original name, and
again appears in history as an independent city.
Thus it is mentioned in b. c. 276, as one of the cities
which joined Pyrrhus during his invasion of Sicily.
(Diod. xxii. 10. Exc. ii. p. 498.) It
however, soon after fell again under the power of the
Carthaginians; and it was probably on this occasion
that the city was taken and plundered by them, as
alluded to by Cicero (Verr. iv. 33): a circumstance
of which we have no other account. It continued subject
to, or at least dependent on that people, till the First
Punic War. In the first year of that war (b. c. 264)
it was attacked by the consuls Appius Claudius, but
without success (Diod. xxiii. 3. p. 501); but shortly
after the inhabitants put the Carthaginian garrison
to the sword, and declared for the alliance of Rome.
(Th. 6. p. 502; Zonar. viii. 5.) They were in con-
sequence besieged by a Carthaginian force, and were
at one time reduced to great straits, but were relieved
by the arrival of Duilius, after his naval victory,
b. c. 260. (Pol. i. 24.) Segesta seems to have been
one of the first of the Sicilian cities to set the exam-
ple of defection from Carthage; and on account,
as well as of their pretended Trojan descent, the in-
habitants were treated with great distinction by the
Romans. They were exempted from all public bur-
ders, and even as late as the time of Cicero continued
to be " sine fœdere immunes et liber. " (Cic. Verr.
iii. 6. iv. 33.) After the destruction of Carthage,
Scipio Africanus restored to the Segestans a statute
of Diana which had been carried off by the Carthagi-
arians, probably when they obtained possession of the
city after the departure of Pyrrhus. (Cic. Verr.
vii. 33.) During the Servile War also, in b. c. 102,
the territory of Segesta is again mentioned as one of
those where the insurrection broke out with the
greatest fury. (Diod. xxxvi. 5. Exc. Phot.p. 534.)
But with the exception of these incidental notices
we hear little of it under the Roman government.
It seems to have been still a considerable town at
the time of Cicero, and had a port or emporium of its
own on the bay about 6 miles distant (χωρίον το των Ἀγαθο-
χάριων ἐμπόρων, Strab. vii. pp. 266, 272; SEGESTΑ
καὶ Μότων ἐμπόρων, Plut. iii. 4. § 4.) This emporium seems
to have grown up in the days of Strabo to be a more
important place than Segesta itself; but the con-
tinued existence of the ancient city is attested both
by Pline and Ptolemy; and we learn from the former
that the inhabitants, though they no longer retained
their position of nominal independence, enjoyed the
privileges of the Latin citizenship. (Strab. i. c.;
Plin. iii. 8. s. 14; Plut. iii. 4. § 15.) It seems,
however, to have been a decaying place, and no trace
of it is subsequently found in history. The site is
said to have been finally abandoned, in consequence
of the ravages of the Saracens, in a. d. 900 (Amico,
ad Fazell. Sic. vii. 4. not. 9), and is now wholly de-
solated; but the town of Castell' a Mare, about 6 miles
distant, occupies nearly, if not precisely, the same site
as the ancient emporium or port of Segesta.
The site of the ancient city is still marked by the
ruins of a temple and theatre, the former of which is
one of the most perfect and striking remains of architec-
ture in Sicily. It stands on a hill, about 3 miles N.W. of
Calatafimi, in a very barren and open situation. It is
of the Doric order, with six columns in front and fourteen
on each side (all, except one, quite perfect, and that
only damaged), forming a parallelogram of 162 feet
by 66. From the columns not being fluted, they
have rather a heavy aspect; but if due allowance be
made for this circumstance, the architecture is on
the whole a light order of Doric; and it is probable,
therefore, that the temple is not of very early date.
From the absence of fluting, as well as of the architec-
ture, there can be no doubt that it never was finished,—the work probably being inter-
rupted by some political catastrophe. This temple
appears to have stood, as was often the case, outside
the walls of the city, at a short distance to the W.
of it. The latter occupied the summit of a hill of small
extent, at the foot of which flows, in a deep
valley or ravine, the torrent now called the Fiume
Gaggera, a confluent of the Fiume di S. Bartolomeo,
which flows about 5 miles E. of Segesta. The latter
is probably the ancient Crimius (Curtius), cele-
britated for the first victory of Roman over Carthagi-
nians, while the Gaggera must probably be the
stream called by Diodorus (xx. 71) the Scamander

949

SEGESTA.
SEGESTA.

Two other streams are mentioned by Abel (V. II. ii. 33) in connection with Segesta, the Telemæus and the Porpaix; but we are wholly at a loss to determine them. Some vestiges of the ancient walls may still be traced; but almost the only ruins which remain within the circuit of the ancient city are those of the theatre. These have been lately cleared out, and exhibit the praecinctio and sixteen rows of seats, great part in good preservation. The general form and arrangement are purely Greek; and the building rests at the back on the steep rocky slope of the hill, out of which a considerable part of it has been excavated. It is turned towards the N. and commands a fine view of the broad bay of Castell’a Mare.

(For a more detailed account of the antiquities of Segesta, see Swinhurne’s Travels, vol. ii. pp. 231—235; Smyth’s Sicily, pp. 67, 68; and especially Serva di Falcon, Antichita della Sicilia, vol. i. pt. II.)

Ancient writers mention the existence in the territory of Segesta of thermal springs or waters, which seem to have enjoyed considerable reputation (τα ςερμα βάτα Αγεσταία, Strab. vi. p. 275; ςερμα λουτρά τα Ευγεσταία, Dion. iv. 23). These are apparently the sulphurous springs at a spot called Calametti, about a mile to the N. of the site of the ancient city. (Fazelli, Sic. vii. 4.) They are mentioned in the Itineraries as “Αποκ Segestansae sive Tincasiae” (Itin. Ant. p. 91); but the origin of the latter name is wholly unknown.

The coins of Segesta have the figure of a dog on the reverse, which evidently alludes to the fable of the river-god Crimisos, the mythical parent of Agestus, having assumed that form. (Serv. ad Aen. i. 550. v. 30; Eckhel, vol. i. 234.) The older coins (as already observed) uniformly write the name SEGESTA, as on the one annexed: those of later date, which are of copper only, bear the legend ETESIAEON (Eckhel, l. c. p. 236). [E. H. B.]

COIN OF SEGESTA.

SEGESTA (Setstri), a town on the coast of Liguria, mentioned by Pliny, in describing the coast of that country from Genoa to the Murca. (Plin. iii. 5. s. 7.) He calls it Segesta Tigulliorum; so that it seems to have belonged to a tribe of the name of the Tigullii, and a town named Tigulia is mentioned by him just before. Segesta is commonly identified with Setstri (called Setstri di Levante to distinguish it from another place of the name), a considerable town about 30 miles from Genoa, while Tigulia is probably represented by Tregosa, a village about 2 miles further inland, where there are considerable Roman remains. Some of the MSS. of Pliny, indeed, have “Tiguliana inus, et Segesta Tigulliorum;” which would seem to point clearly to this position of the two places. (Silius, ad loc.) It is probable, also, that the Tigulata of the Itineraries (Itin. Ant. p. 293) is identical with the Tigulia of Pliny. [E. H. B.]

SEGESTA, or SEGESTICA. [Sestia.]

SEGIDA (Σεγίδα, Strabo, iii. p. 162). 1. A town of the Arevaci in Hispania Tarraconensis. According to Appian, who calls it Σεγίδα (vi. 44), it belonged to the tribe of the Belli, and was 40 stadia in circumference. Stephanus B. (s. e.) calls it Σεγίδα, and makes it a town of the Celtiberians, of whom indeed the Arevaci and Belli were only subordinate tribes. Segida was the occasion of the first Celtiberian War (Appian, l. c.), and was probably the same place called Segestica by Livy (xxxiv. 17). 2. A town of Hispania Baetica, with the surname Restituta Julia. (Plin. iii. 1. s. 3.) [T. H. D.]

SEGISA (Σεγίσα, Pet. ii. 6. § 61), a town of the Bastiani in Hispania Tarraconensis, perhaps the modern Segisign. [T. H. D.]

SEGISAMA and SEGISAMA Julia (Σεγισαμα τοια, Pet. ii. 6. § 50), a town of Hispánica Tarraconensis. We find the inhabitants mentioned by Pliny as Segisamajulenses (iii. 3. s. 4). Poëlemys ascribes the town to the Vaecaci, but Pliny to the Turmodigi, whence we may probably conclude that it lay on the borders of both those tribes. The latter author expressly distinguishes it from Segisamo. [T. H. D.]

SEGISAMO. [Segesama.] SEGISAMUNCULUM. [Segasamunculum.]

SEGNI, a German tribe in Belgium, mentioned by Caesar (B. G. vi. 32) with the Condrusii, and placed between the Eburones and the Treveri. In B. G. 4. 4 Caesar speaks of the Condrusii, Eburones, Caenaei, and Paranai, “qui une nomine Germani appellantur;” but he does not name the Segni in that passage. There is still a place named Sinei or Signi near Condovis, on the borders of Namur; and this may indicate the position of the Segni. [G. L.]

SEGOBODIUM in Gallia, placed in the Table on a road from Andomatum (Langres) to Vesontio (Besançon). The Itin. gives the same road, but omits Segobodium. D’Anville supposes Segobodium to be Serven, which is on the Saône, and in the direction between Besançon and Langres. [G. L.]

1. The capital of the Celtiberi in Hispania Tarraconensis. (Plin. iii. 3. s. 4.) It lay SW. of Caesaraugusta, and in the jurisdiction of Cartago Nova. (Plin. l. c.) The surrounding district was celebrated for its t alc or salicine. (Id. xxxvi. 22. 45.) It must have been in the neighbourhood of Priege, where, near Pennasacréte, considerable ruins are still to be found. (Flores, Esp. SAGR. vii. p. 61.) For coins see Sestini, i. p. 193. (Cf. Strab. iii. p. 162; Front. Strat. iii. 10. 6.)

2. A town of the Edetani in Hispania Tarraconensis, known only from inscriptions and coins, the modern Segobiaco. (Flores, Esp. SAGR. p. 21, viii. p. 97, and Med. pp. 573, 650; Monnet, p. 50, and Supp. 1. p. 102.) [T. H. D.]

COIN OF SEGEBRIGA.

SEGEBRIGIL [Massilia, p. 290].
SEGODUNUM, a town of southern Germany, probably in the country of the Hercunduri, is, according to some, the modern Würzburg. (Ptol. iii. ii. § 29; comp. Wilhelm, Gegen- niere, p. 206.)

SEGONIA. A town of the Celtiberi in Hispania Tarraconensis, 16 miles from Caesaraugusta. (Itin. Ant. pp 437, 439.) Most probably identical with the Seguntia of Livy (xxiv. 19). The modern Rueda, according to Lapie.

SEGOSA, in Gallia, appears in the Table on a road from Portus Nannetum (Nantes) to Limumin, or Limosum (Poltiers). D'Anville supposes that Segosa is Bresseure, which is on the road from Nantes to Poltiers. (G. L.)

SEGOSA, in Gallia, is placed by the Antoinius Itin. on a road from Aquae Tarbellicae (Deca) to Burdigala (Bordeaux). The first station from Aquae Tarbellicae is Moscunnum, or Mostemontium, the site of which is unknown. The next is Segosa, which D'Anville fixes at a place named Esconesi or Escoarse. But he observes that the distance, 28 Roman leagues, between Aquae and Segosa is less than the distance in the Itin. (G. L.)

SEGOVIA (Σεγοβια, Ptol. ii. 6. § 56). 1. A town of the Areuii in Hispania Tarraconensis, on the road from Emerita to Caesaraugusta. (Itin. Ant. p. 435; Plin. iii. 3. s. 4; Fluator ii. 92.) It still exists under the ancient name. For coins see Flores (Med. ii. p. 577), Mionnet (i. p. 51, and Suppl. i. p. 104), and Sectini (p. 196).

2. A town of Hispania Baetica, on the river Sicile. (Hirt. B. A. 57.) In the neighbourhood of Secuii or the modern Teruel. (T. H. D.)

SEGUSIANI (Σεγοσιανοι, or Σεγουσιανοι), a Gallic people. When Caesar (B. C. 58) was leading against the Helvetii the troops which he had raised in North Italy, he crossed the Alps and reached the territory of the Allobroges. From the territory of the Allobroges he crossed the Rhone into the country of the Segusians: "Hi sunt extra Provenciam trans Rhodanum primi." (B. G. i. 10.) He therefore places them in the angle between the Rhone and the Saône, for he was following the Helvetii, who had not yet crossed the Saône. In another place (vii. 64) he speaks of the Aedu and Segusian as bordering on the Provancia, and the Segusiani were dependents of the Aedui (vii. 75). Strabo (iv. p. 186) places the Segusiani between the Rhodanus and the Dubis (Dobs), on which D'Anville remarks that he ought to have placed them between the Rhone and the Saône. But part of the Segusians at least were west of the Rhone in Caesar's time, as he plainly tells us, and therefore some of them were between the Rhone and the Dobs, though this is a very inaccurate way of fixing their position, for the Dobs ran through the territory of the Sequani. Lugdunum was in the country of the Segusiani. (Luc. Ant. i. 541.) Tiny gives to the name of Lepi (iv. 18).

In Cicero's oration Pro P. Quinto (c. 25), a Gallic people named Segathinius, Segathinum, with several other variations, is mentioned. It is by the Lambins. Bailer (Orelli's Cicero, 2nd ed.) has written "Segathinos" in this passage of Cicero on his own authority; but there is no name Segathinius in Gallia. It is probable that the true reading is "Segathinos." Ptolomy (ii. 8. § 14) names Rodumna (Romana) and Forum Segusianorum as the towns of the Segusiani, which shows that the Segusiani in his time extended to the Loivre (Rodumna); and the greater part of their territory was probably west of the Rhone and Saône. Mionnet, quoted by Uberti (Cullan, p. 209), has a mural which he supposes to belong to the Segusiani. (G. L.)

SEGUSIO (Σεγοσιον: Eth. Σεγουσιανις, Segusia: Sueo), a city of Gallia Transpadana, situated at the foot of the Cottian Alps, in the valley of the Doria (Dora Riparia), at the distance of 35 miles from Augusta Taurinorum (Turin). It was the capital of the Gaulish king or chiefman Cottius, from whom the Alps Cottae derived their name, and who, became in the reign of Augustus, a tributary or dependent ally of the Roman Empire. Hence, when the other Alpine tribes were reduced to subjection by Augustus, Cottius retained the government of his territories, with the title of Praefectus, and was able to transmit them to his son, M. Julius Cottius, upon whom the emperor Claudius even conferred the title of king. It was not till after the death of the younger Cottius, in the reign of Nero, that this district was incorporated into the Roman Empire, and Segusio became a Roman municipal town. (Strabo, iv. pp. 179, 204; Plin. iii. 20. s. 24; Amm. Marci. xv. 10.)

It was probably from an early period the chief town in this part of the Alps and the capital of the surrounding district. It is situated just at the junction of the route leading from the Mont Genêvre down the valley of the Doria with that which crosses the Mont Cenis; both these passages were among the natural passes of the Alps, and were doubtless in use from a very early period, though the latter seems to have been unaccountably neglected by the Romans. The road also that was in most frequent use in the latter ages of the Republic and the early days of the Empire to arrive at the pass of the Cottian Alps or Mont Genêvre, was not that by Segusio up the valley of the Doria, but one which ascended the valley of Fenestrelles to Ocem (Uceoz), and from thence crossed the Col de Sestrères to Seingemagnus (at or near Cessenon), at the foot of the actual pass of the Genêvre. This was the route taken by Caesar in B. C. 58, and appears to have still been the one most usual in the days of Strabo (Caes. B. G. i. 10; Strab. iv. p. 179); but at a later period the road by Segusio seems to have come into general use, and is that given in the Itineraries. (Itin. Ant. pp. 541, 542.)
SELEUCIA.

357. Of Segusio as a municipal town we hear little; but it is mentioned as such both by Pliny and Ptolemy, and its continued existence is proved by inscriptions as well as the Itineraries: and we learn that it continued to be a considerable town, and a military post of importance, as commanding the passes of the Alps, until long after the fall of the Western Empire. (Plin. in. 17. s. 21; Ptol. iii. 1. § 40; Gruter, Inscr. p. 111. 1; Orelli Inscr. 1690, 3893; Ann. Marc. xv. 10: Itin. Hier. p. 556; P. Dier. Hist. Long. iii. 8; Greg. Tur. iv. 39.)

Arnimius tells us that the tomb of Cottius was still visible at Segusio in his time, and was the object of much honour and veneration among the inhabitants (Ann. l.c.). A triumphal arch erected by him in honour of Augustus is still extant at Sasa; it commemorates the names of the "Civitatis" which were subject to his rule, and which were fourteen in number, though Pliny speaks of the "Cottianae civitates xii." (Plin. in. 20. s. 24; Orelli Inscr. 626.) All these are, however, mere obscure mountain tribes, and the names of most of them entirely unknown. His dominions extended, according to Strabo, across the Pyrenees as far as Ebrovum in the land of the Cattares (Strab. iv. p. 170); and this is confirmed by the inscription which enumerates the Cattariges and Medulli among the tribes subject to his authority. These are probably the two omitted by Pliny. O elum, in the valley of the Chane, was comprised in the territory of Cottius, while its limit towards the Taurini was marked by the station Ad Fines, placed by the Itineraries on the road to Augusta Taurinorum. But the distances given in the Itineraries are incorrect, and at variance with one another. Ad Fines may probably be placed at or near Aygyluna, 15 miles from Tarin, and 20 from Sasa. The mountain tribes called by Pliny the "Cottian civitates," when united with the Roman government, at first received only the Latin franchise (Plin. l.c.); but as Segusio became a Roman municipium, it must have received the full franchise. [E. H. B.]

SEGUSTERO, a name which occurs in the Antonine Itin. and in the Table, is a town of Gallia Narbonensis, and the name is preserved in Sistoron, the chief town of an arcaminium in the department of Basses Alpes, on the right bank of the Durance. Roman remains have been found at Sistoron. The name in the Notit. Provinc. Galliae is Civitas Segustriana. It was afterwards called Sesterriaton, and Sistoron, where the modern name continues (V. A. V. Anville, Notice, etc.). [G. L.]

SEIR, M. (Σείρα, LXX. Σείρα, Σηήερο, Joseph). "The land of Seir" is equivalent to "the country of Edom." (Gen. xxxii. 3.) Mount Seir was the dwelling of Esau and his posterity (xxxvi. 8, 9; Deut. iii. 4, 5), in the possession of which they were not to be disturbed. (Josh. xxvii. 4.) Its general situation is defined in Deuteronomy (i. 2) between Horeb and Kadesh Barnea. The district must have been extensive for in their retrograde movement from Kadesh, which was in Seir (i. 44), the Israelites compassed Mount Seir many days (v. 1, 9). The original inhabitants of Mount Seir were the Horites; "but the children of Esau succeeded them, who had destroyed them from before them, and dwelt in their stead." (ii. 12, 22; comp. Gen. xxv. 6). It obviously derived its name from "Seir the Horite" (xxxvi. 20, 21), and not, as Josephus erroneously supposes, from the Hebrew סיר = hir-
istus. (Ant. i. 20. § 3.) The range bordering Wady Araba is marked M. Seher in some modern maps, but without sufficient authority for the name. Dr. Wilson confines the name to the eastern side of the Araba, from a little north of Petra to the Gulf of Akabah, which range he names Jebel-esh-Sheerah (Land of the Bible, vol. i. pp. 289, 290, 337, 340); but since Kadesh was in Seir, it is obvious that this name must have extended much more widely, and on both sides the Araba. Mr. Rawlends heard the name Es-Serr given to an elevated plain to the east of Kadesh, which must, he thinks, be the Seir alluded to in Deut. i. 44, where the Israelites were chased before the Amalekites. (Williams's Holy City, vol. i. appendix, p. 46.) [G. W.]

SEIBAE. [Ἰσσόφις]

SELABUS, an island lying off the Argolic promontory of Spercaium, mentioned only by Pliny (iv. 12. s. 57).

SELAH. [Πετρά.]

SEELIRNA. [Σελενίναις, Σηελίντις, Σελενίτης, Σελενίτης, Σελενίτης, Σελενίτης] a district in the south-west part of Cilicia, extending along the coast, but also some distance in the interior; it derived its name from the town of Selinus. (Plot. v. 8. §§ 2, 5.)

SELENUSIAE (Σελενοῦσιαι) or SELENOUS, two lakes formed by the sea, north of the mouth of the Casyrus, and not far from the temple of the Ephesian Artemis. These two lakes, which communicated with one another, were extremely rich in fish, and formed part of the revenue of the temple of Artemis, though they were on several occasions wrested from it. (Strab. xiv. p. 642; Plin. v. 31.) The name of the lake, derived from Selene, the moon-goddess, or Artemis, probably arose from their connection with the great goddess of Ephesus. (Comp. Claudier's Travels in Asia Minor, vol. i. p. 162.) [L. S.]

SELEUCIA or SELEUCIA, two towns in Syria. 1. Ad Belem (Σκλευρία πρὸς Βῆλαι), sometimes called Seleukeibolis, situated in the district of Cassabitis, placed by Ptolemy in long. 66° 30', lat. 34° 45'. The Belus was a tributary of the Orontes, running into it from the W, and since, as Pococke remarks, Seleucia was exactly in the same latitude as Paltos, it must have been due E. of it. Now Bula'a, the ancient Paltos, lies two hours S. of Jebelie, ancient Gabala, on the coast. Seleucia ad Belum must be looked for 1° 10' to the E., according to Ptolemy's reckoning, who places Paltos in long. 65° 30', lat. 34° 45'. Modern conjecture has identified it with Singh and Dervetigi, which is placed 30 miles E. of Antioch. (Plot. v. 13. § 16; Pococke, Syria. vol. ii. p. 199.) Pliny mentions it with another not elsewhere recognised, in the interior of Syria: "Seleucia proster jam dictam (i.e. Pierra), duas, quam ad Ephratem, et quae ad Belum vocantur" (v. 23. § 19).

2. PIERA (Σκλευρία Πιείρα : Ειθ. Σαλακεοīς), a maritime city of Syria, placed by Ptolemy in long. 68° 36', lat. 35° 26', between Rhossus and the mouths of the Orontes. Its ancient name, according to Strabon, was " Rivers of Water " (Τῆςας τούτων), a strong city, called Free by Pompey (Strab. xvi. 2. § 8). Its position is fully described by Polybius.
it was situated on the sea between Cilicia and Phoenice, over against a large mountain called Corypheum, the base of which was washed on its W. side by the sea, towards the E. it dominated the districts of Antioch and Seleucia. Seleucia lay on the S. of this mountain, separated from it by a deep and rugged valley. The city extended to the sea through broken ground, but was surrounded for the most part by precipitous and abrupt rocks. On the side towards the sea lay the factory (κωπανία) and suburb, on the level ground, strongly fortified. The whole hollow (κόψατο) of the city was likewise strongly fortified with fine walls, and temples, and buildings. It had one approach on the sea side, by an artificial road in steps (καταφάρσεις), distributed into frequent and continuous slopes (καταφάρσεις και κυκλωματα) and curves (καταφάρσεις και κυκλωματα). The embouchure of the Orontes was not far distant—40 stadia, according to Strabo (xvi. p. 750). It was built by Seleucus Nicator (died B.C. 280), and was of great importance, in a military view, during the wars between the Seleucidae and the Ptolemies. It was taken by Ptolemy Evergetes on his expedition into Syria, and held by an Egyptian garrison until the time of Antiochus. He ordered it to be razed to the ground, according to Apollonius, Seleucian, resolved to recover it from Ptolemy Philopator (cir. n. c. 220), in order to remove the disgrace of an Egyptian garrison in the heart of Syria, and to obviate the danger which it threatened his operations in Coele-Syria, being, as it was, a principal city, and well nigh, so to speak, the proper none of the Syrian power. Having sent the fleet against it, under the admirals Diogenetes, he himself marched with his army from Apamea, and encamped near the Hippodrome, 5 stadia from the city. Having in vain attempted to win it by bribery, he divided his forces into three parts, of which one under Zenais made the assault near the gate of Antioch, 2nd under Harmogenes near the temple of the Besiari, the third under Ardis and Diogenetes by the arsenal and suburb, which was first carried, whereupon the garrison capitulated (Polyb. v. 58—60). It was afterwards a place of arms in the further prosecution of the war against Ptolemy (66). The M-ant Corypheum of Polybius is the Pteria of Ptolemy and Strabo, from which the town derived its distinguishing appellation. Strabo mentions, from Posidonius, that a kind of asphaltic soil was quarried in this place, which, when spread over the roots of the time, acted as a preservative against blight (vii. p. 316). He calls it the first city of the Syrians, from Cilicia, and states its distance from Soli, in a straight course, a little less than 1000 stadia (xiv. p. 676). It was one of the four cities of the Tetrapolis, which was a synonym for the district of Seleucia, the others being Antioch, Apamea, and Laodicea, which were called sister cities, being all founded by Seleucus Nicator, and called by the names respectively of himself, his father, his wife, and his mother-in-law; that bearing his father's name being the lesser, that bearing his own, the strongest. (Strab. xiv. p. 749.) The auguries attending its foundation are mentioned by John Malalas (Chronographia, lib. viii. p. 254). It became the port of Antioch, and there it was that St. Paul and Barnabas embarked for Cyprus, on their first mission to Asia Minor (Acts, xiii. 4), the Orontes never having been navigable even as far as Antioch for any but short draught. Phily calls it "Seleucia libera Pteria." and describes it as situated on a promontory (v. 21) εξωτικό εστιατος απο Ζευγων απο τα Ευφρατεια (12). He de
SELEUCIA.

carefully executed plan, with drawings and sections of the tunnel, &c., has lately been published by Captain Allen, who surveyed the site of the harbour, but not of the town, in 1850. (The Dead Sea, &c., Map at end of vol. i., and vol. ii. pp. 208—230.) [G. W.]

SELEUCIA.

COIN OF SELEUCIA IN SYRIA.

SELEUCIA or SELEUCIA (Seleucia) 1. A town near the northern frontier of Phœnia, surannamed Sidera (ἲ Σίδηρα, Plut. v. 5. § 4; Hieroc. p. 673), probably on account of iron-works in its vicinity. There are some coins of this place with the image of the Asiatic divinity Meo, who was worshipped at Antioch, and bearing the inscription Καλα‑ 

διοσσελκεων, which might lead to the idea that the place was restored by the emperor Claudius. (Sestini, Mon. Vet. p. 96.) Its site is now occupied by the town of Aiydras.

2. A town in Pamphyilia between Side and the mouth of the river Euryneon, at a distance of 80 stadia from Side, and at some distance from the sea. (Stadium, Marc. Mag. § 216.)

3. An important town of Cilicia, in a fertile plain on the western bank of the Calycadnus, a few miles above its mouth, was founded by Seleucus I., surannamed Nicator. A town or towns, however, had previously existed on the spot under the names of Obia or Hyria, and Seleucia seems to have only extended and united them in one town under the name Seleucia. The inhabitants of the neighbouring Helmi were at the same time transferred to the new town, which was well built, and in a style very different from that of other Cilician and Pamphylian cities. (Steph. B. s. r.; Strab. xiv. p. 670.)

In situation, climate, and the richness of its productions, it rivalled the neighbouring Tarsus, and it was much frequented in account of the annual celebration of the Olympia and on account of the oracle of Apollo. (Zosim. i. 57; Basil. Viti S. Theod., i. p. 275, Orat. xxvii. p. 148.) Pliny (v. 27) states that it was surannamed Trachonitis; and some ecclesiastical historians, speaking of a council held there, call the town simply Trachae (Saxon. iv. 16; Socrat. ii. 39; comp. Plut. v. 8. § 5; Amm. Marc. xvi. 29; Oros. vii. 12.) The town still exists under the name of Seleçkisch, and its ancient remains are scattered over a large extent of ground on the west side of the Calycadnus. The chief remains are those of a theatre, in the front of which there are considerable ruins, with porticoes and other large buildings; farther on are the ruins of a temple, which had been converted into a Christian church, and several large Corinthian columns. Ancient Seleucia, which appears to have remained a free city ever since the time of Augustus, remained in the same condition even after a great portion of Cilicia was given to Archelans of Cappadocia, whence both imperial and autonomous coin of the place are found. Seleucia was the birthplace of several men of eminence, such as the peripatetics Athenaeus and Xenarchus, who flourished in the reign of Augustus, and the sophist Alexander, who taught at Antioch, and was private secretary to the emperor M. Aurelius (Philist. Inf. Soph. ii. 5.) According to some authorities, lastly, the emperor Trajan died at Seleucia (Eutrop. vi. 2, 16; Oros. l. c.), though others state that he died at Seilma.

COIN OF SELEUCIA IN CILICIA.

4. Seleucia in Caria [Theales]. [L. S.]

SELEUCIA or SELEUCIA (Seleucia, Polyb. v. 48; Strab. xi. p. 521; Plut. v. 18. § 8), a large city near the right bank of the Tigris, which, to distinguish it from several other towns of the same name, is generally known in history by the title of Seleucia epi tv Tigrēti. (Strab. xvi. p. 738; Appian, Syr. 57.) It was built by Seleucus Nicator (Strab. l. c.; Plin. vi. 26. s. 30; Tacit. Ann. vi. 42; Joseph. Anti. Jud. xviii. 9. § 8; Amm. Marc. xxiii. 29), and appears to have been placed near the junction with the Tigris, of the great dyke which was carried across Mesopotamia from the Euphrates to the Tigris, and which bore the name of Nakar Malecha (the royal river). (Plin. l. c., and Luc. Char. p. 5.) Ptolemy states that the artificial river divided it into two parts (v. 18. § 8). On the other hand, Theophylact states that both rivers, the Tigris and Euphrates, surrounded it like a rampart —by the latter, in all probability, meaning the Nakar Malecha (v. 6). It was situated about 40 miles N.E. of Babylon (according to Strabo, 300 stadia, and to the Tab. Pentongier, 44 M.P.). In form, its original structure is said to have resembled an eagle with its wings outspread. (Plin. l. c.) It was mainly constructed of materials brought from Babylon, and was one principal cause of the ruin of the elder city, as Ctesiphon was (some centuries later) of Seleucia itself. (Strab. xvi. p. 738.) It was placed in a district of great fertility, and is said, in its best days, to have had a population of 600,000 persons. (Plin. l. c.) Strabo adds, that it was even larger than Antiocheia Syriæ, —at his time probably the greatest commercial entrepôt in the East, with the exception of Alexandria (xvi. p. 750). Even so late as the period of its destruction its population is still stated to have amounted to half a million. (Eutrop. v. 8; comp. Oros. viii. 5.) To its commercial importance it doubtless owed the free character of its local government, which appears to have been administered by means of a senate of 300 citizens. Polybius states that, on the overthrow of Molon, the Median rebels Antiochus and Hermeias descended on Seleucia, which had been previously taken by Molon, and, after punishing the people by torture and the infliction of a heavy fine, exiled the local magistracy, who were called Adéi¬

ansae. (Polyb. v. 54.) Their love of freedom and of independent government was, however, of longer duration. (Plin. l. c.; Tacit. Ann. vi. 42.) Seleucia owed its ruin to the wars of the Romans with the Parthians and other eastern nations. It is first noticed in that between Crassus and Orodes (Dion Cass. xi. 20); but it would seem
that Crassus did not himself reach Seleucia. On the advance of Trajan from Asia Minor, Seleucia was taken by the Parthians, and after a massacre of Julius Alexan- der, and partly burnt to the ground (Dion Cass. Ixvii. 30); and a few years later it was still more completely destroyed by Cassius, the general of Lucius Verus, during the war with Volgeses. (Dion Cass. Ixvi. 2; Eutrop. v. 8; Capitol. Verus, c. 8.) When Severus, during the Parthian War, descended the Euphrates, he appears to have found Seleucia and Babylonia equally abandoned and desolate. (Dion Cass. Ixx. 9.) Still later, in his expedition to the East, Julian found the whole country round Seleucia one vast marsh full of wild game, which his soldiers had to hunt with Arrows. It would seem from the indistinct notices of some authors, that Seleucia once bore the name of Coche.

[COCHE.]  

SELEUCUS (Σελεύκος), a district of Syria, mentioned by Ptolemy, as containing the cities of Cephura, Gindaros, and Imaua (v. 15, § 15). Strabo calls it the best of all the districts; it was also called Tetrapolis, on account of its four most important cities, for it had many. These four were, Antioch, Seleucia in Pieria, Apamea, and Laodicea (xvi. p. 749). It also comprehended, according to Strabo, four satellites; and it is clear that he uses the name in a much wider sense than Ptolemy, who places the four cities of the tetrapolis of Strabo's Seleucus in so many separate districts; Antioch in Cassiots, Apamea in Apamene, Laodicea in Laodicene, while he only implies, but does not state, that Seleucia lies in Seleucia.

[G. W.]  

SEIGE (Σιγῆ; Eth. Σιγεῖα), an important city in Pisidia, on the southern slope of Mount Taurus, at the part where the river Eurymedon forces its way through the mountains towards the south. The town was believed to be a Greek colony, for Strabo (xii. p. 520) states that it was founded by Lacedaemonians, but adds the somewhat unintelligible remark that previously it had been founded by Calchas (Comp. Polyb. v. 76; Steph. B. s. v.; Dio. Per. 858). The acropolis of Selge bore the name of Cesidium (Κεσιδεῖον; Polyb. L. C.) This district in the town which was situated was extremely fertile, producing abundance of oil and wine, but the town itself was difficult of access, being surrounded by precipices and beds of torrents flowing towards the Eurymedon and Cestrus, and requiring bridges to make them passable. In consequence of its excellent laws and political constitution, Selge rose to the rank of the most powerful and populous city of Pisidia, and at one time was able to send an army of 20,000 men into the field. Owning to these circumstances, and the valour of its inhabitants, for which they were regarded as worthy kinmen of the Lacedaemonians, the Selgians were never subject to any foreign power, but remained in the enjoyment of their own freedom and independence. When Alexander the Great passed through Pisidia, the Selgians sent an embassy to him and gained his favour and friendship. (Arrian, Anat. l. 28.) At that time they were at war with the Telemissians. In the period when Achaia had made himself master of Western Asia, the Selgians were at war with Pedoeilus, which was besieged by them; and Achaia, on the invitation of Pedoeilus, sent a large force against Selge. After a long and vigorous siege, the Selgians, being betrayed and despairing of resisting Achaia any longer, sent deputies to sue for peace, which was granted to them on the fol-
SELGOVAE. (ΣΚΛΩΓΩΒΑΝ, Prot. η. 3. § 8), a people on the SW. coast of Britannia Bavarica, in the E. part of Galloway and in Dumfriesshire. Cand.en (p. 1194) derives the name of Selovey from them. [T. H. D.]

SELINUS (ΣΕΛΙΝΟΣ). 1. A village in the north of Lacedo, described by Pananias as 20 stadia from Geronathus; but as Pananias seems not to have visited this part of Lacedo, the distances may not be correct. Leake, therefore, places Selinus at the village of Kiosmos, which lies further north of Gerathine than 20 stadia, but where there are remains of ancient tombs. (Paus. iii. 22. § 8; Leake, Peloponnesinae, p. 363; Boblaje, Recherches, ge. p. 97; Curtius, Peloponnesos, vol. ii. p. 304.)

2. A river in the Triphylia Elis, near Scillus. [SCILLUS.]

3. A river in Achaea. [ACHAIA, p. 13, b. No. 6.]

SELINUS (ΣΕΛΙΝΟΣ; Eth. ΣΕΛΙΝΩΤΙΑΝ, Selinuntines: Ru. at Torre dei Pulci), one of the most important of the Greek colonies in Sicily, situated on the SW. coast of that island, at the mouth of the small river of the same name, and 4 miles W. of that of the Hypeas (Beliet). It was founded, as we learn from Thucydides, by a colony from the Sicilian city of Megara, or Megara Hyblaea, under the conduct of a leader named Pamnunis, about 100 years after the settlement of that city, with the addition of a fresh body of colonists from the parent city of Megara in Greece. (Thuc. vi. 4, vii. 57; Seym. Ch. 292; Strab. vi. p. 272.) The date of its foundation cannot be precisely fixed, as Thucydides indicates it only by reference to that of the Sicilian Megara, which is itself not accurately known, but it may be placed about n. c. 628. Diodorus indeed would place it 22 years earlier, or n. c. 650, and Hieronymus still further back, n. c. 654; but the date given by Thucydides, which is probably entitled to the most confidence, is incompatible with this earlier epoch. (Thuc. vi. 4; Diod. xiii. 59; Hieron, Chron. ad ann. 1362: Clinton, Fast. Hell, vol. i. p. 208.) The name is supposed to have been derived from the quantities of wild parsley (σελινος) which grew on the spot; and for the same reason a leaf of this parsley was adopted as the symbol of the colony.

Selinus was the most westerly of the Greek colonies in Sicily, and for this reason was early brought into contact and collision with the Carthaginians, and the barbarians in the W. and NW. of the island. The former people, however, do not at first seem to have offered any obstacle to their progress; but as early as n. c. 550 we find the Selinuntines engaged in hostilities with the people of Segesta (a non-Hellenic city), whose territory bordered on their own. (Diod. v. 9.) The arrival of a body of emigrants from Rhodes and Ciris who subsequently founded Lipara, and who lent their assistance to the Segestans, for a time secured the victory to that people; but disputes and hostilities seem to have been of frequent occurrence between the two cities, and it is probable that in n. c. 454, when Diodorus speaks of the Segestans as being at war with the Liphæans (xi. 86), that the Selinuntines are the people really meant. [LIPHAEAN.] The river Mazurus, which at that time appears to have formed the boundary between the two states, was only about 15 miles W. of Selinus; and it is certain that at a somewhat later period the territory of Selinus extended to its banks, and that that city had a fort and emporium at its mouth. (Diod. xiii. 54.) On the other side its territory certainly extended as far as the Halyucus or Solso, at the mouth of which it had founded the colony of Minoa, or Hercules, as it was afterwards termed. (Herod. v. 46.) It is evident, therefore, that Selinus had early attained to great power and prosperity; but we have very little information as to its history. We learn, however, that, like most of the Sicilian cities, it had passed from an oligarchy to a despotism, and about n. c. 510 was subject to a despot named Pelagioares, from whom the citizens were freed by the assistance of the Spartan Eurykleus, one of the companions of Dorius; and thereupon Eurykleus himself, for a short time, seized on the vacant sovereignty, but was speedily overthrown and put to death by the Selinuntines. (Herod. v. 46.) We are ignorant of the causes which led the Selinuntines to abandon the cause of the other Greeks, and to take part with the Carthaginians during the great expedition of Hasdrubal, n. c. 480; but we learn that they had even promised to send a contingent to the Carthaginian army, which, however, did not arrive till after its defeat. (Diod. xi. 21, xiii. 55.) The Selinuntines are next mentioned in n. c. 466, as co-operating with the other free cities of Sicily in assisting the Syracusans to expel Thyrasylus (ib. xi. 68); and there is every reason to suppose that they fully shared in the prosperity of the half century that followed, a period of tranquillity and opulence for most of the Greek cities in Sicily. Thucydides speaks of Selinus just before the Athenian expedition as a powerful and wealthy city, possessing great resources for war both by land and sea, and having large stores of wealth accumulated in its temples. (Thuc. vi. 20.) Diodorus also represents it at the time of the Carthaginian invasion, as having enjoyed a long period of tranquillity, and possessing a numerous population. (Diod. xiii. 55.)

