must suffice. There seems, then, to be no question that the site of Horeb was traditionally known to the Israelites for many centuries after the Exodus (1 Kings, xix. 8); and if so, it is improbable that it was subsequently lost, since its proximity to Kahl and Eilat has been so long in possession, would serve to ensure the perpetuity of the tradition. It is worthy of remark that Josephus nowhere uses the name Horeb, but in the passage parallel to that above cited from the 1st book of Kings, as uniformly throughout his history, substitutes to Μανάων, if so—so far confirming the identity of locality indicated by the two names, learnedly maintained by Dr. Lepsius, who holds Horeb to be an Ammanite appellative equivalent in signification with Sin, both signifying "earth made dry by draining off the water," which earth he finds in the large mounds of alluvial deposit in the bed of Warde Faran, at the northern base of Serbal, his Sinai. Buxtorf, however, cites rational authorities for another etymology of Sinai, derived from the nature of the rock in the vicinity. (See Show's Travels, 4to, p. 443, and note 7.) Josephus does not in any way identify the site; but Eusebius and St. Jerome have been erroneously understood to describe Serbal under the name Sinum, when they say that Pharan was sent to Arabia, next to the desert of the Saracen, through which the children of Israel journeyed when they decamped from Sinai (Onomast, s. v. Pharenis); for they obviously confound the city of Pharan with the wilderness mentioned in Numbers (xii. 16, xiii. 3), and the description is so vague as to prove only their ignorance, if not of the true site of the city Pharan (which they place 3 days east of Aila), at least of the utter want of all connection between this and the desert of Zin, which is Parah; and in this, as in other passages, on which much reliance has been placed in this discussion, it is clear that they are not writing from any local knowledge, but simply drawing deductions from the Scripture narrative. —See e. g. Onomast, s. v. Raphadim, which we are perhaps equally competent to do. The earliest Christian writer, then, who can be quoted as a witness to the true site of the "Mountain of the Law" is Cosmas Indicopleustes (civ. A. D. 550), who mentions, doubtless in the Holy Ghora (desert 7), as near to Pharan, about 6 miles distant; and this Pharan must be the Pharan of the ecclesiastical annals, whose ruins at the foot of Mount Serbal have been noticed above. This then is direct historical testimony in favour of a hypothesis first started by Birkhardt in modern times, advocated by Dr. Lepsius, and adopted by Mr. Forster and others. But that it appears to be the only clear historical evidence, and must therefore be compared with that in favour of the existing tradition, which, as it is accepted in its main features by Drs. Robinson and Wilson, Ritter, Mr. Stanch and other eminent scholars, is obviously not unworthy of regard. That the present convent of St. Catharine was originally founded by the emperor Justinian (about A. D. 556), is, at least as any fact in history; and it is equally difficult to imagine that, at so short an interval after the journey of Cosmas, the remembrance of the true Sinai could have been lost, and that the emperor of the monks would have prescribed in what they knew to be a fictitious site; for the mountain had long been regarded with reverence by the monks, who, however, had erected no monastery before this time, but dwelt in the mountains and valleys about the bahr in which God appeared to Moses. (Entychii Annales, tom. ii. p. 163; comp. Procopius, De Aedificiis Justiniani, v. 8); so that when their monasteries are mentioned in earlier times, it is clear that the monastic cells only are to be understood. On the whole, then, the testimony of Cosmas can hardly avail against a tradition which was not originated, but only perpetuated, by the erection of Justinian's convent at Sinai. To this historical argument in favour of the existent traditions, any graphical one may be added. If Rephaim is correctly placed by Dr. Lepsius and others at the foot of Serbal, it seems to follow incontestably that Serbal cannot be Sinai; for what occasion could there be for the people to decamp from Rephaim, and journey to Sinai, if Rephaim were at the very base of the mount? (Eosed. xiv. 1, 2). Dr. Lepsius feels the difficulty, and attempts to remove it by insinuating that the sacred narrative is not to be implicitly trusted. That Horeb is mentioned in connection with Rephaim is certainly a palpable difficulty (Eosed. xvii. 1-6), but in a choice of difficulties it is safer to adopt that which does least violence to the sacred text.

By far the strongest argument in favour of the identity of Serbal with Sinai is to be found in the celebrated inscriptions with which the rocks on that mountain and in the surrounding valleys are covered. Not that anything can be certainly determined from these mysterious records, while the art of deciphering them is still in its infancy. The various theories respecting them cannot here be discussed; the works containing them are referred to at the end of the article: but it may be well to put on record the whole of the earliest testimony concerning them, and to offer for their elucidation an observation suggested by an early writer which has been strangely overlooked in this discussion. It is an interesting theory of Cosmas Indicopleustes, that the Israelites, having been instructed in written characters in the Decalogue given in Horeb, were practised in writing, as in a quiet school, in the desert for forty years: "from whence it comes to pass," he proceeds, "that you may see in the desert of Mount Sinai, and in all the stations of the Hebrews, all the rocks in these parts, which have rolled down from the mountains, engraved with certain inscriptions as if by itself, who journeyed in those parts, testify; for certain Jews also having read, interpreted to us, saying that they were written thus. 'The pilgrimages (H2papai) of such an one, of such a tribe, in such a year, and such a month,'—as is frequently written in our hostelries. For they, having newly acquired the art, practised it by multiplying writing, so that all those pieces are full of Hebrew inscriptions, preserved even unto this time, on account of the unbelievers, as I think; and any one who wishes can visit those places and see them, or they can inquire and learn concerning that which I have spoken the truth." (Cosmas Indicopleustes, de Mundo, lib. v. apud Montanam, Collectio Nova Patrum, tom. ii. p. 205.) On this it may suffice to remark, that while it is certain that the characters are neither the original nor later Hebrew, — i.e. neither Phoenicin nor Chaldaic, — still the Jews in Cosmas's company could decipher them. We know that they are for the most part similar to the ancient Arabian (the Hanyaorit or Hadramudite) character, with which the whole region in the south of the Arabian peninsula teems. If, then, Mr. Forster's ingenious and very probable conjecture of the identity of the rock-hewn inscription of Ilisan Ghorab with that
copied by Abderakhman from the southern coast of Arabia, preserved and translated by Schultens, is correct, it will follow that the old Arabic character was decipherable even two centuries later than the date assigned to it. Compelled to conclude scarcely have failed to discover the Christian origin of these inscriptions, if they had been really Christian. Indeed it may well be questioned whether any Christians could have been sufficiently conversant with this ancient character to use it as freely as it is used on the rocks of the peninsula. Certainly if the hypothesis of this place having been resorted to as a place of pilgrimage by the pagan tribes of Arabia, and so having acquired a sanctity in the very earliest times, could be established, the fact might furnish a clue to the future investigation of this deeply interesting subject, and, as Ritter has suggested, might serve to remove some difficulties in the Sacred Narrative. Now the journal of Antoninus Phæconius does in fact supply so precisely what was wanting, that it is singular that his statement has attracted so little notice in connection with the Sinaitic inscriptions; which, however, he does not expressly mention or even allude to. But what we do learn from him is not unimportant, viz., that before the time of Isâlam, in "the ages of ignorance," as the Mohammedans call them, the peninsula of Mount Sinai was a principal seat of the idolatrous superstition of the Arabians; and that a feast was held there in honour of their miraculous idol, which was resorted to by Isâlimmâtes, as he calls them, from all parts; the memorial of which feast seems still to be preserved by the Bedawin. (Burckhardt, Syria, pp. 566, 567.) Now when it is remembered that the eastern commerce of Greece and Rome, conducted by the Arabs of Yemen and Hadramaunt, must have brought their merchants and sailors to the vicinity of this ancient sanctuary at Arsinoe or at Elana, the pilgrimage becomes almost a matter of course; and the practice which we know prevailed in their own country of graving their memorials with an iron pen in the rock for ever, was naturally adopted by them, and imitated by the Christian pilgrims in after times. Undue stress has been laid on the frequency of the inscriptions about Serbal, contrasted with their rarity about Jebel Ma'mûn; but it should be remembered that they are executed almost entirely in the soft sandstone which meets the granite on and around Serbal, but which is scarcely found in the interior, where the hard, primitive rock did not encourage the scribbling propensities of the travelers, as the softer tablets in the more western part, where the blocks of trap-stone (which are also largely interspersed with the granite, and which present a black surface without, but are lemon-coloured within) were studiously selected for the inscriptions, which, in consequence, come out with the effect of a rubricated book or illuminated manuscript, the black surface throwing out in relief the lemon-coloured inscriptions.

This account of the peninsula must not be concluded without a brief notice of the very remarkable temple of arbat-el-Chidien, and the stele which are found in such numbers, not only in the temple, but in other parts of the peninsula, where large masses of copper, mixed with a quantity of iron ore, are still and are found in certain strata of the sandstone rocks along the skirts of the primeval chain, and which gave to the whole district the name still found in the hieroglyphics, Maphath, "the copper land," which was under the particular protection of the goddess Hathor, Mistress of Maphath. The temple, dedicated to her, stands on a lofty sandstone ledge, and is entirely filled with lofty stelae, many of them like obelisks with inscriptions on both sides, so crowded with them in fact, that its walls seem only made to circumscribe the stelae, although there are several erected outside it, and on the adjacent hills. The monuments belong, apparently, to various dynasties, but Dr. Lepsius has only specially mentioned three, all of the twelfth. The massive crust of iron ore covering the hilltops, 250 yards long and 100 wide, to the depth of 6 or 8 feet, and blocks of scoriae, prove that the smelting furnaces of the Egyptian kings were situated on these airy heights; but the cairns in which the ore was found contain the oldest effigies of kings in existence, not excepting the whole of Egypt and the pyramids of Gizeh.

The chief authorities for this article, besides those referred to in the text, are Niebuhr (Voyage en Arabie, vol. i. pp. 181—204); Seetzen (Reisen, vol. iii. pp. 55—121). For the physical history and description of the peninsula, Rüssiger is by far the fullest and most trustworthy authority (Reisen, vol. iii. pp. 22—58). Dr. Robinson has investigated the history and geography of the peninsula, with his usual diligence (Travels, vol. i. §§ 3, 4, pp. 87—111); and Dr. Wilson has added some important observations in the way of additional information or correction of his predecessor (Lands of the Bible, vol. i. chapters vi.—viii. pp. 160—275). Lepsius' Tour from Thebes to the Peninsula of Sinai (Letters, pp. 310—321, 556—562), which has been translated by C. H. Cottrell (London, 1846), argues for Serbal as the true Mountain of the Law; and his theory has been maintained with great learning and industry by Mr. John Hogg (Remarks on Mount Serbal, &c. in Transactions of the Royal Society of Literature, 1849). The graphic description of the country from Mr. A. P. Stanley's pen is the latest contribution to the general history of the peninsula (Sinait and Palestina, 1856). The decipherment of the inscriptions has been attempted by the learned Orientalists of Germany, Gesenius, Roediger, Beer, and others (Ch. Bunsen, Christianity and Mankind, vol. iii. pp. 231—234); and Mr. Forster has published a vindication of his views against the strictures of Mr. Stanley on his original work (The Voice of Israel from the Rocks of Sinai, 1851; The Isrealith Authorship of the Sinaitic Inscriptions, 1856).

MINCH, a sub-division of the Sarmatian tribe of the Tauri. (Anm. Mar. xxii. 8. § 33.) [T. H. D.]

SINDA (Σινάδα; Eth. Sindiness), a town which seems to have been situated on the western frontier of Pisdia, in the neighbourhood of Ciliyra and the river Caturias (Liv. xxviii. 15; Strabo, xii. p. 570, xiii. p. 630). Stephanus B. (s. v. Σινάδα), who speaks of Sinda as a town of Lycia, is probably alluding to the same place. (Comp. Hieroc. p. 680; Polyb. Excerpt. de Leg. 30.) Some writers have confounded Sinda with Isanda, which is the more surprising, as Livy mentions the two as different towns in the same chapter (Leake, Arc. Minor, p. 152.) [L. S.]

SINDA SARMATICA (Σινάδα Σαρμάτια), Ptol. v. 9. § 8), a town or village in Asiatic Sarmatia, in the territory of the Sindi, with an adjoining harbour (Σινάδεος Ἀκρόπολις, Ptol. ii. 180) stadia E. of the mouth of the Besporus Cimmerius at Corcondama, and, according to Arrian (Per. P. Eux. p. 19). 500
SINDI.

SINGARA (Σινγάρα, Dion Cass. xviii. 22), a strongly fortified post at the northern extremity of Mesopotamia, which for awhile, as appears from many coins still extant, was occupied by the Romans as an advanced colony against the Persians. Its position has not been clearly defined by ancient writers, Stephanus B. calling it a city of Arabia, near Edessa, and Ptolemy placing it on the Tigris (v. 18, § 9). There can, however, be no doubt that it and the mountain near it, called by Ptolemy δέκατος ἐπος (v. 18, § 2), are represented at the present day by the district of the Singar. It appears to have been taken by Trajan (Dion Cass. xlviii. 22): and as the legend on some of the coins reads AYP . CEII. KOA . CINGARA, and bears the head of Gordian, it appears to have formed a Roman colony under the emperors Severus and Galerian. It was the scene of a celebrated nocturnal conflict between Constantius and Sapor, the king of Persia, the result of which was so unsatisfactory that both sides claimed the victory. (Ann. Marc. xviii. 5; Eutrop. x. 10; Sext. Ruf. c. 27.) Still later, under the reign of Julian, it is recorded that he underwent a celebrated siege, and at length was carried by the Persians by storm, though gallantly defended by the townspeople and two legions. (Ann. Marc. xx. 6.) The country around it is stated by Ammianus and Theophylactus to have been a region which required equally difficult to take or to relieve from a distance. [V.]

SINGIDAVA (Σιγινδάβα, Ptol. iii. 8, § 8), a town in the interior of Dacia, between the rivers Tysia and Aluta, now Dorv on the Marosch. [T.H.D.]

SINGIDUNUM (Σινγιδούνιον, Ptol. iii. 9, § 3), a town in Moesia Superior, at the spot where the Sivaus falls into the Danubius, and on the main road along the banks of the latter river, opposite to the town of Taurumnum (Semlina) in Pannonia. (Hib. Ant. p. 192; Hib. Hierosol. p. 568.) By Procopius (de Aed. iv. 6, p. 287) it is called Σιγινδατας. It was a fortress, and the head-quarters of the Legio iv. Flavia Felix (Not. Imp.), the modern Belgrade.

SINGILL or SINGILIS, a town of Hispании Baetica. (Plin. iii. 1, s. 3.) It lay near Cartilón or Valseturra, and D'Anville (i. p. 39) identifies it with Uxente de don Gonzalez. Concerning its ruins and inscriptions, see Florcz, Exp. Sagra. ix. p. 42, xii. 20; Morales, p. 21. [T.H.D.]

SINGITCUS SINUS. [Singesis.]

SINGONE (Σιγγόνη), a town of the Quadi in the south-east of Germany, mentioned by Ptolemy (ii. 11, § 30) but otherwise unknown. [L.S.]

SINGILIS, a tributary river of the Bacstis navigable as far as Astigi. (Plin. iii. 1, s. 3.) Now the Xelim.

SINGUS (Σιγγός), Hерod. vii. 122; Thuc. v. 18; Böckh, Corp. Insocr. vol. i. p. 304; Ptol. iii. 13, § 11; Stephan. B. s. r.; Plin. iv. 17; Etr. Σιγγόνη), a town of Tithonia in Macedonia, upon the gulf to which it gave its name, SINGITCUS SINUS (Σιγγιτκός κόλπος, Ptol. i. c.; Gulf of 'Aţhlim Oros), identified with Sibyk, probably a corrupted form of the old name. (Leake, Northern Greece. vol. iii. p. 153.) [E.B. 3.]

SINHAR, a district of Babylonia, which is mentioned in Genesis under the title of the "land of Shinar." It is noticed under the name of Ἄταρα τῆς Βαβυλωνίας by Hesiodus of Miletus, quoted by Josephus (Ant. Jud. i. 5) and Eusebius (Praepar. Evang. ix. 15; comp. Gen. xi. 2; Isinah, xi. 11;
Zeck. v. 11). It would seem to comprehend especially the great plain land of Babylon, as distinguished from Assyria and Elamitis (Gen. xiv. 1), and probably tended to the junction of the Tigris and Euphrates, if not far as the Persian Gulf. Some have, without reason, confounded it with Sin-para, the modern Singir.

SINIS (Singes), a Roman colonie in the district of Mehitone in Armenia Minor. (Pol. v. 7. § 5.) The place is not mentioned by any other writer, but it is possible that it may be the same place as the one which Procopius (de Aed. iii. 4) simply calls Κόλω νας. [L. S.]

SINNA. 1. (Σωνᾶ, Pol. v. 18. §§ 11, 12), the name of two towns in Mesopotamia, one on the S. coast to the point of Mount Matus, the other more to the SE., on the Tigris.

2. (Σοῖνα, Strab. xvi. p. 755), a mountain fortress in Lebanon. [T. H. D.]

SINONIA (Zamone), was the name given in ancient times to the smallest of the three islands known as the Æsole of Pontus. It is situated about 5 miles to the NE. of Pontia (Ponza), the principal island of the group (Plin. iii. 6. 12; Mel. ii. 7. § 18). [E. H. B.]

SINOPÆ (Σινωπᾶ: Eih. Sinωπᾶ), the most important of all the Greek colonies on the coast of the Euxine, was situated on a peninsula on the coast of Paphlagonia, at a distance of 700 stadia to the east of Cape Caramis (Strab. xii. p. 546; Marcian, p. 73; Eustath. ad Dion. Per. 775.) This was a very ancient place, its origin being referred to the Argonauts and to Sinope, the daughter of Aesonus. (Apollon. Rhod. ii. 947; Val. Flacc. v. 108.) But the Sinopienses themselves referred the foundation of their city to Autolycus, a companion of Heracles, and one of the Argonauts, to whom they paid heroic honours (Strab. l. c.). But this ancient town was small and powerless, until it received colonists from Miletus. The Miletians were in their turn dispossessed by the Cimmerians, to whom Herodotus (iv. 12) seems to assign the foundation of the city; but when the Cimmerians were driven from Asia Minor, the Ephesians (in b. c. 632) recovered possession of their city. (Seym. 204, foll.; Anonym. Peripl. P. E. p. 8.) The leader of the first Miletian colony is called Ambron, and the leader of the second Cons and Crites; though this latter statement seems to be a mistake, as Eustathius and Stephanus B. (s. c.) call the founder Critios, a native of Cos. After this time Sinope soon rose to great power and prosperity. About the commencement of the Ptolemaic war the Sinopienses, who were then governed by a tyrant, Timesileus, received assistance from the Athenians; and after the expulsion of the tyrant, 600 Athenian colonists were sent to Sinope (Plut. Pericl. 20). At the time of the retreat of the Ten Thousand under Xenophon, Sinope was a wealthy and flourishing city, whose dominion extended to the river Halys, and which exercised great influence over the tribes of Paphlagonia and Cappadocia, independently of its colonies of Cerasus, Cucydra, and Trapezus. It was mainly owing to the assistance of the Sinopienses, that the returning Greeks were enabled to procure ships to convey them to Heraclea (Xenop. Anab. v. 5. § 3; Arrian, Peripl. P. E. p. 87; Diod. Sic. xiv. 30, 32; Amm. Marc. xxii. 8). Strabo also acknowledges that the fleet of the Sinopienses held a distinguished position among the naval powers of the Greeks; it was mistress of the Euxine as far as the entrance of the Bosphorus, and divided with Byzantium the lucrative tunny fisheries in that sea. In the time of Ptolemy Soter, Sinope was governed by a prince, Sydriothenus, to whom the Egyptian king sent a Limassian, the master of the port. (Tai. Hist. iv. 32, 87.) Its great wealth, and above all its excellent situation, enabled the city to expand the city, the city to become one of the greatest in the region, and to rival the city of Byzantium. It was first assailed in b. c. 220, by Mithridates IV., the great-grandfather of Mithridates the Great. Polybius (iv. 56), who is our principal authority for this event, describes the situation of Sinope in the following manner: It is built on a peninsula, which advances out into the sea. The isthmus which connects the peninsula with the mainland is not more than 2 stadia in breadth, and is entirely barred by the city, which comes up close to it, but the remainder of the peninsula stretches out towards the sea. It is quite flat and of easy access from the town; but on the side of the sea it is precipitous all around, and dangerous for vessels, and presents very few spots fit for effecting a landing. This description is confirmed by Strabo (xii. p. 545), for he says that the city was built on the neck of the peninsula; but he adds, that the latter was girt all around with rocks hollowed out in the form of basins. At high water these basins were filled, and rendered the shore inaccessible, especially as the banks of the rocks were everywhere so pointed that it was impossible to walk on them with bare feet. The Sinopienses defended themselves bravely against Mithridates, and the timely aid of the Rhodians in the end enabled them to compel the aggressor to raise the siege. Pharmaces, the successor of Mithridates IV., was more successful. He attacked the city unexpectedly, and finding its inhabitants unprepared, easily overpower'd it, b. c. 183. From this time Sinope became the chief town, and the residence of the kings of Pontus. (Strab. l. c.; Polyb. xxiv. 10) Mithridates, unnamed Euergetes, the successor of Pharmaces, was assassinated at Sinope in b. c. 120 (Strab. x. p. 477). His son, Mithridates the Great, was born and educated at Sinope, and did much to embellish and strengthen his birthplace: he formed a harbour on each side of the isthmus, built naval arsenals, and constructed admirable reservoirs for the tunny fisheries. After his disaster at Byzantium, the king intrusted the command of the garrison of Sinope to Bacchides, who acted as a cruel tyrant; and Sinope, pressed both from within and from without, was at last taken by Lucullus after a brave resistance. (Strab. l. c.; Plut. Lucull. 18; Appian, Bell. Mithr. 83; Memnon, in Phot. Cod. p. 238, ed. Bekker.) Lucullus treated the Sinopienses themselves mildly, having put the Pontian garrison to the sword; and he left them in possession of all their works of art, which embellished the city, with the exception of the statue of Autolycus, a work of Sthenes, and the sphere of Biharus. (Strab. Plut. ll. cc.; Cic. pro Leg. Man. 8.) Lucullus restored the city to its ancient freedom and independence. But when Pharmaces, the son of Mithridates, had been routed at Zela, Cesar took Sinope under his protection, and established Roman colonies there, as we must infer from coins bearing the inscription Col. Jul. Cae. Felix Sinope. In the time of Strabo Sinope was still a large, splendid, and well fortified city; for he describes it as surrounded by strong walls, and adorned with fine porticoes, squares, gymnasia, and other public edifices. Its commerce indeed declined, yet the tunny fisheries formed an inexhaustible
source of revenue, which maintained the city in a tolerable state of prosperity. It possessed extensive suburbs, and numerous villas in its vicinity (Strab. L. c.; Plin. vi. 2). From Pliny's letter's (x. 91), it appears that the Sinopians suffered some inconvenience from the want of a good supply of water, which Pliny endeavoured to remedy by a grant from the emperor Trajan to build an aqueduct conveying water from a distance of 16 miles. In the time of Arrian and Marcian, Sinope still continued to be a flourishing town. In the middle ages it belonged to the empire of Trebizond, and fell into the hands of the Turks in A.D. 1470, in the reign of Mohammed II. Sinope is also remarkable as the birthplace of several towns of renown, such as Diogenes the Cynic, Baton, the historian of Persia, and Dipilius, the comic poet.

Near Sinope was a small island, called Scopulus, around which large vessels were obliged to sail, before they could enter the harbour; but small craft might pass between it and the land, by which means a circuit of 40 stadia was avoided (Marcian, p. 72, &c.). The celebrated Sinopian cinnabar (Σινοπικὸς μίλωτος, Σινωπικὴ γῆ) was not a product of the district of Sinope, but was designated by this name only because it formed one of the chief articles of trade at Sinope. Groskurd on Strabo, vol. ii. p. 437, foll.) The imperial coins of Sinope that are known, extend from Augustus to Gallienus. (Sestini, Num. Vet. p. 63; Rasche, Lex. Num. iv. 2. p. 1105, foll.)

Sinope, now called Sinib, is still a town of some importance, but it contains only few remains of its former magnificence. The wall across the isthmus has been built up with fragments of ancient architecture, such as columns, architraves, &c., and the same is found in several other parts of the modern town; but no distinct ruins of its temples, porticoes, or even of the great aqueduct, could be seen (Hamilton, Researches, vol. i. p. 306, &c.) [L. S.]

SINORIA (Σινώρια, Strab. xii. p. 555), a town on the frontier of Armenia Major, a circumstance which gave rise to a pun of the historian Theophanes who wrote the name Σινώρια. The place is no doubt the same as the one called Sinorega by Appian (Mithrid. 101), by Ammianus Marcellinus (xxvii. 7) Synhorium, by Ptolemy (v. 7. § 2) Simbra or Sinara, and in the Antonine Itinerary (p. 208) Sinervas. The pun upon the name made by Theophanes seems to show that the form Sinoria, which Strabo gives, is the correct one. The town was a fortes-cit built by Mithridates on the frontier between Greater and Lesser Armenia; but assuming that all the different names mentioned above are only varieties or corruptions of one, it is not easy to fix the exact site of the town, for Ptolemy and the Antonine Itinerary place it to the south-west of Satala, on the road from this town to Melitene, and on the Euphrates, while the Table, calling it Sinara, places it 79 miles to the north-east of Satala, on the frontiers of Pontus; but there can be no doubt that the Sinara of the Table is altogether a different place from Sinoria, and the site of the latter place must be sought on the banks of the Euphrates between Satala and Melitene, whence some identify it with Murad Chat, and others with Seaı Bachtı. [L. S.]

SINOTHM. [SYNONIUM.]

SINSI (Σίνσιοι, Pltol. iii. 8. § 5), a people in the S. of Dacia. [T. II. D.]

SINTI (Thuc. ii. 98; Steph. B. s. v.; Liv. xiii. 51), a Thracian tribe who occupied the district lying between the ridge called Cercine and the right or W. bank of the Styx, in the upper part of the course of that river, which was called from the

SINTICE (Σιντίκη, Ptol. iii. 13. § 30). When Macedonia was divided into four provinces at the Roman conquest, Sintice was associated with Bisaltia in the First Macedonia, of which Amphipolis was the capital (Liv. xlv. 29). It contained the three towns HERACLEIA, PAROECOPOLIS, TRISTOBUL. [EBJ.]

SINTIES. [LEMMOS.]

SINUessa (Σινουσέα or Σινουσέα: Eth. Σινουσενεός, Sinussamnus: Mondragone), a city of Latium, in the more extended sense of the name, situated on the Tyrrhenian sea, about 6 miles N. of the mouth of the Tiber, and, especially on the Via Appia, and was the last place where that great high-road touched on the sea-coast. (Strab. v. p. 233.) It is certain that Sinuessa was not an ancient city; indeed there is no trace of the existence of an Italian town on the spot before the foundation of the Roman colony. Some authors, instead, mention an obscure tradition that there had previously been a Greek city on the spot which was called Sinope; but little value can be attached to this statement. (Liv. x. 21; Plin. iii. 5. s. 9.) It is certain that if it ever existed, it had wholly disappeared, and the site was included in the territory of the Ausonian city of Vesuvia, when the Romans determined to establish simultaneously the two colonies of Minturnae and Sinuessa on the Tyrrhenian sea. (Liv. x. 21.) The name of Sinuessa was derived, according to Strabo, from its situation on the spacious gulf (Sinus), now called the Gulf of Gaeta. (S. v. p. 234.) The object of establishing these colonies was chiefly for the purpose of securing the neighbouring fertile tract of country from the ravages of the Samnites, who had already repeatedly overran the district. But for this very reason the plebeians at Rome hesitated to give their names, and there was some difficulty found in carrying out the colony, which was, however, settled in the following year, b. c. 206. (Liv. x. 21; Vell. Pat. i. 14.) Sinuessa seems to have rapidly risen into a place of importance; but its territory was severely ravaged by Hamilcas in b. c. 217, whose cavalry carried their devastations up to the very gates of the town. (Liv. xxii. 13, 14.) It subsequently endeavoured, in common with Minturnae and other "coloniae maritimae," to establish its exemption from furnishing military levies; but this was overruled, while there was an enemy with an army in Italy. (Id. xxvii. 38.) At a later period (b. c. 191) they again attempted, but with equal ill success, to procure a similar exemption from the naval service. (Id. xxxi. 3.) Its position on the Appian Way doubtless contributed greatly to the prosperity of Sinuessa; for the same reason it is frequently incidentally mentioned by Cicero, and we learn that Caesar halted there for a night on his way from Brundusium to Rome, in b. c. 49. (Cic. ad Att. ix. 15, 16, xiv. 8, ad Fam. xii. 20.) It is noticed also by Horace on his journey to Brundusium, as the place where he met with his friends Varus and Virgil. (Sat. i. 5. 46.) The fertility of its territory, especially of the adjoining ridge of the Mons Massicus, so celebrated for its wines, must also have tended to promote the prosperity of Sinuessa, but we hear little of it under the Roman Empire. It received a body of military colonists, apparently under the Triunvirate (Lib. Col. p. 237), but did not retain the rank of a Colonial, and
is termed by Pliny as well as the Liber Colonarum only an "oquidum," or ordinary municipal town. (Plin. iii. 5. s. 9, Lib. Col. l. c.) It was the furthest town in Latium, as that term was understood in the days of Strabo and Pliny, or "Latium adiunctum," as the latter author terms it; and its territory extended to the river Savo, which formed the limit between Latium and Campania. (Strab. v. pp. 219, 231, 233; Plin. iii. 5. s. 9; Mel. ii. 4. § 9.) At an earlier period indeed Polybius reckoned a town of Campania, and Ptolemy follows the same classification, as he makes the Liris the southern limit of Latium (Pol. iii. 91; Ptol. iii. 1. § 6); but the division adopted by Strabo and Pliny is probably the most correct. The Itineraries all notice Sinuessa as a still existing town on the Appian Way, and place it 9 miles from Minturnae, which is, however, considerably below the truth. (Itin. Ant. p. 108; Itin. Hier. p. 611; Tab. Peut.) The period of its destruction is unknown.

The ruins of Sinuessa are still visible on the seacoast just below the hill of Mondragone, which forms the last underfall or extremity of the long ridge of Monte Massico. The most important are those of an aqueduct, and of an edifice which appears to have been a triumphal arch; but the whole plain is covered with fragments of ancient buildings. (Cluer. Ital. p. 108; Romanaeli, vol. iii. 8.)

At a short distance from Sinuessa were the baths or thermal springs called Aquae Sinuessae, which appear to have enjoyed a great reputation among the Romans. Livy tells us they were esteemed a remedy for barrenness in women and for insanity in men. They are already mentioned by Livy as early as the Second Punic War; and though their fame was eclipsed at a later period by those of Baiae and other fashionable watering-places, they still continued in use under the Empire, and were resorted to among others by the emperor Claudius. (Liv. xxii. 13; Tac. Ann. xii. 66; Plin. xxxi. 2. s. 4.) It was there, also, that the infamous Tegellinus was compelled to put an end to his own life. (Tac. Hist. i. 72; Plut. Oth. 2.) The mild and warm climate of Sinuessa is extolled by some writers as contributing to the effect of the waters (Tac. Ann. xii. 66): hence it is called "Sinuessa tepens" by Silius Italicus, and "mollis Sinuessa" by Martial. (Sil. Ital. viii. 529; Mart. vii. 42.) The site of the town is still called I Bagni, and the remains of Roman buildings still exist there. [E. H. B.]

SINUS AD GRADUS OR AD GRADUS. [FOSSA MARIANA.]

Sion, M. (Siovi), originally the name of a particular fortress or hill of Jerusalem, but often in the poetical and prophetic books extended to the whole city, especially to the temple, for a reason which will presently be obvious. Sion proper has been always assumed by later writers to be the SW. hill of Jerusalem, and this has been taken for granted in the article on Jerusalem [Jerusalem, p. 18]. The counter hypothesis of a later writer, however, maintained with great learning, demands some notice under this head. Mr. Thrupp (Antient Jerusalem, 1853) admits the original identity of Sion and the city of David, but believes both to have been distinct from the upper city of Josephus, which latter he identifies with the modern Sion, in agreement with other writers. The transference of the name and position of Sion he dates as far back as the return from the Babylonish captivity, believing that the Jews had lost the tradition of its identity with the city of David; so that, while they correctly placed the latter, they erroneously fixed the former where it is still found, viz., at the SW. of the Temple Mount, which mount was in fact the proper "Sion," identical with "the city of David;" for it is admitted that the modern Sion is identical not only with that recognised by the Christian (he might have added the Jewish) inhabitants of Jerusalem, and by all Christian (and Jewish) pilgrims and travellers from the days of Constantine, but with the Sion of the later Jewish days, and with that of the Maccabees. The elaborate argument by which it is attempted to remove this error of more than 2000 years' standing from the topography of Jerusalem, cannot here be stated, much less discussed; but two considerations may be briefly mentioned, which will serve to vindicate for the SW. hill of the city the designation which it has enjoyed, as is granted, since the time of the Babylonish captivity. One is grounded on the language of the Holy Scripture, the other on Josephus. Of the identity of the original Sion with the city of David, there can be no doubt. Mr. Thrupp (pp. 12, 13) has adduced in proof of it three conclusive passages from Holy Scripture (2 Sam. v. 7, 1 Kings, viii. 1, 1 Chron. xii. 5). It is singular that he did not see that the second of these passages is utterly irreconcilable with the identity of the city of David with the Temple Mount; and that his own attempt to reconcile it with his theory, is wholly inadequate. According to that theory Mount Sion, or the city of David, extended from the NW. angle of the present Haram, to the south of the same enclosure; and the tombs of David, which were certainly in the city of David, he thinks might yet be discovered beneath the south-western part of the Haram (p. 161). That the temple lay on this same mount, between these two points, is not disputed by any one. Now, not to insist upon the difficulty of supposing that the threshing-floor of Araunah the Jebusite, where the temple was undoubtedly founded (2 Chron. iii. 1), lay in the very heart of the city of David, from which David had expelled the Jebusites, it is demonstrable, from the contents of the second passage above referred to, that the temple was in no sense in the city of David; for, after the completion of the temple, it is said that "he placed the ark which he had brought from the city of David," in the temple (2 Chron. x. 2, 5, 7) that Solomon and the assembled Israelites brought up the ark of the covenant of the Lord out of the city of David, which is Sion, into the temple which he had prepared for it on what Scripture calls Mount Moriah (2 Chron. iii. 1). Again, in 2 Samuel, v. 6—9, we have the account of David's wrestling "the stronghold of Sion, the same is the city of David," out of the hands of the Jebusites; after which he called it the city of David. (Josephus, in recording the same events, states that David "laid siege to Jerusalem, and took the lower city by assault, while the citadel still held out." (Ant. vii. 3. § 3) This citadel is clearly identified with the upper city, both in this passage and in his more detailed description of the city, where he says "that the hill upon which the upper city was built was by far the highest, and on account of its strength was called by King David the fortress," etc. (Bell. Jews. vol. iv. 4. § 1). We are thus led to a conclusion directly opposite to that arrived at by Mr. Thrupp, who says that "the accounts in the books of Samuel and Chronicles represent David as taking the stronghold of Sion first first 3 T
SIPHOI.

and the Jebusite city afterwards; Josephus represents him as taking the lower city first, and afterwards the citadel. There can be no doubt, therefore, that in Josephus’s view, Sion was the lower city, and the Jebusite city the citadel;” for a comparison of the Targum on the 13th verse, c. 9., and of the 5th with the 7th verse in 1 Chron. xi. can leave no doubt that the intermediate verses in both passages relate to the particulars of occupation of Sion, which particulars are narrated by Josephus of the occupation of the upper city, here called by him by the identical name used by the sacred writer, of the “castle in which David dwelt; therefore they called it the city of David;” and this ἐπισταλέω of Josephus is admitted by Mr. Thripp to be the upper city (p. 56, note 2). That the name of Sion was subsequently used in a much wider acceptance, and applied particularly to the sanctuary, is certain; and the fact is easily explained. The tent or tabernacle erected by David for the reception of the ark was certainly on Mount Sion, and in the city of David (2 Sam. vi. 12; 1 Chron. xv. 1, 29), and therefore in all the language of his own divine compositions, and of the other Psalmists of the conclusion of his and the commencement of Solomon’s reign. Sion was properly identified with the sanctuary, and the name of Sion naturally applied to that, when the ark was transferred to the newly-consecrated temple on the contiguous hill, which was actually united to its former resting-place by an artificial embankment, the significance of the name should be extended so as to comprehend the Temple Mount, and continue the propriety and applicability of the received phraseology of David’s and Asaph’s Psalms to the new and permanent abode of the most sacred emblem of the Hebrew worship.

But to attempt to found a topographical argument on the figurative and metaphorical expressions of Psalms or prophecies is surely to build on a foundation of sand. It was no doubt in order not to perplex the topography of Jerusalem by the use of ecclesiastical and devotional terminology that Josephus has wholly abstained from the use of the name Sion.

[S. W.]

SIPHI or ZIPHI (LXX. Alex. Zép, Var. Ζηπ: Eθh. Ζηπαός), a city of the tribe of Judah, mentioned in connection with Mount, Carmel, and Juttah (Jos. xv. 53). The site of their wilderness seems to have been the lower hilly place of David when concealing himself from the malice of Saul. (1 Sam. xxiii. 14, 26, xxvi. 1: Psal. liv. title.) This wilderness of Ziph was contiguous to the wilderness of Maon (1 Sam. xxiii. 25); and this Maon is connected with Carmel in the history of Nabal and Abigail (xxv. 2). The three names are still found a few miles south of Hebron, as Kirmeil, Midian, Ziph. The ruins lie on a low ridge between two small wadys, which commence here and run towards the Dead Sea. “There is here little to be seen except broken walls and foundations, most of them of uneven stone, but indicating solidity, and covering a considerable tract of ground. Numerous cisterns also remain.” (Robinson, Bibl. Res. vol. ii. p. 191.) Ziph is placed by St. Jerome 8 miles E. of Hebron (S. would be more correct), and the desert of Ziph is frequently mentioned in the annals of the redresses of Palestine, while the site of the town was identified by travellers at least three centuries ago. (Flüerer, Hierosolymaen, p. 68.) [G. W.]

SIPHONS or SIPHINUS (Συφών: Ethh. Σιφῶν: Siphano Gr., Siphanto Ita1.), an island in the Augustan age, celebrated by Pausanias, Steph. of Byz., and Strabo, the latter mentioning Siphnos, and Xb. of Mela. Phiny (iv. 12. s. 22. § 66) describes it as 28 miles in circuit, but it is considerably larger. The same writer says that the island was originally called Merope and Aegis; its ancient name of Merope is also mentioned by Pausanias B. (s. v.). Siphons was colonised by Ionians from Athens (Herod. viii. 48), whence it was said to have derived its name from Siphnos, the son of Sunnis. (Steph. B. s. v.) In consequence of their gold and silver mines, of which remains are still seen, the Siphonsians gained great prosperity, and were regarded, in the time of Polycrates (n. c. 520), as the wealthiest of all the islanders. Their treasury at Delphi, in which they deposited the tenth of the produce of their mines (Paus. x. 11. § 2), was equal in wealth to the treasuries of the most opulent states; and their public buildings were decorated with Parian marble. Their riches, however, exposed them to pillage; and a party of Samian exiles, in the time of Polycrates, invaded the island, and placed a consent upon it: this event is dated by Pausanias (i. 50). The Siphonsians were among the few islanders in the Aegean who refused tribute to Xerxes, and they fought with a single ship on the side of the Greeks at Salamis. (Herod. viii. 46. 48.) Under the Athenian supremacy the Siphons paid an annual tribute of 3600 drachmæ. (Frac. Emin, Epigr. Gr. n. 52.) Their mines were afterwards less productive; and Pausanias (i. c.) relates that in consequence of the Siphonsians neglecting to send the tenth of their treasure to Delphi, the gods destroyed their mines by an inundation of the sea. In the time of Strabo the Siphons had become so poor that Σιφώνοι ἀπρόλαβοι became a proverbial expression. (Strab. x. p. 448; comp. Eustath. ad Dionys. Per. 525; Heacy, s. v. Σιφόνου ἀπόθανον.) The moral character of the Siphonsians stood low; and hence to net like a Siphonian (Σιφώνους) was used as a term of reproach. (Steph. B.; Soln.; Heacy.) The Siphonsians were celebrated in antiquity, as they are in the present day, for their skill in pottery. Phiny (xxvi. 22. § 159, Silici) mentions a particular kind of stone, of which drinking cups were made. This, according to Fieller, was a species of talc, and is probably intended by...
SIPILIA.

Stephans B. when he speaks of Σιπύλιον τωτή-μαχ. Siphnos possessed a city of the same name (Ptol. iii. 13. § 31), and also two other towns, Apollonia and Minia, mentioned only by Stephanus B. The ancient city occupied the same site as the modern town, called Kastron or Siroflo, which lies upon the eastern side of the island. There are some remains of the ancient walls; and fragments of marble are found, with which, as we have already seen, the public buildings in antiquity were decorated. A range of mountains, about 3000 feet in height, runs across Siphnos from SE. to NW.; and on the high ground between this mountain and the eastern side of the island, about 1000 feet above the sea, lie five neat villages, of which Stauro is the principal. These villages contain from 4000 to 5000 inhabitants; and the town of Kastron about another 1000. The climate is healthy, and many of the inhabitants live to a great age. The island is well cultivated, but does not produce sufficient food for its population, and accordingly many Siphians are obliged to emigrate, and are found in considerable numbers in Athens, Smyrna, and Constantinople. (Tonnemort, Voyage, &c. vol. i. p. 134, seq. trans.; Fiedler, Reise, vol. ii. p. 125, seq.; Ross, Reise auf den Griech. Inseln, vol. i. p. 138, seq.)

COIN OF SIPHINOS.

SIPILIA, in Gallia, is placed by the Table on a route from Condate (Remnes) to Julionacagus (Auger). The distance from Condate to Sipia is xvi. and this distance brings us to a little river Seche at a place called Vi-seche, the Vi being probably a corruption of Vadum. The same distance xvi. measured from Vi-seche brings us to Combranstum (Combre) on the road to Augers. But see the article Combranstum.

The Sehe is a branch of the Rivaine (D'Avrile, Notice, &c.).

[S. L.]

SIPONTUM, or SIPILUM, but in Greek always SIPUS (Σιπόνιον - ούς: EIk. Σιπόνιονες, Sipontius: Sta Maria di Siponto), a city of Apulia, situated on the coast of the Adriatic, immediately S. of the great promontory of Garganus, and in the height of the deep bay formed by that promontory with the prolongation of the coast of Apulia. (Strab. vi. p. 284.) This bay is now called the Gulf of Manfredonia, from the city of that name which is situated within a few miles of the site of Sipontum. The Cebulus, or Cerraro, and the Canadaro fall into this bay a short distance S. of Sipontum, and form at their mouth an extensive lagoon or salt-water pool (στενικάλωμα, Strab. l. c.), now called the Puntao Salso. Like most places in this part of Apulia the foundation of Sipontum was ascribed to Dionel (Strab. l. c.); but with the exception of this vague and obscure tradition, which probably means no more than that the city was one of those belonging to the Daunian tribe of Apulians, we have no account of its being a Greek colony. The name is closely analogous in form to others in this part of Italy (Hydruntum, Butuntum, &c.); and its Greek derivation from σπιονα, a cuttle-fish (Strab. l. c.), is in all probability fictitious. The Greek form Sipus, is adopted also by the Roman poets. (Sil. Ital. viii. 633; Lucan. v. 377.) The only mention of Sipontum in history before the Roman conquest is that of its capture by Alexander, king of Epirus, about n. c. 2350. (Liv. vol. iii.) The manner in which it passed under the yoke of Rome we have already seen; but in n. c. 194 a colony of Roman citizens was settled there, at the same time that those of Salernum and Buxentum were established on the other sea. (Liv. xxxiv. 45.) The lands assigned to the colonists are said to have previously belonged to the Arpni, which renders it probable that Sipontum itself had been merely a dependency of that city. The new colony, however, does not seem to have prospered. A few years later (n. c. 184) we are told that it was deserted, probably on account of malaria; but a fresh body of colonists was sent there (Liv. xxxix. 22), and it seems from this time to have become a tolerably flourishing town, and was frequented as a seaport, though never rising to any great consideration. Its principal trade was in corn. (Strab. vi. p. 284; Mel. ii. 4. § 7; Plin. iii. 11. s. 16; Pol. iii. 1. § 16; Pol. x. 1.) It is, however, mentioned apparently as a place of some importance, during the Civil Wars, being occupied by M. Antonius in n. c. 40. (Appian, B. C. v. 56; Dio Cass. xlviii. 27.) We learn from inscriptions that it retained its municipal government and magistrates, as well as the title of a colony, under the Roman Empire (Mommsen, Inschr. R. N. 927—929); and at a later period Paulus Diaconus mentions it as still one of the "urbes satis opulentae" of Apulia. (P. Dan. Hist. Lang. ii. 21.) Lucan notices its situation immediately at the foot of Mount Garganus ("sub sita Sipus montibus," Lucan. v. 377.) It was, however, actually situated in the plain and immediately adjoining the marshes at the mouth of the Canadaro, which must always have rendered the site unhealthy; and in the middle ages it fell into decay from this cause, till in 1250 Manfred king of Naples removed all the remaining population to a site about a mile and a half further N., where he built a new city, to which he gave the name of Manfredonia. No ruins of the ancient city are now extant, but the site is still marked by an ancient church, which bears the name of Sta Maria di Siponto, and is still termed the cathedral, the archbishop of Manfredonia bearing officially the title of Archbishop of Sipontum. (Craven's Southern Tour, p. 67; Romanelli, vol. ii. p. 209.) The name of Sipontum is found in the Itineraries (Itin. Ant. p. 314; Tab. Peut.), which give a line of road proceeding along the coast from Thence to Barium, passing by the Salamine at the mouth of the Palus Salapia, and therefore following the narrow strip of beach which separated that lagoon from the sea. There is still a good horse-road along this beach; but the distances given in the Itineraries are certainly corrupt.

[S. H. E.]

SIPILUS (Σιπιλός), a mountain of Lydia between the river Hermus and the town of Smyrna; it is a branch of Mount Tmolus, running in a northwestern direction along the Hermus. It is rugged, much torn mountain, which seems to have taken its present form to violent convulsions of the earth. The mountain is mentioned even in the Iliad, and was rich in metal. (Hom. H. xxiv. 615; Strab. i. p. 58, xlii. p. 579, xiv. p. 680.) On the eastern slope of the 3 1 2
the mountain, there once existed, according to tradition, an ancient city, called Tantalus, afterwards Sipylos, believed the capital of the Macedonians, which was afterwards swallowed up by an earthquake, and plunged into a crater, afterwards filled by a lake, which bore the name of Soloi or Naias (Strab. i. p. 58, xii. p. 579; Steph. B. s. c.; Plin. v. 31; Pans. vii. 24, § 7). Tantalus relates that the spot once occupied by Sipylos was successively occupied by other towns, which he calls Arcopelae, Colpe, and Lekade. Pausanias (v. 13, § 4) calls the lake the marsh of Tantalus, and adds that his tomb was conspicuous near it, and that the throne of Pelops was shown on the summit of the mountain above the temple of (Cybele) Plastene. The tops of the houses of Sipylos were rock, and have been seen under the water for some time after (Pans. vii. 24, § 7); and some modern travellers, mistaking the ruins of old Sipylos for those of Sipylos, imagine that they have discovered both the remains of Sipylos and the tomb of Tantalus. Chandler (Travels in Asia Minor, p. 331) thought that a small lake of limpid water at the northeastern foot of Mount Sipylos, not far from a sepulchre cut in the rock, might be the lake Soloi; but Hamilton (Researches, i. p. 49, foll.) has shown that the lake of Sipylos cannot be sought for in the marshy district of Mannissa.

In speaking of Mount Sipylos, we cannot pass over the story of Niobe, alluded to by the poets, who is said to have been metamorphosed into stone on this mountain in grief at the loss of her children. (Hom. ii. xxiv. 614; Soph. Antig. 822; Ov. Met. vi. 310; Apollod. iii. 5; Paus. vii. 2, § 3.) Pausanias (i. 21, § 5) relates that he himself went to Mount Sipylos and saw the figure of Niobe formed out of the natural rock; when viewed close she was only a few inches across, but resembling a woman either weeping or in any other posture; but standing at a distance you fancied you saw a woman in tears and in an attitude of grief. This phantom of Niobe, says Chandler (p. 331), whose observation has been confirmed by subsequent travellers, may be defined as an effect of a certain portion of light and shade on a part of Sipylos, perceivable at a particular point of view. Mount Sipylos now bears the name of Sidonieitou, or Sipylos Didos. [L. C.]

SICACELLAE [Strabo].—CEACALAE (Itin. Ant. p. 332; ib. p. 353, Siracella; it. Herr. p. 602, Singelass; Tob. Pont. Syracellae; and in Geog. Rav. iv. 6, and v. 12, Syrascelle), a place in Thrace, on the road from Transjanopolis to Callipolis, and on the main road to Constantinople. Its distance from Transjanopolis is variously given in the Itin. Ant., and the readings of the MSS. differ,—one stating the distance to be as much as 39,000 paces, another as little as 50,000. According to Mannert (vii. p. 205), its site is near the modern Chlocan or Klou将近ε (π?) of P. Lucas (Thatins. Vey. p. 47); but Richard places it near Zerena, and Lape near Malaura or Melgaura; the uncertainty of the itinerary above mentioned being probably the cause of this discrepancy. [J. R.]

SHACEN (n. i).—SHECAINE (Σακεανη) (Strabo, vi. 9. §§ 17, 19), a great and mighty people of Asia Minor, on the east shore of the Maeotis, beyond the Rhô and on the Aecheans, in the district called by Strabo (xi. 504) Siracene. This name appears under various names. Thus Strabo (xi. p. 504) and Nela (i. 19) call them Sireas; Tacitus (Ann. xii. 15, sqq.) Siraci (in Strabo, xi. p. 492, Σιράκειον); and in an inscription (Bückh, ii. p. 1069) we find the form Σιραχύν.

They were governed by their own kings, and the Romans were engaged in a war with them, A. D. 50. (Tac. i. c.; Strab. ib. p. 504.) [T. H. D.]

SIRAE or SEIRAE. [Psoritis.]

SIRAE, in Macedonia. [Siris.]

SIRANGAE (Σιραγγαί or Σιραγγαί, Ptol. iv. 6. § 17), a tribe in the interior of Libya. [T. H. D.]

SIBES. [Xanthus.]

SIRRH. [Serrh.]

SIRTUM, a city of Aethiopia, above which the mountains cease, and at a distance of 14 days' sail from Merokia. (Plin. vi. 30, s. 35.) From these particulars Mannert (x. pt. i. p. 171) is induced to regard it as the modern Sinar. [T. H. D.]

SIRTONIS LACUS (�权. 6 Scironos or Σιρτονόνον, Strab. i. 30; Ptol. iv. 5. §§ 12, 20; Strab. i. p. 30, 65, xvi. 760—763; 211; Luc. Steph. B. s. c.; Plin. v. 12, s. 14; Schackt, Barbois), was a vast tract of morass, the centre of which formed the Sirtonian lake, lying between the eastern angle of the Delta, the Isthmus of Suez, Mount Cænas, and the Mediterranean sea. With the latter it was at one time connected by a natural channel (τό Σαρτονα), running through bars of quicksand and shingle (τα βάθος τα βαθύ), which separated the sea from the morass. The limits of the Sirtonian bog have, however, been much contracted in later ages by the elevation of the sea-borde and the drifting of the sands, and the lake is now of inconceivable extent. The Sirtonian region is celebrated in history for having been the scene of at least the partial destruction of the Persian army in B.C. 350, when Darius Ochus was leading it, after the storming of Selen, to Aegypt, in order to restore the authority of Persia in that kingdom. Diodorus (i. 30) has probably exaggerated the serious disaster into a total destruction, and Milton (P. L. ii. 293) has adopted the statement of Diodorus, when he speaks of

"— that Sirotonian bog
Bewi'xt Damia and Mount Cænas old
Where armies whole have sunk."

The same Persian army, however, afterwards took Pelasgus, Bulabistus, and other cities of the Delta. The tribe of Sciron, which of Aegypt was reckoned by Herodotus (ii. 6) from the bay of Phlyctnis to the lake of Sironis. [W. B. D.]

SIRENIAE I'N-SULAE. [Minaeriae. Pontomorcium.]

SIRECAE, a place in Cappadocia on the road from Canna to Melitene, and 24 miles NW. of the first. (Itin. Ant. pp. 210, 211.) According to Lapte, near the Bebebekogh. [T. H. D.]

SIRIO, in Gallia, is placed by the Itins. on a road from Burgidaga (Bordeaux) to Aginnum (Agen). The distance is probably corrupt in the Table, which places Sirio x. from Bordeaux; for the true distance is xv. or xvi. Gallic leagues. Anville fixes Sirio (the Pont de Sirion) near the point where the small river Sirion or Ciron joins the Garonne on the left bank.

SIRIS (Σίρης; Ech. Σίρης, but also Σιρέας; Sirites), an ancient city of Magna Graecia, situated at the mouth of the river of the same name flowing into the Tarentine gulf, and now called the Sirino. There is no doubt that Siris was a Greek colony, and that at one time it attained to a great amount of wealth and prosperity; but its history is extremely obscure and uncertain. Its first origin was generally ascertained to a Trojan colony; and, as a proof of this,
an ancient statue of Minerva was shown there which claimed to be the true Trojan Palladium (Strab. vi. p. 264; Lyceoph. Arch. 397—985). Whatever may have been the origin of this legend, there seems no doubt that Siris was originally a city of the Chones, the native Oenotrian inhabitants of this part of Italy (Strab. l. c.). A legend found in the Etymologicum (s. v. Σήρης), according to which the city derived its name from a daughter of Morges, king of the Siculi, evidently points in the same direction, as the Morgeti also were an Oenotrian tribe. From these first settlers it was probably established by a body of Ionian colonists from Calaphon, who had fled from their native city to avoid the dominion of the Lydians. (Strab. l. c.; Athenae. xii. p. 523.) The period of this emigration is very uncertain; but it appears probable that it must have taken place not long after the capture of the city by Gyges, king of Lydia, about 700—690 B.C. Archilochus, writing about 660 B.C., alludes to the fertility and beauty of the district on the banks of the Siris; and though the fragment preserved to us by Athenaeus does not expressly notice the existence of the city of that name, yet it would appear from the expressions of Athenaeus that the poet certainly did mention it; and the fact of this colony having been so lately established there was doubtless the cause of his allusion to it (Archil. ap. Athen. xii. p. 523). On the other hand, it seems clear from the account of the settlement at Metapontum (Strab. vi. p. 263), that the territory of Siris was at that time still unoccupied by any Greek colony. We may therefore probably place the date of the Ionian settlement at Siris between 690 and 660 B.C. We are told that the Ionic colonists gave to the city the name of Poleium (Πολείου, Strab. vi. p. 264; Steph. B. s. v. Σήρης); but the appellation of Siris, which it derived from the river, and which seems to have been often given to the whole district (ἡ Σήρης, used as equivalent to ὁ Σήρης), evidently prevailed, and is the only one met with in common use. Of the history of Siris we know literally nothing, except the general fact of its prosperity, and that its citizens indulged in habits of luxury and effeminacy that rivalled those of their neighbours the Sybarites. (Athen. xii. p. 523.) It may be received as an additional proof of their opulence, that Damonus, a citizen of Siris, is noticed by Herodotus among the suitors for the daughter of Cleisthenes of Sicyon, about 580—560 B.C., on which occasion Siris and Sybaris among the cities of Italy alone furnished claimants. (Herod. vi. 127.) This was probably about the period that Siris was at the height of its prosperity. But an Ionian city, existing as it did in the midst of the powerful Achaeans colonies, must naturally have been an object of jealousy to its neighbours; and hence we are told that the Meta- potentines, Sybarites, and Crotoniats formed a league against Siris; and the war that ensued ended in the capture of the city, which appears to have been followed by the expulsion of the inhabitants (Justin. xxi. 2). The date of the destruction of Siris cannot be fixed with any approach to certainty; it was probably after 550 B.C., and certainly preceded the fall of its rival Sybaris in B.C. 510. Its ruin appears to have been complete, for we meet with no subsequent mention of the city, and the territory is spoken of as open to colonisation at the time of the Persian War, B.C. 480. (Herod. viii. 62.)

Upon that occasion we learn incidentally that the Athenians considered themselves as having a claim of old standing to the vacant district of the Sirites, and even at one time thought of removing thither with their wives and families. (Herod. l. c.) The origin of this claim is unknown; but it seems pretty clear that it was taken up by the Athenian colonists who established themselves at Thurii in B.C. 443, and became the occasion of hostilities between them and the Tarentines. These were at length terminated by a compromise, and it was agreed to found in common a fresh colony in the disputed territory. This appears to have been at first established on the site of the ancient city, but was soon after transferred to a spot 3 miles distant, where the new colony received the name of Heraclea, and soon rose to be a flourishing city. (Strab. vi. p. 264; Dios. xii. 36.) [HERACLEA.] According to Strabo, Siris still continued to exist as the port or naval station of Heraclea; but no other mention of it is found, and it is not clear whether Strabo himself meant to speak of it as still subsisting in his day. No remains of it are extant, and the exact site does not appear to have been determined. But it may be placed on the left bank of the river Siris (now called the Sinox), at or near its mouth; a position which well accords with the distance of 24 stadia (3 miles) from Heraclea, the remains of which are visible at Policoro, near the river Agri, the ancient Aciris. [HERACLEA.]

The river Siris is mentioned by Lyceophron (Alex. 982), as well as by Archilochus in a passage already cited (op. Athen. xii. p. 523); but the former author calls it Zýris, and its modern name of Sirano would seem to have been derived from a different period; for we find mention in the Taenilia of a station 4 miles from Heraclea, the name of which is written Semnum, probably a corruption for Ad Simum or Simum. The Siris and Aciris are mentioned in conjunction by Pliny as well as by Strabo, and are two of the most considerable streams in Lucania. (Plin. i. 11. s. 15; Strab. vi. p. 264.) The name of the former river is noticed also in connection with the first great battle between Pyrrhus and the Romans, B.C. 280, which was fought upon its banks (Pint. Pyr. 16.) It has been absurdly confounded by Florus and Orosius with the Siris in Campania. (Flor. i. 18. § 7; Oros. iv. 1.)

The fertile district of the Siritía (ἡ Σήρης or Σήρης) is a portion of the level tract or strip of plain which borders the gulf of Tarentum from the neighbourhood of Rocca Imperiale to the mouth of the Bradano. This plain stretches inland from the mouth of the Sinnio to the foot of the hill on which stands the modern city of Taras, about 8 miles from the sea. It is a tract of extraordinary natural fertility, but is now greatly neglected, and, in common with all this coast, desolated by malaria. [E. H. B.]

SIRIUS, SIRAE, SIRHAEAS (Σήρης, Herod. vii. 113; Sirae, Liv. xiv. 4; Σήρης, Herod. Eth. Σήρασιονος, Herod. v. 15; Steph. B: Sirri), a town of Macedonia, standing in the widest part of the great Strymonic plain on the last slopes of the range of mountains which bound it to the N.E. Xerxes left a part of his sick here, when retreating to the Hellespont (Herod. l. c.) and P. Aemilius Paulus, after his victory at Pydna, received at this town, which is ascribed to Odonantia, a deputation from Persians, who had retired to Samothrace. (Liv. l. c.) Little is known of Sirrhae, which was the usual form of the name in the 5th century (from two inscriptions found at Serris it appears that Sirrhia, or Sirrhae, was the more ancient orthography, and that which obtained at least until the division of the empire), until the great spread of

1013
the Servian kingdom. Stephen Dashan in the 14th century seized on this large and flourishing city, and assumed the imperial crown here, where he established a court on the Roman or Byzantine model, with the title of Emperor of Romania, Silavonia, and Albamia. (Nicoph. Greg. p. 467.) After his death a partition of his dominions took place but the Greeks have never since been able to recover their former preponderance in the provinces of the Strymon valley. Sultan Murad took this town from the Servians, and when Sigismund, king of Hungary, was about to invade the Ottoman dominions, Bayezid (Rajazet Ilerlim) summoned the Christian princes who were his vassals to his Serrhais, previous to his victory at Nicopolis, A.D. 1396. (J. von Hammer, Gesch. des Osman. Reiches, vol. i. pp. 193, 246, 600.)

Besides the Macedonian inscriptions of the Roman empire found by Leake (Inscr. 126) and Coudsney, there are other vestiges situated at the entrance of a piece of Hellenic wall faced with large quadrangular blocks, but composed within of small stones and mortar forming a mass of extreme solidity. Servian remains are more common. (Leake, Northern Greece, vol. iii. pp. 200—210.)

[**SIRMIO** (Sermione), a narrow neck or tongue of land, projecting out into the Lake Benacus (Lago di Garda), from its southern shore. Though a con-pious and picturesque object in all views of the lake from its southern shores, it is unnoticed by any of the geographers, and its name would probably have been unknown to us, but for the circumstance that Catullus, who was a native of the neighbouring Verona, had a villa on its shores, and has sung the praises of Sirmio in one of the most charming odes in the Latin language (Catull. xxxii.). The name of Sirmio is, however, found in the Itineraries, which place a "Sermione mansio" on the road from Brizza to Verona, and just midway between the two cities, 22 M.P. from each (Itin. Ant. p. 127). This name, however, has been situated at the entrance of the peninsula, probably where a road turned off to it, as it is clear that the highroad could never have turned aside to the promontory itself.

Extensive substructions and other remains of an ancient villa are still visible at the extremity of the promontory, where it juts out into the lake: but these undoubtedly belong to an abode on a much more magnificent scale than the villa of Catullus, and probably belong to some villa of the imperial times, which had replaced the humbler dwelling of the poet.

[**E. B. J.**]

**SIRMIMUL (Sirmum), an important city in the south-eastern part of Lower Pannonia, was an ancient Celtic place of the Taurisci, on the left bank of the Savus, a little below the point where this river is joined by the Baucetus (Plin. iii. 28.) Zosimus (ii. 181) is mistaken when he asserts that Sirmium was surrounded on two sides by a tributary of the Ister. The town was situated in a most favourable position, where several roads met (It. Ant. pp. 124, 131; Vit. Hieroc. p. 563), and during the wars against the Dacians and other Donabian tribes, it became the chief depot of all military stores, and gradually rose to the rank of the chief city in Pannonia. (Herodian, vii. 2.) Whether it was ever made a Roman colony is not quite certain, though an inscription is said to exist containing the words Dec. Colon. Sirmiens. It contained a large manufactory of arms, a spacious forum, an imperial palace, and other public buildi-
SITACE.

(Pl. Ant. pp. 259, 260, 265, 266, 272, 274; Plin. iii. 28.) According to Pliny the name Segestica belonged only to the island, and the town was called Siscia; while Strabo (vii. p. 314) says that Siscia was a fort in the neighbourhood of Segestica; but if this was so, it must be supposed that subsequently the name of town became united as one place.

(Comp. Strab. iv. p. 202, v. p. 214, vii. p. 218; Appian, Illyr. 16, 23, &c.) Siscia was from the first a strongly fortified town; and after its capture by Tiberius, in the reign of Augustus (Appian, Dion Cass. it. cc.; Vell. Pat. ii. 118), it became one of the most important places of Pannonia; for being situated on two navigable rivers, it not only carried on considerable commerce (Strab. v. pp. 207, 214), but became the central point from which Augustus and Tiberius carried on their undertakings against the Pannonians and Illyrians. Tiberius did much to enlarge and embellish the town, which as early as that time seems to have been made a colony, for Pliny mentions it as such; in the time of Septimus Severus it received fresh colonists, whence in inscriptions it is called Col. Septimiana Siscia. The town contained an imperial mint, and the treasury for what was at a later time called the province Siscia; at the same time it was the station of the small fleet kept on the Siscian coast. It was soon, however, of importance until Sirmium began to rise, for in proportion as Sirmium rose, Siscia sank and declined.

(Comp. Zosim. ii. 48; Orelli, Inscription. n. 504, 505, 2703, 3075, 3336, 4993.) The modern town of Siscia, occupying the place of the ancient Siscia, contains many interesting remains of antiquity.

(Marcell. Danubiius, p. 47; Schonwinder, Antiqu. Sabariae, p. 52, foll.; Muchar, Norikum, i. p. 152; Dr. L. S.)

SITACE (Στίταξε), a large town, first noticed by Xenophon (Anab. ii. 4. § 13), situated about 8 parasangs from the Median Wall, and 15 from the Tigris and the mouth of the Phryses. The exact situation cannot be now determined, but several travellers have noticed, in this neighbourhood, extensive ancient remains, which may perhaps belong to this city. (Mamert, v. pt. ii. p. 281; Niebuh, ii. p. 305; Ives, Travels, &c. p. 153.)

SITACUS (Σιτακός), Arrian, Ind. c. 38), a river of Persia, to which Xenophon alludes in his celebrated coasting voyage. It is in all probability the same that called by Pliny Sitiosagus (vi. 23. s. 26); although his statement that, from its mouth, an ascendant could be made to Pasargada in 7 days, is manifestly erroneous. There is no reason to doubt that it is at present represented by a stream called Shu-Rhekhti. (Vincent, Voy. of Nearchus, i. p. 355; D'Anville, Mem. de l'Acad. xxx. p. 158; Ritter, Erfkund, vii. p. 765.)

SITIOHANIA (Σιτιοχανία, Horal. vii. 123; Steph. B.; Virg. Bucol. x. 66; Hor. Carm. i. 18. 9; Lompos), the central of the three prongs which run out into the Aegaeon from the great peninsula of Chalcidice, forming a prolongation to the peak called Sokolain or Kololain. The Sithonian peninsula, which, though not so hilly as that of Acte, is not so inviting as Pallene, was the first, it appears, to be occupied by the Chalcidice colonists. A list of its names is given in Chalcidice. [E. B. J.]

SITIA, a place in Hispamia Baeticae (Plin. iii. 1. s. 8.)

SITIFI (Σιτιφή, Ptol. iv. 2. § 34), a town in the interior of Mauretania Caesariensis, situated in an extensive plain not far from the borders of Numidia, and on the road from Cartagine to Cirta. (Itin. Ant. pp. 24. 29. 31. &c.; comp. Ann. Marc. xxvii. 6.) At first, under the Numidian kings, it was but an unimportant place; but under the Roman dominion it became the frontier town of the new province of Numidia, was greatly enlarged and elevated to a colony; so that on the subsequent division of Mauretania Caesari, into two smaller provinces it became the capital of Mauretania Sitifensis. Under the dominion of the Vandals, it was the capital of the district Zabé. (Zaës, Procop. B. Vandal. ii. 20.) It is still called Setifi, and lies upon an eminence in a delightful neighbourhood. Some ruins of the ancient town are still to be seen. (Siisay's Travels, p. 49.)

SITILLIA, in Gallia, is placed by the Table on a road from Aegae Burnum (Boirebn P. Archambad) to Poerinum, supposed to be Perrigni. Sitiilia xvi. from Aegae Burnum and xiiii. from Poerinum Sitiilia is probably a place named Tieck. (D'Anville Notice, &c.)

SITIOGAGUS. [SITACUS.]

SITOMAGUS. [SITACUS.]

SITOMAGUS, a town of the Iceni or Siveni, in the E. part of Britannia Romana. (Itin. Ant. p. 450.) Camden (p. 456) identifies it with Thatford in Norfolk, whilst others seek it at Stowmerket, Southold, and Saxmundham. In the Tab. Pent. it is erroneously written "Suromacchus." [T. H. D.]

SITONES, a population conterminous with the Sitones, from whom they differ only in being governed by a female: "in tantum non modo a libertate sed etiam a servitute degenerant. Hic Sivevae finis." (Tac. Germ. 45.) The Sitonian locality is some part of Finland; probably the northern half of the coast of the Gulf of Bothnia.

The statement that they were under a female rule is explained as follows. "The name by which the East Bohemian Finlanders designate themselves is Kainus-lainen (in the singular Kainu-lainen). The Swedes call them Quenaus (Kournus). The mediaeval name for their country is Cajen-la. Now quenin in the Norse language = woman, being our words queen and queen; and in the same Norse tongue the land of the Quenas would be Queen-land; as it actually is, being Queen-land (Queen-land) in Anglo-Saxon. Hence the statement of Tacitus arises out of a confusion of information concerning a certain Queen-land, erroneously considered to be a terra femininarum, instead of a terra Quenumorum. The reader who thinks this fanciful should be informed that in Adam of Bremen, writing in the 12th century, when the same country comes under notice, the same confusion appears, and that in a stronger form. The Sitonian country is actually terra femininarum. More than this, the feminine become Amazons: "circa hanc flumen Baltico murius femtus esse Amazones, quondam mun terra feminarum dicuit, quas aequo gestu alipi discip consciperent... Hae simul viventes, spernunt consortia virorum, quos etiam, si advenirent, a se viriliter repellerent," c. 228. (Zeuss, Die Deutschen, &c. s. v. Karena.)

It is worth noticing that King Alfred's locality of the Cewnas is, in respect to their relations to the Scyths, exactly that of Tacitus,—Cewna-land succeeding Scya-land.

The Sitones seem to have been the ancient representatives of the Finns of Finland,—the Fenni of the ancients being the Lapps. This is not only what the words Sitones and Quena suggest, but the inference from the word Fenni also. To the Finlander, Fin is a strange name. The Swede calls him Quena; 3t4
be calls himself Symo-leton or Hamaleton. On the other hand, it is the Lap of Finsmark that is called a Fin, and it is the Norwegian who calls him so. [Feoski]

[SITTA] [R. G. L.]

SITTA (Ktrion, Ptol. vi. 1 § 6), a town of ancient Assyria, at the southern end of this province, on the road between Artemita and Susa. (Strab. xvi. p. 744.) It is called Sita (Kttrtta) by Diodorus (xvii. 110). It was the capital of the district of Sittacene, which appears to have been called in later times Apolloniatis (Strab. xii. p. 524), and which adjoins the province of Susa (xv. p. 722). Piny, who gives the district of Sittacene a more northerly direction, states that it bore also the names of Arbe- litis and Palaestine (vi. 27. s. 31). It is probably the same country which Curtius calls Sattrapene (v. 2).

[SITTA] [V.]

SITTCALIS (Ktrkcali, Arrian, Ind. c. 4), a navigable river, which, according to Arrian, flowed into the Ganges. It has been conjectured by Man- nert that it is the same as the present Sind, a tributary of the Jamna, near Ramnar (v. pt. i. p. 69).

[SITU] (Xosphi, Herod. ii. 172), a town of the Saltic nome in the Delta of Egypt. It does not appear to be mentioned by any other writer besides Herodotus. [T. H. D.]

SIVA (Kiaos), a town in the prefecture of Cilicia in Cappadocia, on the road from Mazarca to Tavium, at a distance of 22 miles from Mazarca. (Ptol. v. 6. § 15: Tab. Peri.)

SMARAGDUS MONS (KtSparp柯s Mora, Ptol. iv. 5 § 15), was a portion of the chain of hills which runs along the western coast of the Red Sea from the Heropollis gulf to the straits of Bab-el-Mundeb. Between lat. 24° and 25° in this range is the Mount Smaragdus, the modern Djebel Zabarah, which derived its name from the emeralds found there, and early attracted by its wealth the Aegyp- tians into that barren region. The principal mine was at Djebel-Zabarah; but at Bender-el-Soghair to N., and at Sikket to S., each a portion of Mount Smaragdus, there are traces of ancient mining op- erations. Small emeralds of an inferior quality are still found in this district. (Mannert, Geograph. vol. x. p. 21.) Strabo (xvii. p. 815) and Pliny (xxvii. 15. s. 16) mention the wealth obtained from these mines. At Sikket there is a temple of the Ptolemaic era; but the mines were known and worked at least as early as the reign of Ammoun III., in the 18th dynasty of the native kings of Egypt. [W. B. S.]

SIEUS. [Laconia, p. 114, b.]

SILL. [Cromasa.]

SMIRNA (K.Spva: Euth. Samosrais, Smyrnaeans: Smyrna or Izmir), one of the most celebrated and most flourishing cities in Asia Minor, was situated on the east of the mouth of the Helles, and on the bay which received from the city the name of the Smyr- naeans. Its said to have been a very ancient town founded by an Axiosos of the name of Smyrna, who had previously conquered Ephesus. In conse- quence of this Smyrna was regarded as a colony of Ephesus. The Ephesians colonists are said after- wards to have been expelled by Aeolians, when the Ephesian colonists, who occupied the place, until, aided by the Colophonians, the Ephesian colonists were enabled to re-establish themselves at Smyrna. (Strab. xiv. p. 633; Steph. B. c. v: Plin. v. 31.) Herodotus, on the other hand (i. 159), states that Smyrna originally belonged to

SMYRNA. [X.]

the Aeolians, who admitted into their city some Colophonian exiles; and that these Colophonians afterwards, during a festival which was celebrated outside the town, made themselves masters of the place. From that time Smyrna ceased to be an Aeolian city, and was received into the Ionian confederacy (Comp. Paus. vii. 5 § 1.) So far then as we are guided by authentic history, Smyrna belonged to the Ionian confederacy until the year B.C. 684, when by an act of treachery on the part of the Colophonians it fell into the hands of the Ionians, and became the capital of the 27th city, the Ionian League. (Herod. l.c.; Paus. l. c.) The city was attacked by the Lydian king Gygés, but successfully resisted the aggressor (Herod. i. 14; Paus. ix. 29 § 2.) Alyattes, however, about B.C. 627, was more suc- cessful; he took and destroyed the city, and hence- forth, for a period of 400 years, it was deserted and in ruins (Herod. i. 16; Strab. xiv. p. 646), though some inhabitants lingered in the place, living woskétes, as it is stated by Strabo, and as we must infer from the fact that Seloys (p. 57) speaks of Smyrna as still existing. Alexander the Great is said to have formed the design of rebuilding the city (Paus. viii. 5 § 1); but he did not live to carry this plan into effect; it was, however, undertaken by Antigonus, and finally completed by Lyssinachus. The new city was not built on the site of the ancient one, but at a distance of 20 stadia to the south of it, on the southern coast of the bay, and partly on the site of a hill which carries the name of Maestus, but prin- cipally in the plain at the foot of it extending to the sea. After its extension and embellishment by Lyssinachus, new Smyrna became one of the most magnificent cities, and certainly the finest in all Asia Minor. The streets were handsome, well paved, and drawn at right angles, and the city contained several squares, porticoes, a public library, and numerous temples and other public buildings; but one great drawback was that it had no drains. (Strab. l. c: Marm. Gr. n. 5.) It also pos- sessed an excellent harbour which could be closed, and continued to be one of the wealthiest and most flourishing commercial cities of Asia; it after- wards became the seat of a conventus juridicus which embraced the greater part of Aeolis as far as Magnesia, at the foot of Mount Sipylos. (Cic. p. Plac. 30; Plin. v. 31.) During the war between the Romans and Mithridates, Smyrna remained faithful to the former, for which it was rewarded with various grants and privileges. (Liv. xxxv. 42, xxxvi. 16, 54, xxxvii. 39.) But it afterwards suffered much, when Trebonius, one of Caesar's murderers, was besieged there by Delabolla, who in the end took the city, and put Trebonius to death. (Strab. l. c: Cic. Phil. xi. 2; Liv. Epit. 119; Dion Cass. xlvii. 29.) In the reign of Tiberius, Smyrna had conferred upon it the equalhon of being allowed, in preference to several other Asiatic cities, to erect a temple to the emperor (Tac. Ann. iii. 63, iv. 56). During the years A.D. 178 and 180 Smyrna was injured much from earthquakes, but the emperor M. Aurelius did much to alleviate its sufferings (Dion Cass. lxxi. 32.) It is well known that Smyrna was one of the places claiming to be the bi tlahpe of Homer, and the Smyrnaeans them- selves were so strongly convinced of their right to claim this honour, that they erected a temple to the great bard, or a Ὅδηγερ, a splendid edifice con- taining a statue of Homer (Strab. l. c: Cic. p. Arch. 8); they even showed a cave in the neigh-
bouhhood of their city, on the little river Meles, where the poet was said to have composed his works.

Smyrna was at all times not only a great commercial place, but its schools of rhetoric and philosophy also were in great repute. The Christian Church also flourished through the zeal and care of its first bishop Polycarp, who is said to have been put to death in the stadium of Smyrna in A. d. 166 (Iren. iii. p. 176). Under the Byzantine emperors the city experienced great vicissitudes: having been occupied by Tzelas, a Turkish chief, about the close of the 11th century, it was nearly destroyed by a Greek fleet, commanded by John Ducas. It was restored, however, by the emperor Commenus, but again subjected to severe sufferings during the siege of Taylerkne. Not long after it fell into the hands of the Turks, who had retained possession of it ever since. It is now the great mart of the Levant trade. Of Old Smyrna only a few remains now exist on the north-eastern side of the bay of Smyrna; the walls of the acropolis are in the ancient Cyclopedian style. The ancient remains of New Smyrna are more numerous, especially of its walls which are of a solid and massive construction; of the stadium between the western gate and the sea, which, however, is stripped of its marble entablature and decoration; and of the theatre on the side of a hill fronting the bay. These and other remains of ancient buildings have been destroyed by the Turks in order to obtain the materials for other buildings; but numerous remains of ancient art have been dug out of the ground at Smyrna. (Chandler's Traveies in Asia, pp. 76, 87; Prokesch, Denkwürdigkeiten. i. p. 515, foll.; Hamilton, Researches, i. p. 46, foll.; Sir C. Fellows, Asia Minor, p. 10, foll.) [L. S.]

COIN OF SMYRNA.

SmyrNaeus Sinus (Σμυρναίαν χώραν), also called the bay of Hermus (Κρήνας κόλπον), from the river Hermus, which flows into it, or the bay of Meles (Μελένα κόλπον), from the little river Meles, is the bay at the head of which Smyrna is situated. From its entrance to the head it is 350 stadia in length, but is divided into a larger and a smaller basin, which have been formed by the deposits of the Hermus, which have at the same time much narrowed the whole bay. A person sailing into it had on his right the promontory of Celaenae, and on his left the headland of Phocaea; the central part of the bay contained numerous small islands. (Strab. xiv. p. 645; Pompon. Mele, i. 17; Vit. Hom. 2; Steph. B. s. v. Σμύρνα.) [L. S.]

SOANAS (Σωάνας, Ptol. vii. 4. § 3), a small river of Taprobane (Ceylon), which flowed into the sea on the western side of the island. Lassen (in his map) calls it the Kiloom. On its banks lived a people of the same name, the Sani. (Ptol. vii. 4. § 9.) [V.]

SOANDA or SOANDUM (Σωάνδα or Σωάνδων), a castle of Cappadocia, between Therman and Saceova. (Strab. xiv. p. 663; It. Ant. p. 202.) The same place seems to be alluded to by Frontinus (iii. 2. § 9), who calls it Suanda. Hamilton (Researches, ii. p. 286, fol.) identifies it with Souahali Dere, a place situated on a rock, about 8 miles on the south-west of Karahisar, but other geographers place it in a different locality. [L. S.]

SOATRA (Σάτρα), or possibly more correctly Savatara (Σαβατάρα), as the name appears on coins, was an open town in Lycaonia, in the neighbourhood of Apameia Chiotus, on the road from thence to Laodicea. The place was badly provided with water (Strab. xiv. p. 668; Ptol. v. 4. § 12; Hieroc. p. 672; Tab. Pent.), whence travellers are inclined to identify its site with the place now called Si Yeress, that is, "there is no water here." [L. S.]

SOATRAE, a town in Lower Moesia (Hist. Ant. p. 229), variously identified with Prasovi and Kipikhani. In the Tab. Peut. and by the Geogr. Bavar. (iv. 6) it is called Socratse T. II. D.

SOBEURA (Σομευράν ήπειρον), a place on the eastern coast of Hiuskhaten, mentioned in the Peripius (p. 54). It is probably the same as the modern Sóbras, on the coast of Pindickerry and Madura. (See Lassen's map.) [V.]

SOCAIiA (Σκοκαία), a small river of Hyrcania, noticed by Ptolemy (vi. 9. § 2). It is probably the present Gorgyn. Ammianus Marcellinus speaks of a place called Scoconda, on the shores of the Hyrcanian or Caspian sea (xii. 6). [V.]

SOUKATIS INSULA (Σοκουκάτου νησίων), an island of the Sinus Arabinus (Red Sea), placed by Ptolemy (vi. 7. § 44), who alone mentions it, in long. 70°. lat. 16° 40', and therefore off the N. coast of his Elates, the Sabaei of other geographers, 30° east of his Accacratam Insula (Lopan) and 42° 20' south of them. They are probably identical with the Farasan islands, of the E. I. Company's Chart, described by commanders Moresey and Elwyn, in their Sailing Directions for the Red Sea, as "the largest all along this coast, situated upon the extensive banks west of Gheesam. They are two in number, but may be considered as forming one island, being connected by a sandy spit of shoal sand, across which canoes frequently pass from one to the other." The westernmost is Farasan Kbeier (= the greater), 31 miles in length, extending from lat. 16° 3' 30' long. 42° 15' to lat. 16° 54' long. 41° 47'. Farasan Sogger (=the smaller) is, on its NE. side, 18 miles in length, and extends to lat. 17° 11'; their whole breadth is only 12 miles. The land is of considerable height, interspersed with some plains and valleys; the hilly parts are coral rock (pp. 38, 39; C. Muller, Tabulae in Geogr. Grace. Min. tab. viii). In other comparative atlases, adopted by Arrowsmith, the modern name is given as Kotamulbe, considerably to the N. of the Farasan, described by the same writers as lying only 2 miles from the main, a small island about 3 mile in length and therefore not likely to have been noticed by Ptolemy, who obviously mentions only the more important. (Sailing Directions, p. 50.) Mannert identifies the Socratis Insula with Niebuer's Faram, where the traveller says the inhabitants of Lobchia have a pearl fishery. This name does not occur in the "Sailing Directions," but is probably the same as Farsan. (Mannert, Geographie von Arabien, p. 49; Niebuer, Description de l'Afrique, p. 201.) [G. W.]

SOCANDA. [SOCANAA.]

SODOM (τὸ Σωδόμ, Strab. xv. p. 764; Steph. B.
SODOM, which is also known as Sodom or Sodom before the 17th century, is a city mentioned in the Bible. It is located in the Jordan Valley, near the Dead Sea, and is described as a place of sin and corruption. The city was destroyed by God in a catastrophe described in Genesis 19:24-28.

The city of Sodom is also mentioned in the Book of Tobit as the place where the angel Raphael, the guardian of Tobit, met with the demon Azazel. This meeting is described in the apocryphal book of Tobit 15:12-16.

The city of Sodom is also mentioned in the Book of Judith, where it is described as a place of wickedness and sin. Judith 10:1-5

SOGDIANA is a region of central Asia, located between the Oxus and the Amu Darya rivers. It was a major trading center and home to a number of important cities, including Sogdiana itself, Bactria, and Parthia.

SOGDIANIA (SOGDONIA), one of the smaller tribes noticed by Arrian (Anab. vi. 15) as encountered by Alexander in the lower Panjib. By their name, they would appear to represent an immigration from the north.

SOGDIANA (SOGDIA or SOGDYAN), a tribe met with by Alexander in the lower Panjib. Their name is probably of Indian origin, and may represent the name of the Sauddes.

SOGDIANIA (SOGDIA, SOGDYAN), a tribe met with by Arrian (Anab. vi. 15) as encountered by Alexander in the lower Panjib. By their name, they would appear to represent an immigration from the north.
SOGDII MONTES.

who occupied different parts of the province. Many of these show by the form of their name that it is not directly of Italian or Etruscan origin, but they are clearly connected with that country. Thus we have the Piaciae, near the Monte Osci; the Tarchi (Takura) on the Jaxartes; the Oxynacrae, Dryhsate, and Gandari (Gandharia), under the mountains; the Mardymi (Madras), Chorasmii (Khorezmian). near the Oxus; and the Cirrides (Kirtale) near the same river. (Wilson, Arabia, p. 164.)

The historians of Alexander's march leave us to suppose that Sogdiana abounded with large towns; but, like many of these, as Professor Wilson has remarked (L.c.), were probably little more than forts erected along the lines of the great rivers to defend the country from the incursions of the barbarous tribes to its N. and E. Yet these writers must have had good opportunity of estimating the force of these places, as Alexander appears to have been the best part of three years in this and the adjoining province of Bactriana. The principal towns of which any account has been handed down to us, were Cyresshat or Cyropleis, on the Jaxartes (Steph. B. s. r.; Curt. vi. 6); Gaza (Gazha or Gazette, Ibn Hankil, p. 270); Alexandria Ultima (Arrian, iii. 30; Amm. Marc. xxiv. 6), doubtless in the neighborhood of, if not on the site of the present Khoyjendi; Alexandria Oxia (Ptol. vi. 12. 5.; Steph. B. s. v.); Nautaca (Arrian, iii. 28, iv. 18), in the neighborhood of Karush or Nashekhe; Branchidae (Strab. xiii. 518), a place traditionally said to have been colonized by a Greek population; and Marginia (Curt. vii. 10, § 15), probably the present Marghian (Droysen, Rhein. Mus. 2 Jahr. p. 86; Mannert, iv. p. 452; Brunnes, Travels, i. p. 350; Memoirs of Biblior, p. 12; De Saec, Notices et Extraits, iv. p. 334; Thrival, Hist. of Greece, vi. p. 284.).

SOGDII MONTES. [SOGDIANA-]

SOGIJUNI, an Alpine people mentioned by Pliny (iii. 20. s. 24). Nothing but resemblance of name gives us any indication of the position of this people. Many small mountain tribes, but the names remain frequently very little changed. The position of the Sogijunti is conjectured to be shown by the name Sonae or Sunches, NE. of Briendon in the department of Hautes Alpes. But this is merely a guess; and even the orthography of the name Sogijunti is not certain. [G. L.]

SOLE, a small town in the interior of Hyrcania, mentioned by Ammianus (xxiii. 6).

SOLEN (Solen), Ptol. vii. 1. §§ 10, 34), a small river of S. India, which has its sources in J. Bittigo, and flows thence into the Sinus Colchicos or Gulf of Mannar. It is not certain which of two rivers, the Iapima or the Tanaparami, represent it at present: Lassen inclines to the latter. [V.]

SOLENTA. [OLYNTA INSULA-]

SOLENTUM. [SOLHS-]

SOLEUM (Soleo), a town of Calabria, situated in the interior of the Japygian peninsula, about 12 miles S. of Lupiae (Lecce). It is mentioned only by Pliny, in whose time it was deserted ("Soleum desertum," Plin. iii. 11. s. 16), but it must have been again inhabited, as it still exists under the ancient name. That the modern town occupies the ancient site is proved by the remains of the ancient walls which were still visible in the days of Galateo, and indicated a town of considerable magnitude (Galateo, de Sit. Japyg. p. 81; Romanioli, vol. ii. p. 267). [E. H. B.]

SOLI (Soloi: Eth. Solaeos or Soliow), an im-

portant town on the coast of Cilicia, between the mouths of the rivers Lamas and Pyramus, from each of which its distance was about 500 stadia. (Strab. xiv. p. 675; Stadttm. Mar. Mag. § 170, &c.)

The town was founded by Arciues joined by Lin-

dians from Rhodes. (Strab. xiv. p. 671; Pomp. Meli. i. 13; Liv. xxxvii. 56.) It is first mentioned in history by Xenophon (Anab. i. 2. § 24) as a maritime town of Cilicia; it resisted to such op-

ulence that Alexander the Great could not give its citizens for their attachment to Persia with 200 talents. (Arrian, Anab. ii. 5. § 5; Curt. iii. 17.) During the Mithridatic War the town of Soli was taken and de-

stroyed by Tigranes, king of Armenia, who probably transplanted most of its inhabitants to Tigranocerta. (Dion Cass. xxxvi. 20; Plat. Pomp. 25; Strab. xi. p. 532.) But the place was revived by Pompey, who peopled it with some of those pirates who had fallen into his hands, and changed its name into Pom-

peia (Haurcla, Plut. i. c.; Strab. xiv. p. 671; Apian, Mithr. 105; Ptol. v. 8. § 4; Plin. v. 22; Steph. B. s. v.; Tac. Ann. ii. 58; Hieroc. p. 704.) Soli was the birthplace of Chrysippus the philosopher, and of two distinguished poets, Philemon and Aratus, the latter of whom is believed to have been buried on a hill near the town. The Greek inhabitants of Soli are reported to have spoken a very corrupt Greek in consequence of their inter-

course with the natives of Cilicia, and hence to have given rise to the term solieanum (prooosioay), which has found its way into all the languages of Europe; other traditions, however, connect the origin of this term with the town of Soli, in Cyprus. (Diog. Laert. i. 2. § 4; Eustath. ad Dion. Per. 875; Solli. s. v. Sin.)

Of the locality and the remains of this ancient city have been described by Beanfort (Karumanta, p. 261, foll.). "The first object that presented itself to us on landing," says he, "was a beautiful harbour or baie-in, with parallel sides and circular ends; it is entirely artificial, being formed with sur-

rounding walls or mole, which are 50 feet in thick-

ness and 7 in height. Opposite to the entrance of the harbour a portico rises from the surrounding quay, and opens to a double row of 200 columns, which, crossing the town, communicates with the principal gate towards the country. Of the 200 columns no more than 42 are now standing; the remainder lie on the spot where they fell, intermixed with a vast assemblage of other ruined buildings which were connected with the colonnade. The theatre is almost entirely destroyed. The city walls, strengthened by numerous towers, entirely surrounded the town. Detached ruins, tombs, and sarcophagi were found scattered to some distance from the walls, on the outside of the town, and it is evident that the whole country was once occupied by a numerous and industrious people." The natives now call the place Mescela. (Comp. Leake, Asia Minor, p. 213, foll.) The little river which passed through Soli was called Lipara, from the city nature
its waters. (Vitr. viii. 3; Antig. Caryst. 150; Plin. L.c.) Pliny (xxxi. 2) mentions bituminous springs in the vicinity, which are reported by Beaufort to exist at Bibblyhour, about six hours' walk to the north-east of Miletus. (L. S.)

SOLI or SOLAE (ΣΩΛΑ, Prot. v. 14, § 4), an important seaport town in the W. part of the N. coast of Cyprus, situated on a small river. (Strab. xiv. p. 683.) According to Plutarch (Sol. 26) it was founded by a native prince at the suggestion of Solon and named in honour of that legislator. The sojourn of Solon in Cyprus is mentioned by Herodotus (v. 113). Other accounts, however, make it an Athenian settlement, founded under the auspices of Phalereus and Acamas (Strab. L.c.), or of Demosthenes, the son of Theseus (Onit. L.c.). We learn from Strabo (L. c.) that it had a temple of Aphrodite and one of Isis; and from Galen (de Simp. Med. ix. 3, 8) that there were mines in its neighbourhood. The inhabitants were called Solii (ΣΩΛΑΙ), to distinguish them from the citizens of Soli in Cilicia, who were called ΣΩΛΕΙ (Diog. Laert. I. Solon, 4). According to Pococke (ii. p. 253), the valley which surrounded the city is still called Solae; and the ruins of the town itself may be traced to the right of the routes of Alexeopolis, Adrastea, and Leucornus. (Pers. 889; Sycth. p. 41; Stadium. Μ. Magni, § 295, seq.; Const. Porphyry de Them. i. p. 39, Lips.; Hieroc. p. 707, §c.). [T. H. D.]

SOLIA. [ARAK HESSPERI.]

SOLONIUM, a town in the Arcy Decumanus, in South-western Germany, on Mount Pirns, where Valentinius in A. D. 369 gained a victory over the Alamanni. (Amn. Marc. xxviiii, 10, xxviiii, 2, xxx. 7.) A variety of conjectures have been made to identify the site of the town, but there are no positive criteria to arrive at any satisfactory conclusion. [L. S.]

SOLMARACA, in Gallia, is placed in the Antonine Itin. on the road from Andosmatunum (Launoges) to Toulain Lencorum (Tont), and nearly half-way between Mosse (Montes) and Tullum. There is a place named Soudasse, which in name and in position agrees with Solmarica. "The trace of the Roman road is still marked in several places by its elevation, both on this side of Soudasse and beyond it on the road to O'Anville. (O'Anville, Archd. 16.)"

SOLIANIA, a small island of the Aegean sea, off the coast of Thessaly, near Scopelos. (Plin. iv. 12, s. 23.)

SOLIS INSULA (Plin. vi. 22, s. 24), an island mentioned by Pliny between the mainland of India and Ceylon, in the Strait. There can be no doubt that it is the present Ramacaram Cor, famous for a temple of Rama. It bore also the name of Kaju [Ceyl.]

SOLIS FOES. [OASIS, p. 458.]

SOLIS PORTUS (Hainow Adyre, (Prot. vii. 4, § 6), a haven near the SE. corner of Taprobanum (Ceylon). It has been conjectured by Forliger that it is the present Venedebulak,—a name we do not discover on the best maps. Its position, south of the Maka mountains (Aekan's Peak), is certain. [V.]

SOLIS PROEMONTORIUM (Iepa Hainow apreka), "Sacra solis extremu," a promontory of the east coast of Arabia at the south of the Persian gulf, between the mouths of the river Lut and defilagma. It is near the country of the Kurrit. (Prot. vi. 7, § 14.) [LAR: RHUMA.]

SOLLTEM: Euth. ZEALOKOS, a town on the coast of Acarnania, on the Ionian sea. Its exact site is uncertain, but it was probably in the neighbourhood of Palauros, which lay between Leucos and Alyzia. [Pallaeus.] Leake, however, places it S. of Alyzia, at Strataklismia (i.e. Port Stratus). Solliton was a Corinthian colony, and as such was taken by the Athenians in the first year of the Peloponnesian War (H. c. 431), who gave both the place and its territory to Palauros. It is again mentioned in H. c. 426, as the place at which Demosthenes landed when he resolved to invade Aeolia. (Thuc. ii. 30, iii. 95, comp. v. 30; Steph. B. s. c.; Leake, Northern Greece, vol. iv. p. 18, seq.)

SOLMINUS (Solomnus), a hill near Eupides, rising above the grove of Leto, where the Corinthians, by the lead of their arms, prevented Hera from hearing the cries of Leto when she gave birth to her twins. (Strab. xiv. p. 640.) [L.S.]

SOLMATCHES (Solomasses, Arrian, Ind. c. 4), a river named by Arrian as one of the feeders of the Ganges. There has been much difference of opinion as to what modern stream this name represents. Maenart thinks that it is one of the affluents of the Jamna (v. pt. i. p. 69); but Benfey, on the other hand, considers it not unlikely that the name makes impressions on the name Arseveni or Sarositi, which, owing to its being lost in the sands, is falsified by the Indians to flow under the earth to the spot where the Ganges and Jamna join, near Allahabad. (Benfey, art. Indien, in Ezech und Gruher, p. 4.)

SOLONA (Euth. Solonos; Cittia del Sole), a town of Gallia Cispadana, mentioned only by Pliny among the municipal towns of the 8th region (Plin. iii. 13, s. 20), but the name of the Solonates is found also in an inscription, which confirms its municipal rank (Groner, Inscr. p. 1095. 2). Unfortunately this inscription, which was found at Ariminum, affords no clue to the site of Solona; it is placed conjecturally by Cluver at a place called Cittia del Sole about 5 miles SW. of Forli; but this site would seem too close to the important town of Forum Livii. (Cluver, Ital. p. 291.) [E. H. B.]

SOLONIUM (Solonion), in Gallia Narbonensis, where C. Paullus defeated the Allobroges, B. c. 61. (Dio Cass. xxxviiii. 49; Liv. Epit. 103, where it is said, "Solonius Romanus Allobrogum reliquiam ad Salumin"") It has been conjectured that Solonium is Sellonuz, in the department of Ain, near the small river Birivas; but this is merely a guess. The narrative of Dion is useless, as usual, for determining anything with precision. Other guesses have been made about the position of Solonium; one of which is too absurd to mention. [G. L.]

SOLONIUS AGER (Solonius, Plin.), was the name given to a district or tract in the plain of Latium, which appears to have bordered on the territories of Ousta, Ardea, and Lanuvium. But there is some difficulty in determining its precise situation or limits. Cicero in a passage in which he speaks of a prodigy that happened to the infant Resonic, places it "in Soloni, quod est campus agri Lanuvini" (de Div. i. 36); but there are some reasons to suspect the last words to be an interpolation. On the other hand, Livy speaks of the Ausetes' invasion of Siculus, "Solonum" (viii. 12). Plutarch mentions that Ma- rius retired to a villa that he possessed there, when he was expelled from Rome in n. c. 88; and from thence repaired to Oatis. (Plut. Mar. 35.) But
SOLORIUS MONS, the most distinct indication of its locality is afforded by a pass of Festus (s. v. Pomona, p. 250) where he tells us "Pomona est in agro Solonii, via Ostiensi, ad duodecimq; militem, diverticulo a millario octava." It is there evident that the "agro Solonii" extended westward as far as the Via Ostiensis, and probably the whole tract bordering on the territories of Asculum, Laurentum, and Ardea, was known by this name. It may well therefore have extended to the neighbourhood of Luna and also Cicerio tells us that it abounded in snakes. (De Dic. ii. 31.) It appears from one of his letters that he had a villa there, as well as at Martins, to which he talks of retiring in order to avoid contention at Rome (ad Att. ii. 3).

The origin of the name is unknown; it may probably have been derived from some extinct town of the name; but no trace of such is found. Dionysius, indeed, speaks of an Etruscan city of Soloniius, from whence the Lucumon came to the assistance of Romulus (Dionys. ii. 37); but the name is in all probability corrupt, and, at all events, cannot afford any explanation of the Latin district of the name.

[S. E. B.]

SOLORIUS MONS, an offshoot of Mona Argentarius, running to the SW., on the borders of Hispanic Tarraconensis and Baetica, and connecting Mount Orpesidea with Mount Hephaestus. (Plin. iii. i. s. 2.) It is probably the same mountain mentioned by Strabo (iii. p. 156) as rich in gold and other mines, and the present Sierra Nevada. [T. H. D.]

SOLUS or SOLUNTUM (Sólos, Thuc. Sólos, Dial. Éth. Σωλοντιών, Dial., but coins have Σωλοντιων; Soluntum; Solunto), a city of Sicily, situated on the N. coast of the island, about 12 miles E. of Panormus, and immediately to the E. of the bold promontory called Cape Zaffarana. It was a Phoenician colony, and from its proximity to Panormus was one of the few which people retained when they gave way before the advance of the Greek colonies in Sicily, and withdrew to the NW. corner of the island. (Thuc. vi. 2.) It afterwards passed together with Panormus and Motya into the hands of the Carthaginians, or at least became a dependency of that people. It continued steadfast to the Carthaginian alliance even in n. c. 397, when the formidable armament of Dionysius shook the liberty of most of their allies (Diod. xIV. 48); its territory was in consequence ravaged by Dionysius, but without effect. At a later period of the war (u. c. 396) it was betrayed into the hands of that despot (Lb. 75), but probably soon fell again into the power of the Carthaginians. It was certainly one of the cities that usually formed part of their dominions in the island; and in u. c. 307 it was given up by them to the soldiers and mercenaries of Agathocles, who had made peace with the Carthaginians when abandoned by their leader in Africa. (Diod. xx. 69.) During the First Punic War we find it still subject to Carthage, and it was not till after the fall of Panormus that Soluntum also opened its gates to the Romans. (Id. xx. iii. p. 503.) It continued to subsist under the Roman dominion as a municipal town, but apparently one of no great consideration, as its name is only slightly and occasionally mentioned by Cicero (C. c. c. 49, iii. 43.) But it is still noticed both by Pliny and Ptolemy (Plin. iii. 8. s. 14; Ptol. iii. 4. § 4, where the name is corruptly written 'Oολoντιων'), as at a later period by the Itineraries, which place it 12 miles from Panormus and 12 from Tharros (Termini).

(SOLO. Ant. p. 91; Tab. Peut.) It is probable that its complete destruction dates from the time of the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited. It stood on a lofty hill, now called the Monte Cartofiano, at the foot of which is a small cove or port, with a fort, still called the Castello di Solunto, and a station for the tunny fishery. The traces of two ancient roads, paved with large blocks of stone, which led up to the city, may still be followed, and the whole summit of the hill is covered with fragments of ancient walls and foundations of buildings. Among these may be traced the remains of two temples, of which some capitals, portions of friezes, &c. have been discovered; but it is impossible to trace the plan and design of these or any other edifices. They are probably all of them of the period of the Roman dominion.

Several cisterns for water also remain, as well as sepulchres; and some fragments of sculpture of considerable merit have been discovered on the site. (Fuxel. de Reb. Sic. viii. p. 352; Amico, Lex. Top. vol. ii. pp. 192—193; Heeres Class. Tour, vol. ii. p. 234; Scenna di Falo, Att. della Sicilia, vol. v. pp. 60—67.) [E. H. B.]

COIN OF SOLUS.

SOLYGIA, SOLYGIUS. [Cornutus, pp. 684, 685, a.]

SOLYMA (v. ώλυμα), a high mountain near Phaselis in Lycia. (Strab. xiv. p. 666.) As the mountain is not mentioned by any other writer, it is probably only another name for the Chimaera Mons, the Olympus, or the mountains of the Solymi, mentioned by Homer. (Od. v. 283.) In the Stadiasmus it is simply called the ώλυμα: it extends about 70 miles northward from Phaselis, and its highest point, now called Teghida, is immediately above the ruins of Phaselis, which exactly corresponds with the statement of Strabo. (Leake, Asia Minor, p. 189.) [L. S.]

SOLYM. [LYCIA.]

SOMENA. [SIMENA.]

SONAUTES, according to Pliny (vi. 1), a river in Pontus; while, according to Apollodorus Rhodes (ii. 747), the Acheron in Bithynia was anciently called Sonamotes (Σωομωτης). [L. S.]

SONEIJUM, a place in Mysia Superior, on the borders of Thrace, at the pass of Mount Scamiae, called Succi. (Plin. Hieros, p. 567.) Identified with Bagna. [T. H. D.]

SONISTA, a town in Upper Pannonia, on the road from Postumia to Scicna. (Geog. Rav. iv. 19; Tab. Peut. It. Hieros, p. 561, where it is written Sunista.) Its exact site is unknown. [L. S.]

SONITIA (Eth. Σονιτίνα: Σανά), a town of Lusitania, known only from Pliny, who enumerates the Sonitini among the municipal towns of that province (Ptolemy iii. 11. s. 15). It is probable that it is the same place now called Sanza, situated in the mountains about 12 miles N. of the Gulf of Policastro. [E. H. B.]

[Digitized by Microsoft®]
SONTIUS. One of the most considerable of the rivers of Venetia, which has its sources in the Alps, at the foot of the lofty Mt. Teryou, and has from thence a course of above 75 miles to the sea, which it enters at the innermost height of the Alpian, between Aquileia and the Timavus. It revolves at the present day the waters of the Natisone and Torre, the ancient Nariso and Turcis, both of which in ancient times pursued independent courses to the sea under the walls of Aquileia, and from the E. those of the Hippach or Vipsan, called by the ancients the Tuvicis River. They, as if it had been a stream, the name of the Sontius is not mentioned by any of the geographers; but it is found in the Tabula, which places a station called Ponte Sonti (Ad Pontem Sontii) 14 miles from Aquileia on the highroad to Acauno (Lyubloc). This bridge, which lay on the main entrance into Italy on this side, was a military point of considerable importance. It checked for a time the march of the emperor Maximin when advancing upon Aquileia, in A. D. 258 (Herodian, viii. 4, 1; Sulpicius, Vita); and at a later period it was here that Odoacer took up his position to oppose the advance of Theodoric, by whom he was, however, defeated in a decisive battle, A. D. 493 (Vasisiel, Chron. p. 472; Id. Var. i. 18; Jornand. Gott. 57). The Sontius is correctly described by Herodian, though he does not mention its name, as a large and formidable stream, especially in spring and summer, when it is fed by the melting of the Alpine snows.

SOPHIE. Compare Arrian, Ind. c. 4; Plin. vii. 18; s. 22, a principal affluent of the Garma, which flows in a NE. direction to it from the Vischg Mountains. Its modern name is Socana. There is no doubt that it has been contracted from the Sanscrit Savarna, golden. The Sars (Sara) of Ptolemy (vii. 1. § 30) is certainly the same river. [V.]

SOPHOCLES (Σοφόκλης, Strab. et ali; Σωφοκλῆς, Dion Cass. xxxvi. 36; Procop. de Aedif. iii. 2; E. Perv. i. 21; Eth. Σωφοκλῆς), a district of Armenia, lying between Antitaurus and Mount Maxius, separated by the Euphrates 224, inhabited at a later period by the Mines, and by Antitaurus from Mesopotamia. Its capital was Carathieocerta. (Strab. xi. pp. 521, 522, 527.) It formed at one time, with the neighbouring districts, a separate west Armenian kingdom, governed by the Sophocles Artæus, but was annexed to the east Armenian kingdom by Tigranes. Sophene was taken away from Tigranes by Pompey. (Strab. xi. p. 532; Dion Cass. xxxvi. 26; Plut. Lucull. 24, Pomp. 33.) Nero gave Sophene as a separate kingdom to Soganes. (Tac. Ann. xiii. 7.) SOPHIE, a town in the central part of Lower Pamphylia, on the road from Mersa to Subaria (It. Ant. pp. 231, 232, 264, 267), was according to Ammianus Marcellinus (xxviii. 1) the birthplace of the emperor Maximinus. Its site is occupied by the modern Mumkirchen. [L. S.]

SORA (Σορά: Eth. Soramis: Sora), a city of Latium, situated in the valley of the Liris, on the right bank of that river, about 6 miles to the N. of Arpinum. Though included in Latium in the more extended sense of that term, as it was understood under the Roman Empire, Sora was originally a Volscian city (Liv. x. 1), and apparently the most northerly possessed by that people. It was wrested from them by the Romans in B. C. 343, being surprised by a sudden attack by the consuls Fabius, Dresco and Sec. Sulpicius, (Liv. vii. 28.) It was subsequently occupied by the Romans; the establishment of this is not mentioned by Livy, but in B. C. 315 he tells us the inhabitants had revolted and joined the Samnites, putting to death the Roman colonists. (Id. ix. 25; Dion. xix. 72.) The city was in consequence besieged by the dictator C. Fabius, and, notwithstanding the great defeat of the Romans at Lutulae, the siege was continued into the following year, when the city was at length taken by the consuls C. Sulpicius and M. Postelius; the citadel, which was in a very strong and inaccessible position, being betrayed into their hands by a deserter. The leaders of the defection were sent to Rome and doomed to execution; the other inhabitants were spared. (Liv. ix. 23, 24.) Sora was now occupied by a Roman garrison; but notwithstanding this it again fell into the hands of the Samnites in B. C. 306, and it was not recovered by the Romans till the following year. (Id. i. 43, 44; Dion. xix. 59, 90.) After the close of the Second Samnite War it was one of the points which the Romans determined to secure with a colony, and a b. C. 209 (Dion. ii. 5; Liv. xii. 62) was established in it. In B. C. 303. (Id. i. 1.) From this time Sora became one of the ordinary "coloniae Latinae" and is mentioned in the Second Punie War among the refractory colonies, which in B. C. 209 refused any further contributions. (Liv. xxvii. 9, xxix. 15.) The text of Livy gives Sora in the first passage, and Sora in the second, but the same place is necessarily meant in both passages, and it is probable that Sora is the true reading. From this time we hear little more of Sora, which lapsed into the condition of an ordinary municipal town. (Cic. pro Pison. 9.) Its rank of a Colony Latina was merged in that of a municipium by the Lex Julia; but it received a fresh colony under Augustus, consisting, as we learn from an inscription, of a body of veterans from the 4th legion. (Lib. Colon. p. 257; Plin. iii. s. 9; Orb. Inscr. 3681.) Juvenal speaks of it as a quiet country town, where houses were cheap (Juv. iii. 259); and it is mentioned by all the geographers among the towns of this part of Italy. (Pepin. Cod. ii. 18; Suid. Itul. viii. 394; Orb. Inscr. 3972.) Nothing more is heard of it under the Roman Empire, but it survived the fall of the Western Empire, and continued throughout the middle ages to be a place of consideration. Sora is still an episcopal see, and much the most important place in this part of Italy, with about 10,000 inhabitants. The modern town undoubtedly occupies the same site with the ancient one, in the plain or broad valley of the Liris, resting upon a bold and steep hill, crowned by the ruins of a medieval castle. The ancient citadel, described by Livy, stood on a hill at the back of this, called the Rocca di S. Angelo, where some remains of the ancient walls, constructed of massive polygonal blocks, are still visible. No remains of Roman times are preserved, except a few inscriptions, and some foundations, supposed to be those of a temple. (Gournelli, vol. iii. pp. 362—366; Hearne's Classical Tours, vol. i. pp. 299—302.) [E. H. B.]

SORA (Σορά or Σορά), a town of Phaphigonia, noticed only by the latest writers of antiquity, and of unknown site. (Constant. Porphy. Thea. 7; Novellae, xxi. 1; Hieroc. p. 695; Conc. Nicean. ii. p. 52; Conc. Chalc. p. 664, where it is called Sora.) [L. S.]

SORA (Σορά, Prov. vii. 1. § 68), a town in the southern part of Italy, between M. Betigio and Adelestathern. It was the capital of a nominal race.
SORATE.

called Sora (Ptol. L. c.), and the royal residence of a king named Arcates. The people are evidently the same as the Surae of Pliny (vi. 20. s. 23). Lassen places them in the mountains above Modræs (see map).

SORATE (Monte S. Oreste), a mountain of Etruria, situated between Falerni and the Tiber, about 26 miles N. of Rome, from which it forms a conspicuous object. It is detached from the chain of the Apennines, from which it is separated by the intervening valley of the Tiber; yet in a geological sense it belongs to the Apennine range, of which it is an outlying offset, being composed of the hard Apennine limestone, which at once distinguishes it from the Mons Ciminus and the other volcanic hills by which it is surrounded. Though of no great elevation, being only 2420 feet in height, it rises in a bold and abrupt mass above the surrounding plain (or rather table-land), which renders it a striking and picturesque object, and a conspicuous feature in all views of the Campagna. Hence the selection of its name by Horace in a well-known ode (Cor. i. 9) is peculiarly appropriate. It was consecrated to Apollo, who had a temple on its summit, probably on the same spot now occupied by the monastery of S. Silvestro, and was worshipped there with peculiar religious rites. Its priests were supposed to possess the power of passing unhurt through fire, and treading on the hot coals with their bare feet. (Virg. Aen. vii. 696. xi. 785-790; Sil. Ital. vi. 175-181, vii. 662; Plin. vii. 2.) Its rugged and ragged peaks were in the days of Catius still the resort of wild goats. (Var. R. R. ii. 3. § 3.)

Sorate stands about 6 miles from Civita Castellana, the site of the ancient Falerii, and 2 from the Tiber. It derives its modern appellation from the village of Sant' Oreste, which stands at its S. extremity on a steep and rocky hill, forming a kind of step or ledge at the foot of the more elevated peaks of Sorate itself. This site, which bears evident signs of ancient habitation, is supposed to be that of the ancient Ferola or Lucus Floromae. (Denis's Etruria, vol. i. p. 179.)

Sorbodunu'num, or SORVODUNUM, a town of Britannia Romana, in the territory of the Belgae. (Hist. Ant. pp. 483, 486.) It is identified with Old Sarum, where coins of several Roman emperors have been found, and where the traces of the ancient Roman walls show it to have been about a mile in circumference. (Camden, p. 113.)

Sordice, a lake in Gallia. A river Sordus ran out of the Etang Sordice, in the country of the Sorodones or Sordi. [Sordones.]

"Stagnam hic palusque, quippe diffusa petat, Et incola istum Sordicen cognominat." (Avienus, Or. Mar., as I. Vossius reads it.)

The Soridce is supposed by some geographers to be the Etang de Leuca; but others take it to be an étang further south, called Etang de St. Nazaire, and the Etang de Leveau to be that near Salusus, which is described by Strabo, Mela, and others. [Salusiae; Ruscino.]

[Sordones; Ruscino.] [G. L.]

SORDONES, or SARDONES, as the name has sometimes been written, a people in Gallia. Mela (i. 5) writes: "after the Salusii comes the Ruscusii, and the small streams Tels and Tichiis; the Colonial Ruscins, and the views Hibberis." Pliny (iii. 4) begins his description of Gallia Narbonensis from the foot of the Pyrenees. He says: "On the coast is the regio Sardonum or Sardomum, and in the interior the Consarnani; the rivers Techum, Vernodrubrun; towns, Hibberis and Ruscino." These Sordones are the Sordi of Avienus (Or. Marit. 562):—

"Sordus indé cineque

Populus agebat inter arias locos

Ac pertinentes usque ad internus mare,

Qua finiternis stant Pyrene vertices,

Inter ferrum hastra ductae greates,

Et arva late et gurgitum ponti primit:"

as I. Vossius reads the passage in his edition of Mela. The Sordi then occupied the coast of the Mediterranean from the Pyrenees northward, and the neighbouring part of the interior at the north foot of the Pyrenees. Ptolomy, as D'Anville observes, does not mention the Sordones, and he has made the territory of the Vales Tectosagens comprehend Hibberis and Ruscino. The Sordones probably occupied the whole of the territory called Ronsillon, and they would be in possession of that pass of the Pyrenees called Col de Fortis, which is defended by the fort of Bellegarde. They bordered on the Consarnani. [Consarnani.]

Soribicaria, a place in Hispania Baetica, mentioned by Hirtius (R. Hesp., c. 24), and which is also called also "Soritia" by that author (c. 27). (ii. pt. i. p. 361) seeks it in the neighbourhood of the Flumen Salsus (the Salado), S. of the Baetis, and between Ossuna and Antequera. [T. H. D.]

Soricingi (Soric withholding, Peripl. M. E. f. 34), a people of the southern part of Hindostan, who apparently dwelt along the banks of the Chaberas (Káveri). Lassen places them below the Sora, on the slopes of the hills above Madræs. [V.]

Soritia. [Soribicaria.]

Sorinum, (Sòrinus, Ptol. ii. 8. § 10), a city of Dacia; now Gierstow. [T. H. D.]

Sorothes (AD), a station in Lucania, X. of Emerita. (Hist. Ant. p. 433.) Variously identified with Montomaches and Aliseda. [T. H. D.]

Sostomagus, in Gallia, is placed by the Jerusalem Hist. between Tolosa (Toulouse) and Carcans (Carcassone), 38 miles from Tolbouse and 24 from Carcassone. The road is nearly direct, and if the distances are correct, we might perhaps find some name like Sosto in the proper place. Some geographers have found Sostomagus near Castelbouvard. [G. L.]

Sotera, a place in Aria, mentioned by Ammianus (xxiii. 6). It is probably the same as that called by Ptolemy Στότερα (vi. 17. § 7). [V.]

Sotiates or Sotiates, a people of Aquitania. Schneider (Caeasar, B. G. i. 20) who writes "in Sotiarum fines" has a long note on the various forms of this word. Nicomachus Damascenus (quoted by Athenaeus, vi. p. 249) writes the name Sotian, but as Cæsar was his authority for what he says, he may have altered the form of the word. In Dion Cassius (xxxix. c. 46) the reading is Σωτάρας (ed. Reimar); but there are other variations in the MSS. In Pliny (iv. 19) we find among the nations of Aquitania "Avexul, Eunates, Sotiates, Osquitates Campestres." Orosius (vi. 8. ed. Haver- kamp) has Sotiates, but one MS. has Sotiates and others have Sotauses.

In r. c. 56 Caesar sent P. Crassus into Aquitania. Crassus came from the north, and after summoning the men of fighting age who were on the muster rolls of Tolbouse, Carcassone, and Narbonens,
SOZOPOLIS.

be entered the territory of the Sotiates, the first of the Aquitanian peoples whom he attacked. The Sotiates were the neighbours of the Elmeses, a name represented by the town of Enaus. A line drawn from Auch (Aumô) on the Garonne to Biarritz in the department of La Gironde, passes near Sos, a town which is on the G^tine, and in the Cabaret. In the middle ages it was called Sodinum. Ancient remains have been found at Sos. Here we have an instance of the preservation of ancient names in this part of France, and there are many other instances.

D'Aubigné in determining the position of the Sotiates argues correctly that Crassus having passed through the Saxones, a people who had submitted to Caesar (B. G. iii. 21) and who offered no resistance, entered Aquitania by the north, and the Sotiates who were only seven or eight leagues south of the Garonne would be the first tribe on whom he fell. He says that he has evidence of a Roman road very direct from Sos to Enaus; and he is convinced that this is part of the road described in the Jerusalem Itin. between Vasatue and Elmesa. On this road the name Scitium occurs in the Itin., and as the distance between Scitium and Elmesa corresponds very nearly to the distance between Sos and Enaus, he conjectures that this word Scitium is written wrong, and that it should be Sotium.

The Sotiates, who were strong in cavalry, attacked the Romans on their march, and a battle took place in which they were defeated. Crassus then assaulted their town, which made a stout resistance. He brought up his vineyard and towers to the walls, but the Sotiates drove mines under them, so as they had copper mines in their country they were very skilful in burrowing in the ground. At last they sent to Crassus to propose terms of surrender (B. G. iii. 21). While the people were giving up their arms on one side of the town, Adcantumans, who was a king or chief, attempted to sally out on another side with his 600 "soldati." The Romans met him there, and after a hard fight Adcantumans was driven back into the town; but he still obtained the same easy terms as the rest.

These Soldati were a body of men who attached themselves to a chief with whom they enjoyed all the honours of their country, as long as the chief lived; but if any violence took off their leader it was their duty to share the same fate or to die by their own hand. This was an Illyrian and a Gallic fashion. The thing is easily understood. A usurper or any desperate fellow seized on power with the help of others like himself; lived well, and fed his friends; and when his tyranny came to an end, he and all his crew must kill themselves, if they wished to escape the punishment which which. (Plut. Sertor. c. 14; Caesar, B. G. vii. 40; and the passage in Athenaeus.)

The MSS. of Caesar vary in the name of Adcan-
tumans. Schneider writes it Adatanum, and in Athenaeus it is Aδαταμόνος. Schneider mentions a medal of Peltaein, with REX ΑΔΑΛΕΤΤΩΝ and a lion's head on one side, and on the other SO-
TIOGA. Walckenaer (Geogr. d'é. i. 284) may be speaking of the same medal, when he describes one which is said to have been found at Toulouse, with a head of Adatunum on one side and the word Sotiales on the other. He thinks it "very suspected," but it may be.

[O.L.]

SOZOPOLIS (Σοζόπολης), a town noticed only by late writers as a place in Pisisa, on the north of Tarentum, in a plain surrounded on all sides by mountains. (Hieroc. p. 672; Evagri. Hist. Eccl. iii. 33.) It is possible the same place which Stephanus B. notices under the name of Sozana, Nicetas (Ann. p. 9) mentions that it was taken by the Turke, but defended for a long time by John Comnenus. (Comp. Ann. p. 169; Cinnamus, p. 18.)

The traveller Paul Lucas (Sec. Voy. vol. i. c. 33) observed some ancient remains at a place now called Sunan, south of Aquitania, which probably belong to Sozopolis.

[S. L.]

SOZOPOLIS, a later name of Apollonia in Thrace. [Vol. I. p. 160.]

SPLATHRA (Plin. iv. 9. s. 16; Σπλάθρα, Plin. iv. 9. s. 16; Σπλάθρα, Steph. B. s. s. Σπλάθρα, Hes. Phaen. op. Steph. B. s. s. Σπλάθρα, Paus. B. s. s. Σπλάθρα), a town of Magnesia, in Thessaly.

The Paeonian gulf. It is conjectured that this town is meant by Lyceophron (899), who describes Protonus, the leader of the Magnetes in the Helid, as ο καὶ Παλαθρής (Σπλάθρα). (See Müller, ad Segl. l. c.)

SPALATUM. [Salona.]

SPARTA (Σπαρτή, Ιοκ. Σπάρτη: Εθν. Σπα-
τίνθια, Spartiates, Spartans), the capital of La-
nonia, and the chief city of Peloponnesus. It was also called LACEDAEMON (Λακεδαιμόν: Εθν. Λα-
κεδαίμων, Lacedaemonius), which was the original name of the country. [See Vol. II. p. 103, n. 2.]

Sparta stood at the upper end of the middle vale of the Eurotas, and upon the right bank of the river. The position of this valley, shut in by the mountains ranges of Taygetus and Parmon, its inaccessibility to invaders, and its extraordinary beauty and great fertility, have been described in a previous article [LAONIA]. The city was built upon a range of low hills and upon an adjoining plain stretching SE. to the river. These hills are offshoots of Mt. Tay-
getus, and rise almost immediately above the river. Ten-stadia S. of the point where the Oenus flows into the Eurotas, and upon the right bank of the river. space enclosed by this wall there are two terraces, upon one of which, amidst the ruins of a church, the French Commission discovered traces of an ancient temple. In this space there are also some ancient doors, formed of three stones, two upright with the architrave, buried in the ground; but no conjecture can be formed of the building to which they belonged without excavations.

The hill we have been describing is the largest of all the Spartan heights, and is distinguished by the wall which surrounds it, and by containing traces of foundations of some ancient buildings. From it two smaller hills project towards the Eurotas, parallel to one another, and which may be regarded as turrets or smaller hills. Upon the more southerly of the two there are considerable remains of a circular brick building, which Leake calls a circus, but Curtius an amphitheatre or odeum (Map, 3). Its walls are 16 feet thick, and its diameter only about 100 feet; but as it belongs to the Roman period, it was probably sufficient for the diminished population of the city at that time. Its entrance was on the side towards the river. West of this building is a valley in the form of a horse-shoe, enclosed by walls of earth, and apparently a stadium, to which its length nearly corresponds.

To the north of the hollow way leading from the bridge of the Eurotas to Megala there is a small insulated hill, with a flat summit, but higher and more precipitous than the larger hill to the south of this way. It contains but few traces of ancient buildings (Map, B). At its southern edge there are the remains of an aqueduct of later times.

The two hills above mentioned, north and south of this hollow way, formed the northern half of Sparta.

The other portion of the city occupied the plain between the southern hill and the rivulet falling into the Eurotas, sometimes called the River of Megala, because it flows past that village, but more usually Trypitiako, from Trypi, a village in the mountains (Map, c). Two canals, beginning at Megala, run across this plain: upon the southern one (Map, bb), just above its junction with the Trypitiako, stands the small village of Psychitako (Map, c). Between this canal and the ravine which cuts the hill on which the town of New Sparta is now built (Map, D). Here are several ancient ruins, among which are some remains of walls at the southern extremity, which look like city-walls. The plain between the heights of New Sparta and the hill of the theatre is covered with corn-fields and gardens, among which are seen fragments of wrought stones, and other ancient remains, cropping out of the ground. The only remains which make any appearance above the ground are those of a quadrangular building, called by the present inhabitants the tomb of Leonidas. It is 22 feet broad and 44 feet long, and is built of ponderous square blocks of stone. It was probably an heronum, but cannot have been the tomb of Leonidas, which we know, from Pausanias (iii. 14. § 1), was near the theatre, whereas this building is close to the new town.

This plain is separated from the Eurotas by a range of hills which extend from the Roman amphitheatre on the north to the village of Trypitiako; some of the hills and the river is a level tract, which is not much more than 50 yards wide below the Roman amphitheatre, but above and below the latter it swells into a plain of a quarter of a mile in breadth. Beyond the river Trypitiako there are a few traces of the foundations of ancient buildings near the little village of Kalagonida (Map, 7). Leake mentions an ancient bridge over the Trypitiako, about a quarter of a mile N.E. of the village of Kalagonida. This bridge, which was still in use when Leake visited the district, is described by him as having a rise of about one-third of the span, and constructed of large single blocks of stone, reaching from side to side. The same traveller noticed a part of the ancient causeway remaining at either end of the bridge, of the same solid construction. But as this bridge is not noticed by the French Commission, it probably no longer exists, having been destroyed for its materials. (Leake, Morea, vol. i. p. 157, Peloponnesian, p. 115.)

Such is the site of Sparta, and such is all that now remains of this famous city. There cannot be any doubt, however, that many interesting discoveries might be made by excavations; and that at any rate the foundations of several ancient buildings might be found, especially since the city was never destroyed in ancient times. Its present appearance corresponds wonderfully to the anticipation of Thucydides, who remarks (l. 10) that "if the city of the Laconians were deserted, and nothing remained but its temples, and the foundations of its buildings, men of a distant age would find a difficulty in believing in the existence of its former power, or that it possessed two of the five divisions of Peloponnesus, or that it commanded the whole country, as well as many allies beyond the peninsula,—so inferior was the appearance of the city to its fame, being neither adorned with splendid temples and edifices, nor built in magnificence, but in separate quarters, in the ancient method. Whereas, if Athens were reduced to a similar state, it would be supposed, from the appearance of the city, that the power had been twice as great as the reality." Compared with the Acropolis of Athens, which rises proudly from the plain, still crowned with the columns of its glorious temples, the low hills on the Eurotas, and the shapeless heap of ruins, appear perfectly insignificant, and present nothing to remind the spectator of the city that once ruled the Peloponnesus and the greater part of Greece. The site of Sparta differs from that of almost all Greek cities. Protected by the lofty ramparts of mountains, with which nature had surrounded their fertile valley, the Spartans were not obliged, like the other Greeks, to live within the walls of a city pent up in narrow streets, but continued to dwell in the midst of their plantations and gardens, in their original village trim. It was this rural freedom and comfort which formed the chief charm and beauty of Sparta.

It must not, however, be supposed that Sparta was destitute of handsome public buildings. Notwithstanding the simplicity of the Spartan habits, their city became, after the Messenian wars, one of the chief seats of poetry and art. The private houses of the Spartans always continued rude and unadorned, in accordance with a law of Lycurgus, that the doors of every house were to be fashioned only with the saw, and the ceiling with the axe (Plut. Ages. 13); but this regulation was not intended to discourage architecture, but to prevent it from being carried to the excess which the richer persons, the buildings for the gods and the state. The palace of the kings remained so simple, that its doors in the time of Agesilaus were said to be those of the original building erected by Aristodemus, the founder of the Spartan monarchy (Xen. Ages. 8. § 7); but the temples of the gods were built with
great magnificence, and the spoils of the Persian wars were employed in the erection of a beautiful sta in the Agora, with figures of Persians in white marble upon the columns, among which Pausanias admired the statues of Mardonius and Artemisia (iii. 11. § 3). After the Persian wars Athens became more and more the centre of Greek art; but Sparta continued to possess, even in the time of Pausanias, a larger number of monuments than most other Grecian cities.

Sparta continued unfortified during the whole period of autonomous Grecian history; and it was first surrounded with walls in the Macedonian period. We learn from Polybius (ix. 21) that its walls were 48 stadia in circumference, and that it was much larger than Megalopolis, which was 50 stadia in circuit. Its superiority to Megalopolis in size must have been owing to its form, which was circular. (Polyb. v. 22.) Leake remarks that, "as the site towards the Eurotas measured about two miles with the windings of the outline, the computation of Polybius sufficiently agrees with actual appearances, though the form of the city seems rather to have been semicircular than circular." (Morea, vol. i. p. 180.) Its limits to the eastward, at the time of the invasion of Philip (n. c. 218), are defined by Polybius, who says (v. 22) that there was a distance of a stadium and a half between the foot of the cliffs of Mount Menelaius and the nearest part of the city. Livy also describes the Eurotas as flowing close to the walls (xxxiv. 28, xxxv. 29). When Demetrius Poliorcetes made an attempt upon Sparta in n. c. 296, some temporary fortifications were thrown up; and the same was done when Pyrrhus attacked the city in n. c. 272. (Paus. i. 13. § 6, vii. 8. § 5.) But Sparta was first regularly fortified by a wall and ditch by the tyrant Nabas in n. c. 193 (Livy, xxxvi. 27; Paus. vii. 8. § 5), though even this wall did not surround the whole city, but only the level parts, which were more exposed to an enemy's attack. (Livy, xxxiv. 38.) Livy, in his account of the attack of Sparta by Philopoemen in n. c. 192, alludes to two of the gates, one leading to Pharnae, and the other to Mount Barbaithenes. (Livy, xxxv. 30.) After the capture of the city by Philopoemen, the walls were destroyed by the Achaeans. (Livy, xxxv. 27; Paus. vii. 8. § 5; but they were shortly afterwards restored by order of the Romans, when the latter took the Spartans under their protection in opposition to the Achaeans (Paus. vii. 9. § 5). Its walls and gates were still standing when Pausanias visited Sparta in the second century of the Christian era, but not a trace of them now remains. When Alaric took Sparta in n. d. 396, it was no longer fortified, nor protected by arms or men (Zosim. v. 6); but it continued to be inhabited in the three centuries, as we learn from the "Chronicle of the Morea." It was then always called Lae-
dae-mon, and was confined to the heights around the theatre. The walls, which surrounded it at that time may still be traced, and have been mentioned above. It is to the medieval Lacedaemon that the ruins of the churches belong, of which no less than six are noticed by the French Commission. After the conquest of Peloponnesus by the Franks in the thirteenth century, William de Villehardouin built a strong fortress upon the hill of Misistriv. usually pronounced Mistrié, a little more than two miles west of Sparta, at the foot of Mt. Taygetus. The inhabitants of the medieval Lacedaemon soon abandoned their town and took refuge in the fortress of Mistrié, which long continued to be the chief place in the valley of the Eurotas. The site of Sparta was occupied only by the small villages of Magala and Psychidiko, till the present Greek government re-
solved to remove the capital of the district to its ancient seat. The position of New Sparta upon the southern part of the ancient site has been already described.

It has been observed that Sparta resembled Rome in its site, comprehending a number of contiguous hills of little height or boldness of character. (More, Tour in Greece, vol. ii. p. 236.) It also resembled Rome in being formed out of several earlier settle-
ments, which existed before the Dorian conquest, and gradually coalesced with the later city, which was founded in their midst. These earlier places, which are the hamlets or coins mentioned by Thucydides (i. 10; iii. 102, 103. vi. 6. p. 601.) We are also told that_Pitane, which was united by a common sacrifice to Artemis. (Paus. iii. 16. § 5.) They are frequently called ψυκαι, or tribes, by the grammarians (Müller, Doriins, iii. 3. § 7), and were regarded as divisions of the Spartans; but it is clear from ancient writers that they are names of places.*

We are best informed about Pitane, which is called a παλατζ by Euripides (Troad. 1112), and which is also mentioned as a place by Pindar (παλατζ pαδαν ελευθερός, Πταν. vii. 46). Herodotus, who had been there, calls it a βασιλεία (iii. 55). He also mentions a λόγος Παλατζίνης (i. 53); and though Thucydides (i. 20) denies its existence, Caracalla, in imitation of antiquity, composed a λόγος Παλατζίνης of Spartans. (Herodian. iv. 8.) It appears from the passage of Pindar quoted above, that Pitane was at the ford of the Eurotas, and con-
sequently in the northern part of the city. It was the favourite and fashionable place of residence at Sparta, like Collytus at Athens and Ceratonia at Corinth. (Clusi. de cens. 6. p. 363.) It is probably that Pitane was near the temple and stronghold of Isorium, of which we shall speak presently. (Polyben. ii. 1. § 14; Plut. Ages. 32.) Limnæus was situated upon the Eurotas, having derived its name from the marshy ground which once existed there (Strab. viii. p. 363); and as the Dromos occupied a great part of the lower level towards the southern extremity, it is probable that Limnæus occupied the northern. (Leake, Morea, vol. i. p. 177.) It is probable that Mesoa was in the SE part of the town, as will be seen below, p. 1026 b., and Cynouros in the SW.

In the midst of these separate quarters stood the Acropolis and the Agora, where the Dorian invaders first planted themselves. Pausanias remarks that the Lacedaemonians had no acropolis, towering above other parts of the city, like the Cadmeia at Thebes and Larissa at Argos, but that they gave this name to the loftiest eminence of the group (ii. 17. § 2). This is rather a doubtful description, as the great hill, upon which the temple of Apollo, and the hill upon the northern extremity of the site, present nearly the same elevation to the eye. Leake places the Acro-

polis upon the northern hill, which, he observes, was

* Some modern writers mention a fifth tribe, the Aigeiae, because Herodotus (v. 149) speaks of the Aigeae as a great tribe (φυλής) in Sparta; but the word φυλή seems to be here used in the more general sense of family, and there is no evidence that the word Aigea was the name of a place, like the other four mentioned above.
better adapted for a citadel than any other, as being separated from the rest, and at one angle of the site; but Curtius supposes it to have been upon the hill of the theatre, as being the only one with a sufficiently large surface on the summit to contain the numerous buildings which stood upon the Acropolis. The latter opinion appears the more probable; and the larger hill, cleared from its surrounding rubbish, surrounded with a wall, and crowned with buildings, would have presented a much more striking appearance than it does at present.

The chief building on the Acropolis was the temple of Athena Chalcioe, the tutelary goddess of the city. It was said to have been begun by Tyndareus, but was long afterwards completed by Gitiadas, who was celebrated as an architect, statuary, and poet. He caused the whole building to be covered with plates of bronze or brass, whence the temple was called the Brazen House, and the goddess received the surname of Chalcioe. On the bronze plates there were represented in relief the labours of Hercules, the exploits of Dionneur, Hephaestus sewing his mother from her chains, the Nymphs arming Heracles, Perseus testing his resolve against Medusa, the birth of Athena, and Amphitrite and Poseidon. Gitiadas also made a brazen statue of the goddess. (Paus. iii. 17. §§ 2, 3.)

The Brazen House stood in a sacred enclosure of considerable extent, surrounded by a stoa or colonnade, and containing several sanctuaries. There was a separate temple of Athena Ergane. Near the southern stoa was a temple of Zeus Cosmetas, and before it the tomb of Tyndareus; the western stoa contained two temples, one dedicated by Lyssander in commemoration of his victories over the Athenians. To the left of the Brazen House was a temple of the Muses; behind it a temple of Ares Areia, with very ancient wooden statues; and to its right a very ancient statue of Zeus Hypatus, by Leochares of Rhegium, parts of which were fastened together with nails. Here also was the onkios, a booth or tent, which Curtius conjectures to have been the onkios of the Cumaean Sibyl; and a statue of the Eponymous河北 as a suppliant. Near the altar of the Brazen House stood two statues of Pausanias, and also statues of Aphrodite Amblogora (delaying old age), and of the brothers Sleep and Death. The statues of Pausanias were set up by order of the Delphian Apollo to expiate his having starved to death within the sacred precincts. (Paus. iii. 17. §§ 2-18. § 1.)

The Agora was a spacious place, surrounded, like other Greek market-places, with colonnades, from which the streets issued to the different quarters of the city. Here were the public buildings of the magistrates,—the council-house of the Gerousia and senate, and the offices of the Ephors, Nomophylakes, and Biaideis. The most splendid building was the Persian stoa, which had been frequently repaired and enlarged, and was still perfect when Pausanias visited the city. The Agora contained statues of Julius Caesar and Augustus; in the latter was a brazen statue of the prophet Agias. There was a place called Chorum, marked off from the rest of the Agora, because the Spartan youths made here dances in honour of Apollo at the festival of the Gymnopaeia. This place was adorned with statues of the Pythian deities, Apollo, Artemis, and Leto; and near it were temples of Earth, of Zeus Agoraeus, of Athena Agoraea, of Apollo, of Pausianus Asclepieus, and of Hera. In the Agora was a colossal statue representing the people of Sparta, and a temple of the Morae or Fates, near which was the tomb of Orestes, whose bones had been brought from Teges to Sparta in accordance with the well-known tale in Herodotus. Near the tomb of Orestes stood the statue of king Polydorus, whose effigy was used as the seal of the state. Here, also, was a Hermes Acoraeus bearing Dionysus as a child, and the old Ephoreia, where the Ephors originally administered justice, in which were the tombs of Epimenides the Cretan and of Apharesus the Aeolidian king. (Paus. iii. 11. §§ 2-11.)

The Agora was near the Acropolis. Lycurgus, it is said, when attacked by his opponents, fled for refuge from the Agora to the Acropolis, but was overtaken by a fiery youth, who struck out one of his eyes. At the spot where he was wounded, Lycurgus founded a temple of Opitileus * or Ophthalmitis, which must have stood immediately above the Agora. Pindar says that it lay within the temenos of the Brazen House; and Pausanias mentions it, in descending from the Acropolis, on the way to the so-called Aplium, beyond which was a temple of Athena Castor and Pollux, also a temple of Artemis Cagaia. (Pht. Lyn. 11. Orph. Phth. loc. p. 227, b.; Paus. iii. 18. § 4.)

The Agora may be placed in the great hollow east of the Acropolis (Map, 2). Its position is most clearly marked by Pausanias, who, going westwards from the Agora, arrived immediately at the theatre, after passing only the tomb of Brasidas (iii. 14. § 1). The site of the theatre, which he describes as a magnificent building of white marble, has been already described.

The principal street, leading out of the Agora, was named Aphetas (Αφετας), the Cynosura of the poets (Map, 2). It ran towards the southern wall, through the most level part of the city, and was bordered by a succession of remarkable monuments. First came the house of king Polydorus, named Bousera (Βούσερα), because the state purchased it from his widow for some oxen. Next came the office of the Bidaici, who originally had the inspection of the race-course; and opposite was the temple of Athena Niki, with a statue of her and of Celerbeia, with a statue of Alpheus, and a tomb of Epimenides the Cretan (Map, 2). It ran towards the southern wall, through a tomb of Diotima, and the royal sepulchres of the Euryphontes. Pausanias then returns to the Helleum, probably to the other side of the Aphetas, where he mentions a sanctuary of Arionoe, the sister of the wives of Castor and Pollux; then a temple of Artemis near the so-called Phuria (Φούρια), which were perhaps the temporary fortifications thrown up before the completion of the city walls; next the tombs of the Lamiaës, the Elean prophets,—sanctuaries of Maia and Alpheus, who fell at Thermopylae,—the temple of Zeus Troeaeus, built by the Dorians after conquering the Achaeans, and especially the Anyclaei,—the temple

* So called, because οὐρλυγός was the Lacedaemonian form for οὐρλυγός, Plut. Lyn. 11.
SPARTA.

of the mother of the gods,—and the heroa of Hippolytus and Aylon. The Apeithaia upon quitting the city joined the great Hyaclanthian road which led to the Amyclaeum. (Paus. iii. 12. §§ 1—9.)

The next most important street leading from the Agora ran in a south-easterly direction. It is usually called Scias, though Pausanias gives this name only to a building at the beginning of the street, erected by Theodorus of Saus, and which was used even in the time of Pausanias as a place for the assembling of the people. 'Near the Scias was a round structure, said to have been built by Epanenides, containing statues of the Olympian Zeus and Aphrodite; next came the tombs of Cy- mera, Castor, Idas, and Lyneicus, and a temple of Core Soteira. The other buildings along this street or in this direction, if there was no street, were the temple of Apollo Cornutus, who was worshipped here before the Dorian invasion,—a statue of Apollo Apeithaia,—a quadrangular place surrounded with colonnades, where vessels (ἀγάλατα) were anciently sold,—an altar sacred to Zeus, Athens, and the Dioscuri, all surrounded Ambulii. Opposite was the place called Colona and the temple of DemANNs Colotactas. Near the Colona was the temple of Zeus Euanemous. On a neighbouring hill was the temple of the Argive Hera, and the temple of Hera Hypercheira, containing an ancient wooden statue of Aphrodite Hera. To the right of this hill was a statue of Heracles, who had gained the victory in the Olympic games. (Paus. iii. 12. § 10—iii. 13.) Although a neighbouring hill was said not to say that the Colona was a hill, yet there can be no doubt of the fact, as κοιλάω is the Doric for κοιλάω, a hill. This height and the one upon which the temple of Hera stood are evidently the heights NW. of the village of Τεγ- χίκα between the Erotais and the plain to the S. of the theatre (Map. C.).

After describing the streets leading from the Agora to the S. and SE. Pausanias next mentions a third street, running westward from the Agora. It led past the theatre to the royal sepulchres of the Agesand. In front of the theatre were the tombs of Pausanias and Leonidas (i. 14. § 1).

From the theatre Pausanias probably went by the hollow way to the Erotais, for he says that near the Septichures of the Agesand was the Lesche of the Crotani, and that the Crotani were a portion of the Pitaneis. It would appear from a passage in Athenaeus (i. p. 31) that Pitane was in the neigh- borhood of the Oenous; and its proximity to the Erotais has already been shown. [See above, p. 1026, a.] It is not improbable, as Curtius observes, that Pitane lay partly within and partly without the city, like the Ceraunaeus at Athens. After proceeding to the tomb of Taenurus, and the sanctuaries of Poseidon Hippocomeus and the Aigcinota. Artemis, Pausanias returns to the Lesche, near which was the temple of Artemis lissoria, also called Limnaca. Issoria, which is known as a stronghold in the neighborhood of Pitane (Ptol. iv. 1. § 14; Plut. Ages. 52), is supposed by Curtius to be the hill to the north of the Agora (Map. C.); Lesco, as we have already seen, regards this hill as the Aivopolis itself, and identifies the Issoria with the height above the ruined amphitheatre or circus. Pau- sanias next mentions the temples of Theisc, of Demeter Cithonia, of Sumpis, and of the Olympic Zeus. He then reached the Dromos, which was used in his day as a place for running. It extended along the stream southward, and contained gymn-
The account of Xenophon illustrates a passage of Pausanias. The latter writer, in describing (iii. 19. § 7) the road to Therapne, mentions a statue of Athena Alea as standing between the city and a temple of Zeus Phoebus, above the right bank of the Eurotas, at the point where the river was crossed; and only by a bridge across the Eurotas is mentioned by ancient writers. It may be that no doubt that the road to Therapne crossed the bridge which Xenophon speaks of, and the remains of which are still extant. Therapne stood upon the Menelaium or Mount Menelaius, which rose abruptly from the left hand of the river opposite the south-eastern extremity of Sparta. (Μενελαίον, Polyb. v. 22; Μενελαίον, Steph. B. s. v.; Mene-laii Mon, Liv. xxxiv. 28.) The Menelaium has been compared to the Acropolis of Rome, and rises about 760 feet above the Eurotas. It derived its name from a temple of Menelaus, containing the tombs of Menelaus and Helen, whither solemn processions of men and women were accustomed to repair, the men imploring Menelaus to grant them bravery and success in war, the women invoking Helen to bestow beauty upon them and their children. (Paus. iii. 19. § 9; Herod. vi. 61; lscer. Encom. Hel. 17; Hezych. s. v. Ἑλένη, Θεράπνεα, πατρίς.) The foundations of this temple were discovered in 1834 by Ross, who found amongst the ruins several small figures in clay, representing men in military costume and women in long robes, probably dedicatory offerings made by the poorer classes to Menelaus and Helen. (Ross, Wanderungen in Griechenland, vol. ii. p. 13, seq.) The temple of Menelaus is expressly said to have been situated in Therapne (Θεράπνη, Θεράπνια; Thermae, Phil. iv. 5; s. e.), which was one of the most ancient and venerable places in the middle valley of the Eurotas. It was said to have derived its name from a daughter of Lelex (Paus. iii. 19. § 9), and was the Achaean citadel of the district. It is described by the poets as the lofty well-towered Therapne, surrounded by thick woods (Pind. Isthm, i. 31; Coluth. 225), where slept the Dioscuri, the guardians of Sparta. (Pind. Nem. x. 55.) Here was the fountain of Messes, the water of which the captive women had to carry (Paus. iii. 19. § 7; 20. § 83; vii. 19; 55.), and it was probably upon this height that the temple of Menelaus stood, which excited the astonishment of Telemachus in the Odyssey. Hence Therapne is said to have been in Sparta, or is mentioned as synonymous with Sparta. (Θεράπνη, πᾶς Δακ. νυκτή, ὑπὸ τῶν Σπάρτη χαῖς, Steph. B. s. r; ἐν Σπάρτη, Schol. ad Apoll. Rhode. ii. 162, Pind. Isthm. i. 31.) It is probable that further excavations upon this spot would bring to light some tombs of the heroic ages. The Phoebaeum, which has been already described as the open space on the right bank of the Eurotas [see p. 1028, b.], contained a temple of the Dioscuri. Not far from this place was the temple of Poseidon, known as Gaeacous. (Paus. iii. 20. § 2.) After the power of Sparta was destroyed by the battle of Leuctra, its territory was exposed to invasion and the city to attack. The first time that an enemy appeared before Sparta was when Epaminondas invaded Lacenia in B. C. 370 he marched down the left bank of the Eurotas till he reached the foot of the bridge which led through the city into the city. But he did not attempt to force the passage across the bridge; and he saw on the other side a body of armed men drawn up in the temple of Athena Alea. He therefore continued his march along the left bank of the river till he arrived opposite to Amycle, where he crossed the river. (Xen. Hell. vi. 5. § 27.)
Philip, however, contrary to the expectation of Lycurgus, stormed the Menelaion, and brought his whole army safely through the pass, and encamped two stadia above the city. (Polyb. v. 17—24.) In n. c. 195 Quinctius Flamininus attacked Sparta, because Nabis, the tyrant of the city, refused obedience to the terms which the Roman general imposed. With an army of 50,000 men Flamininus assaulted the city on its three undefended sides of Phoebaeum, Dictyoeanum, and Hepiagonae. He forced his way into the city, and after overcoming the resistance which he met with in the narrow ways at the entrance of the city, marched along the broad road (probably the Aphe tales) leading to the citadel and the surrounding heights. Thereupon Nabis set fire to the buildings nearest to the city walls, which compelled the Romans to retreat. But the main object of Flamininus had been answered, for three days afterwards Nabis sent his son-in-law to implore peace. (Liv. xxxiv. 58, 39.)

The position of the Phoebaeum has been already explained. The Dictyoeanum was so called from the temple of Artemis Dictyna, which Pausanias describes as situated at the end of the Aphe tales, close to the walls of the city (iii. 12, § 8). Leake thinks that the name of the village of Kalagonia may be a
corruption of Heptagoniae; but it is more probable that the Heptagoniae lay further west in the direction of Mistré, as it was evidently the object of Flaminious to attack the city in different quarters.

The small stream which encloses Sparta on the north, now called the Trypitiokos or river of Magda, is probably the ancient Tisna (Tisana), upon which stood the sanctuary of Phaea and Cleta, and across which was the road to Amyclae (Plut. iii. 18. § 6). Leake, however, gives the name of Tisna to the Pancoleitias, the next torrent southwards falling into the Eurotas.

With respect to the gates of Sparta, the most important was the one opposite the bridge of the Eurotas: it was probably called the gate to Thermopylae. Livy mentions two others, one leading to the Messenian town of Phare, and the other to Mount Barbosthenes (xxxv. 30). The former must have been upon the western side of the city, near the village of Magda. Of the southern gates the most important was the one leading to Amyclae.

In this article it has not been attempted to give any account of the political history of Sparta, which forms a prominent part of Grecian history, and cannot be narrated in this work at sufficient length to be of any value to the student. A few remarks upon the subject are given under LACONIA.

**SPARTA**

**Sparta** is a town in the state of Greece, on the north coast of the Peloponnesus, 100 miles long and 30 broad, which produced the peculiar kind of grass called *spartum*, used for making ropes, mats, &c. (Plin. xix. 2. s. 8) It is the *stipe tenacissima* of Linnaeus; and the Spaniards, by whom it is called *esparto*, still manufacture it for the same purposes as those described by Pliny. It is a thin wiry rush, which is cut and dried like hay, and then soaked in water and planted. It is very strong and lasting, and the manufacture is a large source of wealth to the inhabitants and children. It was no doubt the material of which the Iberian whips mentioned by Horace (*Epod. iv. 3*) were composed. (See Ford, Handb. of Spain, p. 168.) From this district Carthago Nova itself obtained the surname of "Sparta." [T. H. D.]

**SPARTA** (Σπάρτα), a town in Media Atropatene, which is intensely salt, so as to cause the itch on the bodies of persons who have unwittingly bathed in it, with injury also to their clothes (Strab. xi. p. 523). Its present name is the Sea of Urubnahan. Its earliest name is said to have been Kigondis, or Kypatos Chnum, whence the Greek form would seem to have been modified. (L. Ingel, Archael. Armcn. i. p. 160; St. Martin, Memoirs, i. p. 59.) It is probably the same as the Mount *Kiphtis* of Totenly (vi. 2. § 17). Many travellers have visited it in modern times. (Tavernier, i. ch. 4; Mairier, Sec. Voy. ii. p. 179.)

**SPRAEAEM**, a place in Macedonia which Livy says was near Pella (xiv. 33).

**SPOLAENCA** (*Sperlonga*), a place on the coast of Latium (in the modern sense of that name), situated between Tarraclina and Caieta. The emperor Tiberius had a villa there, which derived its name from a natural cave or grotto, in which the emperor used to dine, and where he on one occasion very nearly lost his life, by the falling in of the roof of the cavern (Tac. Ann. iv. 59; Suet. Tib. 39). The villa is not again mentioned, but it would appear that a village had grown up around it, as Pliny mentions it in describing the coast ("locus, Sporlanca," Plin. iii. s. 9), and its memory is still preserved by a village named Sperlonga, on a rocky point about 8 miles W. of Gaeta. Some Roman remains are still visible there, and the cave belonging to the Imperial villa may be identified by some remains of architectural decoration still attached to it (Craven's *Abruoci*, vol. i. p. 73). [E. H. B.]

**SPaeos Artemidos**, the present grooves of *Beni-hassen*, was situated N. of Antinoe, in Middle Egypt, on the eastern bank of the Nile, in lat. 27° 40' N. The name is variously written; Pes on the Itinerary of Antoninus (p. 167, Wesseling); Poes in the Notitia Imperii; but *SPaeos* is probably the true form, implying an excavation (*σπεῖος*) in the rocks. Speos Artemidos was rediscovered by the French and Tuscans expedition into Egypt early in the present century. It was constructed by some of the Pharaohs of the 18th dynasty in a desert-valley running into the chain of Arabian hills. The structure is a whole complex of a temple, and of between thirty and forty catacombs. The temple is dedicated to Psibh, Bubastis, the Artemis of the Greeks. (Herod. ii. 58.) The catacombs appear to have served as the general necropolis of the Hermopolite nome. For although Hermopolis and its district lay on the western bank of the Nile, yet as the eastern hills at this spot approach very closely to the stream, while the western hills recede from it, it was more convenient to ferry the dead over the river than to transport them across the sands. Some of these catacombs were appropriated to the mummies of animals, cats especially, which were worshipped by the Hermopolitans. In the general cemetery two of these catacombs merit particular attention: (1) the tomb of Neophytos, a military chief in the reign of Setosarten I. and of his wife Rotii; (2) that of Amenomne, of nearly the same age, and of very similar construction. The tomb of Neophytos, or, as it is more usually termed, of Rotii, has in front an architrave 3 to 4 feet thick, fastened to the rock, and supported by two columns, each 23 feet high, with sixteen fluted facette. The columns have neither base nor capital; but between the architrave and the head of the column a square abacus is inserted. A dented cornice runs over the architrave. The effect of the structure, although it is hardly detached from the rock, is light and graceful. The chamber or crypt is 30 feet square, and its roof is divided into three vaults by two arches each of which was originally supported by a single column, now vanished. The walls are painted in compartments of the most brilliant colours, and the

3 4 v
drawing is generally in the best style of Egyptian art. They represent various events in the life of Neophytos. From the tomb of Rotei, indeed, might be compiled a very copious record of the domestic life of the Egyptians. On its walls are depicted, among others, the following subjects: the return of warriors with their captives; wrestlers; hunting wild beasts and deer; the Nile boats, including the Heliopolis and Behbiros; the granaries and cash-keeping; spinning and weaving; games with the lance, the ball, and the discus; and the rites of sepulture. The tomb of Amenemope is covered also with representations of men in various postures of wrestling; and the other grotescos are not less interesting for their portraits of civil and domestic life. (Wilkinson, Modern Egypt and Thebes; Rosellini, Mon. Civ. vol. i.; Kenrick, Anc. Egypt, vol. i. p. 47, foll.)

SPHAC'TE'RIA. (Spha smoker, Ellidoto, a river in the S. of Thessaly, rising in Mount Tymphrestus (Strab. ix. p. 433), and flowing into the Malac gulf. The Dryops and Ameuas dwelt in the upper part of its course till it entered the plain of Malis, through which it flowed to the sea. In ancient times it joined the sea at Anticyra; and the rivers Dyras, Melas, and Asopus fell separately into the sea to the S. of the Spercheius. (Herod. vii. 198.) But the Spercheius has changed its course, and now falls into the sea much farther south, about a mile from Thermopylae. The Dyras and Melas now unite their streams, and fall into the Spercheius, as does also the Asopus. (Thermopylae.) Spercheius is celebrated in mythology as a river-god [Dict. of Biogr. s. v.], and is mentioned in connection with Achilles. (Hom. II. xvi. 142.) Its name also frequently occurs in the other poets. (Aesch. Pers. 456; Sophoc. Phil. 722; Virg. Georg. ii. 485; Lucan, vi. 366.) (Leake, Northern Greece, vol. ii. pp. 8, 11, 15.)

SPOLETIUM, a place in Thessaly, which, according to the description of Livy (xxxi. 13), would seem to have been situated at no great distance from the sources of the Spercheius. Ptolemy (iii. 13. § 17) mentions a place Spercheia between Echinos and Thebes in Phthiotis; and Pliny (iv. 7. s. 13) places Spercheis in Deris. It is probable that these three names indicate the same place, but that its real position was unknown.

SPIAC'TE'RIA. [Pylus.]

SPIA'GUA. [Pylus.]

SPENDALE. [Attica, p. 330, s.]

SPHI'TTU. [Attica, p. 332, 6.]

SPI'HINGUM. [Boeotia, p. 412, s.]

SPI'NA (Zirno, Strab. ii. 383, Steph. B.; E. Zsirny and Zsirnya), an ancient city of Italy, situated near the southernmost mouth of the Padus, within the limits of Julia Cisalpinia. It was, according to Dionysios, a Pelasgic settlement, and one of the most flourishing cities founded by that people in Italy, enjoying for a considerable time the dominion of the Adriatic, and deriving great wealth from its commercial relations, so that the citizens had a treasury at Delphi, which they adorned with costly offerings. They were subsequently expelled from their city by an overwhelming force of barbarians, and compelled to abandon Italy. (Dionys. i. 18, 28.) Strabo gives a similar account of the naval
greatness of Spina, as well as of its treasury at Delphi; but he calls it a Greek (Hellenic) city; and Sylvius, who notices only Greek, or reputed Greek, cities, mentions Spina apparently as such. Its Greek origin is confirmed also by Justin, whose authority, however, is not worth much. (Strab. v. p. 214, ix. p. 421; Scyl. p. 6. § 19; Justin, xx. 1; Plin. iii. 16. s. 20.) But these authorities, as well as the fact that it had a treasury at Delphi, which is undoubtedly historical, seem to exclude the supposition that it was an Etruscan city, like the neighbouring Adria; and whatever be the foundation of the story of the old Pelasgic settlement, there seems no reason to doubt that it was really a Greek colony, though we have no account of the period of its establishment. Scylus alludes to it as still existing in his time: hence it is clear that the barbarians who are said by Dio- cyrians to have driven out the inhabitants, can be no other than the neighbouring Gauls; and that the period of its destruction was not very long before the conquest of Cisalpine Gaul by the Romans. It does not appear to have ever been rebuilt or become a Roman town. Strabo speaks of it as in his time a mere village; and Pliny repeatedly alludes to it as a place no longer in existence. (Plin. iii. 16. s. 20, 17. s. 21; Strab. v. p. 214.) No subsequent trace of it is found, and its site has never been ascertained. We know, however, that it must have been situated on or near the southernmost arm of the Padus, which is derived from it the name of Spinethum Ostium, and which probably corresponded with the modern Po di Primario. [Padus.] But the site of Spina must now be sought far from the sea: Strabo tells us that even in his time it was 90 stadia (11 miles) from the coast; though it was said to have been originally situated on the sea. It is probably now 4 or 5 miles further inland; but the changes which have taken place in the channels of the rivers, as well as the vast accumulations of alluvial soil, render it almost hopeless to look for its site.

Pliny tells us that the Spinetic branch of the Padus was the one which was otherwise called Eridanus; but it is probable that this was merely one of the attempts to connect the mythical Eridanus with the actual Padus, by applying its name to one particular branch of the existing river. It is, however, probable that the Spinetic channel was, in very early times, one of the principal mouths of the river, and much more considerable than it afterwards became. [Padus.]

SPINAE, a place in Britannia Boiana, E. of Aqua Solis (Bathe). (Tit. Ant. pp. 455, 456.) Now the village of Spin near Newbury in Berkshire, which has its name of new in regard to Spinac, the ancient borough. (Candan, p. 166.) [T. J. H.]

SPI'REAUM (Plin. iv. 5. s. 9) or SPEIREAUM (Iot. iii. 16. § 12), a promontory on the eastern coast of Telephusenus upon the confines of the territories of Corinth and Ephelusans. For details, see Vol. i. pp. 753 and 754.

SPOLETIUM (Sperchius; E. Spoletons; Spoletio), a city of Umbria, situated between Interamna (Terini) and Trebia (Trebi), about 9 miles S. of the sources of the Clitumnus. Its name is not mentioned in history as an Umbrian town, nor have we any account of its existence previous to the establishment of the Roman colony, which was settled there in B.C. 240, just after the close of the First Punic War (Liv. Epit. xx.; Vell. Pat. 1. 14). It was a Colonia Latina, and its name is repeatedly mentioned during the Second Punic War.
SPOLETUM.

In n. c. 217, just after the battle at the Lake Trasimenus, Hannibal advanced to the gates of Spoleto, and made an assault upon the city, but was repulsed with so much vigour by the colonists, that he drew off his forces and crossed the Apennines into Picenum. (Liv. xxii. 9.) A few years later (n. c. 209) Spoleto was taken by Phurius, which distinguished themselves by their fidelity and zeal in the service of Rome, at the most trying moment of the war. (Id. xxvii. 10.) For some time after this we hear but little of Spoleto, though it seems to have been a flourishing municipal town. In n. c. 167 it was selected by the senate as the place of confinement of Gentius, king of Illyria, and his sons; but the citizens declined to take charge of them, and they were transferred to Icuvium (Liv. xiv. 43). But in the civil war between Marius and Sulla it suffered severely. A battle was fought beneath its walls in B. C. 52, between Pompeius and Crassus, the generals of Sulla, and Carriniae, the lieutenant of Carbo, in which the latter was defeated, and compelled to take refuge in the city. (Appian, B. C. i. 89.) After the victory of Sulla, Spoleto was one of the places severely punished, all its territory being confiscated, apparently for the settlement of a military colony. (Flor. iii. 19; Zumpt, de Colon. 25.) Phurius calls Spoleto at this time one of the "municipia Italicae splendissimae," but this is probably a rhetorical exaggeration. Cicero, however, terms it, in reference to a somewhat earlier period, "colonia Latina in primis firma et illustris." (Cic. pro Balb. 21.) It became a municipium (in common with the other Latin colonies) by virtue of the Lex Julia; and does not appear to have subsequently obtained the title of a colony, though it received a fresh accession of settlers. (Lib. Col. p. 225; Zumpt. L. C.) It is again mentioned during the Perusin War (n. c. 41), as affording a retreat to Munatius Plancus when he was defeated by Octavian (Appian, B. C. v. 33); and seems to have continued under the Empire to be a flourishing municipal town, though rarely mentioned in history. (Strab. v. p. 227; Plin. iii. 14, s. 19; Polybius iii. 1 § 54; Orell. Inscr. 1100, 1103, 3956.) It was at or near Spoleto that the emperor Augustus was encamped, when the death of his rival Gallus and Volusianus gave him temporary possession of the empire; and it was there also that he was himself put to death by his soldiers, after a reign of only three months. (Vict. Epit. 31.) Spoleto is again mentioned during the Gothic Wars, after the fall of the Western Empire, when it was taken by the Gothic king Totila (Procop. B. G. iii. 12), who partially destroyed its fortifications; but these were restored by Nanes (ib. iv. 38). It was at this time regarded as a strong fortress, and was a place of importance on that account. Under the Lombards it became the capital of a duchy (about A. D. 570), the dukes of which soon reckoned themselves altogether independent of the Lombard kings, and established their authority over a considerable part of Central Italy. The duchy of Spoleto did not cease to exist till the 12th century.

SPOLETO is still a tolerably flourishing place, with the rank of a city. It has several Roman remains, among which the most interesting is an arch commonly called the Porta d'Annibale, as being supposed to be the gate of the city from whence that general was repulsed. There is, however, no foundation for this: and it is doubtful whether the arch was a gateway at all. Some remains of an ancient theatre are still visible, and portions of two or three ancient temples are built into the walls of modern churches. A noble aqueduct, by which the city is still supplied with water, though often ascribed to the Romans, is not really earlier than the time of the Lombard dukes. Some remains of the palace inhabited by the latter, but first built by Theodoric, are also visible in the citadel which crowns the hill above the town.

SPOLETO, or the "Scattered," a group of islands in the Aegean, Cretan, and Carpathian seas, so called because they were scattered throughout these seas, in opposition to the Cyclades, which lay round Delos in a circle. But the distinction between these groups was not accurately observed, and we find several islands sometimes ascribed to the Cyclades, and sometimes to the Sporades. The islands usually included among the Cyclades are given under that article. [Vol. I. p. 723.]

Seylax makes two groups of Cyclades; but his southern group, which he places off the coast of Laconia and near Crete, are the Sporades of other writers: in this southern group Seylax specifies the following: Melos, Cinomolgo, Olyrma, Sicyon, Thera, Anaphe, Astypalae, on (p. 18, ed. Hudson). Strabo first mentions among the Sporades the islands lying off Crete,—Thera, Anaphe, Therissa, leis, Sicyon, Lagona, Phylagnondros (x. pp. 484, 485). Then, after describing the Cyclades, he resumes his enumeration of the Sporades,—Amorgos, Lebinthos, Leria, Patmos, the Corassae, Iearia, Astypalae, Teles, Chaldia, Nisyros, Kasos, the Cyclades (x. pp. 487—489). Pliny (iv. 12. s. 25) gives a still longer list. An account of each island is given under its own name.

STABIA, in Gallia, a name which occurs in the Table on a road from Vienna (Vienne) past Culuro (Grevenoble) to the Alpis Cottia (Mont Genèvre). Stabio is placed between Gudetium and Alpis Cottia. D'Anville fixed Stabio at Monestier or Monaster near Briangon. [C. L.]

STABIAE (Σταβίαι). Edh. Stabianus; It. su, near Castell' a Mare), a city of Campania, situated at the foot of the Monte Laucarius, about 4 miles S. of Pompeii, and a mile from the sea. The first mention of it in history occurs during the Social War (n. c. 90), when it was taken by the Samnite general C. Papius (Appian, B. C. i. 42). But it was retaken by Sulla the following year (n. c. 89), and entirely destroyed.
STABULA.

(Plin. iii. 5. s. 9.) Nor was it ever restored, so as to resume the rank of a town; Pliny tells us that it was in his time a mere village, and the name is not mentioned by any of the other geographers. It is, however, incidentally noticed both by Ovid and Columella (Ovid. Met. xvi. 711; Colum. R. R. x. 133), and seems to have been, in common with the whole coast of the Bay of Naples, a favourite location for villas.

Among others Pompeianus, the friend of the elder Pliny, had a villa there, where the great naturalist sought refuge during the celebrated eruption of Vesuvius in A.D. 79, and where he perished, suffocated by the cinders and sulphurous fumes (Plin. Ep. vi. 16). It is certain that Stabiae was on this occasion buried under the ashes and cinders of the volcano, though less completely than Pompeii and Herculaneum; but the site was again inhabited, and the name was retained throughout the period of the Roman Empire, though it appears to have never again risen into a place of any consideration. It was chiefly resorted to by invalids and others, on account of its neighbourhood to the Mens Lactarins, for the purpose of adopting a milk diet (Galen, de Med. Med. v. 12 ; Cassiod. Var. vi. 10 ; Symmach. Ep. vi. 17). Its name is found also in the Tabula, and was preserved in that of Costel in Mare di Stabia, borne by the modern town. The Stabiae of the later Travellers seems to have been situated on the coast, in the bight of the Bay of Naples; and probably did not occupy the same site with the older town, which seems to have been situated about a mile inland at the foot of the hill of Graynano. The exact spot was forgotten till the remains were accidentally brought to light about 1750; and since that time excavations have been frequently made on the spot, but the results are far less interesting than those of Pompeii and Herculaneum. They confirm the account of Pliny, by showing that there was no town on the spot, but merely a row of straggling villas, and these for the most part of an inferior class. They seem to have suffered severely from the earthquake of A.D. 63, which did so much damage to Pompeii also. (Swinhurne's Travels, vol. i. p. 52.)

[ E. H. B. ]

STABULA, in Gallia, is placed by the Antonine Itin. vi. from Cambes (Gros Kembis) and xviii. from Argentovaria (Artenheim). These distances bring us to a place between Castrum de Be giàuta and Beavich, which is described by D'Avenys, says that traces of an old place are found.

The word Stabula meant a station or resting place for travellers, a kind of inn, as we see from a passage of Ulpian (Dig. 47. tit. 5. s. 1.); "gioi caras, carponas, stabula exercitum," and the men who kept these places were "Stabularii." [G. L.]

STABULUM, AD, in Gallia, is placed by the Antonine Itin. between Salsiae (Salsia) and Sumnas Pyrenaeus, or the pass of the Pyrenees at Bellegarde. It is supposed to be Le Boulu, which looks like a part of the old name, on the left bank of the Tech. The distances in the Itin. both from Salsiae to Ad Stabulum, and from Ad Stabulum to Summas Pyrenaeus, are a great deal too much. The name, however, and the place Le Boulu on the Tech seem to fix the position of this Stabulum. [Centuriones, Ad; Stabula.]

[ G. L. ]

STABULUM DIOCESIS (Itin. Ant. p. 361; H. Tier. p. 603), a place on the coast of Thrace, on the Via Eucatis, 180 Roman miles, according to Itin. Ant., 184; according to P. H. Hier., from Poroi, or Maximenopolis; probably the same as Pliny (iv. 11. s. 18) calls Tirida: "Oppidum fuit Tirid, Dio medis eponum stabulis dirum." This Diodemex was king of the Bistones in Thrace, and was in the habit of throwing strangers to be devoured by his savage horses, till at length he himself was punished in the same way by Hercules. (Mela, ii. § 8.) Lapie places it near the modern Ioannina. [J. B.]

STACHTIR (Στάχτιρ), Ptol. iv. 6. §§ 7 and 8), a river on the W. coast of Libya Interior, which rose in Mount Ryssdamm. Not far from its source it formed a lake named Climia, and after flowing in a westerly direction, discharged itself into the Siuas Hesperus, to the S. of the promontory of Rys- sdamm. It is probably the same river with which (v. l. s. 1) calls Salsia, and may be the modern St. John or St. Antonio river, also called Río de Guara. [T. H. D.]

STAGEIRA, STAGEIRUS (Στάγειρος, Herod. vii. 115 ; Thuc. iv. 88, v. 18; Strab. vii. p. 331, Fr. 33. 35; Στάγειρος, al. Στάγειρη, Ptol. iii. 13. § 10; Plin. iv. 17, xvi. 57.), a town of Chalcidice in Macedonia, and a colony of Andros. The army of Xerxes, after passing through the plain of Selenus, approached through Stageirus to arrive at Aegaeon. In the eighth year of the Peloponnesian War it surrendered to Brasidas, and two years afterwards was included in the treaty between Sparta and Athens. It was the birthplace of Aristotle. Alexander, from regard to his great teacher, restored this town, which with other Greek colonies in that quarter had fallen into decay, when W. Thrace had become part of the Macedonian kingdom. (Pint. Alex. 7; Diog. Laert. v. § 4; Theophr. H. P. 102; Aelian, V. H. iii. 17.) But the improvement was not permanent, and no mention of the birthplace of Aristotle remains, unless the coins inscribed Οπάσα- γονος are of this place, as Eckel (vol. ii. p. 73) supposed, on the authority of a fragment in the Geographi Minores (vol. iv. p. 42, ed. Hudson). Leke (Northern Greece, vol. iii. p. 168) has fixed the site at Stavros, which he considers to be a contraction of the old name; it is almost presumption to differ with so great an authority in comparative geography; but it may be observed that the name of Stavros, "tree," is common in Greece, and Mr. Bowen (Mount Athos, 2d. p. 120, London, 1854) has shown, from a comparison with the passage in Herodotus (l. e.), that the traditional belief of the Macedonian peasants in identifying Isboreos or Nizoro, as it is called by them, with Stageirus, rests upon satisfactory grounds. The position of this village, on the S. face of a wooded mountain which commands a view of Mt. Athos and the Aegean, is very much that of an helicene city, and there are vast substractions of Helicene masonry all around. The Epitomiser of Strabo (vii. p. 381), who lived not long before the eleventh century, has a port and island called CAPRUS (Κάπρος) near Stageirus, which is probably the island of Leftphinxia near C. Marmari; Leke (l. c.) prefers, in accordance with his views that Stavros represents Stageirus, the port and island of Lęx- tiska. [E. B.]

STAGNA VOLCARUM, on the coast of Gallia Narbonensis. Mela (iv. 5) speaks of the Stagnum Volcarum, which he places W. of the Rhone. They are the long line of canals between Aigues-Mortes and
and Aspis, separated from the land by a long, narrow, flat, which widens near Cetoe, where the Morn Setius is. These laruses are the E'tang de Tau, de Front-tiquin, de Maguelone, and others. Avienus (Or. Marit. 58) mentions the Taurus or E'tang de Tau: "Taurum paladum namque gentiles vocant."

[PLUTARCO: LEDUS]:

[STALIOCA'KUS PORTUS]:

[STALIOCA'KUS PORTUS (Σταλιοκακός λι-μῆς)]. Ptolemy (ii. 8. § 2) places this port between Thambam Promontorium (Golemum) and the mouth of the Tana, on the coast of Gallia Aquitania. D'Anville (Notice, etc.) found in a manuscript plan of the Anse du Conquet the name of Port Siocon, N. of Cap Malôt, at the bottom of the road of Loco-Christ. Lobineau in his History of Bretagne says that the name means White Tower, and that there were traces of a port there, constructed of brick and cement. Gosselin places the Stalioconus on the N. coast of Bretagne, at the outlet of the river on which Morlaix stands. It is impossible to determine which of the numerous bays on this irregular coast is Ptolemy's Stalioconus.

[STANACUM]:

[STANACUM, a place in Noricum, on the road leading along the Danube from Augusta Vindelici-erum to Carnuntum and Vindobona. (H. Ant. p. 249; Tab. Peut.) Its exact site is uncertain. (Comp. Munch, Noricum, i. p. 235.) [L. S.]

[STATIELLI (Στατιελλοί)], a tribe of Ligurians, who inhabited the northern slopes of the Apennines, on both sides of the valley of the Bormida. Their locality is clearly fixed by that of the town of Aquae Statilae, now Acqui, which grew up under the Roman Empire from a mere watering place into a large and populous town, and the chief place of the surrounding district. The Statilae are mentioned by Livy in n. c. 173, as an independent tribe, who were attacked by the Roman consul, M. Popillius; after defeating them in the field, he attacked and took their city, which Livy calls Caryutus, and, not content with disarming them, sold the captives as slaves. This proceeding was severely arraigned at Rome by the tribunes, especially on the ground that the Statilae had previously been uniformly faithful to the Roman alliance; but they did not succeed in enforcing reparation (Livy vii. 7, 8, 9, 21). Livy writes the name Statiiellates, while Decimus Brutus, who crossed their territory on his march from Mu-tina, n. c. 44, and addresses one of his letters to Ciceron from that place, d. it " finibus Statilensium" (Cic. ad Fam. xii. 11). Pliny, who enumerates them among the tribes of Ligurians existing in his time, calls them Statiiellii, and their chief town Aquae Statilierum (Plin. iii. 5. s. 7). The site of Caryutus, mentioned only by Livy, in the passage above cited, is wholly unknown.

[STETRIA]:

[STETRIA. [Attica. p. 332, n.]

[STELAE (Στηλαι), Steph. B. s. e. c.], a Cretan city which is described by the Byzantine geographer as being near two towns, which are called, in the published editions of his work, Paresaw and Eul-ithymna. In Mr. Pashley's map the site is fixed at the Mohammedan village of Philippo on the route from Kasteliani (Inatus) to Haghias Dheka (Gortyn). [E. B. J.]

[STELLAETIS CAMPUS]:

[STELLAETIS CAMPUS was the name given to a part of the rich plain of Campania, the limits of which cannot be clearly determined, but which appears to have adjoined the "Falernus ager," and to have been situated likewise to the N. of the Valluturnus. Livy mentions it more than once during the wars of the Romans with the Samnites (ix. 44, x. 31), and again during the Second Punic War, when Hannibal found himself there by an error of his guides (Livy xxii. 13). From his expressions it would appear to have adjoined the "Calenus ager," and apparently was the part of the plain lying between Cales and the Valluturnus. It was a part of the public lands of the Roman people, which the tribune Rutilius proposed by his agrarian law to parcel out among the poorer citizens (Cic. de Leg. Agr. i. 7. ii. 31): this was for the time successfully opposed by Ciceron, but the measure was carried into effect a few years later by the agrarian law of Caesar, passed in his consubship, b. c. 59 (Suet. Cesar. 20). The statement of Suetonius that the district thus named was previously regarded by the Romans as consecrated, is clearly negatived by the language of Ciceron in the passages just referred to. The name of Stellaetis Ager seems to have been given to a district in quite another part of Italy, forming a part of the existence of a lake "in agro Stataeni," in which there were floating islands. (Plin. ii. 93, s. 96; Senec. N. Q. iii. 25.) This can hardly be any other than the small Lago di Mezzano, a few miles W. of the more extensive Lago di Bolsena: we must therefore probably look for Statetia between this and Tarquinii. But within this space several sites have been indicated as possessing traces of ancient habitation; among others, Farmace and Castro, the last of which is regarded by Cluver as the site of Sta- tetia, and has as plausible a claim as any other. But there is nothing really to decide the point. (Cluver, Ital. p. 517; Dennis's Eturiae, vol. i. pp. 463, 468.)

[STETIUS (AD)]:

[STETIUS (AD), the name of two places in Pannonia, one of which was situated on the Danube, a little to the west of Bregetin (H. Ant. p. 246; Notit. Imp.), and the other further south-east, in the neighbourhood of Alisca and Alta Riga (H. Ant. p. 244), which Mucuar (Vorikum, i. p. 264) identifies with Suckoward. [L. S.]

[STIQUVITR], a town in the territory of the Contestelii in Hispania Tarraconensis. (Itin. Ant. p. 400.) Variously identified with Adianeta and Xatia or S. Felipe. [T. H. D.]

[STIANS], Ptol. iii. 5. § 25), a people in Europeo Sarmatica, at the N. foot of Mons Bo- dius. Ukert (iii. 2. § 433) conjectures that we should read Στιαναω, that is, Sativi, and seeks them on the Dana and the Tusesci. [T. H. D.

[STICTORIUM (Στικτοριουμ Εθν. Στατιοκακος, a town of Phrygia, between Feltac and Semnada. (Ptol. v. 2. § 25; Paus. x. 27, § 1.) Kiepert (in Franz's Fünf Inschriften, p. 36) identifies it with the modern Afijma Karahissar. (Comp. Sestini, Num. Vet. p. 126.)[L. S.]

[STIONAIA]:

[STIONAIA: Etd: Statetionensis], a part of Southern Etruria, which is mentioned by Strabo among the smaller towns (ποιηγας) in that part of Italy. (Strab. v. p. 226.) Pliny also mentions the Stationes among the municipalities of Etruria (iii. 5. s. 8), but neither author affords any nearer clue to its situation. We learn, however, that it was celebrated for its wine, which was one of the most noted of those grown in Etruria (Plin. xiv. 6. s. 8), and that there were valuable stone- quarries in its territory. (Vitr. ii. 7. § 3.) From the terms in which Vitruvius speaks of these, it seems probable that the district of Statetionis, which he calls "prefectura Statetionatis," was an extension of that of Tarquinii; and both Pliny and Seneca allude to the
territory of Capena in southern Etruria. It was from this district that the Stellatian tribe derived its name (Fest. a. e. Stellatia). [E. H. B.]

STENA. a station in Macedonia, on the road from Tauriana (Doirin) to Stobi (Pent. Tabh), which is evidently the pass now called Demirkapi, or "Iron Gate," where the river Axios is closely bordered by perpendicular rocks, which in one place have been excavated for the road (Leake, Northern Greece, vol. iii. p. 442.) [E. B. J.]

STENOURIS LACUS (Στενούρις Λαξος), a town in the north of Messenia, and the capital of the Doric conquerors, built by Crespontia. Argosia had been the ancient capital of the country. (Paus. iv. 3. § 7; Strab. viii. p. 361.) The town afterwards ceased to exist, but its name was given to the northern of the two Messenian plains (Paus. i. 23. § 4; iv. 13. § 8; Herod. ix. 64.) [Messenia, p. 341.]

STEPHANABERIUS, more correctly, perhaps, Stephanus Fannus, a place in Illiris Graeca, on the Via Egnatia (Itin. Iliorus, p. 608). It was the castle of St. Stephen (τοιού άγιου Στέφανου), repaired by Justinian. (Procop. de Aed. iv. 4.) Lapius places it on the river Bosomenus. [T. H. D.]

STEPHANE (Στεφάνα), a small port town on the coast of Paphlagonia, according to Arrian (Periplus. T. E. p. 15) 180 stadia east of Cilicia, but according to the majority of forms, only 150. The place was mentioned as early as the time of Hecataeus as a town of the Mariandyni (Steph. B. s. n. Στεφαναċας), under the name of Stephanias. (Comp. Synax, p. 34; Ptol. v. 4. § 2.) The modern village of Stephanio or Estiānα probably occupies the site of the ancient Stephanē. [L. S.]

STEREOANTUM (Στερεοάντων), a town in North-western Germany, probably in the country of the Bructeri or Marsi, the exact site of which cannot be ascertained. (Ptol. ii. 11. § 27; T. L. S.)

STUPHANE (Στυφάνα), a lake in the north-western part of Pontus, in the district called Phazemonitis. The lake was extensive and abounded in fish, and its shores afforded excellent pasture (Strab. xii. p. 560.) Its modern name is Boghaz Kewa Ghoul. (Hamilton, Researches, i. p. 336, fol.)

STYRIA. [Attica, p. 332, a.]

STYRIS (Στύρις Εθ. Στυρίγης), a town of Phocis situated 120 stadia from Chaeroneia, the road between the two places running across the mountains. The inhabitants of Styra claimed descent from an Athenian colony of the Attic demes of Styria, led by Petasus, when he was driven out of Attica by Aegaeus. Pausanias describes the city as situated upon a rocky summit, with only a few wells, which did not supply water fit for drinking, which the inhabitants obtained from a fountain, four stadia below the city, to which fountain there was a descent excavated among the rocks. The city contained in the time of Pausanias a temple of Artemis Styriris, made of crude brick, containing two statues, one of Pentelic marble, the other of ancient workmanship, covered with hamages. (Paus. x. 33. §§ 8—10.) Styris was one of the Phocian cities destroyed by Philip at the close of the Sacred War (Paus. x. 3. § 2); but it was afterwards rebuilt and was inhabited at the time of the visit of Pausanias. The ruins of Styris, now called "Pedi khanı," are described by Pausanias as being defended by a wall of precipitous rocks, with a round gate used as a gateway to the city. [J. R.]

STONUS, a river of Thrace, mentioned by Mela only (ii. 2. § 8) as near Maronea, on the south coast. The name is probably corrupt, as it occurs in the MSS. in 40 Marcan (p. 72) only. — Stephano, Stonoe, Scoeneus, Sceneus, Stitheros, &c. (See Tzschecke, ad loc.) [J. B.]

STENYCLARUS (Στενύκλαρος), a town in the north of Messenia, and the capital of the Doric conquerors, built by Crespontia. Argosia had been the ancient capital of the country. (Paus. iv. 3. § 7; Strab. viii. p. 361.) The town afterwards ceased to exist, but its name was given to the northern of the two Messenian plains (Paus. i. 23. § 4; iv. 13. § 8; Herod. ix. 64.) [Messea, p. 341.]

STEPHANIANDRA, more correctly, perhaps, Stephanus Fannus, a place in Illiris Graeca, on the Via Egnatia (Itin. Iliorus, p. 608). It was the castle of St. Stephen (τοιού άγιου Στέφανου), repaired by Justinian. (Procop. de Aed. iv. 4.) Lapius places it on the river Bosomenus. [T. H. D.]