In n. c. 416, a renewal of the old disputes between Selinus and Segesta became the occasion of the great Athenian expedition to Sicily. The Selinuntines were the first to call in the powerful aid of Syracuse, and thus for a time obtained the complete advantage over their enemies, whom they were able to blockade both by sea and land; but in this extremity the Segestans had recourse to the assistance of Athens. (Thuc. vi. 6; Diod. xiii. 82.) Though the Athenians do not appear to have taken any measures for the immediate relief of Segesta, it is probable that the Selinuntines and Syracusans withdrew their forces at once, as we hear no more of their operations against Segesta. Nor does Selinus bear any important part in the war of which it was the immediate occasion. Nicias indeed proposed, when the expedition first arrived in Sicily (n. c. 415), that they should proceed at once to Selinus and compel that city to submit on moderate terms (Thuc. v. 47); but this advice being overruled, the efforts of the armament were directed against Syracuse, and the Selinuntines in consequence bore but a secondary part in the subsequent operations. They are, however, mentioned on several occasions as furnishing auxiliaries to the Syracusans; and it was at Selinus that the large Peloponnesian force sent to the support of Gylippus landed in the spring of 415, having been driven over to the coast of Africa by a tempest. (Thuc. vii. 50, 58; Diod. xiii. 12.) The defeat of the Athenian armament left the Segestans apparently at the mercy of their rivals; they in vain attempted to disarm the hostility of the
Selinuntines by ceding without further contest the frontier district which had been the original subject of dispute. But the Selinuntines were not satisfied with this concession, and continued to press them with fresh aggressions, for protection against which they sought assistance from Carthage. This was, after some hesitation, accorded them, and a small force sent over at once, with the assistance of which the Segestaeans were able to defeat the Selinuntines in a battle. (Diod. xiii. 43, 44.) But not content with this, the Carthaginians in the following spring (B.C. 409) sent over a vast army amounting, according to the lowest estimate, to 100,000 men, with which Hannibal (the uncle of the famous Hamilcar that was killed at Himera) landed at Lilybaeum, and from thence marched direct to Selinus. The Selinuntines were wholly unprepared to resist such a force; so little indeed had they expected it that the fortifications of their city were in many places out of repair, and the auxiliary force which had been promised by Syracuse as well as by Agrigentum and Gela, was not yet ready, and did not arrive in time. The Selinuntines, indeed, defended themselves with the courage of despair, and even after the walls were carried, continued the contest from house to house; but the overwhelming numbers of the enemy recovered all resistance hopeless; and after a siege of only ten days the city was taken, and the greater part of the defenders put to the sword. Of the citizens of Selinus we are told that 16,000 were slain, 5000 made prisoners, and 2600 under the command of Epiomed escaped to Agrigentum. (Diod. xiii. 54—59.) Shortly after Hannibal destroyed the walls of the city, but gave permission to the surviving inhabitants to return and occupy it, as tributaries of Carthage, an arrangement which was confirmed by the treaty subsequently concluded between Dionysius and the Carthaginians, in B.C. 405. (Id. xiii. 59, 114.) In the interval a considerable number of the survivors and fugitives had been brought together by Hermocrates, and established within its walls. (Ib. 63.) There can be no doubt that a considerable part of the citizens of Selinus availed themselves of this permission, and that the city continued to subsist under the Carthaginian dominion; but a fatal blow had been given to its prosperity, which it undoubtedly never recovered. The Selinuntines are again mentioned in B.C. 397 as declaring in favour of Dionysius during his war with Carthage (Diod. xiv. 47); but both the city and territory were again given up to the Carthaginians by the peace of 389 (Id. xv. 17); and though Dionysius recovered possession of it by arms shortly before his death (Id. xv. 73), it is probable that it soon again lapsed under the dominion of Carthage. The Harceus, which was established as the eastern boundary of the Carthaginian dominion in Sicily by the treaty of 383, seems to have generally continued to be so recognised, notwithstanding temporary interruptions; and was again fixed as their limit by the treaty with Agathocles in B.C. 314. (Id. xix. 71.) This last treaty expressly stipulated that Selinus, as well as Heraclea and Himera, should continue subject to Carthage, as before. In B.C. 276, however, during the expedition of Pyrrhus to Sicily, the Selinuntines voluntarily submitted to that monarch, after the capture of Heraclea. (Id. xxi. 10. Exc. II. p. 498.) During the First Punic War we again find Selinus subject to Carthage, and its territory was repeatedly the theatre of military operations between the contending powers. (Id. xxi. 1, 21; Pol. i. 59.) But before the close of the war (about B.C. 250), when the Carthaginians were beginning to contract their operations, and confine themselves to the defence of as few points as possible, they removed all the inhabitants of Selinus to Lilybaeum and destroyed the city. (Diod. xxi. 1. Exc. II. p. 506.) It seems certain that it was never rebuilt. Pliny indeed, mentions its name ("Selinum oppidum," iii. 8, s. 14), as if it was still existing as a town in his time, but Strabo distinctly classes it with the cities of which were wholly extinct, and says, though he mentions the river Selinus, has no notice of a town of the name. (Strab. vi. p. 272; Pol. iii. 4, § 5.) The Thermæ Selinuntiae, which derived their name from the ancient city, and seem to have been much frequented in the time of the Romans, were situated at a considerable distance from Selinus, being undoubtedly the same as those now existing at Sciacca; they are sulphureous springs, still much valued for their medical properties, and dedicated, like most thermal waters in Sicily, to St. Colagero. At a later period they were called the Aqua Selinuntinae or Larotes, under which name they appear in the Itineraries. (Itin. Ant. p. 59; Tab. Pent.) They are there placed 40 miles W. of Agrigentum, and 46 from Lilybaeum; distances which agree well with the position of Sciacca. This is distant about 20 miles to the E. of the ruins of Selinus.

The site of the ancient city is now wholly desolate, with the exception of a solitary guardhouse, and the ground is for the most part thickly overgrown with shrubs and low brashwood; but the remains of the walls can be distinctly traced throughout a great part of their circuit. They occupied the summit of a low hill, directly abutting on the sea, and bounded on the W. by the marshy valley through which flows the river Medine, the ancient Selinus; on the E. by a smaller valley or depression, also traversed by a small marshy stream, which separates it from a hill of similar character, where the remains of the principal temples are still visible. The space enclosed by the existing walls is of small extent, so that it is probable the city in the days of its greatness must have covered a considerable area without them, and it has been supposed by some writers that the whole extent of walls is that erected by Hermocrates when he restored the city after its destruction by the Carthaginians. (Diod. xiii. 63.) No trace is, however, found of a more extensive circuit, though the remains of two lines of wall, evidently connected with the port, are found in the small valley E. of the city. Within the area surrounded by the walls are the remains of three temples, all of the Doric order, and of an ancient style; none of them are standing, but the foundations of them all remain, together with numerous portions of columns and other architectural fragments, sufficient to enable us to restore the plan and design of all three without difficulty. The largest of them (marked C. on the plan) is 250 feet long by 85 feet broad, and has 6 columns in front and 18 in length, a very unusual proportion. All these are hexastyle and peripteral. Besides these three temples there is a small temple or Aedicula (marked B.), of a different plan, but also of the Doric order. No other remains of buildings, beyond mere fragments and foundations, can be traced within the
walls; but the outlines of two large edifices, built of squared stones and in a massive style, are distinctly traceable outside the walls, near the NE. and NW. angles of the city, though we have no clue to their nature or purpose.

But much the most remarkable of the ruins at Selinus are those of three temples on the hill to the E., which do not appear to have been included in the city, but, as was often the case, were built on this neighbouring eminence, so as to front the city itself. All these temples are considerably larger than any of the three above described; and the most northerly of them is one of the largest of which we have any remains. It had 8 columns in front and 17 in the sides, and was of the kind called pseudo-dipteral. Its length was 339 feet, and its breadth 162, so that it was actually longer than the great temple of Jupiter Olympius at Aegigentum, though not equal to it in breadth. From the columns being only partially fluted, as well as from other signs, it is clear that it never was completed; but all the more important parts of the structure were finished, and it must have certainly been one of the most imposing fabrics in antiquity. Only three of the columns are now standing, and these imperfect; but the whole area is filled up with a heap of fallen masses, portions of columns, capitals, &c., and other huge architectural fragments, all of the most massive character, and forming, as observed by Swinhorne, "one of the most gigantic and sublime ruins imaginable." The two other temples are also prostrate, but the ruins have fallen with such regularity that the portions of almost every column lie on the ground as they have fallen; and it is not only easy to restore the plan and design of the two edifices, but it appears as if they could be rebuilt with little difficulty. These temples, though greatly inferior to their gigantic neighbour, were still larger than that at Segesta, and even exceed the great temple of Neptune at Paestum; so that the three, when standing, must have presented a spectacle unsurpassed in antiquity. All these buildings may be safely referred to a period anterior to the Carthaginian conquest (B. C. 409), though the three temples last described appear to have been all of them of later date than those within the walls of the city. This is proved, among other circumstances, by the sculptured metopes, several of which have been discovered and extracted from among the fallen fragments. Of these sculptures, which those who belonged to the temples within the walls, present a very peculiar and archaic style of art, and are universally recognised as among the earliest extant specimens of Greek sculpture. (They are figured by Müller, Denkmäler, pl. 4, 5, as well as in many other works, and casts of them are in the British Museum.) These, on the contrary, which have been found among the ruins of the temple marked E. on the opposite hill, are of a later and more advanced style, though still retaining considerable remains of the stiffness of the earliest art. Besides the interest attached to these Selinuntine metopes from their important bearing on the history of Greek sculpture, the remains of these temples are of value as affording the most unequivocal testimony to the use of painting, both for the architectural decoration of the temples, and as applied to the sculptures with which they were adorned. A very full and detailed account of the ruins at Selinus is given in the Duke of Serra di Falco's Antichità Siciliane, vol. ii., from which the preceding plan is derived. A more general description of them will be found in Swinhorne's Travels, vol. ii, pp. 242—245; Smyth's Sicily, p. 219—221; and other works on Sicily in general.

The coins of Selinus are numerous and various. The earliest, as already mentioned, bear merely the figure of a parsley-leaf on the obverse. Those of somewhat later date (including the one figured below) represent a figure sacrificing on an altar.
which is consecrated to Aesculapius, as indicated by
the cock which stands beside it. The subject of
this type evidently refers to a story related by
Diogenes Laërtius (viii. 2, § 11) that the Selinun-
tines were afflicted with a pestilence from the
marshy character of the lands adjoining the neigh-
bouring river, but that this was cured by works of
drainage, suggested by Empedocles. The figure
standing on the coin is the river-god Selinus, which
was thus made conducive to the salubrity of the
city.

[ E. H. B. ]

COIN OF SELINUS

Selinus (Σελίνως; Eth. Σελίνωντος or Σε-
λινωνέως; Scelnos; Selne) is a port-town
on the west coast of Cilicia, at the mouth of a small river of the same
name, which is now called Selcuti. (Scylax, p. 40; Liv. xiii. 20; Strab. xiv. p. 682; Ptol. v. 8, § 2,
vii. 17, § 42; Plin. v. 23.) This town is memorable
in history as the place where, in A. D. 117, the
emperor Trajan is said by some authors to have died
(Dio Cass. liv. iii. 32). After this event the place for
a time bore the name of Trajanopolis; but its bishops
afterwards are called bishops of Selinus. (Hierocl. p.
709.) Basil of Selucia (Vita S. Theodori, ii. 17)
describes the place as reduced to a state of insig-
nificance in his time, though it had once been a great
commercial town. (Comp. Studia Pol. Mar. Mag. §§
203, 204; Lucan, viii. 260; Chron. Paschal. p. 253.)
Selinus was situated on a precipitous rock, sur-
rrounded on almost every side by the sea, by which
position it was rendered almost impregnable.
The whole of the rock, however, was not included in
the ancient line of fortifications; inside the walls
there still are many traces of houses, but on the
outside, and between the foot of the hill and the
river, the remains of some large buildings are yet
standing, which appear to be a mausoleum, an agora,
a theatre, an aqueduct, and some tombs (Beaumont,
Aegaeum, p. 186, foll.).

Respecting the small river Selinus, flowing by
Pergamus, see Pergamus, p. 575. [L. S.]

Sella sia (Σελλασία, Xen. Polib. Diod.; Σε-
λασία, Steph. B., Hesych. s. v.; the latter is perhaps
the correct form, and may come from σέλας; the
name is connected by Hesychius with Artemis
Selas; Eth. Σελλασιῶς, Σελλασίως), a town of
Laconia, situated in the valley of the Oenous, on
the road leading from Tegea and Argos, and one of
the bulwarks of Sparta against an invading
army. Its distance from Sparta is nowhere men-
tioned; but from the description which Polybius
gives of the celebrated battle fought in its neigh-
borhood between Antigonus and Cleomenes, it is
probable that the plain of Krenatis was the site of
the battle. We learn from Polybius that this
battle took place in a narrow opening of the vale of
the Oenous, between two hills named Evas and
Olympus, and that the river Gorgylus flowed across
the plain into the Evusus. South of the Khan of

Krenatis is a small plain, the only one in the valley
of the Oenous, about ten minutes in width and a
quarter of an hour in length, in the midst of which
the rocks again approach so close as barely to leave
room for the passage of the river. The
mountain, which bounds this plain on the east, is Olympus, a
continuation of the mountain of Vresthena: it rises
very steep on the left bank of the Oenous. The
mountain on the western side is Evas, now Turlnes,
which, though not so steep, is still inaccessible to
cavalry. Towards the north the plain is shut in by
a mountain, on which the road leads to Tegea,
and towards the south by a still higher mountain.
The Oenous, which flows near the eastern edge of
the plain, can be crossed at any point without diffi-
culty. It receives on its right side a small brook,
the Gorgylus, which descends from a ravine on
the northern side of Mt. Evas. On the summit of the
hill, more than 2800 feet above the sea, which
shuts in the plain on the south, and over which the
road leads to Sparta, are the ruins of Sellasia, described
below.

The battle of Sellasia, of which Polybius gives a
detailed account, requires a few words of explanation.
In B. C. 221, Cleomenes, the Spartan king, ex-
pecting that Antigonus, the Macedonian king and
the Achaens, would invade Laconia, fortified the
other passes which led into the country, and took
up his own position with the main body of his forces
in the plain of Sellasia, since the roads to Sparta
from Argos and Tegea united at this point.
His army amounted to 20,000 men, and consisted of
Lacedaemonians, Perioeci, allies, and mercenaries.
His left wing, containing the Perioeci and allies,
was stationed on Mt. Evas under the command of
his brother Eucleidas; his right wing, consisting of
the Lacedaemonians and mercenaries, encamped
on Mt. Oenous under his own command; while his
cavalry and a part of the mercenaries occupied
the small plain between the hills. The whole line
was protected by a ditch and a palisade. Antigonus
marched into Laconia from Argos with an army of
30,000 men, but found Cleomenes so strongly in-
trenched in this position, that he did not venture to
attack him, but encamped behind the small stream
Gorgylus. At length, after several days' hesitation,
both sides determined to join battle. Antigonus
placed 5000 Macedonian peltasts, with the greater
part of his auxiliary troops, on his right wing to
oppose Eucleidas; he disposed Eucleidas with 1000
men, and the same number of Megalopolitans in the small
plain; while he himself with the Macedonian pha-
lanx and 3000 mercenaries occupied the left wing, in
order to attack Cleomenes and the Lacedaemonians
on Mt. Oenous. The battle began on the side of
Mt. Evas. Eucleidas committed the error of awaiting
the attack of the enemy upon the brow of the hill,
rather than availing himself of his superior position
to charge down upon them; but while they were
climbing the hill they were attacked upon the rear
by some light troops of Cleomenes, who were sta-
tioned in the centre with the Lacedaemonian cavalry.
At this critical moment, Philipomen, who was in
the centre with the Megalopolitan horse, diverted
the attack of the light infantry by charging without
orders the Lacedaemonian centre. The right wing
of the Macedonians then renewed their attack,
defeated the left wing of the Lacedaemonians, and
drove them over the steep precipices on the opposite
side of Mt. Evas. Cleomenes, perceiving that the
only hope of retrieving the day was by the defeat
of the Macedonians opposed to him, led his men out of the intrenchments and charged the Macedonian phalanx. The Lacedaemonians fought with great bravery; but after many vain attempts to break through the impenetrable mass of the phalanx, they were entirely defeated, and of 6000 men only 200 are said to have escaped from the field of battle. Cleomenes, perceiving all was lost, escaped with a few horsemen to Sparta, and from thence proceeded to Gythium, where he embarked for Egypt. Antigonus, thus master of the passes, marched directly to Sellasia, which he plundered and destroyed, and then to Sparta, which submitted to him after a slight resistance. (Polyb. ii. 65—70; Plut. Cleom. 27, 28. Philop. 6; Pam. ii. 9. § 2, iii. 10. § 7, iv. 29. § 9, vii. 7. § 4, viii. 49. § 5.)

In the preceding account of the battle we have followed the excellent description of Ross. (Reisen im Peloponnes, p. 181.) The French Commission had previously supposed the plain of Krevatá to be the site of the battle of Sellasia (Robaye, Recherches, &c. p. 73); and the same opinion has been adopted by Curtius. (Peloponnesos, vol. ii. p. 260.) Leake, however, places Sellasia to the S.E., near the monastery of the Forty Saints ("Ἀγίοι Σαράντα"), and supposes the battle to have been fought in the pass to the eastward of the monastery. The ruins near the Khan of Krevatá he maintains to be those of Caryae. (Leake, Morus, vol. ii. p. 529, Peloponnesia, p. 341, seq.) But Ross informs us that in the narrow pass S.E. of the monastery of the Forty Saints there is barely room for a loaded mule to pass; and we know moreover that Sellasia was situated on the high road from Sparta to Tegea and Argos, which must have led through the plain of Krevatá. (κατὰ τὴν λαχοφορὲ, Pam. iii. 10. § 7; Plut. Cleom. 23; Xen. Hell. vi. 5. § 27; Diol. xv. 64; Liv. xxxiv. 28.)

On leaving the plain of Krevatá, the road southwards ascends the mountain, and at the distance of a quarter of an hour leaves a small ruin on the left, called by the peasants Palacogilia (§ Παλακογίλα). The remains of the walls are Hellenic, but they are of very small extent, and the place was probably either a dependency of Sellasia or one to which the inhabitants of the latter fled for refuge at one of the periods when their city was destroyed.

The ruins of Sellasia lie 1½ miles beyond Palacogila upon the summit of the mountain. The city was about 1½ miles in circumference, as appears
SELEIS.

from the foundations of the walls. The latter were
from 10 to 11 feet thick, and consist of irregular but very small stones. The northern and smaller
half of the city was separated by a wall from the southern half, which was the older.

From its position Sellesis was always exposed to the
attacks of an invading army. On the first in-
vasion of Laconia by the Thetans in B.C. 369, Sel-
lesis was plundered and burnt (Xen. Hell. vi. 5,
§ 27); and because the inhabitants at that time,
together with several others of the Perioeci, went
over to the enemy, the town was again taken and
destroyed four years later by the Lacedaemonians
themselves, assisted by some auxiliaries sent by the
younger Dionysius. (Xen. Hell. vii. 4, § 12.) It
suffered the same fate a third time after the defeat
of Cleomenes, as has been already related. It appears
to have been never rebuilt, and was in ruins in the
time of Pausanias (iii. 10, § 7).

SELETS (Σαλέετες). 1. A river in Elis, mentioned
by Homer, upon which Ephyra stood.

[EPHYRA, No. 2.]

2. A river in Sicily, upon which Strabo also
places a town Ephyra. [EPHYRA, No. 3.]

SELETTAE (Πλπ. iv. 11. s. 18, init.), a people of
Thrace, whose country was called SELETTICA
(Σαλητική, Ptol. iii. 11. § 8). It was north of the
Haemus, between that range of mountains and the
Pamphylia. [J. B.]

SELETTICA. [SELETTAE.]

SELLI or HELLH, an ancient tribe in Epeirus, in
whose country, called Hellopia, the oracle of Dodona
was situated. [DODONA, p. 782, a.]

SELLIUM (Σαλκών, Ptol. ii. 5, § 7), a place in
Lusitania, lying N. of Scalabis (Itin. Ant. p.
421). Identified with Céce or Scéjo. [T. H. D.]

SELLUS, according to Avienus (Ora Marit. 507)
a high mountain in Hispania Tarraconensis, on
which the city of Lebedontia once stood. Ubert
(ii. p. i. 484) identifies it with C. Salus. [T. H. D.]

SELYMBRIA (Σαλημμπρία, Heral. vi. 35; Σηλημ-
Ptol. iii. 11. § 6; Σηλημμπρία, Dem. de Rhod. lib.
b. 198, Reiske), a Thracian town on the Propontis,
22 miles east from Perinthos, and 44 miles west
from Constantinople (Itin. Hier. p. 570, where it is
called Salamembria), near the southern end of the
wall, built by Anastasius Dicoris for the protection of
his capital. (Procop. de Aed. iv. 9; see SCYL-
LAE.)

According to Strabo (L. c.), its name signi-
fies "the town of Selys," from which it has been
inferred that Selys was one of its founders, or
of the leader of the colony from Megara, which
founded it at an earlier period than the estab-
lishment of Byzantium, another colony of the same
Greek state. (Scymn. 714.) In honour of Eu-
doxia, the wife of the emperor Arcadius, its name
was changed to Eudosxipolis (Hierol. p. 652),
which it bore for a considerable time; but its modern
name, Sittiri, shows that it subsequently resumed
its original designation.

Respecting the history of Selymbria, only detached
and fragmentary notices occur in the Greek writers.
In Latin authors, however, it was still named
Selymbria (Ptol. vii. ii. 2, § 6; Plin. iv. 11. s. 18,
xxvi. i. s. 1; in the latter passage it is said to have been
the birthplace of Pro-
dius, a disciple of Hippocrates). It was here that
Xenophon met Medeasides, the envoy of Sennes
(Anab. vii. 2, § 28), whose forces afterwards en-
camped in its neighborhood (Ib. 5. § 15). When

SEMBRITAE. 961

Alicibades was commanding for the Athenians in
the Propontis (n. c. 410), the people of Selymbria
refused to admit his army into the town, but gave
him money, probably in order to induce him to ab-
sume from forcing an entrance. (Xen. Hel!. i. 1,
§ 21.) Some time after the latter event, he gained
possession of the place through the treachery of
some of the townspeople, and, having levied a con-
tribution upon its inhabitants, left a garrison in it.
(Ib. 3. § 10; Plut. Alcib. 30.) Selymbria is men-
tioned by Demosthenes (L. c.) in n. c. 351, as in alli-
ance with the Athenians; and it was no doubt at
that time a member of the Byzantine confederacy.
According to a letter of Philip, quoted in the
oration de Corona (p. 251, L.), it was blockaded by him
about n. c. 343; but Professor Newman considers
that his mention of Selymbria is one of the numerous
proofs that the documents inserted in that speech
are not authentic. (Class. Mus. vol. i. pp. 153,
154.) [J. R.]

SEMACHIdae. [Attica, p. 330, b.]

SEMENA SILVA (Σεμένα Σίλβα or Σκίνας Σίλα),
one of the mountain forests of ancient Germany, on
the south of Muns Melloboc (Ptol. ii. 1. § 7), is
perhaps only a part of the Harz mountain or of
the Thüringer Wald. (Zeus, Die Deutschen, p. 8;
Wilhelm, Germanien, p. 38, &c.)

SEMANTHNI (Σημανθνι, Ptol. vii. 3. § 4), a people
dwelling in the land of the Sinae E. of the Selymbria
mountains, which derived their name from them.

[T. H. D.]

SEMANTIcI MONTEs (Σημανθνιαί Μόνστες, Ptol.
vi. 2, § 8), a mountain chain in the country of
the Sinae (China), which, according to Ptolemy,
extended from the sources of the Asphara in a NW.
direction as far as those of the Serus. It is probably
the chain which separates the Chinese province of
Yuanan from the districts of Mien and Laot-
schau. [T. H. D.]

SEMBRITAE (Σημπρίται, Strab. xvi. p. 770
786; SEMBRITAE, Ptol. viii. 30. 35), a people
inhabiting the district of Tenitis in Aethiopia,
although they seem to have been of Egyptian origin.
The first mention of the Sembritae occurs in Erato-
stenes (ap. Strab. xvi. p. 780), who says that they
occupied an island above Meroe; that their name
implies "immigrants;" that they descended from
the Egyptian war-caste, who, in the reign of Psam-
mitichus (n. c. 658), abandoned their native land;
and that they were governed by a queen, although
they were also dependent on the sovereigns of Meroe.
Artemidorus, also quoted by Strabo (xvi. p. 770),
says on the contrary, that they were the ruling order
in Meroe; these accounts, however, may be con-
cluded by the supposition that Eratosthenes and Ar-
temidorus described them at different periods. If
the Sembritae were the Egyptian refugees, they were
also the Automoloi (Αυτωμολοί) noticed by Herodotus
(ii. 30). Pliny (l. c.) speaks of four islands of the
Sembritae, each containing one or more towns. These
were therefore not islands in the Nile, or in any
of its principal tributaries, the Astapus, or Astabræa,
but tracts between rivers, mesopotamian districts
like Meroe itself, which in the language of Nubia
are still denominated "islands." The inhabited part of
the Sembritae was, according to Pliny, Sembolia. It
stood on the left bank of the river, 30 days' jour-
y above Meroe. Pliny names also, among other of
their principal towns, Sai in Arabia,—i. e. on the
right bank of the Nile, for he assumes that river as
the boundary between Lybia and Arabia,—Esar or
Sape (Sobah), on the left bank, 17 days' journey above Meroë, and Darun again on the Arabian side.

Without being able to define the position of this tribe, or to state their relations to the Aethiopians of Meroë, we shall perhaps not err in placing them on the Blue Nile [Astapus], and in the neighbourhood of Axum. The geographers (Herren, &c.) who describe the Sembritae as dwelling near the White Nile, have forgotten both their vicinity to Arabia—that is, the eastern portion of Meroë—and the character of the regions which the Astapus and Asbathae respectively water. The White Nile flows through lakes and rivers unsuited for towns and permanent settlements; while the Blue Nile has always on its banks a numerous population, dwelling in large villages and towns. Along the Blue Nile ran the principal highways of the trade of Egypt with Southern Aethiopia, while the White Nile led off to the uncivilised and scattered tribes of the Libyans. The Sembritae, if seated on the latter river, would probably have eluded observation altogether; whereas on the former they would be as well known to the caravans and their guides as any other part of Meroë. Moreover, the mesopotamian districts suited to towns lie to the east of Aethiopia Proper, and would afford a secure retreat to the refugees from Egypt in search of a new habitation. (See Cocker's Claudius Ptolemy and the Nile, pp. 7-27.) The present Senaar corresponds nearly with the territory of the Sembritae. [W.B.D.]

SEMIRAMIDIS MONS (Σεμιραμίδιος ὄρος), a remarkable circular mountain on the N. side of the Persian gulf, and the eastern limit of Caramania. It is noticed both by Arrian (Peripl. M. E. p. 30, ed. Huhn.) and by Mariam (Peripl. M. Ext. c. 37, ed. Müller, 1855), who states that it was opposite to Mr. Pasco, in Arabia, and that these two mountains, with their promontories, form the straits at the entrance of the gulf of Persia. Ptolemy speaks of it, and states that it was also called Strongylus, probably from its form (vi. 8 § 11). Its modern name appears to be Elbourz. (Vincent, Voyage of Nearchus, i. p. 319—321.) [V.]

SEMMONES (Σημίμωνεις or Σημίνωνεις), or perhaps more correctly Semnomes, are described as the most ancient and illustrious among the Suevi in the north of Germany. They dwelt between the Albus and Vialus, being surrounded on the west by the Huns, on the south by the Burgundiones, on the east by the Manuni and Burgundiones, and on the north-west by the Longobardi. (Tac. Germ. 39; Proli. ii. 11 §§ 15, 17; Vell. Patt. ii. 106.) Their country accordingly extended from the hills of Lusatia in the south, as far as Padaunum in the north, and in it they formed 100 communities (paggi), which gave them such strength that they regarded themselves as the head of the Suevi. Their country contained an ancient forest (Semmomus Silva), hailed by awful superstition and sacrificial rites; at stated seasons deputes from all the kindred tribes met in it, and commenced their proceedings with a human sacrifice. No one, moreover, was allowed to enter this forest except he was bound in chains, a mask of humiliation in the presence of the god; and if any one stumbled he was not permitted to rise, but had to crawl along. As to the history of the Semnomes, we learn from Tacitus (Ann. ii. 43) and Strabo (vii. p. 290) that in the time of Augustus they were united with the Marcianini under Maroboduus. In the Monumentum Ancyranum the Semnomes are mentioned among the German tribes which sought the friendship of the emperor and the Romans. They appear to have been governed by kings, one of whom bore the name of Maysus, and reigned in the time of Domitian. (Dion Cass. ixvii. 5, comp. ixvii. 20.) After the reign of M. Aurelius they are no longer mentioned in history, from which circumstance some have unnecessarily inferred that the Semnomes were not a distinct tribe, but only a general name for several kindred tribes. As to the Silva Semnomum, it is generally supposed to have existed near Finsterwalde or Senomanswalt, between the rivers Elster and Spree, where three large places have been discovered, which were evidently intended as a sort of altars. (Kruse, Deutsche Alterth. vol. ii part 2, p. 132; Zeuss, Die Deutschen, p. 130.) [L.S.]

SENA (Σηνά, Pol. Σήνα, Strab. Edf. Semenis), called also for distinction's sake SENA GALlica (Σηναγαλλικα), Pol. Sinagoplia, a city of Umbria, but situated in the district known as the Gallicus Ager, on the coast of the Adriatic, at the mouth of a small river of the same name. The district in which it was situated had previously belonged to the Gallii, and they have no doubt that both the river and town derived their name from that of this people. (Sil. Ital. viii. 453; Pol. ii. 19.) It is therefore probable that there was a Galatian town of the name before the Roman conquest, but we have no account of it until the establishment of a Roman colony there, which seems to have taken place immediately after the final subjection of the Semones in B. C. 289. (Pol. ii. 19; Liv. Epit. xi.) The colony must have been a "colonia civium," as its name is not mentioned by Livy among the Latin colonies in the Second Punic War. It was at Sena that the two consuls Livius and Nero united their forces before the battle of the Metaurus, B. C. 267 (Liv. xxvii. 45; Appian, Anab. 52; Vict. Vitr. Ill. 48), on which account that battle is described by some authors as being fought "ad Senam," and even Cicero alludes to it as the "Senensium praedam." (Cic. Brut. 18; Eurip. iii. 18; Oros. iv. 18.) Its name is not again mentioned in history till the Civil Wars between Marius and Sulla, when it was taken and plundered by Pompeius, the lieutenant of Sulla, B. C. 82. (Appian, B. C. i. 88.) It seems to have always continued to be a flourishing and considerable town, and under the Imperial times received a fresh accession of colonists (Cass. 26. 252.). Its name is mentioned by all the geographers, as well as in the Itineraries. It was situated on the line of road which led along the coast from Ancona to Fano Fortuna, where it joined the Flaminian Way, properly so called. (Strabo. v. 227; Plin. iii. 14. s. 19; Pol. iii. 1 § 22; Itin. Ant. pp. 100, 316; Tab. Ptolem.) The name was early corrupted from Sena Gallica into the contracted form Senegalla, which is already found in Pliny, and appears also in the Itineraries. The Geographer of Ravenna has Senegalla, thus approaching still more closely to the modern form of Sinagoplia. The city is mentioned as still in existence during the Gothic Wars, after the fall of the Western Empire, and again under the Lombards (Procop. B. G. iv. 23; P. Digg. Hist. Long. ii. 22); it was for some time also one of the cities of the Pennapoli under the exarch of Ravenna, but fell into decay in the middle ages, and is alluded to by Dante in the 14th century as verging rapidly to extinction. (Dante, Par. xvi. 75.) It, however, revived again, and is now a flourishing town, with a considerable trade, but has no ancient remains.
SENA.
The river Sena, alluded to by Silius Italicus and Lucan, must be the small stream now called the Neva or Nioga, which falls into the sea at Sestaglia (Plin. iii. 453; Lucan. ii. 407.) [E. H. B.]

SENA (Saiva, Post.: Edh. Senessis: Sieno), a city of Etruria, sometimes called Sena Julia, to distinguish it from the city of the same name on the Adriatic. It was situated nearly in the heart of Etruria, about 25 miles E. of Volaterrae and 40 S. of Florentia. There is no reason whatever to suppose that there was an Etruscan city on the site, and no allusion to its existence occurs before the establishment of the Roman colony. Even the date of this is not accurately known; but it was probably from the epithet of Julia that it was founded either by Caesar himself or by the Triumvirate in his honour. It is singular that its name is not found in the Liber Coloniarum; but its colonial rank is attested by Pliny, who calls it "colonia Senesium," as well as by Tacitus. (Plin. iii. 5. s. 8; Tac. Hist. iv. 45.) It is subsequently mentioned by Ptolemy, as well as in the Tabula, which places it on a line of road from Florentia to Clusium, (Post. iii. 1. § 49; Tab. Peut.) But it seems never to have been a place of much importance in ancient times, and it was not till the middle ages that it rose to be one of the first cities of Tuscany. It has no remains of antiquity. (Deminis Eturio, vol. ii. p. 135.) [E. H. B.]

SENA INSULA, in Gallia. On this island, which was opposite to the coast of the Osismi, was an oracle of a Gallic goddess. Nine virgins named Gallicaneae (Barrigeneae, ed. I. Vossius) had the care of the oracle. They could raise storms by their versets, change themselves into beasts, heal diseases, and foretell the future, but they were only propitios to sea men who came to consult them. (Mela. iii. 6.)

This is the island of Sena, incorrectly called on the maps Islc des SaBaints, which is at the entrance of the bay of Douarnenez, and separated from a point of land on the coast of Brittany (Pointe Roux) by a narrow channel. D'Anville supposes that this may be the island which Strabo places opposite the mouth of the Loire. This island was inhabited only by women who were possessed by Dionysus. They allowed no man to enter their island; but so far from keeping their virginity, they used to visit the men on the mainland. These two stories are very different. Strabo names his island that of the Numines, as Graecus (Str. Trans. iv. 5), but the name is Samuntes in the common texts of Strabo. This seems to be the same island that Dionysius speaks of (Perig. 571) as being visited by the women of the Amnita for the purpose of performing the rites of Bacchus. D'Anville further thinks that Pliny (iv. 16) may be speaking of Sena when he mentions after the islands which are near to Britain, Scambis, or Aemis, as some MSS. have it, and Aixantes, which is evidently Uxantus or Uenetus. Sina, as the Maritime Hist. names it, is mentioned there with Uxantus. [G. L.]

SENA (Saiva, Post. iii. 16. (17.) § 2), a Roman colony on the coast of Liburnia ("Colonia Senesium," Tac. II. iv. 45), and on the road from Aquileia to Scicia. (Itin. Antv. p. 273.) It had a harbour. (Comp. Plin. iii. 21. s. 25; Geogr. Rav. iv. 31; Tab. Peut.) Variously identified with Zeng or Sena. [T. H. D.]

SENUMAGUS, in Gallia Narbonensis, is mentioned in the Table, and placed north of Avenio Arignon, on a road along the east side of the Rhone. Some geographers guess that it may be near the Pont St. Espirit.

SENOES (Σενόες, Σενωνες, Steph. B. s. v.). Polybius (ii. 17) names the Italian Senones, Σενωνες. The Roman poets make the penultima short:—

"Ut Bacchuratorum puere Senonumque minores."

(Juv. viii. 234.)

An absurd explanation of the name is quoted by Festus (s. v. Senones) and by Servius (ad Aen. viii. 556). The Senones were one of the great Celtic nations who bordered on the Belgae. (Caes. B. G. ii. 2.) They were north-west of the Aedui and bordered on them. Their capital was Agelincum (Sene), on the right bank of the Somme, which is a branch of the Seine. (Post. ii. s. 8 § 12.) The Senones lived in the Lugdunensis of Ptolemy and Pliny. Besides Agelincum there were in the country of the Senones, Antissiodorum (Auxerre) and Meldunum (Melun) on the Seine not far from Paris, which shows that their territory extended from the neighbourhood of Paris along the Seine and along the Yonne to the borders of the small nation of the Mandubii (Manduchoi), whose town was Alexia, and to the borders of the Lingones. The railroad from Paris to Dijon, which passes near Melun, Fontainebleau, Sena, Jouy, St. Florent, Tonnerre on the Armançon, a branch of the Yonne, runs through the territory of the Senones. Between St. Florentin and Flogny, which is about half-way between St. Florentin and Tonnerre, extends a vast plain, level as the sea, fertile, and in summer covered with wheat. A large part of the territory of the Senones is a fertile country. In seems to have comprehended the dioceses of Sena and Auxerre. Besides Meldunum and Agelincum, Caesar mentions Valentumodunum as a town of the Senones (vi. 11), on the side towards the Carnutes.

The Senones were at first well disposed to Caesar (B. G. ii. 2), probably through fear of their neighbours, the Belgae, and the German people north of the Marne. Caesar had given them Cavarinus for a king, but the Senones expelled him (v. 54); and when the Roman proconsul ordered the senate of the Senones to come to him, they refused. In the spring of B. C. 53 Caesar summoned the states of Gallia to a meeting, but the Senones, Carnutes, and Treviri would not come (vi. 3), upon which he transferred the meeting of the states to Rutetia Parisisorum. He says that the Parisii bordered on the Senones, and that "the memory of their fathers they had united their state with that of the Senones," but he does not explain the nature of this union. He marched from Rutetia (Paris) into the country of the Senones, which presents no difficulties for an army. The Senones yielded in spite of Acco, who was the leader in the revolt; and Caesar took with him Cavarinus and the cavalry of the Senones, in which force it is probable that they were strong, as their country is well adapted for grazing and corn. At the close of the year Caesar whipped Acco to death, and quartered six of his legions at Sena for the winter (vi. 44). In B. C. 52 the Senones sent 12,000 men with the rest of the Gallic forces to attack Caesar before Alexia (vii. 75). The Senones seem to have given Caesar no more trouble; but in B. C. 51 Drappes, a Senon, at the head of a number of de-perate men, was threatening the Provence. Drappes was caught and starved himself to death. (B. G. viii. 30, 44.) [G. L.]

SENOES (Σενωνες), a nation of Gaulish origin, which was settled in Italy, on the coast of the Adriatic, extending from the river Aesis (Eaion),

9 2

Digitized by Microsoft ©
a few miles N. of Araba, to the Utis (Montone). (Livy v. 35.) The history of their migration from Transalpine Gaul, their settlement in Italy, and their wars with the Romans, which ended in the extermination of the whole nation, are fully related under the article Gallia Cisalpina (pp. 936—938). After the conquest of the Senones, and their expulsion from their land on the Adriatic, two colonies were founded in their territory, the one at Sena, the other at Arpinum; and at a later period the remainder of their lands was portioned out among the Roman citizens by an aedilian law of the Flamines. This district, which still retained the name of the "Galliabalis," was afterwards considered as a part of Umbria, and included for all administrative purposes under that appellation. Its topography will therefore be most conveniently given in the article Umbria. [E. H. B.]

SENTICE (Sentiace), a town of the Vaeconae in Hispanic Tarracconensis, variously identified with Los Santos, Zamora, Calzadilla de Maancia, and Zarzosa. [T. H. D.]

SEXTIDES (Sevrides), people of the S. of Marmarica. [T. H. D.]

SEVI (Svoniis), a people of Gallia Narbonensis. (Ptol. ii. 19,) whose town Ptolemy names Divia, which is Digna. (Digna.) [G. L.]

SEVIUM (Svivum): Eth. Sivavitgenis, Sentianus-sinis: Sentino, a city of Umbria, on the E. slope of the Apennines, but near the central ridge of those mountains, and not far from the sources of the Anisa (Esino). It is celebrated in history as the scene of a great battle fought in the Third Samnite War, B.C. 293, when the allied forces of the Samnites and Gauls were defeated by the Roman consul Q. Fabius. Cælius Erarinus, the Samnite general, was slain in the battle; while the Roman consul P. Decius followed the example of his father, and destroyed himself for the safety of the Roman army. (Liv. x. 27—30; Pol. ii. 19.) The scene of this decisive victory, one of the most memorable in the Roman annals, is placed by Livy "in Sentinatis aegit" but we have no more precise clue to its position, nor do the details of the battle give us any asistance. Sentinum itself seems to have been a strong town, as in the Persian War it was besieged by Octavius himself without success; though it was afterwards taken by surprise by his lieutenant, Salviodus Rufus, by whom it was plundered and burnt to the ground. (Dion Cass. lviii. 15.) It was subsequently revived, by receiving a body of colonists, under the Trinumvirate (L. C. p. 258.), but did not obtain the title of a colony, and continued under the Roman Empire to be a town of municipal rank. (Plin. iii. 14. s. 19; Strab. v. p. 227; Orell. Insct. 3861. 4949.) Its site is marked by the village still called sentina, on the river of the same name (a small stream falling into the Esino). a few miles below the modern town of Sineso Ferrato. [E. H. B.]

SENUAS (Sivois or Sivois, Pet. v. 3., § 2), a river in the land of China which ran into the Sinus Magnus between the South Horn Cape (Newen hoek), S. of Amsterdam, and Batavia. Probably the modern Sai-on or Savang. (Comp. Foringer, Geogr. p. 478.) [T. H. D.]

SENUAS (Sivos, Pet. ii. 2., § 4), a river on the W. coast of Hispam, in the territory of the Autari. (Carm. i. 75.) It is identified with the Shannon. [T. H. D.]

SEPTIMA, a town of the Eutelani in Hispanic Tarracconensis (Plin. Ant. p. 40.), identified with Bardia, or Onda, Castellon de la Plana. [T. H. D.]

SEPTIANA (Sivitiana), a promontory of Magnesia, opposite the island of Scintias, and forming the SE. extremity of Thessaly. It is now called S. George. It is celebrated in mythology as the spot where Pelesus laid in wait for Theis, and from whence he carried off the goddes (Eurip. Androm. 1266), and in history as the scene of the great shipwreck of the fleet of Xerxes. (Herod. vii. 113, 183: Strab. ix. p. 443; Apoll. Rhod. i. 880; Plit. iii. 13. § 16; Plin. iv. 9. s. 16; Mela, ii. 3; Lake, Northern Greece, vol. iv. p. 382.)

SEPONTIA PABRAICA (Sepontia Pabrika), a town of the Vaeconae in Hispanic Tarracconensis lying to the W. of Lacedorina (or the modern Lobera). [T. H. D.]

SEPHERIS (Sepheris, al. Sepheres: Eth. Sepherovitites), a town of Upper Galilee, not mentioned under this name in Scripture, but frequently by Josephus. It was garrisoned by Antigons, in his war with Herod the Great, until the latter took it, early in his Galilean campaign (Ant. xiv. 15. § 4.) It seems to have been a place of arms, and to have been occasionally the royal residence. For in the troubles which arose in the country during the presidency of Varus, the robber-chief Judas, son of Ezekias, seized the palace of Sepheris, and carried off the arms and treasure which it contained (xvii. 12. § 5). It was subsequently taken and burned by Varus (§ 9). Herod the tetrarch (Ant.) afterwards rebuilt and fortified it, and made it the glory of all Galilee, and gave it independence (xvii. 2. § 1); although, according to the statement of Justinus the son of Pius, he still maintained the superiority of his newly founded city Tiberias: and it was not until Nero had assigned Tiberias to Agrippa the Younger that Sepheris established its supremacy, and became the royal residence and depository of the archives. It is termed the strongest city of Galilee, and was early taken by Galles, the general of Cestius. (B. J. ii. 18. § 11.) It maintained its allegiance to the Romans after the general revolt of Galles (B. J. iii. 2. § 4, 4. § 1), but did not break with the Jewish leaders. (I. A. 8., § 9.) Its early importance as a Jewish town, attested by the fact that it was one of the five cities in which district sanhedrims were instituted by Gallesius (B. J. i. 8. § 5), was further confirmed by the destruction of Jerusalem, after which catastrophe it became for some years the seat of the Great Sanhedrins, until it was transferred to Tiberias. (Iohann. Bib. Res. vol. iii. p. 202.) It was subsequently called Dioscardia, which is its more common appellation in the ecclesiastical annals; while Epiplanos and S. Jerome recognise both names. A revolt of the Jewish inhabitants, in the reign of Constantius (A.D. 339), led to the destruction of the city by Constantius Gallus Caesar. (Socrate, H. E. ii. 33; Sozomen, H. E. iv. 7.) This town, once the most considerable city of Galilei, was situated according to S. Jerome 10 miles west of Mount Tabor. (Iohann. c. n. Oedip; Procopius Gazz. Comm. in Lib. Judicium.) It was much celebrated in the history of the Crusaders, for its fountain—a favourite camping place of the Christians. It is still represented by a poor village bearing the name Septiferich, distant about 3 miles to the north of Nazareth, retaining no vestiges of its former greatness, but conspicuous with a ruinous tower and church, both of the middle ages: the latter professing to mark the site of the birthplas
of the Virgin Mary, assigned by a late tradition to this locality. It became the see of a suffragan bishop, under the metropolitan of Scythopolis (Le Quien, Oriens Christianus, vol. iii. pp. 713, 714), and there are coins still extant of the reigns of Domitian, Trajan, &c. (Reinh. Palæstina, pp. 199—1003; Eckhel, Doct. Vet. Num. vol. iii. pp. 425, 426.)

[SEPTEM AQUEA. [BEATE.]

SEPTEM AARE, a place in Lusitania (Itin. Ant. pp. 419, 420). Variously identified with Coleseu and Aroches. [T.I.D.]

SEPTEM FRATRES (Σεπτεμβρατεω η, Plut. iv. 1. § 5), a group of mountains in the northwestern part of Mauritania Tingitana, connected by a tongue of land with the promontory of Abyla (now Ximéira near Ceuta), and thus on the narrowest part of the Fretum Gadirimum (Plin. v. 1. s. 1; Solin. c. 28; Strab. xvii. p. 827.) One of these mountains, now called the Ape Mountains (Grabon Von Hemsom, Emare of Morocco, Germ. Tr. p. 24), bore, according to Strabo (i.e.) the name of the Elephant (Σεπτεμβρατεω), probably from the number of elephants which used to be found there (Plin. l. c. Hart Cap. v. p. 216.). The Geogr. Rer. (iii. 11) also mentions in this neighbourhood a town called Septem Fratres, which is perhaps the same place mentioned in the Itin. Ant. (p. 9) as a station between Tingis and Abyla. Procopius also (B. Vancl. i. 1; Comp. ii. 5, and de Aed. vi. 7) mentions here a castle or fortress called χστενων; and Isidor (Orig. xv. 1) a castle and town called Septa, perhaps the modern Ceuta. [Comp. Mela, i. 5, § 5, et ibi Tauchteke. [T. H. D.]

SEPTEM MARIA (Σεπτεμπρατεω η), was the name commonly given to the extensive lags on the mouth of the Padus, and the adjoining rivers, and which extend along a considerable part of the shores of the Adriatic from the mouths of the Padus to Althinum. Pliny indeed seems to use the term in a more restricted sense, as he speaks of "Atri- anorum paludes, quae Septem Maria appellatur" (iii. 16. s. 20); but the Itinerary distinctly applies the name to the whole extent of the lags from Ravenna to Althinum (Itin. Ant. p. 126); and Herod. dian, who notices them particularly (vii. 7), clearly uses the term in the same sense. [E. H. B.]

SEPTEM PAGI (Σεπτεμπρατεω η, Pagi), was the name given to a district close to Rome, but on the right bank of the Tiber, which according to tradition had originally formed part of the territory of the Veientes, but was ceded by them to the Romans as early as the reign of Romulus. (Dion. ii. 55; Plut. Rom. 25.) According to the authorities followed by Dionysius it was again surrendered to the Etruscans by the treaty concluded with Porsena, but was shortly after restored by that monarch to the Romans. (Dionys. v. 91, 96.) Livy mentions the same circumstances, but without giving the name of the district. (Liv. ii. 13, 15.) It is evident, however, that this was a well-known appellation, but we are unable to fix its boundaries more definitely. [E. H. B.]

SEPTEMPEDIA (Σεπτεμπρατεω η, Strab. Ptol. Eth. Septempedana: San Severino), a town of Pecenum, in the upper valley of the Potentia, 9 miles above Treia. It is mentioned by all the geographers, and the "ac er Septempedana" is noticed in the Liber Colonarum. (L. tit. iii. 13. 18; Strab. v. 241; Ptol. iii. 1. § 52; Lib. Col. p. 258.) Pliny assigns it the rank of a municipal town, and this is confirmed by inscriptions, one of which is of the age of Aurelian. (Orell Inschr. 1026; Gruter, Inschr. p. 308. 3.) It is placed by the Itinerary of Antoninus on that branch of the Flaminian Way which quitting the main high road at Nuceria, crossed the Apennines to Prospleunum and thence descended the valley of the Potentia by Septempeda and Treia to Anxium and Ancona. (Itin. Ant. p. 312.) It early became an episcopal seer, and derives its modern name of San Severino from one of its bishops who flourished in the middle ages. It still retains its rank as an episcopal city, and is the capital of the surrounding city, though it has not more than 3000 inhabitants. (Bampoldi, Dizion. Corregg. vol. iii. p. 587.) [E. H. B.]

SEPUICHRUM EURIPIDIS (Amm. Marc. xxvi. 4. § 8; comp. Gall. xv. 20; Plut. Lycurg. 36; Vitruv. viii. 3; Pline. xxxi. 19; Itin. Hierosol.), the remarkable monument erected to Euripides in Macedonia, at the narrow gorge of Aulon or Arethusa (Besikta or Rumil Bighaz), where the mountains close upon the road. The ancients (Vitruvius, l. c; Pline. l. c.) placed it at the confluence of two streams, of which the water of one was poisonous, the other so sweet and health-giving that travellers were wont to halt and take their meals by its currents. In the Jerusalem Itinerary, a document as late as the 13th century, it occurs as a station between Pennana and Apollonia. (Comp. Clarke's Travels, vol. viii. pp. 9—13.)

SEQUANA (Σεπτεμπρατεω η, Sequana), Plut. ii. 8. § 2), the Seine, one of the large rivers of Gallia. The Seine rises in the highlands south of Langres, but in the department of Côte d'Or, and flows in a northeasterly direction past Châtillon-sur-Seine, Troyes, Melun, Paris, Mantes, Eloise, Rouen, and Le Havre. It enters the Atlantic below Le Havre. The course of the Seine is about 470 miles, and the area of its basin is about 26,000 English square miles, which is only one half of the area of the basin of the Loire. The chief branches of the Seine which join it on the right bank are the Aube, the Marne, and the Oise; on the left bank, the Yonne, the Loing, and the Erve. None of the hills which bound the basin of the Seine, or are contained within it, have a great elevation, and a large part of the country included within this basin is level.

Cæsar (B. G. i. 1) makes the Sequana and the Matrona (Mornac) the boundary between the Celtae and the Belgae. Strabo (iv. p. 192) says that the Sequana rises in the Alps, a statement which we must not altogether impute to an erroneous notion of the position of the river's source, though his knowledge of Gallia was in many respects inaccurate, but to the fact that he extended the name of Alps far beyond the proper limits of those mountains. But his inaccuracy is proved by his saying that the Sequana flows parallel to the Rhine, and through the country of the Sequani. He is more correct in fixing its outlet in the country of the Galeti and the Lessovii. The Seine was navigated in the time of Strabo and much earlier. [Gal. Transalpina, Vol. i.]

The Matrona, as Ausonius names it (Mosella, v. 462),—

"Matrona non Gallos Belgasque interista fines,"—

joins the Seine a few miles above Paris; it is the largest of the affluent of the Seine.

Ammianus Marcellinus (xx. 11) says that the

} \)

3 q 3
united streams of the Sequana and Matrona entered the sea near Castra Constantia (Coetouanes), which is a great mistake. In the cosmography of Aetius the Sequana is named Geum or Geshonna. [G. L.

**SEQUANI (Zipavari), a Celtic nation in the upper valley of the Arar or Saône.** Lucan (i. 425) follows the quantity of the Greek form: —

"Optima gens flexis in gyrum Sequana fræmis."

Caesar fixes the position of the Sequani. Their territory extended to the Rhine. (B. G. i. 1.) The Jura separated them on the east from the Helvetii; and the narrow pass between the Jura and the Rhine at Fort l'Ecluse was in the possession of the Sequani (B. G. i. 6, 8). The southern boundary of their territory from Fort l'Ecluse was the Rhine; but they did not possess all the country in the angle between the Rhine and the Saône, for part of it was held by the Allobrogges (B. G. i. 12), and part by the Sequani (B. G. i. 10) and by the Ambarri, who were dependent on the Aedui (B. G. i. 11). When Caesar describes the march of the Helvetii from Fort l'Ecluse to the Saône, he says that the Helvetii first passed through the territory of the Sequani, and then entered the territory of the Aedui, which they plundered. But they did not yet reach the Saône, as Caesar's narrative shows, and it is clear from this passage (B. G. i. 11) and those already cited, that a large tract of country between the Rhine and Saône did not belong to the Sequani, for the line of march of the Helvetii from Fort l'Ecluse to the Saône would probably bring them to the Saône at a point not much lower down than Macon. The western boundary of the Sequani was the Arar, also called the Scanenae, a name which appears to be the same as the name of the Sequani. Their neighbors on the west side of the Saône were the Aedui, with whom the Sequani had disputes about the river tolls (Strab. iv. p. 192). On the north their neighbors were the Lanici and Lingones. Strabo (iv. p. 186) describes the Arar and Duubs (Doubs) as flowing through the country of the Sequani. D'Anville has an argument to show that the part of the dioceses of Chalon-sur-Saône and Macon which is east of the Saône belonged to the old territory of the Sequani, which may be true; but the towns Matiscus (Macon) and Cabillomum (Chalon) were on the west side of the Saône and in the territory of the Aedui (B. G. vii. 90).

In another passage besides that already referred to, Caesar shows that the Sequani extended to the Rhine, for in describing the course of this river from south to north, he says that it passes by the territory of the Helvetii, Sequani, Mediomatrici and Trinovantes. (B. G. iv. 10.)

The Sequani belonged to the division of Belgica under the Empire (Plin. iv. 17; Prob. i. 9. § 21). The territory of the Sequani contained much good land, some of the best in Gallia. Their chief town was Vesanio (Bœnacum) on the Doubs, and they had other towns also. They fed hogs, and their hams and bacon were exported to Rome as Strabo (iv. p. 192) says; and Varro (de R.R. iv. 4) may mean to say the same, when he speaks of Gallic bacon.

The Sequani had kings, sometimes at least, for Gallic kings were not perpetual. (B. G. i. 3.) Before Caesar went into Gallia, the Arverni and Aedui had been the two most powerful peoples. The Sequani were in league with the Arverni, who occupied the centre of all Gallia, but hostile to their neighbors the Aedui. To maintain themselves against the

Aedui, the Arverni and Sequani hired Germans to come over the Rhine. The Germans came in great numbers, and in Caesar's time it was computed that there were 120,000 of them in Gallia. This is the first historical notice of a permanent settlement of Germans in these parts. The Sequani with the assistance of their allies defeated and humbled the Aedui, but they gained nothing by this victory. Arianistus, the king of these German mercenaries, took from the Sequani a third part of their lands, and was threatening to take a second third, when Caesar drove the Germans into the Rhine, after defeating them near that river. If the Germans were destroyed or driven away from the territory of the Sequani by Caesar, they came again, for the country on the west bank of the Rhine, which belonged to the Sequani, the Upper Alps, has been German for many centuries.

In the 52, the Sequani were among the nations who sent their contingent to attack Caesar before Alesia. [G. L.

**SEERA (Zipava, Prob. i. 11. § 17, § 5, vi. 13. § 16. § 8, viii. 24. § 8), the capital of the country of Serica, and one of the chief commercial towns of the Seres. It is the remotest point of Eastern Asia with which the ancients had any commerce, of which they possessed any knowledge. It was situated on the mountain Otrorcorras at the eastern source of the Bantisus. Mannert (iv. p. 501) identifies it either with Singan in the province of Scheini, or with Roman on the Hoang-ho; but according to Heeren (Icen, i. 2. 665) it is Pekin itself. [T. H. D.

**SEBACA (Zipava, Prob. v. 9. § 25), a town in the S. of Asiatic Sarmatia. [T. H. D.

**SEBRG A, perhaps more correctly Serrania, a town of the interior of Pontus Polemoniacus, on the southeast of Comana Pontica. (Tab. Peut; Prob. v. 6. § 9, where it is written Σερεώνα or Σερανά.) [L. S.

**SEBRHUM (It. Anton. p. 170; Serapia, Tab. Peut), a large village situated near the junction of the canal of the Ptolemies with the Bitter Lakes, east of the Delta. Serapium was 18 miles distant from Hermopolis and 50 from Clysma, at the top of the Sinus Hercopolitises. Its temple of Serapis, and its city, stood on the canal that connected the Nile with the Red Sea, rendered it a place of considerable traffic. It was probably founded, or at least enlarged, by the Ptolemies after Ptolemy Philopator (n. c. 274) had extended the canal to the Bitter Lakes. [W. B. D.

**SEBRIS (Ziparors eклад, Prob. iv. 2. § 27), a small river on the N. coast of Mauritania, which fell into the sea to the W. of Rannenurum; either the present Mensaraum, or, more probably, the Isser. [T. H. D.

**SERIBI or SERIBI (Zipi or Zipiba, Prob. v. 9. § 21), a people in Asiatic Sarmatia, according to Ptolemy (i. c.) between the Ceraunian mountains and the river Iba, above the Dihari and below the Vahl. Pliny, however (vi. 7. s. 7), places them on the E. slope of the Moeastis, between the Vahl and the Arreci. (Comp. Schaffarik, Star. Alterth. i. p. 165.) [T. H. D.

**SERBOYNIS LACUS. [Serbonnis Lacus.

**SERDICIA or SARDICA (Zipavae, Prob. iii. 11. § 12) (the first of these forms is the more usual with the Romans, the latter with the Greeks), a considerable town of Upper Moesia, which in earlier times was regarded as belonging to Thrace (Prob. iv. 27), but which in the third century was attributed
to Dacia Interior, and made its capital. (Theodoret. \textit{Hist. Ecc.} ii. 4.) It lay in a fruitful plain, at the spot where the sources of the Oescus united, and on the high-road from Naissus to Philippopolis, between Illyria and Raetia. (\textit{Th. Hierosol.} p. 567.) From the time of Aurelian it bore on its coins the surname of Ulpius; probably because, when Dacia was relinquished, the name of that Dacian town was transferred to it, to its inhabitants, perhaps, located there. The emperor Maximian was born in its neighbourhood. (\textit{Entrop.} ix. 14. 22.) It was destroyed by Attila (Priscus, \textit{de Legat.} p. 49), but shortly afterwards restored. In the middle ages it occurred under the name of Triadita (\textit{Tudja-ta}, Niepceh. \textit{Chron. Ann. Is. Angell.} iii. p. 214; Asop. Geogr. in Hudson, iv. p. 45), which was perhaps its original Thracian appellation, and which is still retained in the dialect of the inhabitants. (See Wesseling, \textit{ad Itin. Ant. l. c.}) Its extensive ruins lie to the S. of Sophia. (Comp. \\textit{Procop. de Aed.} iv. 1 p. 267, 4. p. 282; Hieroc. p. 634; Matt. \textit{LXX}. 26.) Gruter, \textit{Inscr.} p. 540, 2; Orelli, nos. 3348, 5013. The Geogr. \\textit{Rav.} (iv. 7) incorrectly writes the name Serica, since it was derived from the Thracian tribe of the Seri. It is called by Athanasius (\textit{Apol. contra Ariano}, p. 154) \textit{Σερικα} νησιον, (probably the \textit{Serica} of Ptolemy.) It is, however, \textit{Serena}, a town in Lower Pannonia, on the south bank of the Danube, on the road from Poetovium to Mura. (\textit{It. Hierosol.} p. 562; Geogr. \\textit{Rav.} iv. 19, where it is called Serenis; \textit{Tab. Peut.}, where its name is Serena.) It is thought to have occupied the site of the modern \textit{Mesulavicia}. [L. S.]

**SERES. (\textit{Serica})**

**SERETUM (Σερετος), Dion Cass. Ivi. 12.,** a fortified town of Dalmatia, which with Rhaetium was captured by Germanicus in the campaign of A. D. 7. [E. B. J.]

**SERGIUN'TIA (Σεργιουσιας), Strab. iii. p. 162.,** a small town of the Arracii on the Danube, in \textit{Hispania Tarraconensis}. Uertik (\textit{Ist. \&c.} i. p. 455) takes it to have been the \textit{Σάρδα} of Stephans B. (a. e.) [T. H. D.]

**SERIA (Σειρα), Ptol. ii. 4. § 12.,** a town of the Turdetani in \textit{Hispania Baetica}, with the surname of Fama Julia. (Ptol. iii. i. 3. s.) It lay E. of the mouth of the Anas, and N. of Baetia. [T. H. D.]

**SERI'ANE, a city of Syria mentioned in the Itinerary of Antoninus as xviii. M. P. distant from Auranthus, which was xxviii. M. P. from Calceus, cxxviii. M. P. from Dolicha, now Daloot, \textit{(Itin. Ant.} pp. 194, 195.) Mannert thinks that it corresponds in situation with the Chalybon (\textit{Χαλωβων}) of Ptolemy (v. 15. § 17.), which gave its name to a district of Syria Chalybontis. It is certainly identical with the modern \textit{Siria}, 2 long days SE. of Aleppo, in the desert, the ruins of which were discovered and described by Pietro della Valle. (Mannert, \textit{Geographie}, part vi. vol. i. p. 411.) [G. W.]

**SEIFICA (ἡ Σειφικα, Ptol. vii. 16. §§ 1, 3, 4, 6, viii. 2. § 1, 3, § 1, 5, § 1, 8. viii. 24. §§ 1, 5, 27. § 2; \&c.), a tract of country in the E. part of Asia, inhabited by the people called Seres. According to the description of Ptolemy, it was bounded on the W. by Scythia or \textit{Scyphia} Iomn, on the E. by an unknown land, on the E. by Sinas, and on the S. by India. Pliny on the contrary (\textit{vi.} 13. s. 15) seems to extend it on the E. as far as the coast of Asia, as he mentions an Oceanus Sericus, and in another place (\textit{ib.} 17. s. 20) speaks of a promontory and bay. Modern opinions vary respecting its site; but the best geographers, as Rennell, D'Anville, and Heeren, concur in placing it at the NW. angle of the present empire of China. (See Yates, \textit{Text.} \textit{Antiqu.} ad p. 292, note.) To speak of it as a country, is a term used before the first century of our era, though there are earlier accounts of the people called Seres. It seems highly improbable, however, that they were known to Hecataeus, and the passage on which that assumption is founded occurs only in one MS. of Photius. They are first mentioned by Ctesias (p. 371, n. 22, ed. Bähr); but according to Mela (iii. 7) they were in his time known to all the world by means of their commerce. On the northern borders of their territories were the more eastern skirts of the mountains Ambari and Anaxaei (the Alturei or the Alto), which are called from Scythia. In the interior of the country were the Montes Asmiarei, the western part of the Ia-Uri chain; and towards the southern borders the Casii Montes (now Khara, in the desert of Gobi), together with a southern branch called Thagurus, which towards the river Bautius (\textit{Baiuus}), on the farther side of that river lay the Otorocorcas, the most eastern branch of the Emudi mountains, called by Ptolemy (vi. 16. § 5) Ζαμπας δήμος. Among the rivers of the country, the same author (\textit{Ib.} § 5) names, in its northern part, the Odechardes, and, in the S., the Butes or Bautius (\textit{Baiuus}), which flowed towards the land of Sinas. Pliny, however (l. c.), mentions several other rivers, which seem to have been coast ones, as the Psaiaras, Cambari, Lanes, and Atianos, as well as the promontory of Chryso and the bay of Cyprus. Serica enjoyed a serene and excellent climate, and possessed an abundance of cattle, trees, and fruits of all kinds (Amm. Marc. \textit{LXXX}. 6. § 64; \textit{Plin.} l. c.). Its chief product, however, was silk, with which the inhabitants carried on a very profitable and most extensive commerce (Strab. xiv. p. 693; \textit{Arist. Hist. Nat.} v. 19. Virg. \textit{Georg.} ii. 121; \textit{Plin.} and Amm. U. c. \&c.). Pliny records (xi. 22. s. 26), that a Greek woman of Nos, named Pamphila, first invented the expedient of splitting these substantial silken stuffs, and of manufacturing those very fine and veil-like dresses which became so celebrated under the name of Coae vestes. Both Serica and its inhabitants are thought to have derived their name from their staple product, since, as we learn from Hesychius (s. e \textit{Σειφικα}), the insect, from the web of which the brilliant stuff called holosorion was prepared, was named \textit{Σειφικος} (\textit{Comp. Klugrotte, Sur les Noms de la Chine in the Mem. rel. l'Asie, iii. p. 264; and Tableaux Hist. de l'Asie, pp. 57 and 68.}) It has been doubted, however, from the apparent improbability that any people should call themselves Seres, or silkworms, whatever the name of Seres was ever really borne by any nation; and it has been conjectured that it was merely a mercantile appellation by which the natives of the silk district were known. (Latham, in \textit{Class. Misc.} vol. ii. p. 43, sec.) Lassen (\textit{Indl. Ant.} i. p. 321) has produced from the \textit{Makhabiranta}, ii. 50, as the real names of the Seres, those of Caka, Tikhara, and Ranka, who, as presented as bringing just the same goods to market as are ascribed by Pliny (\textit{xxxiv. 14. s. 41}) to the Seres, namely, wool, skins, and silk. Yet, though it may be allowed to be improbable that a people should have called themselves "Silkworms," yet it seems hardly less so that such an appellation should have been given them by foreigners, and that they should have been known by it and no other for a
period of several centuries. On the other hand, may it not be possible that the product was called after the people, instead of the people after the product? We are not without examples of an analogous procedure; as, for instance, the name of the phasis, or pheasant, from the river Phasis; of our own word currants, anciently and properly Corinthis, from the place whence that small species of grape was originally brought, &c. However this may be, we may refer the reader who is desirous of a further account of the origin and manufacture of silk, to an excellent dissertation in the *Textbook of Antiquities* of Mr. Yates (part i. p. 160, seq.), where he will find all the passages in ancient authors that bear upon the subject carefully collected and discussed.

Besides its staple article, Serica also produced a vast quantity of precious stones of every kind (*Eycop. tot. Mundii*, ap. Hudson, iii. p. 1, seq.), as well as iron, which was esteemed of a better quality even than the Parthian (Plin. l. c.) and skins (*Per. M. Erythr. p. 22.* Ann. l. c.)

According to Pausanias (vi. 22. § 2) the Seres were a mixture of Scythians and Indians. They are mentioned by Strabo (sv. p. 701.), but only in a cursory manner. It appears from Pliny (vi. 17. s. 24.), compared with Eustathius (ed Dionys. *Per.* v. 753., seq.), and Ammianus Marcellinus (l. c.), that they were a just and gentle people, loving tranquillity and comfort. Although addicted to commerce, they were obliged to carry on their commercial transactions in a very singular manner. They inscribed the prices of their goods upon the bales in which they were packed, and then deposited them in a solitary building called the Stone Tower; perhaps the same place mentioned by Ptolemy (vi. 15. § 3) under the name of Hometorion, situated in a valley on the upper course of the Jaxartes, and in the Sicytian district of Asia. The Scythian merchants then approached, and having deposited what they deemed a just price for the goods, retired. After their departure, the Seres examined the sum deposited, and if they thought it sufficient took it away, leaving the goods; but if not enough was found, they removed the latter instead of the money. In the description of this mode of traffic we still recognise the characteristics of the modern Chinese. The Scythians also traded with the Seres, and it was probably through the former that the Romans at a later period procured most of their silk stuffs; though the Parthians passed them off as Assyrian goods, which seems to have been believed by the Romans (Plin. xi. 22. s. 25.). After the overthrow of the Parthian empire by the Persians, the silk trade naturally fell into the hands of the latter. (Vopisc. *Aurcl.* c. 43; Procop. B. Pers. i. 20, &c.) With regard to their persons, the Seres are described as being of unusual size, with blue eyes, red hair, and a rough voice (Plin. vi. 22. s. 24.), almost totally unacquainted with diseases and bodily infirmities (*Eycop. tot. Mundu*, l. c.), and consequently reaching a very great age (*Ctes. l. c.* Strab. x. p. 701; Lucian, *Macrobl. 5*). They were armed with bows and arrows (Hor. *Od.* i. 29. 9; Charic. v. 3). Ptolemy (ll. cc.) enumerates several distinct tribes of them, as the Amuli, in the extreme N., on the mountains named after them; the Zizyges, between them and the Aucaxian mountains; the Damass, to the S. of these; and still further S.,

down to the river Ochebard, the Pailae; the Oechardae, who dwelt about the river of the same name; and the Garenei and Nabanaei, to the E. of the Amibi. To the S. of these again was the district of Asmiraæ, near the mountains of the same name, and still further in the same direction the Issedones; to the E. of whom were the Throati. To the S. of the Issedones were the Asparaceæ, and S. of the Throati the Ethaguri. Lastly, on the extreme southern borders were seated the Balkæ and the Ottoroccæ,—the latter, who must doubtless be the same people called by Piny Attacao, on the like-named mountains. To the southern district must also be ascribed the Sesataæ mentioned in Arrian’s *Peripl. M. Erythr.* (p. 37), small men with broad foreheads and flat noses, and, from the description of them, evidently a Mongol race. They migrated yearly with their wives and children to the borders of Sinaæ, in order to celebrate their festivals there; and when they had returned to the interior of their country, the reeds which they left behind them, and which had served them for straw, were carefully gathered up by the Sinaæs, in order to prepare from them the rich cloth that is worn principally in the cold in India. (Comp. Bitter, *Erdwander*, ii. p. 179, v. p. 443, 2nd ed.; Bohlen, *Das Alte Indien*, ii. p. 173; Heeren’s *Idea*, i. 2. p. 494). According to Ammianus (l. c.) the towns of Serica were few in number, but large and wealthy. Ptolemy, in the places cited at the head of this article, names fifteen of them, of which the most important seem to have been, Sera, the capital of the nation; Issedon; Throana, on the E. declivity of the Asmiraæ mountains, and on the easternmost source of the Ochebardæ; Asmiraæ, on the same stream, but somewhat to the NW. of the preceding town; Apsaraca, on the left bank of the Kuntsus, not far from its most western source; and Ottoroccæ.

SERICA. (Σερικα.)

SERIMUM (*Σεριμου*). Ptol. iii. 5. § 28), a town on the Borysthenes, in the interior of European Sarmatia.

SERIPHS or SERIPHUS (Σερίφος: *Ebek. Σερείφου*: *Seriph*), an island in the Aegaeæ sea, and one of the Cyclades, lying between Cythnos and Siphos. According to Pliny (iv. 12. s. 22) it is 12 miles in circumference. It possessed a town of the same name, with a harbour. (Seylax. p. 22; Ptol. iii. 15. § 31.) It is celebrated in mythology as the place where Danae and Perseus were driven to shore in the chest in which they had been exposed by Acrisius, where Perseus was brought up, and where he afterwards turned the inhabitants into stone with the Gorgon’s head. (Apollod. ii. 4. § 3; Pind. *Pyth.* x. 72, xii. 18; Strab. x. p. 487; Or. *Met.* v. 242.) Seriphs was colonised by Ionians from Athens, and it was one of the few islands which refused submission to Xerxes. (Herod. viii. 46, 48.) By subsequent writers Serips was almost always mentioned with contempt on account of its poverty and insignificance (Aristoph. *Acharn*. 542; Plint. *Rep.* i. p. 329; *Pint. de Exil.* 7. p. 602; *Cic. de Nat. Deor.* i. 31. de Sensct. 3); and it was for this reason employed by the Roman emperors as a place of banishment for state criminals. (Tac. *Ann.* ii. 85, iv. 21; *Juiv.* vi. 564, x. 170; Senee, *ad Consul. 6.* It is curious that the ancient writers make no mention of the iron and copper mines of Serips, which were, however, worked in antiquity, as is evident from existing traces, and which, one might have supposed, would have bestowed some prosperity upon the island.
But though the ancient writers are silent about the mines, they are careful to relate that the frogs of Seriphos differ from the rest of their fraternity by being dumb. (Plin. viii. 58. s. 83; Arist. Nat. Hist.Anim. 70; Theophr. Plant. 4. 19.)

The town stands upon the site of the ancient city, on the eastern side of the island, and contains upwards of 2000 inhabitants. It is built upon a steep rock, about 300 feet above the sea. There are only a few remains of the ancient city. (Ross, Reisen auf den Griech. Inseln, vol. i. p. 134, seq.; Fiedler, Reise, etc. vol. ii. p. 106, seq.)

COIN OF SERIPHOS.

SÉRIMO, a town of the Celtiberi in Hispania Tarraconensis. (Itin. Ant. p. 447.) Variously identified with Melae and Meloechea. [T. H. D.]

SERMELYE (Σερμέλη, Herod. vii. 122; Thuc. vi. v. 18; Suid. S. 26; Hecataeus, ap. Steph. B. s. r.; Böckh, Inscr. Graec. vol. i. p. 304; Itin. Σερμελέων), a town of Chalcidice, between Galaxpus and Mebyrna, which gave its name to the Toronean gulf, which was also called Sermulicus Sinus (κόλπος Σερμυλικός, Suid. l. c.). The modern Ormilia, between Moloyo and Derna, is identified from its name, which differs little from the ancient form, with the site of Sermyle. (Leake, Northern Greece, vol. iii. p. 155.) [E. B. J.]

SÉRMULICUS SINUS. [Sermyle.]

SÉROTA, a town on the frontier between Upper and Lower Pannonia, on the right bank of the river Dravus. (It. Ant. p. 130; It. Hieros. p. 562; Geog. Rav. iv. 19, where it is called Sirore, while the Table calls it Sirota.) It is possible that this town may have belonged to the tribe of the Serretes mentioned by Pliney (iii. 28) as inhabiting a part of Pannonia. The town of Serota is commonly identified with the modern Verceava or Verna (L. S.).

SERPA, a place in Hispania Baetica, on the Axus, and in the territory of the Turdantes. (Itin. Ant. p. 425.) It still bears its ancient name. See Resendi Ant. Lexic. p. 194. [T. H. D.]

SERFAEFOLIS (Σερφαιόφολης κώρης, Ptol. v. 6. § 4), a village on the coast of Cilicia, lying between Mallus and Aega (Aga).

SERAPILLI, a tribe mentioned by Pliney (iii. 28), as dwelling on the river Dravus in Pannonia. The resemblance of name has induced some grammarians to assume that they dwelt about the modern town of Pliachi; but this is mere conjecture. [L. S.]

SÉRRETES. [Serota.]

SÉRREHAE. [Sinus.]

SÉRREHHUM or SERRHIUM (Σέρρηχον, Dem. p. 85; E. Σέρρηχον, Herod. viii. 59; Steph. B. s. r.), a promontory and town on the south-east coast of Thrace, now Cape Makri. It lay to the west of Maronia, and opposite to the island of Samothrace. It is repeatedly mentioned by Demosthenes (pp. 85, 114, 133, K.), as having been taken by Philip, contrary to his engagements with the Athenians; and Livy (xxx. 16) states that it was one of the Thracian towns captured by Philip V. in the year n. c. 200. (Plin. iv. 11. s. 13; Mela, ii. 2.) According to Stephanus Byz. (i. c.) a town on the island of Samothrace bore the same name. (J. J. B.)