STOBII (Στοβι), a town of Thessaly, near the river Axios, called also Paeonii (Ptol. iii. 13. § 4; Liv. xxxii. 19, xxxiii. 59, xl. 21, xiv. 29; Plin. iv. 17), a town in the NW. of Paeonia in Macedonia, which appears to have been a place of some importance under the Macedonian kings, and perhaps the place where Philip had been granted a share of the spoils of the Dardani, when Philip had an intention of founding a new city near it in memory of a victory over these troublesome neighbours, and which he proposed to call Pessines, in honour of his son. At the Roman conquest, Stobi was made the place of deposit of salt, for the supply of the Dardani, the monopoly of which was given to the Third Macedonia. In the time of Piny (l. c.) Stobi was a municipal town, but probably as late as the time of Heliogabalus it was made a "colonia." When about A.D. 400 Macedonia was under a "consular," Stobi became the chief town of Macedonia II. or Salutaris (Marquardt. in Beekker's Rom. Alter, vol. iii. pt. i. p. 118). According to the Tabular Itinerary it stood 47 M. P. from Heraclea of Lyncaia, which was in the Via Egnatia, and 55 M. P. from Tauriana, and was therefore probably in the direct road from Heraclea to Serdica. The position must have been therefore on the Erijon, 10 or 12 miles above the junction of that river with the Axios, a situation which agrees with that of Livy, who describes it as belonging to Denuiopus of Paroia, which was watered by the Erijon. Stobi was a point from which four roads issued. (Pent. Tab.) One proceeded NW. to Scupi, and from thence to Naissus on the great SE. route from Viminacium on the Danube to Byzantium; the second NE. to Serdica. 100 M. P. SE. of Naissus on the same route; the third SE, to Thessalonica; and the fourth SW. to Heraclea, the last forming a communication with that central point on the Via Egnatia leading through Stobi from all the places on the three former routes. In A. D. 479 Stobi was captured by Theodoric the Ostrogoth (Malch. Philadelph. Exerc. de Leg. Rom. pp. 78—86, ap. Müller, Fragmenta Hist. Graec. vol. iv. p. 125); and in the Bulgarian campaign of A. D. 1014, it was occupied by Basil II. and the Byzantine army (Στοβραοε, Cedren. p. 709). The geography of the basin of the Erijon in which Stobi was situated
STOBORRUM PROM.
is so imperfectly known that there is a difficulty in identifying its site: in Kiepert's map (Europäische Türkei) the ruins of Stobi are marked to the W. of Demirkapi, or the pass of the "Iron Gate." (Leake, Northern Greece, vol. iii. pp. 306. 440.) [F. B. J.]

STOBORRUM PROM. (Στρατούρρομ Ναύσα, Ptol. iv. 3. § 5), a headland of Numidia, between the promontory of Hippus and the town of Aphrodisias, at the E. point of the Sinus Oichonos. Now Cap Faro or Ras Hendid. [T. H. D.]

STOECHADES (Στοιχαδές πόρος) or STICHADES on the S. coast of Gallia. Strabo (iv. p. 184) speaks of the Stoechades islands lying off the coast of Naxione, five in number, three larger and two smaller. They were occupied by the Massaliots. Steph. B. (a. v. Στοιχαδες) says, "islands near Massalia; and they are also named Ligyestides." Ptolemy (ii. 10. § 21) also mentions five islands Stoechades, which he places in the meridian of the Citharistes Promontorium [Citharistes].

Pliny (iii. 5) mentions only three Stoechades, which he says were so named from being in a line (εν ἀφάνεια), and he gives to them the Greek names respectively, Prote, Mose or Pomponiana, and Hypaec. These must be the islands now named Isles d'Hères, of which the most westerly is Porquerolles, the central is Port-Cros, and the most easterly is l'Île du Levant or du Titan, opposite to the town of Hères, in the department of Var. These islands are mere barren rocks. Besides the three larger islands, which have been enumerated, there are two others, more costly, Τ'Εσχαθαθείαν και Βογαννα, which make up the number of five. Coral was got in the sea about the Stoechades (Plin. xxxii. 3), and is still got on this part of the French coast.

Acathemurus (Geo. Min. ii. p. 13, ed. Hudson) places the Stoechades along the coast which was occupied by the settlements of the Massaliots; but he fixes the two small Stoechades near Massalia. These are the two dismal rocks named Ratoncar and Pompegni which are seen as soon as you get out of the port of Marseille, with some still smaller rocks near them [Massila, p. 292], one of which contains the small fort named Château d'If.

The Stoechades still belonged to the Massaliots in Tacitus' time (Hist. iii. 43.). The Romans who were exiled from Rome sometimes went to Massilia, as L. Scipio Asiacus did; if he did not go to the Stoechades as the Scholasdi says (Cic. pro Sest. c. 3); but the Roman must have found the Stoechades a dull place to live in. When Lucan (iii. 516) says: Στοιχαδος αρχας, he uses a poetical licence; and Ammianus (xxv. 11) as usual in his geography blunders when he places the Stoechades about Nicomedia and Antipolis (Nissa, Antionia). [G. L.]

STOENI. [Eugenet.]

STOMA, AD, a place in Mossea on the Southernmost arm of the Danube. (Tab. Pict.; Geogr. Rav. iv. 5.) Mannert (vii. p. 123) places it by the modern Zof. [T. H. D.]

STOMALMINE. [Fossa Mariana.]

STRADELA, a town of Palestine mentioned only in the History Hierosolymitana as x. M.P. from Maximianopolis, and xii. M.P. from Scipopolis (i. e. Sytipolos), and identified by the writer with the place where Abah abode and Elius prophesied, and — by a strange confusion — where David slew Goliath (p. 586, ed. Wesseling). The name is undoubtedly a corruption of Esdraela, the classical form of the Scriptural Esdræla. [Esdraela.][G. W.]

STRAEGONIA (Στραγώνια), a town in the south-eastern part of Germany, either in the country of the Silingae or in that of the Diduni, on the northern slope of Mons Asculurum. (Ptol. ii. 11. § 28.) If the resemblance of names be a safe guide, we might identify it with Strigus, though this hardly agrees with the degrees in which it is placed by Ptolemy; whence others suppose it to have been situated at Streben, between Schwechtitz and Brighy. [L. S.]

STRAPELLUM. [Apella, p. 167.]

STRATIA. [Eniste.]

STRATONICEA (Στρατονίκεια or Στρατάνκιον, Ptol. v. 2. § 20. Etr. Στράτωνικός), one of the most important towns in the interior of Caria, was seated on the south-east of Mylasa, and on the south of the river Marsyas. It appears to have been founded by Antiochus Soter, who named it after his wife Stratone. (Strab. xiv. p. 660; Steph. B. s. v.) The subsequent Syro-Macedonian kings adorned the town with splendid and costly buildings. At a later time it was ceded to the Rhodians. (Liv. xxxiii. 18. 30.) Mithridates of Pontus resided for some time at Stratone, and married the daughter of one of its principal citizens. (Appian, Mithr. 20.) Some time after this it was besieged by Labienus, and the brave resistance it offered to him entitled it to the gratitude of Augustus and the Senate (Tac. Ann. iii. 62; Dion Cass. lxxxvi. 26). The emperor Hadrian is said to have taken this town under his special protection, and to have changed its name into Hadrianopolis (Steph. B. l. c.), a name, however, which does not appear to have ever come into use. Pliny (xxxiii. 29) enumerates it among free cities in Asia. Near the town was the temple of Zeus Chrysaoreus, at which the confederate towns of Caria held their meetings ; at these meetings the several states had votes in proportion to the number of towns they possessed. The Stratonicans, though not of Carian origin, were admitted into the confederacy, because they possessed certain small towns or villages, which formed part of it. Menippus, surnamed Catochus, according to Cicero (Brut. 91) one of the most distinguished orators of his time, was a native of Stratonecia. Stephanus B. (s. v. Στρατωνικός) mentions a town of Idris in Caria, which had previously been called Chrysaorion; and as Herodotus (v. 118) makes the river Marsyas, on whose banks stood the white pillars at which the Carions held their national meetings, flow from a district called Idris, it is very probable that Antiochus Soter founded the new city of Stratonecia upon the site of Idris. (Leake, Asia Minor, p. 235.) Eschis hora, which now occupies the place of Stratonecia, is only a small village, the whole neighbourhood of which is strewed with marble fragments, while some shafts of columns are standing single. In the side of a hill is a theatre, with the seats remaining, and ruins of the proscenium, among which are pedestals of statues, some of which contain inscriptions. Outside the village there are broken arches, with pieces of massive wall and marble columns. (Chandler, Travels in Asia Minor, p. 240; Leake, Asia Minor, p. 229; Fellows, Asia Minor,
STRATONIS INSULA.

p. 254, foll., Lycia, p. 80, foll.; Sestini, Xum., p. 90.)

[1. S.]

STRATONIS INSULA, an island in the Arabian gulf between the harbour Euaea and the harbour Sabian. [Strab. xvi. p. 570; Plin. vi. 29, s. 54.)

STRATONIUS TURBIUS. [CGaraeda, No. 4. p. 470.]

STRATUS (Στράτος, Eθ. Στράτος; territory of Στρατος: Suroviglia), the chief town of Acaania, was situated in the interior of the country, in a fertile plain on the right bank of the Acheletes. It commanded the principal approaches to the plain from the northward, and was thus a place of great military importance. Strabo (p. 430) places it 200 stadia from the mouth of the Acheletes by the course of the river. At the distance of 80 stadia S. of the town the river Amapus flowed into the Acheletes; and 5 Roman miles to its N., the Acheletes received another tributary stream, named Petittaurus. (Thuc. ii. 82; Liv. xlvii. 22.) Stratus joined the Athenian alliance, with most of the other Acarnanian towns, at the commencement of the Peloponnesian War. In B.C. 429 it was attacked by the Amabacots, aided by a number of barbarian auxiliaries, sent by some Peloponnesian troops, under the command of Cossus; but they were defeated under the walls of Stratus, and obliged to retire. Thucydides describes Stratus at that time as the chief town of Acarnania, which it also is called by Xenophon in his account of the expiugation of Aegianus into this country. (Thuc. ii. 50, seq., iii. 106; Xen. Hell. iv. 6.) When the Achaeans extended their dominions, Stratus fell into the hands of this people, whence it is called by Livy a town of Aetolia. It is frequently mentioned during the Macedonian and Roman wars. Neither Philip V., nor his successor Perseus, was able to wrest the town from the Achaeans; and it remained in the power of the latter till their defeat by the Romans, who restored it to Acarnania, together with the other towns, which the Achaeans had taken from the Acarnian. (Polyb. iv. 63, v. 6, 7, 13, 14, 96; Liv. xxxvi. 11, xlvii. 21, 22.) Livy (xliii. 21) gives an erroneous description of the position of Stratus when he says that it is situated above the Ambrian gulf, near the river Ichthus.

There are considerable remains of Stratus at the modern village of Suroviglia. The entire circuit of the city was about 24 miles. The eastern wall followed the bank of the river. Leake discovered the remains of a theatre situated in a hollow; its interior diameter below is 105 feet, and there seem to have been about 30 rows of seats. (Leake, Northern Greece, vol. i. p. 137, seq.)

STRAVIAEAE or STRAVIANA, a town in Lower Parnonia, on the road from Siceia to Marko, of which the exact site has not been ascertained. (It. Ant. iv. 263, where it appears in the ablat. form Stravian.)

STRENOUS (Στρενος; Eth. Στρηνος), a town of Crete, which Stephanus of Byzantium (σ. v.) mentions on the authority of Herodian (others read Herodotus), but no further notice is found of it either in Herodotus or any other author. [E. B. J.]

STREVINIA (Στρεινίνια), a place in the south-east of Greece, near Moes Aracophsan, of uncertain site. (Ptol. iii. 11, 1. 29.)

STIBILLUS (Στιβίλλος), a peak of Mount Caeccus, to which, according to the legend, Prometheus had been fastened by Hephaestus. (Aelian, Peripl. E. E. p. 12.)

STROGOYILE. [Aeoliae Insulae.]

STRO'NGYLIUS. [Semiramis Mons.]

STRO'THADES (Στροτθαδες; Eth. Στροτθαδες; Strofandia and Stroithen) formerly called Phoen (Πωηνα), two small islands in the Ionian sea, about 35 miles S. of Zancus, and 400 stadia distant from Cyraeis in Mesenia, to which they belonged. The sons of Bores pursued the Harpies to these islands, which were called the "Turning" islands, because the Boreae here returned from the pursuit. (Strab. vii. p. 359; Ptol. iii. 16 § 23; Steph. B. s. r.; Plin. iv. 12. s. 19; Mela. ii. 7; Apoll. Rhod. ii. 296; Apollod. i. 9. § 21; Virg. Aen. iii. 210; Ht. Ant. p. 523.)

STROUCHATES (Στρούχατες), one of the six tribes into which the Stratoconsians divided the ancient inhabitants of Media. (Herod. i. 101.) [V.]

STRUTHUS. [HERMIONE.]

STRYME (Στρυμων), a town on the S. coast of Thrace, a little to the W. of Mesembria, between which and Stryme flowed the small river Lissus, which the army of Xerxes is said to have drunk dry. (Herod. vii. 108.) Stryme was a colony of Thasos; but disputes seem to have arisen respecting it between the Teissi and the people of the neighboring city of Marnonia. (Philip. ap. Ptol. iii. 163; Ht. Ant. p. 163.) [I. R.]

STYMYON (Στρυμων, Ptol. iii. 13. § 18), the largest river of Macedonia, after the Axus, and, before the time of Philip, the ancient boundary of that country towards the E. It rises in Mount Scopus near Pantalla (the present Gustendil) (Thuc. ii. 96), and, taking first an E. and then a S. course, flows through the whole of Macedonia. It then enters the lake of Presias, or Cernovis, and shortly after its exit from it, near the town of Amphipolis, falls into the Strymonic gulf. Philip, with less correctness, places its sources in the Haemon (iv. 10. s. 12). The importance of the Styron is rather magnified in the ancient accounts of it, from the circumstance of Amphipolis being seated near its mouth; and it is navigable only a few miles from that town. Apollodorus (ii. 5. 10) has a legend that Hercules rendered the upper course of the river shallow by casting stones into it, so that it has been previously navigable much farther. Its banks were much frequented by cruelers (Cuv. xliii. 167; Virg. Aen. x. 269, Mart. ix. 308). The Strymon is frequently alluded to in the classics. (Comp. Hesiod, Theog. 333; Aesch. Suppl. 252, Agam. 192; Herod. vii. 75; Thuc. i. 200; Ptol. viii. p. 323; Mela. ii. 2; Liv. xiv. 44. &c.) Its present name is Struna, but the Turks call it Karvan. (Comp. Leake, "North. Gr." iii. pp. 223, 465, &c.) [T. H. D.]

STYMYONICUS SINUS (Στρυμωνικός κόλπος, Ptol. vii. p. 330), a bay lying between Macedonia and Thrace, on the E. side of the peninsula of Chalcidece (Ptol. iii. 13. § 9). It derived its name from the river Strymon, which fell into it. Now the gulf of Kedainia. [T. H. D.]

STYMYONII (Στρυμωνίη), the name by which, according to tradition, the Bithynians in Asia originally were called, because they had immigrated into Asia from the country about the Strymon in Europe. (Herod. vii. 75; Steph. B. e. v. Στρυμων.) Phoebus (v. 40) further states that Bithynia was called by some Strymonea. [I. S.]

STUBERIA. [STUBIRIA.]

STUCCIA. [Στουκανικα, Ptol. iii. 3, § 3], a small river on the W. coast of Britain, identified by Camden (p. 772) with the Yetlyk in Cardiganshire. [I. II. D.]

STURA.

STURA (Stura), a river of Northern Italy, one of the confluent of the Padus (Plin. iii. 16. s. 20). which joins that river a few miles below Turin (Augusta Taurinorum), within a few miles of the Dacia Minor or Dora Riparia. It still retains its ancient name and is a considerable stream, rising in the glaciers of the Alps, between the Roche Mellon and Mount Mantoie, called by the ancient name of Sternaccio, to which it is succeeded by a small stream, which rises in Mount Gavantigm in the neighbourhood of Kostania; and from the east comes another stream, which rises near Duna. But the most important of the three streams is the one which rises on the northern side of the plain, from a copious kefalovryis. In summer it flows about two miles through the plain into the katavorta of Apeharrum; but in winter it becomes almost immediately a part of the waters of the lake, though its course may be traced through the shallower water to the katavorta. This stream was called Stymphalus by the ancients; it was regarded by them as the principal source of the lake, and was universally believed to make its reappearance, after a subterraneous course of 200 stadia, as the river Erasmis in Argolis. (Herod. vi. 76; Paus. ii. 3. § 5, ii. 24. § 6, viii. 22. § 3; Strab. viii. p. 371; Anxios, Vol. I. p. 201, a.) The Stymphalii worshipped the lake and Metope (Metoni, Aelian, V. ii. 33), whence it has been concluded that Metope is only another name of the river Stymphalus. Metope is also mentioned by Callimachus (Hymn. in Jov. 26), with the epithet pebolly (πεβολλίους), which, as Leake observes, seems not very appropriate to a stream issuing in a holy from the earth, and flowing through a marsh. (Peloypomeneis, p. 384.) The water, which formed the source of the Stymphalus, was conducted to Corinth by the emperor Hadrian, by means of an aqueduct, of which considerable remains may still be traced. The statement of Pausanias, that in summer there is no lake, is not correct, though it is confined at that time to a small circuit round the katavorta. As there is no outlet for the waters of the lake except the katavorta, a stoppage of this subterraneous channel by stones, sand, or any other substance occasions an inundation. In the time of Pausanias there occurred such an inundation, of which Ctesias was the first to write. (Strabo, 3. 8. 371; Paus. viii. 22. § 8.) Strabo relates that Iphicles, when besieging Stymphalus without success, attempted to obstruct the katavorta, but was diverted from his purpose by a sign from heaven (viii. p. 389). Strabo also states that originally there was no subterraneous outlet for the waters of the lake, so that the city of the Stymphalii, which was in his time 50 stadia from the lake, was originally situated upon its margin. But this is clearly an error, even if his statement refers to old Stymphalus, for the breadth of the whole lake is less than 20 stadia.

The city derived its name from Stymphalus, a son of Elatus and grandson of Arcas; but the ancient city, in which Temenus, the son of Pelasgus, dwelt, had entirely disappeared in the time of Pausanias, * There was also a small town, Apelaurum, which is mentioned by Livy as the place where the Achaeans under Nicostratus gained a victory over the Macedonians under Androthenes, n. c. 197. (Livy. xxxii. 14.)

STYMPHALUS. 1039

(Achaeus, Polyb. iv. 69)*, and at its foot is the katavorta or subterraneous outlet of the lake of Stymphalus (ἡ Στύμφαλης Λίμνη, Strab. viii. p. 371; ἡ Στυμφηλίη Λίμνη, Herod. vi. 76). This lake is formed partly by the rain-water descending from Cyllene and Apelaurum, and partly by three streams which flow into it from different parts of the plain. The lake is a large and magnificent stream, which rises in Mount Gavantigm in the neighbourhood of Kostania; and from the east comes another stream, which rises near Duna. But the most important of the three streams is the one which rises on the northern side of the plain, from a copious kefalovryis. In summer it flows about two miles through the plain into the katavorta of Apeharrum; but in winter it becomes almost immediately a part of the waters of the lake, though its course may be traced through the shallower water to the katavorta. This stream was called Stymphalus by the ancients; it was regarded by them as the principal source of the lake, and was universally believed to make its reappearance, after a subterranean course of 200 stadia, as the river Erasmis in Argolis. (Herod. vi. 76; Paus. ii. 3. § 5, ii. 24. § 6, viii. 22. § 3; Strab. viii. p. 371; Anxios, Vol. I. p. 201, a.) The Stymphalii worshipped the lake and Metope (Metoni, Aelian, V. ii. 33), whence it has been concluded that Metope is only another name of the river Stymphalus. Metope is also mentioned by Callimachus (Hymn. in Jov. 26), with the epithet pebolly (πεβολλίους), which, as Leake observes, seems not very appropriate to a stream issuing in a holy from the earth, and flowing through a marsh. (Peloypomeneis, p. 384.) The water, which formed the source of the Stymphalus, was conducted to Corinth by the emperor Hadrian, by means of an aqueduct, of which considerable remains may still be traced. The statement of Pausanias, that in summer there is no lake, is not correct, though it is confined at that time to a small circuit round the katavorta. As there is no outlet for the waters of the lake except the katavorta, a stoppage of this subterraneous channel by stones, sand, or any other substance occasions an inundation. In the time of Pausanias there occurred such an inundation, of which Ctesias was the first to write. (Strabo, 3. 8. 371; Paus. viii. 22. § 8.) Strabo relates that Iphicles, when besieging Stymphalus without success, attempted to obstruct the katavorta, but was diverted from his purpose by a sign from heaven (viii. p. 389). Strabo also states that originally there was no subterraneous outlet for the waters of the lake, so that the city of the Stymphalii, which was in his time 50 stadia from the lake, was originally situated upon its margin. But this is clearly an error, even if his statement refers to old Stymphalus, for the breadth of the whole lake is less than 20 stadia.

The city derived its name from Stymphalus, a son of Elatus and grandson of Arcas; but the ancient city, in which Temenus, the son of Pelasgus, dwelt, had entirely disappeared in the time of Pausanias, * There was also a small town, Apelaurum, which is mentioned by Livy as the place where the Achaeans under Nicostratus gained a victory over the Macedonians under Androthenes, n. c. 197. (Livy. xxxii. 14.)
and all that he could learn respecting it was, that Hera was formerly worshipped there in three different sanctuaries, as virgin, wife, and widow. The modern city lay upon the southern edge of the lake, about a mile and a half from the katâvôra, and upon a rocky promontory connected with the mountain behind. Stymphalius is mentioned by Homer (II. ii. 608), and also by Pindar (Ol. vi. 102), who calls it the mother of Arcadia. Its name does not often occur in history, and it owes its chief importance to its being situated upon one of the most frequented routes leading to the westward from Argolis and Corinth. It was taken by Apollonides, a general of Cassander (Diod. xix. 63), and subsequently belonged to the Achean League (Polyb. ii. 55, iv. 68, &c.). In the time of Pausanias it was included in Argolis (viii. 22. § 1). The only building of the city, mentioned by Pausanias, was a temple of Artemis Stymphalia, under the roof of which were figures of the birds Stymphaliuses; while behind the temple stood statues of white marble, representing young women with the legs and thighs of birds. These birds, so celebrated in mythology, the destruction of which was one of the labours of Heracles (Dict. of Bowgr. Vol. ii. p. 396), are said by Pausanias to be as large as cranes, but resembling in form the ibis, only that they have shorter beaks, and not crooked like those of the ibis. They are mentioned in accordance with the description of Pausanias.

The territory of Stymphalus is now called the vale of Zarabi, from a village of this name, about a mile from the eastern extremity of the lake. The remains of the city upon the projecting cape already mentioned are more important than the cursory notice of Pausanias would lead one to expect. They cover the promontory, and extend as far as the fountain, which was included in the city. On the steepest part, which appears from below like a separate hill, are the ruins of the polygonal walls of a small quadrangular citadel. The circuit of the city walls, with their round towers, may be traced. To the east, beneath the acropolis, are the foundations of a temple in antis; but the most important ruins are those on the southern side of the hill, where are numerous remains of buildings cut out of the rock. About ten minutes N. of Stymphalus is the prison of the giant of Crete (Leake, Morea, vol. iii. p. 108, seq.; Peloponnesianc., p. 384; Bblaye, Recherches, d. 5c., p. 434; Boss, Reisen im Peloponnes, p. 54; Curtius, Peloponnesco, vol. i. p. 201, seq.).

STYRA. (τρά Tyra). Eth. Τυρεώς; Stura), a town of Lacedaemon, on the W. coast, N. of Carysbus, and nearly opposite the promontory of Cynosura in Attica. The town stood near the shore in the inner part of the bay, in the middle of which is the island Argelia, now called Smyrnia. Styra is mentioned by Homer along with Caryus (H. ii. 539). Its inhabitants were originally Dryopians, though they denied this origin (Herod. viii. 46; Paus. iv. 34. § 11), and claimed to be descended from the demus of Steiria in Attica. (Strab. x. p. 446.) In the First Persian War (B.C. 490) the Persians landed at Argelia, which belonged to Styra, the prisoners whom they had taken at Eutrin. (Herod. vi. 107.) In the Second Persian War (B.C. 480, 479) the Styrians fought at Artemision, Solymin, and Platæa. They sent two ships to the naval engagements, and at Platæa they and the Eretrians amounted together to 600 men. (Herod. vii. i, 46, ix. 28; Paus. v. 23. § 2.) They afterwards became the subjects of Athens, and paid a yearly tribute of 1200 drachms. (Thuc. vii. 57; Franz, Epiq. Gr. n. 49.) The Athenian fleet was stationed here n. c. 356. (Dem. c. Mid. p. 658.) Strabo relates (x. p. 446) that the town was destroyed in the Mæcian war by the Athenian Philip, and its territory given to the Eretrians; but as the Mæcian war is not mentioned elsewhere, we ought probably to substitute Lamina for it. (Leake, Northern Greece, vol. ii. pp. 422, 432.)

STYX (Στήξ), a waterfall descending from a lofty rock in the Arcadian mountains, above Nona-cria, a town in the N.E. of Arcadia, in the district of Phocea. The water descends perpendicularly in two slender cascades, which, after winding among a labyrinth of rocks, unite to form a torrent into the Crathis. It is by far the highest waterfall in Greece; the scenery is one of wild desolation; and it is almost impossible to climb over the rocks to the foot of the cascade. The wildness of the scenery, the inaccessible character of the water, and the singularity of the waterfall made at an early period a deep impression upon the Greeks, and invested the Styx with superstitious reverence. It is correctly described by both Homer and Hesiod. The former poet speaks of it as 'a white torrent resembling a white serpent' (ισχυρόν Ναυώνυμον Στῦχα θάνατον οἰκαί, Πόλ. ii. xvi. 37), and of the "lofty torrents of the Styx." (Στῦχες θάνατος καὶ θάνατος δύκας, II. vii. 369.) Hesiod describes it as "a cold stream, which descends from a precipitous lofty rock" (θανάτοις μετ' ρήματος ηλικίατος θάνατος ἐλθετεὶ, Theog. 785), and as "the perennial most ancient water of the Styx, which flows through a very rugged place" (Στῦχας ἀβιτόν θανάτων, τὸ δ' ἔπος κατασταφεῖον διὰ φύσος, Theog. 805). The account of Herodotus, who does not appear to have visited the Styx, is not so accurate. He says that the Styx is a fountain in the town of Nona-cria; that only a little water is apparent; and that it dropped from the rock into a cavity surrounded by a wall (vi. 74). In the same passage Herodotus relates that Cleomenes endeavoured to persuade the chief men of Arcadia to swear by the waters of the Styx to support him in his enterprise. Among the later descriptions of this celebrated stream of Pausanias (viii. 17. § 6) is the most full and exact. Of Nona-cria, he says, "is a lofty precipice higher than I ever remember to have seen, over which descends water, which the Greeks call the Styx." He adds that when Homer represents Hera swaying by the Styx, it is just as if the poet had the water of the stream dropping before his eyes. The Styx was transferred by the Greek and Roman poets to the invisible world (see Dict. of Gr. and Rom. Biogr. and Myth. art. STYX); but the waterfall of Nona-cria continued to be regarded with superstitious terror; its water was supposed to be poisonous; and it was believed that it destroyed all kinds of vessels, in which it was put, with the exception of those made of the hoof of a horse or an ass. There was a report that Alexander the Great had been poisoned by the water of the Styx. (Arrian, Anab. vii. 27; Pint. Alex. 77, de Prin. Frig. 20. p. 934; Paus. viii. 18. § 4; Strab. viii. p. 389; Aelian, H. Are. x. 48; Antiq. hist. Mar. 135 and 154; Stub. Hist. Phys. i. 20. p. 45; Pll. ii. 103. s. 106, xvi. 16. s. 53, xxxi. 2. s. 19; Vitruv. viii. 3; Seneo. Q. N. iii. 25.) The belief in the deleterious nature of the
water continues down to the present day, and the inhabitants of the surrounding villages relate that no vessel will hold the water. It is now called the Tana. [Leake, Ital., vol. i. p. 160, seq.: Fiedler, Reise durch Griechenland, vol. i. p. 400, who gives a drawing of the Styx: Curtius, Peloponnesos, vol. i. p. 195.]

**SUAGELA.** (Σωγέλα), a town of Caria, in which was shown the tomb of Car, the ancestor of all the Carians; the place was in fact believed to have received its name from this circumstance, for in Caria Σωγέλα signifies a tomb, and Σωγόμαρι (? Sowemari) (Steph. Byz. v. a.), Strabo, who calls the place Syngella (xii. p. 611), states that this town and Myndus were preserved at the time when Mausolus united six other towns to form Halicarnassus. [L.S.]

**SUANA** (Σωνα), Ptol.: Eth. Sonaones; Soneae, a town of Southern Etruria, situated in the valley of the Fiora (Arminia), about 24 miles from the sea, and 20 W. of Velzini (Sesto). No mention of it is found in history as an Etruscan city, but both Pliny and Ptolemy notice it as a municipal town of Etruria under the Roman Empire. (Plln. iii. 5. s. 8; Ptol. iii. 1. § 49.) Its site is clearly marked by the modern town of Sonea or Sona, which was a considerable place in the middle ages, and still retains the title of a city, and the seal of a bishop, though now a very poor and decayed place. It has only some slight remains of Roman antiquity, but the ravines around the town abound with tombs hewn in the rock, and adorned with architectural façades and ornamental stonework resembling in character those at Castel d' Aeso and Binda. These relics, which are pronounced to be among the most interesting of the kind in Etruria, were first discovered by Mr. Ainsley in 1843, and are described by him in the Annali dell' Institute di Corrispondenza Archeologica for 1843 (pp. 223-226); also by Mr. Dennis (Etruria, i. pp. 450-500). [E. H. B.]

**SUARDONES**, a tribe of the Suevi in Northern Germany, on the right bank of the Albi, south of the Saxones, and north of the Langobardi. (Tac. Germ. 40.) Zeno (Die Deutschen, p. 154), deriving their name from sward or sword (a sword), regards it as identical with that of the Prahonidi, mentioned by Ptolemy (ii. 11. § 13) as living in nearly the same part of Germany. [L. S.]

**SURNIN, a rude people of Asiatic Sarmatia, in the neighbourhood of the Portae Caesariae and the Rhin. They possessed gold mines (Plin. vi. 11. s. 12). They are probably the same people whom Ptolemy calls Surnia (Σωνεριά, v. 9. § 20) and places between the Hispanic and Caucasian mountains. [T. H. D.]

**SUASA** (Σώσαρα; Eth. Susansus; Ru. near Castel Leone), a town of Umbria mentioned both by Ptolemy and Pliny, of whom the latter reckons it among the municipal towns of that country. Ptolemy places it together with Ostra, in the district of the Senones, and it was therefore situated on the northern declivity of the Apennines. Its site is clearly identified at a spot between S. Lorenzo and Castel Leone in the valley of the Cesano, about 18 miles from the sea. Considerable ruins were still extant on the spot in the time of Cluver, including the remains of the walls, gates, a theatre, &c.; and inscriptions found there left no doubt of their identification. (Cluver, Ital. p. 620.) [E. H. B.]

**SUASTEONE** (Σωσατης), Ptol. vii. 1. § 42), a district in the NW. of India, beyond the Parnib, and above the junction of the Kabul river and the Indus. It derives its name from the sacred river Sunast (the Sunatr or Sunga), which is one of the tributaries of the Kabul river. [Goyla.]

**SUASTUS.** [Silvanicae.]

**SUBANECTII.** (Tubarantes.]

**SUBDIXNUM.** (Cenomani.)

**SUBERTUM, another reading of Subertum.**

**SUBI,** a river on the E. coast of Hispam Tarracentum, which entered the sea near the town of Subur. (Plln. iii. 3. s. 4.) Probably the modern Francioli. [T. H. D.]

**SUBLAQUEUM (Subisco), a place near the mouth of the Anio about 24 miles above Tibur (Tivoli). It derived its name from its situation below the lake or lakes formed by the waters of the Anio in this part of its course, and called the Simbruina Stagna or Silvrii Laci.** These lakes have now entirely disappeared; they were evidently in great part artificial, formed as reservoirs for the Aqua Marcia and Aqua Claudia, both of which were derived from the Anio in this part of its course. There is no mention of Sublaqueum before the time of Nero, who had a villa there called by Frontinus "Villa Neoroniata Sublaconia;" and Tacitus mentions the name as if it was one not familiar to every one. (Tac. xiv. 22; Frontin. de Agric. 93.) It seems certain therefore that there was no town of the name, and it would appear from Tacitus (l. c.) that the place was included for municipal purposes within the territory of Tibur, Pliny also notices the name of Sublaqueum in the 4th book of Augustus, but not among the municipal towns; as well as the lakes ("lacus tres anguo natentia nobilia") from which it was derived. (Plln. iii. 12. s. 17.) It appears from medieval records that these lakes continued to exist down to the middle ages, and the last of them did not disappear till the year 1305. (Nibby, Dintorni, vol. ii. p. 125.) Suburbo obtained a great celebrity in the middle ages as the place of retirement of St. Benedict, and the cradle of the celebrated monastic order to which he gave his name. It seems probable that the site was in this time quite deserted, and that the modern town owes its origin to the monastery founded by him, and a castle which was soon after established in its neighbourhood. (Nibby, l. c. p. 123.) [E. H. B.]

**SUBLAVIO** (II. Ant. p. 280) or SUBLABIO (Tob. Pent.), a place in Rietia, on the site of the modern convent of Suba, near the town of Caesun. Some suppose the correct name to be Subalai, which occurs in a middle age document of the reign of the emperor Conrad II. [L. S.]

**SUBLUCRUM** (Sublacrum, Ptol. ii. 6. § 17), a town of the Lucatini in Hispania Tarracentum lying E. of Tarraco. (Mela, ii. 6.) Ptolemy (l. c.) ascribes it to the Costateni, and Pliny (iii. 3. s. 4) to the Hergetes. It is mentioned in an inscription. (Griper, p. 414.) Variously identified with Segia and Sublubraca. [T. H. D.]

**SUBLUCUR** (Sublacura, Ptol. iv. 1. § 13). 1. A town in the interior of Mauretania Tingitana, near the river of the same name. 2. (Ptol. iv. 1. § 2), a river of Mauretania Tingitana. Pliny (v. i. s. 1) calls it a fine navigable river. It fell into the Atlantic near Colonia Bausa, 50 miles south of Limitum. It is still called Suba or Cobus, and rises among the forests of Mount Sabelo in the province of Scita (Grabegec Hemaus). Das Kaiserreich Maroko, tr. by Remount, p. 12). [T. H. D.]

**SUBLUS** (Sobusor, Ptol. iv. 6. § 8), a river on the
SUBZUPARA.

W. coast of Libya Interior, which had its source in Mount Sagapola, and discharged itself to the S. of the point of Atlas Major; now the Suez. [T. H. D.]

SUBZUPARA, a place in Thrace, on the road from Philippopolis to Hadrianopolis (Hist. Ant. pp. 137, 231). It is called Anastasia or Carra Barba in the Itin. Hieros. (p. 568), and as Ταύτεια by Procopius (de Aed. iv. 11, p. 305, ed. Bonn), and still retains the name of Casto Zorri, or simply Zorri. It has, however, also been identified with Hirmenely and Coudunon. In the Tab Peutinum it is called Castra Rubra. [T. H. D.]

SUCABAR (Σουκάβαρ, Ptol. iv. 2. § 25, 3. § 20, xiii. 13, § 11), a town in the interior of Manetania Caucausiana, lying to the S. of the mouth of the Chalapha, and a Roman colony with the name of Colonia Augusta (Plin. v. 2. s. 1). It appears in Ammianus Marcellinus under the name of Oppidum Sagabaritamnum (xxii. 5). Mannert (2. p. 451) would identify it with the present Mazane, where Leo Africanus (Lohrbach, p. 382) found considerable remains of an ancient city, with inscriptions, &c. [T. H. D.]

SUCI or SUCCORUM ANGITAE, the principal city of Mount Haemus, in Thrace, between Philippopolis and Serdica, with a town of the same name. (Amm. Marc. xxi. 10. § 2, xxii. 2. § 2, xxvi. 10. § 4.) It is called Σουκιος by Sozomenus (ii. 22), and Σουκακια by Nicephorus (ix. 13). Now the pass of South Derbent or Derpin Kupi (Comp. V. Hammer, Gesch. des Oezman. Reichs, i. p. 175.) [T. H. D.]

SUCOSSA (Σουκόσσα, Ptol. ii. 6. § 68), a town of the Heriotes in Hispания Tarraconensis (T.H.D.) SUCOSSA or SUSSO (L.XX. Σουκόσσα, Vat. Σουκας, Alex.), a city of the country of the Haemus, formerly part of the kingdom of Sihon king of Bashbon (Josh. xiii. 27). It is connected with Zarthan in 1 Kings, vii. 46, where Hiram is said to have cast his brased vessels, &c., for Solomon's temple "in the plain of Jordan, in the clay ground between Suecoth and Zarthan," elsewhere called Zaretan, mentioned in the account of the miraculous passage of the Israelites (Josh. iii. 16). The city doubtless derived its name from the incident in the life of Jacob, mentioned in Genesis (xxvi. 8), where the name is translated by the LXX. as in the parallel passage in Josephus (Ant. i. 21. § 1). Σουκα (booths). It was therefore south of the Jabbock, and the last station of Jacob before he crossed the Jordan towards Shechem. S. Jerome, in his commentary on the passage, says, "Suecoth: est usque hodie civitas trans Jordani hoc vocabulo in parte Scythopolis," from which some writers have inferred that Scythopolis may have derived its name from this place in its vicinity (Robinson, Bibl. Res. vol. iii. p. 175. n. 5), and this hypothesis is supported by the re-pecatable names of Relan, Geseon, and Rosenmiller. A place called Suecæ is still pointed out by the Arabs south of Beisan (=Bethshan = Scythopolis), on the east side of Jordan, near the mouth of Wady Mis. [G. W.]

SUCHE (Ρω Σουκιου φυσιας, Strab. xvi. p. 770), the Siteum of the Hebrews (2 Chron. xiii. 3), and the modern Sousien, was a harbour on the western coast of the Red Sea, just above the bay of Adole, lat. 16° N. It was occupied by the Egyptian and Greeks successively as a fort and trading station; but the native population of Soche were the Sabae Arbusioans. [T. W. B. D.]

SUCRO (Σουκρος, Ptol. ii. 6. § 14), a river of Hispания Tarraconensis, which rose in the country of the Celtiberi in a S. slope of Mount Iudaha, and after a considerable bend to the SE. discharged itself in the Sueconensis Soutus, to the S. of Valentia. (Strab. iii. pp. 158, 159, 163, 167; Mela. ii. 6; Plin. iii. 3. ss. 4, 5, 11.) Now the Xucuro. [T. H. D.]

SUCRON (Σουκρων, Strab. iii. p. 158), a town of the Euclei in Hispania Tarraconensis, on the river of the same name, midway between Carthago Nova and the river Xerus. (Itin. Ant. p. 400; cf. Cic. Balb. 2; Liv. xxxviii. 24, xxxix. 19; App. B. C. i. 110; Plut. Sert. 13, &c.) It was already destroyed in the time of Ptolemy, and identified by the Franks, and Romans, with Alcera, Sueca, and Cultura. (Cf. Flocer. Exp. Sagr. v. p. 35; Marcs, Hist. ii. 5.) [T. H. D.]

SUCRONIS SINS, a bay on the E. coast of Hispания Tarraconensis, now the Gulf of Valencia. (Mela. ii. 6 and 7.) [T. H. D.]

SUDENI (Σουδένι), a tribe in the east of Germany, about the Gibrata Silva, and in close proximity to the Marcomanni. (Ptol. ii. 11. § 13; comp. SUDERTUM.) [L. S.]

SUDEPTUM (Σουδέπτομ, Etr. Sudeptum), a town in the southern part of Etruria, apparently situated between Volatini and the sea-coast, but we have no clue to its precise situation. The name itself is uncertain. The MSS. of Pliny, who enumerates it among the municipal towns of Etruria, vary between Sudertani and Subertani; and the same variation is found in Livy (xxvi. 23), who mentions a prodigy as occurring "in foro Sudertano," Ptolemy on the other hand writes the name Σουδέπτομ, for which we should probably read Σουδέπτομ. Varro states it, without any apparent reason, with the Maternum of the Itineraries, and place it at Farnese. Sorano, a few miles NE. of Soravna (Sorana), would seem to have a more plausible claim, but both identifications are merely conjectural. (Cluver, Ital. p. 517; Dannis's Eturri, vol. i. p. 478.) [E. H. B.]

SUDET MONTES (Σουδέτα μόντες), a range of mountains in the SE. of Germany, on the N. of the Gibrata Silva, thus forming the western part of the range still called the Sudeten, in the NW. of Bohemia. (Ptol. ii. 11. §§ 21, 23.) [L. S.]

SUEBUS (Σουεβος), a river on the north coast of Germany, between the Albis and Viadus, which flows into the Baltic at a distance of 850 stadia to the west of the mouth of the Viadus (Marian. p. 53), and which, according to Ptolemy (ii. 11. § 1), divided at its mouth into several branches. Notwithstanding these explicit statements, it is extremely difficult to identify the river; hence some regard it as the Prene, others as the Warne, and others again as the Viadus or Oder itself, or rather the central branch of it, which is called the Sciwene or Schewene. [L. S.]

SUEL (Σουελ, Ptol. ii. 4. § 7), a town of Hispания Baetica, on the road from Malaca to Gades.
SEULTERI.

(Liv. Ant. p. 405.) According to inscriptions it was a Roman municipality in which libertini had been settled. (Reins. pp. 13, 131; Spon, Miscell. v. p. 189; Orelli, Inscr. no. 3914; Meis, ii. 6, Plin. hist. iii. 1. s. 3.) It is the modern Fuengirola. (Inscr. in Aldrete, Orig. Ling. Cast. i. 2.) [T. II. D.]

SEULTERI, a people of Gallia Narbonensis, enumerated by Pliny (iii. 4), between the Canautullici and the Verrucini. The name Seltiieri is placed in the Table above Forum Julia (Frugi). Nothing can be ascertained about the position of this people [Canautulllici].

SUESA PÁLUS, a large lake of Germany mentioned only by Pomponius Mela (iii. 3) along with two others, the Eisia and Mesachium, but it is impossible to say what lake he is alluding to. [L. S.]

SUESSA, sometimes called for distinction's sake SUESSA AURUNCA (SVESSA: Eth. Suessamus; Suessa), a city of Latium in the widest sense of that term, but previously not of the Roman dominion, on the SW. slope of the volcanic mountain of Bocca Manziana, about 5 miles S. of the Liris, and 8 from the sea. Though it became at one time the chief city of the Aurunci, it was not a very ancient city, but was founded as late as n. c. 337, in consequence of the Aurunci having abandoned their ancient city (called from their own name Aurunca), which was situated a good deal higher up, and about 5 miles N. of Suessa. [AURUNCA.] Aurunca was now destroyed by the Sabinians and Suessa became the capital of the Aurunci (Liv. viil. 15). That people had, after their defeat by T. Manlius in n. c. 340, placed themselves under the protection of Rome, and we do not know by what means they afterwards forfeited it; perhaps, like the neighbouring Ausonians of Vesia and Minturnae, their fidelity had been shaken by the defeat of the Romans at Lantulac; but it is clear that they had in some manner incurred the displeasure of the Romans, and given the latter the right to treat their territory as conquered land, for in n. c. 313 a Roman colony was established at Suessa. (Liv. ix. 28; Vell. Pat. i. 14.) It was a colony with Latin rights, and is mentioned among those which in the Second Punic War professed their inability to furnish their required quota to the Roman armies. It was punished a few years later by the imposition of double contributions. (Livy. xxvi. 9, xxix. 15.) It is again mentioned in the Civil Wars of Marius and Sulla, when he espoused the party of the latter, but was surprised and occupied by Sertorius. (Appian, R. C. i. 55, 108.) In the time of Cicero it had passed into the condition of a municipality by virtue of the Lex Julia, and is spoken of by that orator as a prosperous and flourishing town; it was the scene of a massacre by Antonius of a number of military captives. (Cic. Phil. iii. 4, iv. 2, xiii. 8.) It received a fresh colony under Augustus, and assumed in consequence the titles of "Colonia Julia Felix Classicum," by which we find it designated in an inscription. (L. A. Col. p. 237; Plin. iii. 5. s. 9; Gruter, Inscr. iii. 1093, 8; Orell. Inscr. 4047.) Numerous other inscriptions attest its continuance as a flourishing and important town under the Roman Empire (Orell. Inscr. 130, 836, 1013, 2284, 3042; Menninger, Inscr. R. N. x. pp. 210—212); and this is confirmed by existing remains: but no mention of it is found in history. Nor is it name found in the Itineraries; but we learn from existing traces that there was an ancient road which branched off from the Via Appia at Minturnae and proceeded by Suessa to Teanum, from which it was continued to Beneventum. (Hoare's Class. Tom. vol. i. p. 145. This is evidently the same line given in the Liv. Ant. p. 121, though the name of Suessa is not there mentioned.)

Suessa Aurunca was the birthplace of the celebrated satirical poet Lucilius, whence he is called by Juvenal "Auruncae alumnus." (Aen. Epist. 15. 9; Juv. i. 20.)

The modern city of Sessa undoubtedly occupies the ancient site: and considerable ruins are still visible, including, besides numerous inscriptions and other fragments, the remains of a temple incorporated into the church of the Foceneado, a remarkable cryptoporicus, and several extensive subterranean vaults under the church of S. Benedetto, constructed of reticulated masonry. Some remains of an amphitheatre are also visible, and an ancient bridge of 21 arches, constructed for the support of the road which leads into the town at the modern Porta del Borgo. It is still called Porta di Roma, supposed to be a corruption of Porta Aurenae (Hoare, i. c. pp. 143—147; Giustiniani, Di. Topogr. vol. iv. p. 28). The fertile plain which extends from the foot of the hills of Sessa to the Liris and the sea, now known as the Demanio di Sessa, is the ancient "Ager Vesicinus," so called from the Ausonian city of Vescia, which seems to have ceased to exist at an early period [Vescia]. The district in question was probably afterwards divided between the Roman colonies of Suessa and Suesa. [E. H. B.]

COIN OF SUESSA AURUNCA.

SEUSSA FOMETIA. 1043

SUSSA POMETIA (SUESSA POMETIARUM, Dionys.; Eth. POMETIARUM), an ancient city of Latium, which had ceased to exist in historical times, and the position of which is entirely unknown, except that it bordered on the "Pomptinus ager" or Pomptinae Paludes, to which it was supposed to have given name. Virgil reckons it among the colonies of Alba, and must therefore have considered it as a Latin city (Aen. vii. 776): it is found also in the list of the same colonies given by Diodorus (vii. Fr. 3); but it seems certain that it had at a very early period become a Volscian city. It was taken from that people by Tarquinius Superbus, the first of the Roman kings who is mentioned as having made war on the Volscians (Liv. i. 53; Strabo, v. p. 231; Vict. T. iv. ill. 8): Strabo indeed calls it the metropolis of the Volscians, for which we have no other authority; and it is probable that this is a mere inference from the statements as to its great wealth and power. These represent it as a place of such opulence, that it was with the body derived from thence that Tarquinius was able to commence and carry on the construction of the Capitoline temple at Rome. (Liv. i. c.; Dionys. iv. 50; C ic. de Rep. ii. 24; Plin. vii. 16. s. 15.) This was indeed related by some writers of Apionae, another city taken by Tarquin (Val. Antias, ap. Plin. iii. 5. s. 9), but the current tradition seems to have been

3 x 2
that connected with Pomatia (Ter. Hist. 66, 72). The name of Suessa Pomatia is only once mentioned before this time, as the place where the sons of Ancus Marcus retired into exile on the accession of Servius. (Liv. i. 41). It is clear also that it survived its capture by Tarquin, and even appears again in the wars of the Republic with the Volscians, as a place of great power and importance. Livy indeed calls it a "Colonia Latina," but we have no account of its having become such. It, however, re- 

voiced (according to his account) in B.C. 503, and was not taken till the following year, by Sp. Cassius, when the city was destroyed and the inhabitants sold as slaves. (Liv. ii. 16, 17). It nevertheless, appears again a few years afterwards (B.C. 495) in the hands of the Volscians, but was again taken and pillaged by the consul P. Servilius (ib. 251; Dion. xvi. 29). This time the blow seems to have been decisive; for the name of Suessa Pomatia is never again mentioned in history, and all trace of it disappears. Pliny notices it among the cities which were in his time utterly extinct (Hist. iii. 5, s. 9), and no record seems to have been preserved even of its site. We are, however, distinctly told that the Volscians ager and the Pomptine tribe derived their appellation from this city (Fast. i. 11. Pomptum, p. 303), and there can therefore be no doubt that it stood in that district on the borders of the Volscian territory, and that the name Pomptine is the corruption of Suessa. This is the origin of the Pomptines; but it must be carefully noted that the appellation is purely contularial. (F. H. B.)

Suessa Pomatia, a people of Hispamia Tarra-

cemisa, mentioned only by Livy (xxxiv. xxv. 24, xxxiv. 20, XXXIV. 42) and especially in con-

nection with the Sequani (or Lctani). Marca (Hisp. ii. 9, 4) takes them for a branch of the 

Cossetani; and Uster (ib. ii. p. 318) seeks them 

near the Colliberi, Lacetani, and Hercetis. (T. H. D.)

SUESSENAES, or SUESONES (Ov. Ixvrig., 

v. 9, § 11), a people of Gallia Belgica. The 

Renil told Caesar (B. G. ii. 3) in B.C. 57 that the 

Suessones were their brothers and kinsmen, had 

the same political constitution and the same laws, 

namcd one political body with them, and had 

the same head or chief: their territory bordered on 

the territory of the Reni, and was extensive and 

fruitful; within the memory of man the Suessones 

had a king, Divitiacus, the most powerful prince 

in that district, even to the dominion of Britania; 

at this time (B.C. 57) they had a king named Gallus, 

a very just and wise man, to whom the Belgae 

who were combining against Caesar unanimously 

gave the direction of the war. The Suessones had 

twelve towns, and promised a contingent of 50,000 

men for the war with Caesar.

Caesar (B. G. ii. 12) took Noviodumum, a town 

of the Suessones, and the people submitted [Novi- 

dumum; Albert. Suessonum]. The Suessones 

had the rich country between the Oise and the 

Marne, and the town of Suessa on the Marne 

preserves their name unchanged. The Suessones are 

mentioned (B. G. vii. 7, 5) among the people who sent 

their contingent to attack Caesar at Alesia, B.C. 

92; but their force was only 5000 men. Caesar 

put the Sequanians to flight by subjecting them 

to their best friends the Reni (B. G. viii. 6; "qui Remi- 

tanum habitavat"); in which passage the word "habit-

ator" denotes a political dependence, and in Gallia 

it means a patron of the country. The Reni took 

one of themselves [Vilm.]

Pline names the Suessone Lriteri (iv. 17), which, 

if it means anything, may mean that they were re-

laxed in his time from their dependence on the 

Reni. In Pliny's text the name "Suessone" stands 

between the name Veronamini and Suessones; but 

nobody has yet found out what it means. 

The orthography of this name is not quite cer-

tain; and the present name Suessones is as near 

the truth as any other form. In Strabo (iv. p. 193) 

it is Suessones, and Lucan (i. 423) has—

"Et Bitunia, languiqque leves Suessones in armis;"

Suessones is a correction; but there is no doubt 

about it (ed. Oudem.)

[S. L.]

SUESSELMA : Etb. Suessonum; 

Sessoderi, a city of Campania, situated in the 

interior of that country, near the frontiers of Campania, 

between Capua and Nola, and about 4 miles N.E. of 

Arezzo. It is repeatedly mentioned during the 

wars of the Romans with the Samnitic allies, as well 

as in their campaigns against Hannibal. Thus in 

the First Samnite War (B.C. 343) it was the scene of 

a decisive victory by Valerius Corvus over the Samnites, 

who had gathered together the remains of their army 

which had been previously defeated at Mount Gaurus 

(Liv. vii. 37). In the great Campanian War shortly 

afterwards, the Suessones followed the fortunes of 

the citizens of Capua, and shared the same fate, so 

that at the close of the contest they must have obtained 

the enemy's victory; and as the city of Capua, 

where the attack was made, now lies within the 

 confines of the Samnite alliance, it may be supposed 

that the Suessones took advantage of the occasion 

of the victory to join the Samnites, and assist them in 

their campaigns against Hannibal. If the name is 

correct in the text, they may have been a Samnite 

tribe, and joined the Samnites in the war with 

Hannibal, but there is no other evidence of their 

connection with the Samnites. (Liv. viii. 14.) 

In the Second Punic War the city bears a 

considerable part, though apparently more from 

its position than its own importance. The line of 

hills which rises from the level plain of Campania 

immediately above Suessa, and forms a kind of 

projection of the ridge of Mount Tifata, was a 

station almost as convenient as that mountain 

itself, and in B.C. 216, it was occupied by Marcellus 

with the view of protecting Nola, and watching the 

operations of Hannibal against that city (Liv. 

xxiii. 14, 17). From this time the Romans seem to 

have kept up a permanent camp there for some years, 

which was known as the Castra Claudiana, from 

the name of Marcellus who had first established it, 

and which is continually alluded to during the 

operations of the subsequent campaigns (Liv. 

xxiii. 31, xxxiv. 46, 47, xxv. 7, 22, xxvi. 9). But 

from this time the name of Suessa disappears from 

history. It continued to be a municipal town of 

Campania, though not of the rank of a secondary 

city, and the inscriptions attest its municipal rank 

under the Empire. It had received a body of 

veterans as colonists under Sulla, but did not attain 

the colonial rank (Strab. v. p. 249; Plut. iii. 5, s. 9; 

The Tabula places it on a line of road from Capua to 

Nola, at the distance of 9 miles from each of those 

cities (Tab. Pont). It was an episcopal see in the 

first ages of Christianity, and its destruction is 

attributed to the saracens in the 9th century. Its 

ruins are still visible in a spot now occupied by a 

mansion forest about 4 miles S. of Mignolanda, 

and an adjacent castle is still called Torre ai Sessoli. 

Inscriptions, as well as capitals of columns and 

other architectural fragments, have been found there 

(Prattii Flus Aquae, iii. 3 p. 347; Romarci, vol. 

iii. p. 390).

F. H. B.}

SUETRI (Sewetria, Prot. iii. l. § 42, written 

Sewetria in some editions), a Ligurian people, 

placed by Pline (vi. 4) above the Oksylus, who were 

on the coast between Fejus and Antes. The Suetri 

are the last people named in the Trophy of the Alps. 

If the position of their town Salines [SALISAB.] is
properly fixed, the Suevi were in the northern part of the

division of Ge'sus. [I.]
SUEVI (םוֹבָּא or סֶוֹבֵו), is the designation for a very large portion of the population of ancient Germany, and comprised a great number of separate tribes with distinctive names of their own, such as the Semnones. German authors generally connect the name Suevi with Suebion, i.e. to sway, move unsteadily, and take it as a designation of the unsteady and migratory habits of the people, to distinguish them from the Ingaeones, who dwelt in villages or fixed habitations (Zeua, Die Deutschen, p. 55, fol.); others, however, and particularly with good reason, regard the name as of Celtic or even Slavonian origin; for the Romans no doubt employed the name, not because indigenous in Germany, but because they heard it from the Celts in Gaul. We must, however, from the first distinction between the Suevi of Caesar (B. G. 1. 37, 51, 54, iii. 7, iv. 1, &c.) and these of Tacitus (Germ. 58, &c.); the Suevi in Caesar occupied the eastern banks of the Rhine, in an area the country now called Baden, while Tacitus describes this designation as occupying the country to the north and east of the Suevi of Caesar, so that the two writers assign to them quite a different area of country. Strabo (vii. p. 290) again states that in his time the Suevi extended from the Rhine to the Albis, and that some of them, such as the Hermunduri and Longobardi, had advanced even to the north of the Albis. Whether the nations called Suevi by Caesar and Tacitus are the same, and if so, what causes induced them in later times to migrate to the north and east, are questions to which history furnishes no answers. It is possible, however, that these whom Caesar encountered were only a branch of the great body, perhaps Chatti and Longobardi. That these latter were pure Germans cannot be doubted; but the Suevi of Tacitus, extending from the Baltic to the Danube, and occupying the greater part of Germany, no doubt contained many Celtic and still more Slavonic elements. It lies in fact conjectured, with great probability, that the name Suevi was applied to these tribes which were not pure Germans, but more or less mixed with Slavonians; for thus we can understand how it happened that in their habits and mode of life they differed so widely from the other Germans, as we see from Tacitus; and it would also account for the fact that in later times we find Slavonians peaceably established in countries previously occupied by Suevi. (Comp. Plin. iv. 28; Ptol. ii. 11, § 15; Oros. i. 2.) It deserves to be noticed that Tacitus (Germ. 2. 45) calls all the country inhabited by Suebian tribes by the name Suevia. The name Suevi appears to have been known to the Romans as early as B.C. 123 (Sisenna, ap. Non. s. l. lanae), and they were at all times regarded as a powerful and warlike people. Their country was covered by mighty forests, but towns (oppida) also are spoken of. (Caes. B.C. iv. 19.) As Germany became better known to the Romans, the generic name Suevi fell more and more into disuse, and the separate tribes were called by their own names, although Ptolemy still applies the name of Suevi to the Semnones, Longobardi, and Angli.

In the second half of the third century we again find the name Suevi limited to the country to which it had been applied by Caesar. (Amm. Marc. xvi. 10; Jornand. Get. 55; Tap. Peut.) These Suevi, from whom the modern Sambii and the Suebians derive their names, seem to have been a body of ad-

venturers from various German tribes, who assumed the ancient and illustrious name, which was as applicable to them as it was to the Suevi of old. These later Suevi appear in alliance with the Alamanni and Burgundians, and in possession of the German side of Gaul, and Switzerland, and even in Italy and Spain, where they joined the Visigoths. Reiner, who acts so prominently a part in the history of the Roman empire, was a Suevian. (Comp. Zeua, l. c.; Wilhelm, Germanien, p. 101, &c.; Grimm, Deutsche Gramm. i. pp. 6, 25, Gesch. der Deutschen Spr. i. p. 494, Lathan, on Tacit. Germ. Epigraph. p. 97.)

SUEVICUM MARE, is the name given by Tacitus (Germ. 42) to the Baltic Sea, which Ptolemy calls the ΣΥΥΕΙΤΙΚΟΣ ΝΑΟΣ (vii. 5. § 2, viii. 10. § 2). [L.S.]

SUFETULA a town of Byzacena, 25 miles S. of Sufes. In its origin it seems to have been a later and smaller place than the latter, whence its name, according to Suetonius, was a diminutive—little Sufes. In process of time, however, it became a very considerable town, as it appears to have been the centre whence all the roads leading into the interior radiated. Some vast and magnificent ruins, consisting of the remains of three temples, a triumphal arch, &c., at the present Sjatïla, which is erected on a lofty plateau on the right bank of the Wad Dschamila, 80 kilometres SW. of Kairouan, attest its ancient importance. (See Shaw's Travels, p. 107; Peleker, in Recueil, in Æreus Archæol. July 1847.) [T. H. D.]

SULI (Σούλι, Stephan. B. c. e. c. Eth. Σούλης, Σούλης, Σούλτης, Sbiba, Stadionn, §§ 331, 332), the harbour of Elyras in Crete, 50 stadia to the W. of Poccilassos, situated on a plain. It probably existed as late as the time of Hierocles, though now entirely uninhabited. Mr. Paschal (Travels, vol. ii. p. 100) found remains of the city walls as well as other public buildings, but not more ancient than the time of the Roman Empire. Several tombs exist resembling those of Ἡλεγων Ὀλυσίος; an aqueduct is also remaining. [E. B. J.]

SULLUM (Σηγιλαμ). [Helvillum.]

SUNDINUM. [Cesomani.]

SUIONES, are mentioned only by Tacitus (Germ. 44) as the most northern of the German tribes, dwelling on an island in the ocean. He had no doubt thinking of Scandia or Scandinavia; and Suiones unquestionably contains the root of the modern name Sweeds and Swedes.

SUNSSA, a town in Armenia Minor (Itin. Ant. pp. 207, 216), where, according to the Notitia Imperii (p. 27), the Ala I. Ulpi Duovirum was stationed; but its site is now unknown. [L. S.]

SUSISSATUM (in Ptol. Σουασέσταθυ, ii. 6, § 63), a town of the Caristi in Hispania Tarraconensis. The Geogr. Rav. (iv. 45) calls it Suc- stumatum. It is the modern Vitoria. [T. H. D.]

SULCI (Σούλκι, Stephan. B. c. e. c. Ptol. Σωύκχι, Strab.; Σούλκι, Paus. Eth. Saliskanus: S. Antioce, one of the most considerable cities of Sardinia, situated in the SW. corner of the island, on a small island, now called Isola di S. Antioce, which is, however, joined to the mainland by a narrow isthmus or neck of sand. S. of this isthmus, between the island and the mainland, is an extensive bay, now called the Golfo di Palmas, which was known in ancient times as the Saliskanus Portus (Ptol.). The foundation of Sulci is expressly attributed to the Cartha-

3 x 3
SULMO.

SULMO, a city of the Peligni, situated in the valley of the Gizio, in a spacious basin formed by the junction of that river with several minor streams. There is no doubt that it was one of the principal cities of the Peligni, as an independent tribe, but no notice of it is found in history before the Roman conquest. A tradition alluded to by Ovid and Silanus Italicus, which ascribed its foundation to Solumus, a Phrygian and one of the companions of Memnon, is evidently a mere etymological fiction (Ovid, Fast. iv. 79; Sil. Ital. ix. 70—76). The first mention of Sulmo occurs in the Second Punic War, when its territory was ravaged by Hannibal in n. c. 211, but without attacking the city itself. (Liv. xxvi. 11.) Its name is not noticed during the Social War, in which the Peligni took so prominent a part; but according to Florus, it suffered severely in the subsequent civil war between Sulla and Marius, having been pillaged by him in his advance to Rome. (Flor. ii. 21.) The expressions of that rhetorical writer are not, however, to be construed literally, and it is more probable that Sullana was confiscated and its lands assigned by Sulla to a body of his soldiers. (Zumpt, de Colon. p. 261.) At all events it is certain that Sulmo was a well-peopled and considerable town in n. c. 49, when it was occupied by Domitius with a garrison of seven cohorts; but the citizens, who were favourably affected to Caesar, opened their gates to his lieutenant M. Apicius Cæcilius, as soon as he appeared before the place. (Caes. B. C. i. 18; Cic. ad Att. viii. 4. 12 a.) Nothing more is known historically of Sulmo, which, however, appears to have always continued to be a considerable provincial town. Ovid speaks of it as one of the three municipal towns whose districts composed the territory of the Peligni ("Peligni pars terrae ruris," Amor. ii. 16.1); and this is confirmed both by Pliny and the Liber Coloniarum; yet it does not seem to have ever been a large town. Pliny, indeed, designates it as a small provincial town. (Amor. iii. 15.) From the Liber Coloniarum we learn also that it had received a colony, probably in the time of Augustus (Plin. iii. 12. s. 17; Lib. Colon. pp. 229, 260); though Pliny does not give it the title of a Colonia. Inscriptions, as well as the geographers and Itineraries, attest its continued existence as a municipal town throughout the Roman Empire. (Strab. v. p. 241; Cic. Att. iii. 1. § 64; Tab. Fast. V.; Orell. Inscr. 1956; Morant, Inscr. R. X. pp. 287—289.)

The modern city of Sulmona undoubtedly occupies the ancient site; it is a tolerably flourishing place and an episcopal see, having succeeded to that dignity after the fall of Valerius, which had arisen on the ruins of Confinium. (Romaneli, vol. iii. pp. 154—156.)

The chief celebrity of Sulmo is derived from its having been the birthplace of Ovid, who repeatedly alludes to it as such, and celebrates its salubrity, and the numerous streams of clear and personal water in which its neighbourhood abounded. But, like the whole district of the Peligni, it was exceedingly cold in winter, whence Ovid himself, and Silanus Italicus in imitation of him, calls it "gelidus

SULMO (Sulmonae: Edh. Sulmonenses; Sulmona), a city of the Peligni, mentioned only by Pliny (iii. 5. s. 9) among those which were extinct in his time, and incidentally noticed by Virgil. (Aen. x. 517.) It is in all probability the same place with the modern Sermoneta, which stands on a hill between Norba and Setia, looking over the Pontine Marshes. (T. H. B.)

SUIAS, a town in Britain, inhabited by the Suetones (Itin. Ant. p. 471), now Brockley Hill in Hertfordshire. (Cameron. p. 359.)

SULMO (Sermoneta), an ancient city of Latium,}
SUMATIA. (Ovid, Fast. iv. 81, Trist. iv. 10. 3, Amor, ii. 16; Sil. Ital. viii. 511.) Its territory was fertile, both in corn and wine, and one district of it, the Pausus Fabianus, is particularly mentioned by Pliny (xvii. 26. s. 43) for the care bestowed on the irrigation of the vineyards.

The remains of the ancient city are of little interest as ruins, but indicate the existence of a considerable town; among them are the vestiges of an amphitheatre, a theatre, and thermae, all of them without the gates of the modern city. About 2 miles from the city, and on Monte Morvone, are some ruins of reticulated masonry, probably those of a Roman villa, which has been called, without the slightest reason or authority, that of Ovid. (Romnellii, vol. iii. pp. 159, 161; Craven's Abruzzi, vol. ii. p. 32.)

Sulmo was distant seven miles from Corfinium, as we learn both from the Tabula and from Caesar. (Caes. B. C. i. 18; Tab. Peut.) Ovid tells us that it was 90 miles from Rome (Trist. iv. 10. 4), a statement evidently meant to be precise. The actual distance by the highway would be 94 miles; viz. 70 to Cerenna, 17 from thence to Corfinium, and 7 from Corfinium to Sulmo. (D'Avulle, Anais. Geogr. de l'Italie, pp. 175, 179.)

There was, however, probably a branch road to Sulmo, after passing the Mons Imicus, avoiding the détour by Corfinium. [E. H. B.]

SUMATIA (Συμάτια, Paus. viii. 36. § 4; Steph. B. s. v.; Σωματίαν, Paus. viii. 36; Σωματίων, Paus. viii. 27; Σωμάτιον, Steph. B. s. v.), a town of Arcadia in the district of Maenalus, on the southern slope of Mt. Maenalus. It was probably on the summit of the hill now called Sylimum, where there are some remains of polygonal walls. (Leake, Morea, vol. ii. p. 51; Ross, Peloponnes, p. 120.)

SUMMONTORIUM, a place in Vindicia (I. Ant. p. 277), where, according to the Notitia Imperi, the commander of the 3rd legion was stationed, its exact site is uncertain.

SUMUS PYRENAEUS. One of the passes of this name mentioned in the Antonine Itin. and the Table was on the road from Narbo (Varnovae) to Juncaria (Junquera) in Spain. The road passed from Narbo through Ad Centuriones and Ad Stabulum; but the distances in the Itin. are not correct; nor is the distance in the Itin. correct from Sumus Pyreneus to Juncaria. The pass, however, is well marked; and it is the Col de Pertus, which is commanded by the fort of Belleracine. This is the road by which Hannibal entered Gallia, and the Roman armies marched from Gallia into Spain. A second pass named Summus Pyrenaeus in the Antoine Itin. was on the road from Benharram [Beneharranum] in Aquitania to Caesaragustia (Saragossa) in Spain. The road went through Inns (Olaron) and Aspa Luca [Aspa Luca] and Forum Lignenum [Forum Lignem], which is 5 from Summus Pyrenaeus. This road follows the Gave d'Aspe from Oloron; and on reaching the head of the valley there are two roads, one to the right and the other to the left. That to the right called Port de Bareine must be the old road, because it leads into the valley of Araques and to Beilo in Spain, which is the Ebellenium of the Itin. on the road from Summus Pyrenaeus to Saragossa.

There is a third pass the most western of all also named Summus Pyrenaeus on the road from Aude Tarbellicus (Daz) in Aquitania to Pompellen (Pamplona) in Spain. The Summus Pyrenaeus is the Sommet de Castel-Piron, from which we descend into the valley of Roncairelles on the road to Pamplona [Imus Pyrenaeus]. (D'Avville, Notice, iv.)

SUNA [Aborigines].

SUNICI. Tacitus (Hist. iv. 66) mentions the Sunici in the history of the war with Civilis. Civis having made an alliance with the Agrippinenses (Colii) resolved to try to gain over the nearest people to Colii, and he first secured the Sunici. Claudius Laber opposed him with a force hastily raised among the Britons, Tungri and Nervii, and he was confident in his position by having possession of the bridge over the Mosse. [Pons Mosae]. No certain conclusion as to the position of the Sunici can be derived from this; but perhaps they were between Colii and the Maus. Pliny (iv. 17) mentions the Sunici between the Tungri and the Frisian-bones. [G. L.]

SUNIUM (Σουίνιον, Eth. Σουίνων), the name of a promontory and demus on the southern coast of Attica. The promontory, which forms the most southerly point in the country, rises almost perpendicularly from the sea to a great height, and was crowned with a temple of Athena, the tutelary goddess of Attica. (Paus. i. 1. § 1; Σουίνων ιππός, Hom. Od. iii. 278; Soph. Ajx., 1235; Eurip. Cycl. 292; Virg. iv. 7.) Sunium was fortified in the nineteenth year of the Peloponnesian War (B.C. 413) for the purpose of protecting the passage of the cornships to Athens (Ith. vii. 4), and was regarded from that time as one of the principal fortresses of Attica (Comp. Dem. pro Cor, p. 238; Liv. xxxii. 23; Sylvyx, p. 21.) Its proximity to the silver mines of Laurium probably contributed to its prosperity, which passed into a proverb (Anaxand. ap. Athen. vi. p. 263, c); but even in the time of Cicero it had sunk into decay (ad Att. xiii. 10). The circuit of the walls may still be traced, except where the precipices nature of the rocks afforded a natural defence. The walls which are fortified with square towers, are of the most regular Hellenic masonry, and enclose a space of a little more than half a mile in circumference. The southern part of Attica, extending northwards from the promontory of Sunium as far as Thoricus on the east, and Anaphylustas on the west, is called by Herodotus the Sunian angle (πέρα τοῦ Σουίνου τῷ Σουίνοκι, iv. 99). Though Sunium was especially sacred to Athena, we learn from Aristophanes (Egopt, 537, Aren, 869) that Poseidon also was worshipped there.

The promontory of Sunium is now called Cape KOLUMN, from the ruins of the temple of Athena which still crown its summit. Leake observes that "the temple was a Doric hexastyle; but none of the columns of the fronts remain. The original number of those in the flanks is uncertain; but there are still standing nine columns of the southern, and three of the northern side, with their architraves, together with the two columns and one of the antes of the prossae, also bearing their architraves. The columns of the peristyle were 3 feet 4 inches in diameter at the base, and 2 feet 7 inches under the capital, with an intercircumference below of 4 feet 11 inches. The height, including the capital, was 19 feet 3 inches. The exposed situation of the building has caused a great corrosion in the surface of the marble, which was probably brought from the neighbouring mountains; for it is less homogeneous, and of a coarser grain, than the marble of Pentele. The walls of the fortress were faced with the same kind of stone. The excavation..."
tage of the platform of the temple was adorned with sculpture, some remains of which have been found among the ruins. North of the temple, and nearly in a line with its eastern front, are foundations of the Propylæum or entrance into the sacred peripæs; it was about 50 feet long and 30 broad, and presented at either end a front of two Doric columns between which supported a pediment. The columns were 17 feet high, including the capital, 2 feet 10 inches in diameter at the base, with an opening between them of 8 feet 8 inches. (The Dei n of Attica, p. 63. 2nd ed.) Leake remarks that there are no traces of any third building visible, and that the present close comes down here, and the temple of Athens Poias at Athens, Poseidon was honoured only with an altar. Wordsworth, however, remarks that a little to the NE. of the platform on which the temple stands is a conical hill, where are extensive vestiges of an ancient building, which may perhaps be the remains of the temple of Poseidon. (Athens and Attica, p. 207.)

SUNNESIA, a small island on the S. coast of Spain (Geogr. Brev. v. 27.)

SUPERAEQUM or SUPEREQUM (Eth. Superaeqo, Superaeqo), a town of the Perægi, one of the three which possessed municipal rights, and among which the territory of that people was divided. (Pisistr. 15.) Hence it is mentioned both by Pliny and in the Liber Coloniarum, where it is termed "Colonia Superaequana." It received a colony of veterans, probably under Augustus, to which a fresh body of colonists was added in the reign of M. Aurelius. (Pim. iii. 12. s. 17.; Lib. Colon. p. 229; Zumpt, de Colon. p. 361.) The name is not mentioned by any other author, but several inscriptions attest its municipal importance. The site, which was erroneously transferred by Cluverius to Pola, was clearly fixed by Holderns at a place still called Castel Vecchio Subeqo (in older documents Subeqo or Subeqego), where the inscriptions alluded to are still extant. It is situated on a hill on the right bank of the Aterna, and about 4 miles on the left of the Via Valeria. Its territory probably comprised the hill district between that road and the Aterna. (Cluver, Ital. p. 738; Holderns. Not. in Colon. p. 145; Romani III, vol. ii. pp. 134—137; Menemen, Inscri. R. N. p. 289.) [E. H. B.] SUPERATH. [Ant. B.]

SUPERAEQUM MARE. [Adriaticum Mare.]

SUTPARKA (Sutparrka, Peripl. M. E. c. 52, ed. Mill.), a place on the western coast of Hindostan, at no great distance from Barygaza or Benech. Pliny calls it Sutparrka (vi. 1. § 6). In Lassen's map it is placed on the left bank of the Tapi or Baramanga, not far to the N. of Surat. This place is also mentioned by Elissen (p. 171), and by Ossian Inscr. situated between the points of Ghorap (p. 437, ed. Montaigne). It has been suspected, with much reason, by Bentley, that this is the "Ophir" of the Bible,—the name in Sanscrit and Hebrew respectively offering some remarkable analogies. (Bentley, ad. Ind. in Ezek. and Neh.; v. 28.)

SUIUS (σάυος, Fth. Σαυοῦς). City of Syrus, situated on the Euphrates, in the district of Palmyra, long. 72° 40', lat. 35° 40' of Palmyra, which places it is still this: (v. c. 13. § 25); apparently the Sure of the Peninger Table, according to which it was 103 M. distant from Palmyra. It is called in the Notitiae Imperii (§ 24) Flavia Turina Sura (ap. Mannert, p. 408). It is probably identical with the Sura of Pliny, where, according to him, the Euphrates turns to the east from the deserts of Palmyra (v. 24. s. 87). Ic., however, mentions Sura (26. s. 89) as the nearest town to Philiscus, a town of the Parthians on the Euphrates.

Sura was 26 stadia distant from Telloum, which was situated in what was called "Barbaccius campus." It was a Roman garrison of some importance in the Persian campaigns of Belisarius; and a full account is given of the circumstances under which it was taken and burned by Chosroes I. (a. d. 532), who, having marched three long days' journey from Circensium to Zenobia, along the course of the Euphrates, thence proceeded an equal distance up the river to Sura. In incidental mention of the bishop proves that it was a bishopric. (Procop. Bell. Pers. i. 18. ii. 5.) It's walls were so weak that it could not hold out more than half an hour; but it was afterwards more substantially fortified, by order of the emperor Justinian. (Id. de Aedificiis Justiniani, ii. 9.) "About 36 miles below Bais (the Aulis of Palmyra). Following the course of the river, are the ruins of Sura; and about 6 miles lower is the ford of El-Hamamim," which Col. Ciesney identifies with the Zenema of the Thapsaeus, where, according to local tradition, the army of Alexander crossed the Euphrates (Experimand for Seras, p. 1. v. 1. 415.). In the Chart (iii.) it is called Souregh, and marked as "brick ruins," and it is probable that the extensive brick ruins a little below this site, between it and Phanas (Thapsaeus), may be the remains of Amatus, mentioned in connection with Sura by Pliny. Ainsworth is certain wrong in identifying the modern Serikhe with the ancient Thapsaeus (p. 72.).

SURIA, a branch of the Mosella in Gallia. Ausonius (Mosella, v. 354.):—

"Xanque et Pronaeae Nemeseae adjecta mactu Sura tuis properat non degener icer ab undas."

The Sura (Suar or Sura), comes from, Luxembourg, and after receiving the Pronaeae (Pronae) and Nemeseae (Nunas), joins the Our, which falls into the Moselle on the left bank above Augustine Trevigorum. (G. L.)

SUÆAE. [Sauae.]

SURAÆNAE (Σουαραινα, Arrian, Ind. c. 8.), an Indian nation, noticed by Arrian, who appear to have dwelt along the banks of the Jumna. They were famous for the worship of the Indian Hercules, and had two principal cities, Methora (Modana) and Clisiorora. The name is, pure Sanscrit, Surana. [V.]

SURDANOES, a people of Hispania Tarraconensis, seated near Hurda, and probably belonging to the Lorgetes (Pilin iii. 3. s. 4.).

SURUMI (Σορουμη, Pilin. v. 10. § 6), a place in Colchis, at the mouth of the Surum. (Pilin. iv. 4. s. 4.) It is then given that the plain called Syrus (Bitter, Richters, i. p. 809.)

SURUS a small tributary river of the Phasis in Colchis. (Pilin. v. 4. s. 4.) According to the same authority, its water had a petrifying power (i. i. s. 106.)
SURRENTINUM PROM.

SURRENTINUM PROM. [Minervae Prom.] SURRENTUM (Surruntor, Strab.; Surruntor, Pol. : Eth. Surruntinum; Sorrento), a city on the coast of Campania, on the southern side of the beautiful gulf called the Crater or Bay of Naples, about 7 miles from the headland called Minervae Promontorium, which forms the southern boundary of that bay. We have already described its promontory, its name is never mentioned till after the Roman conquest of Campania. Tradition indeed ascribed the foundation of Sorrentum to the Greeks, but whether it was a colony from Cumae, or an earlier Greek settlement, we have no account: and there does not appear any evidence that it had, like many places in this part of Italy, a distinctly Greek character in historical times. Strabo calls it a Campanian city (Strab. v. p. 247), but this may possibly refer to its not being one of those occupied by the Picenes. According to the Liber Caesariurn a great part of its territory, and perhaps the town itself, was considered in a certain sense as consecrated to Minerva, on account of its proximity to her celebrated temple on the adjoining promontory, and was for that reason occupied by Greek settlers (Lib. Coll. p. 236). It nevertheless received a partial colony under Augustus (B.), but without attaching the rank or character of a Colony. Nevertheless the name of Surruntinum, as the municipal town under the Roman Empire, and it is noticed by all the geographers; but its name is rarely mentioned in history (Strab. l. c.; Plin. iii. 5. s. 9; Mel. ii. 4. § 9; Potl. iii. 1. § 7; Orell. Insr. 3742; Mommsen, Insr. R. R. 2111—2125). It was, however, restored to by wealthy Romans on account of its beautiful scenery and delightful climate; among others Pollius Felix, the friend of Statius, had a villa there, which the poet has celebrated at considerable length in one of his minor poems (Statius, I. v. 2). We are told also that Agrippa Postumus, when he first incurred the displeasure of Augustus, was ordered to retire to Surruntum, before he was consigned to more complete banishment in the island of Planasia (Suet. Aug. 65).

But the chief celebrity of Surruntum was derived from its wine, which enjoyed a high reputation at Rome, and is repeatedly alluded to by the poets of the Empire. It was considered very wholesome, and was in consequence prescribed to physicians and invalids. Tiberius indeed is said to have declared that it owed its reputation entirely to the physicians, and it was in reality no better than vinegar. It did not attain its maturity till it had been kept 25 years (Plin. xiv. 6. s. 8; Athenae. i. p. 126; Ovid. Met. xv. 710; Martial, xiii. 110; Stat. Silv. iii. 5. 102; Strab. v. p. 243; Colum. R. R. iii. 2. § 10). We learn from Martial also (xiii. 110, 102) that Surruntum was noted for its pottery. The hills which produced the celebrated wine were those which enclose the plain in which the city was situated ("Surruntia collas," Ovid. Met. l. c.), and separate it from the gulf of Posidonia on the other side. These hills form a part of the ridge which descends from the lofty mountain group of the Monte S. Angelo between Castellammare and Amalfi, and is continued as far as the headland opposite Capri. This point, now called the Punta della Campanella, the ancient Promontorium Minervae, was known also by the name of Surruntinum Promontorium, from its close connection with the town of Surruntum (Tac. Ann. iv. 67; Stat. Silv. v. 3. 165). The celebrated sanctuary of the Sirens, from which Surruntum itself was supposed to have derived its name, seems to have been situated (though the expressions of Strabo are not very clear) between this headland and the town (Strab. v. p. 247). But the islands of the Sirens (Sirenae Insulae) were certainly the rocks now called Li Gulli, on the opposite side of the promontory. The villa of Pollius, which is described by Statius as looking down upon the deep Gulf of Poetae, stood upon the headland now called Capo di Sorrento, on the W. of the town, separating the Bay of Sorrento from that of Massa: extensive ruins of it are still visible, and attest the accuracy of the poet's description. (Stat. Silv. i. 2; Swinburne's Traveled, vol. i. pp. 88—90).

The other ruins still visible at Sorrento and in its neighbourhood are of no great interest: they present numerous fragments of buildings of imperial times, to some of which the names of a temple of Hercules, temple of Neptune, &c. have been applied by local antiquarians, with no other foundation than the fact that we learn from Statius the existence of temples to these deities at Surruntum. The most considerable relic of antiquity is a Piscina of large dimensions, which is in such good preservation that it still serves to supply the inhabitants with water. The modern town of Sorrento is a populous place with a population of above 6000 souls; it is much visited by strangers on account of its mild and delicious climate, for which it is already extolled by Silus Italicus ("Zephyrus Sorrentum molles solubi"); "Sd. Ital. v. 466 [E. H. B.]

SUSA (τὰ Σοῦσα, Aescyl. Pers. 553, 730; Herod. l. 188; Xen. Cy spr. viii. 6. § 8, &c.; in O. T. Shushan, Esther, i. 2; Nehem., i. 1; Daniel, viii. 2), the chief city of the province of Susiana, on the eastern bank of the Chosapes (Kerakhus). There was considerable doubt among the ancient writers as to the exact position of this celebrated city. Thus Arria (vii. 7), Pline (vi. 27. s. 31), and Daniel (viii. 2) place it on the Enlaesus (Uhi in Daniel); while from other authors (Strab. xv. p. 728) it may be gathered that it was situated on the Chosapes. (For the probable cause of this confusion, see CHOSAPES.) We may add, however, that, according to Curius, Alexander on his way from Babylon had to cross the Chosapes and reach Nineveh (C. 2). The city was supposed to be built on the site of the same name, as may be drawn from the account of Aristocorus of the relative position of the places in Persia in his address to Cleomenes. (Herod. v. 52.) It appears to have been an early tradition of the country that Susa was founded by Darius the son of Hystaspes (Plin. i. c.); and it is described by Aeschylus as μήγα λάτος Σουσά (Pers. 119). By others it is termed Μεγάθισσα Λάττα (Herod. v. 54), and its origin is attributed to Memnon, the son of Tirhochus. (Strab. l. c.; Steph. B. v. c.) The name is said to have been derived from a native Persian word Sasan (meaning σίτος), from the great abundance of those plants in that neighbourhood. (Steph. B. v. c.; Athen. xii. p. 513, ed. Cassaub.) Athenaeus also confirms the account of the excellence of the climate of Susa (l. c.). It may be remarked that the word Σουσά was well known as applied to an unguent extracted from flax. (Dioscor. v. de livr. Athen. xv. p. 699; Etymol. M. i. c. 2. 2. Σούσα.) The city is said to have had 120 stadia in circumference (Strab. l. c.), and to have been surrounded by a wall, built like that of Babylon of burnt brick. (Strab. l. c.; Paus. iv. 31.
USA.

§ 5. Didius (six. 16, xvii. 65) and Cassiodorus (vii. 15) speak of the strength and splendor of its citadel; and the latter writer affirms that there was a splendid palace there, built for Cyrus by Memnon. Besides this structure, Pline speaks of a celebrated temple of Diana (l. c.; see also Mart. Capella, vi. de Indis, p. 225, ed. Grotius), in all probability that of the Syrian goddess Anaitis; while St. Jerome adds, that Daniel erected a town there (Hieronym. in Dan.), a story which Josiphus narrates, with less probability, of Ecbatana (Ant. x. 16). Susa was one of the capitals at which the kings of Persia were wont to spend a portion of the year. Thus Cyrus, according to Xenophon, lived there during the three months of the spring. (Cyr. vili. 6. § 22.) Strabo offers the most probable reason for this custom, where he states that Susiana was peculiarly well suited for the royal residence from its central position with respect to the rest of the empire, and from the quiet and orderly character of its government (l. c.) From these and other reasons, Susa appears to have been the chief treasury of the Persian empire (Herod. v. 49); and how vast were the treasures laid up there by successive kings, may be gathered from the narrative in Arrian, of the sums paid by Alexander to his soldiers, and of the presents made by him to his leading generals, on the occasion of his marriage at Susa with Barsine and Parysatis (Curt. vii. 4, 5): even long after Alexander's death, Antigonus found a great amount of plunder still at Susa. (Diod. xxii. 48.)

With regard to the modern site to be identified as that of the ruins of Susa, there has been considerable difference of opinion in modern times. This has, however, chiefly arisen from the scarcity of travellers who have examined the localities with any sufficient accuracy. The first who did so, Mr. Kinmeir, at once decided that the modern Sus, situated at the junction of Kerkhah and river of Das, must represent the Shushan of Daniel, the Susa of profane authors. (Travels, p. 99; comp. Malcolm, Hist. Persis, i. p. 256.) Bennell had indeed suspected as much long before (Geogr. Herodot. i. p. 302); but Vincent and others had advanced the rival claim of Shuster. (Anecd. Commerce, i. p. 439.)

The question has been now completely set at rest, by the careful excavations which have been made during the last few years, first by Colonel (now Sir W. F.) Williams, and secondly by Mr. Loftus. The results of their researches are given by Mr. Loftus in a paper read to the Royal Society of Literature in November, 1855. (Transactions, vol. v. new series.) Mr. Loftus found three great mounds, measuring together more than 34 miles in circumference, and above 100 feet in height; and, on excavating, laid bare the remains of a gigantic colonnade, having a frontage of 343 feet, and a depth of 284, consisting of a central square of 38 columns, flanked to the N., E., and W. by a similar number—the whole arrangement being nearly the same as that of the Great Hall of Nereus at Persepolis, and many of the other curious discoveries were made, the most important being numerous inscriptions in the cuneiform character. Enough of these has been already deciphered to show, that some of the works on the mound belong to the most remote antiquity. Among other important but later records is an inscription,—the only memorial yet discovered of Artaxerxes Memnon, the conqueror of the Greeks at Cunaxa,—which describes the completion of a palace, commenced by Dareius the son of Hystaspes and dedicated to the goddesses Tanaitis and Mithra. A Greek inscription was also met with, carved on the base of a column, and stating that Arreneeides was the governors of Susiana. The natives exhibit a monument, however, that it is a modern structure of the Mohammadian times. [V.]

Susiana (Sept. provincia Susiana, Polyb. vi. 3, § 1; Polyb. v. 46; Strab. xv. 729, &c.; 728, Strab. xv. 731; 733, Strab. p. 493), an extensive province in the southern part of Asia, consisting in great measure of plain country, but traversed by some ranges of mountains. Its boundaries are variously given by different writers according as it was imagined to include more or less of the adjacent district of Persia. Generally, its limits may be stated to have been, to the N., Media with the mountains Charbarans and Cambalidas, part of the chain of the Parachaeuthras; to the E., the onlying spurs of the Parachaeuthras and the river Oratios; to the S., the Persian gulf from the mouth of the Oratios to that of the Tigris; and to the W., the plains of Mesopotamia and Babylonia. (Cf. Polb. i. c. with Strab. l. c., who, however, treats Susiana as part of Persia.) As a province it appears to have been very fertile, especially in grain, but exposed along the coasts to intense heat. (Strab. xv. p. 731.) The vine, the Macedonians are said to have introduced. (Strab. l. c.) Its principal mountains are those on the N., called by Pliny Charbarans and Cambalidas (vi. 27, § 31), while a portion of the Montes Uxii probably belonged to this province, as in them is a pass called Parn Susides. (Polyb. iv. 3. 27.)

Susiana was intersected by numerous rivers which flowed either to the Tigris or Persian gulf, from the high mountain watershed whereby it was surrounded. Of these the principal were the Enkeus (Karvin), the Chaspeus (Kerkhah), the Coprates (river of Diez), the Hedyphon or Hedyprus (Jervah), and the Oratios (Tab). The inhabitants of the district appear to have borne indifferently the names of Susi or Susiani, and, as inhabitants of the plain country, to have been devoted to agricultural employments; in the mountains, however, were tribes of robbers, who, from time to time, were strong enough to levy black mail even on their kings when traversing their passes. (Strab. xv. p. 728.) Another name, whereby the people were known, at least in early times, was Cissius (Asch. Pers. 16), and the land itself Cissia (Strab. xv. p. 728; Herod. v. 49). This name is clearly connected with that of one of the chief tribes of the people, the Cossaei, who are repeatedly mentioned in ancient authors. (Strab. xi. p. 522; Harm. Ind. 40; Polyb. v. 54, &c.) There were many different tribes settled in different parts of Susiana; but it is hardly possible now to determine to what different races they may have belonged. Among these, the most prominent were the Uxii, a robber tribe on the mountain borders of Media; the Messabards who occupied a valley district, probably now that known as Mah Sabadan; the Cossaei, in the direction along the Median mountains; and the Elaymae, inhabitants of Elamia, the remnant, in all probability, of the earliest dwellers in this province—Elam being the name whereby this whole district is known in the sacred records. (Isaiah, xxii. 2; Jeremiah. xlix. 23.) Besides these, several smaller districts are noticed in different authors, as Cakan- dene, Corbiana, Gahiene, and Characeene. Though Pliny has preserved the names of several small
SUSUDA.

lands, there seems to have been no city of importance in Susiana, except Susa itself. [V.

SUSUDA (Σουαοβαΐρα), a place in the south-east of Germany, probably in the country inhabited
by the Silingsae, at the foot of the Vandalic Montes. (Ptol. ii. 11. § 28.) Its exact site cannot be ascer-
tained. [L. S.]

SUTHUL, a town and fortress in the interior of Numidia, where Jugurtha had a treasury. (Sall. 
Jan. 37.)

SU TRIUM (Σωτριος, Eth. Sutriaca; Sutrius), a city of Etruria, situated in the southern part of 
that country, 32 miles from Rome, on the line of the Via Cassia. There is no doubt that it was 
an ancient Etruscan site, but apparently a small town, and in all probability a mere dependency of 
one of its more powerful neighbours. It was not till after the fall of Veii that the Romans carried 
their arms as far as Sutrium, which they first attacked in n. c. 391, with what success is uncertain
(Diod. xiv. 98); but it must have fallen into their hands either in that or the following year, as we 
find it in a state of dependence on Rome immediately after the Gaulish invasion. (Liv. vi. 3.) The 
very year after that event (n. c. 389) the neighbouring Etruscans laid siege to Sutrium with a large force; 
the city fell into their hands, but was recovered (as the tradition related) by the dictator Camillus on 
the same day. (Liv. vi. 5; Dion. ii. 117.) Very nearly the same story is told again in n. c. 385, 
when the city was half taken by the Etruscans, but recovered by Camillus and Valerius. (Liv. vi. 9.)

It was doublets with a view to guard against the repetition of these auspices that two years after-
wards Sutrium received a Roman colony, n. c. 383 (Vell. Pat. i. 14), and henceforth became, in con-
junction with the neighbouring Nepete, one of the principal frontier fortresses of the Roman terri-
tory on this side; hence Livy terms it “chaustra Etruriae.” (Liv. ix. 32.) We do not find any 
succeeding mention of it in history till n. c. 311, when the Etruscans again laid siege to the city 
with their united forces, but were defeated in a great battle under its walls by Aemilius Barbula. 
(Liv. L.c.) The next year (n. c. 310) they able to renew the siege at the opening of the campa-
gain, but were once more defeated by the consuls Q. Fabius Maximus, and took refuge, as the Clu-
us of the country, which lay only a few miles distant. (Ib. 33, 35.) But this barrier was now for 
the first time passed by the Roman arms, and hence-
forth the wars with the Etruscans were transferred to a more northerly region. From this time, there-
fore, we hear but little of Sutrium, which was, how-
ever, still for a time the outpost of the Roman power 
on the side of Etruria. (Liv. x. 14.) Its name is 
next mentioned after a long interval during the 
Second Punic War, as one of the Colanine Latium, 
which, in n. c. 204, declared their inability to bear 
any longer the burdens of the war. It was in con-
sequence punished at a later period by the imposition 
of still heavier contributions. (Liv. xxvii. 9, xxix. 
15.) Its territory was one of those in which per-
mission was given to the exiled citizens of Capua to settle. (Id. xxvi. 34.)

Sutrium continued under the Roman government to be a small and unimportant country town; it is 
only once again mentioned in history, at the out-
break of the Verrine War (n. c. 41), when it was 
occupied by Agrippa, in order to cut off the commu-
nications of Lucius Antonius with Rome. (Appian, 
B. C. v. 31.) But its position on the Cassian Way 
preserved it from falling into decay, like so many of the 
Etruscan cities, under the Roman Empire; it is 
noticed by all the geographers, and its continued 
existence down to the close of the Western Empire 
is proved by inscriptions as well as the Itineraries.

We learn that it received a fresh colony under 
Augustus, in consequence of which it bears in inscriptions 
the name of the new settlement, Sutrium Phoca. (Suet. 
Aug. 226; Plin. iii. 5. s. 8; Ptol. iii. i. § 50; Hiob. Ant. 
p. 302. 1; Zunart, de Col. p. 581.)

The modern town of Sutri is but a poor place with 
only about 20000 inhabitants, but retains its 
ecclesiastical see, which has preserved throughout the 
middle ages. It occupies the site of the ancient 
city, as is shown by many fragments of columns and 
other architectural ornaments built into the modern 
houses, as well as by some portions of the ancient 
walls, which resemble in their style of construction 
those of Nepe and Falerii. The situation is, like 
that of most of the towns in this part of Etruria, 
on a nearly isolated hill bounded by precipitous cliffs 
or banks of tufo rock, of no great elevation, 
and surrounded by small glens or ravines on all sides.
In the cliffs which bound these are excavated 
numerous tombs, of no great interest. But the 
most remarkable relic of antiquity at Sutri is its 
amphitheatre, which is excavated in the tufo rock, 
and is in this respect unique of its kind. It is, 
however, of small size, and, though irregular in 
construction, its architectural details are all of 
late character: hence it is probable that it is really of 
Roman and Imperial times, though great impor-
tance has been sometimes attached to it as a 
specimen of an original Etruscan amphitheatre. Its 
anomalies and irregularities of structure are probably 
owing only to the fact that it was worked out of 
a previously existing slate-quarry. (Dionysius 
Etruria, vol. i. pp. 94-97; Nibby, Dinotaria, 
vol. iii. pp. 142, 143.)

SUGAEI (Σοιαει), a tribe of ancient Persis, 
noticed by Ptolemy (vi. 4. § 3). Lassen considers 
from this name that they were connected with the 
people of Susa, and that they were of the same 
race as the Uxii, one of the mountain races of 
Susiana. (Ersch. u. Gruber's Encycl. iii. sect. 
vol. xvii. p. 432.)

SYAGRROS PROMONTORIUM (Συαγρος λαον), 
a promontory of the S. coast of Arabia, at the 
eastern extremity of the Adramite, the westernmost of the 
gulf of the Saceliane, placed by Ptolemy in long. 
90°, lat. 14° (vi. 7. § 11). He comments on 
an error of his predecessor, Marinus, who, he says, places 
the gulf Sacelites on the W. of Cape Syagros, while 
all who had navigated these seas distinctly asserted 
that the country Sacelitii and its synchronous bay 
were to the E. of Syagros (i. 17. §§ 2, 3) (Macri-
 anus (p. 23, ap. Hudson Geogr. Min. tom. i.) agrees with Ptolemy. The author of the Periplus ascribed 
to Arrian seems, however, to confirm the testimony 
of Marinus, by placing the Sinus Sacelites next to 
Cane Emporium, between that and Syagros Promon-
torium, and naming the bay to the E. of Syagros, 
Omana, which he reckons as 600 stadia in width; 
but as he mentions still further to the E., Moscha 
Portus, as a magazine for the victory of Sacelitii, 
which he there more fully describes, it is possible 
that he may have included all the country as far E. 
as Moscha under this name. It is at least clear that 
The Omana Sinus could be no part of the present
SYBARIS.

district of Ocm. The maps give today the W. of Syagros, where the Tretos Portus was said. The Periplus says that the cape extended eastward, places a castle with a harbour and magazine at Syagros, and describes, in connection with it, the Dioscoridus Insula (Socotra), which Pliny places at a distance of 2240 stadia.

There is no difficulty in identifying this promontory Syagros with the modern Ras Faritack, which derives its designation from the sound of the animal commemorated in its Greek name, which was possibly a race translated into that of the city. The Periplus describes Syagros as the largest promontory in the world,—an hyperbolic expression, no doubt, but better suited to this cape than to any other on the coast, since the isolated mountain that forms Ras Faritack reaches an elevation of 2500 feet, and is visible at a distance of 60 miles; while those of Ras Sungra (al. Sankira), further to the E., sometimes identified with Syagros on account of the similarity of name, do not exceed 600 feet. The subject, it must be admitted, is not free from difficulty, mainly owing to the fact that Pliny places Moscha Portus,—which is usually supposed to be the same as the Moscha Portus of the Periplus, and is identified with Dajfar or Saplar,—W. of Syagros; in which case Ras Noos (al. Noos), or Ras Sungra (al. Sankira), must be his Syagros, and the Samialsites Suna still further E. But since the distance between Sankira and the coast at Ras Faritack, about 2000 stadia, approximates much more nearly to Pliny's figure, 2400 (2240 stadia), than that between the same island and either of the other capes,—for Ras Noos is 3600 stadia distant, and Ras Sungra considerably more,—the most probable solution of the difficulty is found in the hypothesis adopted above, of two ports called Moscha on the same coast. [Moscha.] (See Miller's Notes to Diodot's ed. of the Geog. Grac. Min. vol. i. pp. 279. 280.) The question has been examined by Dom Vincent, who was the first to fix correctly this important point in Arabian geography, and his main conclusions are approved of by M. Forster, who has corroborated them by fresh evidence from the researches of modern travellers; and it is an interesting fact, that while the Greek geographers appear to have translated the native name of the cape, which it retains to this day, the natives would appear to have adopted a modification of that Greek transliteration as the name of the town situated, then as now, under the cape, which still bears the name of Syagros. (Vinc. Periplus, vol. ii. pp. 311—313; Forster, Arabia, vol. iii. pp. 166—177.) [G. W.]

SYBARIS. (Συβαρίς.) Eth. Σαβαρίνη, Sybarintha, a celebrated city of Magna Graecia situated on the W. shore of the Tarentine gulf, but a short distance from the sea, between the rivers Cratiss and Sybaris. (Strab. vi. p. 263; Diod. xii. 9.) The last of these, from which it derived its name, was the stream now called the Cosco, which at the present day falls into the Trisso about 3 miles from its mouth, but in ancient times undoubtedly pursued an independent course to the sea. Sybaris was apparently the collet of all the Greek colonies in this part of Italy, being tamed, according to the statement of Scymnus Chios, as early as n. c. 720. (Scymn. Ch. 356; Cianto, F. H. vol. i. p. 174.) It was an Achaean colony, and its Oikist was a citizen of Hevea in Achaia; but with the Achaeans emigrants were numbered a number of Troezenian citizens. The Achaeans, however, eventually ob-

lained the supremacy, and might and the Troe-

zenians. (Strab. i. c.; Arst. P. 3.) The Sybarises indeed appear to have sought for an origin in heroes; and Sibyllus has a story that the first founder of the city was a son of Ajax Oileus (Solin. 2. § 10); but this is evidently mere fiction, and the city was, historically speaking, undoubtedly an Achaean colony. It rose rapidly to great prosperity, owing in the first instance to the fertility of the plain in which it was situated. Its citizens also, contrary to the policy of many of the Greek states, freely admitted settlers of other nations to the rights of citizenship, and the vast population of the city is expressly ascribed in great measure to this cause. (Diod. xii. 9.) The statements transmitted to us of the power and opulence of the city, as well as of the luxurious habits of its inhabitants, have indeed a very fabulous aspect, and are without doubt grossly exaggerated, but there is no reason to reject the main fact that Sybaris had in the sixth century n. c. attained a degree of wealth and power unprecedented among Greek cities, and which excited the admiration of the rest of the Hellenic world. We are told that the Sybarites ruled over 25 subject cities, and could bring into the field 300,000 of their own citizens (Strab. i. c.), a statement obviously incredible. The subject cities were probably for the most part Oriental towns in the interior, but we know that Sybaris had extended its dominion across the peninsula to the Tyrrhenian sea, where it had founded the colonies of Posidonia, Liris, and Scidrus. The city itself was said to be not less than 50 stadia in circumference, and the horsemen or knights who figured at the religious processions are said to have amounted to 5000 in number (Athen. xii. p. 519), which would prove that these wealthy citizens were more than four times as numerous as at Athens. Simms-

hyrides, a citizen of Sybaris, who was one of the suitors for the daughters of Cleothemis of Sycaon, is said by H.-Robutus to have surpassed all other men in refined luxury. (Herod. vi. 127.) It was asserted that on this occasion he carried with him a train of 1000 slaves, including cooks, fishermen, &c. (Athen. vi. p. 273; Diod. viii. Fr. 19.) It is unnecessary to repeat here the tales that are told by various writers, especially by Athenaeus, concerning the absurd refinements of luxury ascribed to the Sybarites, and which have removed their very name proverbial. (Athen. xi. pp. 518—521; Diod. vol. vi. Fr. 18—24; Suid. s. v. Σαβαρίς. ) They were particularly noted for the splendid array of their attire, which was formed of the finest Musitan wool, and this gave rise to extensive commercial relations with Miletus, which produced a close friendship between the two cities. (Timaeus, ap. Athen. xi. p. 519; Herod. vi. 21.) As an instance of their magnificence we are told that Alcimehis of Sybaris had dedicated as a votive offering in the temple of the Larantine Juno a splendid figured robe, which after-wards fell into the power of Demetrius of Syracusa, and was sold by him for 120 talents, or more than 2000 dollars. (Pseud. Arist. Mirab. 96 Athen. xi. p. 541.)

Notwithstanding these details concerning the wealth and luxury of Sybaris, we are almost wholly without information as to the history of the city until shortly before its fall. Herodotus incidentally refers to the time of Simmerydes (about 586—560, n. c.) as the period when Sybaris was at the height of its power. At a later period it seems to have been agitated by political dissensions, with the
circumstances of which we are very imperfectly acquainted. It appears that the government had previously been in the hands of an oligarchy, to which such persons as Sinndrides and Alcineus naturally belonged; but the democratic party, headed by a demagogue named Telys, succeeded in overthrowing their power, and drove a considerable number of the leading citizens into exile. Telys hereupon seems to have raised himself to the position of despot or tyrant of the city. The exiled citizens took refuge at Crotona; but not content with their victory, Telys and his partisans called upon the Crotomaitis to surrender the fugitives. This they refused to do, and the Sybarites hereupon declared war on them, and marched upon Crotona with an army said to have amounted to 300,000 men. They were met at the river Traeis by the Crotomaitis, whose army did not amount to more than a third of their numbers; notwithstanding which they obtained a complete victory, and put the greater part of the Sybarites to the sword, continuing the pursuit to the very gates of the city, of which they easily made themselves masters, and which they determined to destroy so entirely that it should never again be inhabited. For this purpose they turned the course of the river Crathis, so that it inundated the site of the city and buried the ruins under the deposits that it brought down. (Diod. xii. 9, 10; Strab. vii. p. 263; Herod. v. 44; Athenae. xii. p. 521; Senvn. Ch. 537—361.) This catas- trophic event is recorded in n. c. 510, and seems to have been viewed by many of the Greeks as a divine vengeance upon the Sybarites for their pride and arrogance, caused by their excessive prosperity, more especially for the contempt they had shown for the great festival of the Olympic Games, which they are said to have attempted to supplant by attracting the principal artists, athletes, &c., to their own public games. (Sevnn. Ch. 530—360; Athen. l. c.)

It is certain that Sybaris was never restored. The surviving inhabitants took refuge at Lais and Scidrus, on the shores of the Tyrrhenian sea. An attempt was indeed made, 58 years after the destruction of the city, to establish them anew on the ancient site, but they were quickly driven out by the Crotomaitis, and the fugitives afterwards combined with the Athenian colonists in the foundation of Thurii. [Thrivi.] At the present day the site is utterly desolate, and even the exact position of the ancient city cannot be determined. The whole plain watered by the rivers Coscile and Crati (the ancient Sybaris and Crathis), so renowned in ancient times for its fertility, is now a desolate swampy tract, pestilent from malaria, and frequented only by vast herds of buffaloes, the usual accomplishment in Southern Italy of all such pestiferous regions. The circumstance mentioned by Strabo that the river Crathis had been turned from its course to inundate the city, is confirmed by the accidental mention in Herodotus of the dry channel of the Crathis (ταπη των Ερχθρ Καθηρ, Herod. v. 44): and this would sufficiently account for the disappearance of all traces of the city. Swinburne indeed tells us that some "degraded fragments of aqueducts and tombs" were still visible on the peninsula formed by the two rivers, and were pointed out as the ruins of Sybaris, but these, as he justly observes, being built of brick, are probably of Roman times, and have no connection with the ancient city. Keppel Craven, on the other hand, speaks of "a wall sometimes visible in the bed of the Crathis when the waters are very low" as being the only remaining relic of the ancient Sybaris. (Swinburne's Travels, vol. i. pp. 299—292; Craven's Southern Tour, pp. 217, 218.) The ruins marked on Zanoni's large map as Λαντίκο σιτωρί are probably those of Thurii [Thrivi]. But it is certain that the locality has never yet been thoroughly examined, and it is probable that some light may even yet be thrown upon the site of this ancient town, especially for the marshy plain in which it is situated should ever be reclaimed and cultivated. There is no doubt that if this were done, it would again be a tract of surpassing fertility; it is cited as such by Varro, who tells us that "in Sybaritano" wheat was said to produce a hundred-fold. (Varr. R. R. i. 44.) Even at the present day the drier spots produce very rich crops of corn. (Swinburne, l. c.)

The river Sybaris was said to be so named by the Greek colonists from a fountain of that name at Bura in Achaia (Strab. viii. p. 386): it had the property, according to some authors, of making horses shy that drank of its waters. (Psued. Arist. Mi- rabe. 169; Strab. vi. p. 263.) It is a considerable stream, and has its sources in the Apennines near Marsano, flows beneath Castrovillari, and receives several minor tributary streams before it joins the Crathis.

[Ε. Η. Β.]

**COIN OF SYBARIS.**

SYBOTA. [Corcutra. p. 670.]

SYBEITA (Σαφιρα), Syl. p. 18; Σαφιρας, Ptol. iii. 17. § 10; Σαφιρας, Hierocles: Σαφιρας, Polycl. op. Steph. B. s. v.; Eth. Σαφιρας. Βοδιλ. Corp. Inscr. vol. ii. p. 657, a town of Crete, 8 M. from Eleutherna (Pent. Tab.), and famous for its numerous and beautiful silver coins, which, though some of them belong to a very early period, are the finest specimens of the Cretan mint; the types are always connected with the worship of Dionysus or Hermes. (Eckel, vol. ii. p. 320.) [Ε. Β. Ι.]

SYCAMINA (Σκαμιλονα πολις), a city of Palestine, placed by Strabo between Acre (Aknj) and Caesarea Palestinae (Σερανας οψωρ), the name of which alone remained in his time. There were, he says, many such and of which he specifies this and Ba- calon (Bonacola) and Crocodion (Κροκοδιδια). (Strab. xvi. p. 758.) It was here that Ptolemy La- thyrus, son of Cleopatra, landed the army of 30,000 men whom he had brought from Cyprus to besiege Ptolemais, which would imply that it was not far distant from Acre (Jospehus, lib. xiii. 13. § 31). The Itinerary of Antoninus makes it xxi. M. from Ptolemais, xx. M. P. from Caesarea; the Jerusalem Itinerary xvi. M. P. from Ptolemais, xvi. from Caesarea. (Wesseling, p. 149. 584.) The last-named authority places it at Mount Carmel, thereby justifying its identi- fication with the modern Kafrkha or Hufa', followed by Keichard, Mannert, and Kiepert, rather than with Attid, suggested by Lapie. Indeed the testimony of Eusebius would seem to be conclusive on this point,
as he speaks of a village of this name (Συκαινιόν [Συκαινιόν]) on the coast between Polemais and Caesarea, near Mount Carmel, called also Hepha (Ἡφα) in his day. (Onomast. s. v. Λαβέθ.) Dr. Wilson, however, thinks that the modern Heapes "more probably occupies the site of the Mutatio Calamon," given in the Jerusalem Itinerary as 12 Roman miles from Polemais, while the "Manio Sireneos" of the same work was 3 miles farther on. Ruins have been discovered along the shore, about 2 Roman miles to the W. of Heapes; these ruins may have been those of Sycamia."

(Lands of the Bible, vol. ii. p. 241.)

Heapes is a small walled town to the S. of the Bay of Acre, at the northern base of the promontory of Mount Carmel, distant about 10 miles from Polemais (Acre); a distance far too small to satisfy the statement of the Itinerary of Antoninus, or even that of the Jerusalem Itinerary. But, notwithstanding this, its identity with Sycamia seems to be sufficiently established by the testimony of Eusebius, joined to the historical fact recorded by Josephus, which better suits this than any other place on the coast, being in fact the very place where Ithaius Pasha, when engaged in a similar enterprise against Acre, landed some of his troops and concentrated his army, in 1834, preparatory to forming the siege of the town. (Alderson, Notes on Acre, pp. 23, 30.)

SYCE (Συκέα), a town of Cilicia, which according to the Ravenna Geographer, who calls it Sycae (i. 17), was situated between Arsinoi and Celerides. (Athen. iii. 5; Steph. B. s. v. Σωκέα;) Leake (Asia Minor, p. 202) looks for its site near the modern Kinchmen. [L. S.]

SYCEON, a town of Galatia, situated at the point where the river Spheris flowed into the Sangarius. (Procop. de Aed. v. 4; Vit. Theod. Sycostata, 2; Wessel ad Hieroc. p. 697.) [L. S.]

SYCURIUM, a town of Thessaly in the district of Pelagonia, at the foot of Mt. Ossa, which Leake identifies with Marmarianth. (Liv. xii. 54; Leake, Northern Greece, vol. iii. p. 374.)

SYEBI MONTES (Σύβια Μόντες, Prot. vi. 14, § 8), a mountain chain in Scythia, running from the Taphiari mountains in a NE. direction towards Imaus. [T. H. D.]

SYEDRA (Συδρα: Eth. Συδρέα), a coast-town in the west of Cilicia, between Corum and Scamander. (Strab. xiv. p. 659; Istros; it is, however, a corruption of Caria.) Leake assigns it to Pamphylia. Beaufort (Karavaniana, p. 178) observed some ruins on a steep hill in that district, which he thinks may mark the site of Sydra; and Mr. Hamilton, in his map of Asia Minor, also marks the ruins of Sydra on the same spot, and to the south-east of Ayas, the modern Aydin. [L. S.]

SYEN (Σιγήν, Herod. ii. 30; Strab. ii. p. 133, xvii. p. 797, seq.; Steph. B. s. v.; Prot. vii. 5, § 15, viii. 15, § 15; Plin. ii. 73, s. 75, v. 10, s. 11, vi. 29, s. 34; ii. 164), the modern Assoum, was the frontier town of Aegypt to the S. Syene stood upon a peninsula on the right bank of the Nile, immediately below the Great Falls, which extend to it from Philae. It is supposed to have derived its name from Suan, an Egyptian goddess, the Hippyn of the Greeks, and of which the import is "the opener;" and at Syene Upper Aegypt was in all ages, conceded to open or begin. The quarries of Syene were celebrated for their stone, and especially for the marble called Syenite. They furnished the colossal statues, obelisks, and monolithic shrines which are found throughout Aegypt; and the traces of the quarrymen who wrought in these 3000 years ago are still visible in the native rock. The distance by land to the Nile, which road, 4 miles in length, was cut beside them from Syene to Philae. Syene was equally important as a military station and as a place of traffic. Under every dynasty it was a garrison town; and here were levied toll and custom on all boats passing southward and northward. The latitude of Syene—24° 5' 23"—was an object of great interest to the ancient geographers. They believed that it was seated immediately under the tropie, and that on the day of the summer solstice a vertical staff cast no shadow, and the sun's disc was reflected in a well at noonday. This statement is indeed incorrect; the ancients were not acquainted with the true tropic; yet at the summer-solstice the length of the shadow, or of the staff, could scarcely be discerned, and the northern limb of the sun's disc would be nearly vertical. The Nile is nearly 3000 yards wide above Syene. From this frontier town to the northern extremity of Aegypt it flows for more than 730 miles north and north-west, the course from Syene to Alexandria usually occupied between 21 and 28 days in favourable weather. [W. B. D.]

SYGAMBRI. [SICAMBR.] SYLLINA INSULA. [SILERA.]

SYLLIUM (Σύλλιον), a fortified town of Pamphylia, situated on a lofty height between Aspendus and Side, and between the rivers Euremecdon and Cestrus, at a distance of 40 stadia from the coast. (Strab. xiv. p. 667; Arrian, Anat. 25; Sylas, p. 40; Pol. v. 5, § 1; Hieroc. p. 679; Polyb. xxii. 17; Steph. B. mentions it under the name Σιλλίον, while in other passages it is called Σιλλιον, Σιλλαον, and Σιλλαον.) Sir C. Fellowes (Asia Minor, p. 200) thinks that the remains of a Greek town which he found in a wood on the side of a rocky hill near Bocacceve belong to the ancient Syllium; but from his description they do not appear to exist on a lofty height. [L. S.]

SYMAETHUS (Συμαῆθος: Simeto), called the most considerable of the rivers of Sicily, which rises in the chain of Mars Nebresies, in the great forest now called the Bosco di Cervinia, and flows from thence in a southerly direction, skirting the base of Etna, till it turns to the E. and flows into the sea about 8 miles S. of Catania. In the lower part of its course it formed the boundary between the territory of Leonini and that of Catana. (Thuc. vi. 65.) It receives in its course many tributaries, of which the most considerable are, the Fiume Salso, flowing from the neighbourhood of Nicotera and Troina, probably the Cyamoeus of Polybus (i. 9), which he describes as flowing near Centurius (Cetorbi), and the Dittatino, which rises in the hills near Asero, the ancient Assorus. This is undoubtedly the stream called in ancient times Chrysas. Stephanus of Byzantium apparently gives the name of Adrianus to the upper part or main branch of the Symaethus itself, which flows under the walls of Adrianum (Aderma). This part of the river is still called the Simeto; but in the lower part of its course, where it approaches the sea, it is now known as the Giarretta. Such differences of name are common in modern, as well as in ancient times. The Symaet-
1. Temple of Minerva.
2. Theatre.
3. Amphitheatre.
4. Lighthouse or Quarry.
5. Fountain of Arethusa.
6. Site of Apollo Teneanites.
7. Entrance to the Grottoes.
8. Ancient bridge over the Aegaeus.
SYMBOLON PORTUS.

thus is much the most considerable river on the E. coast of Sicily, and is in consequence noticed by all the geographers (Scyl. p. 4, § 13; Strab. vi. p. 272; Plin. iii. 8. s. 14; Ptol. iii. 4. § 9). It is also repeatedly alluded to by the Roman poets (Verg. Aen. ix. 584; Ovid, Fast. iv. 472; Sil. Ital. xiv. 252.)

SYMBOLON PORTUS (Συμβόλου πόρτος (Strab. vol. iii. 6. § 2; Συμβόλου λιμήν, Arrian, Per. Pont. Eux. p. 29), a harbour with a narrow entrance on the S. coast of the Chersonesus Taurica, between the town of Chersonesus and the port of Ciusus. In ancient times it was the chief station for the pirates of the Tauric peninsula. (Strab. vii. p. 309; Ptol. iv. 12. s. 26; Amon. Per. Pont. Eux. p. 6.) Now the port of Bolchakara. (Comp. Clarke’s Travels, ii. p. 398; Pallas, ii. p. 128.)

SYMBOLUM (Συμβόλων, Dion Cass. xviii. 35), a place in the Thracian district of Edeus, in the neighbourhood of Philippi. (Comp. Leake, North. Gr. iii. p. 217.)

SYMBRÆ (Συμβρα), a small town in Babylonia mentioned by Zosimus (iii. 27). It is probably the same as that called by Ammianus, Hecuntra (xxiv. 8).

SYME (Σύμε: Symo), an island off the coast of Caria, to the west of Cape Cynosmos, between the Cnidian and Tenedian promontories, at the entrance of the Sinus Schoenus. (Herod. i. 174; Thuc. viii. 41; Strab. xiv. p. 656; Scalix, p. 38; Athen. vi. p. 262.) The island is described as 37 Roman miles in circumference, and as possessing eight harbours (Plin. v. 31, 133) and a town of the same name as the island. The island itself is very high but barren. According to Stephannus B. (s. r.; comp. Athen. vii. p. 296) Syme was formerly called Metapontis and Aegia, and obtained its later name from Syme, a daughter of Ialysus, who, together with Chthonius, a son of Poseidon, is said to have first peopled the island. In the story of the Trojan war, Syme enjoys a kind of celebrity, for the hero Nires is said to have gone with three ships to assist Aeænemon. (Harm. ii. ii. 671; Dictys Cret. iv. 17; Darex Phryn. 21.) The first historical population of the island consisted of Dorians; but subsequently it fell into the hands of the Carians, and when they, in consequence of frequent droughts, abandoned it, it was, for a long time, uninhabited, until it was finally and permanently occupied by Agries and Lacedaemonians, mixed with Cnidian and Rhodians. (Diod. Sic. v. 33; Eason-Rochette, Hist. des Colon. Grecques, i. p. 337, ii. p. 72.)

There are still a few but unimportant remains of the acropolis of Syme, which, however, are constantly diminished, the stones being used to erect modern buildings. (Comp. Ross, Reisen auf den Griech. Inseln, vol. iii. p. 121, foll.)

SYMPLEGADES. [Bosporus, p. 424.]

SYNCA (Σύνκα, a small village of Babylonia noticed by Zosimus (iii. c. 28).

SYNNADA (Συννάδα; Eth. Συννάδιον), a town of Phrygia Salutaris, at the extremity of a plain about 60 stadia in length, and covered with olive plantations. It is first noticed during the march of the consul Manlius against the Gallicaei (Liv. xxxvii. 34, xvi. 34) and Cicerio (ad Att. v. 3, 14. 1, ad Fam. v. 8, 1, xiv. 4) mentions that he passed through Synnada on his way from Ephesus to Cilicia. In Strabo’s time (xii. p. 577) it was still a small town, but when Pline wrote (v. 29) it was an important place, being the conventus juridici for the whole of the surrounding country. It was very celebrated among the Romans for a beautiful kind of marble furnished by the neighbouring quarries, and which was commonly called Synadic marble, though it came properly from a place in the neighborhood, Decinia, whence it was more correctly called Docimites laps. This marble was of a light colour, interspersed with purple spots and veins. (Strab. l. c. Ptol. v. 2, § 222; Socrate, Hist. Ecl. vii. 3; Nepos, Hist. Ecl. xiv. 11; Condul. Chaced. p. 674; Hamilton, Researches, ii. p. 124, Franz, Funf Inschriften, p. 33.)

SYNODIUM (Συνοδιον, Appian, Illyr. 27; Συνώτριον, Strab. vii. p. 315), a town of Dalmatia, situated in a deep gorge between two hills, where Gabinins was defeated, and to which the Dalmatians retreated in the campaign of B. c. 34. Octavius, suspecting their intentions, sent skirmishers over the high ground while he advanced through the valley and burnt Synodium. [E. B. J.]

SYRACUSAE (Συρακοσῶν; Eth. Συρακοοινωνικύ), the most powerful and important of all the Greek cities in Sicily, situated on the E. coast of the island, about midway between Catana and Cape Pachywn. Its situation excelled so much as to influence on its history and progress, that it will be desirable to describe this somewhat more fully before proceeding to the history of the city, reserving, at the same time, the topographical details for subsequent discussion.

I. Situation.

Syracuse was situated on a table-land or tabular hill, forming the prolongation of a ridge which branches off from the more elevated table-land of the interior, and projects quite down to the sea, between the bay known as the Great Harbour of Syracuse, and the more extensive bay which stretches on the N., as far as the peninsula of Himera or Meganei. The broad end of the kind of promontory thus formed, which abuts upon the sea for a distance of about 2½ miles, may be considered as the base of a triangular plateau which extends for above 4 miles into the interior, having its apex formed by the point now called Mongibellini, which was occupied by the ancient fort of Euhyalus. This communications, as already stated, by a narrow ridge with the table land of the interior, but is still a marked point of separation, and was the highest point of
SYRACUSAE.
the ancient city, from whence the table-land slopes very gradually to the sea. Though of small elevation, this plateau is bounded on all sides by precipices banks or cliffs, varying in height, but only accessible at a few points. It may be considered as naturally divided into two portions by a slight valley or depression running across it from N. to S., about a mile from the sea: of these the upper or triangular portion was known as Epipoleae, the eastern portion adjoining the sea bore the name of Acinousia, which thus forms in some degree a distinct and separate plateau, though belonging, in fact, to the same mass with Epipoleae.

The SE. angle of the plateau is separated from the Great Harbour by a small tract of low and level ground, opposite to which lies the island of Ortynia, a low islet about a mile in length, extending across the mouth of the Great Harbour, and originally divided by only a narrow strait from the mainland, which the ancient prosperity was separated from the nearest point of the headland of Plannedromyrium by an interval of about 1200 yards, forming the entrance into the Great Harbour. This last was a spacious bay, of above 5 miles in circumference; thus greatly exceeding the dimensions of what the ancients usually understood by a port, but forming a very nearly land-locked basin of a somewhat oval form, which afforded a secure shelter to shipping in all weather; and is even at the present day one of the best harbours in Sicily. Between the island of Ortynia and the mainland to the N. of it, was a deep sighted islet, formingwhat was called the Lesser Port or Portus Lacus, which, though very inferior to the other, was still equal to the ordinary requirements of ancient commerce.

S. of the Great Harbour again rose the peninsular promontory of Plemmyrium, forming a table-land bounded, like that on the N. of the bay, by precipices enclosures and cliffs, though of no great elevation. This table-land was prolonged by another plateau at a somewhat lower level, bounding the southern side of the Great Harbour, and extending from thence towards the interior. On its SE. angle and opposite to the heights of Epipolea stood the temple of Jupiter Olympus, or the Olimpium, overlooking the low marshy tract which intervenes between the two table-lands, and through which the river Anapus finds its way to the sea. The beautiful stream of the Cysne rises in a source about 14 mile to the N. of the Olympium, and gains its waters with those of the Anapus almost immediately below the temple. From the base of the hill crowned by the latter extends a broad tract of very low marshy ground, extending along the inner side of the Great Harbour quite to the walls of the city itself. A portion of this marsh, which seems to have formed in ancient times a shallow pool or lagoon, was known by the name of Lysimelesia (Aust., Thuc. vii. 53; Theor. Id. xvi. 84), though its present name would seem to have been Syracos (Schol.), from whence the city at-was supposed to derive its name. (Steph. B. s. v. Sycocrates; Scymn. Ch. 281.) It is, however, uncertain whether the names of Syracos and Lysimelesia may not originally have belonged to different portions of these marshes. This marshy tract, which is above a mile in breadth, extends towards the interior for a considerable distance, till it is met by the precipices enclosures of the great table-land of the interior. The proximity of these marshes must always have been prejudicial to the healthiness of the situation; and the legend, that when Archias and Myssius were about to found Syracuse and Cronus, the latter chose health while the former preferred wealth (Steph. B. L. c.), points to the acknowledged insalubrity of the site even in its most flourishing days. But in every other respect the situation was admirable; and the prosperity of Syracuse was doubtless owing in a great degree to natural as well as political causes.

It was, moreover, celebrated for the mildness and serenity of its climate, it being generally asserted that there was no day on which the sun was not visible at Syracuse (Cic. Terr. v. 1 0), an advantage which it is said still to retain at the present day.

II. History.

Syracuse was, with the single exception of Xeres, the most ancient of the Greek colonies in Sicily. It was a Corinthian colony, which was founded, as already mentioned, under a leader named Archias, son of Eugetes, who belonged to the powerful family of the Barchiae, but had been compelled to expatriate himself. According to some accounts the colony was strengthened by an admixture of Dorian or Locrian colonists with the original Corinthian settlers; but it is certain that the Syracusans regarded themselves in all ages as of pure Corinthian origin (Theor. Id. xv. 91), and maintained relations of the closest amity with their parent city. The colony was founded in p. 794, and the first settlers established themselves on the island of Ortynia, to which it is probable that the city was confined for a considerable period. (Thuc. vi. 2; Strab. vi. p. 269; Scymn. Ch. 279—282; Mann. Par.; concerning the date, see Clinton, F. II. vol. i. p. 164.) The name of Ortynia is evidently Greek, and derived from the well-known epithet of Dione, to whom the island was regarded as consecrated (Diod. v. 3); but the city seems to have assumed from the very beginning the name of Syracos, which was derived, as already mentioned, from the name of the adjoining marsh or Lake. Syracuse, doubtless an indigenous name, as it has no significance in Greek. It appears indeed that the form Syracos was used by Ephorusus for the name of the city itself, but this was evidently a mere poetie licence. (Strab. viii. p. 364.)

As in the case of most of the Greek colonies in Sicily, we have very little information concerning the early history and progress of Syracuse; but we may infer that it rose steadily, if not rapidly, to prosperity, from the circumstance that it continued to extend its power by the foundation of new colonies; that of Acrae within 70 years after its own establishment (n. c. 664), Casmaena 20 years later (n. c. 644), and Camarina 45 years afterwards, or n. c. 599. None of these colonies, however, rose to any considerable power; it was obviously the policy of Syracuse to keep them in the position of mere dependencies; and Camarina, having given evidence to the parent city, was destroyed only 46 years after its foundation. (Thuc. vi. 5; Scymn. Ch. 294—296.) Syracuse was not, however, free from internal dissensions and revolutions. An obscure notice preserved to us by Thucydides indicates the occurrence of these as early as n. c. 648, which led to the expulsion of a party or clan called the Myletidae, who withdrew into exile and joined in the foundation of Himera. (Thuc. vi. 5.) Another indication of such disputes is found in Aristotle (vol. iv. 4), but we are unable
to assign any definite place in chronology to the occurrence there alluded to. At a later period we find the government in the hands of an exclusive oligarchy called the Geomori or Gamori, who, from their name, would appear to have been the descendants of the original colonists, around whom there naturally grew up a democracy or plebe, composed of the citizens derived from other sources. At length, though, as Thucydides (II. c. 435—437), as well as that of his successor Hieron (c. 478—467), who, notwithstanding the more despotic character of his government, was in many respects a liberal and enlightened ruler. His patronage of letters and the arts especially rendered Syracuse one of the chief resorts of men of letters, and his court afforded shelter and protection to Aeschylus, Pindar, and Bacchylides. Nor was Syracuse itself deficient in literary distinction. Epicharmus, though not a native of the city, spent all the latter years of his life there, and Sophron, the celebrated writer of mimes, was a native of Syracuse, and exhibited all his principal works there. The care bestowed upon the arts is sufficiently attested by the still extant coins of the city, as well as by the accounts transmitted to us of other monuments; and there is every probability that the distinction of Syracuse in this respect commenced from the reign of Hieron. The tranquil reign of that monarch was followed by a brief period of revolution and disturbance; his brother Thrasybulus having been expelled by a short but tyrannical and violent reign, been expelled by the Syracusans, who established a popular government, B. c. 466. This was for a time agitated by fresh tumults, arising out of disputes between the new citizens who had been introduced by Gelen and the older citizens, who claimed the exclusive possession of political power; but after some time these disputes were terminated by a compromise, and the new citizens withdrew to Messenia. (Diod. xi. 67, 68, 72, 73, 76.)

The civil disensions connected with the expulsion of Thrasybulus, which on more than one occasion broke out into actual hostilities, show how great was the extent which the city had already attained. Thrasybulus himself, and afterwards the discontented citizens, are mentioned as occupying the Island and Achradina, both of which were strongly fortified, and had their own separate walls (Diod. xi. 68, 73); while the popular party held the rest of the city. It is evident therefrom that there were already considerable spaces occupied by buildings outside the walls of these two quarters, which are distinctly mentioned on one occasion as "the suburbs" (παρασκεύα, Jb. 63). Of these, one quarter called Tychon, which lay to the W. of Achradina, adjoining the N. slope of the table-land, is now first mentioned by name (Ithol); but there can be no doubt that the plain between the heights of Achradina and the marches was already occupied with buildings, and formed part of the city, though it apparently was not as yet comprised within the fortifications.

The final establishment of the democracy at Syracuse was followed by a period of about sixty years of free government, during which we are expressly told that the city, in common with the other Greek colonies in Sicily, developed its resources with great rapidity, and probably attained to its maximum of wealth and power. (Diod. xi. 68, 72.) Before the close of this period it had to encounter the severest danger it had yet experienced, and gave abundant proof of its great resources by coming off victoriously in a contest with Athens, then at the very height of
its power. The circumstances of the great siege of Syracuse by the Athenians must here be related in some detail, on account of their important bearing on all questions connected with the topography of the city, and the interest they confer on its localities. At the same time it will obviously be impossible to do more than give a very brief sketch of that memorable contest, for the details of which the reader must refer to the narratives of Thucydides, with the copious illustrations of Arnold, Grose, and Col. Leake.

It was not till the spring of B. C. 414 that the siege of Syracuse was regularly commenced. But in the autumn of 415, the Athenians had already made a demonstration against the city, and sailing into the Great Harbour, effected a landing without opposition near the Olympieum, where they established their camp on the shore, and erected a temporary fort at a place called Dascon (Thuc. vi. 66; Dial. xiii. 6), apparently on the southern cliff of the harbour, between the mouth of the Anapus and the bay now called the Bay of Moddalenus. But though successful in the battle that ensued, Nicias did not attempt to follow up his advantage, and withdrew to winter at Catana. The next spring the Athenians landed to the N. of Syracuse, at a place called Leon, about 6 or 7 stadia from the heights of Epipolae, while they established their naval station at the adjoining peninsula of Thapsites (Magnisia). The land troops advanced at once to occupy Epipolae, the military importance of which was felt by both parties, and succeeded in establishing themselves there, before the Syracusans could dislodge them. They then proceeded to build a fort at a place called Labdalaun, which is described by Thucydides as situated "on the top of the cliffs of Epipolae, looking towards Megara" (Thuc. vi. 97), and having occupied this with a garrison, so as to secure their communications with their fleet, they advanced to a place called Sice (§ 2ow5), where they established themselves, and began to construct with great rapidity a line of circumvallation across the plateau of Epipolae.* The construction of such a line was the customary mode of proceeding in Greek sieges, and it was with the special object of guarding against it that the Syracusans had in the preceding winter extended their fortifications by running a new line of wall so as to enclose the temple of Apollo Teneptes (Thuc. vi. 73), which probably extended from thence down to the Great Harbour. Nevertheless the Athenian line of circumvallation was carried on so rapidly as to excite in them the greatest alarm. Its northern extremity was made to rest on the sea at a point called Trogilus (probably near the Scula Green), and it was from thence carried across the table-land of the Epipolae, to the point nearest to the Great Harbour. Alarmed at the rapid progress of this wall, the Syracusans endeavored to interrupt it by constructing a counter or cross wall (διποτείχισμα ηρ ηγαριον τείχος), directed apparently from the wall recently erected around the temple of Apollo Teneptes towards the southern cliff of Epipolae. (Thuc. vi. 99.) This wall was, however, carried by the Athenians by a sudden attack and destroyed, whereupon the Syracusans attempted a second counterwork, carried through the marshes and low ground, so as to prevent the Athenians from connecting their works on Epipolae with the Great Harbour. But this work was, like the preceding one, taken and destroyed; and the Athenians, whose fleet had meanwhile entered the Great Harbour, and established itself there, were able to construct a strong double line of wall, extending from the cliffs of Epipolae quite down to the harbour. (Ib. 100—163.) On the contrary, their works were still incomplete, and especially that part of the line of circumvallation near Trogilus was still in an unfinished state when Gylippus landed in Sicily, so that that commander was able to force his passage through the lines at this point, and effect an entry into Syracuse. (Id. vii. 2.) It is remarkable that the hill of Enyalus, though in fact the key of the position on the Epipolae, seems to have been neglected by Nicias, and was still undefended by any fortifications.

Gylippus immediately directed his efforts to prevent the completion of the Athenian lines across the table-land, and obtained in the first instance an important advantage by surprising the Athenian fort at Labdalaun. He next began to erect another cross wall, running out from the walls of the city across the plateau, so as to cross and intersect the Athenian lines; and notwithstanding repeated efforts on the part of the Athenians, succeeded in carrying this on so far as completely to cut off their line of circumvallation, and render it impossible for them to complete it. (Id. vii. 4—6.) Both parties seem to have looked on the completion of this line as the decisive point of the siege; Nicias finding himself unable to capture the outwork of the Syracusans, almost despaird of success, and wrote to Athens for strong reinforcements. Meanwhile he sought to strengthen his position on the Great Harbour by occupying and fortifying the headland of Plemmyrium, which completely commanded its entrance. (Ib. 4.) The Syracusans, however, still occupied the Olympieum (or Polichne, as it was sometimes called) with a strong body of troops, and having, under the guidance of Gylippus, attacked the Athenians both by sea and land, though foiled in the former attempt, they took the forts which had been recently erected on the Plemmyrium. (Ib. 4, 22—24.) This was a most important advantage, as it rendered it henceforth very difficult for the Athenians to supply their fleet and camp with provisions; and it is evident that it was so regarded by both parties (Ib. 25, 31): the Syracusans also subsequently gained a decisive success in a sea-fight within the Great Harbour, and were preparing to push their advantage further, when the arrival of Demostrhenes and Eurymedon from Athens with a powerful fleet restored for a time the superiority of the Athenians. Demostrhenes immediately directed all his efforts to the capture of the Syracusan counterwork on Epipolae; but meanwhile Gylippus had not neglected to strengthen his position there, by constructing three
rebuilt or fortify the island of Syracuse, which continued for a period of 38 years (c. 405—387), cannot be here related: it is briefly given in the Biogr. Dict., art. Dionysius, and very fully in Grote’s History of Greece, vols. x. and xi.; but its influence and effects upon the city itself must be here noticed. From a very early period he turned his attention to the strengthening and fortification of the city, and constructed particularly with a view to the defence of the city against external invasion, partly for the security of his own power. One of his first operations was to convert the island of Ortygia into a strong fortress, by surrounding it with a lofty wall, fortified with numerous towers, especially on the side where it adjoined the land, where he raised a strongly fortified front, called the Penta-pyle; while, for still further security, he constructed an interior fort or citadel within the island, which became the acropolis of Syracuse, and at the same time the residence of Dionysius and his successors in the despotism. Adjoining this he constructed within the lesser port, or Portus Laccinus, docks for his ships of war on a large scale, so as to be capable of receiving 60 triremes: while they were enclosed with a wall, and accessible only by a narrow entrance. But not content with this, he a few years afterwards added docks for 160 more ships, within the Great Port, in the recess or bight of which he approached the eastern edge of the Portus Laccinus, and opened a channel of communication between the two. At the same time he adorned the part of the city immediately outside the island with porticos and public buildings for the convenience of the citizens. (Diod. xiv. 7.) But his greatest work of all was the line of walls with which he fortified the heights of Epipolae. The events of the Athenian siege had sufficiently proved the vital importance of these to the safety of the city; and hence before Dionysius engaged in his great war with Carthage he determined to secure their possession by a line of permanent fortifications. The walls erected for this purpose along the northern edge of the cliffs of Epipolae (extending from near Sta Panagia to the hill of Euryalus, or Mongibelli) were 30 stadia in length, and are said to have been erected by the labour of the whole body of the citizens in the short space of 20 days. (Diod. xiv. 18.) It is remarkable that we hear nothing of the construction of a similar wall along the southern edge of the town of Epipolae; though the table-land is at least as accessible on this side as on the other; and a considerable suburb called Neapolis had already grown up on this side (Diod. xiv. 9), outside of the wall of Acharnadas, and extending over a considerable part of the slope, which descends from the Temenitis towards the marshy plain of the Anapus. But whatever may have been the cause, it seems certain that Syracuse continued till a later period to be but imperfectly fortified on this side.

The importance of the additional defences erected by Dionysius was sufficiently shown in the course of the war with Carthage which began in b. c. 397. In that war Dionysius at first carried his arms successfully to the western extremity of Sicily, but fortune soon turned against him, and he was compelled in his turn to shut himself up within the walls of Syracuse, and trust to the strength of his fortifications. The Carthaginian general Hamilcar entered the Great Port with his fleet, and established his head-quarters at the Olympieum, while he not only ravaged the country outside the walls, but made himself master of one of the suburbs,
SYRACUSAE.

in which were situated the temples of Ceres and Proserpine, both of which he gave up to plunder. But the anger of the goddesses, brought on by this act of sacrilege, was believed to be the source of all the calamities that soon befell him. A pestilence broke out in the Carthaginian camp, from which they sustained very heavy losses, and Dionysius took advantage of their enfeebled state to make a general attack on their camp both by sea and land. The position occupied by the Carthaginians was very much the same as that which had been held by the Athenians; they occupied the headland of Plomennium, on which they had erected a fort, while they had also fortified the Olympeum, or Polichne, and constructed a third fort close to the edge of the Great Harbour for the protection of their fleet, which lay within the inner bay or harbour of Daeon. But Dionysius, by a sudden attack from the land side, carried both the last forts, and at the same time succeeded in burning a great part of the Carthaginian fleet; so that Hanno was compelled to abandon the enterprise, and by a secret capitulation secured a safe retreat for himself and the native Carthaginians in his army, abandoning his allies and mercenaries to their fate. (Plut. Dion. 29; Diol. xvi. 12.) It was not till after the blockade had been continued for above a year that Apollonides was compelled by scarcity of provisions to surrender this stronghold, and Dion thus became complete master of Syracuse, b.c. 356. But that event did not as had been expected, restore liberty to Syracuse, and the island chieftain still remained the stronghold of the despots who successively ruled over the city. When at length Timoleon landed in Sicily (b.c. 344) Ortygia was once more in the possession of Dionysius, while the rest of the city was in the hands of Hierocles, who was supported by a Carthaginian fleet and army, with which he closely blockaded the island fortress. But the arrival of Timoleon quickly changed the face of affairs: Ortygia was voluntarily surrendered to him by Dionysius; and Neom, whom he left there as commander of the garrison, by a sudden sally made himself master of Acrae also. Soon after Timoleon carried the heights of Epploa by assault, and thus found himself master of the whole of Syracuse. One of the first measures he took after his success was to demolish the fortress erected by Dionysius within the Island, as well as the palace of the despots himself, and the splendid monument that had been erected to him by his son and successor. On the site were erected the new courts of justice. (Plut. Timol. 22.)

Syracuse had suffered severely from the long period of civil dissensions and almost constant hostilities which had preceded its liberation by Timoleon; and one of the first cares of its deliverer was to recruit its exhausted population, not only by recalling from all quarters the fugitive or exiled citizens, but by summoning from Corinth and other parts of Greece a large body of new colonists. Such was the success of his invitation that we are assured the total number of immigrants (including of course the restored exiles) amounted to not less than 60,000 souls. (Plut. Timol. 22, 23.) The democratic form of government was restored with the end of laws which had been introduced by Diodorus after the Athenian expedition, but which had speedily fallen into neglect under the long despotism of the two Dionysii, was now revived and restored to its full vigour. (Diod. xiii. 35, xvi. 70.) At the same time a new annual magistracy was established, with the title of Amphipolus of the Olympian Jove, who was thenceforth destined, like the Archon at Athens, to give name to the year. The office was apparently a merely honorary one, but the years continued to be designated by the names of the Ampipolii down to the time of Augustus. (Plut. xvi. 70; Gis. Ferr. a. 51, iv. 61.)

There can be no doubt that the period following the restoration of liberty by Timoleon was one of great prosperity for Syracuse, as well as for Sicily in general. Unfortunately it did not last long. Less than 30 years after the capture of Syracuse by Timoleon, the city fell under the despotism of Agathocles (b.c. 317), which continued without interruption till b.c. 259. We hear very little of the fortunes of the city itself under his government, but it appears that, like his predecessor Dionysius, Agathocles devoted his attention to the construction of great works and public buildings, so that the city continued to increase in magnificence. We are told, among other things, that he fortified the entrance of the lesser port, or Portus Lacedaeum, with towers, the remains of one of which are still visible. During the absence of Agathocles in Africa, Syracuse was indeed exposed to the assaults of the Carthaginian general Hamilcar, who encamped, as Himilco had formerly done, at Polichne, and from thence made desultory attacks upon the city, but without any important result; and having at length made a night attack upon the fort of Euryalus, he was defeated, and himself taken prisoner. (Diod. xx. 29.) After the death of Agathocles, Syracuse for a short time recovered its liberty, but soon fell again under the virtual despotism of Hierocles, and subsequently passed into the hands of successive military adventurers; till in b.c. 275, the government became vested in Hieron, the son of Hierocles, who, at first with the title of general autocrator, and afterwards with that of king, continued to reign over the city till b.c. 216. His wisdom and moderation proved a striking contrast to the despotism of several of the former rulers of Syracuse, and while his subjects flourished under his liberal and enlightened rule, external tranquillity was secured by the steadiness with which he adhered to the alliance of Rome, after having once measured his strength against that formidable power. By the treaty concluded between him and the Romans in b.c. 263, he was recognised as king of Syracuse, with the dependent towns of Acrae, Helorus, Netro, Megara, and Locontium, to which was annexed Tauromenium also, as an outlying dependency. (Diod. xxiii. Exc. E. p. 502.) Notwithstanding the small extent of his territory,
Hieron was undoubtedly a powerful prince, and Syracuse seems to have risen, during this long period of peace and tranquillity, to a high state of wealth and prosperity. Relations with foreign countries, especially with Egypt, were assiduously cultivated and extended, while the natural resources of its fertile territory were developed to the utmost by the wise and judicious regulations of Hieron, which, under the name of the Lex Hieronica, were subsequently introduced into all parts of Sicily, and continued to be observed by the Romans, in their administration of that province. At the same time, the monarch turned his attention to the public works and buildings, including temples, gymnasia, &c., while he displayed his wealth and magnificence by splendid offerings, both at Rome and the most noted sanctuaries of Greece. On the whole it may probably be assumed that the reigned of Hieron II. was the period when Syracuse attained its highest degree of splendour and magnificence, as well as of wealth and population.

But this state of things abruptly changed after the death of Hieron. His grandson, Hieronymus, who succeeded him, deserted the alliance of Rome for that of Carthage, and though the young king was shortly after assassinated, the Carthaginian party continued to maintain its ascendency at Syracuse under two leaders named Hippocrates and Epicydes, who were appointed generals with supreme power. They shut the gates against Marcellus, who was in command of the Roman armies in Sicily, and having refused all terms of accommodation, compelled that general to form the siege of Syracuse, b.c. 214. (Liv. xxiv. 21—33.)

The enterprise proved far more arduous than the Roman General seems to have anticipated. He established his camp, as the Carthaginians had repeatedly done, on the height of the Olympieum; but his principal attacks were directed against the northern walls, in the neighbourhood of Hexapyrum (the outlet of the city towards Leontini and Megara), as well as against the defences of Archadia from the sea. His powerful fleet gave Marcellus the complete command of the sea, and he availed himself of this to bring up his ships with powerful battering-engines under the very walls which bordered the rocks of Archadia; but all his efforts were baffled by the superior skill and science of Archimedes; his engines and ships were destroyed or sunk, and after repeated attempts, both by sea and land, he found himself compelled to abandon all active assaults and convert the siege into a blockade. (Liv. xxiv. 32, 34.)

During the winter he left the camp and army at the Olympieum, under the command of T. Quintius Crispinus, while he himself took up his winter-quarters and established a fortified camp at Leon, on the N. side of the city. But he was unable to maintain a strict blockade by sea, and the Carthaginians succeeded in frequently throwing in supplies, so that the blockade was prolonged for more than two years; and Marcellus began to entertain little prospect of success, when in the spring of b.c. 212 an accident threw in his way the opportunity of scaling the walls by night, at a place called by Livy the Fortus Trogillorum (evidently the little cove called Scoula Greco); and having thus surprised the walls he made himself master of the gate at Hexapyrum, as well as of a great part of the slope of Epipolae. But the strong fort of Euryalus, at the angle of Epipolae, defied his efforts, and the walls of Archadia, which still retained its separate fortifications, enabled the Syracusans to hold possession of that important part of the city, as well as of the island and barriques of Ortigia. The two quarters of Tycha and Neapolis were, however, surrendered to him, and given up to plunder, the citizens having stipulated for their lives; and shortly after Philodemus, who commanded the garrison of Euryalus, having no hopes of relief, surrendered that important post also into the hands of Marcellus. (Liv. xxv. 23—25.)

The Roman general was now in possession of the whole heights of Epipolae, and being secured from attacks in the rear by the possession of Euryalus, he divided his forces into three camps, and endeavoured wholly to blockade Archadia. At the same time Crispinus still held the old camp on the hill of the Olympieum. (Ib. 26.) In this state of things a vigorous effort was made by the Carthaginians to raise the siege; they advanced with a large army under Himilco and Hippocrates, and attacked the camp of Crispinus; while Bomilcar, with a fleet of 150 ships, occupied the Great Harbour, and took possession of the shore between the city and the mouth of the Anapus, at the same time that Epicydes made a vigorous sally from Archadia against the lines of Marcellus. But they were repulsed at all points, and though they continued for some time to maintain their army in the immediate neighbourhood of the city, it was soon attacked by a pestilence, arising from the marshy nature of the low grounds in which they were encamped, to which both Hippocrates and Himilco fell victims, with a great part of their troops. Bomilcar, also, who had quitted the post with the reinforcements from Carthage, never returned, and Epicydes, who had gone out to meet him, abandoned the city to its fate, and withdrew to Agrigentum. The defence of Syracuse was now entrusted to the leaders of the mercenary troops, and one of these, a Spaniard named Mericon, betrayed his post to Marcellus. A body of Roman troops was landed in the night at the extremity of the island, near the fountain of Arethusa, and quickly made themselves masters of the whole of Ortigia; while Marcellus, having at the same time made a general assault on Archadia, succeeded in carrying a portion of that quarter also. The remaining part of the city was now voluntarily surrendered by the inhabitants; and Marcellus, after taking precautions to secure the royal treasures, and the houses of those citizens who had been favourable to the Romans, gave up the whole city to be pillaged by his soldiers. Archimedes, who had contributed so much to the defence of the city, was accidentally slain in the confusion. The plunder was said to be enormous; and the magnificent statues, pictures, and other works of art which were carried by Marcellus to Rome, to adorn his own triumph, are said to have given the first impulse to that love of Greek art which afterwards became so prevalent among the Romans. (Liv. xxv. 26—51, 40; Plat. Mar. 14—19; Dio. xxi. Fr. 18—26.)

From this time Syracuse sank into the ordinary condition of a Roman province, but; hut it continued to be the unquestionable capital of Sicily, and was the customary residence of the Roman praetors who were sent to govern the island, as well as of one of the two quaestors who were charged with its financial administration. Even in the days of Cicero it is spoken of by that orator as "the greatest of Greek cities, and the most beautiful of all cities." (Cic. Verr. iv. 52.) Its public buildings had apparently suffered little, if at all, from its capture by
SYRACUSAE.

Marcellus, and were evidently still extant in the days of the orator, who enumerates most of them by name. All the four quarters of the city, the Island, Acharnian, Tyche, and Neapolis, were still well inhabited; though as a measure of precaution no persons of native Syracusean extraction were permitted to dwell in the Island. (10. v. 22.) But the prosperity of the town is not to be inferred from a severe shock in the time of Sextus Pompeius, who, according to Strabo, inflicted upon it injuries, from which it appears never to have recovered. Such was its decayed condition that Augustus endeavoured to recruit it by sending thither a Roman colony (n. c. 21). But the new settlers were confined to the Island and to the part of the city immediately adjoining it, forming a portion only of Acharnian and Neapolis. (Strab. vi. 270; Dig. That. iv. 7; Plin. liii. iii. 8 s l.) It is in this part of the town that the amphitheatre and other edifices of Roman construction are still found.

But though greatly fallen from its former splendour, Syracuse continued throughout the Roman Empire to be one of the most considerable cities of Sicily, and still finds a place in the 4th century in the Ordo Nobilium Urbium of Ausonius. The natural strength of the Island as a fortress rendered it always a post of the utmost importance. After the fall of the Western Empire it fell within a sphere of the Arabians, and was recovered by Belisarius in A. D. 535, and annexed to the dominions of the Byzantine emperors, in whose hands it continued till the 9th century, when it was finally wrested from them by the Arabs or Saracens. Syracuse was, with the single exception of Tauromenium, the last place in Sicily that fell into the hands of those invaders; it was still a very strong fortress, and it was not till 878, more than fifty years after the Saracens first landed in the island, that it was compelled to surrender, after a siege of nine months' duration. The inhabitants were put to the sword, the fortifications destroyed, and the city given up to the flames. Nor did it ever recover from this calamity, though the Island seems to have always continued to be inhabited. Its fortifications were strengthened by Charles V., and assumed very much their present appearance. The modern city, which is still confined to the narrow limits of the Island, contains about 13,000 inhabitants, but the whole of the expanse on the opposite side of the strait, as well as the broad table-land of Acharnian and Epipolae, are now wholly bare and desolate, being in great part uncultivated as well as uninhabited.

III. TOPOGRAPHY.

The topographical description of Syracuse as it existed in the days of its greatness cannot better be introduced than in the words of the orator who has described it in unusual detail. "You have often heard (says he) that Syracuse was the largest of all Greek cities, and the most beautiful of all cities. And it is so indeed. For it is both strong by its natural situation and striking to behold, from whatever side it is approached, whether by land or sea. It has two ports, as it were, enclosed within the buildings of the city itself, so as to combine with it from every point of view, which have different and separate entrances, but are united and conjoined together at the opposite extremity. The junction of these separates from the mainland the part of the town which is called the I-band, but this is reunited to the continent by a bridge across the narrow strait which divides them. So great is the city that it may be said to consist of four cities, all of them of very large size; one of which is that which I have already mentioned, the Island, which is surrounded by the two ports, while it projects towards the mouth and entrance of each of them. In it is the palace of king Hieron, which is now the custom-house building; it being a very considerable structure, several sacred edifices, but two in particular, which far surpass the others, one a temple of Diana, the other of Minerva, which before the arrival of Verres was most highly adorned. At the extremity of this island is a fountain of fresh water, which bears the name of Arethusa, of incredible magnitude, and full of fish: this would be wholly overflowed and covered by the waves were it not separated from the sea by a strongly-built barrier of stone. The second city at Syracuse is that which is called Acharnian, which contains a forum of very large size, beautiful porticoes, a most highly ornamented Pyraneum, a spacious Curia, and a magnificent temple of Jupiter Olympius; not to speak of the other parts of the city, which are occupied by private buildings, being divided by one broad street through its whole length, and many cross streets. The third city is that which is called Tyche, because it contained a very ancient temple of Fortuna; in this is a very spacious temple of Jupiter, which is not large; and it is the quarter of the town which is the most thickly inhabited. The fourth city is that which, because it was the last built, is named Neapolis: at the top of which is a theatre of vast size; besides this it contains two splendid temples, one of Ceres, the other of Libera, and a statue of Apollo, which is known by the name of Teneaites, of great beauty and very large size, which Verres would not have hesitated to carry off if he had been able to remove it."

 Cicero here distinctly describes the four quarters of Syracuse, which were commonly compared to four separate cities; and it appears that Diodorus gave the same account. (Diod. xxvi. 19, ed. Diol.) In later times, also, we find it alluded to as "the quadruple city" ("quadrupli city").

Others, however, enumerated five quarters, as Strabo tells us that it was formerly composed of five cities (πεντάπολις ὧν τὸ πάντα) (Strab. vi. 270), and the whole of the expanse on the opposite side of the strait, as well as the broad table-land of Acharnian and Epipolae, are now wholly bare and desolate, being in great part uncultivated as well as uninhabited.

I. ORTIGIA (Ortigia, Pind., Diod., Strab., &c.), more commonly known simply as "the Island" (ἡ Ὀρτίγια, Thuc., &c., and in the Doric dialect Ὕρτιγα: hence Livy calls it Nasus, while Cicero uses the Latin Isola), was the original seat of the colony, and continued throughout the flourishing period of the city to be as it were the citadel or Acropolis of Syracuse, though, unlike most citadels, it lay lower than the rest of the city, its strength as a fortress being derived from its insular position. It is about a mile in length, by less than half a mile in breadth, and of small elevation, though composed wholly of rock, and rising perceptibly in the centre. There is no doubt that it was originally an island, naturally separated from the mainland, though in the time of Thucydides it was united with it (Thuc. vi. 3): probably, however, this was merely effected by an artificial mole or causeway.
for the purpose of facilitating the communication with "the outer city," as that on the mainland was then called. At a later period it was again severed from the mainland, probably by the elder Dionysius, when he constructed his great docks in the two ports. It was, however, undoubtedly always connected with the mainland by a bridge, or series of bridges, as it is at the present day. The citadel or castle, constructed by Dionysius, stood within the island, but immediately fronting the mainland, and closely adjoining the docks or navalia in the Lesser Port. Its front towards the mainland, which appears to have been strongly fortified, was known as the Pentaptychon. Of the ancient descriptions of this it seems to have looked directly upon the Agora or Forum, which we know to have been situated on the mainland. It is therefore clear that the citadel must have occupied nearly the same position with the modern fortifications which form the defence of Syracuse on the land side. These were constructed in the reign of Charles V., when the isthmus by which Ortygia had been reunited to the mainland was cut through, as well as a Roman aqueduct designed to supply this quarter of the city with water, constructed, as it appeared from an inscription, by the emperor Claudius. (Fazeli. Sic. iv. p. 169.)

Ortygia was considered from an early time as consecrated to Artemis or Diana (Diod. v. 3), whence Pindar terms it "the couch of Artemis," and "the sister of Deles" (δέων αρτεμιδος, Δήδους καιρων, Nem. i. 3). Hence, as we learn from Cicero (i. c.), one of the principal edifices in the island was a temple of Diana. Some remains of this are supposed to be still extant in the NE. corner of the modern city, where two columns, with a portion of their architrave, of the Doric order, are built into the walls of a private house. From the style and character of these it is evident that the edifice was one of very remote antiquity. Much more considerable remains are extant of the other temple, noticed by the orator in the same passage—that of Minerva. This was one of the most magnificent in Sicily. Its doors, composed of gold and ivory, and conspicuous for their beautiful workmanship, were celebrated throughout the Grecian world: while the interior was adorned with numerous paintings, among which a series representing one of the battles of Agathocles was especially celebrated. All these works of art, which had been spared by the generosity of Marcellus, were carried off by the insatiable Verres. (Cic. Terr. iv. 53, 56.) On the summit of the temple was a shield, which served as a landmark to sailors quitting or approaching the port. (Polemon, ap. Athen. xii. p. 462.) There can be no doubt that this temple, which must have stood on the highest point of the island, is the same which has been converted into the modern cathedral or church of Sta Maria delle Colonne. The columns of the sides, fourteen in number, are still perfect, though built into the walls of the church; but the portico and façade were destroyed by an earthquake. It was of the Doric order, and its dimensions (185 feet in length by 75 in breadth), which nearly approach those of the great temple of Neptune at Paestum, show that it must have belonged to the first class of ancient edifices of this description. The style of the architectural details and proportions of the columns would render it probable that this temple may be referred to the sixth century B.C., thus confirming an incident notice of Diodorus (viii. Fr. 9), from which it would appear that it was built under the government of the Geonom, and therefore certainly prior to the despotism of Gelon. No other ancient remains are now extant in the island of Ortygia; but the celebrated fountain of Arethusa is still visible, as described by Cicero, near the southern extremity of the island, on its western shore. It is still a very copious source, but scarcely answering to the accounts of its magnitude in ancient times; and it is probable that it has been disturbed and its supply diminished by earthquakes, which have repeatedly afflicted the modern town of Syracuse.

At the extreme point of the island, and outside the fortifications, on the side toward the sea, lies a small temple, probably on the spot where the castle built by John Maniates now stands, was seated a temple of the Olympian Jove, with an altar from which it was the custom for departing sailors to take a cup with certain offerings, which they flung into the sea when they lost sight of the shield of the temple of Minerva (Polemon, ap. Athen. l. c.). Of the other edifices in the island the most remarkable were the Hexastyle temples (Σαλιά του ἕξακοσιον κόσμου καλοστεμπορς, Diod. xvi. 85), built, or at least finished, by Agathocles, but the purpose and nature of which are uncertain; the public granaries, a building of so massive and lofty a construction as to serve the purposes of a fortress (Liv. xxiv. 21); and the palace of king Hieron, which was afterwards made the residence of the Roman praetors (Cic. Terr. iv. 52). The site of this is uncertain; the palace of Dionysius, which had been situated in the citadel constructed by him, was destroyed together with that fortress by Timoleon, and a building for the courts of justice erected on the site. Hence it is probable that Hieron, who was always desirous to court popularity, would avoid establishing himself anew upon the same site. No trace now remains of the ancient walls or works on this side of the island, which have been wholly covered and concealed by the modern fortifications. The remains of a tower are, however, visible on a shelve or rock near the N. angle of the modern city, which are probably those of one of the towers built by Agathocles to guard the entrance of the Lesser Harbour, or Portus Laccus (Diod. xvi. 83): but no traces have been discovered of the corresponding tower on the other side.

2. ACRAIDNA (Ἀκραίδνα, Diod.), and this seems to be the more correct form of the name, though it is frequently written Acridina; both Livy and Cicero, however, give Acridina), or "the outer city," as it is termed by Thucydides, was the most important and extensive of the quarters of Syracuse. It consisted of two portions, comprising the eastern part of the great triangular plateau already described, which extended from the angle of Epipolae to the sea, as well as the lower and more level space which extends from the foot of this table-land to the Great Harbour, and borders on the marshes of Lysimeleia. This level plain, which is immediately opposite to the island of Ortygia, is not, like the tract beyond it extending to the Anapus, low and marshy ground, but has a rocky soil, of the same limestone with the table-land above, of which it is as it were a lower step. Hence the city, as soon as it extended itself beyond the limits of the island, spread at once over this area; but not content with this, the inhabitants occupied the part of the table-land above it nearest the sea, which, as already mentioned in the general description, is partly separated by a cross valley or depression from the upper part of the plateau, or the heights of Epipolae. Hence this part of the city

Digitized by Microsoft®
was of considerable natural strength, and seems to have been early fortified by a wall. It is not improbable that, in the first instance, the name of Achradina was given exclusively to the heights* and that these, as well as the island, had originally their own separate defences; but as the city spread itself out in the plain below, this must also have been protected by an outer wall on the side towards the marshes. It has indeed been supposed (Grout’s Greece, vol. vii. p. 536) that no defence existed on this side till the time of the Athenian expedition, when the Syracusans, for the first time, surrounded the suburb of Thermitis with a wall; but no mention of this defensive work in the Thucydides of so important a fact as the construction of this new line of defence down to the Great Harbour, and it seems impossible to believe that this part of the city should so long have remained unprotected.† It is probably indeed (though not certain) that the Agora was already in this part of the city, as we know it to have been in later times; and it is highly improbable that so important a part of the city would have been placed in an unprotected suburb. But still more necessary would have been some defence for the protection of the naval arsenals or dockyards in the inner bight of the Great Harbour, which certainly existed before the Athenian invasion. It seems, therefore, far more natural to suppose that, though the separate defences of Ortygia and the heights of Achradina (Diod. xi. 67, 73) were not destroyed, the two were from an early period, probably from the reign of Gelon, united by a common line of defence, which ran down from the heights to some point near that where the island of Ortygia most closely adjoined the mainland. The existence of such a boundary wall from the time of the Athenian War is certain; and there seems little doubt that the name of Achradina, supposing it to have originally belonged to the heights or table-land, soon came to be extended to the lower area also. Thus Diodorus describes Dionysius on his return from Gelon as arriving at the gate of Achradina, where the outer gate of the city is certainly meant. (Diod. xiii. 113.) It is probable that this gate in its suburban position belonging to Gelon, is the same as the one called by Cicero the Portae Agraeciae, immediately outside of which he had discovered the tomb of Archimedes. (Cic. Tuscul. Quaest. v. 23.) But its situation cannot be determined: no distinct traces of the ancient walls remain on this side of Syracuse, and we know not how they may have been modified when the suburb of Neapolis was included in the city. It is probable, however, that the wall (as suggested by Col. Leake) ran from the brow of the hill near the amphitheatre in a direct line to the Great Harbour.

* These still abound in the wild pear-trees (ἀχυδάς), from which the name, as suggested by Leake, was probably derived.

† The argument against this, urged by Cavallari, and derived from the existence of numerous tombs, especially the great necropolis of the catacombs, in this part of the city, which, as he contends, must have been without the walls, would prove too much, as it is certain that these tombs were ultimately included in the city: and if the ordinary custom of the Greeks was deviated from at all, it may have been so at an earlier period. In fact we know that in other cases also, as at Agrigentum and Tarentum, the custom was violated, and persons habitually buried within the walls.

SYRACUSAE.

Of the buildings noticed by Cicero as still existing at Achradina in his day there are scarcely any vestiges; but the greater part of them were certainly situated in the lower quarter, nearest to the island and the two ports. The Forum or Agora was apparently directly opposite to the Pentaptylia or fortified entrance of the island; it was surrounded with porticoes by the elder Dionysius (Diod. iv. 7), which are obviously those alluded to by Cicero (“pulcherrimae porticuri,” Verr. iv. 53). The temple of Jupiter Olympus, noticed by the orator, also adjoined the Agora; it was built by Hiero II. (Diod. xvi. 80), and must not be confounded with the more celebrated temple of the same divinity on a hill at some distance from the city. The prytaneum, which was most richly adorned, and among its chief ornaments possessed a celebrated statue of Sappho, which fell a prey to the capidity of Verres (Cic. Verr. iv. 53, 57), was probably also situated in the neighbourhood of the Agora; as was certainly the Timoleontemum, or monument erected to the memory of Timoleon. (Plut. Timol. 39.) The splendid sepulchral monument which had been erected by the younger Dionysius in memory of his father, but was destroyed after his own expulsion, seems to have stood in front of the Pentaptylia, opposite the entrance of the citadel. (Diod. iv. 74.) A single column is still standing on this site, and the bases of a few others have been discovered, but it is uncertain to what edifice they belonged. The only other ruins now visible in this quarter of the city are some remains of Roman baths of little importance. But under the surface of the soil there exist extensive catacombs, constituting a complete necropolis: these tombs, as in most similar cases, are probably the work of successive ages, and can hardly be referred to any particular period. There exist, also, at two points on the slope of the hill of Achradina, extensive quarries hewn in the rock, similar to those found in Neapolis near the theatre, of which we shall presently speak.

Traces of the ancient walls of Achradina, crowning the low cliffs which bound it towards the sea, may be found from distance to distance along the whole line extending from the quarries of the Caves Chapel round to the little bay or cove of Sta Panagia at the NW. angle of the plateau. Recent researches have also discovered the line of the western wall of Achradina, which appears to have run nearly in a straight line from the cove of Sta Panagia, to the steep and narrow pass or hollow way that leads up from the lower quarter to the heights above, thus taking advantage of the partial depression or valley already noticed. The cove of Sta Panagia may perhaps be the Portus Troglilium of Livy (xxv. 23), though the similar cove of the Scala Greca, about half a mile further W., would seem to have the better claim to that designation. The name is evidently the same with that of Troglis, mentioned by Thucydides as the point on the N. side of the heights towards which the Athenians directed their lines of circumvallation, but without succeeding in reaching it. (Thuc. vi. 99, viii. 2.)

3. TYSCHA (Τυσχα), so called, as we are told by Cicero, from its containing an ancient and celebrated temple of Fortune, was situated on the plateau or table-land W. of Achradina, and adjoining the northern face of the cliffs looking towards Megara. Though it became one of the most populous quarters of Syracuse, no trace of its existence is found at the period of the Athenian siege; and it may fairly be assumed that there was as yet no considerable
suburb on the site, which must otherwise have materially interfered with the Athenian lines of circumvallation, while the Syracusans would naturally have attempted to protect it, as they did that of Temenitis, by a special outwork. Yet it is remarkable that Diodorus notices the name, and even speaks of it as a distinct quarter of the city, as early as B.C. 466, during the troubles which led to the expulsion of Tarsyphylus (Diod. xi. 65). It was difficult to reconcile this with the entire silence of Thucydides. Tyucha probably grew up after the great wall erected by Doroysins along the northern edge of the plateau, which might have enabled it from attack. Its position is clearly shown by the statement of Livy, that Marcellus, after he had forced the Hexapylum and scaled the heights, established his camp between Tyucha and Neapolis, with the view of carrying on his assaults upon Achradinga. (Liv. xxv. 25.) It is evident therefore that the two quarters were not contiguous, but that a considerable extent of the table-land W. of Achradinga was still unoccupied.

4. Neapolis (Νεάπολις), or the New City, was, as its name implied, the last quarter of Syracuse which was inhabited, though, as is often the case, the New Town seems to have eventually grown up into one of the most splendid portions of the city. It may, however, well be doubted whether it was in fact more recent than Tyucha; at least it appears that some portion of Neapolis was already inhabited at the time of the Athenian invasion, when, as already mentioned, we have no trace of the existence of a suburb at Tyucha. But Tyucha was then already a suburb called Temenitis, which had grown up around the sanctuary of Apollo Temenites. The statue of Apollo, who was worshipped under this name, stood as we learn from Cicero, within the precincts of the quarter subsequently called Neapolis; it was placed, as we may infer from Thucydidcs, on the height above the theatre (which he calls ἄπευς Τεµενίτις), forming a part of the table-land, and probably not far from the southern escarpment of the plain. A suburb had apparently grown up around it, which was surrounded by the Syracusans with a wall just before the commencement of the siege, and this outwork bears a conspicuous part in the operations that followed. (Thuc. vi. 75.) But this extension of the fortifications does not appear to have been permanent, for we find in B.C. 396 the temples of Ceres and the Cora, which also stood on the heights not far from the statue of Apollo, described as situated in a suburb of Achradinga, which was taken and the temples plundered by the Carthaginian general Hamilcar. (Diod. xiv. 63.) The name of Neapolis (Νεάπολις) is indeed already mentioned some years before (Id. xiv. 9), and it appears probable therefore that the city had already begun to extend itself over this quarter, though it as yet formed only an unfortified suburb. In the time of Cicero, as is evident from his description, as well as from existing remains, Neapolis had spread itself over the whole of the southern slope of the table-land, which here forms a kind of second step or underfall, rising considerably above the low grounds beneath, though still separated from the heights of Temenitis by a second line of cliff or abrupt declivity. The name of Temenitis for the district on the height seems to have been lost, or merged in that of Neapolis, which was gradually applied to the whole of this quarter of the city. But the name was retained by the adjoining gate, which was called the Temenitid Gate (Plut. Dion. 29, where there seems no doubt that we should read Τεµενίτιδας for Μεσίτιδας), and seems to have been one of the principal entrances to the city.

Of the buildings described by Cicero as existing in Neapolis, the only one still extant is the theatre, which he justly extols for its large size ("theatrum maximum," Verr. iv. 53). Diodorus also alludes to it as the largest in Sicily (xvi. 83), a remark which is fully borne out by the existing remains. It is not less than 440 feet in diameter, and appears to have had sixty rows of seats, so that it could have accommodated no less than 24,000 persons. The lower rows of seats were covered with slabs of white marble, and the several cunei are marked by inscriptions in large letters, bearing the name of king Hieron, of two queens, Philistis and Nereis, both of them historically unknown, and of two deities, the Olympian Zeus and Hercules, with the epitaph of Εὐφρον. These inscriptions evidently belong to the time of Hieron II., who probably decorated and adorned this theatre, but the edifice itself is certainly referable to a much earlier period, probably as early as the reign of the elder Hieron. It was not used merely for theatrical exhibitions, but for the assemblies of the people, which are repeatedly alluded to as being held in it (Diod. xiii. 94; Plut. Dion. 38, Timol. 34, 38, &c.), as was frequently the case in other cities of Greece. The theatre, as originally constructed, must have been outside the walls of the city, but this was not an unusual arrangement.

Near the theatre have been discovered the remains of another monument, expressly mentioned by Diodorus as constructed by king Hieron in that situation, an altar raised on steps and a platform not less than 640 feet in length by 60 in breadth (Diod. xiv. 83). A little lower down are the remains of an amphitheatre, a structure which undoubtedly belongs to the Roman colony, and was probably constructed soon after its establishment by Augustus, as we find incidental mention of gladiatorial exhibitions taking place there in the reigns of Tiberius and Nero (Tac. Ann. xiii. 49; Val. Max. i. 7. § 8). It was of considerable size, the arena, which is the only part of which the dimensions can be distinctly traced, being somewhat larger than that of Verona. No traces have been discovered of the temples of Ceres and Libera or Proserpine on the height above: the colossal statue of Apollo Temenites had apparently no temple in connection with it, though it had of course its altar, as well as its sacred enclosure or τεµενος. The statue itself, which Verres was unable to remove on account of its large size, was afterwards transported to Rome by Tiberius (Suet. Tib. 74).

Immediately adjoining the theatre are extensive quarries, similar in character to those already mentioned in the cliffs of Achradinga. The quarries of Syracusae (Latomiae or Lautomiae) are indeed frequently mentioned by ancient authors, and especially noticed by Cicero among the most remarkable objects in the city. (Cic. Ferr. v. 27; Adian, V. II. xii. 44.) There can be no doubt that they were originally designed merely as quarries for the extraction of the soft limestone of which the whole table-land consists, and which makes an excellent building stone; but from the manner in which they were worked, being sunk to a considerable depth, without any outlet on a level, they were found places of such security, that from an early period they were em-
ployed as prisons. Thus, after the Athenian expedition, the whole number of the captives, more than 7000 in number, were confined in these quarries (Thuc. vii. 56, 87; Diod. xiii. 33); and they continued to be used for the same purpose under successive despots and tyrants. In the days of Cicero they were used as a general prison for criminals from all parts of Sicily. (Cic. Verr. v. 27.) The orator in one passage speaks of them as constructed expressly for a prison by the tyrant Dionysius (15. 55), which is a palpable mistake if it refers to the Laun- tumiae in general, though it is not unlikely that the despot may have made some special additions to them with that view. But there is certainly no authority for the popular tradition which has given the name of the Earl of Dionysius to a peculiar excavation of singular form in the part of the quarries nearest to the theatre. This notion, like many similar ones now become traditional, is derived only from the suggestion of a man of letters of the 16th century.

5. Epipolae (Επιπολαι), was the name originally given to the upper part of the table-land which, as already described, slopes gradually from its highest point towards the sea. Its form is that of a tolerably regular triangle, having its vertex at Euryalus, and its base formed by the western wall of Achradina. The name is always used by Thucydides in this sense, as including the whole upper part of the plateau, and was doubtless so employed as long as the space was uninhabited; but as the suburbs of Tyche and Temenitas gradually spread themselves over a considerable part of the heights, the name of Epipolae came to be applied in a more restricted sense to that portion only which was nearest to the vertex of the triangle. It is generally as-

sessed that there subsequently arose a considerable town near this angle of the walls, and that this is the fifth quarter of the city alluded to by Strabo and those who spoke of Syracuse as a Pentapolis or aggregate of five cities. But there is no allusion to it as such in the passage of Cicero already quoted, or in the description of the capture of Syracuse by Marcellus; and it seems very doubtful whether there was ever any considerable population at this remote point. No vestiges of any ancient buildings remain within the walls; but the line of these may be distinctly traced along the top of the cliffs which bound the table-land both towards the N. and the S.; in many places two or three courses of the masonry remain; but the most important ruins are those at the angle or vertex of the triangle, where a spot named Mongibello was still crowned by the ruins of the ancient castle or fort of EURYALUS (Ευρύλαος, Thuc., but the Doric form was Εφύλ- αλος, which was adopted by the Romans). The ruins in question afford one of the best examples extant of an ancient fortress or castle, designed at once to serve as a species of citadel and to secure the approach to Epipolae from this quarter. The annexed plan will give a good idea of its general

form and arrangement. The main entrance to the city was by a double gate (A.), flanked on both sides by walls and towers, with a smaller postern or sally-port a little to the right of it. The fortress itself was an irregular quadrangle, projecting about 200 yards beyond the approach to the gate, and fortified by strong towers of solid masonry with a deep ditch cut in the rock in front of it, to which a number of subterraneous passages gave access from within. These passages communicating with the fort above by narrow openings and stairs, were evidently designed to facilitate the sallies of the besieged without exposing the fortress itself to peril. As the whole arrangement is an unique specimen of ancient fortification a view is added of the external, or N. front of the fort, with the subterranean openings.

The can be no doubt that the fortress at Mongibello was the one anciently known as Euryalus. This clearly appears from the mention of that fort at the time of the siege of Syracuse by Marcellus, as one capable of being held by a separate garrison after the capture of the outer walls of Epipolae, and threatening the army of Marcellus in the rear, if he proceeded to attack Achradina, (Liv. xxv. 25, 26.) Euryalus is also mentioned by Thucydides at the time of the Athenian expedition, when it was still unfortified, as the point which afforded a ready ascent to the heights of Epipolae (Thuc. vi. 99, vii. 2); and it must indeed have always been, in a military point of view, the key of the whole position. Hence, the great care with which it was fortified after the occupation of Epipolae by the Athenians had shown the paramount importance of that position in case of a siege. The existing fortifications may, indeed, be in part the work of Hieron II. (as

It. This ascended the where It continued by, Livi
It was not till the reign of the elder Dionysius (as we have already seen) that the heights of Epipolae were included within the walls or fortifications of Syracuse. Nor are we to suppose that even after that time they became peopled like the rest of the city. The object of the walls then erected was merely to secure the heights against military occupation by an enemy. For that purpose lie in b. c. 402 constructed a line of wall 50 stadia in length, fortified with numerous towers, and extending along the whole N. front of the plateau, from the NW. angle of Achradina to the hill of Euryalus. (Diod. xiv. 18.) The latter point must at the same time have been occupied with a strong fort. The north side of Epipolae was thus securely guarded; but it is singular that we hear of no similar defence for the S. side. There is no doubt that this was ultimately protected by a wall of the same character, as the remains of it may be traced all around the edge of the plateau; but the period of its construction is uncertain. The portion of the cliffs extending from Euryalus to Neapolis may have been thought sufficiently strong by nature; but this was not the case with the slope towards Neapolis, which was easily accessible. Yet this appears to have continued the weakest side of the city, as in b. c. 396 Himilco was able to plunder the temples in the suburb of Temenitis with apparently little difficulty. At a later period, however, it is certain from existing remains, that not only was there a line of fortifications carried along the upper escarpment as far as Neapolis, but an outer line of walls was carried round that suburb, which was now included for all purposes as part of the city. Strabo reckons the whole circuit of the walls of Syracuse, including the fortifications of Epipolae, at 180 stadia (Strab. vi. p. 270); but this statement exceeds the truth, the actual circuit being about 14 English miles, or 122 stadia. (Leake, p. 279.)

It only remains to notice briefly the different localities in the immediate neighbourhood of Syracuse, which are noticed by ancient writers in connection with that city. Of these the most important

angle near the farmhouse now called Targia. Its purpose was, doubtless, to secure the communications of the Athenians with their fleet which lay at Thapsus, as well as with the landing-place at Leone.

Some writers on the topography of Syracuse have supposed the fortress of Mongibellisi to be the ancientHexyplanum, and that Euryalus occupied the site of Belvedere, a knoll or hill on the ridge which is continued from Mongibellisi inland, and forms a communication with the table-land of the interior. But the hill of Belvedere, which is a mile distant from Mongibellisi, though somewhat more elevated than the latter point, is connected with it only by a narrow ridge, and is altogether too far from the table-land of Epipolae to have been of any importance in connection with it; while the heights of Mongibellisi, as already observed, form the true key of that position. Moreover, all the passages that relate to Hexyplanum, when attentively considered, point to its position on the N. front of the heights, looking towards Megara and Thapsus; and Colonel Leake has satisfactorily shown that it was a fort constructed for the defence of the main approach to Syracuse on this side; a road which then, as now, ascended the heights at a point a short distance W. of the Scala Graeca, where a depression or break in the line of cliffs affords a natural approach. (Leake, Notes on Syracuse, pp. 258, 342, &c.) The gate at Hexyplanum thus led, in the first instance, into the suburb or quarter of Tycha, a circumstance completely in accordance with, if not necessarily required by, a passage in Livy (xxiv. 21), where the two are mentioned in close connection.

It is more difficult to determine the exact position of Labdalem, where the Athenians erected a fort during the siege of Syracuse. The name is not subsequently mentioned in history, so that we have no knowledge of its relation to the fortifications as they existed in later times; and our only clue to its position is the description of Thucydides, that it stood "on the summit of the cliffs of Epipolae, looking towards Megara." It was probably situated (as placed by Gooller and Mr. Grote) on the point of those heights which forms a slightly projecting

This must have been the fort on Epipolae taken by Dion, which was then evidently held by a separate garrison. (Plut. Dion. 29.)

was repulsed by means of a strong garrison posted at Euryalus, who attacked his army in flank, while advancing to the attack of Epipolae. (Diod. xx. 29.)

*
SYRACUSAE.

is the OLYMPIUM, or Temple of Jupiter Olympus, which stood, as already mentioned, on a height, facing the southern front of Epipole and Neapolis, from which it was about a mile and a half distant (Liv. xxiv. 30), the interval being occupied by the marshy plain on the banks, and the Anapus. The sanctuary seems to have early attained great celebrity; even at the time of the Athenian expedition there had already grown up around it a small town, which was known as POLICHE (ἡ Πολιχή, Diod.), or the Little City. The military importance of the post, as commanding the bridge over the Anapus and the road to Helorus, as well as overlooking the marshes, the Great Harbour, and the lower part of the city, caused the Syracusans to fortify and secure it with a garrison before the arrival of the Athenians. (Thuc. vi. 75.) For the same reason it was occupied by all subsequent invaders who threatened Syracuse; by Himilco in B.C. 396, by Hamilcar in B.C. 309, and by Marcellus in B.C. 214. The remains of the temple are still visible: in the days of Cluverius, indeed, seven columns were still standing, with a considerable part of the substructure (Cluver. Sicil. p. 179), but now only two remain, and these have lost their capitals. They are erected on an ancient site, and belong probably to the original temple, which appears to have been built by the Geomori as early as the 6th century B.C.

The adjoining promontory of Plemmyrium does not appear to have been ever inhabited, though it presents a table-land of considerable height, nor was it ever permanently fortified. It is evident also, from the account of the operations of successive Carthaginian fleets, as well as that of the Athenians, that the Syracusans had not attempted to occupy, or even to guard with forts, the more distant parts of the Great Harbour, though the docks or arsenal, which were situated in the inner bight or recess of the bay, between Ortigia and the lower part of Acradina, were strongly fortified. The southern bight of the bay, which forms an inner bay or gulf, now known as the bay of Sta Maddalena, is evidently that noticed both during the Athenian siege and that by the Carthaginians as the gulf of DASCON. (Add. 1449, Thuc. vi. 60; Diod. xii. 13, xiv. 72.) These are erected by the Athenians for the protection of their fleet apparently stood on the adjacent height, which is connected with that of the Olympium.

Almost immediately at the foot of the Olympium was the ancient bridge across the Anapus, some remains of which may still be seen, as well as of the ancient road which led from it towards Helorus, memorable on account of the disastrous retreat of the Athenians. They did not, however, on that occasion cross the bridge, but after a fruitless attempt to penetrate into the interior by following the valley of the Anapus, struck across into the Helorine Way, which they rejoined some distance beyond the Olympium. Not far from the bridge over the Anapus stood the monument of Gelon and his wife Demaret, a sumptuous structure, where the Syracusans were in the habit of paying heroic honours to their great ruler. It was adorned with nine towers of a very massive construction; but the monument itself was destroyed by Himilco, when he encamped at the adjacent Olympium, and the towers were afterwards demolished by Agathocles. (Diod. xi. 38, xiv. 63.)

About a mile and a half SW. of the Olympium is the fountain of CYANE, a copious and clear stream rising in the midst of a marsh: the sanctuary of the nymph to whom it was consecrated (τὸ τῆς Κασίνης ήτοίμος, Diod.), must have stood on the heights above, as we are told that Dorynus led his troops round to this spot with a view to attack the Carthaginian camp at the Olympium (Diod. xiv. 72); and the marsh itself must always have been impassable for troops. Some ruins on the slope of the hill to the W. of the source are probably those of the temple in question. [CYANE.] The fountain of Cyane is now called LA PIUMA: near it is another smaller source called Piamotta, and a third, known as II Cefalino, rises between the Cyane and the Anapus. The number of these fountains of clear water, proceeding from distant sources among the limestone hills, is characteristic of the neighbourhood of Syracuse, and is noticed by Pliny, who mentions the names of four other noted sources besides the Cyane and the more celebrated Arethusa. These he calls Temenitis, Archidemia, Magare, and Milicia, but they cannot be now identified. (Plin. iii. 8. s. 14.) None of these springs, however, was well adapted to supply the city itself with water, and hence an aqueduct was in early times carried along the road from the interior to the coast. The existence of this is already noticed at the time of the Athenian siege (Thuc. vi. 100); and the channel, which is in great part subterraneous, is still visible at the present day, and conveys a stream sufficient to turn a mill situated on the steps of the great theatre.