SÉRRII, a people of the Asiatic Sarmatia, on the Exuxus. (Plin. vi. 5. s. 5.) Mela (i. 19) places them between the Meanchaes and Siraces. [T. H. D.]

SÉRRIUM. [Serrhium.]

SERVIODURUM, a town in the north-east of Vindelicia on the Danube, on the road from Reginium to Boiodurum, near Augustana Castra. (Tab. Pent.; Not. Imp.) It must have occupied the site of the modern Strumbing, or some place in the neighbourhood, such as Sercule, where ancient remains still exist. [T. D.]

SERVYTHUM, a town in the southern part of Upper Pannonia, on the river Dravus, on the road from Siscia to Sirmium. (It. Ant. p. 268; Geog. Rav. iv. 19, where it is called Serbietum; Tab. Pent.) Its site has been identified with several modern places; but the most probable conjecture is that it occupied the place of the modern Siwerorozzi, the point at which the roads leading from Sirmium and Siscia to Salona met. [L. S.]

SESAJUS (Σασατός), a small river on the coast of Paphlagonia, flowing into the Exuxus near the town of Amastria, whence in later times the river itself was called Amastris. (Anonym. Peripl. P. E. p. 5; Marcian. p. 71; Amastris.)

SESAETHUS. [Taulantia.]

SESEBATAE. [Sesica.]

SESECHENAE (Σεσεχιέναι πόρος, Arrian, Peripl. M. Erythr. p. 30), a group of islands opposite to the S. coast of India intra Gangem, and probably in the Sinus Colchici — where Ptolemy (vii. 1. § 10) places a town with the somewhat similar name of Σεσεχιέναι. It must have been in the neighbourhood of Taprobane, since the Periplo mentions the Arborean νόμος as close to the Sesecerina, whilst Ptolemy (vii. 4. § 11) places the same island amongst a number of others lying before Taprobane, many of which must undoubtedly have belonged to the Sesecerinae. [T. H. D.]

SESEITES (Σεσίτες), a river of Gallia Transpadana, and one of the most important of the northern tributaries of the Padus. It flows beneath the walls of Vercellae (Vercelli), and joins the Padus about 16 miles below that city. Its name is noticed only by Pliney (iii. 16. s. 20) and the Geographer of Ravenna (iv. 36), who writes the name Sisidus. [E. H. B.]

SESTIANAE ARABAE (called by Ptolemy Σεσίανον ρωσιών ἄραβας, ii. 5. § 3), the W. promontory of the N. coast of Gallaecia in Hispania Tarraconensis. It had three altars dedicated to Augustus, whence its name. (Plin. iv. 20. s. 34; Mela, iii. 1.) It is the present Cabo Villano (Florez, Exp. Segr. xx. p. 41; Sestini, Med. Isp. p. 103.). [T. H. D.]

SESTIANA PROM. (Σεστιανία πρωστ., Ptol. iv. 1. § 7), a headland on the N. coast of Mauritania Tingitana, between capes Irsusaur and Abuia. It is probably the same that is called Cannarum Promontorium in the Itin. Ant. (p. 11), lying at a distance of 50 miles from Irsusaur, or the present Cabo Quilates. [T. H. D.]

SESTINUM (Eth. Sestinas; Sestino), a town in the interior of Umbria, mentioned only by Pliney, who enumerates the Sestinates among the towns of that region (Plin. iii. 14. s. 19; Gruter, Inscr. p. 108. 7), but which still retains its ancient name. It is situated among the Apennines, at the source of the river Foschia (Pisanus). [E. H. B.]
of the Peloponnesian War (n. c. 404), Sestus, with most of the other possessions of Athens in the same quarter, fell into the hands of the Lacedaemonians and their Persian allies. During the war which soon afterwards broke out between Sparta and Persia, Sestus adhered to the former, and refused to obey the command of Pharnabazus to expel the Lacedaemonian garrison; in consequence of which it was blockaded by Conon (n. c. 394), but without much result, as it appears. (Xen. Hell. iv. 8. § 6) Some time after this, probably in consequence of the peace of Antalcidas (n. c. 387), Sestus regained its independence, though only for a time, and perhaps in name merely; for on the next occasion when it is mentioned, it is as belonging to the Persian satrap, Ariobarzanes, from whom Cotsys, a Thracian king, was endeavouring to take it by arms (n. c. 362 ?). He was, however, compelled to raise the siege, probably by the united forces of Timotheus and Agesilus (Xen. Ages. ii. 26; Nep. Timoth. i); the latter authority states that Ariobarzanes, in return for the services of Timotheus in this war, gave Sestus and another town to the Athenians * from whom it is said to have soon afterwards revolted, when it submitted to Cotsys. But his successor, Cerocelerites, surrendered the whole Chersonesus, including Sestus, to the Athenians (n. c. 357), who, on the continued refusal of Sestus to yield up them, sent Chares, in n. c. 353, to reduce it to obedience. After a short resistance it was taken by assault, and all the male inhabitants capable of bearing arms were, by Chares' orders, barbarously massacred. (Diod. xvi. 34.)

After this time we have little information respecting Sestus. It appears to have fallen under the power of the Macedonians, and the army of Alexander the Great assembled there (n. c. 334), to be conveyed from its harbour in a Grecian fleet, from Europe to the shores of Asia. By the terms of the peace concluded (n. c. 197) between the Romans and Philip, the latter was required to withdraw his garrisons from many places both in Europe and in Asia; and on the demand of the Rhodians, acted no doubt by a desire for free trade with the Euxine, Sestus was included in the number. (Liv. xxxii. 33.) During the war with Antiochus, the Romans were about to lay siege to the town (n. c. 190); but it at once surrendered. (Liv. xxxvii. 9.) Strabo mentions Sestus as a place of some commercial importance in its time; but history is silent respecting its subsequent destinies. According to D'Anville its site is occupied by a ruined place called Zemenice; but more recent authorities name it Jalowca (Mannert, vii. p. 190). (Herod. iv. 143; Thuc. viii. 62; Polyb. iv. 64; Diod. xi. 37; Arrian, Anab. i. 11, §§ 5, 6; Ptol. iii. 12 § 4, viii. 11. § 10; Steph. B. s. v.; Synn. 708; Lucan, ii. 674.)

[S. L.]

SUVH (ESUI). SETABIS (SAKTABIS).

SETAE, SETTA, or SAETAE (Σηταί, Σητταί, or Σετται), a town in Lydia, near the sources of the river Hermus, which is not mentioned by any of the earlier writers. (Herod. p. 669; Ptol. v. 2. § 21; Conzil. Constant. iii. p. 502; Conzil. Nictern. 55.)

* There is much obscurity in this part of Grecian history, and the statement of Nepos has been considered inconsistent with several passages in Greek authorities, who are undoubtedly of incomparably greater weight than the unknown compiler of the biographical notices which pass under the name of Nepos. (See Dict. Biogr. Vol. III. p. 1146, a.)
SETANTIL

ii. p. 591; comp. Sestini, *Geog. Num.* p. 55.) It is commonly supposed to have occupied the site of the modern *Sidai Koleh.*

**SETANTIL (Σεταντιλ,** *Ptol.* ii. 3. § 2), a tribe probably belonging to the Brigantes on the W. coast of Britannia Romana, and possessing a harbour (*Σεταντιλιον λιμήν, *Ptol.* i. c.) named Gortis to have been at the mouth of the river Bibble. Beichard, however, places it on the S. coast of the *Solony Frith,* while Camden (p. 793) would read, with one of the MSS. of Ptolemy, "Σεταντιοριμον Portus," and seeks it near Corrmarnon. [*T. H. D.*]

**SETANTIORIUM PORTUS. [SETANTIL.**

**SETELIS (Σετέλις or Σελέλις, *Ptol.* ii. 6. § 72), a town of the Jaccetani in *Hispania Tarraconensis,* now Selona. See a coin in Sestini, p. 189. [*T. H. D.*]

**SETERIRES, a river of a Sialitic Sarmatia, on the E. coast of the Pontus Euxinus, and in the territory of the Sindii. (Plin. vi. 5. s. 5.)**

**SETIA (Σετία; *Eth.* Setianus; *Sceæ,* an ancient city of Latium, situated on the S. slope of the Volscian mountains, between Norba and Privernum, looking over the Pontine Marshes. It is probable that it was originally a Latin city, as its name is found in the list given by Dionysius of the thirty cities of the Latin League. (Dio. v. 61.) But it must have fallen into the hands of the Volscians, at the time their power was at its height. No mention of it is, however, found during the wars of the Romans with that people until after the Gallic invasion, when a Roman colony was established there in n. c. 392, and recruited with an additional body of colonists a few years afterwards. (Vell. Pat. i. 14; Liv. vi, 30.) At this time Setia must have been the ancient point of the Roman dominion in this direction, and immediately adjoined the territory of the Privernates, who were still an independent and powerful people. It appears as the new colonists, in the incursions of that people, who, in n. c. 342, laid waste their territory, as well as that of Norba. (Liv. vii. 42, viii. 1.) The Privernates were, however, severely punished for this aggression, and from this time the Setini seem to have enjoyed tranquillity. But it is remarkable that a few years later L. Annius of Setia appears as one of the leaders of the Latins in their great war against Rome, n. c. 349. (Liv. viii. 3.) Setia was a Colony Latina, and was one of those which, during the pressure of the Second Punic War (n. c. 269), declared its insubordination to the further supplies either of men or money. (Liv. xxvii. 9.) It was, at a later period of the war, severely punished for this by the imposition of much heavier contributions. (Id. xxix. 13.) From its strong and somewhat secluded position, Setia was selected as the place where the Carthaginian hostages, given at the close of the war, were detained in custody, and in n. c. 198 became in consequence the scene of a very dangerous conspiracy among the slaves of that and the adjoining districts, which was suppressed by the energy of the praetor L. Cornelius Marcus. (Id. xxxii. 26.) During this time we hear no more of Setia till the Civil Wars of Marcus and Sulla, when it was taken by the latter after a regular siege, n. c. 82. (Appian, *B. C.* i. 87.) It appears therefore to have been at this period a strong fortress, an advantage which it owed to its position on a hill as well as to its fortifications, the remains of which are still visible. Under the Empire Setia seems to have continued to be a flourishing municipal town, but was chiefly celebrated for its wine, which in the days of Hadrian and Antoninus Pius seems to have been esteemed one of the choicest and most valuable kinds: according to Pline it was Augustus who first brought it into vogue. (Plin. xiv. 6. 8; Martial, x. 36. 6, xiii. 112; Juv. x. 27; Strab. v. pp. 234, 237; Sil. Ital. viii. 379.) We learn from the Liber Coloniarum that Setia received a colony under the Triumvirates; and it is probable that it subsequently bore the title of a Colonia, though it is not mentioned as such by Pline. (Plin. iii. 5. 9; *Lib. Colon.* p. 237; Orell. *Inschr.* 2246; *Zumpt, de Colon.* p. 358.)

The position of Setia on a lofty hill, looking down upon the Pontine Marshes and the Appian Way, is alluded to by several writers (Strab. v. p. 237; Martial, x. 74. 11, xiii. 112), among others in a fragment of Lucilius (op. *A. Gell.* xvi. 9), in whose time it is probable that the highroad, of the extreme hilliness of which he complains, passed by Setia itself. It was, however, about 5 miles distant from the Appian Way, on the left hand. There can be no doubt that the modern town of Scææ occupies the same site with the ancient one, as extensive remains of its walls are still visible. They are constructed of large polygonal or roughly squared blocks of limestone, in the same style as those of Norba and Cora. The substructions of several edifices (probably temples) of a similar style of construction, also remain, as well as some incon siderable ruins of an amphitheatre. (Westphal, *Rom. Komp.* p. 53; Dodwell's *Pediculus Remains,* pp. 115—120.)

**SETIA (Σετία, *Ptol.* ii. 4. § 9).** 1. A town of the Tarulli in *Hispania Baetica,* between the Baetic and Mount Illipus.

2. A town of the Vascones in *Hispania Tarraconensis.* (Ptol. ii. 6. § 57.)

**SETIDIA (Σέτιδια, *Ptol.* ii. 4. § 12), a town of the Turdutani in the W. of *Hispania Baetica.* [T. H. D.]

**SETIDAVA (Σετιδάβα), a town in the north-east of ancient Germany, on the north of the sources of the Vistula, so that it belonged either to the Osmni or to the Burgundiones. (Ptol. ii. 11. § 28.)**

Its exact site is not known, though it is commonly assumed to have occupied the place of the modern Zdycone on the south of Gnesen. (Wilhelm, *Germanien,* p. 255.) [*L. S.*]

**SETUSACUM (Σετεσακομ, *Ptol.* ii. 6. § 52), a town of the Murbegi in the N. of *Hispania Tarraconensis.* [T. H. D.]

**SETUS MONS or FROM [BLASON; PEKAY JEGUM.**

**SETOTRIALLACTA (Σετοτριαλλακτα, *Ptol.* i. 6. § 56), a town of the Arexaci in *Hispania Tarraconensis.* [T. H. D.]

**SETOVIA (Σετοβια, Appian, *Illyr.* 27), a town of Dalmitia, situated in a well-wooded valley, which was besieged by Octavius in the campaign of n. c. 34. It has been identified with *Sibum,* situated in the rich valley of the *Cetina,* and lay enclosed by mountains to the right and left. [E. B. J.]

**SETUACOTUM (Σετουακοτομ, Σετωνικοτομ, or Σετωνικοτομ), a town in the south of *Germmania* between the upper part of the Danube and the Silva Gabreta, perhaps belonging to the territory of the Narisci (*Ptol.* ii. 11. § 30); but its site is quite unknown. [*L. S.*]
SEBUHIA (Σεβουή), a town of the Quadi, in the south-east of Germany, apparently near the sources of the river Achea, a tributary of the Danube, in the Carpathian mountains. (Ptol. ii. 11. § 29.) Its identification is only matter of conjecture. [L.S.]

SEVACES (Σεβάκις), a tribe in the western part of Noricum, is mentioned only by Ptolemy (ii. 14. § 2). [L.S.]

SEVERI MURUS. [VALLUM.]

SEVERUS MONS, a mountain of Central Italy mentioned only by Virgil (Aen. vii. 713), who places it among the Sabines, and associates it with the Mons Tetricus. It therefore evidently belonged to the ranges of the Apennines, in that part of Italy, but cannot be identified with more accuracy. [APENNINES.] [E. H. B.]

SEUMARA or SEUSAMORA (Σεύμαρα and Σεύσαμορα, Strab. xi, p. 501), a town in the Caucasian Iberia. [T. H. D.]

SEVO, a lofty mountain in the extreme north of ancient Germany, in the island of Scandia, in the territory of the Ingaveones. It was believed to equal in extent and magnitude the Lipai Montes. (Plin. iv. 27: Solin. 20.) There can be no doubt that this mountain is the same as Mount Kielchen which at present separates Sweden from Norway, and the southern branch of which still bears the name of Sver-roggen. [SCANDIA.] [L.S.]

SEVERR. [SEVERT.]

SEX. [SANCTANUM.]

SEXANTAPRISTA (Σεανταπρίστα, Procop. de Aed. iv. 11. p. 307), a town of Moesia Inferior, on the Danube, on the great high-road between Tri- mammium and Tigara. According to the Notit. Imp. (where it is called Sexantaprista), the 5th cohort of the 1st Legio Ital, together with a squadron of cavalry, lay in garrison here. Some identify it with Antaeus, whilst others place it further to the E., near Lipnik. [T. H. D.]

SEXANTHOI, in Galilia Nubencensia. The true name of this place is preserved in an inscription found at Nemanaus (Nimmae), and published by Ménard. The name is written Sextatio in the Antonine Itin.; and Sostantio in the Jerusalem Itin. The remains of Sextantio are supposed to be those which are about 3 miles north of Montpellier, on the banks of the Ludos (Lex). [G. L.]

SHAALABBIN (Σαλαμί, LXX.), a city of the tribe of Dan (Josh. xix. 42) joined with Ajalon (Izaladoi), and mentioned in the LXX. (not in the Hebrew) as one of the cities in which the Amorites continued to dwell, after the occupation of Canaan by the Israelites (xix. 48). This last fact identifies it with the Shalhim (LXX. Salamii) of the book of Judges (i. 35), which is also joined with Ajalon, and of which the same fact is related. It is there placed in Mount Hebron. Ensebsin mentions a village named Sallaka (Σαλαλακα), in the borders of the district of Sebaste (Omanriet. s. v.), which could not be in Dan; but S. Jerome (Comment. in Ezech. xxviii.) mentions three towns in the tribe of Dan, Alien, Sebela and Ennasa. It is joined with Mahaz and Beth-shean in 1 Kings iv. 9, which also indicates a situation in or near the plain of Sharon. In Mr. Smith's list of places in the district of Ramleh, is a village named Sebit, containing all the radials of the Scripture name, and probably identical with Sebela of Josephus, as the modern Yolo is with Ajalon and Amisja with Emnasus. Its place is not definitely fixed. (Robinson, Bibl. Res. vol. iii. 2nd appendix, p. 120.) [G. W.]

SHALISHIA (LXX. Σαλίσσια, Vat. Σαλίς), a district of Palestine, in or near Mont Ephraim (1 Sam. ix. 4), in which was probably situated Baal Shilishah. [BAAL SHALISHAH.]

SHALON (Σαλῶν Fth. Σαλωνίτης). 1. Part of the great western plain of Palestine, distinguished for its fertility, mentioned by the prophet Isaiah with "the glory of Lebanon, and the excellency of Carmel and Sharon." (Isaiah, xxxii. 2.) "The rose of Sharon" is used poetically in the Canticles (ii. 1.) It is remarkable that the name does not occur in either of these passages in the LXX., but in the latter it is translated by ἡ ἐν τοίς νεαρῶς, by which appellative Symmachus translates it in the former passage, while Theodotion and Aquila retain the proper name. Its richness as a pastoral land is intimated in 1 Chronicles (xxvii. 29), where we read that "Shitam the Sharonite" was overseer of David's "herds that fed in Sharon." It doubtless derived its name from a village mentioned only in the New Testament (Acts, ix. 35) in connection with Lydda, in a manner that intimates its vicinity to that town. Its site has not been recovered in modern times, but it occurred to the writer, on the spot, that it may possibly be represented by the village of Dutas (or Peter), on the north of the road between Lydda and Beth-shan, and may have changed its name in honour of the Apostle, and in commemoration of the miracle wrought by him. S. Jerome in his commentaries limits the name to the district about Joppa, Lydda, and Iamnia (ad loc. xxvii. 37.) Ensebsins calls the district Saronis (Σαρωνι), and extends it from Joppa to Caesarea (of Palestine); while other writers reckon to it the whole of the coast north of Caesarea, as far as Carmel, (Onom. sub. sce. cocce.) The width of the plain about Jaffa is little less than 18 miles, and the luxurious of its soil is still attested by the numerous wild flowers with which it is carpeted in the spring,—roses, lilies, tulips, narcissus, anemones, carnations, and a thousand others, no less than by the abundant vegetation and increase where the land is cultivated as garden or corn land. (Ritter, Palestine, &c. vol. iii. part i. pp. 25, 586—588.) Reland has shown that the classical name for this fruitful district was ἰδρυμος, which Strabo joins with Carmel, as then in the power of the pirates who had Joppa for their port (xvi. 2. § 28, p. 759.) Reland suggests an ingenious account of this synomy, which appears to resemble the name of the same people (who does not mean the Scripture name) in connection with Carmel, in a manner that clearly points to the district described by Strabo under the same name. In one passage the name is used in the plural (Δρυμοι et το χωρον καλεσαν, Ant. xiv. 13. § 3); in the parallel pas- sage it is singular (εν το καλογενον Δρυμον, Bell. Jud. t. 13. § 2). Now ἰδρυμος, according to ancient etymologists, signified any kind of wood, and, as Ritter remarks, the traces of the forests of Sharon are still to be discovered in the vicinity of Carmel; but according to Pliny the Sinus Saronicus derived its name from an oak grove, "its Graecia antiqua appellante aquorum." (H. N. iv. 5. s. 9.) The very probable connection of Reland therefore is that Δρυμος is simply a translation of Saron or Saruna, for according to the Etymologicum Magnun Σαρωνίδοι αι καλαὶ δρυησ (ad voc. Sarōnios). 2. Ensebsins and St. Jerome recognise another Sharon, to which they apply the prophecy of Isaiah (xxiii. 9). "Sharon is like a wilderness" (ὁγ γενέτορ ὁ Σαλὼν, LXX.), which they refer to the
country between Tabor and the sea of Tiberias (Onomast. s. v.) But as the name is here introduced in connection with Lebanon and Carmel,—Bashan being also introduced,—and as no other notice of a Galilean Sharon is to be met with, it seems more reasonable to refer the notice in Isaiah to the plain of Sharon on the west coast.

3. There was certainly another Sharon beyond Jordan, apparently the whole of the region of Gilad, for the children of Abishai, of the tribe of Gad, are said to have dwelt in Gilad in Bashan, and in her towns, and in all the suburbs of Sharon (1 Chron. v. 16); and it is possible that "the herds that fed in Sharon," under charge of David's chief herdsmen, Shitrai the Sharonite, may have pastured in this trans-Jordanic district, not in the plain of the Mediterranean. Re LAND ind maintains that the mention of the suburbs of Sharon in connection with the Gadites, is no proof of the existence of a trans-Jordanic Sharon, for that, as the tribe of Gad was specially addicted to pastoral pursuits, they may have pastured their flocks in the suburbs of the towns of other and distant tribes. But this hypothesis seems much more forced than the very natural theory of a Sharon in the tribe of Gad properly so called. (Palaestina, pp. 370, 371, 988.) [G. W.]

SHAVEH (LXX. Βάτ. ἡ κωλάς τοῦ Σαβ. ἡ Σαβ.) "the valley of Shaveh, which is the king's dale," where Melchizedek met Abraham returning from the slaughter of the kings. (Gen. xiv. 17.) The learned are not agreed concerning the city of Melchisedek. They who regard his Salem as identical with Jerusalem, naturally identify "the king's dale," equivalent to "the valley of Shaveh," with "the king's dale" where Absalom erected his monument (2 Sam. xvii. 18), and place it in the vicinity of "the king's gardens," in the valley of the Kidron, where tradition points out "Absalom's hand" or place. (Jerusalem Vol. ii. p. 17, a. and p. 23 B.) [G. W.]

SHAVEH KIRJATHAIM (translated by the LXX. Σαβ. ἡ πόλις), the original seat of that very ancient people the Enims, where they were smitten by Chedorlaomer, king of Elam. (Gen. xiv. 5.) It no doubt passed with the other possessions of the Enims to the Medes (Herod. ii. 9—11), and is probably identical with the Kirjathaim (LXX. Κησοῦθαμ) of Jeremiah (xxvii. 13) and Ezekiel (xxv. 9).

SHEBA. [SABAE.] SHECHEM. [NEAPOLIS II.]

SHILOH. [SIIeo.]

SHITTIM (LXX. Σαρτείλιν αἱ Σαρτίλιν), the last station of the Israelites before crossing the Jordan, described to be by Jordan in the plains of Moab. Abel-shittim was at one extremity of their vast encampment, as Beth-Jesimoth was at the other. (Num. xxxii. v. 13; Deut. iv. 49.) It was from thence that Joshua sent the spies to reconnoitre Jericho (Josh. ii. 1), and from thence that they marched to their miraculous passage of the Jordan (iii. 1). In Micah (vi. 5) it is mentioned in connection with Gilgal, being the last encampment on the east of Jordan, as Gilgal was the first on the west. Here the LXX. render ἀπὸ τῶν χρυσίνων ἑως τῆς Γαλα-γίας. [G. W.]

SHUNEM (LXX. Σουᵐεν; Eth. Σουµςίντις, Σουµςίτης), a village of Palestine celebrated as the birthplace of Abishag (1 Kings, i. 4), and for the miracle of Elisha. (2 Kings, iv.) It was situated in Issachar (Josh. xix. 18; LXX. Σουµανίας), near Gilboa, to the north; for when Saul and the Is-raelites were encamped in Gilboa, the Philistines pitched in Shunem, so that he had to pass through their lines to come to Endor. (1 Sam. xxviii. 4.) Eusebius mentions a village named Samim, in the borders of Sebaste, in the district of Acraabatene, which cannot be identical with this. But the Subem (Σουµ-θίας) of the same author, which he places v. M. P. south of Mount Tabor, corresponds very well with the modern village of Solomon which still marks the site of ancient Shunem. It is a miserable village, situated above the plain of Esdraelon, on the road between Jenin and Nazareth, about 1½ hours north of Zer'a, ancient Jezered, on the steep slope of the western spur of Little Hermon (Ed-Diyy). [G. W.]

SHUR (Σοῦρ, LXX.), a place repeatedly mentioned to describe the western extremity of the borders of the pesterity of Ishmael (Gen. xxi. 18), of the Amalekites only (1 Sam. xvii. 7), of the Geshurites, Gerites, and Amalekites (xxvii. 8), in all which passages it is placed "over against," "before," and on the way to Egypt. Hagar's well, afterwards called Beer-lahai-roi, between Kadesh and Bered, was "in the way to Shur." (Gen. xvi. 7, 14.) The name is still found in the south of Palestine. "Moilahhi (= Beer-lahai-roi) lies on the great road from Beersheba to Shen, or Jebel-es-Sur, which is its present name,—a grand chain of mountains running north and south, a little east of the longitude of Suez, lying, as Shur did, before Egypt. (Gen. xvii. 7.) It lies at the south-west extremity of the plain of Paran, as Kadesh does at its utmost north-east extremity. (Bowdich, in Williams's Holy City, vol. i. appendix No. 1. pp. 465, 466.) [G. W.]

SHUSHAN. [SUS.]

SIAGUL (Σιαγόλα, Ptol. iv. 3, § 9, the most easterly town of Zegitana, only 3 miles from the coast, and to which Ptolemy served as a harbour. Shaw (Travels, ch. 2) identifies it with some ruins at the village of Kassiri-Asefe, from two inscriptions which he found there, with the words Civ. Siagitanæ; but which he must have read incorrectly, since the town was nowhere called Siagitanæ. According to Maffei (Mus. Veron., i. 189) this place is also an inscription with the words Civ. Siagitanæ near Turac in Africa; which Orrell (i. p. 334) refers either to Sigus in Numidia or to Siga in Mauritania Caesariensis. [T. H. D.]

SIACTICUM. [SANTICUM.]

SIATA, an island on the Gallic coast, which is mentioned in the Maritime Itin. after Vivallis, or Belle Isle. D'Anville conjectures Siata to be the Isle of Howat, which is off the coast of the department of Morbihan, and between Belle Isle and the mainland. [G. L.]

SIATUTANDA (Σαιτοτανθάδα), is mentioned by Ptolemy (ii. 11. § 27) as a town of Germany; but had probably no existence at all, the geographer imagining that in the words of Tacitus (Anna. iv. 73), "ad sua tutanda digressibus rebellium" the name of some town was contained. Notwithstanding this evident origin of the name, some modern geographers still persist in assuming a town Suntantana. [L.S.]

S'BAE (Σιβα, Arrian, Ind. c. 5; Diod. xvii. 96; Strab. xv. p. 688), a nation of the Punjab, below
the junction of the Hydaspes and Acesines, en-
countered by Alexander in his attempt to invade
India. They are described as a rude, warlike people,
armed only with clubs for defensive weapons. The
Greeks noticed this use of the club, and that the
people were in the habit of branding the representa-
tion of an aurochs on their cattle, and that they
were clothed in the skins of the aurochs and
terdons. From these facts they inferred that they must be
descendants of Hercules. There can be doubt that
they are the same race as are called Sabii in
Curtins (ix. 4. § 2). A tribe of similar character,
called *Spagul or Spiegnch, still exists in that country,
and they live, with the people, and wear the skins of goats for
clothing. (Ritter, vii. p. 279, v. p. 467; Bohlen,
Alte-Indien, i. p. 205.) It is possible that they have
derived their name from the god Siva. [V.]

SIBABIA, a town of the Vettines in Hispania
Tarraconensis, N. of Salamanca, and on the road
from Emerita to Caesaraugusta. (Itin. Anicia p. 434.)
Variously identified with Sancti, Fluente de Saburro,
Peñauende, and Zamorica. [T. H. D.]

SIBIA (Sibia; Eth. Sibias, Sibisgrtvt), a place
in Caria, and one of the six towns which were
given by Alexander the Great to Ada, a daughter of
king Heccatomus of Halicarnassus, and thus became
subject to Halicarnassus. (Steph. B. s. v.; Plin. v.
29.) Its exact site cannot be ascertained. [L. S.]

SIBERNA (Siberna; Sta. Severinum), a town of
Bruttum situated in the mountains about 15 miles
N.W. of Crotone. The name is mentioned only by
Stephanus of Byzantium (c. 9.), who calls it an
Oenetran city, but it is probable that it is the same
place which is now called Santa Severina, an appel-
lation that is already noticed by Constantine Por-
phyrogenitus in the tenth century. It was at that
time apparently a place of importance, but is now
much decayed. (Const. Porph. de Adv. Imp. ii. 10;
Holstein, Obs. in Steph. Byz. s. v.) [E. H. B.]

SIBIRIS (Sibiris), a river of Galatia, a tri-
butary of the Sangarius; it flowed in a south-
western direction, and joined the main river near
the little town of Sycemon, not far from Julopolis. (Procop. de Aed. v. 4.) Procopius also men-
tions that this river frequently overflowed its banks, a fact
which is perhaps alluded to in the name of a station
called Hyrcan Potamion, about 13 miles east of Julio-
polis (It. Hieros. p. 574); though it is possible also
that the name may be misspelt for Hieron Potamion,
which is only another name for the Hieras of Phiny
(v. 43), and unquestionably identical with the Sibiris
which now bears the name of Kirmir. [L. S.]

SIBIZATES, an Aetolian people, who sub-
mitted to P. Crassus, Caesar's legatus in b. c. 56. (B. G. iii. 27.) There are many varieties in the
manuscript readings of this name. It is merely by
conjecture founded on resemblance of name, that they
have been placed about Selinunte or Selinus, on the
Adour, between Aquae Tarbellici (Haute) and
Bayonne. [G. L.]

SIBYLLAIES, one of the Aetolian tribes
mentioned by Phiny (iv. 19). D'Auville conjectures
that the name is preserved in that of the Vallis
Subola, mentioned by Fredegarius. He argues that
they cannot be the same people as the Sibyzates
who submitted to P. Crassus, because Caesar speaks
of a few of the remnant Aetolian tribes which did
not submit to the Roman general, trusting to the
approaching winter season (B. G. iii. 27); from which
remark we may infer that these remnant tribes were
in the valleys of the Pyrenees. " The people of the
valley of Soule might derive this advantage from their
situation, which is shut in between Low Navarra
and the high part of Bearn." (D'Auville.) [G. L.]

SIBYRTUS. [Syriza.]

SICAMBRI, SICAMBRI, SYGAMBERI, SU
GAMBERI, or SICAMBERI (Σιγαμβρος, Σιγαμβρος,
Σιγαμβρος), a powerful German tribe, occupying,
in the time of Tiberius, the farther part of the
Rhine, and extending from the Sieg to the Lippe. It
is generally assumed that this tribe derived its name
from the little river Sieg, which falls into the Rhine
a little below Bonn, and during the middle ages
was called Sega, Segaha, but is not mentioned by
any ancient writer; this assumption, however, is at
least only a probable conjecture, though it must be admitted
that in the time of Caesar they inhabited the country
north and south of the Sieg, and to the north of the
Ubi. (Caes. B. G. iv. 16, foll., vi. 35; Strab. vii.
p. 290, 291; Dion Cass. xxxix. 45, xl. 32, liv.
20, 52, 33, 36.) When the Usipetes and Teneteri
were defeated by Caesar, the remnants of these tribes
took refuge in the country of the Sicambri, who
took them under their protection. Caesar then de-
manded their surrender; and this being refused, he
built his famous bridge across the Rhine to strike
terror into the Germans. The Sicambri, however, did
not wait for his arrival, but, on the advice of the Usi-
petes and Teneteri, quitted their own country and
withdrew into forests and uninhabited districts,
whither Caesar neither would nor could follow them.
A few years later, b. c. 51, during the war against
the Eburones, we find Sicambri fighting against the
army of Caesar on the left bank of the Rhine, and
nearly defeating the Romans; Caesar's arrival, who
had been in another part of Gaul, alone saved his
legions. The Sicambri were then obliged to return
across the Rhine. In b. c. 16 the Sicambri, with
the Usipetes and Teneteri, again invaded Gallia Bel-
gica, and M. Lolliaus, who had provoked the bar-
barians, sustained a serious defeat. A similar at-
tack which was made a few years later, was repelled
by Drusus, who pursued the Germans into their
own country. After the withdrawal of the Romans, the
Sicambri formed themselves into a confederation and
warred against the common enemy, and as the Chatti
who had received the country of the Usi on the
right bank of the Rhine, refused to join them, the
Sicambri made war upon them; and as they left
their own territory unprotected, Drusus penetrated
through it into the interior of Germany. After
the death of Drusus, Tiberius undertook the comple-
tion of his plans against Germany. None of the tribes
offered a more vigorous resistance than the Sicambri;
but in the end they were obliged to submit, and
40,000 Sicambri and Suevi were transplanted into
Gaul, where as subjects of Rome they received settle-
ment between the lower course of the Meuse and
the Rhine. In that country they subsequently
formed an important part of the nation or confed-
erate of the Franks. Those Sigambri who were not
transplanted into Gaul seem to have withdrawn into the
hills of Mons Reics, and for a long time they
are not mentioned in history; they reappear in the
time of Pelceny (ii. 11. § 8), when they are spoken of
as neighbours of the Bructeri Minores. The Si-
cambri are described as bold, brave, and cruel, and
we hear nothing of towns in their country; they
seem in fact to have lived in villages and isolated
farms. (Caes. B. G. v. 19; Tac. Ann. ii. 26, iv. 47, xii. 39; Suet. Aug. 21, Thr. 9; Eutrop.
vi. 9; Oros. vi. 21; Horat. Carm. iv. 2. 36, 14.
SICANI.

51; Or. Amor. i. 14, 49; Venant. Fort. de Charib, Rege, vi. 4; Gregor. Turon. iii. 31; Procop. Bell. Goth. i. 12; Lydus, de Magiste. i. 50, iii. 36; Zeuss, Die Deutschen, p. 83, foll.; Wilhelm, Germanien, p. 142, foll.)

SICANI. [SICULI.]

SICCA VENERIA (Σίκκα ou Σίκκα Ωιούερία, Ptol. iv. 3. § 50, vili. 2. § 9), a considerable town of Numidius on the river Bagradas, and on the road from Carthage to Hippo Regius, and from Musti to Cirta. (Itin. Ant. pp. 41, 45.) It was built on a hill, and, according to Pliny (v. 3. s. 2), was a Roman colony. We learn from Valerius Maximus (ii. 6. § 15) that it derived its surname from a temple of Venus which existed there, in which, according to a Phoenician custom, the maidens of the town, including even those of good family, publicly prostituted themselves, in order to collect a marriage portion; a circumstance which shows that the town was originally a Phoenician settlement, devoted to the worship of Astarte. (Comp. Sall. Jug. 56; Polyb. i. 66, 67.) Shaw (Travels, p. 87) takes it to be the modern Kef, where a statue of Venus has been found, and an inscription, with the words Ordo Sicensium. (Comp. Donati, Suppl. Thes. Murat. ii. pp. 266. 6; Orelli, Inscr. no. 3733.)

SICELLA. [ZIKLAG.]

SICHEM. [NEAPOLIS II.]

SICILIA (Σικίλια: Σηκίλιαντίρια, Siceliana: Sicily), one of the largest and most important islands in the Mediterranean. It was indeed generally reckoned the largest of all; though some ancient writers considered Sardinia as exceeding it in size, a view which, according to the researches of modern geographers, turns out to be correct. [SARDINIA].

I. GENERAL DESCRIPTION.

The general form of Sicily is that of a triangle, having its shortest side or base turned to the E., and separated at its N.E. angle from the adjoining coast of Italy by a narrow strait, called in ancient times the Prietum Siculum or Sicilian Strait, but now more commonly known as the Straits of Messina. It was generally believed in antiquity that Sicily had once been joined to Italy, and separated from it by some natural convalvum. (Strab. vi. p. 258; Plin. iii. 8. s. 14; Virg. Aen. iii. 414.) But though this is probably true in a geological sense, it is certain that the separation must have taken place at a very early period, not only long before the historical age, but before the first dawn of tradition. On the other side, the W. extremity of Sicily stretches out far towards the coast of Africa, so that the westernmost point of the island, the headland of Melita, is separated only by an interval of 80 geogr. miles from the Hermaean Promontory, or Cape Bon in Africa.

The general triangular form of Sicily was early recognised, and is described by all the ancient geographers. The three promontories which may be considered as forming the angles of the triangle, viz. Cape Pelorus to the NE., Cape Pachynus to the SE., and Lilybæum on the W., were also generally known and received (Pol. i. 42; Strab. vi. pp. 265, 266; Plin. iii. 8. s. 14; Ptol. iii. 4; Mel. i. 714.). Its dimensions are variously given: Strabo, on the authority of Posidonius, estimates the side from Pelorus to the SE., which he reckons the longest, at 1700 stadia (or 170 geogr. miles); and that from Pachynus to Pelorus, the shortest of the three, at 1130 stadia. Pliny on the contrary reckons 186

Roman miles (149 geogr.) from Pelorus to Pachynus, 200 M.P. (160 geogr. miles) from Pachynus to Lilybæum, and 170 M.P. (136 geogr.) from Lilybæum to Pelorus: thus making the northern side the shortest instead of the longest. But Strabo's views of the proportion of the three sides are entirely correct; and his distances but little exceed the truth, if some allowance be made for the windings of the coast. Modern geographers, from the time of Ptolemy onwards, erroneously conceived the position of Sicily as tending a great deal more to the SW. than it really does, at the same time that they gave it a much more regular triangular form; and this error was perpetuated by modern geographers down to the time of D'Anville, and was indeed not altogether renewed till the publication of the valuable coast survey of the island by Captain Smyth. (See the map published by Magni in 1620, and that of D'Anville in his Analyse Géographique de l'Isle, Paris 1744.)