A few localities remain to be noticed to the N. of Syracuse, which, though not included in the city, are repeatedly alluded to in its history. LEON, the spot where the Athenians first landed at the commencement of the siege (Thuc. vi. 97), and where Marcellus (Diod. xii. 13, xiv. 72.) found himself unable to carry the city by assault (Liv. xxiv. 39), is probably the little cove or bay about 2 miles N. of the Scala Greca: this is not more than a mile from the nearest point of Epipoleis, which would agree with the statement of Thucydides, who calls it 6 or 7 stadia from thence; Livy, on the contrary, says it was 5 miles from Hexapylum, but this must certainly be a mistake. About 3 miles further N. is the promontory of THARSUS (ἡ Θαρσος, now called Messana), a low but rocky peninsula, united to the mainland by a sandy isthmus, so that it formed a tolerably secure port on its S. side. On this account it was selected, in the first instance, by the Athenians for their naval camp and the station of their fleet, previous to their taking possession of the Great Harbour. (Thuc. vi. 97.) It had been one of the first points on the Sicilian coast occupied by Greek colonists, but these speedily removed to Megara (Thuc. vi. 4); and the site seems to have subsequently always remained uninhabited, at least there was never a town upon it. It was a low promontory, whence Virgil appropriately calls it "Ithapae jacens." (Virg. Aen. iii. 689; Ovid, Fast. iv. 477.) About a mile inland, and directly opposite to the entrance of the isthmus, are the remains of an ancient monument of large size, built of massive blocks of stone, and of a quadrangular form. The portion now remaining is above 20 feet high, but it was formed, as indicated by a column, whence the name presumably derived by which it is still known of L'Agenzia, or "the Needie." This monument is popularly believed to have been erected by Marcellus to commemorate the capture of Syracuse; but this is a mere conjecture, for which there is no foundation. It is probably in reality a sepulchral
monument. (D'Orville, Sicula, p. 173; Swinburne, vol. ii. p. 318.)

The topography of Syracuse attracted attention from an early period after the revival of letters; and the leading features are so clearly marked by nature that they could not fail to be recognised. But the earlier descriptions by Fazell, Bonanni, and Mirabella, are of little value. Oliverus, as usual, investigated the subject with learning and diligence; and the ground has been carefully examined by several modern travellers. An excellent survey of it was also made by British engineers in 1868; and the researches and excavations carried on by the duke of Serra di Falco, and by a commission appointed by the Neapolitan government in 1859 have thrown considerable light upon the extent remains of antiquity, as well as upon some points of the topography. These have been discussed in a separate memoir by the architect employed, Savere Cavallari, and the whole subject has been fully investigated, with constant reference to the ancient authors, in an elaborate and excellent memoir by Col. Lenke. The above article is based mainly upon the researches of the last author, and the local details given in the great work of the duke of Serra di Falco, the fourth volume of which is devoted wholly to the antiquities of Syracuse. (Fazell, de Reb. Sic. iv. 1; Bonanni, Le Antiche Siculae, 2 vols. fol. Palermo, 1717; Mirabella, Dichiarazione della Pianta de' antiche Siculae, reprinted with the preceding work; Clever, Sicil. i. 12; D'Orville, Sicula, pp. 175—202; Smyth's Sicily, p. 162—176; Swinburne, Travels in the Two Sicilies, vol. ii. pp. 318—346; Howre, Classical Travels, pp. 140—176; Lenke, Notes on Syracuse, in the Transactions of the Royal Society of Literature, 2nd series, vol. iii. pp. 239—354; Serra di Falco, Antichità della Sicilia, vol. iv. Cavallari, Zur Topographie von Syrakus, 8vo. Göttingen, 1845.)

SYRACUSAE. (Σύρακας, Herod. iv. 123), a considerable river of European Sarmatia, which flowed from the country of the Thessagetae through the territory of the Macedons, and discharged itself into the Parus Maeotis. Modern geographers, have variously attempted to identify it. Kennell (Geogr. of Herod. p. 90) considers it to be one of the tributaries of the Wolga. Gatterer (Comment. Soc. Gott. xiv. p. 36) takes it to be the Donetz, whilst Reichard identifies it with the Irigiz, and Linder (Scevthen, p. 66) with the Don itself.

SYRIA (Συρία: Eth. Σύριος), the classical name for the country whose ancient native appellation was Aram, its modern Esh-Sham.

I. Nome.—The name Aram (Ἀραμ), more comprehensive than the limits of Syria Proper, extends, with several qualifying adjuncts, over Mesopotamia and Chaldaea. Thus we read (1.) of Aram of the two rivers, or Aram Naharaim (ארם נהראים LXX. ἄραμ νηραίας, Gen. xxiv. 10), equivalent to Pailan-Aram, or the Plain of Aram (ארם הער LXX. ἄραμ ὑγείας Συρίας, Gen. xxiv. 10, xxviiii. 2, 5, 6, 7, xxi. 18), but comprehended also a mountain district called “the mountains of the east” (Ναμ. xxii. 5, xxi. 7; Dent. xxiii. 4). (2.) Aram Sobah (ארם שבא LXX. סבאה, 1 Sam. xiv. 47; 2 Sam. viii. 3, x. 6, 8). (3.) Aram of Damascus (ארם דמשק, 2 Sam. viii. 8). (4.) Aram Beth-Rehob (בירת רעב LXX. Ρωσία, 2 Sam. x. 6, 8). (5.) Aram Maacah (ארם מקה LXX. מְקַח, 1 Chron. xix. 6). Of these five districts thus distinguished, the first has no connection with this article. With regard to the second, fourth, and fifth, it is doubtful whether Sobah and Rehob were in Mesopotamia or in Syria Proper. Gesenius supposes the empire of Sobah to have been situated north-east of Damascus; but places the town, which he identifies with Neehin, Nisibis, and Antiocchia Myrdonias, in Mesopotamia (Lex, s. v. בֵּית רַעְב and בֵּית אָרָם); but a comparison of 2 Sam. x. 6 with 1 Chron. xix. 6 seems rather to imply that Rehob was in Mesopotamia, Soba and Maacha in Syria Proper; for, in
the former passage, we have the Aramites of Beth-Rehob, and the Armites of Sohon, and the king of Mazakhd— in the latter, Aram Naharaim = Mesopotamia, and Aram Mazakhd and Zalih; from which we may infer the identity of Beth-Rehob and Mesopotamia, and the distinction between this latter and Mazakhd or Zalih: and again, the alliance between Haddakezer, king of Zobah, and the Armites of Damascus (2 Sam. viii. 3—6; I Chron. xix. 3—6) would imply the contiguity of the two states; while the expedition of the former "to recover his border," or to establish his dominion at the river Euphrates (Gen. x. 22, David at the head of his people, would have been a march from west to east, through Syria, rather than in the opposite direction through Mesopotamia.

With regard to the origin of the name Aram, there are two Patriarchs in the early genealogies from whom it has been derived; one the son of Shem, the progenitor of the Hebrew race, whose other children Us, Assur, Arphaxad, and Lud, represent ancient kingdoms or races contiguous to Syria; while the first-born of Aram, apparently gave his name to the native land of Job, at a very early period of the world's history. (Gen. x. 22, 23.) The other Aram was the grandson of Nahor, the brother of Abraham, by Kemuel, whose brother Haziz is by some supposed to have given his name to the country of Job, as it can scarcely admit of a doubt that the third brother, Haziz, was the Patriarch from whom the neighbouring district took its name. (Gen. xxii. 20, 21; Job i. 1, xxii. 2.) But as we find the name Aram already applied to describe the country of Bethuel and Lahan, the uncle and cousin of the later Aram, it is obvious that the country must have derived its name from the earlier, not from the later patriarch. (Gen. xxv. 20, xxviii. 5, &c.)

The classical name Syria is commonly supposed to be an abbreviation or modification of Assyria, and to date from the period of the Assyrian subjugation of the ancient Aram; and this account of its origin is confirmed by the fact that the name Syria does not occur in Homer or Hesiod, who speak of the inhabitants of the country under the name of Arimi, (eir 'Apipous, Hom. II. β. 783. Hes. Theog. v. 304.) in connection with the myth of Typhon, recorded by Strabo in describing the Orontes (Orontes); and this writer informs us that the Syrians were called Aramei or Arimi (i. p. 42. xiii. p. 627. xvi. pp. 784, 785), which name was, however, extended too far to the west or north by other writers, so as to comprehend Cilicia, and the Sace of Sythia. (See Bochart, Geoj. Sac. lib. ii. cap. 6.) Herodotus, the earliest extant writer who distinctly names the Syrians, declares the people to be identical with the Assyrians, where he is obviously speaking of the latter, making the former to be the Greek, the latter the barbarian name (vi. 63); and this name he extends as far south as the confines of Egypt,—placing Sidon, Azotus, Caesarea, and, in short, the Phoenicians in general, in Syria (ii. 12, 158, 159), calling the Jews the Syrians 'in Palestine' (ii. 104); and as far west as Asia Minor, far the Cappadocians, he says, are called Syrians by the Greeks (i. 72), and speaks of the Syrians about the Troadon and Parthenius, rivers of Bithynia (ii. 104). Consistently with this is the description of Syria as extended from Babylonia as far as the gulf of Issus, and thence as far as the Euxine (xvi. p. 597); and in this wider sense the name is used by other classical writers, and thus includes a tract of country on the west which was not comprehended within the widest range of the ancient Aram.

11. Natural boundaries and divisions. — The limits of Syria proper, which is now to be considered, are clearly defined by the Mediterranean on the west, the Euphrates on the east, the range of Amanus and Taurus on the north, and the great Desert of Arabia on the south. On the west, however, a long and narrow strip of coast, commencing at Maratini, and running south to El Tabarik, was rocky and inhospitable, and, it is supposed, had been described under that name. In compensation for this deduction on the south-west, a much more ample space is gained towards the south-east, by the rapid tendency away of the Euphrates eastward, between the 36th and 34th degree north lat., from near the 38th to the 41st degree of east longitude, thereby increasing its distance from the Mediterranean sea, from about 100 miles at Zeugma (Sir), to 250 miles at the boundary of Syria, south of Cireon (Kiapur). Commencing at this point, or at the island Samara (Gulf of Iskanderian), near Issus itself, the Amanus Mons (Alma Dagh), a branch of the Taurus, runs off first in a northern direction for 18 miles, then north-east for 30 more, until it joins the main chain (Duradian Dagh), a little westward of Marath, from whence it runs due eastward to the Euphrates. The southern line cannot be accurately described, as being marked only by an imaginary line drawn through an interminable waste of sand. This irregular trapezium may now be subdivided.

For the purposes of a physical description, the ranges of Lebanon and Antilibanus may be assumed as landmarks towards the south, while the river Orontes affords a convenient division in the geography of the country towards the north; for the valley of the Orontes may be regarded as a continuation northward of the great crease of CœleSyria, the watershed being in the vicinity of Bâlîkeb, so that this depression extends along the whole western side of the country, having on each side, through nearly 6 degrees of latitude, an almost continuous chain of mountains, from which numerous effluents strike into the interior in different directions. (Col. Chesney, Expedition for the Survey of the Euphrates and Tigris, vol. i. p. 384.)

1. The western range.— Where the range of Amanus meets the coast at the Gulf of Iskanderian, near the river Issus, it leaves only a narrow pass between its base and the sea, formerly occupied by the Armenian, Syrian, or Anamitan gates of the various geographers, which will be again referred to below. Thus range then advances southwards under various names, approaching or receding from the coast, and occasionally throwing out bold headlands into the sea, as at Ras Khawzer, Ras Bassit (Posidium Prom.), Ras-es-Shuka, &c. The part of the chain north of the Orontes is thus described by Col. Chesney (p. 384): "The base of the chain consists of masses of serpentine and diablastic rocks, rising abruptly from plains on each side, and supporting a tertiary formation, terminating with bold rugged peaks and conical summits, having at the crest an elevation of 5987 feet. The sides of this mass are occasionally favored by rocky fissures, or broken into valleys, between which there is a succession of rounded shoulders, either protruding through forests of pines, oaks, and larches, or diversified by the arbutus, the myrtle, olander, and other shrubs. Some basalt
appears near Ayas, and again in larger masses at some little distance from the N.E. side of the chain. Southward of Helian the chain becomes remarkable for its serrated sides and numerous summits, of which the Akkum Tuhg shows about fifteen between that place and the valley of the Orontes. The sharp ridge of Jebel Rhoma terminates in the rugged and serrated mass of Kaschar, which overhangs the sea, and separates the Gulf of Iskanderun from the Gulf of Antioch. South of this is Jebel Musa, the Mosaic Pleria of classic writers, a limestone offset from Mount Rhoma, and itself imperfectly connected with the other classic mountain, Casius, by the lower range of Jebel Simdir. A little to the south of the embouchure of the Orontes, Mount Casius reaches an elevation of 5699 feet, composed of supra-cretaceous limestone, on the skirts of which, among the birds and larch woods, are still to be seen the ruins of the temple, said to have been consecrated by Cronus or Ham (Ammianus Marcell. xxii. 14), while the upper part of its cone is entirely a naked rock, justifying its native modern name Jebel-el-Akra (the bald mountain). From this point the mountain chain continues southward, at a much lower elevation, and receding further from the coast, throws out its roots both east and west, towards the Orontes on the one side and the Mediterranean on the other. This range falls, for the general name of Jebel Amsarick from the tribe that inhabits it, but is distinguished in its various parts and branches by local names, chiefly derived from the towns and villages on its sides or base. The southern termination of this range must be the intervening plains which Pinuy places between Libanus and Basylys (les interjacentes campi), on the north of the former. (Plin. v. 20.) These plains Shaw finds in the Janeiro (fruitful), as the Arabs call a comparatively level tract, which "commences a little south of Maguzzel, and ends at Sunarab, extending itself all the way from the sea to the eastward, sometimes five, sometimes six or seven leagues, till it is terminated by a long chain of mountains. These seem to be the Mons Barylys of Pinuy," Sunarab he identifies with Sinyara,—which Pinuy places in Coelesyria at the northern extremity of Mount Libanus,—but remarks that, as Sunarab lies in the Jene, 2 leagues distant from that mountain, this circumstance on the other hand falls in with Area, where Mount Libanus is remarkably broken off and discontinued. (Shaw, Travels in Syria, pp. 268, 269, 4to ed.) Here we reach the confines of Phoenicia, to which a separate article has been devoted, as also to Mount Lebanon, which continues the coastline to the southern extremity of Syria.

2. Coelesyria, and the valley of the Orontes. Although the name of Coelesyria (Hollow Syria) is sometimes extended so as to include even the coast of the Mediterranean—as in the passage above cited from Pinuy—from Seleucia to Egypt and Arabia (Strabo, ut infra), and especially the prolongation of the southern valley along the cressas of the Jordan to the Dead Sea (see Roland, Palaeastia, pp. 103, 438, 607, 774), yet, according to Strabo, the name properly describes the valley between Libanus and AntiLibanus (xxvi. 2, § 21), now known among the natives as El-Beki'a (the deep plain). "Under this name is embraced the valley between Lebanon and Anti-Lebanon, from Zahleh southward; including the villages on the declivities of both mountains, or rather at their foot: for the eastern declivity of Lebanon is so steep as to have very few villages much above its base; and the western side of Anti-Lebanon is not more inhabited. Between Zahleh and its suburb, M'allelaha, a stream called El-Berdiny descends from Lebanon and runs into the plain to join the Litany. The latter river divides the Beki'a from north to south; and at its southern end passes out through a narrow gorges, between precipices in some places of great height, and finally enters the sea, where it is called Kismih" (Leon. Texto. To the south of the Beki'a is the Merj 'Ayun (meadow of the springs), "between Jebel Basharak and Wady-et-Teim, on the left of the Litany. Here Lebanon and Anti-Lebanon come together, but in such a manner that this district may be said to separate rather than to unite them. It consists of a beautiful fertile plain, surrounded by hills, in some parts high, but almost everywhere arable, until you begin to descend towards the Litany. The mountains farther south are much more properly a continuation of Lebanon than of Anti-Lebanon." (Dr. Eli Smith, in Biblical Researches, vol. iii. Appendix B, pp. 136, 140.) This then is the proper termination to the south of Coelesyria. The Merj 'Ayun terminates in the Erd-el-Hitch, which is traversed by the several tributaries of the Jordan, and extends as far south as the Bahr-el-Hitch. (Samachonitis Lacus; Palaeastina, pp. 521, 522.)

To return now to the watershed. Baulbek gives its name to the remainder of the Beki'a, from the village of Zahleh northward (Smith, ut supr. p. 143), in which direction, as has been stated, the remotest sources of the Orontes are found, not far from Baulbek, which lies in the plain nearer to the range of AntiLibanus than to Lebanon. (Orontes; Heliofoli.) The copious fountain of Libbek is about 10 miles north-east of Baulbek; and this village gives its name to the stream which runs for 12 miles through a rocky desert, until it falls into the basin of a much larger stream at the village of Er-Ras or 'Ain Zerka, where is the proper source of the Orontes, now El-Azi. The body of water now "becomes at least threefold greater than before, and continues in its rugged chan in generally in a north-easterly course for a considerable distance, until it passes near Ribigh," then runs north through the valley of Homo, having been fed on its way by numerous streams from the slopes of Lebanon and AntiLibanus, draining the slopes of Jebel Amsarick, and forming as it approaches Homo the Bekr-el-Kades, which is 6 miles long by about 2 wide. (Chesney, ut supr. p. 334; Robinson, Journal of the R. G. S. vol. xxiv. p. 32.) Emerging from the lake, it waters the gardens of Homo about a mile and a half to the west of the town, then running north to Er-Rustam, where is a bridge of ten arches, it is turned from its direct course by Jebel Arbalyn on its left bank, round the roots of which it sweeps almost in a semicircle, and enters Hamah, where it is crossed by a bridge of thirteen arches. It now continues its course north-west for about 15 miles to Kaliatt-es-Sejar (Larissa), then due west for 8 miles, when it turns due north, and so continues to the Jar Halid mentioned below. About 20 miles below Larissa it passes Koliatt-em-Maddak (Apani) on its right bank, distant about 2 miles; a little to the north of which it receives an affluent from the small lake El-Tal'a, remarkable for its abundance of black-fish and carp (Burckhardt, Syria, p. 143; Chesney, p. 395), then, running through Wady-el-Qhab, enters the Birkelet-el-Horaasch, 8 miles
with its impetuousity is curbed and its waters dissipated in the marsses, so that it flows off in a diminished stream to Jisr Skogher, to be again replenished in its course through the plain of 'Uruk by other affluents, until it reaches its northernmost point at Jisr Hadid (the Iron Bridge), a little below which it winds round to the west, and about 5 miles above Antiocoh roces from Tahr-el-Abiad (the White Sea) the Tahr-el-Koussat, a navigable river, containing a greater volume of water than El-Layj itself. It flows through the north of Antiocoh and the infamous groves of Daphne, through an exceedingly picturesque valley, in a south-west course to which it enters a little to the south of Scclia, after a circumspect course of about 200 miles, between 34° and 36° 15' of north latitude, 36° and 37° of east longitude.

3. Antiocoh and the eastern range. — The mountain chain which confines Coele叙利亚 on the east is properly designated Antiocoh, but it is further extended towards the north and south in offsets, which confine the valley of the Orontes and the Jordan valley respectively. Antiocoh itself, now called Jebel-esh-Shurkh (Eastern Mountain), is a vastly inferior to Libanus both in majesty and fertility, has been already described, as has also its southern prolongation in Mount Hermon, now Jebel-esh-Selkeh, sometimes Jebel-et-Telpy (the Snow Mountain). [Antiocoh] The northern chain, on the east of the Orontes valley, has not been sufficiently surveyed to admit of an accurate description, but there is nothing striking in the height or general aspect of the range, which throws out branches into the great desert, of which it forms the western boundary.

4. The eastern desert. — Although for the purposes of a geographical description the whole country east of the mountain chains above described may be regarded as one region, and the insufficient materials for a minute and accurate survey make it convenient so to regard it, yet it is far from being an uniform flat, presenting throughout the same features of desolation. On the contrary, so far as it has yet been explored, particularly to the south of the parallel of Damascus, the country is diversified by successions of hills and valleys, which often present large fertile tracts of arable land, cultivated in many parts by a hardy and industrious race of inhabitants. By far the richest of these is the plain of Damascus (El-Ghlabah), at the foot of the eastern declivity of Antiocoh, the most excellent of the four earthy paradises of the Arabic geographers. (Dr. Eli Smith, in Bib. Res. vol. iii. Appendix. B. p. 147.) It owes its beauty, not less than its fertility, to the abundance of water conveyed to it in the united streams of the Barada and the Phigee, which, issuing together from the eastern roots of Antiocoh, and distributed into numerous rivulets, permeate the city and its thousands of gardens, and finally lose themselves in the Sea of the Plain, Bahr-el-Merj, which the exploration of a recent traveller has found to consist of two lakes instead of one, as has been hitherto represented in all modern maps. (Porter, Five Years in Damascus, 1853, vol. i. pp. 377—382, and map.) Indeed, so much fresh light has been thrown on the south-west of Syria by Mr. Porter's careful surveys, that the geography of the whole country will have to be greatly modified in all future maps, as we are now, for the first time, in a position to define with some degree of accuracy the limits of several districts mentioned both by sacred and classical writers, whose relative position even has hitherto been only matter of doubtful conjecture. The statements of Burckhardt, who has hitherto been the sole authority, require considerable correction.

The Barada, the ancient Abam, from its rise in Antiocoh, near the plain of Zebeday to its termination in the South and East Lakes, is computed to traverse a distance of 42 miles, and to water a tract equal to 311 square miles, inhabited by a population of 150,000 souls, or an average of 4,52 to every square mile. In its course there are a few rises and its suburbs, "The prevailing rock of the mountains through which it flows is limestone. In the higher regions it is hard and compact, but near Damascus soft and chalky, with large modules of flint intermixed. Fossils shells and corals in great variety are found along the central chain of Antiocoh, through which the river first cuts. In the white hills near Damascus are large quantities of ammonites. At Suk Wady Barada (near its source) is a vast bed of organic remains, which, in a mile in length, has some places exceeding 100 feet in thickness. Trunks of trees, branches of every size and form, and even the delicate tracery of the leaves may be seen scattered about in vast masses. There are in several places among the mountains traces of volcanic action. On a lofty summit, two hours' north-east of Suk, is what appears to be an extinct crater. The mountain has been rent, the limestone strata thrown back, and black porous trap-rock fills up the cavity. The plain of Damascus has a leamy soil intermixed with fine sand. The substrate is generally conglomerate, made up of rounded smooth pebbles, flint, and sand. The south-eastern portion of the plain is entirely volcanic." (Porter, Journal of Sacred Literature, vol. iv. p. 262.) The plain of Damascus is bounded towards the south by a low range of hills called Jebel-esh-Awed (the Black Mountain), the southern base of which is washed by a stream, which has lately been supposed by some travellers to represent the ancient Pharpar. It is now called Naher-el-Awed, which, running along a course about north-east to a small lake named Bahr-el-Heijang, only about 4 miles south of the Barahel-el-Kibliah, into which the Barada flows. It runs partly through a limestone and partly through a volcanic formation, which continues hence far to the south. (Porter, in Journal of Soc. Lit. vol. v. pp. 45—57, Travels, vol. i. pp. 297—322.) On the south side of the river, opposite to Jebel-esh-Awed, is another low mountain range called Jebel Mania, and a higher elevation connected with this range commands a view of those ancient divisions of Southern Syria, which have hitherto been only conjecturally placed in modern maps. Their boundaries have notwithstanding been indelibly traced by the hand of nature, and the limits so clearly defined that they actually exist, mostly under their identical ancient names, as an evidence of the fidelity of classical and sacred geographers. But these will be more conveniently considered in connection with Trachonitis, round which they are grouped [Tra- chonitis], particularly as this part of the country may be regarded as debatable ground between Syria, Arabia, and Palestine.

Turning now to the north of Damascus and the east of the mountain range, the country between this city and Aleppo offers nothing worthy of particular notice; indeed its geography is still a blank in the map of Syria, except its western side, which is traversed by the Hoy road, the most northern part
The northern part of Syria is now comprehended in the province of Aleppo. It is bounded on the east by the Euphrates, and on the north and west by the mountain chains of Taurus and Anti-Libanus, the former of which throws off other diverging branches to the south, until they only point the way to the valleys of the Orontes on the east, so continuing the connection between Anti-Libanus and its parent stock. Aleppo itself is situated in a rich and extensive plain, separated on the east by undulating hills from the almost unoccupied country, which consists of a level sheep-track, extending from thence to the Euphrates. The sandy level of this Syrian desert is, however, diversified by occasional ranges of hills, and the plateaux are of various elevation, rising a little west of the meridian of Aleppo to a height of 1500 feet above the Mediterranean, and thence declining suddenly to the east and much more gradually to the west. It is on one of these ranges in the heart of the desert, north-east of Damascus, that Palmyra is situated, the only noticeable point in all the dreary waste, which has been described in an article of its own [Palmyra]. The tract between Damascus and Palmyra has been frequently explored by modern travellers, as well as the ruins themselves; but there is no better account to be found of them than in Mr. Porter's book, already so frequently referred to (vol. i. pp. 149—254; compare Irby and Mangles, pp. 257—276).

III. Ancient geographical divisions.—The earliest classical notice of Syria, which could be expected to enter into any detail, is that of Xenophon in his Anabasis. Unhappily, however, this writer's account of the march of Cyrus through the north of Syria is very brief. The following notes are all that he offers for the illustration of his ancient geography. Issus he mentions as the last city of Cilicia, towards Syria. One day's march of 5 parasangs brought the army to the gates of Cilicia and Syria: two walls, 3 stadia apart, — the river Cersus (Kéros) flowing between, — drawn from the sea to the precipitous rocks, fitted with gates, allowing a very narrow approach along the coast, and so difficult to force, even against inferior numbers, that Cyrus had thought it necessary to send for the fleet in order to enable him to turn the flank of the position which was abandoned by the general of Antiochus. One day's march of 5 parasangs brought them to Myriandrus (Myrian tras), a mercantile city of the Phoenicians, on the sea. Four days' march, or 20 parasangs, to the river Chalus (Xδας), abounding in a fish held sacred by the Syrians. Six days, or 30 parasangs, to the fountains of the Daradax (al. Darides, Aδραδος), where were palaces and parks of Belusa, governor of Syria. Three days, 15 parasangs, to the city Thapsacus on the Euphrates (Anab. ii. 4. §§ 4—18). It is to be remarked that the 9 days' march of 50 parasangs beyond this is said by Xenophon to have been through Syria, where he uses that term of the Aram Naharaim, of the Scriptures, equivalent to Mesopotamia. Of the places named by the historian in Syria Proper, Issus has been fully described [Issus]. The position of the Cilician and Syrian gates is marked by the narrow passage left between the base of the Anti-Libanus and the sea, where the ruins of two walls separated by an interval of about 600 yards, still preserve the tradition of the fortifications mentioned in the narrative. The Cersus, however, now called the Merkez-su, appears to have been diverted from its ancient channel, and runs to the sea in two small streams, one to the north of the northern wall, the other to the south of the southern. The site of Myriandrus has not yet been positively determined, but it must have been situated about half-way between Iskanderin (Alexandria) and Araeis (Thebes), as Strabo also intimates (see below). From there it must have been passed through the valley of the Beldin pass, and have marched through the plain of 'Uml, north of the lake of Antioch, where three fordable rivers, the Labetos (Kara-su), the Omon paras (Axiwcid), and the Areclatus (Afrin), must have been crossed on their march; which, however, are unnoticed by the historian. The river Chalus, with its sacred fish, is identified with the Chalib or Roweik, the river of Aleppo, the principal tributary to which in the mountains is still called Balaclus, or Fish-river. The vegetation of fish by the Syrians is mentioned also by Dioscorus, Lucian, and other ancient writers. (Ainsworth, Travels in the Track of the Ten Thousand, pp. 57—65.) The source of the river Daradax, with the palaces and parks of Beleys, 30 parasangs, or 90 geographical miles, from Chalus, is marked by an ancient site called to the present day Balsis, peculiarly positioned with regard to the Euphrates, and at a point where that river would be first approached on coming across Northern Syria in a direct line trending a little southward, and corresponding at the same time with the distances given by Xenophon. (Ainsworth, l. c. p. 66.) The ruins of a Roman castle, built upon a mound of ruins of greater antiquity, doubtless preserve the site of the satrap's palace; while the rich and productive alluvial soil of the plain around, covered with grasses, flowering plants, jungle, and shrubs, and abounding in game, such as wild boars, francolin, quails, hounds, &c., represents "the very large and beautiful paradise:" the river Daradax, however, is reduced to a canal cut from the Euphrates, about a mile distant, which separated the large park from the mainland; and Mr. Ainsworth thinks that the fact of the fountain being 100 feet wide at its source, "tends to show that the origin of a canal is meant, rather than the source of a river" (p. 67, n. 1). Thapsacus is described in a separate article [Thapsacus].

For more full, but still unsatisfactory, is the description of Syria given by Strabo, a comparison of which with the later notices of Pliny and Ptolemy, illustrated by earlier histories and subsequent Itineraries, will furnish as complete a view of the classical geography of the country as the existing materials allow. The notices of Ptolema, necessarily intermingled with those of Syria, are here omitted as having been considered in a separate article [Ptolemaic]. On the north Syria was separated from Cilicia by the Anti-Libanus. From the sea at the cult of Issus to the bridge of the Euphrates in Commagene was a distance of 1400 stadia. On the east of the Euphrates, it was bounded by the Scintii, Arabs, on the south by Arabia Felix and Egypt, on the west by the Egyptian sea as far as Issus (xiv. p. 749). He divides it into the following districts, commencing on the north: Commagene; Seleucia of Syria; Cilicia of Syria; Phoenicia on the coast; Judaea inland. Commagene was a small territory, having Samosata for its capital, surrounded by a rich country. Seleucia, the fortress of Mesopo...
SYRIA.

Syreria, was situated at the bridge of the Euphrates in this district, and was assigned to Commagea by Pompey. Seleucia, otherwise called Tetrapolis, the best of the before-named districts, was subdivided according to the number of its four principal cities, Seleucia of Pieria, Antioch, Apamea, and Laodicea. The Oronotes flowed from Coseleyria through this district, having to the east the cities of Bumbye, Beroea, and Heraclea, and the river Euphrates. Heraclea was 20 stadii distant from the temple of Athena at Cyrrhestis. This gave its name to Cyrrhestisc which extended as far as Antiochis to the south, touched the Amanus on the north, and was co-terminous with Commagene on the east. In Cyrrhestis were situated Gindarus, its capital, and near it Heraclea. Contiguous to Gindarus lay Pagae of Antiochis, on the Amanus, above the plain of Antioch, which was watered by the Arcenitus, the Oroetes, the Laobots, and the Oenoparos, in which was also the camp of Meleager; above these lay the table mount, Trapezoe. On the coast were Seleucia and Mount Pieria, attached to the Amanus, and Rhous (Pauis), between Issus and Seleucia. South of Antiochis was Aparisia, lying inland; south of Seleucia was the district of Amanus, which the former was divided from Seleucia by the embouchure of the Oronotes and the rock-hewn temple of Xynphaeum; then Posidium a small town, Heraclea, Laodicea, &c. The mountains east of Laodiceia, sloping gradually on their west side, had a steeper inclination on the east towards Apameia (named by the Macedonians Pela) and the Chersonese, as the rich valley of the Oronotes about that city was called. Conterminous with the district of Apameia, on the east, was the country of the phylarch of the Arabs named Parapotamia, and Chalcedee, extending from the Masayas; while the Seleucite Arabs also occupied the south, being less wild and less distinctively Arabs in proportion as they were brought nearer by position to the influences of Syrian civilization. (Ibid. pp. 749-753.) Then follows the description of the coast, which belongs to Phoenicia (sup. p. 606), and his extraordinary mis-statement about Libanus and Antilibanus (p. 753) alluded to under those articles. According to this writer, the western terminus of Laodicea was on the coast, a little to the south of Tripoli, at a place called ὁρος τριπολιν, while Anti-libanus commenced at Saladin. The two ranges then ran parallel towards the east, until they terminated in the mountains of the Arabians, above Damascus, and in the two Trachones (Trachonitis). Between these two ranges lay the great plain of Coseleyria, divided into several districts, the width at the sea 200 stadia, the length inland about double the width; fertilized by rivers, the largest of which was the Jordan, and having a lake called Genusceritis (Thadmas Makar). The Chrysorhass, which rose near Damascus, was almost wholly absorbed in irrigation. The Lycus and Jordan were navigated by the Aradian. The westernmost of the plains, along the sea-border, was called Macra (Μάκρα πατος), next to which was Massayas, with a hilly district in which Gindere was situated as a kind of aeropos of the district, which commenced at Laodicea. This district, then, was divided by the Oronotes and Arabs (Itlukla). Above Massayias was the Royal Plain (Ἀρχαῖον Βασιλεία), and the country of Damascus, followed by the Trachones, &c. (pp. 755-756). This very confused and inaccurate description has been sufficiently corrected in the account above given of the Physical Geo-

graphy of Syria, and need not be further noticed than to observe that it is very strange that, after Syria had been occupied by the Macedonians and the Romans for so many years, and notwithstanding the frequent campaigns of the Roman legions in that country, even its main features were so little known.

Pliny confines Syria to the limits usually assigned it, that is he distinguishes between Syria and Palestine, which are confounded by Strabo. He describes Galilee as that part of Judaea which adjoins Syria (v. 14. s. 15), but coincides with Strabo in giving a description of the coast under the name of Phoenice (19. s. 17). His notion of the direction of the ranges of Libanus and Antilibanus is more correct than that of Strabo; but his description of the coast of Phoenice, like that of his predecessor, is far more correct than that of the interior of the country; while his grouping of the various districts is altogether arbitrary and incorrect. Thus, while he correctly describes Mount Lebanon as commencing behind Sidon, he makes it extend for 1500 stadia (a monstrous exaggeration, if the reading is correct) to Simyra, and this he calls Coseleyria. Then he loosely states the parallel range of Antilibanus to be equal and adjoin that of Strabo, but the later writers, that the two ranges were joined by a wall drawn across the intermediate valley. Within, i.e. east of this last range ("post eun intrnum") he places the region of Decapolis and the tetrarchies which he had before enumerated (viz. Trachonitis, Paneas, Abila, Arca, Ampeloessa, Gabe), and the whole extent of Palestine ("Palestina tota laxitas"),—a confusion on the part of the author involving a double or triple error; for, 1st, unless Damascus be included in the Decapolis, the whole region lay south of Antilibanus; 2dly, the cities of the Decapolis lay in several tetrarchies, and therefore ought not to be distinguished from them as a separate district; 3dly, the tetrarchies themselves, which are wrongly enumerated, lay, for the most part, within Coseleyria proper, and only Abilene, in any proper sense, to the east of Antilibanus, although this description might loosely apply to Trachonitis also (Trachonitis). But to descend to particulars.

Phoenicia. The coast of Phoenicia begins at the mouth of the Orontes, according to Pliny, at the island Aradus, north of the river Elleutherus, near Simyra and Marathus. On the coast were situated Carne, Balanec, Palto, Galase, the promontory on which lay Laodicea Libera, Dionpolis, Heraclea, Charadus, Posidium; then the promontory of Syria of Antioch, then that of Seleucia Libera, called also Pieria. Another egregious error follows this generally correct statement, and is accompanied with another example of exaggeration. Mous Catus he places above Seleucia ("super camp")—from which it is distant about 15 miles to the north, the Oronotes intervening—and states its ascent to be xix. M. P.; and its direct height iv. M. P., or nearly 20,000 feet!—its actual height being about 5,700 feet, from the summit of which the sun might be seen above the horizon at the fourth watch, i.e. three hours before sunrise. North of this came the town Illinois, behind which ("in tertio") Partae Syriae, between the Ilissius Montes and the Taurus, then Mecipolis terminates to west, and Mount Hauran on which was Panium, and which separated Syria from Cœle Syria (v. 20. 22). In the interior the following districts belonged to Coseleyria; Apameia, divided by the river Marayas from the tetrarchy of the Naxerid; Bumbye, otherwise called Hieropolis, but Mabeg by the Syrians (luminous for the worship

of the monstrous Araratc, the Decteo of the Greeks.; Chalce ad Belurn, which gave its name to the region of Chalcidene, the most fertile in Syria; then Cyrrhestes, named from Cyrrhus; the Gazatae, Galani; the Antiochians named Grenmoun- nian; the Elaeans; the Euphrates; the infernal seat of the Eroseni; Hyldites; the Atraces and their kindred Bastarveti; the Mariammitani, the tetarch of Mammisea, Paradisae, Pagaeae, Pinaritae; two other Seleuciae, the one at the Euphrates, the other at Belus; the Cardytians. These all places in Coelosyria: the towns and peoples enumerated in the rest of Syria, omitting those on the Euphrates, which are separately described, are the Arethusa, Berenicee, Epiphaniasen, on the east, the Laodiceans by Lybaris, the Iacacaei, Larisaces, besides seventeen tetarchies with barbarous names not further specified. The towns named in connection with the Euphrates are, Samosata, the seat of Commagene, x. M. P. below the cataracts, where it receives the Marvas; Cirgilla the end, and Imex the commencement, of Commagene; Epiphanis, Antiochis ad Euphrates; then Zeugma, Iaxix. M. P. from Samosata, celebrated for the bridge over the Euphrates where its name— which connected it with Aparmeni on the left bank of the river—was transferred to Euphrates. On reaching Ura, the river turned to the east, leaving the vast desert of Palmyra on the right. Palmyra was XXXVII. M. P. from the Persian city of Seleucia ad Tigrim, orix. M. P. from the nearest part of the Syrian coast, and xxvii. M. P. from Damascus. Below ("infra") the deserts of Palmyra was the region Strelela, and the above-named Hierapolis, Bereno, and Chalce; and beyond ("ultra") Palmyra, Emesa and Edhatas, half as near again ("dimidio proprio") to Petra as was Damascus (ib. xvi. 23—26).

It is difficult to discover many of these names in their Latin disguis still further obscured by corrupt readings; but many of them will occur in the more accurate and methodical notices of Ptolemy, in connection with which a comparative Geography of Ancient and Modern Syria may be attempted. The boundaries of Syria are fixed by Ptolemy consistently with earlier writers. On the N., Crete, and Capatamia, X. M. P. from Cappadocia, a part of Cappadocia, x. M. P. from the S. Judaea; on the E. the Arabian desert as far as the ford of the Euphrates, near Thapsacus; then the river itself as far as Cappadocia (Ptol. v. 15. §§ 1—8).

The districts and towns are enumerated under the following subdivisions:

1. THE COAST (§§ 2. 3) after Isus and the Cilician Gates. 1. Alexandria by the Issus. 2. Myrian- drus, 3. Rhosos. 4. The Rhosken Rock (ARK-fAAT). 5. Seleucia of Pieria. 6. The mouth of the Orontes. 7. Poseidonia. 8. Hersalea. 9. Laodicea. 10. Gabala. 11. Paltos, 12. Balanace. [Then follows Phoe- nicia, from the Eleutherns to the Chorsaeus. S. of the Dead Sea. See PHOLENE.] Of the above-named maritime towns of Syria, No. 2 alone has occurred in Xenophon, 5 parasangs S. of the Cilician Gates. Both this and most of the others occur in Strabo and Pliny, and the distances are furnished by the author of the Stadiasmus Maris Magni, and the Itinerarium Antonini Pius. And Strabo, P. 211, mentions a town named Seremist, not mentioned by Strabo or Pliny, was 45 stadia from the Cilician Pyla. Myriandrus was 80 stadia from Alexandria. Its site has not been identified (Ains- worth, Travels in the Track of the Ten Thousand, p. 59), but is conjecturally, though probably, placed by Pococke on the river Dugelhan. (Observations on Syria. p. 179.) Rhossus (now Arsis) is 90 stadia from Myriandrus; while the Rhossicus Seopolis, 80 stadia from Rhossus, is to be identified in the Rhas Khouszer, the southern promontory of the Gulf of Iskenderian, a feature on this coast. (Ib. p. 180; Chesney, Expedition, i. p. 410.) Between Seleucia and the Rhossic rock the Stadiasmus inserts Georgia, 40 stadia from the former, 80 from the latter. Seleucia is clearly marked by extensive and important ruins. (Seleucia.) From Seleucia to the Orontes, 40 stadia. Between the Orontes and Poseidion the Stadiasmus enumerates Nymphaeum, 15 stadia; Long Island (Maspa pycx). one of the Pheceans R. 50 stadia; Chaladrus, or Chaldropolis (otherwise the Charadrus of Ptolemy), 10 stadia; Solonii, 60 stadia, above which was a lofty mountain called the Throne (Opeyers), distant 80 stadia from Poseidion. Heraclea (Ros-el-Bali), situated on a cape called Poiia, was 100 stadia from Poseidion, and Laodicea 120 stadia direct distance from Heraclea; between which the Stadiasmus inserts Palaesia and Albus Portus, the former 120 stadia from Poiia, the latter 30 stadia from Laodicea, with a hke interval between the two. From Lau- dicea the Stadiasmus reckons 200 stadia to Balanace (Bacrius), in direct distance, subdivided as follows: from Laodicea to a navigable river, probably Nahr- el-Kebir, 70 stadia; from that to Gabala (Jebbeh), 90; to Pultus (Boldo), 30; to Cape Balanace, 70 stadia.

3. BYERIA. (§ 12.) 1. Pina. 2. Pagaeae. 3. The Syrian Gates. This is the w. western part of the country, where Bagres still marks about the centre of the district. (Pagaeae.)

4. CYRBHETICE (§ 13). 1. Arisoria. 2. Rhois. 3. Bada. 4. Hersalea. 5. Niara. 6. Hier- apolis. 7. Cyrrhus. 8. Berrheo. 9. Basa. 10. Pa- phlara. This district lay to the east of Pieria, and corresponded with the fertile plain watered by the three streams that flow into the lake of Antoch, the Lake of Lybutus, the river Carius, and theomenclature of Strabo; on the last and easternmost of which, now called the Afrin, the modern village of Corsus still represents the ancient Cyrrhus, the capital of the district to which it gave its name. This part of Syria is so little known that it is impossible to identify its other ancient towns, the names of which, however, might doubtless be recovered in existing villages or sites. The village of Corsus, which has ruins in its vicinity, is situated on the slopes of the Taurus, about 40 miles N. by W. of Aleppo and 15 miles NW. of Kilis, the seat of the Turkish government, whose limits nearly correspond with those of the ancient Cyrbhetc. (Chesney, Euphrates Expedition, vol. i. p. 422, and map i.)

V. BY THE EUPHRATES (§ 14). 1. Uria. 2. Arisitas. 3. Zeugma. 4. Europas. 5. Caesaria. 6. Bethanamia. 7. Geraea. 8. Arimara. 9. Ephesia or Erhasiga. These towns of the Euphrates were situated lower down the stream than those mentioned above (§§) apparently between Samosat and the river Soejer, a tributary of the Euphrates, which, rising near Ain Tab, enters that river a little below some ancient ruins, supposed to represent the Caesaria of Ptolemy (No. 5). The names of some of these towns are still preserved in the native villages situated between the Soejer and the Euphrates; and it is clear that the geographer did
not intend to say that all these towns were on the river. The name of Orontes, not far above Bireh-Jik and Port William, is Urina (No. 1 in the list), to the west of which, not far from 'Ain Tub, is the small village of Arud, Arulis (No. 2). (Chesney, p. 419.)

vi. SELECTUS (§ 15). 1. Gephyra. 2. Gindanin. 3. Innna. The Seleucids of Tobeley comprehended a small part only of that district described under the same name by Strabo, probably that tract of coast to the north of the Orontes, in which Seleucia Pieria was situated. [SELECTUS; SELECTIA PIERIA].

vii. Cassiotis (§ 16). 1. Antiuch on the Orontes. 2. Daphne. 3. Bartiahel. 4. Arabis (al. Lydia). 5. Seleucia ad Belum. 6. Larissus. 7. Ephiphanea. 8. Rhapanea. 9. Antardarus. 10. Marathus. 11. Marianne. 12. Mamuya. This district comprehended the coast from the mouth of the Orontes to Aradus, so including part of Phœnicia, while in the east it extended as far as the Orontes, thus corresponding nearly with the province of Tripoli in the modern division of the country. This also was part of Strabo's Seleucus, in which he places Antiuch of. Of the towns recited, 7, 6, 5, 1, 2 were situated at or near the Orontes; 8, 9, and 10 on the coast (see under the names): 3, 4, 11, and 12 have not been identified.

viii. Chalypontis (§ 17). 1. Thema. 2. Aenara (al. Arzama). 3. Derbimace. 4. Clayphon. 5. Spionca; and, by the Ephrates, 6. Barbarianus. 7. Athus. Chalypontis received its name from No. 3 in the list of cities, afterwards called Benusa by Seleucus Nicator, and so designated by Strabo, situated about half-way between Antiuch and Phœnicus. [BEOREA, No. 3.] This fixes the district to the east of Cassiotis, in the pastoral of Aleppo, whose renowned capital called in Arabic Chaleeb, is the modern representative of Chalypontis, which had assumed its ancient name as early as the time of Strabo, unless it had rather retained it throughout among the natives. The district extended from the Orontes to the Ephrates. The sites have not been identified.

ix. Chalybea (§ 18). 1. Chaleeb. 2. Asaphellana. 3. Toluidessa. 4. Maronias. 5. Corna. This district lay south of Aleppo, and therefore of Chalypontis, according to Pococke (Observations on Syria, p. 149), which is confirmed by the existence of Kennasyrin, which he takes to be identified in situation with Chaleeb, and which, among Arabic writers, gives its name to this part of Syria, and to the gate of Aleppo, which leads in this direction. [CHALOS, No. 1.]

x. Apameen (§ 19). 1. Nazaba (al. Nazama). And on the coast of the Orontes, 2. Thelmesamus (al. Thelmensam). 3. Apamea. 4. Emissa. This is comprehended in Strabo's Seleucus, and also in Chalypontis, according to Pococke (Observations on Syria, p. 149), which is confirmed by the existence of Kennasyrin, which he takes to be identified with the district of Homer. [See EMISSA, &c.]

xi. Laodicea (§ 20). 1. Scablosa Laodicia. 2. Paralosas. 3. Jabanta. To the south of the former, higher up the Orontes, also comprehended in the Seleucia of Strabo, No. 1 is identical with Strabo and Pliny's Laodicea ad Libanum, placed by Mr. Porter and Dr. Robinson at Tell Nebh Miniai on the left bank of the Orontes, near Lake Hans, Paralaxis (2), still marked by a pyramid, on which are represented hunting scenes. (See above, p. 495, s. e. ORONTES.) Dr. Robinson so nearly agrees with this identification as to place Paralaxis at Jusheikh-al-Kudin, which is only a few miles distant from the pyramidal of Harmal to the east. (Robinson, Bib. Res. 1852, p. 556; Porter, Five Years in Damascus, vol. ii. p. 339.) Jabanta (3) is distinctly marked by Yahyal on the east of Antiochus, a town mentioned by writers of sacred geography as an episcopal city in the fourth century, a distinction which it still retains.

xii. Phoenicia, inland cities (§ 21). 1. Arca. 2. Palaeobioloi. 3. Gabala. 4. Caesarea Panias. These have been noticed under the articles PHOENICE, &c.

xiii. Seleucia, cities of the Decapolis (§§ 22, 23). 1. Helippolis. 2. Alba, named of Lysans, 3. Susa. 4. Ima. 5. Damascus. 6. Samnul. 7. Abala. 8. Hippos. 9. Capitoli. 10. Gadara. 11. Aila. 12. Scythopolis. 13. Gerasa. 14. Pella. 15. Dec. 16. Gadara. 17. Philadelphia. 18. Caesarea. The statement of the geographer that these are the cities of the Decapolis, preceding, as it does, the enumeration of eighteen cities, can only be taken to mean that the ten cities of the Decapolis were comprehended in the list, and that the remainder, which appear as situated in the province of Triopli in the modern division of the country, this also was part of Strabo's Seleucus, in which he places Antiuch of. Of the towns recited, 7, 6, 5, 1, 2 were situated at or near the Orontes; 8, 9, and 10 on the coast (see under the names): 3, 4, 11, and 12 have not been identified.

IV. History.—The earliest accounts which we possess of Syria represent it as consisting of a number of independent kingdoms. Thus we hear of the kings of Maacha in the time of David (2 Sam. x, 6). Then the kings of the neighbouring town of Gesher in the time of Solomon (1H. iii. 31. xlii. 37), &c. But of all the Aramaic monarchies the most
powerful in the time of Saul and David was Zobah, as appears from the number of men which people brought into the field against David (Ib. viii. 4), and from the rich booty of which they were spoiled by the Israelites (Ib. v. 7). Even after sustaining a signal defeat, they were able in a little time to take the field again with a considerable force (Ib. x. 6). David nevertheless subdued all Syria, which, however, recovered its independence after the death of Solomon, b.c. 975. From this period Damascus, the history of which has been already given [Damascus, Vol. I. p. 748], became the most considerable of the Syrian kingdoms. Syria was conquered by Tiglath-Pileser, king of Assyria, about the year 747 b.c., and was annexed to that kingdom. Hence it successively formed part of the Babylonian and Persian empires; but its history presents nothing remarkable down to the time of its conquest by Alexander the Great. After the death of that conqueror in B.C. 323, Syria and Mesopotamia fell to the share of his general Seleucus Nicator. The sovereignty of Seleucus, however, was disputed by Antigonus, and was not established till after the battle of Ipsus, in 301 b.c., when he founded Antioch on the Orontes, as the new capital of his kingdom. [Antiocheia, Vol. I. p. 142.] From this period the descendants of Seleucus, known by the appellation of Seleucidae, occupied the throne of Syria down to the year 63 b.c., when Antiochus XIII. Asiaticus was dethroned by Pompey, and Syria became a Roman province. (Plut. Pompe. 39; Appian, Syr. 46; Eutrop. vi. 14.) Into the history of Syria under the Seleucidae it is unnecessary to enter, since a table of that dynasty is given in the Dictionary of Biography [Vol. III. p. 769], and the public events will be found described in the lives of the respective monarchs.

The tract of which Pompey took possession under the name of Syria comprised the whole country from the gulf of Issus and the Euphrates to Egypt and the deserts of Arabia. (Appian, Syr. 50, Myth. 106.) The province, however, did not at first comprehend the whole of this tract, but consisted merely of a strip of land along the sea-coast, which, from the gulf of Issus to Damascus, was of slender breadth, but which to the S. of that city spread itself out as far as the town of Canatha. The rest was parcelled out in such a manner that part consisted of the territories of a great number of free cities, who were accustomed to various petty princes, whose absolute dependence upon Rome led to their dominions being gradually incorporated into the province. (Appian, Syr. 50.) The extent of the province was thus continually increased during the first century of the Empire; and in the time of Hadrian it had become so large, that a partition of it was deemed advisable. Commagene, the most northern of the ten districts into which, according to Ptolemy (v. 15), the upper or northern Syria was divided, had become an independent kingdom before the time of Pompey's conquest, and therefore did not form part of the province established by him. [Commagene, Vol. I. p. 651.] The extent of this province may be determined by the free cities into which it was divided by Pompey; the names of which are known partly from their being mentioned by Josephus (Ant. xiv. 4, § 4), and partly from the era which they used, namely that of B.C. 63, the year in which they received their freedom. In this way we are enabled to enumerate the following cities in the original province of Syria: Antiochae, Seleucia in Pieria, Ephphaestia, between Arethusa and Eumes, Apamea; nearly all the towns of the Decapolis, as Abila (near Gadara), Antiochea ad Iippo- purum or Hippos, Canatha, Dium, Gadara, Pella, and Philadelphea; in Phoenicia, Tripolis, Sidon, Tyrus, Doris; in the north of Palestine, Scythopolis and Samaria; on the coast, Turris Stratonis (Caesarea), Joppa, Iamaea, Azotus, Gaza; and in the south, Marissa. The gift of freedom to so many cities is not to be attributed to the generosity of the Romans, but must be regarded as a necessary measure of policy. All these towns had their own constitution, and administered their own revenues; but they were tributary to the Romans, and their taxes were levied according to the Roman system established on the organisation of the province. ("Syria tum primum facta est stipendiaria," Vell. Pat. ii. 37.) The first governors of Syria, and especially Gabinius, who was procured in the year 57 b.c., took much pains in restoring the cities which had been destroyed. (Joseph. Ant. xiv. 5, § 3.) The divisions established in Judea by Gabinius have been noticed in another article. [Palaestina, Vol. II. p. 532.] Caesar, during his expedition against Pharnaces, b.c. 47, confirmed these cities in their rights, and likewise extended them to others, as Gabala, Ladesiea ad Mare, and Potilemais. (Eckel. vol. iii. p. 314 sq.; Norusis, Ep. Syr. Rom. pp. 175—213, 450.) Of the regulations adopted in Syria during the reign of Augustus we have little information.

The same political reasons which dictated the establishment of these free cities, where it was possible to do so, rendered the continuance of dynastic governments necessary in the eastern and southern districts of the province, where either the nomadic character of the population, or its obstinate adherence to ancient institutions was adverse to the introduction of new and regular forms of government. These dynasties, however, like the free cities, were used as the responsible organs of the Roman administration, and were tributaries of Rome. Thus, in the histories of Commagene and Judea, we find instances in which their sovereigns were cited to appear at Rome, were tried, condemned, and punished. The Roman idea of a province is essentially a financial one. A province was considered as a "praebuit populi Romani" (Cic. Terr. ii. 3); and hence the dynasties of Syria may be considered as belonging to the province just as much as the free towns, since, like them, they were merely instruments for the collection of revenue. (Cf. Hucbich, Uber den zur Zeit der Geburt Jesu Christi gehaltenen Canus, pp. 100—112.) Thus we find these petty sovereigns in other parts of the world regarding themselves merely as the agents, or procurators, of the Roman people (Sall. Jug. 14; Maffeii, Hist. Terr. p. 234); nor were they allowed to subsist longer than was necessary to prepare their subjects for incorporation with the province of which they were merely adjuncts.

The Syrian dynasties were as follows: 1. Chabria ad Belun. 2. The dynasty of Arethusa and Eumes. 3. Abila. 4. Damascus. 5. Judea. 6. Palmyra. These states have been treated of under their respective names, and we shall here only add a few particulars that may serve further to illustrate the history of some of them during the time that they were under the Roman sway. All that is essential to be known respecting the first three dynasties has already been recorded. With regard to Damascus, it may be added that M. Aemilius Scaurus, the first
governor of Syria appointed by Pompey, after having punished its ruler, the Arabian prince Aretas, for the attacks which he had made upon the province before it had been reduced to order, concluded a treaty with him in B. C. 62. It has been also related (Joseph. Ant. xv. 4 §5, 14) that Damascus was dependent on the Romans, and sometimes had a Roman garrison (Hieron. in Isid. c. 17; Joseph. Ant. xiv. 11 §7), though it cannot be doubted that the Arabian kings were in possession of it, on the condition of paying a tribute. It has already been remarked that the city was in the possession of an eldharch of Aretas in A.D. 39; and it was not till the year 105, when Arabia Petraea became a province, that Damascus was united with Syria, in the proconsulship of Cornelianus Palma. (Echell, vol. iii. p. 330.)

On the other hand, Judea appears to have been annexed to the province of Syria immediately after its conquest by Pompey in B.C. 63 (Dion Cass. xxxvii. 15-16; Eutrop. vi. 14; Liv. Ep. 102; Strab. xvi. p. 762; Appian. B. J. i. 7 §7; Annal. Maj. iv. 116. 23) during the year 61). Although it retained the same civil administration, with regard especially to the taxes which it paid to the Romans. (Joseph. Ant. xiv. 4 §4, B. J. i. 7 §6.) The race of the Jewish kings ended with Aristobulus, whom Pompey, after the capture of Jerusalem, carried to Rome to adorn his triumph (Appian, Syr. 50; Dion Cass. xxxvii. 16; Plat. Pomp. 45; Joseph. Ant. xiv. 4, &c.) Hyrcanus, the brother of Aristobulus, was left indi left in Judea as chief priest and eisarch, in which office he was confirmed by Caesar; but his dignity was only in the person of a priest and judge. (Dion Cass. l. c.; and Joseph. l. c. and xiv. 7 §2, 10 §2.) The land, like the province of Syria, was divided for the convenience of administration into districts or circles of an aristocratic constitution (Joseph. B. J. i. 8 §5), and during the constant state of war in which it was kept either by internal disorders, or by the incursions of the Barbarians and Parthians, the presence of Roman troops, and of the governor of the province himself, was almost always necessary. (Joseph. B. J. c. xxvii. 1.) After the death of Herod, the province was divided between the Romans and the procurators, who were generally Roman citizens. (Joseph. B. J. c. ii. 24; Liv. Epit. 27.) Syria continued to be governed by Antony’s successors till the year 44, when Cassius seized it, and assumed the title of proconsul. (Cic. ad Fam. xii. 11.) After the death of Philip, Antony appointed to it his lieutenant, L. Decius Saxa, b. c. 41, whose overthrow by the Parthians in the following year occasioned the loss of the whole province. (Dion Cass. xviii. 24; Liv. Epit. 27.) The Parthians, however, were driven out by Ventidius, another of Antony’s lieutenants, in the autumn of 39. (Dion Cass. 36. 39-43; Liv. 46; Plat. Adv. 33.) Syria continued to be governed by Antony’s officers till his defeat at Actium in 31, namely, C. Sosius, b. c. 38 (by whom, as we have said, the throne of Judea was given to Herod), L. Munatius Plancus, n. c. 35, and L. Bibulus, b. c. 31. In b. c. 30, Octavian intrusted Syria to his legate, Q. Didius. After the division of the province, the emperor and senate in b. c. 27, Syria continued to be governed by Augustus pro praetore, who were always consuls. (Suet. Tiber. 41; Appian, Syr. 51.) The most accurate account of the governors of Syria, from b. c. 47 to a. d. 69, will be found in Norius, Censorina Placita. (Opp. vol. iii. pp. 124-531.)
residence was Antioch, which, as the metropolis of the province, reached its highest pitch of prosperity. It was principally this circumstance that induced the emperor Hadrian to divide Syria into three parts (Spart. 14), namely: I. Syria, which by way of distinction from the other two provinces was called Syria Coele, Magna Syria, Syria Major, and sometimes simply Syria. (Gruter, under Sela, i. 1079; Orell. Inscr. Gr. 5186, 4997; Galen, de Antioch. i. 2.) Antioch remained the capital till the time of Septimius Severus, who deprived it of that privilege on account of its having sided with the Severian Nicator, and substituted Laodicea, which he made a city in its stead (Cappell. M. Anton. 25; Avic. Cass. 9; Ulp. Dig. 50. tit. 15. s. l. § 3); and although Caracalla procured that its rights should be restored to Antioch, yet Laodicea retained its title of metropolis, together with a small territory comprising four dependent cities, whilst Antioch, which had also been made a colony by Caracalla, was likewise called Metropoliscolonia (Corp. Inscr. Gr. no. 4472; Paul. Dig. 50. tit. 15. s. 8. § 5; Eckhel, ii. p. 302, sqq., 319, sq.) II. Syria Phœnicia, or Syriaphoenicux, under a legatus Augusti pro praetore (Murat. 2099. 1, 2; Marin. Att. c. 744), consisted of three parts, with three metropolitan cities, namely: 1. Tyre, which first obtained the title of metropolis, with relation to the Roman province, a fact acknowledged by Hadrian (Suidas, ii. p. 147, Bernh.), though it had that appellation previously with relation to its own colonies (Strab. xvi. p. 756; Eckhel, vol. iii. p. 386). 2. Damascus, which from the time of Hadrian became a metropolis, with a small territory comprising five towns. (Just. Mart. Dial. s. Tryphane, c. 78; Tert. adv. Marcion. iii. 13; Eckhel, vol. iii. pp. 331—333.) 3. Palmyra, which appears to have been the residence of a procurator Caesariensis, whom we may infer that it was the centre of a fiscal circle (Notit. Dict. i. p. 82; Ulpian, Dig. 50. tit. 15. s. 1. § 5; Procop. de Aed. ii. 11; Corp. Inscr. Gr. no. 4485. 4496—4499.) A fourth metropolis, Emesa, was added under Helogabalus (Eckhel, iii. p. 311; Ulpian, Dig. 50. tit. 15. s. 1. § 4). Trachonitis also fitted a separate circle at this time, with the village of Phana as its metropolis (Corp. Inscr. Gr. 4351; Orell. Inscr. vol. ii. p. 437, no. 5040). III. Syria Palæstina, from the time of Hadrian administered by a legatus Augusti pro praetore. The name of Syria Palæstina does not appear on coins till the time of the Antonines (Eckhel, iii. p. 435; cf. Aristid. ii. p. 470, Dict.; Galen. de Simpl. Med. iv. 19; Just. Mart. Apol. i. 1; Corp. Inscr. Gr. no. 4029, 4151, &c.). Its metropolis was Caesarea, anciently Turris Stratonis (Eckhel, iii. p. 432). This division of the province of Syria was connected with an alteration in the quarters of the three regions usually stationed in Syria. In the time of Domitianus (iv. 23) the Legio VI. Scythica was cantioned in Syria, the Legio III. Gallica in Phœnicia, and the Legio VI. Ferrata in Syria Palæstina. The system of colonisation which was begun by Augustus, and continued into the third century of our era, was also adapted to insure the security of the province. The first of these colonies was Berenice, where Augustus settled the veterans of the Legio V. Macedonica and VIII. Augusta. It was a Colonia juris Italic. (Eckhel, iii. p. 365; Orell. Inscr. Gr. 514; Ulpian, Dig. 50. tit. 15. s. l. § 3; Esch. Chron. i. 135, Scul.) Augustus also founded Helopolis (Baalbek), which received the jus italicum under Septimius Severus (Ulpian, l. c.; Eckhel, iii. p. 334). Under Claudius was founded Ptolemais (Acris), which did not possess the jus Italicum (Ulpian, th. § 3; Plin. v. 1; Eckhel, iii. p. 424). Ptolemais planted two colonies, Caesarea (Turris Stratonis) and Nicopolis (Emmaus) Paul. Dig. 50. tit. 15. s. 8. § 7; Eckhel, iii. p. 430; which latter, however, though originally a military colony, appears to have possessed neither the right, nor the name of a colony (Eckhel, iii. p. 454; Joeph. Bell. Jud. vii. 6; Sozomen. Hist. Eccles. v. 21.) The chief colony founded by Hadrian was Aelia Capitolina (Jerusalem), whose colonists, however, were Greeks, and therefore it did not possess the jus Italicum. (Dion Cass. lxxvi. 12; Euseb. Hist. Eccles. v. 6; Malalas, ch. p. 279, ed. Bomn.; Ulpian, c. c. § 6.) Hadrian also probably founded Palmyra. Under Septimius Severus we have Laodicea, Tyros, and Sebaste (Samaria), of which the first two possessed the jus Italicum. (Ulpian, th. § 3 and 7; Eckhel, iii. p. 319, 387, seqq. 440, seq.) Caracalla founded Antioch and Emesa (Ulpian, th. § 4; Paul. th. § 5; Eckhel, iii. 302, 311), Elagabalus Sidon (Eckhel, iii. p. 371), and Philippus, apparently Damascus (ib. p. 334). To these must be added two colonies whose foundation is unknown, Capitolias, of whose former name we are ignorant (Paul. Dig. 50. tit. 15. s. 8. § 7; Eckhel, iii. p. 328, seq.), and Caesarea ad Libanum (Area). (Eckhel, iv. p. 361.) At the end of the fourth century of our era Syria was divided into still smaller portions, namely: 1. Syria prima, governed by a consularis, with the metropolis of Antioch and the following cities: Seleucia, Laodicea, Gaba, Palto, Beroea, Chalcis. 2. Syria Secunda, under a præses, with Apamea for its chief city, and the dependent towns of Ephesania, Arethusa, Larissae Marciane, Balatea, Ephesania, and Seleucia ad Belum. Malalas (xiv. 265, ed. Bomn.) attributes its separation from Syria Prima to the reign of Theodosius III., which, however, may be doubted. Böcking attributes the division to Theodosius the Great (ad Not. Dignit. i. p. 129). 3. Phœnicia Prima, under a consularis, with the metropolis of Tyros and the cities Ptolemais, Sidon, Berytus, Byblos, Botrys, Tripolis, Areca, Orthesios, Arados, Antipatris, Caesarea Phœnicia. 4. Phœnicia Secunda, or Phœnicia ad Libanum, under a præses, having Damascus for its capital, and embracing the towns of Emesa, Laodicea ad Libanum, Heliopolis, Aliba, Palmyra. It was first separated from Theodosius the Great. 5. Palæstina Prima, administered by a consularis, and in the years 383—385 by a proconsul. Its chief city was Caesarea, and it comprehended the towns of Deca, Antonitaria, Diospolis, Azotas ad Mare, Azotas Mediterranea, Eleutheropolis, Aelia Capitolina (Jerusalem). Neapolis, Livias, Sebaste, Antioch, Dmesiatiopis, Doppa, Gaza, Raphia, Aeschalon, &c. 6. Palæstina Secunda, under a præses, with the capital of Scythopolis, and the towns of Gadara, Aliba, Capitolium, Hippo, Tize- riana, Dio Caesarea, and Gabac. 7. Palæstina Tellia. This was formed out of the former province of Arabia. (Procop. de Aed. v. 8.) It was governed by a præses, and its chief city was Petra. (Cf. Palæstina, Vol. i. p. 533.) With respect to these later subdivisions of Syria, the reader may consult Hachorels, p. 397, ed. Bomn., with the note of Wieling. 518, seqq., the Apo- totita Dignit. i. p. 5, seq., and the commentary of Böcking, pp. 128—140, 511; Bingham, Orig. Ecc. vol. iii. p. 434, seq.; Norisius, de Ephoc. Syromaced. in Opp. vol. ii. p. 374, seqq., p. 419, seq. 3 z 4
In the year 632, Syria was invaded by the Saca-
ness, nominally under the command of Abn Obeidih, one of the “companions” of Mahomet, but really led by Chaled, the “sword of God.” The easy conquest of Bosra inspired the Moslems to attack Damascus; but here the resistance was more deter-
mined, and, though invested in 633, the city was not captured till the following year. Heraclius had been able to collect a large force, which, however, under the command of his general Weridan, was completely defeated at the battle of Amidin and Damascus, after that decisive engagement, though it still held out for seventy days, was compelled to yield. Helipoliss and Emessa speedily shared the fate of Bosra and Damascus. The last efforts of Heraclius in defence of Syria, though of extraordinary magnitudes, were frustrated by the battle of the Yarmuk. Jerusalem, Aleppo, and Damascus successively yielded to the Saracen arms, and Heraclius abandoned a province which he could no longer hope to retain. Thus in six campaigns (633–639) Syria was entirely wrested from the Roman empire. (Gibbon, Decline and Fall, ch. 51; Marqand, Rom. Asher, vol. iii.) [T. H. H.]

SYRIAE PORTAE (Σωπάς πόλης), a pass be-
 tween Mount Ananus and the coast of the bay of Issus, which formed a passage towards Syria. It was 3 stadia in length, and only broad enough to allow an army to pass in columns. (Xenoph. Anab. i. 4, § 4; Arrian, Anab. ii. 8; Plin. v. 18; Ptol. v. 15, § 12; Strab. xiv. p. 676.) This mountain pass had formerly been closed up at both ends by walls leading from the rocks into the sea; but in the time of Alexander they seem to have existed no longer, as they are not mentioned by any of his historians. Through the midst of this pass, which is now called the pass of Belbas, there flowed a small stream, which is still known under the name of Merkez-as, its ancient name being Cersas.

SYRIAS (Σωπῶς), a headland in the Euxine, on the coast of Paphlagonia, which, to distinguish it from the larger promontory of Carambuc in its vicinity, was also called ἀκρα Λεψτῆς. (Marchan, p. 72; Arrian, Peripl. P. E., p. 15; Anonym. Peripl. P. E. p. 7.) Its modern name is Cape Ilifje. [L.S.]

SYRIENI. [Συριστερία.] (Him. Illust. p. 168), a town in the north-western part of Thrace, between Philippi and Peraopolis. [J. H.]

SYRIO-PHŒNICE. [Συρια, p. 1079.]

SYROS or SYRIUS (Σύρος, also Ἀνων, Hom. Od., xv. 403, and Σύρος, Deyg. Ar. ent. i. 115; Hesych.; Socin.: Eibl. Σύρος: Syra (Σύρα), and the present inhabitants call themselves Συρωνιωτα or Συρωνιανοι, not Σύρων), an island in the Asiae at sea, one of the Cydnodes, lying between Rhenea and Cythamus, and 20 miles in circumference, according to some ancient authorities. (Plin. iv. 12, s. 22.) Syros produces good wine, but is upon the whole not fertile, and does not deserve the praises bestowed upon it by Homer (λ. c.), who describes it as rich in pastures, cattle, wine, and wheat. It is usually stated upon the authority of Pline (xxm. 12, s. 56) that Syros produced Sit or yellow ochre; but in Sillic's edition of Pline, Syros is substituted for Syros.

Syros had two cities even in the time of Homer (Od. iv. 112), one on the eastern and the other on the western side of the island. The one on the eastern side, which was called Syros (Ptol. iii. 15, § 30), stood on the same site as the modern capital of the island, which is now one of the most flourishing cities in Greece, containing 11,000 inhabitants, and the centre of a flourishing trade. In consequence of the numerous new buildings almost all traces of the ancient city have disappeared; but there were con-
siderable remains of it when Tournemait visited the island. At that time the ancient town was aban-
doned, and the inhabitants had built a town upon a lofty and steep hill about a mile from the shore; this town is now called Old Syra, to distinguish it from the modern town, which has arisen upon the site of the ancient city. The inhabitants of Old Syra, who are about 6000 in number, are chiefly Catholics, and, being under the protection of France and the Pope, they took no part in the Greek revolu-
tion during its earlier years. Their neutrality was the chief cause of the prosperity of the island, since numerous merchants settled there in consequence of the disturbed condition of the other parts of Greece.

There are ruins of the second ancient city on the west coast, at the harbour of Maria della Grazia. Ross conjectures that its name may have been Grachis, or Grecchis, since we find the πρωταχθης, who are otherwise unknown, mentioned three times in the inscriptions containing lists of the tributary allies of Athens. There was another ancient town in the island, named Eschatia. (Bechk. Insch. no. 2347, c.) Pherecydes, one of the early Greek philosophers, was a native of Syros. (Comp. Strab. x. pp. 485, 487; Sylaxia, p. 22; Steph. B. s. r.; Tournemait, Voyage, vol. i. p. 245, seq. Engl. tr.; Prokoses, Eriwerungen, vol. i. p. 55, seq.; Ross, Reisen auf den Griech. Inseln, vol. i. p. 5, seq., vol. ii. p. 24, seq.; Frinner, Reise, vol. ii. p. 164, seq.)

SYRTICA REGIO (Συρτική Ρεχία, Ptol. iv. 3), a tract on the coast of N. Africa, between the Syrtic Major and Minor, about 100 m. in length. (Strab. xvii. p. 834, sq.; Melas, i. 7; Plin. v. 4, s. 4.) After the third century it obtained the name of the Regio Tripolitana, from the three principal cities, which were allied together, whence the modern name of Tripoli (Not. Imp. Oecid. c. 45; Procop. de Aed. vol. 3.; cf. Solinus, p. 27). Mantenn conjectures (xv. pt. ii. p. 133) that the emperor Septimus Severus, who was a native of Leptis, was the founder of this Province of Tripolitania, which, according to the Not. Imp. (l. c.), was governed by its own duke (Dux) (Comp. Amm. Marc. xxviii. 6). The district was attributed by Ptolomy, Melia, and Phiny to Africa Propria; but in reality it formed a separate district, which at first belonged to the Cyrenaecans, but was subsequently wrested from them and annexed to Carthage, and, when the whole kingdom of the latter was subjected to the Romans, formed a part of the Roman province of Africa. For the most part the soil was sandy and little capable of cultivation, as it still remains to the present day (Deilla Cella, Piggio, p. 50); yet on the borders of the river Cinys and in the neighbourhood of the town of Leptis, there was some rich and productive land. (Herod. iv. 198; Sylaxia, p. 47; Strab. xvi. p. 835; Ovid, ex Ptol. ii. 7. 25.) Ptolomy mentions several mountains in the district, as Mount Gignias or Gignus (τοῦ Γίγνους ἱππό, iv. 3, § 20), Mount Thizili (τοῦ Θίζηλου ἱππό, ib.) Mount Zachinbari or Zachinbar (τοῦ Ἰαζινβαρίου ἱππό, ib.) and Mount Vasa-
lutum in Vazalath (τοῦ Ζασηλασώτου ὁδοῦ, τοῦ Ζασηλασωτοῦ ἱππό, τοῦ Ζασηλασωτοῦ ἱππό, ib. § 18). The more important pro-
nomitories were Syrphales (Συρφάλης ἱππό, Ptol. iv. 3, § 13), near which also, on the W., the same author
mentions another promontory, Trieron (Τριερων or Τριερων Άφωρ, ib.) and Zeitha (νόμος Ζείθα, ib. § 12). The principal rivers were the Cinyopa or Cinyclus (Πολον αυθές νομος, ib. § 20), in the eastern part of the district, and the Trierea, which formed the western boundary, and by which the three lakes called Tritoitionis, Pallas, and Libya were supplied (ib. § 19). Besides these waters there were extensive salt lakes and marshes along the coast (Strab. 1. c.; Tab. Pent. tab. v.). The lotus is mentioned among the scanty products of this unfruitful land (Plin. xxiv. 1. s. 1), and a peculiar kind of precious stones, called after the country Syritides gemmæ, was found on the coast (ib. xlviii. 10. § 67). The tribes that inhabited the country besides the Nasamones, Payti, and Macae, who in the earlier times at least spread themselves over this district, were the Lotophagi [Vol. II. p. 205], who dwelt about Syrits Minor, and the Gindanes [Vol. I. p. 1002], who were situated to the W. of the former. Ploteus, however, in place of these ancient tribes, mentions others that are heard of nowhere else, as the Nigittini, Samamyc, Nyepi, Nybeni, Easoens, Damnesi, &c. (iv. 3. §§ 29—27). But Egyptian and Phoenician colonies were established at a very early period with these aboriginal Libyan tribes, whom the Greeks found there when they settled upon the coast, and with whom, probably, they had for some time previously had connections. The most important towns of the Regio Syrtica were the three from which it subsequently derived its name of Tripolitana, that is, Leptra Magna, Oea, and Sabrata; besides which we find Tacape and other places mentioned by Ptolemy. Opposite to the coast lay the islands of Memix and Cerera. [T. H. D.]

SYRTIS MAJOR and MINOR (Στρίτος μεγάλη και μικρή, Pol. iv. 3), two broad and deep gulfs in the Libyan sea on the N. coast of Africa, and in the district called after them Regio Syrta. The name is derived from the Arabic, Sert, a desert from the desolate and sandy shore by which the neighbourhood of the Syritae is still characterised. The navigation of them was very dangerous because of their shallow and sand bars, and those places where salt was considered in ancient times as altogether un navigable, and even into the larger one only small vessels ventured. (Strab. xviii. p. 833; Scylax, p. 48; Polyb. i. 39; Melia i. 7; Plin. v. 4. s. 4; Procop. de Aed. vi. 3). The reports of modern travellers, however, do not tend to establish these dangers. (Laughter, Relazione in Della Cella's Tiagge, p. 214, sqq.) The Greater Syrta, which was the eastern one, now the Gulf of Sirdu, extended from the promontory of Berenice on the E. side to that of Cephalae on the W. (Scyl. 46, sqq.; Polyb. iii. 29; Strab. 1. c. and ii. 123; Mela and Plin. II. ec.) According to Strabo it was from 4000 to 5000 stadia in circumference (l. c.) but in another place (xviii. p. 835) he puts down the measure more accurately at 3900 stadia. Its depth, or landward recess, was from 1500 to 1800 stadia, and its diameter 2000 stadia. (Comp. Agathem. l. 3, and ii. 14). The smaller, or more western Syrta (now Gulf of Cephallenia), was formed on the E. by the promontory of Zeitha and on the W. by that of Brachochis. (Scyl. p. 48; Polyb. i. 39, ii. 23, xiii. 1; Strab. ii. 123, iii. 157, xviii. 3, 84, &c.) According to Strabo it had a circumference of 1600 stadia and a diameter of 600 (comp. Agathem. l. c.). Particulars respecting the size of both will likewise be found in Mela i. 7; and Iren. Ant. p. 64, sqq. The shores of both were inhospitable, and sandy to such a degree that men and even ships were often overwhelmed by the huge cloud-like masses lifted by the wind (Diod. xx. 41; Sall. Jug. 79; Herod. iii. 25, 26, iv. 173; Lucan, ix. 204, sqq.), and it is affirmed by modern travellers that these descriptions of the ancients are not exaggerated. (See Brown's Travels, p. 282; Bruce, Travels, iv. p. 458; Beechey, Expedition, qe. ch. 10; Ritter, Erdkunde, i. p. 1030) [T. H. D.]

SYSPHRITSIS (Σωσπριθης, Strab. xi. p. 508), a district in Armenia Major. [T. H. D.]

SYTHAS. [Achall, p. 13, b.]

TABAE. 1081

TAAANACH (תאAndroid), a town in Palestine, not far from Megiddo, with which it is generally mentioned, was originally one of the royal cities of the Canaanites. (Josh. xii. 21; Judges, v. 19; 1 Kings, iv. 12.) It was assigned to Manasseh (Josh. xvii. 11), but was afterwards one of the cities given to the Levites. (Josh. xxii. 5) "Ta'anach by the waters of Megiddo" was the scene of the great battle of Deborah and Barak. (Judges, v. 19.) In the time of the Judges the Canaanitish inhabitants still remained in Taanach (Judges, 1. c. 27), but in the reign of Solomon it appears as an Israelitish town. (1 Kings, iv. 12.) Eusebius describes it as 3 Roman miles, and Jerome as 4 Roman miles from Legio, which is undoubtedly the Megiddo of Scripture. [Legio.] Taanach is still called Tammam, a village standing on the slope of the hills which skirt the plain of Esdraelon towards the south. (Robinson, Bibl. Res. vol. ii. p. 316, vol. iii. p. 117, 2nd ed.; Stanley, Sinai and Palestine, p. 331.)

TABAE (תאא, Eth. Tsi'iyov), a town which, according to Strabo (xii. p. 570), was situated on the confines between Phrygia and Caria, and which, in another passage (p. 576), he evidently includes in Phrygia. The country was situated in a plain which derived from the town of the name Πρόδοσις Ταμαχα. (Strab. xii. p. 576.) Strabo (xii. p. 576) on the other hand calls Tabae a Lydian town, though he at the same time mentions another in Caria; but it is highly probable that not only both are one and the same town, but also the same as the one assigned by Strabo to Phrygia, and that in point of fact the town was in Caria near the confines of Phrygia. Mythically the name of the place was derived from a hero Tabus, while others connected it with an Asiatic term τάμαχα, which signified a rock. (Steph. B. l. c.) The latter etymology is not inconsistent with Strabo's account, for though the town is described as being in a plain, it, or at least a part of it, may have been built on a rock. The plain contained several other little towns besides Tabae. Livy (xxxviii. 13), in his account of the expedition of Mamilus, states that he marched in three days from Gordiutchoro to Tabae. It must then have been a considerable place, for, having provoked the hostility of the Romans, it was ordered to pay 20 talents of silver and furnish 10,000 medium of wheat. Livy remarks that it stood on the borders of Pisidia towards the shore of the Pamphylian sea. There can be no doubt that D'Anville is correct in identifying the modern Thaura or Daras, a place of some note north-east of Mogha, with the ancient Tabae. Col. Leake (Asia Minor, p. 153), relying too implicitly on Strabo, looks too far east for its site; for Hieracu
TABALA.

(p. 689) distinctly commemorates it among the Carian towns. "Ibras is a large and well-built town, and the capital of a considerable district; the governor’s residence stands on a height overlooking the town, and commanding a most magnificent view. (Richter, Wulfharten, p. 543; Franz, Fünf Inschriften, p. 30.)

It should be observed that Pliny (v. 27) mentions another town in Cilicia of the name of Tabae, of which, however, nothing is known. [L. S.]

COIN OF TABAE.

TABALA (Tăseala), a town of Lydia near the river Hermus, is known only from coins found in the country; but it is no doubt the same as the one mentioned by Herodotus (p. 670) under the name of Gubila, which is perhaps only misspelled for Tabala. It is even possible that it may be the town of Tabala, which Stephanoius Byz. assigns to Lydia. Some traces of the ancient place seem to be preserved in the name of the village Toubalis on the left bank of the Hermus, between Anda and Kula. [L. S.]

TABANA (Tăseava, ProL iii. 6, § 6), a place in the interior of the Chersonese Taurica. [T. H. D.]

TABASO (Tăsasou, ProL vii. 1, § 65), a tribe of Iliadians who occupied the interior of the southern part of Ilissestia, in the present province of Mygore. Their exact position cannot be determined, but they were not far distant from M. Bélitig, the most S. of the W. Ghâls. They derived their name from the Semitic Tappaya, “woods.” (Lassen, Ind. Alterth. vol. i. p. 243.) [V.]

TABERNAE, in Gallia, is placed by the Itineraries between Noviomagus (Spicer) and Saetio (Schel.). The position of Tabernaev is supposed to correspond to that of Rheinzabern. Tabernae is mentioned by Ammianus Marcellinus (xvi. 2), unless in this passage he means another place (No. 2) which has the same name.

2. Between Argentaratum (Strasburg) and Virodunum (Metz) is Flats-zaburn, or Sauerne, as the French call it, which is about 21 miles from Strasbourg. This seems to be the place which Ammianus (xvi. 11) calls Tras Tabernae. When Julian was marching against the Alamanni, who were encamped near Argentaratum, he repaired Trs Tabernae, for the purpose of preventing the Germans from entering Gallia by this pass in the Vosges. Ammianus (xvi. 12) also gives the distance from Tras Tabernae to the German camp at Argentaratum as 21 “leges,” which is 21 Roman miles, and agrees very well with the distance between Sauerne and Strasbourg (D’Anville, Notice, etc.).

3. Tabernae is mentioned by Ausonius (Museol. v. 8) on the road between Einginum (Ringin) and Noviomagus (Ninimum): but the geographers are not agreed about the position, whether it is Bergzabern, a place which is out of the way, Halckenau, or Berncastel on the Mosel. Ausonius says there is a spring there:—

"Practeros arentem sitientibus unique terris
Dumnissaeus riguasque perenni fonte Tabernas.

[L.]

TACAPE.

TABEIENI (Tabenomi, ProL vi. 14, § 11), a people in the N. part of Scythia, on this side of the Issus. [T. H. D.]

TABEIENI (Tabenoi), an Aetolian tribe, situated NW of the Beccio Trogliotis, near the headland of Euxinum (Ras-el Naschaf), mentioned by Ptolemy alone (iv. 27, § 28). [W. B. D.]

TABLAE, in Gallia, is marked in the Table between Lugdunum Batavorum (Leiden) and Noviomagus (Nymegen). D’Anville and others suppose it to be Ablines, a little above the junction of the Lekk and the Mosse, and opposite to Dort. [G. L.]

TABULAS, a celebrated mountain in Galilee, called by the Greeks Tauroboerus, or Atharbrium, under which name it is described. [Atarbrium.]

TABUCAC. [Tabraca.]

TABUDBA, or TABULLAS in some editions of Ptolemy (ii. 9, § 3), a river of North Gallia. The mouth of this river is placed by Ptolemy between Gesoriacum (Boutogone) and the mouth of the Mosse (Masse). In another passage (ii. 9, § 9), after fixing the position of the Morini, whose town was Gesoriacum, Tarrana, he adds, “Then after the Tabullas are the Tungri.” As there are indications seem to show that the Tabula or Tabullas is the Schelde, which would be correctly placed between the Morini and the Tungri. Ordinarily, cited by D’Anville and others, is said to have produced evidence from writings of the middle ages, that the Schelde was named Tabul and Tabula. [G. L.]

TABURNUS MNN. (Monte Taburna), was the name given in ancient times to one of the most important mountain groups of the Apennines of Samnium. It is situated nearly due W. of Beneventum, between the valley of the Calore (Calor) and that of the smaller stream of the Iceloro. Like the still more elevated mass of the Monte Matese, which fronts it on the N., it forms no part of the main chain of the Apennines (if that be reckoned, as usual, by the line of water-shed), but is considerably advanced towards the W., and its W. and NW. slopes consequently descend at once to the broad valley or plain of the Vulturmas, where that river receives its tributary the Calore. It is the only one of the slopes and underfalls to which Virgil alludes as affording a favourable field for the cultivation of olive (Virg. Georg. ii. 38; Bib. Sequest. p. 33), with which they are covered at this day. But in another passage he alludes to the "hosti Taburnas" as covered with forests, which afforded pasture to extensive herds of cattle. (Id. Aen. xii. 713.) Gratius Falscius also speaks of it as a rugged and rocky group of mountains (Cynegiet. 590). We learn from that writer that it was included in the territory of the Canidie Summites (Caudini), and indeed the celebrated pass of the Canidie Forks was at a very short distance from the foot of Mount Taburnus. The name of Monte Taburna or Taburno is still commonly applied to the whole group, though the different summits, like those of the Matese, have each their peculiar name.

There is no ground for reading (as has been suggested) Tauroboerus (for Atharbrium, in Polyb., ii. 100); the mountain of which that author is speaking must have been situated in quite a different part of Italy. [E. H. B.]

TACAPE (Takam or Kârg, ProL iv. 3, § 11), a town in the Roman province of Africa, in the Regio Syrkit and in the innermost part of the Syrkit Minor. The surrounding country is represented by Pliny (xiv. 27, s. 30, xvii. 22, s. 51) as exceedingly
TACARAEI.

TAERUM.

TADU (Plin. vi. 24, s. 35; comp. Strab. xix. p. 786), a small island of the Nile that formed the harbour of the city of Meroe. Bruck (Travels, vol. iv. p. 618) supposes Tadu to have been the modern Curog, N. of Schwerly As, however, the site of Meroe is much disputed, that of Tadu is equally uncertain (Ritter, Erdkunde, vol. i. p. 567). [W. B. D.]

TAEARUM (Taerapor, Herod. ii. 29; Tacumpos, Plin. vi. 29, s. 33; Mela, i. 9 § 2), a town in the Regio Daciecchœnœs, S. of Aegypt and the Cataracts. It stood upon an island of the Nile, and was inhabited by a mixed colony of Aegyptians and Achæiopians. The Coptic word Tächmapas signifies the place of many crocodiles. Tächompso was seated on the right bank of the river at 23° 12' N., nearly opposite the town of Psirix. As Psirix increased, Tächompso declined, so that it last was regarded as merely a suburb of that town, and went by the name of Contra-Psirix. Though supposed by some to have been near the modern village of Conzo in Lower Nubia, it is impossible to reconcile any known locality with the ancient descriptions of this place. Heren (African Natûna, vol. i. pp. 346, 350) supposes it to have been either at the island Kadaleucher (Talmis) or 20 miles further S. as Ghrabha. Heren (i. c.) describes the island on which Tächompso stood as a plain contiguous to a vast lake. But neither such a lake nor island now appear in this part of the Nile's course. The lake may have been the result of a temporary inundation, and the island gradually undermined and carried away by the periodical floods. [W. B. D.]

TACOLA (Tacaola, Plin. vii. 2 § 5), a place on the west coast of the Aegro Chersoecus, in Libya extra Garam, which Ptolemy calls an emporion. There can be no doubt that it is represented now by Teycov or Teccerserin. [V.]

TACUBIS (Takowis, Plin. ii. 5 § 7), a place in Lusitania. [T. H. D.]

TADER, a river on the S. coast of His-pania Tarraconensis. (Plin. iii. 3. s. 4.) It is probably indicated by Ptolemy (ii. 6 § 14) under Τηρεσιος ου τιτάσην ιδαναιαν. Now the Segura. [T. H. D.]

TADINUM (Eth. Tadinis: En. near Gualdo), a town of Umbria, mentioned by Pliny among the municipal towns of that region. (Plin. iii. 14. s. 19.) It is not noticed by any other ancient author previous to the fall of the Western Empire; but its name is repeatedly found in the epistles of Gregory the Great, and it is evidently the same place called by Procopius Tagamæ (Téyara, Procop. B. G. iv. 29), near which the Gothic king Theod was defeated by Narses in a great battle, in which he was himself mortally wounded, A. D. 552. The site is clearly fixed by the discovery of some ruins and other ancient monuments in 1750 at a place about a mile and a half from Gualdo, where there is an old church consecrated in the middle ages to Sta. Maria di Tadinus. Gualdo is about 9 miles N. of Nocera (Nuceria), close to the line of the Flaminian Way; hence there is little doubt that we should substitute Tadinus for "Niliaris," a name obviously corrupt.
Taanaiunum. TAENARIUM.

Taanarvus aperta umbria, Lucan, ix. 36. There is a slight difference between Strabo and Pausanias in the position of the cave; the former placing it near the temple, which agrees with present appearances (see below); the latter describes the cave itself as the temple, before which stood a statue of Poseidon. Among the many dedicatory offerings to Poseidon the most celebrated was the brazen statue of Arion seated on a dolphin, which was still extant in the time of Pausanias. (Herod. i. 23. 24.) The temple was plundered for the first time by the Aetolians. (Ptol. ix. 34.)

Taanarum is said to have taken its name from Taenarum, a son of Heracles or Leucon or Elatus. (Pans. i. xiv. 2. 3; Steph. B. s. c.; Schol. ad Apoll. Rhod. i. 102.) Bechert derives the word from the Phoenician tinev "rupe." (Geograph. Sacrr. p. 459;) and it is not improbable that the Phoenicians may have had a settlement on the promontory at an early period.

Pausanias (iii. 25. § 4) mentions two harbours in connection with the Taenarian promontory, called respectively ΑΜΑΘΩΣ (Psamatheis), and the ΕΛΟΜΗ ΑΠΟΚΟΙΛΙΟΝ (Elomeii Apokouleion). Scylax (p. 267.) also mentions these two harbours, and describes them as situated back to back (ἀπευθεῖα). Strabo (vii. p. 373) speaks of the former of these two harbours under the name of ΑΜΑΘΩΣ (Psamatheis), but omits to mention the Harbour of Achilles. It would appear that these two harbours are the Ποτηρία Κούνδιο and the port of Παθος mentioned above, as these are the two most important in the peninsula. Leake identifies Psamatheus with Κούνδιο, and the Harbour of Achilles with Παθος, but the former opinion is probably correct. There are, however, no doubt that Leake is correct; for the ancient remains above the Ποτηρία Κούνδιο, the monasteries on the heights, and the cultivated slopes and levels, show that the Taenarian population has in all ages been chiefly collected here. Moreover, no ancient writers speak of a town in connection with the Harbour of Achilles, while Strabo and others describe the remains as Psamatheus as Παθος. (Strab. B. s. c.; Psamatheis; cf. Aeschin. Ex. 1. Ptol. iv. 5. § 8.) If we were to take the description of Scylax literally, Psamatheus would be Ποτηρία Κούνδιο, and the Harbour of Achilles Ποτηρία Μαρμάρι; and accordingly, they are so identified by Curtius; but it is impossible to believe that the dangerous creek of Μαρμάρι is one of the two harbours so specifically mentioned both by Scylax and Pausanias.

The remains of the celebrated temple of Poseidon still exist at Ασίανος, or Κάστρος, close to Αντιοχέαν on the eastern side. They now form part of a ruined church; and the ancient Helicon will may be traced on one side of the church. Leake observes that the church, instead of facing to the east, as Greek churches usually do, faces south-eastward, towards the head of the port, which is likely to have been the aspect of the temple. No remains of columns have been found. A few pieces north-east of the church is a large grotto in the rock, which appears to be the cave through which Hercules is supposed to have dragged Cerberus; but there is no appearance of any subterranean descent, as had been already remarked by Pausanias. In the neighbourhood there are several ancient cisterns and other remains of antiquity.

There were celebrated marble quarries in the Taenarian peninsula. (Strab. viii. p. 367.) Pline describes the Taenarian marble as black (sxxvi. 18. s. 29. 22. s. 43; but Sextus Empiricus (Prpyhi. Hypot. i. 130) speaks of a species of marble that was white when broken to pieces, though it appeared yellow in the mass. Leake inquired in vain for these quarries.

At the distance of 40 stadia, or 5 English miles, north of the isthmus of the Taenaran peninsula, was the town Taenarum or Taenarum, subsequently called Caeneopolis. (Kuviptti, Pans. iii. 25. § 9; Kaou, Pol. iii. 16. § 9; Pinn. iv. 15. s. 16; Steph. B. s. c. Taisoros; the same town is probably mentioned by Strab. viii. p. 360, under the corrupt form Κανεών.) It contained a temple of Poseidon, and another of Aphrodite, the latter near the sea. The modern village of Κανεών stands on the site of this town. Some ancient remains and inscriptions of the time of the Antonines and their successors have been found here. On the door-posts of a small ruined church are two inscribed quadrangular στήλαι, decorated with mouldings above and below. One of the inscriptions is a decree of the Taenarii; and the other is by the community of the Eleutherian Locanes (τό καάντα των Ελευθερολοχίων). We have the testimony of Pausanias (ii. 21. § 7) that Caeneopolis was one of the Eleutherian Locanian cities; and it would appear from the above-mentioned inscription that the maritime Locians, when they were delivered from the Spartan yoke, formed a confederation and founded as their capital a city in the neighbourhood of the revered sanctuary of Poseidon. The place was called the New Town (Caeneopolis); but, as we learn from the inscriptions, it continued to be also called by its ancient name. For the inscriptions relating to Taenarum, see Bickh. Inscr. no. 1315 — 1317, 1731, 1732, 1389, 1393, 1483. (On the topography of the Taenarian peninsula, see Leake, Morea, vol. i. p. 290, seq.; Peloponneseica, p. 175, seq.; Bobbyle, Recherches, 2e. p. 89, seq.; Curtius, Peloponnesos, vol. ii. p. 277, seq.)

TAZALI (Ταζάλας or Ταζάλος, Ptol. ii. 3. § 15), a people on the eastern coast of Bosnia, mentioned by Pausanias, Strabo and others. (Strab. viii. 6. 1. 2.)

TAGAE (Ταρέλ, Ptol. x. 29. § 3), a town in the northern part of Parthia, situated in the defiles of the chain of Labatia, visited by Antiochus in his war against Araxes. It has been conjectured by Forbiger that it is the same place as Ταταί, mentioned by Strabo (xi. p. 508) as a royal palace in the adjacent province of Hyrcania; but this conjecture seems unnecessary. Perhaps it may be represented by the present Lamarghan. [V.]

TAGARA (Ταγάρα, Peripl. M. Egertii, § 51, ed. Müller; Ptol. viii. 1. § 82), one of the two principal caperias of the interior of the Decena, according to the author of the Periplus. It is not certain what modern town now represents this ancient site, but there is a fair presumption in favour of Decaphir, which was the seat of government down to A.D. 1293, and which is now close to Durubabadh. (Vincent, Voyage de Nearchus, ii. p. 413; Maunser, v. i. p. 83; Bletter, Erdw. v. p. 513; Begaissac's Map.) Ptolomy, who places the town in Arabia, probably copied from the author of the Periplus. It may be remarked that the distance given between Barygaza (Baroach), Pachthana (Pythuna), and Tagara (Deaphir) are not reconcilable with the actual position of these three places. [V.]}
TAGASTE, or TAGESTENSE: OPP. (Plin. v. 4. s. 4), a town of Numidia, whose spot is now marked by the ruins at Tajjil on the Oued Hamize or Sugerat, a tributary of the river Mejerdla. (Hist. Ant. p. 41.) Tagaste is particularly distinguished by having been the birthplace of St. Augustine. (Ang. Conf. ii. 3.)

TAGOYNIUS (Ταγόινιος, Pint. S. E. 17), a tributary of the Tagus in Hispania Tarraconensis, either the Tajuna or Hermonas. (Cf. Florence, Epigraphs. v. p. 40; Uberti, it. p. 389.) [T. H. D.]

TAGORI. [T. H. D.]

TAGRIT (Ταγρίτ, Ptol. iii. 5. § 35), a people of European Saroantia, on the borders of Dacia, and probably identical with the Tagori of Pliny (vii. 7. s. 7) and Jannamdes (Geogr. 4). [T. H. D.]

TAGUS (Ταγός, Ptol. ii. 5. § 4), one of the principal rivers of Spain, being considerably larger than the Anas and having its sources between Monte Oropeza and胡hbed, in the country of the Celtiberi. (Strab. iii. pp. 139, 152, 162.) After a tolerably straight course of upwards of 300 miles in a westerly direction, it falls into the Atlantic ocean below Olissipo, where it is 20 stadia broad, and capable of bearing the largest ships. It was navigable as far up as Monz for smaller vessels. According to Strabo, at flood tides it overflowed at its mouth into a circumference of 150 stadia. It was celebrated for its fish and oysters (Strab. ib.; Mart. x. 78), and likewise for its gold sand (Plin. iv. 22. s. 35; Meli, iii. 1. Catull. xx. 30; Ov. Met. ii. 251, &c.), of which last, however, so little is now to be found that it hardly repays the amphibious panners who earn a precarious living by seeking for it. (Vout's Hand-book of Spain, p. 487; Diblon, i. p. 257.) The Tagus alone, is named as a tributary. The Tagus is still called Tajo in Spain, Tajo in Portugal. (Cf. Liv. xxi. 5, xxvii. 19; Plin. iii. 3. s. 4, viii. 42. s. 67; Sen. Thyest. 352, &c.) [T. H. D.]

TAPAHANIS or TEPHAPHERES (Τεμαχανίς, xxi. 7, xxiv. 1; Ezek. xxx. 18; ąż Táφανις, L.N.), is supposed to be the same place with the Daphne of Pelusium of the Greeks. It was the seat of a garrison under the native and the Persian kings of Assyria (Herod. ii. 30), and was probably a place of considerable strength and importance, since it commanded the high road to Syria (Strab. xvi. 821). According to the Hebrew writers, Tapahansis was also occasionally a royal residence in Pharaonic times. In the reign of Pammithius (n. c. 670, foll.) the troops quartered at Tapahans, in common with the rest of the native Assyrian army, offended by the king's favour to his Carian and Greek mercenaries, abandoned their country, and established themselves in the Regio Docedacchomus 8. of Syene (Diodor. i. 67). From the Itinerary's it appears that Daphne or Tapahansis was 16 Roman miles from Pelusium, Tedefencheh, lying nearly in a direct line between the modern Sula-bokh and Pelusium, is supposed to be on the site of Tapahansis. [W. B. D.]

TALABRIGA (ταλάβριγα, App. Hisp. 73), a town of Lusitania, between Eminim and Lambergia. (Hist. Ant. p. 421; Plin. ii. 5. e. 7, iv. 21. s. 33.) Variously identified with Cacia, Areio, Palavaca, la Ravina, and Villarriba. [T. H. D.]

TALABROCA (ταλαβρικα, Strab. iii. 5. p. 508.), one of the four principal towns of Hyrcania noticed by Strabo. It is perhaps the same place that was called Tambrax or Polybusa (x. 31). Its site cannot now be identified. [V.]

TALACORTY (ταλάκορτη), Ptol. vii. 4. § 7), a port on the north-western side of the island of Taposene or Ceylon. It is described as an emporium, and has, probably, derived its name from the promontory of Cory, which was opposite to it, on the mainland. It appears to have been also called Acosta (Ακοστή). [V.]

TALADUSSII (ταλαδουςία, Ptol. iv. 2. § 17), a people in the north part of Marcania Caspriaeum. [T. H. D.]

TALAEUS MONS. [TAALEUS.]

TALAMINA (ταλαμίνα), Ptol. ii. 6. § 27), a town of the Sauri in Gallasia. [T. H. D.]

TALAIRES (ταλαίρες), a Molossian people of Epirus, extinct in the time of Strabo (ix. p. 344).

TALALOS (ταλαλός), a mountain fortress in Pontus to which Midribades withdrew with his most precious treasures, which were afterwards found there by Lucullus. (Dion Cass. xxxix. 14; Appian, Mithr. 115.) As the place is not mentioned by other writers, some suppose it to have been the same as Gaunia, the modern Torakth which is perched upon a lofty isolated rock. (Hamilton, Researches, vol. i. p. 360.) [L. S.]

TALBENDA (ταλβενδά or ῥαλβεolio, a town in the interior of Pisidia, noticed only by Ptolemy (v. 5. § 8). [L. S.]

TALCETUM. [Laconia, p. 108, b.]

TALIA (Hist. Ant. p. 319), or TALITATA (Not. Imp.), erroneously called Tarvatis by Ptolemy (iii. 9. § 4), Talata by the Geogr. Rav. (iv. 7), and Faliata in the Tab. Peut. A place in Upper Moesia, between Novae and Euzeta. Variously identified with Talatis, Gjergjashik, and a place near Alt. Pore. [T. H. D.]

TALICUS, a river of Scythia intra Imaum. (Ann. Marc. xxvii. 6. § 63.) [T. H. D.]

TALIEUS or TALAEUS MONS (Beckh, Corp. Ins. Græc. vol. ii. p. 423; Hesych. s. v.), the station of Talus, the mythical man of bronze, and the guardian of the island of Crete. The well-known inscription which deprecates the loss of Artemis, the cheste wife of Salvius Menas, is now buried by the mass of earth and stones heaped up at the entrance of the stygastic cavern of Melathion. This grotto, memorable in modern times for the massacre of the Cretan Christians by the Mohammedans, is identified from the inscription with the spot where in ancient times human victims were presented before the statue of Talus. (Pasbley, Travels, vol. i. pp. 126—139.) [E. B. J.]

TALIEN (ταλάιεν, Arrian, Indic. c. 29), a port of Gedrosia at which the fleet of Nearchus found a secure harbour. It is not clear what place now may be identified with it, and different geographers have held different opinions. Vincent (Frontis de Nearcho, i. p. 271) thinks it is the bay formed by the mouth of a small river called by Ptolemy Candricanes or Hydrices (v. 8. § 8). It was probably close to the modern town, Cherouar Tez and Parug. (Cf. Gesselin, iii. p. 148.) [V.]

TALMIS (Η. Αυθαι, p. 161; Olympiader. op. Phthium, p. 62, ed. Bekker), a town in the Regio Docedacchomus, 8. of Phiane, from which it was five days journey distant, situated in lat. 29° 30' N., and consequently immediately under the tropic of Cancer. Talmis stood on the western bank of the Nile, and is represented by the modern Kalabashes. The Libyan hills which rise immediately behind the town afforded an inexhaustible supply of materials for building, and the ancient quarries are still visible.
in their sides. The ruins of Talmis are of surpassing interest, and comparatively in good preservation, probably because, being excavated in the sandstone, they escaped mutilation or destruction by the Persians. The principal structure was a rock-temple at the foot of the hills, dedicated, as appears both from a hieroglyphical and a Greek inscription, to a deity named Mandulis or Malnis, a son of Isis. His mythical history is exhibited on bas-reliefs. But the sculptures at Talmis are of the highest interest, both as works of art and as historical monuments. Their execution is the work of various ages; some, as appears by their rude forms, ascending to the time of Tiberius or Hadrian; others as those in the temple of Mandulis, being of the best days of Egyptian art. The temple was founded by Amunoph II., was rebuilt by one of the Ptolemies, and repaired in the reigns of the Caesars, Augustus, Caligula, and Trajan. The subjects of these sculptures represent partly the triumphs of the Pharaohs, and partly the tributes exacted by them from the conquered. On one wall is the warrior in his chariot putting to flight bearded men in short garments, armed with bow and arrows and a sickle-shaped knife or sword. In another compartment the conqueror is in the act of putting his captives to death. Another represents the body obtained after a victory, and, besides the captives, exhibits the spoils taken, e. g. lion-headed and lion-clawed chairs, knives, leaves, sandals, skins of animals, &c. These sculptures illustrate also the natural history of S. Aethiopia. They contain figures of lions, antelopes, and bulls, greyhounds, giraffes, ostriches and monkeys. The giraffe and ostriches point clearly to a country south of the utmost limit of Egyptian dominion, and seem to indicate wars with the Garamantes and the kingdom of Borneo. Herodotus (iii. 97) mentions eben wood among the articles of tribute which every three years Aethiop offered to the Persian king. Ebony as well as ivory, a product of the interior of Libya, appears on the walls of the temple of Mandulis. A coloured fac-simile of these sculptures is displayed in one of the rooms of the British Museum. At a short distance from Talmis another temple, perhaps of a purely interior interest, and the space between is covered with heaps of earth and fragments of pottery, mixed with human bones and bandages that have been steeped in blood — the evident traces of a large necropolis. At Talmis has been also discovered an inscription in the Greek language, supposed to be of the age of Diocletian, in which Solon, king of Aethiopia and Nubia, commemorates his victories over the Blemmyes. The wealth of Talmis, apparent in its sculptures, was double in great measure owing to its position as a commercial station between Aegypt and Aethiop, but partly also to the emerald mines in its neighbourhood. In the fifth century A.D., the town and its neighbourhood were occupied by the Blemmyes, who had a regular government, since they had chiefs of tribes (φολάρχες) and werecelebrated for their skill in divination. (Olympic or. ap. Photius, p. 62.)

[The text continues with more historical references and descriptions of the Talmis region.]
TANAGRA. 1067

account of its exposed situation, and rebuilt higher up the Nile, about 5 miles farther from the sea. The date of this change of position is fixed by Abulfeda in the year of the Hegira 648 (A.D. 1251).

TAMNA (Táuma, Strab. xvi. p. 768; Stephan. B. s. v.; Tamna, Plin. vi. 28. s. 32; Ótim induce, Plut. vi. 7. § 57; Thonma, Plin. xii. 14. s. 32: Eth. Táouirn); a city of Arabia, and the chief town of the Cattabani (Catabanum), according to Strabo, or of the Gemanites, according to Ptolemy. It is described by Ptolemy as a large commercial town with 65 temples, to which caravans from Gaza in Palestine resorted. It is probably Sain, the present capital of Yemen.

TAMNULI, in Gallia, is placed by the Itineraries on a road from Bundigala (Borducrua) to Mediolanum Santonum (Saintes); but in the Table the name is written Lamnun. The distance from Blavia or Blavium (Blaye) to Tamnun is xvi. in the Itins.; but the distance xxii. in the Table is nearer the truth, if Tulumom or Tulumun is the site of Tamnun. Tulumon is below Blaye on the right bank of the Gironde. (Gal. L. A.)

TAMUGADIS, a town in Numidia, on the E. side of Mount Aurusius, and 14 miles NE. of Lambese. (*It. Ant. pp. 34, 40; Thamugulis, Tab. Petu.) It still retains the name of Tamuyadi. (Bruce.) Lapie identifies it with Agor-Smithai. [T. H. D.]

TAMUXAE (Táumixai, Strab. et alii; Táumia, Stephan. B. s. v.; Eth. Táouwarn, Tausvery), a town of Eubea in the territory of Eretia, at the foot of Mt. Cotyleaume, with a temple of Apollo, said to have been built by Alcmene. (Strab. x. p. 447; Stephan. B. s. v. Táumae, Karlovna.) It was taken by the Persians, when they attacked Eretia in n. c. 490 (Hered. vi. 101), but it is chiefly memorable for the victory which the Athenians, under Phocion, gained here over Callias of Choles, n. c. 530. (Aschach. et al. §§ 85—86, de Falsus, Leg. 190; Dren. de Pac. 5: Plut. Phoc. 12.) Leake places Tamynae at the village of Gnyhna, at the foot of a high mountain, which he supposes to be the ancient Cotyleaume (Ancient Greece, vol. ii. p. 493;) but Urichs regards Alcuri, where there are several ancient remains, as the site of Tamynae. (Rheinisches Museum, for 1847. p. 512.)

TAMYRACA (Tamyraka, Plut. iii. 5. § 8, viii. 10. § 3), a town and promontory of European Sar- matia in the neighbourhood of a lake (Avian, Per. P. Fucz. p. 20), and in the innermost part of the gulf of Carchemish, now gulf of Achemshid or Perek- kop. Hence, according to Strabo, the Sinus Carchemis was also called the gulf of Tamyraca (vii. p. 308). But the coast has undergone such extensive alterations at this part, that all attempts to determine the site of the town are unavailing. Some, indeed, have doubted its existence, as it is mentioned only by Polieny. (Cf. Neumann, Dieellenen in Skythen- bnde, p. 375; Uchert, iii. 2. p. 457; Gall. Geogr. M. iii. p. 127.)

TAMYRACES SINUS. [CARDICA; TAMY- RAS]

TAMYRAS or TAMYRAS (Tamysa, Strab. xvi. p. 756; Awaqgous, Polyb. v. 68); a river of Phoe- nicia between Sidon and Berytus, the modern Nahbr- ed-Damier. (Robinson, Bibl. Res. vol. ii. p. 488, 2nd ed.) [Comp. Leontes.]

TANAGER or TANAGRUS (Tanagra), a river of Lucania, a tributary of the Silarus. It rises in the mountains near Lago Negro, flows for about 30 miles in a NNW. direction, through a broad and level upland valley called the *alde di Diano, till near *La Poile it sinks into the earth, and emerges again through a cavern at a place thence called *La Pertusai. This peculiarity is mentioned by Ptolemy, who calls it “duvianus in Attine camps,” without mentioning its name (Plin. ii. 103. s. 106, with Harduin’s note); but this is known to us from Virgil, who notices it in connection with Mount Albanus, which rises immediately to the W. of it, and the epithet “siccus” which he applies to it (“sicci ripa Tanagri”) doubtless refers to this same peculiarity. (Virg. Geor. iii. 131; Serv. ad loc.; Vib. Sec. p. 15.) There is no doubt, alas, that in the Itinerary we should read “AD Tanagrum” for “Ad Taenarum,” a station which it places on the road from Silerum to Neurium. (Itin. Ant. p. 109.) The same Itinerary gives a station “Ad Calorem,” as the next on this line of route, which seems to show that the river was then, as now, called in the upper part of its course Calor or Calore, while in the lower part it assumes the name of Tanagro or Negro. This part of the route, however, is very confused.

TANAGRA (Táuma: Eth. Táumaporos); the territory Táumaporos, Pans. ix. 22. § 1, and Táumaporoi or Táumaporoi, Strab. ix. p. 404; Adj. Táumaporoi: *Grómadoi or *Gromailo, a town of Boeotia, situated upon the left bank of the Asopus, in a fertile plain, at the distance of 130 stadia from Oropus and 200 from Platane (Dicaearch. Stat. Gr. pp. 12, 14, ed. Hudson). Several ancient writers identified Tanagra with the Heroic Graes (Plin., Hom. II ii. 498; 644;) but others supposed them to be distinct places, and Aristokles regards Oropus as the ancient Graes. (Steph. B. s. v. Táuma; Strab. ix. p. 404; Pans. ix. 20. § 2.) It is possible, as Leake has remarked, that Tanagra, sometimes written Tanagroa, may be connected with the ancient name Graes, Tan, being an Aeolic suffix, and that the modern name *Grümadoi or *Gromailo may retain traces of the Heroic name. Tanagra was also called Peonandria, and its territory Peonandria, from the fertile meadows which surrounded the city. (Steph. B. s. v.; Strab. ix. p. 404.) The most ancient inhabitants of Tanagra are said to have been the Gephyraeoi, who came from Phoenicia with Cadmus, and from thence emigrated to Athens. (Hered. v. 57; Strab. ix. p. 404.) From its vicinity to Attica the territory of Tanagra was the scene of more than one battle. In n. c. 457 the Lacedaemonians on their return from an expedition to Doris, took up a position at Tanagra, near the borders of Attica, with the view of assisting the oligarchical party at Athens to overthrow the democracy. The Athenians, with a thousand Argeians and some Thessalian horse, crossed Mount Parnes and advanced against the Lacedaemonians. Both sides fought with great bravery; but the Lacedaemonians gained the victory, chiefly through the treacherous desertion of the Thessalians in the very heat of the engagement. (Thuc. l. 107, 108; Dio. xi. 80.) At the beginning of the following year (n. c. 456), and after sixty-two days after their defeat at Tanagra, the Athenians, under Myronides again invaded Boeotia, and gained at Oenohipyles, in the territory of Tanagra, a brilliant and decisive victory over the Boeotians, which made them masters of the whole country. The walls of Tanagra were now razed to the ground. (Thuc. l. 108; Dio. xi. 81, 82.) In n. c. 426 the Athenians made an incursion into the territory of Tanagra, and
on their return defeated the Tanagraeans and Boeotians. (Thuc. iii. 91.) Dicaearchus, who visited Tanagra in the time of Alexander, says that the city stands on a rugged and lofty height, and has a white chalky appearance. The houses are adorned with handsome porticoes and encasement paintings. The surrounding country is a vineyard; corn, but produces the best wine in Boeotia. Dicaearchus adds that the inhabitants are wealthy but frugal, being for the most part handiworkers, not manufacturers; and he praises them for their justice, good faith, and hospitality. (De Statu Graec. p. 12.) In the time of Augustus, Tanagra and Thebes were the two most prosperous cities in Boeotia. (Strab. i. p. 403.) Tanagra is called by Pliny (iv. 7. s. 12) a free state; it is mentioned by Polybius (iii. 15. § 29); and it continued to flourish in the sixth century. (Hieroc. p. 645.) Its public buildings are described at some length by Pausanias (ix. 20. § 3, seq.). The principal temple was that of Dionysus, which contained a celebrated statue of Parian marble, by Calamis, and a remarkable Triton. Near it were temples of Themis, Aphrodite and Apollo, and two of Hermes, in one of which he was worshipped as Criophorus, and in the other as Promachus. Near the latter was the theatre, and probably at no great distance the gymnasium, which contained a picture of Corinth as a war captive. Tanagra was a part of Tanagareia. There was also a monument of this pestis as a conspicuous part of the city. Pausanias remarks as a peculiarity in Tanagra, that all their sacred buildings were placed by themselves, apart from the houses of the town (ix. 22. § 2). He likewise notices (ix. 22. § 4) that Tanagra was famous for its breed of fighting-cocks, a circumstance which is mentioned by other writers. (Varr. de Re Rust. iii. 9. § 6; Hesych. s. v. Κοκαίφωγος; Solinus, s. v. Ταναγειον ἀδετροποιος.) Tanagra possessed a considerable territory. (Strab. i. p. 405) mentions four villages belonging to it, Elmen or Helen, Harma, Mycalessus, and Pharae. (Pherec. Plin iv. 7. s. 12.) The ruins of Tanagra are situated at an uninhabited spot, called Grinádikia or Trinitáta, situated 3 miles south of the village of Skimitaró. The site is a large hill nearly circular, rising from the mouth of the Asopus. The upper part of the site is rocky and abrupt, looking down upon the town beneath; and it was probably upon this upper height that the sacred offices stood apart from the other buildings of the town. The walls of the city which embraced a circuit of about two miles, may still be traced, but they are a mere heap of ruins. About 100 yards below the height already described are the remains of the theatre, hollowed out of the slope. On the terrace below the theatre to the NE. are the foundations of a public building, formed of marble of a very dark colour with a green cast. The ground is thickly strewed in every direction with remains of earthenware, betokening the existence of a numerous population in former times. (Leake, Northern Greece, vol. ii. p. 454, seq.; Wordsworth, Athens and Attica, p. 14, seq.; comp. K. O. Müller, Orokonimos, p. 20.)

TANAGRA (Μανάκρι, Πτολ. iii. 5. § 14, v. 9. §§ 1, 2, &c.), a famous river, which in the course of time was identified with the Donar (Strab. xi. 310, xi. 493; Melo, i. 3; Scey, p. 30, &c.) The older writers of antiquity thought that it rose from a large lake (Herod. iv. 57; Ephor. ap. Anon. Per. P. Eur. p. 43), which is really the case, its source being in the lake Irán Ózíro, in the government of Toula; whilst later writers held that it had its sources either in the Caucasus (Strab. xi. 493; Ammian. xxii. 8), or in the Iphican mountains. (Mela, i. 19; Lucan, iii. 272; Propoc. B. G. iv. 6, &c.) The last of these hypotheses was most probably correct; but there was likewise a fourth which made it a branch of the Ister (Strab. l. c.) Whilst Strabo, however, adds different these opinions, he himself holds that its source was entirely unknown (ii. 107). It is represented as flowing in so rapid a stream that it never froze. (Mela, l. c.; cf. Nonnus, Dionys. xxiii. 85.) It flows first in a NE. and then in a SW. direction; and after receiving the Hyriss or Nyrgis as a tributary, empties itself into the Palus Maeotis (Strab. xxiii. 85). (Herod. iv. 100.) These mosts, which are at the northern point of the Palus Maeotis, Strabo places at the distance of 60 stadia from one another (vi. 310), whilst Artemidorus (ap. Eustath. ad Dion. 14) makes them only 7 stadia distant. At present, however, the Don has 13 months. (Clarke, Trav. i. p. 423.) The etymology of the name is discussed by Plutarch (de Flam. 14) and Eustathius (l. c.); but its true derivation is from the Scythian word Don or Donus, signifying water, which occurs in the names of other rivers, as Donasus, Kyonos, &c. (Forbiger, Handb. des Alter. Geogr. p. 325, n. 16.) The Tanais is frequently alluded to by the Latin poets. (Hor. Od. iii. 10. 1; Virg. G. iv. 517; Ov. Ex. Pott. iv. 10. 55, &c.) Clarke (Travels, i. pp. 339, 448, note) would identify it with the Danaqes, from the similarity of the name, an hypothesis also accepted by Linnæus (Scythica, p. 66); but there can scarcely be a doubt that it should be identified with the Don (modern Dnepro). [T. H. D.]

TANAIAS (Ταναιας, Ptol. iii. 5. § 26, 27), a town of Asiae Sarmatia, lying on the more southern coast of the river, on the same name. It may also be described as situated at the northernmost point of the Palus Maeotis, and not far from the sea. It was a flourishing colony of the Milesians, enjoying an extensive commerce, and being the principal market of the surrounding tribes, both of Europe and Asia, who here bartered slavers and skins for the wine, apparel, and other articles of more civilized nations. (Strab. xi. 493.) The inhabitants soon reduced a considerable part of the neighbouring coasts to subjection, but were in turn themselves subdued by the kings of the Bosporus (Id. vii. p. 310, xi. 493). An attempt to regain their independence only ended in the destruction of their city by Polemon I. (Id. p. 493), a little before the time when Strabo wrote. Pliny (vi. 7. s. 7) speaks of Tanais as no longer existing in his time; but it appears to have been subsequently restored (Ptol. ii. 26. e. Sept. B. p. 633), though it never recovered its former prosperity. Clarke (l. p. 415) could discover no trace of it, nor even a probable site; but its ruins are said to exist near the modern Keyrjokha.
TANAITAE.

TANATÆ (Tána), a river of Liguria, the most important of all the southern tributaries of the Padus. It rises in the Maritime Alps above Ceva (Ceba), flows at first one N., receives near Cherasco the waters of the Stura, a stream as consider­able as it-off, then turns to the NE., passes within a few miles of Pollenta (Pollinum) under the walls of Alba Pompeia and Asta (Asti), and discharges its waters into the Po about 15 miles below Valenza (Forum Fulvii). It receives may considerable tributaries besides the Stura already mentioned, of which the most important is the Bormida, the ancient name of which has not been preserved to us; but the Orbä, a minor stream which falls into it a few miles above its junction with the Tamaro, is evidently the river Urbs, mentioned by Claudian (B. Get. 555), the name of which has given rise to an ambiguous prophecy, that had misled the Gothic king Alaric. The Bébba, which falls into the Tamaro a few miles above the Bormida, has been identified with the Feus of the Tabula, but the names of rivers given in that document in this part of Italy are so corrupt, and their positions so strangely misplaced, that it is idle to attempt their determination. Though the Tamarus is one of the most important rivers of Northern Italy, its name is not mentioned by any of the geographers except Pliny; nor does it occur in history until long after the fall of the Western Empire. (Pllin. iii. 16. s. 20; P. Dic. Hist. Lang. vi. 58.)

TANATIS. [Talas.]

TANNAUS. [Argos, Vol. i. p. 201, a.]

TANETUM or TANNEETUM (Tányrróv, Ptol.: Eth. Tanetanas, Plin.: S. Iliaro), a small town of Gallia Cispadana, on the Via Aemilia, between Regium Lepidum and Parma, and distant 10 miles from the former and 8 from the latter city. (Itin. Ant. p. 287; Itin. Hier. p. 616; Tab. Pent.) It is mentioned in history before the Roman conquest of this part of Italy, as a Gaulish village, to which the praetor L. Manlius retired after his defeat by the Boi in B. c. 218, and where he was surrounded and besieged by that people. (Pol. iii. 40; Liv. xxii. 25.) Its name is not again noticed in history, but it is mentioned both by Pliny and Procopius as a municipal town of Gallia Cispadana, though it appears to have never risen to be a place of importance. (Pllin. iii. 15. s. 20; Poli. iii. 1. § 46; Ptole­gon, Macrob. 1.) Livy calls the Gallia Cispadana “Pallieno et Padus propinquus,” an expression which would lead to an erroneous idea of its position; for we learn from the Itineraries that it certainly stood on the Via Aemilia, at a distance of more than 10 miles from the Padus. The site is still occupied by a large village, which is now called, from the name of its principal church, Sant’ Iliaro; but a hamlet or village about half a mile to the N. still retains the name of Taneto. It is distant about 2 miles from the river Elbe, the Nicia of Pliny (iii. 16. s. 20), which flows into the Po, about 12 miles from the point where it crosses the Aeemilian Way. [E. H. B.]

TANIS (Táü, Herod. ii. 166; Strab. xvii. p. 892; Ptol. v. § 52; Joseph. c. Zos. xiii. 23; the Copis Tanit or Athenini Tanit and the modern San), was a city of Lower Egypt, situated, in lat. 30° 54', on the Tanitic arm of the Nile. [Niles. Ostium Tanitium.] It was the capi­tal of the Tanitic Nome. Although the name of Tanis does not appear in Egyptian annals earlier than the xxi-st dynasty, which consisted of 21 Tanite kings, it had long previously been among the most im­portant cities of the Delta. The branch of the Nile on which it stood, was, with the exception of the Pelusiac, the most easterly, and the nearest to Palestine and Arabia. It is described in the Book of Numbers (c. c.) as founded only seven years later than Hebron; and Hebron, being extant in the time of Abra­ham, was one of the oldest towns in Palestine. Tanis owed its importance partly to its vicinity to the sea, and partly to its situation among the Deltaic marshes. It probably was never occupied by the Hyksos, but, during their usurpation, afforded refuge to the exiled kings and nobles of Memphis. It was a place of strength during the wars of the early kings of the New Monarchy—the xviiith dynasty— with the shepherds; and when the Aegyptians, in their turn, invaded Western Asia, the position of Tanis became of the more value to them. For after Aegypt became a maritime power, in its wars with Cyprus and Phoenicia, a city at no great distance from the coast would be indispensable for its naval armaments. To these purposes Tanis was better adapted than the more exposed and easterly Pelusiac. The eastern arms of the Nile were the first that silted up, and the Pelusiac mouth of the river was at a very early period too shallow for ships of war. The greatness of Tanis is attested in many passages of the Hebrew writers. In the 78th Psalm the waders that attended the departure of the Israelites from Aegypt are said to have been “wrought in the plain of Zoan.” This Psalm, indeed, is somewhat later than David (c. c. 1055—1015); but it proves the tradition that Tanis was the capital of that Pharaoh who oppressed the Hebrew people. In the age of Isaiah (xix. 11, foll.), about 258 years later, Tanis was still reckoned the capital of the Delta, since the prophet speaks of the princes of Zoan and the princes of Nephe (Memphis) as equivalent to the nobles of Aegypt. Again, Isaiah (xxx. 4) describes the ambassadors who were sent to Aegypt to form an alliance with its king as repairing to Zoan and Hanes, or Hareclo­polis; and the desolation of Zoan is threatened by Ezekiel as the consequence of Nebuchadnezzar’s invasion. Tanis probably declined as Scis and Memphis rose into importance; yet twenty years before the Christian era it was still a large town (Strab. xvii. p. 892); nor did it shrink into insigni­ficance until nearly 80 A.D. (Joseph. B. Jud. iv. 1, § 4.) The linen manufacture probably long sustai­ned it. The marshy grounds in its environs were well suited to the cultivation of flax; and Pliny (ix. 1) speaks of the Tanitic linen as among the finest in Aegypt.

No city in the Delta presents so many monu­ments of interest as Tanis. The extensive plain of San is indeed thinly inhabited, and no village exists in the immediate vicinity of the buried city. A canal passes through, without being able to fertilize, the field of Zoan, and wild beasts.

4 A
TANUS.

TAPHIS. and, more anciently TELEBOIDES, a number of small islands off the western coast of Greece, between Leuca and Acarnania (Plin. iv. 12. s. 19). also called the islands of the Taphii or Teleboae (Taphos, Teleboae νησίων, Strab. p. x. 459), who are frequently mentioned in the Homeric poems as pirates. (Od. xv. 427, xvi. 426.) When Athena visited Telemachus at Ithaca, she assumed the form of Mentor, the leader of the Taphians. (Od. i. 105.)

The Taphians or Teleboans are celebrated in the legend of Amphitrion, and are said to have been subdued by this hero. (Herod. v. 59; Apollod. ii. 4. § 6.) The temple of the god was built in Egypt, and was dedicated to the god of this name, AMPHITRION. The principal island is called Taphos (Ταφός) by Homer (Od. i. 417), and by later writers Taphis, Taphiussa, or Taphis (Ταφίς, Ταφώσια, Ταφίας, Strab. L. c.; Plin. L. c. Steph. B. s. v. Taphore, now Meganisi. The next largest island of the Taphii was Carus, now Kalamos, (Scylax, p. 13; Steph. B. s. v.; Leake, North Grecia, vol. iv. p. 16; Diodowill, vol. i. p. 60.) Stephanus B. mentions Contra-Taphis, or Taphis in Cephalonia, named Taphis, represented by the modern Tafesi, where many ancient sepulchres are found. (Leake, North Grecian, vol. iii. p. 67.)

TAPIRASSUS. [AETOLIA, p. 63.]

TAPHS. (Itia. Anton. p. 161; Taphis, Pltis. iv. 4. § 17; Tapii, Olympiod. ap. Phot. p. 62, ed. Bekker), a town situated on the western bank of the Nile, in the region Dodcacsenos, S. of Philae and the Lesser Cataract. The ruins of an ancient city have been discovered at Taphis in Lower Nubia, which are supposed to correspond with the ancient Taphis. It was in the neighbourhood of large stone-quarries. On the opposite side of the river was a suburb called Contra-Taphis. Both towns in the 5th century A.D. were occupied by the Blemmyes. [W. B. D.]

TAPHERES. [TAPHERAE, or TAPHERIO (Taphes, Steph. B. s. v. 642; cf. Mela, ii. 1; Plin. iv. 12. s. 26; Taphos, Pltis. iii. 6. § 3), that part of the neck of the Chersonisus Taurica which was cut through by a dyke and a road (Herod. iv. 3). Pliny and Pudemly (L. c.) mention a town called Taphares; and Strabo (vii. 308) also notices at this spot a people called Taphes. (Cf. D'Anville, Min de L. C. d. Inscri. xxxvii. p. 581; Renoull, Geogr. of Herod. p. 96; Mannert, iv. p. 291.) Perceval, or Persepol, the modern name of the isthmus, also signifies in Russian a ditch or entrenched. (Clarke, Trav. ii. p. 316.)

TAPHEROS. [TAPHERAE.]

TAPHROS. [TAPHERAE, or TAPHERIO (Taphes, Steph. B. s. v. 642; cf. Mela, ii. 1; Plin. iv. 12. s. 26; Taphos, Pltis. iii. 6. § 3), that part of the neck of the Chersonisus Taurica which was cut through by a dyke and a road (Herod. iv. 3). Pliny and Pudemly (L. c.) mention a town called Taphares; and Strabo (vii. 308) also notices at this spot a people called Taphes. (Cf. D'Anville, Min de L. C. d. Inscri. xxxvii. p. 581; Renoull, Geogr. of Herod. p. 96; Mannert, iv. p. 291.) Perceval, or Persepol, the modern name of the isthmus, also signifies in Russian a ditch or entrenched. (Clarke, Trav. ii. p. 316.)

TAPHROS. [TAPHERAE.]

TAPHOS. [Hiera. Tr. L. 25.]

TAPSIRES. (Tapsores, Strab. xvii. p. 799; Tapsores, Pltis. iv. 5. § 34; Dusordelis, Mater. Med. ii. 24; Taphos, Steph. B. s. v.; Tapsores, Tub. Pent.; the Busiris of Leo Africanus), was a town in the Libyan Nome, west of the Delta, and about 25 miles distant from Alexandria. There were probably several places of this name in Egypt, since each Nome would be desired to possess a tomb of Osiris. Alisdair mentions a Bostir near Scen- hytus, another in the Arsinoite Nome, the Fagum; a third at Gich, close to the Pyramids. The town, however, in the Libyan Nome appears to have been the most considerable of all, insunuch as it was the place where the prefect of Alexandria held the pe- riodical census of the Libyan Nome. It's market, indeed, was so much frequented that the emperor Justinian (A.D. 527, foll.) constructed at Tapsores
a town-hall, and public baths. (Procop. de Aedif., vi. 1.) Nearer Alexandria was a smaller town of this name. (Tαπροβάνε της Αίγυπτου, Steph. B. s. v., η ρημα, Strab. xv. p. 800.) [W. B. D.] TAPPUAH or BETH-TAPPUAH, a city in Palestine, upon the mountains of Judah, not far from Hebron, which Robinson believed to be the ancient village of Tefjib, lying in the midst of olive-groves and vineyards. (Josh. xv. 53; Robinson, Bibl. Res. vol. ii. p. 71, 2nd ed.) There was another Tappuah in the plain of Judah (Josh. xv. 34); but which of these was the place conquered by Joshua, cannot be determined. (Josh. xii. 17.) TAPROBANE (γε Ταπροβανα, Strab. i. 63, xv. 690, Sc.; Steph. B. s. v.; Pol. vii. 4; Plin. vi. 22, s. 24; Mela, iii. 77; Ov. ex Pont. i. 5, 80), a very large island, now Ceylon. It is situated on the SE. of the peninsula of Hindostan, and is all but joined to the continent by a reef now called Adam's Bridge, and by an island called Ramisair or Ramisieram Cor, the Κάβουδ of Tpoloey (vii. 1 § 11) and the Isula Solis of Pliny (vi. 22. s. 24). (Comp. Duncan, As. Res. v. p. 39; Ritter, Erdk. vi. p. 63.) Tappuah was not known to the writers of classical antiquity before the time of Alexander the Great, and the various narratives which have reached the West subsequent to his invasion of the Punjab, though often correct as to its natural productions, are singularly erroneous as to its position, its size, and its shape. Thus Onesiarius estimates it at 5000 stadia, though whether this number implies length, breadth, or circumference, is not stated by Strabo (xv. p. 690). If the last, he is nearly correct, Kennell considering this to be about 660 miles. (See Map, and Memoir of India.) Eratothenes adds that it was twenty days' sail from the continent and is constructed and unfit for sailing; a view remarkably confirmed by Pliny, who notices the change in the length of the voyage owing to the improved kind of vessels, and the shallow character of the intervening strait (vi. 22. s. 24). Eratothenes reduces the distance to a navigation of seven days — the same time as Pliny states (l. c.); but this is far too great (Strab. xv. p. 691), as it is really little more than 50 miles from its nearest shores to the mainland of Hindostan (Vincent, Voy. of Nearchus, l. p. 45; Boyd, in Jut. Ann. Regist. 1779). Eratothenes is still more erroneous in the position he assigns to the island, for he extends it 8000 stadia in the direction of Africa (Strab. l. c.), while the author of the Periplus M. Erigdr, makes it reach almost to the coast of Azania (c. 61, ed. Muller) — an error which has probably led to that of Edrisi, who has confounded C. Conomis with Madogascar, and in his map has even placed this island to the E. of Ceylon. Strabo supposes that Ceylon is not less than Britain (ii. p. 130), and Ptolemy gives it a length of more than 1000 miles, and a breadth of more than 700 (l. 14. § 9, viii. 28. § 3). (Compare with this the statement of Marco Polo, which is, as to circumference, identical with Ptolemy, l. c.; and Caesar Frederick, ap. Hacchla's Voy. ii. pp. 225—227.)

The history of ancient Ceylon falls naturally into three heads: 1 What may be gathered from the writers who followed this island in the 2nd century. 2 What we may learn from the Roman writers. 3. What may be obtained from the Byzantines.

Of the times preceding the invasion of India by Alexander we have no distinct notice in classical history; yet it may be inferred from Pliny that some report of its existence had reached the West, where he states that it had long been the opinion that Taprobane was another world, and bore the name of Antichthonus, but that it was determined to be an island about the aera of Alexander (vi. 22. s. 24); while it is not impossible that Herodotus may have heard some tradition on the subject, since he states that cinnamon is produced in those countries in which Dinysius speaks (p. 111); from which passage, however, it cannot be determined whether the true cinnamon, that is the bark of the shrub, is intended, or some other kind of cassia.

To the first class of writers belong Onesiarius, the companion of Alexander, Megasthenes and Daimachus, who were sent as ambassadors by Seleucus to Sandroctos (Chandragupta) and his son Amritochates (Amrityagatha), from whose memorials almost all that is preserved in Strabo and in the earlier portion of the notice in Pliny has been taken. There is no reason to suppose that either Onesiarius or Megasthenes themselves visited this island; they probably collected, while in India, the narratives they subsequenty compiled.

The second class of writers are of the period when the vast commerce of Alexandria had extended to India subsequent to the death of Strabo, A. 24. (Groskurd, Prolog. in Strab. i. p. 16.) Previous to this period, some few ships may have reached India from Egypt; but, from Strabo's own statement, they appear to have been those only of private individuals (l. c.). Pliny, the writer of the Periplus of the Erythraean Sea, Marcius of Heraclea, Mela. and Ptolomey, belong to this class, and, in the fulness of their narratives, show clearly how much additional knowledge had been acquired during the extension of the power of the early emperors of Rome.

Lastly, under the head of Byzantine writers, we have the remarkable account of the island in Cosmas Indicopleustes, the latest which belongs to the period of ancient or classical history.

The most important notice is that of Pliny (l. c.), who states that ambassadors from the island were received at Rome by the emperor Claudius, through the instrumentality of the freedman of a certain Annius Placumus, who, after having been driven out of his course upon the island, remained there six months, and became intimate with the people and their rulers. He states that Placumus landed at a port he calls Hippapras, which may be identified with the modern Kudremutai, which means the same in Sanscrit; and that the name of the king was Rauha, evidently the Indian Rāṭha: he adds that the island contained 500 towns, the chief of which was called Palassinumum, and a vast lake Megisbha, from which flowed two rivers, one called Cydara (Kusudara or Kshudhra in the Annals, now Aripo). It is not possible accurately to determine what modern place is to be identified with Megisba, but the Mahawamsa speaks of enormous works of this nature attributed to Vasabha and other early kings. (Mah. pp. 65, 210, 221, 215.) Pliny adds some astronomical facts, which are not equally coincident with the truth; and remarks on the richness of the island in precious stones and metals, and on the fineness of the climate, which extended the life of man beyond its usual limits.

We may mention also, that Diodorus tells a remarkable story, which has been generally held to refer to Ceylon, though this is not capable of proof. According to him Iambulus, the son of a merchant, on his way to the spice countries, was taken prisoner.
by the Aethiopians, and, after a time, with one other companion, placed in a boat and left to his fate. After a long voyage, he came to an island, rich in all kinds of natural productions and 5000 stadia round (στρογγυλά μίν διπαρχόντα τον οίκον). Lindsay said to be known even in the island, to Palibothra, where he was well received by the king, who is said to have been φαλαλας (Pud. ii. 55, &c.). That the details of this voyage are fabulous no one can doubt, yet the narrative is probably founded on fact, and points to an early intercourse between the shores of Eastern Africa and India.

The fullest and by far the most interesting account of Ceylon, is that preserved by Cosmas Indicopleustes, which was published by Montfaucon (Coll. Non. Nat. ii. p. 536). Cosmas, who flourished in the reign of Justinian, about a.d. 553, states that he obtained his information from a Greek named Sophatus, whom he met at Adulis. According to this writer, the Taprobane of the Greeks is the Selsidela of the Hindus, an island lying beyond the Pepper Coast, or Moloban, and having near it a great number of small islands (i.e. the Maldives). He reckons it about 900 miles in length and breadth, a measure he deduces from a native measure called cattala (still used in the island, and the same as the Tamil nallugal, Vincent, ii. p. 506). There were, at the time he received his information, two kings in the island, one the possessor of the Hynchith (i.e. or the mountain districts which abound in precious stones), and the other of the plain country and coast, where in later times the Arabian, Portuguese, Dutch, and English, have in succession established factories. A Christian church, he adds, was established there, called τεπρωβανις διπαρχον των Χριστιανων, which a priest and deacon ordained in Persia. There is no doubt that these were Nestorians, whose Catholicos resided at Ctesiphon, and who, on the Malabar coast, are often called Christians of St. Thomas. He determines the position of Selsidela, by stating that it is as far from it to China, as from the Persian Gulf to the island (p. 138). Again, he says, which is less correct, that Selsidela is five days' sail from the continent; and that on the continent is a plain named Malaian (Mallale), which produces the pearl oysters; and adds, that the king of Ceylon sells elephants for their height; and that in India elephants are trained for war, while in Asia they are captured for their ivory. Horses imported from Persia pay no tax. It is remarkable that this notice of the elephants is in strict accordance with that of Aelian, who asserts that they were bred in Ceylon and transported in large native vessels to the opposite continent, and sold to the king of Ceylon (Hist. Anim. xxxvi. 18). Pliny (l.c.), on the authority of Onesicritus, affirms that larger and more warlike elephants are reared in this island than anywhere else in India, and that the hunting of them was a constant sport; and Ptolemy places under the Maka M. (Adena's Peak) Αλεφατρων ρυγαλ, in the exact position in which they were, till lately, most abundant (vii. 4. § 8). The testimony of all modern travellers on the subject of the Ceylon elephant is, that these being great tuskers, and other valuable for ivory, they are extremely rare in the island. (Compare also Dionsus, Perieg. v. 593, who calls Κενμον μετα την Αιγυπτίους ελέφατων; Alex. Lychn. in Steph. B., who speaks of ελεφατων ελεφατων as the product of the island; Solin. c. 56; and Tzetzes Chil. viii. Hist. 215). Cosmas concludes his remarkable story with a notice of a conference between the king of Ceylon and Sophatus, in which the latter convinced the king that the Romans were a greater people than the Persians, by exhibiting some gold coins of Byzantium. It confirms the veracity of the narrator that we know from the Ghuta inscription that the India princes of the sixth century had only silver money, while at the capital of the Eastern Empire gold coin was not rare. There were many temples in the island, one of them famous for a hyacinth of extraordinary size.

Few islands have borne, at different times, so large a number of names; as many of these have considerable interest, we shall notice them in succession.

The first, as we have stated, by which it was known to the Greeks was Taprobane. Several explanations have been given of this name; the best is probably Tamraparni (Sunset for red-leaved; cf. Burnouf, Journ. Asiat. viii. p. 147; Mahavano, ed. Tourneur, p. 50; Lassen, Int. Ling. Pragmat. p. 246), a form slightly changed from the Pali Tambaparni, the spot where the first king Vijaya is said to have landed (Mahavano, l. c.). This name is not unknown in other Indian writings; thus we find so named a place on the adjoining continent of Hindostan, and a river of the same district which flows from the Ghuta into the Ganges. It was called Vijnava Purana, (p. 176); and a pearl-fisbery at the mouth of this stream is noticed in the Koghu-vansa (iv. p. 50; cf. also Vijnava Purana, p. 175, and Asiat. Research. viii. p. 330). Other interpretations of Taprobane may be found in Bochart (Geogr. Sacra, p. 692), who, after the fashion of the scholars of his day, derives it from two Hebrew words, and imagines it the ὄφηρ of the Bible; Wahl (Erdbesch. v. Ost-Indien, ii. 682, 683), Mannert (p. 283), Du督促 (Geogr. Sacra, v. p. 215; Angus Aberki, iii. 36), Boehler (Alles Indiens. i. 27), Vincent (Periplocus, p. 493), none of which are, however, free from objection. There can be no doubt that the early language of Ceylon approximated very closely to that of the adjoining continent, and was, in fact, a form of Tamil. (Cf. Eas. Cingal. Script. p. 1, Colombo, 1821; Buchanan Hamilton, p. 369, 1821; Stark. Egypt. ii. § 509), and may be observed that the name Tambaparni is found in the Gurmukh inscription of Asoka (n. c. 280), and would therefore naturally be known to the Seleucidans of Greece. (As. Journ. Beng. vii. p. 159).

We may add that Pliny states that the ancient inhabitants were called Megasthenes Palaeogoni (l. c.), doubtless the translation into Greek of some Indian name. It is not impossible that Megasthenes may have been acquainted with the Indian fable, which made the Rakshasas, or Giants, the children of the Earth, the earliest inhabitants of this island.

The next name we find applied to Ceylon was that of Simandu or Palaeisinundu, which is found after the time of Strabo, but had, nevertheless, gone out of use before Ptolemy. (Ptol. l. c.; Steph. B. s. v. Taprobane; Peripl. M. E., ed. Hudson, p. 2; Marcian, ed. Hudson, p. 26, and pp. 2. 9.) There is a difficulty at first sight about these names, as to which form is the correct one; on the whole, we are inclined to acquiesce in that of Palaeisinundu (Ρακχασινονος), on the authority of Marcian (l. c.) and of the Periplos (§ 56, ed. Müller). Pliny, too, in his account of the embassy to Rome, calls the city, where the royal palace was, Palaeisinundu. There can be little doubt that this word is the Gracianed form of the Sanscrit Pali-Samanta, the
TAPROBANE.

Head of the Holy Law, which is confirmed by another name of analogous character, Andrasimunnda (Ptol. vii. 4), a promontory now called Calpentya (Mannert, i. p. 211). The ancient city noticed by Pliyi, with the royal palace, must be that elsewhere called Anuvagopura, and by the name of Laheri-jpyura, the royal seat of empire from n. c. 267 to 769 (Maha-wan-su, Int. p. xi.). (For other derivations of Palae-simundu, see Dolwell, Disert. de Geogr. Min. p. 95; Wailh, Erdkundscr. ii. p. 684; Renodart, Anc. Relat. des Indes, p. 133; Malte-Brun, Précis de Geogr. iv. 113: Manort, i. p. 210; Pauhoin-a-St. Barth, Voyage aux Indes, ii. p. 482.)

The conjecture of Willard (As. Res. x. p. 148) that it may be Somattra, and of Heeren (Soc. Roy. Gätting. vol. vii. p. 32) that it is the town of "Pontgomelle," do not need refutation.

The other names which this island has borne appear to have been as follows: Salice, with its inhabitants, the Salies, Serevidus, Nieldhita, Sereirdh, Zeilan, Ceylon. These are all closely connected and in reality euphonous modifications of one original form. The first, Salis, — perhaps more correctly Saline, — which seems to have been in use when Ptolemy wrote the common name of Taprobane (l. c.), is certainly derivable from Sindala (Sinhala) of the Pali form of Sinhala (Maha-si, cap. viii. p. 50): from this would naturally come the Siala of Cosmas (Cosm. Indicop. Lc.), the termination of this name, sala, being nothing more than the Sanscrit sīṛpa, an island. (Cf. in the same neighbourhood the Lakkāde and Malāde islands.) The slight and common interchange of the L and R gives the Serendivus of Asimansu (xxi. 7). From this, again, we obtain the more modern forms of this Arabic, Dutch, and English. Sihala would mean the abode of lions, which word is found with the same sense, and the form Sengkiado, in the narrative of the Chinese travellers who visited Ceylon in A. D. 412. (Poe-kow-ki, p. xii., cf. p. 328, Annal. p. 336.) Besides these names there is one other whereby alone this island is known in the sacred Brahmiinical writings. This is Lanka (see Mahābh. ii. 30, v. 1177, ii. c. 275, etc.). It seems most likely that this term, which had passed out of use before the time of Alexander, as it is not mentioned by any of the classical writers: it has been, however, preserved by the Buddhists, as may be seen from the notices in the Maha-wan-su (pp. 2, 3, 49, etc.). (Comp. also Salebrooke, Ess. ii. p. 427; Davis in As. Res. ii. p. 229.)

Ceylon is a very mountainous island, the greater masses being grouped towards the southern end, and forming thereby the watershed for most of its rivers. and the ancient name of the position of these hills. To the N. were the Montes Galibi, terminating in a promontory called Boreum (now Cape Pedro), and overlooking the principal capital, Anuvargiura. To the S. the great chain was known by the generic name of Molea, doubtless a form derived from the Sanscrit Malā, a mountain. The centre of this group is the well-known Adam's Peak — in the native Pali language, Sdsvana Viita (the Mountain of the Gods) (Upham, Sacred Books of Ceylon, iii. p. 202), and the hilly land now called Nara-Ellia.

The principal rivers of Ceylon, as known to the ancients, were the Phisis, which flowed from the Montes Galibi in a northern direction; the Gangra (now Mahākali-Ganga), the chief of all the streams whereby the island is watered, the principal source of which is in the S. range, of which

Adams's Peak is the pre-eminent mountain (Brooke on Mahavella-Gangra, Roy. Geogr. Journ. iii. p. 223), and whose course is nearly N. E.; the Baracas, which rose in the M. Kalu, and flowed S.E.; and the Sanni, which flows from the same source in a westerly direction. Besides these rivers there was the celebrated lake of Megdsita, the size of which has been extravagantly overestimated by Heeren (vi. 22. a. 24.). It is probable that this lake was formed by the connecting together of several great tanks, many remains of which still exist; and thus Furbiger suggests that it may be near the mouths of the Mahawella-Ganga, in which neighbourhood there are still extraordinary remains of canals, earthworks, &c. (Brooke, l. c.). It was on the shores of this lake that Pliyi placed the capital Palae-simundum, with a population of 200,000 souls. The island was rich in towns and peoples, which are not clearly distinguished by ancient writers; of these the Anuvargiura with the town Anuvargiura (now Anuvargiura) is the most important. The greatness of this place, which was the royal residence of the kings from B.C. 267 to A.D. 769 (Mahawansu, Intro. p. xi.), is shown by the vast remains which still exist on the spot. (Chapman, Ancient Anuvargiura, in Trans. Roy. As. Soc. ii. pl. ii. p. 463.)

Other less known peoples and places were the Soani, Sondacadas, Bhogandani, Danze (now Tanganille), the Morduli with their seaport Mor-dulamne, the Nagadibi, Spartana (now Trinco-mall), Maigarammon (probably Tampakandane), and the Modutti. For these and many more we are indebted to Ptolemy, who from his own account (G. i. 17. § 4), examined the journals and conversed with several persons who had visited the island. It is a strong confirmation of what he states, that a considerable number of the names preserved can be reproduced in the native Indian form.

The people who inhabited the island were for the most part of Indian descent, their language being very nearly connected with the Pali, one of the most widely spread Indian dialects. To this race belong all the monuments which remain of its former greatness, together with a very curious and authentic series of annals which have been of late brought to light by the exertions of Sir Alexander Johnston and the critical acumen of Mr. Tournour (Maha-wansu) and Upham (Sacr. Hist. Books). There are, however, still existing in the island some few specimens of a wholly different race, locally known by the name of the Faddus. These wild and uncivilised people are found in the valleys and woods to the E. and S. of the Mahawella-Ganga: and are, in all probability, the remains of the aboriginal race who dwelt in the land antecedent to the arrival of Vijaya and his Indian followers. In physiognomy and colour they bear a striking resemblance to the earliest inhabitants of the S. provinces of Hindostan and are, most likely, of similarly Sthitic origin. (Knox, Account of Ceylon, Lond. 1667; Perceval, Account of Ceylon, Lond. 1805; Gardiner, Descrip. of Ceylon, Lond. 1807; Dury, Ceylon and its Inhabitants, Lond. 1821; W. Hamilton, Itiner. ii. p. 522; Ritter, iv. p. 226; Lassen, Indische Alterth. i. p. 198; Disert. de Taprobane, Bonn, 1832; Tournour, Mahawansu, Ceylon, 1836; Jour. Asiat. Beng. vi. s. E.; Chapman, Anc. City of Anuvargiura, in Tr. R. As. Soc. iii. 463; Chitty, Ruins of Tam-mana Nuwara, in R. As. Soc. vi. 242; Brooke, Mahavella-Gangra, K. Geogr. Soc. iii. 223.)

4 A 3
TAPURIA (Taraupia), a town of uncertain site in Armenia Minor, is mentioned only by Ptolemy (v. 7. 33). [L. S.]

TAPUREI (Tarquropos, Ptol. vi. 14. §§ 12, 13), a tribe in Scythia intra innamam. [T. H. D.]

TAPURI (Tarquropos or Tarropos, Strab. xi. p. 520; Plin. vi. 16. s. 18), a tribe whose name and probable habitations appear, at different periods of history, to have been extended along a wide space of country from Armenia to the eastern side of the Oarus. Strabo places them along-side the Caspian Gates and Rhaeae, in Parthis, (vi. 11. § 14) or between the Derecizes and Hyrcania (xi. p. 520), or in company with the Amardi and other people along the southern shores of the Caspian (xi. p. 523); in which last view Curtius (vi. 4. § 24, viii. 1. § 13), Dionysius (de S itu Orbis, 733), and Pliny (vi. 16. s. 18) may be considered to coincide. Ptolemy in one place reckons them among the tribes of Media (vi. 2. § 6), and in another describes them to Margiana (vi. 10. § 2). Their name is written with some differences in different authors; thus Tarquropos and Tarquopl occur in Strabo; Tapuri in Pliny and Curtius; Tarquopl in Steph. B. There can be no doubt that the present district of Taberdiatn derives its name from them. Aelian (V. H. iii. 13) gives a peculiar description of the Tapuri who dwelt in Media. (Wilson, Armenia, p. 157.)

TAPURI MONTES, a chain of mountains, in Scythia, to the N. of the Jaxartes, apparently a portion of the Alai range, towards its western extremity (Ptol. vi. 14. § 7). It may, however, be doubted whether this view of Ptolemy is really correct. It would seem more likely that they are connected with the Tapuri, a tribe who nearly adjoined the Hyrcania [Taruri]; and this a notice in Polybius would appear clearly to imply (v. 44.). [V.]

TARACII (Taraphia, Ptol. vii. 4. § 8), a tribe of Taprobane or Ceylon, who occupied the N.E. corner of the island below the Males mountains (Adams's ?reak). They appear to have had a port called Haiou or Hais, apparently in the neighbourhood of the present Yomar. Near to them was a river called the Karave (Ptol. vii. 4. § 5). It is not unlikely that the river and the people had once the same name, which has since been modified by the change of the initial letters. [V.]

TARANDIUS (Taraphpeos; Eth. Taraphdplos), a place in Phrygia of unknown site, is mentioned only by Stephanus Byz. (s. v.). [L. S.]

TARANELI, a people in Arabia Deserta of unknown site. (Plin. vi. 28. s. 32.)

TARAN. [Tarentum.]

TARASCON (Tarasvovs: Tavancon), a town in the Province Narbonensis, on the east side of the Rhone, between Arles and Aegignon. The railway from Aegignon to Marseille passes through Tarascon, and there is a branch from Tarascon to Nimes. Ptolemy (in whose text the name is written Tapou- sovos) enumerates Tarascon among the towns of the Satys [Strab. vi. 17. § 14]. Strabo (iv. p. 178) says that the road from Nemausus (Nimes) to Aquae Sextiae passes through Uermum (Beaucaire) and Tarascon, and that the distance from Nemausus to Aquae Sextiae is 53 Roman miles; which, as D'Anville observes, is not correct. In another passage (iv. p. 187) Strabo makes the distance from Nimes to the bank of the Rhone opposite to Tarascon about 100 stadia, which is exact enough. [TARUSCOVSEENSES.] [G. L.]

TARE. [Tarruna.]

TARBELI (Tarpeoavos, Tarpeiaos) are mentioned by Caesar among the Aquitanian peoples (B. G. ii. 37). They lived on the shores of the Ocean, on the Galliss bay (Strab. iv. p. 190), of which they were masters. Gold was found abundantly in their country, and at little expense. Some pieces were a hundred, and required little purification. The Tarbeli extended southwards to the Ataras (Adour) and the Pyrenees, as the passages cited from Tullius (i. 7, 9) and Lucan (Pharsal. i. 421) show, so far as they are evidence:

"Qui tenet et ripam Aturi, quo litorae curvo
Molliter adsumus clangid Tarbelicus sequor."  

Antonius (Parent. iv. 11) gives the name "Tarbelis" to the Ocean in these parts. Ptolemy (ii. 7. § 9) places the Tarbeli south of the Bituriges viscusi, and makes their limits extend to the Pyrenees. He names their city "Tasta Adyvostra, or Aquae Tarbelineae. [Aqua Tarbelliciae.]

Pliny (iv. 19) gives to the Tarbeli the epithet of Quaternus, a term which indicates the establishment of some Roman soldiers in this country, as in the case of the Cocosasses, whom Pliny names Sexignani. [Cocosasses.]

The country of the Tarbeli continued hot and cold springs, which were near one another.

TARBESUS (Tarqpeos), a town of Pisidia, mentioned only by Strabo (xii. p. 570). [L. S.]

TARENTINUS SINUS (δταρατήριον κόλπος: Golfo di Taranto) was the name given in ancient as well as in modern times to the extensive gulf comprised between the two great promontories or penis- 

TARTAREUS SINUS (δταρατήριον κόλπος: Golfo di Taranto). It was included within the limits of the province of Calabria, as that term was used by the Romans; but the Greeks
TARENTUM.

the document contains a passage discussing the history and geography of Tarentum, an ancient city in ancient Greece. It is located on a promontory or peninsula at the entrance of a passage leading to the entrance of a extensive bay, now called the Mare Piccolo, but in ancient times known as the Port of Tarentum, an inlet of above 6 miles in length, and from 2 to 3 in breadth, which was so nearly closed at its mouth by the peninsula occupied by the city, that the latter is now connected by a bridge with the opposite side of the harbour. There can be no doubt that the ancient city originally occupied only the same space to which the modern one is now confined, that of the low but rocky islet which lies directly across the mouth of the harbour, and is now separated from the mainland at its E. extremity by an artificial fosse or ditch, but was previously joined to it by a narrow neck of sand. This may probably have been itself a later accumulation; and it is not unlikely that the city was originally founded on an island, somewhat resembling that of Ortygia at Syracuse, which afterwards became joined to the mainland, and has again been artificially separated from it. As in the case of Syracuse, this island or peninsula afterwards became the Acropolis of the enlarged city, which extended itself widely over the adjoining plain.

Tarentum was a Greek city, a colony of Sparta, founded within a few years after the two Achaean colonies of Sybaris and Crotona. The circumstances that led to its foundation are related with some variation by Antiochus and Ephorus (both cited by Strabo), but both authors agree in the main fact that the colonists were a body of young men, born during the First Messenian War under circumstances which threw over their birth a taint of illegitimacy, on which account they were treated with contempt by the other citizens; and after an abortive attempt at creating a revolution at Sparta, they determined to emigrate in a body under a leader named Phalanthus. They were distinguished by the epithet of Parthenians, in allusion to their origin. Phalanthus, who was apparently himself one of the disparaged class, and had been the chief of the conspirators at Sparta, after consulting the oracle at Delphi, became the leader and founder of the new colony. (Antiochus, ap. Strab. vi. p. 278; Ephorus, l. b. p. 279; Serv. ad Aen. iii. 551; Diod. xv. 66; Justin, iii. 4; Scymn. Ch. 332.) Both Antiochus and Ephorus represent them as establishing themselves without difficulty on the spot, and received in a friendly manner by the natives; and this is far more probable than the statement of Pausanius, according to which they found themselves in constant warfare; and it was not till after a long struggle that they were able to make themselves masters of Tarentum. (Paus. x. 10. § 6.) The same author represents that city as previously occupied by the indigenous tribes, and already a great and powerful city, but this is highly improbable. The name, however, is probably of native origin, and seems to have been derived from that of the small river or stream which always continued to be known as the Taras; though, as usual, the Greeks derived it from an eponymous hero named Taras, who was represented as a son of Neptune and a nymph of the country. (Paus. b. 8. § 8.) It is certain that the hero Taras continued to be an object of special worship at Tarentum, while Phalanthus, who was revered as their Oeckist, was frequently associated with him, and gradually became the subject of many legends of a very mythical character, in some of which he appears to have been confounded with Tanaus himself. (Paus. x. 10. §§ 6, 8, 13. § 10; Serv. ad Aen. Lc.) Nevertheless, there is no reason to doubt the historical character of Phalanthus, or the Lacedaemonian origin of Tarentum, which was confirmed by numerous local names and religious observances still retained there down to a very late period. (Pol. viii. 30, 35.)

The Roman poets also abound in allusions to this origin of the Tarantines. (Hor. Carm. iii. 5, 56; ii. 6, 11; Ovid. Met. xi. 50, &c.) The date of the foundation of Tarentum is given by Hieronymus as n. c. 708, and this, as which is in accordance with the circumstances related in connection with it, is probably correct, though no other author has mentioned the precise date. (Hier. Chron. ad ol. viii.) The history of Tarentum, for the first two centuries of its existence, is, like that of most other cities of Magna Graecia, almost wholly unknown. But the main fact is well attested that it attained to great power and prosperity, though apparently at first overshadowed by the superior power of the Achaean cities, so that it was not till a later period that it assumed the predominant position among the cities of Magna Graecia, which it ultimately attained. There can be no doubt that it owed this prosperity mainly to the natural advantages of its situation. (Seymm. Ch. 332—336; Strab. vi. p. 278.) Though its territory was not so fertile, or so well adapted for the growth of grain as those of Metapontum and Siris, it was admirably suited for the growth of olives, and its pastures produced wool of the finest quality, while against the narrow sea as it was called, abounded in shell-fish of all descriptions, among which the Murex, which produced the celebrated purple dye, was the most important and valuable. But it was especially the excellence of its port to which Tarentum owed its rapid rise to opulence and power. This was not only a natural and secure, but was the only safe harbour of any extent on the whole shores of the Tarentine gulf; and as neither Brundisium nor Hydruntum, on the opposite side of the Messapian peninsula, had as yet attained to any eminence, or fallen into the hands of a seafaring people, the port of Tarentum became the chief emporium for the commerce of all this part of Italy. (Pol. x. 1; Flor. i. 18. § 3.) The story of Arion, as related by Herodotus (i. 24) indicates the existence of extensive commercial relations with Corinth and other cities of Greece as early as the reign of Periander, n. c. 625—585. As the Tarentines gradually extended their power over the adjoining territories, they naturally came into frequent collision with the native tribes of the interior,—the Messapians and the Peucetians; and the first events of their history recorded to us relate to their wars with these nations. Their offerings at Delphi noticed by Pausanius (x. 10. § 6, 13, § 10), recorded victories over both these nations, in one of which it appears that Opis, a king of the Hyapygians, who had come to the assistance of the Peucetians, was slain; but we have no knowledge of the dates or circumstances of these battles. It would appear, however, that the Tarentines were continually gaining ground, and making themselves masters of the Messapian towns one after the other, until their progress was checked by a great disaster, their own forces, together with those of the Rhegians, who had been sent to their assistance, being totally defeated by the barbarians with great slaughter. (Herod. vii. 170; Diod. xi. 52.) So heavy was their
loss that Herodotus, without stating the numbers, says it was the greatest slaughter of Greeks that had ever occurred up to his time. The loss seems to have fallen especially upon the nobles and wealthier citizens, so that it became the occasion of a political revolution, and the government, which had previously been an aristocracy, became therefor a pure democracy. (Arist. Pol. v. 3.) Of the internal condition and constitution of Tarentum previously to this time, we know scarcely anything, but it seems probable that its institutions were at first copied from the government of the parent city of Sparta. Aristotle speaks of its government as a *politeia* in the sense of a mixed government or commonwealth; while Herodotus incidentally notices a king of Tar- rentum (iii. 156), not long before the Persian War, who was doubtless a king after the Spartan model. The institutions of a democratic tendency noticed with commendation by Aristotle (Pol. vi. 5) probably belong to the later and democratic period of the constitution. We hear but little also of Tarentum in connection with the revolutions arising out of the influence exercised by the Pythagoreans; that sect had apparently not established itself so strongly there as in the Achaean cities; though many Tarentines are enumerated among the discipes of Pythaga- gora, and it is clear that the city had not altogether escaped their influence. (Lamb. Vit. Pol. 262, 265, Porphyry. Vit. Pol. 56.)

The defeat of the Tarentines by the Messapians, which is referred by Diodorus to n. c. 473 (Diod. xii. 52), is the first event in the history of Tarentum to which we can assign a definite date. Great as that blow may have been, it did not produce any permanent effect in checking the progress of the city, which still appears as one of the most flourishing in Magna Graecia. We next hear of the Tarentines as interfering to prevent the Thurians, who had been recently established in Italy, from making themselves masters of the district of the Sciti. On what grounds the Tarentines could lay claim to this district, which was separated from them by the intervening territory of Metapontum, we are not informed; but they carried on war for some time against the Thurians, who were supported by the Spartan exile Cleamnidas; until at length the dispute was terminated by a compromise, and a new colony named Heraclea was founded in the contested territory (n. c. 432), in which the citizens of both states participated, but it was agreed that it should be considered as a colony of Tarentum. (Ant. xiv. c. 132, v. 264; Diod. xii. 23, 36.) At the time of the Athenian expedition to Sicily, the Tarentines kept aloof from the contest, and contented themselves with refusing all supplies and assistance to the Athenian fleet (Thuc. vi. 44), while they afforded shelter to the Corinthian and Lucanian ships under Gythippus (ib. 104), but they did not even prevent the second fleet under Demosthenes and Eurymedon from bouching at the island of the Chaeae, which was immediately opposite to the entrance of their harbour, and taking on board some auxiliaries furnished by the Messapians. (Ibid. vii. 33.)

Another long interval now elapses, during which the history of Tarentum is to us almost a blank; yet the few notices we hear of the city represent it as in a state of great prosperity. We are told that at one time (apparently about 380-360 B.C.) Archytas, the Pythagorean philosopher, exercised a paramount influence over the government, and filled the office of Strategus or general no less than seven times, though it was prohibited by law to hold it more than once; and was successful in every campaign. (Diod. Laert. viii. 4. §§ 79-82.) It is evident, therefore, that the Tarentines were far from enjoying an unbroken peace. The hostilities alluded to were probably but a renewal of their old warfare with the Messapians; but the security of the Greek cities in Italy was now menaced by two more formidable foes, Dionysius of Syracuse in the south, and the Lucanians on the north and west. The Tarentines, indeed, at first looked upon both dangers with comparative indifference; their remote position secured them from the immediate brunt of the attack, and it is even doubtful whether they at first joined in the general league of the Greek cities to resist the danger which threatened them. Meanwhile, the calamities which befell the more southern cities, the destruction of some by Dionysius, and the humiliation of others, tended only to raise Tarentum in comparison, while that city itself enjoyed an immunity from all hostile attacks; and it seems certain that it was at this period that Tar- rentum first rose to the preponderating position among the Greek cities in Italy, which it there- forth enjoyed without a rival. It was apparently as an acknowledgment of that superiority, that when Tarentum had joined the confederacy of the Greek cities, the place of meeting of their congress was fixed at the Tarentine colony of Heraclea. (Strab. vi. p. 280.)

It was impossible for the Tarentines any longer to keep aloof from the contest with the Lucanians, whose formidable power was now beginning to threaten all the cities in Magna Graecia; and they now appear as taking a leading part in opposing the progress of those barbarians. But they were not content with their own resources, and called in successively to their assistance several foreign leaders and generals of renown. The first of these was the Spartan king Archidamus, who crossed over into Italy with a considerable force. Of his operations there we have no account, but he appears to have carried on the war for some years, as Diodorus places his first landing in Italy in n. c. 346, while the battle in which he was defeated and slain was not fought till the same time as that of Chaeroneia, n. c. 338. (Diod. xvi. 63. 88.) This action, in which Archidamus himself, and almost all the troops which he had brought with him from Greece perished, was fought (as we are told), not with the Lucanians, but with the Messapians, in the neighbour- hood of Manduria, only 24 miles from Tarentum (Flut. Agis. 3; Paus. iii. 10. § 5; Diod. l. c.); but there can be no doubt, however, that both nations were united, and that the Lucanians lent their support to the Messapians, as the old enemies of Tar- rentum. Henceforth, indeed, we find both names continually united. A few years after the death of Archidamus, Alexander, king of Epirus, was invited by the Tarentines, and landed in Italy, n. c. 332. The operations of his successive campaigns, which were continued till n. c. 326, are very imperfectly known to us, but he appears to have first turned his arms against the Messapians, and compelled them to conclude a peace with the Tarentines, before he proceeded to make war upon the Lucanians and Bruttians. But his arms were attended with consider- able success in this quarter also; he defeated the Samnites and Lucanians in a great battle near Paestum, and penetrated into the heart of the Bruttian.
2. The Romans sent an embassy to Tarentum to complain of these outrages; but their demands being refused, and their ambassador treated with contumely, they had new no choice left but to declare war upon the Tarentines, & c. 281. (Appian, v. 146; Zonar. l. c.; Dion Cass. Fr. 145.) Nevertheless, the war was at first carried on with little energy; but meanwhile the Tarentines, following their usual policy, had invited Pyrrhus, king of Epirus, to their assistance. That monarch readily accepted the overture, and sent over his general Milo to occupy the citadel of Tarentum with 3000 men, while he himself followed in the winter. (Zonar. viii. 2; Plat. Pyrrh. 15, 16.)

It is usual to represent the Tarentines as at this period sunk in luxury and effeminacy, so that they were unable to defend themselves, and hence compelled to have recourse to the assistance of Pyrrhus. But there is certainly much exaggeration in this view. They were no doubt accustomed to rely much upon the arms of mercenaries, but so were all the more wealthy cities of Greece; and it is certain that the Tarentines themselves (apart from their allies and mercenaries), furnished not only a considerable body of cavalry, but a large force or phalanx of heavy-armed infantry, called the Lencaspils, from their white shields, who are especially mentioned as serving under Pyrrhus at the battle of Asculum. ( Dionys. xx. Fr. Didot. 1, 5.) It is unnecessary here to repeat the history of the campaigns of that monarch. His first successes for a time saved Tarentum itself from the brink of the war; but when he at length, after his final defeat by Curius, withdrew from Italy (n. c. 274), it was evident that the full weight of the Roman arms would fall upon Tarentum. Pyrrhus, indeed, left Milo with a garrison to defend the city, but the Tarentines themselves were divided into two parties, the one of which was disposed to submit to Rome, while the other applied for assistance to Carthage. A Carthaginian fleet was actually sent to Tarentum, but it arrived too late, for Milo had already capitulated and surrendered the citadel into the hands of the Roman consuls Papirius, &c. 272. (Zonar. viii. 6; Oros. iv. 3.)

From this time Tarentum continued subject to Rome. The inhabitants were indeed left in possession of their own laws and nominal independence, but the city was jealously watched; and a Roman legion seems to have been commonly stationed there. (Pol. ii. 24.) During the First Punic War the Tarentines are mentioned as furnishing ships to the Romans (Pol. i. 20); but with this exception we hear no more of it till the Second Punic War, when it became a military post of great importance. Hannibal was from an early period desirous to make himself master of the city, which, with its excellent port, would at once have secured his communications with Africa. It is evident also that there was a strong Carthaginian party in the city, who shortly after the battle of Cannae, opened negotiations with Hannibal, and renewed them upon a subsequent occasion (Liv. xx. 61, xxiv. 13); but they were kept down by the presence of the Roman garrison, and it was not till n. c. 212 that Nice and Philenmus, two of the leaders of this party, found an opportunity to betray the city into his hands. (Liv. xxv. 8—10; Pol. viii. 26—33.) Even then the Roman garrison still held the citadel; and Hannibal having failed in his attempts to carry this fortress by assault, was compelled to resort to a blockade. He cut it off on
the land side by drawing a double line of fortifications across the isthmus, and made himself master of the sea by dragging a part of the fleet which was shut up within the inner port (or Mare Piccolo), across the narrowest part of the isthmus, and halting it again in the outer bay. (Pol. viii. 34–36; Liv. xxv. 11.) This state of things continued for more than two years, during the whole of which time the Carthaginians continued masters of the city, while the Roman garrison still maintained possession of the citadel, and the besiegers were unable altogether to prevent them from receiving supplies and reinforcements. During this occasion of Roman losses, having sent a considerable fleet under D. Quintus to attempt the relief of the place, this was met by the Tarentines, and after an obstinate conflict the Roman fleet was defeated and destroyed. (Liv. xxv. 15, xxvi. 39, xxvii. 3.) At length in n. c. 209 Fabius determined it possible to wrest from Hannibal the possession of this important post; and laid siege to Tarentum while the Carthaginian general was opposed to Marcellus. He himself encamped on the N. of the city near the entrance, so that he readily put himself in communication with M. Livius, the commander of the citadel. But while he was preparing his ships and engines for the assault, an accident threw in his way the opportunity of surprising the city, of which he made himself master with little difficulty. The Carthaginian garrison was put to the sword, as well as a large part of the inhabitants, and the whole city was given up to plunder. (Id. xxvii. 12, 15, 16; Plut. Fab. vi. 23.) Livy praises the magnificence of Fabius in not carrying off the statues and other works of art in which Tarentum abounded (Liv. xxvii. 16; Plut. Fab. 23); but it is certain that he transferred from thence to Rome a celebrated statue of Hercules by Lysippus, which long continued to adorn the Capitol. (Strab. vi. p. 278; Plin. xxxiv. 7. s. 18.) The vast quantity of gold and silver which fell into the hands of the victors sufficiently bears out the accounts of the great wealth of the Tarentines. (Liv. l. c.)

Tarentum had already suffered severely on its capture by Hannibal, and there can be no doubt that it sustained a still severer blow when it was retaken by Fabius. (Strab. vi. p. 278.) It was at first proposed to degrade it to a condition similar to that of Capua, but this was opposed by Fabius, and the decision was postponed till after the war. (Liv. xxvii. 25.) What the final resolution of the senate was, we know not; but Tarentum is alluded to at a subsequent period, as still retaining its position of ancient city, "urbs federata." (Liv. xxxv. 16.) It is certain that it still remained the chief place in this part of Italy, and was the customary residence of the praetor or other magistrate who was sent to the S. of Italy. Thus we find in n. c. 185, L. Postumius sent thither to carry on investigations into the conspiracies that had arisen out of the Bacchanalian rites, as well as among the slave population. (Liv. xxxiv. 29, 41.) But it is nevertheless clear that it was (in common with the other Greek cities of this part of Italy) fallen into a state of great decay; and hence, in n. c. 123, among the colonies sent out by C. Gracchus, was one to Tarentum, which appears to have assumed the title of Colonia Neptuna. (Vell. Pat. i. 15; Plin. iii. 11. s. 16; see Mommsen, in Berichte der Sächsischen Gesellschaft für 1849, pp. 49–51.) According to Strabo this colony became a flourishing one, and the city enjoyed considerable prosperity in his day. But it was greatly fallen from its former splendour, and only occupied the site of the ancient citadel, with a small part of the adjoining isthmus. (Strab. vi. p. 278.) It was, however, one of the few cities which still retained the Greek language and manners, in common with Neapolis and Rhegium. (Ib. p. 253.) The salubrity of its climate, as well as the fertility of its territory, and, above all, the importance of its port, preserved it from the complete decay into which so many of the cities of Magna Graecia fell under the Roman government. It is repeatedly mentioned during the wars against Octavian, Antony, and Sex. Pompeius as a naval station of importance; and it was there that in n. c. 36 a fresh arrangement was come to between Octavian and Antony, which we find alluded to by Tacitus as the "Tarentum foedas." (Appian, B. C. ii. 40, v. 50, 80, 84, 93—99; Tac. Ann. i. 10.)

Even under the Empire Tarentum continued to be one of the chief seaports of Italy, though in some measure eclipsed by the growing importance of Brundisium. (Tac. Ann. xiv. 12, Hist. ii. 83.) An additional colony of veterans was sent there under Nero, but with little effect, most of them having soon again dispersed. (Tac. Ann. xiv. 27.) No subsequent mention of Tarentum is found in history until after the fall of the Western Empire, but it then appears as a considerable town, and bears an important part in the Gothic Wars on account of its strength as a fortress, and the excellence of its port. (Procop. R. G. iii. 23, 27, iv. 26, 34.) It was taken by Belisarius, but retaken by Totila in A. D. 549, and continued in the hands of the Goths till it was finally wrested from them by Narses. From that time it continued subject to the Byzantine Empire till A. D. 661, when it was taken by the Lombard Remeslaus, duke of Beneventum (P. Diac. vi. 1); and afterwards fell successively into the hands of the Saracens and the Greek emperors. The latter did not finally lose their hold of it till it was taken by Robert Guiscard in 1063. It has ever since formed part of the kingdom of Naples. The modern city of Tarentum has a population of about 20,000 souls; it is the see of an archbishop, and still ranks as the most important city in this part of Italy. But it is confined to the space occupied by the ancient citadel, the extremity of the peninsula or promontory between the two ports; this is now an island, the low isthmus which connected it with the mainland having been cut through by king Ferdinand I., for the purpose of strengthening its fortifications.

Sparely any remains are now extant of the celebrated and opulent city of Tarentum. "Never (says Swinhurst) was a place more completely swept off the face of the earth." Some slight remains of an amphitheatre (of course of Roman date) are visible outside the walls of the modern city; while within it the convent of the Celestines is built on the foundations of an ancient temple. Even the extent of the ancient city can be very imperfectly determined. A few slight vestiges of the ancient walls are, however, visible near an old church which bears the name of Sta Maria di Murata, about 2 miles from the gates of the modern city; and there is no doubt that the walls extended from thence, on the one side to the Mare Piccolo, on the other side to the outer sea. The general form of the city was thus triangular, having the citadel at the apex, which is now joined to the opposite shore by a
bridge of seven arches. This was already the case in Strabo's time, though no mention of it is found at the time of the siege by Hannibal. The form and arrangement of the city cannot be better described than they are by Strabo. He says: "While the whole of the rest of the Tarentine gulf is destitute of ports, there is here a very large and fair port, closed at the entrance by a large bridge, and not less than 100 stadia in circumference. [This is beneath the truth: the Mare Piccolo is more than 16 miles (128 stadia) in circuit.] On the side towards the inner recess of the port it forms an isthmus with the exterior sea, so that the percentage of water is small. The distance of the isthmus is so low that ships can easily be drawn over the land from one side to the other. The whole city also lies low, but rises a little towards the citadel. The ancient wall comprises a circuit of great extent; but now the greater part of the space adjoining the isthmus is deserted, and only that part still subsists which adjoins the mouth of the port, where also the Acropolis is situated. The portion still remaining is such as to make up a considerable city. It has a splendid Gymnasium, and a good-sized Agora, in which stands the bronze colossal statue of Jupiter, the largest in existence next to that at Rhodes. In the interval between the Agora and the mouth of the port is the Acropolis, which retains only a few remnants of the splendid monuments with which it was adorned in ancient times. For the greater part were either destroyed by the Carthaginians when they took the city, or carried off as booty by the Romans, when they made themselves masters of it by assault. Among these is the colossal bronze statue of Hercules in the Capitol, a work of Lysippus, which was dedicated there as an offering by Fabius Maximus, who took the city." (Strab. vi. p. 278.)

In the absence of all extant remains there is very little to be added to the above description. But Polybius, in his detailed narrative of the capture of the city by Hannibal, supplies us with some local names and details. The principal gate on the E. side of the city in the line of wall, seems to have been that called the Temenid Gate (αι πυλῶν Τημενίδων, Pol. viii. 30); outside of which was a mound or tumulus called the tomb of Hyacinthus, whose worship had obviously been brought from Sparta. A broad street called the Batheia, or Low Street, led apparently from this gate towards the interior of the city. This its name may be conjectured to have been close to the port and the water's edge, while another broad street led from thence to the Agora. (Ib. 31.) Another street called the Soteira (Σωτηρία) was apparently on the opposite side of the city from the Batheia, and must therefore have joined the outer sea. (Ib. 36.) Immediately adjoining the Agora was the Museum (Μουσείον), a public building which seems to have served for festivals and public banquets, rather than for any purposes connected with its name. (Ib. 27, 29.) There is nothing to indicate the site of the theatre, alluded to by Polybius on the same occasion, except that it was distinctly within the city, which was not always the case. Strabo does not notice it, but it must have been a building of large size, so as to be adapted for the general assemblies of the people, which were generally held in it, as was the case also at Syracuse and in other Greek cities. This is particularly mentioned on several occasions; it was there that the Roman ambassadors received the insult which finally led to the ruin of the city. (Flor. i. 18. § 3; Val. Max. ii. 2. § 5; Appian, Syrm. 7.)

Livy inaccurately describes the citadel as standing on lofty cliffs ("praestitis ripum," xxv. 11): the peninsula on which it stood rises indeed (as observed by Strabo) a little above the rest of the city, and it is composed of a rocky soil; but the whole site is low, and no part of it rises to any considerable elevation. The hills also that surround the Mare Piccolo are of trifling height, and slope very gradually to its banks, as well as to the shore of the outer sea. There can be no doubt that the port of Tarentum, properly so called, was the inlet now called the Mare Piccolo or "Little Sea," but outside this the sea on the S. side of the city forms a bay or roadstead, which affords good shelter to shipping, being partially sheltered from the SW. by the two small islands of S. Pietro and S. Paolo, apparently the same which were known in ancient times as the Croeades. (Thuc. vii. 33.)

Tarentum was celebrated in ancient times for the salubrity of its climate and the fertility of its territory. Its advantages in both respects are extolled by Horace in a well-known ode (Car. ii. 6), who says that its honey was equal to that of Hymettus, and its olives to those of Yenafraum. Varro also praised its honey as the best in Italy (ap. Macrob. Sat. ii. 12). Its oil and wines enjoyed a nearly equal reputation; the choicest quality of the latter seems to have been that produced at Anol (Hor. I. c.; Martial, xii. 125; Plin. xiv. 6. s. 8), a valley in the neighbourhood, on the slope of a hill still called Monte Melone (Atlus). But the choicest production of the neighbourhood of Tarentum was its wool, which appears to have enjoyed an acknowledged supremacy over that of all parts of Italy. (Plin. xxix. 2. s. 9; Martial, 1. c.; Varr. R. R. ii. 2. § 18; Strab. vi. p. 254; Colum. vii. 2. § 3.) Nor was this owing solely to natural advantages, as we learn that the Tarentines bestowed the greatest care upon the preservation and improvement of the breed of sheep. (Colum. vii. 4.) Tarentum was noted likewise for its breed of horses, which supplied the famous Tarentine cavalry, which was long noted among the Greeks. Their territory abounded also in various kinds of fruits of the choicest quality, especially pears, figs, and chestnuts, and though not as fertile in corn as the western shores of the Tarentine gulf, was nevertheless well adapted to its cultivation. At the same time its shores produced abundance of shell-fish of all descriptions, which formed in ancient times a favorite article of diet. Even at the present day the inhabitants of Taranto subsist to a great extent upon the shell-fish produced in the Mare Piccolo in a profusion almost incredible. Its Pectens or scallops enjoyed a special reputation with the Roman epicures. (Hor. Sat. ii. 4. 34.) But by far the most valuable production of this class was the Murex, which furnished the celebrated purple dye. The Tarentine purple was considered second only to the Tyrian, and for a long time was the most valuable known to the Romans. (Corn. Nep. ap. Plin. ix. 39. s. 64.) Even in the time of Augustus it continued to enjoy a high reputation. (Hor. Ep. ii. 1, 207.) So extensive were the manufactories of this dye at Tarentum that considerable mounds are still visible on the shore of the Mare Piccolo, composed wholly of broken shells of this species. (Swinburne's Travels, vol. i. p. 239.)
The site of Tarentum, though hilly, possessed for its mildness, was generally reckoned a fine and excelling district, and was considered as in some degree the cause of the luxurious and elegant habits ascribed to the inhabitants ("mole Tarretum," Hor. Sat. ii. 4. 34. "imbecile Tarretum," Id. Ep. i. 7. 45.) It is probable that this charge, as in many other cases, was greatly exaggerated; but there is no reason to doubt that the Tarentines, like almost all the other Greeks who became a manufacturing and commercial people, indulged in a degree of luxury far exceeding that of the ruler nations of Central Italy. The wealth and opulence, to which they attained in the 4th century n. c. naturally tended to aggravate these evis, and the Tarentines are represented as at the time of the arrival of Pyrrhus embellished and degraded by luxurious indulgences, and devoted almost exclusively to the pursuit of pleasure. To such an excess was this carried that we are told the number of their annual festivals exceeded that of the days of the year. (Theopomp. ap. Athen. xii. p. 522; Strab. vi. p. 280; Aelian, V. H. xii. 30.) Juvanil.alludes to their love of feasting and pleasure when he calls it "coronatum ac petulans nudulunque Tarentum" (vi. 297). But it is certain, as already observed, that they were not incapable of war; they furnished a considerable body of troops to the army of Pyrrhus; and in the sea-fight with the Roman fleet off the entrance of the harbour, during the Second Punic War, they displayed both courage and skill in naval combat. (Liv. xxvi. 39.) In the time of their greatest power, according to Strabo, they could send into the field an army of 30,000 foot and 3000 horse, besides a body of 1000 select cavalry called Hipparchs. (Strab. vi. p. 280.) The Tarentine light cavalry was indeed celebrated throughout Greece, so that they gave name to a particular description of cavalry, which are mentioned under the name of Tarentines (Tarentinos), in the armies of Alexander the Great and his successors; and the appellation continued in use down to the period of the Roman Empire. (Arrian. Anab.; Id. Tact. 4; Pol. iv. 77. xi. 12; Liv. xxvii. 28; Aelian. Tact. 2. p. 14; Suidas, s. v. Tarentinos.) It is probable, however, that these may have been always recruited in great part among the neighbouring Messapians and Sannitians, who also excelled as light horsemen.

With their habits of luxury the Tarentines undoubtedly combined the refinements of the arts usually associated with it, and were diligent cultivators of the fine arts. The great variety and beauty of their coins is, even at the present day, a sufficient proof of this, while the extraordinary numbers of them which are still found in the S. of Italy attest the wealth of the city. Ancient writers also speak of the numbers of pictures, statues, and other works of art which the city was adorned with, and of which a considerable number were transported to Rome. (Flor. i. 18; Strab. vi. p. 278; Liv. xxvii. 16.) Among the pictures which were considerable were two statues of Jupiter, mentioned by Strabo (L. c.), and which was apparently still standing in the Agera in his time: the bronze statue of Hercules by Leypinus already noticed; and a statue of Victory, which was also carried to Rome, where it became one of the chief ornaments of the Curia Julia. (Dion Cass. li. 22.) Nor were the Tarentines deficient in the cultivation of literature. In addition to Archytas, the Pythagorean philosopher, celebrated for his mechanical attainments and discoveries, who long held at Tarentum a place somewhat similar to that of Pericles at Athens (Dion. Laert. viii. 4; Suid. s. v. Amphoter); Athena, xii. p. 543), Aristoxenus, the celebrated musician and disciple of Aristocles, was a native of Tarentum; as also is Rhiathus, the dramatic poet, who became the founder of a new species of burlesque drama which was subsequently cultivated by Sophster and other authors. (Suid. s. v. Pidias.) It was from Tarentum also that the Romans received the first traditions of the regular drama, Livius Andronicus, their earliest dramatic poet, having been a Greek of Tarentum, who was taken prisoner when the city fell into their hands. (Cic. Brut. 18.)

Polybius tells us that Tarentum retained many traces of its Lacedaemonian origin in local names and customs, which still subsisted in his day. Such was the tomb of Hyacinthus already mentioned (Pol. vii. 30); the river Galasseus also was called by them the Eurates (Civ. viii. p. 166; Tar., xii. 14), a name which ultimately prevailed. Another custom which he notices as peculiar was that of burying their dead within the walls of the city, so that a considerable space within the walls was occupied by a necropolis. (Ib. 30.) This custom he ascribes to an oracle, but it may have arisen (as was the case at Aegyptus and Syracuse) from the increase of the city having led to the original necropolis being included within the walls.

The name of Tarentum (Taras) was supposed to be derived from a river of the name of Taras (Tayus), which is noticed by several ancient writers. (Steph. B. s. v. Tayos; Paus. x. 10. § 8.) This is commonly identified with a deep, but sluggish, stream, which flows into the sea about 4 miles W. of the entrance of the harbour of Tarentum, and is still called Taras, though corrupted by the peasantry into Fiume di Terra. (Romellini, vol. i. p. 281; Swinburne, vol. i. p. 271.) The more celebrated stream of the Galasseus flowed into the Morea or bay of Tarentum, N. N. N.; here it is commonly identified with the small stream called Le Citriace, an old church near which still retains the name of Sta Maria di Galasen. [Galasen s.]

Another locality in the immediate neighbourhood of Tarentum, the name of which is associated with that of the city by Horace, is Avlun, a hill or ridge celebrated for the excellence of its vines. This is identified by local topographers, though on very slight grounds, with a sloping ridge on the seashore about 8 miles S.E. of Tarentum, a part of which bears the name of Monte Melone, supposed to be a corruption of Avuleo [Aulon]. A more obscure name, which is repeatedly mentioned in connection with Tarentum, is that of Saturnium (Sarispow). From the introduction of this name in the oracle alleged to have been given to Phalanthus (Strab. vi. p. 279), it seems probable that it was an old native name, but it is not clear that there ever was a town or even village of the name. It is more probable that it consisted of a tract or district in the neighbourhood of Tarentum. Stephanus of Byzantium distinctly calls it χώρα πληθος Ταρατος (s. v. Sarispow); and the authority of Servius, who calls it a city (civitas) near Tarentum, is not worth much in comparison. There was certainly no city of the name in historical times. Virgil applies the epithet "Saturnium" (as an adjective) to Tarentum itself (Georg. ii. 197; Serv. ad loc.); many commentators, however, consider "satur" from "satur"
to be the true reading), and Horace speaks of "Saturnius cabellus" as equivalent to Tarentine. (Suet. i. 6. 59.) The memory of the locality is preserved by a watch-tower on the coast, about seven miles S.E. of Tarentum, which is still called Torre di Sato (Romanelli, vol. i. p. 294; Zannoni, Carta del Regno di Napoli). (Concerning the history and ancient institutions of Tarentum, see Heyne, Opuscula, vol. i. pp. 217—232; and Lorenz, Civitate Vetere Tarrentorum, 4to. Lips. 1833. The present state and localities are described by Swinhoe, vol. i. pp. 225—270; Keppel Craven, Southern Tour, pp. 174—190; and Romanelli, vol. i. pp. 282—289; but from the absence of existing remains, the antiquities of Tarentum have scarcely received as much attention as they deserve.)

[William Lucie Wilkins]

COINS OF TARENTUM.

TARETICA (Tarentum, or Tauretique, Asp., Ptol. v. 9. § 9), a headland of Asiatic Sarmatia in the Pontus Euxinus, and in the neighbourhood of the modern town of Sudak. [T. H. D.]

TARGINES (Tacio), a small river of Bruttium, mentioned only by Pline (iii. 10. s. 13) among the rivers on the E. coast of that peninsula. It is probable the stream now called the Tacia, which rises in the mountains of the Sita, and falls into the Gulf of Squillace (Sinus Scylaceus). [E. H. B.]

TARICHEAE or TARICHAEE (Tarixiiai, Strab. xvi. p. 764; Joseph. Vita, 32, 54, 73; Tarx他的, Joseph. B. J. iii. § 1, et alibi; Tarxhecia, Steph. B. s. v.; Tarichae, Suet. Tit. 4; Tarichen, Plin. v. 15; Eth. Tarxheciai), a city in Lower Greece situated below a mountain at the southern end of the lake of Tiberias, and 30 stadia from the city of Tiberias itself. (Joseph. B. J. iii. 10. § 1.) It derived its name from its extensive manufactories for salting fish. (Strab. l. c.) It was strongly fortified by Josephus, who made it his headquarters in the Jewish war; and it was taken by Titus with great slaughter. (Joseph. B. J. iii. 10. §§ 1—6.) Its ruins stand upon a rising ground, called Kerak, where at present there is a Muslim village, at the southern end of the lake. The river Jordan, in issuing from the lake, runs at first south, for about a farthing, and then turns west for half a mile. The rising ground Kerak stands in the space between the river and lake, and was a place easily defensible according to the ancient mode of warfare. (Robinson, Bib. Ant. vol. ii. p. 387, 2nd ed.)

TARNE (Tame), is mentioned by Homer (ll. v. 44), and after him by Strabo (ix. p. 413), as a town in Asia Minor; but Pliny (v. 30) knows Tarne only as a fountain of Mount Timolus in Lydia. [L. S.]

TARNIS (Tarne), a river inGalilia, a branch of the Garonne. It rises among the Mount Tarus in the Cévennes, and flows in the upper part of its course in a deep valley. After running near 200 miles it joins the Garonne below Moissac. Sidonius Apollinaris (24. 44) calls it "citus Tarnis." [Lesoka.]

Ausonius (Mostrum, v. 465) speaks of the gold found in the bed of the Tarne:

"Et auriferum postumae Gallia Tarneem."

[T. L.]

TARODUNUM (Tapcprosarin), a town in the south-west of Germany, between Mons Aunoba and the Rhenus. (Ptol. ii. 11. § 30.) It is universally identified with Mark Zarten near Freiburg in the Breisgau, which, down to the 8th century, bore the name of Zarduna, a name which is formed from Tarodunum in the same way in which Zurnum is formed from Tabernae. [L. S.]

TARONA (Tapora, Ptol. iii. 6. § 5), a place in the interior of modern Cattania. [T. H. D.]

TARPHIE (Tapas, Eth. Tapnianos), a town of the Locri Epizephiri, mentioned by Homer (ii. 5. 533). It was situated upon a height in a fertile and woody country, and was said to have derived its name from the thickets in which it stood. In the time of Strabo it had changed its name into that of Pharyges (Φαρυγγε), and was said to have received a colony from Arges. It contained a temple of Hera Pharygaca. It is probably the modern Pandontica. (Strab. l. c. p. 426; Crousir and Kramer, ad loc.; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 179.)

TARPODIZUS (It. Aut. p. 230; It. Hier. p. 569; in Geogr. Rav. iv. 6, Tarpodizum), a town in the E. of Thrace, on the road from Byzantium to Anchialus. According to Kiepert, its site answers to that of the modern Bisko-Derben; according to Reichard, to that of Koutije-Tarula; according to Lapi, to that of Devlet-Agatch. But in some maps it is placed nearly due south of Sadane, and on or near the ancient city of Pharsalus. Tarpodizus must have been in the neighbourhood of Ereklei. [J. B.]

TARQUINI (Tapoxvias, Strab. Dionys.; Tapoxvias, Ptol. Eth. Tarquinientes; Corneto), one of the most ancient and important cities of Etruria, situated about 4 miles from the Tyrrhenian sea, and 14 miles from Centumcellae (Civita Vecchia), near the left bank of the river Marta. All ancient writers represent it as one of the most ancient of the cities of Etruria; indeed according to a tradition generally prevalent it was the parent or metropolis of the twelve cities which composed the Etruscan League, in the same manner as Alba was represented as the metropolis of the Latin League. Its own reputed founder was Tarchon, who according to some accounts was the son, according to others the brother, of the Lydian Tyrrhenus; while both versions represented him as subsequently founding all the other cities of the league. (Strab. l. c. p. 219; Serv. ad Aen. v. 179, 198.) The same superiority of Tarquinii may be considered as implied in the legends that represented the divine being Tages, from whom all the sacred traditions and religious rites of the Etruscans were considered as emanating, as springing out of the soil at Tarquinii (Cic. de Div. ii. 28; Censorin. de Die Nat. 4; Jean. Lys. de Ost. 3.) Indeed it seems certain that there was a close connecti

Digitized by Microsoft®
tion considered as subsisting between this Tages and Tarckon himself, the eponymous hero of Tarquinii. (Müller, Etrucker, vol. i. p. 73.) It is impossible here to discuss the historical bearings of these traditions, which seem to point to Tarquinii as the point from whence the power and civilisation of the Etruscans emanated as from a centre, while on the other hand there is another body of traditions which seems to represent that people as gradually extending themselves from the north, and Cortona as the first centre and stronghold of their power. [Eturua, Vol. i. p. 859.] A somewhat different version is given by Justin, who states that Tarquin was founded by the Tarquinii, and that the Etruscans came from the region of Thessaly, to whom Hellenicus ascribed the colonisation of Etruria in general. (Justin, xx. 1; Hell. in ap Diony. i. 28.)

But whatever value may be attached to these traditions, they may at least be admitted as proving the reputed high antiquity and early power of Tarquinii as compared with the other cities of Southern Etruria: and this is confirmed by the important position it appears to have held, when its name first appears in connection with the Roman history. Cicero calls it "urbem Etruriae ferociissimam" at the time when Demaratus, the father of Tarquinii Priscus, was said to have established himself there. (Cic. de Rep. ii. 19.) It is remarkable indeed that the story which derived the origin of the Roman king Tarquinus from Corinth represented his father Demaratus as bringing with him Greek artists, and thus appears to ascribe the first origin or introduction of the arts into Etruria, as well as its religious institutions, to Tarquinii. (Plin. xxxv. 12. s. 45; Strab. v. p. 220.) It is unnecessary to repeat here the well-known story of the emigration of an Etruscan Lucumo from Tarquinii to Rome, where he became king under the name of Lucius Tarquinii. (Liv. i. 34; Dionys. iii. 46—48; Cic. de Rep. ii. 19, 20; Strab. v. p. 219.) The connection with Tarquinii is rejected by Niebuhr, as a mere etymological fable, but it is not easy to say on what grounds. The name of Tarquinii, as that of a people connected with the city, is undoubtedly Etruscan; the native form being "Tarcnas:" and the strong infusion of Etruscan influence into the Roman state before the close of the regal period is a fact which cannot reasonably be questioned. It is remarkable also that the Roman traditions represented the Tarquiniuns as joining with the Veientes in the first attempt to restore the exiled Tarquinii, B.C. 509, though from this time forth we do not again hear of their name for more than a century. (Liv. ii. 6, 7; Dionys. v. 14.) The story of the emigration of the older Tarquinii to Rome, as well as that of his father Demaratus from Corinth, may fairly be deemed unworthy of belief in its present form; but it is probable that in both cases there was a historical foundation for the fiction.

After the war already mentioned, in the first year of the Republic, no subsequent mention of Tarquinii occurs in Roman history till B.C. 396, when the Tarquinii took up arms, and ravaged the Roman territories, while their army was engaged in the siege of Veii. They were, however, intercepted on their march home, and all their booty taken from them. (Liv. v. 16.) Livy distinctly calls them on this occasion "novi hostes:" but from this time they took an active part in the wars of the Etruscans with Rome. The conquest of Veii in B.C. 396, had indeed the effect of bringing the Romans into immediate collision with the cities which lay next beyond it, and among these Tarquinii and Volsci are said to have taken part. Already in B.C. 389, we find the Tarquinii joining with the other cities of Southern Etruria in an attempt to recover Sutrium: the next year their territory was in its turn invaded by the Romans, who took the towns of Cortona and Contenbrea, both places otherwise unknown, but which appear to have been dependencies of Tarquinii. (Liv. vi. 3, 4.) From this time we hear no more of them till B.C. 358, when the Tarquinii, having ravaged the Roman territories, were defeated by Fabius and Fabius against them, but was defeated in a pitched battle, and 307 of the prisoners taken on the occasion were put to death in the Forum of Tarquinii, as a sacrifice to the Etruscan deities. (Liv. vii. 12, 15.) Shortly after, we find the Tarquinii and Faliscans again in arms, and in the first battle which occurred between them and the Romans they are said to have obtained the victory by putting forward their priests with flaming torches and serpents in their hands, to strike terror into their assailants. (Liv. vii. 16, 17.) But the Etruscans were defeated in their turn by C. Marcia Rullus, who was named dictator to oppose them; and two years later (B.C. 354) the Romans took a sanguinary revenge for the massacre of their prisoners, by putting to death, in the Forum at Rome, 358 of the captives taken from the Tarquinii, chiefly of noble birth. (Liv. 19.) But the spirit of the Tarquinii was not yet subdued, and with the support of the Faliscans and Cumans, who were for a short time their co-partners against Rome, they continued the war till B.C. 351, when they sued for peace, and obtained a truce for forty years. (Liv. 19—22.)

This truce appears to have been faithfully observed, for we hear nothing more of hostilities with Tarquinii till B.C. 311, when the Tarquinii appear to have united with the other confederate cities of Etruria in attacking the Roman colony of Sutrium. They were, however, defeated by the Romans under C. Marcius and Plautius, and the next year by Q. Fabius, who followed up his victory by passing the Ciminius forest, and carrying his arms for the first time into Northern Etruria. There is no doubt that the Tarquinii, though not mentioned by name, bore a part in this contest as well as in the great battle at the Vadimonian lake in the following year (B.C. 309), as we find them soon after making their submission to Rome, and purchasing the favour of the consul Decius by sending him supplies of corn. (Liv. ix. 32, 33—39, 41.) They now obtained a fresh truce for forty years (B.C. 41); and from this time we hear no more of them as an independent nation. Whether this long truce, like the last, was faithfully observed, or the Tarquinii once more joined in the final struggles of the Etruscans for independence, we know not; but it is certain that they passed, in common with the other chief cities of Etruria, gradually into the condition of dependent allies of Rome, which they retained till the Social War (B.C. 90), when they as well as all the other Etruscans obtained the full Roman franchise. (Appian, B.C. i. 49.) The only mention of Tarquinii that occurs in this interval is during the Second Punic War, when the citizens came forward to furnish the expedition of Scipio with sail-cloth for his fleet. (Liv. xxviii. 45.) According to the Liber Coloniarum a body of colonists was sent thither by
TARRACINA.

Graccus; but though it is there termed "Colonia Tarquinii," it is certain that it did not retain the title of a colony; Cicero distinctly speaks of it as a "municipium," and the Tarquinians are ranked by Pliny among the earliest towns of Etruria. The municipal rank is further confirmed by inscriptions recently discovered on the site. (Lib. Col. p. 219; Cis. pro Cæc. 4; Plin. iii. 5. 8 s.; Pol. iii. 1. § 60; Inscr. in Bullet. d. Inst. Arch. 1830, pp. 198, 199.) From these last records we learn that it was apparently still a flourishing town in the time of the Antonines, and its name is still found in the Tabula near three centuries later (Tabb. Punt.). It is probable, therefore, that it survived the fall of the Western Empire, and owed its final desolation to the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited; but on a hill about a mile and a half distant stands the modern city of Corneto, the origin of which does not date further back than the eighth or ninth century. It was probably peopled with the surviving inhabitants of Tarquinii. The site of the latter is clearly marked: it occupied, like most Etruscan cities, the level summit of a hill, bounded on all sides, but especially on the precipitous escarpments, and occupying a space of about a mile and a half in length, by half a mile in its greatest breadth. It is still known as Tarquinia, though called also the Piano di Civita. Hardly any ruins are now visible, but the outline of the walls may be traced around the brow of the hill, partly by foundations still in situ, partly by fallen blocks. The highest point of the hill (farthest to the W. and nearest to the Monti) seems to have served as the Arx or citadel, and here the foundations of some buildings, supposed to be temples, may be traced. Numerous fragments of buildings of Roman date are also visible, and though insignificant in themselves, prove, in conjunction with the inscriptions already mentioned, that the site was well inhabited in Roman times. (Dennis's Etruria, vol. i. pp. 371-385.)

But by far the most interesting remains now visible at Tarquinii are those of the Necropolis, which extends almost the whole of the hill opposite to the precipitous escarpments, and occupying a space of about a mile and a half in length, by half a mile in its greatest breadth. It is known as Tarchicha, though called also the Piano di Civita. Hardly any ruins are now visible, but the outline of the walls may be traced around the brow of the hill, partly by foundations still in situ, partly by fallen blocks. The highest point of the hill (farthest to the W. and nearest to the Monti) seems to have served as the Arx or citadel, and here the foundations of some buildings, supposed to be temples, may be traced. Numerous fragments of buildings of Roman date are also visible, and though insignificant in themselves, prove, in conjunction with the inscriptions already mentioned, that the site was well inhabited in Roman times.

It may indeed be asserted in general of the paintings in these tombs that while the influence of Greek art is unquestionably to be traced in their design and execution, the subjects represented and the manners they exhibit are purely Etruscan. The number of these painted tombs found at Tarquinii greatly exceeds those which have been discovered on the site of any other city of Etruria; but they still bear only a very small proportion to the whole number of tombs opened, so that it is evident this mode of decoration was far from general. The paintings in many of those first opened, which are figured in the works of Micel and Inghirami, have since been allowed to fall into decay, and have in great measure disappeared. Detailed descriptions of all the most interesting of them, as well as those more recently discovered, will be found in Dennis's Etruria (vol. i. pp. 281-364).

TARRACINA (Tarphéva, Strab.; Tarphéva, Steph. B.; Eth. Tarphéva, Tarracinaeum; Tarracina) was the name intended of that name, but originally a Volscian city, which was founded on the Tyrrhenian sea, about 10 miles from Circei, and at the extremity of the Pontine Marshes. It was also known by the name of Anxur, and we learn from Pliny and Livy that this was its Volscian name, while Tarracina was that by which it was known to the Latins and Romans. (Plin. iii. 5. 9 s; Ennius ap. Fest. s. v. Anxur; Liv. iv. 59.) The name of Anxur is frequently used at a much later period by the Roman poets (Hor. Sod. 1. 5. 26; Liv. i. 84; Martial, v. 1. 6, 6. c.), obviously because Tarracina could not be introduced in verse; but Cicero, Livy, and all other prose writers, where they are speaking of the Roman town, universally call it Tarracina. The Greek derivation of the latter name suggested by Strabo (v. p. 253), who says it was originally called Ταρφανθα, from its rugged situation, is probably a mere etymological fancy. The first mention of it in history occurs in the treaty between Rome and Carthage, which was concluded in 509, in which the people of Tarracina are mentioned in common with those of Circei, Antium, &c., among the subjects or dependencies of Rome. (Plol. iii. 22.) It seems certain therefore that Tarracina, as well as Circei, was included in the Roman dominions before the fall of the monarchy. But it is clear that it must have again fallen under the dominion of the Volscians, probably not long after this period. It was certainly in the possession of the Romans at an early period, for its name next appears in history, in b. c. 406. On that occasion it was attacked by N. Fabius Ambustus, and taken by a sudden assault, while the attention of the Volscian army was drawn off in another direction. (Liv. iv. 57; Diss. xiv. 16.) Livy speaks of it as having at this time enjoyed a long period of power and prosperity, and still possessing great wealth, which was plundered by the Roman armies. A few years afterwards (b. c. 402) it again fell into the hands of the Volscians, and was again besieged by the Roman garrison (Liv. v. 8). In b. c. 400, it was again besieged by the Roman armies under Valerius Potitus, and though his first assaults were repulsed, he was compelled to have recourse to a blockade, it soon after fell into his hands. (Lb. 12, 13.) An attempt of the Volscians to recover it in 397 proved unsuccessful (Lb. 16), and from this time the city continued subject to Rome. Nearly 70 years later, after the conquest of Pannonia, it was thought advisable to secure Tarracina with a Roman colony, which was established there in b. c. 329. (Liv. vii. 21; Vell. Pater. i. 14.)

The condition of Tarracina as a Roman colony is not quite clear, for Velesius notices it as if it had been one of the "Coloniae Latinae," while Livy certainly does not consider it as such, for he omits its name among the thirty Latin colonies in the time of the Second Punic War, while he on two occasions mentions it in connexion with the other maritime colonies, Antium, Minturnae, &c. In common with these, the citizens of Tarracina in vain contested for exemption from military service during the Second Punic War, and at a later period claimed exemption from naval service also. (Liv. xxviii. 38, xxxvi. 3.) There can, therefore, be no doubt that Tarracina was a "colonia maritima civilium," and it seems to have early become one of...
TARRACINA.

the most important of the maritime towns subject to Rome. Its position on the Appian Way, which here first touched on the sea (Strab. v. p. 233; Hor. Sat. i. 5. 26), doubtless contributed to its prosperity; and an artificial port seems to have in some degree supplied the want of a natural harbour. (Liv. xxvii. 4.) In a military point of view also its position was important, as commanding the passage of the Appian Way, and the narrow defile of Lautunia, which was situated a short distance from the city on the side of Fundi. (Liv. xxi. 15.) [Lau-

TULLAR.]

Under the Roman Republic Tarracina seems to have continued to be a considerable and flourishing town. Cicero repeatedly noticed it as one of the customary halting-places on the Appian Way, and for the same reason it is mentioned by Horace on his journey to Brundisium. (Cic. de Orat. ii. 59, ad Fam. vii. 23, ad Att. v. 5; Hor. Sat. i. 5. 26; Appian. B. C. i. 12; Val. Max. viii. 1 § 13.) At the outbreak of the civil war between Caesar and Pompey, Tarracina was occupied by the latter with three cohorts under the praetor Butilius Lupus, but they abandoned their post, when Pompey withdrew into Spain. (Cic. de B. C. i. 34, Liv. ad Att. viii. 11, n.) Again, during the civil war between Vespasian and Vitellius, Tarracina was evidently regarded as a place of importance in a military point of view, and was occupied by the partisans of Vespasian, but was wrested from them by L. Vitellius just before the death of his brother. (Tac. Hist. iii. 57, 76, 77.) It was at Tarracina also that the funeral convoy of Germanicus was met by his cousin Drusus and the chief personages of Rome. (Id. Ann. iii. 2.) The neighbourhood seems to have been a favourite site for villas for the Roman Empire: among others the Emperor Domitian had a villa there (Martial. v. 1. 6); and it was at another villa near the town, on the road to Fundi, that the emperor Galba was born. (Suet. Galb. 4.) In addition to the other natural advantages of the situation, there existed mineral springs in the neighbourhood, which seem to have been much frequented. (Martial. v. 1. 6, 21. § 8.) The important position of Tarracina doubtless prevented it's falling into decay as long as the Western Empire subsisted. Its name is found in the Itineraries as a "civitas." (Itin. Ant. p. 187; Itin. Hier. p. 611), and even after the fall of the Roman dominion it appears as a fortress of importance during the Gothic wars. (Procop. B. G. i. 2, 4, &c.)

The position of Tarracina at the extremity of the Pompeian Marshes, just where a projecting ridge of the Volscian mountains runs down to the sea, and separates the marshy tract on the W. from a similar but much smaller tract on the E., which extends from thence towards Fundi, must in all ages have rendered it a place of importance. The ancient city stood on the hill above the marshes. Horace distinctly describes it as standing on lofty rocks, which were conspicuous afar, from their white colour:—

"Impositum saxis late candidentibus Anxur" (Hor. Sat. i. 5. 36); and the same circumstance is alluded to by other Latin poets. (Lucan, iii. 84; Sid. Ital. viii. 392.) Livy also describes the original Volscian town as "laco altius" (v. 12), though it extended also down the slope of the hill towards the marshes ("urbs poena in paludes," iv. 59). At a later period it not only spread itself down the hill, but occupied a considerable level at the foot of it (as the modern city still does), in the neighbourhood of the port. This last must always have been in great part artificial, but the existence of a regular port at Tarracina is noticed by Livy as early as 398 B.C. (Liv. xxvii. 4.) It was subsequently enlarged and reconstructed under the Roman Empire, probably by Trajan, and again restored by Antoninus Pius. (Capit. Ant. P. 8.) Its remains are still distinctly visible, and the whole circuit of the ancient basin, surrounded by a massive mole, may be clearly traced, though the greater part of it is now filled with sand. Considerable portions of the ancient walls also still remain, constructed partly in the polygonal style, partly in the more recent style known to the Romans as "opus incer-

TARRACO.

Several ancient towns and ruins of various buildings of Roman date are still extant in the modern city and along the line of the Via Appia. The modern cathedral stands on the site of an ancient temple, of which only the substructions and two columns remain. This is generally called, though on very uncertain authority, a temple of Ap-o-Do. The most celebrated of the temples at Tarracina was, however, that of Jupiter, which is supposed to have been constructed by Augustus and the special worship of this deity in the Volscian city under the title of Jupiter Anxur is alluded to by Vitellius (Ann. vii. 799). He was represented (as we are told by Suetonius) as a beautiful youth, and the figure of the deity corresponding to this description is found on a Roman coin of the Vibian family. (Eckhel, vol. v. p. 340.) It is probable that this temple was situated in the highest part of the city, very probably in the ancient citadel, which occupied the site of the present town, and the remains of its walls and substructions are still extant.

Tarracina was distant by the Via Appia 62 miles from Rome, and 18 from the Forum Appii. (Itin. Ant. p. 107; Itin. Hier. p. 611; Westphal, Kén. Kmpf. p. 68.) Three miles from the city, at the side of the Via Appia, as well as of the canal which was usually used by travellers, was the fountain of Foniana, celebrated by Horace, together with the sacred grove attached to it. (Pompon. de Agr. 43.)

TARRACCO (Tárraco, Prot. ii. 6, § 17), an ancient city of Spain, probably founded by the Phoc-
larged by the brothers Publius and Cneius Scipio, who converted it into a fortress and arsenal against the Carthaginians. Subsequently it was the capital of a province named after it, a Roman colony, and "conventus juridicus." (Plin. l. c.; Tac. Ann. i. 78; Solin. 23, 26; Polyb. x. 34; Liv. xxi. 61; Steph. B. s. 637) Augustus wintered at Tarraco after his Cantabrian campaign, and bestowed many marks of honour on the city, among which were its honorary titles of "Colonia Victrix Togata" and "Colonia Julia Victoria Tarracoensis." (Grut. Inscr. p. 382; Orell. no. 9127; coins in Eckhel, p. 272; Plin. H. N. v. 579; Mionnet, i. c. p. 51; Suppl. i. p. 104; Sastini, p. 202.) According to Mela (l. c.) it was the richest town on that coast, and Strabo (l. c.) represents its population as equal to that of Carthago Nova. Its fertile plain and sunny shores are celebrated by Martial and other poets; and its neighbourhood is described as producing good wine and flax. (Mart. x. 104, xii. 118; Sil. Ital. iii. 309, xv. 177; Plin. xiv. 6 s. 9, xix. 1 s. 2.) There are still many important ancient remains at Tarragona, the present name of the city. Part of the bases of large Cyclopean walls near the Quartel de Pilatos are thought to be anterior to the Romans. The building just mentioned, now a prison, is said to have been the palace of Augustus. But Tarraco, like most other ancient towns which have continued to be inhabited, has been pulled to pieces by its own citizens for the purpose of obtaining building materials. The amphitheatre near the sea-shore has been used as a quarry, and but few vestiges of it now remain. A circus, 1500 feet long, is now built over it, though portions of it are still to be traced. Throughout the town Latin, and even apparently Phoenician, inscriptions on the stones of the houses proclaim the destruction that has been perpetrated. Two ancient monuments, at some little distance from the town, have, however, fared rather better. The first of these is a magnificent aqueduct which spans a valley about a mile from the gates. It is 700 feet in length, and the loftiest arches, of which there are two tiers, are 96 feet high. The monument on the NW. of the city, and also about a mile distant, is a Roman sepulchre, vulgarly called the "Tower of the Scions;" but there is no authority for assuming that they were buried here. (Cf. Ford, Handbook, p. 219; seq.; Flores, Exp. Segr. xxix. p. 68; seq.; Minn. Diction. viii. p. 320.)

TARACOXENSIS PROVINCIA (called by the Greeks Ταρακόξων, Plut. lii. 6, viii. 4. § 5; &c.; and Ταρακόξων ή τηράκοξων, Dion Cass. liii. 3), at first constituted, as already remarked [Vol. I. p. 1081], the province of Hispania Citerior. It obtained its new appellation in the time of Augustus from its chief city Tarraco, where the Romans had established themselves, and erected the tribunal of a praetor. The Taracoxensis was larger than the other two provinces put together. Subsequently the boundaries were, on the E. the March Interius; on the S. the Pyrenees, which separated it from Gallia, and further westward the Mere Cantabrium; on the W., as far southward as the Durcis, the Atlantic ocean, and below that point the province of Lusitania; and on the N. the province of Lusitania and the province of Baetica, the boundaries of which have already been laid down. (Mela, ii. 6; comp. Strab. iii. p. 156; Plin. iv. 21 s. 35; Marshan, p. 54.) Thus it embraced the modern provinces of Murcia, Valencia, Catalunya, Aragon, Navarre, Basco, Asturias, Galicia, the N. part of Portugal as far down as the Douro, the N. part of Leon, nearly all of Castile, and part of Anxiety. The nature of its climate and productions may be gathered from what has been already said [Hispafia, Vol. I. p. 1086]. A summary of the different tribes, according to the various authorities that have treated upon the subject, has also been given in the same article [p. 1083], as well as the particulars respecting its government and administration [p. 1081].]

TARRAGA (Tarragona, Plut. lii. 6. § 67), called by the Geogr. Rav. (CV. Tarracina, a town of the Vaccones in Hispania Taracoxensis (Plut. iii. 3 s. 4). Now Llerraga. (Cf. Cellarius, Orb. Ant. i. p. 91.)

TARRAHA (Tafha, Passant. ix. 16. § 13; Theophr. H. P. ii. 2; Steph. B. s. 2; Orop. ap. Euseb. P. E. p. 133, ed. Stephan.; Tafhous, Stad.ass., §§ 329, 330), a town on the SW. coast of Crete between Phoenice and Poecilias, one of the earliest sites of the Apollo-temple, and the native country of the writer Lucillus. For Tarha (Tafha, Plut. iii. 17. § 3) Meursius proposes to read Tarrha There can be little or no doubt that its position should be fixed on the SW. coast of the island, at the very entrance of the g len of nagrah, where the bold hanging mountains bear in the rocky bed of the river. (Fasulky, Travel. vol. ii. p. 270.) The Florentine traveller Bianchelmini, who visited Crete A.D. 1415, describes considerable remains of a temple and other buildings as existing on the site of the ancient city (ap. Cornelius, Crisica Sacra, vol. i. p. 85).

TARTASNA (Tarsus, Plut. ii. 17. § 2), called in the Itin. Ant. p. 273, Tharsinianum, a place in Illyrion, on the road from Aquileia to Saccia through Liburnia, now Tereat, to the E. of Fiume. (Cf. Pliny, iii. 21 s. 25; Tab. Peut.)

TARTHISH. [Tartessos.]

TARTSHA (Tapiana, Plut. iii. 16. § 8), a promontory on the coast of Carmania, visited by the fleet of Nearchus. The conjecture of Vincent (Voyage of Nearchus, p. 362) that it is represented by the present Kás-al-Djerd appears well founded. It is perhaps the same as the Themitos Promontorium of Pliny (vi. 25) as suggested by Müller. (Geog. Græc. i. p. 360.)

TARTSINUM (Tarsos, Plut. i. 16. § 8), a place in Pamonia Inferior, now Terzisz. (T. H. D.)

TARTUS. (Tarsos), a river of Mylai in the neighbourhood of the town of Zeleia, which had its source in Mount Tamas, and flowed in a north-eastern direction through the lake of Miletolipos, and, issuing from it, continued its north-eastern course till it joined the Maecestus. (Strab. xiii. p. 557.) Strabo indeed states that the river flowed in numerous windings not far from Zeleia; but he can scarcely mean any other river than the river now bearing the same Bolbrak, and which the Turks still call Tarsos. (Hamilton, Researches, vol. ii. p. 106) identifies it with the Kara Su or Kara Dere Su, which flows into Lake Manijas. [L. S.]

TARSUS (Tarasos, Arrian, Per. P. Eur. p. 10), a river of Colchis falling into the sea between the Singames and the Hippus. (Cf. Plin. vi. 4 s. 4.) It is probably the same river called Tassios in the Tab. Pent.

TASROS (Tarsos, Eth. Tarsos or Tarsos), sometimes also called Taris (Tarsos), Teriass (Tarsos), Tharsos (Tharsos), or Tarsos πρὸς τῷ Κέσυ, to distinguish it from other places of the same name.
was the chief city of Cilicia, and one of the most important places in all Asia Minor. It was situated in a most fertile and productive plain, on both sides of the river Cydnus, which, at a distance of 70 stadia from the city, flowed into a lagoon called Rhogma or Rhogmis. This lagoon formed the port of Tarsus, and was connected with the sea. The situation of the city was most favourable, for the river was navigable up to Tarsus, and several of the most important roads of Cilicia met there. Its foundation is ascribed to Sardanapalus, the Assyrian king, and the name of the city seems to indicate its Semitic origin. But the Greeks claimed the honour of having colonized the place at a very early period; and, among the many stories related by them about the colonization of Tarsus, the one ascribed to Strabo (xiv. p. 673; comp. Steph. B. s. v.) assigns the foundation to Argives who with Triptolemus arrived there in search of Io. The first really historical mention of Tarsus occurs in the Anabasis of Xenophon, who describes it as a great and wealthy city, situated in an extensive and fertile plain at the foot of the passes of Mount Taurus leading into Cappadocia and Lycaonia. (Anab. i. 2. § 28, &c.) The city then contained the palace of Synnepheus, king of Cilicia, but virtually a satrapy of Persia, and an independent ally of Cyrus when he marched against his brother Artaxerxes. When Cyrus arrived at Tarsus, the city was for a time given up to plunder, the troops of Cyrus being exasperated at the loss sustained by a detachment of Cilicians in crossing the mountains. Cyrus then concluded a treaty with Synnepheus, and remained at Tarsus for 20 days. In the time of Alexander we no longer hear of kings; but a Persian satrap resided at Tarsus, who fled before the young conqueror and left the city, which surrendered to the Macedonians without resistance. Alexander himself was detained there in consequence of a dangerous fever brought on by bathing in the Cydnus. (Arrian, Anab. ii. 4: Cart. iii. 5.) After the time of Alexander, Tarsus with the rest of Cilicia belonged to the empire of the Seleucidae, except during the short period when it was connected with Egypt under the second and third Ptolemy. Ptolemy delivered Tarsus and Cilicia from the dominion of the eastern despotism, by making the country a Roman province. Notwithstanding this, Tarsus in the war between Caesar and Pompey sided with the former, who on this occasion honoured it with a personal visit, in consequence of which the Romans changed the name of their city into Julipolis. (Cas. R. Alex. 66; Dion Cass. xivii. 24; Flor. iv. 2.) Cassius afterwards punished the city for this attachment to Caesar by ordering it to be plundered, but M. Antony rewarded it with municipal freedom and exemption from taxes. It is well known how Antony received Cleopatra at Tarsus when that queen sailed up the Cydnus in a magnificent vessel in the disguise of Aphrodite. Augustus subsequently increased the favours previously bestowed upon Tarsus, which on coins is called a "libera civitas." During the first centuries of the empire Tarsus was a place of great importance to the Romans in their campaigns against the Parthians and Persians. The emperor Taeitus, his brother Florian, and Maximinus and Julian died at Tarsus, and Julian was buried in one of its suburbs. It continued to be an opulent town until it fell into the hands of the Saracens. It was, however, taken from them in the second half of the 10th century by the emperor Nicephorus, but was soon after again restored to them, and has remained in their hands ever since. The town still exists under the name of Tarsos, and though greatly reduced, it is still the chief town of that part of Lycia.

Tarsus was not only a great commercial city, but at the same time a great seat of learning and philosophy, and Strabo (xiv. p. 673, &c.) gives a long list of eminent men in philosophy and literature who added to its lustre; but none of them is more illustrious than the Apostle Paul, who belonged to one of the many Jewish families settled at Tarsus. (Acts, x. 30, xi. 30, xv. 22, 41, xx. 39, comp. Paul. vi. s. § 7; Hieroc. p. 704; Stilhum. Mar. M. § 156; Leake, Asia Minor, p. 214: Rassereger, Reisen in Asia, i. p. 395, foll, 2. p. 639, foll.)

Another town of the name of Tarsus is said to have existed in Bithynia (Steph. B. s. v.), but nothing is known about it.

L. S.

COIN OF TARSUS.

TARTARUS (Tartaro), a river of Venetia, near the borders of Gallia Transpadana. It is intermediate between the Athesis (Adige) and the Padus (Po); and its waters are now led aside by artificial canals partly into the one river and partly into the other, so that it may be called indifferently a tributary of either. In ancient times it seems to have had a recognised mouth of its own, though this was even then wholly artificial, so that Pliny calls it the "fossiones Philistinae, quod ali Tarraturn vocant." (Plin. iii. 16. s. 20.) In the upper part of its course it formed, as it still does, extensive marshes, of which Caecina, the general of Vitellius, skilfully availed himself to cover his position near Hostilia. (Tac. Hist. iii. 9.) The river is here still called the Tartaro: lower down it assumes the name of Canal Bianco, and after passing the town of Adria, and sending off part of its waters right and left into the Po and Adige, discharges the rest by the channel now known as the Po di Levante. The river Atriaus (Ἀτριαος ποταμος), mentioned by Ptolemy (iii. 16. § 20), could be no other than the mouth of the Tartaro, so called from its flowing by the city of Adria; but the canals of these waters have in all ages been changing.

E. H. B.
TARTESSUS.

and in like manner the word Tartessus, and its derivative adjectives, are employed by Latini writers as synonymous with the Western Oed, Met. xiv. 416;Sil. Ital. iii. 162; Ps. Hymn. Tit. ii. 84, which appears in Scripture as a celebrated emporium, rich in iron, tin, lead, silver, and other commodities; and the Phoenicians are represented as sailing thither in large ships (Ezek. xxvii. 12, xviii 13; Jerem. x. 9).

Isaiah speaks of it as one of the finest colonies of Tyre, and describes the Tyrians as bringing its products to their market (xxiii. 1, 6, 10). Among profuse writers the antiquity of Tartessus is indicated by the myths connecting it with their gods. (Strab. iii. i. 149; Justin, xiv. 4). But the name is used by them in a very loose and indefinite way. Sometimes it stands for the whole of Spain, and the Tagus is represented as belonging to it (Rutilius, Itin. i. 356; Claud. in Ref. i. 101; Sil. Ital. xiii. 674, &c.). But in general it appears, either as the name of the river Baetis, or of a town situated near its mouth, or thirdly of the country south of the middle and lower course of the Baetis, which, in the time of Strabo, was inhabited by the Tartali. The Baetis is called Tartessus by Strickolinus, quoted by Strabo (iii. p. 148) and by Avienus (Ora Marit. i. 224), as well as the town situated between two of its mouths; and Mot (ad Herod. iv. 152) is of opinion that the modern town of S. Lucar de Barameda stands on its site. The country near the lower course of the Baetis was called Tartessis or Tartesia, either from the river or from the town; and this district, as well as others in Spain, was occupied by Phoenician settlements, which in Strabo's time, and even later, preserved their national customs. (Strab. iii. p. 149, xvii. p. 832; Arr. Esp. Alex. ii. 16; App. Hisp. 2; Const. Porphyrog. de Them. i. p. 107, ed. Bonn.)

There was a temple of Hercules, the Phoenician Melcarth, at Tartessos, whose worship was also spread among the neighbouring Iberians. (Arr. Loc.) About the middle of the seventh century B. C. some Samnite sailors were driven thither by stress of weather; and this is the first account we have of the intercourse of the Greeks with this distant Phoenician colony (Herod. iv. 152). About a century later, some Greeks from Phocaea likewise visited it, and formed an alliance with Arbogathins, king of the Tartassians, renowned in antiquity for the great age which he attained. (Herod. i. 169; Strab. iii. p. 151.) These connections and the vast commerce of Tartassos, raised it to a great pitch of prosperity. It traded not only with the mother country, but also with Africa and the distant Cassiterides, and bartered the manufactures of Phoenicia for the productions of these countries (Strab. i. p. 33; Herod. iv. 196; cf. Heeren, Ideen, i. 2, §§ 2, 3). Its riches and prosperity had become proverbial, and we find them alluded to in the verses of Aeneas (op. Strab. iii. p. 151). The neighbouring sea (Fretum Tartessianum, Avien. Or. Mar. 64) yielded the lamprey, one of the delicacies of the Roman table (Gell. vii. 16); and a coin of Tartassos are represented a fish and an ear of grain (Monnct. Med. Ant. i. p. 26). We are unacquainted with the circumstances which led to the fall of Tartassos; but it may probably have been by the hand of Hamilcar, the Carthaginian general. It must at all events have disappeared at an early period, since Strabo (iii. pp. 148, 151). Pliny (iii. i. 24, xii. 48), Mela (ii. 6), Sallust (Hist. Fr. ii.), and others, confounded it with more recent Phoenician colonies, or took its name to be an ancient appellation of them. [T. H. D.]

TARUSCONIENSES.

TARUALTAE (Tapowaxwa, Plut. iv. 6. § 19), a people of Libya Interior. [T. H. D.]

TARVEDELI [Oriental] TARIKANNA (Tarpowawa, Plut. ii. 9. § 8), a town in North Gallia, and according to Ptolomy an inland town of the Morini. [Morini.] It is written Teranana in the Table, where it is marked a capital town, and the modern name is Terwoune. It is mentioned in several Roman routes. The distance between Gesoriacum (Boulogne) in the Antonine Itin. and Tarunna does not agree with the true distance; nor does the distance in the Antonine Itin. between Taruna and Tarxelium (Cassel) agree with the actual measurement. In both instances we must assume that there is an error in the numerals of the Itin. D'Anville says that the Roman road appears to exist between Terwoune and the commencement of the Boutelouis, or district of Boulogne, near Duree, where it passes by a place called La Chaussee. There are also said to be traces of a Roman road from Huns Portus (Wisant) to Terwoune.

TARVESEDIO (It. Ant. p. 279) or TARVESEDO, according to the Pente. Table, was a place in Illyricia on the road from Mediolanum leading to Comum to Augustus Vinellicorum. Its exact site is now unknown, though it seems to have been situated near Torre di Vercella. [L. S.]

TARVISIUM (Tap榣iow: Rth. Tarvisianus; Trevisio), a town of Northern Italy, in the province of Veneta, situated on the left bank of the river Siis (Sile), about 15 miles from its mouth. The name is not mentioned by any of the geographers, though Pliny speaks of the Siis as flowing "ex montibus Tarvisianis," in a manner that would lead us to suppose it to have been a municipal town (Plin. iii. 18. s. 22), and this is confirmed by an inscription given by Muratori (Insocr. p. 328).

After the fall of the Western Empire it appears as a considerable city, and is repeatedly noticed by Procopius during the Gothic Wars, as well as by Cassiodorus and Paulus Diaconus. (Cassiod. Var. x. 27;Procop. B. G. ii. 29, iii. 1, 2; P. Diaec. Hist. Lang. ii. 12, iv. 3, v. 28, &c.) It retained this consideration throughout the middle ages, and is still a flourishing city under the name of Treviso. [E. H. B.]

TARUS is a river of Gallia Cispadana, one of the southern tributaries of the Pado, which crosses the Acemilian Way between 5 and 6 miles west of Tarra. (Plin. iii. 16. s. 20; Geogr. Rav. iv. 36.)

TARRUSATES are mentioned by Caesar (B. G. iii. 27) among the Aquitanian peoples who submitted to P. Crassus: "Vocates, Tarutases, Eluta.ter." After Crassus had defeated the Sotiates [Sotiates] he entered the territory of the Vocates, and Tarrutes, a statement which gives some indication of their position. Pliny (iv. 19) places the Tarutases between the Suscenses and Bassacibes; but the MSS. reading in Pliny seems to be Taruutases, which wholly should be Tarutases. There appears to be no variation in the name in the MSS. of Caesar, D'Anville conjures that the name Tarrutes is preserved in Tarusia, or Taurus, a part of the diocese of Afr. The town of Afr is on the Atturs (Adour). [G. L.]

TARUSCONIENSES, as the name stands in Harudin's edition of Pliny (iv. 4), but the reading is doubtful. Harudin found Tarusconienses in five MSS., and there are some variations. Besides Tarsacun on the Rhone, there is Taracun on the 4 n 2
Arrège, a branch of the Garonne. This Tarascón is in the Paga de Foix, and in a valley at the foot of the Pyrenees, which circumstance seems to indicate more probably the position of a small tribe or people than that of Tarascón on the Rhone. This Tarascón on the Arrège is mentioned in middle age documents under the name of Castrum Tarascon. Pliny's Taruscinenses, or whatever may be the true name, are enumerated among the Oppida Latina of Narbonensis.

[Gallic.]

TASCIA, a town in Gallia, placed by the Table between Avaricum (Bourges) and Caerodumnum (Tours). The first station from Avaricum is supposed to be Cherau on the Cher, and the next is Tascia, supposed to be Tescæ, also on the Cher. But the number xxiij. placed in the Table at the name of Tascia, which number should represent the distance from Chabriis to Tescæ, is nearly the distance between Tescæ and Tours, and accordingly there is some error here. The Table gives no distance between Tascica and Caerodumnum. (D'Anville, Notice; Ubert, Gallia.)

TASCONI is the name of a Gallic people in the Narbonensis, mentioned by Pliny (iii. 4), as the name is read in five MSS. There is a small river Tescou or Tescou, which flows into the Turin, near Montauban. D'Anville quotes a life of S. Thésard, archbishop of Narbonne, which speaks of this river as called Tescou by the people of that part and as the limit between the territories of the Tolosans, or people of Touloune, and the Caturcenses, or people of Cahors. This is a valuable passage, for it shows how far north the Narbonensis, to which the territory of Touloune belonged, extended in this part of its frontier; and it also confirms the conjecture about the northern limits of the Ruteni Provinciales (Ruteni), who were also included in the Narbonensis.

TASTA. [Dathil.]

TATTA LACUS (q. Tárra), a large salt lake on the frontiers between Lyconia and Galatia; it had originally belonged to Phrygia, but was afterwards annexed to Lyconia. Its waters were so impregnated with brine, that any substance dipped into it was immediately incrusted with a thick coat of salt; even birds flying near the surface had their wings moistened with the saline particles, so as to become incapable of rising into the air, and to be easily caught. (Strab. xii. p. 568; Plin. xxxi. 41, 45; Paus. cod. v. 126.) Stephenus Byz. (s. v. Böriseiow) speaks of a salt lake in Phrygia, which he calls Attaca ("Arrana"); near which there was a town called Börium, and which is probably the same as Lake Tatta. The Turks now call the lake Taca, and still provides all the surrounding country with salt. (Leake, Asia Minor, p. 70.)

TAU. [Taulum.]

TAUA (Tauc, Steph. B. s. v.; Taeoua, Plin. iv. 5, § 50; Taba, Itin. Ant. ii. 153), a town in Lower Aegypt, situated on the left bank of the Canopic arm of the Nile, S. of the city of Nacratius. It was the capital of the small Phthieplumthic Nome (Plin. v. 9, s. 9), and is supposed to be represented by the present Thanaoua (D'Anville, Memoire sur l'Egypte, vol. i. p. 82.)

[Bartherius.]

TAUCHIRA or TUCUCHRA (Tauchépra, Herod. iv. 171, et alii; Tuchépra, Herod. p. 732; Plin. v. 5, s. 5, &c.), a town on the coast of Crete, founded by Cyrene. It lay 200 stadia W. of Ptolemais. Under the Ptolemies it obtained the name of Arinice. (Strab. xviii. p. 836; Mela, i. 8; Plin. li. c.) At a later period it became a Roman colony (Tab. Peut.), and was fortified by Justinian. (Procop. de Aed. vi. 3.) Tauchira was particularly noted for the worship of Cybele, in honour of whom an annual festival was celebrated. (Synes. Ep. 3.) It is the same town erroneously written Tápaya by Diodorus (xviii. 20). It is still called Tachira. (Cf. Delia Celia, Fragg. p. 198; Pacho, Voyage, p. 184.)

[Thd.]

TAVIUM (Tawwów, Tawów) or TAVIA, a town in the central part of eastern Galatia, at some distance from the eastern bank of the river Hays, was given by the Seleucids to the Lycumæans, and became the seat of a governor, and a place of considerable commercial importance, being the point at which five or six of the great roads met. (Plin. v. 42; Strab. xii. p. 567; Plot. v. 4, § 9; Steph. B. s. v. "Aykupoua, Herod. p. 696; It. Ant. pp. 201, 203.) It contained a temple with a colossal bronze statue of Zeus, Leuke (Asis Minor, p. 311) is strongly inclined to believe that Tavorum occupies the site of ancient Tavium; but Hamilton (Researches, i. p. 379, &c.) and most other geographers, with much more of probability, regard the ruins of Boghaz Kéi, 6 leagues to the north-west of Jazgat or Jüghat, as the remains of Tavium. They are situated on the slope of lofty and steep rocks of limestone, some of which are adorned with sculptures in relief. There are also the foundations of an immense building, which are believed to be remains of the temple of Zeus. (Comp. Hamilton in the Journal of the Roy. Geog. Soc. vol. vii. p. 74, Fol.; Cramer, Asis Minor, ii. p. 98.) [L. S.]

TAULANTH (Taualnth, Plin. iii. 13), a town to which a people of Roman Illyria, in the neighbourhood of Epidamnus and Durrachium. In ancient times they were a powerful tribe, possessing several cities, and governed by their own kings, but subsequently they were reduced to submission by the kings of Illyria, and at the time when the Romans waged war with Teuta they had sunk into insignificance. (Cf. Thucyd. i. 24; Arrian, Anab. i. 5; Mela, ii. 3; Liv. xiv. 26; Plin. iii. 22, s. 26.) Aristotle relates that they had a method of preparing mead, which they called Stabiae. (Mor. Arsac. t. ii. p. 716.)

TAUM, TAUS, or TAVA (Tawwów, Plin. ii. 3, § 5), a bay on the E. coast of Britannia Barabara. (Tav. Agr. 22.) Now Frith of Tay. [Thd.]

TAUM (AD), a place in the S.E. of Britannia Romana, in the territory of the Iceni (Tab. Peut.). Probably Yarmouth. [Thd.]

TAUNUS MÖNS, a range of hills in western Germany, beginning near the river Nicer (Necar), and running northward till they reach the point where the River (Main) joins the Rhein. (Pomp. Mela, iii. 3; Tac. Ann. i. 56, xii. 28.) This range of hills still bears its ancient name, though it is sometimes simply called the Höhe, that is, the Height, Taunus being probably the Celtic word Dun or Daun, which signifies a height. In various places along this range of hills Roman inscriptions have been found, in which Cicero Taurinenses are mentioned, from which it may be inferred that they were a town of the name of Taunus. (Orlisti, Inscrip. nos. 181, 4281, 4982; Wilhelm, Germanien, p. 44.)

[Leake.]

TAURANIA, a town of Campania, mentioned only by Pliny (iii. 5, s. 9) as having in his time entirely disappeared, like Stabiae. He affords no clue to its position. The name of Taurania (Tauspavía) is found also in the older editions of Stephens of.
Taurania

Byzantium; but it appears that the true reading is Taurasia. (Steph. B. s. v. ed. Meim.) [E. H. B.]

TAURANITIUM. a district of Armenia Major lying N. of Tigranocerta, in the direction of Artazata. (Tac. Ann. xiv. 24; Cf. Mees Chr. v. 5; Eob. Et. Lat. incert.]

TAURASIA (Taurasi), an ancient city of Samnium, in the country of the Hirpini situated on the right bank of the river Calor, about 16 miles above its junction with the Taurus. The name of the city is known only from the inscription on the tomb of L. Scipio Barbatus, which records it among the cities of Samnium taken by him during the Third Samnite War. (Orell. Inscr. 530.) It was probably taken by assault, and suffered severely, for no subsequent mention of the town occurs in history: but its territory ("ager, qui Taurasium fuerat"), which was doubtless confiscated at the same time, is mentioned long afterwards, as a part of the "ager publicus Romani," on which the Apan Liguarians who had been removed from their own abodes were established by order of the senate. (Liv. al. 38.) These Ligurians appear to have been settled in the plain on the banks of the Taurus near its junction with the Metaurus, which can be little doubt that the modern village of Tauras, though 16 miles further S., retains the name, and marks (approximately at least) the site of the ancient Taurasia.

Several modern writers identify these Taurasini Campi with the Anasini Campi near Beneventum, which were the scene of the defeat of Pyrrhus by M. Curius Dentatus (Flor. I. 18; Oros. iv. 2), and the suggestion is probable enough, though unsupported by any authority. [Busseto.]

TAURANITIES. [Bagraudanieae.]

TAURUS-SUM (Taup̄govoj, Procop. de Aed. iv. 1. p. 266), a place in Moses Superior, near Scypi or Justiniana Prima. It was situated in the Haemus, not far from the borders, and was the birthplace of the emperor Justinian. (Cf. Gibbon, vol. v. p. 79, ed. Smith.)

[T. H. B.]

Tauri (Tāpstr), Strab. vii. p. 308), the inhabitants of the Taurica, are mentioned in Crimea. They were probably the remains of the Cimmerians who were driven out of the Chersones by the Scythians. (Herod. iv. 11, 12; Heeren, Iasen, i. 2. p. 271; Mummert, iv. p. 278.) They seem to have been divided into several tribes: but the two main divisions of them were the nomad Tauri and the agricultural. (Strab. vii. p. 311.) The former possessed the northern part of the country, and lived on meat, mare's milk, and cheese prepared from it. The agricultural Tauri were somewhat more civilized; yet altogether they were a rude and savage people, delighting in war and plunder, and particularly addicted to piracy. (Herod. iv. 103; Strab. vii. p. 308; Mela, ii. 1; Tac. Ann. xii. 17.) Nevertheless, in early times at least, they appear to have been united under a monarchical government (Herod. iv. 119). Their religion was particularly gloomy and horrible, consisting of human sacrifices to a virgin goddess, who, according to Ammianus Marcellinus (xxix. 8. s. 34), was named Orkheche, though the Greeks regarded her as identical with their Artemis, and called her Tauropolas. (Sop. Af. 172; Eur. Jph. Taur. 1457; Diod. iv. 44; Ach. Tat. viii. 2; Strab. xii. 553; Böckh. Inscr. ii. p. 89.) These victims consisted of shipwrecked persons, or Greeks that fell into their hands. After killing them, they stuck their heads upon poles, or, according to Ammianus (l. c.), affixed them to the wall of the temple, whilst they cast down the bodies from the rock on which the temple stood. (Herod. iv. 103; Ox. ex Pont. iii. 2 45, seq.; Trist. iv. 4. 63.) According to a tradition among the Tauri themselves, this was Thaphaen, the daughter of Abaranemon (Herod. l. c.). They had also a custom of cutting off the heads of prisoners of war, and setting them on poles above the chimneys of their houses, which usage they regarded as a protection of their dwellings (H.). If the king died, all his dearest friends were buried with him. On the decease of a friend of the king's, he either cut off the whole or part of the deceased person's ear, as a mark of his sorrow and regard for his dignity. (Nic. Damasc. p. 160, Orell.)

TAURIA'NUS (Travianos), a town on the W. coast of Bruttium, near the mouth of the river Metaurus (Murro). Its name is mentioned by Mela, who places it between Seylla and Metaurus. It was probably, therefore, situated to the S. of the river, while the town of Metaurus was on its N. bank. Subsequently all trace of the latter disappears; but the name of Tauriana is still found in the modern Tabula, which places it 23 miles S. of Vibo Valentia. (Mel. ii. 4. 8 §; Tab. Pont.) It became the see of a bishop in the later ages of the Roman empire, and retained that dignity down to the time of Gregory VII., when the town had fallen into complete decay. Its ruins, however, still exist, and the site is said to retain the name of Traviana. (Holsten. Not. ad Clavus. p. 293; Romanelli, vol. i. p. 760.)

There can be no doubt that the "Taurasum opificium" of Pliny (iii. 5. 10), which he mentions immediately after the "Metaurus annis," is the same place that is called by Mela Taurianum. [E. H. B.]

TAURICA CHERSONESUS (Ταύρικα Χερσονήσους), a peninsula stretching into the Panteus Euxinus from Sarmatia, or the country of the nomad Scythians, with which it is connected by a narrow isthmus, anciently called Taphirus, or Taphrae, now the isthmus of Periope. The peninsula was, before the time of Chersonesus Taurica, and was sometimes styled simply Taurica. (Plin. iv. 12. s. 26; Sclayx, i. p. 29, Huds.) It is now called the Crimea, from the once famous city of Ekite-Krim; but since its incorporation with the Russian empire, the name of Taurica has also been again applied to it.

The isthmus which connects the peninsula with Sarmatia is so slender, being in some parts scarcely 40 stadia or 5 miles across (Strab. vii. p. 308; Clarke, Trav. ii. p. 314, 4th ed. 1816), as to make it probable that in a very remote period Taurica was an island. (Plin. l. c.; cf. Pallas, Voyages, &c., ii. p. 2, Fr. Transl. 4to.) The ancients compared it with the Polemonesus, both as to size and shape (Strab. vii. p. 310; cf. Herod. iv. 99); and this comparison is sufficiently happy, except that Taurica throws out another smaller peninsula on its E. side, the Bosporan peninsula, or peninsula of Kertech, which helps to form the S. boundary, or coast, of the Pallas Macotis. The Chersonese is about 200 miles across in a direct line from Cape Turchan, its extreme W. point, to the Straits of Kertech, and 125 miles from N. to S., from Perope to Cape Kikimes. It contains an area of about 10,050 square miles. Nearly three-fourths of Taurica consist of flat plains little elevated above the sea; the remainder towards the S. is mountainous.
tainness. The NW. portion of the low country, or that which would lie to the W. of a line drawn from the isthmus to the mouth of the river Almus, consists of a sandy soil interspersed with salt lakes, an evidence that it was at one time covered by the sea (Pallas, Lb. p. 605, &c.); but the E. and S. part has a fertile mould. The mountain chain (Taurici Montes) begins to rise towards the centre of the peninsula, generally at first on the N., but increasing in height as the chain approaches the sea, with which rivers steeply sink to the peninsular coast. Hence the coast at this part presents huge cliffs and precipices, and the sea is so deep that the lead often finds no bottom at the distance of a mile or two from the shore. From these mountains, which extend from Symbola, or Balcada, on the W., to Theodosia, or Caffa, on the E., many bold promontories are projected into the sea, enclosing between them deep and warm valleys open to the S., and sheltered from the N. wind, where the olive and vine flourish, the apricot and almond ripen, and the laurel creeps among the dark and frowning cliffs. The most remarkable mountains of this chain are that anciently called the Cummerium at the N. extremity, and the Trapezus at the S. (Strab. vii. p. 309.) The former, which is said to have derived its name from the Cummerians, once dominant in the Bosporus, is now called Aghirmansch-Dagh. It lies nearly in the centre of the peninsula, to the NW. of the ancient Theodosia, and near the town of Eski-Krim, or Old Crimea. Some writers, however, identify Cummerium with Mount Oposuk, on the S. coast of the peninsula of Kertch. (Köller, Mein. de l'Acad. de St. Petersb. 1824, p. 649, seq.; Dubois de Montperreux, Voyages, &c. v. p. 233, seq.) But Trapezus is by far the highest mountain of Tauria. Kohl estimates its height at 5000 German feet (Heisen in Sudrussland, i. p. 204); other authorities make it rather less, or 4740 feet. (Neumann, Die Heilanden im Seythenlande, p. 448.) According to Mr. Seymour, it is 5125 English feet high. (Russia on the Black Sea, p. 146.) Its form justifies its ancient name, and is said to resemble that of the Table Mountain at the Cape of Good Hope (Kohl, Lb.). A good idea of it may be gathered from the vignette in Pallas (ii. p. 196). As it stands somewhat as isolated from the rest of the chain, it presents a very striking and remarkable object, especially so seen from the sea. At present it is called Tschata-Dagh, or the Tent Mountain. The other mountains seldom exceed 1200 feet. Their geological structure presents many striking deviations from the usual arrangement, especially in the absence of granite. These anomalies are fully described by Pallas in his second volume of travels. That part of Tauria which lay to the E. of them was called the Egoduk, or Rocky, Chersonesus (греков, Herod, L. c.). It is in these mountains that the rivers which wind the peninsula have their sources, none of which, however, are considerable. They flow principally from the northern side, from which they descend in picturesque cascades. Only two are mentioned by the ancients, the Tsimpis and the Istrianus. At present the most fertile districts of Tauria are the calcareous valleys among the mountains, which, though often covered with only a thin layer of mould, produce excellent wheat. The nature of this country, however, does not now correspond with the description of the ancients. Strabo (L. c.) praises its fertility in produc-
TAURICA CHERSONESUS.

was at first called Megarice, apparently from the circumstance that Megas was the mother city of the Pontic Heracleots. From these settlers the little peninsula we have just described obtained the name of the CHERSONESUS HERACLONITICA, or Heracleotic Chersonesus, sometimes also called "the small Chersonesus" (Δ βυσσινία, Strab. 1. c.), by way of distinction from the great, or Tauric, peninsula.

The original city of Chersonesus seems to have been founded at the westernmost point of the peninsula, close to the present Cape Fanary. The date and occasion of its foundation are not ascertained; but Neumann conjectures that it may have been built about the middle of the fifth century n. c. (Die Hel lenen, &c. p. 331). Considerable remains of the ancient city were visible so late as the end of the last century (Clarke, Trans. ii. pp. 292 seq.; Pallis, ii. pp. 70 seq.; but every trace of them had vanished when Murawiew Apostol visited the spot (Reise durch Taurien, p. 62). They were destroyed by a certain Liet. Kruse, who used the stones for building and converted the ground into a vineyard (Dubois de Montperreux, Voyages, &c. vi. p. 133). The ancient Chersonesus, however, had fallen into decay before the time of Strabo, whose description of this flourishing and appears from the ruins to have been seated on the W. side of what is now the Quarrantine Harbour of Sebastopol (Neumann, p. 392). The place was much damaged towards the end of the fourteenth century by Olgiar, sovereign of Lithuania, since which time it has been gradually falling into ruins (Karamzin, Russ. Gesch. v. 13. Germ. tr.). The Turks carried away many of its sculptures and columns to adorn Constantinople. Nevertheless, the town, although almost entirely deserted, remained for three centuries in so perfect a state that a plan might have been drawn of it at the time when it came into the possession of the Russians; but its ruin was soon completed by its new masters, who blew up the walls and destroyed the graves and temples. (Clarke, ii. p. 207.)

Pilay (iv. 12. s. 26) gives the circumference of its walls at 5 miles; but their outline could still be traced in 1820, and according to Dubois de Mont perreux (vi. 138), was only about a quarter of that size. In 1826, Prin (May have confounded the town walls with the rampart which extended across the isthmus, which, as we have already seen, Strabo describes as being 40 stadia, or 5 miles, broad. The same writer speaks of it in another place (p. 312) as being fortified with a wall. This wall ran from Ctenus, at the E. extremity of the harbour of Sebastopol to Symbolon (Balaklava) on the S. coast, and appears to have been made by the Bosporan kings as a defence against the Scythians. An account of its remaining vestiges is given by Clarke (ii. p. 285 seq.; cf. Seymour, p. 149.). The whole enclosure was anciently covered with gardens and villas, and the foundations of houses and of the boundary walls of fields and gardens may still be traced, as well as many remains of the town on the promontory between Quarantine Bay and Streltza Bay. Vestiges of the principal street show it to have been 20 feet broad. The town wall on the land side was near 2 miles long; built of limestone, and 5 or 6 feet thick. The profitableness of the town was thereby much increased by the trade which up to the name of the latter place, the ancient Ctenus, the rock is pierced all over with the subterranean dwellings of the ancient Tauri. On the top are the ruins of the castle built by Diophantes, general of Mithridates, to defend the Chersonesus against the Tauro-Scythians. These caverns or crypts are now rapidly falling in. (Seymour, p. 140.) Similar caves are found in other parts of the peninsula.

The Heracleotic Chersonesus was noted as the seat of the savage worship of Diana Taureopolis. The natives, or Tauri, themselves had a worship of a similar kind [TAURI]; but whether it was indigeno us among them, or whether they borrowed it from the Dorian Heracleots who settled here, cannot be ascertained. The account of the Tauri themselves, that their virgin goddess was Iphigenia, the daughter of Agamemnon, would seem to lead to the latter conclusion; though it is well known that the nations of pagus antiquity readily adopted one another's deities when any similar virtue was observable in their rights and attributes; and from the account of Herodotus (iv. 103) it might perhaps be inferred that this horrible worship existed among the Tauri before the arrival of the Greeks. Artemis was a peculiarly Dorian deity, and was worshipped in several parts of Greece with human sacrifices. There was a tradition that the town of Chersonesus was founded by Artemis herself. The Heracleot Chersonesites erected a famous temple on a headland on which they took the name of Parthenium from it. Strabo however merely calls the Parthenium "the temple of the virgin, a certain daemon" (p. 308), and does not mention Artemis. Opinions vary as to which is the real promontory of Parthenium. Many seek it at cape Fanary or Chersonesus, which seems too near the town of Chersonesus, as Strabo places the temple at the distance of 100 stadia from the town, though Fanary answers to his description in other respects. Clarke and Pallis identify it with the Asa Barus or "Sacred Promontory" (Clarke, ii. p. 286, and note), between Cape Fiolente and Balaklava, which, besides its name, has also a ruin to recommend it; though the latter claim to notice is shared by C. Fiolente. Dubois de Montperreux (vi. p. 194, sq.) thinks that the temple may have stood on the spot now occupied by the monastery of St. George; whilst Neumann, again places it on the headland a little to the NW. of C. Fiolente. It will be seen that these opinions rest on little more than conjecture. On the coins of the Heracleotic Chersonesus the image of Artemis occurs by far the most frequently. She sometimes appears with Apollo, sometimes with Hercules, the patron hero of the mother city, but more generally alone, and always as the goddess of the chase, never as Selene (Von Kühne, in the Memoirs of the Archaeolog. and Numism. Society of St. Petersburg, vol. ii. ap. Neumann, p. 420.). On other coins a fish is frequently seen; and one has a rough name obverse, and an ear of corn between two fishes on the reverse. The bays of the Heracleotic peninsula abound with fish, which formed a great part of the riches of the country.

Of the history of the Heracleotic Chersonesus we know but little, but it may perhaps be inferred from the Inscription of Aegacides that its constitution was republican. It was impor-
Tauria Chersonesus.

Taurini.

The Taurini (Tempora), a Ligurian tribe, who occupied the country on the E. slope of the Alps, down to the left bank of the Pulas, in the upper part of its course. They were the most northerly of the Ligurian tribes, and from their geographical position would more naturally have been regarded as belonging to Cisalpine Gaul than to Liguria; but both Strabo and Pliny distinctly say they were a Ligurian tribe, and the same thing may be inferred from the omission of their name by Polybius where he is relating the successive settlements of the Gaulish tribes in the N. of Italy (Vol. ii. 17; Strab. iv. 204; Plin. iii. 17. s. 21). Their territory adjoined that of the Vagienni on the S. and that of the Insubes on the N.; though the Lucii and Lebeoci, tribes of which we know very little, must also have bordered on their N. frontier (Vol. i. c.). The first mention of the Taurini in history is at the time of Hannibal's passage of the Alps (b. c. 218), when that general,

Some have both an article.

Strabo, c.

The

Heracleia, which, as

Kertcg, To this

the

G, the

Shiudenthe, does not appear to describe its name, as it has neither an unpleasant smell nor are its shores unhealthy (Seymour, p. 35); yet in the times of Clarke and Pallas it seems to have possessed both these offensive qualities. (Clarke, Trav. vol. ii. p. 314, note.)

The chief feature in the history of the Chersonesus Taurica, is that of the kingdom of the Bosporus, a sketch of which has been already given. [Bosporus Cimmerius, Vol. I. p. 421, seq.] After the extinction of that dynasty, towards the end of the 4th century of our era, the peninsula fell into the hands of the Huns, of which race remannts still existed between Panticapaeum and Cherson in the 6th century. (Procop. Goth. iv. 5.) It was subsequently over run by the Goths and other nations who followed the great stream of emigration. Justinian reunited the kingdom of the Bosporus to the Greek Empire; and the Byzantine emperors, till the fall of Constantinople, always regarded the Tauric peninsula as part of their dominions. But the Tar-

TAURICI MONTES. [Taurica Chersonesus.]

Taurini (Tempora), a Ligurian tribe, who occupied the country on the E. slope of the Alps, down to the left bank of the Pulas, in the upper part of its course. They were the most northerly of the Ligurian tribes, and from their geographical position would more naturally have been regarded as belonging to Cisalpine Gaul than to Liguria; but both Strabo and Pliny distinctly say they were a Ligurian tribe, and the same thing may be inferred from the omission of their name by Polybius where he is relating the successive settlements of the Gaulish tribes in the N. of Italy (Vol. ii. 17; Strab. iv. 204; Plin. iii. 17. s. 21). Their territory adjoined that of the Vagienni on the S. and that of the Insubes on the N.; though the Lucii and Lebeoci, tribes of which we know very little, must also have bordered on their N. frontier (Vol. i. c.). The first mention of the Taurini in history is at the time of Hannibal's passage of the Alps (b. c. 218), when that general,
TAURIS.

on descending into the plains of Italy, found the Taurini on hostile terms with the Insiders, and, in consequence, turned his arms against them, took their principal city, and put the inhabitants to the sword. (Pol. iii. 60; Liv. xxi. 38, 39.) Neither Polybius nor Livy mention the name of this city, but Appian calls it Taurasia (Annib. 5); it was probably situated on the same site which was afterwards occupied by the Roman colony. The name of the Taurini is not once mentioned during the long wars of the Romans with the Cisalpine Gauls and Ligurians, and we are ignorant of the time when they finally passed under the Roman yoke. Nor do we find any precise account of the foundation of the Roman colony in their territory which assumed the name of Augusta Taurinorum, though it is certain that this took place under Augustus, and it was doubtless connected with his final subjugation of the Alpine tribes in A.D. 8. From this time the name of the Taurini never again appears in history as that of a people; but during the latter ages of the Roman Empire the city of Augusta Taurinorum seems to have been commonly known as was the case in many instances in Transalpine Gaul) by the name of the tribe to which it belonged, and is called simply Taurini in the Itineraries, as well as by other writers. (Itin. Ant. p. 341; Itin. Hier. p. 556; Tab. Peut.; Annian. xvi. 8 § 18.) Hence its modern name of Torino or Turin. This is the only city that we can assign with any certainty to the Taurini. On the W. their territory was bounded (at least in the days of Augustus) by the Segusians and the other tribes subject to Cottius; and their limits in this direction is doubtless marked by the station Ad Fine, situated 18 miles from Augusta, on the road to Segusio (Itin. Ant. l.c.). But it appears probable that at an earlier period the nation of the Taurini was more widely spread, or their name used in a more comprehensive sense, so as to comprise the adjoining passes of the Alps; for Livy speaks of the Insular Gauls who crossed into Italy, "per Taurinas saltusque invas Alpes transierunt" (Liv. v. 34), and Strabo, in enumerating, after Polybius, the passes across the Alps, designates one of them as τῶν διὰ Ταυρονίων (Strab. iv. p. 209.). Whether the pass here meant is the Mont Genevieve or the Mont Cenis (a much disputed point), it was certainly within the territory of the Taurini in the more restricted sense.

TAURISCI. [Nolhuc. Vol. II. p. 447-]

TAUROEIS, TAUROEINTUM (Ταυροῖς, Ταυρούεντιον: Eth. Ταυροπίτως). Stephen B. (s. v. Ταυροὲς), who calls it a Celtic town and a colony of the Massalians, quotes the first book of Arte- midorus's geography for a foolish explanation of the origin of the name. The place is mentioned by Cassius (Boeth. ii. 4), who says: "Tauroea qued est castellum Massalium pervenit;" by Strabo (iv. pp. 180, 184), by Scymnus Chius, and by Polyb. (ii. 10 § 8), who places it between Massilia and Citharites Promontorium. D'Anville erroneously supposes that Caesar uses Tauroenta for the plural number; but it is the accusative of Tauroes. Strabo (iv. p. 184) enumerates the Massalit settlements between Massilia and the Varus in this order: Tauroeintum, Olbia, Antapolis, Nicaea. Mela (ii. 5) enumerates the places on this coast in a different order from east to west: Athenopolis, Olbia, Tauroeis, Citharistas, and "Lucidum Massalium portus." Pliny, as we have seen, places Tauroeis between Massilia and Citharidas. In the latter author Tauroeintum, Olbia, Antapolis, Nicaea. Mela (ii. 5) enumerates the positions between Telo Martius (Toulon) and Immadurus seem to be out of order "IMMADURUS;" and they are to be placed thus—Amenis (Embeis), Tauroeis (Tauronteis), Citharista [Citharista]. Car- sici (Cassie), Immadurus, Massilia. Geographers have been much divided in opinion on the site of Tauroeis, but the modern name seems to determine the place to be at the right of the entry of the bay of Ciotat.

TAUROMENIUM (Ταυρομενίου: Eth. Ταυρομενής, Tauromenitum: Ταυρωμενίου), a Greek city of Sicily, situated on the N. coast of Sicily, about midway between Messana and Catana. It was only about 3 miles from the site of the ancient Naxos, and there is no doubt that Tauromenium did not exist as a city till after the destruction of Naxos by Dionysius of Syracuse, n. c. 403; but the circumstances connected with its foundation are somewhat confused and uncertain. (NAXOS.) It appears, however, from Diodorus that after the destruction of Naxos, the remaining inhabitants of that city were driven into exile, and its territory was assigned by Dionysius to the neighbouring Siculi. These, how- ever, did not re-occupy the site of the ancient city, but established themselves on a hill to the N. of it, which was called the hill of Taurus (δ λόφος το ακροπόλεως Ταυροτος. Here they at first constructed only a temporary camp (in n. c. 396), but after- wards erected walls and converted it into a regular fortress or town, to which they gave the name of Tauromenium. (Diod. xiv. 58, 59.) The place was still in the hands of the Siculi in n. c. 394, and they held it against the efforts of Dionysius, who besieged the city in vain for great part of the winter, and though he on one occasion forced his way within the walls by a nocturnal surprise, was again driven out and repulsed with heavy loss. (Ib. 87, 88.) But by the peace concluded in n. c. 392, it was expressly stipulated that Tauromenium should be subject to Dionysius, who expelled the greater part of the Siculi that had settled there, and supplied their place with their own mercenaries. (Ib. 96.)

From this time we hear no more of Tauromenium till n. c. 358, when we are told that Andromachus, the father of the historian Timaeus, brought together all the remains of the exiled Naxians, who were still scattered about in different parts of Sicily, and established them all at Tauromenium. (Ib. 161.) This is related by Diodorus as if it were a new foundation, and even as if the name had then first been applied to the city, which is in direct contradiction with his former statements. What had become of the former inhabitants we know not, but there is little doubt that the account of this resettlement of the city is substantially correct, and that Tauromenium now for the first time became a Greek city, which was considered as taking the place of Naxos, though it did not occupy the same site. (Wesseling, ad Diod. xiv. 59.) Hence Pliny's expression, that Tauromenium had formerly been called Naxos (Plin. iii. 8. s. 14) is nearly, though not strictly, correct.

The new settlement seems to have risen rapidly to prosperity, and was apparently already a considerable town at the time of the expedition of Timoleon in n. c. 345. It was the first place in Sicily where that leader landed, having eluded the vigilance of
the Carthaginians, who were guarding the straits of Messana, and crossed direct from Rhegium to Tauromenium. (Diod. xvi. 68; Phut. Timol. 10.) The city was at that time still under the government of Anaxarchus, on whose mild and amiable administration is said to have presented a strong contrast with that of the despots and tyrants of the other Sicilian cities. He welcomed Timoleon with open arms, and afforded him a secure resting place until he was enabled to carry out his plans in other parts of Sicily. (Diod. l. c.; Phut. l. c.) It is certain that Anaxarchus was not deprived of the chief power, when all the other tyrants were expelled by Timoleon, but was permitted to retain it unimpaired till his death. (Marcell. Thr. Thucyd. § 27.) We hear, however, very little of Tauromenium for some time after this. It is probable that it passed under the authority of Acacathocles, who drove the historian Timaeus into exile; and some time after this it was subject to a domestic despot of the name of Tyndarion, who was contemporary with Hierocles of Syracuse and Phalinitus of Agrigentum. (Diod. xxii. Exc. H. p. 495.) Tyndarion was one of those who concurred in inviting Pyrrhus into Sicily (n.c. 278), and when that monarch, with his brother-in-law, joined him with all his forces, and supported him in his march upon Syracuse. (Diod. l. c. pp. 493, 496.)

A few years later we find that Tauromenium had fallen into the power of Hieron of Syracuse, and was employed by him as a stronghold in the war against the Mamertines. (Ib. p. 497.) It was also one of the cities which was left under his dominion by the treaty concluded with him by the Romans in n.c. 263. (Diod. xxiii. p. 502.) This is doubtless the reason why its name is not again mentioned during the First Punic War.

There is no doubt that Tauromenium continued to form a part of the kingdom of Syracuse till the death of Hieron, and that it only passed under the government of Rome when the whole island of Sicily was reduced to a Roman province; but we have scarcely any account of the part it took during the Second Punic War, though it would appear, from a hint in Appian (Str. 5), that it submitted to Marcus on favourable terms; and it is probable that, when the territory was divided up, it obtained the peculiarly favoured position it enjoyed under the Roman domination. For we learn from Cicero that Tauromenium was one of the three cities in Sicily which enjoyed the privileges of a "civitas foederata" or allied city, thus retaining a nominal independence, and was not even subject, like Messana, to the obligation of furnishing ships of war when called upon. (Cic. Terr. ii. 66, iii. 6, v. 19.) But the city suffered severe calamities during the Servile War in Sicily, n.c. 134-132, having fallen into the hands of the insurgents, who, on account of the great strength of its position, made it one of their chief posts, and were able for a long time to defy the arms of the consul Rutilius. They held out until they were reduced to the most fearful extremities by famine, when the citadel was at length betrayed into the hands of the consul by one of their leaders named Sarapion, and the whole of the survivors put to the sword. (Diod. xxxiv. Exc. Phist. p. 528; Oros. v. 9.) Tauromenium again appears to have passed over to the wars of Sextus Pompeius in Sicily, and, from its strength as a fortress, was one of the principal points of the position which he took up in n.c. 36, for defence against Octavian. It became the scene also of a sea-fight between a part of the fleet of Octavian, commanded by the tribunvir in person, and that of Pompeius, which terminated in the defeat and almost total destruction of the former. (Appian, B.C. v. 103, 105, 106-111. But the writer seems to mistake.) In the settlement of Sicily after the defeat of Pompey, Tauromenium was one of the places selected by Augustus to receive a Roman colony, probably as a measure of precaution, on account of the strength of its position, as we are told that he expelled the former inhabitants to make room for his new colonists. (Diod. xvi. 7.) Strabo speaks of it as one of the cities on the E. coast of Sicily that was still subsisting in his time, though inferior in population both to that of its ancient rival, Himera (n.c. 270), and the Mamertines. Both Pliny and Pomponius assign it the rank of a "colonia" (Plin. iii. 8. s. 14; Plut. iii. 4. § 9), and it seems to have been one of the few cities of Sicily that continued under the Roman Empire to be a place of some consideration. Its territory was noted for the excellence of its wine (Plin. xiv. 6. s. 8), and produced also a kind of marble which seems to have been highly valued. (Athen. v. p. 207.) Juvenal also speaks of the sea off its rocky coast as producing the choicest mulets. (Juv. v. 53.)

The Itineraries place Tauromenium 32 miles from Messana, and the same distance from Catana. (Itin. Ant. p. 90; Tab. Peut.) It continued after the fall of the Roman Empire to be one of the more considerable towns of Sicily, and from the strength of its position was one of the last places that was retained by the Greek emperors; but it was taken by the Saracens in A. D. 906 after a siege of two years, and totally destroyed, a calamity from which it has never more than partially recovered. The present town of Taurmene is a very large place, with about 3500 inhabitants; but it still occupies the ancient site, on a lofty hill which forms the last projecting point of the mountain ridge that extends along the coast from Cape Pelorus to this point. The site of the town is about 900 feet above the sea, while a very steep and almost isolated rock, crowned by a Saracen castle, rises about 500 feet higher: this is undoubtedly the site of the ancient Arx or citadel, the inaccessible position of which was rendered more secure by the circumstance that, from the end of the ancient walls may be traced at intervals all round the brow of the hill, the whole of the summit of which was evidently occupied by the ancient city. Numerous fragments of ancient buildings are scattered over its whole surface, including extensive reservoirs of water, sepulchres, tessellated pavements, &c., and the remains of a spacious edifice, commonly called a Naumachia, but the real destination of which is difficult to determine. But by far the most remarkable monument remaining at Tauromenium is the ancient theatre, which is one of the most celebrated ruins in Sicily, on account both of its remarkable preservation and of the surpassing beauty of its situation. It is built for the most part of brick, and is therefore probably of Roman date, though the plan and arrangement are in accordance with those of Greek, rather than Roman, theatres; whence it is supposed that the present structure was rebuilt upon the foundations of an older theatre of the Greek period. The greater part of the gracefully disposed part of the wall which surrounded the whole area is preserved, and the proscenium with the back wall of the scene and its appendages, of which only traces remain in most ancient theatres, are here preserved in singular integrity, and contribute much to the picturesque
TAUROSCYTHAE.  

The ruins at Taurus Minus are described in detail by the Duke of Serra di Falco (Antichità della Sicilia, vol. v. part iv.), as well as by most travellers in Sicily. (Cwinn-burse's Travels, vol. ii. p. 380; Sutry's Sicily, p.129, &c.)

E.H.B.

COIN OF TAUROMENIUM.

TAUROSCYTHAE (Taurwsedan, Ptol. iii. 5. § 25), called by Pliny Tauri Scythae (iv. 12. s. 26), a people of eastern Europe, Sarmatia, composed of a mixture of Taurians and Scythians. They were seated to the W. of the Jazgys, and the district which they inhabited appears to have been called Tauroscythia. (Cf. Strab. ap. Hudson. p. 87. C. Capito. M. Ant. 9; Procop. de Aed. S. ii. fin.)

TAURUMINUM (TavpoffKveaT), a strong fortress in Lower Pannonia, at the point where the Savus joins the Danubius, on the road from Sirmium to Singidunum. It was the station of a small fleet of the Danubians. (Plin. iii. 28; Ptol. ii. 16. § 4; It. Ant. pp. 131, 241; Tav. Putei.; Geogr. Rav. iv. 19, where it is called Tamrynum.) Its site is now occupied by the fortress of Semlin, opposite to Belgrade.

L.S.

TAURUS MONS (4 Tavfzos), one of the great mountain ranges of Asia, the name of which is believed to be derived from the Aramaic Tur or Tura, i.e., a high mountain or Ap, and accordingly is in reality a common noun applied to all the high mountains of Asia. The name has even been transferred to Europe, for the Taurian Chersonesus in Sarmatia and the Taurisci in the Norican Alps appear to owe their name to the same origin. We cannot wonder therefore when we find that Eratotheneus (ap. Strab. xiv. 688) and Strabo (ii. pp. 68, 129, v. p. 490) apply the name to the whole range of mountains extending from the Mediterranean to the eastern ocean, although their connection is often broken. This extent of mountains is, according to Strabo's calculation (xi. p. 490), 45,000 stadia in length, and 3000 in breadth. But in the narrower and common acceptance Mount Taurus is the range of mountains in Asia Minor which begins at Carpa Euxyn or Chelidoniun on the coast of Lydia, which for this reason is called by Mela (i. 15) and Pliny (v. 28) Promontorium Tauri. It was, however, well known to the ancients that this promontory was not the real commencement, but that in fact the range extended to the south-western extremity of Asia Minor. (Strab. ii. p. 129, xi. p. 520, xiv. pp. 651, 666.) This range rises in the W. as a lofty and precipitous mountain, and runs without any interruptions, first in a northern direction between Lycia and Pamphylia, then in an eastern direction through Pisidia and Lycia as far as the frontiers of Cilicia and Lycaonia. There it separates into two main branches. The one proceeds north-eastward under the name of Antitaurus (Arvtraov), and surpasses the other in height. It runs through Cappadocia, where it forms Mount Argeus (Argaywos), and Armenia, where it is called Mons Capetos, and through the Montes Moschiti it is connected with the Caucans, while a more southerly branch, under the names of Abus and Macis or Massia, runs through Armenia towards the Caspian Sea. The second branch, which separates itself on the frontiers of Cilicia and Phrygia, retains the name of Taurus, and proceeds from Cilicia, where it forms the Parthae Ciliciæ, and sends forth Mons Amnus in a southern direction, while the main branch proceeds through Cappadocia. After being broken through by the Ephrates, it again sends forth a southern branch under the name of Mons Masius. The name Taurus ceases in the neighbourhood of Lake Arasas, the mountains further east having other names, such as Xiphates, Zagrus, &c. Most parts of Mount Taurus, which still bears its ancient name, were well wooded, and furnished abundance of timber to the maritime cities on the south coast of Asia Minor. [L.S.]

TAURUS PALUS, an étang on the coast of Norhomenis, west of the delta of the Rhone. It is named in the verses of Avienus, quoted in the article Feci Jugum; and to the verses there cited may be added the following verse:—

"Taurus paludem namque gentilis (gentili) vocant."

But I. Vossius in his edition of Mela (ii. 5, note) writes the verses of Avienus thus:—

"In usque Taphrum pertinet, Taphron paludem namque gentili vocant;"

an alteration or corruption which D'Anville justly condemns, for the étang is still named Taur, or vulgarly Tan.

TAXGAETIUM (Taxyartos), a place assigned by Ptolemy (ii. 12. § 5) to Bactria, but which more properly belonged to Vindelicia, was situated on the northern shore of the Lacus Bajacantium, and probably on the site of the modern Lindon. [L.S.]

TAXILA (Thayula, Arrian. Anab. v. 8; Thayala, Ptol. viii. i. § 45), a place of great importance in the Upper Panjak, between the Indus and Hydaspes, which was visited by Alexander the Great. It is said to have been ruled at that time by a chief called Taxas, who succeeded in a friendly manner to the Grecian king. The country around was said to be very fertile, and more abundant than even Egypt (Strab. xv. pp. 698—714). There can be little doubt that it is represented by the vast ruins of Manicula, which has in modern times been the scene of some very remarkable researches (Elphinstone, Cabul, p. 79; Burnes, Travels, i. p. 65, ii. p. 470.) The famous Topes of Manicula, which were examined by General Ventura and others (Asiatic Res. xvii. p. 563), lie to the eastward of Baval-pindi. Wilson considers Taxila to be the same as the Takhasaile of the Hindus (Ariena, p. 196).

TAYGETUS [Laconia, pp. 108, 109.]

TAYUS (Thayos, Ptol. iii. 6. § 5). 1. A town in the SE. part of the Chersonesus Taurici.

2. A town of Asiatic Sarmatia, on the N. coast of the Pontus Euxinus. (Ptol. v. 9. § 9.) [T. H. D.]

TEANUM (Tavos, Strab.; sometimes also called Teanum Apulum (Cic. pro Cluent. 9; Tavos'Avoulopo, Strab.; Ech. Teanenses Apuli), to distinguish it from the Campanian city of the
TEANUM.

same name, was a city of Apulia, situated on the right bank of the river Prente (Fortore), about 12 miles from its mouth. It appears to have been one of the most considerable cities of Apulia before its conquest by the Romans; but its name is first mentioned in B.C. 318, when, in conjunction with Caunusium, it submitted to the Roman consul M. Fosilis Flaccuator and L. Plantius Vanne. (Liv. ix. 20.) It is again noticed during the Second Punic War, when it was selected by the dictator M. Junius Pera as the place of his winter-quarters in Apulia. (Id. xxii. 24.) Cicero incidentally notices it as a municipal town, at the distance of 18 miles from Larinum (Cic. pro Cluent. 9), and its name is found in all the geographers among the municipal towns of Apulia. (Strab. vi. p. 285; Mol. i. 4. 6; Plin. iii. 11. s. 16; Ptol. iii. 1. § 72.) Its municipal rank is confirmed also by an inscription, as well as by the Liber Coloniarum, and it is clear that it never attained the rank of a colony. (Orell. Inserv. 140; Lib. Col. p. 210.) Its ruins still exist at a place called Civitate, near the banks of Larinum (ancient Route de Civitatis), over the Fortore, by which the ancient road from Larinum to Luceria crossed that river. The distance from the site of Larinum agrees with that stated by Cicero of 18 miles (the Tabula erroneous gives only 12), and the discovery of inscriptions on the spot leaves no doubt of the identification. Considerable remains of the walls are still extant, as well as fragments of other buildings. From these, as well as from an inscription in which we first meet the "Ordo splendidissimus Civitatis Tanieanum," it seems probable that it continued to be a flourishing town under the Roman Empire. The period of its final decay is uncertain, but it retained itsiscopal see down to modern times. (Holsen. Not. ad Cic. p. 279; Romanelli, vol. ii. p. 291; Mommsen, Inserv. R. N. p. 271.)

Strabo speaks of Teanum as situated at some distance inland from a lake, the name of which he does not mention, but which is clearly the Lacus Pantanus of Pliny, now known as Lake of Latina. From an inscription found on its banks it appears that this was comprised within the territory of Teanum, which thus extended down to the sea (Romanelli, l. c.), though about 12 miles distant from the coast.

Several Italian topographers have assumed the existence of a city in Apulia of the name of Tete, distinct from Teanum (Giovanelli, Sito di Arte, p. 13; Romanelli, vol. ii. p. 286), but there seems to doubt that the two names are only different forms of the same, and that the Teates Apuli of Livy (ix. 20) are in reality the people of Teanum. It is true that that writer mentions them as if they were distinct from the Teaneses whom he had mentioned just before; but it is probable that this arises merely from his having followed different analysts, and that both statements refer in fact to the same people, and are a repetition of the same occurrence. (Mommsen, Inter-Ital. Diss. p. 301.) In like manner the Teates mentioned in the Liber Coloniarum (p. 261) is evidently the same place called in an earlier part of the same document (p. 210) Teanum. [E. H. B.]

TEANUM (Trapeov: Eith. Tæanosis: Tæano), sometimes called for distinction's sake TEANUM SIDICINUM (Liv. xxii. 57; Cic. ad Att. viii. 11; Plin. iii. 5. 8. 9; Tæanos Sidicinow, Strab. v. p. 237), an important city of Campania, situated in the interior of that province, on the Via Latina, between Cales and Casinum. (Strab. v. p. 237.) It was therefore the frontier city of Campania, as that term was understood under the Roman Empire; but originally Teanum was not reckoned a Campanian city at all, but was the capital of the small independent tribe of the Sidicini. (Sidicini.)

It was indeed the only place of importance that they possessed, so that Livy in more than one instance alludes to it, where he is speaking of that people, merely as "their city," without mentioning its name. (Liv. viii. 2, 17.) Hence its history before the Roman conquest is identical with that of the people, which will be found in the article SIDICINI. The first mention of Teanum after the Roman conquest, is in B.C. 216, immediately after the battle of Cannae, when Marcellus sent forward a legion from Rome thither, evidently with the view of securing the line of the Via Latina. (Liv. xxii. 57.) A few years later, in B.C. 211, it was selected as a place of confinement for a part of the senators of Capua, while they were awaiting their sentence from Rome; but the consul Fulvius, contrary to the opinion of his colleague App. Claudius, caused them all to be put to death without waiting for the decree of the senate. (Liv. xxvi. 15.) From this time Teanum became an ordinary municipal town; it is incidentally mentioned as such on several occasions, and its position on the Via Latina doubtless contributed to its prosperity. A gross outrage offered to one of its municipal magistrates by the Roman consul, was noticed in one of the orations of C. Gracchus (ap. A. Gel. x. 3), and we learn from Cicero that it was in his time a flourishing and populous town. (Cic. de Leg. Agr. ii. 31, 35, ad. Att. viii. 11, d.) Its name repeatedly occurs in the Social War and the contest between Sullus and Marius (Appian, B. C. i. 45, 85); and at a later period it was the place where the commanders of the legions in Italy held a kind of congress, with a view to bring about a reconciliation between Octavian and L. Antonius (Ib. v. 20). It was one of the cities whose territory the tribune Bullus proposed by his law to divide among the Roman populace (Cic. l. c.); but this misfortune was averted. It subsequently, however, received a colony under Augustus (Lib. Col. p. 238; Plin. iii. 5. s. 9), and seems to have retained its colonial rank under the Empire. (Mommsen, Inserv. R. N. 3989, 3999.) Strabo tells us that it was the largest and most populous town on the Via Latina, and the most considerable of the inland cities of Campania after Capua. (Strab. v. pp. 257, 248.) Inscriptions and existing remains confirm this account of its importance, but we hear little more of it under the Roman Empire. The Itineraries place it 16 miles from Casinum, and 18 from Venafro; a cross road also struck off from Teanum to Allifae, Telesia, and Beneventum. (Itin. Ant. pp. 121, 304; Tab. Pict.) Another branch also communicated with Sessa and Minturnae.

Teanum was not more than 5 miles from Cales: the point where the territories of the two cities joined was marked by two shrines or aedilices of Fortune, mentioned by Strabo, under the name of αἰ δίος Τείχω (v. p. 249).

Teanum appears to have declined during the middle ages, and the modern city of Teano is a poor place, with only about 4000 inhabitants, though retaining its episcopal see. Many ruins of the ancient city are visible, though none of them of any great interest. They are situated below the modern city, which stands on a hill, and considerably nearer to
TEARI JULIENSES.

Colci (Cales). The most important are those of an amphitheatre and a theatre, situated near the Via Latina; but numerous remains of other buildings are found scattered over a considerable space, though for the most part in imperfect preservation. They are all constructed of brick, and in the rectilinear style, and may therefore probably be all referred to the period of the Roman Empire. Numerous inscriptions have also been found, as well as coins, vases, intaglios, &c., all tending to confirm the account given by Strabo of its ancient prosperity. (Romanelli, vol. iii. p. 456; Hearne's Class. Tour, vol. i. pp. 249—264; Mommsen, Inscr. R. N. pp. 208, 209.)

At a short distance from Teano are some mineral springs, now called Le Caldarelle, which are evidently the same with the "aquea acidula," mentioned both by Pliny and Vitruvius as existing near Teanum. (Plin. xxxi. 2. 5; Vitruv. viii. 3. § 17.) The remains of some ancient buildings, called il Bagnò Nuovo, are still visible on the spot. [E. H. B.]

COIN OF TEANUM SIDICINUM.

TEARI JULIENSES, the inhabitants of a town of the Iturcaeans in Hispania Tarraconensia (Plin. iii. 3. § 4). It is called by Ptolemy Tauxouaía, and is probably the modern Trogypera. [T. H. D.]

TEARUS (Plin. iv. 11. s. 18; Triagos, Herod. iv. 90), now Teare, Deora, or Dora, a river in the SE. of Thrace, flowing in a SW. direction, until it joins the Costadesos, their united waters falling into the Arrians, one of the principal eastern tributaries of the Hebus. Herodotus (l. c.) states that the sources of the Teurus are equidistant from Heraclea on the Frapanis and Apollonia on the Euxine; that they are thirty-eight in number; and that, though they all issue from the same rock, some of them are cold, others warm. Their waters had the reputation, among the neighbouring people, of being pre-eminentiy medicinal, especially in cases of itch or mange (φηρύ). On his march towards the Danube, Darius halted his army for three days at the sources of the Teurus, and erected a pillar there, with an inscription commemorative of their virtues, and of his own. [J. R.]

TEA'TE (Tearia, Strab. Ptol.; Eth. Teatinus; Chieti), the chief city of the Marrucini, was situated on a hill about 3 miles from the river Aternum, and 8 from the Adriatic. All the ancient geographers concur in representing it as the metropolis or capital city of the tribe (Strab. v. p. 241; Plin. iii. 12. s. 17; Ptol. iii. 1. § 60); and Silius Italicus repeatedly notices it with the epithets "great" and "illustrious" ("magnum Teate," Sil. Ital. viii. 520; Clarum Teste, Id. xvii. 453); but, notwithstanding this, we find no mention of it in history. Inscriptions, however, as well as existing remains, concur in proving it to have been a flourishing and important town under the Roman dominion. It was apparently the only municipal town in the land of the Marrucini, and hence the limits of its municipal district seem to have coincided with those of that people. We learn from the Liber Coloniarum that it received a body of colonists under Augustus, but it did not bear the title of a colony, and is uniformly styled in inscriptions a municipium. (Lib. Colon. p. 258; Orell. Inscr. 2175, 3853; Mommsen, Inscr. R. N. pp. 278, 279.) It derived additional splendour in the early days of the Empire from being the native place of Asinius Pollio, the celebrated statesman and orator; indeed the whole family of the Asini seem to have derived their origin from Teate. Herus Asinus was the leader of the Marrucini in the Social War, and a brother of the orator is called by Catullus "Marrucina Asini." (Liv. Epit. lxxiii.; Catull. 12. 1.) The family of the Vettii also, to which belonged the Vettius Marcellus mentioned by Pliny (ii. 53. s. 85), appears to have belonged to Teate. (Mommsen, l. c. 5311.)

The Itineraire place Teate on the Via Valeria, though from the position of the town, on a hill to the right of the valley of the Aternum, the road must have made a considerable detour in order to reach it. (Itin. Ant. p. 310; Tell. Pent.) Its name is also noticed by P. Diaconus (l. 20), and there seems no doubt that it continued throughout the middle ages to be a place of importance, and the capital of the surrounding district. Chieti is still one of the most considerable cities in this part of Italy, with above 14,000 inhabitants, and is the see of an archbishop. Still existing remains prove that the ancient city occupied the same site as the modern Chieti, on a long ridge of hill stretching from N. to S., though it must have been considerably more extensive. Of these the most important are the ruins of a theatre, which must have been of large size; those of a large edifice supposed to have been a reservoir for water, and two temples, now converted into churches. One of these, now the church of S. Paolo, and considered, but without any authority, as a temple of Hercules, was erected by the Vettiius Marcellus above noticed; the other, from the name of S.ta Maria del Tri-cugio which it bears, has been conjectured to have been dedicated to Diana Trivia. All these edifices, from the style of their construction, belong to the early period of the Roman Empire. Besides these, numerous mosaics and other works of art have been discovered on the site, which attest the flourishing condition of Teate during the first two centuries of the Christian era. (Romanelli, vol. iii. pp. 104—109; Craven, Abruzi, vol. ii. pp. 8, 9.) [E. H. B.]

COIN OF TEATE.

TEBENDA (Thébenda), a town in the interior of Pontus Galaticus (Ptol. v. 6. § 9), is no doubt the same as the Tebenna mentioned by Anna Comnena (p. 364, u.) as situated in the vicinity of Trepaeus. [L. S.]

TECIELA (Tecelia), a town placed by Ptolemy
TECMON. [i. 11, § 27] in the north of Germany, perhaps in the country of the Chauci, on the left bank of the Visargis (Weser). Its site must probably be looked for near or at the village of Zettel, about 3 miles from the western bank of the Weser. (Reichard, Germanien, p. 245.)

[ L. S.]

TECMON (Τέκμον; Eth. Τεκμών), a city of Molossia in Epeirus, incorrectly called by Stephanus B. a city of Thesprotia, taken by L. Anicius, the Roman commander, in b. c. 167. Leake supposes that Gymnasium near Arcadia, about 20 miles to the W. of Juania, may have been the site of Tectmon or Horicum, which Livy mentions in connection with Tectmon. (Liv. xliv. 26; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 83.)

TECTOSAGES (Τεκτοσάγης, Ptol. vi. 14. § 9), a people of Scythia within Imaus. [ T. H. D.]

TECTOSAGES. [VOLCEAE]

TECTOSAGES, TECTOSAGAE, or TECTOSAGI (Τεκτοσάγες, Τεκτοσάγαι), one of the three greater tribes of the Celts or Gallo-Græci in Asia Minor, of which they occupied the central parts. For particulars about their history, see GALATIAS. These Tectosages were probably the same tribe as the one mentioned by Polybius under the names of Aegosages or Bigosages. (Polyb. v. 33. 77. 78. 111.)

[ L. S.]

TECUM. [TICHE]

TEDANUS (Τηδάνος), a small river of Illyricum (Ptol. ii. 16. § 3), on the frontier of the district called Iapetis (Ptol. ii. 25), and in all probability the modern Zapidania. [ L. S.]

TEGAE (Τεγέα, Steph. B. s. v.), a town of Crete, which, according to legend, was founded by Agamemnon. (Vell. Pat. i. 1.) The coins which Scinto and Pellerin attributed to the Cretan Tegae have been restored by Eckhel (vol. ii. p. 321) to the Arcadian city of that name. [ E. B. J.]

TEGAE (Τεγέα, i.e. Τεγέη: Eth. Τεγεήτη, Tegeata), one of the most ancient and principal towns of Arcadia, situated in the NE. of the country. Its territory included the Tegeatis (Τεγεάτης), was bounded by Caynica and Argolis on the E., from which it was separated by Mt. Parthenium, by Laconia on the S., by the Arcadian district of Macaonia on the W., and by the territory of Mantinea on the N. The Tegeae are said to have derived their name from Tegaeon, a son of Lycon, and to have dwelt originally in eight, afterwards nine, demes or townships, the inhabitants of which were incorporated by Alius in the city of Tegea, of which this hero was the reputed founder. The names of these nine townships, which are preserved by Tamsanias, are: Gareae (Γαραιάτα), Phylaeces (Φυλακείς), Coryphos (Κορυφός), Potachilidae (Ποταχιλίδαι), Oxyale (Οξιαλή), Mantypeis (Μαντύπης), Echeuithes (Εχευίθης), to which Aphi- dentes (Αφιδέντης) was added as the ninth in the reign of king Aphiades. (Pans. viii. 3. § 4, viii. 45. § 1; Strab. viii. p. 337.) The Tegeatis were early divided into 4 tribes (πολαί), called respectively Chorii (Χορία), in inscriptions Κρατίωτα, Hippothetis (Ιπποθητής), Apollonis (Απόλλωνι), and Atheneis (Αθηνείας), to each of which belonged a certain number of metoeci (με- τοικοί) or resident aliens. (Pans. viii. 35. § 6; Eckhel, Corp. Inscri. no. 1513.)

Tegae is mentioned in the Iliad (ii. 607), and was probably the most celebrated of all the Arcadian towns in this earliest times. This appears from its heroic renown, since its king Echecius is said to have slain Hyllus, the son of Hercules, in single combat. (Herod. ix. 26; Pans. viii. 43. § 3.) The Tegeatae offered a long-continued and successful resistance to the Spartans, when the latter attempted to extend their dominion over Arcadia. In one of the wars between the two peoples, Charillus or Charillus, king of Sparta, deceived by an oracle which appeared to promise victory to the Spartans, invaded Tegae, and was not only defeated, but was taken prisoner with all his men who had survived the battle. (Herod. i. 66; Pans. iii. 7. § 3, viii. 5. § 9, viii. 45. § 3, 47. § 2, 48. § 4.) More than two centuries afterwards, in the reign of Leon and Agesicles, the Spartans again fought unsuccessfully against the Tegeatae; but in the following generation, in the time of their king Anaxandrides, the Spartans, having obtained possession of the bones of Orestes in accordance with an oracle, defeated the Tegeatae and compelled them to acknowledge the supremacy of Sparta, about B. C. 560. (Herod. i. 63, 67. seq.; Pans. iii. 3. § 5, seq.) Tegea, however, still retained its independence, though its military force was at the disposal of Sparta; and in the Persian War it appears as the second military power in the Peloponnese, having the place of honour on the left wing of the allied army. Five hundred of the Tegeatae fought at Thermopylae, and 3000 at the battle of Plataea, half of their force consisting of hoplites and half of light-armed troops. (Herod. vii. 292. ix. 26, seq. 61.) As it was not usual to send the whole force of a state upon a distant march, we may probably estimate, with Clinton, the force of the Tegeatae on this occasion as not more than three-fourths of their whole number. This would give 4000 for the military population of Tegea, and about 17,400 for the whole free population. (Clinton, F. H. vol. ii. p. 417.)

Soon after the battle of Plataea, the Tegeatae were again at war with the Spartans, of the causes of which, however, we have no information. We only know that the Tegeatae fought twice against the Spartans between B. C. 479 and 464, and were each time defeated; first in conjunction with the Argives, and a second time together with the other Arcadians, except the Mantinians at Dipaia, in the Maenalid district. (Herod. ix. 37; Pans. iii. 11. § 7.) About this time, and also at a subsequent period, Tegea, and especially the temple of Athena Alea in the city, was a frequent place of refuge for persons who had rendered themselves obnoxious to the Spartan government. Either fled the seer Hegesistratus (Herod. ix. 37) and the kings Lycydias and Pansanias, son of Pleistoxanx. (Herod. vii. 72; Xen. Hell. iii. 5. § 25; Pans. iii. 5. § 6.)

In the Peloponnesian War the Tegeatae were the firm allies of the Spartans, to whom they remained faithful both on account of their possessing an aristocratic constitution, and from their jealousy of the neighbouring democratical city of Mantinea, with which they were frequently at war. [For details see MARTINELLA.] Thus the Tegeatae not only refused to join the Argives in the alliance formed against Sparta in B. C. 421, but they accompanied the Lacedaemonians in their expedition against Argos in 418. (Thuc. v. 32. 57.) They also fought on the side of the Spartans in the Corinthian War, 394. (Xen. Hell. iv. 2. § 13.) After the battle of Leuctra, however (371), the Spartan party in Tegea was expelled, and the city joined the other Arcadian towns in the foundation of Megalopolis and
TEGEA.

in the formation of the Arcadian confederacy. (Xen. Hell. vi. 5, § 6, seq.) When Mantinea a few years afterwards quarrelled with the supreme Arcadian government, and formed an alliance with its old enemy Sparta, Tegea remained faithful to the new confederacy, and fought under Epaminondas against the Spartans at the great battle of Mantinea, 362. (Xen. Hell. vii. 4, § 36, seq., viii. 5, § 3, seq.)

Tegea at a later period joined the Aetolian League, but soon after the accession of Cleomenes III. to the Spartan throne it formed an alliance with Sparta, together with Mantinea and Orchomenos. It thus became involved in hostilities with the Achaean, and in the war which followed, called the Cneumonic War, it was taken by Antigonus Doson, the ally of the Achaean, and annexed to the Achaean League, n. c. 222. (Pol. ii. 46, 54, seq.) In 218 Tegea was attacked by Lycurgus, the tyrant of Sparta, who obtained possession of the whole city with the exception of the acropolis. It subsequently fell into the hands of Machanidas, but was recovered by the Achaean after the defeat of the latter tyrant, who was slain in battle by Philopoemen. (Pol. v. 17, xi. 18.) In the time of Strabo Tegea was the only one of the Arcadian towns which continued to be inhabited (Strab. vii. p. 388), and it was still a place of importance in the time of Pausanias, who has given us a minute account of its public buildings. (Paus. viii. 45—48, 53.) Tegea was entirely destroyed by Alaric towards the end of the 4th century after Christ. (Cland. B. 476; comp. Zosim. v. 6.)

The territory of Tegea formed the southern part of the plain of Tripolis, of which a description and a map are given under MANTINEA. Tegea was about 10 miles S. of the latter city, in a direct line, and about 3 miles SE. of the modern town of Tripolis. Being situated in the lowest part of the plain, it was exposed to inundations caused by the waters flowing down from the surrounding mountains; and in the course of ages the soil has been considerably raised by the deposits brought down by the waters. Hence there are scarcely any remains of the city visible, and its size can only be conjectured from the broken pieces of stone and other fragments scattered on the plain, and from the foundations of walls and buildings discovered by the peasants in working in the fields. It appears, however, that the ancient city extended from the hill of Alias Sostis (St. Savvnon) on the N., over the hamlets Ibrahim-Efendi and Palei-Episkopi, at least as far as Akhisia and Piali. This would make the city at least 4 miles in circumference. The principal remains are at Piali. Near the principal church of this village Leake found the foundations of an ancient building, of fine squared stones, among which were two pieces of some large columns of marble; and there can be little doubt that these are the remains of the ancient temple of Athena Alea. This temple was said to have been originally built by Aleus, the founder of Tegea; it was burnt down in n. c. 394, and the new building, which was erected by Scopas, is said by Pausanias to have been the largest and most magnificent temple in the Peloponnesus (Paus. viii. 43. § 4, seq.; for details see Dict. of Biogr. Scopas.) Pausanias entered the city through the gateway directly consequent to the southerm. gate, which must have been near Piali. He begins his description with the temple of Athena Alea, and then goes across the great agora to the theatre, the remains of which Ross traces in the ancient foundations of the ruined church of Paleo-Episkopi. Perhaps this theatre was the splendid marble one built by Antiochus IV. Epiphanes in B.C. 175. (Liv. xii. 20.) Pausanias ends his description with the mention of a height (Xenop. Ephesiapr., vii. 53. § 9), probably the hill Aioi Sostis in the N. of the town, and apparently the same as that which Pausanias elsewhere calls the Watch-Hill (Adpos Xanthos, viii. 49. § 4), and Polibius the acropolis (Ecos, v. 17). None of the other public buildings of Tegea mentioned by Pausanias can be identified with certainty; but there can be no doubt if excavations were made on its site many interesting remains would be discovered, since the deep alluvial soil is favourable to their preservation.

The territory of Tegea N. of the city, towards Mantinea, is a plain of considerable size, and is usually called the Tegeatic plain (Tegaeatis πεδιν). There was a smaller plain, separated from the former by a low range of mountains S. of Tripolis, and lying between Tegea and Pallantium: it was called the Mantyrian plain (Μαντιάρια πέ- δινα), from Mantyrea, one of the ancient demi of Tegea, the ruins of which are situated SW. of Tegea, on a slope of Mt. Borelunum. (Paus. viii. 44. § 7, comp. viii. 45. § 1, 47. § 1; Steph. B. s. v. Μαντῖνα.) The remainder of the Tegeatic plain on the E. and S. is occupied by the mountains separating it from Argolis and Sparta respectively, with the exception of a small plain running eastward from the Tegeatic plain to the foot of Mt. Parthenium, and probably called the Corythian plain, from Corythus, one of the ancient demi of Tegea, which was situated in this plain. (Paus. viii. 45. § 1, 54. § 4.)

The plain of Tegea having no natural outlet for its waters is drained by natural channels through the limestone mountains, called katavôthra. Of these the two most important are at the modern village of Persovó and at the marsh of Taki. The former is situated in the Corythian plain above mentioned, at the foot of Mt. Parthenium, and the latter is the marsh in the Mantyrian plain, SW. of Tegea. The chief river in the district is now called the Sarantapothanas, which is undoubtedly the Alpheus of Pausanias (viii. 54. § 1, seq.). The Alpheus rose on the frontiers of Tegea and Sparta, at a place called Phyllace (Φοιλακε, near Kféa Tegis), one of the ancient demi of Tegea, and, as we may infer from its name, a fortified watch-tower for the protection of the pass. A little beyond Phyllace the Alpheus receives a stream composed of several mountain torrents at a place named Συμβολα (Συμβόλα); but upon entering the plain of Tegea its course was different in ancient times. It now flows in a north-easterly direction through the plain, receives the valley of Obalos (the ancient Garates, Παξιανός, Paus. viii. 54. § 4), flows through the Corythian plain, and enters the katavôthra at Persovó. Pausanias, on the other hand, says (viii. 54. § 2) that the Alpheus descends into the earth in the Tegeatic plain, reappears near Asea (SW. of Tegea), where, after joining the Eurotas, it sinks a second time into the earth, and again appears at Asea. Hence it would seem that the Alpheus at an early period of its existence flowed in a northerly direction, and entered the katavôthra at the marsh of Taki, in the Mantyrian plain. There is a tradition among the peasants that the course of the river was changed by a Turk, who acquired property in the neighbourhood, because the
TEGIANUM.

katavôthra at the Taki did not absorb quickly enough the waters of the marsh. The Garates therefore annually flowed into the katavôthra at Pernôri without having any connection with the Alpheius. It probably derived its name from Garea or Garese, one of the ancient demi of Tegea, which may have been situated at the village of Dihiatani. (Ross, Pelopones, p. 70, seq.; Leake, Peloponymica, p. 112, seq.)

There were five roads leading from Tegea. One led due N. across the Tegeatic plain to Mantinea. [MANTINELLA.] A second led due S. by the valley of the Alpheius to Spartea, following the same route as the present road from Tripolitida to Mistrê. A third led west to Palianium. It first passed by the small mountain Cressium (Κρήσιον), and then ran across the Mantyric plain along the side of the Taki. Mount Cressium is probably the small isolated hill on which the modern village of Voun stands, and not the high mountain at the end of the plain, according to the French map. Upon reaching the Choma (Χώμα), the road divided into two, one road leading direct to Palianium, and the other SW. to Megalopolis through Asea. (Paus. viii. 44. § 1, seq.; Xen. Hell. vi. 3, § 9, αἰ συν το ΠΑΛΑΙΝΤΙΟΝ φόροις πώεις) This choma separated the territories of Palianium and Tegea, and extended as far south as Mount Bereon (Κρανός), where it touched the territory of Megalopolis. There are still remains of this choma running NE. to SW. by the side of the marsh of Taki. These remains consist of large blocks of stone, and must be regarded as the foundations of the choma, which cannot have been a chaussée or causeway, as the same French geographers call it, since Χώμα always signifies in Greek writers an artificial heap of earth, a tamarisk, mound, or dyke. (Ross, p. 59.) A fourth road led SE. from Tegea, by the sources of the Garates to Thyreatis. (Paus. viii. 54. § 4.) A fifth road led NE. to Hydase and Arcos, across the Corythic plain, and then across Mt. Parnassium, where was a temple of Pan, erected on the spot at which the god appeared to the con-"rlier Pheidippides. This road was practicable for carriages, and was much frequented. (Paus. viii. 54. § 5, seq.; Herod. vi. 103, 106; Dict. of Biogr. art. Pheidippides.) Leake, Morea, vol. i. p. 88, seq., vol. ii. p. 333, Peloponymica, pp. 112, seq., 369; Ross, Pelopones, p. 66, seq.; Curtius, Pelopomica, vol. i. p. 247, seq.; Koster, Com. de Rebus Tegatinum, Berol. 1843.)

The Roman poets use the adjective Tegiēus or Tegaeus as equivalent to Arcadian: thus it is given as an epithet to Pan (Virg. Georg. i. 18). Cal-"listo, daughter of Lycon (Or. Ar. Am. ii. 55, Fast. ii. 167), Atlanta (Or. Met. viii. 317, 380), Carmenta (Or. Fast. i. 627), and Mercury (Stat. Silv. i. 54)

COIN OF TEGEA.

TEGIA'NUM (Eth. Tegianen-sis; Diano), a municipal town of Lucania, situated in the interior of that country, on the left bank of the river Tanagar. Its name is found only in a corrupt form in Pliny, who enumerates the Tegiliani among the "populi" in the interior of Lucania (Plin. iii. 11. s. 15); but the Liber Coloniarum mentions the "Prefectura Tegennisa" among the Prefectures of Lucania (Lib. Col. p. 209), and the correct form of the name is preserved by inscriptions. From the same source we learn that it was a town of municipal rank, while the discovery of them in the neighbourhood of Diano leaves no doubt that that place represents the ancient Tegianum. (Romanelli, vol. i. p. 415; Mommers, Iscr. R. N. pp. 18, 19.) The modern city of Diano is a considerable place situated on a hill about 4 miles west of La Sala, and bears the name of Valle di Diano to the whole of the extensive upland valley which is traversed by the river Ta- nagro in the upper part of its course. Some remains of the ancient city are still visible in the plain at the foot of the hill (Romanelli, l. c.). [F. H. B.]

TEGILICUM (Itin. Ant. p. 223), TEGLICUM (Tab. Pent.), and TEGULITA (Geogr. Rav. iv. 7), a place in Moesia Inferior, on the road between Candiana and Dorostorum. It is contained, according to the Liber Coloniarum, in the district of light troops. Veryanis placed near Veternicius and Tatarioka. Some modern writers identify it with the fortress in Moesia called Saitopyrgus by Procopius (de Aedif. iv. 7.) [T. H. D.]

TEGNA. In Gallia Narbonensis, was on the Roman road on the east bank of the Rhone between Vienna (Vienna) and Valenta (Valence). The name occurs in the Table, in which the place is fixed at xiii. from Valenta. Tegna is Teis, the name of which in the writings of a later date is Tainum. A milestone at Tein marks the distance to Vienna xxxviiii. Tein is right opposite to Touvron, which is on the west side of the river. Touvron is well situated, and the mountains there approach close to the Rhone. (D'Anville, Notice, &c; Ubert. Gallien.) [G. L.]

TEGULA. [TIGRA.]

TEGULATA, in Gallia Narbonensis, is placed in the Itins. east of Aquae Sextiae (Aise) on the road to Ad Turrim (Touvron). The distance from Aquae Sextiae to Tegulata is xv. or xvi., and from Tegulata to Ad Turrim xvi. The distance measured along the road between Aquae Sextiae and Ad Turrim is said to exceed the direct distance between these two places, which is not more than 28 Roman miles. Tegulata is supposed to be La Grande Peyriere, near the bend of Pourrières or Pourrières, perhaps somewhere about the place where C. Marius defeated the Teutones c. 102, and where a pyramid was erected to commemorate the great victory. This monument is said to have existed to the fifteenth century (A. Thierry, Hist. des Gaules, Deux. Partie, c. 3); and the tradition of this great battle is not yet effaced. Pourrières is said to be a corruption of Putridi Campi. (D'Anville, Notice, &c.) [G. L.]

TEGULICUM [TEGULICUM].

TEGYRA (Tegyra; Eth. Tegyeis), a village of Boeotia, near Orchomenus, and situated above the marshes of the river Melas. It was celebrated for its oracle and Temple of Apollo, who was even said to have been born there. In its neighbourhood was a mountain named Delos. Leake places Tegyra at Xerôgyrgy, situated 3 miles ENE. of Stryiû (Orchomenus), on the heights which bound the marshes. (Plut. Pelop. 16, de Def. Or. 5 and 8; Lycofr. 646; Steph. B. s. v.; Leake, Northern Greece, vol. ii. pp. 153, 159; comp. Urichus, Riesen, vol. i. p. 196.)
TELEPHINES.

TELEPHINES. [TAUHPAN].

TELECHUM (Τέλεχωμ), a town of Aetolia Epicetum, on the borders of Locris, and one day's march from Croyeleman. (Thuc, iii. 96.)

TEKOA (Τέκοα, 1 Maccab. ix. 33; Τέκαα and Τεκουα, Joseph, Vit. 75), a town of Palestine in Judah, to the south of Bethlehem. It was the residence of the wise woman who pleaded in behalf of Absalom; was fortified by Rehoboam; was the birthplace of the prophet Amos, and gave its name to the hill the desert over the sea. (2 Sam. xiv. 2; 2 Chron. xi. 6; Amos, i. 1; 2 Chron. xx. 20; 1 Macc. ix. 33.) Jerome describes Tekoa as situated upon a hill, 6 miles south of Bethlehem, from which city it was visible. (Hieron. Prooem. in Amos, and Comm. in Jerem. vi. 1.) Its site still bears the name of Teku'a, and is described by Robinson as an elevated hill, not steep, but broad on the top, and covered with ruins to the extent of four or five acres. These consist chiefly of the foundations of houses built of squared stones, and near the middle of the site are the remains of a Greek church. (Robinson, Bibl. Res. vol. i. p. 486, 2nd ed.)

TELAMON (Τελαμών or Telemo), a city on the coast of Etruria, situated on a promontory between the Montes Argentario and the mouth of the Umbro (Ombrone), with a tolerable port adjoining it. The story told by Diodorus of its having derived its name from the hero Telamon, who accompanied the Argonauts on their voyage, may be safely disapproved as an etymological fable (Diod. iv. 56). There seems no reason to doubt that it was originally an Etruscan town, but no mention of its name occurs in history during the period of Etruscan independence. It is first noticed in B.c. 225, when a great battle was fought by the Romans in its immediate neighborhood with an army of Cisalpine Gauls, who had made an irruption into Etruria, but were intercepted by the consuls C. Attilius and L. Aemilius in the neighborhood of Telamon, and totally defeated. They are said to have lost 40,000 men slain, and 10,000 prisoners, among whom was one of their chiefs or kings (Iut. 1. 27—31). The battle, which is described by Polybius in considerable detail, is expressly stated by Polybius to have occurred "near Telamon in Etruria." Frontinius, in speaking of the same battle, places the scene of it near Populonia (Strat. i. 2. § 7), but the authority of Polybius is certainly preferable. The only other mention of Telamon that occurs in history is in B. c. 87, when Marus landed there on his return from exile, and commenced gathering an army around him. (Plut. Mar. 41.) But there is no doubt that it continued to exist as a town, deriving some importance from its port, throughout the period of the Roman dominion. Its name is found both in Mela and Pliny, who calls it "portus Telamon," while Polyeni notices only the promontory of the name (Τελαμών ἐκβολη, Plut. iii. 1. § 4; Plinii. iii. 5. s. 8; Mel. ii. 4. § 9). The Itineraries prove that it still existed at least as the 4th century (Tab. Pent.; Itin. Marit. p. 500, where it is called "Portus Talamos"); but from this time all trace of it disappears till the 14th century, when it was erected into the site. This is the miserable village which adjoins it, still bears the name of Telamone; and the shores of the bay are lined with remains of Roman buildings, but of no great interest; and there are no relics of Etruscan antiquity. (Dennis' Etruria, vol. ii. p. 258.)

TELEMACHES. [ΘΗΛΗΜΑΧ].

TELEBOAE. [ΤΕΛΗΒΑΩε].

TELEBOAS (ὁ Τέλεβαως ποιμην, Xen. Anab. iv. 4. § 3), a river of Armenia Major, a tributary of the Euphrates. Probably identical with the Arrangas. [T. H. D.]

TELEPHRIUS MONS. [ΤΕΛΕΦΡΙΟΟΕ].

TELEPE. [ΤΕΛΕΙΑ].

TELESIA (Τελεία, Σελείου, Τελειαοί; Teleboae; Teleboe), a considerable city of Samnia, situated in the valley of the Calor, a short distance from its right bank, and about 3 miles above its confluence with the Volturra. It is remarkable that its name is never mentioned during the long wars of the Romans with the Samnites, though the valley in which it was situated was often the theatre of hostilities. Its name first occurs in the Second Punic War, when it was taken by Hannibal on his first irruption into Samnium, n. c. 217 (Liv. xii. 13); but was recovered by Fabius in B.c. 214. (Id. xxiv. 20.) From this time we hear no more of it till it became an ordinary Roman municipal town. Strabo speaks of it as having in his time fallen into almost complete decay, in common with most of the cities of Samnia. (Strab. v. p. 250.) But we learn that it received a colony in the time of the Triumvirate (Lith. Colom. p. 293); and, though not mentioned by Pliny as a colony (the name is altogether omitted by him), it is certain, from inscriptions, that it retained its colonial rank, and appears to have continued under the Roman Empire to have been a flourishing and considerable town. (Orelli. Inscr. 2626; Romanelli, vol. ii. p. 423; Mommsen, Inscr. R. N. 4840—4915.) It was situated on the line of the Via Latina, or rather of a branch of that road which was carried from Teucro in Campania through Alifeae and Telesia to Beneventum (Itin. Ant. pp. 122, 304; Tab. Pent.), and this probably contributed to preserve it from decay.

The ruins of the ancient city are still visible about a mile to the NW. of the village still called Teleso: the circuit of the walls is complete, inclosing a space of octagonal shape, not exceeding 1 mile in circumference, with several gates, flanked by massive towers. The masonry is of reticulated work, and therefore probably not earlier than the time of the Roman Empire. The only ruins within the circuit of the walls are mere shapeless mounds of brick; but outside the walls may be traced the vestiges of a circus, and some remains of an amphitheatre. All these remains undoubtedly belong to the Roman colony, and there are no vestiges of the ancient Samnite city. The present village of Teleso is a very small and poor place, rendered desolate by malaria; but in the middle ages it was an episcopal see, and its principal church is still dignified by the name of a cathedral. Its walls contain many Latin inscriptions, brought from the ancient city, the inhabitants of which migrated to the later site in the ninth century. (Craven, Abruzzi, vol. ii. pp. 175—175; Giusiniani, Dizion. Topogr. vol. ix. p. 149, 150.)

Telesia was remarkable as being the birthplace of the celebrated Samnite leader, during the Social War, Pontius Telesio; and it is probable (though there is no direct authority for the fact) that it was also that of the still more celebrated C. Pontius, who defeated the Romans at the Candine Forks. [E. H. B.]

TELIS. [ΤΕΛΙΣ].

[Rescigo.]
TELLENAT.

TELLENATAE ( Killed; Dion. Hal.; Killed, Strab.; Esth. Tellenis, Tellenos), an ancient place so called from figures in early Roman history. According to Dionysius it was one of the cities founded by the Aborigines soon after their settlement in Latium (Dionys. i. 16), a proof at least that it was regarded as a place of great antiquity. Livy also reckons it as one of the cities of the Prisci Latini (i. 33), which may perhaps point to the same result, while Modernus includes it in his list of the colonies of Alba. (Diod. vii. ap. Euseb. Arm. p. 185.) Reference is made by Pausanias (v. 2. 15. 5) to the town inhabited by Arrianus Marcus, who took the city, and transported the inhabitants to Rome, where he settled them on the Aventine, together with those of Pollitorium and Ficiana. (Liv. i. 33; Dionys. iii. 38, 43.) Tellenae, however, does not seem, like the other two places just mentioned, to have been hereby reduced to insignificance; for its name appears again in b. c. 483 among the confederate cities of the Latin League (Dionys. v. 61); and though this is the last mention that we find of it in history, it is noticed both by Strabo and Dionysius as a place still in existence in their time. (Dionys. i. 16; Strab. v. p. 231.) It is probable, however, that it had at that time fallen into complete decay, like Antenae and Collatia; as it is only mentioned by Pliney among the once celebrated cities of Latium, which had left no traces of their existence in his day (Plin. iii. 5. s. 9), and from this time its name wholly disappears. The notices of Tellenae consist scarcely any clue to its position; though the circumstance that it continued to be inhabited, however slightly, down to the days of Augustus, would afford us more hope of being able to identify its site than is the case with Pollitorium, Apiole, and other places, which ceased to exist at a very early period. It is this reason that has led Nibby to identify the ruins of an ancient city at La Giestra, as those of Tellenae, rather than Pollitorium, as supposed by Cell. [Pollitorium.] The site in question is a narrow ridge, bounded by two ravines of no great depth, but with abrupt and precipitous banks, in places artificially scarped, and still presenting extensive remains of the ancient walls, constructed in an irregular style of massive quadrangular blocks of tufo. No doubt can exist that these indicate the site of an ancient city, but whether of Pollitorium or Tellenae, it is impossible to determine; though the remains of a Roman villa, which indicate that the spot must have been inhabited in the early ages of the Empire, give some indication of the probability to the latter attribution. La Giestra is situated on the right of the Via Appia, about 2 miles from a farm-house called Fiorano, immediately adjoining the line of the ancient high-road. It is distant 10 miles from Rome, and 3 from Le Frantocchie, on the Via Appia, adjoining the ruins of Boville. (Gell, Top. of Rome, pp. 280—283; Nibby, Diburtum, vol. ii. pp. 146—153.)

Whether the proverbial expression of "Trene Tellenis" has any reference to the ancient city of Latium or not, can hardly be determined, the origin and meaning of the phrase being involved in complete obscurity. (Varro, ap. Num., i. p. 8; Amyot, adv. Genes, v. p. 28, with Oehler's note.) [E. H. L.]

TELMESSUS, or TELMENOS (Τηλέμησις, Τηλέμης, Τηλόμης; Esth. Tellenis, Tellenos). 1. A flourishing and prosperous city in the west of Lydia, was situated near Cape Telmessus (Strab. xiv. p. 665), or Telsimnus (Steph. B. s. v. Telenis), on a bay which derived from it the name of Sinus Telmessiensis. (Liv. xxxvii. 16; Lcean. viii. 248.) On the south-west of it was Cape Teldalinus, at a distance of 200 stadii. Its inhabitants were celebrated in ancient times for their skill as divers, and were often consulted by the Lydian kings. (Heron. i. 78; comp. Arrian, Anab. ii. 3. § 4.) In the time of Strabo, however, who calls it a small town (παλαιστή), it seems to have fallen into decay; though at a later period it appears to have been an episcopal see. (Heron. p. 684; comp. Pomp. Mela, i. 15; Plin. v. 28; Ptol. v. 6. § 2; Polyb. xxii. 27; Steph. Lyc. M. M., § 255, 256; Scaliger, 39, where it is miswritten Δαφνοκως.) Considerable remains of Telmessus still exist at Μυς or Μέξ; and those of a theatre, porticoes, and sepulchral chambers in the living rock, are among the most remarkable in all Asia Minor. (Leake, Asia Minor, p. 128; Fellows, Asia Minor, p. 243, where some representations of the remains of Telmessus are figured; Lyd. p. 106, fol.)

2. A small town of Caria, at a distance of 60 stadia from Halicarnassus, is likewise sometimes called Telmessus, and sometimes Telmessus. (Suid. s. v.; Etym. Mag. s. v.; Arrian, Anab. i. 25. § 8; Cie. de Div. i. 41; Plin. v. 29, xxx. 2.) The Carian Telmessus has often been confounded with the Lydian, and it is even somewhat doubtful whether the famous Telymessian soothsayers belonged to the Carian or the Lydian town. But the former must at all events have been an obscure place; and that it cannot have been the same as the latter is clear from the statement of Polemo in Suidas, that it was only 60 stadia from Halicarnassus. [L. S.]

TELMESSUS, according to Pliney (v. 29), a tributary of the river Glaucus in Caria, but it flowed in all probability near the town of Telmes, which derived its name from it. [L. S.]

TELMSSICUS SINUS, a bay between Lydia and Caria, which derived its name from the Lydian town of Telmessus (Liv. xxxvii. 16; Lucan, viii. 248); but it is more commonly known by the name Glaucus Sinus, and is at present called the Bay of Macri. [L. S.]

TELMISSIIS PROMONTORIUM. [Telmessus.]

TELOBIS (Τηλοβις, Ttlo.ii. 6. § 72), a town of the Jaccetani in Hispania Tarraconensis, now Martorell. (Cl. Labore, Itin. ii. § 73; Swinhorne, Lett. 8.) [T. H. D.]

TELO MARTIUS (Tolobis), in Gallia Narbonensis. This name is not mentioned by the geographers. It occurs in the Maritime Itin. and in the Notit. Imp. Occid., where a "procurator Bapti Tolumnis Galliarum" is mentioned, which indicates the existence of a dying establishment there. In Lucan (iii. 592) Tolb is the name of a pilot or helmsman, and Oudendorp supposes that the poet gave the man this name because he was of the town Telb; which seems a strange conjecture. And again Silus (xiv. 443) is supposed to allude to the same town, when he says—

": It Neptunicole transversarum 0 Telenis."
TELLOS.  

**TELEIUS.** [TELPHIUS.]  

TEMA, a tribe and district in Arabia, which, they took their name from Tema, one of the twelve sons of Ishmael. (Gen. 25. 15; Jer. xxxv. 5; Job, vi. 19.) Polyenius mentions in Arabi Deserta a town Temna (Φιλομ, v. 19. § 6). Tema is distinguished in the Old Testament from Teman, a tribe and district in the land of the Edomites (Ishmael), which derived their name from Teman, a grandson of Esau. (Gen. 36. 11, 13, 42; Jer. xix. 7, 20; Ezek. xxviii. 13; Amos, i. 12; Jud. iii. 9; Obad. 9.) The Temanites, like the other Edomites, are not celebrated in the Old Testament for their wisdom (Jerem. xix. 7; Obad. 8; Baruch, ii. 22, seq.), and hence we find that Eliphas, in the book of Job, is a Temanite. (Job, ii. 14, iv. 7.) Jerome (Onomast. s. t.) represents Tema as distant 5 miles (Kuesius says 15 miles) from Petra, and possessing a Roman garrison.  

**TEMAIA** (Τημαια, Pot. vii. 2 § 3), a town in the Aerea Regia, in the district of India extra Ganges, probably now represented by the great river of Pena or the Brahmo.  

**TEMAITHIA.** [MESSARIA, p. 341, b.]  

**TEMENCION** (Τημεντίου), a town in the Agera, at the upper end of the Argolic gulf, built by Temenus, the son of Aristomachus. It was distant 50 stadia from Nauplia (Paus. ii. 35. § 2), and 26 from Argos. (Strab. viii. p. 365.) The river Phlias flowed into the sea between Temenium and Lerna. (Paus. ii. 36. § 6, ii. 38. § 1.) Pausanias saw at Temenium two temples of Poseidon and Aphrodite and the tomb of Temenus (ii. 38. § 1). Owing to the marshy nature of the plain, Leake was unable to explore the site of Temenium; but Ross identifies it with a mound of earth, at the foot of which, in the sea, are remains of a dam forming a harbour, and upon the shore foundations of buildings, fragments of pottery, &c. (Leake, Merca, vol. ii. p. 476; Ross, Reisen in Peloponnes, p. 149; Curtius, Peloponnesos, vol. ii. p. 383.)  

**TEMENOTHYRIA** (Τημενοθυρία) (Strabo, ed. 36. § 7: Eth. Temenoturur, Coins), a small city of Lydia, according to Pausanias (l. c.), or of Phrygia, according to Hierocles (p. 668, ed. Wess.), it would seem to have been situated upon the borders of Mysia, since the Temenothyrus (Τημενοθύρυς)—which name is probably only another form of the Temenothyrus—are placed by Ptolemy (v. 2 § 15) in Mysia. (Eckhel, vol. iii. p. 119.)
TEMISDIA. v. 15, 16.) Its name is afterwards found in all the geographers, as well as in the Tabula, so that it must have subsisted as a town throughout the Roman Empire. (Strab. L.; Plin. iii. 5. s. 10; Ptol. iii. 1, § 9; Tab. Peut.) Pausanias expressly tells us it was still inhabited in his day, and Pliny also notices it for the excellence of its wine. (Paus. vi. 6. § 10; Plin. xiv. 6. s. 8.) The period of its destruction is unknown; but after the fall of the Roman Empire the name wholly disappears, and its exact site has never been determined. The best clue is that afforded by the Tabula (which accords well with the statements of Pliny and Strabo), that it was situated 10 miles S. of Clampectia. If this last town be correctly placed at Anamten [Clampectia], the site of Temessa must be looked for on the coast near the Torre del Pino del Castello, about 2 miles S. of the river Saruto, and 3 from Lucera. Unfortunately none of the towns along this line of coast can be fixed with anything like certainty. (Cluver. Ital. p. 1286; Romanelli, vol. i. p. 35.)

Near Temessa was a sacred grove, with a shrine or sanctuary of the hero Polites, one of the companions of Ulysses, who was said to have been slain on the spot, and his spirit continued to trouble the inhabitants, until at length Euthymus, the celebrated Lucian athlete, ventured to wrestle with the spirit, and having vanquished it, freed the city from all further molestation. (Strab. vi. 255; Paus. vi. 6. §§ 7—11; Suid. v. Ethymos.) [E. H. B.]

TEMISDIA (Τήμισδια, Ptol. vi. 4. § 3), one of the districts into which ancient Persia was divided. It cannot now be determined exactly what its position was; but, as it adjoined the Mediae caesarea, it probably was part of a long narrow plain which extended through that province in a direction north-west and south-east. (Lassen, in Ersch and Gruber's Encycl. vol. xvii. p. 438.) [V.]

TEMNICES. [Βοιοτία, p. 414.]

TEMNUS (Τήμνος ὄρος), a mountain range of Mytica, extending from Mount Ida eastward into Phrygia, and dividing Mytica into two halves, a northern and a southern one. It contained the springs, the Mounts, Mytica, Cnossus, and Eleusus. (Strab. xiii. p. 616; Ptol. v. 2. § 13.)

Hamilton (Researches, ii. p. 125) is inclined to believe that Men Temnus is the same as the ΔΑΣΤΟΥΡ, or, as it is commonly called in maps, ΜΟΡΑΩΔΙΣΤΟΥΡ. [L. S.]

TEMNUS (Τήμνος: Etk. Τημνύτης), a town of Aeolis in Asia Minor, not far from the river Hermus, situated on a height, from which a commanding view was obtained over the territories of Cyme, the Phocaeans, and Smyrna. (Strab. xiii. p. 621.) From a passage in Pausanias (v. 13. § 4), it might be inferred that the town was situated on the northern bank of the Hermus. But this is irreconcilable with the statement that Temnus was 30 miles south of Cyme, and with the remarks of all other writers alluding to the place. Pliny (v. 29) also seems to be mistaken in placing Temnus at the mouth of the Hermus, for although the deposits of the river have formed an extensive alluvial tract of land, it is evident that the sea never extended as far as the site of Temnus. The town had already much decayed in the time of Strabo, though it never appears to have been very large. (Xenoph. Hell. iv. 8. § 5; Herod. i. 149; Polyb. v. 77, xx. 25; Cic. pro Fann. 18.) In the reign of Tiberius it was much injured by an earthquake (Tac. Ann. ii. 47), and in the time of Pliny it had ceased to be inhabited altogether. Its site is commonly identified with the modern Memenium, though Texier, in his Description de l'Asie Mineure, looks for it at the site of the village of Gual-Hissar. [L. S.]

TEMPE. TEMPE (τὰ Τέμπη, cont. of Τήμνος), a celebrated valley in the NE. of Thessaly, is a gorge between Mounts Olympus and Ossa, through which the waters of the Peneius force their way into the sea. The beauties of Tempe were a favourite subject with the ancient poets, and have been described at great length in a well-known passage of Aelian, and more briefly by Pliny; but none of these writers appear to have drawn their pictures from actual observation; and the scenery is distinguished rather by savage grandeur than by the sylvan beauty which Aelian and others attribute to it. (Catull. liv. 283; Ov. Met. i. 568; Virg. Georg. ii. 469; Aelian, v. ii. 11; Plin. iv. 8. s. 15.) The account of Livy, who copies from Polybius, an eye-witness, is more in accordance with reality. This writer says, "Tempe is a defile, difficult of access, even though not guarded by an enemy; for besides the narrowness of the pass for 3 miles, where there is scarcely room for a beast of burden, the rocks on both sides are so perpendicular as to cause geldiness both in the mind and eyes of those who look down upon the precipice. Their terror is also increased by the depth and roar of the Peneus rushing through the midst of the valley." (Liv. xiv. 6.) He adds that this pass, so inaccessible by nature, was defended by four fortresses, one at the western entrance at Ginnus, a second at Condylon, a third at Charax, and a fourth in the road itself, in the middle and narrowest part of the valley, which could be easily defended by ten men. The pass is now called Lykistiana, or the Wolf's Mouth. Col. Leake gives about four miles and a half as the distance of the road through the valley. In this space the width of the gorge is in some parts less than 100 yards, comprehending in fact no more than the breadth of the road in addition to that of the river. The modern road follows in the track of the ancient military road made by the Romans, which ran along the right bank of the river. Leake remarks that even Livy in his description of Tempe seems to have added embellishments to the authority from which he borrowed; for, instead of the Peneius flowing rapidly and with a loud noise, nothing can be more tranquil and steady than its ordinary course. The remains of the fourth castle mentioned by Livy are noticed by Leake as standing on one side of an immense fissure in the precipices of Ossa, which afford an extremely rocky, though not impracticable descent from the heights into the vale; while between the castle and the river space only was left for the road. About half a mile beyond this fort there still remains an inscription engraved upon the rock, on the right-hand side of the road, where it ascends: "L. Cassius Longinus Pro Cons. Tempé munivit." It is probable from the position of this inscription that it relates to the making of the road, though some refer it to defensivo works erected
TEMPSA.

by Longinus in Tempe. This Longinus appears to have been the L. Cassius Longinus who was rescued by Caesar from Hyria into Thessaaly. (Caes. B. C. iii. 34.) When Xenexes invaded Greece, c. 480, the Greeks sent a force of 10,000 men to Tempe with the intention of defending the pass against the Persians; but having learnt from Alexander, the king of Macedonia, that there was another pass across Mt. Olympus, which entered Thessaly near Gomus, where the gorge of Tempe commenced, the Greeks withdrew to Thermopylae. (Herod. vii. 173.)

It was believed by the ancient historians and geographers that the gorge of Tempe had been produced by an earthquake which rent asunder the mountains, and afforded the waters of the Penicus an egress to the sea. (Herod. vii. 129; Strab. ix. p. 430.) But the Thessalians maintained that it was the god Poseidon who had split the mountains (Herod. L. c.); while others supposed that this had been the work of Hercules. (Diod. iv. 58; Lucan, vi. 345.)

The pass of Tempe was connected with the works of Apollo. This temple was believed to have gone thither to receive expiation after the slaughter of the serpent Pytho, and afterw hards to have returned to Delphi, bearing in his hand a branch of laurel plucked in the valley. Every ninth year the Delphians sent a procession to Tempe consisting of well-born youths, of which the chief youth plucked a branch of laurel and brought it back to Delphi. On this occasion a solemn festival, in which the inhabitants of the neighbouring region took part, was celebrated at Tempe in honour of Apollo Tempeites. The procession was accompanied by a flute-player. (Aelian, V. H. iii. 1; Plut. Quoest. Graec. c. 11. p. 292, de Musica, c. 14. p. 1136; Büchel, Inscr. No. 1767, quoted by Grote, Hist. of Greece, vol. ii. p. 365.)

The name of Tempe was applied to other beautiful valleys. Thus the valley, through which the Helorus flows in Sicily, is called "Heloia Tempe." (Ov. Fast. iv. 477); and Cicero gives the name of Tempe to the valley of the Velinius, near Reate (ad Att. iv. 15). In the same way Ovid speaks of the "Heliconia Tempe" (Am. i. 1. 15).

(Leake, Northern Greece, vol. iii. p. 390, seq.; Dodwell, vol. ii. p. 109, seq.; Hawkins, in Walpole's Collection, vol. i. p. 517, seq.; Kriegg, Das Thessa-
lications Tempe, Leipzig, 1833.)

TEMPSA. [Temesia.]

TEMPPYRA (Ov. Trist. i. 10. 21; in Geogr. Rav. iv. 6, Trumpra; in it. Ant. p. 322, Taprimara; and in lit. Hier. p. 602, Ad Unimipara), a town in the S. of Thrace, on the Egadiant Way, between Trajano-
polis and Maximianopolis. It was situated in a deile, which rendered it a convenient spot for the operations of the predatory tribes in its neighbourhood. Here the Thrausi attacked the Roman army under Cn. Manlius, on its return, loaded with booty, through Thrace from Asia Minor (c. 128); but the want of shelter exposed them to the Romans, who were thus enabled to defeat them. (Liv. xxxviii. 41.) The deile in question is probably the same as the Kopis hías sténa mentioned by Appian (B. C. iv. 102), and through which, he states, Brutus and Cassius marched on their way to Philippi (Tafel, de Vite Eugeniae Parte orient. p. 34). Paul Lucas (Trois Vog. pp. 29, 27) regards it as corresponding to the modern Giro-
silina. (Luc. p. 1.)

TENCIERI or TENCHITERRI (Τένχητεροι, Τένχιτροι, Τένχηραι, και Ταγχηραία), an important German tribe, which is first mentioned by Caesar (B. G. iv. 1. 4). They appear, together with the Usipetes, originally to have occupied a district in the interior of Germany, and to have been driven from their original homes by the Suevi, and having wandered about for a period of three years, they arrived on the banks of the Lower Rhine, and compelled the Menapii who inhabited both sides of the river to retreat to the western bank. Some time after this, the Germans even crossed the Rhine, esta
blishe
d themselves on the western bank, in the country of the Menapii, and spread in all directions as far as the districts of the Cheloni and Cortulni, who seem to have invited their assistance against the Romans. This happened in n. c. 56. The Germans demanded to be allowed to settle in Gaul; but Caesar, declaring that there was no room for them, promised to procure habitations for them in the country of the Ubi, who happened to have sent ambassadors to him at that time. The Germans asked for three days to consider the matter, requesting Caesar not to advance further into their country, res
tecting some treacherous design; he proceeded on his march, and an engagement ensued, in which the Romans were defeated and sustained serious losses. On the following day the chief of the Germans appeared before Caesar, declaring that their people had attacked the Romans without their orders, and again begged Caesar to stop his march. Caesar, however, not only kept the chiefs as his prisoners, but immediately ordered an attack to be made on their camp. The people, who during the absence of their chiefs had abandoned themselves to the feeling of security, were thrown into the greatest confusion by the unsuspected attack. The men, however, fought on and among their wagons, while the women and children took to flight. The Roman cavalry pursued the fugitives; and when the Ger
mans heard the screams of their wives and children, and saw them cut to pieces, they threw away their arms and fled towards the Rhine; but as the river stopped their flight, a great number of them perished by the sword of the Romans, and others were drowned in the Rhine. Those who escaped across the river were hospitably received by the Signabii, who assigned to the Tenciteri the district between the Ruhr and the Sieg. (Caes. B. G. iv. 4-16; Livy, Epit. lib. cxxxvi.; Tac. Germ. 92, 53, Ann. xiii. 56, Hist. iv. 21. 64, 77; Plut. Tac. 21, Dom Cass. xxix. 47, liv. 20, 21; Flor. iii. 10, iv. 12; Oros. iv. 20; Appian, de Reb. Gall. 4, 18; Pod. ii. 11. § 8.) The Tenciteri were particularly celebrated for their excellent cavalry; and in their new country, on the eastern bank of the Rhine, they possessed the town of Budaris (either Monheim or Dusseldorf), and the fort of Divita (Dente). In the reign of Augustus, the Tenciteri joined the confederation of the Cherusci (Liv. l. c.), and afterwards repeatedly joined the allies of their tribes in their wars against Rome, until in the end they appear as a part of the great confederation of the Franks. (Gret. Tur. ii. 9; comp. Wilhelm, Germanien, p. 141; Reichard, Germanien, p. 31; Latham, Tacit. Germ. p. 116.)

TENEA. (Tenea: Eth. Terame). The most im-
portant place in the Corinthia after the city of Co-
rinth and her port towns, was situated on the capi
tal, and at the distance of 60 stadia from the la-
ter, according to Pausanias. The southern gate of Corinth was called the Teneatic, from its leading to 4 c 3
TENEDOS.

Tenea. Stephanus describes Tenea as lying between Corinth and Mycenae, (s. c. Terev.) The Teneatae claimed descent from the inhabitants of Tenedos, who were brought over from Troy as prisoners, and settled by Acarnanians in this part of the Corinthia; and they said that it was in consequence of their Trojan origin that they worshipped Apollo above all the other gods. (Pas. ii. 5 § 4.) Strabo also mentions here the temple of Apollo, Teneates, and says that Tenea and Tenedos had a common origin in Temnus, the son of Cynmus. (Strab. viii. p. 380.) According to Dionysius, however, Tenea was of late foundation. (Cic. ad Att. vi. 2. § 3.) It was at Tenea that Oedipus was said to have passed his childhood. It was also from this place that Archelaus took the greater number of the colonists with whom he founded Syrakus. After the destruction of Corinth by Mummus, Tenea had the good fortune to continue undisturbed, because it was said to have assisted the Romans against Corinth. (Strab. l. c.) We cannot, however, suppose that an insignificant place like Tenea could have acted in opposition to Corinth and the Achaean League; and it is more probable that the Teneatae were spared by Mummus in consequence of their pretended Trojan descent and consequent affinity with the Romans themselves. However this may be, their good fortune gave rise to the line:

ευάναιος ὤ̂ Kόρωνος, ἕνθ' ἐν̂ Tενεάης.

Tenea lay in the mountain valley through which flows the river that falls into the Corinthian gulf to the east of Corinth. In this valley are three places at which coves and other antiquities have been discovered, namely, at the two villages of Chi'llimidi and Magnes, and at the village of Soplihi, on the road to Xanapia, and the latter at the very foot of the ancient road Contoporiai [see Vol. i. p. 201, b.], and at the village of Athiki, an hour east of Chi'llimidi, on the road to Soplihi. In the fields of Athiki there was found an ancient statue of Apollo, a striking confirmation of the prevalence of the worship of this god in the district. The Teneatae would therefore appear to have dwelt in scattered abodes at these three spots and in the intervening country, but the village of Tenea, properly so called, was probably at Chi'llimidi, since the distance from this place to Corinth corresponds to the 60 stadia of Pausanias.

Since one of the passes from the Argoia into the Corinthia runs by Klenia and Chilimidi and, in the text of Xenophon the words are εὐευτέρως ὑποθέσας καλείς Τενεάς ὀ̂ Κόρωνος, but Tenea ought to be substituted for Tenedos, since it is impossible to believe that Archelaus could have marched from the Argoia to Corinth by way of Tenea. Moreover, we learn from Strabo (vii. p. 380) that the well-known name of Tenea was in other cases substituted for that of Tenedos. In the parallel passage of the Ageantian of Xenophon (l. 17), the pass by Tenea is called καλείς ἀνὰ στενά. (Lecke, Morea, vol. iii. p. 320, Peloponnesia, p. 400; Curtius, Peloponnesia, vol. ii. 639, col.)

TENEBRICATION (Τενεβρίκασις, Strab. vol. ii. § 6 § 16), a promontory on the E. coast of Spain, near the mouth of the Herus. Stephanus B. (s. c.) also mentions a district called Tenebra, and Podemus a harbour called Tenebrin, which Maris (Hist. ii. 8) takes to be Aliseica near Tarragona, but which must be looked for to the SW. [T. II. D.]

TENEDOS (Τένεδος; Eth. Τένεζος; Turc. Bogazhis-Ahassir), an island off the coast of Troas, from which its distance is only 40 stadia, while from Cape Sigeum it is 12 miles distant. (Strab. xiii. p. 604; Plin. s. 106, v. 33.) It was originally called Lysiphus, from its white cliffs, Calyba, Phœrennes, or Lynnymus (Strab. Le. Paris. x. 14. § 3; Steph. B. s. v. Tenedos; Eustath. ad Hom. ii. p. 33; Plin. L. c.), and was believed to have received the name of Tenedos from Tenea, a son of Cyamus (Strab. viii. p. 350; Dio. v. 83; Conon, Narrat. 28; Cic. in Terr. i. 19). The island is described as being 80 stadia in circumference, and containing a town of the same name, which was an Aeolian settlement, and situated on the eastern coast. (Herod. i. 140; Thucyd. vii. 57.) The town possessed two harbours, one of which was called B6e6os (Arrian, Anab. ii. 2. § 2; Skylax, p. 35, who, however, notices only one), and a temple of the Sminthian Apollo. (Strab. Le.; Hom. ii. 3, 452.) In the Trojan legend the island plays a prominent part, and at an early period seems to have been a place of considerable importance, as may be inferred from certain ancient proverbial expressions which owe their origin to it, such as Τενεδοὺς εἰς Λαυκανάς. (Plin. v. 96; Demosth. 28.) Degenian, viii. 58; comp. Cic. ad Quint. Frat. ii. 11.) Ten6dos ἄνθρωπος (Zenob. vi. 9; Eustath. ad Dion. 536), Tενεδίως αλεξιτος (Steph. B. s. v. Plut. Quaest. Gr. 28), Tenediaw kaiou (Apostol. x. 80), and Τενεδίως λυσόμενος (Steph. s. v.). The laws and civil institutions of Tenedos seem to have been celebrated for their wisdom, if we may credit Findar, whose eleventh Nemeon ode is inscribed to Aristocles, a priest or chief priest of the island. It is said that Stephanus that Aristotle wrote on the polity of Tenedos. During the Persian wars the island was taken possession of by the Persians (Herod. vi. 31), and during the Peloponnesian War it sided with Athens and paid tribute to her (Thuc. i. 31. 2), which seems to have amounted to 3426 drachmae every year. (Frass. Elem. Epigraph. v. 52.) Afterwards, in b. c. 399, Tenedos was ravaged by the Laconians for its fidelity to Athens (Xen. Hell. Gr. i. 6.; Steph. B. s. v.); but the Athenians, says Thucydides, on Antalcidas gave up the island to Persia, but it yet maintained its connexion with Athens, (Demos. Pol. 1223, c. Theox. p. 1533.) In the time of Alexander the Great, the Tenedians threw off the Persian yoke, and, though reconquered by Ptolemies, they soon again revolted from Persia. (Arrian, Anab. ii. 31., ii. 2.) During the wars of Macedonia with the Romans, Tenedos, owing to its situation near the entrance of the Hellespont, was an important naval station. (Polyb. xvi. 34. xxxv. 6; Liv. xxxi. 16. xiv. 28.) In the war against Mithridates, L. Lucullus fought a great naval battle near Tenedos. (Plut. Luc. 3; Cic. p. Arch. 9; p. Mrr. 15.) In the time of Virgil, Tenedos seems to have entirely lost its ancient importance, and, being conscious of their weakness, its inhabitants had placed themselves under the protection of Alexander Tenedos (Paus. x. 14. § 4). The favourable situation of the island, however, prevented its utter decay, and the emperor Justinian caused granaries to be erected in it, to receive the supplies of corn conveyed from Egypt to Constantinople. (Procop. de Aed. v. 1.) The women of Tenedos are reported to have been of surpassing beauty. (Athos. xii. p. 609.) There are but few ancient remains in the island worthy of notice. (Chandler. Travels in Asia Minor. p. 22; Preusch.
TENEDOS.

Denkenwürdigkeiten, i. p. 111, foll.; Hemmer, Republiken Tenedorum, Hafniae, 1753.) [L. S.]

COIN OF TENEDOS.

TENEDOS (Τενεδός; Eth. Τενέδβεταί), a fortified east-town in the west of Pamphylia, 20 stadia to the west of Attalia. (Steph. B. s. r.; Stadiasmus, Mar. M. §§ 224, 225.) It has been conjectured that this town is the same as Olbia, the other town of which are exactly 20 stadia from Attalia, and that one of the two names was Lycaean and the other Greek. (Miller, ed. Stadiasmus, p. 490.) [L. S.]

TENEBRUS CAMPUS. [Boezote, p. 418, b.]

TENESIS REGIO (Τενεςις, Strab. xvi. p. 770), was, according to Strabo, who alone mentions it, an inland province of Aethiopia, lying due E. of the Sabeae, and not far distant from the kingdom or city of Meroe. Tenesis was governed, at least when Strabo wrote, by a queen, who was also the sovereign of Meroe. This was one of the many districts of Aethiopia assigned by rumour to the Antemolii, Sedrae, or Aegyptian war-caste, who abandoned their native country in the reign of Psammetichus [Semdrusak]. The lake Coloe and the sources of the Astapus are by some geographers placed in Tenese. It was an alluvial plain bounded on the E. by the Abyssinian Highlands, and frequented by elephants, rhinoceroses, &c. [W. B. D.]

TENOS (Τήνος; Eth. Τήνοις; Tino), an island in the Aegean sea, and one of the Cyclades, lying between Andros and Delos, distant from the former 1 mile and from the latter 15 miles. (Plin. iv. 12. s. 22.) It stretches from NW. to SE., and is 15 miles long according to Pininy (l. c.), or 150 stadia according to Scylax (p. 55). It was also called Hydrusca (Ὑδρυσκής, Υδρωσκής) from the number of its springs, and Olympus because it abounded in snakes. (Plin. l. c.; Mela, ii. 7. § 11; Steph. B. s. r.) The sons of Boreas are said to have been slain in this island by Hercules. (Apoll. Rhod. i. 1304, with Schol.) In the invasion of Greece by Xerxes, the Tenians were compelled to serve in the Persian fleet; but a Tenian trireme deserted to the Greeks immediately before the battle of Salamis (n. c. 480), and accordingly the name of the Tenians was inscribed upon the tripod at Delphi in the list of Greek states which had overthrown the Persians. (Herod. viii. 82.) Pausanias relates that the name of the Tenians was also inscribed on the statue of Zeus at Olympia among the Greeks who had fought at the battle of Plataea (v. 23. § 2). The Tenians afterwards formed part of the Athenian maritime empire, and are mentioned among the subject allies of Athens at the time of the Sicilian expedition (Tine. vii. 57). They paid a yearly tribute of 3600 drachmae, from which it may be inferred that they enjoyed a considerable share of prosperity. (Franz. Elem. Ephig. Gr. No. 49.) Alexander of Phereas took possession of Tenos for a time (Dem. c. Polyb. p. 1207); and the island was afterwards granted by M. Antonius to the Bithydians (Apian, B. C. v. 7.) After the conquest of Constantinople by the Latins, Tenes fell to the share of the Venetians, and remained in their hands long after their other possessions in the Aegean had been taken by the Turks. It was ceded by Venice to the Sultan by the peace of Pasa-

TENTYRA.

1127

tovitius, 1718. It is still one of the most pro-

perous islands in the Aegean, and the inhabitants are remarkable for their industry and good conduct. The present population is about 15,000 souls, of whom more than half are Catholics,—a circumstance which, by bringing them into closer con-

nection with western Europe, has contributed to their prosperity.

The ancient city of Tenes, of the same name as the island, stood at the south-western end upon the same site as St. Nicholas, the present capital. Scyl-

ax says that it possessed a harbour, and Strabo describes it as a small town. (Scyl. p. 22; Strab. x. p. 487; Ptol. iii. 14. § 30.) In the neighbour-

hood of the city there was a celebrated temple of Poseidon situated in a grove, where festivals were celebrated, which were much frequented by all the neighbouring people. (Strab. l. c.; Tac. Ann. iii. 63; Clem. Protr. p. 18; Böckh, Inschr. No. 2329, 2331.) The attributes of Poseidon appear on the coins of Tenes. There was another town in the island named Eriston (Ῥίπρω), Böckh, Inschr. 2336, 2337), which was situated in the interior at the village of Konis. Among the curiosities of Tenes was mentioned a fountain, the water of which would not mix with wine. (Athen. ii. p. 43, c.) The island was celebrated in antiquity for its fine garlic. (Aristoph. Pist. 18.) The chief modern production of the island is wine, of which the best kind is the celebrated Malvasia, which now grows only at Tenes and no longer at Mounebasha in Peloponnesus, from which place it derived its name. (Tournefort, Voyage, s. f. vol. i. p. 271, trans.; Exp. Scient. vol. iii. p. 2; Fiedler, Reise, vol. ii. p. 241, seq.; Finlay, Hist. of Greece under Ottoman and Venetian Domination, pp. 276, 287; and especially Ross, Reise auf den Griech. Inseln, vol. i. p. 11, seq., who cites a mon-

ograph, Maresky Thalabey, Voyage à Tine, l'île des îles de l'Archipel de la Grèce, Paris, 1809.)

COIN OF TENOS.

TENTYRA or TENTYRIS (τὰ Τηντυρία, Strab. xvii. p. 814; Ptol. iv. 5. §§ 6, 8; Steph. B. s. r.: Eth. Tenātrwpra), the Cephal Tenyris and the mo-

dern Denderah, was the capital of the Tentyrisc Stateless in Upper Aegypt (Agatharch. ap. Ptol. p. 447, ed. Bekker). It was situated in lat. 26° 9' N., on the western bank of the Nile, about 38 miles N. of Thebes. The name of the city was probably derived from the principal object of worship there—the goddess Athor (Aphrodite) being a contracted form of Thy-o-Athor or abode of Athor. The hier-

glyphic legend of the genius of the place contains

4 c 4
the name of the town, and is generally attached to the head-dress of Athor, accompanied by the sign Kali on the landlord. The Tentyrite Athor has the same form as the ears of Isis, Isis, or the female (Rosellini, "Novum. del. Collo", pl. 29, 3), and her attributes so closely resemble those of Isis, that it was long doubted to which of the two goddesses the great temple at Tentyra was dedicated. Like Isis, Athor is delineated nursing a young child named Ehos, said, in hieroglyphics, to be her son. He is the third member of the Tentyrite triad of deities.

The principal fabrics and produce of Tentyra were wax and linen. (Plin. nux. 1.) Its inhabitants held the crocodile in abherrance, and engaged in sanguinary conflicts with its worshippers, especially with those of the Omboite Nome (Ombos). Juvenal appears to have witnessed one of these combats, in which the Omboites had the worst of it, and one of them, falling in his flight, was torn to pieces and devoured by the Tentyrites. Juvenal, indeed, describes this flight as between the inhabitants of contiguous nomes ("inter Sinistinos"); but this is incorrect, since Omboites and Tentyreans are more than 50 miles apart. As, however, Coptos and Tentyra were nearly opposite to each other, and the crocodile was worshipped by the Coptites also, we should probably read Coptos for Omboes in Juvenal. (Sat. xvi.) The latter were so expert in the chase of this animal in its native element, that they were wont to follow it into the Nile, and drag it to shore. (Aelian, Hist. Anim. 2, 24; Plin. viii. 25. 38.) Seccoa (Nat. Quaest. ii. 2) says that it was their possession of mind that gave the Tentyrites the advantage over the crocodile, for the men themselves were small sinewy fellows. Strabo (xvii. pp. 814, 815) saw at Rome the exhibition of a combat between the crocodile and men purposely imported from Tentyra. They plunged boldly into the tanks, and, entangling the crocodiles in nets, haled them backwards and forwards in and out of the water, to the great amazement of the beholders.

So long as Egypt was comparatively unexplored, no rains attracted more admiration from travellers than those of Tentyra. They are the first in tolerable preservation and of copious magnitude that meet the eyes of those who ascend the Nile. They are remote from the highways and habitations of men, standing at the foot of the Libyan hills, amid the sands of the western desert. But though long regarded as works of a remote era, Egyptian art was already on the decline when the temples of Tentyra were erected. The architecture, indeed, reflects the grandeur of earlier periods; but the sculptures are meagre, and the hieroglyphics unskillfully crowded upon its monuments. The most ancient of the inscriptions do not go farther back than the reign of the later Ptolemies; but the names of the Caesars, from Tiberius to Antoninus Pius (A.D. 14-161), are of frequent occurrence. Tentyra, in common with Upper Egypt generally, appears to have profited by the peace and security it enjoyed under the imperial government to enlarge or restore its monuments, which, since the Persian occupation of the country, had mostly fallen into decay. The principal structures at Tentyra are the great temple dedicated to Athor; a temple of Isis; a Typhonum; and an isolated building without a roof, of which the object has not been discovered. With the exception of the latter, these structures are inclosed by a crude brick wall, forming a square, each side of which occupies 1000 feet, and which is in some parts 35 feet high and 15 feet thick. Full descriptions of the remains of Tentyra may be found in the following works: Belzoni's Travels in Nubia; Hamilton's Aegypten; and Richardson's Travels along the Mediterranean and Ports adjacent, in 1816-1817. Here it must suffice to notice briefly the three principal edifices:

1. The Temple of Athor. — The approach to this temple is through a dromos, commencing at a solitary stone pylon, inscribed with the names of Domitian and Trajan, and extending to the portico, a distance of about 110 paces. The portico is open at the top, and supported by four columns, ranged in four rows with quadrangular capitals, having on each side a colossal head of Athor, surmounted by a quadrangular block, on each side of which is carved a temple doorway with two wings globe above it. These heads of the goddess, looking down upon the dromos, were doubtless the most imposing decorations of the temple. To the portico succeeds a hall supported by six columns, and flanked by three chambers on either side of it. Next comes a central chamber, opening on one side upon a staircase, on the other into two small chambers. This is followed by a similar chamber, also with lateral rooms; and, lastly, comes the naos or sanctuary, which is small, surrounded by a corridor, and flanked on either side by three chambers. The hieroglyphics and picturesque decorations are so numerous, that nowhere on the walls, columns, architraves, or ceiling of the temple, is there a space of two feet unoccupied by them. They represent men and women engaged in various religious or secular employment; animals, plants, public ceremonies and processions, and the emblems of agriculture or manufactures. Occasionally, also, occur historical portraits of great interest, such as those of Cleopatra and her son Caesarion. The effect of this wilderness of highly-coloured baso-relievs was greatly enhanced by the mode by which the temple itself was lighted. The sanctuary itself is quite dark, the light is admitted into the chambers through small perforations in their walls. Yet the entire structure displays wealth and labour rather than skill or good taste, and, although so elaborately ornamented, was never completed. The emperor Tiberius finished the naos, erected the portico, and added much to the decoration of the exterior walls; but some of the cartouches designed for royal or imperial names have never been filled up.

On the ceiling of the portico is the famous Zodiac of Tentyra, long imagined to be a work of the Pharaonic times, but now ascertained to have been executed within the Christian era. Though denominated a zodiac, however by the French savants, it is doubtful whether this drawing be not merely mythological, or at most astrological, in its object. In the first place the number of the supposed signs is incomplete. The crab is wanting, and the order of the other zodiacal signs is not strictly observed. The supposed astrological signification at all be intended in the picture, it refers to astrology, the zodiac, as we know it, being unknown to the Egyptians. Archaeologists are now pretty well agreed that a pangegyris or procession of the Tentyrite triad with their cognate deities is here represented. The Greek inscription, which long overlooked, determines the recent date of this portion of the temple, runs along the projecting summit of the cornice of the portico. It was engraved in the twenty-first year of Tiberius, A.D. 35 (Letronne, Inscrip. p. 97). Upon the
ceiling of one of the lateral chambers, behind the portico, and on the right side of the temple, was a smaller group of mythological figures, which has also been styled a plasterwork or mosaic. This being sculptured on a kind of sandstone, was removable, and by the permission of Memnon Ali, in 1821, was cut out of the ceiling by M. Leloirain, and brought to Paris. It was purchased by the French government, and is now in the Imperial Museum.

It is probably a few years older than the larger zodiac.

2. The Lictor. — "The chapel of Isis is behind the temple of Atheon." (Strab. xiv. p. 814.) It stands, indeed, immediately behind its SW. angle. It consists of one central and two lateral chambers, with a corridor in front. Among its hieroglyphics appear the names of Augustus, Claudius, and Nero. About 170 paces E. of this chapel stands a pylon, with a Greek inscription, importing that in the thirty-first year of Caesar (Augustus) it was dedicated to Isis. (Letronne, Ib. pp. 82, 84.)

3. The Typhonion, as it is denominated from the emblems of Typhon on its walls, stands about 90 paces N. of the great temple. It comprises two outer passage-chambers and a central and lateral adytum. A peristyle of twenty-two columns surrounds the sides and the rear of the building. On its walls are inscribed the names of Trajan, Hadrian, and Antoninus Pius. But although the symbols of the principle of destruction are found on its walls, Typhon can hardly have been the preeminent deity of this temple. From the circumstance that all the other sculptures refer to the birth of Ekhôn, Champollin (Lettres sur l'Egypte, vol. ii. p. 67) suggests that this was one of the chapels styled "Mammisi," or "lying-in places," and that it commemorated the accouchement of Aithor, mother of Ekhôn. Typhon is here accordingly in a subordinate character, and symbolises not destruction, but darkness, chaos, or the "night primordial," which precedes creation and birth.

TENURCIO. [TINERIUM.]

TEOS (Triap. Eakh. Tepa), an Ionian city on the coast of Asia Minor, on the south side of the isthmus connecting the Ionian peninsula with Mount Mimas with the mainland. It was originally a colony of the Minyae of Orchomenus led out by Athamas, but during the Ionian migration the inhabitants were joined by numerous colonists from Athens under Nausica, a son of Cedeus, Tenedos, and Damcaus; and afterwards their nation was further increased by Boeotians under Geres. (Strab. xiv. p. 633; Paus. vii. 3. § 3; Herod. i. 142; Scylax, p. 37; Steph. B. s. r.) The city had two good harbours, one of which is mentioned even by Scylax, and the second, 30 stadia distant from the former, is called by Strabo ὅφθαλμος (xiv. p. 644), and by Livy (xxvii. 27) Gerastaeons. Teos became a flourishing commercial town, and enjoyed its prosperity until the time of the Persian dominion, when its inhabitants, unable to bear the insolence of the barbarians, abandoned their city and removed to Abderea in Thrace. (Herod. i. 168; Strab. L. c.) But though deserted by the greater part of its inhabitants, Teos still continued to be one of the Ionian cities, and in alliance with Athens. (Thucyd. iii. 32.) After the Sicilian disaster, Teos revolted from Athens, but was speedily reduced (Thucyd. viii. 16, 19, 20). In the war against Antiochus, the fleet of the Romans and Rhodians gained a victory over that of the Syrian king in the neighbourhood of this city. (Liv. l. c.; comp. Polyb. v. 77.) The vicinity of Teos produced excellent wine, whence Bacchus was one of the chief divinities of the place. Pliny (v. 38) erroneously calls Teos an island, for at most it could only be termed a peninsula. (Comp. Pomp. Mels. i. 17; Ptol. v. 2. § 6.) There still exist considerable remains of Teos at a place called Sigajik, which seems to have been one of the ports of the ancient city, and the walls of which are constructed of the ruins of Teos, so that they are covered with a number of Greek inscriptions of considerable interest, referring, as they do, to treaties made between the Teians and other states, such as the Romans, Aetolians, and several cities of Crete, by all of whom the inviolability of the Teian territory, the worship of Bacchus, and the right of asylum are confirmed. The most interesting among the ruins of Teos are those of the theatre and of the great and splendid temple of Bacchus; the massive walls of the city also may still be traced along their whole extent. The theatre commands a magnificent view, overlooking the site of the ancient city and the bay as far as the bold promontory of Myrmeces and the distant island of Sunos. For a detailed description of these remains, see Hamilton, Researches, ii. p. 11, foll.; comp. Leake, Asia Minor, p. 350. [L. S.]

TERECESTES. [TERESCEA, TERESCEA.]

TERACATRIAE (Teracatropia), a German tribe in Noricum, on the banks of the Danube, probably on the south of the territory occupied by the Boemi (Ptol. ii. 11. § 26.) [L. S.]

TEREDON. [EUMIPATES.]

TEREN (Thippa, Diod. v. 72), a river in Crete, perhaps a tributary of the Annioiis, or the modern Aposelemi. [T. H. D.]

TERENUTHIS (Terennuthes, Nat. Imp.), the modern Tarentum, a town in Lower Egypt, was situated on the left bank of the Canopic arm of the Nile. At this point a pass through the hills conducted to the Nototh Lakes, about 30 miles to the W. of the town. The people of Tarentum formed the government of a monarchy for collecting and exporting nation. [NITIAE.] Ruins at the modern hamlet of Abou-Belleu represent the ancient Tarentum. (Smirini, Voyage, vol. i. p. 228.) [W. B. D.]

TEREP'S FLUVIUS. [TADER.]

TERESSES FORTUNATES, a place in the W. of Hispania Baetica (Phln. iii. l. s. 5). [T. H. D.]

TERENTE (Terentus, Strab. v. Terminus, Vol. Eth. Tergestensium Trieste), a city of Venice or Istria, situated on a bay to which it gave the name of Tergestinus Sinus, which forms the inner bight or extremity of the Adriatic sea towards the N. It
TERGESTE.

was very near the confines of Istria and Venetia, so that there is considerable discrepancy between ancient authors as to which of these provinces it belonged, both Strabo and Pliny reckoning it a city of Istria, while Pliny includes it in the region of the Carni, which was comprised in Venetia. (Strab. v. 215, vii. p. 314; Plin. iii. 18. s. 23; Ptol. iii. 1. § 27.) Meta on the centuriy calls it the boundary of Illyricum (ii. 4. § 3). From the time that the Tornico, a river which falls into the sea 6 miles S. of *Trieste,* became fixed as the boundary of the provinces [Propontis], there can be no doubt that Pliny's attribution is correct. It is probable that Tergeste was originally a native town either of the Carni or Istrians, but no mention is found of its name till after the Roman conquest, nor does it appear to have risen into a place of importance until a later period. The first historical mention of it is in n. c. 51, when we learn that it was taken and plundered by a sudden incursion of the neighbouring barbarians (Caes. B. G. viii. 24; Appian, Illyr. 18); but from the terms in which it is there mentioned, it is most likely that it was already a Roman town, and apparently had already received a Roman colony. It was afterwards restored, and, to protect it for the future against similar disasters, was fortified with a wall and towers by Octavius in n. c. 32. (Gruter, Insocr. p. 266. 6.) It is certain that it enjoyed the rank of a Colonia from the time of Augustus, and is styled such both by Pliny and Ptolemy. (Plin. iii. 18. s. 22; Ptol. iii. 1. § 27.) That emperor also placed under the protection and authority of the city the neighbouring barbarian tribes of the Carni and Catalli, and, by reducing to subjection their more formidable neighbours, the Iapodes, laid the foundations of the prosperity of Tergeste. The growth of this was mainly promoted by the advantages of its port, which is the only good harbour in this part of the Adriatic; but it was apparently overshadowed by the greatness of the neighbouring Aquileia, and Tergeste, though a considerable municipal town, never rose in ancient times to a commanding position. We even learn that in the reign ofAntoninus Pius the citizens obtained the admission of the Carni and Catalli—who had previously been mere subjects or dependents—to the Roman "civitas," in order that they might share the honorifics of the local magistracy. (Orell. Insocr. 4040.) The inscription from which we learn this fact is one of the most interesting municipal records preserved to us from ancient times, and has been repeatedly published, especially with notes and illustrations by C. T. Zumpt (Decreta Municipale Tergestinum, 4to. Berol. 1837) and by Göttlinger (Fünfzehn Königische Urkunden, p. 75). No subsequent mention of Tergeste is found in history under the Roman Empire; but it is certain that it continued to exist; and retained its position as a considerable town throughout the middle ages. But it is only within the last century that it has risen to the position that it now occupies of one of the most populous and flourishing cities on the Adriatic. The only remains of antiquity extant at *Trieste* are some portions of a Roman temple, built into the modern cathedral, together with several inscriptions (including the celebrated one already noticed) and some fragments of friezes, bas-reliefs, &c.

Tergeste is placed by the Itineraries at a distance of 24 miles from Aquileia, on the line of road which followed the coast from that city into Istria. (Itin. Ant. p. 270; Tab. Peut.) Pliny, less correctly, calls it 33 miles from that city (Plin. L. C.). The spacious gulf on which it was situated, called by Pliny the Tergestinius Sinus, is still known as the Gulf of Trieste. [E. H. B.]

TERIOLAPE, a town in Noricum, on the road from Ovilaha to Juvenium; was situated in all probability near Lambach. (Tab. Peut.; Muschor, Noricum, vol. i. p. 266.)

TERIA (Tepesia), is mentioned in Homer (H. ii. 829) in connection with a lofty mountain, or as a mountain itself (Tepesinos épria aoros), and, according to Strab. (xii. p. 565, comp. xiil. p. 589), ought to be regarded as a helmet of Olympos; although others pointed out, at a distance of 40 stadia from Lampsacus, a hill with a temple of the Mother of the Gods, surnamed Theus. [L. S.]

TERIAS (Tepies; Fiume di S. Leonardo), a river of Sicily, on the E. coast of the island, flowing into the sea between Catania and Syracuse. It is mentioned by Pliny (iii. 8. s. 14) immediately after the Symmuthus; and Scylax tells us it was navigable for the distance of 20 stadia up to Leontini, (Scyl. p. 4. § 13.) Though this is a student of the river, and it is quite accurate, inasmuch as Leontini is at least 60 stadia from the sea, it leaves little doubt that the river meant is that now called the Fiume di S. Leonardo, which flows from the Lake of Lentini (which is not mentioned by any ancient author) to the sea. It has its outlet in a small bay or cove, which affords a tolerable shelter for shipping. Hence we find the mouth of the Terias twice selected by the Athenians as a halting-place, while proceeding with their first along the E. coast of Sicily. (Thuc. vi. 50, 96.) The connection of the Terias with Leontini is confirmed by Diodorus, who tells us that Dionysius encamped on the banks of that river near the city of Leontini. (Diod. xiv. 14.) [E. H. B.]

TERICIAE. [Tuciae.]

TERINA (Teripa, but Tépavav Lyophor.; Eth. Terporanor, Teremenos), a city on the W. coast of the Bruttian peninsula, near the Gulf of St. Eufemia, to which it gave the name of Terina's Sinus. All writers agree in representing it as a Greek city and a colony of Crotona (Sculpin. Ch. 307; Steph. B. s. c.; Scyl. p. 4. § 12; Strab. vi. p. 256; Plin. iii. 5. s. 10; Solin. 2. § 10), but we have no account of the time or circumstances of its foundation. It was regarded as the burial-place of the Siren Ligeia, a tradition which evidently pointed to the existence of a more ancient town on the spot than the Greek colony. (Lyophor. Alex. c. 726; Steph. B. s. e.) The name of Terina is very scarcely mentioned in history during the flourishing period of Magna Graecia; but we learn from an incidental notice that it was engaged in war with the Thurians under Chalcidrias (Polyaen. Strat. ii. 10. § 1)—a proof that it was at this time no inconsiderable city; and the number, beauty, and variety of its coins sufficiently attest the fact that it must have been a place of wealth and importance. (Milingual, Monarch. de l'Italie, p. 53.) Almost the first notice of Terina is that of its conquest by the Bruttians, an event which appears to have taken place soon after the rise of that people in n. c. 356, as, according to Diodorus, it was the first Greek city which fell into their hands. (Diod. xvi. 15.) It was recovered from them by Alexander, king of Epirus, about 327 n. c. (1iv. viii. 24), but probably fell again under their yoke after the death of that monarch. It was one of the cities which declared in favour of Hannibal during the Second Punic
TERNAEUS SINUS.

[It was necessary to translate the text to make it readable.]
TERMETIS.

TERMETIS, a mountain of Lydia between Mounts Olympus and Tmolus, is mentioned only by Pliny (v. 31).

TERSILAE (Τερσιλάη) is said to have been the ancient name of the inhabitants of Lydia, before the name Lydi came into use. These Tersilae were believed to have come from Crete; and even in the time of Herodotus the Livians were often called Tersilae by the neighbouring nations. (Herod. i. 173, vii. 92; Paus. i. 19. § 4.)

TERPO'NUS (Τερπόνοος), a town of the Iapodes in Illyria, of uncertain site. (Appian, B. Myg. 18.)

TESA (Τέσσα), Ptol. vi. 8. § 8), a small town on the coast of Grecia, visited by the fleet of Nearchus. It is probably the same as the Teos or Teoos of Arrian (Ind. c. 29), and may be represented by the present Tiz. (V.)

TESEBARICE (Τεσσαβαρίς), sc. χώρα, Peripl. Mar. Ephigr. p. 1. ap. Hudson, Geogr. Min.), is supposed to have been a portion of the district inhabited by the Troglodytes. The modern Persian name Tres-u-Barek closely resembles the ancient one, and is said to mean, when applied to a country, "low and flat," which designation would accord with the S. portion of the Regio Troglodytica in the level region of Arthippe near the mouth of the Ixd Sea. (Vincent, Commerce and Navigation of the Ancients, vol. ii. p. 59. [TROOLYDOYTAE] [W.B.D.]

TESTRINA. [Aborigines.]

TETIUS (Τετίος, Ptol. v. 14. § 42), a river on the S. coast of Cyprus, probably the Tisis. [T. H. D.]

TETRIUM. [Τητριάμου.]

TEITANALOCHUS. [Νάουλοχος, No. 3.]

TETRAPHILIA, a town of Athamania in Epeirus, where the royal treasuries were kept. (Liv. xxxviii. 1.)

TETRAPOLIS. 1. Of Attica. [Marathon.]

2. Of Doris. [Dorés.]

TETRAPYRGIA (Τετραπυργία). 1. A town in the Cyrenaica, of uncertain site, situated above the harbour Pyrus. (Strab. xvii. p. 528; Polyb. xxxi. 26.)