A considerable part of Sicily is of a mountainous character. A range of mountains, which are geologically of the same character as those in the southern portion of Bruttium (the group of Aspromonte), and may be considered almost as a continuation of the same chain, interrupted only by the intervening strait, rises near Cape Pelorus, and extends at first in a SW. direction to the neighbourhood of Taormina (Turammina) from whence it turns nearly due W. and continues to hold this course, running parallel with the N. coast of the island till it rises into the elevated group of the Monte Madonie, a little to the S. of Cefalù (Cephalæum). From thence it breaks up into more irregular masses of limestone mountains, which form the central nucleus of the W. portion of the island, while their arms extending down to the sea encircle the Bay of Palermo, as well as the more extensive Gulf of Castellamare, with bold and almost isolated headlands. The detached mass of Mount Erizzo (Monte di S. Giuliano) rises near Tropani almost at the W. extremity of the island, but with this exception the W. and SW. coast round to Sciacco, 20 miles beyond the site of Selinus, is comparatively smooth, with the intervening strait, or gulfs, of the same name, running parallel with the S.E. coast of the island, being produced from the S. and E.; and, though broken up, is seen in its main outline, extending in a nearly irregular manner, being traversed by deep valleys and ravines, and presenting some bold features. Another range or mass of mountains branches off from that of the Monte Madonie near Polizzi, and trends in a SE. direction through the heart of the island, forming the huge hills, rather than mountains, on one of which Emma was built, and which extend from thence to the neighbourhood of Piazza and Aidone. The whole of the SE. corner of the island is occupied by a mass of limestone hills, never rising to the dignity nor assuming the forms of mountains, but forming a kind of table-land, with a general but very gradual slope towards the S. and SE.; broken up, however, when viewed in detail, into very irregular masses, being traversed by deep valleys and ravines, and presenting steep escarpments of limestone rock, so as to constitute a rugged and difficult country.

None of the mountains above described attain to any great elevation. The loftiest group, that of the Monte Madonie, does not exceed 3765 feet, while the average height of the range which extends from thence to Cape Pelorus, is little, if at all, above 3000 feet high. Mount S. Giuliano, the ancient Elekry, erroneously considered in ancient times as the highest mountain in Sicily after Actea [Erizzo], is in reality only 2184 feet in height (Smyth's Sicily, p. 249). The ancient appellations given to these
SICILIA.

The climate of Sicily may be considered as intermediate between those of Southern Italy and Africa. The northern part of the island, indeed, closely resembles the portion of Italy with which it is more immediately in contact; but the southern and southwestern parts present strong indications of their more southerly latitude, and have a parched and arid appearance (at least to the eyes of Northern travellers) except in winter and spring. There is the presence also of the dwarf palm (Chamaerops humilis Linn.), a plant unknown to other parts of Europe, to give a peculiar aspect to these districts of Sicily. The climate of the island in general was certainly not considered unhealthy in ancient times; and though at the present day many districts of it suffer severely from malaria, there is good reason to believe that this would be greatly diminished by an increased population and more extensive cultivation. It is remarkable, indeed, in Sicily, as in the south of Italy, that frequently the very sites which are now considered the most unhealthy were in ancient times occupied by flourishing and populous cities. In many cases the malaria is undoubtedly owing to local causes, which might be readily obviated by draining marshes or affording a free outlet to stagnant waters.

II. HISTORY.

The accounts of the early population of Sicily are more rational and consistent than is generally the case with such traditions. Its name was obviously derived from that of the people who continued in historical times to be its chief inhabitants, the Siculi of Sicela (Siœcola); and the tradition universally received represented these as crossing over from the mainland, where they had formerly dwelt, in the extreme southern portion of Italy. The traditions and notices of this people in other parts of Italy, and of their previous wanderings and migrations, are, indeed, extremely obscure, and will be discussed elsewhere (Sicilia); but the fact that they were at one time settled in the Bruttian peninsula, and from thence passed over into Sicily, may be safely received as historical. There is every probability also that the Sicels, or Siculi, were not the only inhabitants in their origin from the races whom we subsequently find in that part of Italy, but were closely connected with the Orontadians and their kindred tribes. Indeed, the names of Σηκόλες and Σύραλας are considered by many philologers as of common origin. There seems, therefore, little doubt that the Sicels, or Siculi, may be regarded as one of the branches of the great Pelasgic race, which we find in the earliest times occupying the southern portion of Italy; and this kindred origin will account for the facility with which we find the Sicels subsequently adopting the language and civilization of the Greek colonists in the same space of time that there remain abundant traces of their common descent with the people of Italy.

But the Sicels, who occupied in the historical period the greater part of the interior of the island, were not, according to the Greek writers, its earliest inhabitants. Thucydides indeed assigns their immigration to a period only three centuries before the settlement of the first Greek colonies (Thuc. vi. 2); and Diodorus, without assigning any date, agrees in representing them as the latest comers among the native population of the island (Diod. v. 6). The first notices of Sicily allude to the existence of races of gigantic men, of savage manners, under the
names of Laestrygones and Cyclopes; but these fabulous tales, preserved only by the early poets in a manner that renders it impossible to separate truth from falsehood, are justly discarded by Thucydides, as unworthy of serious consideration (Thuc. vi. 2). It may seem singular that colonies should have been founded (as of old, by the earliest authority on the subject) says nothing directly to prove that he conceived either the Cyclopes or Laestrygones as dwelling in Sicily; and this is in both cases a mere inference of later writers, or of some tradition now unknown to us. Homer indeed, in one passage, mentions (but not in connection with either of these savage races), "the island of Thrinakia" (Odys. xii. 127), and this was generally identified with Sicily, though there is certainly nothing in the Odyssey that would naturally lead to such a conclusion. But it was a tradition generally received that Sicily had previously been called Turnacia, from its triangular form and the three promontories which formed its extremities (Thuc. vi. 2; Diod. v. 2; Strab. vi. p. 265), and this name was connected with the Homeric Thrinakia. It is obvious that such a name could only have been given by Greek navigators, and argues a considerable amount of acquaintance with the configuration of its shores. It could not, therefore, have been (as supposed even by Thucydides) the original or native name of the island, nor could it have been in use even among the Greeks at a very early period. We cannot discard the general testimony of ancient writers, that this was the earliest appellation by which Sicily was known to the Greeks.

Another people whom Thucydides, apparently with good reason, regards as more ancient than the Sicels, were the Sicani, whom we find in historical times occupying the western and north-western parts of the island, whither, according to their own tradition, they had been driven by the invading Sicels, when these crossed the straits, though another tradition ascribed their removal to the terror and devastation caused by the eruptions of Aetna (Thuc. vi. 2; Diod. v. 6). The Sicani claimed the honour of being autochthonous, or the original inhabitants of the island, and this view was followed by Timaeus; but Thucydides, as well as Philistus, adopted another tradition, according to which they were of Libyan extraction (Thuc. l. c.; Diod. l. c.). What the arguments were which he regards as conclusive, we are unfortunately wholly ignorant; but the view is in itself probable enough, and notwithstanding the close resemblance of name, it is certain that throughout the historical period the Sicani and Siculi are uniformly treated as distinct races. Hence it is improbable that they were merely tribes of a kindred origin, as we should otherwise have been led to infer from the fact that the two names are evidently only two forms of the same appellation.

A third race which is found in Sicily within the historical period, and which is regarded by ancient writers as distinct from the two preceding ones, is that of Elymii, who inhabited the extreme north-western corner of the island, about Eryx and Segesta. Tradition ascribed to them a Trojan origin (Thuc. vi. 2; Dionys. l. 52), and though this story is probably no more than one of the numerous similar tales of Trojan settlements on the coast of Italy, there must probably have been some foundation for regarding them as a distinct people from their neighbours, the Sicani. Both Thucydidces and Sclavus specially mention them as such (Thuc. l. c.; Sclav. p. 4. § 13); but at a later period, they seem to have gradually disappeared or been merged into the surrounding tribes, and their name is not again found in history.

Such were the indigenous races by which Sicily was peopled when its coasts were first visited, and colonies established there, by the Phoenicians and the Greeks. Of the colonies of the former people we have little information, but we are told in general by Thucydides that they occupied numerous points around the coasts of the island, establishing themselves in preference, as was their wont, on projecting headlands or small islands adjoining the shore. (Thuc. vi. 2). But these settlements were apparently, for the most part, mere trading stations, and as the Greeks came to establish themselves permanently and in still increasing numbers in Sicily, the Phoenicians gradually withdrew to the NW. corner of the island, where they retained three permanent settlements, Motya, Panormus, and Solusias. Here they were supported by the alliance of the neighbouring Elymii, and had also the advantage of the proximity of Carthage, upon which they all became eventually dependent. (Thuc. l. c.)

The settlement of the Greek colonies in Sicily began about the middle of the eighth century B.C., and was continued for above a century and a half. Their dates and origin are known to us with much more certainty than those which took place during the corresponding period in the nautical history of the eastern Mediterranean, and the earliest were established on the E. coast of the island, where the Chalcidic colony of Naxos was founded in B.C. 735, and that of Syracuse the following year (B.C. 734), by a body of Corinthian settlers under Archias. Thus the division between the Chalcidic and Doric colonies in Sicily, which bears so prominent a part in their political history, became marked from the very outset. The Chalcidians were the first to extend their settlements, having founded within a few years of the parent colony (about B.c. 750) the two cities of Leonina and Catana, both of them destined to bear an important part in the affairs of Sicily. About the same time, or shortly after (probably about B.C. 728), a fresh body of colonists from Megara founded the city of the same name, called, for distinction's sake, Megara Hyblaea, on the E. coast, between Syracuse and Catana. The first colony on the S. coast of the island was that of Gela, founded in B.C. 690, by a body of emigrants from Rhodes and Crete; it was, therefore, a Doric colony. On the other hand, the Chalcidians founded, at what precise period we know not, the colony of Zancle (afterwards called Messana), in a position of the utmost importance, as commanding the Sicilian Straits. The rapid rise and prosperity of these first settlements are shown by their having become in their turn the parents of other cities, which soon vied with them, and, in some cases, surpassed them in importance. Thus we find Syracuse extending its power by establishing in succession the colonies of Acrai in B.C. 664, Camarina in B.C. 644, and Camarina in B.C. 599. Of these, the last alone rose to be a flourishing city and the rival of the neighbouring Gela. The latter city in its turn founded the colony of Agrigentum, in B.C. 580, which, though one of the latest of the Greek colonies in the island, was destined to become one of the most powerful and flourishing of them all. Still further to the W., the colony of Selinus, planted as early as B.C. 628, by a body of settlers from the Hyblean Megara, reinforced with emigrants from the parent city in Greece, rose to a state of power...
and prosperity far surpassing that of either of its mother cities. Selinus was the most westerly of the Greek colonies, and immediately bordered on the territory of the Elymii and the Phoenician or Carthaginian settlements. On the N. coast of the island, the only independent Greek colony was Himera, founded about n. c. 649 by the Zancleans; Mylar, another colony of the same people, having apparently continued, from its proximity, to be a mere dependency of Zancle. To the above list of Greek colonies must be added Callipolis and Enoea, both of them colonies of Naxos, but which never seem to have attained to consideration, and disappear from history at an early period.*

Our accounts of the early history of these numerous Greek colonies in Sicily are unfortunately very scanty and fragmentary. We learn indeed in general terms that they rose to considerable power and importance, and enjoyed a high degree of wealth and prosperity, owing as well to the fertility and natural advantages of the island, as to their foreign commerce. It is evident also that at an early period they extended their dominion over a considerable part of the adjoining country, so that each city had its district or territory, often of considerable extent, and comprising a subject population of native origin. At the same time the Sicels of the interior, in the central and northern parts of the island, and the Sicamians and Elymii in the W., maintained their independence, though they seem to have given but little trouble to their Greek neighbours. During the sixth century B.C. the two most powerful cities in the island appear to have been Agrigentum and Gela, Syracuse not having yet attained to that predominance which it subsequently enjoyed. Agrigentum, though one of the latest of the Greek colonies in Sicily, seems to have risen rapidly to prosperity, and under the able, though tyrannical government of the despot Phalaris (n. c. 570—554) became apparently for a time the most powerful city in the island. But we know very little about his real history, and with the exception of a few scattered notices, the earliest account of the affairs of the Greek cities before n. c. 500. At or before that period we find that a political change had taken place in most of these communities, and that their governments, which had originally been oligarchical, had passed into the hands of despots or tyrants, who ruled with uncontrolled power. Such were Tanaitus at Leontini, Cleander at Gela, Terillus at Himera, and Scythes at Zancle (Arist. Pol. v. 12; Herod. vi. 25, vii. 154). Of these Cleander seems to have been the most able, and laid the foundation of a power which enabled his brother and successor Hippocrates to extend his dominion over a great part of the island. Callipolis, Leontini, Naxos, Zancle, and Camarina successively fell under the arms of Hippocrates, and Syracuse itself only escaped subjection by the intervention of the Corinthians (Herod. vii. 154). But what Hippocrates had failed to effect was accomplished by Gelon, who succeeded him as despot of Gela, and by interfering in the civil dissensions of the Syracusans ultimately succeeded in making himself master of that city also, n. c. 485. From this time Gelon neglected his former government of Gela, and directed all his efforts to the aggrandizement of his new acquisition. He destroyed Camarina, and removed all the inhabitants to Syracuse, together with a large part of those of Gela itself, and joined them all to the city of Megara Hyblaea and Enoea (Herod. vii. 156).

Syracuse was thus raised to the rank of the first city in Sicily, which it retained for many centuries afterwards. A few years before (n. c. 485), Theron had established himself in the possession of the sovereign power at Agrigentum, and subsequently extended his dominion over Himera also, from whence he expelled Terillus, n. c. 481. About the same time also Anaxibius, despot of Rhegium, on the other side of the straits, had established a footing in Sicily, where he became master of Zancle, to which he gave the name of Messana, by which it was ever afterwards known [Messana]. All three rulers appear to have been men of ability and enlightened and liberal views, and the cities under their immediate government apparently made great progress in power and prosperity. Gelon especially undoubtedly possessed at this period an amount of power of which no other Greek state could boast, as was sufficiently shown by the embassy sent to him from Sparta and Athens to invoke his assistance against the threatened invasion of Xerxes (Herod. vii. 145, 157). But his attention was called off to a danger more immediately at hand. Terillus, the expelled despot of Himera, had called in the assistance of the Carthaginians, and that people sent a vast fleet and army under a general named Hamilcar, who laid siege to Himera, n. c. 480. Theron, however, was able to maintain possession of that city until the arrival of Gelon with an army of 50,000 foot and 5000 horse to his relief, with which, though vastly inferior to the Carthaginian forces, he attacked and totally defeated the army of Hamilcar. This great victory, which was contemporaneous with the battle of Salamis, raised Gelon to the highest pitch of reputation, and increased his hard gains among the Sicilian Greeks than those of Salamis and Plataea among their continental brethren. The vast number of prisoners taken at Himera and distributed as slaves among the cities of Sicily added greatly to their wealth and resources, and the opportunity was taken by many of them to erect great public works, which continued to adorn them down to a late period (Diod. xi. 23).

Gelon did not long survive his great victory at Himera; but he transmitted his power unimpaired to his brother Hieron. The latter, indeed, though greatly inferior to Gelon in chieftain superiority, was in some respects even superior to him in power: and the great naval victory by which he relieved the Carthaginians in Italy from the attacks of the Carthaginians and Tyrrenians (n. c. 474) earned him a well-merited reputation throughout the Grecian world. At the same time the rule of Hieron was extremely oppressive to the Chalcidice cities of Sicily, the power of which he broke by expelling all the citizens of Naxos and Catana, whom he compelled to remove to Leontini, while he repeopled Catana with a large body of new inhabitants, at the same time that he changed its name to Acirma. Theron had continued to reign at Agrigentum until his death in n. c. 472, but his son Thrasylus, who succeeded him, quickly incurred the enmity of the citizens, who were enabled by the assistance of Hieron to expel him,
SICILIA.

and were thus restored to at least nominal freedom. A similar revolution occurred a few years later at Syracuse, where, on the death of Hieron (n. c. 467), the power passed into the hands of Thrasybulus, whose violent and tyrannical proceedings quickly excited an insurrection among the Syracusans. This became the signal for a general revolt of all the cities of Sicily, who united their forces with those of the Syracusans, and succeeded in expelling Thrasybulus from his strongholds of Ortygia and Acharnida (Diod. xi. 67, 68), and thus driving him from Sicily.

The fall of the Gelonian dynasty at Syracuse (n. c. 466) became for a time the occasion of violent internal dissensions in most of the Sicilian cities, which in many cases broke out into actual warfare. But after a few years these were terminated by a general congress and compromise, n. c. 461; the exiles were allowed to return to their respective cities; Camarina, which had been destroyed by Gelon, was repeopled and became once more a flourishing city; while Catana was restored to its original Chalcidean citizens, and resumed its ancient name (Diod. xi. 76). The tranquillity thus re-established was of unusual permanence and duration; and the half century that followed was a period of the greatest prosperity for all the Greek cities in the island, and was doubtless that when they attained (with the exception of Syracuse) their highest degree of opulence and power. This is distinctly stated by Diodorus (l. c.) and is remarkably confirmed by the still existing monuments,—all the greatest architectural works being referable to this period. Of the form of government established in the Sicilian cities at this time we have little information, but it seems certain that a democratic constitution was in almost all instances substituted for the original oligarchies.

But prosperous as this period (n. c. 461—409) undoubtedly was, it was by no means one of unbroken tranquillity. It was disturbed in the first instance by the ambitious schemes of Ducetius, a Sicilian chief, who endeavoured to organise all the Sicels of the interior into one confederacy, which should be able to make head against the Greek cities. He at the same time founded a new city, to which he gave the name of Palice, near the sacred fountain of the Palici. But these attempts of Ducetius, remarkable as the only instance in the whole history of the island in which we find the Sicels attempting to establish a political power of their own, were frustrated by his defeat and banishment by the Syracusans in n. c. 451; and though he once more returned to Sicily and endeavoured to establish himself on the N. coast of the island, his projects were interrupted by his death, n. c. 445. (Diod. xi. 88, 90—92, xii. 8, 29.) He found no successor; and the Sicels of the interior ceased to be formidable to the Greek cities. Many of their towns were actually reduced to subjection by the Syracusans, while others retained their independent position; but the operation of Hellenic influences was gradually diffusing itself throughout the whole island.

The next important event in the history of Sicily is the great Athenian expedition in n. c. 415. Already, at an earlier period, soon after the outbreak of the Peloponnesian war, efforts were made in the affairs of Sicily, and, in n. c. 427, had sent a squadron under Laches and Chares to support the Ionie or Chalcidean cities in the island, which were threatened by their more powerful Doric neighbours. But the operations of these commanders as well as of Eurymedon and Sophocles, who followed them in n. c. 425 with a large force, were of an unimportant character, and in b. c. 434 a general pacification of the Greek cities in Sicily was brought about by a congress held at Gela (Thuc. iv. 58, 65). But the peace thus concluded did not remain long unbroken. The Syracusans took advantage of the intestine dissensions at Leontini to expel the democratic party from that city: while the Selinuntines were engaged in war with their non-Hellenic neighbours the Segestans, whom they pressed so hard that the latter were forced to apply for assistance to Athens. The Leontine exiles also sued for aid in the same quarter, and the Athenians, who were at this time at the height of their power, sent out an expedition on the largest scale, nominally for the protection of their allies in Sicily, but in reality, as Thucydides observes, in hopes of making themselves masters of the whole island (Thuc. vi. 6). It is impossible here to relate in detail the proceedings of that celebrated expedition, which will be more fully noticed in the article SYRACUSAN, and are admirably related in Grote's History of Greece, vol. viii. ch. 38—60. Its failure may be attributed in great measure to the delays and inactivity of Nicias, who lingered at Catana, instead of proceeding at once to besiege Syracuse itself, and thus gave the Syracusans time to strengthen and enlarge their fortifications, at the same time that they revived the courage of their allies. The siege of Syracuse was not actually commenced till the spring of 414 b. c., and it was continued till the month of September, 413 b. c., with the most unremitting exertions on both sides. The Syracusans were supported by the chief Doric cities in the island, with the exception of Agrigentum, which stood aloof from the contest, as well as by a portion of the Sicel tribes; but the greater part of these barbarians, as well as the Chalcidean cities of Naxos and Catana and the Segestans, furnished assistance to the Athenians (Thuc. vii. 57, 59).

The total defeat of the Athenian armament (by far the most formidable that had been seen in Sicily since that of the Carthaginians under Hamilcar), seemed to give an irresistible predominance to the Doric cities in the island, and to Syracuse especially. But it was not long before they again found themselves threatened by a still more powerful invader. The Selinuntines immediately took advantage of the failure of the Athenians to renew their attacks upon their neighbours of Segesta, and the latter, feeling their inability to cope with them, now applied for protection to Carthage. It is remarkable that we hear nothing of Carthaginian interference in the affairs of Sicily from the time of the battle of Himera until this occasion, and they seem to have abandoned all ambitious projects connected with the island, though they still maintained a footing there by means of their subject or dependent towns of Panormus, Motya, and Soluntum. But they now determined to avail themselves of the opportunity offered them, and sent an armament to Sicily, which seemed like that of the Athenians, calculated not so much for the relief of Segesta as for the conquest of the whole island. Hamilcar, the grandson of Hamilcar Barca, who had been slain at Himera, landed at Lilybaeum, in b. c. 409, with an army estimated at 100,000 men and marching straight upon Selinus, laid siege a nonce to the city. Selinus was at this
time, next to Agrigentum and Syracuse, probably the most flourishing city in Sicily, but it was wholly unprepared for defence, and was taken after a siege of only a few days, the inhabitants put to the sword or made prisoners, and the walls and public build-
ings razed to the ground (Diod. xiii. 54—58). From thence Hannibal turned his arms against Him-
nera, which was able to protract its resistance some-
what longer, but eventually fell also into his power, when in order to avenge himself for his grandfather's defeat, he put the whole male population to the sword, and so utterly destroyed the city that it was never again inhabited (Ib. xiii. 59—62).

After these exploits Hannibal returned to Carthage with his fleet and army. But his successes had now awakened the ambition of the Carthaginian people, who determined upon a second invasion of Sicily, and in b. c. 406 sent thither an army still larger than the preceding, under the command of Hannibal. Agrigentum, at this time at the very highest point of its power and opulence, was on this occasion the first object of the Carthaginian arms, and though the citizens had made every pre-
paration for defence, and in fact were enabled to prolong their resistance for a period of eight months they were at length compelled by famine to surren-
der. The greater part of the inhabitants evacuated the city, which shared the fate of Selinus and Him-
erra (Diod. xiii. 81, 91).

Three of the principal Greek cities in Sicily had thus already fallen, and in the spring of b. c. 405, Himilco, who had succeeded Hannibal in the com-
mand, advanced to the attack of Gela. Meanwhile the power of Syracuse, upon which the other cities had in a great degree relied for their protection, had been in great measure paralysed by internal dissen-
sions: and Dionysius now availed himself of these to raise himself to the possession of despotic power.

But his first operations were not more successful than those of the generals he replaced, and after an ineffectual attempt to relieve Gela, he abandoned both the city and Camarina to their fate, the inha-
bitants of both emigrating to Leontini. Dionysius was able to fortify himself in the supreme power at Syracuse, and fastened to conclude peace with Him-
ilco upon terms which left the Carthaginians undis-
pputed masters of nearly half of Sicily. In addition to their former possessions, Selinus, Himera, and Agrigentum were to be subject to Carthage, while the inhabitants of Gela and Camarina were to be allowed to return to their native cities on condition of becoming tributary to Carthage (Diod. xin. 114).

From this time Dionysius reigned with undisputed authority at Syracuse for a period of 38 years (b. c. 405—367), and was able at his death to transmit his power unimpaired to his son. But though he raised Syracuse to a state of great power and prosperity, and extended his dominion over a large part of Sicily, as well as of the adjoining part of Italy, his reign was marked by great and sudden changes of fortune. Though he had dexterously availed himself of the Carthaginian invasion to establish his power at Syracuse, he had no sooner consolidated his own authority than he began to turn his thoughts to the expulsion of the Carthagi-
nians from the island. His arms were, however, di-
rected in the first instance against the Chalcidic cities of Sicily, Naxos, Catana, and Leontini, all of which successively fell into his power, while he ex-

tended his dominion over all the rest of the island.
his garrison, and still secured him a footing in Sicily. It was not till after a long blockade that his son Apollonius was compelled to surrender it into the bands of Dion, who thus became master of Syracuse, n. c. 336. But the possession of Dion was far from restoring liberty to Sicily, or even to the Syracusans; the despotic proceedings of Dion excited universal discontent, and he was at length assassinated by Callippos, one of his own officers, n. c. 333. The period that followed was one of great confusion, but with which we are very imperfectly acquainted. Successive revolutions occurred at Syracuse, during which the younger Dionysius found means to effect his return, and became once more master of Ortigia. But the rest of the city was still held by a leader named Hicetas, who called in the assistance of the Carthaginian. Ortigia was now besieged both by sea and land by a Carthaginian fleet and army. It was in this state of things that a party at Syracuse, equally opposed to Hicetas and Dionysius, had recourse to the parent city of Corinth, and a small force of 1200 soldiers was sent to their assistance under Timoleon, n. c. 344. His successes were rapid and brilliant; and within less than two months from his landing in Sicily, he found himself unexpectedly in the possession of Ortigia, which was voluntarily surrendered to him by Dionysius. Hicetas and the Carthaginians, however, still masters of the rest of the city; but mistrust and jealousy rendered their defence: the Carthaginian general Mago suddenly withdrew his forces, and Timoleon easily wrested the city from the hands of Hicetas, n. c. 343.

Syracuse was now restored to liberty and a democratic form of government; and the same change was quickly extended to the other Greek cities of Sicily. These had thrown off the yoke of Syracuse during the disturbed period through which they had recently passed, but had, with few exceptions, fallen into the hands of local despots, who had established themselves in the possession of absolute power. Such were, Hicetas himself at Leontini, Mamercus at Catana, and Hippon at Messana, while minor despots, also of Greek origin, had obtained in like manner the chief power in the Sicilian cities of Apollonia, Centaripa and Agyrium. Timoleon now turned his arms in succession against all these petty rulers, and overthrew them one after another, restoring the city in each case to the possession of independent and free self-government. Meanwhile the Greeks had been threatened with a more general danger from a fresh Carthaginian invasion; but the total defeat of their generals Hasdrubal and Hamilcar at the river Crimius (n. c. 340), one of the most brilliant and decisive victories ever gained by the Greeks over the Carthaginians, put an end to all fears from that quarter: and the peace that followed once more established the Halycas as the boundary between the two nations (Diod. xv. 17.).

The restoration of the Sicilian Greeks to liberty by Timoleon, was followed by a period of great prosperity. Many of the cities had suffered severely, either from the exactions of their despotic rulers, or from the troubles and revolutions that had taken place, but there were now created with fresh colonists from Corinth, and other cities of Greece, who poured into the island in vast numbers; the colonies were everywhere restored, and a fresh impulse seemed to be given to the development of Hellenic influences in the island. Unfortunately this period of reviving prosperity was of short duration. Only twenty three years after the battle of the Crimius, a despotism was again established at Syracuse by Agathocles (n. c. 317), an adventurer who raised himself to power by very much the same means as the elder Dionysius, whom he resembled in energy and ability, while he even surpassed him in sanguinary and unsparring severity. The reign of Agathocles (n. c. 317 289) was undoubtedly a period that exercised the most disastrous influence over Sicily; it was occupied in great part with internal dissensions and civil wars, as well as by long continued struggles between the Greeks and Carthaginians. Like Dionysius, Agathocles had, in the first instance, made use of Carthaginian support, to establish himself in the possession of despotic power, but as he gradually extended his aggressions, and reduced one Greek city after another under his authority, he in his turn came into fresh collision with Carthage. In n. c. 310, he was defeated at the river Himera, near the hill of Economus, by the Carthaginian general Hamilcar, in so decisive a battle that it seemed to extinguish all his hopes: his allies and dependent cities quickly threw off his yoke, and Syracuse itself was once more blockaded by a Carthaginian fleet. In this extremity Agathocles adopted the daring resolution of transporting his army to Africa, and carrying on the war at the very gates of Carthage. During his absence from Sicily (n. c. 310—307) Hamilcar had brought a large part of Sicily under the dominion of Carthage, but was failed in all his attempts upon Syracuse, and at length was himself taken prisoner in a night attack, and put to death. The Agrigentines, whose name had been scarcely mentioned for a long period, but whose city appears to have been revived under Timoleon, and now again appears as one of the most considerable in Sicily, made a fruitless attempt to raise the banner of freedom and independence, while the Syracusan exile Democrates, at the head of a large army of exiles and mercenaries, maintained a sort of independent position, aloof from all parties. But Agathocles, on his return from Africa, concluded peace with Carthage, and entered into a compromise with Democrates, while he established his own power at Syracuse by a fearful massacre of all that were opposed to him. For the last twelve years of his reign (n. c. 301—289), his dominion seems to have been firmly established over Syracuse and a great part of Sicily, so that he was at liberty to follow out his ambitious schemes in the south of Italy and elsewhere.

After the death of Agathocles (n. c. 289), Sicily seems to have fallen into a state of great confusion; Syracuse apparently still retained its predominant position among the Greek cities, under a despot named Hicetas: but Agrigentum, which had also fallen into the hands of a despot named Phintias, was raised to a position that almost enabled it to dispute the supremacy. Phintias extended his dominion over several other cities, and having made himself master of Gela, utterly destroyed it, in order to found and people a new city at the mouth of the river Himera, to which he gave the name of Phintias. This was the last Greek city founded in Sicily. Meanwhile the Carthaginians were becoming more and more preponderant in the island, and the Greeks were at length led to invoke the assistance of Pyrrhus, king of Epirus, who was at this time carrying on war in Italy against the Romans. He readily listened to their overtures, and landed in
the island in the autumn of n. c. 278. Phintias was at this time dead, and Hierocles had not long before been expelled from Syracuse. Pyrrhus therefore had no Greek adversaries to contend with, and was able to turn all his efforts against the Carthaginians. His successes were at first rapid and decisive: he wrested one town after another from the dominion of Carthage, took Panormus, which had long been the metropolis of their Sicilian possessions, and had never before fallen into the hands of a Greek invader, and carried by assault the strong fortresses of Erice and Erix ; but he was foiled in an attack on Lilybaeum ; jealousies and dissensions now arose between him and his Sicilian allies, and after little more than two years he was fain to return to Italy (n. c. 276), abandoning all his projects upon Sicily (Diod. Excid. xxxii. 10, pp. 497—499).

The departure of Pyrrhus left the Sicilian Greeks without a leader, but Hieron, who was chosen general by the Syracusans, proved himself worthy of the occasion. Meanwhile a new and formidable enemy had arisen in the Manniterns, a band of Campanian mercenaries, who had possessed themselves by treachery of the important city of Messana, and from thence carried their arms over a considerable part of Sicily, and conquered or plundered many of its principal towns. Hieron waged war with them for a considerable period, and at length obtained a decisive victory over them, in the immediate neighbourhood of Messana, that the city itself must have fallen, had it not been saved by the intervention of the Carthaginian general Hannibal. Hieron was now raised to the supreme power at Syracuse, and even assumed the title of king, n. c. 270. A few years after this we find him joining his arms with the Carthaginians, against the effect of the Manniterns, an object which they would doubtless have accomplished had not that people appealed to the protection of Rome. The Romans, who had recently completed the conquest of Italy, gladly seized the pretext for interfering in the affairs of Sicily, and espoused the cause of the Manniterns. Thus it began the First Punic War, n. c. 264.

It is impossible here to relate in detail the events of that long-protracted struggle, during which Sicily became for twenty-three years the field of battle between the Romans and Carthaginians. Hieron, who had found himself at the beginning engaged in several hostilities with Rome, after sustaining the Manniterns, an object which they would doubtless have accomplished had not that people appealed to the protection of Rome. The Romans, who had recently completed the conquest of Italy, gladly seized the pretext for interfering in the affairs of Sicily, and espoused the cause of the Manniterns. Thus it began the First Punic War, n. c. 264.

speculators, who bought up large tracts of land, which they cultivated solely by means of slaves, so that the free population of the island became materially diminished. The more mountainous portions of the island were given up to shepherds and herdsmen, all likewise slaves, and accustomed to habits of rapine and plunder, in which they were encouraged by their masters. At the same time the number of wealthy proprietors, and the extensive export trade of some of the towns, maintained a delusive appearance of prosperity. It was not till the outbreak of the Servile War in n. c. 133 that the full extent of these evils became apparent, but the frightful state of things then revealed sufficiently shows that the causes which had produced it must have been long at work. That great outbreak, which commenced with a local insurrection of the slaves of a great proprietor at Enna, named Damophilius, and was headed by a Syrian slave of the name of Eunus, quickly spread throughout the whole island, so that the slaves are said to have mastered 300,000 armed men. With this formidable force they defeated in succession the armies of several Roman praetors, so that in n. c. 134, it was thought necessary to send against them the consul Fulvius Flaccus, and it was not till the year n. c. 132 that their strongholds of Tauroomenium and Enna were taken by the consul P. Rupilius (Diod. xxxiv. Exc. Phot., Exc. Vales.) The insurrection was now finally quelled, but the state of Sicily had undergone a severe shock, and the settlement of its affairs was confided to P. Rupilius, together with ten commissioners, who laid down a code of laws and rules for its internal government which continued to be observed in the days of Cicero (Cic. Ferr. ii. 16).

But the outbreak of the second Servile War, under Salvius and Athenienus, less than thirty years after the termination of the former one (n. c. 103), and the fact that the slaves were again able to maintain the contest against successive consuls till they were finally vanquished by M. Aquilus, in n. c. 100, sufficiently proves that the evils in the state of society had been but imperfectly remedied by Rupilius; nor can we believe that the condition of the island was in reality altogether so flourishing as it is represented by Cicero during the interval which elapsed between this second Servile War and the praetorship of Verres, n. c. 73. But the great natural resources of Sicily and its important position as the granary of Rome undoubtedly enabled it to recover with rapidity from all its disasters. The elder Cato had called it the store-room (cella penaria) of the Roman state, and Cicero observes that in the great Social War (n. c. 90—88) it supplied the Roman armies not only with food, but with clothing and arms also (Cic. Ferr. ii. 2). But the praetorship of Verres (n. c. 81—70 B.C.) inflicted a calamity upon Sicily scarcely inferior to the Servile war that had so recently devastated it. The rhetorical expressions of Cicero cannot but indeed be always understood literally; but with every allowance for exaggeration, there can no doubt that the evils resulting from such a government as that of Verres were enormous; and Sicily was just in such a state as to suffer from them most severely.

The ejections of Cicero against Verres convey to us much curious and valuable information as to the condition of Sicily under the Roman republic as well as to the administration and system of government of the Roman provinces generally. Sicily at that time formed but one province, under the government of a praetor or pro-praetor, but it had always two quaestors, one of whom resided at Syracuse, the other at Lilybaeum. This anomaly (for such it appears to have been) probably arose from the different parts of the island having been reduced into the form of a province at different periods. The island contained in all above sixty towns which enjoyed municipal rights; of these, three only, Messana, Tauroomenium, and Netum, were allied cities (civitates foederatae), and thus enjoyed a position of nominal independence; five were exempt from all fiscal burdens and from the ordinary jurisdiction of the Roman magistrates (civitates immunes et liberae); the rest were in the ordinary position of provincial towns, but retained their own magistrates and municipal rights, as well as the possession of their respective territories, subject to the payment of a tenth of their produce to the Roman state. These tenths, which were paid in kind, were habitually farmed out, according to principles and regulations laid down in the first instance by Hieron, king of Syracuse, and which therefore continued to be known as the Lex Hieronica. For judicial purposes, the island appears to have been divided into districts or comitatus, but the number of them is not stated; those of Syracuse, Agrigentum, Lilybaeum, and Panormus are the only ones mentioned.

Sicily took little part in the Civil War between Caesar and Pompey. It was at first held by M. Cato on behalf of the latter, but abandoned by him when Pompey himself had quitted Italy, and was then occupied by Curio, as pro-praetor, with four legions (Caes. B. C. i. 30, 31). Or. Caesar himself visited it previous to his African war, and it was from Lilybaeum that he crossed over with his army into Africa (Hirt. B. Afr. i.) After the death of Caesar, it fell into the hands of Sextus Pompeius, whose powerful fleet enabled him to defy all the efforts of Octavian to recover it, and was at length secured to him by the peace of Misenum, B. C. 39, together with Sardinia and Corsica. But Octavian soon renewed his attempts to dispossess him, and though he sustained repeated defeats at sea, and lost a great part of his fleet by a storm, the energy and ability of Agrippa enabled him to effect his object; and he finally defeated his fleet at Naulochus compelled Pompeius to abandon Sicily, and take refuge in the east (Appian, B. C. v. 77—122; Dion Cass. xiiii. 1—17). There seems no doubt that the island suffered severely from this contest, and from the rapacity or exactions of Sextus Pompeius; Strabo distinctly ascribes its decayed condition in his time principally to this cause (Strab. vi. pp. 270, 272). Augustus made some attempts to relieve it by sending colonies to a few cities, among which were Tauroomenium, Catana, Syracuse, Thermae, and Gela, but none of them was in any degree successful (Strab. vi. p. 277; Plut. Oct. 8. s. 14); but the effect thus produced was comparatively small, and Strabo describes the whole island as in his time, with few exceptions, in a state of decay, many of its ancient cities having altogether disappeared, while others were in a declining condition, and the interior was for the most part given up to pasturage, and inhabited only by herdsmen (Strab. l. c.)

Augustus appears to have greatly remodelled the internal administration of Sicily: so that the condition of most of the towns had undergone a change between the time of Cicero and that of Pliny. Caesar had indeed proposed to give Latin rights to all the Sicilians, and M. Antonius even brought
forward a law to admit them without distinction to the Roman franchise (Cic. ad Att. xiv. 2), but neither of these measures was accomplished; and we learn from Pliny that Messana was in his day the only city in the island of which the inhabitants possessed the Roman citizenship; three others, Centumlaria, Asculum, and Jus Latii, while all the others (except the colonies already mentioned) were in the ordinary condition of "civitates stipendiariæ" (Plin. iii. s. s. 14). We hear very little of Sicily under the Empire; but it is probable that it never really recovered from the state of decay into which it had fallen in Strabo's time. Almost the only mention of it in history is that of an outbreak of slaves and banditti in the reign of Gallienus which seems to have resembled on a smaller scale the Servilia wars that had formerly devastated it (Trebon. Poll. Gallien, 4). The increasing importance of the supply of corn from Africa and Egypt renders it probable that from Sicily had fallen off, and the small number of remains of the imperial period still existing in the island, though so many are preserved from a much earlier date, seems to prove that it could not then have been very flourishing. At a late period of the Empire, also, we find very few names of towns in the Itineraries, the lines of road being carried through stations or "mansio" otherwise wholly unknown, a sufficient proof that the neighbouring towns had fallen into decay. (His. Ant. pp. 86—98.) In the division of the provinces under Augustus, Sicily was assigned to the senate, and was governed by a pro-consul; at a later period it was considered as a part of Italy, and was governed by a magistrate named a Consularis, subject to the authority of the Vicarius Urbis Romae. (Vett. Digm. ii. p. 64; and Böcking, ad loc.)