2. A town of Cappadocia in the district Gar- sania. (Ptol. v. 6. § 14.)

TETRICA MONS, a mountain in the central range of the Apennines, adjoining the territory of the Sabines. Virgil enumerates the "Tetrica horretores rupes" among the localities of that people, and Silus Italicus in like manner closely associates the "Tetrica rupes" with Narsia. Varro also speaks of the Montes Ficellus and Tetrica as abounding in wild goats. (Virg. Aen. vii. 713; Sil. Ital. viii. 417; Varr. R. R. ii. 1. § 5.) From all these passages it is evident that it was one of the lofty and rugged chain of the Central Apennines, which extend from the Monti della Sibilia, southwards as far as the Gran Sasso, separating Picenum from the country of the Sabines: and this position is confirmed by Servius and Vittius Sequester, of whom the former calls it "Mons in Piceno aperittus," while the latter terms it "Mons Sabiturnum." (Serv. ad Aen. l. c.; Vib. Seq. p. 33.) It cannot be identified with more accuracy. The two grammarians just quoted write the name "Tetricus Mons;" but Varro, as well as Virgil and Silus, adopts the feminine form, which is not therefore one merely poetical.

TEUDE' RIUM. [Τεοδωρίου.]

TEUDE'RIUM, a place in the country of the Cheuci Minore, on the river Amnis, in Germany (Ptol. ii. 11. § 28). Its site is commonly identified with that of the village of Döngen, near Meppen. [L. S.]

TEUDURUM, in North Gallia, is placed by the Table about halfway between Nemetacum (Arras) and Samarobriva (Amiens). Two, on the road from Amiens to Arras, represents Teucera. (D'Anville. Notice, e.)

TEUCHI. [Τεος.] (TOLEIUROS), a place in the country of the Chauci Minores, on the river Amnis, in Germany (Ptol. ii. 11. § 28). Its site is commonly identified with that of the village of Döngen, near Meppen. [L. S.]

TEUDERUM, in North Gallia, is placed in the Antonine Itinerary on a route from Colonia Trajana (Colonia Trajana) through Juliaca (Juliers) to Colonia Agrippina (Cologne). The place is Tuddern. The distance from Tuddern to the supposed site of Coriolanum is marked viii. [COSOVA\LUM.]

TEUGLUSSA (Τευγλουσσα), an island mentioned by Thucydides (vii. 42, where some read Teulgoussea), which, from the manner he speaks of it, must have been situated between Syme and Haliarnassus. Stephanus B also mentions the island on the authority of Thucydides, but calls it Teuglussa and an island of Ionia. There can be no doubt that the Scultusa mentioned by Pliny (v. 36) is the same as the Teuglussa or Teutlussa of Thucydides. [L. S.]

TEUMESSUS (Τευμέσσας; Εθ. Τευμέσσας) a village in Boeotia, situated in the plain of Thebes, upon a low rocky hill of the same name. The name of this hill appears to have been also given to the range of mountains separating the plain of Thebes from the valley of the Asopus. (Boeotia. pp. 413, 414.)

Teumessus was upon the road from Thebes to Chalcis (Paus. ix. 19. § 1), at the distance of 100 stadia from the former. (Schol. ad Eupr. Phoen. 1105.) It is mentioned in one of the Homeric hymns. (Hymn. in Apollo. 228) with the epithet λακεώτης or grasny, an epithet justly applied to the rich plain which surrounds the town. Teumessus is celebrated in the epic legends, especially on account of the Teumessian fox, which ravaged the territory of Thebes. (Paus. l. c.; Anton. Lib. 41; Patriarch. de Iunguid. 8; see Dict. of Biogr. Vol. l. p. 667.) The only building at Teumessus mentioned by Pausanias was a temple of Athena Telchinia, without any statue. (Besides the authorities already quoted, see Strab.)
TEUTOBORGIAE.

ix. p. 409; Aristot. Ith. iii. 6; Plin. iv. 7. s. 12; Steph. B. s. v.; Plut. Lex. p. 428; Leake, Northern Greece, vol. ii. p. 245, seq.)

TEUTOBORGIAE. (Teutoburgium, a German tribe, occupying the country south of the Cherusci, on the left bank of the river Drusus, in the modern Erzgebirge and Vogtland. (Ptol. ii. II. § 23.) [L. S.]

TEURISCI (Teurisca, Ptol. iii. 8. § 5), a Dacian tribe near the sources of the Tyris. [T. H. D.]

TEUTHRIA (Teuthria), a Celtic town in Noricum, on the left bank of the upper part of the river Drusus (Plin. iii. 27; Ptol. ii. 14. § 3). Its site is still marked by considerable ruins not far from the little town of Spital. (Comp. Orelli, Inscription. Nos. 498 and 507; E. Grippius, Lit. S. Severi, 17, 21, where it is called Tiberna.) [L. S.]

TEUTHEA. [Dyme.]

TEUTHEAS. [Achala, p. 14, s.]

TEUTHIS (Teuthis. Eth. Teutheth), a town in the centre of Arcadia, which together with Thebais and Methydrium belonged to the confederation (evrē-keia) of Orchomenos. Its inhabitants were removed to Megalopolis upon the foundation of the latter. The Pelasgicans of Galatia probably represent Teuthis. (Paus. ii. 27. §§ 4, 7, 28. § 4; Steph. B. s. v.; Boss, Reisen in Peloponnes, vol. i. P. 114.)

TEUTHRANIA (Teuthrāia), the name of the western part of Myasia about the river Cairus, which was believed to be derived from an ancient Myssian king Teuthras. This king is said to have adopted, as his son and successor, Teleplus, a son of Heracles; and Eurypylus, the son of Teleplus, appears in the Odyssey as the ruler of the Cetoni. (Strab. iii. p. 615; Hom. Od. x. 250; comp. Mrst.)

In the district of Teuthrania a town of the same name is mentioned as situated between Elaea, Pitane, and Atarnea (Strab. L. c.; Steph. B. s. r.; Xenoph. Hist. Gr. iii. 1. § 6), but no other particulars are known about it. [L. S.]

TEUTHRAS (Teuthrās), the south-western part of Mt. Timmus in Teuthrania (Oiasias, op. Stob. Serm. p. 213, ed. Bähr), is perhaps the mountain now called Donnachii, which the caravans proceeding from Spernum to Eurauns have to traverse. (Lucas, Trois-Voyages, p. 133.) [L. S.]

TEUTHRO'NE (Teuthrōnine), a town of Lacois, situated upon the western side of the Laconian gulf, 150 stadia from Cape Taeacarum. It was said to have been founded by the Athenian Teuthras. The chief deity worshipped here was Artemis Issoria. It had a fountain called Nais. Its ruins exist at the village of Kotrōnes, and its citadel occupied a small peninsula, called Skopos, Skopia or Skopia-posal. The distance assigned by Pausanias of 150 stadia from Teuthrone to Cape Taeacarum is, according to the French Commission, only from 8 to 10 stadia in excess. Augustus made Teuthro'ne one of the Eleuther-Lacionian towns. (Paus. iii. 21. § 7, iii. 25. § 4; Ptol. iii. 16. § 9; Boblaye, Recerches, 18. 99. 89; Curtius, Peloponnesos, vol. ii. p. 276.)

TEUTBURGIIUM or TEUTOBURGIIUM (Teo- tur'giioum), a town in Lower Pannonia, near the confluence of the Dravus and Danubius, on the road from Mursa to Carnunus, was the station of the praefect of the sixth legion and a corps of Dalmatian horsemen. (It. Ant. p. 243; Ptol. ii. 16. § 5; Notit. Imp.; Tab. Peut., where it is misswritten Tittoburgium.) The name seems to indicate that it was originally a settlement of the Teutones, which may have been founded at the time when they roamed over those countries, about B. C. 113. No remains are now extant, and its exact site is only matter of conjecture. (Munch, Noricum, vol. ii. p. 265.)

TEUTOBERGIIENSIS SALTUS, a mountain forest in Western Germany, where in A.D. 9 the Roman legions under Varus suffered the memorable defeat, and where, six years later, their unburied remains were found by Drusus. (Tac. Ann. l. 60.)

A general description of the locality without the mention of the name is found in Dion Cassius (vii. 20, 21; comp. Vell. Pat. i. 105, 118, foll.). This locality has in modern times been the subject of much discussion among German antiquaries; but the words of Tacitus seem to imply clearly that he was thinking of the range of hills between the source of the Luipa and Amasia; that is, the range between Lippspringe and Haustenbeck. (Giebers, De Alatone Castelio deique Variarum Cladia Loco Commentatio, p. 47, foll.)

TEUTONES or TEUTONI (Teutones), the name of a powerful German tribe, which about B. C. 113 appears on the frontier of the Germanic tribes, which the Cimbri, probably a Celtic people, after defeating the Romans in several battles, traversed Gaul and invaded Spain. The Teutones, however, remained behind ravaging Gaul, and were joined by the Ombrones. At length, in B. C. 102, they were defeated by C. Marius in a great battle near Aquae Sextiae, where, according to the most moderate accounts, 100,000 of them were slain, while 50,000 or 90,000 are said to have been taken prisoners. A body of 60,000 men, who survived that terrible day, are said to have established themselves in Gaul between the Meas and Scheide, where they became the ancestors of the Aquitani. (Liv. Epit. lib. lxxxvii.; Vell. Pat. ii. 12; Flor. iii. 3; Plut. Mar. 36, foll.; Oros. v. 16; Caes. B. G. ii. 4, 29.)

After this great defeat, the Teutones are for a long time not heard of in history, while during the preceding ten years they are described as wandering about the Upper Rhine, and eastward even as far as Pannonia. In later times a tribe bearing the name of Teutones is mentioned by Pomp. Mela (iii. 3), Pliny (xxxvii. 11), and Ptolemy (ii. 11. § 17) as inhabiting a district in the north-west of Germany, on the north of the river Albis, where according to Pliny, they dwelt even as early as the time of Pytheas of Massilia. The question here naturally presents itself whether these Teutones in the north of Germany were the same as those who in the time of Marius invaded Gaul in conjunction with the Cimbri, who in fact came from the same quarters. This question must be answered in the affirmative; or in other words, the Teutones who appeared in the south were a branch of those in the north-west of Germany, having been induced to migrate southward either by inundations or other calamities. The numerous body of emigrants so much reduced the number of those remaining behind, that thereafter they were a tribe of no great importance. That the name of Teutones was never employed, either by the Germans themselves or by the Romans, as a general name for the whole German nation, has already been explained in the article GERMANNIA. Some writers even regard the Teutones as not Germans at all, but either as Slavonians or Celts. (Latham, Epileg. ad Tac. Germ. p. 32.) The fact that the country between the lower Elbe and the Baltic was once inhabited by the
Tenonoei seems to be attested by the names of Tenonwinkel, a village near Rostock, and Tenendof, between Travemünde and Schweren. [L.S.]

Thatsom (Thatsom), a German tribe mentioned by Pliny (ii. 11, § 17) in close proximity to the Tenonoei, whence it may be inferred that they were only a branch of the Tenonoei. (Litham, Epitq. ad Tac. Germ. p. cxii.) [L.S.]

Thabore. [Alvearem].

Thabraca (Θαβράκα κολώνα, Plut. vi. 3. §§ 5, 21, 28, viti. 14, § 3; Melas, i. 7), also called Tabara (Plin. v. 3. s. 2, 6), a maritime city of Numidia, seated at the mouth of the Tiscen. It was the last enemy to fall to the Roman conquerors. (Plut., Plin. ii. 26.) The surrounding country was covered with thick woods. (Auct. S. x. 191.) Thabraca was the scene of the death of Gilda. (Claud. Landst. Stil. i. 359.) It still retains the name of Tabarka. (Cf. Ilin. Ant. pp. 21, 495, 514; Aug. adl. Domit. vi. 32.) [T.H.D.]

Thabranta, a place in the Libyan Nomos (Ilin. Ant. p. 72), identified by Lapie with Asar Rom Ant Adjourn. [T.H.D.]

Thaipolis, a fortress on the Euphrates in Carrhae, far from Cydra. (Liv. xxxvi. 14.)

Thagurum (Θαγυρομ, Plut. vi. 16, § 2), a mountain in Serica, stretching from the Oxotoreon in a northerly direction towards the Alexandrian mountains. It is in the S. part of the Mysian territory, and N. of the Hyrcanian. [T.H.D.]

Thala (Θαλα, Strab. xvi. p. 831), an important town of Numidia, with a treasury and arsenal. (Sall. J. 75, 77, 80, 89; Tac. Ann. iii. 21; Flor. ili. 1.) It is probably identical with Telepte (Θαληπτη, Paus. de Aeg. vi. 6.), a fortified town of the district, lying to the NW. of Capua, and from which there was a road to Taraccia on the Scandacicus (Strab. v. 779). (Cf. Aeg. Vetus, i. p. 288, seq.) takes Ferrearba, both from its name and its situation, to have been the ancient Thala or Telepte (cf. Mommsen, x. 2. p. 321), but Lapie seeks it at Hamouch-el-Khima. [T.H.D.]

Thala (το Θαλα ὕπο, Plut. iv. 6, §§ 12, 14, 16), a mountain in the interior of Libya, near which dwelt a tribe of the same name (Θαλα, Plut. iv. 6, § 21). [T.H.D.]

Thalamae (Θαλαμαι). 1. A town of Elys, situated above Pylos on the frontiers of Arkadia, and in the rocky recesses of Mount Scollis, probably near the modern village of Stavroneri, at the head of a narrow valley. It was here that the Eleans renounced with their property and flocks, when their country was invaded by Philip in B.C. 219. (Xen. Hell. viii. 4. § 26; Polya. iv. 75; Lek. Mor., vol. ii. p. 204, Peloponnesica, p. 220; Curtius, Peloponnesus, vol. i. p. 38.)

2. (Also Thaloei, Plut. iii. 16, § 22; Ilith. Olaus Magnus), a town of Lacedaemon, distant 80 stadia north of Ostheus, and 20 stadia from Phoebus. (Paus. iii. 26, §§ 1, 2.) Phoebus was on the coast, on the eastern side of the Messenian gulf, and Thalamus was situated inland, probably at or near Plata, upon the river Milia, the minor Panusius of Strabo (vii. p. 361). Thulamus (i. c.) also calls it one of the inland towns of Laconia. Theopompus called Thalama a Messenian town (Steph. B. s. v. Thalama), and we know that the Messenians said that their territory originally extended as far as the minor Panusius (Laconia, i. 114, § 5). Thalama was said to have been founded by Pelops, and was called in the time of Strabo the Boeotian Thalamae, as if it had received a Boeotian colony. (Strab. viii. p. 360.) Thalamae is mentioned by Polybios (xxvi. 16.) It was subsequently one of the Eucleo-Laconian towns. (Paus. iii. 21. § 7.) In the territory of Thalamae, on the road to Oetys was a temple and oracle of Iph or Upsilon, in which the Athenian envoys of 431 were received for thebose that slept in the temple. Even the Spartan kings sometimes slept in the temple for this purpose. The temple probably stood upon the promontory Trachila, where there are some ancient remains. (Paus. iii. 26. § 1; Plut. Agis, 9; Cie. de Divin. i. 43; Hermann, Gotteia. Alth. § 41. § 7.) (Leoke, Peloponnesia, p. 178; Boblave, Redecherches, etc. p. 92; Curtius, Pelopones, vol. ii. p. 264.)

Thalades. [Arcadia, p. 193, No. 15.]

Thalamanca, a people in central Asia, belonging to the fifth ethnarchy of Dareius Hystaspis. Their exact position is uncertain. (Herod. iii. 93, 117; Steph. B. s. r.)

Thamara (Θαμάρα, Euseb. and Onom. s. r., Harazam-Thammarı, Θαμαρ, Plut. vi. 16, § 8; Tab. Peut.; Tamar, Eusek. xvn. 19, xlviii. 28.), a town in Palestine, and one of the most southerly points in the country according to Eusebius. According to Ezechias and Jerome it was a town and fortress one day's journey from Malatha on the way from Hebron to Ashd, and in their time was held by a Roman garrison. Robinson fixes it at Karnah, the site with ruins 6 miles S. of Milth towards the pass Baw-Safih. (Bibl. Res. vol. ii. p. 202, 2nd ed.)

Thambrias (Θαμβριας, Θαμβρας, or Θαμβριας, Plut. iv. 3, §§ 16, 25.), a mountain in the eastern part of Numidia, in which the river Rabathor takes its source. (T.H.D.)

Thamna (Θαμνα: Ech. Θαμναρη), a large village of Palestine near Lydda, on the way to Jerusalem, which gave its name to the Toparchia Thamnatica. (Plut. vi. 16. § 8; Joseph. B. J. iii. 3, v. 4; Plin. vi. 14. s. 15; Euseb. Onom. s. r.; Steph. B. s. v.; Robinson, Bibl. Res. vol. ii. p. 239, seq., 2nd ed.)

Thamondacana. [Nestor, p. 418, b.]

Thamumdeni (Θαμομδενη), a people of Arabia, dwelling upon the coast of the Arabian gulf, for more than 1000 stadia from about Muriah to Wadbeh. (Ptol. iii. 44; Agatharch. p. 59; Hudson, § 92, with Miller's note.) Polybeny mentions the Thamundini (Θαμομδηνι) among the inland tribes of Arabia (vi. 7. § 21), but in another passage he places them upon the coast, under the slightly altered name of Thamynide (Θαμυνίδην, vi. 7. § 4). In Pliny they are called Thamumdei (vi. 28. s. 32.). Stephanus B. makes Thamumi (Θαμομπης) a neighbour of the Nabataeans. The name is evidently the same as Thamud, a celebrated tribe in early Arabian history.

Thana or Thoana (Θανα, Θοανα, Plut. vi. 17. § 5; Thoarna, Tab. Peut.), a town of Arabia Petraea, probably corresponds to Bawana, a village visited by Eucarthus, on the declivity of a mountain N. of
THAIPSA. 

THAIPSA. [Riuschae].

THASPAS (θασπα), a town of considerable importance on the right bank of the Euphrates, in lat. 35° 15' N. It is mentioned very early in ancient history, and is almost certainly the same as the Tishpas, of the Old Testament (I Kings, iv. 24; in the LXX. written Θασψ), which is mentioned as the eastern boundary of the kingdom of Solomon. There is some difference among ancient writers as to the province in which it should be included. Thus, Pliny (v. 24. s. 21) and Stephanus B. (s. v.) place it in Syria; Ptolemy (v. 24. s. 21) placed it in one of the adjoining Roman provinces, and the idea was that it was a frontier town, and might therefore be claimed as belonging to one or more provinces. At Tisapsus was the most important passage of the Euphrates in the northern portion of that river's course. As such, we read it was used by Cyrus the younger, whose army forded it, the water reaching up to their breasts, there being probably at that time no bridge. (Xen. Anc. vi. 4. § 12.)

THASPASION (Θασπασιον), an island on the two years later Dareius crossed to meet Alexander in Cilicia, and recrossed it in haste after his defeat at Issus. (Arrian, ii. 13.)

THASPES (Θασψ), Diiodor, xx. 23), a deep river of the Chersonesian Taurica, on which lay a royal castle. Uckert (iii. 2. p. 193) identifies it with the Sabrige. But Kohler seeks the castle on Mount Opak, 45 wards south of Kertsch. (Μισν. de l'Ac. de St. Petersb. ix. p. 649, seq.) [T. II. D.]

THASPUS (Θασψ, Ptol. iv. 3. § 10), a maritime city of Byzantium, in Africa Propria. It lay on a salt lake, which, according to Shaw (Trav. p. 99), still exists, and on a point of land 50 stadia distant from the opposite island of Loparseus. Thasus was strongly fortified and celebrated for Caesar's victory over the Pompeians, n. c. 46. (Hist. B. Af. 28. seq.) Shaw (l. c.) identifies it with that point of the island of Jennea, where its ruins are still visible. (Cf. Strabo, xvii. pp. 831, 894; Liv. xxxiii. 48; Plin. vi. 4. 3, &c.) [T. II. D.]

THAIPSA. a river of Numidia, falling into the sea near the town of Ruscade, probably the present Wued Rekas (Vib. Sequest.) [T. II. D.]

THAIPUS [Syracuseae].

THARRA (Θαρρα), a place on the great line of road which led across the desert from the Euphrates to Hatime (A&-Hathyr). It is marked on the Tabula Peutingeriana. It has been conjectured by Mannert (v. 2. p. 233) that the name is a mistake for Harran, another form of Harrara; but this hypothesis seems hardly tenable. Richerd believes it is represented by the present Arabam. [V.]

THARRAS (Θάρρας, Ptol. iv. at Capo del Secco), a city of Sardinia, mentioned only by Ptolemy (where the name is written in many MSS. and editions of Ptolemy) and in the Itineraries, but which seems to have been one of the most considerable places in the island. It was situated on the W. coast, on a projecting point of land at the N. extremity of the Gulf of Oristano, where its ruins are still visible. The reason of this, that it was a frontier town, and might therefore be claimed as belonging to one or more provinces. At Thasus was the most important passage of the Euphrates in the northern portion of that river's course. As such, we read it was used by Cyrus the younger, whose army forded it, the water reaching up to their breasts, there being probably at that time no bridge. (Xen. Anc. i. 4. § 12.)

THASPAS (Θασψ), Diiodor, xx. 23), a deep river of the Chersonesian Taurica, on which lay a royal castle. Uckert (iii. 2. p. 193) identifies it with the Sabrige. But Kohler seeks the castle on Mount Opak, 45 wards south of Kertsch. (Μισν. de l'Ac. de St. Petersb. ix. p. 649, seq.) [T. II. D.]

THASPUS (Θασψ, Ptol. iv. 3. § 10), a maritime city of Byzantium, in Africa Propria. It lay on a salt lake, which, according to Shaw (Trav. p. 99), still exists, and on a point of land 50 stadia distant from the opposite island of Loparseus. Thasus was strongly fortified and celebrated for Caesar's victory over the Pompeians, n. c. 46. (Hist. B. Af. 28. seq.) Shaw (l. c.) identifies it with that point of the island of Jennea, where its ruins are still visible. (Cf. Strabo, xvii. pp. 831, 894; Liv. xxxiii. 48; Plin. vi. 4. 3, &c.) [T. II. D.]

Thasos (Θασσος, sometimes Θαρρας; Thaso or Thassus), an island in the N. of the Aegean sea, off the coast of Thrace, and distant only 31 miles from the plain of the river Nestus or Kara-Su. It was distant half a day's sail from Amphipolis (Thuc. iv. 104), and 32 miles from Abdera. (Plin. iv. 12. s. 23.) It was also called Acris or Aethra (Plin. l. c.; Steph. B. s. v.) and Chryse, from its gold mines (Eustath. ad Dionys. Per. 317), which were the chief source of the prosperity of the island. The earliest known inhabitants of Thassos were the Phocicians, who were doubtless attracted to the island by its valuable mines, but who are said to have come thither in search of Europe, five generations before the birth of the Grecian Hercules. They were led by Thasos, the son of Agenor, from whom the island derived its name. (Herod. ii. 44, vi. 47; Paus. v. 25. § 12; Sclioyn. 660; Conon. c. 57; Steph. B. s. v.) Thasos was afterwards colonized in 01. 15 or 18 (n. c. 729 or 708) by settlers from Paris, led by Telesicles, the father of the poet Archilochus. (Thuc. iv. 104; Strab. ix. p. 487; Clem. Alex. Strom. 1. p. 144; Eucl. Prap. Ev. vi. 7.) There also existed at that time in the island a Thracian tribe called Saians, with whom the Parian settlers carried on war, but not always successfully; and on one occasion Archilochus was obliged to throw away his shield. (Archil. Fragm. 5, ed. Schneidewin; Aristoph. Dac. 298, with the Schol.) The Greek colony rapidly rose in power, and obtained valuable possessions on the adjoining mainland, which contained even richer mines than those in the island. Shortly before the Persian invasion, the clear surplus revenue of the Thasians was 200, and sometimes even 300 talents yearly (46,000l. 66,000l), of which Scætit Hyle produced 80 talents, and the mines in the island rather less. (Herod. v. 36.) Besides Scætit Hyle the Thasians also possessed upon the mainland Galæpus and Oeynus (Thuc. iv.
THASOS.

107; Diod. xii. 68), Stryme (Herod. vii. 118; Suid. s. e. Ζρυπίου), Datum, and at a later period Cremones. (Böckh, Pplh. Econ. of Athens, p. 322, Engl. tr.) Herodotus, who visited Thasos, says that the most remarkable mines were those worked by the Phoenicians on the eastern side of the island between Aenya and Conyra opposite Samothrace, where a large mountain had been overturned in search of the gold. (Herod. vi. 47.) The Thasians appear to have been the only Greeks who worked the valuable mines in Thrace, till Histiaeus, the Miletian, settled upon the Strymon and built the town of Myrcean, about B.C. 511. (Herod. v. 11, 28.) After the overthrow of Histiaeus (494), Histiaeus made an unsuccessful attempt to subdue Thasos (Herod. vi. 28), but the growing power of the Thasians excited the suspicions of Dareios, who commanded them in n. c. 492 to pull down their fortifications and remove their ships of war to Abdera,—an order which they did not venture to disobey. (Herod. vi. 46.) When Xenes marched through Thrace on his way to Greece, the Thasians, on account of their possessions on the mainland, had to provide for the Persian army as it marched through their territories, the cost of which amounted to 400 talents (92,600 I.); (Herod. vii. 118.) After the defeat of the Persians, Thasos became a member of the confederacy of Delos; but disputes arising between the Thasians and Athenians respecting the mines upon the mainland, a war ensued, and the Athenians sent a powerful force against the island under the command of Cimon, n. c. 465. After defeating the Thasians at sea, the Athenians disembarked, and laid siege to the city both by land and sea. The Thasians held out more than two years, and only surrendered in the third year. They were compelled to raze their fortifications; to surrender their ships of war; to give up their continental possessions; and to pay an immediate contribution in money, in addition to their annual tribute. (Thuc. i. 106, 101; Diod. xi. 70; Plut. Cim. 14.) In n. c. 411 the democracy in Thasos was overthrown, and an oligarchical government established by Deinander and the Four Hundred at Athens; but as soon as the oligarchy possessed itself of the power they revolted from Athens, and received a Lacedaemonian garrison and harvest. (Thuc. viii. 64.) Much internal dissension followed, till at length in n. c. 408 a party of the citizens, headed by Echphantus, expelled the Lacedaemonian harvest Eteocles with his garrison and admitted Thrasylulas, the Athenian commander. (Xen. Hell. i. 1, §§ 12, 52, i. 4, § 9; Dem. c. Lept. p. 474.) After the battle of Argospotamos, Thasos passed into the hands of the Lacedaemonians; but it was subsequently again dependent upon Athens, as we see from the disputes between Philip and the Athenians. (Dem. de Halon, p. 88, Philipp. Epit. p. 159.) In the Roman wars in Greece Thasos submitted to Philip V. (Polyb. xv. 24), but it received its freedom from the Romans after the battle of Cynoscephalae, n. c. 197 (Polyb. xxii. 27, 31; Liv. xxxiii. 30, 35), and continued to be a free (libera) town in the time of Piny (iv. 12, s. 23).

The city of Thasos was situated in the northern part of the island, and possessed two ports, of which one was closed. (Scylax, p. 27; Polb. iii. 11. § 14.) It stood on three eminences; and several remains of the ancient walls exist, intermingled with towers built by the Venetians, who obtained possession of the island after the capture of Constantinople by the Turks. In the neighbourhood is a large statue of Pan cut in the rocks. No remains have been discovered of Aenya and Conyra; and the mines have long ceased to be worked.

Archilochus describes Thasos as an "as's backbone overgrown with wild wood" (.. . ἵππον ὑδρὸν ῥῆχον ὑπὸ τοῦ πάρακλητος, ἐξ ἐποτήτων, Fragment. 17, 18, ed. Schneidewin), a description which is still strikingly applicable to the island after the lapse of 2500 years, as it is composed entirely of naked or woody mountains, with scanty patches of cultivable soil, nearly all of which are close to the sea-shore. (Grote, Hist. of Greece, vol. iv. p. 24.) The highest mountain, called Mont Ipsari, is 3428 feet above the sea, and is thickly covered with fir-trees. There is not enough corn grown in the island for its present population, which consists only of 6000 Greek inhabitants, dispersed in twelve small villages. Hence we are surprised to find it called by Dionysius (Periegy. 332) Anaxagoras àrchi, but the praises of its fertility cannot have been derived from personal observation, and must have arisen simply from the abundance possessed by its inhabitants in consequence of their wealth. Thasos produced marble and wine, both of which enjoyed considerable reputation in antiquity. (Athen. i. pp. 28, 32, iv. p. 129, Xen. Symp. 4. § 41; Virg. Georg. ii. 91.) The chief produce of the island at present is oil, maize, honey, and timber; the latter, which is mostly fir, is the principal article of export.

The coins of Thasos are numerous. The one figured below represents on the obverse the head of Dionysus, and on the reverse a figure of Hercules kneeling.

**COIN OF THASOS.**

THAUBA'SIUM (Itin. Ant. p. 171; Thauba'teum, Not. Imp.), was a frontier town of Lower Egypt, situated on the Canopic arm of the Nile, about 8 miles N. of Serapeum, and the natural Lakes. In Roman times Thaubasum was the head-quarters of a company of light auxiliary troops "II Aia Ulpa Aforum." (Orelli, Inscription. no. 2552.) It is supposed to be at the modern Chech-El-Nady. (Champollion, L'Egypte, vol. ii. p. 71.)

[W. B. D.]

THAUMACI (Θαυμάκιοι: Eth. Θαυμακάδη), a town of Phthiotis in Thessaly, was situated on the pass called Cela, on the road from Thermopylae and the Malaie gulf passing through Lamia. At this place, says Livy, the traveller, after traversing rugged mountains and intricate valleys, comes suddenly in sight of an immense plain like a vast sea, the extremity of which is scarcely visible. From the astonishment which it excited in the traveller, the city was supposed to have derived its name. It stood upon a lofty and precipitous rock. It was
THAUMACIA. 1137

besieged by Philip in n. c. 199; but a reinforcement of Aetolian soldiers making their way into the town, the king was obliged to abandon the siege. (Liv. xxxii. 4.) Thaumacia was taken by the consul Acilius in the war with Antiocius, n. c. 191. (Liv. xxxvi. 14; comp. Strab. ix. p. 434; Steph. B. s. v. Thaumacia.) Dhomosok occupies the site of Thaumacia, and at this place inscriptions are found containing the ancient name. Its situation and prospect are in exact accordance with the description of Livy, who copied from Polybius, an eye-witness. Dodwell says that "the view from this place is the most wonderful and magnificent," and Leake observes that "at the southern end of the town a rocky point, overtopping the other heights, commands a magnificent prospect of the immense plain watered by the Peneius and its branches." (Dodwell, vol. ii. p. 122; Leake, Northern Greece, vol. i. p. 438.)

THAUMACIA (Thaumacia; Eit. Thaumacii), a town of Magnesia in Thessaly, one of the four cities whose ships in the Trojan War were commanded by Philoctetes. It was said to have been founded by Thaumacus, the son of Poias. Leake supposes it to be represented by the paleokastro of Aiskitii, one of the villages on the Magnesian coast. This Thaumacia must not be confounded with Thaumaci in Pithiotis mentioned above. (Hom. II. ii. 716; Strab. ix. p. 436; Steph. B. s. v.; Eustath. ed Hom. p. 329. 6; Plin. iv. 9. s. 16; Leake, Northern Greece, vol. iv. p. 416.)

THEANGELA (Thaangyla; Eit. Thaangela), a town of Carrhae, which Alexander placed under the jurisdiction of Halicarnassus, is known as the birthplace of Philip, the historian of Caria. (Plin. v. 297; Athen. vi. p. 271; Steph. B. s. v.)

THEBAE (Thbæ, Herod. i. 182, ii. 42; Strab. xvii. pp. 805, 815, foll.; Thebe, Plin. vi. v. 9. s. 11), the Noo (Exekiel, xxx. 14) or No-Amon (Nabum, vv. 3, 8) of the Hebrew Scriptures; at a later period Diospolis the Great of the Greeks and Romans (Διοσκόρα Αίγυπτου, Plut. iv. 5. § 73; Steph. B. s. v.), was one of the most ancient cities of Egypt, and even, according to Diodorus (i. 50, comp. xv. 45), of the world. Its foundation, like that of Memphis, was attributed to Menes, the first mortal king of Egypt, i. e. it went back to the mythical period of Egyptian history. By some writers, however, Memphis was reported to have been a colony of Thebes. It was the capital of the nome formed by the city itself and its dependencies, though Ptolemy (I. c.) describes it as pertaining to the Nome of Coptos. In all Upper Aegypt no spot is so adapted for the site of a great capital as the plain occupied by ancient Thebes. The mountain chains, the Libyan on the western, and the Arabian on the eastern side, of the Nile, sweep boldly from the river, and leave on both banks a spacious area, whose breadth, including the river, amounts to nearly 4 leagues; and the length from N. to S. is nearly as much. Towards the N. the plain is again closed in by the return of the hills to the Nile; but on the S., where the western chain continues distant, it remains open. The ground, therefore, on which Thebes stood was large enough to contain a city of at least equal extent with ancient Rome or modern Paris; and, according to Strabo, ancient Thebes covered the entire plain. Only a portion of it, however, was available for population. An immense area was covered with the tents of traders and pedlars, and the behemoth s side, as far as the Libyan hills, lay the monuments of the dead. On the eastern bank, therefore, the population was generally collected; and there it was probably densely crowded, since ancient writers assign to Thebes an almost incredible number of inhabitants, and Dio Cass. (I. 45) speaks of it as being the residence of many wealthy individuals, and the seat of many of the most original minds. The extent of the city is very differently stated by ancient authors. Rumours of its greatness had reached the Greeks of Homer's age, who (Il. ix. 381) speaks of its "hundred gates" and its 20,000 war-chariots, just as the Arabian story-tellers speak of the glorious of Bagdad or Damascus under the Caliphs. Before the Persian invasion (n. c. 525) no Greek writer had visited Thebes, and after they had seen it is said that its dimensions had considerably shrunk, since Cambyses is said to have burnt all such portions of Thebes as fire would destroy, i. e. all the private buildings; and under the Persian viceroy a Egyptian city was likely to regain its original proportions. It does not appear that Herodotus ever visited Upper Egypt, and his account of Thebes is extremely vague and meagre. Diodorus, on the contrary, who saw it after its capture by Ptolemy Lathyrus, about n. c. 57, beheld Thebes in the second period of its decay, and after Alexander had diverted much of its commerce to Berenice and the Arinsea bay. He estimates its circuit at 140 stadia or about 17 miles. Strabo, again, who went thither with the expedition of Aelius Gallus in n. c. 24, beheld Thebes at a still lower stage of decadence, and assigns it a compass of about 10 miles. But at that time the continuity of its parts was broken up, and it was divided into certain large hamlets (κωμήδωρ) detached from one another. Neither of these writers, accordingly, was in a position to state accurately the real dimensions of the city in its flourishing estate, i. e. between 1600 and 800 n. c. Modern travellers, again, have still further reduced its extent; for example, Sir Gardner Wilkinson supposes the area of Thebes not to have exceeded 25 English miles. As, however, during the space of 2600 years (800 n. c.-1800 A. D.) there have been very material changes in the soil from the contraction of the habitable ground, partly by the depositions of the Nile, and partly by the drifting of the sands, it is scarcely possible for modern travellers to determine how far Egyptian armour and art may once have extended their capital. An author quoted by Stephanus of Byzantium, probably Hecataeus, runs into the opposite extreme. In his account of Thebes he speaks of the size of the city (7,000,000) hardly possible for the entire Nile valley, and an extent (400 stadia, or 50 miles) larger than the Theban plain itself. (Steph. B. s. v. Διοσπόλεις.) The name of Thesê is formed from the Tâpâ of the ancient Egyptian language, pronounced Thauha in the Memphitic dialect of Egypt, and thence easily converted into Θῆβα, Thebe, or Thebes. In hieroglyphics it is written Τήβη or Τήβης, with the feminine article, τήβης, the meaning of which is said to be "head." Thebes being the "head" or capital of the Upper Kingdom. Its later appellation of Diospolis Magna (Διοσκόρα Μεγάλη) answers also to the Egyptian title Amnemco or "abode of Amun,"—Αμνημος or Ζευς, the ram-headed god, being the principal object of worship at Thebes. The name Tape or Thebes applied to the entire city on either bank of the Nile; but the western quarter had the distinctive name of Pathyris, and the eastern was called to Ptolemy (iv. 5. § 69), Tathyris, as being under the special protection of Amon, who is sometimes called the President of the West. The necropolis, indeed, on the Libyan side was appropriately placed under

VOL. II.
the guardianship of this deity, since she was believed to receive the sun in her arms as he sank behind the western hills. This quarter, again, in the age of the Ptolemies, was termed "the Libyan sulurb," which was subdivided also into particular districts, such as the Memnonia (râ Maârousou, Young, Hieroglyph. Literature, pp. 69, 73) and Thyma- banum, where the priests of Osiris were interred. (Wilkinson, Anc. Egyptians, vol. v. p. 387.)

The power and prosperity of Thebes arose from three sources - trade, manufactures, and religion. Its position on the Nile, near the great avenues through the Arabian hills to the Red Sea, and to the interior of Libya through the western desert, rendering it a common entrepot for the Indian trade on the one side, and the caravan trade with the gold, ivory, and aromatic districts on the other, and its comparative vicinity to the mines which intersect the limestone borders of the Red Sea, combined to make Thebes the greatest emporium in Eastern Africa, until Alexandria turned the stream of commerce into another channel. It was also celebrated for its linen manufacture - an important fabric in a country where a numerous priesthood was interdicted from the use of woolen garments (Pi roofs. 1. s. 4). The glass, pottery, and intaglios of Thebes were also in high repute, and generally the number and magnitude of its edifices, sacred and secular, must have attracted to the city a multitude of artisans, who were employed in constructing, decorating, or repairing them. The priests alone and their attendants doubtless constituted an enormous population, for, as regarded Aegypt, and for centuries Aethiopia also, Thebes stood in the relation occupied by Rome in medieval Christendom, - it was the sacred capital of all who worshipped Ammon from Pelusium to Axum, and from the Oases of Libya to the Red Sea.

The history of Thebes is not entirely the same with that of Aegypt itself, since the predominance of the Upper Kingdom implies a very different era in Aegyptian annals from that of the lower, or the Delta. It may perhaps be divided into three epochs: 1. The period which preceded the occupation of Lower Aegypt by the Assyrian nomades, when it is doubtful whether Memphis or Thebes were the capital of the entire country, or whether indeed both the Thebaid and the Delta were not divided into several smaller states, such as that of Heliopolis in the N., and Abydos in the S., the rivals respectively of Memphis and Thebes. 2. The interval between the expulsion of the Assyrians by Tho- mosis, and the 21st dynasty of Tanite kings. During all this period, Thebes was unquestionably the capital of all the Nile-valley, from the Mediterranean to the island of Argo in lat. 16° 31' N. 3. The period of decadence, when the government of Aegypt was centered in the Delta, and Thebes was probably little more than the head-quarters of the sacerdotal caste and the principal refuge of old Aegyptian life and manners. And this third division is rendered the more probable by the consideration that, until the Assyrian empire became formidable, and Phœnicia important from its maritime power, Aethiopia, rather than Arabia or Syria, was the formidable neighbour of Aegypt.

Under the Old Monarchy there is no trace of Aegyptian dominion extending beyond the peninsula of Sinai, the northern shores of the Red Sea, or the Libyan tribes adjoining the Delta. During this period invasion was apprehended almost exclusively from the S. The Aethiopians were no less war-like, and perhaps as civilised, as the Aegyptians: the Nile afforded them direct ingress to the regions north of the Cataracts, and they were then, as the Syrians and north-eastern states became afterwards, the immediate objects of war, treaties, or internarrriages with the Pharaohs of Thebes. When the Theban state was powerful enough to expel the Assyrian nomades, it must have already secured the alliance or the subjection of Aethiopia; and the attention of its rulers was thenceforward directed to the eastern frontier of the Lower Kingdom. Accordingly we find that while only one name in the Thebaid and one in Middle Aegypt were assigned to the native militia, the bulk of the Calasirians and Hermo- bytians was permanently quartered in the Delta.

The greatness of Thebes commences with the 18th dynasty of the Pharaohs, and the immediate cause of it appears to have been the collective efforts of the Upper Country to expel the Assyrian shepherds from the Delta. The Thebaid and its capital were, probably, at no period occupied by these invaders; since, according to Manetho's account of the 17th dynasty, there were then two contemporaneous kingdoms in Aegypt - the Delta governed by the Hyksos, and the Thebaid by native monarchs. Thoutmosis, king of Thebes, was the principal agent in the expulsion of the intruders, and his exploits against them are commemorated on the temples of Karnak, Memphis and the Delta, together with the lesser states, such as Xeis, delivered from the invaders, thenceforward were under the dominion of the kings of Thebes. Its flourishing era lasted nearly eight centuries, i.e. from about 1600 to 800 B.C.

During this period the most conspicuous monarchs were Amenophis I., who appears, from the monuments, to have received divine honours after his decease, and to have been regarded as the second founder of the monarchy. He probably carried his arms beyond the north-eastern frontier of the Delta into Syria, and his presence in Aethiopia is recorded in a grotto at Ibrin near Aboosimbel. The victories or conquests of Amenophis in the N. and S. are inferred from the circumstance that in the sculptures he is represented as destroying or leading captive Asiatic and Aethiopian tribes. Next in succession is Thothmes I., with whose reign appears to have begun the series of Theban edifices which excited the wonder of the Greeks, who beheld them almost in their original magnificence, and of all subsequent travellers. The foundations, at least, of the palace of the kings were laid by this monarch. Thothmes also, like his predecessors, appears, from the monuments, to have made war with Assyria, and to have extended his dominion as high up the Nile as the island of Argo in upper Nubia. Thothmes II. maintained or even enlarged the realm which he inherited, since his name has been found at Gerebel- E'rdel, the Napata of the Romans, lat. 18° 30' N. At this period Aethiopia was apparently an appendage of the Theban kingdom, and its rulers or viceroys seem to have been of the blood royal of Aegypt, since now for the first time, and until the reign of Seti Menepthah (Rosellini, Mon. Reg. tab. xxxi.-xv.), we meet with the title of the royal son or prince of Aethiopia. The records of this reign have nearly perished; the great obelisks of Karnak, however, attest the flourishing condition of contemporary art. They were erected by Nenot Amen, the sister of Thothmes II., who appears, like the Niouera of the
And this consideration is the more important towards a correct estimate of the resources of the Theban kingdom, since its proper territory barely sufficed for the support of its dense population, and there is no evidence of its having any remarkable traffic by sea. The monuments of Amenophis III. stretched to within five days' journey of Axum on the Red Sea; for a scrawled inscription with his name and that of his wife Taia mentions the land of Karoee or Kades, supposed to be Coloe (Rosellini, *Mon. stor. ii. 1, 261; Birch, *Coll.Brit. Mus.* p. 83), as its southern limit. Thebes was enriched by this monarch with two vast palaces, one on the eastern, the other on the western bank of the Nile. He commenced and erected the greater portion of the buildings at Luxor. On the walls of their chambers Amenophis was designated "The vassal of the Memnonian," an unknown people, and the "Pacifier of Aegypt." From the fragment of a monolithic granite statue now in the Louvre, it may be inferred that his victories were obtained over negro races, and consequently were the results of campaigns in the interior of Libya. Amenophis III. has a further claim to notice, since he was probably the Memnon, son of Aurora, whom Achilles slew at the siege of Troy. Of all the Aethiopian works the Memnonian statues, from their real magnitude and from the fabulous stories related of them, have attracted the largest share of attention. By the word Memnon the Greeks understood an Aethiopian or man of dark complexion (Steph. B. s. v.; Agath. *op. Gr. Geog. Min.*), a rather, perhaps, a dark-complexioned warrior (comp. Enestath, ad II. v. 639); and the term may very properly have been applied to the conqueror of the southern land, who was also hereditary prince of Aethiopia. The statues of Memnon, which now stand alone on the plain of Thebes, originally may have been the figures at the entrance of the long dromos of cri-sphinxes which led up to the Amenothis or palace of Amenophis. Of the eastern and northern limits of the Theban kingdom under the third Amenophis, we have no evidence similar to that afforded by the tablet of Karmak; yet from the monuments of his battles we may infer that he levied tribute from the Libyans upon the Red Sea and in the peninsula of Sinai, and at one time pushed his conquests as far as Mesopotamia. According to Manetho he reigned 51 years: his tomb is the most ancient of the sepulchres in the *Bah-el-Mekob;* and even so late as the Ptolemaic age he had divine honours paid him by a special priest-college called "The pastophori of Amenophis in the Memnonia." (Kenrick, *Ancient Aegypt.* vol. ii. p. 246.)

Seti Menepthah is the next monarch of the 18th dynasty who, in connection with Thebes, deserves mention. Besides the temples which he constructed at Amada in Nubia and at Silsilis (Silsil), he began the great palace called Menepthathenion in that city, although he left it to be completed by his successors Rameses II. and III. From the paintings and inscriptions on the walls at Karmak and Luxor it appears that this monarch triumphed over five Asiatic nations as well as over races whose position cannot be ascertained, but whose features and dress point to the interior of Libya. The tomb and sarcophagus of Seti Menepthah were discovered by Belzoni in the *Bah-el-Mekob.* (Travels, vol. i. p. 167.) If he be the same with the Sethos of the lists, he reigned 50 or 51 years. When we return...
the name of Ramesses II. and III., the latter of whom is the Sesostris of Herodotus, and who may therefore be regarded as a clearly historical personage. There can be no doubt of the greatness of Thebes under this dynasty. In this, as in other in-
stances where Egypt is concerned, the monuments of the country enable us to approach the truth, while the credulity of the Greek travellers and his-
torians in accepting the narrations of the Egyptian priests — naturally easier, after their subject by the Persians, to exalt their earlier condition — only tends to bewilder and mislead. Thus, for example, Diodorus (i. 54) was informed that Sesostris led into the field 200,000 infantry, 24,000 cavalry, and 27,000 chariots; and he appeals to the passage already cited from Homer to show that Thebes sent so many chariots out of its hundred gates. There is no evidence that the Egyptians then possessed a fleet in the Mediterranean; yet Diodorus numbers among his conquests the Cyclades, and Desarechus (Schol. in Apoll. Rhod. iv. 272) assigns to him “the greater part of Europe.” The monuments, on the contrary, record nothing so incredible of this monarch; although if we may infer the extent of his conquests and the number of his victories from the space occupied on the monuments by their pictorial records, he carried the arms of Egypt beyond any previous boundaries, and eunted among his subjects races as various as those which, nearly 17 centuries later, were ruled by Trajan and the Antonines. The reign of Ramesses was of 60 years duration, that is nearly of equal length with his life, for the first of his victories — that recorded on the propylae of the temple of Luxor — and much more fully on those of Abuosibyl — was gained in his fifth year. We must refer to works professesly dealing with Eg-
yan annals for his history; here it will be sufficient to observe of Ramesses or Sesostris that he added to Thebes the Ramessene, now genera-
ly admitted to be the “monument of Osyman-
dya,” upon the western bank of the Nile; that he was distinguished from all his predecessors by the extent of his conquests and the wisdom of his laws; and among his subjects for his strength, calmness, and valour. The very pre-eminence of Ramesses III. has, indeed, obscured his authentic history. To him were ascribed many works of earlier and of later monarchs, such as the canal of the Pharaohs, between the Nile and the Red Sea; the dykes and embankments which rendered the Delta habitable; the great wall, 1,500 stadia in length, between Pelisium and Helopolis, raised as a barrier against the Syrians and Aulans; a re-partition of the land of Egypt; the law of hereditary occupation (Arat. Pol. vi. 10); and foreign conquests, or at least expeditions into Western Asia, which rendered tributary to him even the Colchians and the Bac-
trians. (Tacit. Ann. ii. 60.)

With the 21st dynasty appear the traces of a revolution affecting the Upper Kingdom. Tantite and Habite Pharaohs are now lords of the Nile-valley; and these are succeeded by an Aethiopian dynasty, marking invasion and occupation of the Theban by a foreigner. Perhaps, as Egypt became more in-
volved with the affairs of Asia — a result of the con-
quests of the house ofRamesses — it may have proved expedient to remove the seat of government nearer to the Syrian frontier. The dynasty of Sethos, the Aethiopian, however, indicates a revolt of the pro-
vinces S. of the cataracts; and even after the A-
thiopians had withdrawn, the Lower Kingdom re-
tained its pre-eminence. The Saite Pharaohs feared or despised the native militia, and surrounded themselves with foreign mercenaries. Greek col-
onies were established in the Delta; and Aegypt maintained on the frontier a series of praetor-
dial to Thebes, since it implied that the old isola-
tion of the land was at an end, and that the seat of power was on the Syrian, and not on the Aethiopian frontier. The stages of its decline cannot be traced; but Thebes seems to have offered no opposition, after the fall of Memphis, to the Persians, and certainly, after its occupation by Cambyses, never resumed its place as a metropolitan city. That Thebes was partially restored after the destruction of at least its secular buildings by the Persians, admits of no doubt, since it was strong enough in B.C. 86 to hold out against the forces of Ptolemy Lathyrus. But although the circuit of its walls may have been undiminished, it seems never again to have been filled as before with a dense population. The foun-
dation of Alexandria was more fatal to Thebes than even the violence of Cambyses; and its rebellion against the Macedonians was perhaps prompted by jealousy of Greek conquests in culture and religion. The land of Lathyrus lay heavy on Thebes; and from this epoch probably dates the second stage of its decline. From the glimpses we gain of it through the writings of the Greeks and Romans, it appears to have remained the head-quarters of the sacerdotal order and of old Aegyptian life and manners. As a Macedonian or Roman prefecture, it took little or no part in the affairs of Egypt; yet it profited by the general peace of the world under the Caesars, and employed its wealth in the repair or deco-
roration of its monuments. The names of Alexander and some of the Ptolemies, of the Caesars from Ti-
berius to the Antonines, are inscribed on its mon-
uments; and even in the fourth century A.D. it was of sufficient importance to attract the notice of his-
torians and travellers. Perhaps its final ruin was owing as much to the fanaticism of the Christians of the Thebaid, who saw in its sculptures only the abominations of idol-worship, as to its occupation by the Saracens and other barbarians from Nubia and Arabia. When the Saracens, who also were icono-
clasts, broke forth from Arabia, Thebes endured its final destruction, and for many centuries its name almost disappears: nor can its monuments be said to have generally attracted the notice of Europeans, until the French expedition to Egypt once again disclosed its monuments. From that period, and especially since the labours of Belzoni, no ancient city has been more frequently visited or described.

The growth of Thebes and the additions made to it by successive monarchs or dynasties have been partly traced in the foregoing sketch of its political history. A few only of its principal remains can here be noticed, since the ruins of this city form the subject of many works, and even the most condensed account of them would almost demand a volume for itself. Ancient Thebes, as has already been observed, occupied both the eastern and western banks of the Nile; and four villages, two, on each side of the river, now occupy a portion of its original area. Of these villages two, Luxor and Karnak, are on the eastern bank, and two, Geurnch and Medinet-Abao, on the western. There is some difference in the char-
acter and purpose of the structures in the opposite quarters of the city. Those on the western bank formed part of its vast necropolis; and here are found the rock-hewn painted tombs,—the tombs
of the kings,—whose sculptures so copiously illustrate the history, the arts, and the social life of Aegypt. On this side there are also the remains of temples, palaces, and halls of assembly or judecature, with their vast enclosure of walls and their long avenues of sphinxes. But the western quarter of Thebes is to be reached, after the dead, and for the service of religion and the state, while the mass of the population was contained in the eastern. Yet the numbers who inhabited the western side of the city must have been considerable, since each temple had its own establishment of priests, and each palace or public edifice its proper officers and servants. Still we shall probably be correct in describing the eastern quarter as the civil, and the western as the royal and ecclesiastical, portion of Thebes. At present no obelisks have been discovered in the western quarter, but, with this exception, the monuments of Gourneth and Medinet-Abou yield little in grandeur, beauty, or interest to those of Luxor and Karnak, and in one respect indeed are the more important of the two, since they afford the best existing specimens of Aegyptian colossal or portrait statues.

Beginning then with the western quarter,—the Memmoneum of the Ptolemic times,—we find at the northern limit of the plain, about three quarters of a mile from the river, the remains of a building to which Champollion has given the name of "Memphen-theion, because the name of Seti-Mennepthah is inscribed upon its walls. It appears to have been both a temple and a palace, and was approached by a dromos of 128 feet in length. Its pillars belong to the eldest style of Aegyptian architecture, and its bas-reliefs are singularly fine.

The next remarkable ruin is the Memmoneum of Strabo (xvii. p. 725), the tomb of Osymandyas of Didoerus, now commonly called the Ramesseion on the authority of its sculptures. The situation, the extent, and the beauty of this relic of Thebes are all strikingly occupying the first base of the hills, as they rise from the plain; and before the alluvial soil had encroached on the lower ground, it must have been even a more conspicuous object from the city than it now appears. The inequalities of the ground on which it was erected were overcome by flights of steps from one court to another, and the Ramesseion actually stood on a succession of natural terraces improved by art. The main entrance from the city is flanked by two pyramidal towers; the first court is open to the sky, surrounded by a double colonnade, and 140 feet in length and 18 in breadth. On the left of the staircase that ascends to the second court still stands the pedestal of the statue of Rameses, the largest, according to Diodorus (i. 49), of the colossal of Aegypt. From the dimensions of its feet, parts of which still remain, it is calculated that this statue was 54 feet in height and 22 feet 4 inches in breadth across the shoulders. The court is strewed with its fragments. How it was erected, or how overthrown in a land not liable to earthquakes, are alike subjects of wonder; since, without mechanical aid, the stones from which it must have been almost as difficult to cast it down from its pedestal as to transport it originally from the quarries. The walls of the second court are covered with sculptures representing the wars of Rameses III., a continuation and complement of the historical groups upon the interior walls of the pylons. Diodorus (i. 47) speaks of "monolithic figures, 16 cubits high, supplying the place of columns," and these are probably the pillars of this second court. He also mentions the attack of a city surrounded by a river; and this group of sculpture, still extant, identifies the Memmoneum with the monument of Osymandyas. A third flight of stairs conducts from the court to a small platform, and here, as before, was used for public assemblies. A sitting statue of Rameses flanked each side of the steps, and the head of one of them, now called the young Memnon adorns the British Museum. The columns and walls of the court are covered with sculptures partly of a religious, partly of a civil character, representing the homage of the 23 sons of Rameses to their parent and his offerings to the gods. Nine smaller apartments succeed to the hall. One of these was doubtless the library or "Dispensary of the Nins" (γυναικειν) of which Diodorus (i. 49) speaks, since in it are found sculptures of Thoth, the inventor of letters, and his companion Saf, the "lady of letters" and "President of the Hall of Books." This chamber had also at one time an astronomical ceiling adorned with the figures or symbols of the Aegyptian months; but it was carried off by the Persians, and the Greek travelers. Hezekias &c., knew it only from hearsay. Of the nine original chambers, two only remain, the one just described, and a second, in which Rameses is depicted sacrificing to various divinities of the Theban Pantheon. Beneath the upper portion of the Memmoneum rock-sepulchres and brick graves have been discovered, both coeval with the Ramessean dynasty (Lepsius, Ren. Arch. Jan. 1845). The entire area of the Memmoneum was enclosed by a brick wall, in the double arches of which are occasionally imbedded fragments of still more ancient structures, the remains probably of the Thebes which the 15th dynasty of the Pharaohs enlarged and adorned. A dromos NW. of the Memmoneum, formed of not less than 200 sphinxes, and at least 1600 feet in length, led to a very ancient temple in a recess of the Libyan hills. This probably was a place of strength before the lowlands on each side of the Nile were occupied for cultivation by drainage and masonry into the solid area upon which Thebes was built.

The next object which meets the traveller's eye is a mound of rubbish, the fragments of a building once occupying the ground. It is called by the Arabs Kosm-el-Hattam, or mountain of sand-torlo, and is composed of the ruins of the Amunophates, the palace or temple of Amunoph III.—the Memnon of the Greeks. About a quarter of a mile distant from the Amenophat, and nearer to the Nile, are the two colossal statues called Tuma and Chama by the natives, standing isolated on the plain and eminently above it. The most northerly of these statues is the celebrated vocal Memnon. Their present isolation, however, is probably accidental, and arises from the subsidence or destruction of an intermediate dromos, of which they formed the portals, and which led to the Amenophates. These statues have already been described in the Dictionary of Biography, s. v. Memimon [Vol. II. p. 1028]. It may be added here that the present height of these colossal figures, inclusive of the pedestal, is 60 feet. The alluvial soil, however, rises to nearly one half of the pedestal, and as there is an inscription of the age of Antoninus Pius, A. D. 139, foll, i. e. about 1720 years old, we obtain some measure of the amount of deposition in so many centuries. The blocks from which...
The statues are formed are composed of a coarse, hard breccia, intermixed with agatized pebbles. (Rasægger, Reisen, vol. ii. pt. 1. p. 410.) The village of Medinet-Abou stands about one third of a mile NW. of Aboo-El-Nineh; upon a low and rounded hill, the ruins of the most splendid structure in western Thebes. It consisted of two portions, a temple and a palace, connected with each other by a pylon and a dromos. The temple was the work of successive monarchs of the name of Thothmes, and hence has received the name of the Thothmesian. Apparently this site found favour with the sovereigns of Thebes in all ages, since, on the main building or on its numerous outworks, which extend towards the river, are inscribed the names of Thothkak, the Athelmisian, of Nectanebus, the last independent king of Thebes, of Ptolemies Soter II., and of Antoninus Pius. The original Thothmesian comprises merely a sanctuary surrounded by galleries and eight chambers; the additions to it represent the different periods of its patrons and architects. The palace of Rameses—the southern Ramesseum of Champollion—for exceeds in dimensions and the splendour of its decorations the Thothmesian, and is situated a little nearer the foot of the hills. The dromos which connects them is 265 feet in length. The sculptures on the pylons relate to the coronation of Rameses IV.; his victories over the Athelmisians. A portion of the southern Ramesseum seems to have been appropriated to the private uses of the king. The mural decorations of this portion are of singular interest, inasmuch as they represent Rameses in his hours of privacy and recreation. The walls of the southern Ramesseum generally are covered both on the outside and the inside with representations of battles, sacrifices, religious processions and ceremonies, relating to the 18th dynasty. A plain succeeds, bounded by sand-hills and heaps of Nile-mud. It is variously described by modern travellers as the site of a race-course, of a camp or barrack, or an artificial lake, over which, according to Sir Gardner Wilkinson, the dead of thebes were ferried to the neighbourhood of the necropolis. Whatever may have been its purpose, this plain is of considerable extent, being somewhat less than a mile and half in length, and more than half a mile in breadth.

The contrast between the portion of Thebes once crowded with the living, and that which was equally thronged with the dead, is less striking now, when the whole city is a desert or occupied only by a few straggling villages. But under the Pharoeis the vicinity of life and death must have been most sombre and expressive. From Gurnem to Medinet-Abou the Libyan hills, along a curve of nearly 5 miles, are honey-combed with sepulchres, and conspicuous among them are the Tombs of the Kings, situated in the valley of Bab-el-Melook. The Theban necropolis is excavated in the native calcarious rock. The meaner dead were interred in the lower ground, where the limestone is of a softer grain, and more exposed to decomposition by wind and water. This portion of the cemetery has, accordingly, fallen into decay. But the upper and harder strata of the hills are of finer and more durable texture, and here the priest-caste and nobles were interred. The tombs of the lower orders are generally without sculpture, but filled with mummies of animals accordant sacred by the Egyptians. A favourite companion in death appears to have been the ape; and such numbers of this animal have been found in one portion of the necropolis that the valley containing their mummies bears the name of the "Ape's Burial Place." Upon the graves of the upper class the portions of sculpture are lavished in a measure hardly inferior to that which marks the sepulchres of the kings. The entire rock is tunnelled by them, and by the galleries and staircases which led to the various chambers. The entrances to these tombs are rectangular, and open into passages which either pierce the rock in straight lines, or wind through it by ascending and descending shafts. Where the limestone is of a crumbling nature, it was supported by brick arches, and drains were provided for carrying off standing or casual water. The walls of these passages and chambers were carefully prepared for the artist. Rough or carious portions were cut out, and their place filled up with bricks and plaster. Their entire surface was then covered with stucco, on which the paintings were designed and highly coloured. The decorations are rarely in relief, but either drawn on the flat surface, or cut into the stucco. They are mostly framed in squares of chequer and arabesque work. The subjects of these frames or niches are very various,—ranging through religious ceremonies and the incidents of public or private life. The ornaments of these tombs may indeed be termed the miniature painting of the Egyptians. Within a space of between 40 and 50 feet no less than 1200 hieroglyphics are often traced, and finished with a minute delicacy unsurpassed even in buildings above ground, which were meant for the eyes of the living.

The Royal Sepulchres, however, form the most striking feature of the Theban necropolis. They stand in a lonely and barren valley, seemingly a natural chasm in the limestone, and resembling in its perpendicular sides and oblong shape a sarcophagus. At the lower end of this basin an entrance has been cut—there seems to be no natural mode of ingress—in the rock. Forty-seven tombs were, at one time, known to the ancients. (Diodor. i. 46.) Of these twenty-two twenty-one have been counted by modern explorers. Here repose the Thoban Pharaohs from the 18th to the 21st dynasty. The only tombs, hitherto discovered, complete are those of Amenoph III., Rameses Mennun, and Rameses III. To prepare a grave seems to have been one of the duties or pleasures of Egyptian royalty; and since the longest survivor of these monarchs rests in the most sumptuous tomb, it may be inferred that the majority of them died before they had completed their last habitation.

The queens of Egypt were buried apart from the kings, in a spot about three-fourths of a mile NW. of the temple of Medinet-Abou. Each of them bears the title of " Wife of Amun," indicating either that their consorts combined with their proper names that also of the great Theban deity, or that, after death, they were dignified by apotheosis. Twenty-four tombs have at present been discovered in this cemetery, twelve of which are ascertained to be those of the queens. The least injured of them by time and violence bears the name of Tala, wife of Amenoph III.

On the eastern bank of the Nile, the monuments are even more magnificent. The villages of Luxor and Karnak occupy a small portion only of the true Necropolis. The ruins at Luxor stand close to the river. The ancient landing place was a jetty of stone, which
THEBAE AEGYPTI.

also served to break the current of the stream. The most remarkable monuments are two obelisks of Rameses III., respectively 70 and 60 feet high, one of which still remains there, while the other has been removed to the Place de la Concorde at Paris. Their unequal height was partially concealed from the spectator by the lower obelisk being placed upon the higher pedestal. Behind them were two monolithical statues of that monarch, in red Syenite granite. These are now covered from the breeze downwards with rubbish and fluvial deposit, but were, originally, including their chains or bases, 90 feet high. Next succeeds a court, surrounded by two rows of double columns, 198 feet long and 170 broad. It is entered through a portal 51 feet in height, whose pyramidal wings are inscribed with the battles of Rameses. On the opposite side of the court a second portal, erected by Anamoph III., opens upon a colonnade which leads to a smaller court, and this again terminates with a portico composed of four rows of columns, eight in each row. Beyond the third portico follow a considerable number of apartments, flanking a sanctuary on the walls of which are represented the birth of Anamoph, and his presentation to Amon. A dromos of ambro-sphinxes, and various buildings now covered with sand and dried mud, formerly connected the quarter of eastern Thebes, represented by Luxor, with that represented by Karnak. Near to the latter place a portion of the dromos still exists, and a little to the right of it a second dromos of coni-sphinxes branches off, which must have been one of the most remarkable structures in the city. It led up to the palace of the kings, and consisted of a double row of statues, sixty or seventy in number, each 11 feet distant from the next, and each having a lion's body and a ram's head. The SW. entrance of the palace is a lofty portal, followed by four spacious courts with intervening gateways.

The grandeur of the palace is, in some degree, lessened by later additions to its plan, for on the right side of the great court was a cluster of small chambers, while on its left were only two apartments. Their object is unknown, but they probably served as lodgings or offices for the royal attendants. In the first of the two main courts stood two obelisks of Thothmes I., one in fragments, the other still erect and uninjured. In a second court to the right of the first, there were two obelisks also; the one which remains is 92 feet high. The oldest portion of the palace of Karnak appears to be a few chambers, and some polygonal columns bearing the shield of Scoortsen I. To these—the nucleus of the later structures—Thothmes III. made considerable additions; among them a chamber whose sculptures compose the great Karnak Tablet, so important a document for Egyptian chronology.

But the Great Court is surpass'd in magnificence by the Great Hall. This is 80 feet in height, and 329 feet long by 179 broad. The roof is supported by 154 columns, 12 in the centre and 70 on each side. The central columns are each 66 feet high, clear of their pedestals, and each 11 feet in diameter. The pedestals were 10 feet high, and the abacæ over their capitals, on which rested the architraves of the ceiling, was 4 feet in depth. The columns were each about 27 feet apart from one another. The side-columns stood in 7 rows, were each 41 feet high, and 9 feet in girth. Light and air were admitted into the building through apertures in the side walls. The founder of the palace was Seti-Menepthah, of the 18th dynasty; but one reign cannot have sufficed for building so gigantic a court, and we know indeed not only that many of the historical bas-reliefs which cover the walls were contributed by his son Rameses II., but also that the latter added to the Great Hall, on its NW. side, a vast hypothalurian court, 375 feet in breadth, by 329 in length. This, like the hall, had a double row of columns down its centre, and a covered corridor round its sides. Four gateways opening to the four quarters gave admission into this court: and to the principal one which fronted the Nile an avenue of coni-sphinxes led up, headed by two granite obelisks of Ramses II.

The purpose for which these spacious courts and their annexed halls and esplanades were erected was perhaps partly religious, and partly secular. Though the kings of the 18th and succeeding dynasties had ceased to be chief-priests, they still retained many ceremonial functions, and the sacred calendar of Aegypt abounded in days of periodical meetings for religious objects. At such panegyries the priests alone were a host, and the people were not excluded. From the sculptures also it appears that the Court of Royal Palaces was the place where troops were reviewed, embassies received, captives executed or distributed, and the spoils or honours of victory apportioned. Both temples and palaces also served occasionally for the encampment of soldiers and the administration of justice. The temperature of the Theban rendered vast spaces indispensable for the congregation of numbers, and utility as well as pomp may have combined in giving their colossal scale to the structures of the Pharaohs.

In the Great Hall a great number of the columns are still erect. The many which have fallen have been undermined by water loosening the soil below; and they fall the more easily, because the architraves of the roof no longer hold them upright. The most costly materials were employed in some parts of the palace. Cornices of the finest marble were inlaid with ivory mouldings or amalgamated with beaten gold.

These were the principal structures of the eastern moiety of Thebes: but other dromoi and gateways stand within the circuit of its walls, and by their sculptures or inscriptions attest that the Macedonian as well as the native rulers extended, renovated, or adorned the capital of the Upper Country. The eastern branch of the dromos which connects Luxor with Karnak appears from its remains to have been originally 500 feet in length, and composed of a double row of ram-headed lions 58 in number. The loftiest of Egyptian portals stands at its SW. extremity. It is 64 feet high, but without the usual pyramidal propyla. It is indeed a work of the Greek era, and was raised by Ptolemy Euergetes I. Rameses IV. and Rameses VIII. added temples and a dromoi to the city. Nor was Thebes without its benefactors even so late as the era of the Roman Caesars. The name of Tiberius was inscribed on one of its temples; and Hadrian, while engaged in his general survey of the Empire, directed some repairs or additions to be made to the temple of Zeus-Ammon. That Thebes, as Herodotus and Diodorus saw it, stood upon the site and incorporated the remains of a yet more ancient city, is rendered probable by its sudden expansion under the 18th dynasty of the Pharaohs, as well as by the extent and magnificent aspects of its monuments. R. of the catacombs thun the poppy Egyptian style. It seems hardly questionable that
Th#bes was indebted for its greatness originally to its being the principal centre of Ammon-worship—a worship with which the two hands connected it with Meroe, and, on the other, with the islands of the Libyan desert. The strength which the Thebais and its capital thus acquired not only enabled it to rise superior to Abydos in the earlier period, but also to expel the Assyrian invaders from the Delta. It becomes then an interesting question which quarter of Thebes was its cradle? Did it spread itself from the eastern or the western shore of the Nile? Both Diodorus and Strabo are agreed in placing the "old town," with its Ammonian temple, on the eastern bank of the river; and this site too was the more accessible of the two, whether its population came from the left or, as it is more likely they did, from the right shore. Between Luxor and Karnak lies the claim to be considered as the site of the earliest Dromos. Now in the former place there is no conspicuous trace of Ammon-worship, whereas the latter, in its ram-headed dromos, abounds with symbols of it. At Karnak, every monument attests the presence of Ammon. Osiris indeed appears as his son or companion on the sculptures, and in some of the temple-legends they were represented as joint founders of the shrine. But Ammon was without doubt the elder of the two. We may accordingly infer that the first Thebes stood nearly on the site of the present Karnak; at a period anterior to all record: that it expanded towards the river, and was separated by the whole breadth of the stream and of the plain to the foot of the Libyan hills from the necropolis. Finally, that as its population became too large for the precincts of the eastern plain, a suburb, which grew into a second city, arose on the opposite bank of the Nile; and thus the original distinction between eastern and western Thebes partially disappeared, and the river, having thenceforward bastalions on both its banks, no longer parted by a broad barrier the city of the living from the city of the dead.

The territory of Thebes was named Thebais (v. Geval, sc. χώρα, or ό όν ων των, the Upper Country, Ptol. iv. 5. § 62), the modern Sais or Ptolemais, and was one of the three principal divisions of Egypt. Its frontiers to the S. varied accordingly as Aegypt or Aethiopia preponderated, the Theban Pharaohs at times ruling over the region above the Cataracts as far S. as Ihierea Sycaminia lat. 23° 8' N.; while, at others, the kings of Meroe planted their garrisons N. of Syene, and, at one period, occupied the Thebais itself. But the ordinary limits of Upper Aegypt were Syene to S., lat. 24° 5' N., and Hermopolis Magna to N., lat. 27° 43' N. On the E. they were bounded by the W. by the Libyan hills and desert. As rain seldom falls in the Thebais (Herod, iii. 10), and as its general surface is rocky or sandy, the breadth of cultivated land depends on the alluvial deposit of the Nile, and this again is regulated by the conformation of the banks on either side. For a similar cause the population of the Thebais was mostly gathered into towns and large villages, both of which are often dignified by ancient writers with the appellation of cities, but numerous cities were incompatible with the physical character of this region, and its population must have been considerably below the estimate of it by the Greeks and Romans. For the towns was divided into ten nomes (Strab. xvi. p. 787), and consequently ten balls in the Labyrinth were appropriated to its Nomarchs. But this number apparently varied with the boundaries of Upper Aegypt, since Pliny (v. 9) enumerates eleven, and other writers mention fourteen Nomes. The physical aspect of the Thebais requires especial notice, since it differed, both geologically and in its Fauna and Flora, from that of Lower Aegypt.

For the most part it is a narrow valley, intersected by the river and bounded by a double line of hills, lofty and abrupt on the eastern or Arabian side, lower and interrupted by sandy plains and valleys on the Libyan or western. The desert on either side produces a stunted vegetation of shrubs and herbs, which emit a slight aromatic odour. The cultivable soil is a narrow strip on each side of the Nile, forming, with its bright verdure, a strong contrast to the brown and arid hue of the surrounding district. The entire breadth of this valley, including the river, does not exceed 11 miles, and sometimes is contracted by the rocky banks of the Nile even to two.

Upper Aegypt belongs to Nubia rather than to the Heptanomia or the Delta. Herodotus (iii. 10) was mistaken in his statement that rain never falls in the Thebais. It is, however, of rare occurrence. Showers fall annually during four or five days in each year, and about once in eight or ten years heavy rains fill the torrent-beds of the mountains, and convert the valleys on either side of the Nile into temporary pools. That this was so even in the age of Heucataeus and Herodotus is proved by the circumstance that the lions on the cornices of the Theban temples have tubes in their mouths to let the water off.

But the fertility of the Thebais depends on the overflow of the Nile. From Syene nearly to Latopolis, lat. 25° 17' N., the cultivable soil is a narrow rim of alluvial deposit, bounded by steep walls of sandstone. On the Arabian shore were the quayries from which the great temples of Upper Aegypt were constructed. At Apollinopolis Magna (Edfu) the sandstone disappears from the W. bank of the river, and on the E. it extends but a little below that city. Four miles below Elithyia, the limestone region begins, and stretches down nearly to the apex of the Delta, descending on the Libyan side in terraces to the Mediterranean. At this point a greater breadth of land is cultivable, and in the Arabian hills deep gorges open towards the Red Sea, the most considerable of which are the valleys that run from Elithyia in a S.E. direction to Bereice, and from Coptos, past the porphyry quarries, to Cosser on the Red Sea. The banks and stations for the caravans which the Thebais Pharaohs or the Ptolemies constructed in these valleys are still occasionally found in the sand. At Qarun is the Nile-valley is nearly 3 miles wide, but it is again contracted by the rocks at Gheislein, where, owing to the precipitous character of the banks, the road quits the river and crosses the eastern desert to Hermomitis.

The next material expansion of the Nile-valley is at the plain of Thebes. At this point both chains of hills curve boldly away from the river, and leave an area of more than 5 miles in length and 3 in breadth. At the northern extremity of this plain the banks again contract, and at Gourneh are almost close to the Nile. Re-opening again, the
THEBAE AEGYPTI.

borders of the stream as far as Hermopolis Magna, the northern boundary of the Thebaid, generally extensive tableland, called the Thebais or the Theban Plain, is about forty-league square, or a little less than the W. about two miles. They do not indeed observe an unbroken line, but the alluvial soil, where the mouths of the collateral valleys permit, occasionally stretches much farther into the country. Canals and dykes in the Pharaonic period admitted and retained the Nile's deposit to an extent unknown either in Grecian, Roman, or modern eras.

Seen from the river the Thebaid, in the flourishing periods of Egypt, presented the most animated spectacle of cultivation and industry, wherever the banks admitted of room for cities or villages. Of the scenery of the Nile, its teeming population and multitudinous river-craft, mention has already been made in the article NILUS. Among many others, the following objects were beheld by those who travelled from Syene to Hermopolis. At first the general appearance of the shores is barren and dreary. Karnum-Ombos, the ancient Ombi, would first arrest attention by the brilliant colours of its temples, and, at certain seasons of the year, by the festivals held in honour of the crocodile-headed deity Sebek. At times also, if we may credit the Roman satirist (Juvenal, Sat. xv.), the shore at Ombi was the scene of bloody fairs with the crocodile exterminators from Tebetyra. Sixteen miles below Ombi was the seat of the special worship of the Nile, which, at this point, owing to the number of its sandstone banks, admits of a narrow road only on either side, and seems to occupy the whole breadth of Egypt. Here too, and on the eastern bank especially are the vast quarries of stone which supplied the Theban architects with their durable and beautiful materials. Various landing-places from the river gave access to those quarries; the names of successive sovereigns and princes of the xviiith dynasty, their wars and triumphs, are recorded on the rocks; and blocks of stone and monolithic shrines are still visible in their galleries. The temples of Apollonopolis Magna (Edfu), the hypogeum of Elibyra, Thebes occupying either bank, Coptos, long the seat of Egyptian commerce with India, the temples of Athor and Isis at Tebetyra, the mouth of the ancient branch of the Nile, the channel of Iunu at Dionsopolis Farra, the necropolis of Abydos, near which runs the highroad to the greater Oasis, the linen-works and stone-quarries of Tanis, the rich stock of the tomb (Ekhmu), the sepulchral chambers at Lycopolis, and, finally, the superb portico of Hermopolis Magna, all evince, within a compass of about 350 miles, the wealth, enterprise, and teeming population of Upper Egypt.

The vegetation of this region announces the approach to the tropics. The productions of the desert, stunted shrubs and trees, resemble those of the Arabian and Libyan wastes. But wherever the Nile fertilises, the trees and plants belong rather to Araboitia than to the lower country. The cynamore never disappears: the Theban palm and the date-palm take its place. The lotus (Nymphaea lotus and Nymphaea caerulea) is as abundant in the Thebais as the papyrus in the Delta. It is the symbol of the Upper Land: its blue and white cups enliven the pools and canals, and representations of them furnished a frequent and graceful ornament to architecture. Its leaf afforded a plentiful and appetizing bread to the poorer classes. The deserts of the Thebais, which in Christian times swarmed with monasteries and hermitages, contained the wolf, hyena, and jackal: but the larger carnivorous animals of Libya were rarely seen in Egypt. (Herc. ii. 63.) In the Pharaonic times the hippopotamus was found in the Nile below the Cataracts: more recently it has seldom been found of them. The crocodile, being an object of worship in several of the Theban monasteries, was doubtless more abundant than it is now. From both papyri and sculptures we know that the Theban landowners possessed horned cattle and sheep in abundance, although they kept the latter for their wool and milk principally; and the chariots of Thebes attest the breeding and training of horses. From extant drawings on the monuments we know also that horticulture was a favourite occupation in Upper Egypt.

The population of the Thebais was probably of a purer Egyptian stamp than that of the Delta; at least its admixtures were derived from Arabia or Meroe rather than from Phoenicia or Greece. Its revolutions, too, proceeded from the south, and it was comparatively unaffected by those of the Lower Country. Even as late as the age of Tiberius,A.D. 14-37, the land was prosperous, as is proved by the extension and restoration of so many of its public monuments; and it was not until the reign of Diocletian that its ruin was consummated by the inroads of the Blemmyes, and other barbarous tribes from Nubia and the Arabian desert. [W. B. D.]

THEBAE (Θηβαι, orig. Θήβα, Dor. Θήβα: Eth. Θήβαιος, fem. Θήβαια, Thesbian, fem. Thesba), the chief city in Boeotia, was situated in the southern plain of the country, which is divided from the northern by the ridge of Ochaeus. Both these plains are surrounded by mountains, and contained for a long time two separate confederacies, of which Orchomenus in the north and Thebes in the south were the two leading cities.

I. HISTORY.

No city in Greece possessed such long continued celebrity as Thebes. Aitnae and Sparta, which were the centres of Grecian political life in the historical period, were poor in mythical renown, while Argos and Mycenae, whose mythical annals are full of glorious recollections, sank into comparative insignificance in historical times, and Mycenae indeed was blotted out of the map soon after the Persian wars. But in the mythical ages Thebes shone pre-eminent, while in later times she always maintained her place as the third city of Greece; and after the battle of Leuctra was for a short period the ruling city. The most celebrated Grecian legends cluster round Thebes as their centre; and her two sieges, and the fortunes of her royal houses, were the favourite subjects of the tragic muse. It was the native city of the great seer Teiresias and of the great musician Amphion. It was the reputed birthplace of the two deities Dionysus and Heracles, whence Thebes is said by Sophocles to be "the only city where mortal women are the mothers of gods (οὐ δὴ μὴν πρώτους αὐτὰς θεὰς ἔτυχέναι), Fragm. ap. Diceniarch, § 17, ed. Müller; Mure, Tour in Greece, vol. i. p. 253.)

According to the generally received tradition, Thebes was founded by Cadmus, the leader of a Phoenician colony, who was called the city Cadmeia (Καδμεία), a name which was afterwards confined to the citadel. In the Odyssey, Amphion and Zethus, the two sons of Antiope by Zeus, are represented as the first founders of Thebes and the first
THEBES BOEOTIAE.

builders of its walls. (Od. xi. 262.) But the lexicographers placed Amphin and Zethus lower down in the series, as we shall presently see. The legends connected with the foundation of the city by Cadmus are related elsewhere. [Dict. of Biogr. and Myth., art. Cadmus.] The five Sparti, who were the only survivors of the warriors sprung from the dragon's teeth, were the reputed ancestors of the noblest families in Thebes, which bore the name of Sparti down to the latest times. It is probable that the name of their families gave origin to the fable of the sowing of the dragon's teeth. It appears certain that the original inhabitants of Thebes were called Cadmeans (Kadmeoikoi, II. iv. 388, 391, v. 807, x. 288, Od. xi. 276) or Cadmians (Kadmeioi, II. iv. 385, v. 804, xiii. 680), and that the southern plain of Boeotia was originally called the Cadmean land (Kadmeioi teip', Thuc. i. 12). The origin of these Cadmeans has given rise to much dispute among modern scholars. K. O. Müller considers Cadmus a god of the Tyrrhenian Pelasgiots, and maintains that the Cadmeans are the same as the Tyrrhenian Pelasgiots. Welecker endeavours to prove that the Cadmeans were a Cretan colony; while other writers adhere to the old traditions that the Cadmeans were Phoenicians who introduced the use of letters into Greece. (Müller, Orchomenos, p. 111, seq. 2nd ed.; Thirlwall, Hist. of Greece, vol. i. p. 111.) It is needless, however, to enter into the discussion of a subject respecting which we possess no materials for arriving at a satisfactory conclusion. It is certain that the Greeks were indebted to the Phoenicians for their alphabet; but whether the Cadmeans were a Phoenician colony or some other race must be left uncertain.

But we must return to the legendary history of Thebes. Cadmus had one son, Polydorus, and four daughters, Ino, Semele, Antanoë, and Agave, all of whom are celebrated in the mythical annals. The tales respecting them are given in the Dict. of Biogr. and Myth., and it is only necessary to mention here that Ino became the wife of Adrastus and the mother of Melicertes; Semele was beloved by Zeus and afterwards the mother of the god Dionysus; Antanoë was the mother of the celebrated hunter Actaeon, who was torn to pieces by the dogs of Artemis; and Agave was the mother of Pentheus, who, when Cadmus became old, succeeded him as king of Thebes, and whose miserable end in attempting to resist the worship of Dionysus forms the subject of the Bacchae of Euripides. After the death of Pentheus, Cadmus retired to the Illyrians, and his son Polydorus became king of Thebes. Polydorus is succeeded by his son Labdacus, who leaves at his death an infant son Laius. The throne is usurped by Lycur, whose brother Nycteus is the father of Antiope, who becomes by Zeus the mother of the twin sons, Amphin and Zethus. Nycteus having died, Antiope is exposed to the persecutions of her uncle Lycur and his cruel wife Dirce, till at length her two sons, Amphin and Zethus, revenge her wrongs and become kings of Thebes. They fortify the city; and Amphin, who had been taught by Hermes, possessed such exquiste skill on the lyre, that the stones, obedient to his strains, moved of their own accord, and formed the wall ("movit Ampthon lapides canendo," Hor. Carm. iii. 11). The remainder of the legend of Amphin and Zethus need not be related; and there can be no doubt, as Mr. Grote has remarked, that the whole story was originally unconnected with the Cadmeian family, as it still stands in the Odyssey, and has been interwoven by the lexicographers into the series of the Cadmeian myths. In order to reconcile the Homeric account of the origin of the city by Amphin and Zethus with the usually received legend of its foundation by Cadmus, it was represented by later writers that, while Cadmus founded the Cadmea, Amphin and Zethus built the lower city (την πολύν των κατω), and gave to the united city the name of Thebes. (Paus. iv. 5, §§ 2, 6.)

After Amphin and Zethus, Laius became king of Thebes; and with him commences the memorable story of Oedipus and his family, which is too well known to need repetition here. When Oedipus was expelled from Thebes, after discovering that he had murdered his father Laius and married his mother Jocasta, his two sons Eteocles and Polynices quarrelled for their father's throne. Their disputes led to the two sieges of Thebes by the Argive Adrastus, two of the most memorable events in the legendary history of Greece. They formed the subject of the two epic poems, called the Thebais and the Epigoni, which were considered only inferior to the Iliad and the Odyssey. Polynices, having been driven out of Thebes by Eteocles, retires to Argos and obtains the aid of Adrastus, the king of the city, to reinstate him in his rights. Polynices and Adrastus are joined by five other heroes, making the confederacy known under the name of the "Seven against Thebes." The names of these seven chiefs were Adrastus, Amphaiias, Capaneus, Hippomedon, Parthenopaeus, Tydeus, and Polynices; but there are discrepancies in the lists, as we shall notice more fully below; and Aeschylus (Sept. L. Thes. 461) in particular omits Adrastus, and inserts Eteocles in his place. The Seven Chiefs advanced against Thebes, and each attacked one of the celebrated gates of the city. Polynices and Eteocles fell by each other's hands; and in the general engagement which followed the combat of the two brothers, the Argives were defeated, and all their chiefs slain, with the exception of Adrastus, who was saved by the swiftness of his horse Areus, the offspring of Poseidon. A few years afterwards the sons of the Seven Chiefs undertook an expedition against Thebes, to avenge their fathers' fate, hence called the war of the Epigoni or Descendants. This expedition was also led by Adrastus, and consisted of Aegeidus, son of Adrastus, Thersander, son of Polyneices, Alemos and Amphialos, sons of Amphaiias, Diomedes, son of Tydeus, Scironius, son of Capaneus, and Paeonius, son of Parthenopaeus. The Epigoni gained a victory over the Cadmeans at the river Gissas, and drove them within their walls. Upon the advice of the seer Teiresias, the Cadmeans abandoned the city, and retired to the Illyrians under the guidance of Laodamas, son of Adrastus. (Apollod. iii. 7, § 4; Herod. v. 57—61; Paus. iv. 5, § 13; Diod. iv. 65, 66.) The Epigoni thus became masters of Thebes, and placed Thersander, son of Polynices, on the throne. (For a full account of the legends of Thebes, see Grote, Hist. of Greece, vol. i. c. xiv.) According to the mythical chronology, the war of the Seven against Thebes took place 20 years before the Trojan expedition and 30 years before the capture of Troy; and the war of the Epigoni was placed 14 years after the first expedition against Thebes, and consequently only 4 years before the departure of the Greeks against Troy. (Clinton, F. B. vol. i. p. 140.)
There are many important events in the mythical times of Thebes, which was not interwoven with the series of the legends already related. This is the birth of Heracles at Thebes, and the important service which he rendered to his native city by his war against Orophemus. It was stated that the Thebans were compelled to pay tribute to Erginus, king of Orophemus, but that they were delivered from the tribute by Heracles, who marched against Orophemus, and greatly reduced its power (Paus. ii. 37. § 2; Strab. ii. p. 414; Dio. iv. 18). This legend has probably arisen from the historical fact, that Orophemus was at one time the most powerful city in Boeotia, and held even Thebes in subjection.

Thebes is frequently mentioned in Homer, who speaks of its celebrated seven gates (H. iv. 406, Od. xi. 263); but its name does not occur in the catalogue of the Greek cities which fought against Troy, as it was probably supposed not to have recovered from its recent devastation by the Epigoni. Later writers, however, related that Thersander, the son of Polyneices, and another Aegacoonus, was slain in Mycia by Telephus, before the commencement of the siege; and that upon his death the Thebans chose Peionesus as their leader, in consequence of the tender age of Tissamenes, the son of Thersander. (Paus. ix. 5. §§ 14, 15.) In the Iliad (ii. 494) Peionesus is mentioned as one of the leaders of the Boeotians, but it is not otherwise connected with Thebes.

According to the chronology of Thucydides, the Cadmeans continued in possession of Thebes till 60 years after the Trojan War, when they were driven out of their city and country by the Boeotians, an Athenian tribe, who migrated from Thessaly. (Thuc. i. 12; Strab. ii. p. 401.) This seems to have been the genuine tradition; but as Homer gives the name of Boeotians to the inhabitants of the country called Boeotia in later times, Thucydides endeavours to reconcile the authority of the poet with the other tradition, by the supposition that a portion of the Aeolic Boeotians had settled in Boeotia previously, and that these were the Boeotians who sailed against Troy. According to other accounts, Thebes was taken by the Thracians and Pelasgians during the Trojan War, and its inhabitants driven into exile in Thessaly, whence they returned at a later period. (Strab. ii. p. 401; Dio. xix. 53.)

Pausanias gives us a list of the kings of Thebes, the successors of Tissamenes, till the kingly dignity was abolished and a republic established in its place (ii. 5. § 16). But, with the exception of one event, we know absolutely nothing of Theban history, till the dispute between Thebes and Plataea in the latter end of the sixth century b.c.

The event to which we allude is the legislation of Philelaus, the Corinthian, who was encomium of Boeotia, also a Corinthian, and the victor in the Olympic games, b.c. 728. Both Philelaus and Boeotia left their native cities and settled in Thebes, where the former drew up a code of laws for the Thebans, of which one or two particulars are mentioned by Aristotle. (V. ii. 9. §§ 6, 7.) At the time when Thebes first appears in history, we find it under an oligarchical form of government, and the head of a political confederation of some twelve or fourteen Boeotian cities. The greater cities of Boeotia were members of this confederation, and the smaller towns were attached to one or other of these cities in a state of dependence. (BOEOTIA, p. 415.)

The affairs of the confederation were managed by certain magistrates or generals, called Boeotarchs, of whom there were eleven at the time of the battle of Delium (v. c. 422), two being elected by Thebes, and one apparently by each of the other members of the confederation (Thuc. iv. 91). But the real authority was vested in the hands of the Thebans, who used the power of the confederation with an almost exclusive view to Theban interests, and kept the other states in virtual subjection.

The first well-known event in Grecian history is the dispute, already mentioned, between Thebes and Plataea. The Plataeans, disconsolate with the supremacy of Thebes, withdrew from the Boeotian confederation, and surrendered their city to the Athenians. This led to a war between the Thebans and Athenians, in which the Thebans were defeated and compelled to cede to the Plataeans the territory S. of the Apsoms, which was made the boundary between the two states. (Herod. vi. 108; Thuc. iii. 69.) The interference of Athens upon this occasion was bitterly resented by Thebes, and was the commencement of the long enmity between the two states, which exercised an important influence upon the course of Grecian history. This event is usually placed in B.C. 519, upon the authority of Thucydides (l. c.); but Mr. Grote brings forward strong reasons for believing that it must have taken place after the expulsion of Hippias from Athens in B.C. 510. (Hist. of Greece, vol. iv. p. 222.)

The hatred which the Thebans felt against the Athenians was probably one of the reasons which induced them to desert the cause of Grecian liberty in the great struggle against the Persian power. But in the Peloponnesian War (B.C. 427) the Theban orator pleaded that their alliance with Persia was not the fault of the nation, but of a few individuals who then exercised despotic power. (Thuc. iii. 62.) At the battle of Plataea, however, the Athenians showed so much reluctance, and fought resolutely against the Athenians, who were posted opposite to them. (Herod. ix. 67.) Eleven days after the battle the victorious Greeks appeared before Thebes, and compelled the inhabitants to surrender their mediating leaders, who were immediately put to death, without any trial or other investigation. (Herod. ix. 87, 88.) Thebes had lost so much credit by the part she had taken in the Persian invasion, that she was unable to assert her former supremacy over the other Boeotian towns, which were ready to enter into alliance with Athens, and would doubtless have established their complete independence, had not Sparta supported the Thebans in maintaining their ascendancy in the Boeotian confederation, as the only means of securing the Boeotian cities as the allies of Sparta against Athens. With this view the Spartans assisted the Thebans in strengthening the fortifications of their city, and compelled the Boeotian cities by force of arms to acknowledge the supremacy of Thebes. (Dio. x. 52; Justin. iii. 6.) In B.C. 457 the Athenians sent an army into Boeotia to oppose the Laconian forces in that country, but they were defeated by the latter near Tanagra. Sixty-two days after this battle (B.C. 456), when the Laconian forces had returned home, the Athenians, under the command of Myronides, invaded Boeotia a second time. This time they met with the most signal success. At the battle of Plataea they defeated the combined forces of the Thebans and Boeotians, and obtained in consequence possession of Thebes and of
THEBES BOEOTIÆ.

the other Thebæan towns. A democratic form of government was established in the different cities, and the oligarchical leaders were driven into exile. (Thuc. i. 108; Dio. xi. 81.) This state of things lasted barely ten years; the democracy established at Thebes was ill-conducted (Arist. Pol. v. 2 § 6); and in n. c. 447 the various Theban exiles, combining their forces, made themselves masters of Orchomenus, Claronia, and some other places. The Athenians sent an army into Boeotia under the command of Tolmèdes; but this general was slain in battle, together with many of his men, while a still larger number were taken prisoners. To recover these prisoners, the Athenians agreed to relinquish their power over Thebes and the other Boeotian cities. The democratic governments were overthrown; the exiles were restored; and Thebes again became the bitter enemy of Athens. (Thuc. i. 113, iii. 62; Dio. xii. 6.) The Thebans were indeed more anti-Athenian than were the Spartans themselves, and were the first to commence the Peloponnesian War by their attempt to surprise Plataea in the night, n. c. 431. The history of this attempt, and of the subsequent siege and capture of the city, belongs to the history of Plataea. (Plataea.) Throughout the Peloponnesian War the Thebans continued the active and bitter enemies of the Athenians; and upon its close after the battle of Aegospotami they joined the Corinthians in urging the Lacedaemonians to destroy Athens, and sell its population into slavery. (Xen. Hell. ii. 2 § 19.) But soon after this event the feelings of the Thebans towards Athens became materially changed in consequence of their jealousy of Sparta, who had refused the allies all participation in the spoils of the war, and who now openly aspired to the supremacy of Greece. (Plut. Lyg. 77; Justin, vi. 10.) They consequently viewed with hostility the Thirty Tyrants at Athens as the supporters of the Spartan power, and gave a friendly welcome to the Athenian exiles. It was from Thebes that Thrasylulus and the other exiles started upon their enterprise of seizing the Peiraeus; and they were supported upon this occasion by Isemiænes and other Theban citizens. (Xen. Hell. ii. 4 § 2.) So important was the assistance rendered by the Thebans on this occasion that Thrasylulus, after his success, showed his gratitude by dedicating in the temple of Hercules colossal statues of this god and Athena. (Paus. ix. 11 § 6.)

The hostile feelings of Thebes towards Sparta continued to increase, and soon produced the most important results. When Agesilaus was crossing over into Asia in n. c. 397, in order to carry on war against the Persians, the Thebans refused to take any part in the expedition, and they rudely interrupted Agesilaus when he was in the act of offering sacrifices at Anis, in imitation of Agamemnon; an insult which the Spartan king never forgave. (Xen. Hell. iii. 5 § 5; Plut. Ages. 6; Paus. iii. 9 §§ 3—5.) During the absence of Agesilaus in Asia, Tithraustes, the satrap of Asia Minor, sent an envoy to Greece to distribute large sums of money among the leading men in the Greek cities, in order to persuade them to make war against Sparta. This declamation could be formed for this purpose, a separate war broke out between Thebes and Sparta, called by Dioecus. (xiv. 81) the Boeotian war. A quarrel having arisen between the Opuntian Locrians and the Phocians respecting a strip of border land, the Thebans espoused the cause of the former and invaded Phocis. Thereupon the Phocians invoked the aid of the Lacedaemonians, who were delighted to have an opportunity of avenging the affronts they had received from the Thebans. (Xen. Hell. iii. 5 §§ 3—5; Paus. iii. 9 § 9.) The Lacedaemonians made active preparations to invade Boeotia. Lysander, who had been foremost in the war, was to lay siege to Halisartus, under the walls of which town Pausanias was to join him on a given day with the united Lacedaemonian and Peloponnesian forces. Thus menaced, the Thebans applied for assistance to their ancient enemies, the Athenians, who readily responded to their appeal, though their city was still undefended by walls, and they had no ships to resist the maritime power of Sparta. (Xen. Hell. iii. 5 § 16; Dem. de Cor. p. 258.) Orchomenus, however, seized the opportunity to revolt from Thebes, and joined Lysander in his attack upon Halisartus. (Xen. Hell. iii. 5 § 17; Plut. Lyg. 28.) The death of Lysander under the walls of Halisartus, which was followed by the retreat of Pausanias from Boeotia, emboldened the enemies of Sparta; and not only Athens, but Corinth, Argos, and some of the other Grecian states joined Thebes in a league against Sparta. In the following year (n. c. 394) the war was transferred to the territory of Corinth; and so powerful were the confederates that the Lacedaemonians recalled Agesilæus from Asia. In the month of August Agesilæus reached Boeotia on his homeward march, and found the confederate army drawn up in plain of Corinthæ to oppose him. The right wing and centre of his army were victories, but the Thebans completely defeated the Orchomenians, whereupon which the Thebans marched up to the territory of Corinthæ; and so powerful were the confederates that the Lacedaemonians recalled Agesilæus from Asia. In the month of August Agesilæus reached Boeotia on his homeward march, and found the confederate army drawn up in plain of Corinthæ to oppose him. The right wing and centre of his army were victories, but the Thebans completely defeated the Orchomenians, who were driven back to the plain of Helicon. The victorious Thebans now faced Athens, in order to regain the territory of their army, which had retreated to Mount Helicon. Agesilæus advanced to meet them; and the conflict which ensued was one of the most terrible that had yet taken place in Grecian warfare. The Thebans at length succeeded in forcing their way through, but not without great loss. This was the first time that the Thebans had fought a pitched battle with the Spartans; and the value which they showed on this occasion was a prelude to the victories which were soon to overthrow the Spartan supremacy in Greece. (Xen. Hell. iv. 3 §§ 15—21.)

We have dwelt upon these events somewhat at length in order to explain the rise of the Theban power; but the subsequent history must be related more briefly. After the battle of Corinthæ the course of events appeared at first to deprive Thebes of the ascendency she had lately acquired. The peace of Antalcidas (n. c. 397), which was concluded under the influence of Sparta, guaranteed the independence of all the Grecian cities; and though the Thebans at first claimed to take the oath, not in their own behalf alone, but for the Boeotian confederacy in general, they were compelled by their enemy Agesilæus to swear to the treaty for their own city alone, since otherwise they would have had to contend single-handed with the whole power of Sparta and her allies. (Xen. Hell. iv. 1 §§ 32, 35.) By this oath the Thebans virtually relinquished their supremacy over the Boeotian cities; and Agesilæus hastened to exert all the Spartan power for the purpose of weakening Thebes. Not only was the independence of the Boeotian cities proclaimed, and a legal oligarchy organised in each city hostile to Thebes and favourable to Sparta, but Lacedaemonian garrisons were
THEBAE BOEOTIÆ.

stationed in Orchomenus and Thespiae for the purpose of overanxious Boeotians, and the city of Platæa, it is re-

built to serve as an outpost of the Spartan power (Paus. ix. 1. § 4). A more direct blow was aimed at the independence of Thebes in b.c. 382 by the seizure of the Cadmeia, the citadel of the city, by the Spartan commander, Phoebidas, assisted by Leontiades and a party in Thebes favorable to Sparta. Though Phoebidas appears to have acted under secret orders from the Ephors (Diod. xvi. 20; Plut. Pelop.; also Ruvier, the grandson of the Greek sent to Sparta to inform the Lacedaemonians of the sister city's misfortunes) and apparently the Lacedaemonians were informed throughout Greece by this treacherous act in time of peace, that the Ephors found it necessary to dis-
avow Phoebidas and to remove him from his command; but they took care to reap the fruits of his crime by retaining their garrison in the Cadmeia. (Xen. Hell. v. 2. § 25.) Many of the leading citizens at Thebes took refuge at Athens, and were received with the same kindness which the Athenian exiles experienced at Thebes after the close of the Peloponnesian War. Thebes remained in the hands of the Spartan party for three years; but in b.c. 379 the Spartan garrison was expelled from the Cadmeia, and the party of Leontiades overthrown by Pelopidas and the other exiles. The history of these events is too well known to be repeated here. In the following year (b.c. 378) Thebes formed an alliance with Athens, and with the assistance of this state resisted with success the attempts of the Lacedaemonians to renew the same subjection; but the continued increase of the power of the Thebans, and their destruction of the city of Plataea [PLATAEA] provoked the jealousy of the Athenians, and finally induced them to conclude a treaty of peace with Sparta, b.c. 371. This treaty, usually called the peace of Callias from the name of the leading Athenian negotiator, included all the parties in the late war with the exception of the Thebans, who were thus left to contend single-handed with the might of Sparta. It was universally believed that Thebes was doomed to destruction; but only twenty days after the signing of the treaty all Greece was astounded at the news that a Lacedaemonian army had been utterly defeated, and their king Cleon-

ibratus slain, by the Thebans, under the command of Epaminondas, upon the fatal field of Leuctra (b.c. 371). This battle not only destroyed the pres-
tige of Sparta and gave Thebes the ascendency of Greece, but also enabled them to make overtures for reconciliation to the other Greek allies, over whom she had exercised dominion for centuries, and led to the establishment of two new political powers in the Peloponnesus, which threatened her own independence. These were the Arcadian confederation and the restoration of the state of Messenia, both the work of Epaminondas, who con-
ducted four expeditions into Peloponnesus, and di-
rected the councils of Thebes for the next 10 years. It was to the abilities and genius of this extraordinary man that Thebes owed her position at the head of the Graecian states; and upon his death, at the battle of Mantinea (b.c. 362), she lost the pre-eminence she had enjoyed since the battle of Leuctra. During their supremacy in Greece, the Thebans were of course undisputed masters of Boeotia, and they availed themselves of their power to wreak their vengeance upon Orchomenus and Thespiae, the two towns which had been the most active in the attempt to resist their authority the one in the north and the other in the south of Boeotia. The Orchomenians had in b.c. 395 openly joined the Spartans and fought on their side; and the Thebans had withdrawn from the Theban army just before the battle of Leuctra, when Epaminondas gave permission to any Boeotians to retire who were adverse to the Thebans. (Paus. ix. 13. § 8.) The Thebans were expelled from their city and Boeotia soon after the battle of Leuctra [THESPIAE]; and Orchomenus in b.c. 368 was burnt to the ground by the Thebans; the male inhabitants were put to the sword, and all the women and children sold into slavery. [ORCHOMENUS.]

This alliance which Athens had felt towards Thebes before the peace of Callias had been greatly increased by her subsequent victories; and the two states appear henceforward in their old condition of hostility till they were persuaded by Demosthenes to unite their arms for the purpose of resisting Philip of Macedon. After the battle of Mantinea their first open war was for the possession of Euboea. After the battle of Leuctra this island had passed under the supremacy of Thebes; but in b.c. 358, discon-
tent having arisen against Thebes in several of the cities of Euboea, the Thebans sent a powerful force into the island. The discontented cities applied for aid to Athens, which was readily granted, and the Thebans were expelled from Euboea. (Diod. xvi. 7: Dem. de Cherison. p. 108. de Cor. p. 259, c. 6.) Shortly afterwards the Thebans commenced the war against the Phocians, usually known as the Sacred War, and in which almost all the leading states of Greece were eventually involved. Both Athens and Sparta supported the Phocians, as a counterpoise to Thebes, though they did not render them much effectual assistance. This war ter-
minated, as is well known, by the intervention of Philip, who destroyed the Phocian towns, and restored to Boeotia Orchomenus and the other towns which the Phocians had taken away from them, b.c. 346. The Thebans were still the allies of Philip, when the latter seized Elateia in Phocis; and towards the close of b.c. 339, as preparatory to a march through Boeotia against Athens. The old feeling of ill-will between Thebes and Athens still continued: Philip calculated upon the good wishes, if not the active co-operation, of the Thebans against their old enemies; and pro-

bably never dreamt of a confederation between the two states as within the range of probability. This union, however, was brought about by the eloquence of Demosthenes, who was sent as ambassador to Thebes, and who persuaded the Thebans to form an alliance with the Athenians for the purpose of resisting the ambitious schemes of Philip. In the following year (b.c. 338) Philip defeated the combined forces of Thebes and Athens at the battle of Chaeroneia, which crushed the liberties of Greece, and made it in reality a province of the Macedonian monarchy. On this fatal field the Thebans main-
tained the reputation they had won in their battles with the Spartans; and their Sacred Band was cut to pieces in their ranks. The battle was followed by the surrender of Thebes, which Philip treated with great severity. Many of the leading citizens were either banished or put to death; a Macedonian garrison was stationed in the Cadmeia; and the go-

government of the city was placed in the hands of 300 citizens, the partisans of Philip. The Thebans were also deprived of their sovereignty over the allied towns, and Orchomenus and Platæa were restored, and again filled with a population hostile to Thebes. (Diodor. xvi. 87; Justin. ix. 4; Paus. iv. 27. § 10, ix. 1. § 8.) In the year after Philip's death (b.c. 335) the Theban exiles got possession of the city,
THEBAN BOEOTIÆ.

besieged the Macedonian garrison in the Cadmeia, and invited the other Grecian states to declare their independence. But the rapidity of Alexander's movements discouraged all their plans. He appeared at Ochæa, and any intelligence had arrived of his quitting the north. He was willing to allow the Thebans an opportunity for repentance; but as his proposals of peace were rejected, he directed a general assault upon the city. The Theban troops outside the gates were driven back, and the Macedonians entered the town along with them. A dreadful carnage ensued; 6000 Thebans are said to have been slain, and 3000 were taken prisoners. Among the ruins of the conquered city was referred to the Grecian allies in his army, Orchoemnians, Plataneans, Phocians, and other invertebrate enemies of Thebes. Their decision must have been known beforehand. They decreed that Thebes should be razed to the ground, with the exception of the Cadmeia, which was to be held by a Macedonian garrison; that the territory of the city should be divided among the allies; and that all the inhabitants, men, women, and children should be sold as slaves. This sentence was carried into execution by Alexander, who levelled the city to the ground, with the exception of the house of Pindar (Arrian, Anab. i. 8, 9; Diodor. xvii. 12—14; Justin, x. 4.) Thebes was thus blotted out of the map of Greece, and remained without inhabitants for the next 20 years. In B.C. 315, Cassander undertook the restoration of the city. He united the Theban exiles and their descendants from all parts of Greece, and was zealously assisted by the Athenians and other Grecian states in the work of restoration. The new city occupied the same area as the one destroyed by Alexander; and the Cadmeia was held by a garrison of Cassander. (Diodor. xix. 52—54, 78; Plut. Cæs. ii. 4.) Thebes was twice taken by Demetrius, first in B.C. 293, and a second time in 290, but on each occasion he used his victory with moderation. (Plut. Dem. 39, 40; Diod. xxi. p. 491, ed. Weis.)

Dierarchus, who visited Thebes not long after its restoration by Cassander, has given a very interesting account of the city. "Thebes," he says (§ 12, seq. ed. Miller), "is situated in the centre of Boeotia, and is about 70 stadia in circumference; its site is level, its shape circular, and its appearance gloomy. The city is ancient, but it has been lately rebuilt, having been three times destroyed, as history relates," on account of the insolvency and haughtiness of its inhabitants. It is well adapted for rearing horses since it is plentifully provided with water, and abounds in green pastures and hills; it contains also better gardens than any other city in Greece. Two rivers flow through the town, and irrigate all the adjacent plain. There is also a subtropical stream issuing from the Cadmeia, through pipes, said to be the work of Cadmus. Thebes is a most agreeable residence in the summer, in consequence of the abundance and coolness of the water, its large gardens, its agreeable breezes, its verdant appearance, and the quantity of fruit, winter and autumnal fruits. In the winter, however, it is a most disagreeable residence, being destitute of fuel, and constantly exposed to floods and winds. It is then often covered with snow and very muddy." Although Dierarchus in this passage gives to Thebes a circumference of 70 stadia, he assigns in his verses (Stat. Græcum, 93) a much smaller extent to it, namely 43 stadia. The latter number is the more probable, and, being in metres was less likely to be altered; but if the number in prose is correct, it probably indicates the ruins and gardens outside the city walls. Dierarchus also gives an account of the character of the inhabitants, which is too long to be extracted. He represents them as noble-minded and sanguine, but insolent and proud, and always ready to settle their disputes by fighting rather than by the ordinary course of justice.

Thebes had its full share in the later calamities of Greece. After the fall of Corinth (B.C. 146), Mummius is said to have destroyed Thebes (Liv. Epit. 22), by which we are probably to understand the walls of the city. In consequence of its having sided with Mithridates in the war against the Romans, Sulla deprived it of half its territory, which he dedicated to the gods, in order to make compensation for his having plundered the temples at Olympia, Epidaurus, and Delphi. Although the Romans afterwards restored the land to the Thebans, they never recovered from this blow (Plut. Cæs. ii. 4, 3), and so low was it reduced in the time of Augustus and Tiberius that Strabo says that it was little more than a village (ix. p. 403). In the time of the Antonines, Pausanias found the Cadmea alone inhabited, and the lower part of the town destroyed, with the exception of the temples (ix. 7, § 6). In the decline of the Roman Empire, Thebes became the seat of a considerable population, probably in consequence of its inland situation, which afforded its inhabitants greater security than the maritime towns from hostile attacks. In the eleventh and twelfth centuries Thebes was one of the most flourishing cities in Greece, and was celebrated for its manufactories of silk. In A.D. 1040 the Thebans took the field to oppose the Bulgarian invaders of Greece, but were defeated with great loss. ( Cedren. p. 747, ed. Paris., p. 529, ed. Bonn.) In A.D. 1146 the city was plundered by the Normans of Sicily, who carried off a large amount of plunder (Niemey. p. 50, ed. Paris., p. 95, ed. Bonn.) Benjamin of Tudela says that Thebes about 20 years later, speaks of it as still a large city, possessing 2000 Jewish inhabitants, who were very skilful manufacturers of silk and purple cloth (i. 47, ed. Asher; Friulay, Byzantine Empire, vol. i. p. 493, vol. ii. p. 199). The silks of Thebes continued to be esteemed even at a later period, and were worn by the emperors of Constantinople. (Nicetas, p. 297, ed. Paris., p. 609, ed. Bonn.) They were, however, gradually supplanted by those of Sicily and Italy; and the loss of the silk trade was followed by the rapid decline of Thebes. Under the Turks the city was again reduced, as in the time of Pausanias, to the site of the Cadmeia.

II. Topography.

Thebes stood on one of the hills of Mount Teum- mesos, which divides southern Boeotia into two distinct parts, the northern being the plain of Thebes and the southern the valley of the Asopus. The Greeks, in founding a city, took care to select a spot where there was an abundant supply of water, and a hill naturally defensible, which might be easily converted into an acropolis. They generally preferred a position which would command the adjacent plain, and which was neither immediately upon the coast nor
yet at a great distance from it. But as Boeotia lies between two seas, the founders of Thebes chose a spot in the upland country, where water was very plentiful, and where the nature of the ground was admirably adapted for defence. The hill, upon which the town stands, rises about 150 feet above the plain, and lies about 2 miles northward of the highest part of the ridge. It is bounded on the east and west by two small rivers, distant from each other about 6 or 7 stadia, and which run in such deep ravines as to form a natural defence on either side of the city. These rivers, which flow a little south of the city, and divided the northward into the plains of Thebes, are the celebrated streams of Ismenus and Dirce. Between them flows a smaller stream, which divided the city into two parts, the western division containing the Cadmeia*, and the southern the hill Ismenius and the Amphionian. This middle torrent is called Cnopus by Leake, but more correctly Stromphia (Callim. Hymn. in Del. 76) by Forchhammer. The Cnopus is a torrent flowing from the town Cnopia, and contributing to form the Ismenus, whence it is correctly described by the Scholastx on Nicander as the same as the Ismenus. (Strab. i. p. 404; Nicand. Theorica. 889, with Schol.) The three streams of Ismenus, Dirce, and Stromphia unite in the plain below the city, to which Callimachus (I. c.) appears to allude:—

Δίπρες τε καὶ σέλις εἰς κοινὸν κέρα πατρός.

The middle torrent is rarely mentioned by the ancient writers; and the Ismenus and Dirce are the streams alluded to when Thebes is called ἴπτόταμος πόλις. (Europ. Suppl. 622; comp. Phoen. 185, iacch. 5, Her. Fur. 572.) Both the Ismenus and Dirce, though so celebrated in antiquity, are nothing but torrents, which are only full of water in the winter after heavy rains. The Ismenus is the eastern stream, now called Ai Iovani, which rises from a clear and copious fountain, where the small church of St. John stands, from which the river derives its name. This fountain was called in antiquity Melia, who was represented as the mother of Ismenus and Teneus, the hero of the plain which the Ismenus inundates. It was sacred to Ares, who was said to have stationed a dragon to guard it. (Callimach. Hymn. in Del. 80; Spanheim, ad loc.; Pind. Pyth. x. 6; Paus. i. 10. § 5; Forchhammer, Hellenica. p. 113.) The Dirce is the western stream, now called Platistisiana, which rises from several fountains, and not from a single one, like the Ismenus. A considerable quantity of the water of the Platistisiana is now diverted to supply the fountains of the town, and it is represented as the parent of the Theban streams; and it appears to have been so regarded in antiquity likewise, judging from the epithets bestowed upon it by the poets. (Ἀγαθός, Pind. l. c. Ism. vii. 109, καλλιέρας, Ism. vii. 43; ἄρρητος ἄρρητος καὶ ἀρρητώτατος των νερῶν, Sept. c. Theb. 307; καλλιϊρας, Eurip. Phoen. 647; Δίπρες τε καὶ σέλις εἰς κοινὸν κέρα πατρός.) Though the position of Thebes and of its celebrated streams is certain, almost every point connected with its topography is more or less doubtful. In the other cities of Greece, which have been inhabited continuously, most of the ancient buildings have disappeared; but nowhere has this taken place more completely than at Thebes. Not a single trace of an ancient building remains; and with the exception of a few scattered remains of architecture and sculpture, and some fragments of the ancient walls, there is nothing but the site to indicate where the ancient city stood. In the absence of all ancient monuments, there must necessarily be great uncertainty; and the three writers who have investigated the subject upon the spot, differ so widely, that Leake places the ancient city to the south of the Caden, and Dirce to the north of it, while Forchhammer supposes both the western heights between the Stromphia and the Dirce to have been in a certain sense the Cadmeia, and the lower city to have stood eastward, between the Stromphia and the Ismenus. In the great difficulty of arriving at any independent judgment upon the subject without a personal inspection of the site, we have adopted the hypothesis of Forchhammer, which seems consistent with the statements of the ancient writers.

The most interesting point in Theban topography is the position of the seven celebrated Theban gates. They are alluded to by Homer (θὸντις οἴος ἓτοι χήρων, Od. xi. 263) and Hesiod (ἐπίπονοι θὸντις, Op. 161); and their names are given by seven different authors, whose statements will be more easily compared by consulting the following table. The numeral represents the order in which the gates are mentioned by each writer. The first line gives the names of the gates, the second the names of the Arge chiefs, the third the emblems upon their shields, and the fourth the names of the Theban chiefs.

The original position of the gates of the gods and the planets, and to the other two, to which he gives the names of Electrae and Oinacea, he also adds their position. Hyginus calls the gates by the names of the daughters of Amphion, and that of Ogygia alone agrees with those in the other writers. But dismissing the statements of Nummus and Hyginus, whose authority is of no value upon such a question, we find that the remaining five writers agree as to the names of all the seven gates, with two or three exceptions, which will be pointed out presently. The position of three of the gates is quite clear from the description of Pausanias alone. These are the Electrae, Phorcides, and Nietae. Pausanias says that Electrae is the gate by which a traveller from Platea enters Thebes (ix. 8. § 6); that there is a hill, on the right hand of the gate, sacred to Apollo, called the Ismenian, since the river Ismenus runs in this direction (ix. 10. § 3); and that on the left hand of the gate are the ruins of a house, where it was said that Amphitrion lived, which is followed by an account of other ancient monuments on the Cadmea (ix. 11. § 1). Hence it is evident that the gate Electrae was in the south of the city, between the hills Ismenius and Cadmeia. The gate Phorcides was on the north-eastern side of the city, since it led to Chalcis (ix. 18. § 1). The gate Nietae was on the north-western side of the city, since it led to Orchomenus and Delphi; and the river which Pausanias crossed, could have been no other than the Dirce (ix. 23. §§ 1, 3, ix. 26. § 5). The names of these three gates are the same in all the five writers: the manuscripts of Appollodorus have the corrupt word Ὀγυγίας, which has been corrected by the editors into Ὀγυγίας, instead of Ὀγυγόμ, which was the reading suggested by Porson (ad. Eurip. Phoen. 1150), and adopted by Unger in his Thesbae Paradoxa, vol. i. p. 313.)

* The western division contains two cinemises, and the question as to which of them was the Cadmeia will be discussed below.

Of the other four gates, the Homoloides is also the same in all the five writers. Of the remaining three Aeschylus does not mention their proper names, but specifies two by their locality, one as near the temple of Athena Oenea, and the other as the Northern gate (Βοιοτίαν πόροι), and describes the last simply as the Seventh gate. The names of these three gates are nearly the same in the other four writers, the one near the temple of Athena Oenea being called Crenaeae, and in Statius Cunina Dirceae, the Northern gate Ογγεία, and the Seventh gate Hypsistae.—Euripides, however, also giving the name of Seventh to the last-mentioned gate. Having described the position of the Electra, Proctides, and Neitae, it remains to speak of the position of the other four, which we shall take in the order of Aeschylus. The fourth gate was probably situated on the western side of the city, and was called Crenaeae, because it was near one of the fountains of Dirce, now called Παραπόρφυρα, situated upon the right bank of the river. Near that fountain was a hill, called by the Greeks Άγγος, whence Athena derived the name of Oenea. Accordingly Statius, in calling the fourth gate Cunina Dirceae, connects both the fountain and the hill. Nonnus, who calls this gate Oeneaa, describes it as at the same time as situated towards the west. It is usually stated, on the authority of Hesychius, that the Oeneeae gate is the same as the Ογγεια; but this identification throws everything into confusion, while the change of three letters, proposed by Forchhammer, brings the statement of Hesychius into accordance with the other writers. (Ογγεια Αθρόας τας Ογγειας [instead of Ογγειας] πόλεως άγγος, i. e. Aes. Sept. c. Th. 486.)

The sixth gate was called by Nonnus Osyriam from Ogygus, the most ancient king of Thebes, in whose time the deluge is said to have taken place. Now there is no part of Thebes more exposed to inundation than the north of the city between the gates Neitae and Proctides, where the torrent Stepha descends into the plain. Here we may probably place the Osyriam gate, which Aeschylus calls the Northern, from its position.

The exact position of the sixth gate, called Homoloides, and of the seventh, designated by its number in Aeschylus and Euripides, but by the name of Hypsistae in the other writers, is doubtful. Forchhammer maintains that these gates were in the southern part of the city, one on either side of the gate Electra; but none of his arguments are conclusive; and the position of these gates must be left uncertain. Pausanias relates that, after the victory of the Epirou in the battle of Gisias, some of the Thebians fled to Homole in Thessaly, and that the gate, through which the exile re-entered the city, when they were recalled by Thenander, was named the Homoloides, from Homole in Thessaly (ix. 8, §§ 6, 7).

Forchhammer thinks that it would have been supposed that the exiles entered the city by the same gate by which they quitted it; and as the gate leading to Gisias must have been either in the southern or
eastern side of the city, the gate Homoloides must have been on the southern side, as the Proctides lay towards the east. But this is mere conjecture; and Lenae supposes, with quite as much probability, that the Homoloides was on the north-western side of the city, since the Thebans would re-enter the city in that direction on their return from Homoloe.

The divisions of the city, and its monuments, of which Pausanias has given a full description, must be treated more briefly. The city, as already remarked, was divided into two parts by the torrent Strophia, of which the western half between the Strophia and the Dirce was the Cadmeia, while the eastern half between the Strophia and the Ismenus

F F. Road to Thebi.
was the lower city (ἡ κάτω πόλις), said to have been added by Amphion and Zethus. (Paus. ix. 5. § 25.) The Cadmeia is again divided by a slight depression near the fountain of Dirce and the Cre- 
meanac gate into two hills, of which the larger and the higher one to the south was the acropolis proper, and was called the Cadmeia κατ' ἑξοχήν, while the northern hill formed the agora of the 
acropolis (τὸς ἀκροπόλεως ἄγορα, Paus. ix. 12. § 3). The eastern half of the city was also divided between the Strophius and the Isemus into two parts, 
of which the southern consisted of the hill Isemus, and the northern of several minor eminences known under the general name of Apumheon. (Ἀμφικων, 
Arrian, Amb. i. 8.) Aeschythus describes the tomb of Amphion as standing near the northern gate. 
(Βορήμαι πολύα τῶν κατ' αὐτού διαγενέων Ἀσκιότων, Sept. c. Theb. 528.) Hence Thebes con- 
sisted of four parts, two belonging to the acropolis, and two to the lower city, the former being the acropolis proper and the agora of the acropolis, and the latter being the hill Isemus and the Apumheon. Aeschy- 
thus, entering Thebes on the south by the gate Elecatre, before which he noticed the Polyandrion, or tomb of the Thebans who fell 
fighting against Alexander. (Paus. ix. 8. §§ 3, 4, 7, ix. 10. § 1.) The explanation of Forchhammer that Alexander laid siege to the city on the south, and 
that he did not return from the gate Elecatre to the Proctides, as Leake supposes, seems the most 
probable. Accordingly the double lines of circum- 
vallation, which the Thebans erected against the 
Macedonian garrison in the Cadmeia, must have 
been to the south of the city around the chief gates 
of the Cadmeia. (See Arrian, i. 7, 8.) Upon enter- 
ing the city through the gate Elecatre, Pausanias 
notices the hill Isemus sacred to Apollo, named 
from the river Isemus flowing by it (ix. 10. § 2). 
Upon the hill was a temple of Apollo, containing 
some monuments enumerated by Pausanias. This 
temple is likewise mentioned by Pindar and Herod- 
dotus, both of whom speak of the tripod situated in 
it treasury. (Pind. Iphth. xi. 7, seq.; Herod. v. 59.) 
Above the Isemium, Pausanias noticed the fountain 
of the Isemus, sacred to Ares, and guarded by a 
dragon, the name of which fountain was Melia, as 
we have already seen (ix. 10. § 5).

Next Pausanias, beginning again from the gate 
Elecatre, turns to the left and enters the Cadmeia 
(ix. 11. § 1, seq.). He does not mention the 
acropolis by name, but it is evident from the list of 
the monuments which he gives that he was in the Cad- 
meia. He enumerates the house of Amphitrion, 
containing the bedchamber of Ameche, said to have 
been the work of Trophonius and Agamedes; a 
monument of the children of Hercules by Megara; the 
stone called Sophronister; the temple of Hercules 
(Ἡράκλειον, Arrian, Amb. i. 8); and, near it, a 
Sumenius and stadium, both bearing the name of 
this God; and above the Sophronister an altar of 
Apollo Sphinios.

Pausanias next came to the depression between 
the acropolis and the agora of the Cadmeia, where he 
noticed an altar and statue of Athena, bearing the 
Phocaean surname of Oyna (Οὐγγα), or Onca 
(Οὐγκα) according to other authorities, and said to 
have been dedicated by Cadmus (ix. 12. § 2). We 
know from Aeschythus that there was originally a 
temple of Athena Oynca in this locality, which stood 
outside the city near one of the gates, whence the 
goddess was called Ἀχινεώτης. Some derived the 

name from a village named Oynca or Onca. (Aesch. 
in Eupolis, Philar. 1009; Steph. B. v. Ὀυγκα, 
Hesych. s. v. Ὀγκας; Schol. ad Pind. Ol. ii. 39, 
48; Tzetzes, ad Lyogreon. 1223; Phavorinus, s. v. 
Ὀγκα.) Sophocles also speaks of two temples of 
Athens at Thebes (πρὸς Παλαίδας διδοὺς ναός, 
Oed. Tyr. 20), in one of which, according to 
the Scholast, she was summoned Oncaen, and in 
the other Ismenia. In the valley between the two 
hills, there are still the remains of an aqueduct, 
partly under and partly above ground, to which Decac- 
chreteristes (φερετεριστης, Paus. i. 16. § 14) 
are attributed (Παλαΐδαι ἀκρόπολεις ἄγορας, l. e.) 
In the agora of the Cadmeia the house of Cadmus 
is said to have stood; and in this place were shown 
ruins of the bedchamber of Harmonia and Semele; 
statues of Dionysus, of Promus, the celebrated 
musician, and of Eupamnondas; a temple of Ammon; 
the place where Teiresias observed the flight of 
birds; a temple of Fortune; three wooden statues 
of Aphrodite, with the surnames of Urania, Panis- 
mus, and Archegeus; and a temple of Demeter 
Theophronis. (Paus. ix. 12. §§ 3—5, ix. 16. 
§§ 1—5.)

Crossing the torrent Strophy, Pausanias saw near 
the gate Proctides the theatre with the temple of 
Dionysus (ix. 16. § 6). In this part of the city, 
to which Forchhammer gives the name of Apumheon, 
the following monuments are mentioned by Pausa- 
rias (ix. 16. § 7, ix. 17. §§ 1—4): ruins of the 
house of Lycus and a monument of Semen; tem- 
ple monuments of the children of Apumheon; a 
temple of Artemis Eileia, and near it, statues of 
Apollo Boe- 
dromius and of Hermes Ageraeus; the funereal 
fane (πολιος) of the children of Apumheon, distant half 
a stadium from their tombs; two statues of Athena 
Zosteria; and the monument of Zethus and Apumheon, 
being a mound of earth. As the lower city was de- 
scribed in the time of Pausanias, he does not mention 
the agora; but there is no doubt that it contained one, 
if not more, since Sophocles speaks of several agoras 
(Oed. Tyr. 20).

Outside the gate Proctides, on the road to Chal- 
vis, Pausanias names the monuments of Melanippos, 
Tydeus, and the sons of Oedipus, and 15 stadia 
beyond the latter the monument of Teiresias. Pausa- 
rias also mentions a tomb of Hector and one of 
Ampheion, at the fountain Oedipoleis, which is perhaps 
the modern fountain of St. Theodore. On the same 
road was the village Temnussus. (Paus. ix. 18. 
ix. 19. § 1.) After describing the road to Cha- 
lvis, Pausanias returns to the gate Proctides, outside 
which, towards the N., was the gymnasion of Iolus, 
a stadium, the heroon of Iolus, and, beyond the 
stadium, the hippodrome, containing the monument 
of Pindar (ix. 23. §§ 1, 2). Pausanias then comes 
to the road leading from the Ogygian or Northern 
gate, to Arcamuaphion, after following which he 
returns to the city, and enumerates the objects outside 
the gate Nectae. Here, between the gate and the 
river Dirce, were the tomb of Menoneus, the son of 
Creon, and a monument marking the spot where the 
two sons of Oedipus slew each other. The whole of 
this locality was called the Syrmia (Σύρμυα) of Anti- 
gone, because, being unable to carry the dead body 
of her brother Polynices, she dragged it to the 
fumal pile of Exceles. On the opposite side of the 
Dirce were the ruins of the house of Pindar, and a 
temple of Dionysus (ix. 25. §§ 1—3). Pausanias 
then appears to have returned to the gate Nectae and
THEBAE PITTHOTIDES.

followed the road which ran from this gate to On- chestus. He first mentions a temple of Themis, then temples of the Fates and of Zeus Agoranus, and, a little further, a statue of Hercules, surmounted by Rhine-colastes, because he here cut off the noses of the heralds of Hermione. Twenty-five stadia beyond was the grove of Demeter Cabeira and Persephone, and 7 stadia further a temple of the Cabeira, to the

centre of the city, looking towards the sea. (Leake, *Northern Greece*, vol. iv. p. 358.)

THEBAI. [THEBAE AEGYPTI.]

THEBE (Θῆβαι), a famous ancient town in Mycia, at the southern foot of Mount Phyle, which is often mentioned by Homer as governed by Leto, the father of Andromache (II. i. 366, vi. 397, xxii. 479). The town is said to have been destroyed during the Trojan War by Achillês (II. ii. 691; Strab. xiii. pp. 584, 585, 612, foll.) It must have been restored after its first destruction, but it was decayed in the time of Strabo, and when Pliny (v. 32) wrote it had entirely disappeared. The belief of some of the ancient grammarians (Eymy. M. s. r. v.; Dylom. ad Hom. ii. 2, 336; Dylom. ad Herod. Sct., 41' and Eustath. ad Hom. ii. 691) that Thebe was only another name for Aegyptum, is contradicted by the most express testimony of the best writers. Xenophon (Anab. vii. 8, § 7) places it between Antandros and Aegyptum, and Strabo, perhaps more correctly, between Aegyptum and Carina, about 80 stadia to the north-east of the former. (Comp. Pomp. Melk, i. 18; Steph. B. s. r.) Although this town perished at an early period, its name remained celebrated throughout antiquity, being attached to the neighbouring plain (Θῆβαι πατών, Campus Thebanus), which was famed for its fertility, and was often ravaged and plundered by the different armies, whom the events of war brought into this part of Asia. (Herod. vii. 42; Xenoph. l. c.; Strab. xiii. p. 588; Liv. xxxvii. 19.) Stephanus B. (s. v.) mentions another town of this name as belonging to the territory of Miletus in Asia Minor. [L. S.]

THECHES (Θέχη), one of the highest points of Mount Pantyades in Pontus, south-east of Trapezus, cn the borders of the country inhabited by the Mar- cines. From it the Ten Thousand Greeks under Xenophon for the first time descried the distant Euxine. (Xenoph. Anab. iv. 7, § 21.) Diodorus Siculus (xiv. 29) calls the mountain Χάνιον ξῆρας; but it still bears its ancient name Tôkhê. (Ritter, Erdkunde, ii. p. 768.) [L. S.]

THECOA. [ΤΕΧΟΑ.]

THEGANUSSA. [ΜΕΣΣΕΝΙΑ, p. 342. b.]

THEILSOA (Θείλσωα; Eth. Θείλσωτης). 1. A town of Arcadia, in the district Cinema or Parhassia, on the northern slope of Mt. Lycaeus, called after the nymph Theiosa, one of the names of Zeus. Its in- habitants were removed to Megalopolis upon the foundation of the latter city. Leake places it at the castle of St. Iheo above Lavratha. Ross discovered some ancient remains N. of Anatridias, which he conjectures may be those of Theiosa. (Paus. viii. 38, §§ 3, 9, viii. 27, § 4; Steph. B. s. r.; Leake, Morea, vol. ii. p. 315, Peloponomaca, p. 154; Ross, Reisen im Peloponnes, vol. i. p. 101; Boblaye, Recherches, p. 151.)

2. A town of Arcadia, in the territory of Orcho- menus, the inhabitants of which also removed to Megalopolis. It is mentioned along with Methyd- rium and Tenthis as belonging to the confederation (συντέλεια) of Orchomenos. It is probably repre- sented by the ruins near Dimitsana. (Paus. viii. 27, §§ 4, 7, viii. 28, § 3; Ross, p. 115.)

THEIUM, a town of Aethamana in Epeirus, of uncertain site. (Liv. xxxviii. 2.)

THELINE. [ΑΡΕΛΑΤΗ.]

THELIPUSA (Θελιποσα, Paus. and Coins; Τη- φώσα, Polyb., Deyl., and Steph. B. s. r.; Eth. Θε- φώσων, Τηλίφωσων), a town in the west of Arcadia, 4 e. 2

COIN OF THEBEES.

right of which was the Teneric plain, and to the left a road which at the end of 50 stadia conducted to Thebe (ix. 25, § 5, ix. 26, §§ 1, 6.) (Leake, *Northern Greece*, vol. ii. p. 218, seq., vol. iv. p. 375, seq.; Ulich, *Topographie von den Theben*, in Abhandl. der Bayer. Akad. p. 413, 1841; Uther, *Thebana Paradoxa*, 1839; Forchhammer, *Topographia Thebarum Hoetopogynarum, Kiliae, 1584."

THEBAE CORISCÆ. [CORSEA, No. 2.]

THEBAE PITTHOTIDES or PITTHAE (Θῆ- βαι Πιθθοτίδες, Polyb. v. 99; Strab. ix. p. 433; Thebæae Pitthiae. Liv. xxxvii. 30), an important town of Pitthotis in Thessaly, was situated in the north-eastern corner of this district, near the sea, and at the distance of 300 stadia from Larissa. (Polyb. l. c.) It is not mentioned in the Íiad, but it was at a later time the most important maritime city in Thessaly, till the foundation of Demetrias, by Demetrion Poiocrates, about b. c. 290. ("Thebae Pitthiae unam maritimorum emporium fuisse quondam Them- sales quaedamque ad figuram," Liv. xxxiv. 25.) It is first mentioned in b. c. 282, as the only Thessa- lian city, except Pelasga, which did not take part in the Lamian war. (Diod. xxvii. 11.) In the war between Demetrias Poiocrates and Cassander, in b. c. 302, Thebes was one of the strongholds of Cassander. (Diod. xx. 110.) It became at a later time the chief possession of the Aetolians in northern Greece; but it was wrested from them, after an obstinate siege, by Philip, the son of Demetrias, who changed its name into Philippopolis. (Polyb. v. 99, 100; Diod. xxxvi. p. 513, ed. Wisebung.) It was attacked by the consuls Flamininus, previous to the battle of Cynoscephalæ, b. c. 197, but without success. (Liv. xxxviii. 5; Polyb. xvii. 2.) After the defeat of Philip, the name of Philippiopolis was gradually dropped, though both names are used by Livy in narrating the transactions of the year b. c. 185. (Liv. xxxix. 25.) It continued to exist under the name of Thebes in the time of the Roman Empire, and is mentioned by Hierocles in the sixth century. ("Theæae Thessalæae," Plin. v. 8. s. 15; Θῆβαι Θεια- τος, Ptol. iii. 13. § 17; Steph. B. s. r.; Hieroc. p. 642, ed. Wess.) The ruins of Thebes are situated upon a height half a mile to the north-east of Ak- kejel. The entire circuit of the walls and towers, both of the town and citadel, still exist; and the circumference is between 2 and 3 miles. The theatre, of which only a small part of the exterior circular wall of the cavea remains, stood about the
situated upon the left or eastern bank of the river Ladeon. Its territory was bounded on the north by that of Psophis, on the south by that of Heraea, on the west by the Eleia and Tisatias, and on the east by that of Chelor, Tripolis, and Thessira. The town is said to have derived its name from Thelpusa, the daughter of the river Ladeon, which nymph was probably the stream flowing through the lower part of the town into the Ladeon. It is first mentioned in history in n. c. 332, when the Lacedaemonians were defeated in its neighbourhood by the Spartans. (Diod. xvi. 39.) In n. c. 222 it was taken by Antigonus Doson, in the war against Cleomenes, and it is also mentioned in the campaigns of Philip. (Poth. ii. 54, iv. 60, 73, 77; Steph. B. s. v. Tisatis; Plin. iv. c. 6. 20.) Its coins show that it belonged to the Achaeans League. (Leake, Peloponnesiacs, p. 260.) When Pausanias visited Thelpusa, the city was nearly deserted, so that the agora, which was formerly in the centre of the town, stood at its extremity. He saw a temple of Asclepius, and another of the twelve gods, of which the latter was nearly levelled with the ground. (Paus. viii. 25 § 3.) Pausanias also mentions two temples of some celebrity in the neighbourhood of Thelpusa, one above and the other below the city. The one above was the temple of Demeter Eleusinia, containing statues of Demeter, Persephone and Dionysus, made of stone, and which probably stood at the castle opposite to Spithnari (vii. 25. §§ 2, 3). The temple below the city was also sacred to Demeter, whom the Thelpusans called Erinys. This temple is alluded to by Lycophron (1038) and Callimachus (Fr. 107). It was situated at a place called Oureum, where Oenus, the son of Apollo, is said once to have reigned (viii. 25. § 4. seq.; Steph. B. s. v. Oureum). Below this temple stood the temple of Apollo Oncareas, on the left bank of the Ladeon, and on the right bank that of the boy Asclepius, with the sepulchre of Trygon, said to have been the nurse of Asclepius (viii. 25. § 11). The ruins of Thelpusa stand upon the slope of a considerable hill near the village of Vanena (Vanea). There are only few traces of the walls of the city. At the ruined church of St. John, near the rivulet, are some Hellenic foundations and fragments of columns. The saint is probably the successor of Asclepius, whose temple, as we learn from Pausanias, stood longest in the city. There are likewise the remains of a Roman building, about 12 yards long and 6 wide, with the ruins of an arched roof. There are also near the Ladeon some Hellenic foundations, and the lower parts of six columns. Below Vanea there stands upon the right bank of the Ladeon the ruined church of St. Athanasius the Miraculous, where Leake found the remains of several columns. Half a mile below this church is the village of Tumbiki, where a promontory projects into the river, upon which there is a mound apparently artificial. This mound is probably the tomb of Trygon, and Tumbiki is the site of the temple of Asclepius.

Pausanias, in describing the route from Psophis to Thelpusa, after mentioning the boundaries between the territories of the two states [Psophis], first crosses the river Arsen, and then, at the distance of 23 stadia, arrives at the ruins of a village Caus and a temple of Asclepius Causus, erected upon the road. From this place the distance to Thelpusa was 49 stadia. (Leake, Morea, vol. ii. pp. 97, seq., 250, seq., Peloponnesiacs, pp. 205, 222, 228; Boblaye, Recherches, ñ. p. 152; Ross, Reisen im Peloponnes, p. 111; Curtius, Peloponnesos, vol. i. p. 370, seq.)

THELUTHA, a fortress situated on an island in the Euphrates. It is mentioned by Ammianus (xxiv. 2), who states that it was used as a treasury by the Persians. It is unquestionably the same as the Thilabas of Isidorus (Stat mum, l'arth. 1), who gives a similar description of it, and places it at no great distance from another island in the same river, Anatho. Zosimus, speaking of the same region, notices a fortified island, which he calls φωάων ουκετάρων (iii. 15); probably the same place. It is doubtless represented now by an island which Colonel Chesney calls Telbeis, Tilibus, or Antelobos (Isid. l'arth. 1).

THEMOTAE (Témotai, Ptol. v. 9. § 17), a people of Asiatic Sarmatia. [T. H. D.]

THEMMA. [Tema].

THEMISCYRA (Θήμισκυρα), a plain in the north of Pontus, about the mouths of the rivers Iris and Tibermon, was a rich and beautiful district, ever verdant, and supplying food for numberless herds of oxen and horses. It also produced great abundance of grain, especially pannick and millet; and the southern parts of the mountains furnished a variety of fruits, such as grapes, apples, pears, and nuts in such quantities that they were suffered to waste on the trees. (Strab. ii. p. 126, xii. p. 547, fol.; Aelian, Prom. 722; comp. Apollod. ii. 5; Apollon. Rhod. ii. 370; Plin. vi. 3, xxiv. 102.) Mythology describes this plain as the native country of the Amazons. A Greek town of the name of Themiscyra, at a little distance from the coast and near the mouth of the Tibermon, is mentioned as early as the time of Herodotus (iv. 86; comp. Scalix, p. 33; Paus. ii. 2. § 1). Polenius (v. 6. § 5) is undoubtedly mistaken in placing it further west, midway between the Iris and Cape Heracleum. Scalix calls it a Greek town; but Diodorus (ii. 44) states that it was built by the founder of the kingdom of the Amazons. After the retreat of Mithridates from Cyzicus, Themiscyra was besieged by Lucullus. The inhabitants on that occasion defended themselves with great valour; and when their walls were undermined, they sent bears and other wild beasts, and even swarms of bees, against the workmen of Lucullus (Appian, Mithrid. 78). But notwithstanding their gallant defence, the town seems to have perished on that occasion, for Mela speaks of it as no longer existing (i. 19), and Strabo does not mention it at all. (Comp. Anon. Peripl. B. E. p. 11; Steph. B. s. v. Xabaria.) Some suppose that the town of Thermae, at the mouth of the Tibermon, marks the site of ancient Themiscyra; but Hamilton (Researches, i. p. 283) justly observes that it must have been situated a little further inland. Ruins of the place do not appear to exist, for those which Texier regards as indicating the site of Themiscyra, at a distance of two days' journey from the Haires, on the borders of Galatia, cannot possibly have belonged to it, but are in all probability the remains of Tavium. [L. S.]
THREMISIONIUM (Ἑθ. Ἑθ. Ἑθ.), a town of Phrygia, near the borders of Pisidia, whence in later times it was regarded as a town of Pisidia. (Strab. vii. p. 576; Paus. x. 32; Ptol. v. 2, § 26; Steph. B. s. v.; Plin. v. 29; Herod. p. 600; G. Strab. i. 18.) Pausanias relates that the Themisionians showed a cave, about 30 yards from their town, in which, on the advice of Heracles, Apollo, and Hermes, they had concealed their wives and children during an invasion of the Celts, and in which afterwards they set up statues of these divinities. According to the Peutinger Table, Themisionium was 34 miles from Laudaeia. Arundell (Discoveries, ii. p. 196), guided by a coil of the place, finds its site on the river Araxes, and believes the ruins at Kai Nissi to be those of Themisionium, but Kiepert (in Franz's fünf Inschriften, p. 29) thinks that the ruins of Khiel Issar, which Arundell takes to mark the site of Cybyra, are those of Themisionium.

THEANA (Ἠθαναία, Callim. in Ion. 42; Steph. B. s. v. Ἑθανάλων), a town of Cretan close on the Ompalban plain, and near Cnossus. If not on the very spot it must have been close to the Cypselion Temenos of the Venetians, which was built A. D. 343 by the Cretans, under their Saracen leaders, were vanquished by Nicephorus Phocas and the forces of the Byzantine emperor. (Psander, Travels, vol. i. p. 224; comp. Finlay, Byzantine Empire, vol. i. p. 377; Gibbon. c. iii.)

[Ε. Μ. Τ.]

THEANA (Ἠθαναία), a maritime city of Byzacium in Africa Preper, at the mouth of a small river which fell into the Syrtis Minor, and 216 miles SE. of Carthage. (Ptol. v. 4, s. 3.) By Strabo it is called Ἑθανάλων (xvii. p. 831), and by Ptolemy Ἑθανάλων, or Θανάλων (i. 15, § 2, iv. 3. § 11). At a later period it became a Roman colony with the name of Achla Augusta Mercariaeas (Gruter, Inscrip. p. 363; cf. Ikin. Ant. p. 59, also pp. 46, 47, 48, 57). Now Thani, or Tény.

[Τ. Η. Δ.]

THEDORIANS (Ἀνακόρδοι). Theodoropolis (Θεοδορόπολις, Procop. de Aed. iv. 6, 7), a town of Moeisia Inferior, founded by the emperor Justinian.

THEODOSIOTIS (Ὀθωδοσιοτίς), a city in Armenia Major, founded by Theodosius II. to keep the Armenians in subjection. It was enlarged by the emperor Anastasius, and its fortifications were much strengthened by Justinian. (Procop. B. P. i. 10.) It lay S. of the Araxes and 42 stadia S. of the mountain in which the Euphrates rises, the present Bingöl. (Ib. 17; cf. Ritter, Erdk. x. p. 79, seq.) Theodosiopolis enjoyed an extensive commerce. (Const. Perp. de Aed. Imp. 45.) Some were writers identify it with the Theodoropolis of Ritter, ib. pp. 80, 271, seq.; Zeune, p. 431; but according to D'Anville (Geogr. Anc. ii. p. 99, seq.) it lay 35 miles E. of that place. (Cf. Chardin, ii. p. 173, seq.; Hamilton, Asia Minor, &c. i. p. 178; Gibbon, Decline and Fall, iv. p. 168, ed. Smith.)

[Τ. Η. Δ.]

THEODOSIOPOLIS, in Myssia. (Περιπερεία). THEOCHELIA (Ὀθωδοσιοτίς), in Libya, p. 179, l. 9. THEOPHILUS (Θεοφιλος, Ptol. v. 9, § 3), a river of Asiatic Sarmatia, which fell into the Pulsus Macedis, between the greater and less Rhombites. (Cf. Amm. Marc. xxi. 8 § 29.)

[Τ. Η. Δ.]

THEOPOLIS. This place in Gallia, with a pure Greek name, was near Sisernon, in the department of Basses-Alpes, on the left bank of the Dracutus (Durance). An inscription cut on the slope of a rock in honour of Baradoius, prefect of the Praetorium of Gallia Transalpina, informs us that they had a road for this town by cutting both sides of the mountains, and they gave it walls and gates. The place is still called Thevenz, and there are said to be remains there. (D'Anville, Notice, &c.)

[Γ. Λ.]

THERA (Θηρία, Ion. Θῆρια: Ἑθ. Θηρίας: santorin), an island in the Aegean sea, and the chief of the Sporades, is described by Strabo as 200 stadia in circumference, opposite the Cretean island of Dia, and 700 stadia from Crete itself. (Strab. x. p. 484.) Pisny places Thera 25 Roman miles S. of los (iv. 12. s. 23). Thera is said to have been formed by a cleft of earth thrown from the ship Arge, to have received the name of Calliste, when it first emerged from the sea, and to have been first inhabited by the Phoenicians, who were there left by Cadmus. Eight generations afterwards it was colonised by Lacedaemonians and Mycenae under the guidance of the Spartan Themis, the son of Antæus, who gave his name to the island. (Herod. iv. 147, seq.; Pind. Pyth. iv. 457; Callin. op. Strab. viii. p. 347, x. p. 484; Apoll. Rhod. iv. 1762; Paus. ii. 3. § 7, iii. 15. § 6, vii. 2. § 2.) Its only importance in history is owing to its being the mother-city of Cyrene in Africa, which was founded by Battus of Thera in n. c. 631. (Herod. iv. 156, seq.) At this time Thera contained seven districts.
THERA.

Thera, Therasia, and Aspronisi are all composed of volcanic matter, except the southern part of Thera, which contains Mount Elias, of limestone formation, the peak of which rises 1887 feet above the sea. The latter is separated by a submarine ravine from the highest land on the island. This mountain must have been originally a submarine eminence in the bed of the Mediterranean before the volcanic cone was formed (Lyell, *Principles of Geology*, p. 445, 9th ed.).

The first appearance of the three Kamnēi was recorded in ancient times, and has been narrated by several writers. The Nea Kamnēi, which is the largest of the group, did not emerge till the year 1707; but the other two were thrown up in ancient times. The exact time of their appearance, however, is differently related, and it is difficult, and in some cases impossible, to reconcile the conflicting statements of ancient writers upon the subject. It appears certain that the oldest of these islands is the most southerly one, still called the *Palaea or Old Kamnēi*. It burst out of the sea in B.C. 197, and received the name of Hiera, a name frequently given in antiquity to volcanic mountains. This fact is stated by Eusebius, Strabo, and Plutarch. It is related by Strabo that flames burst out of the sea for four days, and that an island was formed 12 stadia or 1½ English mile in circumference. (Euseb. Chron. p. 144, *Olymp. 145*. 4; Justin, *xxx*. 4; Strab. i. p. 57; *Plut. de Tyth. Or*. ii. p. 119.)

The unanimous statement of these four writers is, however, at variance with that of Pliny (ii. 67, 89), who says "that in the 4th year of the 153th Olympiad [B.C. 257] there arose Thera and Therasia; between these islands, 120 stadia of water [p. c. 107]. Hiera, also called Autonome, and 2 stadia from the latter, 110 years [A.D. 3] afterwards, in the consulate of M. Junius Silanus and L. Ballus, on the 8th of July, Thias." In another passage he says (iv. 12. s. 23): "Thera, when it first emerged from the sea, was called Calliste. Therasia was afterwards torn away from it; between the two there presently arose Autonome, also called Hiera; and in our age Thias near Hiera." Seneca refers apparently to the events mentioned by Pliny, when he states (Q. Nat. ii. 26), under the authority of Posidonius, that an island arose in the Aegean sea "in the memory of our ancestors" (najorum nostrorum memoria), and that the same thing happened a second time "in our memory" (nostra memoria) in the consulate of Valerius Asiaticus [A.D. 46]. (Comp. Q. Nat. vi. 21.)

According to the preceding statements there would have been five different eruptions of islands in the space of little more than 200 years. First Thera and Therasia themselves appeared in B.C. 257, according to Pliny; secondly Hiera, according to Eusebius, Justin, Strabo, and Plutarch, in B.C. 197; thirdly Hiera or Autonome, according to Pliny, 130 years later than the first occurrence, consequently in B.C. 107; fourthly, according to Pliny, 110 years afterwards, Thias, that is in A.D. 3; fifthly, according to Seneca and other writers, who will be mentioned presently, an island in the reign of the emperor Claudius, A.D. 46.

Now it is evident that there is some gross error in the text of Pliny, or that he has made use of his authorities with a carelessness which is not unusual with him. The most surprising thing is, that he has omitted the eruptions of the islands in B.C. 197 and A.D. 46, which are guaranteed by several authorities. His statement that Thera and Therasia first appeared in the 4th year of the 153th Olympiad,

and corrected, we may suppose a slight error in the numerals in the text of Pliny (reading "Olympiadis cxxxv anno quarto" instead of "Olympiadis cxxxv anno quarto"), we have the very year (B.C. 197) in which Eusebius and Justin place the appearance of Hiera. There can be little doubt, therefore, that Pliny's authorities referred to this event, and that it was only through carelessness that he spoke of the appearance of Thera and Therasia in that year. Thus the first statement of Pliny may be reconciled with the accounts of Eusebius, Justin, and the other writers. The appearance of the second island, to which he falsely transfers the name of Hiera from the earlier occurrence, must be placed in B.C. 67, according to the corrected chronology. This island no longer exists; and it must therefore either have been thrown up and disappeared again immediately, as was the case in the eruption of 1650, or it was simply an addition to the ancient Hiera, of which there are some instances at a later period. It is apparently to this eruption that the statement of Poseidonius, quoted by Seneca, refers. The last statement of Pliny that a new island, named Thia, was thrown up 2 stadia from Thira in the consulship of M. Junius Silanus and L. Balbus, on the 8th of July, is so exact that it seems hardly possible to reject it; but here again is an error in the date. If we take the numbers as they stand, this event would have happened in A.D. 3, or, according to the corrected numbers, in A.D. 43, whereas we know that M. Junius Silanus and L. Balbus were consuls in A.D. 19. No other writer, however, speaks of an eruption of an island in this year, which, if it actually happened, must again have disappeared. Moreover, it is strange that Pliny should have passed over the eruption of the real Thia, or Mikra Kammeni, which occurred in his lifetime, in the consulship of Valerius Asiaticus, and in

MAP OF THERA AND THE SURROUNDING ISLANDS.

THERA.

1160

the reign of Claudius, A.D. 46. This event, with the difference of only a single year, is mentioned by several writers. (Senec. de Nat. ii. 29, vi. 21; Diod. Cass. ix. 29; Antic. Vict. Caius 4, Epit. 4; Oppian. Herc. iv. 37, ed. Curt. i. p. 197, ed. Par.) Moreover Pliny himself, in another passage (iv. 12. s. 23), says that Thia appeared in our age ("in nostro seco"), which can hardly apply to the consignment of Sianus and Babius, since he was not born till A.D. 23.

In A.D. 726, during the reign of Leo the Isaurian, Heria, or the Palata Kalamene, received an augmentation on the NE. side, (Theoph. Chronogr. p. 398, ed. Paris.; Cosenz. i. p. 454, ed. Paris.; Nevehor. p. 35, ed. Par.) There have been several eruptions in modern times, of which a full account is given by Liout. Leycester and Ross. Of these one of the most important was in 1573, when the Mikra Kalamene is said to have been formed. But as we have already seen from several authorities that an island was formed in the reign of Claudines, A.D. 46, we must suppose either that the last-mentioned island sunk into the sea at some unknown period, and made its appearance a second time as the Mikra Kalamene in 1573, or that there was only an augmentation of the Mikra Kalamene in this year. The latter supposition is the more probable, especially since Father Richard, who records it, was not an eye-witness, but derived his information from old people in the island. There was another terrible eruption in 1650, which Father Richard himself saw. It broke out at an entirely different spot from all preceding eruptions, outside the gulf, off the NE. coast of Theria, about 31 miles from C. Kalymnos, in the direction of Is and Anydroi. This submarine outbreak lasted about three months, covering the sea with pumice, and giving rise to a shoal, which was found by the English Survey to have 10 fathoms water over it. (See map, A.) At the same time the island of Theria was violently shaken by earthquakes, in which many houses were overturned, and a great number of persons and animals were killed by the pestilential vapours emitted from the volcano. The sea inundated the flat eastern coast of the island, to the extent of two Italian miles inland. The ruins of two ancient towns at Perissa and Kounari were disinterred, the existence of which was previously unknown, and which must have been overwhelmed by some previous eruption of volcanic matter. The road also, which then existed round Cape Mesana-Vouno, was sunk beneath the waters.

For the next 50 years, or a little longer, the volcanic fires slept, but in 1707 they burst forth with redoubled fury, and produced the largest of the three burnt islands, the Nea Kalamene. It originally consisted of two islands. The first which rose was called the White Island, composed of a mass of pure ice extremely porous. A few days afterwards there appeared a large chain of dark rocks, composed of brown trachyte, to which the name of the Black Island was given. These two islands were gradually united; and in the course of the eruptions, the black rocks became the centre of the actual island, the Nea Kalamene. The White Island was first seen on the 23rd of May, 1707, and for a year the discharges of the volcano were incessant. After this time the eruptions were less frequent; but they continued to occur at intervals in 1710 and 1711; and it was not till 1712 that the fires of the volcano became extinct. The island is now about 2½ miles in circuit, and has a perfect cone at its SE. side, which is 325 feet high. From 1712 down to the present day there has been no further eruption.

There are several thermal and mineral springs at Theria and the surrounding islands, of which Liout. Leycester gives an account, and which are more fully described by Lauderer in the treatise entitled Περί των ἐν θεία (Σαντορίνη) Θεών θάλατ. Athens, 1835. The most important are the iron springs in a bay on the SE. side of Nea Kalamene. There are springs on the NE. side of Palata Kalamene, likewise near Cape Esonuti in the south of Theria, and at other places. Fresh water springs are very rare at Theria, and are only found round Mount Elias springing from the limestone. The inhabitants depend for their supply of water upon the rain which they catch in the tanks during the winter.

The principal modern town of the island is now called Theria, or Thira, and is situated in the centre of the curve of the gulf. When Tournemont visited Theria, the capital stood upon the promontory Skaro, a little to the N. of the present capital, and immediately under the town of Merovouta. The promontory Skaro projects about one third of a mile into the sea, and upon it are the remains of a castle built by the dukes of Naxos. The chief town in the island, after the capital, is Epamaneria, on the NW. promontory, and directly opposite to Therassia. As space is of the utmost value in this small island, all the principal towns are built upon the very edge of the cliffs, and present a very singular appearance, perched in some cases more than 900 feet above the sea. Wood being very scarce, the houses are excavated in the face of the vast beds of pozzolana. In order to reach these houses to the towns upon the cliffs, the inhabitants have cut zig-zag stairs or roads in the sides of the precipices. The road upon the summit runs along the edge of the precipices, and, in many cases, over the habitations, which are built in the face of them. The population of the island in 1848 was about 14,000, and, including Therassia, about 14,350. In the time of Tournemont there were 10,000 inhabitants, so that the increase has been nearly a third in about 150 years. The island is carefully cultivated; and the chief production is wine, which is mostly exported to the Russian ports in the Black Sea.

The antiquities of the Black Island have been explained at length by Ross and Liout. Leycester. There are remains of an ancient city situated on the SE. point of the island, upon the summit of Mesa-Vouno, a mountain about 1100 feet above the level of the sea, connected with Mount Elias by the ridge of the Sirtida. The mountain of Mesa-Vouno slopes suddenly off to the precipices on the NE. side, which rise perpendicularly 600 feet above the water and form the cap of the same name. The walls exhibit masonry of all ages, from the most ancient Cyclopean to the regular masonry of later times. The walls may still be traced, and enclose a circuit of only seven-tenths of a mile; but the houses appear to have been built terrace-fashion upon the side of the hill. Several inscriptions, fragments of sculpture, and other antiquities, have been discovered here. The name of this city has been a subject of some dispute. In an inscription found below Mesa-Vouno, at Kamari, in the church of St. Nicholas, the name Oes occurs, which, as we have already seen, is one of the two towns mentioned by Polyennys. But in an inscription upon some steps cut out of the rock of Mesa-Vouno we find orsa voltm. Ross, however, does not consider this to be a proof that
THERAMBUS.

The town or the city, supposed that \( \mathcal{X} \alpha \lambda \iota \mathcal{S} \) here signifies only the political community of the Theraeans. On the other hand, it was so usual for the islands of the Aegean to possess a capital of the same name that, in connection with the inscription last mentioned, it is probable, either that Polcely has accidentally omitted the name of the capital, or that in his time the Theraeans had removed from the lofty site at Messa-I'ovo to Oea upon the sea-coast at Kounari, where submarine ruins still exist. Upon the other or S. side of the Cape Messa-I'ovo, at Perissa, there are also so many ancient remains as to lead us to suppose that this was the site of an ancient city, but the inscription has been discovered to give a clue to its name. Upon either side of the mountain of Messa-I'ovo there are numerous tombs. South of Perissa is C. Ezenoiti, and a little to the N. of this cape there are the remains of an ancient city, which is probably the Elenus of Polcely. Here are the ruins of a mole under water, and on the side of the mountain many curious tombs. There are likewise some ruins and tombs at C. Kolamb, in the N.E. of the island, which may be the site of Melatessa. The island of Therasia possessed a town of the same name (Ptol. iii. 15; § 28), the ruins of which were discovered by Ross opposite Eupanormia in Thera. (Besides the earlier writers, such as Tonnecort and others, the reader is particularly referred to Ross, Reisen auf den Griechischen Inseln, vol. i. pp. 33, seq., 86, seq., 180, seq.; and Lieut. Leycester, Some Account of the Volcanic Group of Santorin or Thera, in the Journal of the Royal Geographical Society, vol. xx. p. 1.)

THERAMBUS or THRAMBUS (Θραμβος, Herod. vii. 123; Θραμβος, Steph. B. s. v.; Θραμβης, Scylax, p. 26; Θραμβουσις δεησα, Lycochr. 1404), a town of the peninsula Pallene, in Chalcidice in Macedonia, is called a promontory by Stephanus B., and is hence supposed by Leake (Northern Greece, vol. iii. p. 156) to have occupied a position near the promontory Cnusastraem, the most southerly point of Pallene; but from the order of the names in Scylax we would rather place it at the promontory upon the western side of the peninsula, called Posidium by Thucydides (iv. 129).

THERANDA, a town of Mosia, now Trenontica (Geogr. Rv. iv. 15; Tab. Pent.). · [T. H. D.]

THERAPNEAE (Θέραπνα : Εθ. Θέραπνατος), a place in the territory of Theseus, between this city and the Asopus. (Enaeip. Bocchi 1029 ; Strab. iii. p. 409; Leake, Northern Greece, vol. ii. p. 369.)

THERAPNE. [Sivanta, p. 1029, b.]

THERIA. [Thelia.]

THERIOIDES SINES (Θηριόδαι κάλαφος, Ptol. viii. 3, § 2), a gulf on the coast of the Sinus, between the promontories Natium (Νατιον) and Satyron (Σάτυρον). Perhaps the gulf of Tonkin, or that between the Cape St. James and the river of Campejia. · [T. H. D.]

THERIA. [Thessalonica.]

THERMIAE (Θερμαι) was the name of two cities in Sicily, both of which derived their name from their position in the neighbourhood of hot springs. 1. The northern Thermae, sometimes called for distinction's sake THERMAE HIMERENSES (now Termini), was situated on the N. coast of the island, in the immediate neighbourhood of the more ancient city of Himera, to the place of which it may be considered as succeeding. Hence its history is given in the article HIMERA.

2. The southern Thermae, or THERMAE SICULIUM (Sciculae), was situated on the S.W. coast of the island, and, as its name imports, within the territory of Selinus, though at a distance of 20 miles from that city in the direction of Agrigentum. There can be no doubt that it occupied the same site as the modern town of Scicula, about midway between the site of Selinus and the mouth of the river Haly-
cus (Platoni), where there still exist sulphureous waters, which are in constant use. (Smyth's Sicily, p. 217; Cluer, Sicil., p. 223.) We have no account of the existence of a town on the site during the period of the independence of Selinus, though there is little doubt that the thermoic waters gained always a considerable celebrity, and have attracted some population to the spot. Nor even under the Romans did the place attain to anything like the same importance with the northern Thermes; and there is little doubt that Phiny is mistaken in assigning the rank of a colonia to the southern instead of the northern town of the name. [Himera.]

Strabo mentions the waters (τὰ Θερμαὶ τὰ Σικυωνία, Strab. vi. p. 273); and they are still noticed in the Itineraries under the name of Aquae Ladienses or Laidrodes (Itin. Ant. p. 59; Tab. Pent.). · [E. H. B.]

THERIAICUS SINUS. [Thessalonica.]

THERMODON (Θέρμοδον : Thermod.), a river of Pontus, celebrated in the story about the Amazons, is described by Phiny (vi. 3) as having its sources in the Amazonian mountains, which are not mentioned by any other ancient writer, but are believed still to retain their ancient name in the form of Mason Deigh (Hamilton, Researches, i. p. 283.)

Strabo (xii. p. 547) places its many sources near Phanaros, and says that some streams combine to form the Thermodon. Its course is not very long, but its breadth was nevertheless three plethra, and it was a navigable river (Xen. Anab. v. 6, § 9, vi. 2, § 1; Arrian, Peripl. P. E. p. 16.) It discharged itself into the Euxine near the town of Themiscyra, at a distance of 400 stadia to the north-east of the mouth of the Iris. This river is very often noticed by ancient writers. See Anachyl. Prom. 274, Suppl. 290; Herod. ix. 27; Scylax, p. 33; Strab. i. 52, vii. p. 298; Anon. Peripl. P. E. p. 10; Plut. v. 6, § 4; Pompon. Mela, i. 19; Plin. xi. 38; sec. 37; Virg. Aen. vi. 659; Or. ce Pont. iv. 19, 51; Propert. iv. 4, 71, and many other passages. [L. S.]

THERMOPYLAE (Θερμοπυλαι), or simply PYLAE (Πυλαι), that is, the Hot Gates or the Gate, a celebrated narrow pass, leading from Thessaly into Locris, and the only road by which an enemy can penetrate from northern into southern Greece. It lay between Mount Oeta and an inaccessible morass, forming the edge of the Maelic gulf. In consequence of the change in the course of the rivers, and in the configuration of the coast, this pass is now very different from its condition in ancient times; and it is therefore necessary first to give the statement of Herodotus and other ancient writers, taken from the locality, and then to compare it with its present state. In the time of Herodotus the river Spercheius flowed into the sea in an easterly direction at the town of Anticyra, considerably W. of the pass. Twenty stadia E. of the Spercheius was another river, called Dyras, and again, 20 stadia further, a third river, named Melas, 5 stadia from which was the city Trachis. Between the mountains where Trachis stood, and the sea the plain is widest. Still further E. was the Asopus, issuing from a rocky gorge (δασσαφεί),
and E. again is a small stream, named Phoenix, flowing into the Asopus. From the Phoenix to Thermopylae the distance, Herodotus says, is 15 stadia. (Herod. vii. 198—200.) Near the united streams of the Phoenix and the Asopus, Mt. Octa approached so close to the margin of the gulf as to leave space for only a single carriage. In the immediate vicinity of the pass is the town of Anthela, celebrated for the temples of Amphictyon and of the Amphictyonic Demeter, containing seats for the members of the Amphictyonic council, who held there their annual meetings. At Anthela Mount Octa recedes a little from the sea, leaving a plain a little more than half a mile in breadth, but again contracts near Alpeni, the first town of the Locrians, where the space is again only sufficient for a single carriage. At this pass were some hot springs, which were consecrated to Hercules (Strab. ix. p. 428), and were called by the natives Cithri or the Pans, on account of the cells here prepared for the bathers. Across this pass the Phocians had in ancient times built a wall to defend their country against the attacks of the Thessalians, and had let loose the hot water, so as to render the pass impracticable. (Herod. vii. 200, 176.) It appears from this description that the proper Thermopylae was the narrow pass near the Locrian town of Alpeni; but the name was also applied in general to the whole passage from the mouth of the Asopus to Alpeni. Taking the term in this acception, Thermopylae consisted of the two narrow openings, with a plain between them rather than a mile in length and about half a mile in breadth. That portion of Mt. Octa, which rises immediately above Thermopylae is called Calidromeo by Livy and Strabo, but both writers are mistaken in describing it as the highest part of the range. Livy says that the pass is 60 stadia in breadth. (Liv. xxxvi. 15; Strab. ix. p. 428.)

In consequence of the accumulation of soil brought down by the Spercheiins and the other rivers, three or four miles of new land have been formed, and the mountain stream which issues in the plain, and which is longer close to the sea. Moreover, the Spercheiins, instead of flowing into the sea in an easterly direction, considerably W. of Thermopylae, now continues its course parallel to the pass and at the distance of a mile from it, falling into the sea lower down, to the E. of the pass. The rivers Illyras, Melas, and Asopus, which formerly reached the sea by different mouths, now discharge their waters into the Spercheiins. In addition to this there has been a copious deposit from the warm springs, and a consequent formation of new soil in the pass itself. The present condition of the pass has been described by Colonel Leake with his usual clearness and accuracy. Upon entering the western opening, Leake crossed a stream of warm mineral water, running with great rapidity towards the Spercheiins, and leaving a great quantity of red deposit. This is undoubtedly the Phoenix, which probably derived its name from the colour of the sediment. After crossing a second salt-spring, which is the source of the Phoenix, and a stream of cold salt water, Leake entered upon which that Herodotus calls the plain of Anthela, which is a long triangular slope, formed of a hard gravelly soil, and covered with shrubs. There is an easy descent into this plain over the mountains, so that the western opening was of no importance in a military point of view. Upon reaching the eastern pass, situated at the end of the plain of Anthela, the traveller reaches a white elevated soil formed by the deposit of the salt-springs of the proper Thermopylae. There are two principal sources of these springs, the upper or western being immediately at the foot of the highest part of the cliffs, and the lower or eastern being 200 yards distant. From the lower source the water is conducted in an artificial canal for a distance of 400 yards to a mill. This water emits a strong sulphureous vapour, and, as it issues from the mill, it pours out a great volume of smoke. Beyond the hill are conical heights, and in their rear are two salt ponds, containing cold water; but as this water is of the same composition as the hot springs, it is probably also hot at its source. Leake observes that the water of these pools, like that of the principal hot source, is of a dark blue colour, thus illustrating the remark of Pausanias, that the bluest water he ever saw was in one of the baths at Thermopylae. (Paus. iv. 35. § 9.) The springs at this pass are much hotter, and have left a far greater deposit of those saline of Thermopylae of the plains, than the opening which may be called the false Thermopylae, issuing from the pass are foundations of a Hellenic wall, doubtless the remains of works by which the pass was at one time fortified; and to the left is a tumulus and the foundations of a circular monument. Upwards of a mile further is a deep ravine, in which the torrents descending from Mt. Callidromon, are collected into one bed, and which afford the easiest and most direct passage to the summit of the mountain. This is probably the mountain path by which the Persians, under Hydarnes, descended in the rear of Leonidas and his companions. This path, as well as the mountain over which it leads, is called Anopaea (Ἀνόπαια) by Herodotus, who does not use the name of Callidromon. He describes the path as beginning at the gorge of the Asopus, passing over the crest of the mountain, and terminating near Alpeni and the rock called Melampygus, and the seats of the Cercopes, where the road is narrowest. (Herod. vii. 216.) The history of these parts of Thermopylae is too well known to require to be related here. The wall of the Phocians, which Leonidas repaired, was probably built a little eastward of the western salt-spring. When the Spartan king learnt that Hydarnes was descending in his rear, he advanced beyond the wall into the widest part of the pass, resolved to sell his life as dearly as possible. Upon the arrival of Hydarnes, the Greeks retired behind the wall, and took up their position upon a hill in the pass (κοιλαία ἐν τῇ γέφυρᾳ), where a station was afterwards erected in honour of Leonidas. This hill Leake identifies with the western of the two small heights already described, as nearest to the position of the Phocian wall, and the narrowest part of the pass. The other height is probably the rock Melanagynas.

Thermopylae is immortalised by the heroic defence of Leonidas; but it was also the scene of some important struggles in later times. In n. c. 279 an allied army of the Greeks, who established in the pass to oppose the Gauls under Brennus, who were marching into southern Greece with the view of pillaging the temple of Delphi. The Greeks held their ground for several days against the attacks of the Gauls, till at length the Heracloteans and Aetians conducted the invaders across Mount Callidromon by the same path which Hydarnes had followed two centuries before. The Greeks, finding their position
no longer tenable, embarked on board their ships and retired without further loss. (Paus. x. 19—22.) In B.C. 207, when the Romans were carrying on war in Greece against Philip, king of Macedonia, the Aetolians, who were then in alliance with the Romans, fortified Thermopylae with a ditch and a rampart, but Philip shortly afterwards forced his way through the pass. (Liv. xxxii. 5, 7; Polyb. x. 41.) In B.C. 181, Antiochus, who was then at war with the Romans, took up his position at Thermopylae, which he fortified with a double rampart, a ditch, and a wall; and, in order to prevent the Romans from crossing the mountains and descending upon his rear, he garrisoned with 2000 Aetolians the three summits, named Callidromum, Telchius, and Rhodunita. The consul Acius sent some troops against these fortresses and at the same time attacked the army of Antiochus in the pass. While the battle was going on in the pass, the Roman detachment, which had succeeded in taking Callidromum, appeared upon the heights, threatening the king's rear, in consequence of which Antiochus immediately took to flight. (Liv. xxxvi. 15—19.) There are still remains of three Hellenic fortresses upon the heights above Thermopylae, which probably represent the three places mentioned by Livy. Appian (Syv. 17) speaks only of Callidromum and Telchius, but Strabo (ix. p. 428) mentions Rhodunita also. Procopius relates that the fortifications of Thermopylae were restored by Justinian (de Aed. iv. 2).

(On the topography of Thermopylae, see the excellent account of Leake, Northern Greece, vol. ii. pp. 5, seq., 40, seq.; there is also a treatise by Gordon, Account of Two Visits to the Anopara or the Highlands above Thermopylae, Athens, 1838, which the writer of this article has not seen.)

**MAP OF THERMOPYLAE AND THE SURROUNDING COUNTRY.**

**THERMUM, THERMUS or THERMA (τὸ Θηρμός, Pol. v. 8. τὰ Θηρμα, Strab. x. p. 463; Pol. v. 7; Θηρμα, Steph. B. s. v.; Eth. Θηρμα, Plut.); the chief city of Aetolia during the flourishing period of the Aetolian League, and the place where the meetings of the league were usually held and an annual festival celebrated. It possessed a celebrated temple of Apollo, in connection with which the festival was probably celebrated. It was situated in the very heart of Aetolia, N. of the lake Trichonis, and on a height of Mt. Panantolium (Viena). It was considered inaccessible to an army, and from the strength of its situation it was regarded as a place of refuge, and as it were, the Acropolis of all Aetolia. The road to it ran from Metapa, on the lake Trichonis, through the village of Paphmia. The city was distant 60 stadia from Metapa, and 30 from Paphmia; and from the latter place the road was very steep and dangerous, running along a narrow crest with precipices on each side. It was, however, surprised by Philip V., king of Macedonia, in his invasion of Aetolia in B.C. 218. The Aetolians, who had never imagined that Philip would have penetrated so far into their country, had deposited here all their treasures, the whole of which now fell into the hands of the king, together with a vast quantity of arms and armour. He carried off the most valuable part of the spoil, and burnt all the rest, among which were more than 15,000 suits of armour. Not content with this, he set fire to the sacred buildings, to retaliate for the destruction of Dium and Dodona. He also defaced all the works of art, and threw down all the statues, which were not less than 2000 in number, only sparing those of the Gods. (Pol. v. 6—9, 13.) A few years afterwards, when the Aetolians had sided with the Romans, Philip again surprised Thermus (about B.C. 206), when he destroyed everything which had escaped his ravages in his first attack. (Pol. xi. 4.) We have no further details of the history of Thermum. Polybius alludes, in one or two other passages (xxviii. 31, xxviii. 4), to the meetings of the league held there. In the former of these passages Livy (xxxiii. 32) has misunderstood the words τὴν.
The Thespians, therefore, to overthrow the existing government; but the latter receiving assistance from Thebes, many of the conspirators withdrew to Athens. (Thuc. vi. 95.) In B.C. 372 the walls of Thespiae were again destroyed by the Thebans. According to Diodorus (xxv. 46) and Xenophon (Hell. vi. 3. § 1) Thespiae was at this time destroyed by the Thebans, and the inhabitants driven out of Boeotia; but this happened after the battle of Leuctra, and Mr. Grote (Hist. of Greece, vol. x. p. 219) justly infers from a passage in Iamblichus that the fortifications of the city were alone demolished at this period. Pausanias expressly states that a contingent of Thespians was present in the Theban army at the time of the battle of Leuctra, and availed themselves of the permission of Epaminondas to retire before the battle. (Paus. ix. 13. § 8, ix. 14. § 1.) Shortly afterwards the Thespians were expelled from Boeotia by the Thebans. (Paus. ix. 14. § 2.) Thespiae afterwards returned and is mentioned in the Roman wars in Greece. (Polyb. xxvii. 1; Liv. xiii. 43.) In the time of Strabo, Thespiae and Tanagra were the only places in Boeotia that deserved the name of cities. (Strab. i. p. 410.) Pliny calls Thespiae a free town ("liberum oppidum," iv. 7. s. 12). It is also mentioned by Ptolemy (iii. 15. § 20) and in the Antonine Itinerary (p. 326, ed. Wess.), and it was still in existence in the sixth century (Herod. p. 645, ed. Wess.).

Erse or Love was the deity chiefly worshipped at Thespiae; and the earliest representation of the god in the form of a rude stone still existed in the city in the time of Pausanias (ix. 27. § 1). The courtyard of Phryne, who was born at Thespiae, presented to her native city the celebrated statue of Love by Praxiteles, which added greatly to the prosperity of the place in consequence of the great numbers of strangers who visited the city for the purpose of seeing it. (Dio. iv. 25, ed. Muller; Cic. Verr. iv. 2; Strab. i. p. 410, who erroneously calls the courtyard Glycera; Paus. ix. 27. § 3.) The story of the manner in which Phryne became possessed of this statue, and its subsequent history, are related in the life of Praxiteles. [Dict. of Biog. Vol. III. pp. 529, 521.] In the time of Pausanias there was only an imitation of it at Thespiae by Menodorus. Among the other works of art in this city Pausanias noticed a statue of Eros by Lyppus, statues of Aphrodite and Phryne by Praxiteles, the agora containing a statue of Hesiod; the theatre, a temple of Aphroditel Melanesia, a temple of the Muses, containing their figures in stone of small size, and an ancient temple of Hercules. (Paus. ix. 27.) Next to Eros, the Muses were specially honoured at Thespiae; and the festivals of the 

The Thespian or Thespiad, of which the word is derived from Thespiae, was the title of a great national festival of the Thebans, at which they celebrated the memory of their great national hero, Eteocles, in memory of the battle of Leuctra. (Polyb. xxvii. 1; Liv. xiii. 43.) There were also other Thespiads, the most important of which was the Thespiad or Thespiada at the Thespian games, which was celebrated at the same time as the great national festival of the Thebans at Leuctra, and in memory of the great national hero, Eteocles, in memory of the battle of Leuctra. (Polyb. xxvii. 1; Liv. xiii. 43.) There were also other Thespiads, the most important of which was the Thespiad or Thespiada at the Thespian games, which was celebrated at the same time as the great national festival of the Thebans at Leuctra, and in memory of the great national hero, Eteocles, in memory of the battle of Leuctra. (Polyb. xxvii. 1; Liv. xiii. 43.) There were also other Thespiads, the most important of which was the Thespiad or Thespiada at the Thespian games, which was celebrated at the same time as the great national festival of the Thebans at Leuctra, and in memory of the great national hero, Eteocles, in memory of the battle of Leuctra. (Polyb. xxvii. 1; Liv. xiii. 43.) There were also other Thespiads, the most important of which was the Thespiad or Thespiada at the Thespian games, which was celebrated at the same time as the great national festival of the Thebans at Leuctra, and in memory of the great national hero, Eteocles, in memory of the battle of Leuctra. (Polyb. xxvii. 1; Liv. xiii. 43.) There were also other Thespiads, the most important of which was the Thespiad or Thespiada at the Thespian games, which was celebrated at the same time as the great national festival of the Thebans at Leuctra, and in memory of the great national hero, Eteocles, in memory of the battle of Leuctra.
rivers Kastorias rising here. Leake noticed the foundations of an oblong or oval enclosure, built of very solid masonry of a regular kind, about half a mile in circumference; but he observes that all the adjacent ground to the S.E. is covered, like the interior of the fortress, with ancient foundations, squared stones, and other remains, proving that if the enclosure was the only fortified part of the city, many of the public and private edifices stood without the walls. The site of some of the ancient temples is probably marked by the churches, which contain fragments of architraves, columns, and other ancient remains. (Leake, Northern Greece, vol. ii. p. 479, seq.; Dodwell, vol. i. p. 253.)

COIN OF THESPIAE.

THESPOTLI, THESPOTLIA. [EPEIRUS.] THESSALIA (ΘΕΣΣΑΛΙΑ or ΘΕΣΣΑΛΙΑ: Eth. ΘΕΣΣΑΛΟΣ or ΘΕΣΣΑΛΙΟΣ, Thessalus, fem. ΘΕΣΣΑΛΗ, ΘΕΣΣΑΛΗ, Thessallis: Adj. ΘΕΣΣΑΛΟΣ, ΘΕΣΣΑΛΙΩΣ, Thessalianis, Thessalius, Thessalius), the largest political division of Greece, was in its widest extent the whole country lying N. of Thessaly as far as the Cambunian mountains, and bounded upon the W. by the range of Pindus. But the name of Thessaly was more specifically applied to the great plain, by far the widest and largest in all Greece, enclosed by the four great mountain barriers of Pindus, Othrys, Ossa, and Pelion, and the Cambunian mountains. From Mount Pindus,—the Apennines or back-bone of Greece,—which separates Thessaly from Epeirus, two large arms branch off towards the eastern sea, running parallel to one another at the distance of 60 miles. The northern, called the Cambunian mountains, forms the boundary between Thessaly and Macedonia, and terminates in the summit of Olympus, which is the highest mountain in all Greece [Olympus]. The southern arm, named Othrys, separates the plain of Thessaly from Malis, and reaches the sea between the Malian and Pagassaean gulf [Othyni]. The fourth barrier is the range of mountains, first called Ossa and afterwards Pelion, which run along the coast of Thessaly upon the E., nearly parallel to the range of Pindus [Ossa; Pelion]. The plain of Thessaly, which is thus enclosed by natural ramparts, is broken only at the N. corner by the celebrated vale of Tempe, which separates Ossa from Olympus, and is the only way of entering Greece from the N., except by a pass across the Cambunian mountains. This plain, which is drained by the river Peneius and its affluents, is said to have been originally a vast lake, the waters of which were afterwards carried off through the vale of Tempe by some sudden convulsion, which rent the rocks of the valley asunder. (Herod. vii. 129.) [TEMPE.] The lakes of Nessonis and Bochae, which are connected by a channel, were supposed by Strabo (ix. p. 450) to have been the remains of this vast lake. In addition to this plain there are two other districts included under the general name of Thessaly, of which one is the long and narrow slip of rocky coast, called Magnesia, extending from the vale of Tempe to the gulf of Pagassae, and lying between Mounts Ossa and Pelion and the sea; while the other, known under the name of Malis, is quite distinct in its physical features from the rest of Thessaly, being a long narrow valley between Mounts Othrys and Oea, through which the river Spercheius flows into the Malian gulf. The plain of Thessaly properly consists of two plains, which received in antiquity the name of Upper and Lower Thessaly; the Upper, as in similar cases, meaning that the country of Mount Pindus is distant from the sea, and the Lower the country near the Therman gulf. (Strab. ix. pp. 430, 437.) These two plains are separated by a range of hills between the lakes Nessonis and Bochae on the one hand, and the river Enipus on the other. Lower Thessaly, which constituted the ancient division Pelagistos, extends from Mounts Titarus and Ossa on the N. to Mount Othrys and the shores of the Pagassaean gulf on the S. Its chief town was Larissa. Upper Thessaly, which corresponded to the ancient divisions Thessaliotis and Histiaeotis, of which the chief city was Pharsalus, stretches from Aegginium in the N. to Thammuc in the S., a distance of at least 50 miles in a straight line. The road from Thermopylae into Upper Thessaly entered the plain at Thammuc, which was situated at the pass called Coela, where the traveller came in sight of a plain resembling a vast sea. (Liv. xxxii. 4.) [THAMMUC.] The river Peneius, now called the Salambria or Salambria (Σαλαμβρια, Σαλαμπρια), rises at the NW. extremity of Thessaly, and is composed of streams collected in the valleys of Mount Pindus and the offshoots of the Cambunian mountains. At first it flows through a contracted valley till it reaches the perpendicular rocks, named the Meteorae, upon the summits of which several monasteries are perched. Below this spot, and near the town of Aegginium or Stagia, the valley opens out into the vast plain of Upper Thessaly, and the river flows in a general southerly direction. At Trica, or Trybalka, the Peneius makes a bend to the E., and shortly afterwards reaches the lowest point in the plain of Upper Thessaly, where it receives within a very short space many of its tributaries. Next it passes through a valley formed by a range of hills, of which these upon the left divide the plains of Upper and Lower Thessaly. It then emerges into the plain a few miles westward of Larissa; after passing which city it makes a sudden bend to the N., and flows through the vale of Tempe to the sea. Although the Peneius drains the greater part of Thessaly, and receives many tributaries, it is in the greater part of its course a shallow and sluggish river, except after the melting of the snows, when it sometimes floods the surrounding plains. Hence on either side of the river there is frequently a wide gravelly uncultivated space, described by Strabo as ποταμόλυατος (ix. p. 430; Leake, Northern Greece, vol. i. p. 420). When the river is swollen in the spring, a channel near Larissa conducts the superfluous waters into the Karatajeor or Μανολυμπ, the ancient Nessonis; and when this basin is filled, another channel conveys the waters into the lake of Karla, the ancient Bochae. (Leake, iv. p. 448.) In the large part of its course, after leaving Larissa, the Peneius flows with more rapidity, and is full of small vortices, which may have suggested to Homer the epithet, —
THESSALIA.

Strabo, 7:753) though, as Leake has remarked, the poet carries his alliteration to an extreme in comparing to silver the white hue of its turbid waters, derived entirely from the earth sup-pended in them. (Northern Greece, vol. iv, p. 291.)

The principal rivers of Thessaly, according to Herodotus (vii. 129), are the Peneus, Axios, Onchos, Eupenus and Pamisus. The four latter rivers all flow from the S. Of these the most important is the Eupenus, now called the Parsons, which flows through the plain of Pharsalus, and falls into the Peneus near Pherae in the lowest part of the plain. The Axios, now called a Byzis, into which the Cuarius (Sosadithiko) falls, is a tributary of the Eupenus. [Enpeus.]

The Pamisus, now called the Eliouri or Petiouri, also joins the Peneus a little to the W. of the Enpens. The Onchos, which is probably the same as the Ochecutes, flows into the lake Bœbisa and not into the Peneus. [For details, see Vol. II. p. 483, a.]

The chief tributary of the Peneus on the N. in the Titaeusesus, now called Flatonitikos or Xeracht, which rises in Mt. Titius, a part of the Cambunian range, and joins the main stream between Larissa and the vale of Tempe. Homer relates (Il. ii. 753, seq.) that the waters of the Titaeusesus did not mingle with those of the Peneus, but flowed upon the surface of the latter like oil upon water, whence it was regarded as a branch of the infernal river Styx. (Comp. Lucan, vi. 375.) Leake calls attention to the fact that Strabo (ix. p. 441), probably misled by the epithet Σρυφοσ, applied by the poet to the Peneus, has reversed the true interpretation of the poet's comparison of the Peneus and the Titaeusesus, supposing that the Peneus was the pellicid river, whereas the apparent reluctance of the Titaeusesus to mingle with the Peneus arises from the former being clear and the latter muddy. (Northern Greece, iii. p. 396, iv. p. 296.) The Titaeusesus was also called Eurotas (Strab. vii. p. 329) and Hoerus or Orcus (Ulin. iv. s. 15).

The plain of Thessaly is the most fertile in all Greece. It produced in antiquity a large quantity of corn and cattle, which supported a numerous population in the towns, and especially a rich and proud aristocracy, who were at frequent feuds with one another and much given to luxury and the pleasures of the table (έκεί γάρ δή πλείστη στή στα τις και άολων; Plut. Crit. 15; Athen. xii. p. 564; Theopomp. ap. Athen. vi. p. 260; Dem. Olynth. p. 16.). The Thessalian horses were the finest in Greece, and their cavalry was at all times efficient; but we rarely read of their infantry. The nobles, such as the Aleuadae of Larissa and the Scopaeidae of Cranion, supplied the poorer citizens with horses; but there was no class of free equal citizens, from which the hoplites were drawn in other Grecian states. (See Grote, Hist. of Greece, vol. ii. p. 367.) Hence the political power was generally either in the hands of these nobles or of a single man who established himself as despot. The numerous flocks and herds of the Scopaeidae at Cranion are alluded to by Theocritus (ld. xvi. 36), and the wealth of the Thessalian nobles is frequently mentioned by the ancient writers.

Thessaly is said to have been originally known by the names of Pyrrha, Aetna, and Aedon. (Rham. ap. Schol. Rhod. iii. 1089; Steph. B. s. v. Αἴανης; Herod. vii. 176.) The two former appellations belong to mythology, but the latter refers to the time when the country was inhabited by the Aeolian Pelasgi, who were afterwards expelled from the country by the Thessalians. This people are said to have been immigrants, who came from Thessalia in Epirus, and conquered the plain of the Peneus. (Herod. vii. 176, comp. ii. 57; Strab. ix. p. 444.)

The Boeotians are said to have originally dwelt at Arne, in the country afterwards called Thessaly, and to have been expelled by the Thessalian invaders 60 years after the Trojan War. (Thuc. i. 12.)

The expulsion of the Boeotians by the Thessalians seems to have been conceived as an immediate consequence of the immigration of the former invaders; but, however this may be, the name of Thessaly is unknown in Homer, who only speaks of the several principalities of which the country was composed. In the Homeric catalogue Phaidippus and Antiphus, who led the Greeks from Carpathus, Cos, and the neighbouring islands, are called the sons of Thessalus, the son of Hercules (Hom. Il. ii. 676); and, in order to connect this name with the Thessalians of Thespria, it was reported that these two chiefs had, upon their return from Troy, been driven by a storm upon the coast of Epirus, and that Thessalus, the grandson of Phaidippus, led the Thessalians across Mount Pindus and imposed his name upon the country. (Vell. Pat. i. 2, 3; Steph. B. s. v. Δάφνως; Polyben. viii. 44.) There are many circumstances in the historical period which make it probable that the Thessalians were a body of immigrant conquerors; though, if they came from Thespria, they must have gradually dropped their original language, and learnt of the conquered who the Thessalian was a variety of the Aeolic dialect. There was in Thessaly a triple division of the population analogous to that in Laconia. First, there were the Thessalians proper, the rich landed proprietors of the plain. Secondly, there were the descendants of the original inhabitants of the country, who were not expelled by the Thessalian conquerors, and who were more or less dependent upon them, corresponding to the Lacadaemonian Perioeci, but, unlike the latter, retaining their original names and their seats in the Amphictyonic council. These were the Pherreiazi, who occupied the mountainous district between Mount Olympus and the lower course of the Peneus; the Magnetes, who dwelt along the eastern coast between Mount Pelion and Ossa and the sea; the Achireans, who inhabited the district called Phthiotis, which extended S. of the Upper Thessalian plain, from Mount Pindus on the W. to the Gulf of Pagae on the S.; the Dolopes, who occupied the mountainous regions of Pindus, S. of Phthiotis and the Mallians, who dwelt between Phthiotis and Thermopylae. The third class of the Thessalian population were the Penestae, serfs or dependent cultivators, corresponding to the Heilits of Laconia, although their condition seems upon the whole to have been superior. They tilted the estates of the great nobles, paying them a certain proportion of the produce, and followed their masters to war upon horseback. They would not, however, be held out of the country, and they possessed the means of acquiring property, as many of them were said to have been richer than their masters. (Arch. ench. ap. Athen. vi. p. 264; Plut. Leg. vi. p. 777; Aristot. Pol. ii. 6. § 3, vii. 9. § 9; Dionys. iv. 84.) They were probably the descendants of the original inhabitants of the country, reduced to slavery by the conquering Thespriots; but when Thespompos states that they were the descendants of the conquered Pherreiazi and Mag-
THESSALIA.

netes (Ap. Athen. vi. p. 265), this can only be true of a part of these tribes, as we know that the Penetae were entirely distinct from the subject Perrhaebians, Magnesites, Acheans, and Doloepes occur; and Achaean Pithiotis was the residence of the great hero Achilles. This district was the seat of Helen, the founder of the Hellenic race, and contained the original Hellas, from which the Hellenics gradually spread over the rest of Greece. (Thuc. i. 263; Thuc. ii. 3; Strab. ix. p. 431; Dicewarch, p. 21, ed. Hudson; Steph. B. s. v. "Ekla".) The Acheans of Pithiotis may fairly be regarded as the same race as the Acheans of Peloponnesus. Thessaly Proper was divided at an early period into four districts or tetrachy, named Thessaliotis, Pelasgiotis, Histiaeotis, and Phociotis. When this division was introduced is unknown. It was older than Histiaeotis (Steph. B. s. s. v. "Kteis"), and was ascribed to Aeacus, the founder of the family of the Aeauadiæ. (Hellenic. Fregam. 28, ed. Didot; Harpocr. s. v. Terapaxia; Strab. ix. p. 430.) This quadruple division continued to the latest times, and seems to have been instituted for political purposes; but respecting the internal government of each we have no precise information. The four districts were nominally united under a chief magistrate, called Tagus; but he seems to have been only appointed in war, and his commands were frequently disobeyed by the Thessalian cities. "When Thessaly is under a Tagus," said Jason, despot of Phene, "she can send into the field an army of 6000 cavalry and 10,000 hoplites." (Xen. Hell. vi. 1. § 8.) But Thessaly was rarely united. The different cities, upon which the smaller towns were dependent, not only administered their own affairs independently of one another, but the three most important, Larissa, Pharsalus and Phere, were frequently at feud with one another, and at the same time torn with intestine faction. Hence they were able to offer little resistance to invaders, and never occupied that position in Grecian history to which their population and wealth would seem to have entitled them. (Respecting the Thessalians in general, see Mr. Grote's excellent remarks, Hist. of Greece, vol. ii. p. 363, seq.) The history of Thessaly may be briefly dismissed, as the most important events are related under the separate cities. Before the Persian invasion, the Thessalians had extended their power as far as Thermopylae, and threatened to overrun Phocis and the country of the Loerians. The Phocians built a wall across the pass of Thermopylae to keep off the Thessalians; and though active hostilities seem to have ceased before the Persian invasion, as the wall was at that time in ruins, the two nations continued to cherish bitter and perpetual enmity against each other. (Herod. vii. 176.) When Xerxes invaded Greece, the Thessalians were at first opposed to the Persians. It is true that the powerful family of the Aleuadiæ, whom Herodotus calls (vii. 6) kings of Thessaly, had urged Xerxes to invade Greece, and had promised the early submission of their countrymen; but it is evident that their party was in the minority, and it is probable that they were themselves in exile, like the Athenian Peisistratids. The majority of the Thessalians sent envoys to the confederate Greeks at the Isthmus, urging them to send a force to the pass of Tempe, and promising them active co-operation in the defence. Their request was complied with, and a body of 10,000 heavy-armed infantry was despatched to Thessaly; but the Grecian commanders, upon arriving at Tempe, found that there was another pass across Mount Olympus, and believing it impossible to make any effectual resistance north of Thermopylae, retreated to their ships and abandoned Thessaly. (Herod. vii. 172, seq.) The Thessalians, thus disembarked, hastened to make their submission to Xerxes; and under the influence of the Aleuadiæ, who now regained the ascendency in Thessaly, they rendered zealous and effectual assistance to the Persians. After the death of Leonidas and his heroic companions at Thermopylae, the Thessalians gratified their enmity against the Phocians by directing the march of the Persians against the Phocian towns and laying their country waste with fire and sword. From the Persian to the Peloponnesian wars the Thessalians are rarely mentioned. Before the battle of Oenophyta (B.C. 456) had given the Athenians the ascendency in Boeotia, Locris, and Phocis, they endeavoured to extend their power over Thessaly. With this view they marched into Thessaly under the command of Myronides in B.C. 454, for the purpose of restoring Orestes, one of the exiled nobles or princes of Pharsalus, whom Thucydides calls son of the king of the Thessalians. The progress of Myronides was checked by the powerful Thessalian cavalry; and though he advanced as far as Pharsalus, he was unable to accomplish anything against the city, and was compelled to retreat. (Thuc. i. 111; Diodor. xi. 85.) In the Peloponnesian War the Thessalians took no part; but the mass of the population was friendly to the Athenians, though the oligarchical governments favoured the Spartans. With the assistance of the latter, combined with his own rapidity and address, Brasidas contrived to march through Thessaly in B.C. 424, on his way to attack the Athenian dependencies in Macedonia (Thuc. iv. 78); but when the Lacedaemonians wished to send reinforcements to Brasidas in the following year, the Thessalians positively refused them a passage through their country. (Thuc. iv. 132.) In B.C. 395 the Thessalians joined the Boeotians and their allies in the league against Sparta; and when Aegarians marched through their country in the following year, having been recalled by the Spartan government from Asia, they endeavoured to intercept him on his return; but their cavalry was defeated by the skilful manoeuvres of Agesilaus. (Xen. Hell. vi. 3. § 3, seq.)

About this time or a little earlier an important change took place in the political condition and relative importance of the Thessalian cities. Almost down to the end of the Peloponnesian War the powerful families of the Aleuadiæ at Larissa, of the Scopaei at Magnesia, and of the Creonæi at Pharsalus, possessed the chief power in Thessaly. But shortly before the close of this war Phereus rose into importance under the administration of Lycophon, and aspired to the supremacy of Thessaly. Lycophon overthrew the government of the nobles at Phere, and made himself tyrant of the city. In prosecution of his ambitious schemes he attacked Larissa; and in B.C. 404 he gained a great victory over the Lacedaemonians, but his other enemies, who opposed him, defeated him. (Xen. Hell. ii. 3. § 4.)

In B.C. 395 Lycoophon was still engaged in a con-

Digitized by Microsoft®
test with Larissa, which was then under the government of Medius, probably the head of the Alcántae. Lycephon was supported by Sparta; and Medius accordingly applied for succour to the confederacy of Greek states which had been lately formed to resist the Laconian power. With their assistance Medius took Pharsalus, which was then occupied by a Laconian garrison, and it is said to have sold all its inhabitants as slaves. (Diod. xiv. 82.) The return of Agesilus, and his victory over the Thessalians, probably deprived Medius and his party of their power, and Larissa no longer appears as the rival of Phere for the supremacy of Thessaly. Pharsalus was captured from the blow which it had received from Medius, and became, next to Phere, the most important city in Thessaly. The inhabitants of Pharsalus agreed to entrust the supreme power to Polydamas, one of their own citizens, in whose integrity and abilities all parties placed the greatest confidence. The aetopoli and the whole management of the finances were placed in his hands, and he discharged his trust to the satisfaction of all parties. (Xen. Hell. vi. 18, 30.)

Meantime the supreme power at Phere had passed into the hands of Jason, a man of great energy and ability, and probably the son of Lycephon, though this is not expressly stated. He inherited the ambitious views of Lycephon, and meditated nothing less than extending his dominion over the whole of Greece, for which his central situation seemed to offer many facilities. He cherished even still more extensive projects of aggrandisement, and, once master of Greece, he looked forward to conquer the Persian empire, which the retreat of the Ten Thousand Greeks and the campaigns of Agesilus in Asia seemed to point out as an easy enterprise. But the first step was his election as Tagus of Thessaly, and the submission of all the Thessalian cities to his authority. For this purpose it was necessary to obtain the acquiescence of Pharsalus, and although he might have gained his object by force, he preferred to effect it by negotiation, and accordingly frankly discarded his projects and schemes of a Persian alliance, which were his title of a second place in Thessaly, if he would support his views. Polydamas asked the advice of the Spartans, and finding that he could receive from them no help, he acceded to the proposals of Jason, and induced the Pharsalians to espouse his cause. Soon after this, probably in c. 374, Jason was elected Tagus of Thessaly, and proceeded to settle the contingent of cavalry and heavy-armed troops which the Thessalian cities were to furnish. He now possessed a force of 8000 cavalry and more than 20,000 infantry; and Alcetas I., king of Epirus, and Amyntas II., king of Macedonia, were his allies. (Xen. Hell. vi. 1 §§ 2—19; Diod. xiv. 60.) He could in effect command a greater force than any other state in Greece; and from the disunion and exhaustion of the other Grecian states, it seemed not improbable that he might be able to carry his ambitious projects into effect. He had already formed an alliance with Thebes, and, after the battle of Leuctra (n. c. 371) he was invited by the Thebans to join them in attacking the Laconian camp. But Jason's policy was to prevent any other power from obtaining the preponderance in Greece, and accordingly upon his arrival at Leuctra he advised the Thebans not to drive the Laconians to dispair, and to obtain a truce for the latter, which enabled them to ensure their safety by a retreat. (Xen. Hell. vi. 4 §§ 20, seq.) In the following year he announced his intention of marching to Delphi at the head of a body of Thessalian troops and presenting at the Pythian festival. Great alarm was felt throughout Greece; but before the time came, he was killed by seven youths as he sat in public to give audience to all comers. His death was felt as a relief by Greece; and the honours paid in many of the Grecian cities to his assassins proved the general fear which his ambitions schemes had excited. (Xen. Hell. vi. 4 §§ 28—32.)

Jason had so firmly established his power that he was succeeded in the post of Tagus of Thessaly by his brother Polydorus, who did not possess his abilities or energy, and Thessaly again sank into political insignificance. Polydorus was assassinated by his brother Polydorus, who became sole Tagus. Polydorus exercised his authority with great cruelty; he put to death Polydamas of Pharsalus, and killed or drove into exile many other distinguished persons of this city and of Larissa. (Xen. Hell. vi. 4 §§ 33, 34.) At the end of a year he was also assassinated by Alexander, who was either his brother (Diod. xv. 61) or his nephew. (Plut. Pelo. 29.) Alexander surpassed even Polydorus in cruelty, and was guilty of gross enormities. The Alcántae and other noble families, who were chiefly exposed to his vengeance, applied in their distress to Alexander, the youthful king of Macedonia, who had recently succeeded his father Amyntas. Alexander invaded Thessaly, defeated the tyrant, and took possession of Larissa and Crannon, which he garrisoned with his troops. (Diodor. xv. 61.) It would seem, however, that the necessities of his own kingdom compelled him shortly afterwards to withdraw his troops from Thessaly; since we find the Thessalian cities opposed to the tyrant inviting the aid of the Thebans. Accordingly, about n. c. 369, Peloepidas invaded Thessaly, and took Larissa and several other cities under his protection, apparently with the sanction of Alexander of Macedonia, who, with whom he formed an alliance. (Diodor. xv. 67.) In the following year (n. c. 368) Peloepidas again invaded Thessaly with a Theban force, to protect Larissa and the other cities against the projects of Alexander of Phere, who had solicited aid from Athens. Alexander was compelled to sue for peace; and Peloepidas, after arranging the affairs of Thessaly, marched into Macedonia, where the young king had been lately assassinated. Pobedy, the regent of the kingdom, was also compelled to enter into alliance with Peloepidas, and to give him several hostages, among whom was the youthful Philip, afterwards king of Macedonia. (Diod. xv. 71; Plut. Pelo. c. 26.) By these means the influence of Thesbes was extended over the greater part of Thessaly. Two years afterwards (n. c. 366) the Thebans obtained from the Persian court a rescript acknowledging their claims to the headship of Greece; and in the same year Peloepidas, accompanied by Ismenias, visited Thessaly with the view of obtaining the recognition of their claim from Alexander of Phere and the other Thessalian cities. Alexander met them at Pharsalus, but when he found that they were not supported by any armed force, he seized them as prisoners and carried them off to Phere. The first attempt of the Thebans to rescue their countryman proved unsuccessful; and the army which they sent into Thessaly was only saved from destruction by the genius of Epaminondas, who was then serving as a private, and was compelled
by the soldiers to take the command. So greatly was Alexander strengthened in his power by this failure that all the Thessalian cities submitted to him, and the influence of Thebes in Thessaly was for a time destroyed. Subsequently a second expedition was sent into Thessaly under the command of Epaminondas, who compelled the tyrant to release Peloepidas and Ismenias, but without restoring Thebes to the commanding position which she had formerly held in Thessaly. (Diod. xv. 71—73; Plut. Pelo. 27—29; Cornel. Nep. Pelo. 5; Paus. ix. 13, § 1.)

The continued opposition of Alexander of Pherae became so intolerable to Epaminondas in Peloponnesus, and the influence of the Thessalian cities overthrown by restoring Thebes for assistance. Accordingly in B.C. 364 Peloepidas was again sent into Thessaly at the head of a Thessalian army. In the first engagement Peloepidas was slain, but Alexander was defeated. (Diod. xv. 80, 81; Plut. Pelo. 31, 32; Cornel. Nep. Pelo. 5; respecting the different expeditions of Peloepidas into Thessaly, as to which there are discrepancies in the accounts, see Grote, Hist. of Greece, vol. x. p. 361, note, p. 391, note.)

The death of Peloepidas, however, proved almost fatal to Alexander. Burning to revenge his loss, the Thes- sans sent a powerful army into Thessaly, which compelled him to renounce his supremacy in Thessaly, to confine himself to Pherae, and to submit to all the demands of Thebes. (Plut. Pelo. 33.)

After the death of Epaminondas at the battle of Mantinea (B.C. 362) the supremacy of Thebes in Thessaly was weakened, and Alexander of Pherae recovered much of his power, which he continued to exercise with his accustomed cruelty and ferocity till his assassination in B.C. 359 by his wife Thebe and her brothers. One of these brothers, Tisiphonus, succeeded to the supreme power, under the direction of Thebe; but his reign lasted only a short time, and he was followed in the government by Lycoophon, another brother. (Xen. Hell. vi. 4, § 37; Diod. xvi. 14; Plut. Pelo. 35.) Meanwhile Philip, who had ascended the throne of Macedon in B.C. 369, had been steadily extending his dominions and his influence; and the Achean and Larissian states had come to him in preference to Thebes. Accordingly Philip marched into Thessaly in B.C. 353. Lycoophon, unable to resist him, invoked the aid of Oenomachus and the Phocians; and Philip, after a severe struggle, was driven out of Thessaly. (Diodor. xvi. 35.) In the following year Philip returned to Thessaly, and gained a signal victory over Oenomachus and Lycoophon. Oenomachus was slain in the battle; and when Philip followed up his victory by laying siege to Pherae, Lycoophon surrendered the city to him, upon being allowed to retire to Thoctic with his mercenaries. (Diodor. xvi. 37.)

Thus ended the powerful dynasty of the tyrants of Pherae. Philip established a popular government at Pherae (Diod. xvi. 38), and gave nominal independence to the Thessalian cities. But at the same time he garrisoned Magnesia and Thessalus on the part of Pergamus with his troops, and he steadily in view the subjugation of the whole country. An attempt made in B.C. 344 to restore the dynasty of the tyrants at Pherae gave him an opportunity of carrying his designs into effect. Not only did he garrison Pherae with his own troops, but he revived the ancient division of the country into four tetrarchies or tetradarchies, and placed at the head of each some of the chiefs of the Achean, who were entirely de- voted to his interests. The result of this arrange- ment was the entire submission of Thessaly to Philip, who drew from the country a considerable addition to his revenues and to his military resources. (Harpe- catz, s. v. Περαια; Dem. Olynth. i. § 33; Strab. xix. p. 440; Thirr. Hist. of Greece, vol. vi. pp. 12—14.)

Upon the death of Philip the Thessalians were the first Greek people who promised to support Alexander in obtaining the supremacy of Greece. (Diod. xvii. 4.) After the death of Alexander the Thessalians took an active part with the other Grecian states in attempting to throw off the Macedonian yoke, but by the victory of Antipater they were again united to the Macedonian monarchy, to which they had remained subject till the defeat of Philip by the Romans at the battle of Cyzicus, B.C. 197. The Roman senate then declared Thessaly free (Liv. xxxiii. 32); but from this time it was virtually under the sovereignty of Rome. The government was vested in the hands of the more wealthy persons, who formed a kind of senate, which was accustomed to meet at Larissa. (Liv. xxxiv. 52, xxxvi. 8, xiii. 39.)

When Macedonia was reduced to the form of a Roman province, Thessaly was incorporated with it. (Strab. xvii. p. 840.) Under Alexander Severus it formed a separate province governed by a procurator (Gruter. Inser. p. 474. 4); and in the later constitution of the Empire after the time of Constantine it also appears as a separate province under the administration of a praeses. (Not. Din. i. p. 7; Bocklin, i. p. 151; Marquardt, in Becker's Röm. Alterth. vol. iii. p. 117.)

In giving an enumeration of the Thessalian tribes and cities, we will first describe the four tetrarchies already mentioned, and then take the other divisions of the country.

1. Hestiaiotis or Histiaiotis (Ἑστιαίωτης, [Ἑστιαϊώτης]), inhabited by the Hestiaetans (Ἑστιαϊωται), the northern part of Thessaly, of which the Peneian may be described as its southern boundary. It occupied the passes of Olympas, and extended westward as far as Lindus. (Plin. iv. 1; Strab. i. p. 430, 437, 438.) It was the seat of the Pheraebsi (Ῥεθαίον), a warlike and powerful tribe, who possessed in historical times several towns strongly situated upon the mountains. They are mentioned by Homer (II. ii. 7—49) as taking part in the Trojan War, and were regarded as genuine Hellenes, being one of the Amphicyonic states (Aesch. de Fals. Leg. p. 122). The chief of the Hes- tieiotis inhabited by them was frequently called Perrhaebia, but it never formed a separate Thessalian province. The Perrhaebians are said at one time to have extended south of the Peneian as far as the lake Bœbeia, but to have been driven out of this dist- 4
the Thessalian side of Pindus near the sources of the Peneius. They are described as a barbarous tribe, living by plunder and robbery. (Hom. ll. ii. 744; Strab. viii. p. 327, ix. p. 434; Steph. B. s. v. Αθηναία.) The towns of Hestiocotis were: Oxyneia, Pellia, Arginum, Meliboea, Phalakia, Erechinum, Pleinatarum, Trecca, Ochialia, Silana, Gomph, Phoca or Phecadam, Ithome, Limnaea, Phactum, Phaestus, Pharcadon, Mylae, Malacca, Cynetis, Erythum, Odosson, Athribis, Doliche, Pythium, Elone subsequently Lemone, Lapathus, Gonus or Gonde, Charax, Condylos, Phalanna, Orthia, Atrak.

2. Pelagiotis (Πελαγιώτης), inhabited by the Pelasgites (Πελαγιώται), extended S. of the Peneius, and along the western side of Pelion and Ossa, including the district called the Pelagian plain. (Strab. ix. p. 443.) The name shows that this district was originally inhabited by Pelasgians; and its chief town was Larissa, a well known name of Pelasgian cities. The towns of Pelagiotis were: Elatea, Mopsium, Metropolis, Gyrtos or Gyrtona, Aegura, Larissa, Sycburn, Crannox, Amyrus, Armenium, Phereas, Cynoscephalae, Scotussa, Palaeaphus.

3. Thessaliotis (Θεσσαλίωτης), the central plain of Thessaly and the upper course of the river Peneius, so called from its having been first occupied by the Thessalian conquerors from Epeirus. Its towns were: Perresia, Phyllus, Metropolis, Cleiium, Euydorium, Pharsalus, the most important in the district, the Thidiunum.

4. Phthiotis (Φθιώτης), inhabited by the Achaean Phthiotae (Ἀχαϊκοὶ Φθιώται), under which name they are usually mentioned as members of the Amphictyonic league. This district, according to Strabo, included the southern part of Thessaly, extending from the Mavrian gulf on the E. to Dolopia and Mount Pindus on the W., and stretching as far N. as Pharsalus and the Thessalian plains. (Strab. ix. p. 430.) Phthiotis derived its name from the Hellenic Phthia (Φθια, ll. i. 155, ii. 683), which appears to have included in the heroic times not only Helis and Dolopia, which is exactly called the furthest part of Phthia (ll. ii. 484), but also the southern portion of the Thessalian plain, since it is probable that Phthia was also the ancient name of Pharsalus. (Leake, N. G. E., vol. iv. p. 484, supra.) The chief cities of Phthiotis were: Amphanumaeum (Spalax, p. 25), or Amphanae (Ἀμφαναί, Steph. B. s. v.), on the promontory Pirrha and on the Pagassaean gulf; Therade, Eretria, Phylace, Iton, Halus, Pteleum, Antroon, Larissa, Cemastae, Prokena, Pras, Nartiacium, Thaumace, Melitara, Cornella, Xynlea, Lamia, Phalara, Echinus.

5. Magnesia (Μαγνησία), inhabited by the Magnetes (Μαγνητείς), was the long and narrow strip of country between Mt. Ossa and Pelion on the W. and the sea on the E., and extending from the mouth of the Peneius on the N. to the Pagassaean gulf on the S. The Magnetes were members of the Amphictyonic league, and were settled in this district in the Hellenic times. (ll. ii 756.) The Thessalian Magnesians are said to have founded the A-italic cities of Magnesia on Mt. Sipylos and of Magnesia on the river Macedon. (Arist. op. Athen. iv. p. 173; Conon. 20; Strab. xiv. p. 647.) The towns of Magnesia were: Ceretium, Boeoe, Glaphyrion, Aeisone, Pa

THESSALONICA.

GASAE, IOLETS, DEMETRIS, NELA, APYTAE, HOMOLKO, HOMOLMIO, MELIBOE, THAUMACIA, CASTHANA, RHIZIS, MAGNESA, OLESON, MYLAE, SPALATHIA, COICAE, METHONE.

6. Dolopia (Δολόπια), inhabited by the Dolopes (Δολόποι), a mountainous district in the SW. corner of Thessaly, lying between Mt. Tymphrestus, a branch of Pindus, on the one side, and Mt. Otères on the other. The Dolopes were, like the Magnetes, an ancient Hellenic people, and members of the Amphictyonic league. They are mentioned by Homer (ll. ii. 484) as included in Phthia, but were governed by a subordinate chieftain of their own. Though nominally belonging to Thessaly, they seem practically to have been independent: and their country was at a later period a constant subject of contention between the Aetolians and the kings of Macedonia. The only place in Dolopia of the greatest importance was Ctirime.

7. Oetaea (Οηταία), inhabited by the Oetaei (Οηταίοι), was the mountainous district around Mt. Oeta in the upper valley of the Spercheiius, and to the E. of Dolopia. The Oetaeans appear to have been the collective name of the various predatory tribes, dwelling upon the northern declivities of Mt. Oeta, who are mentioned as plundering both the Mavrians on the east, and the Doriains on the west (Thuc. iii. 92—7, vii. 3.) The most important of these tribes were the Aenaites (Ἀεναιτεῖς), called Ecinces (Ἐκινεῖς) by Homer (ll. ii. 749) and Herodotus (vii. 132), an ancient Hellenic Amphictyonic race. (Paus. x. 8, 2; Harpocr. s. v. Αμφικτηρίων.) They are said to have first occupied the Dotian plain in Pelagia; afterwards to have wandered to the borders of Epeirus, and finally to have settled in the upper valley of the Spercheiius, where Hypata was their chief town. (Phil. iv. 295; v. 294; Strab. i. p. 61, ix. p. 442.) Besides Hypata, which was the only place of importance in Oeta, we find mention of Spercheiius and Macra Come by Livy (xxxii. 13), and of Sousheins (Σουσθης), Homihoe ('Ομηία), Cyphaera (Κύφαερα) and Phalacthina (Φαλακτηνα) by Ptolomy (iii. 13, 45.)

8. Malis, the lower valley of the Spercheiius, described in a separate article. [Malis.]

COIN OF THESALY.

THESSALOPOLIS. [THESALONICA.] THESALOPOLOCA (Θεσσαλοπόλεις, Θεσσαλοπόλεις), Polyb. xxiii. 4: Scymn. Ch. 625; Θεσσαλοπόλεις, Strab. viii. Epit. 3: Eth. Θεσσαλοπόλεως), a large and important city, the capital of Roman Macedonia, situated at the head of the Thermaic gulf, in the district anciently called Mygdonia. 1. SITUATION.—This is well described by Piny (iv. 10) as "medio flexa litoris [sinus Thermaic]". The gulf extends about 30 leagues in a NW. direction from the group of the Thessalian islands, and then turns to the NE., forming a noble basin be-
THESALONICA.

between CapeS Vardar and Karaburun. On the edge of this basin is the city, partly on the level shore and partly on the slope of a hill, in 40° 38' 47" N. lat. and 22° 57' 22" E. long. The name of the city, as seen from the sea, is described by Leake, Holland, and other travellers as very imposing. It rises in the form of a crescent up the declivity, and is surrounded by lofty whitened walls with towers at intervals. On the E. and W. sides of the city ravines descend from the shore and converge towards the highest point, on which is the citadel called Eretrupogeis, like that of Constantinople. (A view of Thessalonica from the sea is given by Consi-
incy.) The port is still convenient for large ships, and the anchorage in front of the town is good. These circumstances in the situation of Thessalonica were evidently favourable for commanding the trade of the Mediterranean. Its relations to the inland districts were equally advantageous. With one of the two great levels of Macedonia, viz. the plain of the "wide-flowing Axios" (Hom. H. ii. 429), to the N. of the range of Olympus, it was immediately con-
ected. With the other, viz. the plain of the Stru-
mon and Lake Cercinith, it communicated by a pass across the neck of the Chalcidic peninsula. Thus Thessalonica became the chief station on the Roman Via Egnatia, between the Hadriatic and the Hel-
lepsent. Its distance from Pella, as given by the Itineraries, is 27 miles, and from Amphipolis (with intermediate stations; see Act. Apud. xvi. 1) 67 miles. It is still the chief centre of the trade of the district. It contains a population of 60,000, or 70,000, and (though Adriatic may possibly be larger) it is the most important town of European Turkey, next after Constantinople.

2. Name.—Two legendary names, which Thessa-
onica is said to have borne in early times, are Emathia (Zonar. Hist. xii. 26) and Halia (Steph. B. s. v.), the latter probably having reference to the maritime position of the town. During the first period of its authentic history, it was known under the name of Thermia (Θηρμία, Aesch., Ἡθώρια, Herod., Thucyd.; Ἐσθώρια, Mal. Chron., p. 190, ed. Bonn.) derived, in common with the designation of the gulf (Thermicus Sions), from the hot salt-springs, which are found on various parts of this coast, and one of which especially is described by Pococke as being at a distance of 4 English miles from the modern city. (See Sylbus, p. 278, ed. Gali.) Three stories are told of the origin of the name Thessalonica. The first (and by far the most probable) is given by Strabo (vii. Epit. 10), who says that Thermia was rebuit by Cassandar, and called after his wife Thessalonica, the daughter of Philip: the second is found in Steph. B. (s. v.), who says that its new name was a memorial of a victory obtained by Philip over the Thessalians (see Const. Porphryorg. De Them. ii. p. 51, ed. Bonn): the third is in the Etym. Magn. (ετυμ. μεγαλ., s. v.), where it is stated that Philip himself gave the name in honour of his daughter. Whichever of these stories is true, the new name of Thessalonica, and the new eminence connected with the name, are distinctly associated with the Macedonian period, and not at all with the earlier passages of Greek history. The name, thus given, became per-
manent. Through the Roman and Byzantine pe-
riods it remained unaltered. In the Middle Ages the Italians gave it the form of Salonicchi or Salonicchi, which is still frequent. In Latin chronicles we find Salonicia. In German poems of the thirteenth cen-
tury the name appears, with a Teutonic termination,

as Saloneck. The uneducated Greeks of the present day call the place Σαλονίκη, the Turks Selanik.

3. Political and Military History.—Thessalonica was a place of some importance, even while it here had its name of Therma. Three passages of chief interest may be mentioned in this period of its history. Xerxes rested here on his march, his land-forces being encamped on the plain between Thermia and the Axios, and his ships cruis-
ing about the Thermaic gulf; and it was the view from hence of Olympus and Ossa which tempted him to explore the course of the Peneus. (Herod. vii. 128, seqq.) A short time (n. c. 421) before the breaking out of the Peloponnesian War, Thermia was occupied by the Athenians (Thucyd. i. 61); but two years later it was given up to Pericles (Id. ii. 29). The third mention of Thermia is in Aeschines (de Fals. Leg. p. 31, ed. Beck), where it is spoken of as one of the places taken by Paus-
anius.

The true history of Thessalonica begins, as we have implied above, with the decay of Greek

The earliest author who mentions it under its new name is Polybius, in which he says that it was rebuilt in the same year (n. c. 315) with Cassandria, immediately after the fall of Pydna and the death of Olympus. [CASSANDREIA.] We are told by Strabo (I. c.) that Cassander incorporated in his new city the population, not only of Thermia, but also of three smaller towns, viz. Aeneas and Ciusus (which are supposed to have been on the eastern side of the gulf), and Chalasta (which is said by Strabo (vii. Epit. 9) to have been on the further side of the Axios, whences Tafel (p. xxii.) by some mistake infers that it lay between the Axios and Thermia). It does not appear that these earlier cities were absolutely destroyed; nor indeed is it certain that Thermia lost its separate existence. Pliny (I. c.) seems to imply that a place bearing this name was near Thessalonica; but the text is probably corrupt.

As we approach the Roman period, Thessalonica begins to be more and more mentioned. From Livy (xlv. 10) this city would appear to have been the great Macedonian naval station. It surrendered to the Romans after the battle of Pydna (Ib. xlv. 45), and was made the capital of the second of the four divisions of Macedonia (Ib. xlv. 29). Afterwards, when the whole of Macedonia was reduced to one pro-

vice (Flor. II. 14), Thessalonica was its most important city, and virtually its metropolis, though not so called till a later period. [MACEDONIA.] Cicero, dur-

ing his exile, found a refuge here in the quaster's house (pro Pace. 41); and on his journeys to and from his province of Cilicia he passed this way, and wrote here several of his extant letters. During the first Civil War Thessalonica was the head-quarters of the Pompeian party and the senate. (Dion Cass. xli. 20.) During the second it took the side of Octavian and Antonius (VInt. Brut. 46; Appian, B. C. iv. 119), and took the advantage of this course by being made a free city. (See Plin. l. c.) It is possible that the word Σαλονίκη, with the head of Octavia, on some of the coins of Thes-
salonica, has reference to this circumstance (see Eckhel, ii. p. 79); and some writers see in the "Verdâr gate, mentioned below, a monument of the victory over Brutus and Cassius.

Even before the close of the Republic Thessal-

onica was a city of great importance, in con-
sequence of its position on the line of communica-

4 & 2
between Rome and the East. Cicero speaks of it as 
$posta in grimo imperii nostri.' It increased in size and rose in importance with the consolidation of the Empire. Strabo in the first century, and Lucian in the second, speak in strong language of the amount of its population. The supreme magistrates (apparently six in number) who ruled in Thessa-
lonica as a free city of the Empire were entitled to
$\alpha \theta \alpha \omega \omega \gamma \omega \chi \alpha$, as we learn from the remarkable co-
incidence of St. Luke's language (Act. Ap. xvii. 6) with an inscription on the Yardlay gate. (Bickh, 1867.) Belley mentions another inscription con-
sisting of the same terms. (Act. Ap. p. 239.) The
$\delta e\varphi o\sigma$ is mentioned which formed part of the con-
stitution of the city. Tafel thinks that it had a
$\beta o\nu \alpha \lambda \eta$ also.

During the first three centuries of the Christian era, Thessalonica was the capital of the whole coun-
try between the Adriatic and the Black Sea; and even after the founding of Constantinople it re-
mained practically the metropolis of Greece, Mac-
edonia, and Illyricum. In the midst of the third century, as we learn from coins, it was made a
Roman colonia; perhaps with the view of strengthen-
ing this position against the barbarian invasions,
which now became threatening. Thessalonien was
the great safeguard of the Empire during the first
shock of the Gothic invasions. Constantine passed
some time here after his victory over the Sarmatians;
and perhaps the second arch, which is mentioned
below, was a commemoration of this victory; he is
said also by Zosimus (ii. p. 86, ed. Bonn) to have con-
structed the port, by which we are, no doubt, to
understand that he repaired and improved it after
a time of comparative neglect. Passing by the
dreadful massacre by Theodosius (Gibbon's
Rome, ch. xxvii.), we come to the Schavonic wars,
of which the Gothic wars were only the prelude,
and the brunt of which was successfully borne by
Thessalonica from the middle of the sixth century
to the latter part of the eighth. The history of
these six Schavonic wars, and their relation to Thess-
alonica, has been elaborated with great care by
Tafel.

In the course of the Middle Ages Thessalonica was
three times taken; and its history during this period
is thus conveniently divided into three stages. On
Sunday, July 29th, 904, the Saracen fleet appeared
before the city, which was stormed after a few days' fighting. The slaughter of the citizens was dread-
ful, and vast numbers were sold in the various
slave-markets of the Levant. The story of these
events is told by Jo. Cameniata, who was courier-
bearer to the archbishop of Thessalonica. From his
narrative it has been inferred that the population of the city at this time must have been 220,000.
(De Excidio Thessalonicensi, in the volume entitled
Thophana Continuatus of the Bonn ed. of the Byz.
writers, 1838.) The next great catastrophe of
Thessalonica was caused by a different enemy, the
Normans of Sicily. The fleet of Tancred sailed
round the Morea to the Thracian gulf, while an army
marched by the Via Egnatia from Dyrrhachium.
Thessalonica was taken on Aug. 15th, 1185, and
the Greeks were barbarously treated by the Latins. Their
ruin is described by Nicetas Choniates (de And-
celebrated Eustathius was archbishop of Thessalonica
at this time; and he wrote an account of this capture of
the city, which was first published by Tafel (Ti-
bingen, 1832), and is now printed in the Bonn ed.

of the Byz. writers. (De Thessalonica u Latiniu
cepita, in the same vol. with Leo Grammaticus,
1842.) Soon after this period follows the current
history of western feudalism in Thessalonica under
Boniface, marquis of Montferrat, and his successors,
during the first half of the 13th century. The city
was again under Latin dominion (having been
sold by the Greek emperor to the Venetians) when it was finally taken by the Turks under Atmurat
II., in 1430. This event also is described by a
writer in the Boim Byzantine series (Joannes Ana-
gnostos, de Thessalonicensi Excidio Narratio, in the
same vol. with his work on Camanius, 1828).

For the medieval history of Thessalonica see Mr.
Finlay's works, Medieval Greece (1851), pp. 70, 71,
135-147; Byzantine and Greek Empires, vol. i.
(1853), pp. 315-332, vol. ii. (1854), pp. 182, 264,
266, 607. For its modern condition we must re-
ter to the travellers, especially Beaujour, Con-
siery, Holland, and Leake.

4. ECCLESIASTICAL HISTORY. — The annals
of Thessalonica are so closely connected with religion,
that we may pass directly to this aspect of it. After
Alexander's death the Jews spread rapidly in
all the large cities of the provinces which had
formed his empire. Hence there is no doubt that
in the first century of the Christian era they were
settled in considerable numbers at Thessalonica: in-
deed this circumstance contributed to the first es-
establishment of Christianity there by St. Paul (Act.
Ap. xvii. I). It seems probable that a large com-

munity of Jews has been found in this city ever
since. They are mentioned in the seventh century
during the Schavonic wars; and again in the twelfth
by Eustathius and Benjamin of Tafela. The
events of the fifteenth century had the effect of
bringing a large number of Spanish Jews to Thes-
alonica. Paul Lucas says that in his day there were
30,000 of this nation here, with 22 syna-
gogues. More recent authorities vary between
10,000 and 20,000. The present Jewish quart
is in the south-east part of the town.

Christianity, once established in Thessalonica,
spread from it in various directions, in consequence
of the mercantile relations of the city. (1 Thess.
i. 8.) During the succeeding centuries this city
was the bailiwick, not simply of the Byzantine
Empire, but of Oriental Christendom,—and was largely
instrumental in the conversion of the Schavonians
and Bulgarians. Thus it received the designation
of “The Orthodox City.” It is true that the
legends of Demetrius, its patron saint (a martyr of
the early part of the fourth century), disfigure the
Christian history of Thessalonica; in every siege
success or failure seems to have been attributed
to the granting or withholding of his favour: but still
this see has a distinguished place in the annals of
the Church. Thessalonia was baptized by its bishop;
even his massacre, in consequence of the serra
severity of Ambrose, is chiefly connected in our
minds with ecclesiastical associations. The see
of Thessalonica became almost a patriarchate after
this time; and the withdrawal of the province sub-
ject to its jurisdiction from connection with the see
of Rome, in the reign of Leo Isauricus, became one
of the principal causes of the separation of East and
West. Cameniata, the native historian of the cala-
mity of 904, was, as we have seen, an ecclesiast.
Eustathius, who was archbishop in 1185, was, be-
yond dispute, the most learned man of his age, and
the author of an invaluable commentary on the Hesl
and Odyssey, and of theological works, which have been recently published by Tatel. A list of the Latin archbishops of Thessalonica from 1265 to 1418, when a Roman hierarchy was established along with Western feudality, is given by Le Quien (Orize Christianins, iii. 1069). Even to the last we find this city connected with questions of religious interest. Symeon of Thessalonica, who is a chief authority in the modern Greek Church on ritual subjects, died a few months before the fatal siege of 1430; and Theodore Gaza, who went to Italy soon after this siege, and, as a Latin ecclesiastic, became the translator of Aristotle, Theophrastus, and Hippocrates, was a native of the city of Demetrius and Eustathius.

5. REMAINS OF ANTIQUITY. — The two monuments of greatest interest at Thessalonica are two arches connected with the line of the Via Egnatia. The course of this Roman road is undoubtedly preserved in the long street which intersects the city from east to west. At its western extremity is the Yvar达尔 gate, which is nearly in the line of the modern wall, and which has received its present name from the circumstance of its leading to the river Ydar or Axios. This is the Roman arch believed by Beaujour, Holland, and others to have been erected by the people of Thessalonicins in honour of Octavian and Antoninus, and in memory of the battle of Philippi. The arch is constructed of large blocks of marble, and is about 12 feet wide and 18 feet high; but a considerable portion of it is buried deep below the surface of the ground. On the outside face are two bas-reliefs of a Roman wearing the toga and standing before a horse. On this arch is the above-mentioned inscription containing the names of the polltarchs of the city. Leake thinks from the style of the sculpture, and Tatel from the occurrence of the name Flavius in the inscription, that a later date ought to be assigned to the arch. (A drawing of it is given by Consinery). The other arch is near the eastern (said in Clarke's Travels, iv. p. 359, by mistake, to be near the western) extremity of the main street. (A drawing of this arch also is given by Consinery and an imaginary restoration by Pococke.) It is built of brick and faced with marble, and formerly consisted of three archways. The sculptured camels give an oriental aspect to the monument, and it is generally supposed to commemorate the victory of Constantine over Licinius or over the Sarma'tians.

Near the line of the main street, between the two above-mentioned arches are four Corinthian columns supporting an architrave, above which are Caryatides. This monument is now part of the house of a Jew; and, from a notion that the figures were petrified by magic, it is called by the Spanish Jews Los Inoculados. The Turks call it Beretak-Mahel. (A view will be found in Consinery, and a more correct one, with architectural details, in Stuart and Revett's Athen. Antiq, vol. iii. ch. 9, p. 53). This colonnade is supposed by some to have been part of the Propylaea of the Hippodrome, the position of which is believed by Beaujour and Clarke to have been in the south-eastern part of the town, between the sea and a building called the Rotunda, now a mosque, previously the church Esli-Metropol, but formerly a temple, and in construction similar to the Pantheon at Rome. (Pococke has given the ground-plan of this building.) Another mosque in Thessalonica, called Eski-Djemal, is said by Beaujour to have been a temple consecrated to Venus Thermaca.

The city walls are of brick, and of Greek construction, resting on a much older foundation, which consists of hewn stones of immense thicknesses. Everywhere are broken columns and fragments of sculpture. Many remains were taken in 1430 to Constantinople. One of the towers in the city wall is called the Tower of the Statue, because it contains a colossal figure of Thessalonica, with the representation of a ship at its feet. The castle is partly Greek and partly Venetian. Some columns of red antique, supposed to be relics of a temple of Hercules, are to be noticed there, and also a shattered triumphal arch, erected (as an inscription proves) in the reign of Marcus Aurelius, in honour of Antoninus Pius and his daughter Faustina.

In harmony with what has been noticed of its history, Thessalonica has many remains of ecclesiastical antiquity. Leake says that in this respect it surpasses any other city in Greece. The church of greatest interest (now a mosque) is that of St. Sophia, built, according to tradition, like the church of the same name at Constantinople, in the reign of Justinian, and after the designs of the architect Anthenius. This church is often mentioned in the records of the Middle Ages, as in the letters of Pope Innocent III. and in the account of the Norman siege. It remains very entire, and is fully described by Beaujour and Leake. The church of St. Demetrius (apparently the third on the same site, and now also a mosque) is a structure of still greater size and beauty. Tatel believes that it was erected about the end of the seventh century; but Leake conjectures, from its architectural features, that it was built by the Latins in the thirteenth. Tatel has collected with much diligence the notices of a great number of churches which have existed in Thessalonica. Dapper says, that in his day the Greeks had the use of thirty churches. Wahlpill (in Clarke's Travels, iv. p. 459) gives the number as sixteen. All travellers have noticed two ancient mosques, consisting of "single blocks of varied height, with small steps cut in them," which are among the most interesting ecclesiastical remains of Thessalonica.

6. AUTHORITIES. — The travellers who have described Thessalonica are numerous. The most important are Paul Lucas, Second Voyage, 1705; Pococke, Description of the East, 1743—1745; Beaujour, Tableau du Commerce de la Grece, translated into English, 1800; Clarke, Travels in Europe, &c. 1810—1823; Holland, Travels in the Ionian Isles &c., 1815; Consinery, Voyage dans la Macedoine, 1831; Leake, Northern Greece, 1833; Zachariâ, Reise in den Orient, 1840; Grisebach, Reise durch Koniahen, 1841; Bowen, Mount Athos, Thessaly, and Epirus, 1852.

In the Mémoires de l'Académie des Inscriptions, tom. xxxviii. Sect. hist. pp. 121—146, is an essay on the subject of Thessalonica by the Abbe Belley; and the most elaborate work on the subject is that by Tatel, the first part of which was published at Tubingen in 1833. This was

**COIN OF THESSALONICA.**

4 F 3
afterwards reprinted as "Prolegomena" to the *Dissertatio de Thessaloniensibus Insigne Agro Geographica*, Berlin, 1839. With this should be compared his work on the *Via Egnatia*. To these authorities we ought to add the introduction to some of the commentaries on St. Paul's *Epistles to the Thessalonians*, especially those of Koch (Berlin 1849) and Lüne- mann (Göttingen, 1850). [J. S. H.]

**THESTIA.** [THESTINES].

**THESTIENES (Θέστινη, Pol. v. 7),** are usually called the inhabitants of a town Thestia in Aetolia. But no town of this name is mentioned by the ancient writers, and it is no improbable that the town itself was called *Θέστις*. The name occurs only in Polybius, and the exact site of the place is unknown. We only learn, from the narrative of Polybius, that it was situated in the Northern part of the upper plain of Aetolia. The name is perhaps connected with Thestius, one of the old Aetolian heroes.

**THEUHUM (Θεύθουμ, Strab. ix. p. 431; Pol. iv. 3, 4; Θεύθουμ, Eurip. Androm. 20; Θεύτησις, Steph. B. s. v.; Eth. Θεύτης),** a place in Thessaly, close to Pharsalus, where Luminious encamped at the end of the second march from Pherea towards Scuttinga, before the battle of Cynoscephalae. It derived its name from Thetis, the mother of Achilles, the national hero of the Achaean Philhetae. Leake places it at or near *Maugilo*, on the opposite bank of the Europan. (Northern Greece, vol. iv. pp. 472, 473.)

**THEUDPRIA, one of the chief towns of the Athamanas in Epeirus, is identified by Leake with the modern *Tholohoriana*, a village situated near *Mount Taxmérka* in a pass which leads from the Aehelons to the Arachthos. (Liv. xxxviii. 1; Leake, Northern Greece, vol. iv. p. 212.)

**THEUMA, a town of Thessaly, near the frontiers of Dobropia (Liv. xxvii. 13).**

**THEUPROSON.** [Phoenixia, p. 606, a.] **THEVESTE (Θευστέτη, Pol. iv. 3, § 30),** an important town of Numidia, which is only mentioned in the later writers. It was a Roman colony (Gruter, Insocr. p. 600; Itin. Ant. p. 27), and the place where many roads running in a SE. direction into the Roman province of Africa, had their commencement. (Cf. Itin. Ant. pp. 33, 46, 47, 53, 54.) It is the town of *Tebea*. recently discovered by General Negrin, considerable ruins of which still exist, especially the ancient walls, the circumference of which indicates a town capable of containing 40,000 inhabitants. (See Letomme, in Rev. Archivol. iv. p. 360, sqq.; Sur l'Arce de Triomphe de Tereste, g., Paris, 1847; Janin's *Jahrhicher*, iii. p. 409.) [T. H. D.]

**THIA.** [THEBA.]

**THIANNICE (Θιαννίς, Arrian, Per. P. Eux p. 7), or THIANITICE (Θιανιτίς, Anon. Per. P. Eux. p. 14),** a district of Asia in the Pentus Euxinus, which was separated from Colesis by the river Ophis. Its name probably should be Samice, as the Sami, or Tzani, were a well-known people in this region. (Cf. Thanassi, in p. 378, vi. pt. 2, p. 421; Cruiksh Artian. p. 95.) [T. H. D.]

**THIAR, a town of the Contestans in Hispanic Tarraconensis, between Carthagio Nova, and Ilicii (Itin. Ant. p. 401).** Variously identified with *Sin Bios* and *Arithmea*, near which latter place are many ruins. (Flores, Epigr. Sagra. p. 30, vii. p. 124.) [T. H. D.]

**THIBA (Θίβα: Eth. Θίμαις),** a district in Pontus, so called from an Amazon slant there by Hercules. The inhabitants were said to be *sorcerers, whose breath was poisonous, and who would not perish if thrown into the water, but would float on the surface. (Eustath. ad Dionys. Per. 628; Steph. B. s. v. Θίμαις; Plut. Symp. v. 7, § 1; Philarch. ap. Plin. vii. 2, s. 2.)

**THILSAPHA (Θίλσαπα, Amm. Marc. xxv. 8), a fortified town in the south of Mesopotamia, probably the present Tel el Halla, between Mosul and the Sinjar, in the neighborhood of the *Tigris*. [V.]

**THILUTHA, an impregnable fortress on an island in the Euphrates, near Anatho, which defied the assault of Julian (Amm. Marc. xxv. 2). Zois- mus (iii. 15) speaks of this island, and of the impregnable fortress (φρονίμων δεξιωτάτων) situated upon it, but without mentioning its name. It is described by Isidorus Charax (Mans. Pasth. § 1, ed. C. Müller) as an island in the Euphrates, containing a treasury of the Parthians, and distant two schoeni from Anatho. The old editions read *Oλασίβος*; but the MSS. have Ολασίδος, which Müller has changed into Ωλασίδος, and there can be little doubt of the propriety of this correction. It corresponds to the island called *Thibus* by Herodotus (vol. i. p. 57), and in his map *Tebe* or *Anatelles*, containing ruins of very ancient buildings. (See Müller, ad Isid. Char. I. c.)

**THINAE (Θίναι, or Θίνα, Pol. vii. 3, § 6, viii. 27, § 12), or THINAX (Θίνα, Arrian, Per. M. Erythr. p. 36), a capital city of the Sinae, who carried on here a large commerce in silk and woolen stuffs. It appears to have been an ancient tradition that the city was surrounded with brazen walls; but Ptolemy remarks that these did not exist there, nor anything else worthy of remark. The ancient writers differ very considerably as to its situation. According to the most probable accounts it was either Nankin, or rather perhaps *Thain*, or *Tain*, in the province Sekhenu, where, according to the accounts of the Chinese themselves, the first kingdom of Sin, or China, was founded. (Cf. Ritter, Erdkunde, ii. p. 159.) [T. H. D.]

**THINODES (7 Θίνωδης ἐπορ, i.e. the Sand Hill, Pol. iv. 5, § 18), a mountain of Egypt, belonging to the Libyan chain, on the S. borders of Macmarica. [T. H. D.]

**THIRMIĐA, a place in Numidia, the situation of which is totally unknown. (Sull. Jug. 12.) [T. H. D.]

**THIS.** [ABYDUS.]

**THISBE (Θισβη, Hom., Pans., Steph. B. s. v.; Θίσβη, Strab., Xen., Eth. Θισβη, a town of Bocotia, described by Strabo as situated at a short distance from the sea, under the southern side of Helicon, bordering upon the confines of Thespiae and Coroneia. (Strab. ix. p. 411.) This is mentioned by Homer, who says that it abounds in wild pigeons (πολυτρυπηρά τε Θισβη, II. ii. 502); and both Strabo and Stephanus B. remark that this epitaph was given to the city from the abundance of wild pigeons at the harbour of Thisbe. Xenophon remarks that Cleombrotus marched through the territory of Thisbe on his way to Creusa before the battle of Leuctra. (Hell. vi. 4, § 3.) The only public building at Thisbe mentioned by Pausanias (ix. 32, § 3) was a temple of Hercules, to whom a festival was celebrated. The same writer adds that between the mountain on the sea-side and the mountain at the foot of which the town stood, there is a plain which would be inundated by the water flowing into it, were it not for a mole or causeway constructed through the middle, by means of which the water is diverted every year into the part of the plain lying

Digitized by Microsoft®
on one side of the causeway, while that on the other is cultivated. The ruins of Thisbe are found at 
Kakosisa. "The position is between two great sum-
mits of the mountain, now called Karamangali and 
Palaeoumi, which rise majestically above the vale, 
clothed with trees, in the upper part, and covered 
with snow at the top. The modern village lies in a 
little hollow surrounded on all sides by low cliffs 
connected with the last falls of the mountain. The 
walls of Thisbe were about a mile in circuit, follow-
ing the crest of the cliffs which surround the village; 
they are chiefly preserved on the side towards 
Thornia and the south-east. The masonry is for 
the most part of the fourth order, or faced with 
equal layers of large, oblong, quadrangular stones on 
the outside, the interior as usual being filled with 
loose rubble. On the principal height which lies 
towards the mountain, and which is an entire mass 
of rock, appear some reparations of a later date than 
the rest of the walls, and there are many Hellenic 
foundations on the face of this rock towards the 
village. In the cliffs outside the walls, to the north-
west and south, there are many sepulchral excavations."

(Leake, *Northern Greece*, vol. ii. p. 506.) 
Leake observed the mole or causeway which Pausan-
ias describes, and which serves for a road across the 
mars to the port. The same writer remarks that, 
as the plain of Thisbe is completely surrounded by 
heights, there is no issue for the river which rises in 
the Acraea and here terminates. "The river crosses 
the causeway into the marsh by two openings, the 
closing of which in the winter or spring would at 
any time cause the upper part of the plain to be 
inundated, and leave the lower part for cultivation in 
the summer; but as the river is now allowed to flow 
constantly through them, the western side is always 
in a state of marsh, and the ground has become 
much higher on the eastern side."

The port of Thisbe is now called Velthe. The 
shore is very rocky, and abounds in wild pigeons, as 
Strabo and Stephanus have observed; but there is 
also a considerable number at Kakosisa itself. The 
Roman poets also allude to the pigeons of Thisbe. 
Hence Ovid (Met. xi. 300) speaks of the "This-
bacae columbae," and Statius (Theb. vii. 261) de-
scribes Thisbe as "Dionais avibus circumosa." 
Thisbe is mentioned both by Pliny (iv. 7. s. 12) and 
Polyen (iii. 13. § 20) as the port of Attica.

THIUS. [Megalopolis.]

THMIUS (Θομιους, Herod. ii. 165; Aristides, 
Aegypt. vol. iii. p. 610; Ptol. iv. 5. § 51), 
the modern Tmawi, was a town in Lower Aegypt, situ-
ated upon a canal E. of the Nile, between its Tanite 
and Mendesian branches. It was the capital of the 
Timiate Nome, in which the Cibalician division of 
the Egyptian army possessed lands. At the time of 
Herodotus's visit to the Delta the Timiate Nome 
had been incorporated with the Mendesian. Their 
incorporation was doubtless owing, partly to the 
superior size of the latter, and partly to their having 
a common object of worship in the god Mendes 
(Pan), of whom Tmawi was in the old Egyptian 
language (Hierogym. in Isaium, xlv. 1) the appella-
tion. In the reigns of Valentinian and Theodosius 
the Great (A.D. 375, s.) Tmawi was a town of 
some consequence, governed by its own magistrates, 
and exempt from the jurisdiction of the Alexandrian 
præfect (Amm. Marc. xxvii. 16; § 6). It was also an 
ecclesiastical see, and one of its bishops, Serapius, 
is mentioned by Hieracleamus. (ap. Photiom. p. 65, ed.)

Becker.) Remains of the ancient city are supposed 
to exist at Tel-Camai or TMawi, SW. of Memphis. 
A monolithic shrine and many sarcophagi of granite 
have been found there, and a funicular mound at the 
village of Ternay, raised above the level of the 
inundation, is probably an Egyptian work. (Cham-
That dykes were essential to the preservation of 
the city appears from the description of it by Aristides 
(1. e.), who represents Tmawi as standing upon and 
surrounded by flat and marshy grounds. [W.B.D.]

THOAL. [Echinades.]

THOANA. [THANA.]

THOARCHUS or THOARIIUS (Θαρχις or Θαρρις), 
a small coast river in Pontus Ptolemaicus (Arrian, 
Peripl. P. E. p. 16; Anon. Peripl. P. E. p. 11), is 
now called Ghevrech, Imrok, or perhaps more cor-
278.)

THO'NCIA (Θονκία, Θόνκια; *Eth. Θονκία*), a 
town of Arcadia in the district Parhaxia, situated 
on a height on the river Aminias, which flows into 
the Helissos, a tributary of the Alpheius. The 
town was said to have been founded by Thoaces, the 
son of Lycon, and was deserted in the time of 
Pausanias, as its inhabitants had been removed to 
Megalopolis. It is placed by Leake in the position of 
Vromosela. (Pans. viii. 3. § 2, 27. § 4, 29. § 5; Steph. B. s. c.; Leake, *Morea*, vol. ii. p. 293.)

THONNA. [TAMNA.]

THONITUS LACUS. [THOPTITUS.]

THORA. [ATTICA. p. 331, a.]

TH'ORICUS (Θορίας; *Eth. Θορίης: Thörheis*), 
a town of Attica on the S.E. coast, and about 7 or 8 
miles N. of the promontory of Aminias, was origi-
nally one of the twelve cities into which Attica is 
said to have been divided before the time of Theseus, 
and was afterwards a de
tinuous 
to the tribe 
Acrantis. (Strab. ix. p. 957.) It continued to be a place of importance during the flourishing 
period of Athenian history, as its existing remains 
prove, and was hence fortified by the Athenians in 
the 24th year of the Peloponnesian War. (Xen. 
Bell. i. 2. § 1.) It was distant 60 stadia from Anaphylus 
upon the western coast. (Xen. de Vest. 4. § 43.)

Thoricus is celebrated in mythology as the residence of 
Cephalus, whom Eos or Aurora carried off to 
dwell with the gods. (Apollod. ii. 4. § 7; Eurip. 
Hippod. 455.) It has been conjectured by North-
worth, with much probability, that the idea of 
Thoricus was associated in the Athenian mind with such 
a translation to the gods, and that the "Thorican 
stone" (Θορικός πτώσις) mentioned by Sophocles 
(Oed. Col. 1595), respecting which there has been so 
much doubt, probably has reference to such a migra-
tion, as the poet is describing a similar translation of 
Oedipus.

The fortifications of Thoricus surrounded a small 
plain, which terminates in the harbour of the city, 
now called Porto Mandri. The ruins of the walls 
may be traced following the crest of the hills on the 
northern and southern sides of the plain, and cross-
ing it on the west. The acropolis seems to have 
stood upon a height rising above the sheltered creek 
of Frangó Limiona, which is separated only by a 
cape from Porto Mandri. Below this height, on the 
northern side, are the ruins of a theatre, of a 
singular form, having an irregular curve, with one of 
the sides longer than the other. In the plain, to the 
westward, are the remains of a quadrangular colon-
nade, with Doric columns. (Leake, *Deni of Attica, 
4 F 4
THORNAX. p. 68. seq. 2nd ed.; Wordsworth, Atheni and Atticu, p. 208. seq.)

THORNAX (θορνᾶς). 1. A mountain near the city of Hermione in Argolis, between which and Mt. Parn the road ran from Hermione to Halice. It was subsequently called Cocecyum, because Zeus was said to have been here transformed into a centaur, and on its summit was a temple of Zeus Cocecyus. (Paus. ii. 36. §§ 1, 2; Leake, Peloepostica, p. 288; Curtius, Peloepostes, vol. ii. p. 463.)

2. A mountain in Laconia, on the road from Sparta to Sestia, upon which stood a colossal statue of Apollo Pythneas. (Herod. i. 69; Paus. iii. 10. § 8; Steph. B. s. e.; Leake, Morea, vol. ii. p. 534; Peloepostica, pp. 348, 352; Belbaly, Recch. p. 75; Ross, Peloepostes, p. 190; Curtius, Peloepostes, vol. ii. pp. 237, 239.)

THOSPIA (Θοσπία, Ptol. v. 13. § 19, viii. 19, § 12), the capital of the district Thospites. [T. H. D.]

THOSPITUS (Θοσπίτος, Ptol. v. 13. § 18), a district of Armenia Major. It lay at the northern side of the Lacus Thospites (ἡ Θοσπίτις λίμνη, Ptol. vi. § 7), through which the Tigris flowed (Plin. vi. 27. s. 31). It is perhaps the same lake called Thonitis or Thopit is by Strabo (Θονιτίς ή Θοπιτίς, xii. p. 529), and Priscian (Lacus Thoniticus, Persic. 919), the water of which is described by Strabo as nitrous and undrinkable. It is probably the modern Van, in the district of Topji, and hence called by the Armenians Dwos T landmarks. [T. H. D.]

THRA'CA (Θρακία, Hom.; Θρακία, Herod. i. 168, ο Θρακία, iv. 99; Attic, Θρακία, Euh. Θρακία, Hom.; Θρακία, Herod. viii. 116; Attic, Θρακία, Traj. Θρακία, Thrax, Thrax, the latter form being chiefly, if not exclusively, employed by gladiators, a country at the south-eastern extremity of Europe, and separated from Asia only by the Propontis and its two narrow peninsulas, the Bosporn and the Hellespont.

I. Name. — Besides its ordinary name, the country had, according to Steph. B (τ. c.), two other appellations, Πόρικα and Α'πο; and Gellius (xiv. 6) mentions Sthenon as another. Respecting the origin of these names, various conjectures have been made both in ancient and in modern times; but as none of them, with the exception to be presently mentioned, are of much value, it is not worth while to devote any space to their consideration. The etymology alluded to is the etymology adopted by Col. Murray (*Hist. Long. and Lit. of Anc. Greece, p. 153, note*), which is far more probable and satisfactory than any other that the present writer has seen, and which derives the name Thrace from the adjective τραχία, "ragged," by the common transfer of the aspirate. Thus the name would indicate the geographical character of the various districts to which it is given; for, as we shall see, it was by no means confined to the country which is the special subject of the present notice.

II. Extent. — In the earliest times, the region called Thrace had no definite boundaries, but was often regarded as comprising all that part of Europe which lies to the north of Greece. Macedonia, in the south, is spoken of by Herodotus as belonging to it (c. Med. ii. 2, sub fin., where the Chalcidic peninsula is described under the title of Thrace); and

* Those who are curious about such matters may consult Steph. B. s. c.; Eukath. ad Dion. Perl. 322, 323; Suckler, Handbook. i. § 490; Berkell ad Steph. B. p. 400; Tzschucke, ad Med. ii. 2. p. 62; Kenrick, Philol. Mus. i. p. 618.

SCYTHIA. p. 69. seq. 3rd ed.; Wordsworth, Atheni and Atticu, p. 208. seq.)

SCYTHIA. (Σκύθεια). Scythia, in the north, is included in it by Steph. B. (σε νομοσ: cf. Aristol. xxvii. 4. § 3). This explains the false reported by Andron (Tzetza, ad Lyce. 894), to the effect that Oceanus had four daughters, Asia, Libya, Europa, and Thracia; thus elevating the last-named country to the rank of one of the four quarters of the known—rather unknown—world. But as the Greeks extended their geographical knowledge, the designation Thrace became more restricted in its application, and at length was generally given to that part of Europe which is included within the following boundaries: the Ister on the N. (Strab. ii. p. 129; Plin. iv. 18; Med. ii. 2); the Euxine and the Bosporos on the E.; the Propontis, the Hellespont, the Aegean, and the northern part of Macedonia; on the S.; the Strymon, or subsequently, i.e. in the time of Philip II. and his son Alexander the Great, the Nestos (Strab. vii. pp. 323, 330; Ptol. iii. 11), and the countries occupied by the Illyrians, on the W., where, however, the boundary was never very settled or accurately known. (Plin. and Med. ii. cc.) These were the limits of Thrace until the Romans subdued the country, when, in the reign of Augustus, it was divided into two parts, separated by the Haemus; the portion to the south of that mountain chain retaining the name of Thrace, while the part between the Ister and the Haemus received the appellation of Monsia, and was constituted a Roman province. (Moessia, Vol. II. p. 367.) But even after this period both countries were sometimes included under the old name, which the Latin poets frequently used in its earliest and widest extent of meaning. (Cf. Heyne, ad Tib. Aen. xi. 659; Burman, ad Val. Flacc. iv. 280; Monucer, ad Hygin. Fab. 138; Tzschucke, ad Med. ii. 2. 63.) As the little that is known about Moesia is stated in the article above referred to, the present will, as far as possible, be confined to Thrace proper, or south of the Haemus, corresponding pretty nearly to the modern Roumelia, which, however, extends somewhat more to the west than ancient Thrace.

III. Physical Geography, Climate, Productions, &c. — Many circumstances might have led us to expect that the ancients would have transmitted to us full information respecting Thrace; its proximity to Greece; the numerous Greek colonies established in it; the fact that it was traversed by the highway between Europe and Asia; and that the capital of the Eastern Empire was situated in it,—all these things seem calculated to attract attention to the country in an unusual degree, and to induce authors of various kinds to employ their pens in recording its natural and political history. Yet the latest and most profound historian of Greece is compelled to admit that, apart from two main roads, "scarcely anything whatever is known of the interior of the country." (Grote, vol. xii. p. 34, note. For this reason the country may be assigned; but the principal one is the barbarous character, in all ages, of the occupants of the land, which, has, at least until very recently, precluded the possibility of its exploration by peaceful travellers. These who have

* Even one of the latest travellers there, M. Viquesnel, commissioned by the French government, and accompanied by the Turkish authorities, found it impossible to induce his guides to conduct him to a certain district which he wished to visit, although he offered to take as numerous an escort as they pleased. (See Archives des Missions scient. et litt. v. i. p. 210.)
traversed it have been almost invariably engaged in military enterprises, and too much occupied with their immediate objects to have either opportunity or inclination, even had they possessed the necessary qualifications, to observe and describe the natural features of the country. What adds to the difficulty of the writer on the classical geography of Thrace is the unfortunate loss of the whole of that portion of the seventh book of Strabo which was devoted to the subject. Strabo, in several parts of his work, treats incidentally of Thrace; but this is a poor substitute for the more systematic account of it which has elsewhere been given. Much little more than a table of contents has been preserved in the meagre epitome which alone remains of it.

In modern times, several travellers have endeavoured, with various degrees of success, to explore the country; and some of them have published the results of their investigations; but it is evident from their very frequent disagreement as to the sites of the places which they attempt to identify with those mentioned in ancient writers, that as yet the necessary data have not been obtained; and the Itineraries, instead of assisting, not seldom add to the difficulty of the task, and render its accomplishment almost hopeless. Moreover, the extent of country examined by these travellers was very limited. "The mountainous region of Rhodope, bounded on the west by the Strymon, on the north and east by the Hebrus, and on the south by the Aegean, is a terra incognita, except the few Grecian colonies on the coast. Very few travellers have passed along or described the southern or King's road; while the region in the interior, apart from the highroad, was absolutely unexplored until the visit of M. Viquesnel in 1847." (Grote, l. c.)

The results of this traveller's researches have not yet, we believe, appeared in a complete and connected form. His reports to the French minister by whom he was commissioned are published in the work already referred to; but most of them are mere outlines, written on the spot from brief notes. They contain much that is valuable and interesting; but no one except their author could make full use of them; and it is to be hoped that he may be able to employ the materials so skilfully collected in the composition of a work that would dispel much of the obscurity that at present rests upon the country. M. Viquesnel was engaged little more than a year in Thrace, a period evidently insufficient for its complete exploration; accordingly he seems to have devoted his principal attention to its geology, especially of the mountain systems, above all in the district of Rhodope.

According to Ami Boué's chart of the geological structure of the globe, copied in Johnston's Physical Atlas, the three principal geological formations in Thrace are: (1) the crystalline schistous, comprehending all the granitoid rocks; this occupies the W. portion of the country, and a small district on the Evian, immediately S. of the Haemus: (2) the tertiary, extending over the basins of the Struma and the Axios: (3) the primary stratifications, or the transition series, including the carbouiferous formations; this occupies the SE. part of the country, and a region S. of the Haemus, and W. of the tertiary formation above mentioned. Near the sources of the Bourgalas, Viquesnel found volcanic rocks (p. 213).

The surface of Thrace is, on the whole, decidedly mountainous, the vast plains spoken of by Virgil (Aen. iii. 13) belonging to Moesia. From the great range of Haemus, three chains of mountains branch off towards the SE., and with their various ramifications occupy nearly the entire country. The most westerly of these begins at the NW. extremity of the boundary line, and soon separates into two almost parallel ranges, the Pangaena and Rhodope, which are separated from each other by the river Nestus; the former filling up the whole space between that river and the Strymon, the latter the district E. of the Nestus and W. of the Hebrus. Both Pangaena and Rhodope extend down to the coast of the Aegean, and the latter is continued parallel to it as far E. as the Hebrus. The central offshoot of the Haemus branches off between the sources of the Hebrus and the Tonzus, and extends to their junction near Hadrianopolis. The most easterly chain diverges from the Haemus about 100 miles W. of the Enuine, to the W. shore of which it is nearly parallel, though it gradually approaches nearer to it from N. to S.; it extends as far as the Besporns, and with its lateral offshoots occupies nearly the whole country between the K. tributaries of the Hebrus and the Enuine. The central and E. ranges appear to have had no general distinctive names; at least we are not aware that any occur in ancient writers; the modern name of the most easterly is the Straumija-Dagh. A continuation of this range extends along the shore of the Propontis, and is now called the Teki-Dagh.

The loftiest peaks, among these mountains, belong to Rhodope, and attain an elevation of about 8900 feet (Viquesnel, p. 925); the summits of the Straumija-Dagh, are 2600 feet high (ib. p. 314); those of the Teki-Dagh, 2300 (Id. p. 315); the other mountains are from 2000 to 6000 feet in height (ib. pp. 314, 315). The Haemus is not more than 4000 feet high, in that portion of it which belongs to Thrace. It is obvious from these measurements that the statements of some of the ancients that the summits of the Thracean mountains were covered with eternal snow (Orphcae spha rapouerra, Hom. H. xiv. 227), and that from the highest peak of the Haemus the Adriatic and the Enuine could be seen, are mere fancies. Strabo (vii. pp. 315,317) points out the inaccuracy of this notion. An interesting account is given by Livy (xl. 21, 22) of the ascent of Haemus by Philip V., who shared in the popular belief in question. Livy states plainly enough his conviction that Philip's labour, which was far from slight, was thrown away; but he and his attendants were presently silent upon the subject, not wishing, says Livy, to be laughed at for their pains. Yet Florus, who alludes to the same circumstance (ii. 12), but makes Perseus the mountain-climber, assumes that the king's object was accomplished, and that the bird's-eye view of his dominions, obtained from the mountain top, assisted him in forming a plan for the defence of his kingdom, with reference to his meditated war with Rome. Mela too repeats the erroneous statement (ii. 2).

The main basis of the river of Thrace is from N. to S., as might be inferred from the foregoing description of its mountain system. The Strymon forms its W. boundary. In the lower part of its course, it expands to a considerable width, and was called Lake Cercinithus, into which flowed a smaller river, the Angites (Herod. vii. 115); next, towards the E., comes the Nestus; then, in succession, the Travus, which falls into Lake Bistonus, the Schoenus, the Hebrus, the principal river of Thrace, and lastly the Melas. All these rivers fall into the Aegean. Several small streams flow into the Hellespont and
TIRACIA.

The Propontis, of which we may mention Aegeospotami, renowned, notwithstanding its insignificant size, the Araxes, and the Erginus. The rivers which fall into the Euxine are all small, and few of them are distinguished by name in the geographers, though doubtless not so un honoured by the dwellers upon their banks; among them Phénix (iv. 18) mentions the Pira and the Orosmes. The Hebrus drains at least one-half, probably nearer two-thirds, of the entire surface of Thrace; and on its banks, or on those of its affluents, most of the level portions of the country are cultivated, as well as nearly all the inland towns. Its principal affluents are the Arda (in some maps called the Harpasos), and the Suenmus on the W., the Tonrus, Artiscus, and Agrianes on the E.

The Thracean coast of the Aegean is extremely irregular in its outline, being broken up by bays which enter far into the land, yet appear to be of comparatively little depth. Most of them, indeed, are at the mouths of rivers, and have probably been filled up by alluvial deposits. It was perhaps for this reason that several of them were called lakes, as if they had been regarded as belonging to the land rather than to the sea; e.g. Lake Cerinithis, already mentioned, which seems, indeed, to have been little more than a marsh, and in Kiepert's map its site is so represented; Lake Eustonlos, east of Abdera; and Stenoris Locus, at the mouth of the Hebrus. The gulfs of Melas, formed by the northern shore of the Chersonesus and the opposite coast of what may be called the mainland, is an exception to this description of the Thracean bays. The coasts on the Propontis and the Euxine are comparatively unbroken, the only gulf of any extent being Portus Heliodos, near Anchialus, which is known in modern times, by the name of the bay of Bourghaz, as one of the best harbours in the Euxine, the Thracean shore of which was regarded by the ancients as extremely dangerous. [SALMYDESUS.]

The principal promontories were, Isamara, Ser- rheum, Sarpedonium, and Mastumara, on the southern coast; Thasos and Haima Extrema, on the eastern.

For an account of one of the most remarkable parts of Thrace, see CHERSONEUS, Vol. I. p. 608.

Off the southern coast are situated the islands of Thasos, Samothrace, and Imbras; the first is separated from the mainland by a channel about 5 miles wide; the other two are considerably more distant from the shore.

The climate of Thrace is always spoken of by the ancients as being extremely cold and rigorous; thus Athenaeus (viii. p. 351) describes the year at Aenus as consisting of eight months of cold and four months of winter; but such statements are not to be taken literally, since many of them are mere poetical exaggerations, and are applied to Thrace as the representative of the north in general. The Aenus was regarded as the abode of the north wind, and the countries beyond it were believed to enjoy a beautifully mild climate. (See Niebuhr, Ethnog. and Geogr. i. p. 16; Eng. trans. Soph. Antig. 1885; Emsw. Reisen, p. 62; Thespis and de Coss. Hist. v. 17; Pliny, n. h. 15.335 seq.; Ov. Pont. iv. 10. 41; ib. 7. 8; Trist. iii. 10; &c.). Even after making full allowance for the undoubtedly effect of vast forests, undrained marshes, and very partial cultivation, in lowering the average temperature of a country, it is difficult to believe that a land, the northern boundary of which (i.e. of Thrace Proper) is in the same parallel of latitude as Tuscany and the Pyrenees, and the highest mountains of which are less than 9000 feet above the level of the sea, can have had a very severe climate. That the winter was often extremely cold, there can be no doubt. The Hebrus was sometimes frozen over; not to dwell upon the "Hebrus nivali compate succinctum" of Horace (Ep. i. 3. 3; cf. Virg. Aen. xii. 331, and the epigram, attributed by some to Cæsar, beginning, "Thracì puer adiutrici glacie dum ultit Hiber"). Florus (iii. 4) relates that, in the campaign of Minucius in southern Thrace, a number of horsemen in his army were drowned while trying to cross that river on the ice. Xenophon states that the winter which he passed in Thrace, in the mountainous district of the Thyami, was so cold that even wine was frozen in the vessels, and that many Greek soldiers had their noses and ears frostbitten; the snow also lay deep upon the ground. And that this was not an exceptional season may be inferred from Xenophon's remarks on the dress of the Thraces, which seemed to him to have been devised with special reference to the climate, and to prevent such mishaps as those which befell the Greeks (Anab. vii. 4 §§ 3, 4). Tacitus (Ann. iv. 51) assigns the early and severe winter of Mount Haemus among the causes which prevented Poppaeus Sabinius (A. D. 26) from following up his first success over the rebellious Thracians. * Phryn (xvii. 3) says that the vines about Aeonus were often injured by frosts, after the Hebrus was brought nearer to that city; the allusion probably being to the formation of the western mouth of the river, nearly opposite to Aeonus, the floating ice and the cold water brought down by which would have some effect in lowering the temperature of the neighbourhood. Mela (ii. 2, init.) describes Thrace generally as agreeable neither in climate nor in soil, being, except in the parts near the sea, barren, cold, and very ill adapted for agriculture and fruit-trees of all kinds, except the vine, while the fruit even of that required to be protected from the cold by a covering of the leaves, in order to ripen. This last remark throws some doubt upon the accuracy of the writer; for the shedding of the grapes from the direct rays of the sun is obviously more likely to prevent than to promote their arrival at maturity; and hence, as is well known, it is the practice in many parts of Europe to remove the leaves with a view to this object.

However this may be, it is certain that Thrace did produce wine, some kinds of which were famous from very early times. Homer, who bestows upon Thrace the epithet ὀρνητής (H. xx. 483), represents Nestor rewarding Agamemnon that the Grecian ships bring him cargoes of wine from that country every day (Hb. ix. 76); and the poet celebrates the excellence of the produce of the Maroneian vineyards. (Od. ix. 197, seq.). Pliny (xvii. 6) states that this wine still maintained its reputation, and describes it as black, pertuned, and growing rich with age; a description which agrees with Homer's (I. c.). Paul Lucas says that he found the Thracean wine excellent. (Voy. dans la Turquie, I. p. 25; seq., and Athen. i. p. 31). Thrace was in the time of Pauline (Rom. iv. 17), at one crop, its wheat was placed by Pliny high in the scale of excellence as estimated by weight. It has, he says (xviii. 12), a stalk consisting of several ears (tuncire).
THRACIA.

...to protect it, as he supposes, from the severity of the climate; by which also he accounts for the cultivation, in some parts of the country, of the *tritium trinitum* and *binatum*, so called because these varieties were reaped in the third month and the first month respectively after they were sown. Corn was exported from Thrace, and especially from the Chersonesus to Athens (*Theop. de Plantis*, viii. 4; *Lys. in Dioq.*, p. 902), and to Rome (*Plin. Lyc.*). Millet was cultivated in some parts of Thrace; for Xenophon (*Anab.*, vii. 5, § 12) states that on the march to Salmydessus, Sotseus and his allies traversed the country of the "millet-eating Thracians" (*cf. Strab. vii. p. 315.) The less important products of Thrace may be briefly mentioned: a species of water-chestnut (*tribulus*) grew in the Strymon, the leaves of which were used by the people who lived on its banks to fatten their horses, while of its nuts they made a very sweet kind of bread. (*Plin. iii. 58, xxii. 12.*) Roses (*Rosa centifolia*) grew wild on the Pangeus, and were successfully transplanted to the native lands (*id. xxi. 10*). The mountains, in general, abounded in wild-thyme and a species of mint (*id. xvi. 45*). A sort of more or less wild olive (Olea) was found in Thrace (*id. xix. 12; Athen. ii. p. 62*), and a styrup plant (*thioeconom*), which was said to stop bleeding from even divided blood-vessels. (*Theoph. de Plant., xi. 15; *Plin. xxv. 45.*) Several varieties of ivy grew in the country, and were sacred to Dionysus. (*Theop. de Plant., iii. 16; *Plin. xvi. 62.*) Herodotus (iv. 74) states that the Scythians had hemp both wild and cultivated; and as he proceeds to say that the Thracians made clothing of it, we may fairly infer that it grew in Thrace also. The Athenians imported their timber chiefly from the country about the Strymon, for the Thracian hills abounded in oak and fir-trees." (*Niebuhr, Lect. Anc. Hist. i. p. 292, Eng. trans.*). M. Viquesnel states that the *Strangja- 

...dagh* is covered with forests of oak (p. 314), and that in some parts of the district of Rhodope tobacco is now cultivated (p. 320).

Among the animals of Thrace, white horses are repeatedly mentioned. The famous steeds of Rhodes were "whiter than snow." (*Hern. *II. x. 437; Eurip. *Rhes. 304.*). When Xerxes reached the banks of the Strymon in his onward march, the magi sacrificed white horses (*Herod. viii. 119*), which were probably Thracian, for the same reason, whatever that was, that the human victims spoken of in the next chapter were the children of naiades. Xenophon states that, during a banquet given by Sotseus, a Thracian entered, leading a white horse, which he presented to his prince, with an eunuch on its *feetness*; (*Anab. vii. 3, § 26*). Virgil speaks of Thracian horses with white spots (*Aen. v. 565, ix. 49*). Horses were no doubt plentiful in Thrace: Homer (*II. xiv. 227*) calls the Thracians *παραλός*; and cavalry always formed a large part of their armies. Thus Timocides (ii. 98) estimates the number of horsemen in the army with which Sisatse invaded Macedonia at about 50,000. One of the twelve labours of Hercules was to bring to Mycevae the savage mares of Diomedes, king of the Bistones in Thrace, who fed them with human flesh. (*Or. Met. ix. 194.*) Herodotus (vii. 126) states that horses were found throughout the country bounded on the W. by the Acheleus and on the E. by the Nestus; a statement which is repeated by Aristophanes (*II. A. vi. 31, viii. 28*); so that the part of Thrace between the Strymon and the Nestus must have been in

fested, at least in early times, by those formidable animals. Herodotus says that they attacked the baggage-camels of Xerxes during the march of his army from Acarnthus to Therme (vii. 125). Cattle, both great and small, were abundant, and seem to have constituted the chief wealth of a considerable part, like most barbarians, considered agriculture a base occupation. (*Herod. v. 6.*) The fertile valleys were well adapted for oxen, and the thyme-covered hills for sheep; and it is clear, from several passages in Xenophon, that even the mildest Thracian tribes were rich in this kind of wealth. (*Anab. vii. 3, § 48, 7, § 53.*) Aristotle informs us that the Thracians had a peculiar method of fattening swine (*II. A. viii. 6*). He attributes the smallness of their asses to the coldness of the climate (*Ib. 28.*) Cranes are often mentioned as belonging to Thrace. (*Virg. *Georg. i. 120; Or. A. A. iii. 182; *Juv. xiii. 167.*) Aristotle says that an aquatic bird of the pelican kind (*palaeræus*) migrates from the Strymon to the Ister (*II. A. viii. 11*); and that the people in some marshy districts of Thrace were assisted in catching water-fowl by hawks, which do not seem to have been trained for the purpose, but, though wild, to have been induced by a share of the game, to proceed the secondings of their human associates (*Ib. ix. 36.*) Eels were caught at certain seasons in the Strymon (*Ib. viii. 2, ad fin.*) The tunny fishery was a source of great wealth to Byzantium. (*Strab. vii. p. 320.*)

The principal mineral productions of Thrace were gold and silver, most of which came from the mountainous districts between the Strymon and the Nestus. There, at the southern extremity of the Pangeus, was situated Crenides, founded by the Thasians, and afterwards called Philippis, in a hill near which, named the hill of Dionysus (*Appian, B. C. iv. 106*), were the most productive gold mines of Thrace, to get possession of which was Philip's principal object in annexing the district in question to his dominions. He is said to have derived from the mines an annual income of 1000 talents. (*Diol. xvi. 8*; *cf. Strab. viii. p. 328.*) Strabo (xiv. p. 689) says that the wealth of Cadmus came from the mines of the Pangeus; and Pliny refers to the same tradition when he states (vii. 57) that according to some authorities, the Pangeus was the place where Cadmus first discovered gold-mines, and the art of melting their produce (*conflagrura*). Herodotus (vii. 112) mentions silver, as well as gold, mines in the Pangeus, which in his time were in the possession of the native tribes called Piere, Odomonti, and Stryone. He states also (vi. 46) that the Thasians had gold mines at Scapte Hyle, near Abila, from which they derived an (annual) revenue of about 80 talents; and that a part of the revenues of Poisistratus came from the Strymon, by which the mines on its banks are probably meant (i. 64). (*See also, ix. 75*; Eurip. *Rhes. 921; Strabo (or rather his epitomiser), vii. p. 331.*) According to Pliny (xxxii. 21) gold was found in the sands of the Nestus; and this is confirmed by Paul Lucas (*Lyc.*), and by Viquesnel, who states (p. 204) that in rainy years the affluents of that river are frequented by gold-finders, who wash the sands which contain gold in grains (*en paillettes*). Thucydides was interested in gold mines and works near Amphipolis, as he himself informs us (iv. 105). Of the other minerals of Thrace we may mention the

* On these mines, see Niebuhr, *Lect. Ethnog.* and *Geogr.* i. pp. 283, 295; Eng. trans.
The first point to be determined here is whether the Thracians mentioned in the ancient writers as extending over many parts of Greece, as far south as Attica, were ethnologically identical with those who in historical times occupied the country which is the subject of the present article. And before discussing the topic, it will be convenient to lay before the reader some of the principal passages in the classics which bear upon it.

It is Strabo who makes the most distinct statements on the point. He says (vii. p. 321), "Hecateus the Mileusian states that, before the Hellenes, barbarians inhabited Peloponnesus. But in fact nearly all Greece was originally the abode of barbarians, as may be inferred from the traditions. Pelops brought a people with him into the country, to which he gave his name, and Danaus came to the same region with followers from Egypt, at a time when the Dryopes, Cynocons, Pelagi, Leleges, and other similar races had settlements within the Isthmus; and indeed without it too, for the Thracians who accompanied Eumolpos had Attica and Tereus possessed Daules in Phocis; the Phocian companions of Cadmus occupied Cadmeia, the Aones, Teneaics, and Hyataes Boeotia." Strabo subsequently (ix. 401) repeats this statement respecting Boeotia, and adds that the descendants of Cadmus and his followers, being driven out of Thebes by the Thracians and Pelasgians, retired into Thessaly. They afterwards returned, and, having joined the Myiavans of Orchomenus, expelled in their turn the Pelasgians and Thracians. The former went to Athens, where they settled at the spot of Hymettus, and gave the name of Pelasgiuni to a part of the city (cf. Herod. vi. 137); the Thracians, on the other hand, were driven to Parnassus. Again (ix. p. 410) he says, speaking of Helicon: "The temple of the Muses, and Hippocrene, and the cave of the Leukidrangia nymphs are there; from which one would conjecture that those who consecrated Helicon to the Muses were Thracians; for they dedicated Pieris, and Leukithramus, and Pomphilia to the same goddesses. These Thracians were called Pierians (Pieper); but their power having declined, the Macedonians now occupy these (last named) places." This account is afterwards (x. p. 471) repeated, with the addition that "the cultivators of ancient music, Orpheus, Musaeus, Thamyris, and Eumolpos, were Thracians." This authority that presents itself in these passages,—and they are in general agreement with the whole body of Greek literature,—arising from the confounding under a common name of the precursors of Greek poetry and art with a race of men designated as barbarous, is well stated by K. O. Müller (Hist. of Greek Literature. p. 26, seq.): "It is utterly inconceivable that, in the later historic times, when the Thracians were esteemed as a barbarian race, a notion should have sprung up that the first civilization of Greece was founded by them; consequently we cannot doubt that this was a tradition handed down from a very early period. Now, if we are to understand it to mean that Eumolpos, Orpheus, Musaeus, and Thamyris were the fellow-countrymen of those Edonians, Orydians, and Odostomians, who in the historical age occupied the Thracian territory, and who spoke a barbarian language, that is, one unintelligible to the Greeks, we must despair of being able to comprehend these accounts of the ancient Thracian marbles, and of assigning them a place in the history of Greek civilization; since it is
The region of Thrace was situated in that from which first or chiefly, the seeds of elementary culture were propagated throughout the nation. Here tradition places the first introduction of the alphabet. Here were also the principal seats of Apollo and the Muses. In the heart of the same region was situated the Mianye Orphic Temple. The temple of the Graces, rivaling Thebes itself in the splendour of its approach and zeal for the promotion of art. Among the early masters of poetry or music, not vulgarly styled Thracians, the most illustrious, Amphiion and Linus, are Boeotians. Nor was this region of Central Greece less favoured in respect of its religious institutions. It was not only the favourite seat of Apollo, the Muses, and the Graces, but the native country of the Deinosac rites, zeal for the propagation of which is a characteristic of the Thracian sages. (Hist. of Lang. and Lit. of Ant. Greece, i. pp. 150—153; cf. Niebuhr, Lect. on Ethnog. and Geog. i. p. 287.)

In thus entirely disconnecting these early "Thracians," from those of later times, we have the authority of Thucydidcs (ii. 29), who, in speaking of a Thracian Hoplis, the father of Stilac, remarks: "This Teras had no connection whatever with Teres, who married Procne, daughter of Pandion of Athens; they did not even belong to the same Thracian tribe, for he dwelt at Daulia, a city of the country now called Phocis, and which was then occupied by the Thracians." And he proceeds to show that it was not likely that Pandion would form an alliance with any one who lived so far from Athens as the country of the Odrysae.

The consideration of the ethnological relations of the early Thracians hardly falls within the scope of this article; but here identity of name has often caused them to be confounded with the historical inhabitants of Thrace, it may be desirable briefly to discuss the subject in this place.

The view which seems to the present writer to be best supported by the evidence, and to explain most satisfactorily the ancient authors, is that which regards the mythical Thracians as members of the widely extended race to which the name of Pelasgians is usually given. It is clear from Homer that a close connection existed between the people of Southern Thrace and the Trojans, who were probably Pelasgians, and who are at the same time represented by him as agreeing, in language, religion, and other important respects, with the Greeks. Again, Homer mentions among the auxiliaries of Priam, the Cucoons, who are named along with the Pelasgians (II. x. 429), and the Cicones (Il. ii. 846). These two names bear so close a resemblance to each other as to suggest the probability of the cognate origin of the tribes so designated. Now the Cicones were undoubtedly Thracians (Odys. ix. 39, seqq.); while as to the Cucoons, Strabo (xii. p. 542) informs us that they occupied part of the coast of Bithynia, and were regarded by some as Sythians, by others as Macedonians, by others again as Pelasgians. It will be remembered that Cucoons are mentioned by him (vii. p. 321) among the earliest inhabitants of Peloponnesus. Another noticeable fact is, that in the passage of Strabo already quoted (ix. p. 401), he represents the Thracians and Pelasgians as acting in

* Yet subsequent prose writers, to say nothing of poets, fall into the error of making Teres an inhabitant of Thrace Proper; and Pliny (iv. 18) even mentions the castle there in which the crime of Teres was perpetrated!
concert. The same author (xiii. p. 590) points out the similarity of many Thracian names of places to those existing in the Trojan territory. Finally, the names of the places mentioned by Strabo (vii. p. 321) as common to Thracia and the southern Thracians, are evidently Greek (see Miller's Dorians, i. p. 501); and, as we have seen, the name Thrace itself is in all probability a significant Greek word.

These considerations appear to us to lead to the conclusion already stated, namely, that the mythical Thracians, as well as those spoken of by Homer, were Pelasgians; and hence that that race once occupied the northem as well as the other shores of the Aegean, until, at a comparatively late period, its continuity was broken by the irruption of the historical Thracians from the north into the country between the Strymon and the Euxine. The circumstance that the Greeks designated these barbarians by the name which had been borne by those whom they supplanted, admixes of easy explanation, and history abounds in instances of a similar kind. But it may be doubted whether the Thracians had any general designation in their own language: they probably called themselves Eolones, Doneselae, Thyni, Sarac, and so on; but we have no evidence that they really were all branches of a common stock. Under these circumstances, it was inevitable that the Greeks should bestow upon them the name of the earlier possessors of the country; and those Thracians who were brought in contact with the more civilized world would probably adopt it. (On the following question, see Niebuhr, Lect. on Anc. Hist. i pp. 142, 212; Lect. on Ethnog. and Geog. i. p. 287; Wachsmuth, Hist. Ant. i. p. 44, seqq.)

Reverting, the historical Thracians we have tolerably full information, but not of that kind which will enable us to arrive at any very definite conclusions as to their ethnological relations. That they belonged to an extensively diffused race, whose early abodes were in the far northern regions, may be regarded as sufficiently proved by the concurrent testimony of the ancient writers. Herodotus, in a well-known passage (v. 3), says that the Thracian nation is the greatest in the world, after the Indians, and that its subdivisions, of which the Getae are one, have many names, according to the countries which they severally occupy. Strabo too (vii. p. 295) states that the Getae and the Mysi were Thracians (as to the Mysi, see also i. p. 6), who extended north of the Danube (vii. p. 296). In confirmation of his assertion that the Getae were ethnologically akin to the Thracians, he adduces the identity of their Language (vii. p. 303). He adds (vii. p. 305) that the Daci also spoke this language. From his remark (vii. p. 315) about the Iapodes, it would seem that he regarded the Illyrians also as nearly allied to, if not actually a branch of, the Thracians. In another passage (x. p. 471) he says that the Pityrgians were colonists of the Thracians; to which race also the Saraparae, a nation still farther towards the east, north of Armenia, were reported to belong (xii. p. 533). The Bithynians, previously called Mysii, were so named, as is attested by most authorities, from the Thracian Bithyni and Thyrai, who emigrated to that country (i. e. Asia Minor; cf. Herod. vi. 75). And I conjecture that the Bebryces, who settled in Mysia before the Bithyni and Mysi, were also Thracians. The Mysians themselves are said to be colonists of these Thracians who are now called Mysi. As the Mariandyni are in all respects like the Bithyni, they too are probably Thracians." (Strab. xii. pp. 541, 542.) Justin couples the Thracians with the Illyrians and Dardani (xii. 1). In the west and south-west it is impossible to define the Thracian boundary: we have seen that Mela describes the whole of the Chalcidic peninsula as part of Thrace (cf. Thucyd. ii. 79); and there is no doubt that they extended as far south as Olympus, though mixed up with Macedonians, who were the preponderating race in that quarter. In later times the intrusive and undeniably distinct races which were mingled with the Thracians near the Danube, were sometimes confounded with them. Thus Florus (iii. 4) calls the Scatulii the most savage of all the Thracians.

Of the language of the Thracians scarcely a trace exists. They were too barbarous to have any literary or artistic memorial, so that the principal guides of the ethnologist are wanting. Strabo (vii. p. 319) states that bria, which occurs as the termination of several names of Thracean towns, signified "city" or "town." This and a few proper names sometimes preserved remains of their language.

The following is the account which Herodatus gives of the customs of the Thracians. They sell their children into foreign slavery. The women while unmarried enjoy perfect freedom in their intercourse with men; but after marriage they are strictly guarded. The men pay large sums of money for their wives to the parents of the latter. *To be tattooed is considered an indispensable mark of male birth. (Cf. Strab. vii. p. 315.) Kindness is most honoured; the cultivator of the soil is regarded as the meanest of men; to live by war and plundering is most noble. The only gods they worship are Ares, Dionysus, and Artemis. But their kings differ in this respect from their subjects; for they worship Hermes especially, and swear by him alone, from whom they say that they are descended. When a wealthy man dies, his corpse lies in state for three days: his friends then make a great feast, at which, after bewailing the departed, they slaughter victims of every kind: the body is then buried, having some of the nearest relations of their language. The mound is raised above the grave, upon which athletic games are celebrated (v. 6—8; cf. Xen. Hell. iii. 2. § 5). Besides these customs, which were common to all the Thracians, Herodatus mentions some which were peculiar to certain tribes; as, for instance, that which prevailed among the people to the north of the Cretanians. "Among them, each man has many wives. When any man dies, a great contest arises among his widows on the question as to which of them was most beloved by their husband; and in this their relations take a very active part. She in whose favour the point is decided, receives the congratulations of both men and women, and is then slain upon her husband's grave by her nearest male relation. The other widows regard themselves as extremely unfortunate, for they are considered to be disgraced." (Ib. 5.) Herodatus here seems to speak of polygamy as confined to a certain tribe of Thracians; but Strabo (vii. p. 297) represents this custom as general among them. In a note upon this passage, Casaubon quotes from Heracleides Ponticus to the effect that Thracians often had as many as thirty wives, whom they employed as servants, a practice still common in many eastern countries. Xenophon furnishes us with an illustration of the Thracian custom of purchasing wives. He states that at his first interview with Suthes, the Thracian prince proposed to give his daughter in marriage to Xenophon; and if the Greek himself had a
daughter, offered to buy her as a wife. (A. I. iii. 2, § 28; cf. Mela, ii. 2.)

The want of union among the Thracians is mentioned by Herodotus (v. 3) as the only cause of their weakness. Their tribes, like the Highland clans, seem to have been constantly engaged in petty warfare with one another, and to have been incapable of co-operating even against foreign foes, except for very brief periods, and rarely with any higher object than plunder. Until a late period (Flor. iv. 12, §17) they appear to have been destitute of discipline, and this, of course, rendered their bravery of comparatively little avail. Thus we learn from Thucydides (ii. 96, 98) that, although Sitalces was the most powerful Thracian king that had ever reigned—he seems indeed to have been subsequently regarded as a kind of national hero; Xen. Anab. vii. 1, § 6)—yet a large part of the army with which he invaded Macedonia consisted of mere volunteers, for the most capable for their numbers, and attracted to his standard by his offers of pay, or by their hope of plunder. Any one, in fact, who held out these inducements, could easily raise an army in Thrace. Thus Clearchus no sooner received supplies of money from Cyrus the Younger, than he collected a force in the Chersonesus, which, although in great part undoubtedly Thracian, was employed by him in making war upon other Thracians, until he was required to join Cyrus in Asia Minor (Ib. i. 1, § 3, 2, § 9, 6.). "So when Seuthes undertook the expedition against his so-called revolted subjects, his army was soon tripled by volunteers, who hastened from other parts of Thrace to serve him, as soon as they heard of his enterprise (Ib. vii. 4, § 21). Such soldiers could not, of course, be depended upon for one moment after a reverse. A considerable number of Thracian mercenaries in the army of Cyrus took the earliest opportunity to desert to Artaxerxes after the battle of Cunaxa (Ib. ii. 2, § 7)."

Tacitus (Ann. iv. 40) informs us that the principal cause of the insurrection (A. D. 36) of the Thracians who dwelt in the elevated mountain districts (probably of Rhodope), was their dislike of the conscription, which, it would appear, the Romans had introduced into Thrace. This was a joke to which they could not submit; they were not accustomed to obey even their own rulers, except when they pleased them; and when they sent troops to the assistance of their princes, they used to appoint their own commanders, and to war against the neighboring tribes only. (Cf. Liv. xiii. 51; Xen. Anab. viii. 4, § 24, 7, § 29, seq.; Plut. Paul. Aemil. 17.) Thracian soldiers fought with impetuosity and with no lack of bravery; but they, like all barbarian and undisciplined troops were incapable of sustained efforts. Livy (xiii. 59) describes them as rushing to the attack like wild beasts long confined in cages; they hastystrung the horses of their adversaries, or stabbed them in the belly. When the victory was gained on this occasion (the first encounter in the war between the Romans and Persians), they returned to their own camp, singing lusty songs of triumph, and carrying the heads of the slain on the tops of their weapons (Ib. 60). When defeated, they fled with rapidity, throwing their shields upon their backs, to protect them from the missiles of the pursuers. (Xen. Anab. vii. 4, § 17.)

About the time of the Peloponnesian War, Thrace began to be to the countries around the Aegean what Switzerland has long, to its disgrace, been to the despotic powers of modern Europe, a land where men might be procured to fight for any one who could hold out sufficient inducements in the shape of pay or plunder. (Thucyd. vii. 27, et alibi; Xen. Anab. i. pass.; Just. xli. 1 & 9.) The chief causes of this, apart from the character of its people, appear to have been the want of any central government, and the difficult nature of the country, which rendered its savage independence tolerably secure; so that there was nothing to restrain those who might wish to seek their fortune in foreign wars. During the period of Macedonian supremacy, and after its close, under the Roman power, Thracians are often mentioned as auxiliaries in Macedonian and Roman armies; but few of these, it is probable, were volunteers. (Livy xxxi. 39, xxxii. 29, 51, et al.; Caes. B. C. iii. 4; Vell. Pat. ii. 112; Tac. Hist. i. 68, &c.) Cicero (De Prox. Cons. 4) seems to imply that Thracians were sometimes hired to assassinate like the modern Italian bravos; these were perhaps gladiators, of whom great numbers were Thracians. Caligula gave the command of his German body-guard to Thracians. (Suet. Calig. 55.)

Another point in which the Thracians remind us of the natives of India, is mentioned by Thucydides (ii. 97) in these words: "The tribute of the barbarians and of the Greek cities received by Sthenes, the successor of Sitalces, might be reckoned at 400 talents of silver, reckoning gold and silver together. The presents in gold and silver amounted to as much more. And these presents were made not only to the king, but also to the most influential and distinguished of the Oryses. For these people, like those of Thrace generally, differ in this respect from the Persians, that they would rather receive than give; and among them it is more shameful not to give when you are asked, than to be refused when you ask. It is true that abuses arise from this custom; for nothing can be done without presents." (Cf. Liv. xiii. 51; xiv. 42; Tac. Germ. 15.) Xenophon (Anab. vii. 3) gives some amusing illustrations of this practice among the Thracians.

Mention is often made of the singing and dancing of the Thracians, especially of a martial kind. Xenophon (Anab. vi. 1, § 5, seq.) gives an account of a dance and combat performed by some Thracians, to celebrate the conclusion of a peace between the remnants of the 10,000 Greeks and the Daphlogistaians; they danced fully armed to the measure of the lyre; jumping up nimly to a considerable height, and fencing with their swords: at last, one man struck another, to all appearance mortally and he fell as if
deal, though in reality not in the least injured. His antagonist then stripped off his armour, and went out singing the praises of Sitalces, while the other man was carried out like a corpse by his comrades (cf. Iib. vii. 3, § 32, seq.; Tac. Ann. iv. 47).

Their music was rude and noisy. Strabo (x. p. 471) compares it to that of the Thrygians, whom, indeed, he regards as descended from the Thracians. Xenophon, in the passage last referred to, says that they played on horns and on trumpets made of raw ox-hide. Their worship of Dionysus and Cottyas was celebrated on mountain tops with loud instruments of music, shouting, and noises like the bellowing of cattle. (Strab. x. p. 470.)

Their barbarity and ferocity became proverbial. Herodotus (vii. 116) tells a story of a king of the Bisaltes, who punished his six sons for disobeying him by putting out their eyes. Suthes, with his own hand, transfixed some of the Thyi who had been taken prisoners (Xen. Anab. viii. 4, § 6). Rhaseuporis invited his nephew to a banquet, piled him with wine, then loaded him with fetters, and afterwards put him to death. (Tac. Ann. ii. 64, seq.) Thucydides (vii. 27, seq.) gives an instance of the ferocity of the Thracians in the massacre of the inhabitants of Mycelessus.

A truly barbarian trait in the character of the Thracians was their faithlessnes, even to one another. This is especially shown in their disregard of their obligations towards the hostages whom they gave as securities for the observance of their engagements with others. Suthes had received from the Thyi a number of old men as hostages; yet the Thyi, seeing a favourable opportunity, as they supposed, for receiving hostilities, at once seized it, apparently without a thought of the but too probable consequences of such conduct to their helpless countrymen. (Xen. Anab. vii. 4, § 31; cf. Liv. xlv. 22.) Some of the tribes inhabiting the Thracian coast of the Euxine were systematic wreckers. (Sall. Iuv. 4, 3.) Robbery, as we have seen, was considered honourable by them; and plunder was their chief inducement to engage in war. (Strab. vii. p. 318; Cie. Pisc. 34; Liv. lix. 25, xxxviii. 40, seq.) Strabo (iii. pp. 164, 165), Mela (ii. 2), and Tacitus (Ann. iv. 51) bear witness to the brutality of the Thracian women.

The deity most worshipped by the Thracians was Dionysus, whom they regarded, as well as their Burgundian call Sabazius. (Schol. Aristoph. Iep. 9.) The mythical stories respecting Orpheus and Lycurgus are closely connected with the worship of this god, who had an oracle on Kholope, in the country of the Sattrae, but under the direction of the Bessi (Sattrae). Herodotus (vii. 111) states that the mode of delivering the answers of this oracle resembled that which prevailed at Delphi. He compares also the worship of Artemis (whose Thracian name was Bendis or Cottyas), as he had seen it celebrated by Thracians and Burgundian women with some of the ceremonies at Delos (iv. 33). These resemblances may be accounted for on the supposition that the Thracian rites were derived from the original Pelasgian population, remnants of which may have maintained themselves amid the mountain fastnesses; as Niedbalt holds (Ethnog. and Geog. i. p. 287) was the case with the Phocians, who are mentioned by Herodotus in the passage last referred to. (On the Thracian deities, see Strabo. x. pp. 470, 471; Soph. Antig. 955, seq.; Plut. Per. 602; and the articles Bendis, Cottys, and Ibera, in the Dict. Bkg. and Myth.)

It has sometimes been asserted that the Thracians were accustomed to sacrifice human victims to their divinities; but this appears to be either an incorrect generalisation, or a confounding of them with other races; for we find no reference to such a custom in any of the ancient accounts of their manners. Herodotus, it is true, states (ix. 119) that when the Persian Oorbazanes fell into the hands of the Apishtii, after the taking of Sustain by the Athenians, they sacrificed him to their local god, Phlestor; but from the next words (προσευξαμένοις ως τον ιερόν αναθέτο) it is clear that he regarded the practice as characteristic of the Apishthii, and not as common to all Thracians; nor is it conceivable that he would have omitted to mention so striking a circumstance, in his general description of Thracian manners, which has been already quoted (v. 3, seq.); for the practice of slaying the favourite wife on the tomb of her deceased husband cannot with any propriety be called a sacrifice.

Whether indulgence in wine was regarded as a part of the homage due to Dionysus, or simply as a means of sensual gratification, certain it is that it was prevalent in Thrace, and frequently attended with violent and sanguinary quarrels: "Natis in haiis laeallia scyphus pagnum Thracum est," says Homer, and evidence is not wanting in support of the accusation. Ammianus (xxvii. 4, § 9) describes the Thracian custom: "they invited their guest, after eating and drinking to satiety, they used to fall to blows with one another. Tacitus (Ann. iv. 48) relates that the Thracians serving with Poppeus Sabinius against their fellow-countrymen, indulged to such a degree in feasting and drinking that they kept no guard at night, so that their camp was stormed by their exasperated brethren, who slew great numbers of them. Xenophon tells us that at his first interview with Suthes, they drank horns of wine to each other's health, according to the Thracian custom (Anab. vii. 2, § 23). At the banquet which Suthes afterwards gave to Xenophon and some other important persons the drinking seems to have been deep. Xenophon admits that he had indulged freely; and he was evidently astonished that when Suthes rose from the table, he manifested no signs of intoxication. (Ib. 3, § 26, seq.) The Thracians are said to have had a custom, which prevailed in England as late as the last century, of all the guests to drink the same quantity. (Calp. ap. Athen. x. p. 442.) The Odrysian auxiliaries of Dercyllidus poured great quantities of wine upon the graves of their slain comrades. (Xen. Hell. iii. 2, § 5.) It would appear from Mela (ii. 2), that some of the Thracians were unacquainted with wine, but practised another mode of producing intoxication; while feasting, they threw into the fires around which they were seated certain seeds, the fumes of which caused a cheerful kind of drunkenness. It is possible that these may have been the seeds of hemp, which, as we have seen, probably grew in Thrace, and contains, as is well known, a narcotic principle.

The Thracians against whom Suthes led his forces lived in villages (Ib. § 43), the houses being fenced round with large stakes, within the inclosure formed by which their sheep were secured (Ib. 4. § 14; cf. Tac. Ann. iv. 49).

Pliny (vii. 41) states that the Thracians had a custom of marking their happy or unhappy days, by placing a white or a black stone in a vessel at the close of each day. On any one's death, the vessel
belonging to him was emptied, the stones were separately marked, and his life pronounced to have been happy or the reverse, as the white or the black were more numerous.

V. History.—Thrace is one of those countries whose people, not being sufficiently civilised to establish a national government or to possess a national literature, cannot have histories of their own. We become acquainted with the Thracians at second hand, as it was, through the narrations of foreigners, who necessarily make them subordinate to their own countrymen; and therefore it is only in connection with foreign states that their history has been recorded. Hence it is fragmentary, and, consequently, often obscure; nor would its importance, indeed, repay the labour that might be employed in elucidating it, even if we possessed the requisite materials. Institute of union, the Thracians, notwithstanding their numbers, their wide diffusion, their powers of endurance, and their contempt of death, exercised no perceptible influence upon the general course of history; but were reduced, in spite of their wild love of independence, to assist, as humble allies or subjects, in the aggrandisement of the more civilised or politic races with which they came in contact. These were the Greeks, the Persians, the Macedonians, and the Romans, with the successors of the last in the Eastern Empire. We shall now briefly state the leading points of their history, as connected with that of the nations just mentioned; referring the reader for details, especially as to the little that is known of their purely internal affairs, to the articles in this work which relate to the Besii, Dendra, and other prominent Thracian tribes.

We pass over the alleged conquest of Thrace by Sesostris (Herod. ii. 103; Diod. i. 53), and that said to have been effected by the Tencri and Mysi before the Trojan War (Herod. vii. 29; cf. Eurip. Rhes. 406, seq.), and come at once to the strictly historical periods.

The first connection of the Greeks with Thrace was through colonies planted upon its various coasts, the original object of which seems generally to have been of a commercial kind. Only an approximation to the date of most of these can be made, since the majority were established long before the commencement of authentic history. Byzantium and Selymbria, colonies of Megara, belong to the seventh century B.C., the year 675 B.C. being assigned for the foundation of the former. In 651 B.C. an unsuccessful attempt is said to have been made by settlers from Clazomenae to establish themselves at Abdera (Solin. x. 10); but that city was not actually founded till 560 B.C., and then by emigrants from Teos. (Herod. i. 168.) Mesembria, on the Euxine, was a colony of the Byzantines and Chalcedonians, who abandoned their cities on the approach of the Phoenician fleet, B.C. 493. (Ibid. vi. 33.) When Dicesa, Manda, and Arrus, all on the south coast, were established, is not known; which is the case also with Cardia and Sestus in the Chersonesus. That these settlements were generally exposed to the hostility of their Thracian neighbours, there is no doubt, though we rarely have their infant struggles so fully recorded as in the instance of Amphipolis. The Athenians sent no less than 10,000 men (B.C. 463) to found a colony there; and they succeeded in driving off the Edonians who occupied the country, but having advanced into the interior, they were defeated at Drabescus by the natives, and compelled to abandon the country. About thirty years afterwards, however, the Athenians returned, and this time overcame all resistance. Sometimes the relation between the Greeks and the Thracians was of a more friendly description. Thus, in the time of Peisistratus, the Doloni, who dwelt in the Chersonesus, invited Miltiades (the elder) to rule over them, as they were unable to cope with their neighbours the Assinithi; and this led to the Athenians obtaining a firm footing in that most important and valuable district (Herod. vi. 54, seq.).

By these various means, the Greeks had obtained possession of nearly the whole coast of Thrace, a considerable period before the commencement of the great contest between themselves and the Persian empire. Of the interior they appear to have known scarcely anything whatever; and although in some cases the surrounding barbarians may have been brought into subjection (Byzantium is said to have reduced the Bithynian Thracians to the condition of tributary subjects), yet this was rarely the case. On the contrary, it is clear from Thucydides (ii. 97), that the Greeks sometimes paid tribute to the native kings. The Greeks, even when dwelling among hostile strangers, showed their tendency to separation rather than to union; and hence their settlements on the Thracian coast never gained the strength which union would have conferred upon them. Each city had a government and to a great extent of its own; and we must therefore refer the reader for information respecting these states to the separate articles in this work devoted to them.

The first Persian expedition to Thrace was that of Darius, who crossed the Bosphorus with his army about B.C. 513 (or 508, as some authorities hold). As the principal object of Darius was to chastise the Scythians for their invasion of Asia in the reign of Cyrus, he took the shortest route through Thrace, where he met with no opposition. The Greeks whom he found there were required to follow in his train to the Danube; among them was the younger Miltiades, the destined hero of Marathon, who then ruled over the Chersonesus, as his uncle had formerly done, and who had married the daughter of a Thracian king. (Herod. vi. 39.) * On returning from the north, Darius directed his march to the Hellespont, and before crossing from Sestus into Asia, erected a fort at Doriaus, near the mouth of the Hebrus. (Herod. iv. 89—93, 143, 144, vii. 59.) Megabazus was left with 80,000 men to subdued the whole of Thrace, a task which he began by besieging Perithous, which, though previously weakened by the attacks of the Paeonians, made a brave but fruitless resistance. After this, Megabazus reduced the country into subjection, though perhaps only the districts near the sea. (Herod. v. 1, 2, 10.) That his conquests extended as far as the Syrmus appears from Darius's grant of a district upon that river to Histaiaus, who founded there the town of Myrcius. (Herod. v. 11.) Megabazus soon returned to Asia; and it seems probable that he took with him the greater part of his army; for if the Persians had maintained

* Instances occur in later times of the intermarriage of Greeks with Thracians: thus the wife of Sitalces was a daughter of Thesicles, a citizen of Abdera (Thucyd. ii. 29); and Iphocrates married a daughter of the Thracian king Cotys. (Nep. Iph. 3.)

THACIA.

a powerful force in Thrace, the Paeonians could hardly have succeeded in making their escape from Phrygia back to the Strymon (Id. v. 98), nor could the revolting Ionians (n. c. 498) have taken Byzantium and all the other cities in that country. (Id. v. 103.) It is to this period that we must refer the invasion of the Scythians, who are said to have advanced as far as the Chersonesus, thus occasioning the temporary flight of Miltiades, who, they were aware, had assisted Darius to his attack upon their country. (Id. vi. 40.)

After the suppression of the Ionian revolt (n. c. 493), the Phoenician fleet sailed to the Hellespont, and again brought the country under the Persian dominion, Cardia being the only city which they were unable to take. (Id. vi. 33.) Miltiades made his escape from the Chersonesus to Athens, on hearing of the approach of the hostile fleet. (Ib. 41.)

Next year Mardonius led an army across the Hellespont, and advanced as far as Macedonia; but had his fleet being wrecked off Mount Athos, and his land forces having suffered considerably in a war with the Thracians, who then occupied the country W. of the Strymon, he retraced his steps, and transported his shattered army into Asia (Id. vi. 43, seqq.).

It was not till n. c. 490 that the vast army under the command of Xerxes crossed the Hellespont by the famous bridges which spanned the strait from Abydos to Sestus. Of his march through Thrace, Herodotus gives an interesting account (vii. 108—115); but as he met with no opposition, we need not dwell upon these circumstances.

After the disastrous battle of Salamis, Xerxes, with an escort of 60,000 men, hastened back by the same road which he had so recently trod in all the overwhelming confidence of despotic power: in Thrace, his intrepid troops suffered greatly from hunger and consequent disease, but do not appear to have been openly attacked. (Herod. viii. 115, seq.)

Next year (n. c. 479) was fought the battle of Platea, in which the Thracians formed part of the hostile host arrayed against Greek freedom (Id. ix. 32). Artabazus led the 40,000 men, who alone remained of the Persian army, by forced marches through Thessaly, Macedonia, and Thrace. He struck through the interior of the latter country, probably for fear of the Greek cities on the coast; but he encountered enemies as much to be dreaded, and lost a great part of his army by hunger, fatigue, and the attacks of the Thracians, before he reached Byzantium.

It was now the turn of the victorious Greeks to avoid their foes in their own territories. Thrace, with the exception of Doriscus, was soon cleared of the Persians. After the battle of Mycale, their fleet sailed to the Hellespont, where the Athenians laid siege to Sestus, which was taken early in the following year (n. c. 478) [Sestus]. Eion, at the mouth of the Strymon, made a desperate resistance; but at length (n. c. 476) fell into the hands of Cimon and the Athenians, after its Persian governor had put to death all his family, and finally himself. (Herod. vi. 140, 141; (vii. 496), with Herod. vii. 498). Byzantium had been taken by Pausanias the year before. Thus the Persians were driven out of Europe, and the Greek settlements in Thrace resumed their internal freedom of action, though most of them, it is probable, were under the supremacy of Athens, as the chosen head of the great Greek confederacy.

During the administration of Pericles, 1000 Athenian citizens were settled in the Thracian Chersonesus, which was always the chief stronghold of Athens in that quarter. Under the auspices of the same statesman, in b. c. 437, the Athenians succeeded in founding Amphipolis, the contests for the possession of which occupy a very prominent place in the subsequent history of Greece. [Amphipolis, Vol. I. p. 126.]

About this time flourished the most powerful Thracian kingdom that ever existed, that of the Odrysae, for the history of which see Odys. Vol. II. 437—440. At the commencement of the Peloponnesian War (b. c. 43 1), the Athenians entered into an alliance with Sitalces, the king of the Odrysae (Thucyd. ii. 29), who, they hoped, would enable them to subdue all opposition to their supremacy in the Chalcidic peninsula. In consequence of this alliance, Sitalces led (n. c. 429) a vast host into Macedonia, the ruler of which supported the enemies of Athens; he encountered no opposition, yet was compelled by want of supplies to return to Thrace, about a month after he had left it (Ib. 93—101). But although Sitalces was an ally of Athens, this did not prevent Brasidas from having great numbers of light-armed Thracians in his armies, while commanding the Spartan forces in the neighbourhood of Amphipolis (b. c. 422).

It would occupy too much space to relate minutely the various turns of fortune which occurred in Thrace during the Peloponnesian War. The principal struggle in this quarter was for the command of the Bosporus and Hellespont, so important, especially to the Athenians, on account of the corn trade with the Euxine, from which Athens drew a large part of her supplies. Hence many of the most important naval battles were fought in the Hellespont; and the possession of Byzantium and Sestus was the prize of many a victory. The battle of Aegospotami, which terminated the long contest for supremacy, took place to the S. of Sestus, b. c. 405. By the peace concluded next year, Athens gave up all her foreign possessions; and those in the east of Thrace fell into the hands of the Spartans and Persians. [See Byzantium, Sestus, &c.]

When the remnant of the 10,000 Greeks returned (b. c. 400) to Europe, they were engaged by Suthes, an Odrysian prince, to assist him in recovering the dominions which had belonged to his father, in the south-eastern part of Thrace. (Xen. Anab. vii. pass.) Having thus been reinstated in his principality, he showed his gratitude to the Greeks, by sending auxiliaries to Dercyllidas, who commanded the Spartan forces against the Persians, with whom they were now (b. c. 399) at war (Xen. Hell. iii. 2). Next year Dercyllidas crossed over into the Chersonesus, and erected a wall across its northern extremity, as a protection to the Greek inhabitants, who were exposed to constant attacks from their barbarous neighbours (Ib. 2. §§ 8—10). The same general successfully defended Sestus from the combined forces of Conon and Pharnabazus (b. c. 394 : Ib. iv. 8, § 5, seqq.). But in b. c. 390 Thrasylalus restored Athenian influence in Thrace, by forming an alliance with the Sparta and Thrace princes, and by establishing democracy at Byzantium (Ib. § 25, seqq.); and his success was confirmed by the victory of Iphicrates over Auxilius the next year (ib. § 34). The peace of Antalcidas, however, released all the Greek states from their connexion with Athens, and virtually gave the supremacy to Sparta (b. c. 387).

Nothing of any importance happened in Thrace after this event till the accession of Philip II. to the throne of Macedonia (b. c. 339). This able but un-
scrupulous monarch at once began his career of aggression towards the east. He contrived to get possession of Amphipolis (n. c. 358), and thus obtained a secure footing from which he might extend his dominions in Thrace as opportunity offered. At this time there were three native Thracian princes, probably brothers, who seem to have ruled over most of the country. According to Justin (viii. 3), Beusidas and Amadocus, two of them, chose Philip as judge of their disputes; of which position he treacherously availed himself to seize upon their dominions. Though this statement is not supported, we believe, by any other ancient author, yet it is probably true; for such conduct is highly characteristic of the Macedonian monarch; and the almost entire disappearance from history of these Thracian princes soon after Philip's accession, would thus be accounted for. Cersoblepes, the third brother, who seems to have had the E. portion of Thrace, maintained a long struggle against his ambitious neighbour. In n. c. 357 he ceded the Chersonesus to the Athenians, who sent a colony to occupy it four years afterwards. [See Cerso-
blepes, Dict. Biog. Vol. I. p. 674; Sestus.] Philip at various times marched into Thrace, and repeatedly defeated Cersoblepes, whom he at length (n. c. 343) completely subdued and rendered tributary. Next year he established colonies in the eastern part of Thrace, and acts of hostility occurred between him and Diopeithes, the Athenian commander in that quarter. Philip was occupied the next three years in Thrace, and laid siege to Perinthus and Byzantium, which were in alliance with Athens, whose forces, commanded by Phocion, compelled Philip to abandon the siege; and he soon afterwards left Thrace, to advance towards the south against the confederate Greeks. On his departure Phocion recovered several of the cities in which Macedonian garrisons had been placed.

Notwithstanding these checks, Philip had brought under his command a great part of Thrace, especially on the south coast: he had, above all, completely incorporated with his kingdom the district between the Strymon and the Nestus, and from the mines of the PANGaeus, which he seized in n. c. 356, he obtained abundant supplies of the precious metals. Philip was assassinated n. c. 336: next year his successor, Alexander, marched across the Haemus to attack the Triballi; but his chief attention was bestowed upon the preparations for the Asiatic expedition, which he entered upon next year, crossing the Hellespont from Sestus.

On the death of Alexander (n. c. 323), Thrace was allotted to LySImachus, who was soon involved in hostilities with Seleucus, a king of the ODYSye. The reader is referred to the account of LySImachus (Dict. Biog. Vol. III. pp. 867—870) for details respecting his government of Thrace: the result of his various wars was that his sway was firmly established over all the countries south of the Danube, as far as the confines of Macedonia: the Greek cities on the Euxine were garrisoned by his troops; and though many of the native tribes, in the more inaccessible districts, no doubt retained their freedom, yet he had completely defeated all their attacks upon his power. In n. c. 309 he founded LySImachus, near the northern extremity of the Chersonesus, and made it his capital. Alexander the Great, marched across the Haemus, and, with Seleucus, the ruler of Syria, he advanced to meet his antagonist in Asia, and was defeated and slain at Corupedion (n. c. 281); upon which Seleucus passed over into Europe and took possession of Thrace. Next year, however, he was assassinated by Ptolemy Ceraunus, who was thereupon acknowledged king; but shortly afterwards a vast horde of Celts invaded the country, and Ptolemy was slain in a battle with them. Anarchy now prevailed for some years in the country: the Celts again advanced to the south in n. c. 279, and under Brennus penetrated as far as Delphi, on their repulse from which they retreated northwards, and some of them settled on the coast of Thrace.

For nearly fifty years after this time little mention is made of Thrace in history; it appears to have been annexed to Macedon.; but the rulers of that kingdom were too insecure, even in their central dominions, to be able to exercise much control over such a country as Thrace, inhabited now by races differing so widely as the Thracians, the Greeks, and the Celts, and offering so many temptations to the assertion of independence. [See Antigonus GON-

tas, Demetrios II, and Pyrrhus, in Dict. Biog.] About n. c. 247, the fleet of Ptolemy Eupemis captured LySImachus and other important cities on the coast; and they remained for nearly half a century under the kings of Egypt. (Polyb. v. 34, 58.)

In n. c. 220, Philip V. ascended the throne of Macedonia. Under him the Macedonian power regained something of its old prestige; and had it not been brought in collision with Rome, it might have become as extensive as in former times. But Philip unfortunately directed his ambitious views in the first instance towards the West, and thus soon encountered the jealous Republic. It was not till n. c. 211 that Philip commenced his enterprises against Thrace: he then led an army into the country of the Mazi, who were in the habit of making incursions into Macedonia. Their lands were laid waste, and their capital, Lamphorina, compelled to surrender. Having made peace with the Romans (n. c. 205), he invaded Thrace, and took LySImachus. In n. c. 200, he again attacked that country, both by sea and land; and it is evident that he did not anticipate much resistance, since he took with him only 2000 infantry and 200 cavalry. Yet with this insignificant force, aided by the fleet, he made himself master of the whole of the south coast, and of the Chersonesus. He then laid siege to Abydos, and took it after a desperate and valiant resistance. (Liv. xxxi. 16.) This seems to have hastened the declaration of war on the part of the Romans; a war which lasted till n. c. 196, when Philip was reduced to procure peace by surrendering all his conquests, and withdrawing his garrisons from the Greek cities (Liv. xxxii. 30).

L. Stertinius was sent to see that these terms were complied with (ib. 35). But scarcely had the cities been evacuated by the Macedonian garrisons, when Antiochus the Great crossed the Hellespont, and took possession of the Chersonesus, which he claimed as a conquest of Seleucus (ib. 38). He refused to comply with the demand of the Romans, that he should withdraw his army from Europe; but left his son Seleucus to complete the restoration of LySImachus, and to extend his influence, which seems to have been done by placing garrisons in Maroneia and Aeum.

In the war which ensued between the Romans and Antiochus (n. c. 190), Philip rendered the former good service, by providing everything necessary for their march through Thrace and securing them from molestation by the native tribes (Liv. xxxvii. 7). Antiochus was defeated by Scipio at Magnesia, and
The Romans gave the Chersonesos and its dependencies to their ally Eumenes (ib. 48). As indicative of the beneficial condition of Thrace, even along the great southern road, the account which Livy (ib. 40, seq.) gives of the march of the consul Manlius' army through the country on its return from Asia Minor, is highly interesting. The army was loaded with booty, conveyed in a long train of baggage-waggons, which presented an irresistible temptation to the predatory tribes through whose territories its route lay. They accordingly attacked the army in a defile, and were not beaten off until they had succeeded in their object of sharing in the plunder of Asia.

The possession of the Chersonesos by Eumenes soon led to disagreements with Philip, who was charged by Eumenes (n. c. 185) with having seized upon Maroneia and Aenus, places which he coveted for himself. (Liv. xxxix. 24, 27.) The Romans insisted upon the withdrawal of the Macedonian garrisons (n. c. 184), and Philip, sorely against his will, was obliged to obey. He wreaked his anger upon the defenceless citizens of Maroneia, by convoking them, if not actually commanding, the massacre of a great number of them (ib. 33, 34). In the course of the disputes about these cities, it was stated that at the end of the war with Philip, the Roman commissioner, Q. Fabius Labeo, had fixed upon the king's road, which is described as nowhere approaching the sea, as the S. boundary of Philip's possessions in Thrace; but that Philip had afterwards formed a new road, considerably to the S., and had thus included the cities and lands of the Macedonian territories (ib. 27).

In the same year, Philip undertook an expedition into the interior of Thrace, where he was fettered by no engagements with the Romans. He defeated the Thracians in a battle, and took their leader Amadocus prisoner. Before returning to Macedon the Romans sent envoys to the barbarians on the Danube to invite them to make an incursion into Italy (ib. 33). Again in n. c. 183, Philip marched against the Odryses, Denthelae and Bassi, took Philippopolis, which its inhabitants had abandoned at his approach, and placed a garrison in it, which the Odryses, however, soon afterwards drove out (ib. 53). In n. c. 182, Philip removed nearly all the inhabitants of the coast of Macedonia into the interior, and supplied their places by Thracians and other barbarians, on whom he thought he could more safely depend in the war with the Romans, which he now saw was inevitable (Liv. xl. 3). He had done something of the same kind a few years before (lod. xxxix. 24).

Philip's ascent of the Haemus, already referred to, took place in n. c. 181; on the summit he erected altars to Jupiter and the Sun. On his way back his army plundered the Denthelae; and in Macedonia he took a town called Petra. (Liv. xl. 21, seq.)

Philip died in n. c. 179, and his successor Perseus continued the preparations which his father had made for renewing the war with Rome, which did not begin, however, till n. c. 171. The Romans had formed an alliance with a number of independent Thracian tribes, who had sent ambassadors to Rome for the purpose, and who were likely to be formidable foes to Perseus. The Romans took care to send valuable presents to the principal Thracians, their ambassadors having no
of its people into Macedonia; they then sometimes made retaliatory expeditions into Thrace; but seem generally to have made their way back as soon as the immediate object was accomplished. The relation existing between the Romans and the Thracians, for more than a century after the conquest of Macedonia, thus bears a close resemblance to that which has long existed between our own countries and the Caesars.

During the years B.C. 110, 109, the Consul M. Minucius Rufus was engaged in hostilities with the Scordisci and Triballi; and, according to Flerus (l.c.), laid waste the whole valley of the Hebrus (cf. Eutr. iv. 27). In B.C. 104, Calpurnius Piso penetrated into the district of Rhodope (Flor. l.c.). In B.C. 92, the Maedi defeated the praetor, C. Sentius, and then ravaged Macedonia (Cic. Pis. 34; Liv. Epit. 70). After the breaking out of the Mitridatic War (B.C. 88), mention is made in several successive years of the incursions of the Thracians into the Roman provinces, and it is probable that they were acting in concert with Mithridates, whose general Taxiles, in B.C. 86, led a vast army through Thrace, and Macedonia to the assistance of Archelaus. (Liv. Epit.74,76,81,82) On the final defeat of Archelaus, Sulla directed his march towards Asia through Thrace B.C. 84, and, either to punish the people for their connection with Mithridates or because they opposed his passage, made war upon them with complete success (Id. 83). C. Scribonius Curio defeated the Dardani, and penetrated to the Danubus, being the first Roman who had ventured into that part of Europe (B.C. 75; Liv. Epit. 92; Eutr. vi. 2). Curio was succeeded as governor of Macedonia by M. Lucullus (B.C. 73), who defeated the Bessi in a pitched battle on Mount Haemus, took their capital, and ravaged the whole country between the Haemus and the Danube (Liv. Epit. 97; Eutr. vi. 10). The Bessi were again conquered in B.C. 60 by Octavius, the father of Augustus (Suet. Aug. 3; cf. Ib. 94; Freish. Suppl. cxxxv. 2). In the years B.C. 58, 57, Piso, so well known to us from Cicero's celebrated speech against him, was governor of Macedonia; and, if we may believe Cicero, acted in the most cruel and faithless manner towards the Bessi and other peaceable Thracian tribes. (Fis. 34, de Prov. Cons. 2, seq.). From the latter passage it appears that although the Thracians were not under the government of Rome, yet the Romans claimed the right of way through it to the Hellespont; for Cicero calls the Egnatian Way "via illa nostra militaris."

In the civil war between Caesar and Pompey, several Thracian princes furnished the latter with auxiliary forces. Why they interfered in the contest, and why they preferred Pompey to Caesar, are matters of conjecture only. Pompey had been chiefly engaged all his life in the East, Caesar in the West; and that is probably sufficient to account for the greater influence of Pompey in Thrace. (Cas. B. C. iii. 4; Flor. iv. 2; Dion Cass. xii. 51, 63, xivii. 25).

At the time of Caesar's death two brothers, Rhascopoiris and Rascus [Dict. Biog. Vol. III. p. 647] ruled over the greater part of Thrace; and when the war broke out between the triumvirs and the republicans, Rhascopoiris sided with the latter, while Rascus sided with Caesar. By this plan they hoped to be safe, whichever party might be victorious; and it is said that their expectations were realised.

When the power of Rome was at length wielded by Augustus without a rival, the relation of Thrace to the Roman state seems to have become in many respects like that which the native princes of India long bore to the British. The Thracian kings were generally allowed to exercise, without restraint, their authority over their own subjects, and when needful it was supported by the arms of Rome. But all disputes among the native rulers were referred to the decision of the emperors, who disposed of the country as its acknowledged lords. These subject princes were expected to defend Thrace from external and internal foes; to assist the Romans in the field; to allow them to enlist troops, and in other ways to exercise the rights of sovereignty. For illustrations of these statements we must refer the reader to Tacitus, especially to the following passages: Ann. ii. 64— 67, iii. 38, 39, iv. 5, 46—51. The few Thracian coins which are extant afford a proof of the dependent character of the Thracian kings; they bear on the obverse the effigy of the reigning emperor, on the reverse that of the native prince. [See Dict. Biog. Vol. III. p. 653.]

The interference of the Romans in the government of Thrace was not submitted to by the nation at large without several severe struggles. The most formidable of these occurred about B.C. 14, the fullest account of which is given by Dion Cassius (lib. iv.). The leader in this insurrection was Vlogeasus, a Bishop of Bacchius, who availed himself of his sacerdotal character to inflame the religious feelings of his countrymen. Having thus assembled a large army, he attacked, defeated, and slew Rhascopoiris, a king under Roman protection; his uncle, Rhoemetalces, was next assailed and compelled to flee: the insurgents pursued him as far as the Chersones, where they devastated the country and captured the fortified places. On receiving information of these proceedings, Augustus ordered L. Piso, the governor of Pamphylia, to transport his army into Thrace, where, after a three years' war and several reverses, he at length succeeded in subduing the Bessi, who had adopted Roman arms and discipline. They soon afterwards made a second attempt to regain their independence; but were now easily crushed. (Veill. Pat. ii. 98; Tac. Ann. vi. 10; Sen. Ep. 83; Flor. iv. 12; Liv. Epit. 137.)

After this war, the Romans gradually absorbed all the powers of the government in the country. Germanicus visited Thrace about a. d. 9; and introduced reforms in its administration (Tac. Ann. ii. 54). A system of conscription seems to have been imposed upon the Thracians about a. d. 26 (Ib. iv. 46). The last native prince of whom we find any mention is Rhoemetalces II, who, in a. d. 38, was made by Caligula ruler over the whole country; and at length, in the reign of Vespasian (a. d. 69—79), Thrace was reduced into the form of a province. (Suet. Vesp. 8; Eutr. vii. 19; cf. Tac. Ann. i. 11.) The date of this event has been disputed on the authority of the Eusebian Chronicle, which states that it took place in a. d. 47, in the reign of Claudius; but the statement of Soetanius is express on the point. It is possible that Rhoemetalces II. may have died about the year last mentioned; and if Claudius refused to appoint a successor to him, this would be regarded as equivalent to incorporating the country in the Roman empire, although its formal constitution as a province was delayed till we know was commonly the case. It is remarkable that Moesia was made a province upwards of 50 years before Thrace Proper, its first procurator being mentioned in a. d. 15. (Tac. Ann. i. 79; cf. Ib. ii. 66; Plin. iii. 26. s. 29.)
Thracia.

Thrace now shared in the general fortunes of the Roman world, on the division of which into the Eastern and Western Empires, it was attached to the former, being governed by the Victorius Thracicus, who was subordinate to the Proconsul Proconsularis Orientis. Its situation rendered it extremely liable to the incursions of barbarians, and its history, so far as it is known, is little else than a record of war and devastation. The Goths made their first appearance there in A.D. 255; the emperor Probus, about A.D. 280, established in it 100,000 Bastarnae. In A.D. 314, and again in 323, the emperor Licinius was defeated at Hadrianoopolis by Constantine, who, in A.D. 334, settled a multitude of Sarmanians in Thrace, which, in 376, received another accession to its heterogeneous population, Valens having given permission to the Goths to reside in it. This gave rise to innumerable wars, the details of which are recorded by Ammianus (lib. xxxi.). In 395 the defeated country was overrun by Alaric, and in 417 by the more dreadful Attila. Through all these misfortunes, however, Thrace remained in connection with the Eastern Empire, the capital of which was within its boundaries, until the year 1333, when the Turks, who then crossed over into Europe in 1341, obtained possession of the Thracian fortresses. Their leader Amurath conquered the whole country, except Constantinople, and made Hadrianoopolis his capital. At length, in 1453, Constantinople itself was taken, and the Turks have ever since been the undisputed lords of Thrace.

VI. Topography.—Under this head we shall merely collect such names as will serve to direct the reader to articles in this work, where fuller information is given.

Pliny (iv. 18; cf. Nela., i. 2; Amm. xxvii. 4) enumerates the following as the principal Thracian tribes: Denselatae, Macdi, Bisaltae, Dgeri, Bessi, Eletti, Diocessi, Cariblesi, Bryae, Sapeci, Odosmae, Odryae, Cabylei, Pyrogiri, Drurici, Caenici, Hyysalti, Beni, Corpili, Bottiaci, Edoni, Selle- tae, Pantaeci, Dolanci, Thymi, Coeleatae. To these we may add, the Apisthi, Bistone, Cicones, Satace, Dri, and Trasi.

Of the towns mentioned by Pliny (l. c.), these belong to Thrace Proper: 1. On the coast (i.) of the Aegean: Oesyma, Neapolis, Datum, Aldera, Tirida, Dicaea, Monea, Zone, and Aenous; to these must be added Amphipolis, Pintyus, Cosinthus, and Mesembria; (ii.) of the Chersonesos: Cardia, Lyssa, Thyni, Topi, Iuchya, Calipolis, Setus, Elaeus, Coles, Thirstias, and Panormus; besides these there were Alepoomamus and Aenous; (iii.) of the Propontis: Bistihe, Pintyus, and Selymbria; (iv.) of the Bosporus: Byzantium; (v.) of the Euxine: Mesembria, Anchialus, Apollonia, Traianopolis, Semidossus, and Phina- polis. 2. In the interior: Philippopolis, Philippi, Scuttusi, Topiria, Dorius, Cyzisia, Apros, and De- velon. This is a very scanty list; but many of the principal inland towns were founded after Pliny’s time; their names also were often changed. The following are some of the chief towns in the interior: Hadrianoopolis, Phlai, Trajanopolis, Temepyra, Nicepolis, Beroca, Iamporina, and Petra.

Besides the rivers mentioned in the course of this article, the following occur: the Euxine, Pityrus, or Aytares, Bargus, Coasines, Codinthus, and Xeropogus.

As to the political divisions of Thrace, Pliny (l. c.) states that it was divided into fifty strategiae; but he describes Moesia as part of Thrace. According to Ptolemy (iii. 11, § 8, seq.), its districts were Macedica, Denthetica, Sardica, Bessica, Drosica, Ben- nica, Ustocesica, Selletica, Samiaica, Coletica, Sapiaca, Coripalica, Caenica, and Asica.

Ammianus (l. c.) states that in the 4th century Thrace was divided into six provinces, but of these only four belonged to Thrace south of the Haemus: (i.) Thrace Proper (speciali nomine), including the W. part of the country; principal cities, Philippopolis and Beroca; (ii.) Pseuimos, i. e. the NE. district; chief towns, Hadrianoopolis and Anchialus; (iii.) Europa, comprehending the SE. district; cities, Apri and Perinthus (Constantinople, being the cap- ital of the whole Eastern Empire, was not regarded as belonging to any province); (iv.) Euchopia, compris- ing the SW. region; principal cities, Maximianopolis, Moracena, and Aenus.

The principal modern writers in whose works information will be found respecting Thrace, have been mentioned in the course of this article. Among the other authors whom the reader may consult, we may name the following: Dapper, Beschreibung der Eileanen in de Archipel, Amst. 1688, of which Latin and French translations were published at Amsterdam in 1704. Paul Lucas, Voyage dans la Turquie, Asia, 2 vols. Amst. 1790. Chelsea, Voyage Pittoresque dans l’Empire Ottoman: of this work the first volume was published at Paris in 1762, the first part of the second not until 1809; the author died in 1817. A new edition, with many corrections and additions, was published in 4 vols. Svo. at Paris in 1842. This work is devoted chiefly to the antiquities of the country; of which the plates contained in the illustrative Atlas which accompanies the book give many representations. And Borradaile, La Côte d’Europe, 4 vols. Svo. Paris, 1840, is the most complete work yet written on the subject; its author, a man of great scientific acquire- ments, made two journeys in Turkey, in 1836, when he was accompanied by M. Viquesne, and in 1838. The first volume contains an elaborate account of the physical geography, geology, vegetation, fauna, and meteorology of the country; but takes little or no notice of its classical geography. A map is prefixed to it, which is a vast improvement on all that had preceded it; but it is now in its turn superseded by that of Kiepert, who has employed in its construc- tion the materials afforded by M. Viquesne’s reports already referred to. (Comp. Gatterer, De Herardi et Thracidio Thraciae, contained in the Commenta- tiones Soc. Reg. Gottin. vol. iv. pp. 87—112, vol. v. pp. 59—88. [J. R."

Thracia, in Asia. A district in Asia Minor on the coast of the Euxine, is sometimes called Thrace, and its inhabitants Thraceans. (Herod. i. 28; Xen. Anab. vi. 2, § 14, et al.) This country is more commonly called Bithynia. [See Bithynia, Vol. I. p. 404.] [J. R."

Thracius Bosporus. [Bosporus.]"

Thrymanus Lacus. [Trasimennus.]"

Thraustus (Θραυστος, Νεα) or Thraes- tus (Θραστος), a town in the mountainous dis- trict of Arcadia in Elis, of unknown site. (Xen. Hell. vii. 14, § 14; Diod. xiv. 17.)

Thria. [Attica, p. 328, b.]

Thronio (Θρωνιος), a place in Carmania, mentioned by Ptolemy (vi. 8, § 14). Perhaps the modern Giroust.

Throni (Θρόνι), a town and promontory on the NE. coast of Cyprus, distant 700 stadia from the promontory Curius. On the promontory of Throni.
THIRIONIUM.

Pococke observed an ancient tower. (Strab. xiv. p. 682; Ptol. v. 14, §§ 2, 3; Engel. Kypris, vol. i. p. 99.)

THIRIONIUM (Θίριονιων; Eth. Θιρίονιωτι, Θιρίονιος, Θιρίοιος). 1. The chief town of the ancient coast of Euboea, situated 29 stadia from the coast and 30 stadia from Scepsa, on the river Boeas, which is described by Strabo as sometimes dry, and sometimes flowing with a stream two plethra in breadth. (Strab. ix. p. 436.) It is mentioned by Homer, who speaks of it as near the river Bageira. (H. ii. 333.) It was at one time partly destroyed by an earthquake. (Strab. i. p. 60.) At the beginning of the 3rd century B.C. Velopes, king of Thirionium, was taken by the Athenians. (Thuc. ii. 26; Dial. xii. 44.) In the Sacred War it was taken by Onomarchus, the Phocian general, who sold its inhabitants into slavery, and hence it is called by Sclavus a Phocian city. (Dial. xvi. 33; Aesch. de Falsa Leg. p. 43, 33; Sclavus. p. 23.) (Thirionium) is also mentioned by Polyb. ix. 41, xvii. 9; Eurip. Iph. Aul. 264; Liv. xxxii. 5, 6, xxxiii. 3, xxxvi. 37, xxxvi. 30; Paus. v. 22 § 4; Lycophr. 1148; Ptol. iii. 1590; Thuc. i. 13, 14; Steph. B. s. v. R.

The site of Thirionium is uncertain, and Meletius who found above the village Romaniti, at a place named Paleokastro, where some remains of the city still exist, a dedicatory inscription of the council and demus of the Thironienses. (Leake, Northern Greece, vol. ii. pp. 177, 178.)

2. A town in Greek Illyria in the neighbourhood of Amanita [Amanita], said to have been founded after the Trojan War by the Ablantes of Illyria and the inhabitants of the Locri Thirionium. It was taken at an early period by the inhabitants of the neighbouring town of Apollonia, and annexed to their territory, as appears from an epigram inscribed on a dedicatory offering of the Apolloniatae at Olympia. (Paus. v. 22 §§ 3, 4.)

THIRYON, THIRYOESSA. [Epitallium]

THULE (Οοιλθ, Ptol. ii. 6, § 32), a celebrated town in the Northern Ocean, discovered by the navigator Pytheas. Pytheas arrived at it after a voyage of six days from the Orcales, in which it may be computed that he had accomplished about 3000 stadia. (Plin. ii. 77.) According to the account of Pytheas, he reached the polar circle, so that on this island the longest day was twenty-four hours, and there was constant light during the six summer months and constant night during the six winter ones. It was deficient in animals, and even the most necessary fruits, but produced a little corn. From the time of its discovery it was regarded as the most northerly point of the known world, although no further knowledge was obtained respecting it; and this view seems to be confirmed by its name, since in Gothic Tiul or Tiule (τεοος, goat) denoted the remotest land. (Strab. i. p. 63, pp. 104, 114, iv. p. 201; Agath. i. 8; Plin. Periég. 587, sqq.; Meu. iii. 6; Ptol. iv. 16, s. 30; Tac. Agr. 10; Virg. G. i. 30; Solin. c. 22, &c.; cf. Praetorius, de Orbe Goth. iii. 4. 3. p. 33; D'Anville, Sur la Navig. de Pytheas, p. 439; Rudbeck, Altant. i. p. 314.) Pytheas is the only writer who places Thule a great deal further S., though he undoubtedly had in view the island discovered by Pytheas; and according to him it would seem to have been the largest of the Shetland islands, or the modern Mainland (see ii. 3 § 32, i. 24 §§ 4, 6, 17, 20, vi. 16 § 21, viii. 5 § 12, viii. 3 § 3). Most modern geographers incline to the opinion that Pytheas meant Iceland; though according to others his Thule is to be variously sought in Norway; in that part called Ytiul or Ytiulemark; in Jutland, the extreme point of which is called Thy or Thyland; or in the whole Scandinavian peninsula, or near Bruns, Gogr. Univ. s. p. 129; Orellius, Theatr. Orb. p. 103.)

THUMATI (Θωμάτα, Ptol. vi. 7, § 33; Piii. vi. 28. a. 32; Thamatin, Not. Imp. Rom. § 22, p. 37), a town of Arabia Felix, according to Ptolemy, and described by Pline as distant 10 days' sail from Petra, and subject to the king of the Charsenii.

THUMNA. [TAMNA]

THUSIDEMON (Θωυσιδομών, Ptol. iv. 3, § 29), a Roman colony in Numidia. It seems to be the same place as the Tyndrarnarum oppidum of Pline (v. 4. s. 4).

THURIA (Θερία; Eth. Θεριάτης), a town of Messenia, situated in the eastern part of the southern Messenian plain, upon the river Atris (Fidirna), and at the distance of 80 stadia from Tharae, which was about a mile from the coast (Paus. iv. 31 § 1). It was generally identified with the Homerian Tharrai, though others supposed it to be Acreria. (Paus. i. c.; Strab. viii. p. 360.) It must have been a place of considerable importance, since the distant Messenian gulf was even named after it (Θωυσίδιας κόλπος, Strab. l. c.). It was also one of the chief towns of the Lacedaemonian Perioeci after the subjugation of Messenia; and it is here that the Third Messenian War took its rise, b. c. 464 (Thuc. i. 101). On the restoration of the Messenienses by Epaenetus, Thuria, like the other towns in the country, was dependent upon the newly-founded capital Messene; but after the capture of this city by the Achaeans in b. c. 182, Thuria, Tharae, and Abia joined the Achaean League as independent members. (Polyb. xxv. 1.) Thuria was annexed to Laconia by Augustus (Paus. l. c.); but it was restored to Messenia by Tiberius. [Mes- senia, p. 343. a.] Pausanias found two cities of this name. The Thuriarates had descended from the summit of the lofty hill of the upper city to dwell upon the plain; but without abandoning altogether the upper city, where a temple of the Syrian goddess still stood within the town walls (Paus. iv. 31 § 2). There are considerable remains of both places. Those of Upper Thuria are on the hill of the village called Paleokastro, divided from the range of mountains named Makrepli by a deep ravine and torrent, and which commands a fine view of the plain and gulf. The remains of the walls extend half a mile along the summit of the hill. Nearly in the centre of the ruins is a quadrangular cistern, 10 or 12 feet deep, cut out of the rock at one end, and on the other side constructed of masonry. The cistern was divided into three parts by two cross walls. Its whole length is 29 paces; the breadth half as much. On the highest part of the ridge there are numerous ruins, among which are those of a small Doric temple, of a hard brown calcareous stone, on which are cockle and mussel shells, extremely perfect. In the plain at Palei Lutra are the ruins of a large Roman building, standing in the middle of a fine mulberry grounds. Leake observes that it is in an uncommon state of preservation, part even of the roof still remaining. The walls are 17 feet high, formed of equal courses of Roman tiles and mortar. The roof is of rubble mixed with cement. The plan does not seem to be that of a bath only, as the name would imply, though there are many appearances of the building having contained baths: it seems rather to have been the palace of some Roman
Theorion. Eth. Thouriton, Thurium, called also by some Latin writers and by Polibey Thourium (Thopov, Pith.), a city of Magna Graecia, situated on the Tarentine gulf, within a short distance of the site of Sybaris, of which they were considered as having taken the place. It was one of the latest of all the Greek colonies in this part of Italy, not having been founded till nearly 70 years after the fall of Sybaris. The site of that city had remained desolate for a period of 58 years after its destruction by the Crotonians (Sybarites); when at length, in B.C. 452, a number of the Sybarite exiles and their descendants made an attempt to establish themselves again on the spot, under the guidance of some leaders of Thessalian origin; and the new colony rose so rapidly to prosperity that it excited the jealousy of the Crotonians, who, in consequence, expelled the new settlers a little more than 5 years after the establishment of the colony. (Diod. xii. 10, xii. 10.)

The fugitive Sybarites first appealed for support to Sparta, but without success; their application to the Athenians was more successful, and that people determined to send out a fresh colony, at the same time that they reinstated the settlers who had been lately expelled from thence. A body of Athenian colonists was accordingly sent out by Pericles, under the command of Lampson and Xenocrates; but the number of Athenian citizens was small, the greater part of those who took part in the colony being collected from various parts of Greece. Among them were two celebrated names, — Herodotus the historian, and the orator Lycurus, both of whom appear to have formed part of the original colony. (Diod. xii. 10; Strab. vi. p. 263; Dionys. Lys. p. 453; Vit. X. Orat. p. 835; Plut. Peric. xi. Nic. 5.) The new colonists at first established themselves on the site of the deserted Sybaris, but shortly afterwards removed (apparently in obedience to an oracle) to a spot at a short distance from thence, where there was a fountain named Thurium, from whence the new city derived its name of Thurii. (Diod. L.c.; Strab. L.c.) The foundation of Thurii is assigned by Diodorus to the year 446 B.C.; but other authorities place it three years later, n.c. 443, and this seems to be the best authenticated date. (Clinton, F. H. vol. ii. p. 54.) The protection of the Athenian name probably secured the rising colony from the assaults of the Crotonians, at least we hear nothing of any obstacles to its progress from that quarter; but it was early disturbed by dissensions between the descendants of the original Sybarite settlers and the new colonists, the former laying claim not only to honorary distinctions, but to the exclusive possession of important political privileges. These disputes at length ended in a revolution, and the Sybarites were finally expelled from the city. They established themselves for a short time upon the river Traenas, but did not maintain their footing long, being dislodged and finally dispersed by the neighbouring barbarians. (Diod. xii. 11, 22; Arist. Pol. v. 3.) The Thurians meanwhile concluded a treaty of peace with Crotona, and the new city rose rapidly to prosperity. Fresh colonists poured in from all quarters, especially the Peloponnesus; and though it is continued to be generally regarded as an Athenian colony, the Athenians in fact formed but a small element of the population. The citizens were divided, as we learn from Diodorus, into ten tribes, the names of which sufficiently indicate their origin. They were, — the Arcadian, Achaeans, Elean, Boeotian, Amphicytonic, Dorian, Ionian, Athenian, Euboean, and Nestic, or that of the islanders. (Diod. xii. 11.) The form of government was democratic, and the city is said to have enjoyed the advantage of a well-ordered system of laws; but the statement of Diodorus, who represents this as owing to the sagacity of Charondas, and that lawgiver himself as a citizen of Thurii, is certainly erroneous. [Dict. of Biog. art. Chardonas.]

The city itself was laid out with great regularity, being divided by four broad streets or "platea," each of which was crossed in like manner by three others. (Diod. xii. 10.)

Very shortly after its foundation, Thurii became involved in a war with Tarentum. The subject of this was the possession of the fertile district of the Strilas, about 30 miles N. of Thurii, to which the Athenians had a claim of long standing [Strilas], which was naturally taken up by their colonists. The Spartan general, Chaeandrias, who had been banished from Greece some years before, and taken up his abode at Thurii, became the general of the Thurians in this war, which, after various successes, was at length terminated by a compromise, both parties agreeing to the foundation of the new colony of Heraclea in the disputed territory. (Diod. xii. 23, 36, 33. viii. 106; Strab. vi. p. 264; Polyaen. Strat. ii. 10.) [Herculea.] Our knowledge of the history of Thurii is unfortunately very scanty and fragmentary. Fresh disputes arising between the Athenian citizens and the other colonists were at length allayed by the oracle of Delphi, which decided that the city had no other founder than Apollo. (Diod. xii. 35.) But the same difference appears again on occasion of the great Athenian expedition to Sicily, when the city was divided into two parties, the one desirous of favouring and supporting the Athenians, the other opposed to them. The latter faction at first prevailed, so far that the Thurians observed the same neutrality towards the Athenian fleet under Nicias and Alcibiades as the other cities of Italy (Thuc. vi. 44); but two years afterwards (n. c. 213) the Athenian party had regained the ascendency; and when Demosthenes and Eurydemus attacked at Thurii, the citizens afforded them every assistance, and even furnished an auxiliary force of 700 hoplites and 300 durmers. (Id. vii. 33, 33.)

From this time we hear nothing of Thurii for a period of more than 20 years, though there is reason to believe that this was just the time of its greatest prosperity. In n. c. 390 we find that its territory was already beginning to suffer from the incursions of the Lucanians, a new and formidable enemy, for protection against whom all the cities of Magna Graecia had entered into a defensive league. But the Thurians were too impatient to wait for the support of their allies, and instead forth with an army of 14,000 foot and 1000 horse, with which they repulsed the attacks of the Lucanians; but having rashly followed them into their own territory, they were totally defeated, near Lalis, and above 10,000 of them cut to pieces (Diod. xiv. 101).

This defeat must have inflicted a severe blow on the prosperity of Thurii, while the continually increasing power of the Lucanians and Bruttians, in their immediate neighborhood, would prevent them from quickly recovering from its effects. The city
continued also to be on hostile, or at least unfriendly, terms with Dionysius of Syracuse, and was in consequence chosen as a place of retirement or exile by his brother Leptines and his friend Philistus (Diod. xxvi. 20). In this latter year, 262 B.C., the war at Thurii, which 356 probably became the cause of the complete decline of Thurii, but the statement of Diodorus that the city was conquered by that people (xvi. 15) must be received with considerable doubt. It is certain at least that it reappears in history at a later period as an independent Greek city, though much fallen from its former greatness. No mention of it is found during the wars of Alexander of Ephesus in this part of Italy; but in a later period it was so hard pressed by the Lucanians that it had recourse to the alliance of Rome; and a Roman army was sent to its relief under C. Fabricius. That general defeated the Lucanians, who had actually laid siege to the city, in a pitched battle, and by several other successes to a great extent broke their power, and thus relieved the Thurians from all immediate danger from that quarter. (Liv. Epit. xi.; Plin. xxxiv. 6. s. 15; Val. Max. i. 8. § 6.) But shortly after they were attacked on the other side by the Tarentines, who are said to have taken and plundered their city (Appian, Sanna. 7. § 1); and this aggression was one of the immediate causes of the war declared by the Romans against Tarentum in B. C. 252.

Thurii now sunk completely into the condition of a dependent ally of Rome, and was protected by a Roman garrison. No mention is found of its name during the wars with Pyrrhus or the First Punic War, but it plays a considerable part in that with Hannibal. It was apparently one of the cities which revolted to the Carthaginians immediately after the battle of Cannae, though, in another passage, Livy seems to place its defection somewhat later. (Liv. xxii. 61, xxv. 1.) But in B. C. 213, the Thurians returned to their alliance with Rome, and received a Roman garrison into their city. (Id. xxv. 1.) The very next year, however, after the fall of Tarentum, they changed sides again, and betrayed the Roman troops into the hands of the Carthaginian general Hannibal. (Id. xxv. 15; Appian, Hann. 34.) A few years later (B. C. 210), Hannibal, finding himself unable to protect his allies in Campania, removed the inhabitants of Atella who had survived the fall of their city to Thurii (Appian, Hann. 49); but it was not long before he was compelled to abandon the latter city also to its fate; and when he himself in B. C. 204 withdrew his forces into Bruttium, he removed to Crotona 3500 of the principal citizens of Thurii, while he gave up the city itself to the plunder of his troops. (Appian, l. c. 57.) It is evident that Thurii was now sunk to the lowest state of decay; but the great fertility of its territory rendered it desirable to preserve it from utter desolation; hence in B. C. 194, it was one of the places selected for the establishment of a Roman colony with Latin rights. (Liv. xxxiv. 53; Strab. vi. p. 263.) The number of colonists was small in proportion to the extent of land to be divided among them, but they amounted to 3000 foot and 300 knights. (Liv. xxxv. 9.) Livy says merely that the colony was sent "in Taurinum agrum," and does not mention anything of a change of name; but Strabo tells us that they gave to the new colony the name of Copia, and this statement is confirmed both by Stephanus of Byzantium, and by the evidence of coins, on which, however, the name is written Copia. (Strab. i. 6; Steph. Byz. s. v. Copia; Eichh. vol. i. p. 164.) But this new name did not continue long in use, and Thurii still continued to be known by its ancient appellative. It is mentioned as a municipal town on several occasions during the latter ages of the Republic. In B. C. 72 it was taken by Spartacus, and subjected to heavy contributions, but not otherwise injured. (Appian, B. C. i. 117.) At the outbreak of the Civil Wars it was deemed by Caesar of sufficient importance to be secured with a garrison of Gaulish and Spanish horse; and it was there that M. Coelius was put to death, after a vain attempt to excite an insurrection in this part of Italy. (Caes. B. C. iii. 21. 22.) In B. C. 40 also it was attacked by Sextus Pompeius, who laid waste its territory, but was repulsed from the walls of the city. (Appian, E. C. v. 56, 59.)

It is certain therefore that Thurii was at this time still a place of some importance, and it is mentioned as a still existing town by Pliny and Ptolemy, as well as Strabo. (Strab. vi. p. 263; Plin. iii. 11. s. 15; Ptol. iii. 1. § 12.) It was probably, indeed, the only place of any consideration remaining on the coast of the Tarantine gulf, between Crotona and Tarentum; both Metapontum and Heraclea having already fallen into almost complete decay. Its name is still found in the Itineraries (Itin. Ant. p. 114, where it is written "Tarusos"; Tab. Pent.); and it is noticed by Procopius as still existing in the 6th century. (Procop. B. G. i. 15.) The period of its final decay is uncertain; but it seems to have been abandoned during the middle ages, when the inhabitants took refuge at a place called Tarraconae, about 12 miles inland, on a hill on the left bank of the Cratius.

The exact site of Thurii has not yet been identified, but the neighbourhood has never been examined with proper care. It is clear, from the statements both of Diodorus and Strabo, that it occupied a site near to, but distinct from, that of Sybaris (Diod. xi. 10; Strab. l. c.): hence the position suggested by some local topographers at the foot of the hill of Terranova, is probably too far inland. It is more likely that the true site is to be sought to the N. of the Cosciile (the ancient Sybaris), a few miles from the sea, where, according to Zannoni's map, ruins still exist, attributed by that geographer to Sybaris, but which are probably in reality those of Thurii. Swinburne, however, mentions Roman ruins as existing in the peninsula formed by the rivers Crathis and Sybaris near their junction, which may perhaps be those of Thurii. (Swinburne, Travels, vol. i. pp. 294, 292; Bonamelli, vol. i. p. 236.) The whole subject is very obscure, and a careful examination of the localities is still much needed.

The coins of Thurii are of great beauty; their number and variety indeed gives us a higher idea of the opulence and prosperity of the city than...
we should gather from the statements of ancient writers. [E. II. B.]

THYMA. [Boeotia, p. 412, b.]

THY'AMIA. [Pillius, p. 602, b.]

THYAMIS (Thymus), a river of Epeirus, flowing into the sea near a promontory of the same name. (Plut. iii. 14, §§ 4, 5.) It formed the northern boundary of Thesprotia, which is separated from Cestrine, a district of Chalcis (Thuc. i. 46; Strab. vii. p. 324; Paus. i. 11, § 2; Cic. ad Att. vii. 2, de Leg. ii. 3; Plin. iv. 1.) It is now called Ka-

land, apparently from the large reeds and aquatic plants which grow upon one of its principal tributaries. Its ancient name seems to have been derived from the δᾶρα or juniper, which, Leake informs us, though not abundant near the sources of the river, is common in the woody hills which border the middle of its course. The historian Phylarchus related (ap. Athen. iii. p. 79) that the Egyptian bear, which grew only in marshy places and nowhere but in Egypt, once grew for a short time upon the banks of the Thymis. (Leake, Northern Greece, vol. i. p. 103, vol. iv. p. 97.)

THYAMUS (Thaearios), a mountain lying to the S. of Argos Amphialichium, identified by Leake with Spartocynus, (Thuc. iii. 106; Leake, Northern Greece, vol. iv. p. 251.)

THYATEIRA (τὰ θωτέρα, Eth. θωτέραν), a considerable city in the north of Lydia, on the river Eucirus, and on the road leading from Sardes in the south to Germa in the north. It was anciently called Pelopia, Eulippa, and Scirantis. (Plin. v. 31; Steph. B. s. v. θωτέρα.) Strabo (xiii. p. 625) calls it a Macedonian colony, which probably means only that during the Macedonian period it was in-

creased and embellished, for Stephanus B. admits that it previously existed under other names, relates that Scirantis the founder gave it the name of Thyateira or Thyateira on being informed that a daughter (Θωτέρη) was born to him. But whatever we may think of this etymology, it seems clear that the place was not originally a Macedonian colony, but had existed long before under other names, and at one period belonged to Mysia. After the time of Antiochus Nicator, however, it became an important place, and is often noticed in history. When the two Sejouls arrived in Asia on their expedition against Antiochus the Great, the latter was encamped near Thyateira, but retreated to Magnesia. (Liv. xxviii. 8, 21, 37.) After the defeat of the Syrian king, the town surrendered to the Romans. (Liv. xxxiv. 44; Polyb. xvi. 1, xxxii. 25; comp. Appian, Syr. 30; Strab. xiii. p. 649; Plut. Sulla, 15; Pol. v. 2, § 16; It. Ant. p. 336.) In Christian times Thyateira appears as one of the seven Churches in the Apocalypse (vi. 18); in the Acts of the Apostles (xvi. 14) mention is made of one Lydia, a purple-seller of Thyateira, and at a still later period we hear of several bishops who worshipped there. In the middle ages the Turks changed the name of the town into Akhisar, which it still bears. (Mull. Dec. p. 114.) Sir C. Fellows (Asia Minor, p. 22), who calls the modern place Aktos, states that it teems with relics of an ancient splendid city, although he could not discover a trace of the site of any ruin or early building. These relics consist chiefly of fragments of pillars, many of which have been changed into well-tops or troughs. (Comp. Arrudell, Sehon Churches, p. 188, foll.; Wheeler and Spen, vol. i. p. 253; Lucas, Thirty Years' Voy. p. 192, &c.; Prokesch, Denkwürdigkeiten, iii. p. 60, foll.)

THYIA (Θήια), a place in Phocis, where the Delphians erected an altar to the winds, derived its name from the name of a daughter, a daughter of Cephissus or Castalius, and the mother of Delphus by Apollo. (Herod. vii. 178; Dict. of Biogr. art. THYIA.)

THYMBRABA (Θηµήβαρα, Θηµήβαρα), a town of Troes, in the vicinity of Ilium. (Hom. H. x. 430; Steph. B. s. v.; Plin. v. 32.) Strabo (xiii. p. 598) speaks of it only as a plain traversed by the river Thymbros. The valley of Thymbrius and the hill in it, called Callicodon (Hom. H. xx. 53, 151; Strab. l. c.), are said still to retain their ancient names. (Prokesch, Denkwürdigkeiten, i. p. 145, foll.) The town of Thymbra must have perished at an early period; but its name remained celebrated in religion, for Apollo, who had had a temple at Thymbra, is frequently called Thymbraeus (Θηµήβαρος; Virg. Aen. iii. 85; Eurip. Rheus, 224; Steph. B. s. v. Θηµήβαρα.)

THYMBRARA (Θηµήβραρα), a place near Sardes, not far from the small river Pactolus, at which the contingents of the Persian army furnished by the inhabitants of Asia Minor used to assemble. (Xen. Cyrop. vi. 2, § 11, vii. 1, § 45; Steph. B. s. v.) Some are inclined to identify this place with Thy-

barn, mentioned by Diodorus Siculus (xiv. 80); but this latter place could hardly be said to be situated on, or even near the Pactolus. (L. S.)

THYMBRIUS, a tributary of the Sangarius in Phrygia (Liv. xxxviii. 18), is no doubt the same as the Tembrius of Pliny (vi. 1) and the Timbrius in the Argonautica bearing the name of Orpheus (713), where the river is described as abounding in fish. (L. S.)

THYMBRIA (Θηµήβρια), a small town of Caria, only 4 stadia cast of Myus on the banks of the Maeander; in its neighbourhood there was a so-
called Charoneum, or cave from which poisonous vapours issued. (Strab. vi. p. 656, &c.)

THYMBRIUM (Θηµήβριον, Ech. Thymbrianos), a town of Phrygia, at a distance of 10 parasangs to the west of Trymenum (Xenoph. Anab. i. 2, § 13; Hieroc. p. 673; Conc. Constant. iii. p. 505.) Vibi-

thus Sequester (p. 25, ed. Oebri) mentions a forest Thymbria in Phrygia, which seems to have been near the town of Thymbrius. (L. S.)

THYMBRIUS (Θηµήβριον), a small river of Troes in the neighbourhood of Ilium; it was a tributary of the Sangarius, and on its banks stood the town of Thymbra (Strab. xiii. p. 598; Kuesten und Hom. H. xx. 430.) There still exists in that district a small river called Timbrek, which, however, does not flow into the Scamander, but into a bay of the sea; if this be the ancient Thymbrius, the plain of Thymbra must have been at a considerable dis-
tance from Ilium. For this reason, Col. Leake is in-

clined to identify the Thymbrius rather with the Kaufenn Sour, which still is a tributary of the Scamander or Membrine Sour (Asia Minor, p. 289.) (L. S.)

THYNEA (Θηήνεα), a place on the coast of Paphlagonia, at a distance of 90 stadia from Ac-
THYMIATERION.

But the early rate of 10,000 Greeks entered the service of Sesthenes, one expedition in which they were employed had foreseen the object of the subjugation of the Thyrene, who were said to have defeated the Teires, an ancestor of Sesthenes (Anab. vii. 2. § 22). Xenophon gives them the somewhat equivocal character of being the most warlike of all people, especially by night: and he had personal experience of their fondness for nocturnal flight; for, having encamped in their villages at the foot of the mountains, to which the Thyrogen had retired on the approach of Sesthenes and his forces, he was attacked by them on the next night, and narrowly escaped being burnt to death in the house in which he had taken up his quarters (ib. 4. § 14, seq.). But this attack failing, the Thyrogen again fled to the mountains, and soon afterwards submitted to Sesthenes. Xenophon visited the country of the Thyren in the winter (ib. 6. § 31), which he describes as being extremely severe, there being deep snow on the ground; and so low a temperature, that not only water, but even wine in the vessels was frozen; and many of the Greeks lost noses and ears through frostbite. (ib. 4. § 3.)

THYNIAS (Owiras), a small island in the Euxine at a distance of one mile from the coast of Thyria or Bithynia; its distance from the port of Rhod was 20 stadia, and from Calpe 40. (Plin. vi. 13; Arrian, Peripil. P. E. p. 13.) The island had only 7 stadia in circumference, and had at first been called Apollonia from a temple of Apollo which existed in it. (Pilin., Arrian, Ill. cc.; Apollon. Rhod. ii. 177, 675; Anon. Peripil. P. E. p. 3.) According to Ptolemy (v. 1. § 15) it was also called Daphnusia, and obtained its name of Thyrinia from the Thyrogen, who inhabited the opposite coast. The island had a port and a naval station belonging to Heraclia (Scylas, p. 24; Arrian, L. c.); and Mela (ii. 7) is probably mistaken in believing that the island contained a town of the same name. (Comp. Strab. xii. p. 543, where it is called Thyrinia; Marciyan, p. 69; Steph. B. s. v.; Orph. Argon. 717, where it bears the name Thyrinia.) The modern name of the island is Klima.

THYNIAS (Mela. ii. 2. § 5; Plin. iv. 11. s. 18; Owiras, Strabo vii. p. 319. xii. p. 541; Sveyn. 727; Arrian. Per. P. Eux. p. 24; Anon. Per. P. Eux. p. 15; Ptol. iii. 11. § 4; Steph. B. s. v.), a promontory on the Thracian coast of the Euxine, N. of Sounydessus, which was probably at one time in the territories of the Thyrogen, although Strabo (vii. p. 319) speaks of the district as belonging to the people of Apollonia. (Pliny [L. c.] mentions a town of the same name, which in some maps is placed a little to the south of the promontory, on the site of the modern Indira or Indiada; but which, according to Dapper (de l'Archp. p. 515), is still called Thirno.)

THYROS or TYSOS, a town mentioned only by Pliny (v. 22) as situated between Mopon and Zephyrium in Cilicia. (Pliny.)

THYRES (Othran), a town of Arcadia in the district Cyrenia, said to have been founded by Thyrerae, a son of Cyrene. It is placed by Leake at Palaméniri. (Pans. viii. 3. § 35, § 7; Steph. B. s. v.; Leake, Peloponnesiac, p. 240.)

THYRAEMUS. (Megapolphis, p. 310. a.)

THYREA, THYREATIS. (Cynuria.)

THYREATES SINUS. (Cynuria, p. 727. a.)

THYREUM. (Thyrium.)

THYBOG NOIDEA. [Attica, p. 330. a.]

THYRIDES (Ouipnos), a promontory of Lacedaemon, on the western coast of the Taygetic peninsula, now called Cape Grosso. It is of a semicircular form, nearly 7 miles in circumference, and rises from the sea to the height of 700 feet. There are many apertures and clefts in the rocks, the abodes of innumerable pigeons, and from the window-like form of these holes the whole promontory has received the name of Thyridae. Strabo describes it as a wSia Kpmuva.4, a precipitous cape beaten by the winds, distant 130 stadia from Taenarum (reckoning from the northern point of Thyridae); Pausanias, as a promontory (yalsa), situated 70 stadia from Taenarum (reckoning from the southern point of the promontory). Pausanias likewise calls it a promontory of Taenarum, using the latter word in its widest sense, to signify the whole peninsula of Memi. According to Strabo, the Messenian gulf terminated at this promontory. Pliny (iv. 12. s. 56) mentions three islands of the name of Thrudes in the Aegean gulf. (Pans. iii. 25. § 9; Strab. vii. pp. 360, 362; Leake, Morea, vol. i. p. 302, seq.; Boldrey, Researches, p. 91; Curtius, Peloponnesiac, vol. ii. p. 281.)

THYRIM or THYREUM (Othran, Pol. iv. 25; Othran, Pol. iv. 6; Othran, Pol. xxvii. 5; Oithros, Ant. Gr. i. 553; Ith. Othros, Thyrinieus), a city in Cariandia, the exact site of which is unknown. It placed by Pausanias in the interior near the sources of the Anapus; and his authority is followed by K. O. Müller and others. This, however, is evidently a mistake. Cicero tells us (ad Fam. xvi. 5) that in sailing from Alyxia to Leucas, he touched at Thyrium, where he remained two hours; and from this statement, as well as from the history of the events in which Thyrium is mentioned, we may infer that it was situated on or near the Ionian sea, and that it was the first town on the coast S. of the canal.
which separated Leucas from the mainland. It is placed by Leake in the plain of Zaciroda, but no ruins of it have been discovered. Its name does not occur in Strabo. Thyrsus is first mentioned in B.C. 373, when its territory was invaded by Iphocrates. (Xen. Hell. vi. 2. § 37.) Xenophon describes it as a place of importance; and it appears as one of the chief cities of Acanania at the time of the Roman wars in Greece, when its name frequently occurs. At this period Thyrsus was one of the places at which the meetings of the Acananian League were usually held. (Acanania.) It was one of the many towns whose ruin was occasioned by the foundation of Nicor هي، to which its inhabitants were removed by order of Augustus. (Pol. iv. 6, 25, xvii. 10, xxii. 12, xxvii. 5; Liv. xxxi. 11, 12, xxxvii. 9, xiii. 17; Anth. Graec. l.c.; Leake, Northern Greece, vol. iv. p. 16.)

CONI OF THYREUS.

THYRSUS or TYRSUS (Θνρης ὁ θηρός, Ptol.; Θηρος, Paus.; Τύρος), the most considerable river of Sardinia, which still retains its ancient name almost unaltered. It has its sources in the mountains in the NE. corner of the island, and flows into the Gulf of Oristano on the W. coast, after a course of about 75 miles. About 20 miles from its mouth it flowed past Fornum Trajani, the ruins of which are still visible at Forhaimianus; and about 36 miles higher up are the Bagni di Renutti, supposed to be the Aaque Lestinae of the Tolomey. The Itineraries give a station "ad Caput Tyras" (Itin. Ant. p. 81), which was 40 M.I. from Oliba by a ranged mountain road: it must have been near the village of Badulai. (De la Marморa, Vey. en Sardaigne, vol. ii. p. 445.) Pausanias tells us that in early times the Thyrsus was the boundary between the part of the island occupied by the Greeks and Trojans and that which still remained in the hands of the native barbarians. (Paus. x. 17. § 6.) [E. H. B.]

THYSSENS (Θυσσης, Ptol. iv. 3. § 39), the epidemum Tusisirianum or Thysirianum of Piny (v. 4. § 4), a city of Braccinum, in the Roman province of Africa, lying midway between Thunes and Tripus, and west of the promontory Brachades. It was here that the emperor Gordians first set up the standard of rebellion against Maximin (Herodian. vii. 4. seq.; Capitol. Carol. c. 7. seq.), and it was from him, probably, that it derived its title of a Roman cokyus. We find the name variously written, as Tusia, by Iliarits or whoever was the author of the history of the African War (B. Afr. 26. 27, &c.), and Thysraus, in the Itin. Ant. (p. 58). Now El Jemme or Legumen, with extensive ruins, especially of a fine amphitheatre in a tolerably perfect state. (Slaw. Travels, vol. i. p. 220, seq.) [T. H. D.]

THYSSESGETAE (Θυσσεγέται, Herod. iv. 22), a numerous people of Asatian Sarmatia, living principally by the chase. They dwelt to the north-east of a great desert of 7 days' journey, which lay between them and the Buduni. Stephanus B. (c. xxv) erroneously Places them on the Maeotis, apparently from misunderstanding Herodotus. They are called

TIBERIAS.

Thusagetae by Mela (i. 19) and Pliny (iv. 12. s. 26), and Thyssagetae by Valerius Flaccus (vi. 140). [T. II. D.]

THYSSUS (Θυσσας), a town of Chalcedon in Macedonia, situated on the W. or S. side of the peninsula of Acte or Mt. Athos. Its exact position is uncertain, but it appears that Thyssus and Cleonea occupied the central part of the W. or S. coast of the peninsula, and that one of them may be placed at Zeugrafa or Bokhabiri, and the other at Aeropontaini. (Herod. vii. 22; Thuc. iv. 109, v. 53; Strab. viii. p. 834; Plut. Tyr. p. 10. s. 17; Leake, Northern Greece, vol. iv. pp. 149—152.)

TIARANTUS (Τύαραντος, Herod. iv. 48), a river in Sclavnia, flowing into the Ister from the N. Mannert identifies it with the Syg (iv. p. 105; cf. Ubert, iii. 2. p. 184). [T. II. D.]

TIARRILIA. [TAEARI JULIENSES.]

TIBAS. [LACONIA, p. 110, a.]

TIASUM (Τιασόων or Τιασών, Ptol. iii. 8. § 9), a town of Dacia, in the neighbourhood of the modern Foschitani. [T. IV. D.]

TIBERANI (Τιβέρανοί), a tribe on the coast of Pontus, occupying the country between the Chalys and the Mosynodai, on the east of the river Ias. They are mentioned as early as the time of Herodites (iii. 94), and were believed to be of Scythian origin. (Schol. ad Apoll. Rhod. ii. 378, 1010; Xen. Anab. v. 5. § 2; Strab. p. 533; Steph. B. s. v. Τιβέρανος.) Strabo (xi. p. 527) describes them as inhabiting the mountains branching off from the Montes Macchie and Colebich, and mentions Cotysa as their principal town. (Comp. Xen. L. c.; Plin. vi. 4.) They appear to have been a harmless and happy people, who performed all their duties in a joyous manner. (Schol. ad Apoll. Rhod. L. c.; Steph. B. l. c.; Anon. Peripl. P. F. p. 12; Pomp. Mela, i. 19.) Their arms consisted of wooden helmets, small shields, and short spears with long points. (Herod. vii. 78.) Xenophon and his Greeks spent three days in travelling through their country. (Xen. L. c., vii. 8. § 23; Diod. Sic. xiv. 30; Dionys. Per. 767; Pomp. Mela, ii. 2; Val. Flacc. v. 149; Strab. ii. p. 129, vii. p. 509, xii. p. 519, xii. p. 555.) [L. S.]

TIBERACUM, in North Gallia, is placed in the Antonine Itin. between Juliacum (Juliers) and Colonia Agrippina (Cologne), viii. from Juliacum and x. from Colonia. D'Anville and others fix Tiberiacum at Bergheim, at the passage of the river Efftz, which flows between Juliers and Cologne. Others place Tiberacum at Tarren, south of Bergheim, where the bridge is. D'Anville adds "that a place situated in the direction between Juliers and Bergheim is called Steinstraz, that is to say, Lapiden Strata (Stone Street), just as in our provinces they say Chemins Peres." (D'Anville, Nottiers, &c.; Ubert, Gallien, p. 544.) [G. L.]

TIBERIAS (Τιβέρας, Joseph. Ant. xviii. 3, B. J. ii. 8, iii. 16; Steph. B. s. v.; Ptol. viii. 20. § 16), the principal town of Galliaec, on the SW. bank of the sea of Tiberias or Genesareth. It was situated in the most beautiful and fruitful part of that state (Joseph. Ant. xviii. 2. § 3), and was adorned with a royal palace and stadium. (Joseph. Vit. 12, 13, 64.) It was built by the
TIBERIUS MARE.

Tetrarch Herodes Antipas, in honour of the Roman emperor Tiberius, from whom it derived its name. (Joseph. v. 20.) It is stated to have been built from Hippo, 60 from Gadara, and 120 from Scythopolis (Joseph. Vit. 63); distances which are not much at variance with that of Jolphi, who states that it was 20 miles English from Nazareth and 90 from Jerusalem. (Travela, p. 40.)

From the time of Herodes Antipas to that of the reign of Agrippa II., Tiberius was probably the capital of the province (Joseph. Vit. 9), and it was one of the principal cities which supplied men to the kingdom of Agrippa. (Joseph. Ant. xx. 8. § 4.)

In the last Jewish War, Tiberias, from its great strength, played an important part (Joseph. B. J. ii. 20); as, after Sepphoris, it was held to be the largest place in Galilee (Joseph. Vit. 65), and was very strongly fortified. (B. J. iii. 10. § 1.) The inhabitants derived their sustenance in great measure from their fisheries in the adjoining sea. (Joseph. Vit. 12.) On the destruction of Jerusalem, and for several centuries subsequently, Tiberias was famous for its academy of learned Jews. (Lightfoot, Hor. Heb., p. 140.)