Its insular position must have for a considerable time preserved Sicily from the ravages of the barbarians who devastated Italy towards the close of the Western Empire. Alaric indeed attempted to cross over the straits, but was foiled by a tempest. (Hist. Miscell. xii. p. 335.) But Germanic, being master of a powerful fleet, made himself master of the whole island, which was held by the Vandals for a time, but subsequently passed into the hands of the Goths, and continued attached to the Gothic kingdom of Italy till it was conquered by Belisarius in A.D. 535. It was then united to the Eastern Empire, and continued to be governed as a dependency by the Byzantine emperors till the ninth century, when it fell into the hands of the Saracens or Arabs. That people first landed at Mazara, in the W. of the island in A.D. 827, and made themselves masters of Agrigentum; but their progress was vigorously opposed. They took Motya in 831, and Panormus in 835, but it was not till 878 that Syracuse, the last fortress in the island, fell into their hands. The island continued in the possession of the Saracens till the middle of the eleventh century, when it was partially recovered by the Byzantine emperors with the assistance of the Normans. But in 1061 the Norman Roger Giscard invaded Sicily on his own account, and, after a long struggle, wholly reduced the island under his dominion. It has since remained attached, with brief exceptions, to the crown of Naples, the monarch of which bears the title of King of the Two Sicilies.

The extant remains of antiquity in Sicily fully confirm the inference which we should draw from the statements of ancient historians, as to the prosperity and opulence of the island under the Greeks, and its comparatively decayed condition under the Romans. The ruins of the latter period are few, and for the most part unimportant, the exceptions being confined to the three or four cities which we know to have received Roman colonies; while the temples, theatres, and other edifices from the Greek period are numerous and of the most striking character. No city of Greece, with the exception of Athens, can produce structures that vie with those of which the remains are still visible at Agrigentum, Selinus and Segesta. At the same time the existing relics of antiquity, especially coins and inscriptions, strongly confirm the fact that almost the whole population of the island had been gradually Hellenised. It is evident that the strong line of demarcation which existed in the days of Thucydides between the Greek cities and those of non-Hellenic or barbarian origin has been to a great degree effaced before the island passed under the dominion of Rome. The names of Sicilian cities mentioned by Cicero in his Verrius orations are as purely Greek where they belong to cities of Sicilian origin, such as Centuripa and Agyrium, or even to Carthaginian cities like Panormus and Lilybaenum, as are those of Syracuse or Agrigentum. In like manner we find coins with Greek legends struck by numerous cities which undoubtedly never received a Greek colony, such as Alcues, Metacaenum, and many others. It is probable indeed that during the Roman period the language of the whole island (at least the written and cultivated language) was Greek, which must, however, have gradually given way to Latin under the Emperors, as the Sicilian dialect of the present day is one of purely Latin origin, and differs but slightly from that of the south of Italy. Of the language of the ancient Sicels we have no trace at all, and it is highly probable that it was never used as a written language.

III. Topography

The general description of the physical features of Sicily has already been given. But it will be best that of these to describe its coast in more detail. The E. coast extending from Cape Pelorus to Pachynus, consists of three portions of a very different character. From Pelorus to Taormina, a distance of about 40 miles, it is closely bordered by the chain of mountains called the Mons Neptunius, the slopes of which descend steeply to the sea, forming a very uniform line of coast, fringed by numerous small torrents. Two of the small headlands between these valleys appear to have borne the names of Despanum (Plin.) and Argennum (Ptol.), but their identification is quite uncertain. S. of Taormina, from the mouth of the Aci to the point of Scirocco, is formed by beds of lava and other volcanic matters, which have flowed down from Aetna. Off this coast, about midway between Acium and Catana are some rocky islets of volcanic origin, called by Pliny the Cyclopus Scopuli; the name of Portus Uliscus is given by the same author to a port in this neighbourhood, but it is impossible so say which of the many small sheltered coves on this line of coast he means to designate. S. of the Symeathus the coast is much varied, being indented by several deep bays and inlets, separated by projecting rocky headlands. The principal of these is the bay of Megara (Sinus Megaracensis) so called from the Greek city of that name; it was bounded on the N. by the Niphonian
SICILIA.

promontory, now Capo di Sta Croce (Euphronia ἀκρωτηριον, Strab. vi. p. 267), within which is the Xiphonian Port (Μυρανον ἄγωρωπον, Stryl. p. 4), evidently the harbour of Amynta, one of the finest natural harbours in the island. Between this and Syracuse is the remarkable peninsular promontory of Thapsus (Magnisiis), while immediately S. of Syracuse occurs the remarkable landlocked bay called the Great Harbour of that city, and the rocky headland of Plemmirium which bounds it on the S. From this point to Cape Pachynus no ancient names have been preserved to us of the headlands or harbours. From Cape Pachynus to the site of Gela the coast is low but rocky. Along this line must be placed the port of Ulysses (Portus Odysseas) mentioned by Cicero, and the promontory of Ulysses of Potelemy, both apparently in the immediate neighbourhood of Cape Pachynus (Pachyni). The Bacra promontory (Βακρια ἄκρα) of Potelemy, which he places further W., is wholly unknown, as is also the port of Canare of the same author (Καυκαρα ἄκρα, Polyb. iii. 4. § 7). The remainder of the S. coast of Sicily from Gela to Lilybaeum presents on the whole a very uniform character; it has few or no natural ports, and no remarkable headlands. It is bounded for the most part by hills of soft limestone, generally sloping gradually to the sea, but sometimes forming cliffs of no great elevation. The celebrated promontory of Lilybaeum is a low rocky point, and its famous port, though secure, is of small extent. N. of Lilybaeum was the promontory of Aegithal/us, with the adjacent low islands, on one of which the city Motya was built; while the more considerable islands of the Aegates lay a few miles further to the W., and the promontory of Drepanum adjoining the city of the same name formed the NW. point of Sicily. It is remarkable that no ancient name is preserved to us for the deep Gulf of Castellomare which occurs on the coast between Trepagni and Palermo, though it is one of the most remarkable features of the N. coast of Sicily; nor are the two striking headlands that bound the Bay of Palermo itself known to us by their ancient names. The bold and insulated hill of Monte Sta Rosalia is, however, the ancient Erice. The northern coast of Sicily is bold and varied, formed by off-shoots and ridges of the northern chain of mountains descending abruptly to the sea; hence it was always a rugged and difficult line of communication, which was not to be conquered, and that interrupt it are mentioned to us by their ancient names, till we come to that of Mylae adjoining the town of the same name (Milazzo), and the Phalacrian Promontory (Polyb. iii. 4. § 2), apparently the Capo di Roscolomuto within a few miles of Cape Pelorus.

From the triangular form of Sicily and the configuration of the mountain chains which traverse it, it is evident that it could not have any rivers of importance. Most of them indeed are little more than mountain streams, swelling with great rapidity after violent storms or during the winter rains, but nearly, if not wholly, dry during the summer months. The most important rivers of the island are: 1. The Simlaethes (Simeto or Giarratetta), which rises in the northern chain of mountains (the Mons Nebrodos), and flows to the S. and SE. round the foot of Aetna, falling into the sea about 6 miles S. of Catania. It receives several tributaries, of which the Ditaino is certainly the ancient Chrysas, that flowed near the city of Assoros, while the Adrianus of Stephanus can be no other than the northern or main branch of the Symaethus itself. The Cyaneus (Κυανος) of Polybius, which appears to have joined the neighbourhood of Centuria, must probably be the branch now called Fiume Salso, which joins the Simeto just below Centorbi. 2. The Ascines or Asines (F. Cantisari), which rises very near the Symaethus, but flows along the north foot of Aetna, and falls into the sea just below Tauromenium. 3. The Himera (F. Salso), the most considerable of two rivers which bore the same name, rising in the Monte Medonius (Mons Nebrodos) only about 15 miles from the N. coast, and flowing due S. to the northern breadth of Sicily, and falls into the sea at Alita (Phaladini). 4. The Halycus (Platani), so long the boundary between the Carthaginian and Greek territories in the island, is also a considerable stream; it rises not far from the Himera, but flows to the SW., and enters the sea between Agrigentum and Selinus, close to the site of Heraclea Minora. 5. The Hyposas (Belici), falling into the sea on the S. coast, a few miles E. of Selinus; and 6, the Anapus (Ampto), which flows under the walls of Syracuse and falls into the great harbour of that city. It is unlike that of most of the rivers of Sicily, being a full clear stream, supplied from subterranean sources. The same character belongs still more strongly to its tributary the Cyane, which has a considerable volume of water, though its whole course does not exceed two miles in length.

The minor rivers of Sicily which are mentioned either in history or by the geographers are numerous, but in many cases are very difficult to identify. Beginning at Cape Pachynus and proceeding along the coast westward, we find: 1. The Motyarus (Motyaurus, Polyb. iii. 4. § 7), evidently so called from its flowing near Motya, and therefore probably the stream now called Fiume di Scici; 2. the Hirminius of Sillius, probably the Fiume di Ragusa, very near the preceding; 3. the Hipparas; and 4. the Oxus, two small streams which flowed under the walls of Camarina, now called the Fiume di Ciamarana and Frascolari; 5. the Gela or Gelas, which gave name to the city of Gela, and must therefore be the Fiume di Terranova; 6. the Agrasas, a small stream flowing under the walls of Agrigentum, to which it gave name, and receiving a tributary called the Hyposas (Drogo), which must be the mountainous river of the same name already mentioned; 7. the Camicius, probably the Fiume delle Canne, about 10 miles W. of Girgenti; 8. the Selinus, flowing by the city of that name, now the Modiddi; 9. the Mazara or Mazurus, flowing by the town of the same name, and still called Fiume di Mazara. Besides these Ptolemy mentions the Isisurus and Sessa or Sossius, two names otherwise wholly unknown, and which cannot be placed with any approach to certainty. Equally uncertain is the more noted river Achates, which is placed by Sillius in the same part of Sicily with the Mazara and Hyposas; but there is great confusion in his enumeration as well as that of Ptolemy. It is generally identified with the Sirillo, but this is situated in quite a different part of Sicily. The Acithius of Ptolemy, which he places between Lilybaeum and Selinus, may be the Fiume di Marsala.

Along the N. coast, proceeding from Lilybaeum to Cape Pelorus, we meet with a number of small streams, having for the most part a short torrent
like course, from the mountains to the sea. Their identification is for the most part very obscure and uncertain. Thus we find three rivers mentioned in connection with Segesta, and all of them probably flowing through its territory, the Porparx, Telmessus, and Crimessus or Crimianus. The last of these is probably the Fiume di S. Bartolomeo, about 5 miles E. of Segesta; the other two, which are mentioned only by Aelian (1. H. ii. 33), cannot be identified, though one of them is probably the Fiume Goggera, which flows beneath Segesta itself, and falls into the F. di S. Bartolomeo near its mouth. But, to complete the question still more, we are told that the names of Scamander and Simoeis were given by the Trojan colonists to two rivers near Segesta; and the former name at least seems to have been really in use. (Strab. xiii. p. 608; Dial. xx. 71.) Proceeding eastwards we find: 1, the Oretus (Vib. Sequest. p. 13), still called the Orote, a small stream flowing under the walls of Panormus; 2, the Eleutheria (Eutr. p. 10, 4, § 3), placed by Polyenio between Panormus and Solunto, and which must therefore be the Fiume di Bareaprius; 3, the northern Himera, commonly identified with the Fiume di S. Leonardo, near Terminii, but more probably the Fiume Grande, about 8 miles further E. (Himera); 4, the Monalus (Monozor, Pto. i.), between Cephaleodium and Alaea, now the Pollina; 5, the Halaeus or Alaeus, flowing beneath the city of Alaea, now the Pettineo; 6, the Clydas (Xolias, Pto.), between Alaea and Alantium; 7, the Timethus (Thaemos, Id.), between Agathyrra and Tyndaris; 8, the Helicon (Xenw, Id.), between Tyndaris and Mylai; 9, the Phaeelus (Vib. Sequest.), which was near Mylai, or between that city and Messana (the nearer determination of these four last is wholly uncertain); 10, the Meias of Ovili (Fast. iv. 476) is generally placed in the same neighbourhood, though without any obvious reason.

Along the E. coast the names may be more clearly identified. 1. The Onomada of Appian (B. C. v. 109) is probably identical with the Aeconines already noticed; 2, the Acis, a very small stream, is the Fiume di Jaci; 3, the Amenanes, flowing through the city of Catana, is the Giardello; 4, the Terias is the Fiume di S. Leonardo, which flows from the Lake of Lenaei; 5, the Pantalica is the Parco; 6, the Alabos is the Pantorso, a small stream flowing into the bay of Augusta. The Anapus and its confluent the Cyane have been already mentioned. S. of Syracuse occur three small rivers, memorable in the retreat of the Athenians: these are: 1. the Carypiares (Cassibili); 2. the Erineus (Fiume di Acu); and 3. the Asinanius (Falconara). A few miles S. of this was the Helorus, now called the Aibuso, flowing by the city of the same name. No other stream occurs between this and Cape Pachynum.

Sicily contains no lakes that deserve the name; but there are a few pools or marshy lagoons, of which the names have been preserved to us. Of the latter description were the Lynemilia Palus near Syracuse, and the Camarina Palae, adjoining the city of the same name. The Lacus Palcorum, on the contrary, was a deep pool or basin of volcanic origin: while the small lake called by the poets Pergus or Pergus is still extant in the neighbourhood of Enna. The Lago di Lenaei, though much the most considerable accumulation of waters in Sicily, is not mentioned by any ancient author.

The towns and cities of Sicily were very numerous. The Greek colonies and their offshoots or dependencies have been already mentioned in relating the history of their settlement; but the names of all the towns so far as they can be ascertained will be here enumerated in geographical order, without reference to their origin, omitting only the places mentioned in the Itineraries, which were probably mere villages or stations. 1. Beginning from Cape Pachynus and proceeding along the E. coast towards Cape Pachynus, were: MESSANA, TIPDANIAEUM, NAXOS, ACUM, CATANA and SYRACUSE. Teotium, destroyed at an early period, as well as Megara Hyblaea, were situated between Catana and Syracuse. The Chalcidic colonies of CALLIPOLIS and EUROEA, both of which disappeared at an early period, must have been situated on or near the E. coast of the island, and to the N. of Syracuse, but we have no further clue to their situation. S. of Syracuse, between it and Cape Pachynus, was Helorus, at the mouth of the river of the same name. 2. W. of Cape Pachynus, proceeding along the S. coast, were: CAMARINA, GELA, PHINTIUM, ARGINTUMUS, HERACLEA MINOR, THERMIS, SAMNENTIAE, SELinus, MAZARA, and LILYBAEUM. Besides these the more obscure towns of CAMICUS, CAENA, and INYCEM, the two former dependencies of Agrigentum, the latter of Selinus, must be placed on or near the S. coast of the island. 3. N. of Lilybaeum was Motya, which ceased to exist at a comparatively early period, and Drepanum (Trapani) at the NW. angle of the island. Between this and Panormus, were Eryx at the foot of the mountain of the same name, and a short distance from the coast, the Emporium of Segesta, HIRACA, and CETARIA. Proceeding eastward from Panormus along the N. coast of the island, were: SOLunto, THERMIS, HIMERA, CEPHALOEIDUM, ALESA, CALACTA, AGATHYRRHA, ALCENTUM, TYNDARIS, and MYLAE.

The towns in the interior are more difficult to enumerate: with regard to some of them indeed we are at a loss to determine, even in what region of the island they were situated. For the purpose of enumeration it will be convenient to divide the island into three portions; the first comprising the western half of Sicily as far as the river Himera, and a line drawn from its sources to the N. coast; the second, between the other two, the N. and N.E. portions, being separated by the course of the river Dititone and that of the Symatius to the sea. 1. In the western district were SEGESTA and HALICAYAE, the most westerly of the inland cities; ENTella, on the river Hipsas, about midway between the two seas; ILAETA and MACELLA, both of which may probably be placed in the mountainous district between Entella and Panormus; THIOCALA, near Colatabellotta, in the mountains inland from the Thermae Selinuntiae; SCHERIA, of very uncertain site, but probably situated in the same part of Sicily; HERBEDUS, in the neighbourhood of Agrigentum; PETRA, near the sources of the W. branch of the Himera in the Modonius mountains; and ENGYUM (Gangi), at the head of the Fiume Grande, the E. branch of the same name. PAROPUS must apparently be placed on the northern declivity of the same mountains, but further to the W.

A little to the E. of the Himera and as nearly as possible in the centre of the island, was situated the fortress of ENNA (Castro Giovanni), so that the boundary line between the NE. and NW. regions may be conveniently drawn from thence. 2. In the NE. region were: ASSORTA and AGYTHUM,
SICILIA.

NE. of Emma, but W. of the valley of the Symæth- thys; CENTURIPA (Centorbi), nearly due E. of Emma; and AMIADA (Aduria), on the E. bank of the Syræan, at the foot of Mount NANCARA MAJOR (which must not be confounded with the city of the same name near Syracusa), and AETNA, previously called INESSA, both situated on the southern slope of the same mountain. N. of AGRi- Rium, on the southern slopes of the Montes Nebrodes were situated HERBITA, CAPITIUM, and probably also GALATIUM; while on the northern declivities of the same mountains, fronting the sea, but at some distance inland, were placed APOLLONIA (probably Pollina), AEMESTRATUS (Mistrettia), ABACANUM, a few miles inland from Euboea, and NOAZ, probably NEVA. Three other towns were NANCAR, ICHANA, and TISSA, may probably be assigned to this same region of Sicily, though their exact position cannot be determined. 3. In the SE. portion of Sicily, S. of the Symæthys and its tributary the Chrysas or Bittaino, were situated ERGETIUM, MORGANTIA, LEONTINI, and HYDRA; as well as MENAENUM and HEREDASSUS; but of all these names LEONTINI (Lenitini) and Menaenum (Minoa) are the only ones that can be identified with any- thing like certainty. In the hills W. of Syracusa were ACIAE (Palazzo), BIDDE (S. GIO. DI ZODIAN), and CACYRUM (Cassaro); and W. of these again, in the direction towards Gela, must be placed the HERACE HYDRA, as well as ECHETLA, in the neigh- bourhood of GRAN MICHETE. SW. of Syracusa, in the interior, were NETUM or NETEUM (Noto Vecchio), and MOTYCA (Modica), both of which are well known. The Syracusan colony of CASSANAE must probably have been situated in the same district but its site has never been identified.

After going through this long list of Sicilian towns, there remain the following, noticed either by Cicero or Polybius, as municipal towns, at the position of which we have no means of even approximating. The ACHERINI (Cic.), TYRACINI (Cic.; Tyracensi, Plin.), Acestaei (Plin.), ETINI (Id.), Herbulenses (Id.), SEMELLITANI (Id.), Talarense (Id.). Many of the above names are probably corrupt and merely false readings, but we are at a loss what to sub- strate. On the other hand, the existence of a town called MUTISTRATEM or Mystrattem is attested by both Cicero and Polybius, and there seems no sufficient reason for rejecting it as identical with Aemestatus, as has been done by many modern geographers, though its site is wholly uncertain. Equally un- known are the following names given by Polybius among the inland towns of the island: ALETA (ALOITA), HYDRA or LYDIA (YTHRA or LOidia), PATY- ORUS (Paroros), CORUTA or Cortusa (Kóretura or Köretura), LEGUM or Letum (LITaRON or LIaTAN), Ancusa (Agkura), IMA or ESA (Iva or Iva), and ELECHTIUM (Elechthion). It would be a waste of time to discuss these names, most of which are probably in their present form corrupt, and are all of them otherwise wholly unknown. On the other hand the existence of NAONA, mentioned by Stephanus of Byzantium, but not noticed by any other writer, is confirmed by coins.

The topography of Sicily is still very imperfectly known. The ruins of its more celebrated cities are indeed well known, and have been often described; especially in the valuable work of the Duke of Serra di Falco (Antichità della Sicilia, 5 vols. fol. Palermo, 1834—1839), as well as in the well-known travels of Swinhorne, Sir R. Hoare, &c. (Swinburnes

Travels in the Two Sicilies, 2 vols. 4to. Lond. 1783; Sir R. Hoare’s Classical Tour through Italy and Sicily, 2 vols. 8vo. Lond. 1819; St. Non, Voyage Pittoresque autour de Naples et de la Sicile, 5 vols. fol. Paris, 1781; Bari, DE SORELLA, Antichità della Sicilia, 8vo. Palermo, 1817, &c.) but the island has never been thoroughly explored by an antiquarian traveller, like those to whom we are indebted for our knowledge of Greece and Asia Minor. The valuable work of Cluverius (Sicilia Antiqua, fol. Lond. Bat. 1619) must here, as well as for Italy, be made the foundation of all subsequent researches. But much valuable information is found in the more ancient work of Fazello, a Sicilian monk of the sixteenth century, as well as of his commen- tator Amico, and in the Topographical Dictionary of the latter author. (Thione Fazelli de Rebus Siculis Decades Duo, first edit. in fol. Panormi, 1558, republished with copious notes by Amico, 3 vols. fol. Catania, 1749—1753; Amico, Lexicon Topographicum Siculum, 3 vols. 4to. Catania, 1759.) Much, however, still remains to be done. Many localities indicated by Fazello in the sixteenth century as presenting ancient remains have never (so far as we are aware) been visited by any modern traveller; no good map of the island exists, which can be trusted for topographical details, and there can be little doubt that a minute and careful examination of the whole country, such as has been made of the neigh- bouring island of Sardinia by the Chev. de la Mar- mora, would well reward the labours of the explorer. Even the ruins described by Sir R. Hoare as existing in the neighbourhood of Sta Croce, or those situated near Vindicari, a few miles N. of Cape Pachynus and commonly ascribed to Imachara, have never been examined in detail, nor has any clue been ob- tained to their identification.

The Itineraries give several lines of route through the island, but many of the stations mentioned are wholly uncertain, and were probably never more than obscure villages or mere solitary posthouses. The first line of route (Itin. Ant. pp. 86—89) proceeds from Messana along the E. coast to Tauromen- nium and Actium to Catana, and from thence strikes inland across the centre of the island to Agrigentum; the course of this inland route is wholly uncertain and the names of the three stations upon it, Capo- torina, Gelasium Philosofianum and Petilliana, are entirely unknown. From Agrigentum it followed the line of coast to Lilybaeanum; the stations given are Cena [CAGENA], Ailava, Ad Aquas (i.e. the Aegae Labedos or Thermae Selaminiae), Ad Fluviun Lunarium, and Mazzara; all except the 3rd and 5th of very uncertain site. A second route (Itin. Ant. pp. 89, 90) proceeds in the inverse direction from Lilybaeanum to Agrigentum, and thence by a more southerly line, through Calvisiana, Hydria, and Acari (Palazzolo) to Syracusa, and from thence as before along the E. coast to Messana. A third line follows the N. coast of the island from Lilybaeanum by Panormus to Messana. The stations on this line are better known and can for the most part be de- termined; they are, Drepana, Aegae Segestanea (near Segesta), Parium (Parrhusia), Hyac- tua (Muro di Corin), Panormus, Soluntum, Thermae, Cephalodion, Halesum (Alaesa), Calacte, Agathynum, (Agathyrrum), Tydarias, and Messana. A fourth route (Itin. Ant. p. 93) crossed the interior of the island from Thermae, where it branched off from the preceding, passing through Emma, Ahyrnum, Centu- rica and Actia to Catana. A fifth gives us a line
of strictly maritime route around the southern extremity of the island from Agrigentum to Syracuse; but with the exception of Pintis, which is probably Phintias (Alpha), none of the stations can be identified. Lastly, a line of road was in use which crossed the island from Agrigentum direct to Panama (Hirt. Ant. p. 96), but none of its stations are known, and we are therefore unable to determine even its general course. The other routes given in the Itinerary of Antoninus are only unimportant variations of the preceding ones. The Tabula gives only the one general line around the island (crossing, however, from Calvisiana on the S. coast direct to Syracuse), and the cross line already mentioned from Thera to Catana. All discussion of distances along the above routes must be rejected as useless, until the routes themselves can be more accurately determined, which is extremely difficult in so hilly and broken a country as the greater part of the interior of Sicily. The similarity of names, which in Italy is so often a sure guide where all other indications are wanting, is of far less assistance in Sicily, where the long period of Arabic dominion has thrown the nomenclature of the island into great confusion.

[†E. H. B.†]

COIN OF SICILIA.

SICILIBRA or SICILIBBA [sic] (in the Geogr. Rv. Sicilia, iii. 5), a place in Africa Propria (Hirt. Ant. pp. 25, 45), variously identified with Bazilhah and Haunach Alonina.

[†T. H. D.†]

SICINOS (Σίκινος; Eth. Σικινέρις; Sikino), a small island in the Aegaean sea, one of the Sporades, lying between Pholegandros and Ios, and containing a town of the same name. (Syllax, p. 19; Strab. x. p. 484; Plat. iii. 15, § 31.) It is said to have been originally called Onisi from its cultivation of the vine, but to have been named Sicinos after a son of Thess and Onisii. (Steph. B. s. v.; Apoll. Rhod. i. 623; Schol. ad loc.; Plin. iv. 12. s. 23; Etym. M. p. 712. 49.) Wine is still the chief production of the island. It was probably colonised by Ionians. Like most of the other Greek islands, it submitted to Xerxes (Herod. viii. 4), but it afterwards formed part of the Athenian maritime empire. There are some remains of the ancient city situated upon a lofty and rugged mountain, on whose summit stands the church of S. Marina. There is also still extant an ancient temple of the Pythian Apollo, now converted into the church Episkopi (q. v 'EpiskopH). It stands in a depression between the main range of mountains, and the summit lying more to the left, upon which the ruins of the ancient city stand. We learn from an inscription found there by Rosso that it was the temple of the Pythian Apollo. (Ross, Reisen auf den Griech. Inseln, vol. ii. p. 149, seq.; Fiedler, Reise, vol. ii. p. 151, seq.)

SICOR. [†Sicor.†]

SICORIS (Σικόρις, Dion Cass. xii. 20), a tributary river of the Ierbas in Hispanic Tarraconensis. It race in the Tyrrhenian in the territory of the Cerretani, and separated the countries of the Iberges and Lacetani. It flowed past Herda, and according to Vivian Sossor (p. 224, ed. Bipont) bore the name of that town. A little afterwards it received the Cinga, and then flowed into the Ierbas near Octogesia. (Caes. B. C. i. 40, 48; Plin. iii. 3. s. 4; Lucan. iv. 13, seq.) Ausonius describes it as flowing impetuously ("torremont," Epist. xxxv. 59), Now the Segre.

SICULI (Σικυλοί), is the name given by ancient writers to an ancient race or people that formed one of the elements in the primitive population of Italy, as well as Sicily. But the accounts given of them are very confused and uncertain. We find the Siculi mentioned: 1, as among the early inhabitants of Latium; 2, in the extreme S. of Italy; 3, in Sicily; 4, on the shores of the Adriatic. It will be convenient to examine these notices separately.

1. The Siculi are represented by Dionysius as the earliest inhabitants of the country subsequently called Latium (i. 9), as well as of the southern part of Etruria; they were an indigenous race, i.e. one of whose wanderings and origin he had no account. They had probably once filled the whole country till they were expelled from it by the people whom he calls Aborigines, descending from the mountains of Central Italy (Aborigines), who made war upon them, in conjunction with the Pelasgians; and after a long protracted struggle, wrested from them one town after another (Id. i. 9, 16). Among the cities that are expressly mentioned by him as having once been occupied by the Siculi, are Tibur, where a part of the city was still called in the days of Dionysius Σικυλίωτας. Ficulea, Antemnae, and Telleneae, as well as Falerii and Fessanum, in the country afterwards called Etruria (Id. i. 16, 20, 21). The Siculi being thus finally expelled from their possessions in this part of Italy, were reported to have migrated in a body to the southern extremity of the peninsula, from whence they crossed over the straits, and established themselves in the island of Sicily, to which they gave the name it has ever since borne. [†Sicilia.†] (Id. i. 22.) Dionysius is the only author who has left us a detailed account of the conquest and expulsion of the Siculi, but they are mentioned by Pliny among the races that had successively occupied Latium (Plin. iii. 5. s. 9); and this seems to have been established and received tradition. 2. We find the Siculi frequently mentioned in the southern part of the Italian peninsula, where they appear in close connection with the Oenotrians, Maresgetes, and Italii, all of them kindred tribes, which there are good reasons for assigning to the Pelasgic race. [†Oenotheia.†] It is probable, as suggested by Strabo, that the Siculi, more than once, mentioned by Homer (Odys. xx. 383, xxiv. 211, &c.), were the inhabitants of the coast of Italy opposite to Hiusca; and the traditions of the Epiphanian Oenotrians, reported by Polybius, spoke of the Siculi as the people in whose territory they settled, and with whom they first found themselves engaged in war. (Polyb. xii. 5, 6.) Numerous traditions also, reported by Dionysius (i. 22, 73) from Antiochus, Hellenicus, and others, concur in bringing the Siculi and their eponymous leader Siculus (Σικυλός) into close connection with the Etruscos and the Italii; and this is confirmed by the linguistic relation which may fairly be admitted to exist between Σικυλός and Ιταλός (Niebuhr, vol. i. p. 47) though this is not close enough to be in itself conclusive. No far as
our scanty knowledge goes, therefore, we must conclude that the two shores of the Sicilian strait were at one period peopled by the same tribe, who were known to the Greeks by the name of Sicels or Siculi; and that this tribe was probably a branch of the Oenotrian or Pelasgic race. The legends which tell how they were expelled from Latium seem to have been a late invention, as we may infer from the circumstance that Scesuls, who is represented by Antiochus as taking refuge with Morges, king of Italy, was called a fugitive from Rome. (Dionys. i. 73.)

3. The Siculi or Siceli were the people who occupied the greater part of the island of Sicily when the Greek colonies were first established there, and continued throughout the period of the Greek domination to occupy the greater part of the interior, especially the more rugged and mountainous tracts of the island. [SICILIA.] The more westerly portions were, however, occupied by a people called Sicani, whom the Greek writers uniformly distinguish from the Siculi, notwithstanding the resemblance of the two names. These indeed would seem to have been in their origin identical, and we find Roman writers using them as such; so that Virgil more than once employs the name of Sicani, where he can only mean the ancient Latin people called by Dionysius Siculi. (Vig. Aen. viii. 795, xi. 317.)

4. The traces of the Siculi on the western shores of the Adriatic are more uncertain. Pliny indeed tells us distinctly that Numana and Ancona were founded by the Siculi (Plin. iii. 13. a. 18); but it is by no means improbable that this is a mere confusion, as we know that the latter city at least was really founded by Sicilian Greeks, as late as the time of Dionysius of Syracuse [ANCONA]. When, however, he tells us that a considerable part of this coast of Italy was held by the Sicilians and Liburnians, before it was conquered by the Umbrians (Ib. 14. a. 19), it seems probable that he must have some other authority for this statement; Pliny is, however, the only author who mentions the Siculi in this part of Italy.

From these statements it is very difficult to arrive at any definite conclusion with regard to the ethnographic affinities of the Siculi. On the one hand, the notices of them in Southern Italy, as already observed, seem to bring them into close connection with the Itali and other Oenotrian tribes, and would lead us to assign them to a Pelasgic stock; but on the other it must be admitted that Dionysius distinctly separates them from the Pelasgi in Latium, and represents them as expelled from that country by the Pelasgi, in conjunction with the so-called Abruzzi. Hence the opinions of modern scholars have been divided: Niebuhr distinctly receives the Siculi as a Pelasgic race, and as forming the Pelasgic or Greek element of the Latin people; the same view is adopted by O. Müller (Etrusk. pp. 10-16, &c.) and by Aleken (Mittel Italien, p. 5); while Grotendorf (All Italien, vol. iv. pp. 4-6), followed by Forbiger and others, regards the Siculi as a Gaulish or Celtic race, who had gradually wandered southwards through the peninsula of Italy, till they finally crossed over and established themselves in the island of Sicily. This last hypothesis is, however, purely conjectural. We have at least some foundation for supposing the Siculi as well as the Oenotrians to be of Pelasgic origin; if this be rejected, we are wholly in the dark as to their origin or affinities.

[SICILIA MARE (τὸ Σικελικὸν πέλαγος, Pol. Strab. &c.), was the name given in ancient times to that portion of the Mediterranean sea which bathed the eastern shores of Sicily. But like all similar appellations, the name was used in a somewhat vague and fluctuating manner, so that it is difficult to fix its precise geographical limits. Thus Strabo describes it as extending along the eastern shore of Sicily, from the Straits to Cape Pachynus, with the southern shore of Italy as far as Locri, and again to the eastward as far as Crete and the Peloponnesse; and as filling the Corinthian Gulf, and extending northwards to the Iapgian promontory and the mouth of the Ionian gulf. (Strab. ii. p. 123.) It is clear, therefore, that he included under the name the whole of the sea between the Peloponnesse and Sicily, which is more commonly known as the Ionian sea [IONIUM MARE], but was termed by later writers the Adriatic [ADRATIUM MARE]. Polybius, who in one passage employs the name of Ionian sea in this more extensive sense, elsewhere uses that of the Sicilian sea in the same general manner as Strabo, since he speaks of the island of Cephallenia as extending out towards the Sicilian sea (v. 3); and even describes the Ambraean gulf as an inlet or arm of the Sicilian sea (iv. 63, v. 5). Eratosthenes also, it would appear from Pliny, applied the name of Siculum Mare to the whole extent from Sicily to Crete. (Plin. iii. 5. s. 10.) The usage of Pliny himself is obscure; but Mela distinguishes the Sicilian sea from the Ionian, applying the former name to the western part of the broad sea, nearest to Sicily, and the latter to its more easterly portion, nearest to Greece. (Mel. ii. 4. § 1.) But this distinction does not seem to have been generally adopted or continued long in use. Indeed the name of the Sicilian sea seems to have fallen much into disuse. Podiensy speaks of Sicily itself as bounded on the N. by the Tyrrenian sea, on the S. by the African, and on the E. by the Adriatic; thus omitting the Sicilian sea altogether (Ptol. iii. 4. § 1); and this seems to have continued under the Roman Empire to be the received nomenclature. Strabo tells us that the Sicilian sea was the same which had previously been called the Ausonian (Strab. ii. p. 133, v. p. 233); but it is probable that that name was never applied in the more extended sense in which he uses the Sicilian sea, but was confined to the portion more immediately adjoining the southern coasts of Italy, from Sicily to the Iapgian promontory. It is in this sense that it is employed by Pliny, as well as by Polybius, whom he cites as his authority. (Plin. l. c.)

SICULUM (see also Sicyon, &c.) is a town of Dalmatia, to the E. of Tragurium, on the road to Salona, where Claudius is said to have quartered the veterans. (Plin. l. c.) From its position it cannot be Sibenico, with which it has been identified, but may be represented by the vestiges of a Roman station to the NW. of Castel Vetturi, on the Riviere dei Castelli, where a column with a dedicatory inscription to M.Julius Philippus has been lately found, as well as much pottery and Roman tiles. (Wilkinson, Dalmatia, vol. i. p. 176.)

SICYON (6 and § Sicyons, also Sicyons, Becker, Anecd. p. 555; Eth. Sicelonax: the territory Siculonax: Vasiabia.)

1. Situation. — Sicyon was an important city of Peloponnesus, situated upon a table-height of no great elevation, at the distance of about 2 miles from the
Corinthian gulf. Strabo (viii. p. 382) correctly describes it as occupying a strong hill distant 20 stadia from the sea, though he adds that others made the distance 12 stadia, which may, however, have reference to the lower town built at the foot of the table-mountain. Upon this height the modern village of Vasia-Likia now stands. It is defended on every side by a natural wall of precipices, which can be ascended only by one or two narrow passages from the plain. A river flows upon either side of the height, the one on the eastern side being the Asopus, and that on the western side the Hedosson. When Sicyon was at the height of its power, the city consisted of three parts, the Acropolis on the hill, the town at the foot, and a port-town upon the coast. The port-town was well fortified. (Σικυονικός λείψ.) Xen. Hell. vii. 3. § 2; Polyb. v. 27; Paus. ii. 12. § 2; Strab. L c.)