In the immediate neighbourhood of Tiberias were the celebrated hot springs of Emannaus (Joseph, B. J. ii. 21, Ant. xviii. 2.) [Emmaus.] It is not certain whether Tiberias occupied the site of Chinnereth, though Hieronymus thinks so (Onom. s. v. Chinnereth); it seems more likely that this place belonged to the tribe of Naphtali. (Joseph. xix. 35; Beland, Palest., p. 16.) Nor is there any better reason for identifying it, as some have done, with Chamathus (Joseph. xix. 35) or Zakkak, which was the Rabbinical notion. (Lit. Hieron, Megil. fol. 701; Lightfoot, Chronograph. Cent. cap. 72-74.) The modern name of Tiberias is Tiberiopolis: it is not, however, built actually on the site of the old town, though close to its ruins. When Josephus was there, it had a population of 11,000 (Travela, pp. 48-58.) It was nearly destroyed by an earthquake on New Year's Day, 1837, since which time it has never been completely rebuilt. (Ruissiger, iii. p. 132; Strass, p. 356; Robinson, iii. p. 500.) [V.]

TIBERIUS MARc. (λημνή Τιβερίας, Pausan. v. 7. § 4; Ptol. v. 16. § 4; λημνή η Τιβερίας, Joseph. B. J. iv. 26), the principal lake or sea of Palestine in the province of Galilee. It was bordered on the W. by the tribes of Issachar and Zabulon, and on the E. by the half-tribe of Manasseh. The waters were fresh (Joseph. B. J. iii. 35) and full of fish (Joseph. B. J. iv. 26; Matth. iv. 18; Luke, v. 1, &c.), and its size is variously stated, by Josephus (1. c.), to have been 140 stadia long by 40 broad, and by Pliny, to have been 16 M. P. long and 6 M. P. broad (v. 15). It was traversed in a direction NW. and SE. by the river Jordan. (Jordanes: Palaestina.) This sea is known by many different names in the Bible and profane history; its earliest title was that which is called Chinnereth (Numb. xxxiv. 11; Joseph. xiii. 27; LXX. Χιννερῆ. the name of the sea of Galilee) (Isa. xxv. 10; Luke, vii. 19; Tahn. Amx. Matth. iv. 18; Mark, vii. 31, &c.; and with a double title, ζωάονα τῆς Γαλαλαίας, τῆς Τιβερίας, John vi. 1). Pliny, in describing the same localities, speaks of a town called Tarricnac, from whence also he says the adjoining lake is sometimes named (1. c.; cf. also Strab. xvi. p. 764.) This lake is Cahu-ar-Tabarish. (Pococke, ii. p. 103; Thevenot, p. 387; Hasekist, i. p. 181; Robinson, iii. pp. 499—509, &c.)

TIBERIUSPOLIS (Τιβερίουτοποίς), a town in Phrygia Major, in the neighbourhood of Eumenus. (Ptol. v. 2. § 25; Socrat. Hist. Eccles. vii. 46.) Its site is yet uncertain, but Kiepert (in Franz, Briefe, Gesch. v. 33) is disposed to regard the extensive ruins near Suleiman as the remains of Tiberiopolis. Hamilton (Researches, i. p. 137, toll.), more probably correctly, regards them as the ruins of Baniurmus. (Comp. Arandell, Discoveries, i. p. 81, foll.)

TIBERIUS (Τιβέριος; Tevere, Tiber; the forms Tiberis, Tybris, and Thybris are chiefly poetical, as is θιβέριος also in Greek: the Latin poets use also Tiberinus as an adjective form, as Tiberinus pater, Tiberinum flumen, &c., and thence sometimes Tiberinus by itself as the name of the river), one of the most important rivers of Central Italy. It has its sources in the Apennines above Tiberinus, and in the territory of Arretium (Plin. iii. 5. s. 9), on the confines of Etruria and Umbria, and flows at first in a southerly direction, passing by the walls of Tiberium, which derived from it the name of Tiburnium (Città di Castello), and afterwards within a few miles of Perusia on the E. and within a still shorter distance to the W. of Tuder (Todi). From thence it still preserves a general S. direction, notwithstanding considerable windings, till it receives the waters of the Anio (Terone), a few miles from the walls of Rome, from which point it has a general SW. course to the sea at Ostia. Pliny estimates the upper part of its course at 150 miles, to which must be added about 35 more for the lower part, giving as a total 185 miles (Plin. l.c.; Strab. v. p. 218); but this estimate is below the truth, the whole course of the river being about 180 geogr. or 225 Roman miles. During the whole of its course from Tiberinus to the sea the Tiber formed in ancient times the eastern boundary of Etruria, separating that country from Umbria in the upper part of its course, afterwards from the territory of the Sabines, and, in the lower part, from the mouth of the Anio downwards, dividing it from Latium. (Strab. v. p. 219; Plin. l.c.) It receives numerous confluent or tributaries, of which the most important are, the Timia, an inconsiderable stream which joins it from the E. a little below Perusia, bringing with it the waters of the more celebrated Clitumnus; the Clancis, which falls into it from the right bank, descending from the marshy tract near Clusium; the Naia, a much more considerable stream, which joins from the Velurnus a few miles above Interamnia, and discharges their combined waters into the Tiber, a few miles above Oriciulanum; and the Anio, which falls into the Tiber at Antcanae, 3 miles above Rome. These are the only affluents of the Tiber of any geographical importance, but among its minor tributaries, the Aella on its left bank, a few miles above the Anio, and the Cenemara on the right, are names of historical celebrity, though very trifling streams, the identification of which is by no means certain. [See the respective articles.] Two other streams of less note, which descend from the land of the Sabines and fell into the Tiber between Oriciulanum and Ere-
TIBERIS.

The Tiber is unquestionably, in a merely geographical point of view, the most important river of Central Italy, but its great celebrity is derived from its flowing under the walls of Rome, or rather through the heart of the city, after this had attained to the full extension. The detailed account of the river in this part of its course must be sought in the article ROMA; we need here only mention that after flowing under the Milvian Bridge [FOX.. MIVILUS or MIVLVS] the river makes a considerable bend to the W. so as to approach the foot of the Vatican hills, and leave, on the other side, between its left bank and the nearest ridge of hills, a broad tract of plain, early known as the Campus Martius, the wretched part of which was later to be to everyone the most remarkable of TITIKNA, and known from 1198 Yirg. "berim," visited by tugboats, a few miles from Olbia, navigable, and having tributaries, which were both in time and subject to the city. A short distance lower down, but still within the walls of the city, its stream was divided into two by an island known as the ISSELLA TIBERINA, and reported by tradition to have been formed by alluvial accumulations within the period of Roman history. It is remarkable that this is the only island of any consideration in the whole course of the river, with the exception of that called the ISSELLA SACRA, at its mouth, formed by the two arms of the river, which is a remarkable example of late growth, and in great part of artificial formation.

The Tiber was at all times, like most rivers which are supplied principally by mountain streams, a turbid, rapid, and irregular river, that must always have presented considerable difficulties to navigation. The yellow and muddy hue of its turbid waters is repeatedly alluded to by the Roman poets ("fluvam Tiberinum, Hor. Carm. i. 2. 13; "saeurn gurgite flavo," Verg. Aen. ix. 816; and the truth of Virgil's description, "Vorticulis rapidis et multa flavus areae," (Aen. vii. 31)).

The Tiber was visited by Rome. In the upper part of its course, as we learn from Pliny, the river was with difficulty navigable, even for small boats; nor did its first tributarie, the Tinea and Clavis contribute much to its facilities in this respect, though their waters were artificially dammed up, and let off from time to time in order to augment the main stream. (Flinn. iii. 5. s. 9.) But from the point of its junction with the Nar, the Tiber became navigable for larger vessels, and aid was given from a great period extending to the various kinds were brought down the river to Rome. (Liv. ii. 34, v. 54; Cic. de Rep. ii. 5; &c.) In the more flourishing period of the city the navigation of the Tiber was of course enormously increased; and vast supplies of timber, stone, and other materials for building, as well as corn and provisions, were continually introduced by means of the river and its tributaries. (Strab. v. 295.) Corn was brought down the Tiber even from the northern extremity of Tiberium, when the upper part of the stream was navigable. (Flinn. Ep. v. 6.)

It seems also to have been used as an ordinary mode of travelling, as we are told that in A.D. 20, Piso, the murderer of Germanicus, proceeded from Narnia to Rome by descending the Nar and the Tiber. (Tac. Ann. iii. 9.) At the present day the river is navigated by boats of large size as far as the confluence of the Nera, and small steamers ascend as far as Benevento, a few miles from Otranto.

But it was from Rome itself to the sea, a distance of 27 miles by the river (Strab. v. 232), that the navigation of the Tiber was the most important. Pliny speaks of it as in this part of its course navigable for the largest vessels ("quomlibet magnam navium ex Italo mari capacem"), and as becoming the receptacle of merchandise from every part of the world. The latter statement may be readily admitted; but the former is calculated to astonish any one acquainted with the river in its present condition; yet it is (Liv. xiv. 38) confirmed by the distinct statement of Strabo (v. p. 232), that the larger class of merchant vessels used to ride at anchor in the open sea off the mouth of the river, until they had been lightened of a part of their cargoes, which they discharged into barges, and afterwards proceeded up the river to Rome. Diminuens gives the same account, with the exception that vessels which exceeded 3000 amphorae in burden were unable to enter the river at all, and forced to send their cargoes up by barge. (DINU. xxiv. 4.) But all kinds of rowing vessels, not excepting the largest ships of war, were able to ascend the river (HIB.); and thus we find the younger Cato on his return from Cyprus proceeding at once in his galley to the Nara within the walls of Rome. (Plut. Cat. Min. 39.)

We learn also from Livy that the ships of war which had been taken from Persia king of Macedonia, though of unusual size ("insutatae ante magnitudinis"), were carried up the river as far as the Campus Martius, and thence were constructed for the purpose of bringing the obelisk which was set up in the Circus Maximus, was able to ascend as far as the Vicus Alexandri, within three miles of Rome (Ammian. xvi. 4. § 14). The chief difficulties that impeded the navigation of the river in the time of Strabo were caused by its own accumulations at its mouth, which had destroyed the port of Ostia. These were afterwards in great measure removed by the construction of an artificial port, called the Portus Augusti, commenced by Claudius, and enlarged by Trajan, which was subsequently named after him, and is of such a length and breadth as to facilitate the navigation of the largest ships of war. It is situated opposite to the modern port of the Volturno, and is known to have been a busy and important port of commerce, from which the Tiber was laboured, in common with most rivers of mountain origin, arose from the frequent inundations to which it was subject. These appear to have occurred in all ages of the Roman history; but the earliest recorded is in B.C. 241, immediately after the close of the first Punic War (Oros. iv. 11), which is said to have swept away all the houses and buildings at Rome in the lower part of the city. Similar inundations, which did more or less damage to the city, are recorded by Livy in B.C. 215, 202, 193, and again in 192 and 189 (Liv. xiv. 9, xxx. 38, xxxv. 9, 21, xxxviii. 28) and there is little doubt that it is only from the less of the detailed annals that we do not hear again of the occurrence of similar catastrophes till near the close of the Republic. Thus we find a great inundation of the Tiber noticed as taking place in B.C. 54 (Dios. Cass. xxxxxx. 61), which is alluded to by Cicero (ad Q. Fr. iii. 7); and several similar inundations are known to have occurred in the time of Augustus, in B.C. 27, 23 and 22, of which the first is probably that alluded to by Horace in a well-known ode. (Her. Carm. i. 2. 13; Orell. Excurs. ad loc. ci.; Dion Cass. lxxii. 20,
TIBERIS.

33, Ev. 1.) Great attention was bestowed by Augustus upon the subject, and his first instituted magistrates with the title of Curatores Tiberis, whose special duty was to endeavour to restrain the river within due bounds, to preserve the embankments, &c. (Suet. Oct. 37.) These officers received increased powers under Tiberius, and continued down to the close of the Empire. We frequently meet with mention in inscriptions of the "Curatores alvi Tiberis et riparum," and the office seems to have been regarded as one of the most honourable in the state. (Dion Cass. livi. 23. Orell. Inser. 1172, 2284, &c.; Gruter, Inser. pp. 197, 198.) But it is evident that all their efforts were ineffectual. In the reign of Tiberius so serious was the mischief caused by an inundation in A. D. 15 that it was proposed in the senate to diminish the bulk of the waters by diverting some of the chief tributaries of the stream, such as the Nar, Velinus and Clusus. (Tac. Ann. i. 76; Dion Cass. livl. 14.) This plan was, however, abandoned as impracticable; and in A. D. 69 another inundation took place, which appears to have caused still more damage than any that had preceded it (Tac. Hist. i. 86). It is strange that in face of these facts Pliny should assert that the Tiber was so confined within artificial banks as to have little power of out-break, and that its inundations were rather subject to superficial alarm than formidable in themselves. (Plin. iii. 5. s. 9.) During the later ages of the Empire indeed we hear but little of such out-breaks of the Tiber, but this is very probably owing only to the scanty nature of our records. One great inundation is, however, recorded as doing great mischief in the reign of Trajan, another in that of Macrinus, and a third in that of Valerian. (Dion Cass. lxxviii. 25; Vict. Caes. 34. Epit. 13.) One of the most destructive of all is said to have been that of A. D. 590, which added to the various calamities that at that time almost overwhelmed the city. (Hist. Marcell. xvi. p. 583; Greg. Taron. x. 1.) At the present day the lower parts of Rome are still frequently flooded by the river, for though the soil of these parts of the city has unquestionably been raised, in some places many feet, the bed of the Tiber has undoubtedly been also elevated, though probably in a less degree. The whole subject of the inundations and navigation of the Tiber, and the measures taken in ancient times in connection with them, is fully illustrated by Peller in an article entitled Rom und der Tiber in the "Beitrage der Sichsischen Gesellschaft" for 1848 and 1849.

The Tiber appears to have been in ancient times occasionally frozen, at least partially; a circumstance to which the Latin poets repeatedly allude. But we must not construe their rhetorical expressions too strictly; and it is clear from the terms in which Livy notices its being frozen over in the extraordinary winter of B. C. 298, that such an occurrence was of extreme rarity. ('Insignis curatus Tiberis alvi ac nivea fuit, adeo ut vise clausae, Tiberis innavigabilis fuerit, Liv. v. 13.) St. Augustine also alludes to such a winter (apparently the same noticed by Livy), "ut Tiberis quoque glacie daturatur," as a thing unheard of in his times. (Augustin, C. Dei. iii. 17.) It was a tradition generally received among the Romans that the Tiber had been originally called the Alba; and that it changed its name by consequence of Tiberius the famous kings of Alba, having been drowned in its waters. (Liv. i. 3; Dionys. i. 71; Vict. Orig. G. Rom. 18.) Virgil, however, who calls the king Thybris, assigns him to an earlier period, prior to the landing of Acraea (viii. 330). Hence the river is not unfrequently called by the Roman poets Alba. (Sil. Ital. vi. 391, viii. 455, &c.) It had naturally its truchary divinity or river-god, who, as we learn from Cicero, was regularly invoked in their prayers by the augurs under the name of Tiberius (Cic. de N. D. iii. 19). He is frequently introduced by the Roman poets as "pater Tiberius" (Enn. Ann. i. p. 43; Virg. Aen. viii. 31, 72; &c.; Ov. H. E. 15.)

TIBERIGENSES OPTIDUM, a town in Africa Provincia, apparently the Thibiga (Ov. H. E. 15.) of Polye- my (iv. 3. § 29; Plin. v. 4. s. 4). [T. H. D.]

TIBILIS, a town in the interior of Niumidia, 54 miles from Cirta having hot mineral springs (Aquae Tibilisanae) (August. Ep. 128; Itin. Ant. p. 42), commonly identified with Hammam Mecka- ti in the mountains near the river Setibone; but, according to D'Arbaz and the map of the province of Constantine (Par. 1827), it is Hammam-el- Berda, somewhat more to the N. [T. H. D.]

TIBISCUM (Tibiscus, Ptol. iii. 8. § 10), a town of Dacia, on the river Tibiscus. By the Geogr. Rav. it is called Tibus (iv. 14), and in the Tab. Pict. Tisicus. Its ruins exist at Kavaran, at the junction of the Tensus (Tisicus) and Bistra (cf. Ukert, iii. 2. p. 616). [T. H. D.]

TIBISCUSS (Tibiscus, Ptol. iii. 8. § 1), a tributary river of the Danube in Dacia. We also find it called Tissus (Inser. Grat. p. 448. 3) and Tibisia (Geogr. Rav. iv. 14). Several authors identify it with the Tisius or Tisia (the modern Thiesis), with which, indeed, Polteny seems to have confounded it, as he does not mention the latter (Manuet, iv. p. 203; Sickler, i. p. 196; cf. Ukert, iii. 2. p. 603). But Forbiger, after Reichard, identifies it with the Tese- nes; his grounds for that opinion being that Jor- manides (Get. c. 34) and the Geographer of Ravenna (l. c.) mention the Tisia and Tisibus as two distinct rivers, and that the site of the ancient town of Tiscicum appears to point to the Domeus (Hendab. d. alt. Geogr. iii. p. 1103, note). It is probable that the Pathus of Piny (iv. 12. s. 25) and the Arthusc of Ammianus Marcellinus (xviii. 13. § 4) are the same river, though some identify them with the Tisauins. [T. H. D.]

TIBISIUS (Tibisius), a large river of Syria, which Herodotus describes as rising in Mt. Haemus, and flowing into the Maris (iv. 49). It is identified by some with the Kora Lowa.

TIBULA (Tibula, Ptol.), a town of Sardinia, near the N. extremity of the island, which appears to have been the customary landing-place for travellers coming from Corsica; for which reason the itineraries give no less than four lines of route, taking their departure from Tibula as a starting-point. (Itin. Ant. pp. 78—83.) It is very unfortunate therefore that his position is a matter of great un- certainty. That assigned to it by Polteny would place it on the site of Castel Sardo on the N. coast of the island, and only about 18 miles from Porto Torres, but this is wholly incompatible with the statements of the itineraries, and must certainly be erroneous. Indeed Polteny himself places the Tibulates, or Tubulata (Tibulata, who must have been closely connected with the town of that name, in the extreme N. of the island (Ptol. iii. 3. § 6), and all the data derived from the itineraries concur in the same result. The most probable posi-
tion is, therefore, that assigned it by De la Marmona, who fixes it on the port or small bay called Porto di Lungo Sardeo, almost close to the northernmost point of the island, the Errentebantum Prom. of Pedenei. (De la Marmona, Voy. en Sardeigne, vol. ii. pp. 421—432, where the whole question is fully examined and discussed.)

[II. B.]

Tibur. (q; Tiberius, or Tébés, or Tébres, Polyb. vi. 14; H Tébres, Strab. v. p. 238; H Tébres, Ptol. iii. 1. § 58; H Tébres, Stephan. B. p. 564; Eth. Tiburs, Liv. vii. 9; Virg. Aen. xi. 757; Hor. S. i. 6. 108; Tac. Ann. xiv. 22. &c.; Titirutinus, Cic. Phil. v. 7; Prop. iv. 7. 85; Plin. Ep. vii. 29, &c.; Tiburinus, Stat._Silv. i. 3. 74; Prop. iii. 22, 23; now Trivoli), an ancient and celebrated town, seated on the Anio, to the NE. of Rome, from which it was distant 20 Roman miles (Inn. Antit. p. 309; cf. Mart. iv. 57; Procop. B. ii. ii. 4), Tibur lies on an offshoot or spur thrown out from the northern side of what is now called Monte Algebeni, at a level between 800 and 900 feet above the sea. This ledge extends across the bed of the Anio to Monte Castello on its north bank, thus forming a natural barrier over which the river leaps into the valley below, from a height of about 50 feet, and forms the celebrated waterfall so frequently mentioned by the ancient writers (Strab. l. c.; Diod. i. 105; Plin. B. H. vi. 27; d'Her. i. 7. 116, &c.). The town lay principally on the cliff on the left or southern bank, where it is half encircled by the Anio. It is probable that at a remote period the waterfall was lower down the river than it is at present, since there are tokens that the stream once washed the substructions of the terrace on which the round temple is built; especially a broken wheel embedded in the cliff at a height of 150 feet above the abyss called the Grotta di Neptune. The awful catastrophe in A. D. 105 recorded by the younger Pliny (Ep. viii. 17), when the Anio burst its banks and carried away whole masses of rock—montes he calls them—with the groves and buildings upon them, must have produced a remarkable change in the character of the fall. We may gather, from some descriptions in Propertius (iii. 16. 4) and Statius (Silv. i. 3. 73), that previously to that event the Anio leaped indeed from a high rock, but that its fall was broken towards its lower part by projecting heights which caused it to form small lakes or pools. From the time of Pliny the catastrophe probably remarkably changed much in the same sense down to the year 1826, when the river again swept away a number of houses on the left bank, and threatened so much danger to the rest that it was found necessary to divert its course by forming a tunnel for its waters through Monte Castello on the right bank. This alteration spoiled the romantic points of view on the side of the crevices of Neptune and the rivers; but the fall is still a very fine one. Scarcely inferior to it in picturesque beauty are the numerous small cascades, called Cascatelle, on the western side of the town. These are formed by water diverted from the Anio for the supply of various manufactories, which, after passing through the town, seeks its former channel by precipitating itself over the rock in several small streams near what is commonly called the villa of Macerata. Nothing can be finer than the view of these cascades from the declivities of Monte Piscilamone, where the eye ranges over the whole of the Conventina, with houses in the distant background.

The country around Tibur was not very fertile in grain; but it was celebrated for its fruit-trees and orchards ("pomois Tiburis arva," Col. R. R. x. p. 347, ed. Lugd. 1548; cf. Prop. iv. 7. 81: "Pomosis Anio qua spumifer incastab arva"), and especially for its grapes and figs (Plin. xiv. 4. 7, xv. 19). Its stone, now called travertino, was much used at Rome for building, whither it was easily conveyed by means of the Anio; and it has been worked on both sides of the river (Strab. l. c.). Vast remains of ancient quarries may still be seen on the banks of that river (Nibby, Virg._Ann. i. 112). Of this material were constructed two of the largest edifices in the world, the Colosseum and the Basilica of St. Peter. The air of Tibur was healthy and bracing, and this was one of the recommendations, together with its beautiful scenery, which made it a favourite retirement of the wealthy Romans. Besides its salubrity, the air was said to possess the peculiar property of bleaching ivory (Sil. It. xi. 329; Mart. viii. 28, 12). Tibur was also famed for its pottery (Sen. Ep. 119).

The foundation of Tibur was long anterior to that of Rome (Plin. xvi. 87). According to Dionysius of Halicarnassus (i. 16), it was one of the cities founded by the Siculi when they had possession of Italy; in proof of which statement he adds the fact that in his own time part of the town was still called Scilenium; a name which would also indicate its having been the chief cities of that people. Another legend affirmed that the Siculi were expelled by Tiburtius, Coras and Catullus II., sons of Catullus I. The last was the son of Amphiusarus, the celebrated Theban king and prophet, who flourished about a century before the Trojan War. Catullus migrated to Italy in consequence of a ver sacrum. Tiburtius, or Tiburinus, the eldest of his three sons, became the eponymous hero of the newly founded city; for such it may be called, since the Siculi dwelt only in unwalled towns, which were subsequently fortified by the Greek colonists of Italy. According to Cato's version of the legend, Tibur was founded by Catillus, an officer of Euerax (Sol. i. 2). From these accounts we may at all events infer the high antiquity of Tibur. The story of its Greek origin was very generally adopted by the Roman poets, whence we find it designated as the "moenia Catilli" by Horace (Od. i. 18. 2; cf. 16. ii. 6. 5; Virg. Aen. vii. 670; Ov. Fast. iv. 71, 80, 82; Serv. iv. 6. 45, 46; cf. Liv. ii. 3. 74; Plin. vii. 225, viii. 364). Tibur possessed a small surrounding territory, the limits of which, however, we are unable to fix, all that we know respecting it being that the towns of Empulum and Sassa, besides one or two others, at one time belonged to it. Both these places lay in what is called the Vallo di Sicelitno, to the NE. of the town, the name of which is probably connected with the Sicelion of Dionysius. Empulum is identified with the present Ampugnone, a place about 4 miles distant from Tibur. Sassa, probably lay 2 or 3 miles beyond Empulum, in the same direction. The boundary between the Tiburtine territory and that of the Sabines was very uncertain. Augustus adopted the Anio as the limit; yet considerable uncertainty seems to have prevailed, even subsequently to the assumption of that boundary. Thus according to Tacitus (Ann. xiv. 22), the territory of Tibur extended beyond the Anio, and included Subiaco, the modern Sabino, which is commonly assigned to the Acquino. Originally Tibur, with its territory seems to have belonged to the Sabines. Pliny enumerates Tibur among the Sabine towns (i. 12. s. 17).
We know nothing of the history of Tibur except in connection with that of Rome. The first occasion on which we find it mentioned is in the time of the Decemvirate, n. c. 446, when M. Claudius, the infamous tool of the decemvir Appius, went into exile there (Liv. iii. 58). It does not appear, however, as taking any active part in affairs till n. c. 337; in which year the Tiburtines shut their gates against the Roman consuls C. Sulpicius and C. Licinius Calius, who were returning from a successful expedition against the Hernici. There appears to have been previous disputes and complaints between the Tiburtines and Romans, and the latter seized the opportunity to declare war (Liv. vii. 9). But hostilities were suspended for a time by an incursion of the Gauls, who crossed the Anio and advanced to within 3 miles of Rome. This invasion of the Gauls was assisted by the Tiburtines; and therefore, after the barbarians had been repulsed by the celebrated valor of Manlius Torquatus, the consul C. Postellus was sent against them with an army in the following year. But the Gauls returned to the assistance of the Tiburtines; and, to meet this emergency, Q. Servilius Ahala was named dictator. The Gauls again advanced close to the walls of Rome, and a great battle was fought just outside the Porta Collina, in the sight of all the citizens. After a desperate conflict, the barbarians were defeated and fled to Tibur for refuge. Here they were intercepted and completely defeated by the consul Postellus, who drove them into the city, as well as the Tiburtines who had come to their aid. For this achievement a triumph was awarded to Postellus, which we find recorded in the Fasti Capitolini as well as by Livy. This triumph, however, excited the ridicule of the Tiburtines, who denied that the Romans had ever met them in a fair and open field; and in order to wipe out this affront, they made, in the following year, a nocturnal attempt upon Rome itself. But when day dawned and two armies, led by the two consuls, marched out against them from different gates, they were scarcely able to sustain the first charge of the Romans (Liv. vii. 11, 12). Yet the war continued for several years. In n. c. 350, the consul M. Popillius Laenas devastated their territory (ib. 17), and in the following year Valerius Poplicola took Equinum, one of their dependent cities (ib. 18; cf. EMPIR.). Sassaia also yielded in 349 to the arms of M. Fabius, and the Tiburtines would have lost all the rest of their territory had they not laid down their arms and submitted to the Roman consul. The triumph of Fabius is recorded in the Fasti and by Livy (ib. 19). Yet a few years later we find the Tiburtines joining the Latin league against the Romans; and even after the overthrow of the Latins they allied themselves with the Praenestini and Veliterni to defend Pometum (Id. viii. 12). In n. c. 335, the consul L. Furius Camillius, attacked and completely defeated them under the walls of that place, in spite of a sortie of the inhabitants, and then took the town by escalade. All Latium was now subdued, and we do not again hear of the Tiburtines taking up arms against Rome (ib. 13). For this exploit Camillus not only obtained a triumph, but also an equestrian statue in the forum, a rare honour in that age. In the Senatusconsultum subsequently drawn up for the settlement of Latium, Tibur and Fufia were treated with more severity than other cities, except Veii, because they were deprived of part of their territory, and were not admitted to the Roman franchise like the rest. The cause of this severity was not their recent insurrection, the guilt of which they shared with the rest of the Latin cities, but their having formerly joined their arms with those of the Gauls (ib. 14). Thus Tibur remained nominally free and independent, so that Roman exiles might resort to it (Polyb. vi. 14). Hence we find the tibicines taking refuge there when they fled from the rigour of the censors (n. c. 310), who had deprived them of the good dinners which they were accustomed to enjoy in the temple of Jupiter; an event more important than at first sight, it might seem to be, since, without the tibicines, neither sacrifices, nor several other important ceremonies, could be performed at Rome. On this occasion the rights of the Tiburtines were respected. The senators sent ambassadors to them as to an independent city, to request their assistance in procuring the return of the fugitives. The Tiburtines, like able diplomatists, took the pipes by their weak side. They invited them to dinner and made them drunk, and during the night carried them in waggoes to Rome, so that when they awoke in the morning sober, they found themselves in the Forum (Liv. ix. 30). The story is also told by Ovid with his usual felicity (Fast. vi. 665, sqq.). Other instances might be adduced in which Tibur enjoyed the privilege of affording an asylum. That of M. Claudius, before alluded to, was of course previous to the conquest of Latin by the Romans; but we find Cn. Iunius taking refuge at Tibur after the murder of Caesar (App. B. C. i. 65); and Ovid (ex Ponto, i. 3, 81, sq.) notes it as the most distant land of exile among the ancient Romans.

It was at Tibur that Syphax, king of Numidia, expired, in n. c. 201, two years after being captured in Africa. He had been brought thither from Alba, and was destined to adorn the triumph of Scipio; a humiliation which he escaped by his death (Liv. xxx. 45). Some centuries later Tibur received a more interesting captive, the beautiful and accomplished Zenobia. The former queen of the East resided near the villa of Hadrian, in the unostentatious manner of a Roman matron; and at the time when Trebellius Pollio wrote her history, the estate still bore her name. (Poll. XXX. XIII. 26.)

In the Barberini palace at Rome is preserved a bronze tablet which is engraved on the following fragment of a Senatusconsultum: Propereca., quod, scibamus, ea, vos, merito, in vestr., fuscere, non, patuisse, neque, vos, dignos, esse, qui, fuscetis, neque, id, robete, neque, rei, poplicae, vestrae, oitile, esse,fuscere. This monument, first acquired by Fulvio Orsini, and left by him to Cardinal Farnese, is published by Gruter (Inscr. ecccxiix. 12). The tenour seems to show that the Tiburtines had been accused of some grave offence from which they succeeded in exculpating themselves; but, as there is nothing to fix the date of the inscription, various opinions have been entertained respecting the occasion of it. As the style seems to belong to about the middle of the 7th century of Rome, Nibby (Dinantum, iii. p. 172) is of opinion that the document refers to the social war: that the Tiburtines had cleared themselves from the charge of taking part in that league, and were in consequence admitted to the Roman franchise, at the same time with many other Latin and Etruscan cities. This conjecture is by no means improbable. It, however, Tibur received the franchise before the civil wars of Marins and Sulla, the latter must have taken

**TIBUR.**

**TIBUR.**
it away when he deprived the rest of the municipal cities of it, with the exception of Anagnia (Gio. pro Dom. 30), but it was probably regained on the abdication of the dictator. The treasure deposited at Tibur in the temple of Hercules was appropriated by Octavian during his war against Lucius Antonius, when so many other temples were plundered at Rome and in its neighbourhood. (App. B. C. v. 24.) From this period we have no

notices of Tibur till the time of the Gothic war in the 6th century of our era. During the siege of Rome by Vitiges, Belisarius placed 500 men in it, and afterwards garrisoned it with Isaurians. (Procop. B. G. ii. 4.) But under his successor Totila a party of the Tiburtines having introduced the Goths by night into the city, the Isaurians fled, and the Goths murdered many of the inhabitants with circumstances of great cruelty (ib. iii. 10.) Great part of the city must have been destroyed on this occasion, since it appears further on (c. 24.) that Totila having retired to Tivoli, after a vain attempt upon Rome, rebuilt the fortress.

At present there are but few traces of the boundaries of the ancient city; yet there are certain points which, according to Nibby (Dintorni, iii. p. 186, seq.), enable us to determine the course of the walls with some degree of accuracy, and thus to estimate its circumference, at all events during the time of its subjection to the Romans. These points are determined partly by the nature of the ground, partly by existing remains, and partly by positive testimony. The nature of the ludge upon which the town is built shows that the walls must have traversed the edge of it towards the N. and E.; and this assumption is confirmed by some remains. The two temples commonly known as those of the Sibyl and of Drusilla in the quarter called Castro Vetere, and the evident pains taken to isolate this part, indicate it to have been the ancient acropolis or arx, and probably the Sibylion of Dymachus. On the W. the boundary is marked by some remains of the walls and of the gate opening on the road to Rome. On investigating this track, we find that it inclined towards the church of Annunziata, leaving out all that part now occupied by the Villa d'Este and its appurtenances. From that church it proceeded towards the modern gate of Santa Croce and the citadel built by Pepe Pisii II. on the site of the ancient amphitheatre. Thence to the Anio two points seem to fix the direction of the walls: first, the church of S. Clemente, which was certainly outside of them, since, according to the testimony of Marzi, some sepulchral stones were discovered there; second, the church of S. Vincenzo, which was certainly within them, as vestiges of ancient baths may still be seen at that spot. From the fortress of Pisii II. the wall seems to have proceeded in an almost direct line to the Anio between the church of S. Bartolomeo and the modern gate of S. Silvestro. It did not extend to the opposite bank, as a small sepulchre of the imperial times has recently been discovered there, at the spot where the tunnel for diverting the Anio was opened; where also were found remains of an ancient bridge. Thus the plan of the city, with the abatement of some irregularities, formed two trapeziums joined together at their smallest sides. The arx also formed a trapezium completely isolated, and was connected with the town by a bridge on the same side as the present one of S. Martino. The circumference of the city, including the arx, was about

8000 Roman feet, or 15 miles. The remains of the wall which still exist are of three different epochs. The rarest and most ancient consist of trapezoidal masses. Others, near the Porta Romana or del Colle, are of opus incertum, and belong to the time of Sulla. The gate itself, though composed of quadrilateral masses, is of the style of the gates of the city of the age of Justinian. From the nature of the plan and the direction of the ancient roads, Tibur must have had five gates: namely, two towards the W., one towards the S., and one towards the E., without counting that which communicated with the citadel; but with the exception of the He- atina, where the aqueduct called Anio Vetus began, their names are unknown, and even with regard to that the reading is doubtful. (Front. Ag. p. 30.)

The ancient remains exist at Tivoli, to call them by the names under which they commonly are, as the temple of Hercules, the temples of Vesta and Sibylla, the thermes or baths, the two bridges and the little tomb recently discovered, the temple of Tussis, the villas of Maccenas, of Varus, &c.

Tibur was famed for the worship of Hercules, and hence the epithet of Herculeum, so frequently applied to it by the Roman poets (Prop. ii. 32. 5; Sil. It. iv. 224; Mar. i. 13. 1, &c.; cf. Stat. Silv. i. 183.) The temple of that demigod at Tibur was, with the exception of the vast temple of Fortune at Praeneste, the most remarkable presented by any city in the neighbourhood of Rome. Thus Strabo (i. c.) mentions the Heracleum and the waterfall as the distinguishing features of Tibur, just as he alludes to the temple of Fortune as the principal object at Praeneste. And Juvenal (xiv. 86, seq.) censures the extravagance of Cetronius in building by saying that his villas at Tivoli and Praeneste outdid the fames of Hercules and Fortune at those places. The name of Heracleum used by Strabo of the former, as well as the term temple applied to it by Stephanus Byzantinus, show that it embraced a large tract of ground, and as Augustus is said to have frequently administered justice in its porticoes (Suet. Oct. 72), they must have been of considerable size. It possessed a library, which, however, in the time of the Antonines appears to have fallen into decay. (A. Gall. N. A. xix. 5.) We have already seen that it had a treasury. There was also an oracle, which, like that at Praeneste, gave responses by means of a stone吃到 a vessel on the foundations of a heathen temple. Nibby therefore (Dintorni, iii. p. 193), after a careful investigation, and a comparison of the remains at Palestrina with those of the so-called villa of Maccenas at Tivoli, is inclined to regard the latter, which will be described further on, as belonging to the celebrated temple of Hercules. It is probable, however, that there were several temples to that deity at Tivoli, just as there were at Rome. The principal one was doubtless that dedicated to Hercules Victor Tiburtus; but there was also one of Hercules Sauninus, which will be described by
and by; and the remains at the cathedral may have belonged to a third. It is pretty certain, however, that the Forum of Tibur was near the cathedral, and occupied the site of the present Piazza dell' Ormo and its environs, as appears from a Bull of Pope Benedict VII. in the year 978, referred to by Ugoliulli in his Italia Sacra (t. i. p. 1306), and copied by Monni (Papiri Diplomatici, p. 316). In this Bull, the object of which was to declare the rights and jurisdiction of the bishop of Tivoli, many places in the town are mentioned by their ancient names; as the Forum, the Vicus Patricius, the Eupiripus, the Porta Major, the Porta Obscura, the walls, the postern of Vesta, the district of Castrum Vetus, &c. The round temple at the cathedral belonged no doubt to the Forum, as well as the crypto-porticus, now called Porta del iPadris, on the street del Paggio. The exterior of this presents ten closed arches about 200 feet in length, which still retain traces of the red plaster with which they were covered. Each arch has three loopholes to serve as windows. The interior is divided into two apartments or halls, by a row of twenty-eight slender pillars. Traces of arabesque painting on a black ground may still be seen. The mode of building shows it to be of the same period as the circular remains.

In that part of the city called Castro Vecere, which Nibby identifies with the ara, are two temples, one round, the other oblong, both of which have been variously identified. The round one, a charming relic of antiquity, is commonly regarded as the temple of the Sibyl. We know that the tenth and last of the Sibyls, whose name was Albunea, was worshipped at Tibur (Varro, ap. Lactant. de Fabia Rel. i. 6; cf. Be Hezbollah T. Scopis Libr. 17-22); and Horace evidently alludes to her when he speaks of the "domus Albineae resonantis" at that place. (Od. i. 7. 12.) It can scarcely be doubted therefore that she had a home at Tibur. But Nibby is of opinion that the epithet of "resonantis," which alludes to the noise of the waterfall, is inapplicable to the situation of the round temple on the cliff; for though it immediately overhangs the fall, before the recent diversion of the stream, the cataract, as before shown, must in the time of Horace have been lower down the river. This objection however, may perhaps be considered as pressing a poetical epithet rather too closely; nor is there anything to show how far the fall may have been removed by the catastrophe described by the younger Pliny. Some writers have ascribed the temple to Vesta, an opinion which has two circumstances in its favour: first, we know that Vesta was worshipped at Tibur, from inscriptions recording the Vestal virgins of the Tiburtini; secondly, the temples of Vesta were round, like the celebrated one near the Roman forum. Unfortunately, however, for this hypothesis, the Bull of Pope Benedict before referred to shows that the district of Vesta was on the opposite side of the river. Hence Nibby (Diatorni, iii. p. 205) regards the building in question as the temple of Hercules Saxanus. We know that round temples were sometimes erected to that deity, as in the Forum Boarium at Rome; and the epithet of Saxanus is applicable to the view which Nibby conceives offered on a rock. It may be observed, however, that Saxanus is not a usual derivative form from Saxum; and on the whole it may perhaps be as satisfactory to follow the ancient tradition which ascribes the temple to the Sibyl. It is of the style called peripteral, or having columns all round. These were originally eighteen in number, but only ten now remain, of which seven are isolated and three are built into the wall of a modern structure; but in such a manner that the sides towards the cell are visible. The columns are of travertino, of the Corinthian order, and channelled; hence the temple bears considerable resemblance to that in the Forum Boarium at Rome. According to what had before been quoted, it was, in the 10th century, a church dedicated to the Virgin Mary.

The same was the case with the adjoining temple, which was dedicated to S. George. This building is also principally of travertino. It has four columns in front, now hidden by modern houses, and six at each side, five of which are built into the walls of the cella to the extent of two-thirds of their circumference. Hence it was of the style called prostylus tetrastyle pseudo-peripteral. The columns are of the Ionic order. From an inscription found near it, some writers have inferred that the temple was dedicated to the worship of Drusilla, the sister of Caecilia: but the style of building is considerably earlier, and belongs to the age of Sulla. Others have called it the temple of the Sibyl. Professor Nibby (Diatorni, iii. p. 210) started a novel hypothesis, and regarded it as the temple of Tiburinus, or Tiburnus. It is certain that the eponymous founder of the city enjoyed divine honours in it, as we see from Horace (" Tiburnus lucus," Od. i. 7. 13) and Statius ("illa reenat Tiburnus in umbra," Silv. i. 3. 74). But these expressions refer to a sacred grove or tremea, probably with a shrine, or perhaps merely an altar, and therefore situated, in all likelihood, in the outskirts of the town, and not in a narrow crowded place like the ark. And we must here point out a little inconsistency into which the learned professor has fallen: for whilst he objects to Tiburinus as a round temple being called that of Vesta, on the ground that it was not within hearing of the waterfall, when that was in its ancient state, yet he regards the square one, which immediately adjoins it, as the temple of Tiburinus, because it was close to the cataract. On the whole, therefore, we must for the present content ourselves with one of the ancient names for this building, or else, which may perhaps be the safer course, leave it altogether undetermined.

The catastrophe of 1816 triumphantly yet faintly light the remains of a bridge; and another still more perfect one was discovered in 1832, in the progress of the works for diverting the course of the river. At the same time the workmen came upon a small tomb, between the Via Valeria and the banks of the river, containing several skeletons and monumental stones. Among these was a cenotaph to Senecio, who was consul for the fourth time A. D. 107, and several inscriptions. Under this tomb was an ancient aqueduct, intended to distribute the waters of the Anio among the adjacent villas.

There are no other remains in the town except some fine opus reticulatum et lateritiam, near the church of S. Andrea. At this spot were discovered, in 1778, some large and handsome columns with Corinthian capitals, and also the pedestal of a statue to Flavius Mucianus Graccus, with an inscription connecting it with some embellishment of the town. Hence we may conclude that the thermes were situated here.

Outside the city, on the Via Constantiniana, is the building known as the temple of Tussis, for which appellation, however, no authority exists. Externally it is of an octagon form, but round inside.
Nibby holds that it is not anterior to the 4th century of our era, its construction resembling that of the villa of Maxentius on the Via Appia. There are traces of painting of the 13th century, showing that then, if not previously, it was a Christian church. A little further on we come to an inscription which records the dedication of the Clivus Tiburtinus in the time of Constantius and Constans. The name of the latter is purposely effaced, no doubt by the order of Magnentius. This monument was discovered in 1736, and re-erected by order of the magistrates of Tibur at the same spot where it was found.

The delightful country in the vicinity of Tibur caused many villas to be erected there during the later period of the Republic and under the first Caesars, as we see from the writings of Catullus, Horace, Propertius, Statius, and other poets. Of these villas, however, of which we shall mention only the more interesting, there are but few remains, and scarcely any that can be identified with certainty. The most striking are those commonly called the villa of Macedenas on the SW. side of the town, near the Cascatelle. Ligorio was the first who called this building the villa of Macedenas; but there is no authority for the assumption. It was probably founded on a wrong conception of Servius' statement of Horace (Od. iii. 39. 6seq.), which is also quoted by Mr. Cramer (Italy, vol. ii. p. 60) under a misapprehension that it contains an allusion to a residence possessed of Macedenas at Tibur, instead of to his town-house on the Esquiline. The plan of this building published by Martepe and Uggeri is correct. It was founded on gigantic substructions; the magnitude of which may be best observed on the N. side, or that towards the valley of the Anio. It is an immense quadrilateral edifice, 657 fur. long, and 450 broad, surrounded on three sides by magnificent porticoes. The fourth side, or that which looks towards Rome, which is one of the long sides, had a theatre in the middle of it, with a hall or saloon on each side. The porticoes are arched, and adjoined on the side towards the area with half columns of the Doric order. Behind is a series of chambers. An old ing tumulus now marks the site of the house, or, according to Nibby, who regards it as the temple of Hercules, of the Cella. The pillars were of travertine, and of a beautiful Ionic order. One of them still existed on the ruins as late as 1812. This immense building intercepted the ancient road, for which, as appears from an inscription preserved in the Vatican, a vault or tunnel was constructed, part of which is still extant. Hence it gave name to the Porta Scaura, or Obscura, mentioned in the Bull of Benedict, which it continued to bear at least as late as the 15th century.

To our apprehension, the plan here laid down is rather that of a palace or villa, than of a temple, nor do we perceive the resemblance, insisted on by Nibby, to the temple of Fortune at Praeneste. It is not probable that the chief fane of Hercules, the patron deity of Tibur, should have been erected outside the town, nor would it have been a convenient spot for Augustus to administer justice, as we have mentioned that he did in his frequent retirements to Tibur, in the porticoes of the temple of Hercules. The precincts of the Forum would have been more adapted to such a purpose. But if that emperor so much frequented Tibur, evidently the favourite among all his country retreats (Suet. i. 33.), he must have had a suitable residence for his reception. Might not this villa have been his palace? Nibby himself observes that the style of building is of the Augustan, or transition, period; and a subject would scarcely have ventured to occupy the highroad with his substructions. But we offer this notion as a mere conjecture in favour of which we can adduce nothing but its probability.

Catullus had a patrimonial estate in the neighborhood of Tibur; and the pretended site of his house is still pointed out in the valley by Monte Catullo. It is evident, however, from his address to his farm (Carmin. 42), that it was more distant from the town, and lay at a point where the boundary between the Sabine and the Tiburtine territory was uncertain. He himself wished it to be considered as in the latter, probably as the more fashionable and aristocratic situation; but his ill-wishers persisted in asserting, that it was Sabine. Horace had also a residence at Tibur, besides his Sabine farm; and, according to his biographer, it was situated near the grove of Tiburinus (Suet. Vit. Hor.); but whether it was at the spot now pointed out, near the hermitage of St. Antonio, on the road from Tivoli to the Cascatelle, is very problematical, the remains there being, according to Nibby (Dintorni, iii. p. 221), of a period anterior to that of Horace. Nibby would identify them as belonging to the villa of Salvinus, who, if we may trust the Declaratio in Sallustian (c. 7) falsely ascribed to Cicero, had a residence at Tibur. But this is mere conjecture. Equally uncertain is the site of the villa of Vopiscus, a poet of the age of Domitian, of which Statius has left us a pretty description (Silv. i. 3). The grounds seem to have extended on both sides of the river, and from certain particulars in the description, Nibby (Dintorni, iii. p. 216) imagines that he has discovered the spot near the place commonly assigned to the villa of Catullus and the grove of Tiburinus, in the valley between M. Catillo and M. Pesciariatore. The Cynthia of Propertius, whose real name was Hostia (Appal. Apoll. ii. p. 405, ed. Bossaia), lived and died at Tibur (Prop. iii. 30, iv. 7, 85, &c.); so that scarcely any place was more associated with the domestic life of the Roman poets. The situation of the villa of Quintilius Varus, a little further on the same road, is rather better supported than most of the Horace villas to the estate of Varus at Tibur, which appears to have lain close to the town (Od. i. 18. 2). A tract on the declivity of Monte Pesciariatore, opposite to the Cascatelle, bore the name of Quintilius as far back as the 10th century, and the little church at this spot is called La Madonna di Quintiliolo, an appellation which may possibly have been derived from the family name of Varus. Here are the remains of a magnificent villa, in which marble pavements, columns, capitals, statues, consummated coins, &c., have been discovered, and especially, in 1820, two beautiful marble Fauns, now in the Vatican. Just below this villa is the Ponte Acquario, which, as well as the surrounding district, takes its name, literally "the golden water," from a beautifully clear spring which rises near it. This bridge was traversed by the primitive Via Tiburtina. One arch of it still remains, constructed of large blocks of travertine. Near it is another bridge of bricks of the imperial times, as well as a modern one of the 15th century, but none of these are at present in use. On the other side of the river, which is crossed by a rude wooden bridge, the road ascends the Clivus Tiburtinus in returning towards the town. Portions of
TIBURES.

The pavement are in complete preservation. Under a rock on the right is an ancient artificial cave, called by the local antiquaries Il Tempio del Mondo, but which was probably either a sepulchre, or one of those caves consecrated by the ancients to the rustic tutelary deities. This road joins the Via Constancia before mentioned, leading up to the ruins of the ancient villa of Marcæus.

Outside the Porta S. Croce is a district called Carciano, a corruption of the name of Cassiæum which it bore in the 10th century, derived from a magnificent villa of the gens Cassia which was situated in it. In the time of Zappi, in the 16th century, a great part of this building was extant. The splendid air of this residence is attested by the numerous beautiful statues found there, many of which were acquired by Pope Pius VI. and now adorn the Vatican. In the neighbourhood of Tibur are also the remains of several aqueducts, as the Anio Vetus, the Aqua Marcia, and the Aqua Claudia. The ruins of the sumptuous villa of Hadrian lie about 2 miles S. of the town. A description of it would be too long for this place, and it will suffice to say that, in a circuit of about 8 miles, it embraced, besides the imperial palace and a barracks for the guard, a Lyceum, an Academy, a faç-simile of the Poseïale at Athens and of the Temple at Alexandria, a vale of Tempe, a Tarantia, a tract called the Ellysian Fields, a stream called the Eburnus, numerous temples, &c. (Cf. Nibby, L'aggio Antiquario, vol. i.; Analisi della carta de' Dintorni di Roma, v. viii.; Gell, Topography of Rome and its vicinity, ed. Bumbur; Ant. del Ré, Antichità Tiburtine; Caprile and F. del Ré, Della Villa e de' Monumenti antichi della Città e del Territorio di Tivoli; Santo Viola, Storia di Tivoli; Keller, De edifice cum nom. Tiber comparato: concerning the villa of Hadrian, Piero Ligoro, Pianta della Villa Tiburtina: Fia, vol. Winckelmann, ii. p. 379.)

TIBURES or TIBURI (Τεθυδης in gen., Pont. ii. § 37.) a branch of the Astures in Hispания Tarraconensis, whose principal town was Nemetebriga.

TICHS (Τεχα), a river of Gallia Narbonensis, placed by Nela (ii. 5) in the "Ora Sardorum" (SARDONES). The Tich is the Tic of Pliny (ii. 4). The Tic and the Tich, two small rivers, cross the territory of Ronsillon from west to east. The Tic is named Illiberis or Illerus by other writers. [ILLIBERIS] [G. L.]

TICHIUM. [ΤΕΙΧΙΟΝ.]

TICHIUSSA (Τεκθιουσσα), is mentioned twice by Thucydides (viii. 26, 28) as a fortified place in Caria in the territory of Miletus. Stephanus B. speaks of it under the name of Τεκθιουσσα, and Athenæus knew it under the name of Τεκθιουσσα (vii. p. 351.) It seems to have been situated on the north coast of the bay of Lassos. [L. S.]

TICHOS or TIECHOS. [DYME.]

TICINUM (Τηςίνου; Eth. Ticinensis; Porcia), a city of Gallia Transpadana, situated on the river Ticins, from which it derived its name, about 5 miles above the junction of that stream with the Padus. According to Pliny it was founded by the two tribes of the Laevi and Marici, at the time of the first Gallic invasions into this part of Italy. (Plin. iii. 17. p. 724.) But it is remarkable that no mention is found of any town on the site during the operations of P. Scipio against Hannibal in B.C. 218, though he must have crossed the Ticinum in the immediate neighbourhood of the spot where the city afterwards stood. It is probable, indeed, that in this, as in many other cases, the rise of a town upon the spot was mainly owing to the existence of a convenient passage across the river. There seems no reason to doubt that under the Roman government Ticinum had grown up into a considerable municipal town before the close of the Republic, though its name was not noticed in history. But it is mentioned by all the geographers, and repeatedly figures in history during the Roman Empire. It is included by Ptolemy among the cities of the Lusubes, and would naturally be so reckoned, though not of Lusubrian origin, as soon as the river Ticinum came to be considered as the boundary of that people. (Strab. v. p. 217; Plin. iii. 17. s. 21; Proli. iii. 1. § 36.)

The earliest mention of Ticinum in history is on occasion of the death of Drusus, the father of Germanicus, when we are told that Augustus advanced as far as Ticinum to meet his funeral procession. (Tac. Ann. iii. 5.) Its name is also repeatedly mentioned during the civil wars of A.D. 69, when its position on the great highroad that led from the foot of the Alps to join the Aemilian Way at Placentia, rendered it a important post. It was the scene of a serious sedition among the troops of Vitellius, while that emperor halted there. (Id. Hist. ii. 17, 27, 30, 68, 88.) At a later period it was at Ticinum that the emperor Claudius (the second of the name) was saluted with the imperial title, while he was commanding the garrison of the city. (Vit. Caece, 33, Epit. 34.) It was there also that Constantius took leave of his nephew Julian, whom he had just raised to the rank of Caesar. (Ammian. xx. 8. § 18.) From these frequent notices of Tici- num it seems probable that it had gradually risen under the Roman Empire into a flourishing municipal town, and derived importance from its position, the great highroad which formed the continuation of the Aemilian Way from Placentia to the foot of the Alps passing through Ticinum, until the increasing importance of Mediolamum, which became the second capital of Italy, made it customary to proceed through that city instead of following the direct route. (Plin. ant. pp. 283, 340, 947.)

But though Ticinum was undoubtedly a considerable town under the Roman Empire, it was not till after the fall of that empire that it rose to the position it subsequently occupied. In A.D. 452, indeed, it had sustained a great calamity, having been taken and devastated by Attila (Jornand. Get. 42); but the Gothic king Theodoric, being struck with the importance of its position, not only raised it from its ruins, but erected a royal palace there, and strengthened the city with fresh fortifications, until it became one of the strongest fortresses in this part of Italy. It consequently bears an important part in the Gothic wars, that people having made it their chief stronghold in the north of Italy (Procop. B. G. ii. 12, 25, iii. 1, iv. 32. &c.), in which the royal treasures and other valuables were deposited. At the time of the Lombard invasion, it offered a prolonged resistance to the arms of Alboin, and was not taken by them until after a siege of more than three years, A.D. 570 (J. Dionis. Hist. Lang. ii. 26, 27). It thenceforth became the residence of the Lombard kings, and the capital of the kingdom of Italy, and continued to hold this position till A.D. 774, when Desiderius, the last of the Lombard kings, was compelled to surrender the city to Charlemagne, after a blockade of more than 15 months. [4 II 3]
TICINUS.

From this time Ticinum sank again into the condition of an ordinary provincial town, which it has retained ever since. Before the close of the Roman period we find that it was already designated by the name of Pavia, from which its modern appellation of "Pavia" is derived. Paulus Diaconus calls it "Ticinus quae alias nonine Papia appellatur" (P. Diaec. ii. 15); and the anonymous Geographer of Ravenna gives the same double appellation (Geogr. Ravenn. iv. 30). The most probable explanation of this change of name is that when Ticinum became admitted to the rights of a Roman municipality its inhabitants], as dwellers in the Papian tribe, a fact which we learn from inscriptions (Gruter, Inscr. Graec. p. 1093. 7; Murat, Inscr. p. 1087. 1, p. 1119. 4), and that in consequence of this the city came to be known as "Civitas Papia," in contradistinction to Mediolanum, which belonged to the Umbrian tribe. (Aldini, Antile, Lapudi Ticenenses, pp. 43—60.)

The modern city of Pavia contains no remains of antiquity except a few sarcophagi and inscriptions. These confirm the municipal condition of the city under the Roman Empire, but are not in themselves of much interest.

[Ε. Η. Β.]

TICINUS (Titious: Ticino), a considerable river of Northern Italy, and one of the most important of the northern tributaries of the Padus. It has its sources among the high Alps, in the Mons Adula or Mont St. Gothard, and, where it first emerges from the Alpine valleys forms an extensive lake, called the Lacus Verbanus or Lago Maggiore. Where it issues from this again it is a deep, clear, and rapid stream, and flows through the level plains of Lombardy, with a course of about 60 miles, passing under the walls of Ticinum (Pavia), and discharging its waters into the Padus or Po, about 3 miles below that city. (Strab. iv. p. 209, v. p. 217; Plin. ii. 103, s. 106, iii. 19. s. 23.) Throughout this lower part of its course (from the Lago Maggiore to the Po) it is navigable for vessels of considerable burden; but the extreme rapidity of the current renders the navigation inconvenient if not dangerous. Its banks are low and marshy, the river being bordered on one side by a belt of reeds and marshy woods. This character of its banks is noticed by Claudian (de Vt. Cons. Hon. 194), while Silvus Italicus alludes to the beautiful clearness of its waters. (Sil. Itat. iv. 82.)

The Ticinus appears to have been recognised at an early period as the boundary between the Insulans and their neighbours the Libicii and Laci (Liv. v. 34. 35). From its geographical position it must always have presented a formidable barrier to any invader advancing into Italy after having crossed the Cottian, Graian or Pennine Alps, and for this reason its banks have been the scene of many successive battles. Even in the first descent of the Gauls into the plains of Northern Italy, we are told that they defeated the Etruscans in a battle near the river Ticinus (Liv. v. 34). But much the most celebrated of the contests which were fought on its banks was that between Hannibal and Scipio in B.C. 218, shortly after the descent of the Carthaginian general into Italy. The decisive scene of this action cannot, however, be determined; but it appears to have been fought on the W. or right bank of the Ticinus, at a short distance from the Padus, and probably not far from the site of Ticinum or Pavia. Livy marks it more distinctly as being within 5 miles of a place called Vicunvittii (?) ; but as no other mention of this obscure name occurs, this lends us no assistance. (Liv. xxii. 45.)

The narrative of Polybius is far from clear and has given rise to considerable discussion. Scipio, who had hastened from Pose into Gaius Q. Gaulin, on hearing that Hannibal had actually crossed the Alps and descended into the plains of Italy, advanced to meet him, crossed the Padus by a bridge constructed for the occasion, and afterwards crossed the Ticinus in like manner. After this, Polybius tells us, "both generals advanced along the river, on the side facing the Alps, the Romans having the stream on their left hand, the Carthaginians on their right" (iii. 65). It is clear that this is not consistent with the statement that the Romans had crossed the Ticinus, while advancing that river they would have had the stream on their right, unless we suppose "the river" to mean not the Ticinus but the Padus, which is at least equally consistent with the general plan of operations. Hannibal was in fact advancing from the country of the Taurini, and no reason can be assigned why he should have turned so far to the N. as to be descending the Ticinus, in the manner supposed by those who would place the battle near Piacenza or Borgo S. Siro. If we are to understand the river in question to be the Ticinus, the words of Polybius above quoted would necessarily require that the battle should have been fought on the left bank of the Ticinus, which is at variance with all the other particulars of the operations, as well as with the probabilities of the case. The battle itself was a mere contest of cavalry, in which the Roman horse was supported by a portion of their light-armed troops. They were, however, defeated, and Scipio at once retreated to the bridge over the Padus, leaving a small body of troops to break up that over the Ticinus. These troops, 600 in number, were cut off and made prisoners by Hannibal, who, however, gave up the attempt to pursue Scipio, and turned up the stream of the Padus, till he could find a point where he was able to construct a bridge of boats across it. (Pol. iii. 63, 66.) The account of Livy (which is based mainly upon that of Polybius, though he must have taken some points, such as the name of Victumvittii, which agrees with the above explanation, though he certainly seems to have transferred what Polybius relates as occurring at the bridge over the Ticinus to that over the Padus. It appears also by his own account that there was considerable discrepancy among his authorities as to the point at which Hannibal eventually crossed the Padus. (Liv. xxii. 45—47.) It may therefore on the whole be assumed as probable that the battle was fought at a short distance W. of the Ticinus, and not close to the banks of that river: the circumstance that Scipio had encamped on the banks of the Ticinus just before, and advanced from thence to meet Hannibal will explain why the battle was always called the "pugna ad Ticinum" or "apud Ticinum." Two other battles were fought in the same neighbourhood before the close of the Roman empire; one

* Polybius, indeed, does not distinctly say that the Romans crossed the Ticinus, but it is implied in the whole narrative, as he tells us that the consuls ordered a bridge to be built over the Ticinus with the purpose of crossing that river, and afterwards relates their advance without further allusion to it (iii. 64, 65). But after narrating the defeat and retreat of Scipio, he says that Hannibal followed him as far as the bridge on the first river, which can be no other than the Ticinus. (Ib. 66.)
TIERNUS.

in A.D. 270, in which the Allemani, who had invaded Italy, were finally defeated by the Emperor Aurelian (Vieit. Epit. 35): the other in A.D. 352, between the rival emperors Magnentius and Constantius. (Ib. 42.)

[11x187]ti this time Again had mention on the camp, the great of the Tifatins. Taded ages Samnites, Latin which was called Tiatiria (!id. 332, 3; Griscini, i. p. 265) in the Digest (de Cens. i. 8), Colonia Zentenins, and in the Nat. Imp. (c. 3), Trans Dieria. [11x187]T H. D.

TIFATA (trad. Tifatiria Apo, Dion Cass. Moteo di Maddaloni), a mountain ridge on the borders of Campania and Samnium, only about a mile from the city of Capua. It is one of the last outlying masses of the Apennines, and is a long, narrow ridge of no great elevation, but above 12 miles in length from E. to W., and presenting a bold and steep mountain front towards the Campian plain, upon which it looks directly down. The name was derived according to Festus from the woods of evergreen oak with which it was covered, "Tifata" being equivalent to "hilleta," though whether it was an Oscan or old Latin word, we are not told. (Fest. s. v. Tifata.) It is first mentioned during the war between the Samnites and Campanians which immediately preceded the First Samnite War. On that occasion the Samnites in the first instance occupied the ridge itself with a strong force, and afterwards drew out their main army into the plain below, where they soon defeated the Campanians in a pitched battle. (Liv. vii. 29.) Livy calls it on this occasion "Tifata, imminentes Capnac exs," and elsewhere "monstrum incomminetum Capnac" (xxvi. 5), which well describes its character and situation. It was this opportune position with regard to Capua and the surrounding plain, that caused it to be selected by Hannibal as a post where he established his camp in B.C. 215, and from which he long carried on his operations against the various cities of Campania. (Id. xxiii. 36, 37, 39, 43, xxvi. 5; Sil. Ital. xii. 457.) At a later period it was in the plain at the foot of Tifata that Sulla defeated the Marian general Norbanus, b.c. 85; and in gratitude for this victory, he consecrated a considerable tract of territory to Diana, the tutelary goddess of the mountain. (Vell. Pat. ii. 25.) We hence learn that that divinity had a celebrated temple on Tifata, and the "Diana Tifatiae fanum" is noticed also in inscriptions found at Capua. From one of these we learn that the consecrated territory was again assigned to the goddess by Vespasian. (Orell. Inscr. 1460, 3055.) As the Tabula marks a station "Ad Dianae" near the W. extremity of the ridge, it is probable that the temple was situated in that neighbourhood. (Tab. Pent.) From the same authority we learn that Jupiter, who was worshipped on so many of the highest points of the Apennines, had a temple also on Tifata, to which it gives the name of Jovis Tifatius. It is placed in the Tabula at the E. extremity of the ridge. (Tab. Pent.) Again in n. c. 48 the fastnesses of this mountain ridge afforded a shelter to Milo when driven from Capua. (Dion Cass. xii. 25.) and it is evident that at that early period the name of Tifata was in use, as it is not noticed by any of the geographers: in the middle ages the name seems to have been wholly forgotten; and the mountain is now called from a neighbouring village the Monte di Maddaloni. But the descriptions of Livy and Silius Italicus leave no doubt of the identification. It is indeed, from its proximity to Capua and the abruptness with which it rises from the plain, one of the most striking natural features of this part of Campania. [E. H. B.]

TIFERNUS (Tiferons) was the name of two cities or towns of Umbria, which were distinguished by the epithets Tiberinus and Metaurus (Plin. iii. 14. a. 19).

1. TIFERNUM TIBERINUM, which appears to have been the most considerable place of the name, was situated on or near the site of the modern città di Castello, in the upper valley of the Tiber, about 20 miles E. of Arezzo. The Tifernates Tiberini are enumerated among the municipal communities of Umbria by Pliny (l.c.); but our principal knowledge of the town is derived from the epitaphs of the younger Pliny, whose Tuscan villa was situated in its neighbourhood. For this reason the citizens had chosen him at a very early age to be their patron; and in return for this honour he had built a temple there at his own expense. (Plin. Ep. iv. 1.) He afterwards adorned this with statues of the various Roman emperors, to which he in one of his letters begs leave to add that of Trajan (Ib. x. 24). From the circumstance that Pliny's villa itself was in Etruria (where he at the same time calls it his Tuscan villa), while Tiferum was certainly in Umbria, it is evident that the frontier of the two countries ran very near the latter place, very probably as that of the Tuscan and Roman States does at the present day, between città di Castello and Borgo S. Sepolcro. The position of Tiferum on nearly the same site with the former of these cities seems to be well established by the inscriptions found there and reported by Cluverius (Cluver. Ital. p. 624; Grauter, Inscr. p. 494. 3). But it was probably situated rather further from the Tiber, as Pliny describes it as being, like Perugia and Orcitum, "not far" from that river (Plin. iii. 5. a. 9), while the modern città di Castello almost adjoins its banks.

The precise site of Pliny's Tuscan villa cannot be ascertained, as the terms in which he describes its position (Ep. v. 6) will apply to many localities on the underrails of the Apennines in the upper valley of the Tiber. It is, however, most probable that it was situated (as suggested by Cluverius) in the neighbourhood of Borgo S. Sepolcro, about 10 miles N. of città di Castello, rather than in the immediate vicinity of Tiferum. (Cluver. Ital. p. 590.)

2. TIFERNUM METAURENSIS was evidently, as its name implies, situated on the other side of the Apennines, in the valley of the Metaurus. Its name is mentioned only by Pliny among ancient writers; but it is found in several inscriptions (in which the citizens are termed, as by Pliny, Tifernates Metaurenses), and the discovery of these at S. Angelo in Vado leaves no doubt that Tiferum occupied the same site as that town, near the sources of the Metaurus, about 20 miles above Postumbrone. (Forum Sempronii). (Cluver. Ital. p. 621; Orell. Inscr. 3049, 3303, 3902.)

It is uncertain which of the towns above mentioned is the Tiferum of Ptolemy (iii. 1. § 53); perhaps the first has the better claim.

TIERNUS (τιερνος, Ptol.: Diferono), one of the most considerable rivers of Sammum, which has its sources in the heart of that country, near Bovi- anum (Bovianum), in a lofty group of mountains, now known by the same name as the river (Moteq Diferono). This is evidently the same which is called by Livy the TIERNEN MONS, which the Samnite...
TIGAVA CASTRA.

array had occupied as a stronghold in B.C. 295; but notwithstanding the strength of the position, they were attacked and defeated there by the Roman consul L. Columbius Flamma (Liv. x. 30, 31). Upon two other occasions during the Samnite wars Livy speaks of Tifer tus or Tiferium in a manner that would leave it uncertain whether this mountain fastness is meant, or a town of the same name (Liv. ix. 44, s. 14); but as we have no other mention of a town of Tiferium in Samnium, it is perhaps more probable that in all these cases the mountain of that name is meant. The group thus named is a part of that known collectively as the Montes Matres, a part of the most conspicuous mountain masses in Samnium. [Samnium.] The river Tiferus has a course of above 60 miles from its source to the Adriatic, in a general direction from SW. to NE. In the lower part of its course, after leaving the confines of Samnium, it constituted in ancient times the boundary between Apulia and the Ferentii. (Med. ii. 4. § 6; Plin. iii. 11. s. 16, 12. s. 17; Pol. iii. i. 1. § 18, where the MSS. have *Putorus*; but this is probably a mistake for *Tutorius.*)

TIGAVA CASTRA (II. Ant. p. 38; Tigrace, Plin. v. 2. s. 1; Triage, Pol. iv. 2. § 26), a fortress in Mauretania Caesariensis, between Oppadum Novum and Mallium, variously identified with El-Herba, Canetara, Abd-el-Kader.

TIGRA (called Triya by Procopius, de Aed. iv. 7), a fortress in Moesia Inferior, near the Danube, and between Sexantapristi and Appii (Itin. Ant. p. 222). In the Not. Imp. it is called Tegra. Variously identified with Maradina and a place near Olymposinar. [T. H. D.]

TIGRANOCERTA (τὰ Τηγρανόκερτα), Strab. xi. pp. 522, 532; Pol. iv. 13. § 22; ῥή τηγρανοκερτα, Plut. Lucull. 25, &c.), literally, the city of Tigranes, since κέρτα (kert, gerd, or kartu) meant, in the Armenian dialect, city (Heychye, ii. p. 237). The later capital of Armenia, built by Tigranes on an eminence by the river Nixeophorus, a city of considerable size and strongly fortified. It was in a great measure populated with Greeks and Macedonians. Tigranes, taken thither by force from Cavaddonia and Cilicia. After Lucullus gained his victory over Tigranes before its walls, he caused a great part of the still unfinished town to be pulled down, and permitted its kidnapped inhabitants to return to their homes. Nevertheless, the town continued to exist, though we hear but little of it subsequently to this event. (Cf. Strab. ii. cc. and xii. p. 539, xvi. p. 747; App. Mithr. 67; Plut. Lucull. 25, sqq.; Tac. Ann. xii. 50, xiv. 24, xv. 4; Plin. vi. 9. s. 10.) It has been variously identified with the ruins of Sert on the Chabar, with Mejafarktun, and with Amid or Amudlah. (See Ainsworth, ii. p. 361; St. Martin, i. p. 173; Eitter, Erdk. p. 87, xii. p. 106, sqq.) [T. H. D.]

TIGRIS, a celebrated river of Asia. We find various forms of its name, both in Greek and Latin writers. The earlier and more classical Greek form is ῥή τηγρις, gen. τηγριτος (Hercul. vi. 20; Xen. Anab. iv. 1. § 3; Arr. Anab. vii. 7, &c.), whilst the form ῥή τηγρις, gen. τηγριτας, and sometimes τηγρισ, is more usual among the later writers. (Strab. ii. p. 79, xv. p. 728; Pol. iv. 13. § 7; Plut. Lucull. 22, &c.) Amongst the Romans the nom. is constantly Tigris, with the gen. Tigris and acc. Tigria and Tigris among the better writers (Verg. Æl. i. 63; Lucan, iii. 261; Plin. vi. s. 9; Curt. iv. 5, &c.); but sometimes Tigris, Tigrideum (Lucan, iii. 256; Evrop. ix. 18; Amm. Marc. xxiii. 6. § 20, &c.) According to Pliny, the river in the upper part of its course, where it flowed gently, was called Digitis; but lower down, where it flowed with more rapidity, it bore the name of Tigris, which, in the Median language, signified an arrow (cf. Strab. xi. p. 529; Curt. iv. 9; Ibd. Or. xii. 2, &c.) Josephus (Ant. i. 1. 2, sqq.) and Zonaras (Ant. ii. 12, 1. 1.) refer to it as the river called Digeia; and in its earliest course it is still called Digeiae, Didleche or Dadasche.

According to the general testimony of the ancients the Tigres rose in Armenia (Xen. Anab. iv. 1. § 3; cp. Ephydros, Plut. Nymph. 57; Pol. l. c., &c.). Diodorus, indeed, places its sources in the territory of the Uxii in Persia (xiv. 77); but he has here confounded the Tigris with the Pasi-tigris. Herodotus (v. 52) observes that there were three rivers bearing the name of Tigris, but that they did not spring from the same source; one of them rising in Armenia, another in the country of the Maleni, whilst he does not mention the origin of the third. These two branches, which are not mentioned by any other authors, form through the more western and proper sources of the Tigris in Sophene, to the NE. of the cataracts of the Ephratries. The more eastern of them forms the little river Nyphius or Nyphaeum (now the Batmmius or river of Misfairakin). The union of these two sources forms the main western arm of the Tigris, which flows for between 100 and 200 miles, first in a NE., then in a S., and lastly in an E. direction, before it joins the main eastern branch of the river, about 62 miles SE. of Tigranocerta. The authors subsequent to Herodotus do not notice his correct account of these sources, but confine themselves entirely to the eastern branch. According to Strabo (xi. pp. 521, 529) this rose in Mount Niphates, at a distance of 2500 stadia from the sources of the Ephratries. But Pliny, who has written in most detail concerning this eastern branch, describes it as rising in a plain of Armenia Major, at a place called Elegosine (vi. 27. s. 31). It then flowed through the nitrus lake of Aresbus, without, however, mingling its waters with those of the lake, and after losing itself at a place called Zerounda (near the present Hazur), under a chain of the Taurus (the Nimrod Dagh), burst again from the earth, and flowed through a second lake, the Thespites. After emerging from this, it again sank into the earth with much noise and foam (cf. Strab. xvii. p. 746; Plin. v. 923; Amm. Marc. xxiii. 6. § 15, &c.), and, after a subterranean passage of 25 miles, reappeared at a place called Nyponsour (cf. Justin, xiii. 3). The account of Strabo, however, varies very considerably from the preceding one of Pliny. The former writer mentions only one lake (xi. p. 529), the description of which entirely resembles Pliny's Arethusa, but which Strabo calls Arœne or Theopiris, meaning evidently the Thespites of Pliny, the present Wjin in Tosp, on which is situated the town of Aρεδησις, with which the Tigris is in reality quite unconnected. Subsequently the river approaches the Ephratries in the neighborhood of Sophene, forming in this part of its course the boundary between Assyria and Mesopota-mia. Diodorus Siculus (ii. 11) and Curtius (v. 1) erroneously represent it as flowing through Media, which it does not even touch. Near Seleucia, it was connected with the Ephratries by means of canals (Arrian, Anat. vii. 7). After this, it again retires from the Ephratries, till at last, bending its...
course to the SW., it completely unites with that river, at a place called by Pliny (L. c.) Digha, 1000 stadia above their common embouchure in the Persian gulf. Many of the ancients were aware that the two rivers joined another, and had a common mouth (Plin. ii.; Strab. ii. p. 79;Procop. B. P. i. 17, &c.), whilst others were of opinion that the Ephrates had a separate embouchure (Oneceritus, op. Strab. xv. p. 729; Arrian, Amab. l. c.; and Ind. 41; Nearch, p. 37, Huds.). But even those who recognised their junction were not agreed as to which stream it was that received the other, and whether their united course, now the Shat-el-Arab, should be called Tigris or Euphrates. Most writers adopted the former name, but Nearcclus and Onesicritus preferred that of the Euphrates (cf. Arrian, Indic. 41). It is not impossible, however, that the Euphrates may at one time have had a separate mouth (cf. Plin. l. c.; Ritter, Erdk. x. p. 27). There was also a difference of opinion as to the number of mouths by which the united stream emptied itself into the Persian gulf. Its western mouths were entirely unknown to the ancient Greeks, as Antiochus Euphemus was the first who caused the coast to the W. of the Tigris to be accurately surveyed; and amongst later conquerors, Trajan alone penetrated as far as this neighbourhood. Hence the ancient Greeks, as well as Pliny (l. c.), speak of only one mouth, the breadth of which is given by the latter at 10 miles. Ptolemy, however, mentions two mouths (vi. 3. § 2) at a distance of 13 degrees apart, which is confirmed by Onesicritus (op. Philostorg. Hist. Estd. iii. 7, 8), according to whom the island between these mouths was inhabited by the Messeni. But probably by the eastern mouth was meant that of the river Eulaeus, the present Karia, one arm of which meets with the Tigris, whilst the other falls into the sea by an independent mouth. This river was also called Pasitigris by the ancients (Naer.; Strab. xv. p. 729), that is, "the little Tigris," from the old Persian word pas, signifying "small," whence also among the modern Persians it bears the name of Diziljahi-Kudak, which means the same thing. Hence we may expect how the united stream of the Tigris and Euphrates itself was throughout its course called Pasitigris by some writers (Strab. l. c.; Plin. l. c.) whilst others regarded the Pasitigris as quite a separate stream, rising in the territory of the Uxii, and discharging itself into the Persian gulf (Nearc. ap. Strab. l. c.; Arrian, Ind. 42; Diodor. xvii. 67; Curt. v. 3, iii.). This last view would make it identical with the present Karia (cf. Kimeer, Mem. p. 59; Gesslin, Recherches, &c. ii. p. 86, sqq; Vincent, Peripl. iii. p. 67, not. &c.).

The other affluents of the Tigris were the Xicephors or Centricis, the Zalatus or Lyceus, the Bumadus, the Caprus, the Termatodes or Torna, apparently the same as the Phycus of Xenophon (Anab. ii. 4. § 23), the Grydes or Delas, the Cheospes, and the Coptares, which fell into the main stream after joining the Eulaeus. All these rivers were on the left or eastern bank of the Tigris. The stream of the Tigris was very rapid, and according to Strabo (p. 559) from its very source; whilst Pliny (l. c.) more correctly ascribes this quality only to its lower course. It was, in fact, owing to the large quantity of water which the Tigris received by means of the canals which connected it with the Euphrates, none of which was returned through the same channels, owing to the bed of the Tigris being at a lower level. (Arrian, l. c.; Dion Cass. lxviii. 28; Strab. l. c.; Hor. Od. iv. 14. 46; Lucan, ii. 256, &c.) In ancient times many dams had been constructed in its course from Opis to its mouth, designed to retain its waters for the purposes of irrigating the adjoining districts (cf. Heeren, Ideen, i. 2. p. 171; Tavernier, 1. 176; Pages, i. p. 185; Niehuh, Beier, ii. p. 243). These, however, were all cut through by Alexander, in order to improve the navigation, which began as high up as Opis (Arrian, l. c.; Strab. 739, sq.) Between Mousa and the confluence of the greater Zab, and 3 hours' journey above the latter, there still remains an ancient dam of masonry thrown across the stream (Ritter, Ferdwende, x. p. 5, sqq.). [T. H. D.]

TIGUADIA, a small island off the coast of Spain, opposite the town of Palma, in the island of Baleares Major. (Plin. iii. 5. s. 11.) [T. H. D.]

TIGURINUS PAGUS. [HELVEITI]

TILADA Sk (Tabba, Ptol. vii. 2. § 15), a race who lived under the Mons Menaedrus in Western India. They are probably the same as the Tabucata of Pliny (vi. 19, s. 22). [TALCTAR.] [V.]

TILAVNUS (TACITUS, HIST. 3, 46), a river of Venetia, which has its sources in the Alps, above 80 miles from the sea, and after traversing the broad plain of the Friuli, falls into the Adriatic sea between Aquileia and Concordia. (Plin. iii. 18. s. 22; Ptol. iii. 1. § 26.) It is the most considerable river in this part of Italy, and, like all the neighbouring rivers, is subject to be swollen by floods and winter rains, so that it leaves a broad bed of shingle, great part of which is dry at ordinary seasons. The name is found in Pliny and Ptolemy; and it is doubtless the same river which is described by Strabo, though without mentioning its name, as separating the territory of Aquileia from the province of Venetia, and which he says was navigable for 1200 stadia from its mouth. (Strab. v. p. 214.) This last statement is indeed a great exaggeration; but the valley of the Tagliamento is one of the natural openings of this part of the Alps, and was followed by the line of a Roman road, which proceeded from Aquileia by Julianum Carunicum (Zuglo) over the pass of the Monte di Sta Croce into the valley of the Gall. [ALPS, p. 110.]

Pliny speaks (l. c.) of a "Tilaventum musa minusque," but it is impossible to say what river he meant to designate under the latter appellation. The name is written in the Tabula "Tribabente," while it assumes very nearly its modern form in the Geographer of Ravenna. (Tabalcntum, Geogr. Prov. iv. 36.) [K. H. B.]

TILENE, in Gallia. The name is Fili in the Table, or Filiens as some say. D'Anville altered it to Tilene, and he finds the place on a road in the Table from Andomatum (Langres) to Cabilbonum (Challon-sur-Saône). The place is Til-le-Château, the Tire Castrum of the eleventh century. Some documents of that time have Tricieram and Triestal, and accordingly the place is vulgarly called Tré-château ou Tri-château. [G. L.]

TILIPOSSA FONS. [BOEZIA, p. 412, a.]

TILIPOSSUUM or TILIPSSAEUM. [BOEZIA, p. 412, a.]

TILURIUM (Geogr. Prov. iv. 31), or TILIUM FONS (Hin. Ant. p. 337), a place in Dalmatia, on the river Tilius. It appears to be the same place as the Tribalium of Pliny (iii. 22. s. 26). Now Trigšć [T. H. D.]
TILURUS, a river of Dahlactia falling into the sea near Dalpanicium. (Itin. Ant. p. 337; Tab. Peut.) Now the Chattina.  
[T. H. D.]

TIMACHUS, a river in Upper Moesia, a tributary of the Danube, which it joined between Derticum and Florentiana. (Plin. iii. 26. s. 29; Tab. Peut.) Now the Timok.  
[T. H. D.]

TIMACUM MAJUS and MINUS (Tiazats, Plin. v. 19. § 5), two towns of Moesia Superior, situated on the Timacuus. (Geog. Trav. iv. 7; Tab. Peut.) One still exists by the name of Timok; but Mannert seeks the larger town near Iperik, and the smaller one near Gragovatz.  
[T. H. D.]

[T. H. D.]

TIMAVUS (Tiazen: Timavo), a river of Venetia, flowing into the Adriatic sea between Aquileia and Tergeste, about 12 miles E. of the former city. Notwithstanding its classical celebrity, it is one of the shortest of rivers, being formed by copious sources which burst out from the rock at the foot of a lofty cliff, and immediately constitute a broad and deep river, which has a course of little more than a mile before it discharges itself into the sea. There can be no doubt that these sources are the outlets of some subterranean stream, and that the account of Posidonius (ap. Strab. v. p. 215), who says that the river after a course of some length falls into a chasm, and is carried under ground about 130 stadia before it issues out again and falls into the sea, is substantially correct. Some subterranean passages are indeed not uncommon in Carniola, and it is impossible to determine from what particular river or lake the waters of the Timavus derive their origin; but the popular notion still regards them as the outflow of a stream which sinks into the earth near S. Casian, about 13 miles from the place of their emergence. (Cluer. Ital. p. 193.) The number of the sources is variously stated; Virgil, in the well-known passage in which he describes them (Aen. i. 245), reckons them nine in number, and this agrees with the statement of Mela; while Strabo speaks of seven; and this would appear from Servius to have been the common belief (Serv. ad Aen. l. c.; Mel. i. 4. § 3), which is supported also by Martial, while Claudian follows Virgil (Mart. iv. 25. 6; Claudian, de Vi. Cons. Hon. 198). Cluerius, on the other hand, could find but six, and some modern travellers believe them only four. Strabo adds that, according to Polybius (ap. Strab. l. c.), the stream was called by the natives the source and mother of the sea ( gamma tis Aetolos). It is probable that the communication with the sea has been choked up, as no modern traveller alludes to the phenomenon described by Cluerius. The Timavo is at present a very still and tranquil stream, but not less than 50 yards broad close to its source, and deep enough to be navigable for vessels of considerable size. Hence it is justly called by Virgil " subterraneum Timavum" (Ecl. viii. 6); and Annonius speaks of the "sequens annnis Timavi " (Clar. Urbs. xiv. 34). Livy speaks of the "lacum Timavi," by which he evidently means nothing more than the basin formed by the waters near their source (Liv. xii. 1): it was close to this that the Roman consul A. Manlius established his camp, while C. Furius with 10 ships appears to have ascended the river to the same point, where their combined camp was attacked and plundered by the Istrians. According to Strabo there was a temple in honour of Diomed erected near the sources of the Timavus, with a sacred grove attached to it. (Strab. v. p. 214.) There were also warm springs in the same neighbourhood, which are now known as the Bagno di S. Giovanni.  
[E. H. B.]

TIMOLAEUM (Timovaaon), a fort or castle on the coast of the Alpagoanonia, 40 or 60 stadia to the north of Clunia, and 100 or 150 stadia from Cape Cambrius. (Marabin, p. 71; Anno. Peripl. P. E. p. 6.)  
[L. S.]

TIMONITIS (Timovavtis), a district in the interior of the Alpagoanonia, near the borders of Bithynia. (Strab. xii. p. 562; Ptol. v. l. § 12.) Pliny (v. 42) mentions its inhabitants under the name of Timoianenses, and Stephanus B. knows Timonianum (Timovvнов) as a fort in the Alpagoanonia, from which the district nee doubt derived its name.  
[L. S.]

TINA (Tina or Tova, Ptol. ii. 3. § 5), a river on the E. coast of Britannia Romana, forming the boundary between it and Britannia Barbara, and still called the Tyne.  
[T. H. D.]

TINCONIUM, in Gallia, is placed in the Itins, on a road between Avaricum (Bourges) and Decetia (Décize). In the Table the name is Tinacula. The distance in the Itins. is the same (xx) from Avaricum to Timonictum (Scevaine), which is named Tincturn in some middle-age documents. The Itins. do not agree in the distance between Tinconium and Decetia.  
[T. H. D.]

TINEFADI, a place in Numidia, 22 miles W. of Thueveate (Itin. Ant. p. 33). According to Lapie, the ruins on the Oued Hrhis.  
[T. H. D.]

TINGESTERA. (Transducta.)

TINGIS (Tigys, Strab. iii. p. 140, and Tiga, xvii. p. 827; in Ptol. iv. 1. § 5, Tyyis Kasperdris), a very ancient city on the N. coast of Mauretania. Mela (i. 5) calls it Tinga, Pliny (v. 1. s. 1) Tingi. It lay 60 miles W. of the promontory of Abya (Itin. Ant. p. 9. § 7), and 30 miles from Reo on the opposite coast of Spain (Vlin. l. c.). Mela and Pliny record the tradition of its foundation by Antaeus, whilst according to Plutarch it was founded by Sophax, a son of Hercules and the widow of Antaeus (Sert. 9). In that neighbourhood was the fabled grave of Antaeus, and his skeleton 60 cubits long (Strab. xvii. 829, cf. iii. p. 422). These mythic legends serve at least to indicate the great antiquity of the place. (Ol. Strab. l. c.; Solin. c. 45.) It was raised by Augustus to the rank of a free city
TINIA. [TINIA: Tintia], a small river of Umbria, falling into the Tiber, a few miles below Perusia. The name is given by the ancient geographers to the affluent of the Tiber (one of the first tributaries which that river receives), but at the present day the stream called the Tinia loses its name after its junction with the Topino, a more considerable stream. Four small rivers indeed bring down their united waters to the Tiber at this point: 1. the Maroggia, which rises between Todi and Spoleto, and brings with it the waters of the Clitumnus, the ancient Clitumnus; 2. the Tinia, which joins the Clitumnus near Mevania (Brenagna); 3. the Topino, which descends from the Apennines near Nepi, and turns abruptly to the NW., after receiving the waters of the Tinia; and 4. the Chiascis, which joins the Topino on the N. only a mile from the point where it falls into the Tiber. Through thus augmented from various quarters the Tinia was always an inconsiderable stream. Pliny speaks of it as navigable with difficulty even for boats, and Silinus Italicus calls it "Tiniae ingloris humor". (Sil. Ital. viii. 452; Plin. iii. 5. x. 9; Strab. v. p. 227.) [E. H. B.]

TINNETIO, a place in Rhaetia, mentioned only in the Antonine Itinerary (p. 277), but still retaining its ancient name in the form of Tinca. [L. S.]

TINNURTHUM, in Gallia, is placed in the Istria, near the Sinua, between Cabillonius (Challon) and Matisco (Malson). The Antonine Itin. marks M. P. xxi, locarni xiii, between Cabillonum and Tinurthum, which is Tournus. The Table gives only xii, which appears to be nearer the truth. The two Itins. do not agree in the distance between Tinurthum and Matisco. Spartanius (IIIa Septim. Severi, c. 11) says that Severus defeated Cidius Albinus at Tinurthum, or Tinurthium, for the reading is perhaps doubtful. (In Cassetbon, in Aetium Spartanum under tune.) Dion (Ixxix. c. 6), Herodian (iii. 7), and Erotapous (viii. 18) speak of Cidius Albinus being defeated by Severus at or near Longdonium (Lyons), the name Tinurthum appears to be sometimes misspelled Tiberthum. [G. L.]

TIORA MATIENA. [Arxorigenes.] TIPARENUS, an island off the coast of Hermonias in Argolis, mentioned only by Pliny (iv. 12. s. 19). It is frequently identified with Sparta; but Leake remarks that Tiparens has no appearance of a Greek name, and conjectures that it is an error for Tricaricus, the same as the Tricara of Pausanias (ii. 34. § 8) and the modern Trilkiri. (Leake, Moren, vol. ii. p. 465; Ross, Wanderungen in Griechenland, vol. ii. p. 21.)

TIPASA (Tirasa, Ptol. iv. 2. § 5). 1. A town in Mauretania Caesariensis, endowed with the jus Latii by the emperor Claudius (Plin. v. s. 1) and consequently a Roman colony (Itin. Anton. p. 15). It lay between Lessim and Caesarea (ib.). Procopius (B. F. ii. 10) mentions two columns near Tipasa in the SE. of Mauretania, which had on them the following inscription in the Phoenician language: "We are fugitives from the face of Joshua, the robber, and his son Nave." Now Tefesna or Tafous. [T. H. D.]

TIPSIAS. [TIPSIAS]. TIPSIUM or TIPSIUS (Str. Hier. p. 569), a place in Thrace, now Sanduki or Kourasian, according to Lapie. [4. K.]

TIUDA. [Stadulm Biomedes.]

TIRISSA. [Geogr. Itin. iv. 6], called by Arrian Tereutias (Per. P. Eux. p. 24), and in the Tab. Pent. Trissa; a fortified place on the promontory of Tirissa. From its situation on this bold headland it was sometimes called simply "Aspa" (Steph. B. p. 53; Hieroc. p. 637), and hence at present Etene or Korunikos. [T. H. B.]

TIRHASTAS (Plin. iv. 11. s. 18; Tippusaria, Scyl. p. 28; Tipusarea, Epit. Philo ad Ath. ap. Dem. p. 159, K.), a town of the Thracian Chersonesus, on the coast of the Propontis. It was included in the dominions of Philip, who in the letter above referred to explains that the Athenian general Dopeithes had taken it and sold its inhabitants for slaves (b. c. 340) [DIOPHEDES, Dict. Byz.] According to Ctesias, its site is still occupied by a village bearing the same name. [J. E.]

TIRIZIN (Tiréa, Strab. vii. p. 519). A very projecting headland of Mesenia in the Pontus Euxinus. The name varies, being written Tiria in Ancyra. (Perip. P. Eux. p. 13). Tippóttis or Tripotris vëra by Ptolemy (iii. 10. § 8), and Tintis and Melia (ii. 2). Now Cape Gylgraf. [T. H. D.]

TIRYS (Tirón: Eth. Tírothos: the name is perhaps connected with τέπαρ, Lepisa, Týroph, Pelagor, p. 13), one of the most ancient cities of Greece, by a short distance SE. of Argos, on the right of the road leading to Epidaurus (Paus. ii. 25. § 8), and at the distance of 12 stadia from Nauplia. (Strab. viii. p. 373.) Its massive walls, which have been regarded with wonder in all ages, are said to have been the work of the Cyclopes, and belong to the same age as those of Mycenae. (Paus. ii. 16. § 5, ii. 25. § 8, vii. 25. § 6, ix. 36. § 5; Strab. l. c.; Plin. vii. 36. § 57.) Hence Homer calls the city Τύρων τικέωςσα. (U. ii. 559.) Pindar speaks of the Κωνικαιά πρύθαμα of Tiryns (Fragn. 642, ed. Bück), and Pausanias says that the walls are not less worthy of admiration than the pyramids of Egypt (ix. 36. § 5.) In another passage he describes the walls as consisting of wide masses of stone (άργια Ἀμφία), of such a size, that a yoke of oxen could not stir the least of them, the interstices being filled in with smaller stones to make the whole more compact and solid. (Paus. ii. 25. § 8.) The foundation of Tiryns accords with the earliest mythical legends of the Argives. It was said to have derived its name from Tiryns, the son of Argos (Paus. ii. 25. § 8), and to have been founded by Proetus. (Strab. viii. p. 372; Paus. ii. 16. § 2.) According to the common tradition, Megapenthes, the son of Proetus, ceded Tiryns to Perseus, who transmitted it to his descendant Electryon. Alcmena, the daughter of Electryon, married Amphicles, who would have succeeded to the crown, had he not been expelled by Sthenelus, king of Argos. Their son Heracles afterwards regained possession of Tiryns, where he lived for many years, and hence is frequently called Tirynthius by the poets. (Hes. Scht. 81; Pind. Ol. x. 37, Isthm. vi. 39; Virg. Aen. vii. 662; Od. Met. vii. 410.) Although Tiryns was thus closely connected with the Heracleidae, yet the city remained in the hands of the old Achaeans population after the return of the Heracleidae and the conquest of Pelopennesus by the
TIRYNs.

Dorians. The strong fortress of Tiryns was dangerous to the neighbouring Dorian colony of Argos. After the dreadful defeat of the Argives by Cleomenes, their slaves took possession of Tiryns and held it for many years. (Herod. vi. 83.) In the Persian War the Tirynthians sent some men to the battle of Plataea. (Herod. ix. 28.) Subsequently their city was taken by the Argives, probably about the same time as Mycenae, B.C. 408. The lower city was entirely destroyed; the citadel was dismantled; and the inhabitants fled to Epidauros and Halieis. A town on the coast of Hermione. (Strab. viii. p. 373; Ephorus, ap. Steph. B. s. v. 'AAt: Eustath. ad Hom. ii. ii. 559, p. 286.) It was probably owing to this circumstance that Stephanus B. (T. v. Tigor)< was led into the mistake of saying that Tiryns was formerly called Halieis. The Tirynthians, who did not succeed in effecting their escape, were removed to Argos. (Paus. ii. 25, § 8.) From this time Tiryns remained uninhabited; and while Pausanias visited the city in the second century of our era, he saw nothing but the remains of the walls of the citadel, and beneath them towards the sea the so-called chambers of the daughters of Proetus. No trace of the lower city appears to have been left. The citadel was named Lycymna, after Lycymnus, son of Electyon, who was slain at Tiryns by Typhodemos, son of Hercules. (Strab. viii. p. 373; Pind. Ol. vii. 47.) Hence Statius calls the marshes in the neighbourhood of Tiryns "stagna Lycymna." (Thyestes 754.) Theophrastus represents the Tirynthians as celebrated for their laughing propensities, which rendered them incapable of attention to serious business (ap. Athen. vi. p. 261, d.).

The ruins of the citadel of Tiryns are now called Poloi Amphi. They occupy the lowest and flattest of several rocky hills, which rise like islands out of the plain. The impression which they produce upon the beholder is well described by Col. More: "This colossal fortress is certainly the greatest curiosity of the kind in existence. It occupies the top of an old hill, or rather knoll, of small extent or elevation, completely encased in masses of enormous stones, rudeley piled in tiers one above another, into the form alternately of towers, curtain walls, abutments, gates, and covered ways. There is not a fragment in the neighbourhood indicating the existence of suburb or outer town at any period; and the whole, rising abruptly from the dead level of the surrounding plain, produces at a distance an effect very similar to that of the hulk of a man-of-war flotting in a harbour." The length of the summit of the rock, according to Col. Leake's measurement, is about 250 yards, the breadth from 40 to 50, the height above the plain from 20 to 50 feet, the direction nearly N. and S. The entire circuit of the walls still remains more or less preserved. They consist of huge masses of stone piled upon one another, as Pausanias describes. The wall is from about 20 to 25 feet in thickness, and it had two entrances, one on the eastern, and the other on the southern side. "Its general design the fortresses appears to have consisted of an upper and lower enclosure of nearly equal dimensions, with an intermediate platform, which may have served for the defence of the upper castle against an enemy in possession of the lower. The southern entrance led by an ascent to the left into the upper inclosure, and by a direct passage between the upper inclosure and the eastern wall of the fortress into the lower inclosure, having also a branch to the left into the middle platform, the entrance into which last was nearly opposite to the eastern gate. Besides the two principal gates, there was a postern in the western side. On either side of the great southern entrance, that is to say, in the eastern as well as in the southern wall, there were galleries in the body of the wall of singular construction. In the eastern wall, where they are better preserved, there are two parallel passages, of which the outer has six recesses or niches in the exterior wall. These niches were probably intended to serve for the protracted defence of the gallery itself, and the galleries for covered communications leading to towers or places of arms at the extremity of them. The passage which led directly from the southern entrance, between the upper inclosure and the eastern wall into the lower division of the fortress, was about 12 feet broad. About midway, there still exists an immense door-post, with a hole in it for a belt, showing that the passage might be closed upon occasion. The lower inclosure of the fortress was of an oval shape, about 100 yards long and 40 broad; its walls formed an acute angle to the north, and several obtuse angles on the east and west. Of the upper inclosure of the fortress very little remains. There is some appearance of a wall of separation, dividing the highest part of all from that next to the southern entrance; thus forming four interior divisions besides the passages." (Leake.) The general appearance of these covered galleries is shown in the accompanying drawing from Grills' Itinerary. (Leake, Morva, vol. ii. p. 356, seq.; More, Tour in Greece, vol. ii. p. 175, seq.; Curtius, Peloponnesus, vol. ii. p. 388, seq.)

TISAEUM (Τισαέων: Bardýioa), a lofty mountain on the promontory of Acmium in Magnesia in Thessaly, at the entrance of the Pagasian gulf, on which stood a temple of Artemis, and where in B.C. 207 Philip V., son of Demetrius, caused watch-towers to be lighted, in order to obtain immediate knowledge of the movements of the Roman fleet. (Apoll. Rhod. i. 568; Val. Flacc. ii. 6; Polyb. x. 42; Liv. xxviii. 5; Leake, Northern Greece, vol. iv. p. 597.)

TICANUS (Jormand. Get. 5), or TYSCA (θ. 34; Geogr. Eav. iv. 14); a river in Thrace, a tributary of the Danube, the modern Theiss. [T. H. D.]

TISEBARICE. [Τισαβαρίς.]

TISIA (Τισία: Eth. Tisirπυ), a town of the Brutti, mentioned by Appian in his account of the operations of Hannibal in that country. It had been occupied by that general with a Carthaginian garrison, but was betrayed by one of the citizens into the hands of the Romans, who held it for a short time, but it was soon recovered by Hannibal. (Appian, Hann. 44.) It is probably the same place which is called Isia by Diodorus, from whom we
learn that it was besieged without success by the leaders of the Italian forces during the Social War. (Diod. xxxvi. 2: Exc. Phot., p. 240.) On both occasions it appears as a strong fortress situated apparently in the neighbourhood of Ehegrium; but no other mention is found of the city, which is not noticed by any of the geographers, and must probably have ceased to exist, like so many of the smaller towns of Bruttian. The name is, however, found in Stephanus of Byzantium, who confirms the correctness of the form Tisäa, found in Apian. (Steph. B. s. r.) Its site is wholly uncertain. [E. H. B.]

Tissa (Tisäa, Prov. ; Tisäna, Steph. B. s. r. : Eth. Tisäwos, Tisselens, Cis., Tessenesis, Plin.) a town in the interior of Sicily, repeatedly mentioned by ancient authors, but without any clue to its position. As its name is cited from Philistus by Stephanus of Byzantium (s. c.), it must have existed as a Siculan town from an early period, but its name is not found in history. Under the Romans it continued to subsist as a municipal town, though a very small place. Cicero, in referring it to "perpetua et animi civitatis," and Silius Italicus also terms it "torno nomine Tissa." (Cic. Verr. iii. 38; Sil. Ital. xiv. 267.) It is again noticed by Pliny and Ptolemy among the towns of the interior of Sicily, but all trace of it is subsequently lost. The only clue to its site is derived from Ptolemy, who places it in the neighbourhood of Aetna. It has been fixed by Cluverius and others on the site of the modern town of Randazzo, at the northern foot of Aetna, but this is a mere conjecture. (Plin. iii. 8. s. 14; Pol. iii. 4. § 12; Cluver. Sicil. p. 308.)

TITACIDAE. [Attica, p. 330, a.]

TITANAE (Tirion, Paus.; Tirana, Steph. B. s. r.; Eth. Tetrânos), a place in the Sicelonia, upon the left bank of the Asopus, distant 60 stadia from Siclyma, and 40 from Philia. It was situated upon the summit of a hill, where Titan, the brother of the Sun, is said to have dwelt, and to have given his name to the spot. It was celebrated for a temple of Asclepius, reported to have been built by Alexander, the son of Macham, the son of Asclepius. This temple still existed in the time of Pausanias, in the middle of a grove of cypresses, in which the servants of the god attended to the patients who came thither for the recovery of their health. Within the temple stood statues of Asclepius and Hygeia, and of the heroes Alexander and Eumenes. There was also a temple of Athena at Titane, situated upon a hill, and containing an ancient wooden statue of the goddess. In descending from the hill there was an altar of the Winds. (Paus. ii. 11. §§ 5—8, ii. 12, § 1, ii. 27, § 1.) Stephanus B. (s. r.) refers the Têranos te lewka kâmpa of Homer (II. ii. 735) to Titane, but these words indicate a mountain in Thessaly. (Vol. i. p. 243, b.) The ruins of Titane were first discovered by Ross. Leake heard that there were some ancient foundations on the summit of the hill above Lepiote, which he supposed to be the remains of the temple of Asclepius at Titane; but although Hellenic remains exist at this site, there can be no doubt that Titane is represented by the more important Paleokéastra on situated further S., and a few minutes N. of the village of Tovía. This Paleokéastra stands upon a projecting spur of the mountains which run eastward towards the Asopus, and terminate just above the river in a small hill, which is surrounded by beautiful Hellenic walls, rising to the height of 20 or 30 ft. on the S. and SW. side, and flanked by three or four quadrangular towers. On this hill there stands a chapel of St. Tryphon, containing fragments of Doric columns. This was evidently the acropolis of the ancient city, and here stood the temple of Athena mentioned by Pausanias. The other parts of this projecting spur, however, are covered with ancient foundations; and upon this part of the mountain the temple of Asclepius must have stood. (Leke. Morea, vol. iii. p. 334, seq.; Ross, Reisen im Peloponnese, p. 49, seq.; Curtius, Peloponnesos, vol. ii. p. 500, seq.)

PLAN OF TITANE.

A. Village of Toivíada.
1. Acropolis of Titane.
2. Temple of Asclepius and surrounding Buildings.

TITANUS. [Asterium.]

TITARESIIUS. [Thessallia, p. 1165, a.]

TITARUS. [Thessallia, p. 1166, a.]

TITHMEEIA. [Neon.]

TITHEON (Telosoros : Eth. Telosoros), a frontier town of Phocis, on the side of Doris. Liby, who calls it Trömon, describes it as a town of Doris (xxvii. 7), but all other writers place it in Phocis. It was destroyed by the army of Xerxes together with the other Phocian towns. It is placed by Pausanias in the plain at the distance of 15 stadia from Amphiclea. The site of Tithonion is probably indicated by some ruins at Mykli below Terzani, where a torrent unites with the Cephasos. (Herod. viii. 36; Paus. x. 2. § 3, x. 33. § 11; Steph. B. s. r.: Leake, Northern Greece, vol. ii. p. 87.)

TITIUM. [Epidauros, p. 841, a.]

TITULCIA, a town of the Carpathii in Hispamia Tarraconensis, on the road from Emerita to Cesarangarta (Itin. Ant. pp. 456, 438, &c.) It seems to be the same town called Triauxia by Ptolemy (ii. 6. § 57). Variously placed near Torejon, at Getafe, and at Bayona. [T. H. D.]

TITVIBUS (Tirpesos, Strab. x. p. 479), a mountain in the NW. part of Crete, not far from Cydonia. Upon it was the sanctuary or temple called Diocynæum. (Strab. ii. 3.) One of its spurs formed the headland also called Citvrus (Stadium. p. 302) or Pseasmun. (Cape Spada.) [T. H. D.]

TIUS or TIIUM (Tius or Tior: Eth. Tiwos), a town on the coast of Bitihina, or, according to others, belonging to Paphlagonia. It was a Greek town situated at the mouth of the river Biceus, and seems to have belonged to Paphlagonia until Priscus annexed it to Bitihina. (Memnon, 17—19; Pomp. Mela, i. 19; Marcian, p. 70; Arrian, Perip. P. F. p. 14; Anon. Perip. P. F. p. 2.) In Strabo's (xii. pp. 542, 543, 565) time, Tius was only a small place but remarkable as the birthplace of Philietaeus, the founder of the royal dynasty of Pergamum. (Comp. Pini. vi. 1.) There are coins of Tius as late as the reign of Gallicus, on which the ethnic name appears as Tiws, Teio, and Teiws. (Sestini, p. 71: Eckhel. ii. p. 438.)

TLOS (Tlos or Tlos), an ancient and important
city of Lycia. It is not often mentioned by ancient writers, but we know from Artemidorus (op. Strab. xiv. p. 665) that it was one of the six cities forming the Lycian confederacy. Strabo only remarks further that it was situated on the road to Cilysra. (Comp. Plin. v. 28; Ptol. v. 3, § 5; Steph. B. s. v.; Hieroc. p. 639.) Until recently the site of this town was unknown, though D’Anville had correctly conjectured that it ought to be looked for in the valley of the Xanthus. Sir C. Fellows was the first modern traveller who saw and described its beautiful remains, the identity of which is established beyond a doubt by inscriptions. These ruins exist in the upper valley of the Xanthus, at a little distance from its eastern bank, almost due north of the city of Xanthus, and about 5 miles from the village of Doxera. They are, says Sir Charles, very extensive, consisting of extremely massive buildings, suited only for palaces; the design appears to be Roman, but not the mode of building nor the inscriptions. The original city must have been demolished in very early times, and the finely wrought fragments are now seen built into the strong walls, which have fortified the town raised upon its ruins. The theatre was large, and the most highly and expensively finished that he had seen; the seats not only are of marble, but the marble is highly wrought and has been polished, and each seat has an overhanging cornice often supported by men’s paws. There are also ruins of several other extensive buildings with columns; but the most striking feature in the place is the perfect honeycomb formed in the sides of the acropolis by excavated tombs, which are cut out of the rock with architectural ornaments, in the form of triangles, &c., some showing considerable taste. (Fellows, Asia Minor, p. 237, note, Lycia, p. 132, note, where some of the remains are figured and a number of inscriptions given.)

TMAKUS. [Diod. v. 783, b.]

TOMUS (Tomax), a mountain range on the south of Sarde, forming the watershed between the basins of the Hermus in the north and the Cayster in the south, and being connected in the east with Mount Messogis. It was said to have received its name from a Lydian king Tomus, whose Ovid (Met. vi. 16) gives this name to the mountain itself. Mount Tomus was celebrated for the excellent vine growing on its slopes (Verg. Georg. ii. 97; Cic. de nat. div. iii. 602; Eurip. Bacch. 55, 64; Strab. xiv. p. 637; Plin. v. 30). It was rich in metals; and the river Pactolus, which has its source in Mount Tomus, at one time carried from its interior a rich supply of gold. (Strab. xiii. pp. 591, 610, 625; Plin. xxxiiii. 43; comp. Hes. H. ii. 373; Asch. Pers. 50; Herod. i. 84, 93, v. 101; Ptol. v. 2, § 13; Dion. Per. 831.) On the highest summit of Mount Tomus, the Persians erected a marble watch-tower commanding a view of the whole of the surrounding country (Strab. xiii. p. 625). The Turks now call the mountain Dome Bayg. (Kiepert, Walfahrten, pp. 512, 519.)

TOMUS, a town of Lydia, situated on Mount Tomus, which was destroyed during the great earthquake in A.D. 19. (Tac. Ann. ii. 47; Plin. v. 30; Euseb. Chron. ad Aum. i. 17; Neep. Call. i. 17.) Some coins are extant with the inscription TMAKATIV. (Sest. p. 114.)

[19.]

TOBIS (Tobos or Tobbos), Ptol. ii. 3, § 5), a river on the western coast of Britannia Iliciana, now the Tweed. [1. 11.]}

TOCAE (Teca), a very large city of Numidia,
TION.}

1215

Puente, Eth. Toletani, Valmone

preach some situated Bimann, name and the note which exist origin, Labicum, who by Latium, and by Toletani, Cariol. Grat. 436; as that according given of it about the farm of Cyneg. taken in army in Latium other fund at Trebium), according by copyists. According to Vitellia's, C. 8 v. p. 486 (Dio. v. 61, according to the Vatican MS; Niebuhr, vol. ii. note 21); and it is again mentioned among the places taken by Coriolanus at the head of the Volscian army in B.C. 486 (Diog. viii. 17; Plut. Coriol. 28). According to the narrative given by Diog. and by Plutarch who copies him, it was the first place attacked by Coriolanus in that campaign, and its reduction was followed in succession by that of Bala, Libicum, Pedum and Corbio. It is singular that no mention of Tolerium occurs in the narrative of the same operations by Livy (ii. 39), and it seems probable that the name of Trebium, which is found in that author (for which the best MSS. give Trebium), is a corruption for Tolerium, a name otherwise little known and therefore liable to alteration by copyists. (Claver, ital. p. 269; Bormann, Alt.-Latinumische Chronographie, p. 203.) The only other notice of Tolerium is found in Pliny, who enumerates the "Toleriences" among the "populi" of Latium who had formerly shared in the sacrifices on the Alban Mount, but were in his time utterly extinct (iii. 5. 9). We have no account of the period of its destruction or final decay. The only clue to its position is that derived from the narratives above referred to, and it seems very doubtful how far we are justified in drawing strict topographical inferences from such relations. It may, however, be admitted as probable that Tolerium was situated in the same neighbourhood with Bala, Libicum, and Pedum; and the conjecture of Nibby, who would place it at Valmontone, derives at least some support from the circumstance that the latter town stands just at the source of the river Sacco, called in ancient times the Treus or Telerus [Tresus]. The name of Valmontone, is of modern origin, but it in all probability occupies an ancient site: some vestiges of its ancient walls are still visible, as well as some remains of Roman date, while the scarped sides of the rocks which surround it, and render the position one of great natural strength, abound in ancient sepulchres. Gell, however, regards it as the site of Vetillia rather than Tolerium, a conjecture which has also much to recommend it. [VETILLIA.] Valmontone is 5 miles S. of Palestrina and about 3 miles beyond Lugnano, on the line of the modern Via Latina, and 26 from Rome. (Nibby, Distorii, vol. iii. pp. 357, 577; Gell, Top. Rom. p. 436; Abeken, Mittel-Italien, p. 76) [E. H. B.]

TOLCTUM (Ttanport, Ptol. ii. § 57: Eth. Tolctani, Ptole., H. s. 4; Orelli, Jaser. no. 980), the capital of the Carpentarii, in Hispania Tarraconensis, situated on the Tagus, and on the road from Emerita to Caesar Augusta, and connected also by another road with Luminum. (Itin. Ant. pp. 433, 446.) It was a very strong town, though only of moderate size, and famed for its manufacture of arms and steel-ware. (Liv. xxxv. 7, 22, xxxix. 30; Grat. Cyne. 541; cf. Milano, Diviz. viii. p. 453.) According to an old Spanish tradition, Toledo was founded in the year 540 n. c. by Jewish colonists, who named it Toletoci, that is, "mother of people," whence we might perhaps infer a Phcenician settlement. (Cf. Miiano, l. c.; Puente, Trav. i. p. 27.) It is still called Toledo, and contains several remains of Roman antiquities, and especially the ruins of a circus. (Cf. F hocz, Esp. Sigr. v. p. 22; Puente, i. p. 165, seq.) [T. H. D.]

TOLIABIS (Tolatiis, Ptol. ii. § 33), a small island on the E. coast of Albion, opposite to the country of the Trinobates. Spevyg seems the only island with which it is at all possible to identify; yet it lies farther S. than the account of Tolemany appears to indicate. [T. H. D.]

TOLISTOBOGI, TOLISTOBOGI, or TOLISOBOI. [Galatia.]

TOLLENTINUM. [Tolentinum.]

TOLOBIS, a coast town of the Illyrenees, in Hispania Tarraconensis. (Mel. ii. 6.) [T. H. D.]

TOLPUSON (Tolopus, Eth. Tolopus), a town of the Leuci Otzale, possessing a large harbour according to Diodorou (66; comp. Thuc. iii. 101; Steph. B. s. c.) According to Leake it occupied the valley of Kielik. (Northern Greece, vol. ii. p. 620.)

TOLOSA or THOLOSA (Tolosaa, Tolaâa, Tolaâ, Dion Cass. xxxviii. c. 32: Eth. Toloses, Toloseses, Tolosani), in Gallia, is Toulouse, in the department of Haute-Garonne, on the right bank of the Garonne.

The identity of Tolosa and Toulouse is easily proved from the Itineraries and other evidence. In Caesar's time Tolosa was within the Roman Provincia. (B. G. i. 10.) When Caesar is speaking of the intention of the Helvetii to migrate into the country of the Santones, he remarks that the Santones are not far from the territory of the Toloses, who are in the Provincia. He considered that it would be dangerous to the Provincia if the warlike Helvetii, the enemies of Rome, should be so near to an open country, which produced a great deal of grain. The commentators have found some difficulty in Caesar's expression about the proximity of the Santones and the Toloses, for the Nitobriges and Petrocorii were between the Santones and the Toloses; but Caesar only means to say that the Helvetii in the country of the Santones would be dangerous neighbours to the Provincia. In Caesar's time Tolosa and Narbonne, both in the basin of the Garonne, were fully organised as a part of the Provincia; for when P. Crassus invaded Aquitania, he summoned soldiers from the muster-rolls of these towns to join his army. (B. G. iii. 20.) Tolosa being situated on the neck of land where Gallia is narrowest [Galla Transalpina, Vol. i. p. 949] and in a position easy of access from the west, north, and east, was one of the places threatened by the Galli in the great rising of n. c. 52; but Caesar with his usual vigilance prevented the province on this side by placing a force at Tolosa. (B. G. vii. 7.)

Tolosa was an old town of the Volcae Tescateses which existed probably many centuries before it was conquered by the Romans. A great quantity of gold and silver was collected there, the gold the produce of the murdering region near the Pyrenees, and both the precious metals the offerings of Gallic superstition. The treasure was kept in the temples, and also in sacred tanks. This is the story of Posidamus (Strab. iv. p. 188), who had
travelled in Gallia; and it is more probable than the tradition that the gold of Tolosa was the produce of the plunder of Delphi by Brennus and his men, among whom it is said there were some Tectosages (Justin, xxxi. c. 3); for it is very doubtful if any of Bremmus' soldiers got back to Gallia, if we admit that they came from Gallia. Tolosa was in some kind of alliance with Rome (Dion Cass. xxxvi. 97) about B.C. 106; but the Tectosages and Cimbri at this time had broken into Gallia, and fear or policy induced the Tolosates to side with them. Q. Servilius Caepio (consul B.C. 106) made this a pretext for attacking Tolosa, which he took and plundered of its treasures, either in B.C. 106 or in the following year. This act of sacrilege was supposed to have been punished by the gods, for Caepio was defeated by the Cimbri B.C. 105, and his army was destroyed. (Liv. Epit. 67; Orosius, v. 15; Gall. iii. 9.) The treasure of Tolosa never reached Rome, and perhaps Caepio himself laid hold of some of it. However this may be, the "Aurum Tolosanum" became a proverb. All who had touched the consecrated treasure came to a miserable end. It seems that there was inquiry made into the matter at Rome, for Cicero (De Nat. Deorun, iii. 30) speaks of a "quaesitum auribus Tolosanis."

The Tolosani or Tolosates were that division of the Tectosages which was nearest to the Aquitain. A place called Fines, between Tolosa and Carcass, denotes the boundary of the territory of Tolosa in that direction, as this term often indicates a territorial limit in the Roman geography of Gallia [Fines]; and another place named Fines marks the boundary on the north between the Tolosates and the Cadurci.

Pliny (iii. 4) mentions Tolosa among the Oppida Latins, Narbonenses, or those towns which had the Latinitas, and, as Procop (ii. 10. § 9) names it a Colonia, we must suppose that it was made a Colonia Latina. Tolosa maintained its importance under the Empire. Ausonius (Ordo Nob. Urb. xii.) describes Tolosa as surrounded by a brick wall of great circuit, and as a populous city, which had sent out inhabitants enough to found four other cities. The name Palladius, which Martial (Ep. ix. 101), Solonius Apollinaris, and Ausonius give to Tolosa, appears to refer to the cultivation of the liberal arts in this Gallic city —

"Te nihil Palladiane antenotit toga docta Tolosan." (Auson. Parent, ii. 6; and Commen. Profess. Burdig. xvii. 7.)

TOMARUS. [Domina, p. 783, b.]

TOMERUS (Tomeos, Arrian, ind. 24), a river, or rather Torrent of Getalicia, called Tomererus or Tomerera by Pliny (vi. 23. s. 25. § 93, ed. Sillic.), and Tubero by Mela (iii. 7). According to the divisions in Arrian, this river is the Mailvar or Hingel.

TOMES. (Messensia, p. 341, b.)

TOMIS or TOMI (Tomi, Strab. vii. p. 319; Or. Tr. iii. 9. 33; Geogr. Rav. iv. 6, &c.; Tomi, Proli. iii. 10. § 8; Tomi, Plin. iv. 11. s. 181; Nat. S. i. 2. 255; Itin. Ant. p. 227, Scylla in Mela, ii. 2; Tomes; we also find the Greek form Tomiri, Steph. B. s. v.; Arrian, Per. P. Eux. p. 24), a town of Lower Moesia, on the Euxine, and the capital of the district of Scythia Minor (Socorn. II. Eccl. vii. 25; Hierocl. p. 637). It was situated at a distance of about 300 stadia or 36 miles from Istris or Istropolis (Anon. Per. P. Eux. p. 12; Itin. Ant. p. 227), but according to the Tab. Peut. 40 miles. It was a Milesian colony, and according to the legend the place where Medea cut up her brother's body, or where their father Aeetes got together and buried the pieces (Ov. L. c.; Apollod. i. 9. 35; Hygin. Fab. 13.) The legend is no doubt connected with the name of the town, which, however, is still better known as the place of banishment of Ovid. Now Tomisvar or Jeni Pandroha. (T. H. D.)

TORETAE.

COIN OF TOMIS OR TOMI.

TOMISA (Tomesa: Eth. Tomapryos, Tomaros, a town of Scythia Minor, in Armenia, was ceded by Lucullus to the Cappadocians. (Polyb. xxxv. 13; Strab. xii. p. 535, xiv. pp. 663, 664; Steph. B. s. v.) TONEBROS. [Tomeous.]

TONICE. [Nicosia Dromus.]

TOWOSA, a town of Cappadocia, 50 miles from Sebastia, still called Tomis. (It. Ant. p. 181, 182, 212.)

TOMUS, or TONZUS (Tomus, Zon. i. 22. § 8; cf. Lampr. Elog. 7), the principal tributary of the Hebrus in Thrace. It rises in the Haemus: its general course for about 70 miles is almost due E.; it then makes a sudden bend to the S., and, after a farther southerly course of nearly the same length, falls into the Hebrus, a short distance from Hadrianopolis. Now Tomca or Tomofia. [J. E.]

TORPEIS (Plin. iv. 11. s. 12; Tompia or Torpi- pis, Proli. iii. 11. § 13), or TORPEIS (It. Ant. p. 321; in p. 331, it is rendered into Octopias; and in H. Hier. p. 603, into Ephorius; Tab. Pont. Torpes, Hierocl. p. 634), a town in the SW. of Thrace, a little NE. from the mouth of the Nestus, and a short distance W. of Aidera. In the time of Procopius (B. G. iii. 38) it was the first of the maritime cities of Thrace, and is described as distant 12 days' journey from Byzantium. Very little is known about this place. In later times, it was called Illisium (Putoria, Hierocl. L. c.; cf. Apospon, Geograph. ib. iv. p. 42; and Anna Comn. p. 212), and was the seat of a bishopric. (Cec. Chald.). Justinian rebuilt its walls, which had been demolished, and made them stronger than before. (Procop. de Aed. iv. 11.) According to Paul Lucas and Boudone, the modern Tomor occupies its site; but Lupic identifies it with Kura-Gewenc. [J. R.]

TOREATAE. [Toreatae.]

TORECCADAE. [Toreatae.]

TOREATAE (Torearai, Steph. B. s. v.; Dione, Per. 6-2; Plin. iv. 5; Mela, i. 21; Avien. Or. Terr. 867) or TOREATAE (Tereatai, Strab. xi. p. 492), a tribe of the Maeotae in Asian Sarmatia. Ptolemy (v. 9 § 9) mentions a Toreatica in Asia Minor; and in another passage (iii. 5. § 25) he
TORNAOTUS.

speaks of the Torneotus as a people in Epeiros, Sarmatia, who are perhaps the same as the Torata or Toraeata.

TORNAOTUS, a small river of Assyria, mentioned by Pliny (vi. 27. s. 31), and a tributary of the Tigris. It is probably the same stream as that noted by Xenophon under the name of the Typhes. (Arber, ii. 4. § 25.) It may be the modern Torna or Othotaspes. Manneri (vi. 2. p. 317) takes it to be the same as the Adiabas of Ammians (xxiii. 9); but the Adiabas is more likely to be that elsewhere called the Zabatus (now Zibd).

II.

TORNAOTES, an Aphabetian people, whose name is preserved in Pliny (iv. 19). There is no indication of their position, unless it be the name Tornot, a small town on the Arros, a branch of the Adonis, and in the diocese of Tarba, which, under the name of Turba, was the chief place of the Biggeriones. [Biggeriones.]

TORONACUS SINUS. [Torpone.]

Toro-ne (T🚦on: Eth. Torgavagw), a town of Chalcidice in Macedonia, situated upon the SW. coast of the peninsula of Sithonia. It was said to have derived its name from Torone, a daughter of Protoeas or Poseidon and Phoebus. (Steph. B. s. v. Toro.) It was a Greek colony, founded by the Chalcidians of Eubea, and appears to have been originally the chief settlement of the Chalcidians in these parts. Hence the gulf lying between the peninsula of Sithonia and Torone was generally called the Toronean, now the Gulf of Kassandria. (Torgavagw κόλπος, Steph. B. s. v. Toro; Ptol. iii. 13. § 13; Torgavagw κόλπος, Strab. vii. p. 330; Seym. Ch. 640; Toronamian mare, Liv. xiv. 11; Toroneus sinus, Tac. Ann. v. 10.) Like the other Greek cities in these parts, Torone furnished ships and men to the army of Xerxes in his invasion of Greece. (Herod. vii. 122.) After the Persian War Torone came under the dominion of Athens. In B. C. 424 a party in the town opened the gates to Brasidas, but it was retaken by Cleon two years afterwards. (Thuc. iv. 110, seq. v. 2.) At a later time it seems to have been subject to Olynthus, since it was recovered by the Athenian general Timotheus. (Diod. xvi. 81.) It was annexed by Philip, along with the other Chalcidic cities, to the Macedonian empire. (Diod. xvi. 55.) In the war against Persians, B. c. 169, it was attacked by a Roman fleet, but without success. (Liv. xiv. 12.) Theophrastus relates that the Egyptian beam grew in a marsh near Torone (ap. Athen. iii. p. 72, d.), and Aristeas mentions a particular kind of fish, for which Torone was celebrated (ap. Athen. vii. p. 310, c.). The harbour of Torone was called Cuphus (κυψός), or "deaf," because being separated from the sea by two narrow passages, the noise of the waves was never heard there; hence the proverb κυψότερος τῷ Τορναϊκῷ μεγέθων. (Strab. vii. p. 330; Melia, ii. 3; Zeno. Prog. Graec. cent. iv. p. 68.) This port is apparently the same as the one called by Thucydides (v. 2) the harbour of the Colophonians, which he describes as only a little way from the city of the Toronaeans. Leake conjectures that we ought perhaps to read Καυσόπεως instead of Καυσόρως. It is still called Κυψός, and Torone is usually called its ancient name. (Leake, Northern Greece, vol. iii. pp. 119, 155, 455.)

TORIYNE (T أسبوع, Ptol. 11. 62; Τrãoyōf, Ptol. iii. 14. § 5), a town of Theophrastus in Epeiros, from which the fleet of Augastus was moored a short time before the battle of Actium, seems from the order of the names in Ptolomæus to have stood in one of the bays between the mouth of the river Thyamis and Syhota, probably at Porga. (Lcke, Northern Greece, vol. i. p. 103, vol. iii. p. 8.)

TOTTAEUM, a place in Bithynia of uncertain site (It. Ant. p. 141; It. Hieros. p. 573, where it is called Tuttam; Concil. Chalcad. p. 98); but some look for its site near Geirek, and others near Karakoza.

TOXANDRI. These inhabitants of North Gallia are first mentioned by Pliny (iv. 17) in a passage which has been interpreted several ways. Pliny's Belgica is limited on the north by the Scaldis (Schole). [Gallia Trans., Vol. l. p. 960.] Pliny says: "A Scaldi incolunt extera Toxandi phiribus nominibus. Deinde Memapi, Morimi." D'Anville and others explain "extera" to signify beyond the limits of the Schole, that is, north and east of this boundary; and Cluer places the Toxandri in the islands of Zeeland. D'Anville supposed that they took a part of their territory from the Memapi, and that this newly acquired country was the Campus north of Brabant and the bishopric of Liège. This conjecture is supposed to be confirmed by the passage of Ammianus Marcellinus (xvii. 8), in which he says that Julian marched against the Franks named Salii, who had dared to fix themselves on Roman ground "apud Toxandros Liguri," that is, the Franks who are best acquainted with the Netherlands fix Toxandri locut at Tosserd Lo, a small place in the Campus to the north of Brabant. Ubert (Gallias, p. 372) gives a different meaning to the word "extera." He remarks that Pliny, describing the north coast of Europe (iv. 14), says: "Toto antem hoc mari ad Scalidum usque fluvium Germaniacum acutum gentes," and he then enumerates the peoples as far as the Scaldis. Afterwards (c. 17) he adds "a Scaldi incolunt, &c.;" and in a few lines further, a word "introrsus" is opposed to this "extera," from which Ubert concludes that "extera" here means the coast country, a meaning which it has in two other passages of Pliny (ii. 67, iv. 13). After describing the nations which occupy this "extera," or coast, Pliny mentions the peoples in the interior, and in the third place the Germanic peoples on the Rhine. Accordingly Ubert concludes that we must look for the Toxandri in the neighbourhood of Ghent and Bruges.

TORACANA (Τρακανα), Ptol. iii. 5. § 27, an inland city of European Sarmatia. [T. H. B.]

TRACHIS or TRACHIN (Τράχις, Herod., Thuc., et alii; Τράχις, Strab.; Eth. Τράχινος). 1. A city of Maxis, in the district called after it Trachinia. It stood in a plain at the foot of Mt. Oeta, a little to the N. or rather W. of Thermopylae, and derived its name from the rocks which surrounded the plain. It commanded the approach to Thermopylae from Thessaly, and was, from its position, of great military importance. (Herod. vii. 176; Strab. ix. p. 428; Steph. B. s. v.) The entrance to the Trachinian plain was only half a plethra in breadth, but the surface of the plain was 22,000 plethra, according to Herodotus. The same writer states that the city Trachis was 3 stadia from the river Melas, and that the river Asopus issued from a gorge in the mountains, to the S. of Trachis. (Herod. vii. 198.) According to Thucydides, Trachis was 40 stadia from Thermopylae and 20 from the sea. (Thuc. iii. 92.) Trachis is mentioned in Homer as one of the cities subject to Achilles (II. ii. 682), and is celebrated in the legends of Hercules as the scene of
this hero's death. (Sop. Trach. passim.) It became a place of historical importance in consequence of the colony founded here by the Lacedaemonians in the sixth year of the Peloponnesian War, n. c. 426. The Trachinians and the neighbouring Dorians, who suffered much from the predatory incursions of the Ostaean mountaineers, solicited aid from the Spartans, who eagerly availed themselves of this opportunity to plant a strong colony in this commanding situation. They issued an invitation to the other states of Greece to join in the colony; and as many as 10,000 colonists, under three Spartan ecdoci, built and fortified a new town, to which the name of Heracleia was given, from the great hero, whose name was so closely associated with the surrounding district. (Thuc. iii. 92; Diod. xii. 59.) It was usually called the Trachinian Heracleia, to distinguish it from other places of the same name, and by later writers Heracleia in Phocis, as this district was subsequently included in the Thessalian Phocis. (Hē'kaleia ἡ ἐν Τραχείᾳ, Xen. Hell. i. 2, § 18; Diod. xii. 77, xv. 57; Πρακτικά οἱ ἐν Τραχέων, Thuc. v. 51; 'H. ἡ Τραχιλεία καλουμένη προτέρων, Strab. ix. p. 428; Heraclea Trachin dicta, Plin. iv. 7. s. 14; H. Φθιώτιδος, Ptol. iii. 13. § 46.) The new colonists also built a port with docks near Thermopylae. It was generally expected that this city, under the protection of Sparta, would become a formidable power in Northern Greece, but it was attacked from the beginning by the Thessalians, who regarded its establishment as an invasion of their territory; and the Spartans, who rarely succeeded in the government of dependencies, displayed haughtiness and corruption in its administration. Hence the city rapidly dwindled down; and in B. C. 420 the Heracleots were defeated with great loss by the neighbouring Thessalian tribes, and Xenas, the Lacedaemonian governor, was slain in the battle. Sparta was unable at the time to send assistance to their colony; and in the following year the Boeotians, fearing lest the place should fall into the hands of the Athenians, took possession of it, and dismissed the Lacedaemonian governor, on the ground of misconduct. (Thuc. v. 51, 52.) The Lacedaemonians, however, regained possession of the place; and in the winter of B. C. 409—408, they experienced here another disaster, 700 of the Heracleots being slain in battle, together with the Lacedaemonian harmost. (Xen. Hell. i. 3. § 18.) But, after the Peloponnesian War, Heracleia again rose into importance, and became the head-quarters of the Spartan power in Northern Greece. In B. C. 399 Herippidas, the La-
deaemonian, was sent thither to repress some factional movements in Heracleia; and he not only put to death all the opponents of the Lacedaemonians in the town, but expelled the neighbouring Ostaeans and Trachinians from their abodes. (Diod. xiv. 38; Polyb. ii. 21.) In B. C. 393 the Thebans, under the command of Hemisia, wrested this important place from the Spartans, killed the Lacedaemonian garrison, and gave the city to the old Trachinian and Ostaean inhabitants. (Diod. xiv. 82.) The walls of Heracleia were destroyed by Jason, lest any state should serve this place and prevent him from marching into Greece. (Xen. Hell. vi. 4. § 27.) At a later time Heracleia came into the hands of the Aetolians, and was one of the main sources of their power in Northern Greece. After the defeat of Antiochus at Thermopylae, B. C. 191, Heracleia was besieged by the Roman consul Aelius Gallienus, who divided his army into four bodies, and directed his attacks upon four points at once; one body being stationed on the river Asopus, where was the gymnasion; the second near the citadel outside of the walls (extra muros), which was almost more thickly inhabited than the city itself; the third towards the Malac gulf; and the fourth on the river Melas, opposite the temple of Diana. The country around was marshy, and abounded in lofty trees. After a siege of twenty-four days the Romans succeeded in taking the town; and the Aetolians removed the inhabitants. In the following day the council seized a rocky summit, equal to the citadel in height, and separated from it only by a chasm so narrow that the two summits were within reach of a missile. Thereupon the Aetolians surrendered the citadel. (Liv. xxxvi. 24.) Leake remarks that it seems quite clear from this account of Livy that the city occupied the low ground between the rivers Karesnarud (Asopus) and Marxos-Neris (Melas), extending from the one to the other, as well as a considerable distance into the plain in a south-eastern direction. There are still some vestiges of the citadel upon a lofty rock above; and upon its perpendicular sides there are many catacombs excavated. "The distance of the citadel above the town justifies the words extra muros, which Livy applies to it, and may explain also the assertion of Strabo (i. c.), that Heracleia was six stadia distant from the ancient Trachis; for, although the town of Heraclea seems to have occupied the same position, as the Trachis of Herodotus, the city, which, according to Livy, was better inhabited in the Aetolian War than the city, may very possibly have been the only inhabited part of Heracleia two centuries later." (Leake, Northern Greece, vol. ii. pp. 26—29.)

2. Surnamed Phocica (ἡ Φωκικὴ), a small city of Phocis, situated upon the confines of Boeotia, and on the road to Lebadeia. (Strab. i. p. 423; Paus. x. 3. § 28.)

TRACHONITIS (Τραχωνίτης, Lyc. iii. 1; Joseph. Ant. xvi. 9, B. J. iii. 3; Plin. v. 18. s. 16; Τραχωνιτής, Joseph. Ant. xiii. 16), according to Josephus, a portion of Palestine which extended in a NE. direction from the neighbourhood of the sea of Galilee in the direction of Damascus, having the Syrian desert and Auranitis on its eastern frontier, Ituraea on the S., and Golanitis on the W. It was considered as the northern portion of Perea (Περαια, i. e. Περαὶ του ἱεροπολίτου, Judith, i. 9; Mattith. iv. 25.) According to Strabo, it lay between Damascus and the Arabian mountains (xvi. p. 755); and from other authorities we may gather that it adjoined the province of Batanaea (Joseph. B. J. i. 20. § 4), and extended between the Regio Decapolitana (Plin. v. 15) as far as S. as Bostra (Euseb. Onomast. e. v. Ηουρανον.) It derived its name from the rough nature of the country (Τραχωνίτης, i. e. τραχός καὶ παραβίωτος); and Strabo mentions two τραχωνίται (xvi. p. 755, 756), which Burchardt considers to be the summits of two mountain ranges on the road from Mecca to Damascus, near the village of Al-Kuseer. (Travels, p. 115.) The inhabitants of Trachonitis are called by Ptolemy, οἱ Τραχωνίται Ἀραβαῖοι (v. 13. § 26), and they seemed to have maintained their character for remarkable skill in shooting with the bow and plundering (Joseph. B. J. ii. 4. § 2), for which the rocky nature of the country they inhabited, full as it was of clefts, holes and secret fastnesses, was peculiarly well suited (Joseph. Ant. xv. 10. § 1.) Trachonitis belonged originally to the tetrarchy of Philippus, the son of Herod the
Great (Joseph. Ant. xvii. 8, § 1, J. J. ii. 6, § 3); but it subsequently formed part of the dominion of Hercules Agrippa. (Joseph. Ant. xvii. 6, § 10, B. J. iii. 3, § 5; Philo, Opit. ii. p. 593.)

The whole district has been recently explored and examined with much care and judgment by the Rev. J. L. Porter of Damascus, who has shown that the ancient accounts of this province, properly weighed, coincide with remarkable accuracy with what we know of it now. According to him, it must have been to the NW. of Batanaea, and have extended along the styptic tract at the base of the Jebel Heuran, as Kotha (now Kumanlu) was a city of Trachon (Kuseb. Onomast. s. v. Coweth), while the Targums extend it, though improbably, as far as Sa血压. Mr. Porter observes that the name is sometimes applied in a more general sense by ancient writers, so as to include the neighbouring provinces (as in Luke, iii. 1, where the "Region of Trachonitis" must be understood as embracing Batanaea and Auranitis; Joseph. Ant. xvii. 14, § 4.) He thinks, too, that the plain on the western side as far as the Haj road was embraced in Trachonitis, and likens it to the city on the north to the Jebel Khigahah, with a considerable section of the plain on the east, N. of Arulal-Battanya. The Argeb of Numb. xxiv. 13, 1 Kings, iv. 13, &c., Mr. Porter considers to be the same district as Trachonitis, the latter being the Greek rendering of the Hebrew form. (Porter, Five Years in Damascus, ii. pp. 259—262, 268—272; Robinson, iii. p. 907; Rusegesser, iii. p. 279; Winer, Bibl. Beiträgerbuch.)

TRAchy. [Ochosmenus, p. 490, a.]

TRACTARI, a tribe in the Caresounus Taurica (Plin. iv. 12. s. 26). [T. H. D.]

TRAELIUS. [Tragilus.]

TRAENS or TRAIS (Trapezis or Trapezi, etc.: Trizion), a river of Bruttium celebrated for the singular victory of the Sybarites on its banks by their rivals the Crotoneans, which led to the destruction of the city of Sybaris, in c. 510. (Iamb. Vit. Pyth. § 260.) It is singular that the banks of a stream which had been the scene of such a catastrophe should be again the scenes of nations being expelled by the Sybarites who were expelled from the new colony of Thurii shortly after its foundation [Thurii] for the site of their settlement. They, however, did not remain long, being expelled and put to the sword by the neighbouring barbarians, whom Diodorus by a remarkable anachronism calls Bruttians, apparently within a few years of their establishment. (Diod. xii. 22.) The name of the river is not found in any of the geographers, but there can be little doubt of its being the one still called the Trizion, which falls into the gulf of Tarentum a few miles E. of Kossovo, and gives name also to an adjoining headland, the Copo di Trizonto. [E. H. B.]

TRAGIA (Trapezi), also called Traegia (Tra- gia), Traizia, Tragezaeae (Trapezi), or Tragia (Trapezi), a small island off the south coast of Sauno, near which Pericles, in n. c. 440, defeated the Samians in a naval engagement. (Thucyd. i. 116; Plin. iv. 71, v. 135; Plut. Per. 25; Strab. xiii. p. 635; Stephan. B. e. 116, s. 116; Resolution, and the Tragezaeae Salinae, see Hales.) [L. S.]

TRAGIA or TRAGAEA. [NAXOS, p. 406, a.]

TRAGILUS (Trapezios: Eth. Trapezies, Stephan. B. e. 116), a town of Macedonia, and doubtless the same as the Bajatios or Drajtios found in Hierocles (p. 639) among the towns of the first or consular Macedonia. In the Table there is a place "Tritio" marked as 10 miles from Philippi. This is apparently a corruption of "Tratio," since numerous coins (one of which is figured below) have been found near Amphipolis with the inscription TRAJAION. Leake conjectures with much probability that the real name was Tragilus, and that in the inscribed form of the name the Τ may have been omitted so that the TRAJAION of the coin may represent the Hellenic TRAGILUS. (Eckhel, vol. ii. p. 81; Leake, Northern Greece, vol. iii. p. 228.)

COIN OF TRAGILUS OR TRAEILUS.

TRAGURION (Trapezios, Strab. Ptol. Tra- gopos, Polyh.), an important town of Dalmatia, situated upon an island, which was separated from the mainland by an artificial canal. According to the Antonine Itinerary, it was distant 16 miles from Pratorion and 13 from Salona. Pliny calls it "Trauritium civium Romanorum," and says that it was celebrated for its marble. Its name is preserved in the modern Truo. (Polyb. xxii. 18: Strab. ii. p. 124, vii. p. 315; Ptol. ii. 17 § 14; Plin. iii. 22. s. 26; Mela, ii. 3; It. Ant. p. 272; Tab. Pote. Geog. Rav. iv. 16.)

TRAGUS. [Caphyae.]

TRAIA CAPITA (Htin. Ant. p. 399), more correctly TRAIA CAPITA (Geog. Rav. v. 3), since it lay near the three months of the Iberus, a town of the Cestani, in Hispania Tarraconensis, between Dertosa and Taracca. Variously identified with Tisiva and Torre del Aliga. [T. H. D.]

TRAJANII MUNIMENTUM, a fort or castle built by Trajan on the southern bank of the river Moenus, not far from its junction with the Rhenus. (Ann. Mare. xvii. 1.) The site is uncertain, nor is it known what the Munimentum really was. [L. S.]

TRAJANOPOLIS (Trapezopolis), a town in Myca, in the district occupied by the tribe of the Themmenothyrates, on the frontiers of Phrygia. (Ptol. v. 2, §§ 14, 15.) The Cilician city of Selinus also for a time bore the name of Trajanopolis. [SELINUS.] [L. S.]

TRAJANOPOLIS (Trapezopolis), an important town in the S. of Thrace, which was probably founded by or in honour of the emperor Trajan, about the time when Pliny was founded, to perpetuate the name of his wife Plotina. Its exact site appears to be somewhat doubtful. Some authorities describe it as situated on the right bank of the Hebrus, near the pass in the range of Mount Rhodope, through which that river flows, and about 40 miles from its mouth. Now this is the site of the modern Oriskora, with which accordingly it is by some identified. It would be difficult, however, to reconcile this with the various distances given in the Itineraries, e. g. Trajanopolis is stated to be 9000 paces from Tempyra, and 29,000 from Cypela; whereas the site above mentioned is nearly equidistant from those assigned to Tempyra and Cypela, being, however, more distant from the former. But this is only one example out of many showing how extremely imperfect is our knowledge of the geography of Thrace, both ancient and modern. In the map of the Society
for the Diffusion of Useful Knowledge. Trajanopolis is placed on the Egnatian Way at a considerable distance W. of the Hebrus, and at a point which sufficed tolerably well the conditions of distance from the two places above mentioned.

Trajanopolis became the capital of the province of Rhodope, and continued to be a place of importance until the fourth century. It is remarkable, however, that it is not mentioned by Ammianus in his general description of Thrace (xxvii. 4); according to him, the chief cities of Rhodope were Maximenopolis, Maroneia, and Annus. (Prov. iii. 11. § 13; Hierocl. p. 631; Procop. de Aed. iv. 11; Const. Porph. de Caesariim. ii. 54; Cantacuz. i. 38, iii. 67, et alibi; It. Ant. pp. 175, 322, 332, 333; It. Hier. p. 602; Geog. Eav. iv. 6; cf. Mannert, vii. p. 224.) [J. R.]

TRAJECTUM, in North Gallia, is not mentioned in any Roman writing before the Itin. of Antoninus. It was on the Roman road which ran along the Rhine from Lugdunum Eivatorum, and the site is Eivect in the kingdom of the Netherlands, at the bifurcation of the old Rhine and the Eivect. The modern name contains the Roman name abbreviated, and the part U seems to be a corruption of the word inuile (Vetus); but D'Anville observes that the name is written Eivect as early as 870. [G. L.]

TRAJECTUS in Gallia, placed by the Antonine Itineraries on a road which ran from Aigrinum (Agatlia) through Exeucum and Trajectus to Vesunna (Vorquire). Trajectus is xxi. from Exeucum (Ville Neuve), and xviii. from Vesunna, and it marks the passage of the Duranium (Dordogne) between these two positions at a place called Fontous on the Dordogne, opposite to which on the other bank of the river is La Lionne, mentioned in the Table under the name of Dioinundum. [Dioinundum.] [G. L.]

TRAIS. [Trains.]

TRALLES or TRALLIS (Τράλλας, Τραλλίς; Eth. Τραλλανός), a large and flourishing city of Caria, on the southern slopes of mount Messogis, a little to the north of the S-amander, a small tributary of which, the Eulon, flowed close by the city, while another passed right through it. Its acropolis was situated on a lofty eminence in the north of the city. Trales was said to have been founded by Argeis in conjunction with a body of Thracians, whence its name Trales was believed to be derived (Strab. xiv. pp. 648, 649; Hesych. s. v.; Iren. adv. haer. xvii. 65; Plut. Ages. 16), for it is said to have previously been called Anthca, Evanthea, Erymya, Charax, Selene, and Anthochia (Steph. B. s. v. Τραλλίς, Χαράξ; Etymun. Mil. p. 389; Plin. v. 29). Others, however, state that it was a Pelasgan colony, and originally bore the name of Larissa (Agath. ii. 17; Schol. ad Hom. ii. x. 429). It was situated in a most fertile district, at a point where highways met from the south, east, and west; so that it must have been a place of considerable commerce. (Cic. ad Att. v. 145; Iul. Cons. adv. Frat. i. 1; Strab. xiv. p. 663.) The inhabitants of Trales were celebrated for their great wealth, and were generally appointed aarchs, that is, presidents of the games celebrated in the district. But the country in which Trales was situated was much subject to earthquakes; in the reign of Augustus many of its public buildings were greatly damaged by a violent shock; and the emperor gave the inhabitants a handsome sum of money to repair the losses they had sustained. (Strab. xii. p. 579.) Out of gratitude, the Traillians petitioned to be permitted to erect a temple in honour of Tiberius, but without effect. (Tac. Ann. iv. 55.) According to Pliny (xxvii. 49), king Attalus had a palace at Trales. A statue of Caesar was set up in the temple of Victoria at Trales; and during the presence of Caesar in Asia a miracle is said to have happened in the temple, respecting which see Caes. Bell. Cir. iii. 105; Plut. Caes. 47; and Val. Max. i. 6. The city is very often mentioned by ancient writers (Xen. Ancub. i. 4 § 8; Hist. cir. iii. 3 § 19; Polyb. xxii. 27; Liv. xxxvii. 45, xxviii. 29; Diod. xiv. 36, xix. 75; Juven. iii. 70; Pol. v. 2 § 19; Hierocl. p. 659). During the middle ages the city fell into decay, but was repaired by Andronicus Pahodos (G. Pachymer, p. 330). Extensive ruins of the place still exist above the modern Ghiulcel Hissar, in a position perfectly agreeing with the description of Strabo. (See Arundell, Seven Churches, pp. 58, 63, 293; Leake, Asia Minor, pp. 243, 246; Fellows, Asia Minor, p. 276; Lycia, p. 16; Hamilton, Researches, i. p. 539.) As to the coins of Trales, which are very numerous, see Sestini, p. 89. [L. S.]

COIN OF TRALES.

TRALES or TRALLIS (Τράλλας), a town in Phrygia, on the west of Apamea, and 15 miles east of Hierapolis, not far from the banks of the Maeander (Hieroc. p. 667; Conc. Nic. caea. ii. p. 51; Tab. Pent.). The ruins seen by Arundell (Seven Churches, p. 231) near the village of Kuslar are probably those of Trales. [L. S.]

TRALLIA (Τραλλία : Eth. Τραλλάς, Τραλλέας, Steph. B. a. v.), a district of Illryia, whose inhabitants, the Tralli, are mentioned several times by Livy (xxvii. 32, xxxii. 33, xxxiii. 4). TRALLICON, a town of Caria, mentioned only by Pliny (v. 29), situated on the river Harpasus; but in his time it had already ceased to exist. [L. S.]

TRAMYA. [Tymphaia.]

TRANSCELLENSIS MONS, a mountain in Mauretania, between Caesarea and the river Chibalp. (Amm. Marc. xxix. 5. § 20.) [T. H. D.]

TRANSLECTA (Τρανσδικητα, Plat. ii. 4. § 6), and in a fuller form, JULIA TRANSLECTA or TRACTA, a town of the Bastuli, in Hispания Baetica, to the E. of Mellaria. It is doubtless the same place which Strabo (ii. p. 140) calls Tinnia, and sets down between Belon and Gades, whether the Romans transported the inhabitants of Zela, in Mauretania Tingitana. According to Urti (vit. ii. p. 434) it is also the Tiagentera of Mela (ii. 6), who informs us that he was born there; though it is not easy to see how it could have had so many names. But the ground for the conjecture is that Tangetera, according to Mela, was inhabited by the Phoenicians, who had been transported thither, which in some respects resembles Strabo's account of Julius Iuza. It is sought in the modern Terrifa, or in its neighbourhood. For curs see Flores, Med. ii. p. 596; Echkel, Doctr. Aqum. i. 1. p. 30; Mionnet, i.
TRANSMARISCA.

p. 26, and Suppt. i. pp. 19, 45; Sestini, p. 90; Flores, Esp. Escr. x. p. 50; Mem. de l'Acad. des Inscr. xxx. p. 103.) [T. H. D.]

TRANSMARISCA (Τραγμάρισκα, Ptol. iii. 10. § 11; Trajaniensis and Trajana, Procop. de Aed. iv. 7. p. 226; Numismatic, Geogr. Rav. iv. 7), a strong fortress of Lower Mysia, opposite to the spot where the Marisicus flows into the Danube. It was the head-quarters of two cohorts of the Legio xi. Claudia, and also of some light-armed troops. (Hirt. Ant. p. 223; Not. Imp.; Tab. Peut.) Now Turtukai, Tuterkoi, or Tuterkon. [T. H. D.]

TRANSOMONTANI (Τραγαμομόονταῖοι, Ptol. iii. 5. § 21), the name of a tribe in Eastern Sarmatia dwelling between the sources of the Borysthene and the Pencinan mountains. [T. H. D.]

TRAPAZOPOLIS (Τραπάζωπολις or Trapezō-πολίς; Fth. Trapezopolis), first attested, according to Ptolemy (iv. 2 § 18), to Caria, but according to Socrates (Hist. Eccles. vii. 36) and Hierocles (p. 665), in Phrygia. The former is the more correct statement, for the town stood on the southern slope of Mount Cadmus, to the south-east of Antiokia, and, according to the Notitia Imperii, afterwards belonged to the province of Phrygia. It is possible that the ruins which Arundell (Discoveries, ii. p. 147) found at Keisalig-hoshek may be those of Trapezopolis. [L. S.]

TRAPAZUS (Τραπάζος; Eth. Trapazō-Gōtrins; now Tavdonos or Trebizond), an important city on the coast of Pontus, on the slope of a hill, 60 stadia to the east of Hermonassa, in the territory of the Macrones (Anon. Peripl. P. E. p. 13), was a colony founded by the Sinopians, who formed many establishments on this coast. (Xenoph. Anab. iv. 8. § 22; Arrian, Peripl. P. E. pp. 1, 3, 6; Scylax, p. 53.) It derived its name probably from its form, being situated on an elevated platform, so that it was a table above the sea; though the town of Trapezus in Armenia pretended to be the mother-city of Trapezus in Pontus (Paus. viii. 27. § 4). Trapezus was already a flourishing town when Xenophon arrived there on his memorable retreat; and he and his men were most hospitably treated by the Trapezantians. (Xen. Anab. v. 5. § 10.) At that time the Colchians were still in possession of the territory, but it afterwards was occupied by the Macrones. The real greatness of Trapezus, however, was due to the circumstance that it was situated under the dominion of the Romans. Pliny (vi. 4) calls it a free city, a distinction which it had probably obtained from Pompey during his war against Mithridates. In the reign of Hadrian, when Arrian visited it, it was the most important city on the south coast of the Euxine, and Trajan had before made its capital of Pontus Cappadocicus, and provided it with a larger and better harbour. (Arrian, Peripl. P. E. p. 17; comp. Tac. Ann. xiii. 99, Hist. iii. 47; Comp. Mela, i. 19; Strab. vii. pp. 399, 390, xi. p. 499, xii. p. 548; Steph. B. z. c.) Henceforth it was a strongly fortified commercial town; and although in the reign of Galienus it was sacked and burnt by the Goths (Zosim. i. 33; Eustath. ad Dion. Per. 687), it continued to be in such excellent condition, that in the reign of Justinian it required but few repairs. (Procop. de Aed. iii. 7.) From the Notitia Imperii (c. 27) we learn that Trapezus was the station of the first Proconsul and its staff. Some centuries later a branch of the imperial house of the Commene declared themselves independent of the Greek Empire, and made Trapezus the seat of their principality. This small principality maintained its independence even for some time after the fall of Constantinople; but being too weak to resist the overwhelming superiority of the Turks, it was oblonged, in A.D. 1460, to submit to Mohammed II, and has ever since that time been a Turkish town. (Chalced. ix. p. 263, foll.; Duc. 45; comp. Gibbon, Decline, c. xlviii. foll.) The port of Trapezus, called Daphnis, was formed by the acropolis, which was built on a rock running out into the sea. (Anon. Peripl. P. E. p. 13.) The city of Trapezis is still one of the most flourishing commercial cities of Asia Minor, but it contains no ancient remains of any interest, as most of them belong to the period of the Lower Empire. (Tournefort, Voyage ou Levant, iii., lettre 17, p. 79, foll.; Fontanier, Voyages dans l'Orient, p. 17—23; Hamilton's Researches, i. p. 240.) The coins of Trapezus all belong to the imperial period, and extend from the reign of Trajan to that of Philip. (Eckhel, i. 2. p. 258; Sestini, p. 60.) [L. S.]

TRASIMEXUS (Τρασίμηνος, -ουτος; Fth. Trașimē-νος, -ους), a town of Arcadia in the district of Parochia, a little to the left of the river Alpheius, is said to have derived its name from its founder Trasimexus, the son of Lycaon, or from trapse (τράπεζα), "a table," because Zeus here overturned the table on which Lycaon offered him human food. (Paus. viii. 3. §§ 2, 3; Apollod. iii. 8. § 1.) It was the royal residence of Hippothous, who transferred the seat of government from Teges to Trapezus. On the foundation of Megapoleis, in n. c. 371, the inhabitants of Trapezus refused to remove to the new city; and having thus incurred the anger of the other Arcadians, they quitied Peloponnesus, and took refuge in Trapezus on the Pontus Euxinus, where they were received as a kindred people. The statues of some of their gods were removed to Megapoleis, where they were seen by Panamisius. Trapezus stood above the modern Mavria. (Paus. viii. 3. § 4, 27. §§ 4—6, viii. 29. § 1, 31. § 5; Herod. vi. 127; Steph. B. z. c.; Leake, Morea, vol. ii. p. 292; Ross, Reisen im Peloponnes, vol. i. p. 90.)

TRASEMENUS LACUS. [Taurica Chersonesus.]

TRAR'UM (Τράρ'οοο, a town of Mysia, mentioned by Strabo in conjunction with Perperuna (xviii. 607).) TEEIUL (ad Lycoth. 1141, 1159) mentions a mountain named Trarum (Τράροοο) in the Troad. TRASIMENUS LACUS (Τρασίμηνος or Trașiμενος; Λίπος Τραςίμηνος; the lake of Trašiμενος; Lat. Lago di Tarsinio), one of the most extensive and important of the lakes of Etruria, situated between Cortona and Perusia. It is the largest of all the lakes of Etruria, being above 10 miles in length by 8 in breadth; and differs from all the other considerable lakes of that country in not being of volcanic origin. It is merely formed in a depressed basin, surrounded on all sides by hills of moderate elevation, and having no natural outlet to the hill on the N. side of the lake, which extend from Crotona to Perusia, are considerably more elevated than those that form the other sides of the basin, but even these scarcely rise to the dignity of mountains. The lake itself is of small depth, nowhere exceeding 30 feet, and its banks are almost everywhere low, flat, and covered with reeds. No comment is necessary.*

* This is the farm universally found in the best MSS. of Latin writers; there is no good ancient authority for the orthography of Trasiméno or Trasiménius, so generally adopted by modern writers.
siderable town was situated on its shores: Perusa, from which it derives its modern name of the Lago di Perugia, stands on a lofty hill about 10 miles to the E. of it; Olsium is situated about 9 miles to the SW. and Cortona between 6 and 7 to the NW. The highroad from Arretium to Perusia followed the northern shore of the lake for a considerable distance.

The lake Trasimenum derives its chief celebrity from the great victory obtained upon its shores by Hannibal over the Roman consul, C. Flaminius, n. e. 217, one of the greatest defects sustained by the Romans during the whole course of their history. The circumstances of this battle are more clearly related and more readily understood with reference to the actual localities than those of any of the other great battles of Hannibal. The Carthaginian general, after crossing the Apumines, and effecting his toilsome march through the marches of Etruria, had encamped in the neighborhood of Faesulae (Pol. iii. 80, 82). Flaminius was at this time posted with his army at Arretium, whose object was to draw him into a general battle, moved along the upper valley of the Arans, and passing within a short distance of the consul's camp, advanced along the road towards Rome (i. e. by Perusia), laying waste the country as he advanced. Flaminius on this hastily broke up his camp, and followed the Carthaginian army. Hannibal had already passed the city of Cortona on his left, and was advancing along the N. shore of the lake, which lay on his right hand, when, learning that Flaminius was following him, he determined to halt and await his attack, taking advantage of the strong position which offered itself to him. (Pol. iii. 82; Liv. xxii. 4.) The hills which extend from Cortona to the lake, called by Livy the "montes Cortonenses," and now known as the Monte Guadalandro, descend completely to the bank of the lake, or at least to the marshes that border it, at a point near the NW. angle of the lake, now marked by a village and a round tower called Borghetto. This spur of the hills completely separates the basin of the lake from the plains below Cortona, and it is not until after surmounting it that the traveller by the modern road comes in sight of the lake, as well as of the small plain or valley, shut in between its N. shore and the Guadalandro, which was the actual scene of the catastrophe. "Arrived at the highest point of the road, the traveller has a partial view of the fatal plain, which opens fully upon him as he descends the Guadalandro. He soon finds himself in a vale, enclosed to the left, and in front, and behind him by the Guadalandro hills, bending round in a segment larger than a semicircle, and running down at each end to the lake, which oblique to the right and forms the chord of this mountain arc. The position cannot be guessed at from the plains of Cortona, nor appears to be so completely enclosed, unless to one who is fairly within the hills. It then indeed appears a place made as it were for a chance, 'locus insidiis natus.' (Liv. xxii. 4.) Borghetto is then found to stand in a narrow marshy pass close to the hill and to the lake, whilst there is no other outlet at the opposite turn of the mountains than through the little town of Passignano, which is pushed into the water by the foot of a high rocky scarp. There is a woody eminence branching down from the mountains into the upper end of the plain nearer to the site of Passignano, and on this stands a village called Torre (more properly Tuoro)." (Hobhouse, Notes and Illustrations to Chloe Harold, canto iv. st. 63.)

From this description of the localities by an eye-witness, which agrees almost exactly with that given by Livy (xxii. 4), the details of the battle are rendered perfectly clear. Hannibal occupied the hill last-mentioned with the main body of his troops, his heavy-armed African and Spanish infantry, while he sent round his light-armed troops to occupy the slopes of the Guadalandro on his right, so as to threaten the left flank of the advancing Roman army, while he posted his cavalry and the Gaulish troops on the hills on the left between Borghetto and the present road. Flaminius advanced the next morning almost before daylight, while a thick fog rising from the lake still further concealed the position of the enemy. He therefore advanced through the pass, in ignorance of the bodies of troops that hung upon both his flanks, and, seeing only the array in front on this hill of Tuoro, began to draw up his forces for battle in the plain in front of them.

But before he was able to commence the engagement, he found himself suddenly attacked on all sides at once: the surprise was complete, and the battle quickly became a mere promiscuous massacre. Flaminius himself fell early in the day, and numbers of the Roman troops were driven into the lake, and either perished in its waters or were put to the sword by the enemy's cavalry. A body of about 4000 men having forced their way through the enemy, occupied a hill on which there stood an Etruscan village, but finding themselves wholly isolated, surrendered the next day to Maharbal. Sixteen thousand Roman troops perished in this disastrous battle: the site of the chief slaughter is still marked by a little rivulet which traverses the plain, and is known at the present day by the name of the Sangineto. (Hobhouse, l.c.) The details of the battle are given by Polybius (iii. 83, 84) and Livy (xxii. 4—6). It is remarkable that in this instance the localities are much more clearly and accurately described by Livy than by Polybius: the account given by the latter author is not incompatible with the existing local details, but would not be easily understood, unless we were able to correct it by the certainty that the battle took place on this particular spot. The narratives of Appian and Zonaras add nothing to our knowledge of the battle. (Appian, Ann. 9. 10; Zonar. viii. 25.) Numerous allusions to and notices of the memorable slaughter at the lake of Trasimene are found in the later Roman writers, but they have preserved no additional circumstances of interest. The well-known story related by Livy, as well as by Pliny and later writers, that the fury of the combatants rendered them unconscious of the shock of an earthquake, which occurred during the battle, is easily understood without any prodigy, such shocks being frequently very local and irregular phenomena. (Flam. ii. 84. s. 86. xv. 18. s. 20; Cic. de N. D. ii. 3, 20.)

* The name of Osraja, a village on the road from Cortona to the lake, has been thought to be also connected with the slaughter of the battle, but this is very improbable. Osraja is several miles distant from the lake, and on the other side of the hills. (Hobhouse, l. c.) It is probable moreover that the modern name is only a corruption of Osraja or Osroaria. (Niebuhr, Lectures, vol. ii. p. 102.)
TRAUSI. 123

de Div. ii. 8; Eutrop. iii. 9; Flor. li. 6; § 13; Ortes. iv. 15; Val. Max. i. 6; § 6; Sil. Ital. i. 49, v. 1, &c.; Ovid, Fast. vi. 770; Strab. v. p. 226.

The lake is now commonly known as the Lago di Perugia, though frequently called on maps and in guide-books the Lago Trasimeno. [E. H. B.]

TRAUSI (Τραύσι, Herod. v. 3; 4; Thrausi, Liv. xxxiv. 41), a Thracian people, who appear in later times at least, to have occupied the SE. offshoots of Mount Rhodope, to the W. of the Hebrus, and about Tempea. Herodotus tells us that the Thrausi entertained peculiar notions respecting human life, which were manifested in appropriate customs. When a child was born, his kinsfolk, sitting around him, bewailed his lot in having to encounter the misery of mortal existence; whereas when any one died, they buried him with mirth and rejoicing, declaring him to have been freed from great evil, and to be now in perfect bliss. As to the Thrausi spoken of by Livy, see TEMPEA.

Suidas and Hesychius (σ. εv.) mention a Scythian tribe called the Trausii, who, according to Steph. B. (σ. εv.), were the same people as the Agathysiri. The last-named author speaks of a Celtic race also, bearing this appellation. On this slight foundation the strange theory has been built that the Thracian Trausi were the original stock of the Celts; and by way of supporting this notion, its proponents arbitrarily read Τραύσι instead of Πλαται in Strabo, iv. p. 187, where Strabo expressly says that he was unable to state what was the original abode of the Trausi; had he been writing about the Thracian Trausi we may safely assume that no such ignorance would have been acknowledged. (Cf. Uberti, ii. 2. § 230.)

TRAUSUS (Τραύσις, Herod. vii. 109), a small river in the S. of Thrace, which falls into the Aupa Beroan, a shallow estuary penetrating far into the land, NE. of Abdera. The Trausus is the principal outlet for the drainage of that part of southern Thrace which is included between the Nestus and the Hebrus. [J. R.]

TREBIA. 1. (Eth. Trebias, lat. Tresibi), a municipal town of Umbria, situated at the western foot of the Apennines, between Faluginum and the sources of the Clitunnum, about 4 miles from the latter. It is mentioned by Pliny among the municipal cities of Umbria, and its name is found in an inscription among the " xv Populi Umbriae;" in both these authorities the name of the people is written Trebienses. The Jerusalem Itinerary, which places it on the Via Flaminia, 4 miles from Sacracia (at the sources of the Clitunnum) and 5 from Faluginum, writes the name Trevis, thus approximating closely to the modern name of Trevi. The modern town is still a considerable place standing on a hill which rises abruptly from the valley of the Clitunnum. (Plin. iii. 14. 19; Itin. Hier. p. 613; Orell. Inser. 198.)

2. (Troppa, Ptol. viii. Eth. Trebuxan: Trevi), a city of Latium, in the upper valley of the Anio, about 5 miles from the sources of that river and 10 above Sabacce. It is mentioned both by Pliny and Ptolemy, as well as by Frontinus, who calls it Treba Augustana (Plin. iii. 5. 9; Ptol. iii. 1. § 62; Frontinus) No mela has followed Herodotus very closely in the following passage (ii. 2): "Lugubre apta quosdam puerepeia, natiue deponent: finera contra festa sunt, et veluti sacra, cantu haspebra celebratur."
TREBIA.

to the W.; where the town of Cladistium was betrayed into his hands. Meanwhile Sempronius, who was newly arrived, after a short interval of repose, was eager for a general engagement, and his confidence was increased by a partial success in a combat of cavalry, in the plain between the Trebia and the Padus (ib. 69.) Hannibal, who on his side was equally desirous of a battle, took advantage of this disposition of Sempronius, and succeeded in drawing him out of his camp, where he could not venture to attack him, into the plain below, which was favourable to the operations of the Carthaginian cavalry and elephants. For this purpose he sent forward a body of Numidian horse, who crossed the Trebia and approached the Roman camp, but, as soon as a body of Roman cavalry and light-armed troops were sent out against them, retreated skirmishing until they had recrossed the river. Sempronius followed with his whole army, and crossed the Trebia, not without difficulty, for the river was swollen with late rains, and was only just fordable for the infantry. His troops suffered severely from cold and wet, and when the two armies met in order of battle, early began to feel themselves inferior to the enemy: but the victory was decided by a body of 1000 foot and 1000 horse, under the command of Mago, the brother of Hannibal, which had been placed by that general in ambuscade, in the hollow bed of a stream which crossed the field of battle, and by a sudden onset on the rear of the Roman army, threw it into complete confusion. A body of about 10,000 Roman infantry succeeded in forcing their way through the centre of the enemy's line, but finding themselves isolated, and their retreat to their camp quite cut off, they directed their march at once towards Placentia, and succeeded in reaching that city in safety. The other troops were thrown back in confusion upon the Trebia, and suffered very heavy loss in passing that river; but those who succeeded in crossing it, fell back upon the body already mentioned and made good their retreat with them to Placentia. Thither also Scipio on the following day repaired with that part of the Roman forces which had not been engaged in the battle.

(Vol. iii. 70—74.)

From the view above given of the battle and the operations that preceded it, which coincides with that of General Vaudoncourt (Campagnes d'Annibale en Italie, vol. i, pp. 93—150), it seems certain that the battle was fought on the left bank of the Trebia, in the plain, but a short distance from the foot of the hills; while the Roman camp was on the hills, and on the right bank of the Trebia. It is certain that this view affords much more the most intelligible explanation of the operations of the armies, and there is nothing in the narrative of Polybius (which has been exclusively followed in the above account) inconsistent with it, though it must be admitted that some difficulties remain unexplained. Livy's narrative of the contrary is confused, and though based for the most part on Polybius, seems to be mixed up with that of other writers. (Livy. xxi. 52—56.) From his account of the retreat of the Roman army and of Scipio to Placentia after the battle, it seems certain that he considered the Roman camp to be situated on the left bank of the river, so that Scipio must necessarily cross it in order to arrive at Placentia, and therefore he must have conceived the battle as fought on the right bank: and this view has been adopted by many modern writers, including Niebuhr and Arnaldi: but the difficulties in its way greatly exceed those which arise on the con-

trary hypothesis. Niebuhr indeed summarily disposes of some of these, by maintaining, in opposition to the distinct statements of Polybius, that Hannibal had crossed the Padus below Placentia, and that Sempronius joined Scipio from Genua and not from Ariminum. Such arbitrary assumptions as these are worthless in discussing a question, the decision of which must rest mainly, if not entirely, on the authority of Polybius. (Niebuhr's Lectures on Roman History, vol. ii. pp. 94—96; Arnold, Hist. of Rome, vol. iii. pp. 94—101.) Cramer adopts the views of General Vaudoncourt. (Ancit. Italy, vol. i. p. 82.)

The battle on the Trebia is alluded to by Lucan, and described by Silius Italicus: it is noticed also by all the epitomisers of Roman history; but none of these writers add anything to our knowledge of the details. (Lucan, ii. 46; Sil. Ital. iv. 484—485; Nep. Nat. ii. 4; Eutrop. iii. 9; Oros. iv. 14; Flor. ii. 6, § 12.)

TREBULA (Трэбруа: Eth. Trebalunae: Треблуа), a city of Campania, situated in the district N. of the Vulturni, in the mountain tract which extends from near Cajozzo (Calatia) to the Via Latina. Pliny terms the citizens "Trebulani cognomine Balienienses," probably to distinguish them from those of the two cities of the same name among the Sabines (Plin. iii. 5. s. 9), but the Campanian town seems to have been the most considerable of the three, and is termed simply Trebula by Ptolemy, as well as by Livy. The first mention of the name occurs in n. c. 303, when we are told that the Trebulani received the Roman franchise at the same time with the Arpinates. (Livy. x. 1.) There seems no doubt that the Campanian city is here meant; and this is quite certain in regard to the next notice in Livy, where he tells us that the three cities of Compitilia, Trebula, and Saticula, which had revolted to Hannibal, were recovered by Fabius in n. c. 215. (K. xxiii. 39.) The "Trebulae ager," is mentioned also by Censor among the fertile districts of Campania, which Rullus proposed to distribute among the poorer Roman citizens (Cic. de Leg. Agr. ii. 25); and we learn from Pliny that it was noted for its wines, which had rapidly risen in estimation in his day. (Plin. iv. 6. s. 8.) The Liber Columbarum also mentions Trebula among the municipal towns of Campania. It appears to have received a fresh body of settlers under Augustus, but the site of its present town is given by a colony. (Livy, Col. p. 238; Plin. iii. 5. a. 9; Ptol. iii. 1 § 68.) The site of Trebula, which was erroneously fixed by Cluverius and some local writers to the S. of the Vulturni, appears to be correctly identified by local antiquarians with a place called Trevilla or Troggia, at the foot of the Pizzo S. Salvatore, about 6 miles N. of the Vulturni and 8 N. E. of Capua. There are said to be considerable ancient remains upon the spot, which together with the resemblance of name would seem clearly to establish the position of the ancient city. (Romaniell, vol. iii. pp. 575, 576; Trutta, Antichita All' horizon. Diss. xxii; Abeken, Mittel-Italien, p. 99.)

TREBULA (Трэбруа: Eth. Trebalunae), was the name of two cities or towns of the Sabines, apparently at no great distance from one another, which were called for the sake of distinction Trebuta Mutusca and Trebula Sufensia.

1. TREBULA MUTUSCA, called by Virgil simply MUSUTUSCA, while the full name is preserved to us by Pliny, the only author who mentions both places ("Trebulani qui cognominatur Mutuscae, et qui
Suffenas," Plin. vi. 12. s. 17.) Its site is clearly fixed at Monte Leone, sometimes called Monte Leone della Sabina, a village about 2 miles to the right of the Via Salaria, between Ostilia Nuova and Poggio S. Lorenzo. Here there are considerable ruins, including those of a theatre, of thermes or baths, and portions of the ancient pavement. Several inscriptions also have been found here, some of which have the name of the people, "Plebs Trebutiana," "Trebutiani Mutucensi," and "Trebutiani Mutus," that no doubt remain of their attribution. (Chaupy, Maison d'Horre, vol. Mag. 395—96; Orell. Inscr. 923, 3443, 3965.) As this seems to be the most considerable place of the two, it is probably that meant by Strabo, who mentions Trebutia without any distinct adjective but in conjunction with Eretum (Strab. v. p. 228). The Liber Colonarium also mentions a "Tribule, municipium" (p. 258) which is probably the same place. Martial also alludes to Trebutia as situated among cold and damp mountain valleys (v. 72), but it is not certain which of the two places he here refers to. Virgil speaks of Mutusca as abounding in olives ("oliviferacque Mutuscse," Aen. vii. 711), which is still the case with the neighbourhood of Monte Leone, and a village near it bears in consequence the name of Oliveto.

2. TREBULA SUFFENAS, the name of which is known only from Pliny, is of very uncertain site. Chaupy would place it at Rocca Spinabelli, in the valley of the Taverno, but this is mere conjecture. Guattani on the other hand fixes it on a hill near Stroncone, between Rieti and Termini, where there are said to be distinct traces of an ancient town. (Chaupy, l.c.; Guattani Mon. della Sabina, vol. i. p. 190.) It is probable that the Tribula (Trüedia) of Dionysius, mentioned by him among the towns assigned by Varro to the Aborigines (Dionys. i. 14) may be the same with the Trebula Suffenas of Pliny. In this case we know that it could not be far from Rieti.

TREIA (Eth. Treiesis; Ra. near Treja), a municipal town of Fiesum, situated on the left bank of the river Potentia, about 9 miles below Septempeda (S. Secerino) and 5 above Ricina. Pliny is the only geographer that mentions it; but it is probable that the Tpilarea of Pтолemy is only a corruption of its name. (Plin. iii. 13. s. 18; Ptol. iii. 1. § 52.) The Treieses are enumerated by Pliny among the municipal communities of Fiesum, and the municipal rank of the town is further attested by several inscriptions. (Orell. Inscr. 516, 3899.) It seems indeed to have been a considerable place. The itinerary of Antoninus places it on the branch of the Via Flaminia which led direct to Ancona: it was 9 miles from Septempeda and 18 from Alexium. (Itin. Ant. p. 312.) Cluverius says that he could find no trace either of the place or the name; but the rules were pointed out by Holsteinus as still existing on the left bank of the Potenza, 9 miles from the foot of the hill occupied by the village of Montevecchio. The latter place has since adopted the ancient name of Treja, and having been augmented by the population of several neighbouring villages, is now become a considerable town. (Cluver. Ital. p. 738; Holsten. Not. ad Clar. p. 136.)

TREMERUS INS. [Dromedae Insulae.]

TREMITHUS (Τρεμιθοῦς, Steph. B. s. v.; Tremithos, Ptol. v. 14. § 6; Τρεμιθοῦς, Constant. de Them. i. 15. p. 59, ed. Bonn; Tremithion, Hieroc. p. 797; Eth. Τρεμιθοῦς, Τρεμιθοῦς). A town in the interior of Cyprus, was the seat of a bishopric and of some importance in the Byzantine times. According to the Peutinger Table it was 18 miles from Salamis. 24 from Cyrene and 2 from Tamassus. Stephanus B. calls it a village of Cyprus, and derives its name from the turpentine trees (τρέμιθον) which grew in its neighbourhood. (Engel. Kypros, vol. i. p. 145.)

TREMULA, a town in Mauretania Tingitana. (Itin. Ant. p. 24.) Variously identified with Eczedchen and Suei Campa. [T. H. B.]

TREPONTIUM or TRIPUNTUM, a place on the Appian Way near the entrance of the Pontine Marshes, 4 miles nearer Rome than Forum Appii. It is not mentioned as a station in the Itineraries, but we learn from an inscription of the time of Trajan that it was from thence the part of the road which was restored by that emperor began. This important work, as we are informed by another inscription, was continued for nineteen miles, a circumstance that explains the origin of the name Decennovium, which occurs at a later period in connection with the Pontine Marshes. Fronius calls the Decennovium a ricer; but it is evident that it was in reality an artificial cut or cauld, such as must always have accompanied the highroad through these marshes, and as we know already existed in the days of Herace from Forum Appii. The importance of this work will account for the circumstance that we find the Pontine Marshes themselves called by Cassius Dio "Dictorum Index." (Cassid. Var. ii. 32, 39; Proc. B. G. i. 11.) The site of Treponium is clearly marked at a distance of 39 miles from Rome, by the name of Torre di Treponi, together with the remains of the 3 ancient bridges, from which it derives its name (Chaupy, Maison d'Horre, vol. iii. pp. 387—392; D'Anville, Analyse de l'Italie, pp. 184—187.)

The inscriptions above cited are given by Sir B.霍are, Class. Top., vol. i. pp. 97, 98; and by the Abbe Chaupy (l. c.). The name of Treponius, found in Strabo (v. p. 237) among the cities on the left of the Appian Way, can hardly be other than a corruption of Treponium, but it is wholly out of place in that passage, and is supposed by Kramer to be an interpolation. [E. H. B.]

TREES (Tripetes), a people repeatedly mentioned by Strabo, generally as a tribe of, or at least as closely connected with, the Cimmeri, but in a few passages as Thracians. They are not named by Homer or Herodotus. Strabo was evidently undecided whether to regard them as a distinct race, or as identical with the Cimmeri, in whose company they several times made destructive incursions into Asia Minor. "The Cimmeri, whom they name Treces also, or some tribe of them, often overran the southern shores of the Euxine and the adjoining countries, sometimes throwing themselves upon the Paphlagonians, at other times upon the Phrygians, at the time of the great Median war, that the Medes died from drinking bull's blood. And Lygdamis led his army as far as Lydia and Ionia, and took Sardes, but perished in Cilicia. And the Cimmeri and Treces often made such expeditions. But they say that the Treces and Cobus [their leader] were at last driven out [of Asia] by Medes, the king of the Scythians."* (Strab. i. p. 61.)

* The reading in the text is τῶν Νάδους τοῦ τῶν Κιμερίων βασιλείου; but as just before we find Μάδους τοῦ Σκυθωτοῦ, we can have no hesita-
that Sardes was taken several times; first by the
Cimmerian; then by the Treres and Lycians, as
Callinus also shows; lastly in the time of Cyrus and
Croesus." (Id. xiii. p. 627). “In olden times, it
befel the Magnesites [the people of Magnesia on
the Maeander] to be utterly destroyed by the Treres,
a Cimmerian tribe.” (Id. xiv. p. 647; see also xi.
p. 511, xii. p. 573; Cimmerii, Vol. I. p. 625, seq.;
Miller, Hist. Lit. Anc. Greece, pp. 108, 109; and
cf. Herod. i. 6, 15, 16, 103.)

Various attempts have been made to fix the dates
of these events; but the means of doing so appear
to be wanting, and hence scholars have arrived at
very different conclusions on the subject. Strabo
inferred from some expressions of Callinus that the
destruction of Sardes preceded that of Magnesia,
which latter occurred, he considers, after the time
of that poet, and during the age of Archibochus,
whom Strabo terms Theopon (g. 96) states that the kingdom
of Sitalces was bounded on the side next to the Triballi
by the Treres and Thilataei, who dwelt on the northern
slope of Mount Scambros (Sceumius), and extended
towards the W. as far as the river Oecus (Oecusus).
Whether this relative clause applies to the Treres
as well as to the Thilataei is doubtful; but the col-
location of the words seems to confine it to the
latter.

Strabo (l. p. 59) speaks of the Treres as dwelling
within the Thracians; and says that the Treres, who
were Thracians, possessed a part of the Trado after
the time of Priam (xii. p. 566).

Pliny does not mention the Treres as a Thracian
people; but in the description of Macedonia (iv. 10.
s. 17), says that they, with the Dardani and Pieres,
dwelt on its borders; it is not clear, however, which
borders are meant. (Cf. Theopom. Frug. 313, where
they are called Трето; and Steph. B. p. 664, where
also a district of Thrace inhabited by them is
named Τρετος).

It is possible that these Thracian Treres were the
descendants of a body of the Cimmerian Treres, left
N. of the Haemus when the main body advanced
towards Asia Minor; for there can be little doubt that Nie-
buhru's view respecting the course of their invades is
correct. “The general opinion, which is presupposed
in Herodotus also, is that the Cimmerians invaded
Asia Minor from the E., along the coasts of the
Euxine. But it would seem that, on the contrary,
you came through Thrace, for they made their first ap-
pearance in Ionia and Lydia. The former road is
almost entirely impassable for a nomadic people, as
the Euxine extends to the very shores of the
Euxine.” (Lect. Anc. Hist. i. p. 32, note.)

In confirmation of the conjecture above made, we
can refer to the parallel case mentioned by Caesar
(B. G. ii. 29), that the Adnatuci, a Belgian tribe,
were the descendants of the 6000 men whom the
Cimbri and Tontini, on their march towards Italy,
left behind them W. of the Elbe, to guard that part
of the road which they were unable to take with
them any farther. [J. R.]

TREBES (Τρέβης, Strab. : Τρετος), a river of La-
tium, and one of the principal tributaries of the Liris
(Γαργίλιον), into which it discharges its waters
close to the ruins of Fabrateria. (Strab. v. p. 237.)
Its name is mentioned only by Strabo, but there is
no doubt of its identification: it is still called the
Tolero in the lower part of its course, near its junction
with the Garigliano, but more commonly known as the
Sacco. It has its sources in the elevated plain which separates the mountains about Prac-
este from the Volscian group; and the broad valley
through which it flows for above 40 miles before
it joins the Garigliano must always have formed a
remarkable feature in this part of Italy. Through-
out out its course it separates the main or central
ranges of the Apennines from the outer lying mass of the
Monti Lepini or Volscian mountains, and hence
it must, from an early period, have constituted one
of the natural lines of communication between the
plains of Latium proper (the modern Campaigna di
Roma) and those of Campania. After the whole
district had fallen under the power of Rome it was
the line followed by the great highroad called the
Via Latina. [VIA LATINA. ]

TRES ARBORES, the Treves, Mutu-
atio or relay for horses mentioned in the Jerusalem
Itin. between Vasaatae and Elusa (Kausae). The
site is unknown.

TRES TABERNAE, the name of a station on
the Via Appia, between Aricia and Forum Appii,
which is noticed not only in the Itineraries (Itin.
Ant. p. 107; Teb. Pent.), but by Cicero and in the
Acts of the Apostles. From the former we
learn that a branch road from Antium joined the
Appian Way at this point (Cic. ad Att. ii. 12);
while in the latter it is mentioned as the place
where many of the disciples met St. Paul on his
journey to Rome. (Acts, xxviii. 15.) It was
probably therefore a village or place of some impor-
tance from the traffic on the Appian Way. Its
position would appear to be clearly determined by
the Antonine Itinerary, which gives 17 miles from
Aricia to Tres Tabernae, and 10 from thence to
Forum Appii: and it is a strong confirmation of
the accuracy of these data that the distance thus
obtained from Forum Appii to Rome corresponds
exactly with the true distance of that place, as
marked by ruins and ancient milestones. It is
therefore wholly unnecessary to change the distances
in the Itinerary, as proposed by D'Anville and
Chaupy, and we may safely fix Tres Tabernae at
a spot about 3 miles from the modern Cestona,
the road to Terracina, and very near the com-
menement of the Pontine Marshes. The Abbé
Chaupy himself points out the existence of ancient
roads remaining in this spot, which he supposes to be the
line of the station Ad Sponnas mentioned only in the
Jerusalem Itinerary. It is far more likely that
they are those of Tres Tabernae; if indeed the two
stations be not identical, which is very probable.
This situation would also certainly accord better
than that proposed by Chaupy with the mention of
Tres Tabernae in Cicero, who there joined the
Appian Way on his road from Antium to his
Fornian villa, not to Rome. (Cic. ad Att. ii. 12,
13, 14; C. Fin. Mand. de Ille, p. 124; D'Anville,
Antiqu. de l'Italie, p. 195; Westphal, Rom. Com-
paugne, p. 69.)

[Ε. Η. Ε.]

TRES TABERNAE, in Gaul. [TABERNAE.]
TREPTA (Τρεπτα, Strab. xiv. p. 683), in Cyprus,
called Τρέπτος in the Studiasmus Maris Magni (p. 285, ed. Hoffmann), where it is placed 50 stadia
from Palaepaphus or Old Paphus, was apparently
a promontory in the SW. of the island, and probably
the same as the one called Φναπτός by Itelyms (v.
14. § 9).