II. History. — Sicyon was one of the most ancient cities of Greece, and is said to have existed under the name of Aegaleia (Aigalea, Paus. ii. 5. § 6) or Aegiali (Aigialoi, Strab. viii. p. 382) long before the arrival of Pelops in Greece. It was also called Mecone (Μηκών), which is apparently its sacred toal name, and under which it is classed as the "dwelling-place of the gloom" and as the spot where Prometheus is depicted as sacrificing and decoying Zeus. (Steph. B. s. v. Σικυών; Strab. viii. p. 382; Callim. Frgm. 195, p. 513, ed. Ernesti; Hesiod. Theog. 535.) Its name Telchinia (Τηλχίνια) has reference to its being one of the earliest seats of the workers in metal. (Steph. B. s. v. Σικυών.) Its name Aegaleia was derived from a mythical autochthon Aegaleus, and points to the time when it was the chief city upon the southern coast of the Corinthian gulf, the whole of which was called by the same name. Its later name of Sicyon was said to have been derived from an Athenian of this name, who was king of the city, and who is represented as a son of either Marathon or Melion. (Paus. ii. 6. § 5.) This legend points to the fact that the early inhabitants of Sicyon were Ionians. Aegaleus is said, in some traditions, to have been the son of Inachus, the first king of Argos, and the brother of Phoroneus. A long series of the successors of Aegaleus is given, among whom one of the most celebrated was the Argive Adrastus, who, being expelled from his own dominions, fled to Polybus, then king of Sicyon, and afterwards succeeded him on the throne. (Euseb. Chron. p. 11. seq.; August. Civ. Dix. xvii. 2; Paus. ii. 6. §§ 6, 7.) Herod. indeed calls Adrastus first king of Sicyon (Hom. ii. ii. 572); and we know that in historical times this hero was worshipped in the city. (Herod. v. 67.) Sicyon was subsequently conquered by Agamemnon, who, however, left Hippolytus on the throne; but Sicyon became a tributary city to Mycenae. (Paus. ii. 6. §§ 6, 7; Hom. ii. ii. 572, xxiii. 299.) Hippolytus was the grandson of Phineus, who was a son of Hercules; and in consequence of this connection, the inhabitants were not expelled or reduced to subjection upon the conquest of the city by the Dorians under Phalae, the son of Teucer, for while the Dorians conquered, as in all other Dorian states, were divided into three tribes under the names of Hyileis, Pamphyli, and Dymanatae, the original Sicyonians were formed into a fourth tribe, under the name of Aegaleia, which possessed the same political rights as the other three. (Paus. ii. 6. § 7; Strab. viii. p. 389; Herod. v. 68.) Sicyon was now a Dorian state; and from this time its real history begins. It was at first dependent upon Argos (Paus. l. iv.), which was for some time the most powerful state in the Peloponnese, Sparta being second to it. In the First Messenian War the Sicyonians fought on the side of the Messenians along with the Argives and Arcadians. (Paus. iv. 11. § 1.) In the Second Messenian War, about B.C. 676, Sicyon became subject to the tyranny of the Orchogorids, who governed the city for more than 100 years, and whose rule is praised by Aristotle (Pol. v. 9. § 21) for its mildness. The family of the Orchogorids belonged to the non-Dorian tribe, and the continuance of their rule was due to the fact of their being supported by the original population against the Dorian conquerors. Orchogoras, the founder of the dynasty, is said to have been originally a cook. (Aristot. l. c.; Hellad. ap. Phot. cod. 279, p. 530; Liban. vol. iii. p. 251, ed. Reiske.) In other accounts Andreas is mentioned as the first of the Sicyonian tyrants (Herod. vi. 126; Diod. Fragm. Vat. 14); and it is probable that he is the same person as Orchogoras, as the two names do not occur in the same author. He was succeeded by his son Myron, who gained a chrest victory at Olympia in B.C. 643; Myron by Aristonymus; Aristonymus by Cleisthenes. (Herod. vi. 126; Paus. ii. 8. § 1, vi. 19. § 1.) The latter was celebrated for his wealth and magnificence, and was also distinguished by his bitter hatred against Argos, and his systematic endeavour to depress and dishonour the Dorian tribes. He changed the ancient and venerable names of the three Dorian tribes into the insulting names of Hyate, Oncetae, and Cheroetae, from the three Greek words signifying the sow, the ass, and the pig; while he declared the superiority of his own tribe by giving it the designation of Archelai, or lords of the people. Cleisthenes appears to have continued despots till his death, which may be placed about B.C. 560. The dynasty perished with him. He left no son; but his daughter Agariste, whom so many suitors wooed, was married to the Athenian Measad, of the great family of the Alcestaeidae, and became the mother of Cleisthenes, the founder of the Athenian democracy after the expulsion of the Pelasgits. The names given to the tribes by Cleisthenes continued in use for sixty years after the death of the tyrant, when by mutual agreement the ancient names were restored. (Herod. vi. 126—131; Grote, Hist. of Greece, vol. iii. p. 43, seq.; Dict. of Biog. art. Cleisthenes.) A Dorian reaction appears now to have taken place, for during a long time afterwards the Sicyonians were the steady allies of the Spartans. In the invasion of Greece by Xerxes (B.C. 480), the Sicyonians sent a squadron of 15 ships to Salamin (Herod. viii. 43), and a body of 300 hoplites to Plataea. (Herod. ix. 28.) In the interval between the Persian and Peloponnesian wars the territory was twice invaded and laid waste by the Athenians, first under Tolmides in B.C. 436 (Thuc. i. 198; Paus. i. 27. § 5), and secondly for three years, 421-418 B.C. (Diod. iii. 88.) A few years later (B.C. 445) the Sicyonians supported the Megarians in their revolt from Athens. (Thuc. i. 114.) In the Peloponnesian War they sided with Sparta, and sent a contingent of ships to the Peloponnesian fleet. (Thuc. ii. 9. 80, 83.) In B.C. 424 the Sicyonians assisted Brasidas in his operations against the Athenians in the Megarid
SICYON.

(Theiv. i. 70), and in the same year they repulsed a descent of the Athenians under Demostenes upon their territory. (Theiv. iv. 101.) In b.c. 419 they united with the Corinthians in preventing Alcibiades from erecting a fortress upon the Acusan promontory of Rhium. (Theiv. v. 52.) About this time a democratic revolution appears to have taken place, since we find the Siceomnians establishing an oligarchical government in Sicyon in b.c. 417. (Theiv. v. 82.) In the wars of Lacedaemon against Corinth, b.c. 394, and against Thebes, b.c. 371, the Sicyonians espoused the side of the Lacedaemonians. (Xen. Hell. iv. 2 § 14, iv. 4. § 7, seq. vi. 4. § 18.) But in b.c. 368 Sicyon was compelled by Epiamnedas to join the Spartan alliance, and to admit a Theban гарнест and garrison into the citadel. Euphoron, a leading citizen of Sicyon, taking advantage of these circumstances, and supported by the Arcadians and Argives, succeeded in establishing a democracy, and shortly afterwards made him-съе tyrant of the city. But being expelled by the Arcadians and Thebans, he retired to the harbour, which he surrendered to Sparta. By the assistance of the Athenians he returned to Sicyon; but finding himself unable to dislodge the Theban garrison from the Acropolis, he re- paired to Thebes, in hopes of obtaining, by corruption and intrigue, the banishment of his opponents and the restoration of his own power. Here, however, he was murdered by some of his enemies. (Xen. Hell. vii. 1—9; Diod. xvi. 69, 70; Dict. of Biogr. art. EUPHORON.) Sicyon seems, however, to have been favorable to tyrants; for, after a short time, we again find the city in their power. The facility with which ambitious citizens obtained the supreme power was probably owing to the antago nism between the Dorian and old Ionian inhabitants. Demosthenes mentions two Sicyonian tyrants, Aristaratus and Epichares, in the pay of Philip (de Cor. pp. 242, 324). In the Laman war, after the death of Alexander the Great, b.c. 323, the Sicyonians joined the other Greeks against the Macedonians. (Diod. xvi. 44.) The Sicyonians naturally fell into the hands of Alexander, the father of Polyperchon; and after his murder in b.c. 314, his brother Cratesipolis continued to hold the town for Cassander till b.c. 308, when she was induced to betray it to Ptolemy. (Diod. xix. 67, xx. 37.) In b.c. 303, Sicyon passed out of the hands of Ptolemy, being surprised by Demetrias Poliorcetes in the night. It appears that at this time Sicyon consisted of three distinct parts, as already mentioned, the Acropolis, on the hill of Vasilikii, the lower city at its foot, and the port-town. It is probable that formerly the Acropolis and the lower city were united with the port-town, by walls extending to the sea; but the three quarters were now separated from one another, and there was even a vacant space between the lower town and the citadel. Seeing the difficulty of defending so extensive a space with the diminished resources and population of the city, and anxious to secure a strongly fortified place, Demetrias compelled the inhabitants to remove to the site of the ancient Acropolis, which Diochorus describes as "a site very preferable to that of the former city, the inclosed space being an extensive plain, surrounded on all sides by a hill, so that it would not be possible to attack the walls with machines." This new city was called Demetrias. (Diod. xx. 102; Plut. Demetr. 25; Paus. ii. 7. § 1; Strab. viii. p. 382.) The name Demetrias soon disappeared; but the city continued to remain upon its lofty site, which was better adapted than most mountain heights in Greece for a permanent population, since it contained a good supply of water and cultivable land. Pausanias (i.c.) represents the lower town as the original city of Argaeus; but Col. Leake justly remarks, it is more natural to con clude that the foundation was made upon the hill Vasikilia, which, by its strength and its secure distance from the sea, possesses attributes similar to those of the other chief cities of Greece. Indeed, Pausanias himself confirms the antiquity of the occupation of the hill of Vasikilia, by describing all the most ancient monuments of the Sicyonians as standing upon it. (Leake, Morea, vol. iii. p. 367.) After Demetrias quitted Sicyon, it again became subject to a succession of tyrants, who quickly dis placed one another. Clean was succeeded in the tyranny by Euthydemos and Timicleides; but they were expelled by the people, who placed Cleinias, the father of Aratus, at the head of the government. Cleinias was soon afterwards murdered by Abantidas, who seized the tyranny, b.c. 264. Abantidas was murdered in his turn, and was succeeded by his father Paseas; but he again was murdered by Nicoles, who had held the sovereign power only four months, when the young Aratus surprised the citadel of Sicyon, and delivered his native city from the tyrant, b.c. 251. (Pans. ii. 8. §§ 1—3; Plut. Arat. 2.) Through the influence of Aratus, Sicyon now joined the Achaean League, and was one of the most important cities of the confederacy. (Pans. ii. 8. § 3; Plut. Arat. 9; Polyb. ii. 43.) In consequence of its being a member of the league, its territory was devastated, both by Cleomenes, b.c. 233 (Plut. Arat. 41, Cleom. 19: Polyb. i. 52), and by the Aetolians, b.c. 221. (Polyb. iv. 13.) In the Roman wars in Greece, Sicyon was favoured by Attalus, who bestowed handsome presents upon it. (Polyb. xvii. 16; Liv. xxxii. 40.) The conquest of Corinth by the Romans, b.c. 146, was to the advantage of Sicyon, for it obtained the greater part of the neighboring territory and the administration of the Ithomenan tribes. (Pans. ii. 2. § 2.) But even before Corinth was rebuilt, Sicyon again declined, and appears in an impoverished state towards the end of the Republic. (Cic. ad Att. i. 19, 20, ii. 1.) After the restoration of Corinth, it still further de clined, and its ruin was completed by an earthquake, which destroyed a great part of the city, so that Pausanias found it almost depopulated (iii. 7. § 1). The city, however, still continued to exist in the sixth century of the Christian era; for Hierocrates (p. 646, Less.) mentions New Sicyon (Nes Sic vno) among the chief cities of Achaia. The maritime town was probably Old Sicyon. Under the Byzantine empire Sicyon was called Hellas, and the inhabitants Helлади, probably in contradistinction to the surrounding Slavonic inhabitants. (Σικυών, ἡ νυν Ἑλλάς, Συδάς; τῶν Σικυωνίων τῶν νυν λεγομένων Ἑλλάδων, Malal. iv. 68, Bonn.) The name Vasilikii (τὰ Βασιλεία) has reference to the ruins of the temples and other public buildings.

III. Art. —Sicyon is more renowned in the artistic than in the political history of Greece. For a long time it was one of the chief seats of Greek art, and was celebrated alike for its painters and sculptors. According to one tradition painting was invented at Sicyon, where Telephanes was the first to practise the monogram, or drawing in outline
SICYON.

SICYON.

(Plin. xxxv. 3. s. 15); and the city long remained the home of painting ("din illa fact patria picturae," Plin. xxxv. 11. s. 40). Sicyon gave its name to one of the great schools of painting, which was founded by Empomus, and which produced Pamphilus and Apelles. (Plin. xxxv. 10. s. 36.) Sicyon was likewise the earliest school of statuary in Greece, which was introduced into the city by Dioponius and Scyllus from Crete about B.C. 560 (Plin. xxxv. 4); but its earliest native statuary of celebrity was Canachus. Lysippus was also a native of Sicyon. (Dict. of Biogr. s. v.) The city was thus rich in works of art; but its most valuable paintings, which the Sicyonians had been obliged to give in pledge on account of their debts, were removed to Rome in the æcclesiæ of M. Scaurus, to adorn his theatre. (Plin. xxxv. 11. s. 40.)

Sicyon was likewise celebrated for the taste and skill displayed in the various articles of dress made by its inhabitants, among which we find mention of a particular kind of shoe, which was much prized in all parts of Greece. (Athen. iv. p. 133; Pollux, vii. 93; Hesych. s. v. Σικυωνία; Author, ad Heron. iv. 3; de Orat. i. 54; Lucret. iv. 1121; Fest. s. v. Sicyon.)

IV. Topography of the City. - Few cities in Greece were more finely situated than Sicyon. The hill on which it stood commands a most splendid view. Towards the west is seen the plain so celebrated for its fertility; towards the east the prospect is bounded by the lofty hill of the Acrocorintus; while in front lies the sea, with the noble mountains of Parnassus, Helicon, and Chimaera rising from the opposite coast, the whole forming a charming prospect, which cannot have been without influence in cultivating the love for the fine arts, for which the city was distinguished. The hill of Sicyon is a tabular summit of a triangular shape, and is divided into an upper and a lower level by a low ridge of rocks stretching right across it, and forming an abrupt separation between the two levels. The upper level, which occupies the southern point of the triangle, and is about a third of the whole, was the Acropolis in the time of Pausanias (ἐν νυν Ακρόπολις, ii. 7 § 5).

MAP OF THE SITE OF SICYON (from Leake).

A. Παναίδα. b b b. Remains of ancient walls.

Pausanias came to Sicyon from Corinth. After crossing the Asopus, he noticed the Olimpionium on the right, and a little farther on the left of the road the tomb of Euclid of Athens, the comic poet. After passing some other sepulchral monuments, he entered the city by the Byzantine gate, where was a fountain dropping down from the overhanging rocks, which was therefore called Stauros (Σταύρος), or the dropping fountain. This fountain has now disappeared in consequence of the falling in of the rocks. Upon entering the city Pausanias first crossed the ledge of rocks dividing the upper from the lower level, and passed into the Acropolis. Here he noticed temples of Tyche and the Dioscuri, of which there are still some traces. Below the Acropolis was the theatre, the remains of which are found, in conformity with the description of Pausanias, in the ledge of rocks separating the two levels. On the stage of the theatre stood the statue of a man with a shield, said to have been that of Aratus. Near the theatre was the temple of Dionysus, from which a road led past the ruined temple of Artemis Limmara to the Agora. At the entrance of the Agora was the temple of Peitho or Persuasion: and in the Agora the temple of Apollo, which appears to have been the chief sanctuary in Sicyon. The temple of Apollo at Sicyon is celebrated in the ninth Nemean ode of Pindar, and Aratus, when he delivered his native city from its tyrant, gave as the watchword ἦπειρον ἵππος. (Plat. Arat. 7.) In the time of Polybius (xvii. 16) a brazen colossal statue of king Attalus I. 10 cubits high, stood in the Agora near the temple of Apollo; but this statue is not mentioned by Pausanias, and had therefore probably disappeared. (Paus. ii. 7. §§ 2—9.) Near the temple of Peitho was a sanctuary consecrated to the Roman emperors, and formerly the house of the Vestal Chast. Before it stood the heroon of Aratus (Paus. ii. 8. §§ 8), and near it an altar of the Athenian Poseidon, and statues of Zeus Meilichios and of Artemis Patria, the former resembling a pyramidal, the latter a column. In the Agora were also the council-house (Βουλήτηριον), and a tower built by Cleisthenes out of the spoils of Cirrha; likewise a brazen statue of Zeus, the work of Lysippus, a gilded statue of Artemis, a ruined temple of Apollo Lyceus, and statues of the daughters of Protes, of Hercules, and of Hermes Agoraeus. (Paus. ii. 9. §§ 6, 7.) The Pocile Stoa or painted stoa, was probably in the Agora, but is not mentioned by Pausanias. It was adorned with numerous paintings, which formed the subject of a work of Ptolemaüs. (Athen. xiii. p. 577.)

Pausanias then proceeded to the Gymnasium, which he describes as not far from the Agora. The Gymnasium contained a marble statue of Hercules by Scopas; and in another part a temple of Hercules in a sacred inclosure, named Paezide. From thence a road led to two large inclosures, sacred to Asclepius and Aphrodite, both of which were adorned with several statues and buildings. From the Aphrodissent Pausanias went past the temple of Artemis Phoenea to the gymnasium of Cleitias, which was used for the training of the Ephebi, and which contained statues of Artemis and Hercules. (Paus. ii. 10.) It is evident that this gymnasium was different from the one already described, as Pausanias continues his course towards the sea-side. From thence he turns towards the gate of the city called the Sacred, near which there formerly stood a celebrated temple of Athena, built by Epepeus, one of the mythical kings of Sicyon, but which had been burnt by lightning, and of which nothing then remained but the altar; this temple may perhaps have been
the one sacred to Athena Colocasia, mentioned by Athenaeus (iii. p. 72). There were two adjoining temples, one sacred to Artemis and Apollo, built by Epopeus, and the other sacred to Hera, erected by Adrastus, who was himself worshipped by the people of Sicyon (Herod. v. 68; Pind. Nem. ix. 29). There can be little doubt that these ancient temples stood in the original Acropolis of Sicyon; and indeed Pausanias elsewhere (ii. 5. § 6) expressly states that the ancient Acropolis occupied the site of the temple of Athena. We may place these temples near the northern edge of the hill upon the site of the modern village of Vasiliká; and accordingly the remarkable opening in the rocks near the village may be regarded as the position of the Sacred Gate, leading into the ancient Acropolis. (Leake, Morea, vol. iii. p. 372.)

In descending from the Heraeum, on the road to the plain, was a temple of Demeter; and close to the Heraeum were the ruins of the temple of Apollo Carneius and Hera Prodronia, of which the latter was founded by Phalces, the son of Temenus. (Paus. ii. 11. §§ 1, 2.)

The walls of Sicyon followed the edge of the whole hill, and may still be traced in many parts. The direction of the ancient streets may also still be

**PLAN OF THE RUINS OF SICYON** (from the French Commission)

A. Acropolis from the time of Demetrius.
1. Temple of Tyche and the Dioscuri.
2. Theatre.

B. Probable site of the Agora.
6. Roman Building.
a a Road from the Lake of Stymphalus to Vasiliká and Corinth.

**Vol. II.**
followed by the existing foundations of the houses; they run with mathematical precision from NE. to SW., and from NW. to SE., thus following the rule of Vitruvius. Few of the ruins rise above the ground; but there is a Roman building better preserved, and containing several chambers, which lies near the ridge separating the two levels of the hill. Leake supposes that this building was probably the praeatorium of the Roman governor during the period between the destruction of Corinth by Munnius and its restoration by Julius Caesar, when Sicyon was the capital of the surrounding country; but more recent observers are inclined to think that the ruins are those of baths. West of this building are the theatre and the stadium; and the modern road which leads from Patellis to Stymphalus runs between this Roman building and the theatre, and then through a portion of the stadium. The theatre was cut out of the rock, separating the two levels of the hill, as already described; its total diameter was about 400 feet, and that of the orchestra 100. Each wing was supported by a mass of masonry, penetrated by an archet passage. To the NW. of the theatre are the remains of the stadium, of which the total length, including the seats at the circular end, is about 680 feet. Col. Leake remarks that "the stadium resembles that of Messene, in having had seats which were not continued through the whole length of the sides. About 80 feet of the rec- linear extremity had no seats; and this part, instead of being excavated out of the hill like the rest, is formed of factitious ground, supported at the end by a wall of polygonal masonry, which still exists." There are also, in various parts of the hill, remains of several subterraneous aqueducts, which supplied the town with water. The opening of one of them is seen on the SE. side of the theatre; and there is another opening now walled up W. of the modern village. The tyrant Nichocles escaped through these subterraneous passages when Sicyon was taken by Aratus. (Plin. Nat. Hist. 9.)

**V. Topography of the Sicyonia.**—The territory of Sicyon was very small, and, in fact, was little more than the valley of the Asopus. In the upper part of its course the valley of the Asopus is confined between mountains, but near the sea it opens out into a wide plain, which was called Aegina. (Strab. viii. p. 382, ix. p. 408; Paus. ii. 1. § 1.) This plain was celebrated for its fertility. (megas frorrn evi to to 7\'\(2\) swm\(2\) pov\(2\) \(\gamma\)ev\(2\)\(\alpha\)\(i\)s, Lucian, Ioum. c. 18,) and was especially adapted to the cultivation of the olive. ("Sicyon a barca, Virg. Georg. ii. 519; Or. Ep. ex Pont. iv. 15. 10; Stat. Theb. iv. 50.) The neighbouring sea supplied an abundance of excellent fish. (Athens. i. p. 27.)

It was separated from the Corinthia on the E. by the river Nemea, and from the territory of Pelleus on the W. by the Sythas; and on the S. it was bounded by the territories of Blilus and Cleone. At one time the territory of Sicyon must have extended even beyond the Sythas, since Gonessa or Donessa, which lay W. of this river, is described by Pausanias as belonging to the Sicyonians. (Paus. i. p. 571, a.) Between the Helisson and the Sythas was probably the river Selices, with the neighbouring village of Epikrya, mentioned by Diodorus (vii. p. 338). (Epikrya, No. 3.) Sixty stadia S. of Sicyon, and near the frontiers of Phlius, was Titane or Titana, the most important of the dependencies of Sicyon. (Titane.) Forty stadia beyond Titana was Philus; which real, which was too narrow for carriages, was not the direct road from Sicyon to Philus. The direct road was to the right of the Asopus; and the circuitous road through Titane to the left of that river. Between these two roads, at the distance of 20 stadia from Sicyon, was a sacred grove, containing a temple of the Eumenides. (Paus. ii. 11, § 3, seq.) East of Sicyon was Epieicra, on the river Nemea. (Epieicra.) In the same direction was the fortress DBEAEK. (Δειάς, Xen. Hell. vii. 1. § 22.) There was also a fortress Phoea, taken by Kyanmichus in his march through the valley of the Asopus; it is probably the same place as Eupha. (DBEAEK.) Strabo (i. p. 416) mentions a demus Plataneac in the Sicyonia. (Hagen. Geogr. ii. p. 583; Gomper. Sicyonoeorum Spec. Petrol. 1832, Targ. 1834. Bobrik, De Sicyoniae Topograph., Regiment. 1839; Leake, Morea, vol. iii. p. 331, seq.; Boblave, Recherches, &c. p. 30, seq.; Ross, Reisen im Peloponnes, p. 39, seq.; Curtius, Peloponnesos, vol. ii. p. 432, seq.; Beulé, Études sur le Peloponèse, p. 343, seq.)

**SICYON.**

**SIDAE (Σίδαι), a place in Boeotia, celebrated for its pomegranates.** Hence the Boeotians called this fruit Σίδην, though the mere usual name was Βοητός. As the Athenians are said to have contended with the Boeotians for the possession of the place, it must have been upon the borders of Attica, but its exact site is unknown. (Athens. xiv. pp. 650, 651.)

**SIDAE (Σίδαι): Eθά. Σίδαις, a town with a good harbour on the coast of Pamphylia, 30 stadia to the west of the river Melas, and 550 east of Attaleia. (Strab. Mar. Mag. § 214, foll.) The town was founded by Cumaei in Aeolis. (Smylax, Peripil. p. 40; Strab. xiv. p. 667, comp. p. 664. Steph. B. s. r.; Pomp. Mela, i. 15.) Arius (Ariab. i. 26), who admits the Cumaeans origin of the place, relates a tradition current at Side itself, according to which the Sideteae were the most ancient colonists sent out from Cumae, but soon after their establishment in their new home forgot the Greek language, and formed a peculiar idioma for themselves, which was not understood even by the neighbouring barbarians. When Alexander appeared before Side, it surrendered and received a Macedonian garrison. In the time of Atticicus the Great, a naval engagement took place off Side between the fleet of Antiochus, commanded by Hannibal, and that of the Rhodians, in which the former was defeated. (Liv. xxxv. 13, 18, xxxvii. 23, 24.) Polybius (v. 73) states that there existed great enmity between the people of Side and Aspendus. At the time when the pirates had reached their highest power in the Mediteranean, they made Side their principal port, and used it as a market to dispose of their prizes and booty by auction. (Strab. xiv. p. 664.) Side continued to be a town of considerable importance under the Roman emperors, and in the ultimate division of the province it became the metropolis of Pamphylia Prima. (Irenel.
SIDE.

SIDE-NI (Σίδιναι, Σίδινοι, Σίδυνοι), a German tribe on the coast of the Baltic, between the mouth of the river Suebas and that of the Vindas. (Ptol. ii. 11. § 14.) It is possible that Sibini (Σίδινοι) is only a corrupt form of the name of this same tribe, as Sibinna and Sibinna, (Eckhel, Lex. German., p. 236.)

SIDE-NUS, a small river of Pontus, having its sources in Mount Parysares, and flowing through the district of Sidene into the Enuex; at its mouth was the town of Side or Polemonium (Plin. vi. 4), from which the river is now called Ptolemaian Choi. (Comp. Hamilton, Researches, i. p. 270.) [L. S.]

SIDE-RUS (Σίδροιοι), according to Sclavus (p. 39) a promontory and a port-town on the coast of Lydia. The same place seems to be meant in Stephamus B. (s. vv. Σίδροιοι), when he calls Sidurus a town and harbour. Col. Leca (Asia Minor, p. 189) has shown that the town of Siderus is in all probability no other than Olympus, on the south of Phaselis. [L. S.]

SIDICI NI (Σιδίκινοι), a people of Central Italy bordering on the Samnites and Campanians. In the time of the geographers they had disappeared as a people, or at least absorbed by the Samnites and Campanians. Their civilisation and history are described by Curtius. (vii. 727) in the history of the Campanians (Strab. v. p. 237), but at an earlier period they appear as a wholly independent people. Their chief city was Tenum, on the E. slope of the volcanic mountain group of Rocce Montano: but they had at one time extended their power considerably further to the N. and up the valley of the Liris, as the territory of Fregelicae is said to have been subject to them, before they were dispossessed of it by the Volscians (Liv. viii. 22).

It is clear however that this extension of their limits was of short duration, or at all events had ceased before they first appear in history. Strabo tells us expressly that they were an Ocean tribe (L. c.), and this is confirmed by the coins of Tenum still extant, which have Ocean inscriptions. They were therefore closely allied to the neighbouring tribes of the Campanians on the S. and the Aurunci and Ausones on the W. Hence Virgil associates the inhabitants of the Sidicinian plains ("Sidicium sequuntur," Jern, vii. 727) with the Auruncans and the inhabitants of Cales. The last city is assigned by Silius Italicus to the Sidicini, but this is opposed to all other authorities (Sil. Ital. viii. 511). The name of the Sidicini is first mentioned in history in n. c. 543, when they were attacked by the Samnites, who had been long pressing upon their neighbours the Volscians. Unable to contend with these formidable assailants, the Sidicini had recourse to the Campanians, who sent an army to their assistance, but were easily defeated (Liv. vii. 29, 30), and being in their turn threatened by the whole power of the Samnites, invoked the assistance of Rome. During the war which followed (the First Samnite War), we lose sight altogether of the Sidicini, but by the treaty which put an end to it (in n. c. 341) it was particularly stipulated that the Samnites should be at liberty to pursue their ambitious designs against that people (Id. viii. 1, 2). Thus abandoned by the Romans to their fate the Sidicini had recourse to the Latins (who were now openly shacking off their connection with Rome) and the Campanians; and the Samnites were a second time drawn off from
their special attack on this petty people to oppose a more powerful coalition (Ib. 2, 4, 5). It is clear that the Sidicini took part as allies of the Latins and Campanians in the war that followed; but we have no account of the terms they obtained in the general settlement of the peace in B.C. 338. It is certain, however, that they retained their independence, as immediately afterwards we find them engaging in a war on their own account with their neighbours the Auruncans. The Romans espoused the defence of the latter people, but before they were able to take the field, the Auruncans were compelled to abandon their ancient city, which was destroyed by the Sidicini, and was replaced by the town of Sidona (Ib. vi. 9). The settlements of Cales had on this occasion been induced to make common cause with the Sidicini, but their combined forces were easily defeated by the Roman consuls. Cales soon after fell into the hands of the Romans; but though the territory of the Sidicini was overrun by the consuls of B.C. 332, who established their winter-quarters there to watch the movements of the Sumnites, their city of Teanum still held out (Ib. 16, 17). Nor do we know at what time it fell into the power of the Romans, or on what terms the Sidicini were ultimately received to submission. But it is probable that this took place before B.C. 297, when we are told that the consul Denius Mas advanced to attack the Sumnites "per Sidicinum agrum" in a manner that certainly implies the district to have been at that time friendly, if not subject, to Rome (Liv. x. 14).

After this the name of the Sidicini never appears in history as that of a people, but their territory (the "Sidicinii ager") is mentioned during the Second Punic War, when it was traversed and ravaged by Hannibal on his march from Capua to Rome (Liv. xxxvi. 9). The Sidicini seem to have gradually come to be regarded as a mere portion of the Campanian people, in common with the Ausones of Cales and the Auruncans of Sessa, and the name still occurs occasionally as a municipal designation equivalent to the Teanenses (Liv. xxxvi. 15; Civ. Phil. ii. 41). Strabo speaks of them in his time as an extinct tribe of Oscan race; and under the Roman Empire the only trace of them preserved was in the epitaph of Sidicinum, which still continued to be applied to the city of Teanum. (Strab. v. p. 237; Plin. iii. 5. s. 9; Petd. iii. 1. § 68; Sil. Ital. v. 551, xii. 524.) [TEANUM. [E. H. B.]

SIDOBEONE (Σιδοβονη or Σιδοδωνη), Arrian Ind. c. 37), a small place on the coast of Carmania, noticed by Arrian in Neearchus's voyage. Rumphius thinks that it is represented by a small fishing village called Magon; but Muller suggests, what seems more probable, that is the present Doum. (Geogr. Graec. Minor. p. 359, ed. Muller. Paris, 1852.) [V.]

SIDOLOCUS or SIDOLECUS, in Gallia, is mentioned by Ammianus Marcellinus when he is speaking of Julian's march from Augustodunnum to Antiochisium. Sidolocus is supposed to be Stadaica (CHONOA. [G. L.]

SIDON (Σίδων; Kith. Σίδωνος), a very ancient and important maritime city of Phoenicia, which, according to Josephus, derived its origin and name from Sidon, the firstborn son of Canaan (Gen. x. 15; Joseph. Ant. i. 6. § 2), and is mentioned by Moses as the northern extremity of the Canaanitish settlements, as Gaza was the southernmost (Gen. x. 19); and in the blessing of Jacob it is said of Zebulun "his border shall be unto Sidon" (xiii.

13. At the time of the Exodous of the children of Israel, it was already distinguished by the appellation of "the Great." (Josh. xi. 8; compare in LXX. ver. 2), and was in the extreme north border which was drawn from Mount Hermon (called Mount Hor in Num. xxxiv. 7) on the east to Great Sidon, where it is mentioned in the border of the tribe of Asher, as also is "the strong city of Tyre." (Josh. xix. 28, 29.) It was one of several cities from which the Israelites did not dispossess the old inhabitants. (Judg. i. 34.)

As the origin of this ancient city, and the vexed question of its priority and precedence of Tyre, its municipal title, religious and civil, and the extent of its political government, its religious and civil history, and its manufactures, have all been noticed under PHOENICIA, it only remains in this place to speak of its geographical position and relations so far as they either serve to illustrate, or are illustrated by, its history.

It is stated by Josephus to have been a day's journey from the site of Dan, afterwards Paneas (Ant. v. 3. § 1). Strabo places it 400 stadia S. of Berytus, 200 N. of Tyre, and describes it as situated on a fair haven of the continent. He does not attempt to settle the questions between the rival cities, but remarks that while Sidon is most celebrated by the poets (of whom Homer does not so much as name Tyre), the colonists in Africa and Spain, even beyond the Pillars of Hercules, showed more honour to Tyre (xvi. 2. §§ 22, 24). Herodotus's account of the origin of the race has been given under PHOENICIA [p. 607, b.], and is shown in accordance with that of other writers. Justin follows it, but gives a different etymology of the name: "Condita urbe, quam a piscium ueterin Sidonum appellaverunt, nam piscem Phoenicius Sidon vacuit," but this is an error corrected by Michaelis and Gesenius (Leet. s. v. ΣΤΙΔΟΝ), who derive it from ΣΙΔΩΝ, "to hunt or snare" game, birds, fish, &c., indifferently, so that the town must have derived its name from the occupation of the inhabitants as fishermen, and not from the abundance of fish; and Ritter refers to the parallel case of Beth-shalum on the sea of Tiberias. (Evolkmade, Syria. vol. iv. p. 43.) Pliny, who mentions it as "arifex vitri Thebarum-que Boeotiarum parum," places "Sarepta et Ornithon oppida" between it and Tyre (v. 19). It is reckoned xxix. m. x. from Berytus, xxiv. from Tyre, in the itinerary of Antoninus (p. 149). But the Itinerary Hierosolymitanum reckons it xxviii. from Berytus, placing Heliopolis and Parphirion between (p. 584). Sylax mentions the closed harbour of Sidon (Sawv napatar, p. 42, ed. Hudson), which is more fully described by a later writer, Achilles Tatius (circ. a. D. 560), who represents Sidon as situated on the Assyrian coast, the metropolis of the Pho- enicians, whose citizens were the ancestors of the Thebans. A double harbour shelters the sea in a wide gulf; for where the bay is covered on the right hand side, a second mouth has been formed, through which the water again enters, opening into what may be regarded as a harbour of the harbour. In this inner basin, the vessels could lie securely during the winter, while the outer one served for the summer. (Cited by Reubel, Palaces. p. 1012.) This inner port Reubel conjectures, with great probability, is the closed port of Sylax, and to be identified with the second harbour described by Strabo at Tyre, where he says there was one closed and another open harbour, called the Egyptian. The best account of
SIDONES.

the site is given by Pococke. "It was situated," he says, "on a rising ground, defended by the sea on the north and west. The present city is mostly on the north side of the hill. The old city seems to have extended farther east, as may be judged from the foundations of a thick wall, that extends from the sea to the east; on the farther side it was probably bounded by a rivulet, the large bed of which might serve for a natural fosse; as another might be on the north side, if the city extended so far, as some seem to think it did, and that it stretched to the east as far as the high hill, which is about three quarters of a mile from the present town. . . .

On the north side of the town, there are great ruins of a fine fort, the walls of which were built with very large stones, 12 feet in length, which is the thickness of the wall; and some are 11 feet, and 5 deep. The harbour is now chocked up. . . . This harbour seems to be the minor port mentioned by Strabo (xvi. p. 756) for the winter; the outer one probably being to the north in the open sea between Sidon and Tyre (?), where the shipping rides in safety during the summer season." (Observations Palestine, p. 86.)

The sepulchral grots are cut in the rock at the foot of the hills; and some of them are adorned with pilasters, and handsomely painted.

The territory of the Sidonians, originally circumscribed towards the north by the proximity of the hostile Giblites, extended southwards to the truce of Zebulan, and Mount Carmel; but was afterwards limited in this direction also by the growing power of their rivals the Tyrians. (Ritter, l. c. p. 43, &c.)

The coins of Sidon are very numerous, belonging to two epochs: the former that of the Seleucidæ, from Antiochus IV. and onwards; the latter commencing with A. u. c. 643, which is found on coins of Trajan and Hadrian. They commonly represent a ship, the most ancient emblem of the maritime pre-eminence of Sidon, sometimes an eagle, sometimes Astarte with a crown, spear, &c., with the legend ΣΙΔΩΝΟΣ ΘΕΑΣ. (Eckhel, vol. 12, pp. 364-367; [G. W.]

SIDONES (ΣΙΔΩΝΕΣ), a tribe in the extreme east of Germany, about the sources of the Vistula (Ptol. ii. 11, § 21), and no doubt the same which appears in Strabo (vii. p. 306) under the name of ΣΙΔΩΝΕΣ, as a branch of the Bastarnæ. [L. S.]

SIDON'IA. [ΠΕΡΩΝΙΔΑ.]

SIDUS (ΣΙΔΟΥΣ, ΣΙΔΟΥΣΤΑΣ κήρυς, Hesych.; Fth. ΣΙΔΟΥΣΤΩΝ, a village in the Corinthia, on the Saronic gulf, between Cronyn and Schemoon. It was taken by the Lacedæmonians along with Cronyn in the Corinthian War, but was recovered by Lycians. (Xen. Hell. iv. 4, § 13, iv. 5, § 13.) It probably stood in the plain of Susilé. (Scylla; Steph. B. s. v.; Plin. iv. 7, s. 11; Böckh, Recercées, f. c. p. 33; Leske, Peloponnesia, p. 397; Curtius, Peloponnesos, vol. ii. p. 555.)

SIDUSSA (ΣΙΔΟΣΣΑ), a small town of Ionia, belonging to the territory of Erythea. (Thucyd. viii. 24; Steph. B. s. v.) Pliny (v. 38) erroneously describes it as an island off the coast of Erythea. It is probable that the place also bore the name of Sidus (ΣΙΔΟΙ), as Stephanus B. (s. v.) mentions a town of this name in the territory of Erythea. [L. S.]

SIDYMA (ΣΙΔΥΜΑ; Fth. ΣΙΔΥΜΟΥΣ), a town of Lycaonia, on the southern slope of Mount Cragus, to the north-west of the mouth of the Xanthus. (Plin. vi. 28; Steph. B. s. v.; Plut. v. 3, § 5; Hierocles, p. 684; Cedrenus, p. 344.) The ruins of this city, on a lofty height of Mount Cragus, have first been discovered and described by Sir C. Fellows. (Lydia, p. 151, fol.) They are at the village of Torturocar Hâisâ, and consist chiefly of splendidly built tombs, abounding in Greek inscriptions. The site itself appears to have been very small, and the theatre, agora, and temples, are of diminutive size, but of great beauty. [L. S.]

SIELEDIVA. [TAPROBANE.]

SIGA (ΣΙΓΑ, Ptol. iv. 2, § 2), a commercial town of Mauritania Caesarianis, seated near the mouth of a river of the same name in a large bay. The mouth of the river formed the port of the city, at a distance of 3 miles from it (Sigenis Portus, Itin. Ant. p. 13), opposite to the island of Aera, on the highland, and near Cirta, the residence of Syphax. (Strab. xvii. p. 829; Plin. v. 2, s. 1.) In Strabo's time it was in ruins, but must have subsequently restored, since it is mentioned in the Itinerary (p. 12) as a Roman municipium. (Comp. Ptol. l. c.; Mela, i. 5; Scylax, 51, 52.) According to Shaw (Travels, p. 12), who, however, did not visit the place, its ruins are still to be seen by the present Tucambr; others identify it with the Arechbalul of the Arabs, at the mouth of the Tafna, near Rosyin. [T. H. D.]

SIGA (ΣΙΓΑ, Ptol. iv. 2, § 2), a river of Mauritania Caesarianis, falling into a bay of the sea opposite to the island of Aera (now Caracolae). Scylax (p. 51) calls it Σιγαβ. Probably the present Tafna. [T. H. D.]

SIGÈM (ΣΙΓΗΜ or ή ΣΙΓΗΜα έδρα), a promontory in Tosas, forming the north-western extremity of Asia Minor, at the entrance of the Hellepont, and opposite the town of Elea in the Thracian Chersonesus. Near it the naval camp of the Greeks was said to have been formed during the Trojan War. (Hered. v. 65, 94; Thucyd. viii. 101; Strab. xiii. pp. 593, 603; Pompon. Mela, i. 18; Plin. v. 33; Plut. v. 2, § 3; Serv. ad Aen. i. 312.) This promontory is now called Tsekhili.

Near the promontory was situated the town of Sigeum, which is said to have been an Aeolian colony, founded under the guidance of Archelaus of Mytilene, who used the stones of ancient Troy in building this new place. But some years later the Athenians sent troops under Phrynion and expelled the Mytileneans; and this act of violence led to a war between the two cities, which lasted for a long time, and was conducted with varying success. Pittaneus, the wise Mytilenean, is said to have slain Phrynion in single combat. The poet Alcaeus also was engaged in one of the actions. The dispute was at length referred to Periander, of Corinth, who decided in favour of the Athenians. (Strab. xiii. p. 599; Herod. v. 95; Steph. B. s. v.; Dio più. i. 74.) Henceforth we find the Pisistratidae in possession of Sigeum, and Hippias, after being expelled from Athens, is known to have retired there with his family. (Herod. v. 65.) The town of Sigeum was destroyed by the inhabitants of Litus soon after the overthrow of the Persian empire, so that in Strabo's time it no longer existed. (Strab. xiii. p. 600; Plin. v. 33.) A large necropolis was formed for the dead; the promontory, being in antiquity to contain the remains of Achilles, which was looked upon with such veneration that gradually a small town seems to have risen around it, under the name of Achilleum [Achilleum]. This tomb, which was visited by Alexander the Great, Julius 3 s 3.
Cæsar, and Germanicus, is still visible in the form of a mound or tumulus. [L. S.]

SIGMAN (Σιγμαν), a river in Gallia. Ptolemy (ii. 7. § 2) places the mouth of the Sigman between the Aruis (Adour) and the Garonne; and between the Sigman and the Garonne he places Curiannum Promontoriunium. [CUIRIANN.] Marcianus (Persil.), who has the name Sigmanus, gives two distances between the mouth of the Adour and that of the Sigman, one of which is 500 and the other 450 stadia. We cannot trust either the latitudes of Ptolemy or the distances of Marcianus along this coast. There is no river between the Adour and the Garonne that we can suppose to have been marked down by the ancient eacting ships to the exclusion of the Legri, which flows into the Bassin d'Arcacon. But Gesselin supposes the Sigman to be the Minism, which is about half-way between the Adour and the Bassin d'Arcacon. [G. L.]

SIGNIA (Σινια: Lbk. Signium; Segul), an ancient city of Latium, situated on a lofty hill at the NW. angle of the Volscian mountains, looking down upon the valley of the Sacro. It is represented by ancient authors as a Roman colony founded by Tarquinus Superbus, at the same time with Cremona (Liv. i. 55; Dionys. iv. 63). No trace of it is found before this; its name does not figure among the cities of the Latin League or those of which the foundation was ascribed to Alba; and the story told by Dionysius (I. c.), that it originated at first in a fortuitous settlement of some Roman troops encamped in the neighbourhood, which was afterwards enlarged and strengthened by Tarquin, certainly points to the fact of its being a new town, and not, like so many of the Roman colonies, a new settlement in a previously existing city. It passed, after the expulsion of the Roman and Latin settlers, to the hands of the Romans of the Roman Republic, as it was attacked in n. c. 492 by Sexius Tarquinius, who vainly endeavored to make himself master of it (Dionys. v. 58). A few years later, it received a fresh colony, to recruit its exhausted population (Liv. ii. 21). From this time it appears to have continued a dependency of Rome, and never, so far as we learn, fell into the power of the Volscians, though that people held all the neighbouring mountain country. Signia must indeed, from its strong and commanding position, overlooking all the valley of the Trerus and the broad plain between it and Praeneste, have been a point of the utmost importance for the Romans and Latins, especially as securing their communications with their allies the Hernicans. In n. c. 340 the Signians shared in the general defection of the Latins (Liv. viii. 3); but we have no account of the part they took in the war that followed, or of the terms on which they were received to submission. We know only that Signia became again (as it had probably been before) a Colonia Latina, and is mentioned as such during the Second Punic War. On that occasion it was one of those which continued faithful to Rome at the most trying period of the war (Liv. xxxvii. 10), and must therefore have been still in a flourishing condition. On account of its strong and secluded position we find it selected as one of the places where the Carthaginian hostagés were deposited for safety (Id. xxxix. 2); but this is the last mention of it that occurs in history, except that the battle of Sacripontus is described by Plutarch as taking place near Signia (Pint. Sull. 28). That decisive action was fought in the plain between Signia and Praeneste [Sacripontus]; it, however, certainly continued during the later ages of the Republic and under the Empire to be a considerable municipal town. It received a fresh body of colonists under the Trumvirates, but it is doubtful whether it retained the rank of a Colonia. Pliny does not reckon it as such, and though it is termed "Colonia Signina" in some inscriptions, these are of doubtful authenticity. (Strab. v. p. 237; Plin. iii. 5. s. 9; Sil. Ital. viii. 374; Ldb. Colon. p. 237; Zumpt, de Col. p. 333; Gruter, Is aç. p. 490, 5, &c.)

Signia was chiefly noted under the Roman Empire for its wine, which, though harsh and astringent, was valued for its medicinal qualities, and seems to have been extensively used at Rome (Strab. v. p. 237; Plin. xiv. 6. s. 8; Athen. i. p. 27; Sil. Ital. I. c. Martian, xiii. 116; Cels. de Med. iv. 5). Its territory produced also pears of a celebrated quality (Juv. xi. 73; Plin. xv. 15. s. 16; Colum. v. 10. § 18; Macrobr. Sat. ii. 15), as well as excellent vegetables, which were sent in large quantities to Rome (Colum. s. 131). These last were grown on a hill near the city, called by Columella Mons Lepinus, apparently one of the underfalls of the Volscian mountains; but there is no authority for the name of Lepinus to be connected only to the whole of that mass of mountains [LEPINUS MOLS]. Signia also gave name to a particular kind of cement known as "opus Signium," and extensively employed both for pavements and reservoirs of water (Plin. xxxv. 12. s. 46; Colum. i. 6. § 12; viii. 15. § 3; Vitr. viii. 7. § 14).

The modern town of Segni (a poor place, with about 3500 inhabitants) occupies a part only of the site of the ancient city. The latter embraced within the circuit of its walls the whole summit of the hill, which stands boldly out from the Volscian mountains, with which it is connected only by a narrow neck or isthmus. The line of the ancient walls may be traced throughout its whole extent; they are constructed of large masses of stone (the hard limestone of which the hill itself consists), of polygonal or radially squared form, and afford certainly one of the most remarkable specimens of the style of construction commonly known as Cyclopean or Pelasgic, of which striking instances are found also in other cities in this part of Latium. The city had in all five gates, two of which still retain their primitive construction; and one of these, known as the Porta Sacripontis, presents a remarkable instance of the rustic and indeed massive Cyclopean construction. The architrave is formed of single masses of stone not less than 12 feet in length, laid across from one impost to the other. This gate has been repeatedly figured; another, less celebrated but scarcely less remarkable, is found on the SE. side of the town, and is constructed in a style precisely similar. The age of these walls and gates has been a subject of much controversy; on the one hand the rude and massive style of their construction, and the absence of all traces of the arch in the gateways, would seem to assign them to a remote and indefinite antiquity; on the other hand, the historical notices that we possess concerning Signia all tend to prove that it was not one of the most ancient cities of Latium, and that there could not have existed a city of such magnitude previous to the settlement of the Roman colony under Tarquin. (For the discussion of this question as well as for

* The annexed figure is taken from that given by Ahken [Mitt. Italic. pl. 2].
the description of the remains themselves, see the *Annali dell' Instituto Archeologico* for 1829, pp. 78—87, 357—360; *Classical Museum*, vol. ii, pp. 167—170; Abeken, *Mitteil Italien*, p. 140, &c.) The only other remains within the circuit of the walls are a temple (now converted into the church of S. Pietro) of Roman date, and built of regularly squared blocks of tufa; and nearly adjoining is a circular reservoir for water, of considerable size and lined with the "opus signinum." (*Annali, l. c. p. 82.) Several inscriptions of imperial date are also preserved in the modern town.

**E.H.B.**

**GATE OF SIGNIA.**

SIGRIANE (ἡ Σιγριανή, Strab. xi. p. 525), a district of Media Atropatene, near the Caspian Gates. Potoncy calls it Ζηνουριανή (vii. 2 § 6). [V.]

SIGRIUM (Σηγρίου), the westernmost promontory of the island of Lesbos, which now bears the name of Sigei (Strab. xiii. pp. 616, 618.) Stephano B. (z. r.) calls Sigrium a harbour of Lesbos. [L. S.]

SIGULONES (Σιγουλόνες), a German tribe mentioned by Potoncy (ii. 11, § 11) as inhabiting the Cimmerian Chersonesus, to the north of the Saxones, but is otherwise unknown. [L. S.]

SIGYNNES (Σηγυννής, Herod. v. 9; Σηγύνη, Apoll. Rhod. iv. 320; Orph. Arg. 759; Σηγύνη, Strab. xi. p. 520). The only name of any Trans-Danubian population, other than Scythian, known to Herodotus was that of the Sigynnes, whom he seems to have described as the Thracians described them to either himself or his informants. The Thracian notion of one of these Sigynnes was that he wore a Median dress, and considered himself a descendant of the Medes; though how this could be was more than Herodotus could say. Anything, however, is possible in a long space of time. The horses of the Sigynnes were undersized — ponies, indeed, rather than horses. They were fattomed and long-haired; their coat being five fingers deep. They were too weak to carry a man on their back; but not too weak for harness. In chariots they were light and quick; and in the drawing of chariots the Sigynnes took great delight. We must look on Sigynnes as a general and collective name for a large assemblage of populations; insomuch as their country is said to extend as far westwards as the Heneti on the Adriatic. Say that it reached what was afterwards the frontier of Panonica. On the north it must really have been bounded by some of the Scythian districts. In the language of the Sigyynes above Musalla, the sigyyn meaning a merchant, or retail-dealer, or carrier. In Cyprus they call spears by the name Sigymna. The resemblance of this word to the name Zigeun—Gipsy has often been noticed. Word for word, it may be the same. It may also have been applied to the gipsies with the meaning it has in Ligyan. It does not, however, follow that the Sigyynes were gipsies. [R. G. L.]

**SHIOR or SHIOR LIBNATH (LXX. Σιόρ καλ. λαμανάθ), perhaps to be taken as two names, as by the LXX., Eusebius, and St. Jerome, who name "Sion in tribu Aser," without the addition of Libnath. It is mentioned only in the border of Asher. (Joshua, xix. 26.) The various conjectures concerning the place or places are stated by Bonferrini (Comment. in loc.), but none are satisfactory, and the site or sites have still to be recovered. [G. W.]

**SILA (ἡ Σίλα: Silia) was the name given in ancient times to a part of the Apennines in the S. of Bruttium, which were clothed with dense forests, and furnished abundance of pitch, as well as timber for ship-building. Strabo tells us it was 700 stadia (70 geo. miles) in length, and places its commencement in the neighbourhood of Locri. (Strab. vi. p. 261.) It is evident, therefore, that he, as well as Pliny (iii. 5. s. 10), who notices it in connection with Rhegium and Leucopatra, assigned the name to the southernmost group of the Apennines (the range of Aspromonte), S. of the isthmus which separates the Terinese and Scylytic gulfs. At the present day the name of Silia is given only to the detached and outlying mountain group N. of that isthmus, and E. of Coccorona (Comenius.) It is probable that the name, which evidently means only "the forest," and is connected with the Latin silius, and the Greek σῖλη, was originally applied in a more general sense to all the forest-covered mountains of this part of Calabria, though now restricted to the group in question. [E. H. B.] 3 s 4
SILACENAE. a place in Lower Pannonia, on the south of Lake Pelo. (It. Ant. p. 233, where it appears in the ablat. form Silacens. Its exact site is unknown. [L.S.]

SILANA, a town in the NW. of Thiessia, near the frontiers of Athamania, mentioned along with Gomphi and Tricea by Livy. Leake conjectures that it occupied the site of Polisima, near which are several squared blocks of ancient workmanship. (Liv. xxxvi. 13; Leake, Northern Greece, vol. iv. p. 529.)

SILARUS (Σιλαρός, Ptol.; Σιλαρός, Strab.; Selē), a considerable river of Southern Italy, flowing into the gulf of Posidonia, and forming the boundary between Campania and Lucania. It rises in the mountains near Tecra, on the confines of the Hirpini, and not far from the sources of the Aufidus; thence it flows for some distance in a southerly direction till it receives the waters of the Tanagrus (Tanagro), a considerable stream, which joins it from the SE.; it then turns to the SW. and pursues that direction to the sea, which it enters about 5 miles to the N. of the city of Paestum. About 5 miles from its mouth it receives another important tributary in the Calor (Calore), which joins it from the S. Between the Calor and Tanagrus, on the S. bank of the Silarus the mountain group of Mount Albarnus, mentioned by Virgil in connection with that river. The "luci Siliari" of the same author are evidently the same with the extensive woods which still clothe the valley of the Sela from its confluence with the Tanagro to within a few miles of the sea. (Virg. Georg. iii. 146.) The Silarus was in the days of Strabo and Pliny the recognised boundary between Campania (including under that name the land of the Picentini) and Lucania; but this applies only to its course near its mouth, as Eboli (Ebolis), though situated to the N. of it, is included by Pliny among the towns of Lucania. (Strab. v. p. 251, vi. p. 252; Plin. iii. 3, ss. 9, 10, 11, ss. 13; Ptol. iii. 1, § 8; Mel. ii. 4, § 9; Tab. Peut.; Dionys. Per. 361.) A peculiarity of its waters, mentioned by several ancient writers, is that they had the power of petrifying sticks and leaves, and other substances immersed in them. (Strab. v. p. 251; Plin. iii. 103. s. 106; Sil. Ital. viii. 582.)

The name is written by Lucan and Columella Siler, and the same form is found in Vellius Sequester, indicating an approach to the modern name of Sele. (Lucan, ii. 426; Colum. x. 136; Vell. Sqg. p. 18.)

SILAS (Σιλάς, Arrian, Ind. c. 6; Strab. xv. p. 703; Dioec. ii. 37), a river of the Upper Tanjib, the story of which, as told by ancient writers, is clearly fabulous. According to Arrian and others, the water of this river was so light that nothing could swim in it. Lassen, who has examined this story with his usual acuteness, has shown from the Mahabharata that there was a stream in the northern part of India called the Sila, the water of which was endowed with a highly petrifying power, from which circumstance the river obtained its signification, Sīla meaning in Sanscrit a stone. (Zeitschr. f. Kunde des Morgenlands, ii. p. 63.)

It may be remarked that the name occurs differently written. Thus Diodorus writes Σίλανον ποταμόν; Antigonus Σίλανον κρινήν. (Mirab. c. 161.) Pliny evidently refers to the same story, but calls the river Side in his quotation from Ctesias (xix. 2. s. 1.).

SILIVUM (Σιλίβιος: Eth. Silibius), a small town of Phrygia, on the east of Apamea and Celaenae, and beyond the source of the Maenander (Ptol. v. 2, § 85; Plin. v. 29). In the Byzantine writers it is sometimes mentioned under corrupt forms of its name, such as Silhia (Hieroc. p. 667), Silis (Cianamus, vol. iv.), or Subhiana and Sylibaea (Oriens Christi. p. 809). This place, which was the seat of a bishop, belonged to the conventus of Apamea. Modern travellers seek its site in the neighbourhood of Sandalkii. (Kiepert, in Franc. Fünf Inscriften, p. 37.)

SILI or SIMI (Σιλίος or Σίμη, Strab. xvi. p. 772), a tribe of Aetolian, who used the horns of the oryx, a species of gazelle, as weapons. Some have considered them to be the same as the Aitolores Σιλίων of Agatharchus, p. 42. (Comp. Ptolema. iii. 8.)

SILICENSES FLUMEN, a river in Hispania Baetica, in the neighbourhood of Corduba, probably the Ganges, or one of its tributaries. (Hirt. B. A. 57.)

SILINDIUM (Σιλίνδιον), a small town of Troas at the foot of Mount Ida, is mentioned only by Stephanus B. (ii. v.) on the authority of Demetrius of Scipio. (Ptol. ii. 11, § 18.)

SилIIGA (Σιλίγγα), a tribe of Germany, on the south of the Sannontes, between the western slopes of Mons Aschinburgs and the river Albe. (Ptol. iii. 11, § 18.)

It is generally supposed that this name is the one from which the modern Sileis or Slezis is formed. (Latham, Tacit. Germ. p. 138; Palacky, Gesch. von Böhmen, vol. i. p. 68.)

SILIS (Sele), a small river of Venetia, in the N. of Italy, which rises in the mountains above Treviso (Tarvisium), and flows into the lagunes at Altinum (Altino). It is still called the Sele. (Plin. iii. 18. s. 22.)

SILLA (Σίλλα), Isid. Chars. § 2, ed. Muller, 1855), a river of Apolloniatis, a district of Assyria, which, according to Isidorus, flows through the centre of the town of Artemita. (Artemita.) There can be little doubt that this is the river now called the Dijokok. It is also, in all probability, the same as the Jokendar, formed by Steph. B. (ii. v. 34), the Delas. Fohrer imagines that the Diabus of Ammianus (xxii. 6), the Durus of Zosimus (iii. 25), and the Gorges of Potomay (iv. i. § 7), refer to the same river. It is, however, more likely that the first of these streams is the same as that elsewhere called the Zalazus.

SILU or SHILLOI (Σιλου: Eth. Σιλλωιτας), a town of Palestine, in the tribe of Ephraim, in the mountain region according to Josephus (Ant. v. 1), where the ark and the tabernacle were first established by Joshua on the settlement of the land by the tribes of Israel. There also were assembled the national conventions for the division of the land and the transaction of other public business affecting the whole Union. (Joshua, xviii. 1, 10, xix. 51, xxii. 2, xxii. 9.) There Samuel ministered before the Lord in the days of Eli the high-priest (1 Sam. i. iii.). There was the seat of the Divine worship until the disastrous battle of Aphek, from which period the decline of Shiloh must be dated (ch. iv.) until its destruction became proverbial in Israel. (Psal. xxviii. 60; Avenelath, xii. 15, xxii. 6, 9.) Its situation is very particularly described in the book of Judges (xxii. 19), as "on the north side of Bethel, on the east side of the highway that goeth up from Bethel to Stichem, and on the south of Lebonah."
St. Jerome places it xii. M. P. from Neapolis (=Shechem = Nablus), in the toparchy of Accrabatenna. (Onomast. s. v.) Its ruins were shown, and the remains of the altar among them, in his day. (Conso- m. Pontif. vi. 14, Epistula, Paulet.) From these notes the site is easily identified with the modern Silan, on the east of the Nablus road, about four hours south of that town, situated over against a village named El-Lebban (Lebonah), which lends its name also to a Khan on the road-side. Silin is merely a heap of ruins lying on a hill of moderate elevation at the south-eastern extremity of a valley through which passes the great north road from Judea to Galilee. Among the ruins of modern houses are traces of buildings of greater antiquity, and at some distance, towards the east, is a well of good water, and in the valley many tombs excavated in the rock. (Robinson, Bibl. Res. vol. iii. pp. 86—89.) Among the tombs of Sililoh, if Ieland's conjecture is correct, is to be sought the very slender authority on which the paganst rested their assertion that their demigod Silenus was buried in the country of the Hebrews; and the fact of the effigy of this deity being found on the coins of Flavia Neapolis, certainly lends countenance to his ingenious hypothesis that the fable originated in the imaginary correspondence between this name and the town of Ephraim. (Palaestina, p. 1017.) But the error which he has copied from Benewitz, in placing the tomb of Silenus at Sililoh, is obviously attributable to a lapse of memory on the part of that writer, as no one has ever identified Sililoh with the modern Nebi Samwil. The error is corrected by Asher. (Itinerary of R. Benobenz of Turdaled, ed. A. Asher, vol. i. p. 78, vol. ii. p. 95.)

SILAM. [JERUSALEM, p. 28, b.]

SILPIA, a town in Hispania Baetica, N. of the Baetis, and apparently in the Sierra Morena. (Liv. xxviii. 12.) Probably Linares. [T. H. D.]

SILSILIS (Not. Imp.), a fort situated on the right bank of the Nile, between Ombos and Apollinopolis Magna in Upper Egypt. The original name of this place is nearly preserved in the modern Silili. The fort of Silisii stood at the foot of the mountain now called Gebel Selsilek, or "hill of the chain," and was one of the points which commanded the passage of the river. For at this spot the Arabian and Libyan hills approach each other so nearly that the Nile, contracted to about half its ordinary width, seems to flow between two perpendicular walls of sandstone. Silisii was one of the principal seats for the worship of the Nile itself, and Rameses II. consecrated a temple to it, where it was worshipped under the emblem of a crocodile and the appellation of Hapi'moon. The stone quarries of Silisii were also celebrated for their durable and beautiful stone, of which the great temples and monuments of the Thebaid were for the most part built. (Wilkinson, Mod. Egypt and Judges, vol. ii. p. 283.)

SILVANECTES. This name occurs in the Notitia of the Provinces of Gallia, where the chief town is called Civitas Silvanectum. In the Notit. Imp. the Silvanectes are placed in Belgium beside Maastricht, but the name there denotes a town, according to the usage then established of giving to the capital towns the names of their people. It appears almost certain that the Subanecti of Prolemy (ii. 9. §11) is the same name as Silvanectae or Silvanectes. Politione places the Subanecti east of the Seine, and makes Ratonamus their capital. But this Ratonagus is conjectured to be the same as the Augustomagus of the Itin. and of the Table, which is Sensilis [Augustomagus].

Pliny (iv. c. 17) mentions the Umanetes in Galilia between Bessiob and Iulii, Umanetes liber, Tungri. It is possible that this too may be a collapsed form of Silvanectes, for the modern name Sensilis confirms the form Silvanecte, and the name Umanetes is otherwise unknown. [G. L.]

SILVIA, a place in Illyria, on the road from Sirmium to Salona. (Itin. Ant. p. 269.) It is probably the same town as the Salvia of Ptolemy [SALVIA]. It is identified with Keprius by La- pie. [T. H. D.]

SILVIUM (Σαλβιος: Eth. Silvius: Garagnone), a town of Apulia in the interior of the country. It is noticed by Strabo (vi. p. 283) as the frontier town of the Pentectii, and its name is noticed by Pliny among the municipal towns of Apulia (Plin. iii. 11. s. 16). But at a much earlier period it is mentioned by Diodorus as an Apulian town, which was wrested from the Samnites by the Romans in B. C. 306 (Diod. xx. 80). Our only clue to its position is derived from the Itineraries, which place it 20 miles from Venisa, on the branch of the Appian Way which led direct to Tarentum. This distance coincides with the site of a town (now destroyed) called Garagonone, situated about midway between Spinazzola and Triggia Orecina, and nearly due E. of Venosa (Pratti, Vita Appia, iv. 6. p. 472; Romanelli, vol. ii. p. 188).

SILURA, an island of Britain, separated only by a narrow strait from the coast of the Dunnoii, who inhabited the most SW. point of Britannia. (Solin. c. 22.) It is probably the same island which Sul-picins Severus (ii. 51) calls Sylvia, and seems to mean the Scilly Islands. [T. H. D.]

SILURES (Σαυρίς, Plut. ii. 3. § 24), a powerful and warlike people in the W. part of Britannia Ro- mana, whose territory was bounded on the S. by the estuary of the Sabrina. The important towns of Isca and Venta belonged to them. Tacitus (Agr. 11) calls them descendants of the Iperi of Spain, and states that they had emigrated from Ireland into Britain; but there seems to be no foundation for this opinion. (Cf. Zeuss, Die Deutschen, p. 202.) Although subjugated by the Romans, they caused them continual alarm; and they were the only people of Britain who, at a later period, main- tained their independence against the Saxons. (Bedo, Hist. Eec. i. 12, seq.; cf. Tac. Ann. xxi. 2, 51; Plin. iv. 1. s. 30.) [T. H. D.]

SIMEQNA (Σίμεσικος: Eth. Σιμησίας), a town on the coast of Lycia, 60 stadia from Aperlae (Plin. v. 27; Steph. B. s. v.; Staduam, Mar. Mag. §§ 239, 240, where it is called Somena, Σιμησίας; comp. Leake Asia Minor, p. 188; Spratt and Forbes, Travels in Lycia, vol. i. p. 137, vol. ii. pp. 86, 274.) [L. S.]

SIMEQNA. [IZEN.]

SIMEQNA. [PATERASTA, p. 529, b.]

SIMITTU (Σιμιττός, Plut. iv. 3. § 29), called by Pliny (v. 4. § 4) Simitenses Oppidum, a Roman colony in the interior of Numidia, on the road from Carta to Carthago. 7 miles to the W. of Bulla Regia. (Itin. Ant. p. 43.) There were some natural resources 5 miles E. of the town (ib.). It lay on the site of the present Ain Semit, on the Qued-el-Balt. 2 leagues to the W. of Bull. [T. H. D.]

SIMOIS (Σιμός), a small river of Tress, having its source in Mount Idas, or more accurately in Mount
Cataplus, and passing by Illion, joined the Scamander below that city. This river is frequently spoken of in the Iliad, and described as a rapid mountain torrent. (Il. iv. 473, v. 774, xii. 22, xiii. 308; comp. Aeschyl. Agam. 692; Strab. xiii. p. 597; Ptol. v. 2. § 3; Steph. B. s. v.; Pomp. Mela, i. 18; Plin. v. 2. § 3; the name is Ismene-brach, and at present its course is so altered that it no longer a tributary of the Scamander, but flows directly into the Hellespont. [L. S.]

SIMUNDU. [TAPPARISIANE.]

SIMYLLA (Σίμωλλα, Ptol. vii. 1. § 6), a commercial entrepot on the western coast of Hindostan, in the district called Άρακαλά Σαίδον. It is noticed in the Periplus by the name of Σίμωλα, and was probably at or near Bassee, a little N. of Bombay. [V.]

SIMYRA (Σιμύρα), a maritime city of Phœnicia mentioned by Pline in connection with Marathus and Antaracus, N. of Tripolis, Orthosia, and the river Eleuthers (v. 20). It is placed by Ptolemy between the mouth of the Eleuthers and Orthosia; and, if the figures can be trusted, 10° west of the former, 14° north, and in the same latitude with Orthosia (i. e. 34° 40'), but 40° east of it, which would seem either to imply an ignorance of the coast, or to intimate that Simyra lay at some distance from the shore, and that the Eleuthers ran southward to the sea. Strabo says that it was occupied by the Aradianis, to other with the neighbouring Marathus (xvi. p. 753), apparently placing it north of the Eleuthers. In addition to what has been said under Marathus, and in confirmation of the identification there attempted, the following may be cited from Shaw, and will serve to illustrate the situation of Simyra: "The ancient Marathus may be fixed at some ruins near the Serpent Fountain, which make, with Ronwadele and Tortosa, almost an equilateral triangle. About 5 miles from the river Akker, and 24 to the SSE. of Tortosa, there are other considerable ruins known by the name of Sunwar, with several rich plantations of mulberry and other fruit trees growing in and round about them. These, from the very name and situation, can hardly be other than the remains of the ancient Simyra ..., the seat formerly of the Zemarites. Pline v. 20) makes Simyra a city of Coediaesyria, and acquaints us that Mount Libanus ended there to the northward; but as Sunwar lies in the Jeune (i.e. the great plain), 2 leagues distant from that mountain, this circumstance will better fall in with Arca, where Mount Libanus is remarkably broken off and discontinued." (Travels, pp. 268, 269.) The ruins of Arca are 5 miles E. of Sunwar, and 2 leagues WSW. of Arca is the Naher-el-Berd, the Cold River, which Shaw and others identify with the Eleuthers. It is manifest how irreconcilable all this is with Ptolemy and other ancient geographers. [ELEUTHERUS; ORTHOSIA; MARATHUS.] [G.W.]

SINA. [SENA.]

SINA (οί Σίναι, Ptol. vii. 3., &c.), the ancient nation of the Chinese, whose land is first described by Ptolemy (l. c.) and Marcianus (p. 29, seq.), but in an unsatisfactory manner. Indeed, the whole knowledge of it possessed by the Greeks and Romans rested on the reports of individual merchants who had succeeded in gaining acquaintance among a people who then, as in modern times, isolated themselves as much as possible from the rest of the world. For the assumption which Descartes sought to establish, that a political alliance was formed between Rome and China, and that the emperor M. Aurelius Antoninus sent a formal embassy thither in the year 166, rests solely on the name of Yen-Tun, which writer discovered in some ancient Chinese annals, and must therefore be regarded with great suspicion. (See Bohlen, das Alte Indien, i. p. 71.) According to the description of Ptolemy, the country of the Sinae extended very far to the W., and was connected with the E. coast of Africa by an unknown land, so that the Indian Ocean formed a large Mediterranean sea. He does not venture to define its eastern boundary, but finishes his account of the known earth with the 180th degree of longitude, without, however, denying that there were tracts of unknown land still further to the E. But Cosmas Indicopleustes (ap. Montfaucon, N. Coll. Patrum, ii. p. 357), who calls the country of the Sinae Ζητητα, was the first who laid down its correct boundary by the ocean on the E. On the N. it was bounded by Serica, and on the S. and W. by India extra Gangem, from which it was divided by the river Aspithra (probably the Bangpa-Kang) and the Semantine mountains. Thus it embraced the southern half of China, and the eastern part of Further India, as Tungquiu, Cochin-China, Cambouja, &c. Ptolemy mentions several large bays and promontories on the coast. At the extreme N., at the Indian Ocean, where the land of the Sinae abutted on Further India, was the great gulf, of Siam), which on the coast of the Sinae was formed by the South Cape (τὸ Νότιον ἄκρον) (probably Cape Cambouja), and on the side of India by another large promontory (perhaps Cape Romania). To the S. of South Cape, and between it and the Cape of the Satyrs (ἲησιόν ἄκρα), Ptolemy and Marcianus (p. 30) place another large bay called Theriodes (ὁ προσεχθεν κόλπος), and to the S. of the Cape of Satyrs, again, and between it and the mouth of the river Cottiaris, the Bay of the Sinae (Σιναίν κόλπος). These vague and incorrect accounts do not permit us to decide with any confidence respecting the places indicated by Ptolemy; but it has been conjectured that the Cape of the Satyrs may have been Cape St. James, the Theriodes being the bay between it and the mouth of the river Cambouja or Magbanjou, and the Bay of the Sinae the gulf of Tungquiu. Among the mountains of the country Ptolemy names only the Mentes Semanthini (Σιναμεθυνί έρως), which formed its NW. boundary. Among the rivers indicated are the Aspithra (Ἀσπίθρα), rising in the mountains just mentioned, to which we have already alluded; the Ambastus (Ἀμβαστός), probably the Cambouja, which fell into the Great Bay between the town of Bramma and Rhabana; the Semos or Sinais (Σεμώς ο Σιναί) more to the S.; and further still in the same direction the Cottiaris (Κοττιαρίς). This latter flows into the bay of the Sinae to the N. of the town of Cattigara. The last may perhaps be the Si Kiang, which discharges itself at Canton. Respecting the nation of the Sinae themselves, we have no information, though Ptolemy mentions several subdivisions of them; as in the N. the Semanthini, on the like named mountains; S. of them the Acaudura, with a town called Acdara, and again to the S. the Aspithrae, on the Aspithrae, and having a city of the same name as the river. S. of the latter, on the Great Bay, and dwelling on the river Ambastus, were the Ambastae. Lastly, in a still more southern district between the bay of Theriodes and that of the Sinae, were the Archiæques.
Ichthyophagi and the Sinæ Ichthyophagi. Among the 3 cities mentioned by Ptolemy, namely, Brahma, Rhahma, Cattigara, Acadus, Asaphra, Cossamgra, Sarata, and Thinae or Sinæ, the last was undoubtless the most important, and was regarded by him and others as the capital of the Sinaic districts. It has been conjectured to be Thais, in the province of Chempa, or even Nettakin itself. It may be remarked that the Sinæ were anciently called Thinae (Ovor); though it is said that this form of their name only arose from the Arabic pronunciation of Sinæ. (See Sickler, ii. p. 518; Gesenius, Heb. Lex. p. 788.)

The next town in point of importance was Cattigara, which both Ptolemy and Marcianus regard as the chief place of trade. [CATTIGARA.] [T.H.D.]

SINAI (Sīnā' ṣop), the celebrated mountain of Arabia Petraea. It, however, lent its name to the whole peninsula in which it was situated, which must therefore first be described. It is formed by the bifurcation of the Red Sea at its northern extremity, and is bounded by the Heropolitans Sinus (or Sea of Suez) on the west, and the Aelantitic Sinus (the Gulf of Akaba) on the east, ending in the Posidium Promontorium (Ros Mohammed). At the northern extremity of the Sea of Suez stood Arsinoe (Suez), and Aelana (Akaba), at the extremity of the gulf that bears its name. The caravans road of the great Hajj, which joins these two towns, traverses a high table-land of desert, known as Et-Tih;* the Wilderness of the Wandering," part of ancient Idumæa. To the south of this road, the plateau of chalk formation is continued to Jebel Tih, the µarkases ṣop of Ptolemy, extending from the eastern to the western gulf, in a line slantly curved to the south, and bounded in that direction by a belt of sandstone, consisting of arid plains, almost without water or signs of vegetation. To this succeeds the district of primitive granite formation, which extends quite to the southern cape, and runs into the Gulf of Akaba on the east, but is separated by a narrow strip of alluvial soil called Et-Kas from the Sea of Suez. The northern part of the Tih is called in Scripture "the wilderness of Paran" (Numb. xii. 16, xiii. 3, xxxii. 8, &c.), in which the Israelites abode or wandered during great part of the forty years; although Eusebius and St. Jerome, as will be presently seen, identify this last with the wilderness of Sin. This wilderness of Sin is commonly supposed to be connected, in name and situation, with Mount Sinai; but as the Israelites entered on the wilderness of Sin on leaving their encampment by the Red Sea, the next station to Elim (Exod. xvi. 1; Num. xxxiii. 10, 11), and traversed it between Elim and Zephrim, where they had apparently left it (Exod. xxvii. 1),—for Dophkah and Alash are inserted between the two in Numbers xxxiii. 12—14,— and yet had not arrived at Sinai (ver. 15; Exod. xvi. 1), it may be questioned whether the identification rests on solid ground. Eusebius and St. Jerome, who distinguish between the deserts of Sin and Sinai, yet appear to extend the former too far eastward. "The desert of Sin," they say, extends between the Red Sea and the desert of Sin; for they came from the desert of Sin to Zephrim and thence to the desert of Sinai, near Mount Sinai, where Moses received the revelation of the Law; but this desert is the same as that of Kudades according to the Hebrew, but not according to the LXX." The confusion indicated by this last remark may be explained by the observations, 1st. that Sin, which is a synonym for the wilderness of Kadesh" (Numb. xx. 1, xxxiii. 36), is identical in Greek with the Sin (i.e. Σίν); the Σ representing both the ס (tavdi) of SIN and the ס (samech) of SIN; and, 2dly, that instead of making Sin identical with Kadesh, as it is in the Hebrew, the LXX. read so as to make "the desert of Paran," which they identify with "the desert of Kadesh," an intermediate station between Sin and Mount Hor. (Numb. xxxiii. 36, in LXX.)

The wilderness of Sin, then, must be fixed to the northwest part of the granite district of the peninsula between Serbal and the Red Sea, while Zin is north of Ezion Geber, between it and Mount Hor,—the southern extremity in fact of Wady Missâ, or the Arabah, north of Akaba.

With respect to Sinai, it is difficult to decide between the rival claims of the two mountains, which, in modern as in ancient times, have been regarded as the Mountain of the Law. The one is Serbal above-mentioned, situated towards the NW. extremity of the granite district, towering with its five sharp-pointed granite peaks above the fruitful and agreeable oasis of Wady Pharan, still marked by extensive ruins of the churches, convents, and buildings of the old episcopal town of Paran; the other between 30 and 40 miles south-east of Serbal, in the heart of the granite district, where native tradition has always been vague, and where the mountains and valleys names connected with the inspired narrative of the giving of the Law, and where the scenery is entirely in unison with the events recorded. Emerging from the steep and narrow valley Nakkâ Ilawâa, whose precipitous sides rise to the perpendicular height of 1000 feet, into the wide plain called Wady Missâ, at the northern base of the traditonal Horeb, Russegger describes the scene as grand in the extreme. "Bare granite mountains, whose summits reach to a height of more than 7000 feet above the level of the sea; wonderful, I might say fabulous, forms encompass a plain more than a mile in length, in the background of which lies the convent of St. Catharine, at the foot of Jebel Missâ, between the holy Horeb on the west, and Ebstemmi on the east." In this valley, then, formed at the base of Horeb by what may be called a junction of the Wady-cr-Rabâb and Wady-sh-Sheikh, but which, according to Russegger's express testimony, bears in this place the native name of Wady MISSâ, must the children of Israel have encamped before Jebel MISSâ, whose rugged northern termination, projected boldly into the plain, bears the distinctive name of Ros Sinâfâb. Jebel Missâ rises to the height of 5056 Paris feet above the sea, but is far from being the highest of the group. Towering high above it, on the south, is seen the summit of Horeb, having an elevation of 7097 Paris feet, and south of that again Jebel Katherina, more than 1000 feet higher still (viz. 8168 Paris feet), all outtopped by Jebel-om-Shomer, the highest of this remarkable group, which attains an altitude of 8300 Paris feet. Over against Jebel Missâ on the north, and confining the valley in that direction, is the spur of a mountain which retains in its name, Jebel Sena, a memorial of the ancient Scripture appellation of the Mountain of the Law. To attempt anything like a full discussion of the questions arising between the advocates of the conflicting traditions or hypotheses, would be as inconsistent with the character of such an article as this, as with the limits which must be assigned it: a very few remarks.