TRETUM (Τρέτος ΋ιπρος, Plut. iv. 3, § 3), a
TREVIUM.

premorial of Numidia at the W. point of the Sinus Oechiitae. (Strabo, xxv. p. 829, 832.) It probably derived its name from the numerous caves in the cliffs, which are still the lurking places of the piratical tribes of this coast. Now Sbbaa Rus. [T.H.D.]

TREVIUM PROM. (Treviri, Stat. Rom., §277.), the NW. promontory of Crete now called Grabias, the Concyclus of Treadon.

TRETUS. [Angius, p. 201, b.]

TREVA (rhopdla), a town of the Saxons in north-western Germany (Pol. ii. 11. §27), which must have been situated somewhere on the Trigen, but for further details we are unknown. It is impossible to fix its site with any degree of certainty. [L.S.]

TREVENTUM or TEREVENTUM (Eich. Treventinas, Flinn.; but inscriptions have Tereventinas and Tereventus: Tretiaca), a town of Samsunum, in the country of the Pentri, situated on the right bank of the Trinnum (Trigno), not far from the frontiers of the Frontana. Its name is not found in history, but Pliny mentions it among the municipal towns of Samsunum in his time, and we learn from the Liber Colonarum that it received a Roman colony, apparently under the Triminirate (Flinn. iii. 14. s. 17; Lib. Colon. p. 238). It is there spoken of as having been thrice besieged ("aeger aequ... post tertium sidonio adsignatus est"), probably during the Social War and the civil wars that followed; but we have no other account of these sieges; and the name is not elsewhere mentioned. But from existing remains, as well as inscriptions, it appears to have been a place of considerable importance, as well as of municipal rank. The modern Tretiaca, which is still the see of a bishop and the capital of the surrounding district, stands on a hill above the river Trigno, but the ruins of ancient buildings and fragments of masonry are scattered to a considerable extent through the valley below it. (Romanelli, vol. ii. p. 473. The inscriptions which have been discovered there are given by Mommsen (Inscr. R. N. pp. 269, 270.}

[E.H.B.]

TREVERI or TREVIRI (Trepidica, Trepidani, Pol.). There is authority for both forms of the name. The position of the Treviri is determined by several passages of Caesar. The Treviri bordered on the Rhine (B. G. iii. 11, iv. 10), and south of them on the Rhine were the Triscioci or Triscioci. The Arduenna Silva extended through the middle of the territory of the Treviri from the Rhine to the commencement of the territory of the Remi (B. G. v. 3). The Treviri were separated from the Germans by the Rhine (B. G. vii. 63, viii. 25); the Ulri were their neighbours on the opposite side of the Rhine (B. G. vi. 29.55). In Caesar's time the Treviri differed little from the Germans in their way of living and their savage temper.Tacitus remarks (de Mor. Germ. c. 28) that the Treviri and Nervii affected a Germanic origin, and it is probable that the Treviri were mixed with Germans, but Caesar supposed them to be a Germanic people. Mela (iii. 2) calls them the most renowned of the Belgae. When Hieronymus speaks of the resemblance between the language of the Galatae of Asia and of the Treviri, he means to say that the Treviri were Galatae (Galatia, Vol. I. p. 951). Strabo (iv. p. 194) speaks of the Nervii as being German. He says: "The Nervii are neighbours of the Treviri, and they (the Nervii) are also a German people;" which remark about the Nervii being also German does not refer to the Treviri, but to the Triboeci, whom he had just spoken of as a German nation which had settled on the Gallic side of the Rhine.

TREVIDON.

It seems impossible to determine whether Caesar includes the Treviri among the Belgae or the Celtae. Some geographers incline them in the Gallia of Caesar in the limited sense, that is, in the country of the Celtae, which lay between the Gaules or the Saint, and between the Ocean and the Rhine. If this determination is correct, the Mediomatrici also of course belong to Caesar's Gallia in the limited sense. [Mediomatrici.]

The Treviri are often mentioned by Caesar, for they had a strong body of cavalry and infantry, and often gave him trouble. From one passage (B. G. viii. 39), it appears that the Segni and Conduris, German settlers in Gallia, were between the Treviri and the Eburones; and the Conduris and Eburones were dependents of the Treviri (B. G. iv. 6). Caesar constructed his bridges over the Rhine in the territory of the Treviri (B. G. vi. 9); and Strabo speaks of a bridge over the Rhine in the territory of the Treviri. It appears then that the Treviri occupied a large tract of country between the Mosse (Maine) and the Rhine, which country was intersected by the lower course of the Moselle (Meuse), for Augustus Trevirorum (Trevir.), on the Mosella, was the chief town of the Treviri in the Roman imperial period and probably a town of the Treviri in Caesar's time. It is not possible to fix the exact limits of the Treviri on the Rhine, either to the north or the south. When the Germans were settled on the west side of the Rhine by Agrippa and after his time, the Treviri lost part of their territory; and some modern writers maintain that they lost all their country on the Rhine, a conclusion derived from a passage of Pliny (iv. e. 17), but a conclusion by no means certain. Another passage of Pliny, cited by Suetonius (Calig. c. 8), says that Caligula was born "in Treveris, vice Ambiatinio, supra Confluentes," and this passage places the Treviri on the Rhine. Treadon in his geography gives the Treviri no place on the Rhine; he assigns the land on the west bank of the river to the Germania Inferior and Germania Superior. The bishopric of Trier used to extend from the Meuse to the Rhine, and along the Rhine from the Abr below Andenbuch as far south as Binga. The limits of the old country of the Treviri and of the diocese may have been the same, for we find many examples of this coincidence in the geography of Gallia. The rugged valley of the Abr would be a natural boundary of the Treviri on the north.

Tacitus gives the Treviri the name of Socii (Ann. i. 63); and in his time, and probably before, they had what the Romans called a Curia or senate. The name of the Treviri often appears in the history of the war with Civilis (Tacit. Hist. iv.). The Treviri under the Empire were in that part of Gallia which was named Belgica, and their city Augusta Trevirorum was the chief place, and under the later emperors frequently an imperial residence. [Augusta Trevirorum.]

TREVIRI (Trepedia, a town in Gallia, mentioned by Sidi- denius Apollinaris (Propempt.), the position of which is partly determined by the fact of the poet fixing Trevisan in the mountainous region of Central France, and partly by the existence of a place named Treve on the boundary of the old province of Rouergue; and on a little river named Trevesal. The mountain in which the Trevesal rises (Lesseron) is the "Vicinius minus boni jugum Rotonis" of Sidensius. [Brest.] [G.L.]

TKKVIIU.

TREVIU. [Treveri.]

TRIACONTASCHOENUS (Τριάκονταςχώνης, Itol. iv. 7. § 32), a district so named by Ptolemy after the analogy of the Dodecaschoen of Egypt, and forming the most northern part of Thracia on the W. side of the Nile, between the cataracts of the Nile and the Apolloniae, an Egyptian river. [T. H. D.]

TRIADITZA (Τριάδιτζα), the North Chos. of St. 214. Apos. Geog. Huds. iv. p. 43, a town in Upper Moesia, at the confluence of the sources of the Oescus, and the capital of the district called in late times Dacia Interior. It was situated in a fertile plain, and its site is identified with that of some extensive mins N. of Sophia. [J. R.]

TRIBALLI (Τριβαλλί), a Thracian people which appears to have been in early times a very widely diffused and powerful race, about the Danube; but which, being pressed upon from the N. and W. by various nations, became gradually more and more confined, and at length entirely disappeared from history. Herodotus speaks of the Triballian plain, through which flowed the river Auros, which fell into the Brongus, a tributary of the Ister (iv. 49). This is probably the plain of Kossos in the modern Servia.

Thucydides states (b. 96) that on the side of the Triballi, who were independent at the beginning of the Peloponnesian War, the Macedons, with their allies, were posted on the E. side of the Danube (cf. Plin. iii. 29, iv. 17; Strab. vii. pp. 317, 318). Strabo (vii. p. 303) informs us that the Triballi were much exposed to the incursions of migrating hordes driven out of their own countries by more powerful neighbours, some expelled by the Strybians, Bastarae, and Sarmatiae, from the N. side of the Danube, who either settled in the islands of that river, or crossed over into Thrace; others from the W., set in motion by the Illyrians. The earliest event recorded of them is the defeat which they gave to Statilus, king of the Olybynes, who made an expedition against them, n. c. 424, in which he lost his life (Thuc. iv. 101). In b. c. 376 the Triballi crossed the Haemus, and with 30,000 men advanced as far as S. as the territory of Abdara, which they ravaged without opposition. On their return, however, loaded with booty, the people of Abdara took advantage of their carelessness and disorderly march, to attack them, killing upwards of 2000 men. The Triballi thereupon marched back to take revenge for this loss; and the Abdertes, having been joined by some of the neighbouring Thracians, gave them battle; in the midst of which they were deserted by their treacherous allies and, being surrounded, were slain almost to a man. The Triballi then prepared to lay siege to Abdara which would now have been quite unable to resist them for more than a very short time; but at this critical moment, Chabrias appeared before the town with the Athenian fleet, which had recently defeated the Lacedaemonian fleet at Naxos. Chabrias compelled the Triballi to retire from Abdara, and garrisoned the city when he departed. (Diod. xv. 36). In n. c. 339, Philip II., after raising the siege of Byzantium, marched to the Danube, where he defeated the Getae, and took much booty. On his return through the country of the Triballi, the latter posted themselves in a defile, and refused to allow the Macedonian army to pass, unless Philip gave to them a part of the plunder. A fierce battle ensued, in which Philip was severely wounded, and would have been slain, but for his son Alexander, who threw himself before his father, and thus saved his life. The Triballi were at length defeated, and probably pressed submission to Philip, so long at least, as he was in their country.

On Alexander's accession to the throne, he thought it necessary to make his power felt by the Thracians on the froniers of his kingdom, before he quitted Europe for his great enterprise against the Persian empire. Accordingly, in the spring of n. c. 333, he marched from Amphipolis in a north-easterly direction, at the head of a large force. In ten days he reached the pass by which he intended to cross the Haemus, where a body of Thracians had assembled to oppose his progress. They were defeated, and Alexander advanced against the Triballi, whose king was absent, having had timely information of Alexander's movements, had already withdrawn, with the old men, women, and children into an island of the Danube, called Peuce, where many other Thracians also had sought refuge. The main force of the Triballi posted themselves in woody ground on the banks of the river Lygions, about 3 days' march from the Danube. Having ventured out into the open plain, however, they were completely defeated by the Macedonians, with a loss of 3000 men. (Arr. Anab. ii. 32, 33.)

Alexander then marched to the Danube, opposite to Peuce; but he was unable to make himself master of that island, because he had few boats, and the enemy were strongly posted at the top of the steep sides of the island. Alexander therefore abandoned the attempt to take it, and crossed the Danube to make war on the Getae. It would appear, however, that he had made sufficient impression on the Triballi to induce them to apply to him for peace, which he granted before his return to Macedonia. It was probably after these events that the Tri- balli were attacked by the Antitarates, a powerful Illyrian tribe, who seem to have completely subdued them, great numbers being killed, and the survivors driven farther towards the east. (Strab. vii. pp. 317, 318.) Hence, in b. c. 293, the Gauls, with only 13,000 foot and 3000 horse, defeated the combined forces of the Triballi and Getae (Just. xvi. 1.)

When the Romans began to extend their dominion in the direction of the Danube, the Triballi were a small and weak people dwelling about the southern shore of the Oescus with the Danube, near the town Oescus (cf. Itol. iii. 10. § 10, viii. 11. § 6).

Pliny (vi. 2) states that, according to Isigones, there were people among the Triballi who fascinated by their look, and destroyed those whom they gazed upon too long, especially with angry eyes; adults were more liable to be injured by them than children. This is probably the same superstition as the modern one respecting the "evil eye," which is peculiarly prevalent among the Slavonian races. (Arrian, Anab. i. 1. § 4, 2. § 4, seqq., 3. § 3, seqq., 4. § 6, v. 26. § 6, vii. 9. § 2; Steph. B. s. r.; Mannert, vii. § 25, seqq.) [J. R.]

TRIBOCI or TRIBOCI, a German people in Gallia. Schneider (Cesar, B. G. I. 51) has the form "Triboces" in the accusative plural. Pliny has Tribochi, and Strabo Tribocchi (Τριβοκόχι). In the passage of Cesar (B. G. iv. 10) it is said that all the Mss. have "Tribocchii" (Schreuder, note).

The Triboci were in the army of the German king Ariovistus in the great battle in which Caesar defeated him; and though Caesar does not say that
TRIBOLA.

they were Germans, his narrative shows that he considered them to be Germans. In another passage (B. G. iv. 10) Caesar places the Triboci on the Rhine, between the Mediomatrici and the Treveri, and he means to place them on the left or Gallic side of the Rhine. Strabo (iv. p. 193), after mentioning the Sequani and Mediomatrici as extending to the Rhine, says, "Among them a German people has settled, the Triboci, who have passed over from their native land." They also (iv. 17) and Tacitus (German. c. 28) say that the Triboci are Germans. The true conclusion from Caesar is that he supposed the Triboci to be settled in Gallia before c. 58.

Ptolemy (iv. 9 § 17) places the Triboci in Upper Germany, but he incorrectly places the Vangiones between the Nemetes and the Triboci, for the Nemetes bordered on the Triboci. However he places the Triboci next to the Rauraci, and he names Breucenamagus (Broecomagus) and Eclebus (Helebus) as the two towns of the Triboci. D'Anville supposes that the territory of the Triboci corresponded to the diocese of Strassburg. Sel etiquette (Seliet or Setie), we may suppose, belonged to the Nemetes, as in modern times it belonged to the diocese of Speyer; and it is near the northern limits of the diocese of Strassburg. On the south towards the Rauraci, a place named Markelsheim, on the southern limit of the diocese of Strassburg and bordering on that of Basle, indicates a boundary by a Teutonic name (mark), as Fines does in those parts of Gallia where the human tongue prevailed. The name of the Triboci does not appear in the Notit. Provinc., though the names of the Nemetes and Vangiones are there; but instead of the Triboci we have Civitas Argentarutus (Strassburg), the chief place of the Triboci. Ptolemy makes Argentarutus a city of the Vangiones. [G.L.]

TRIBOLA (Triدبα, App. Hist. 62, 63), a town of Lusitania, in the mountainous region S. of the Tago, probably the modern Trives. [T.H.D.]

TRIBULUM. [Tri'belum.]

TRIBUNOCI, a place in Gallia, which we may assume to have been near Concordia, for Aunonium (xvi. 12), after speaking of the battle near Strassburg, in which Chnodomarius, king of the Allemanni, was defeated by Julian, says that the king hurried to his camp, which was near Concordia and Tribunoci. But neither the site of Concordia nor of Tribunoci is certain. [Concordia.][G.L.]

TRICARANUM. [THELIS, p. 602, s.]

TRICASSES, a people of Gallia Lugdunensis. (Plin. iv. 18.) In Ptolemy (iv. 8 § 12) the name is Trissa (Tri'sa), and their city is Augustobona (Αὔγουστοβονα). They border on the Parisii. The name appears in the form Triaissina in Aunonium (xvi. 1) and in an inscription. In the Notit. Provinc. the name Civitas Triassicum occurs; and the name of the people has been transferred to the town, which is now Troyes on the Seine, the chief town of the French department of Aube. Caesar does not mention the Tricasses, and his silence has led to the conjecture that in his time they were comprised within the powerful state of the Sequani. [G.L.]

TRICASTINI (Τριάστατοι), a Gallic people between the Rhine and the Alps. Livy (v. 34) describing the march of Belisarius and his Galli into Italy, says they came to the Triasticini: "The Alps next were opposed to them;" from which it is inferred that the Triasticini were near the Alps. But nothing exact can be inferred from the narrative, nor from the rest of this confused chapter. In the description of Hannibal's march (Liv. xxii. 34) it is said that Hannibal, after settling the disputes of the Allobroges, being now on his road to the Alps, did not make his march straight forward, but turned to the left into the territory of the Triasticini, and from the country of the Triasticini he went through the utmost part of the territory of the Voscini into the country of the Trierci, and finally reached the Durentia (Durancus). It would be out of place to examine this question fully, for it would require some pages to discuss the passages in Livy. He means, however, to place the Triasticini somewhere between the Allobroges and part of the border of the Voscini territory. The capital of the Vosi is Dea Vocontiorum, or Décé in the department of Drôme; and the conclusion is that the Triasticini were somewhere between the Isara (Icare) and the Druna (Drome). This agrees with the position of Augusta Triacastilorum (Augusta Triasticinorum) as determined by the Itus.

Ptolemy (ii. 10 § 13) places the Triasticini east of the Seguallani, whose capital is Valentsis, and he can Salcei as the capital of the Triasticini a town Novemogus, which appears to be a different place from Augustae Triasticinorum. D'Anville places the Triasticini along the east bank of the Rhone, north of Arusio (Orange), a position which he fixes by his determination of Augusta Triasticinorum; and he adds, "that the name of the Triasticini has been preserved partly in that of Triassicus." But the Triasticini of Livy and Ptolemy are certainly not where D'Anville places them. [G.L.]

TRICCA (Tri'ki), E. E. Tρικά (Tri'kalia), an ancient city of Theassaly in the district Histiaea, stood upon the left bank of the Peneus, and near a small stream named Lethaena. (Strab. ix. p. 438, xiv. p. 647.) This city is said to have derived its name from Tricca, a daughter of Peneus. (Steph. B. s. e.) It is mentioned in Homer as subject to Pudalerius and Machaon, the two sons of Asclepius or Acapulcios, who led the Theassalians to the Trojan War (Hom. Ill. ii. 729, iv. 202); and it possessed a temple of Asclepius, which was regarded as the most ancient and illustrious of all the temples of this god. (Strab. ix. p. 437.) This temple was visited by the sick, whose cure were recorded there, as in the temples of Asclepius at Epidaurus and Cos. (Strab. viii. p. 374.) There were probably physicians attached to the temple; and Leake gives an inscription in four elegiac verses, to the memory of a "god-like physician named Cimber, by his wife Andromache," which he found upon a marble in a bridge over the ancient Lethaenus. (Northern Greece, vol. iv. p. 285.) In the edict published by PolySpechon and the other generals of Alexander, after the death of the latter, allowing the exiles from the different Greek cities to return to their homes, those of Tricca and of the neighbouring town of Pharsalon were excepted for some reason, which is not recorded. (Diod. xviii. 56.) Tricca was the first town in Thessaly at which Philip V. arrived after his defeat on the Aous. (Liv. xxxii. 13.) Tricca is also mentioned by Liv. xxxvi. 13; Plin. iv. 8. s. 15; Polyb. i. 13. § 44; Them. Ortat. xxvii. p. 333.

Procopius, who calls the town Triacitis (Τριάστιτος), says that it was restored by Justinian (de Aedif. iv. 3); but it is still called Tricca by Hierocles (p. 642) in the sixteenth century, and the form in Justinian may be a corruption. In the twelfth century it already bears its modern name (Τρίκα). (Cod. Notitia Dni Comm. p. 137, ed. Paris; Eustath. Od. II. ii. p. 229.)
who anotlier and admit on Some pp. the arrived and placed place 450 rived and town i"oad principal serves of this place. (Strab. iv. p. 204; Plin. iii. 23). They, with many other Alpine tribes, were subdued in the reign of Augustus. [L. S.]

TRIDENTUM or TRIDENTE (Týôbêra; Trent or Trent), the capital of the Tridentini in the south of Rhaetia, on the eastern bank of the Athesias, and on the highroad from Verona to Veldulena. (Plin. ii. 23; Justin. xx. 5; [It. Ant. pp. 275, 291; Paul. Disc. i. 2, iii. 9, iv. 42, v. 36; Flor. iii. 3; Pol. iii. 1 § 31; Tab. Peut.) The town is said to have derived its name from the trident of Neptune, which is still shown fixed in the wall of the ancient church of S. Vigil. The place seems to have been a Roman colony (Ordi. Inscription. Nos. 2183, 3744, 3905, 4225). Theodicor the Great surrounded Tridentum with a wall, of which a considerable portion still remains. (Comp. Pallharm. Beschreib. der Röm. Heerstrasse von Verona nach Augsburg, p. 23, foll.; Benedetto Giovanni, Discorsi sopra un' imprevista Trentino, Trento, 1824, and by the same author, Trento, città de' Rezz and Colonia Romana, Trento, 1825.) [L. S.]

TRIÈRES (Tîanîpî, Polyb. v. 68; Strab. xvi. p. 754), a small fortified place in Phoenicia, on the northern declivity of Lebanon, and about 12 miles distant from Tripolis. It is in all probability the same place as the Triês of the Itin. Hierosol. (f. 180). Lapeo identifies it with Eute, others with Belmont. [T. H. D.]

TRIÈRUM (Tîpîsor or Tîpîsor âkôp, Polt. iv. 3 § 13), a headland of the Regio Syrtica in Africa, Propria. Ritter (Erdk. i. p. 928) identifies it with the promontory of Cephalis mentioned by Strabo (xvii. p. 836), the present Cape Cefalo or Mesara. Potency indeed mentions this as a separate and adjoining promontory; but as Cefalo still exhibits three points, it is possible that the ancient names can be connected, and may refer only to this one cape. (See Biaupice, Letters from the Mediterraneum, i. p. 18; Delia Cella, Viaggio, p. 61.) [T. H. D.]

TRIFANUM. [VESCIA.]

TRIGABOLI. [PADUS.]

TRIGISAMUM, a town of Noricum, mentioned only in the Peuting. Table, as situated not far from the mouth of the river Trigisamus (Tracen), which flows into the Danubius. It still bears the name of Traisamus. (See Muchar, Noricum, vol. i. p. 269.) [L. S.]

TRIGLYPHON (Tîgîplîfûn to kai Tîgîpîrûn, Polt. vii. ii. § 23), the metropolis and royal residence (Baśkisor) of Cirrhulida, a district at the NE. corner of the Day of Bengal. It is doubtless the present Tipperah (Triphra), which is situated on the Gomut (Gomaut), a small river which flows into the Brahmaputra near its mouth. [V.]

TRIGUNDUM, a place in the territory of the Gallaciæ Lecenses, in Gallaecia. (Hisparia Terracencum, [It. Ant. p. 424].) Variously identified with Icreo and Arandaon. [T. H. D.]
TRILEUCUM.

TRILEUCUM (Τριλεύκου ἄγαρ, Ptol. ii. 6, § 4), a promontory in the territory of the C a li c i u s Lu- censes, on the N. coast of H er s am e T a r - r a c o n e s i s, known also by the name of K a p o u ἄγαρ. (Marxan, p. 44.) Now Cape O r t e g o . [T. H. D.]

TRIMA'MMIUM (Τριμαμμίων or Τριμαμμίων, Ptol. iii. 10, § 10), a castle on the Danube, in Lower Moe sia. (Itin. Ant. p. 222; called Trimmium in the Tab. Peut. and by the Geogr. Rav. iv. 7.) Variously identified with M a r o u t o, D i d a l i k a, and the ruins near Pyrto or B i r a g o . [T. H. D.]

TRIMENOTIHYA. [TEMENOTIHYA.]

COIN OF TRIMENOTIHYA.

TRIMONTIUS (Τριμοντίου, Ptol. iii. 5, § 8), a town of the Selgæae, in Britannia Barba ra, probably near Longholm, in the neighbourhood of the Scot i c Frith. [T. H. D.]

TRI'MU'THUS. [TREMMITHUS.]

TRI'NACI'A. [TYRACA.]

TRI'NAC'I'A. [SICILIA.]

TRINASUS (Τρινάσος, Paus. iii. 22, § 3; Τρί - νασος, Ptol. iii. 16, § 9), a town or rather fortress of Lacedaemon, situated upon a promontory near the head of the Laconian gulf, and 30 stadia above Syrakus. It is opposite to three small rocks, which gave their name to the place. The modern village is for the same reason still called Trinaià (rά Τρι - να - σος). There are considerable remains of the ancient walls. The place was built in a semi-circular form, and was not more than 400 or 500 yards in circuit. (Leake, Morea, vol. i. p. 232; Bobbly, Researches, òc. p. 94; Ross, Wandering in Griechenland, vol. ii. p. 259; Curtius, Peloponnesos, vol. iv. p. 1878.)

TRINEMENSIA. [ATTICA, p. 330, b.]

TRINUNS (Τρινύγο), a considerable river of S ä m u n t a s, which has its sources in the rugged mountain district between Â g n o n e and C a s t e l o d i s S a n g r o, and has a course of about 60 miles from thence to the Adriatic. During the lower part of its course it traverses the territory of the F r e n t a c i, and falls into the sea about 5 miles SE. of H i s t o n i u m (H I Í π o). The only ancient writer who mentions it is P livy (H. 12, s. 17), who calls it "flumen pertusum;" it is, indeed, the only river along this line of coast the mouth of which affords shelter even for small vessels. [E. H. B.]

TRINOBANTES (called by Ptolemy Τρινοβάντες, ii. 3, § 22), a people on the E. coast of Britannia Romana, situated N. of London and the Thame s, in Ê s s e x, and the southern parts of S u f f o l k, whose capital was C a m a d o b a t o n (Colchester). They submitted to C a e s a r when he landed in Britain, but revolted against the Romans in the reign of Nero. (C a s . B. G. v. 20; Tac. Ann. xiv. xiv. 31.) [T. H. D.]

TRINURTIUM. [TINERTIUM.]

TRIOBRIX, a river of Gallia named by S tid i on s A p o l l i n a r i s (Propemt). It is a branch of the Û b i t o (Lot), and is now named Trèvèrc. [G. L.]

TRIOCALA (Τριόκαλα. Eth. Triocalinus; & near Calatabeltotta), a city of Sicily, situated in the interior of the island, about 12 miles from T h e r m e a Selinuntia (Scinco). As the name is cited by S t e p h a n o s of Byzantium (who writes the name τρικάλα) from the Phili stines, it is probable that it was a S ic i a n fortress or an island at least as the time of the elder D i o n i s i a s; but no mention of it is now found in history until the second Service War in Sicily in the 13th century. On that occasion T r i o c a l a was selected, on account of its great natural strength and other advantages, by T r y p h e n e, the leader of the insurgents, as his chief stronghold: he fortified the rocky summit on which it was situated, and was able to hold out there, as in an improppable fortress, after his defeat in the field by L. Lucullus. (Diod. xxxi. 7, 8.) The circumstances of its fall are not related to us, but Silius I t a l i u s alludes to it as having suffered severely from the effects of the war. ("Servili vastata Triocola bello," xiv. 270.) Ciccore nowhere notices the name among the municipal towns of Sicily, but in one passage mentions the "Tricalinus ager" (Verr. v. 4); and the Triocalini again appear in Pliny's list of the municipal towns of Sicily. The name is also found in Ptolemy, but in a manner that gives little information as to its position. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 14.) It was an episcopal see during the early part of the middle ages, and the site is identified by F a z e l o, who tells us that the ruins of the city were still visible in his time a short distance from C a l a t a b e l t o t t a, a town of Saracen origin, situated on a lofty hill about 12 miles inland from Sc ì n c e; and an old church on the site still preserved the ancient appellation. (Fazell. de Reb. Sic. x. 472; Cluver, Sicil. p. 374.) [E. B.]

TRI'OPÍ'UM (Τριόπιον ἄγαρ: C. C r i o), the promontory at the eastern extremity of the peninsula of Cnidus, forming at the same time the southernmost extremity of Asia Minor. (Thucyd. viii. 53, 60; S c h y l a s, p. 38; Pomp. Mela, i. 16.) On the summit of this promontory a temple of Apollo, hence called the Triopian, seems to have stood, near which gardens were celebrated, whence S c h y l a s calls the promontory the ἄμφυτων ἰπέων. According to some authorities the name of Cnidus itself also bore the name of Triopianum, having, it is said, been founded by T r i o p a s . (Steph. B. s. v. Τριπότρος; Plin. v. 29, who calls it Tripolis; Eustath. ad Hom. ii. 341; C i t i s a .) [L. S.]

TRIPI'HI'LA. [ELIS.]

TRIPODÍSCUS (Τριπόδισκος, Thuc. iv. 70; Τριπόδισκος, Paus. i. 43, § 8; Τριπόδεια, Τριπο - διακος, Strab. i. p. 394; Τριπόδισκος, Hes. op. Steph. B. s. v. Τριπότρος: Eth. Τριπόδισκος, Steph. B.; Τριπότροκκίος), an ancient town of M e g a r i s , said to have been one of the five hamlets into which the Megarid was originally divided. (Plut. Quaest. Græc. c. 17.) Strabo relates that, according to some critics, Tripodis was mentioned by H o m e r, along with A e g a r i s s a and N i c e a, as part of the dominions of Ajax of Scyllus, and that the verse containing these names was omitted by the Athenians, who substituted for it another to prove that Scyllus in the time of the Trojan War, belonged to Athens. (Strab. l. c.) Tripodiscus is celebrated in the history of literature as the birthplace of S u x a r i o n, who is said to have introduced comedy into Attica, and to have removed from this place to the Attic Ilaria. (Aspas. ad Aristot. Eth. Nic. iv. 2; Dict. of Biogr. Vol. iii. p. 948.) We learn from Thaikydides (I. c.) that Tripodiscus was situ-

TRIPODÍSCUS.
TRIPOLIS.

Triathian, at the foot of Mount Gerania, at a spot convenient for the junction of troops marching from Platea in the one direction, and from the Isthmus in the other. Pausanias (I. c.) also describes it as lying at the foot of Gerania on the road from Delphi to Argos. This author relates that it derived its name from a tripod, which Correas brought from Delphi, with the injunction that wherever the tripod fell to the ground he was to reside there and build a temple to Apollo. (Comp. Conon, Narrat. 19.) Leake noticed the vestiges of an ancient town at the foot of Mt. Gerania, on the road from Platea to the Isthmus, four or five miles to the NW. of Megara. (Leake, Northern Greece, vol. ii. p. 410.)

TRIPOLIS (Tripolae, Ptol. v. 15, § 4; Eth. Triopolit(i)ς; Adj. Tripoliticius; Plin. xiv. 7, s. 9), an important maritime town of Phœnicia, situated on the N. side of the promontory of Themprospoon. (Strab. xvi. p. 754.) The site of Tripolis has been already described, and it has been mentioned that its derived name, which literally signifies the three cities, from its being the metropolis of the three confederate towns, Tyre, Sidon, and Aradas [Phœnicia, Vol. ii. p. 606]. Each of these cities had here its peculiar quarter, separated from the rest by a wall. Tripolis possessed a good harbour, and, like the rest of the Phœnician towns, had a large maritime commerce. (Cf. Joannes Pheœnæ, c. 4; Wesseling, ad Itin. Ant. p. 149.) Respecting the modern Tripoli (Tarabulus or Tripoli di Sorin) see Po-cocke, vol. ii. p. 146, seq.; Maundrell, p. 26; Burchardt, p. 163, seq., &c.; cf. Seylax, p. 42; Mele, i. 12; Plin. v. 20, s. 17; Dist. xvi. 41; Steph. B. s. a.; Eckhel, vol. iii. p. 372.)

TRIPO'NTIUM.

COINS OF TRIPOLIS IN PHOENICIA.

TRIPO'NTIUM (TpiffKvavav, Eth. Tripolv*ni*). 1. A town of Phrygia, on the northern bank of the upper course of the Maeander, and on the road leading from Sardis by Philadelphia to Laodicea. (It. Ant. p. 336; Tab. Peut.) It was situated 12 miles to the north-west of Hierapolis, and is not mentioned by any writer before the time of Pliny (v. 30), who treats it as a Lydian town, and says that it was washed by the Maeander. Pliny (v. 2, § 18) and Stephanus B. describe it as a Carian town, and the latter (s. a.) adds that in his time it was called Neapolis. Hierocles (p. 669) likewise calls it a Lydian town. Ruins of it still exist near Yeni or Koça Yeni. (Arundell, Seven Churches, p. 245; Hamilton, Researches, i. p. 525; Fellows, Asia Minor, p. 287.)

2. A fortress in Pontus Polemoniacus, on a river of the same name, and with a tolerably good harbour. It was situated at a distance of 90 stadi from Cape Zephyrium. (Arrian, Perip. P. F. p. 17; Anon. Peripil. P. F. p. 13; Plin. v. 14.) The place still exists under the name of Tibrizi, and is situated on a rocky headland. (Hamilton, Researches, i. p. 257.)

TRIPO'NTIUM (Tripolv*ni*). 1. A district in Arecia-dia. [Vol. i. p. 193, No. 12.]

2. A district in Laconia. [Vol. ii. p. 113, b.]

3. A district of Perrhaebia in Thessaly, containing the towns Azorus, Pythium, and Doliche. (Liv. xiii. 53.)

TRIPO'NTIUM (Tripolv*ni*). 1. A district in Arecia-dia. [Vol. i. p. 193, No. 12.]

2. A district in Laconia. [Vol. ii. p. 113, b.]

3. A district of Perrhaebia in Thessaly, containing the towns Azorus, Pythium, and Doliche. (Liv. xiii. 53.)

TRIPI'YA. [Argina, p. 34, b., p. 35, a.]

TESSANTON (Tptrala). Ptol. ii. 3, § 4, a river on the S. coast of Britannia Romana; according to Camden (p. 137) the river Test, which runs into Southampton Water; according to others the river Arun. [T. H. D.]

TRISCIANA (Tripavir, Procop. de Aed. iv. 4, p. 282), a place in Moesia Superior, perhaps the present Firiatiama or Piratians. [T. H. D.]

TRITAEA. 1. (Tripava: Eth. Tripavor; in Herod. i. 145, Tripavaς is the name of the people), a town in Aetolia, and the most inland of the 12 Achaean cities, was distant 120 stadia from Phocea. It was one of the four cities, which took the lead in reviving the Achaean League in b.c. 280. In the Social War (b.c. 220, seq.) it suffered from the attacks of the Aetolians and Eleans. Its territory was annexed to Patrae by Augustus, when he made the city a colony after the battle of Actium. Its site is probably represented by the remains at Kastritsa, on the seashore, near the frontiers of Achaia. (Herod. i. 145; Ptol. ii. 41, iv. 6, 59, 60; Strab. vii. p. 386; Paus. xxii. 38 sqq., seq.; Steph. B. s. v.; Leake, Morea, vol. ii. p. 117.)

2. (Tripova, Ptol. iv. 3, s. 4: Eth. Tripavir; Herod. viii. 33), one of the towns of Phocis, burnt by Xerxes, of which the position is uncertain. (Leake, Northern Greece, vol. ii. p. 89.)

3. (Tripova, Steph. B. s. v.; Eth. Tripavir, Thuc. iii. 101), a town of the Locri Oetae, described by Stephanus B. as lying between Phocis and the Locri Oetae. Hence it is placed by Leake not far from Delphi and Amphissa, on the edge, perhaps, of the plain of Sidima. (Leake, Northern Greece, vol. ii. p. 621.)

TRITIUM, a town of the Attirgones, in Hispania Tarraconensis, in the jurisdiction of Clunia. (Plin. iii. 3, s. 4; Itin. Ant. pp. 450, 454.) Variously identified with Carvela, Rodilla, and a place near Monasterio. [T. H. D.]

TRITIUM METALLUM (Tripova Metalim). Ptol. ii. 6, § 53), a town of the Herones, in Hispania Tarraconensis, now called Triexio, near Najera. (Flores, Cantabr. p. 182.) [T. H. D.]

TRITIUM TUBORICUM (Tripova Tuboricum), Ptol. ii. 6, § 66), a town of the Bariduli, in Hispa-
nia Tarraconensis, on the river Deva or Devala. (Mel. iii. 1.) It is commonly identified with Motricum, which, however, does not lie on the Deva; and Mannert (i. p. 365) seeks it near Mondragun, in Gipuzcoa. [T. II. D.]

TRITON (ἡ Τριτων ποταμός, Ptol. Ἰον. ii. 19, &c.), a river of Libya, forming, according to Ptolemy, the boundary of the Regio Syrtica towards the W. It rose in Mount Vasaletus, and, flowing in a northerly direction, passed through three lakes, the Libya Palus, the lake Pallasi, and the lake Tritonitis (ἡ Τριτωνίτις Χάμη, Ιβ.; after which it fell into the sea in the innermost part of the Syrtis Minor between Macomada and Taucrape, but nearer to the latter.

The lake Tritonitis of Ptolemy is called, however, by other writers Tritonis (ἡ Τριτονίτις Χάμη, Herod. iv. 179). Herodotus seems to confound it with the Lesser Syrtis itself; but Seylax (p. 49), who gives it a circumference of 1000 stadia, describes it as connected with the Syrtis by a narrow opening, and as surrounding a small island—that called by Herodotus (ib. 178) Phila (Φηλα), which is also mentioned by Strabo (xiv. p. 836), as containing a temple of Aphrodite, and by Diodorus (Perteg. 267.). This lake Tritonis is undoubtedly the present Schibhok-el-Loujikah, of which, according to Shaw (Travels, i. p. 237), the other two lakes are merely parts; whilst the river Triton is the present El-Hammeh. This river, indeed, is no longer connected with the lake (Shaw, Ibr.;) a circumstance, however, which affords no essential ground for doubting the identity of the two streams; since in those regions even larger rivers are sometimes compelled by the rapid rise of the land to alter their course. (Cf. Bitter, Erdkunde, i. p. 1017.) Seylax (l. c.) mentions also another island called Tritonitis (Τριτωνίτις) in the Syrtis Minor, which last itself is, according to him, only part of a large Sinus Tritonitides (Στιτωνιτις κόσμος).

Some writers confound the lake Tritonis with the lake of the Hesperides, and seek it in other districts of Libya; sometimes in Mauretania, in the neighbourhood of Mount Atlas and the Atlantic Ocean, sometimes in Cyrenacna near Berenice and the river Lathon or Lethon. The latter hypothesis is adopted by Lucan (ix. 346, seq.), the former by Diodorus Siculus (iii. 53), who also attributes to it an island inhabited by the Amazons. But Strabo (l. c.) especially distinguishes the lake of the Hesperides from the lake Tritonis.

With this lake is connected the question of the epithet Tritogeneia, applied to Palllas as early as the days of Homer and Heled. But though the Libyan river and lake were much renowned in ancient times (cf. Aeschyl. Eum. 293; Eurip. Ion. 872, seq.; Pind. Pyth. iv. 36, &c.), and the application of the name of Pallasi to the lake connected with the Tritonis seems to point to these African waters as having given origin to the epithet, it is nevertheless most probable that the brook Triton near Alacamen in the upper river Boesa has the best pretensions to that distinction. (Cf. Pausan. ix. 33. § 5; Schol. ad Apollon. Rhod. i. 109, iv. 1345; Müller, Orchemonos, p. 355; Leake, Northern Greece, vol. ii. p. 136, seq.; Kruse, Hellas, vol. ii. pt. 1 p. 475. [T. II. D.]

TRITON (Τρίτων, Diosc. v. 72), a river of Crete at the source of which Athene was said to have been born. From its connection with the Omphalian plain, it is identified with the river discharging itself into the sea on the N. coast of the island which is called Platypéras, but changes its name to Ghióso as it approaches the shore. (Pashley, Travels, vol. ii. p. 225.) [E. B. J.]

TRITON (Τρίτων), a river of Boeotia. [Vol. i. p. 413, a.]

TRITURBIA. [P(edal).]

TRIVICUM (Τριβίκιον), a town of Sannium, in the country of the Hirpi, not far from the frontiers of Apulia. Its name is known to us only from Horace, who slept there (or at least at a villa in its immediate neighbourhood) on his well-known journey to Brundusium. (Hor. Sat. i. 5. 79.) It appears therefore that it was situated on the Via Appia, or the line of road then frequented from Rome to Brundusium. But this was not the same which was followed in later times, and is given in the Itineraries under that name, a circumstance which has given rise to much confusion in the toponymy of this part of Italy. [Via Appia.] There can be no doubt that Trivicum occupied nearly, if not exactly, the same site with the modern Tavricio; the ancient road appears to have passed along the valley at the foot of the hill on which it was situated. It was here that stood the villa to which Horace alludes, and the remains of Roman buildings, as well as of the pavement of the ancient road, still visible in the time of Pratelli, served to mark the site more accurately. (Pratelli, Via Appia, iv. 10. p. 507; Romanelli, vol. ii. p. 350.) It probably never was a municipal town, as its name is not mentioned by any of the geographers. [E. H. B.]

TRIUMPHILINI, an Alpine people of Northern Italy, who are mentioned by Augustus in his inscriptions in which he recorded the final subjugation of the Alpine tribes (ap. Plin. iii. 20. s. 24). It appears from Pliny that the whole people was reduced to slavery and sold together with their lands. According to Cato they were of Euganean race, as well as their neighbours the Camuni, with whom they were repeatedly mentioned in common. (Plin. l.c.) Hence there is little doubt that they were the inhabitants of the district called the Tell Triumpin, the upper valley of the Mella, and separated only by an intervening ridge of mountains from the Val Camonica, the land of the Camuni. [E. H. B.]

TROAS (Τροής, Τροϊς, Τροϊα, or Τραίας γῆς), the territory ruled over by the ancient kings of Troy or Ilum, which retained its ancient and venerable name even at a time when the kingdom to which it had originally belonged had long ceased to exist. Homer himself nowhere describes the extent of Troas or its frontiers, and even leaves us in the dark as to how far the neighbouring allies of the Trojans, such as the Dardanians, who were governed by princes of their own, of the family of Priam, were true allies or subjects of the king of Ilum. In later times, Troas was a part of Mysia, comprising the coast district on the Aegean from Cape Lectum to the neighbourhood of Damnous and Abyssus on the Hellespont; while inland it extended about 8 geographical miles, that is, as far as Mount Ida, so as to embrace the south coast of Mysia opposite the island of Lesbos, together with the towns of Assus and Antandrus. (Hom. H. xxv. 514; Herod. vii. 42.) Strabo, from his well-known inclination to magnify the empire of Troy, describes it as extending from the Aegeus to the Caicus, and his view is adopted by the Scholiast on Apollonius Rhodius (i. 1115). In its

Vol. II. 4 k
proper and more limited sense, however, Troas was
an undulating plain, traversed by the terminal branches
of Ida running out in a north-western direction, and
by the small rivers Satnion, Scamander, Simois, and
Thymbris. This plain gradually rises towards
Mount Ida, and contained, at least in later times,
several flourishing towns. In the Iliad we hear in-
deed of several towns, and Achillies boasts (II. ix.
328) of having destroyed eleven in the territory
of Troy; but they can at best only have been very
small places, perhaps only open villages. That
Ilion itself must have been far superior in strength
and population is evident from the whole course of
events; it was protected by strong walls, and had its
acropolis. [Ilion]

The inhabitants of Troas, called Troes (Troyes),
and by Roman prose-writers Trojan or Tenceri,
were in all probability a Pheasantian race, and seem
to have consisted of two branches, one of which, the
Tenceri, had emigrated from Thrace, and become
amalgamated with the Phrygian or native popula-
tion of the country. Hence the Trojans are some-
times called Tenceri and sometimes Phryges. (Herod.
v. 122, vii. 45; Strab. i. p. 62, xiii. p. 604; Virg.
Aen. i. 38, 248, ii. 232, 571, &c.) The poet of the
Iliad in several points treats the Trojans as inferior
in civilisation to his own countrymen; but it is im-
possible to say whether in such cases he describes
the real state of things, or with the object of
laying them so only from a natural partiality for
his own countrymen.

According to the common legend, the kingdom of
Troy was overthrown at the capture and burning of
Ilium in B.C. 1184; but it is attested on pretty
good authority that a Trojan state survived the
catastrophe of its chief city, and that the kingdom
was finally destroyed by an invasion of Phrygians
who crossed over from Europe into Asia. (Xanthis,
an. Strab. xiv. p. 680, xiii. p. 572.) This fact is
indirectly confirmed by the testimony of Homer
himself, who makes Poseidon predict that the
potency of Aeolia should long continue to reign
over the Trojans, after the race of Priam should be
extinct. [L. S.]

TROCHOIDES LACUS. [Delos, p. 759, b.]

TROCHUS. [Cenchreae, p. 584, a.]

TROCMADA (Troph occupata), a place of uncertain
situation in Galatia, which probably derived its name
from the tribe of Trogemni. It is mentioned only by late
Christian writers (Conc. Chalc., pp. 125, 309, 663;
355, where its name is Trokamada; Hieroci. p. 698,
where it is miswritten Petramodix.) [L. S.]

TROCMI (Galatia).

TROES. [Troas.]

TROESA. [Tesa.]

TROEZEN (Troezi), a city in "Massilia of
Italy," as Stephanius (a. e.) says, if his text is right;
but perhaps he means to say "a city of Massilia
in Italy." (Eustath., ad II. p. 297) says that it is
in "Massilia Italy." Charax is Stephanius' au-
thority. This brief notice adds one more to the list
of Massilasoci settlements on the coast of the
Mediterranean; but we know nothing of Troezen. [G. L.]

TROEZEN (Troezi; also Troezi, Pol. iii.
16, § 12; Eich. Troeziors; the territory 77 Trop-
soya, Eurip. Med. 633; 77 Troeziors 75, Thuc.
ii. 56), a city of Peloponnese, whose territory formed
the southeastern corner of the district; to which the
name of Argolis was given at a later time. It stood
at the distance of 15 stadia from the coast, in a fer-
tile plain, which is described below. (Strab. viii. p.
373.) Few cities of Peloponnese boasted of so re-
mote an antiquity; and many of its legends are
closeiy connected with those of Athens, and prove
that its original population was of the Ironic race.
According to the Troezeniains themselves, their
country was first called Orea from the Egyptian
Orus, and was next named Aethipa from Althepus,
the son of Aethipus, who is said to have been
called by the Troesnians the brother of Ilium, and
the father of Oras. In the reign of this king, Poseidon
and Athena contended, as at Athens, for the land of
the Troezeniains, but, through the mediation of Zeus,
they became the joint guardians of the country.
Hence, says Pausanias, a trigon and the head of
Athena are represented on the ancient coins of
Troezen. (Comp. Momont, Suppl. iv. p. 267, § 189.)
Althepus was succeeded by Saros, who built a tem-
ple of the Saronian Artemis in a marshy place near
the sea, which was hence called the Phoebinean marsh
(Thracia lyjera), but was afterwards named Saroius,
because Saros was buried in the ground belonging
to the temple. The next kings mentioned are
Hyperes and Anthus, who founded two cities, named
Hyperia and Anthemia. Aitius, the son of Hyperes,
inherited the kingdom of his father and uncle, and
called one of the cities Poseidoniias. In his reign,
Troezen and Pittikens, who are called the sons of
Pelops, and may be regarded as Achaean princes,
settled in the country, and divided the power with
Aitius. But the Pelopidne soon supplanted the
erlier dynasty; and on the death of Pittheus,
Pittkens united the two Ionic settlements into one city,
which he called Troezen after his brother. Pittheus
was the grandfather of Theseus by his daughter
Aethra; and the great national hero of the Athenians
was born and educated at Troezen. The close
connection between the two states is also intimated by
the legend that two important demi of Attica,
Amphiathrus and Spheates, derived their names from
two sons of Troezen. (Paus. ii. 30. §§ 5—9.) Be-
sides the ancient names of Troezen already specified,
Stephanus B. (a. v. Troeziors) mentions Aphrodiasis,
Saronia, Poseidoniias, Apolloniias and Anthemia.
Strabo likewise says (v. p. 373) that Troezen was
called Poseidouia from its being sacred to Poseidon.

At the time of the Trojan War Troezen was sub-
ject to Argos (Hom. II. ii. 561); and upon the con-
quest of the Peloponnese by the Dorians, it received
a Doric dynasty (Paus. ii. 30. § 6.), and was in this...}
approach of Xerxes, the majority of them took refuge at Troezen, where they were received with the greatest kindness by the semi-Ionic population. (Herod. viii. 41; Plut. Them. 10.) The Troezens sent 5 ships to Artemision and Salamis, and 1000 men to Plataea, and the rest to Mynite. (Herod. ii. 45, x. 28, 102.) After the Persian war the friendly connection between Athens and Troezen appears to have continued; and during the greatness of the Athenian empire before the thirty years' peace (n. c. 455) Troezen was an ally of Athens, and was apparently garrisoned by Athenian troops; but by this peace the Athenians were compelled to relinquish Troezen. (Thuc. i. 115, iv. 43.) Before the Peloponnesian War the two states were estranged from one another; and the Troezens, probably from hostility to Argos, entered into close alliance with the Lacedaemonians. In the Peloponnesian War the Troezens remained the firm allies of Sparta, although their country, from its maritime situation and its proximity to Attica, was especially exposed to the ravages of the Athenian fleet. (Thuc. ii. 56, iv. 45.) In the Corinthian War, b. c. 394, the Troezens fought upon the side of the Lacedaemonians (Xen. Hell. iv. 2 § 16); and in 223-3 they are numbered among the allies of Sparta against Athens. (Xen. Hell. vi. 2 § 3.) In the Peloponnesian period Troezen passed alternately into the hands of the contending powers. In n. c. 303 it was delivered, along with Argos, from the Macedonian yoke, by Demetrias Piborces; but it soon became subject to Macedon, and remained so till it was taken by the Spartan Olymphon in b. c. 278. (Polyaen. Strat. ii. 29. § 1; Paus. Strat. iii. 6. § 7.) Shortly afterwards it again became a Macedonian dependency; but it was united to the Achaean League by Aratus after he had liberated Corinth. (Paus. ii. 8. § 5.) In the war between the Achaean League and the Spartans, it was taken by Cleomenes, in n. c. 223 (Polyb. vii. 52; Plat. Chron. 19); but after the defeat of this monarch at Sellasia in n. c. 221, it was doubtless restored to the Achaeans. Of its subsequent history we have no information. It was a place of importance in the time of Strabo (E. 1. 26 p. 372), and in the second century of the Christian era it continued to possess a large number of public buildings, of which Pausanias has given a detailed account. (Paus. ii. 31, 32.)

According to the description of Pausanias, the monuments of Troezen may be divided into three classes, those in the Agora and its neighbourhood, those in the sacred enclosure of Hippolytus, and those upon the Acropolis. The Agora seems to have been surrounded with stone or colonnades, in which stood marble statues of the women and children who fled for refuge to Troezen at the time of the Persian invasion. In the centre of the Agora was a temple of Artemis Soteira, said to have been dedicated by Theseus, which contained altars of the infernal gods. Behind the temple stood the monument of Pittheus, the founder of the city, surmounted by three chairs of white marble, upon which he and two assessors are said to have administered justice. Not far from hence was the temple of the Muses, founded by Aradus, a son of Hephaestus, where Pittheus himself was said to have learnt the art of discourse; and before the temple was an altar where sacrifices were offered to the Muses and to Sleep, the deity whom the Troezens considered the most friendly to these goddesses.

Near the theatre was the temple of Artemis Lyceia, founded by Hippolytus. Before the temple there was the very stone upon which Orestes was purified by nine Troezens. The so-called tent of Orestes, in which he took refuge before his expiation, stood in front of the temple of Apollo Tereus, which was also the most ancient temple that Pausanias knew. The water used in the purification of Orestes was drawn from the sacred fountain Hippocrene, struck by the hoof of Pegasus. In the neighbourhood was a statue of Hermes Polyeides, with a wild olive tree, and a temple of Zens Sacer, said to have been erected by Aetus, one of the mythical kings of Troezen.

The sacred enclosure of Hippolytus occupied a large space, and was a most conspicuous object in the city. The Troezens denied the truth of the ordinary story of his being dragged to death by his horses, but worshipped him as the constellation Aurora, and dedicated to him a spacious sanctuary, the foundation of which was ascribed to Dionysus. He was worshipped with the greatest honours; and each virgin, before her marriage, dedicated a lock of her hair to him. (Enn. Hippol. 1424; Paus. iii. 32 § 1.) The sacred enclosure contained, besides the temple of Hippolytus, a temple of Apollo Epileptus, also dedicated by Dionysus. On one side of the enclosure was the stadium of Hippolytus, and above it the temple of Aphrodite Calaecoisa, so called because Phaedra beheld from this spot Hippolytus as he exercised in the stadium. In the neighbourhood was shown the tomb of Phaedra, the monument of Hippolytus, and the house of the hero, with the fountain called the Heraeum in front of it. The Acropolis was crowned with the temple of Athena Polias or Sthenia; and upon the slope of the mountain was a sanctuary of Pan Lytorius, so called because he put a stop to the plague. Lower down was the temple of Isis, built by the Halicarnassians, and also one of Aphrodite Ascaria.

The ruins of Troezen lie west of the village of Dhamnala. They consist only of pieces of wall of Hellenic masonry or of Roman brickwork, interspersed over the lower slopes of the height, upon which stood the Acropolis, and over the plain at its foot. The Acropolis occupied a rugged and lofty hill, commanding the plain below, and presenting one of the most extensive and striking prospects in Greece. There are in the plain several ruined churches, which probably mark the site of ancient temples; and several travellers have noticed the remains of the temple of Aphrodite Calaecoiso, overlooking the cavity formerly occupied by the stadium. The chief river of the plain flows by the ruins of Troezen, and is now called Potamon. It is the ancient Taurus, afterwards called Hyllicus (Paus. iii. 32 § 7), fed by several streams, of which the most important was the ChryssaorLOSES, flowing through the city, and which still preserved its water, when all the other streams had been dried up by a nine years' drought (Paus. ii. 31 § 10).

The territory of Troezen was bounded on the W. by that of Epidaurus, on the S.W. by that of Hermione, and was surrounded on every other side by the sea. The most important part of the territory was the fertile maritime plain, in which Troezen stood, and which was bounded on the south by a range of mountains, terminating in the peninsula Scyllauma and Bucephala, the most easterly points of the Peloponnesus. [SYLLAB.] Above the promontory Scyllauma, and nearly due S.E. of Troezen, was a large bay, protected by the island of
TROGILUM.

Calauria, named Pagon, where the Grecian fleet was ordered to assemble before the battle of Salamis (Herod. viii. 42; Strab. viii. p. 373.) The port-town, which was named Celendera (Pans. ii. 32. § 9), appears to have stood at the western extremity of the bay of Pagon, where some ancient remains are found. The high rocky peninsulas of Methana, which belonged to the territory of Troezen and is united to the mainland by a narrow isthmus, is described in a separate article. [METHANA.] There were formerly two islands off the coast of Troezen, named Calauria and Sphaeria (afterwards Hera), which are now united by a narrow sandbank. (Leake, Morea, vol. ii. p. 442, seq.; Bobbeye, Recherches, iv. p. 56; Curtius, Peloponnesos, vol. ii. p. 431, seq.)

TROGILYON (Trogl{lyon), a promontory formed by the western termination of Mount Mycale, opposite the island of Samos. Close to this promontory there was an island bearing the same name. (Strab. xiv. p. 636; Steph. B. s. n. ♦ Tρωγλιόν, according to whom it was also called Trogilia; Act. Apost. xx. 15, where its name is Trogilyon.) Pliny (v. c. 31. s. 57) speaks of three islands being called Trogilae, their separate names being Philion, Argemne, and Sandina. TROGILYON, a town of Lusitania, according to Luitprand (Adversus Sarac., § 30, ap. Wessel ad Itin. p. 458), the same place which Pliny (iv. 35) calls Castra Julia. It is incontestably the Turcanon of the Geogr. Rav. (iv. 32) and the modern Truxillo. (Cf. Florez, Esp. Sorit. xiii. p. 114, and Uberti, it. pt. i. p. 393.) [T. H. D.]

TROGILYS (Trogl{ysis), a small lake in Lycaonia, mentioned only by Strabo (xii. p. 565), and probably the same as the one named Ighan.

[? L.]

TROGLODYTAE (Trogl{odore, Plut. iii. 10. § 9; Diodor. iii. 14; Strab. xvii. pp. 786, 819; Agatharch. ap. Phot. p. 454, ed. Bekker; Philostr. i. 70. s. 71 vi. 29. s. 34; ♦ Tρωγλοδαύτες or Tρωγλοδοτική, sc. χώρα, Diodor. i. 30; Plut. iv. 7, 27.) Under the term Trogloodytae the ancients appear to have included various races of men. For we meet with them in Mauretania (Strab. xvii. p. 825), in the interior of Libya east of the Garamantes, along the Arabian shore of the Red Sea, as well as on the opposite coast of Aethiopia and Egypt, and on both in such numbers that the districts were each of them named "Regio Trogloodytae," and even on the northern side of the Caucasus (Strab. xi. p. 506). The Caucasian Trogloodytae were in a higher state of civilization than their eastern namesakes, since they cultivated corn.

But the race most commonly known as Trogloodytae inhabited either shore of the Red Sea, and were probably a mixture of Arabian and Aethiopian blood. Their name, as its composition imports (τρωγλόχα, δοξα), was assigned to them because they either dug for themselves cabins in the lime and sandstone hills of that region, or availed themselves of its natural caverns. Even in the latter case, the villages of the Trogloodytae were partly formed by art, five long tunnels, for the passage or stabling of their herds, cut between village and village, and the rocks were honeycombed by their dwellings. Bruce saw at Gojran in Nubia a series of such caverns, inhabited by herdsmen, and witnessed the periodical passage of the cattle in Scamor from the lowlands to the hills. The same cause led to similar migrations in ancient times, viz., the appearance of the gadfly in the marshes, immediately after the cessation of the periodical rains.

The accounts of the Regio Trogloodytae that extended from the Sinus Arimaspi to Berenice may be assumed to be applicable to the Trogloodytae generally. The c a m a toms of Lpessino, from which is derived the most accurate image of their dwellings. The Abydos, who now inhabit this region, exhibit many of their peculiar manners and customs. Their language was described by the Greeks as a shriek or whistle, rather than as articulate speech; a portion at least of them were serpent-eaters. (Herod. iv. 183.) But their general occupation was that of herdsmen.

Aghotharchides of Cnidus is the earliest writer who mentions the Trogloodytae (ap. Photius, p. 454, ed. Bekker). According to him and Strabo (xvii. p. 786) animal food was their staple diet; and they eat not only the flesh but also the bones and hides of their cattle. Their drink was a mixture of milk and blood. Since, however, the older and sicklier beasts were slaughtered for food, it may be presumed that the better animals were reserved for the Egyptian and Aethiopian markets. The hides supplied their only armorial figure; but many of them went naked, and the women tattooed their bodies, and wore necklaces of shells. The pastoral habits of the Trogloodytae rendered them so swift of foot as to be able to run down the wild beasts which they hunted; and they must have been acquainted with the use of weapons, since they were not only hunters, but robbers, against whom the caravans passing from the interior of Libya to Berenice on the Red Sea were obliged to employ a guard of soldiers, stationed at Phaiakos (Strab. xii. p. 636; Ptol. ii. 120, Peut.), about 25 miles from Berenice. Trogloodytae also served among the light troops in the army of Xerxes, n. c. 480, and acted as guides to the caravans, since the Ichthyophon who Cambyses employed as explorers of Morea were a tribe of Trogloodytae. (Herod. iii. 19.) Among the common people a community of women existed: the chiefs alone, who may have been of a superior race, being always appropriated. For the abstraction or seduction of a chieftain's wife an ox was the penalty. During their retirement in caverns they seem to have lived peaceably together, but as soon as they satisfied forth with their herd's into the pastures they were incessantly at war with one another, on which occasions the women were wont to act as mediators. They practised the rite of circumcision, like the Arvabans and Aethiopians generally. According to Aghotharchides the Trogloodytae differed as much from the rest of mankind in their sepulchral customs as in their habitations. They bound the corpse neck and heels together, affixed it to a stake, pelted it with stones amid shouts of laughter, and when it was quite covered with stones, placed a horn upon the mound, and went their ways. But they did not always wait for natural death to perform this ceremony, since, accounting inability to procure a livelihood among intolerable evils, they strangled the aged and infirm with an ax-tail. Their civilization appeared so low to Aristotle (Hist. Anim. viii. 12) that he describes the Trogloodytae as pigniuses who, mounted on tiny horses, waged incessant wars with the cranes in the Aethiopian marshes. A tribe on the frontiers of Abyssinia, called Barnahas by the natives, corresponds, according to modern accounts, with the
TROIČUS MONS.

TROIČUS MONS (Τρωίχον ἔρως, Strab. xvii. p. 809; Steph. B. s. v.; Τρωίκυς λίμνι ἔρως, Ptol. iv. 5. § 27,) was a long range of hills east of the Nile, which threw out several abrupt spurts into the Hellenistic of Egypt. It stood in the parallel of Hieracaepolis, i.e. in Lat. 31° N. From this calcarious range was quarried, according to Strabo, the stone used in the construction of the Pyramids. [W. B. D.]

TROJA. [ILLUM. TROAS.]

TRONIS. [DAULIS, p. 756, b.]

TROPAEA AUGUSTI. [MONOEI PORTUS.]

TROPAEA DRUSI (πολιμνία Δροσοῦ), a trophy erected on a hill on the banks of the Elbe by Drusus, to mark the point to which he had advanced in the north of Germany. (Dion Cass. i. 1.; Flor. iv. 12; Ptol. ii. 11. § 28, who speaks of it as if it were a town.) [L. S.]

TROPAEA-ROMOEN (τὰ Πολιμνία τούτου, or ξανθίματα, Strab. iii. p. 160, iv. p. 178), a trophy or monument erected by Pompey on the summit of the Pyrenees, recording the subjugation of 876 Spanish cities. (Plin. iii. 3. s. 4, iv. 7. s. 27, xxvii. 2. s. 6.) It stood at the spot named Sumnum Pyrenaeum in the Itin. Ant. (p. 337), and according to some on the boundary between Gaul and Spain. [T. H. D.]

TROSISMS (Τροίσι, Hieroc. p. 637; Τρωισις or Τρωίσις, Ptol. iii. 10. § 11), a town of some importance in Lower Moesia, on the Danube, where, according to the Itin. Ant. (p. 225), the Legio I. Jovia had its head quarters, though the Not. Imp. (c. 28) more correctly mentions the Legio II. Herculea. Lapie identifies it with Mactochis. (Cf. Ovid, ex Pomp. iv. 9, v. 79.)

TROSSULUM, a town of Etruria, which, according to a story current among the Romans, was taken by a body of cavalry alone, unsupported by infantry; an exploit thought to be so singular, that the Roman knights were for some time called Trossulii on account of it. (Plin. xxxiii. 2. s. 9; Festus, s. v. Trosuli, p. 367.) No other mention is found of it; and it was probably a small place which had disappeared in the time of the geographers, but Pliny tells us (L. c.) that it was situated 9 miles from Volsciinis, on the side towards Rome. It is said that the name was still retained by a place called Tressus or Vado di Tressus, about 2 miles from Monte Fischei, as late as the 17th century, but all trace of it is now lost. (Holsten. Not. ad Clem. p. 67; Dennis's Etruria, vol. i. p. 517.) [E. H. B.]

TRIESTUM. [Castrum Trientinum.]

TRIESTUS or TRIENTINUS (Προεντίνιος: Trento), a considerable river of Picenum, which rises in the Apennines above Amatrice, flows under the walls of Arcidi (Ascalum), and falls into the Adriatic about 5 miles S. of S. Benedetto. It gave name to a town which was situated at its mouth, and is called by Pliny Trientum, but more commonly Castrium Trientum. Though one of the most considerable of the rivers of Picenum, the Trentus has very much the character of a mountain torrent, and is only navigable for about 5 miles near its mouth. (Strab. v. p. 241; Plin. iii. 13. s. 18; Mel. ii. 4. § 6; Ptol. iii. 1. § 21) [E. H. B.]

TRIETUS-TRIENTIUM-TRIESTUS. [CITTA DI.] TRIESTE.

TRIYBACTA (Τριβακτος, Ptol. vi. 12. § 6), a place to the NW. of Alexandria Oxyxus, probably represented by the present Bokhara. [V.]

TUALENSIS (Τούαλενσ, Ptol. ii. 3 § 13), a town on the E. coast of Britannia Barbillana, which stood on an estuary of the same name (Ptol. iv. 6. § 5), now the Murray River. [T. H. D.]

TUATI VETUS, a town in Illyricum Barbillana, belonging to the jurisdiction of Corduba. (Ptol. iii. 3. s. 3.) Ukert (ii. pt. i. p. 370) is of opinion that it should be called Tuci Vetus. [T. H. D.]

TUBANTES or TUBANTIA (Τουβάντιος or Τουβάντιος), a German tribe which was allied with the Cherusi, and seems originally to have dwelt between the Ilme and Yssel; but in the time of Germanicus they appear in the country south of the Luppe, that is, in the district previously occupied by the Sigambri (Tac. Ann. i. 54, viii. 55, foll.). They seem to have followed the Cherusi still farther to the south-east, as Tolomy (ii. 11. § 23) places them on the south of the Chatti, near the Thuringer Wald, between the rivers Fulda and Hera (Comp. Tac. Germ. 56). In the end we find them again as a member of the confederacy of the Franks. (Nazarini, Paneg. Const. 18.) The name Subatii in Strabo (vii. p. 292) is probably only an error of the transcriber, whence Kramer has changed it into Tubatia. (Wilhelm, Germanienc, pp. 130.) [L. S.]

TURČCCI, a place in Lusitania between Sca labris and Mundeldiriga. (Itin. Ant. p. 420.) Probably Abrantes. [T. H. D.]

TURVEBO MAJUS and MINUS (Θυρηβόρος, Ptol. iv. 3. § 35), two neighbouring towns in the interior of Byzantium. The latter is still called Thebanura; the former is variously identified with Tubercole and Zugnouan. Pliny (v. 4. s. 4) writes the name Tuburcia. (Itin. Ant. pp. 44, 48; Tab. Pomp.) [T. H. D.]

TUBUSUPTIS (Τουβοοσύπτως, Τουβοοσύπτως, or Τουβοοσύπτως, Ptol. iv. 2. § 31, viii. 13. § 12), a town of Mauretania Caesariensis, 18 miles SE. of Saldae. (Itin. Ant. p. 32.) According to Ammianus Marcellinus it was situated close to Mons Ferratus (xxix. 5. § 11). From Pliny (v. 2. s. 1) we learn that it was a Roman colony since the time of Augustus. It was once a place of some importance, but afterwards declined, though even at a late period it seems to have had a Roman garrison (Not. Imp., where it is called Tubusubtus). Variously identified with Bary, Bordjy, Tieala, and a place on the Dyjel Afrom. [T. H. D.]

TUBUCATA (Τουμαστά, Ptol. iv. 6. § 25), a place in the interior of Libya. (Ptol. iv. 2. § 31.) A town of Mauretania Caesariensis. Pliny places it in the interior; but according to Pliny (v. 2. s. 1) it was on the sea, at the mouth of the river Ampagea. (Cf. Tab. Pomp.)

2. A town in the district of Byzantium in Africa Proper. (Ptol. iv. 3. § 32.) From inscriptions found in a village still called Dugga it may be inferred that the place should be correctly called Taccu. According to the Itin. Ant. (pp. 47, 49, 51) it lay 50 miles N. of Safitala, the modern Sleilhas or Sflaita, and also bore the name of Terebentina or Terebinthina, probably from its being situated in a neighbourhood abounding with the Terebinth tree. Tucca was a fortified town. (Procop. de Aed. vi. 5.) It is probably the same place called Taccarobi by St. Augustin (adv. Donat. vi. 24) (Cf. Wessels ad Itin. p. 48.)

3. A town of Numidia. (Ptol. iv. 3. § 29.)

TUCCI (Τούκκης, Ptol. ii. 4 § 11), a town of Hispania Boetica, between Ilipa and Itinica (Itin. Ant. p. 432.) According to Pliny (iii. 3. s. 3) it is 4 k 3.
TUCIUS. [T. II. D.]

TUCIUS (Tuscius, Pet. i. i. § 56), a town of the Arcavici in Hispania Tarraconensis. [T. II. D.]

TUDI (Tudii, Tudius, Pet. ii. 6. § 55), a town in Hispania Tarraconensis of L. Umbra, and on the road from Bracara to Asturica. [Hist. Ant. p. 429.]

It is called Tyde by Pliny (iv. 20. s. 34), and according to an ancient tradition it was the seat of an Aedolian colony under Diomed: a tale probably occasioned by the similarity of its name to that of Tydes (Sil. Ital. ii. 367, xvi. 369; Plin. L. C. ii. 462). It is the modern Tuy. [T. H. D.]

TUDER (Tuder, Tudertinus, Tudel), one of the most considerable cities of Umbria, situated on a lofty hill, rising above the left bank of the Tiber, about 26 miles S. of Perusia and 18 W. of Spoleto. There is no doubt that it was an ancient Umbrian city, but no mention of the name occurs in history previous to the Roman conquest. Silius Italicus tells us that it was celebrated for the worship of Mars (Sil. Ital. iv. 222, viii. 462), and notices it on a lofty hill. (Id. vi. 645.) The first notice of it in history is on an occasion of a prodigy which occurred there at the time of the invasion of the Cumiri and Teutones (Plut. Mar. 17; Plin. ii. 57. s. 58); and shortly after we learn that it was taken by Crassus, as the seat of the Sullan, during the wars of the latter with the partisans of Marcius. (Plut. Crass. 6.) It received a colony under Augustus, and assumed the title of "Colonia Fides Tuder," probably in consequence of some services rendered during the Roman War, though its name is not mentioned by Appian. (Plin. iii. 14. s. 19; Lib. Colon. p. 214; Murat. Insocr. pp. 1111. 4, 1120. 3; Orell. Insocr. 3726.) It appears from inscriptions to have been a flourishing and important town under the Roman Empire, and is mentioned by all the geographical writers among the chief towns of Umbria. (Strab. v. p. 227; Plin. L. C.; Pet. iii. i. § 54.) It was not situated on the Flaminian Way, but the Tabula gives a line of road, which led from Amelia to Tuder, and thence to Perusia. (Tab. Peut.) Its greatest prosperity was in the time of its elevation to the rank of a city, which was already alluded to by Strabo (L. c.), and rendered it a place of importance during the Gothic Wars, after the fall of the Western Empire. (Procop. B. G. ii. 10, 13.) It is again mentioned as a city under the Lombards (P. Dacc. iv. 8); and there can be no doubt that it continued throughout the middle ages to be a considerable city. It is now much decayed, and has only about 2500 inhabitants, but still retains the title of a city.

Considerable ancient remains still attest its former consideration. Among these the most remarkable are the walls of the city, some portions of which are apparently of great antiquity, resembling those of Perusia, Volaterrae, and other Etruscan cities, but they are in general more regular and less rude. Other parts of the walls, of which three distinct circuits may be traced, are of regular masonry and built of travertine. These are certainly of Roman date. There are also the remains of an ancient basilica, called a forum, arising from its eleventh temple of Mars, but more probably a basilica of Roman date. Numerous coins and other small objects have been found at Todi: amongst the latter the most interesting is a statue of Mars, now in the Museo Gregoriano at Rome. The coins of Tuder, which are numerous, belong to the class called Aes Grave, being of brass and of large size, resembling the earliest coinage of Volaterrae, Iguvium, &c. They all have the name written in Etruscan characters TvTerre, which we thus learn to have been the native form of the name.

TUGA, a town of the Oretani, in Hispania Tarraconensis. (Plin. iii. 3. s. 4; Hist. Ant. p. 404.) Its site is marked by some ruins at Toga, near Vesu-aria, at the sources of the Guadalquivir. (Cf. Flori. Esp. Sigr. v. pp. 24, 34; D'Anville. Geogr. Anc. i. p. 34.)

TUGENA (Tugena), [Helvetti, Vol. i. p. 1041.]

TUGLA, a town of the Oretani, in Hispania Tarraconensis. (Plin. iii. 3. s. 4; Hist. Ant. p. 404.) Its site is marked by some ruins at Toga, near Vesu-aria, at the sources of the Guadalquivir. (Cf. Flori. Esp. Sigr. v. pp. 24, 34; D'Anville. Geogr. Anc. i. p. 34.)

TUGRIS (Tugris), [Helvetti, Vol. i. p. 1041.]

TULIPHERUM, [Tulipherum], a town in Spain, probably belonging to the country of the Teoburgi, and on the road from Puercal to Asturica. (Hist. Ant. p. 455.) Probably the modern Mesgria. [T. H. D.]

TULLONIUM, [Tullonium], a town of the Caristi in Hispania Tarraconensis. [T. H. D.]

TULLONGIUM, [Tullongium], a town of the Caristi in Hispania Tarraconensis. [T. H. D.]

TULLSRIUM (Toulphirus), a town in Germany, probably in the country of the Chanei Minores, on the right bank of the Visurgis. (Pet. ii. i. § 28.) Wilhelm (Germanien, p. 161) identifies it with the modern Verden; but this is a mere conjecture.

TULLUSRICUM (Toulphirus), a town in Germany, probably in the country of the Chanei Minores, on the right bank of the Visurgis. (Pet. ii. i. § 28.) Wilhelm (Germanien, p. 161) identifies it with the modern Verden; but this is a mere conjecture.

TULLICCIUM (Toullegis), a town of the Caristi in Hispania Tarraconensis. [T. H. D.]

TULLONIUM (Toulphirus), a town of the Barduli in Hispania Tarraconensis, on the road from Puercal to Asturica. (Hist. Ant. p. 455.) Probably the modern Mesgria. [T. H. D.]
TULLUM.

TULLUM (Toluca), in Gallia Belgica, is one of the towns of the Lencii, who bordered on the Mediomatrici. (Ptol. ii. 9. § 13.) Nasium is the other city [Nasium]. The Notitia of the Provinces of Gallia mentions Tullum thus: “Civitas Len- corum Tullum.” Toul, which is Tullum, has preserved its name in Toul, which takes the place of many other inland towns. [Toul is sc. the department of the Meurthe.] [G. L.]

TUNES (Tyntus, Polyb. i. 30; Tévivs, or Tévés, Strab. xvii. p. 834, &c.), a strongly fortified town, once of some importance, in the Roman province of Africa. According to Polybius (xiv. 20), it was followed by Livy (xxx. 9), it was 120 stadia or 15 miles from Carthage, from which it lay in a SW. direction, but the Tab. Peut., in which it is written Thunis, places it more correctly at a distance of only 10 miles from that city. It is said to have been situated at the mouth of a little river called Catada, in the bay of Carthage, but there are now no traces of any such river. On the present state of Tunis, see Blaquière, Litté. i. p. 161, seq.; Ritter Erdkunde, i. p. 914, seq. [T. H. D.]

TUNGRIS (Toivgrai), are placed by Petrony (ii. 9 § 9) east of the Tabulæ rivers, and their chief city is Atinaecum, which is Allauta on Tungus (Aquatic). Tacitus (German, c. 2) says, “Those who first crossed the Rhine and expelled the Galli, are now called Tungri, but were then named Germani.” Tacitus speaks of the Tungri in two other passages (Hist. iv. 55, 79); and in one of them he appears to place the Tungri next to the Nervii. The name of the Ebrones, whom Caesar attempted to annihilate [Eburones], disappears in the later geography, and the Tungri take its place. (Pliny, iii. 111.) D’Anville observes (Notices, &c.) that the name of the Tungri extended over a large tract of country, and comprehended several peoples; for in the Notitia of the Provinces of Gallia, the Tungri divide with the Agrippines and all Germania Secunda; and there is some evidence that the bishops of Tungeri had once a territory which bordered on that of Reims.

Aminianus (av. 11) gives the name of the people, Tungri, to one of the chief cities of Germania Secunda; the other is Agrippina (Cologne). This shows that Tungeri under the later Empire was a large place. Many Roman remains have been dug up there; and it is said that the old Roman road may still be traced through the town. [G. L.]

TUNNOCEIUM, according to the Notitia Imp. a place on the coast of Britannia Romana, at the end of the wall of Hadrian, the station of the Cohors i. Aelia Classicci. Horsley (p. 91) and others place it at Boscastle, on Sothery Frith; Camden, with less probability, seeks it at Tynemouth, on the E. coast. [T. H. D.]

TUNTOBRIGA (Bntobriga, Ptol. ii. 6. § 39), a town of the Callaeci in Hispania Tarraconensis. [T. H. D.]

TURANIA, a place in Hispania Baetica, not far from the coast, between Murgti and Ursi. (Itin. Ant. p. 405.) Variously identified with Torque, TorrhSlon, and Tabernas. [T. H. D.]

TURBA, a town of the Edetani in Hispania Tarraconensis. (Liv. xxxii. 44.) It is now the city of the modern Tashar on the Guadalquivir. [T. H. D.]

TURBA. [Bigeriones.]

TURBULA (ToKvOvai, Ptol. ii. 6. § 61), a town of the Bastarni in Hispania Tarraconensis. D’Anville (Geogr. An. i. p. 28) and Meneute (Esp. Anc. p. 177) identify it with Tureu, but Uxerit (p. i. 407) more correctly declares it to be Turuca in Murcia. The inhabitants are called Taruclœbœni by App. Hist. 10. [T. H. D.]

TURCAE (Toivœs, Suid. s. v.), a Syrian people of Asiatic Sarmatia, dwelling on the Phasis. The Dicionaries of Mela, show that the Sarmatians, which appears to be identical with the Egyptian of Herodotus, and the Romans, which is not so. The various hypotheses that have been started respecting the Turcae only show that nothing certain is known respecting them. (Cf. Mannert, iv. p. 130; Herenn. Ideen, i. 2, pp. 189, 281, 307; Schaffskir. Schrif. Allth. i. p. 318, &c.) Humboldt (Central-Americ, i. p. 243, ed. Mahnman) opposes the notion that these Turcae or Jyrcae were the ancestors of the present Turks. [T. H. D.]

TURCINGI, a tribe in northern Germany which is not noticed before the fifth century of our era, and then is occasionally mentioned along with the Rugii. (Jornand. Get. 15; Paulus Diaec. i. 1.) [L. S.]

TURDETA XI (Tou得不到vov, Ptol. ii. 4. § 5; &c.), the principal people of Hispania Baetica; whence we find the name of Turdetania (Tou得不到vov or Tou得不到vov) used by Strabo (iii. p. 156) and Stephanus Byz. (AtjnoKvov) as identical with the name. Their territory lay to the W. of the river Singius (now Xerul), on both sides of the Baeticus as far as Lusitania on the W. The Turdetani were the most civilised and polished of all the Spanish tribes. They cultivated the sciences; they had their poets and historians, and a code of written laws, drawn up in a metrical form (Strab. iii. pp. 139, 151, 167; Polyb. xxxiv. 9). Hence they were readily disposed to adopt the manners and customs of their conquerors, and became at length almost entirely Romans; but with these characteristics we are not surprised to find that they are at the same time represented by Livy (xxxv. 17) as the most unwarlike of all the Spanish races. They possessed the Jus Latii. Some traits in their manners are noted by Diodorus Sic. (r. 33), Silius Italicus (iii. 310, &c.), and Strabo (iii. 164). Their superior civilization was no doubt derived from their intercourse with the Phoenicians who fixed the town of Tartessus in their neighbourhood. [T. H. D.]

TURDULI (ToivbOwv), Ptol. ii. 4. § 10), a people in Hispania Baetica, very nearly connected with the Turdetani, and ultimately not to be distinguished from them. (Strab. iii. p. 139; Polyb. xxxiv. 9). They dwelt to the E. and S. of the Turdetani, down to the shores of the Etruscan Hellespont. A branch of them called the Turduli Vetere appears to have migrated into Lusitania, and to have settled to the S. of the Durusi; where it is probable that in process of time they became amalgamated with the Lusitanienses (Strab. iii. p. 151; Mela, iii. 1. § 7: Plin. iii. 1. s. 3. iv. 21. s. 35; cf. Flor. Esp. Sapr. ix. p. 77). [T. H. P.]

TURECIONICUM or TURECIONUM, in Gallia Narbonensis, is placed in the Table on a road between Vienna (Vienna) and Culatra (Grenoble). Turecium is between Vienna and Moguntiacum. (Mœsia) The site is unknown. [G. L.]

TURIA or TIRIUM, a river in the territory of the Edetani in Hispania Tarraconensis, which enters the sea in the neighborhood of Valencia (Mela ii. 6. Plin. iii. 3. s. 4: Vib. Seq. p. 227, ed. Bip.) It was famed for the prodigious Turione between Pompey and Scipioria (Plut. Pompe, 1.8., Sert. 19: Cic. p. Balb. 2). Now the Guadalquivir. [T. H. D.]

4 R 4
TURISAS.

TURIASO. (Terraas and Toreias, Ptol. ii. 6, § 58; Taurus, Strabo, Geogr. Rav. iv. 43: Thb. Thraconensis, Plin. iii. 3. s. 4.); a town of the Celtiberi in Hispania Tarraconensis, on the road from Caesaraugusta to Numantia (Itin. Ant. pp. 442, 443). According to Pliny (L. c.) it was a civitas Roman in the jurisdiction of Caesaraugusta. A fountain in its neighbourhood was said to have the quality of hardening iron (ib. xxiv. 14, s. 41). The town is now called Toredo. For coins see Flores, Med. iv. p. 690; ii. p. 124; Monnet, i. p. 53, and Suppl. i. p. 167; Nestini p. 207. [T. H. D.]

TURICUM. (Helvethi, Vol. i. p. 1041.)

TURIGA. (Curtia.)

TURISSA (called by Ptolemy [Talioua, ii. 6, § 67, a town of the Vassones in Hispania Tarraconensis, on the road from Pompos to Burdigala (Itin. Ant. p. 455).] Variously identified with Itures and Osoroc. [T. H. D.]

TURMODIGI. (Mauriagi.)

TURMOGUM (Talpogou, Ptol. ii. 5, § 8), a town in the interior of Lusitania. [T. H. D.]

TURNULI, a town of Lusitania on the Tagus, and on the road from Emerita to Caesaraugusta. (Itin. Ant. p. 433.) Variously identified with Alacctor and Puente de Alcauzote. [T. H. D.]

TURNACUM or Tornacum, a city of North Gallia, is first mentioned in the Roman Ilium. In the Not. Imp. mention is made of a military force under the name of Numerius Turnacensis; and of a "Preparator Gynaeicorum Tarraconensis Beliccis Secundae." This preparator is explained to be a superintendent of some number of women who were employed in making clothing for the soldiers. Heronimus about a. d. 407 speaks of Turnacum as one of the chief towns of Gallia; and Audoenus, in his life of St. Eligius (St. Elios) in the seventh century, says of it, "quae quondam regalis exitii civitas." Turnacum was within the limits of the ancient territory of the Nervii. The Flemish name is Doornik, which the French have corrupted into Tournaï. Tournaï is on the Scheldt, in the province of Hainault, in the kingdom of Belgium.

There are silver horns of Turnacum, with the legend Dyronacos and Dyronacos. On one side there is the head of an armed man, and on the other a horseman armed. On some there is said to be the legend Dyro neo. Numerous Roman medals have been found at Tournaï, some of the time of Augustus and others as late as Claudius Gothicus and Theodosius, and even of a later date. The tomb of Childeric I, who died a. d. 481, was discovered at Tournaï in the seventeenth century, and a vast quantity of gold and silver medals, and other curious things; among which was the golden ring of Childeric, with his name on it, Childeric regis. Such discoveries as these, which have been made in various places in Belgium, show how little we know of the Roman history of this country. (D'Anville, Notice, &c.; Ukert, Gallien, Recueil d'Antiquités Romaines et Gauloises trouvées dans la Flandre proprement dite, par M. J. de Bass.) [G. L.]

TURBRICA, a town of Hispania Baetica in the jurisdiction of Hispalia (Plin. iii. 1. s. 3). [T. H. D.]

TURNODI (Tornodio, Ptol. ii. 10, § 40), a people in Hispania Tarraconensis, probably a subdivision of the Calaci Tarraconensis, whose territory were the baths called "Thoracandus." (T. H. D.)

TURONES, TURONIX, TURONI. Some of Caesar's troops wintered in the country of the Turones after the campaign of B. C. ii. 35. The Turones are mentioned again (B. G. viii. 46), where we learn that they bordered on the Carnutes; and in another place (vi. 4) they are mentioned with the Pictones, Cadurci, Auleri, and other states of Western Gallia. When Vergingetorigus (n. c. 52) was raising all Gallia against Caesar, he ordered the Turones to join him. The contingent which they were called on to furnish against Caesar, during the siege of Alesia (B. G. vii. 75.) But the Turones never gave Caesar much trouble, though Lucan calls them "instabiles" (i. 437), if the verse is genuine.

In Ptolemy (ii. § 14), the name is Tovpiaaflon, and the capital is Caesarodunum or Tours on the Loire. In the insurrection of Sacrovir in the time of Tiberius, the Turoni, as Tacitus calls them (Ann. iii. 41, 46), rose against the Romans, but they were soon put down. They are in the Lugudunensis of Ptolemy. The chief part of the territory of the Turones was south of the Loire, and their name is the origin of the provincial name Turoniane. Ukert (Gallicia, p. 329) mentions a silver coin of the Turoni. On one side there is a female head with the legend "Turunom," and on the other "Cantorix," with the figure of a galloping horse. [G. L.]

TURJOOII (Tofopouwo), a German tribe. As described as occupying a district on the south of the country once inhabited by the Chatti, perhaps on the northern bank of the Moselle (Ptol. ii. 11, § 223.) [L. S.]

TURQUA (in the Geogr. Rav. iv. 43, Turqua), a town of the Callaci in Hispania Tarraconensis on the road from Braccara to Lucius Augusti (Itin. Ant. p. 430.) Variously identified with Tournon or Tarun and Ribesavia. [T. H. D.]

TURRES ALBAE (Pepcrn Acenol, Ptol. ii. 5, § 6), a place of the Celts in Lusitania. [T. H. D.]

TURRIGA (Talpogou or Talpogou, Ptol. ii. 6, § 23), a place of the Callaci Licenses in Hispania Tarraconensis. [T. H. D.]

TURRIM, AD, in Gallia Narbonensis, east of Aque Sextiae (Aix), is placed in the Antonine Itin. between Matavonum and Tegulata (Tegulata). The name Turris is preserved in that of Tours, which is written Torrettez and Torris in some middle age documents. (D'Anville, Notice, &c.) [G. L.]

TURIS. 1. TURIS CAESARIS, a place in Numidia, where there was a road through Signa to Cirta. (Itin. Ant. p. 34.) Usually identified with Tullia, but by Lapie with Djebel Gueriroum. 2. [EUPHRANTA TURIS.]

3. TURIS HANNIBALIS, a strong fortress in the territory of Carthage, where Hannibal took ship when flying to King Antiochus. (Liv. xxxii. 48.) Justin calls it the Rus urbarum Hannibalis (xxxii. 4.) It seems to have been situated between Achla and Thapsus, at the spot where the Tus Pont. places Thuales Sallust in his Bell. Antiq.

4. TURIS TAMALIANI, in Africa Proper, on the road from Tacape to Leptis Magna. (Itin. Ant. pp. 73, 74.) Nova Telemin. [T. H. D.]
TURRIUS LIBYSSONIS.

TURRIUS LIBYSSONIS (Πόρτο λιβύσσων), Plin. (Porto Torre), a town of Sardinia, and appears to have been more considerable in the time of Ptolomy (Vol. ii. 5). It was situated on the N. coast about 15 miles E. of the Gori
ditanian promontory (the Capo del Falcione), and on the spacious bay now called Golfo dell' Asinara. Pline tells us it was a Roman colony, and we may probably infer from its name that there was previously no town on the spot, but merely a port or castellum. (Plin. iii. 12. s. 17.)

It is noticed also by Ptolemy and in the Inscrifions, but without any indication that it was a place of any importance. (Ptol. iii. 4. § 5; Ptolemy, vol. ii. p. 483.) But the ancient remains still existing prove that it must have been a consider
table town under the Roman Empire; and we learn from the inscriptions on ancient milestones that the principal road through the island ran directly from Caralis to Turris, a sufficient proof that the latter was a place much frequented. It was also an episcop
cal see during the early part of the middle ages. The existing part at Porto Torres, which is almost wholly artificial, is based on great part on Roman foundations, and there exist also the remains of a temple (which, as we learn from an inscription, was dedicated to Fortune, and restored in the reign of Philip), of thermes, of a basilica and an aqueduct, as well as a bridge over the adjoining small river, still called the Flume Tarritono. The ancient city continued to be inhabited till the 11th century, when the greater part of the population migrated to Sar
suri, about 10 miles inland, and situated on the hill. This is still the second city of the island. (De la Marmora, l'ag en Sardaigne, vol. ii. pp. 363, 468—
472: Smyth's Sardinia, pp. 263—266.)

TURRISTRATONIS. [CAESAREA, p. 470, a.]

TURRUS FLAVUS. [AQUILEIA.]

TURULIS (Τουρολας, Plin. ii. 6. § 15), a river in the territory of the Ecdetani in Hispania Tarra
cenois, between the Iberus and the Fructus Herculis. Ucet (ii. pt. i. p. 293) thinks that it is probably identical with the Sactabis of Mela (i. 6) and the Uluba of Pliny (iii. 3. s. 4), the present Mijares or Myrues.

TURUM (Eth. Turumus: Tur), a town of Apulia, mentioned only by Pliny, who enumerates the Tur
tini among the towns of that province. (Plin. iii. 11. s. 16.) The name is written Turini in our present text of Pliny; but it is probable that we should read Turini, and that the site is marked by the present village of Tur, near Cervaro, about 6 miles W. of Polignano. (Romanelli, vol. ii. p. 180.)

[T. H. D.]

TURUNTUS (Τουρωντος), Plin. iii. 5. § 2), a river of European Sardinia which fell into the open Ocean, and which, according to Marcius (p. 55), had its source in the Rhiaesan mountains, but Ptolemy seems to place it in Mount Almus or Almus. Maazenr (iv. p. 238) takes it to be the Winde. [T. H. D.]

TURUTTIANA (Τουρωττιανα, Plin. ii. 6. § 23), a town of the Calliari Lusceani in Hispania Tarra
cenois. [T. H. D.]

TUSCA, a river forming the W. boundary of the Roman province of Africa, which, after a short course to the N., fell into the sea near Tabraca. (Plin. v. ss. 2. T.)

TUSCA'NIA (Eth. Tuscanensis: Tuscanelia), a city of Southern Etruria, situated about 12 miles N.E. of Tarquinia. It is mentioned only by Pliny, who enumerates the Tuscanenses among the mun
cipal communities of Etruria, and in the Tabula, which places it on the Via Clodia, between Blera and Saturnia, but in a manner that would afford little clue to its true position were it not identified by the resemblance of name with the modern Tusc
cella. (Plin. iii. 5. s. 8; Tab. Pent.) The name is found in an inscription, which confirms its mun
cipal rank. (Murator. Inscr. p. 328.) But it appears to have been in Roman times an obscure town, and we find no allusion to it as of ancient Etrusca
n origin. Yet that it was so is rendered probable by the tombs that have been discovered on the site, and some of which contain sarcophagi and other relics of considerable interest; though none of these appear to be of very early date. The tombs have been carefully examined, and the antiquities pre
erved by a resident antiquary, Sig. Canzani, a circumstance which has given some celebrity to the name of Tuscanella, and led to a very exaggerated estimate of the importance of Tuscania, which was apparently in ancient times never a place of any considera
ion. It was probably during the period of Etruscan independence a dependency of Tar
quinii. The only remains of ancient buildings are some fragments of reticulated masonry, undoubtedly of the Roman period. (Deusin's Etrurin, vol. i. pp. 440—460.)

[T. H. B.]

TUSCI (Τούσκι, Plin. v. 9. § 22), a people of Asiatic Sarmatia between the Caucasus and the Monte Ceraunii. [T. H. D.]

TUSCIULUM. [TUSCIULUM, p. 1243, b.]

TUSCIULUM (Τούσκεος, Plin. iii. 5. § 61; Τούσκλος, Strab. v. p. 237; Τουσκλος, Steph. B. p.
673; Eth. Tuscanus, Cic. Balb. 20; Liv. iii. 7, 8c: Adj. Tuscus, Tib. i. p. 75; Stat. Silv. iv.
5. 16: Tuscanianus, Cic. Fam. x. 6: Frascati and II Tuscilo), a strong and ancient city of Lu
tium, lying on the hills which form a continuation of Mount Albanus on the W. When Dionysius of Halicarnassus (c. 20) places it at a distance of 100
stadia, or 123 miles, from Rome, he does not speak with his accustomed accuracy, since it was 120
stadia, or 15 miles, from that city by the Via Latina. Josephus (Ant. xviii. 7. § 6) places the imperial villa of Tiberius at Tusculum 100 stadia from Rome, which, however, lay at some distance to the W. of the town. Festus (v. n. Tusco) makes Tus
culum a diminutive of Tuscus, but there is but slight authority to connect the town with the Etrus
cans. According to common tradition, it was founded by Telemon, the son of Ulises and Circe; and hence we find its name paraphrased in the Latin poets as " Telegoni moenia" (Ov. Fast. iii. 91, iv. 71; Prop.
iii. 30. 4; Sil. B. xii. 535) and " Circæa moenia" (Hor. Epod. i. 30); and the hill on which it stood
was called " Telegoni juga parcitiae" (Id. Od i. 29.
8), " Circæænorum" (Sil. B. vii. 631), and " Telegoni jugera" (Stat. Silv. i. 85). Thus Tus
culum did not claim so remote an origin as many other Latin cities; and, as being founded a
generation after the Trojan War, Virgil, a learned antiquary, consistently omits all notice of it in his Aeneid. The author of the treatise entitled Orig
.Genis Romanæ mentions that it was made a depen
dency or colony of Alba by Latinius Silvius (c. 17
§ 6). After the destruction of Alba by Titus Hostilius it appears to have recovered its independ
ence, and to have become a republic under the govern
ment of a dictator.

But to descend from these remote periods to the more historical times. In the reign of Tarquinian

Digitized by Microsoft®
Superbus, who courted the friendship of the Latin cities, Octavius Mamilius of Tusculum was the foremost man of all the race, tracing his descent from Ulysses and Circe. Him Tarquin conscripted by the gift of his daughter in marriage, and thus obtained the powerful alliance of his family and connections. (Liv. i. 49; Dionys. iv. 45.) The genealogical pretensions of the gens Mamilia are still to be seen on their coins, which bear on the obverse the head of Mercury, and on the reverse Ulysses in his travelling dress and with his dog.

The alliance of Mamilius with Tarquin, however, was the main cause of the Latin War. After his expulsion from Rome, and unsuccessful attempt to regain his crown by means of the Etruscans, Tarquin took refuge with his son-in-law at Tusculum (Liv. ii. 15), and by his assistance formed an alliance with the confederacy of the thirty Latin cities (16. 18.). The confederate army took up a position near Lake Regillus, a small sheet of water, now dry, which lies at the foot of the hill on which Tusculum is seated. This was the scene of the famous battle so fatal to the Latins, in n. c. 497. Mamilius, who commanded the Latin army, was killed by the hand of Titus Heraclius; Tarquinius Superbus himself, who, though now advanced in years, took a part in the combat, was wounded; and the whole Latin army sustained an irretrievable defeat (ib. 19, 20; Dionys. vi. 4, seq.).

After the peace which ensued, the Tusculans remained for a long while the faithful allies of Rome; an attachment which drew down on their territory the incursions of the Volsi and Acqui, n. c. 461, 460. (Liv. iii. 7. 8.) In n. c. 458, when the Roman capitol was seized by the Sabine Appius Herdonius, the Tusculans gave a signal proof of their love and fidelity towards Rome. On the next morning after the arrival of the news, a large body of them marched to that city and assisted the Romans in recovering the capitol; an act for which they received the public thanks of that people (ib. 18; Dionys. x. 16); and soon afterwards, Lucius Mamilius, the Tuscan dictator was rewarded with the gift of Roman citizenship. (Liv. ib. 29.) In the following year the Romans had an opportunity of repaying the obligation. The Acqui had seized the citadel of Tusculum by a nocturnal assault. At that time, Fabius with a Roman army was encamped before Antium; but, on hearing of the misfortune of the Tusculans, he immediately broke his camp and flew to their assistance. The enterprise, however, was not of such easy execution as the expulsion of Herdonius, and several months were spent in combats in the neighbourhood of Tusculum. At length the Tusculans succeeded in recapturing their citadel by reducing the Acqui to a state of famine, whom they dismissed after compelling them to pass unarmed under the yoke. But as they were flying homewards the Roman consilium overtook them on Mount Algidus, and slew them to a man. (ib. 23.)

In the following year, the Acqui, under the conduct of Graccius, ravaged the Labican and Tuscanian territories, and encamped on the Algidus with their booty. The Roman ambassadors sent to cope with them were treated with insolence and contempt. Then Tit. Quinctius Cincinnatus was chosen dictator, who defeated the Acqui, and caused them, with their commander Graccius, to pass unarmended under the yoke. (Liv. ib. 25—28.)

Algidus became the scene of a struggle between the Romans and Acqui on two or three subsequent occasions, as in n. c. 452 and 447. (Ib. 31, 42.) In the latter battle the Romans sustained a severe defeat, being obliged to abandon their camp and take refuge in Tusculum. After this, we do not again hear of the Tusculans till n. c. 416. At that period, the Romans, suspecting the Labicans of having entered into a league with the Acqui, razed the territory of Tusculum and encamped upon the Algidus. The Roman army despatched against them was defeated and dispersed, owing to the dissensions among its chiefs. Many of these, however, together with the elite of the army, took refuge at Tusculum; and Q. Servilius Friscus, being chosen dictator, changed the face of affairs in eight days, by routing the enemy and capturing Labicum. (Ib. iv. 45—47.)

This steady friendship between Tusculum and Rome, marked for so many years by the strongest tokens of mutual goodwill, was at length interrupted by an occurrence which took place in n. c. 379. In that year the Tusculans, in conjunction with the Gabinians and Labici, accused the Praenestines before the Roman senate of making inroads on their lands; but the senate gave no heed to their complaints. Next year Camillus, after defeating the Labici, was surprised to find a number of Tusculans among the prisoners whom he had made, and, still more so when, on questioning them, he found that they had taken up arms by public consent. These prisoners he introduced before the Roman senate, in order to prove how the Tusculans had abandoned the ancient alliance. So war was declared against Tusculum, and the conduct of it entrusted to Camillus. But the Tusculans would not accept this declaration of hostility, and opposed the Roman arms in a manner that has scarcely been paralleled before or since. When Camillus entered their territory he found the peasants engaged in their usual avocations; provisions of all sorts were offered to his army; the gates of the town were standing open; and as the legions defiled through the streets in all the panoply of war, the citizens within, like the countrymen without, were seen intent upon their daily business, the schools resounding with the hum of pupils, and not the slightest token of hostile preparation could be discerned. Then Camillus asked the Cumilians to give him the town and the land, which they refused to do. When he appeared before the senate in the Curia Hostilia, not only were the existing treaties with Tusculum confirmed, but the Roman franchise also was shortly afterwards bestowed upon it, a privilege at that time but rarely conferred.

It was this last circumstance, however, together with their unshaken fidelity towards Rome, that drew down upon the Tusculans the hatred and enmity of the Latins; who, in the year n. c. 374, having destroyed the exception of the temple of Matata, directed their arms against Tusculum. By an unexpected attack, they obtained possession of the city; but the inhabitants retired to the citadel with their wives and children, and despatched messengers to Rome with news of the invasion. An army was sent to their relief, and the Latins in turn became the besieged instead of the besiegers; for whilst the Romans encompassed the walls of the city, the Tusculans made sortie upon the enemy from the array. In a short time the Romans took the town by assault and slew all the
TUSCULUM.

Latin. (Ib. 33.) Servius Sulpicius and L. Quin- ciatus, both military tribunes, were the Roman com- manclers of its territory (Liv. iv. 36) and the heroic deviations committed on it by the Gauls, when in alliance with the Tiburtines, in B.C. 357. (Id. vii. 11.) After their long attachment to Rome we are totally at a loss to conjecture the motives of the Tusculans in joining the Latin cities against her. The war which ensued is marked by the well-known anecdote of Titus Manlius, who, being challenged by Geminus Metlius, the commander of the Tuscan cavalry, attacked and killed him, against strict orders to the contrary; for which breach of military discipline he was put to death by his father. (Id. viii. 7.) The war ended with the complete subjugation of the Latins; and by the famous senators-consul tum regulating the settlement of Latinum, the Tusculans were treated with great indulgence. Their defection was ascribed to the intrigues of a few, and their right of citizenship was preserved to them. (Ib. 14.) This settlement took place in B.C. 335. In 321 the Tusculans were accursed by the tribune, M. Flavins, of having supplied the Veliterni and Privenares with the means of carrying on war against Rome. There does not appear to have been any foundation for this charge; it seems to have been a mere calumny; nevertheless the Tusculans, with their wives and children, having put on mourning habits, went in a body to Rome, and implored the tribes to acquit them of so odious an imputation. This spectacle moved the compassion of the Romans, who, without further inquiry, acquitted them unanimously; with the exception of the tribe Poliia, which voted that the men of Tusculum should be scourged and put to death, and the women and children sold, agreeably to the laws of war. This vote remained indelibly imprinted on the memory of the Tusculans to the very latest period of the Roman Republic; and it was found that scarce one of the tribe Papiria, to which the Tusculans belonged, ever voted in favour of a candidate of the tribe Poliia. (Ib. 37.)

Tusculum always remained a municipium, and some of its families were distinguished at Rome. (Id. vi. 21—26; Orell. Inser. 775, 1368, 3042.) Among them may be mentioned the gens Mamalia, the Porcia, which produced the two Catos, the Fulvia, Corunicia, Juventia, Fonteia, &c. (Cic. p. Plac. 8, p. F.ONT. 14; Corn. Nep. Cat. 1; Val. Max. iii. 4, § 6.)

Hamblin appears to have made an unsuccessful attempt upon, or perhaps rather a mere demonstration against Tusculum in B.C. 212. (Liv. xxvi. 9; cf. Sil. It. xii. 534.) In the civil wars of Marius and Sulla, its territory seems to have been distributed by the latter. (Auct. de Colonie.) Its walls were also restored, as well as during the wars of Pumpey. We have no notices of Tusculum under the Empire. After the war of Justinian and the invasions of the Lombards, Tusculum regained even more than its ancient splendour. For several cen-

turies during the middle ages the counts of Tuscu-

lum were supreme in Rome, and could almost dispense with the papal chair. The ancient city remained entire till near the end of the sixteenth century. At that period there were constant wars between the Tusculans and Romans, the former of whom were supported by the German emperors and protected by the popes. According to Romanius, archbishop of Salerno (apud Baronium, vol. xix. p. 340), the walls of Tusculum were raised in the pontificate of Alexander III, in the year 1168; but perhaps a more probable account by Richard de S. Germanus (ap. Marcelli, Sac. i. l. v. p. 172) as-

cribes the destruction of the city to the permission of the German emperor in the year 1191.

Towards the end of the Republic and beginning of the Empire, Tusculum was one of the favourite re-

sorts of the wealthy Romans. Strabo (v. p. 239) de-

scribes the hill on which it was built as adorned with many villas and plantations, especially on the side that looked towards Rome. But though the air was salubrious and the country fine, it does not ap-

pear, like Tibur, to have been a favourite resort of the Roman poets, nor do they speak of it much in their verses. The Anio, with its fall, besides other natural beauties, lent a charm to Tibur which would have been sought in vain at Tusculum. Lucullus seems to have been one of the first who built a villa there, which seems to have been on a magnificent scale, but with little arable land attached to it. (Phin. xviii. 7. s. 1.) His parks and gardens, how-

ever, which were adorned with avenues and fish-

ponds, extended to the Anio, a distance of several miles; whence he was noted in the report of the censors as making more use of the brook than the pleasure. (Ib. and Varr. R. R. i. 13, iii. 3, seq.; Columella, i. 4.) On the road towards Rome, in the Vigna Angelotti, is the ruin of a large circular ma-

soleum, 90 feet in diameter inside, and very much resembling the tomb of Lucullus Metella on the Via Appia. It evidently belongs to the last period of the Republic; and Nibby (Dizionario, p. 344) is inclined to regard it as the sepulchre of Lucullus, mentioned by Plutarch (I. i. Luc. 43), though that is commonly identified with a smaller mausoleum between Fras-

catii and the Villa Rufaela. Besides the villa of Lucullus, we hear of those of Cato, of Cicero and his brother Quintus, of Marcus Brutus, of Q. Horten-

sius, of T. Anicius, of Ballbus, of Caesar, of L. Crassus, of Q. Metellus, &c. It would now be vain to seek for the sites of most of these; though it may perhaps be conjectured that Cato's stood on the hill to the N.E. of the town, which seems to have been called Mons Porcium from it, and still bears the name of Monte Porzio. So much interest, however, is attached to the villa of Cicero (Tusculanum), as the favourite retirement in which he probably composed a great portion of his philosophical works, and especially the Disputationes which take their name from it, that we shall here present the reader with the chief partic-

ulars that can be collected on the subject. Re-

specting the site of the villa there have been great disputes, one school of topographers seeking it at

Grotta Ferrata, another at the Villa Rufaela. Both these places lie to the W. of Tusculum, but the latter nearer to it, and on an eminence, whilst

Grotta Ferrata is in the plain. We have seen from Strabo that the Roman villas lay chiefly on the W. side of the Forum, and it will be found further on that Cicero's adjoined those of Lucullus and Ga-

binius, which were the most splendid and remarkable,
TUSCULUM.

and must therefore have belonged to those noticed by Strabo. The scholar on Horace (Epod. i. 39) describes Cicero's as being "ad latera superiores" of the Tusculan hill; and if this authority may be relied on, it disposes of the claims of Grotta Ferrata. The plural "alta" also determines us in favour of the W. side of the town, or Villa Ruinaeia, where the hill has two ridges. At this spot some valuable remains were discovered in 1741, especially a beautiful mo^ning, now in the Museo Clementino. The villa belonged originally to Sulla (Plin. xxii. 6. s. 6). It was, as we have said, close to that of Lucullus, from which, in neighbourhood, Cicero was accustomed to fetch books with his own hand. (De Fam. iii. 2.) It was likewise near that of the consul Gabinius (pro Dom. 24, post Red. 7), which also stood on the Tusculan hill (in Piz. 21), probably on the site of the Villa Falconieri. In his version pro Sextio (43), Cicero says that his own villa was a mere confusion in comparison with that of Gabinius, though the latter, when tribune, had described it as "pictum," in order to excite envy against its owner. Yet from the particulars which we learn from Cicero himself, his retirement must have been far from deficient in splendour. The money which he lavished on it and on his villa at Pompeii brought him deeply into debt. (Ep. ad Att. ii. 1.) And in another letter (ib. i. 2) he complained that the conveys valued that at Tusculum at only quingentis libellus, or between 4000l. and 5000l. This would be indeed a very small sum, to judge by the description of it which we may collect from his own writings. Thus we learn that it contained two gymnasia (Div. i. 5), an upper one called Lyceum, in which, like Aristotle, he was accustomed to walk and dis-pate in the morning (Tusc. Disp. ii. 3), and to which a library was attached (Div. ii. 5), and a lower one, with shady walks like Plato's garden, to which he gave the name of the Academy. (Tusc. Disp. ii. 3.) The latter was perhaps on the spot now occupied by the Casa^ of the Villa Ruinaeia. Both were adorned with beautiful statues in marble and bronze. (Ep. ad Att. i. 8, 9, 10.) The villa likewise contained a little atrium (atrium, ib. i. 10, ad Quint. Fr. iii. 1), a small portico with exedra (ad Fam. vii. 24), a bath (ib. iv. 20), a covered promenade ("ectea ambulatorium," ad Att. xiii. 29), and a horologium (ad Fam. iv. 18). In the inscriptions of the time of Zuzzeri, a sun-dial was discovered here, and placed in the Collegio Romano. The villa, like the town and neighbourhood, was supplied with water by the Aqua Crabra. (De Leg. Agr. iii. 31.) But of all this magnificence scarce a vestige remains, unless we may regard as such the ruins now called Scuola di Cicerson, close to the ancient walls. These consist of a long corridor with eight chambers, forming apparently the ground floor of an upper building, and if they belonged to the villa they were probably granaries, as there is not the least trace of decoration.

We will now proceed to consider the remains at Frascati. Strabo (v. p. 239) indicates where we must look for Tusculum, when he describes it as situated on the high ridge connected with Mount Albanus, and serving to form with it the deep valley which stretches outwards towards Mount Algidus. This name was given by the name of the Tusculani Colcis. We have already seen that Tusculum was composed of two distinct parts, the town itself and the ara or citadel, which was isolated from it, and

sent on a higher point; so elevated, indeed, that when the Aqued had possession of it, as before narrated, they could despoil the Roman army de-filing out of the gates of Rome. (Dionys. x. 20.) It was indeed on the very nut, or pinnacle, of the ridge, a point isolated by cliffs of great elevation, and approachable only by a very steep ascent. According to Sir W. Gell (Topogr. ite. p. 429) it is 2079 French feet above the level of the sea. Here a few traces of the walls of the citadel remain, from which, looking from the shape of one of the rocks on which the town stood, we may see that it formed an irregular oblong, about 2700 feet in circumference. There must have been a gate towards the town, where the ascent is less steep; and there are also vestiges of another gate on the E. side, towards La Molara, and of a road which ran into the Via Latina. Under the rock are caves, which probably served for sepulchres. The city lay immediately under the ara, on the W. side. Its form was a narrow oblong approaching to a triangle, about 3000 feet in length, and varying in breadth from about 1000 to 500 feet. Thus it is represented of a triangular shape on the coins of the gens Sulpicia. Some vestiges of the walls remain, especially on the N. and S. sides. Of these the ancient parts consist of large quadrilateral pieces of local tufo, some of them being 4 to 5 feet long. They are repaired in places with opus incertum, of the age of Sulla, and with opus reticulatum. Including the ara, Tusculum was about 1 mile in circumference. Between the town and the citadel is a large quadrilateral piscina, 86 feet long by 67$ broad, divided into three compartments, probably intended to collect the rain-water, and to serve as a public washing-place. One of the theatres lies immediately under this cistern, and is more perfect than any in the vicinity of Rome. The scene, indeed, is partly de-stroyed and covered with earth; but the benches or rows of seats in the cavea, of which there are nine, are still nearly entire, as well as the steps cut in them for the purpose of commodious descent. There are three flights of these steps, which consequently divide the cavea into four compartments, or cunei. The spectators faced the W., and thus enjoyed the magnificent prospect over the Alban valley and the plains of Latium, with Rome and the sea in the distance. Abeken (Mittel-Italien, p. 200), considers this theatre to belong to the early times of the Empire. Sir W. Gell. and some other have thought it to be earlier. (Topogr. of Rome, p. 429.) Near this edifice were discovered in 1818, by Lucien Buonaparte, the beautiful bronze statue of Apollo and those of the two Rutulii. The last are now in the Vatican, in the corridor of the Museo Chiarra-monti. At the back of this structure are vestiges of another theatre, or odeum; and at its side two parallel walls, which bounded the street leading to the citadel. On the W. of the theatre is an ancient road in the direction leading to one of the gates of the city, where it is joined by another road. Close to the walls near the piscina is an ancient cistern, and at its side a small fountain with an inscription; a little further is a Roman milestone, recording the distance of 15 miles. Besides these objects, there are also remains of a columbarium and of an amphitheatre, but the latter is small and of high antiquity. Many fragments of architecture of an extremely ancient style are strewn around. Within the walls of the town, in what appears to have been the principal street, several inscriptions.
still remain, the chief of which is one on a kind of pedestal, recording that the object to which it belonged was sacred to Jupiter and Liberty. Other inscriptions found at Tuscæum are preserved in the T. 1621 ed. (p. 192) and relate to M. Fulvius Nabilius, the conqueror of Aetolia; another to the poet Diphilos, mentioned by Cicero in his letters to Atticus (ii. 19).

Near the hermitage at Camadobi was discovered in 1667 a very ancient tomb of the Furi, as recorded by Falconieri, in his Inscri. Athleticae, p. 143, seq. It was cut in the rock, and in the middle of it was a sarcophagus, about 5 feet long, with a pediment-shaped cover. Beyond it were twelve urns placed in loculi, or coffins. The inscriptions on these urns were in so ancient a character that it bore a great resemblance to the Etruscan and Pelasgic. The form of the P resembled that in the sepulchral inscriptions of the Scipios, as well as that of the Τ. The diphthong ΟV was used for Υ, and Ψ for Φ. The inscriptions on the urns related to the Furi, that on the sarcophagus to Luc. Turpilius. There were also fragments of fretted vases, commonly called Etruscan, and of an elegant cursive of terra cotta, painted with various colours. (Nibby, Dintorni, iii. p. 360.)

We shall only add that the ager Tuscæanus, though now but scantily supplied with water, formerly contributed to furnish Rome with that element by means of the Aqua Tepula and Aqua Virgo.  

TUSCUM MARE. [Tyrrenenum Mare.]

TUTATIO, a place in Noricum of uncertain site (It. Ant. p. 377; Tab. Peut, where it is called Tutasitia.)  

TUTHOA (Tovkia), a river of western Arcadia, flowing into the Ladon, on the confines of Thespiae and Heraea. It is now called Langidhios, and joins the Ladon opposite to the small village of Renesi. (Paus. viii. 25. § 12; Lencu, Morea, vol. ii. p. 95, Peloponnesa, p. 223.)

TUTIA, a small stream in the neighbourhood of Rome, mentioned only by Livy and Silius Italicus, who inform us that Hannibal encamped on its banks, when he was commencing his retreat from before the walls of Rome. (Liv. xxvi. 11; Sil. Ital. xiii. 5.) Livy places it 6 miles from the city, and it is probable that it was on the Salarian Way, by which Hannibal subsequently commenced his retreat: in this case it may probably be the stream now called the Fiume di Conca, which crosses that road between 6 and 7 miles from Rome, and has been supposed by Gell and Nibby to be the Allia.  

According to Silius Italicus expressly tell us that it was a very small stream, and little known to fame. The name is written Turia in many editions of that poet, but it appears that the best MSS. both of Silius and of Livy have the form Tutia. [E. H. B.]

TUTIA (Tورثيا, Plut. Sert. 19), a place in the territory of the Edetani in Hispania Tarraconensis not far from Sucro, the scene of a battle between Pompey and Sertorius (Plut. i. c.; Florus, iii. 22.) It is thought to be the modern Tous. But perhaps the conjecture of Uberti (ii. pt. i. p. 413) is correct in both these passages we should read Turia.  

[T. H. D.]

TUTICUM. [Euxus Tuticum.]

TU'TICUS (It. Anton. p. 169), a small fortified town in Aetia, situated 12 miles N. of Tarchonius, upon the western side of the Nile. The ruins of Tütius are supposed to be near, and NW. of the present village of Gyvrah. (Belzoni, Travels, vol. i. p. 112.)  

TU'YANA (τυήνα; Eth. Tu'wrei or Te'wrius), also called Thyana or Thiana, and originally Theana, from Theas, a Thracian king, who was believed to have founded the town (Aelian, hist. c. 1. p. 6; Steph. B. s. c.); reported said that it was built, like Zela in Pontus, on a causeway of Semiramis; but it is certain that it was situated in Cappadocia at the foot of Mount Taurus, near the Cilician gates, and on a small tributary of the Limus (Strabo. xii. p. 537, xiii. p. 587.) It stood on the highroad to Cilicia and Syria at a distance of 300 stadia from Cybistra, and 400 stadia (according to the Pout. Table 73 miles) from Amidia (Strabo. x. 4. 3.; Plut. vi. p. 18, ed. Philon. Ph. s. c.)  

It's situation on that road and close to so important a pass must have rendered Tyana a place of great consequence, both in a commercial and a military point of view. The plain around it, moreover, was extensive and fertile, and the whole district received from the town of Tyana the name of Tyantis (Tevanti, Strab. l. c.). From its coins we learn that in the reign of Caracalla the city became a Roman colony; afterwards, having for a time belonged to the empire of Palmyra, it was conquered by Aurelian, in A.D. 272 (Vopisc. Aurel. 22, foll.), and Valens raised it to the rank of the capital of Cappadocia Secunda (Basil. Magn. Epist. 74, 75; Hieroc. p. 700; Malalu, Chron.; Not. Imp.) Its capture by the Turks is related by Cedrenus (p. 477). Tyana is celebrated in history as the native place of the famous impostor Apollonius, of whom we have a detailed biography by Philostorus. In the vicinity of the town there was a temple of Zeus on the borders of a lake in a marshy plain. The water of the lake itself was cold, but a hot well, sacred to Zeus, issued from it (Philost. Vit. Apoll. i. 4; Amm. Marc. xxiii. 6; Aristot. M. Anac. 163.) This well was called Asmalacon, and from it Zeus himself was supposed Asmalaicus. These details about the locality of Tyana have led in modern times to the discovery of the true site of the ancient city. It was formerly believed that Kura Hisar marked the site of Tyana; for in that district many ruins exist, and its inhabitants still maintain that their town once was the capital of Cappadocia. But this place is too far north to be identified with Tyana; and Hamilton (Researches, ii. p. 302, foll.) has shown most satisfactorily, what others had conjectured before him, that the true site of Tyana was at a place now called Kiz Hisar, south-west of Nigdeh, and between this place and Erkeli. The ruins of Tyana are considerable, but the most conspicuous is an aqueduct of granite, extending seven or eight miles to the foot of the mountains. There are also many foundations of several large buildings, shafts, pillars, and one handsome column still standing. Two miles south of these ruins, the hot spring also still bubbles forth in a copious stream (Lencu, op. cit., pp. 61, 62; Eckel, iii. p. 195; Sestini, p. 60.) [L. S.]

TYBIACAE. (Τυβιακαί, Ptol. vi. 14. § 11), a
people of Scythia into Imaurus, on the banks of the River Tidza.

TYDE. [TIDE.]

TYLE (Tyoe, Polyb. iv. 46), a town of Thrace, on the coast of the Euxine, where the Gauls established a seat of government (Baadarion), and which Reischard identifies with Kilius. Steph. B. (p. 670) calls it Tela, and places it on the Haemonus. [J. R.]

TYLISUS, a town of Crete (Plin. iv. 20), the position of which can only be conjectured. On its ancient coins are found on the reverse a young man holding in his right hand the head of an ibex, or wild goat, and in his left a bow. These types on the coins of Tylissus led the most distinguished numismatist of the last century (Eckhel, vol. ii. p. 321) to fix its situation somewhere between Cydonia and Elyrus, the bow being common on the coins of the one, and the ibex's head on those of the other, of these two cities. Hick (Kreta, vol. i. p. 433) and Torres Y. Riberia (Pyrgus Cretae, p. 324) adopt this suggestion of Eckhel, and place Tylissus on the S. coast at the W. extremity of the island near the modern Schlos-Kastell. (Passale, Travels, vol. i. p. 162.)

TYLUS or TYRUS (Tylas, Pol. vi. 7. § 47; Terys, Strab. vi. p. 766; Steph. B. s. v.), an island in the Persian gulf, off the coast of Arabia. It has already been mentioned that according to some traditions, this island was the original seat of the Phoenicians, who named the city of Tyre after it when they had settled on the coasts of the Mediterranean. [Pausan. ii. 607.] Pliny describes the island as abounding in pearls. (Plin. vi. 28, 32, xii. 10, s. 21, xvi. 41, s. 80; Attian, Aub. vii. 20; Theophr. Hist. Plant. iv. 9, v. 6.)

TYMANUS (T'yanus: Eth. Tyanaprov), a place in Phrygia, between Philomelion and Sostopolis. (Conc. Chalced. pp. 244, and 247: in this passage the reading Mavynoiv omis is corrupt; Hicet., l. 673, where the name is misspelt Tyanapov.) It is possible that Tymannus may be the same as the Demus mentioned by Livy (xxxviii. 15), for which some MSS. have Dumas or Dumin.

[T. L. S.]

TYMBREAS, a tributary of the Saouraxis, in the north of Phrygia (Liv. xxixviii. 18), is in all probability the same river as the one called by Pliny (vi. 1) Tymbreas, which joined the Saouraxis, as Livy says, on the borders of Phrygia and Galatia, and, flowing in the plain of Dorylaeum, separated Phrygia Ejacetus from Phrygia Salutaris. It seems also to be the same river as the Tavara and Batys mentioned in Byzantine writers. (Cassanrus, v. i. p. 111; Richter, Nahrungst., p. 522, foll.)

[T. L. S.]

TYMPHAEAE, TYMPHAEAE. [TYPHE.]

TYMPHE (Tymphi), a mountain on the confines of Macedonia, Epirus, and Thessaly, a part of the range of Pindus, which gave its name to the district Tymphaia (Tympaea), and to the people, the Tymphaei (Tymphai). (Steph. B. s. v.) As it is stated that the river Achelous rose in Mt. Tymph and that Achelous was a town of the Tymphaei (Strab. vii. pp. 325, 327), Mt. Tympha may be identified with the summits near Mt. Akera, and the Tymphae may be regarded as the inhabitants of the whole of the upper valley of the Peneus from Mizeor or Kulaba. The name is written in some editions of Strabo, Symphyl and Tymphaei, and the form Symphyla also occurs in Attian (1. 7); but the orthography without the s is perhaps to be preferred. The question whether Symphylas or Symphyliae is the same district as Tymphaia has been discussed elsewhere. [STYMPHAELAS.] Pliny in one passage calls the Tymphaei an Aetolian people (iv. 2, s. 3), and in another a Macedonian (iv. 10, s. 17), while Stephanus B. describes the mountain as Theophrat, and Strabo (I. c) the people as an Epirote race.

Stephanus B. mentions a town Tymphaea, which is probably the same place called Tramypo (Tymara) by others, where Polyperchon, who was a native of this district, murdered Hercules, the son of Alexander the Great (Iam. Lang. Hist., Diodor. xx. 28, with Wesseling's note; Steph. B. s. v. Tymara, (Leake, Northern Greece, vol. i. p. 422, vol. ii. pp. 275, 276.)

TYMPHRESTUS. [PINEDUS.]

TYNDARIS (Tondaris, Strab.; Tundaros, Pol.; Eth. Tyndaritis, Tyndaritans: Tundaro), a city on the N. coast of Sicily, between Myrae (Mallazo) and Agathyrna. It was situated on a bold and lofty hill standing out as a promontory into the spacious bay bounded by the Punta di Mallazo on the E., and the Capo Calavii on the W., and was distant according to the Itineraries 36 miles from Messana. (It. Ant. p. 90; Tab. Punt.) It was a Greek city, and one of the latest of all the cities in Sicily that could claim a purely Greek origin, having been founded by the elder Dionysus in B. C. 393. The original settlers were the remains of the Messenian exiles, who had been driven from Naupactus, Zacynthus, and the Peloponnesus by the Spartans after the close of the Peloponnesian War. They had at first been established by Dionysus at Messana, when he repelled that city (Messana); but the Spartans having taken umbrage at this, transferred them to the site of Tyndaris, which had previously been included in the territory of Abuceanum. The colonists themselves gave to their new city the name of Tyndaris, from their native divinities, the Tyndairei or Didymleri, and readily admitting fresh citizens from other quarters, soon raised their whole population to the number of 5000 citizens. (Diod. xiv. 78.) The new city thus rose at once to be a place of considerable importance. It is next mentioned in B. C. 344, when it was one of the first cities that declared in favour of Tarenton after his landing in Sicily. (Id. xvi. 69.) At a later period we find it mentioned as espousing the cause of Hieron, and supporting him during his war against the Muniertes, B. C. 269. On that occasion he restored his position upon Tyndaris on the left, and on Tauromenium on the right. (Diod. xxxii. Exc. II, p. 499.) Indeed the strong position of Tyndaris rendered it in a strategic point of view as important a post upon the Tyrrhenian, as Tauromenium was upon the Sicilian sea, and hence we find it frequently mentioned in subsequent wars. In the first Punic War it was at first dependent upon Carthage; and though the citizens, alarmed at the progress of the Roman arms, were at one time on the point of deserting to Rome, they were restrained by the Carthaginians, who carried their holds at the chief citizens as hostages. (Diod. xxxvii. p. 502.) In B. C. 257, a sea-dicta took place off Tyndaris, between that city and the Liparische islands, in which a Roman fleet under C. Atius obtained some advantage over the Carthaginian fleet, but without any decisive result. (Poly. i. 25; Zonar. viii. 12.) The Roman fleet is described on that occasion as touching at the promontory of Tyndaris, but the city had not yet fallen into their hands, and it was not till after the fall of Paounus, in B. C. 254, that
Tyras. expelled the Carthaginian garrison, and joined the Roman alliance. (Diod. xxi. p. 505.) We hear but little of Tyras under the Roman government, but it appears to have been a flourishing and considerable city. Cicero ever and anon mentions "monumenta nobilissima civitas" (Ferr. iii. 33), and we learn from him that the inhabitants had displayed their zeal and fidelity towards the Romans upon many occasions. Amongst others they supplied naval forces to the armament of Scipio Africanus the Younger, a service for which he required them by restoring them a statue of Mercury which had been carried off by the Carthaginians, and which continued an object of great veneration in the city, till it was again carried off by the victors Verres. (Cic. Ferr. iv. 39—42, v. 47.) Tyras was also one of seventeen cities which had been selected by the Roman senate, apparently as an honorary distinction, to contribute to certain offerings to the temple of Venus at Eryx. (Ib. v. 47; Zumpt, ad loc.; Diod. iv. 83.) In other respects it had no peculiar privileges, and was in the condition of an ordinary municipal town, with its own magistrates, local senate, &c., but was certainly in the time of Verres one of the most considerable places in the island. It is however probable that the exacts of Verres (Cic. Ferr. ii. c.), and the inhabitants, to revenge themselves on their oppressor, publicly demolished his statue as soon as he had quitted the island. (Ib. ii. 66.)

Tyras again bore a considerable part in the war between Scævus Pompeius and Octavian (c. 36). It was one of the points occupied and fortified by the former, when preparing for the defence of the Sicilian straits, but was taken by Agrippa after his naval victory at Mylae, and became one of his chief posts, from which he carried on offensive warfare against Pompey. (Appian, B. C. c. 105, 109, 116.) Subsequently to this we hear nothing more of Tyras in history; but there is no doubt of its having continued to subsist throughout the period of the Roman Empire. Strabo speaks of it as one of the places on the N. coast of Sicily which, in his time, still deserved the name of cities; and Pliny gives it the title of a Colony, and is responsible that it received a colony under Augustus, as we find it bearing in an inscription the titles of "Colonia Augusta Tyradinorum." (Strab. vi. p. 272; Plin. iii. 8. 14; Ptol. iii. 4. § 2; Orell. Inscr. 555.) Pliny indeed mentions a great calamity which the city had sustained, when (he tells us) half of it was swallowed up by the sea, probably from an earthquake having caused the fall of part of the hill on which it stands, but we have no clue to the date of this event; (Plin. ii. 92. s. 94.) The Itineraries attest the existence of Tyras, apparently still as a considerable place, in the fourth century. (Itin. Ant. pp. 90, 93; Tab. Peut.)

The site of Tyras is now wholly deserted, but the name is retained by a church, which crowns the most elevated point of the hill on which the city formerly stood, and is still called the Madonna di Tindaro. It is 650 feet above the sea-level, and forms a conspicuous landmark to sailors. Considerable ruins of the ancient city are also visible. It occupied the whole plateau or summit of the hill, and the remains of the ancient walls may be traced, at intervals, all round the brow of the cliffs, except in one part, facing the sea, where the cliff is now quite precipitous. It is not improbable that it is here that a part of the cliff fell in, in the manner recorded by Piny (ii. 92. s. 94.) Two gates of the city are also still distinctly to be traced. The chief monuments, of which the ruins are still extant within the circuit of the walls, are: the theatre, of which the remains are in imperfect condition, but sufficient to show that it was not of large size, and apparently of Roman construction, and the theatre that of Tununcium, rebuilt in Roman times upon the Greek foundations; a large edifice with two handsome stone arches, commonly called a Gymnasium, but the real purpose of which is very difficult to determine; several other edifices of Roman times, but of wholly uncertain character, a mosaic pavement, and some Roman tombs. (Serr. di Falco, Antichità della Sicilia, vol. v. part ii.; Smyth's Sicily, p. 101; Hosie's Classical Tour, vol. ii. p. 217, &c.) Numerous inscriptions, fragments of sculpture, and architectural decorations, as well as coins, vases, &c. have also been discovered on the site.

TYNDIS (Tyndis, Ptol. vii. 1. § 16), a river of India intra Gangem, which flowed into the Bay of Bengal. There is great doubt which of two rivers, the Mansades (Markandya) or the Mucousla (Godavery), represents this stream. According to Mannert it was the southern branch of the former river (v. 1. p. 173). But, on the whole, it is more likely that it is another name for the Godavery. [V.]

TYNDRUMENSE O.PT. [Thonemor闸.]

TYNNX (Týna), a city in Catania or the southern part of Cappadocia, in the neighbourhood of Faustopolis, is mentioned only by Ptolemy (v. 7. § 7). [L. S.]

TYPHAÜS. [Olympia.]

TYPAΣNICA (Typanica, Polyb. Steph. B.; Typanukas, Strab.; Typanwvda, Ptol.; Eth. Typanwàrón), a town of Tripolyëis in Elys, mentioned by Strabo along with Hypana. It was taken by Philip in the Social War. It was situated in the mountains in the interior of the country, but its exact site is uncertain. Leake supposes it to be represented by the ruins near Platiana; but Bökalec supposes these to be the remains of Aécy or Aépinu (Aépy), and that Typanaca stood on the fold of Molgyptus. (Strab. viii. p. 243; Polyb. iv. 77—79; Steph. B. s. v.; Ptol. iii. 16. § 18; Leake, Morea, vol. ii. p. 82; Bökalec, Recherches, &c. p. 153; Ross, Recherches Peloponiss., p. 162; Curtius, Peloponnesos, vol. ii. p. 89.)

TYRACIA or TYRACINA (Typanívà, Steph. B.; Eth. Tyrakinias, Plin.), a city of Sicily, of which very little is known. It is noticed by Stephanus as a "small but flourishing city," and the Tyraicians are mentioned by Pliny among the municipal communities of the interior of Sicily. (Steph. B. s. v.; Plin. iii. 8. 14.) It is doubtful whether the "Tyraecins, princeps civitatis," mentioned by Cicero (Ferr. iii. 56) is a citizen of Tyracina or one of Helorus who bore the proper name of Tyraecinus. In either case the name was probably derived from the city; but though the existence of this is clearly established, we are wholly without any clue to its position.

Several writers would identify the Trinacria (Trinacìa) of Dólorus (xii. 29), which writer describes as having been one of the chief towns of the Siculi, until it was taken and destroyed by the Syracusans in B. C. 439, with the Tyracinae of Stephanus and Tyracina of Pliny. Both names being otherwise unknown, the readings are in both cases uncertain; but Dólorus seems to represent Trinacìa as having been totally destroyed, which would sufficiently account for its not being again
TYRANNOBOAS (ToparonoBos), an emporium on the western coast of Bengal between Mandagura and Byzantium, noticed by the author of the Periplus (p. 30). It cannot now be identified with any place.

TYRAS (Τραγα, Strab. ii. p. 107), one of the principal rivers of European Sarmatia. According to Herodotus (iv. 51) it rose in a large lake, whilst Ptolemy (iii. 5 § 27) places its sources in Mount Carpates, and Strabo (l.c.) says that they are unknown. The account of Herodotus, however, is correct, as it rises in a lake in Galicia. (Georgii, Alte-Geogr. p. 269.) It ran in an easterly direction parallel with the Ister, and formed part of the boundary between Lucia and Sarmatia. It fell into the Pontus Euxinus to the NE. of the mouth of the Ister; the distance between them being, according to Strabo, 960 stadia (Strab. vii. p. 205, seq.), and, according to Pliny (iv. 12. s. 26) calls them, with more accurate orthography, Tyrangetae, and represents them as dwelling on a large island in the Tyras.

[T. H. D.]

TYRANITAE (Τυρανιται, Τυρανιταί, or Τυρανίται, Strab. vii. p. 289, &c.; Strab. iii. 5 § 25), literally, the Getae of the Tyras, an immigrant tribe of European Sarmatia dwelling E. of the river Tyras, near the Harpi and Tagri, and, according to Ptolemy, the northern neighbours of Lower Mesia. Pliny (v. 12. s. 26) calls them, with more correct orthography, Tyrangetae, and represents them as dwelling on a large island in the Tyras.

Tyrassas (Τυρασα, Plin. iv. 10. s. 17), a town of Emathia in Macedonia, placed by Ptolemy next to Eupus.

TYRITAE (Τυρίται, Herod. iv. 51), certain Greeks settled at the mouth of the Tyrons, by the Mielenaei who built the town of that name. (T. H. D.)

TYRRAHIA, TYRRHENI [Etruria]

TYRRHENIAN MARE (το Τυρρηνικόν πέλας), was the name given in ancient times to the part of the Mediterranean sea which adjoins the W. coast of Italy. It is evident from the name itself that it was originally employed by the Greeks, who universally called the people of Etruria Tyrrenians, and was merely adopted from them by the Romans. The latter people indeed frequently used the term Triscytherus Mare (Liv. xvi. p. 33; Mel. ii. 4. § 9), but still more often designated the sea on the W. of Italy simply as "the lower sea," Mare Inferius, just as they termed the Adriatic "the upper sea" or Mare Superius. (Mel. iv. 4. § 11; Plin. iii. 5. s. 10; Liv. l.c.)

The name of Tyrrhenian Mare was indeed in all probability never in use among the Romans, otherwise than as a mere geographical term; but with the Greeks it was certainly the habitual designation of that portion of the Mediterranean which extended from the coast of Liguria to the N. coast of Sicily, and from the mainland of Italy to the islands of Sardinia and Corsica on the W. (Polyb. i. 10, 14, &c.; Strab. ii. p. 222, v. p. 211, &c.; Dionys. Per. 83; Scyl. §§ 15, 17; Agathem. i. 14.) The period at which it came into use is uncertain; it is not found in Herodotus or Thucydides, and Sclavus is the earliest author now extant by whom the name is mentioned. (E. H. B.)

TYRUS (Τύρος) [Οὐρα]

TYRUS (Τύρος, Herod. ii. 44, &c.; Efh. Týros, Tyron), the most celebrated and important city of Phoenicia. By the Israelites it was called Tser (Josh. xix. 29, &c.), which means a rock but by the Tyrians themselves Sor or Sur (Theodor. in Ezech. xxvii.), which appellation it still retains. For the initial letter τ was substituted by the Greeks, and from them adopted by the Romans; but the latter also used the term Sura or Sarr, said to be derived from the Phoenician name of the purple fish; whence also the adjective Sarra-
The former of these etymologies is the preferable one. (Shaw, Travels, ii. p. 51.) The question of the origin of Tyre has been already discussed, its commerce, manufactures and colonies described, and the principal events of its history narrated at some length [Ptol. iii. 5, p. 608, seq.], and this article will therefore be more particularly devoted to the topography, and to what may be called the material history, of the city.

Strabo (xvi. p. 756) places Tyre at a distance of 200 stadia from Sidon, which pretty nearly agrees with the distance of 24 miles assigned by the Itin. Ant. (p. 149) and the Tab. Peutinger. It was built partly on an island and partly on the mainland. According to Pliny (v. 10. s. 17) the island was 22 stadia, or 3/4 miles, in circumference, and was originally separated from the continent by a deep channel 4ths of a mile in breadth. In his time, however, as well as long previously (cf. Strab. l. c.), it was connected with the mainland by an istmus formed by the mole or causeway constructed by Alexander when he was besieging Tyre, and by subsequent accumulations of sand. Some authorities state the channel to have been on the 3 stadia (S-ylus, p. 12) or 4 stadia broad (Dioscor. N. c. xvii. 60. Curt. iv. 2); and Arrian (Anab. ii. 18) describes it as shallow near the continent and only 6 fathoms in depth at its deepest part near the island. The accretion of the istmus must have been considerable in the course of ages. William of Tyre describes it in the time of the Crusades as a bow-shot across (xiii. 4); the Pope Roger makes it only 50 paces (Terre Sainte, p. 44); but at present it is about 1/4 of a mile broad at its narrowest part, near the island. That part of the city which lay on the mainland was called Pala-Tyrus, or Old Tyre; an appellation from which we necessarily infer that it existed previously to the city on the island; and this inference is confirmed by Ezechiel's prophetic description of the siege of Tyre by Nebuchadnezzar, king of Babylon, the particulars of which are not suitable to an island city. Pala-Tyrus extended along the shores from the river Euphrates, on the N., to the fountain of Ras-el-Ain on the S., a space of 7 miles; which, however, must have included the suburbs. When Strabo says (xvi. p. 758) that Pala-Tyrus was 30 stadia, or 3 miles, distant from Tyre, he is probably considering the southern extremity of the former. Pliny (l. c.) assigns a circumference of 19 miles to the two cities. The plain in which Pala-Tyrus was situated was one of the broadest and most fertile in Phoenicia. The fountain above mentioned afforded a constant supply of pure spring water, which was received into an octagonal reservoir, 60 feet in diameter and 18 feet deep. Into this reservoir the water gushes to within 3 feet of the top. (Mauddrel, Journey, p. 67.) Hence it was distributed through the town by means of an aqueduct, all trace of which has now disappeared (Robinson, Palestine, iii. p. 684.) The unusual contrast between the bustle of a great seaport and the more tranquil operations of rural life in the fertile fields which surrounded the town, presented a striking scene which is described with much fidelity in the Dionys. In Nusseus of Nonnus (40, 327, seq.).

The island on which the new city was built is the largest rock of a belt that runs along this part of the coast. We have no means of determining the origin of the island city; but it must of course have arisen in the period between Nebuchadnezzar and Alexander the Great. The alterations which the coast has undergone at this part render it difficult to determine the original size of the island. Mauddrel (p. 66) estimated it at only 40 acres; but he was guided solely by his eye. The city was surrounded with walls of the height of which, where it faced the mainland, was 150 feet. (Strab. l. c.) The foundations of this wall, which must have marked the limits of the island as well as of the city, may still be discerned, but have not been accurately traced. The measurement of Pliny before cited must doubtless include the subsequent accretions, both natural and artificial. The smallness of the area was, however, compensated by the great height of the houses of Tyre, which were not built after the eastern fashion, but story upon story, like those of Aratus, another Phoenician island city (Melis, ii. 7), or like the insulae of Rome. (Strab. l. c.) Thus a much larger population might be accommodated than the area seems to promise.

Bertot, calculating from the latter alone, estimates the inhabitants of insular Tyre at between 22,000 and 23,000. (Topogr. de Tyre, p. 17.) But the accounts of the capture of Tyre by Alexander, as will appear in the sequel, give a population of about double that number; and it should be recollected that, from the maritime pursuits of the Tyrians, a large portion of them must have been constantly at sea. Moreover, part of the western side of the island is now submerged, to the extent of more than a mile; and that this was once occupied by the city is shown by the bases of columns which may still be discerned. These remains were much more considerable in the time of Benjamin of Tudela, in the latter part of the 12th century, who mentions that towers, markets, streets, and halls might be observed at the bottom of the sea (p. 62, ed. Asher).

Insular Tyre was much improved by king Hiram, who in this respect was the Augustus of the city. He added to it one of the islands lying to the N., by filling up the intervening space. This island, the outline of which can no longer be traced, contained on the S. side a temple of Baal, or, according to the Greek way of speaking, of the Olympian Jupiter. (Joseph. c. Apion, i. 17.) It was by the space thus gained, as well as by substructions on the eastern side of the island, that Hiram was enabled to enlarge and beautify Tyre, and to form an extensive public place, which the Greeks called Eurychron. The artificial ground which Hiram formed for this purpose may still be traced by the loose rubbish of which it consists. The frequent earthquakes with which Tyre has been visited (See. G. N. ii. 26) have rendered it difficult to trace its ancient configuration; and alterations have been observed even since the recent one of 1837 (Kenrick, Phoenicia, p. 353, &c.).

The powerful navies of Tyre were received and sheltered in two roads and two harbours, one on the N., the other on the S. side of the island. The northern, or Sidonian roadstead, so called because it looked towards Sidon (Arrian, ii. 20), was protected by the chain of small islands already mentioned. The harbour which adjoined it was formed by a natural inlet on the NE. side of the island. On the N., from which quarter alone it was exposed to the wind, it was rendered secure by two sea-walls running parallel to each other, at a distance of 100 feet apart, as shown in the annexed plan. Portions of these walls may still be traced. The eastern side

Vol. II.
of the harbour was enclosed by two ledges of rock, with the assistance of walls, having a passage between them about 140 feet wide, which formed the mouth of the harbour. In case of need this entrance could be closed with a boom or chain. At present this harbour is almost choked with sand, and only a small basin, of about 40 yards in diameter, can be traced (Shaw, Travels, vol. ii. p. 30); but in its original state it was about 300 yards long, and from 230 to 240 yards wide. Part of the modern town of Sur, or Sour, is built over its southern portion, and only vessels of very shallow draught can enter.

The southern roadstead was called the Egyptian, from its lying towards that country, and is described by Strabo (i. c.) as unenclosed. If, however, the researches of Bertou may be relied upon (Topogr. de Tyr., p. 14), a stupendous sea-wall, or breakwater, 35 feet thick, and running straight in a SW. direction, for a distance of 2 miles, may still be traced. The wall is said to be covered with 2 or 3 fathoms of water, whilst within it the depth is from 6 to 8 fathoms. Bertou admits, however, that this wall has never been carefully examined; and if it had existed in ancient times, it is impossible to conceive how so stupendous a work should have escaped the notice of all the writers of antiquity. According to the same authority, the whole southern part of the island was occupied by a cothion, or dock, separated from the roadstead by a wall, the remains of which are still visible. This harbour, like the northern one, could be closed with a boom; whereas Chariton (vii. 2. p. 126, Reiske) takes occasion to compare the security of Tyre to that of a house with bolted doors. At present, however, there is nothing to serve for a harbour, and even the roadstead is not secure in all winds. (Shaw, ii. p. 30.) The northern and southern harbours were connected together by means of a canal, so that ships could pass from one to the other. This canal may still be traced by the loose sand with which it is filled.

We have already adverted to the sieges sustained by Tyre at the hands of Shalmaneser, Nebuchadnezzar,
The large fleet which Alexander had assembled struck terror into the Tyrians, who now confined themselves to defensive measures. They sent away the old men, women, and children to Carthage, and closed the mouths of their harbours with a line of timbers. It is unnecessary to recount the incidents which followed, and we shall therefore confine ourselves to the most important. Alexander had caused a number of new machines to be prepared, under the direction of the ablest engineers of Phoenicia and Cyprus. Some of these were planted on the mole, which now very nearly approached the city; others were placed on board large vessels, in order to batter the walls on other sides. Various were the devices resorted to by the Tyrians to frustrate these attempts. They cut the cables of the vessels bearing the battering rams, and thus sent them adrift; but this mode of defence was met by the use of iron mooring chains. To deal the blows of the battering engines, leather bags filled with sea-weed were suspended from the walls, whilst on their summit were erected large wheel-like machines filled with soft materials, which being set in rapid motion, either averted or intercepted the missiles hurled by the Macedonians. A second wall also was commenced within the first. On the other hand, the Macedonians, having now carried the mole as far as the island, erected towers upon it equal in height to the walls of the town, from which bridges were projected towards the battlements, in order to take the city by escalade. Yet, after all the labour bestowed upon the mole, Tyre was not captured by means of it. The Tyrians annoyed the soldiers who manned the towers by throwing out grappling hooks attached to lines, and thus dragging them down. Nets were employed to entangle the hands of the assailants; masses of red-hot metal were hurled amongst them, and quantities of heated sand, which, getting between the interstices of the armour, caused intolerable pain. An attempted assault from the bridges of the towers was repulsed, and does not appear to have been renewed. But a breach was made in the walls by battering rams fixed on vessels; and whilst this was assaulted by means of ships provided with bridges, simultaneous attacks were directed against both the harbours. The Phoenician fleet burst the boom of the Egyptian harbour, and took or destroyed the ships within it. The northern harbour, the entrance of which was undefended, was easily taken by the Cyprian fleet. Meanwhile Alexander had entered with his troops through the breach. Provoked by the long resistance of the Tyrians and the obstinate defence still maintained from the roofs of the houses, the Macedonian soldiery set fire to the city, and massacred 8000 of the inhabitants. The remainder, except those who found shelter on board the Sidonian fleet, were sold into slavery, to the number of 30,000; and 2000 were crucified in expiation of the murders of certain Macedonians during the course of the siege. The lives of the king and chief magistrates were spared. Thus was Tyre captured, after a siege of seven months, in July of the year B.C. 332. Alexander then ordered sacrifices and games in honour of the Tyrian Hercules, and consecrated to him the battering ram which had made the first breach in the walls. The population, which had been almost destroyed, was replaced by new colonists, of whom a considerable portion seem to have been natives of Thrace. The subsequent fortunes of Tyre have already been recorded. [PHOENICIA, p. 613.]

For the coins of Tyre see Eckhel, Doctr. Num. 4 i. 2.
TYSANUSA.
P. i, vol. iii. pp. 379—393, and 408, seq. Respecting its history and the present state of its remains, the following works may be advantageously consulted: Hengstenberg, De Rebus Tyrrioram; Kenrick, Phœnicia; Porocke, Description of the East; Volney, Voyage en Syrie; Richter, Wallfahrts; Berton, Topographie de Tyr; Manndrell, Journey from Aleppo to Damascus; Shaw's Travels; Robinson, Biblical Researches, &c.

[1. II. D.]

COIN OF TYRUS.

TYSANUSA, a port on the coast of Caria, on the bay of Scheneus, and a little to the east of Cape Passidum (Pomp. Mela, i. 16). Pliny (v. 29) mentions Tysanusa as a town in the same neighbourhood [L. S.]

TYRIA. [TYSANUSUS.]

TZYKUTUM (Τζυκούτολα), Procop. B. Goth. iii. 38; Anna Comn. vii. p. 215, x. p. 279; Theophyl. vi. 5; in Geogr. Rav. iv. 6, and Tab. Peut. Suralum and Syrailand; in It. Ant. pp. 138, 230, Lusitum, but in p. 323, Tiricalum; and in It. Hirc. p. 569, Tunorullum), a strong town on a hill in the SE. of Thrace not far from Perinthus, on the road from that city to Hadrianeopolis. It has retained its name with little change to the present day, being the modern Tekoros or Tekorha. [J. K.]

U. V.

VABAR, a river of Mauretania Caesariensis, which fell into the sea a little to the W. of Siculid. Ptolemy (v. 2, § 9) mentions it under the name of Oubdar as if it had been a town; and Mela (Muse. Ver. p. 463) thought that he had discovered such a place in the name of Bavaras, in an African inscription (cf. Orelli, Inscri. no. 329). In Pliny (v. 2, s. 1) and Mela (v. 6) the name is erroneously written Natar. It is probably the present Boderak. [T. H. D.]

VACALUS. [BATAVL.]

VACCA. 1. (Sall. J. 29, sc.) or VAGA (Sil. It. iii. 259; Ovid. Fast. iv. 3, § 28; Buyla, Procop. de Med. vi. 5), an important town and place of considerable commerce in the interior of Numidia, lying a long day's journey SW. of Utica. Pliny (v. 4) calls it Vagnese Oppidum. It was destroyed by Metellus (Sall. J. 69); but afterwards restored and inhabited by the Romans. Justinian surrounded it with a wall, and named it Theodorum, in honour of his consort. (Procop. i. c.; cf. Strab. xvii. p. 831; Sall. J. 47, 68; Plut. Mar. 8, p. 499) Now Bayjiah (Bagia, Beggin, Beggin, Bagine) in Tunis, on the borders of Algeria. (Cf. Shaw, Travels. i. p. 183.) Vaga is mentioned by the Geogr. Nub. (Clim. iii. i. 88) under the name of Bagia, and by Leo Atic. (p. 406, Lorschach) under that of B tagia, as a place of considerable commerce.

2. A town in Byzacium in Africa Proper, lying to the S. of Ruspinum (Hist. B. Afr. 74). This is probably the "alia Vagnese oppidum" of Pliny (v. c.). [T. H. D.]

VACAElI (Οίκαεας), Ptol. ii. 6 § 50), an important people in the interior of Hispam (Tarrarum, bounded on the W. by the Astures, on the N. by the Cantabri, on the E. by the Celtiberi (to whom Appian, Hist. 51, attributes them), and on the S. by the Vettones and the river Durus. Hence their district may be considered as marked by the modern towns of Zaraura, Toro, Palencia, Burgos, and Valladolid. Their chief cities were Paliastia (Palencia) and Intecratia. According to Diodorus (v. 34) they yearly divided their land for tilage among themselves, and regarded the produce as common property, so that whoever kept back any part for himself was capitaly punished. (Cf. Liv. xxx. 7, xi. 47; Polyb. iii. 14; Strab. iii. pp. 132, 162; Plin. iii. 3, s. 4; Plut. Sert. 21.) [T. H. D.]

VACOMAGI (Οίκαομαγοι, Ptol. ii. 8 § 13), a people in Britannia Barbaria, near the Taesac, never subdued by the Romans. Camden (p. 1217) places them on the borders of Loch Lamond. Pliny (v. c.) describes four towns to them. [T. H. D.]

VACUA (Οίκαουα, Strab. iii. p. 153; Obacor, Ptol. ii. 5 § 4), a river in Lusitania, which entered the Atlantic ocean between the Durus and Moinia, in the neighbourhood of Talahunis. Pliny (iv. 21, s. 33) calls it Vacca. The present Vouga. [T. H. D.]

VACUATAE (Οίκαουαται, Ptol. iv. 6 § 10), a people in the S. of Mauretania Tingitana, settled on the little Atlas. [T. H. D.]

VADA, a place or on or near the Rhine, in North Gallia. Tacitus (Hist. v. 21) in his history of the war of Civilis speaks of Civilis attacking on one day his troops in four divisions, Arenacum, Batavodurum, Grunies, and Vada. The history shows that Grunies and Vada were south or on the south side of the stream which Tacitus calls the Rheum. [GRUNIES.]

VADA SABBATA (Σαβατων Οιαδα, Strab.; Σαβατα, Ptol.; Υαδομ, a town and port on the south coast of Liguria, about 30 miles W. of Genoa. It was situated on a bay which afforded one of the best roadsteads along this line of coast, and seems to have been in consequence much frequented by the Roman fleets. In n. c. 43 it was the first point at which M. Antonius halted after his defeat at Mutina, and where he effected his junction with Ventidius, who had a considerable force under his command. (Cic. ad Fam. xi. 10, 13.) D. Brutus, in his letter to Cicero, speaks of it as "inter Apenninem et Alpes," a phrase which obviously refers to the notion commonly entertained that this was the point of demarcation between the two chains of mountains, a view adopted also by Strabo (iv. p. 202). A pass led into the interior across the Apennines from Vada to Aquae Statiellae which was probably that followed by Antony. Brutus speaks in strong terms of the rugged and difficult nature of the roads in all directions from this point, (Ib.); but at a later period a regular road was constructed across the mountains from Vada to Aquae Statiellae, as well as in both directions along the coast. (Ulp. Ant. p. 295; Tab. Peut.) Under the Roman Empire we learn that Vada continued to be a place of considerable trade (Iul. Capit. Pert. 9, 13); and it is still mentioned as a port in the Maritime Itinerary (p. 502). Some doubt has arisen with regard to its precise position, though the name of Vado would seem to be obviously derived from it; but that of Sabutta or Sabatia, on the other hand, is apparently connected with that of Sabrata; a
town with a small but secure port about 4 miles N. of Vado. Livy indeed mentions Savo (undoubtedly the same with Savonna) as a sea-port town of the Ligurians, where Mago established himself during the Second Punic War (Liv. xxviii. 46); but the name does not occur again in any writer, and hence Cluverius supposed that this was the place afterwards called Sabatta. There seems, however, no doubt that Sabatta or Sabatia, Vada Sabatha, or Vada Sabatia (as the name is written by Cicero), are all only different forms of the same name, and that the Roman town of Vada was situated on, or very near, the same site as the present Vado, a long straggling fishing village, the bay of which still affords an excellent roadside. The distinctive epithet of Sabatta or Sabatia was evidently derived from its proximity to the original Ligurian town of Savo.

VADAVERO. [E. II. B.]

VADAVERO, a mountain near Bibulis in the territory of the Celtiberi, in Hispania Tarraconensis. It appears to be mentioned only by Martial (i. 50, 6), who characterises it by the epithet of "sacred," and adverts to its rugged character. [T. H. D.]

VADA VOLATERRANA. [VOLATERRAE].

VADICASSII (Orasathace), a people of Gallia Lugdunensis, whom Polemy (ii. § 16) places on the borders of Belgica, and next to the Medes. He assigns to the Vadicassi a city Novosagmum. P. Anville concludes that following Polemy's data we may place his Vadicassi in Vadois, which is between Mexno and Soissons. He remarks that Vadois is Vadus in the capitularies of Charles the Bald, and Vadensis in the later acts. Other geographers have different opinions. In many of the editions of Pliny (iv. 18) we find enumerated "Andegavi, Vidaecasses, Vadiocasses, Ucelli;" but only one MS. has "Vadiocasses," and the rest have Bodicasses or Bodicassii, which we must take to be the true reading, and they seem to be the same as the Baciocasses. (P. Anville. Notice, &c. ukert, Gallien.) [G. L.]

VADIMONIS LACUS (η Ολυμπιών λίμνη, Polyb.: Lagohto di Bassano), a small lake of Etruria, between the Cimilian hills and the Tiber, celebrated in history as the scene of two successive defeats of the combined Etruscan forces by the Romans. In the first of these battles, which was fought in n. c. 509, the Etruscans had raised a chosen army, enrolled with peculiar solemnity (lege sacra); but though they met with the utmost valour and obstinacy, they sustained so severe a defeat at the hands of the Roman Consul Q. Fabius Maximus, that, as Livy remarks, this disastrous day first broke the power of Etruria (Liv. i. 39). The second battle was fought near 30 years later (n. c. 283), in which the allied forces of the Etruscans and Gauls were totally defeated by the consul P. Cornelius Dolabella. (Polyb. ii. 20; Estrop. ii. 10; Flor. i. 13.) But though thus celebrated in history, the Vadinus lake is a very tridling sheet of water, in fact, a mere pool or stagnant pond, now almost overgrown with reeds and bulrushes. It was doubtless more extensive in ancient times, though it could never have been of any importance, and scarcely deserves the name of a lake. But it is remarkable that the younger Pliny in one of his ejaculis describes it as a circular basin abounding in floating islands, which have since all disappeared, and probably have contributed to fill up the ancient basin. Its waters are whitish and highly sulphureous, resembling, in this respect, the Aquae Alb Pillae near Tiber, where the phenomenon of floating islands still occasionally occurs. (Plin. Ep. viii. 20.) It enjoyed the reputation, probably on account of this peculiar character, of being a sacred lake. But the apparent singularity of its having been twice the scene of decisive conflicts is sufficiently explained by its situation just in a natural pass between the Tiber and the wooded heights of the Ciminian forest, which (as observed by Mr. Dennis) must always have constituted a natural pass into the plains of Central Etruria. The lake itself, which is now called the Laghetto di Basserno from a neighbouring village of that name, is only a very short distance from the Tiber, and about 4 miles above Orte, the ancient Hortia. (Dennis's Etruria, vol. i. pp. 167—170.)

VAGA, a town of the Cantii in Britannia Romana (Not. Imp.)

VAGA. [VACC.]

VAGEDRUSA, the name of a river in Sicily, mentioned by Silius Italicus (xvii. 229), according to the old editions of that author; but there can be no doubt that the true reading is that restored by Ruperti, "vage Chrysa," and that the river Chrysas is the one meant. (Ruperti, ad l. c.) [E. H. B.]

VAGIENNI (Begaieni), a Ligurian tribe, who inhabited the region N. of the Maritime Alps, and S. of the territory of the Taninii. According to Pline they extended as far to the W. as the Mens Vesulus or Mons Vico, in the main chain of the Alps (Plin. iii. 16, s. 20), while the district of a town or capital under the Roman rule, called Augusta Vagiennorum, was situated at Bene, between the rivers Stura and Tanaro, so that they must have occupied an extensive territory. But it seems impossible to receive as correct the statement of Velius (l. 15) that the Roman colony of Eporedia (Veria) was included within their limits. [Ero- Realm.] It is singular that Pliny more than once speaks of them as being descended from the Catugures, while at the same time he distinctly calls them a Ligurian tribe, and the Catugures are commonly reckoned a Gaulish one. It seems probable, however, that many of the races which inhabited the mountain valleys of the Alps were of Ligurian origin; and thus the Catugures and Segusiani may very possibly have been of a Ligurian stock like their neighbours the Taninii, though subsequently conformed to the Gauls. We have no account of the period at which the Vagienni were reduced under the Roman yoke, and their name is not found in history as an independent tribe. But Pliny notices them as one of the Ligurian tribes still existing in his time, and their chief town, Augusta, seems to have been a flourishing place under the Roman Empire. Their name is sometimes written Bagieni (Orell. Inscr. 76), and is found in the Tabula under the cognâm form Bagieni. (Tab. Peut.) [E. H. B.]

VAGNIACAE, a town of the Cantii in Britannia Romana, between Noviomagus and Durobrivae. Camden (p. 226) identifies it with Maidstone, Horsey (p. 424), with more probability, with Northfleet. Others have sought it near Longfield, and at Wrotham. [T. H. D.]

VAGORITUM (Oleaginum). [Avir.]

VALADASIS. [Batana-Rhonia.] [L. S.]

VALCUM, a place near the confines of Upper and Lower Pannonia, not far from Lake Peico (Itin. Ant. p. 233), but its exact site is uncertain. [L. S.]

VALDASUS, a southern tributary of the Satus, flowing from the mountains of Illyricum, and join-
VALENTIA. [Hypoxion.]

VALEPONGA or VALEBONGA, a town of the Celtiberi in Hispania Tarraconensis, on the road from Laninum to Caesaragutta. (Hist. Ant. p. 477.) Variously identified with Val de Mena and Valaterra. [T. H. D.]

VALETHIA, the name of the NE. part of Lower Pannonia, which was constituted as a separate province by the emperor Galerius, and named Valeria in honour of his wife. (Aurel. Vict. de Caes. 40; Amm. xvi. 38. xlvii. 3.) This province was bounded on the E. and N. by the Danubius, on the S. by the Savus, and on the W. by Lake Puzco. (Comp. Pannonia, p. 531; and Muchar, Northiam. vol. i. p. 51.)

VALETHIA (Ouleleia, Ptol. ii. 6, § 58), a town of the Celtiberi in Hispania Tarraconensis, on the Sueco. At a later period it became a Roman colony in the jurisdiction of Carthago Nova. (Plin. iii. 3. s. 4.) Now Valeria la Via, with ruins. (Cf. Flor. espec. Sepr. viii. p. 198, v. p. 19, and VII. p. 59.)

VALETHIANA (Valleprada, Prop. de Arc. iv. 6), a place in Moesia Inferior. (Hist. Ant. p. 220.)

Valentia (Ouedia, Ptol. v. 9, § 21), an important Roman town of Asiatic Sarmatia, between Mont Cervantus and the river Rha. (Plin. vi. 7. s. 7.)

VALINA (Valinorum, Ptol. v. 9, § 21), a place in Mesia Inferior. (Hist. Ant. p. 220.)

VALLATUM, a town in the Astures in Hispanic Tarraconensis, between Asturica and Interamnium. (Hist. Ant. pp. 448, 453.) Variously identified with Beaver, the town of the Ubrique, S. Martin de Cavaus, and Villar de Magardia. [T. H. D.]

VALIATUM, a town in Vindelicia, not far from the S. bank of the Danubius, on the road from Regium to Augusta Vindelicorum; it was the station of the staff of the third legion and the second Valerian squadron of cavalry. (Hist. Ant. p. 250; Not. Imp.) It occupied, in all probability, the same site as the modern Wahler, on the little river Ihn. [L. S.]

VALLIS PENNINA, or POENIUM, as the name of the same inscriptions, is perhaps the valley down which the Rhone flows into the Lake of Geneva. In the Notitia of the Gallic Provinces all the inhabitants of this valley are included in the name Vallenses, for we read " Civitas Vallensi, loc est, Octodurum." [Octodurum.] But there were four peoples in the Vallisci, as it seems, Xantuates, Veragri, Sedumi, and Viberti. The name Vailis Pennina went out of use, and it was called Pagus Vallensis. The name Valls is preserved in that of the canton Wallis or Valais, which is the largest valley in Switzerland. (Gallia Transalpina, Vol. i. p. 950; Rhodanus.) [G. L.]

VALLUM ROMANUM. Under this title we propose to give a short account of the remarkable work constructed by the Romans across our island, from near the mouth of the Tyne on the E. to the Solway Frith on the W., and of which considerable remains still exist. The history of the formation of this line of fortification is involved in a good deal of obscurity; in very different opinions have been entertained, respecting its authors; and neither the Latin writers nor the inscriptions hitherto found among the ruins of the wall and its subsidiary works are sufficient to settle the disputed points, though they suggest conjectures more or less probable.

COIN OF VALENTIA IN SPAIN.

VALENTIA (Oualentia), in Gallia Narbonensis, a colony in the territory of the Cavares, as Pliny says (iii. 4); but D'Anville proposes to alter the meaning of this passage of Pliny by placing a full stop between "Cavares" and "Valentia." However, Valentia (Valence) was not in the country of the Cavares, but in the territory of the Sequani, as Pliny (ii. 10, § 12) says, who calls it "colonia." Valence is a town on the east bank of the Rhone, a few miles below the junction of the Isère. In the middle ages it was the capital of the Valentinois, and in the fifteenth century it became the seat of a university. [G. L.]
VALLUM ROMANUM.

The origin of the barrier may have been the forts and stationary camps which Agricola (A.D. 79) caused to be erected in Britain (Tac. Agr. 20); but the account which Tacitus gives of this matter is so vague that it is quite impossible to found any certain conclusion on his words. In A.D. 120, Hadrian visited Britain, where he determined on fixing the boundary of the Roman Empire considerably to the S. of the most N. conquests of Agricola. He chose this boundary well, as it coincides with a natural one. The Tyne flows almost due E., just S., and nearly parallel to the 55° N. lat., far more than two thirds of the breadth of the island. The valley of the Tyne is separated from that of the Irthing, a branch of the Eden, by the N. extremity of the great chain of hills sometimes called the Backbone of England; and the Irthing, with the Eden, completes the boundary to the Solway Frith. In order to strengthen this natural frontier, Hadrian, as we are informed by Spartianus, "drew a wall (murus) 80,000 paces in length, to divide the barbarians from the Romans;" which wall followed the same general direction as the line above indicated.

Entropius (viii. 19) states that the Emperor Septimius Severus, who was in Britain during A.D. 208-211, constructed a rampart (vallum) from sea to sea, for the protection of the Roman provinces in the S. of the island. Now, as will be seen from the following description, the lines of works designated by the general name, Roman Wall, consist of two main parts, a stone wall and an earthen rampart; and most writers on the subject have regarded these as two distinct, though connected, works, and belonging to two different periods; the earthwork has generally been ascribed to Hadrian, the stone wall to Severus. Such is the opinion of Horsley, whose judgment, as Mr. Bruce emphatically admits, is always deserving of the highest consideration. Mr. Bruce himself expresses an opinion, founded on repeated and careful examination of all the remains of the wall, "that the lines of the barrier are the scheme of one great military engineer;" and the wall of Hadrian was not a fence such as that by which we prevent the straying of cattle: it was a line of military operation, similar in its nature to the works which Wellington raised at Torres Vedras. A broad belt of country was firmly secured. Walls of stone and earth crossed it. Camps to the north and south of them broke the force of an enemy in both directions; or, in the event of their passing the outer line, enabled the Romans to close upon them both in front and rear. Look-out stations revealed to them the movements of their foes; beacons enabled them to communicate with neighbouring garrisons; and the roads, which they always maintained, assisted them in concentrating their forces upon the points where it might be done with the best effect. Such, I am persuaded, was the intention of the Roman wall, though some still maintain that the murus and vallum are independent structures, the productions of different periods" (pp. ix. x. Pref. 2nd ed.)

We confess that the reasoning here does not seem to us to be very conclusive. Grant that the system of defence has consistency and unity, yet it by no means follows that the whole was executed at one time. The earliest works were probably detached stationary camps; the next step would naturally be to connect them together by a wall, whether of earth or stone; and if experience should afterwards prove that this barrier was insufficient, it would be an obvious pro-

ceeding to strengthen it by a parallel fortification. The common opinion, therefore, that Agricola commenced the defensive line, Hadrian strengthened it, and Severus completed it, appears to be probable in itself, and is supported by the facts that we find upon the subject in the classical writers. If we may assume that the words murus and vallum were used by Spartianus and Entropius in their strict signification, it would seem that the stone wall was the work of Hadrian, the earthen rampart of Severus. That some portion of the barrier was executed under the direction of the latter, is rendered still more probable by the fact that the Britons called the wall Agripinian Wall, or quael Sever, as Camden states. It has been designated by various names in later times; as the Peice's Wall, the Third Wall, the Kephe Wall; but is now generally called the Roman Wall.

The following description is taken almost entirely from Mr. Bruce's excellent work, mentioned at the end of this article.

The barrier consists of three parts: (I.) a stone wall or murus, strengthened by a ditch on its northern side; (II.) an earthen wall or rampart, month of the stone wall; (III.) stations, castles, watch-towers, and roads; these lie for the most part between the stone wall and the earthen rampart.

The whole of the works extend from one side of the island to the other, in a nearly straight line, and comparatively close to one another. The wall and rampart are generally within 60 or 70 yards of each other, though the distance of course varies according to the nature of the country. Sometimes they are so close as barely to admit of the passage of the military way between them; while in one or two instances they are upwards of half a mile apart. It is in the high grounds of the central region that they are most widely separated. Here the wall is carried over the highest ridges, while the rampart runs along the adjacent valley. Both works, however, are so arranged as to afford each other the greatest amount of support which the nature of the country allows.

The stone wall extends from Walland on the Tyne to Pontes on the Solway, a distance which Horsley estimates at 68 miles 3 furlongs, a measurement which almost exactly coincides with that of General Roy, who gives the length of the wall at 683 miles. The vallum falls short of this length by about 3 miles at each end, terminating at Newcastle on the E. side, and at Dumburgh on the W.

For 19 miles out of Newcastle, the present highway to Carlisle runs upon the foundations of the wall, which parcases a straight course wherever it is at all possible, and is never curved, but always bends at an angle.

In no part is the wall perfect, so that it is difficult to ascertain what its original height may have been. Bede, whose monastery of Jarrow was near its eastern extremity, and who is the earliest authority respecting its dimensions, states that in his time it was 8 feet nine inches and 12 high. Sir Christ. Ridley, writing in 1572, describes it as 3 yards broad, and in some places 7 yards high. Samson Erdeawick, a well-known antiquary, visited the wall in 1574, when he ascertained its height at the W. end to be 16 feet. Camden, who saw the wall in 1599, found a part of it on a hill, near Carvoran, to be 15 feet high and 9 broad. Allowing for a battlement, which would probably soon be destroyed, we may conclude that the average height was from 18 to 19 feet. The thickness varies from 6 to 21 feet.
The wall was everywhere accompanied on its northern side by a broad and deep fosse, which may still be traced, with trifling interruptions, from sea to sea, even where the wall has quite disappeared. It traverses indifferently alluvial soil and rocks of sandstone, limestone, and basalt. Thus, on Tapper Moor, enormous blocks of whinstone lie just as they were lifted out of the fosse. East of Heddon on the Wall, the fosse is 34 feet wide at the top, 14 at the bottom, and about 9 deep. In some places it is 40 feet wide at the top, and in others 20 feet deep.

Hodgson, in his History of Northumbland (ii. p. 276), states a fact curious if true: "A little W. of Portgate, the earth taken out of the fosse lies spread abroad to the N. in lines, just as the workmen wheeled it out and left it. The tracks of their barrows, with a slight mound on each side, remain unaltered in form." It is scarcely credible, however, that slight elevations of earth, and superficial traces in it, should, for more than a thousand years, have successfully resisted the constant operation of the natural agencies which are sufficient to disintegrate the hardest rocks.

The Vallum, or earth wall, is uniformly S. of the stone wall. It consists of three ramparts and a fosse. One rampart is close to the S. edge of the ditch. Of the other two, which are considerably larger, one is situated N., the other S. of the ditch, at the distance of about 24 feet from it. These larger ramparts are even now, in some places, 6 or 7 feet high. They are composed of earth, in which masses of stone are often imbedded, for the sake of which they are sometimes quarried. The fosse of the vallum was probably smaller than that of the muras.

No outlets through the S. lines of fortification have been discovered; so that the gateways of the stations appear to have originally been the only means of communication with the country.

At distances averaging nearly 4 miles, stationary camps were erected along the line. Some of these, though connected with the wall, were evidently built before it.

The stations are four-sided and nearly square, but somewhat rounded at the corners, and contain an area averaging from 3 to 6 acres, though some of them are considerably larger. A stone wall, about 5 feet thick, encloses them, and was probably in every instance strengthened by a fosse and one or more earthy ramparts. The stations usually stand upon ground with a southern inclination.

The great wall either falls in with the N. wall of the stations, or else usually comes up to the N. check of their E. and W. gateways. The vallum in like manner generally approaches close to the S. wall of the stations, or comes up to the S. side of the E. and W. portals. At least three of the stations, however, are quite detached from both lines of fortification, being to the S. of them. These may have been erected by Agricola.

Narrow streets intersecting one another at right angles traverse the interior of the stations; and abundant ruins outside the walls indicate that extensive suburbs were required for the accommodation of these connected with the soldiers stationed in the camps. The stations were evidently constructed with exclusive reference to defence; and hence no traces of tesselated pavements or other indications of luxury and refinement have been discovered in the mural region.

According to Horsley, there were 18 stations on the line of the wall, besides some in its immediate vicinity; but Hodgson reduces the number to 17, believing that in one instance Horsley mistook a mere temporary encampment for a station.

In ascertaining the number and names of the stations, our principal literary authority is the Notitia Imperii, supposed to have been compiled about the end of the reign of the emperor Theodosius the younger. The 69th section of this document contains a list of the prefects and tribunes under the Duke of Britain; the portion relating to our subject is headed, "Item per lineam Vallis," and contains the names of 23 stations, evidently arranged in their order from F. to W. The heading, however, manifestly implies, not, as it seems sometimes to have been interpreted, that all the stations were actually on the line of the wall, but that they were along it, that is, parallel to, or at no great distance from it. It is clear, therefore, that as remains of stations exist both to the N. and to the S. of the wall, as well as actually on its line, nothing but the remains themselves can enable us to name the stations with certainty.

Now the first 12 stations mentioned in the Notitia have been accurately identified by means of inscriptions found in the ruins of the stations. Of these we subjoin a list, with the ancient and modern names, taken chiefly from the plan prefixed to Mr. Bruce's work:--

<table>

</tbody>
</table>

All these are on the actual line of the wall, except Vindolana and Magna, which are a little to the S. of it.

West of Ambelganna no evidence has yet been discovered to identify any of the stations; and it is to be feared that many antiquities which might have enabled us to do so have been destroyed; for it appears that the country people, even quite recently, regarded stones bearing inscriptions as "unlucky," calling them "witch-stones," the evil influence of which was to be extinguished by pounding them to powder. Besides this, stone is scarce in that part of the country; and hence the materials of the wall and stations have been extensively employed in the construction of dikes and other erections in the neighbourhood.

It appears from the plan already referred to that there were stations at the places now called Cambeck Fort, Stawnez, Burygh, Drawbrugh, and Bowness; the first a little to the S., all the rest on the line of the wall.

Of the remaining eleven stations mentioned in the Notitia, the plan identifies Alienis with Whitby Castle, some miles S. of the wall. Mr. Bruce places Breminiacum a little W. of the village of Brampton; Petrana, he thinks, is probably the same as Cambeck Fort.

It is possible that something may yet be done to elucidate what is still obscure in connection with these most interesting monuments of Roman Britain; and the Duke of Northumberland had, in 1853, given
directions to competent persons to make an accurate and complete survey of the whole line of the barrier, from sea to sea. Whether any results of this investigation have yet been published, we are not aware. Most of the fortified stations that are of importance are Vindobola, Ciliumus, Procula, and Bercovicius. At the first, great numbers of coins and other antiquities have been found. The second has an area of 8 acres, and is crowded with ruins of stone buildings. A great part of the rampart of Proculia is entire, and its northern face, which is formed of the main line of wall, is in excellent preservation. Bercovicius, however, surpasses all the other stations in magnitude and in the interest which attaches to its remains. It is 15 acres in extent, besides a large suburb on the S. Within it no less than 20 streets may be traced; and it seems to have contained a Doric temple, part of a Doric capital and fragments of the shafts of columns having been discovered in it, besides a great number of altars, inscriptions, and other antiquities.

The remaining portions of this great fortification may be briefly described. The Castella, or mile-castles as they are called, on account of being usually a Roman mile from one another, are buildings about 60 or 70 feet square. With two exceptions, they are placed against the S. face of the wall; the exceptions, at Portgate and near Aesica, seem to have projecting equally N. and S. of the wall. The castella have usually only one entrance, of very substantial masonry, in the centre of the S. wall; but the most perfect specimen of them now existing has a N. as well as a S. gate.

Between each two stations there were four smaller buildings, called turrets or watch-towers, which were little more than stone sentry-boxes, about 3 feet thick, and from 8 to 10 feet square in the inside.

The line of the wall was completed by military roads, keeping up the communications with all its parts and with the southern districts of the island. As these were similar in their construction to other Roman roads, it is not necessary to say more respecting them in this place.

The following works contain detailed information of every kind connected with the Roman Wall:—Horsley's Britannia Romana; Warburton's Valesa Romanum, 4to. Lond. 1753; W. Hutton's History of the Roman Wall, 1801; Roy's Military Antiquities of the Romans in Britain; the 3rd vol. of Hodgson's History of Northumberland; and lastly, The Roman Wall: an Historical and Topographical Description of the Barrier of the Lower Isthmus, &c. Deduced from numerous personal Surveys. By the Rev. J. C. Bruce, M. A., 2nd edit. Lond. 1855, 4to. This work contains full descriptions of all the antiquities hitherto discovered along the line of the wall, and great numbers of well executed engravings of the most interesting objects, besides maps and plans of the works. [J. R.]

VALVA (Oëcscu, Ptol. iv. 2. § 16), a mountain in Mauretania Cæsariensis. [T. H. D.]

VAMA (Oëscu, Ptol. ii. 4. § 15), a town of the Cheniffis in Hispavíiæ Baetica. [T. H. D.]

VANCANSIS. (BATIANA.)

VANDABANDA (Oëscuavâne, Ptol. vi. 12. § 4), a district of Sogdiana, between the Mamos Caucausus (Hindis-Kasf) and the Imaus (Himadeh). It is probably nearly the same as the present Hâddakhân. (Wilson, Aria. p. 164.)

VANDALI, VANDALII, VINDILI, or VANDULI (Oëavâdo, Bâvâdo, Barâdow), a powerful branch of the German nation, which, according to Procopius (Bell. Goth. i. 3), originally occupied the country about the Palus Macedon, but afterwards inhabited an extensive tract of country on the south coast of the Baltic, between the rivers Vistula and Vistulina. (Hist. deiss. 28) mentions the Hugurudiones as a tribe of the Vandalii. At a certain period we find them in the country north of Bohemia, about the Riesengebirge, which derived from them the name of Vandalici Montes (Oëcasen-ðâlba õvo; Dion Cass. iv. 1.) In the great Marcomanian war, they were allied with the Marcomanni, their southern neighbours, and in conjunction with them the Quadi attacked Pannonia. (Jul. Capit. M. Asde. 17; Eutrop. viii. 13; Vopisc. Prov. 18; Diodippus, Exe. de Leg. p. 12.) In the reign of Constantine they again appear in a different country, having established themselves in Moravia, whence the emperor transplanted them into Pannonia (Jornand. Get. 22), and in the reign of Probus they also appear in Dacia. (Vopisc. Prov. 38.) In A.D. 406, when most of the Roman troops had been withdrawn from Gaul, the Vandals, in conjunction with other German tribes, crossed the Rhine and invaded Gaul in the direction of their devastations in that country and afterwards in Spain have made their name synonymous with that of savage destroyers of what is beautiful and venerable. Three years later they established themselves in Spain under their chief Geisicus. Here again they plundered and ravaged, among many other places, Nova Carthago and Hispales, together with the Balaric islands. At last, in A.D. 429, the whole nation, under king Generic, crossed over into Africa, whether they had been invited by Bonifacius, who hoped to avail himself of their assistance against his calumniators. But when they were once in Africa, they refused to quit it. They not only defeated Bonifacius, but made themselves masters of the whole province of Africa. This involved them in war with the Empire, during which Sicily and the coasts of Italy were at times fearfully ravaged. On one occasion, A.D. 455, Generic and his hordes took possession of Rome, which they plundered and sacked for fourteen days. And not only Rome, but other cities also, such as Capua and Nola, were visited in a similar way by these barbarians. Afterwards various attempts were made to subdue or expel them, but without success, and the kingdom of the Vandals maintained itself in Africa for a period of 105 years, that is, down to A.D. 534, when Belisarius, the general of the Eastern Empire, succeeded in destroying their power, and recovered Africa for the Empire. As to the nationality of the Vandals, most German writers claim them for their nation (Zeuss, Die Deutschen, p. 57; Wilhelm, Germanien, p. 87); but Dr. Latham (on Tac. Epit. l. xxxviii. fol.) and others prefer regarding them as a Slavonic people, though their arguments are chiefly of an etymological nature, which is not always a safe guide in historical inquiries. (Papenrodt, Gesch. der Vandal. Herrschaft in Afrika, Berlin, 1837; Hansen, Wer veranlasste die Berufung der Vandalen nach Afrika? D-rapat. 1843; Friedländer, Die Minuæ der Vandalen, Leipzig, 1849.) [L. S.]

VANDALICI MONTES. [VANDALI.]

VANDUARA, or VANDOGARA (Oëcscuavâne, Ptol. ii. 3. § 9), a town of the Dannonii in Britannia Barba. Now Paisy. (Cf. Cambie, p. 1214.) [T. H. D.]
VANESIA. A place in Galicia Aquisitanica, fixed by the Jerusalem Itin. between Elusa (Euwae) and Auscii, the capital of the Ausei, xii. from Elusa and vii. from Auscii. The place is supposed by D'Anville to be the passage of the Baise, a branch of the Garonne which comes from the Pyrenees. [G. L.]

VANGIONES (Vangiones). There were Vangiones in the army of Ariovistus when Caesar defeated him. (B. G. i. 51.) Caesar means to say that they were Germans, but he does not say whether they were settled in Gallia. Pliny and Tacitus (Ann. xii. 27; Germ. c. 23) also describe the Vangiones as Germans and set down on the left bank of the Rhine, where they are placed by Ptolemy (ii. 9, § 17); but Ptolemy makes a mistake in placing the Netemis north of the Vangiones, and making the Vangiones the neighbours of the Triboci, from whom in fact the Vangiones were separated by the Netemis. In the war of Civilis (Tat. Hist. iv. 74), Tutor strengthened the force of the Troviri by levies raised among the Vangiones, Caracates [Caracates], and Triboci. The territory of the Vangiones seems to have been taken from that of the Mediomatrici. Their chief town was Borbetomagus (Worms). [Borbetomagus.] [G. L.]

VANNIXIA (Vannia, Ptol. iii. 1 § 32), according to Ptolemy a town of the Bechuni in Carnia or Carniola (cf. Plin. iii. 19. s. 23). Variously identified with Venzone and Cividato. [T. H. D.]

VAPINCUM, in Gallia Narbonensis, but not mentioned by any authority earlier than the Antonine and Jerusalem Itins. In the Notitia of the Gallic Provinces it is styled "Civitas Vapincensium." The initial letter of the name has been changed to G, as in many other instances in the French language, and the modern name is Gap, which is the capital of the department of Hautes-Alpes, and on a small stream which flows into the Durance. [G. L.]

VARA, or VARE, a town in Britannia Romana, between Conerium and Deva. (Itin. Ant. p. 482.) Variously identified with St. Asaph, Rutland, and Bedevery. [T. H. D.]

VARADA (Varapa, Ptol. ii. 6 § 57), a town of the Carpetani in Hispania Tarraconensis. [T. H. D.]

VARADETUM, in Gallia, is placed by the Table on a road from Divona (Cahors) to Segodenum (Rodes); and the distance from Divona is xvi. D'Anville places Varadetum at Varae, which is on the road between Cahors and Rodes; but the distances do not agree. The Varenenses, in the site of Varennes at Poitourdes. [G. L.]

VARAE. [VARA.]

VARACGRI. [VARACGRI.]

VARAIL (Varapa, Ptol. ii. 6 § 5), an estuary on the E. coast of Britannia Barba, very probably the present Feith of Cronarty. [T. H. D.]

VARCIANI (Oảikkaouai), a tribe in Upper Panonia, which is mentioned by both Pliny (iii. 28) and Ptolemy (ii. 15. § 2), but of which nothing is known, except that it probably occupied the western portion of Sisienia. [L. S.]

VARGICENNES, the inhabitants of a town of the Carpetani in Hispania Tarraconensis. (Inscr. in Morales, Ant. pp. 17. 26. 28.) The modern Varcites still contains some ruins of the old town. [T. H. D.]

VARDAEI (OăÎpaouai, Ptol. ii. 17. § 8), an Ilyrian tribe dwelling opposite to the island of Pharos (cf. Plin. iii. 23. s. 26). By Strabo they are called Ardaii (Ardbian, vii. p. 316). In the Epitome of Liri (iv.) they are said to have been subdued by the consul Fulvius Flaccus. [T. H. D.]

VARDAXES (OăÎpaouai, Ptol. v. 9 §§ 5 and 28), a river of Asiatic Sarmatia, represented as falling into the Euxine to the SW. of the Atticetus. Probably, however, it was only the southern arm of the latter, the present Kouban. (Cf. Ubert, iii. pt. ii. p. 202) [Atticitus.] [T. H. D.]

VARDO, a tributary of the Ikhone, which rises in the Océennes, and is formed by two branches named respectively Gardon d'Alès and Gardon d'Acanthe, from the names of these two towns. The Vardo flows in a deep valley, and passes under the great Roman aqueduct now named Pont du Gard, below which it enters the Ikhone on the west bank, near a place named Cons. The name Vardo occurs in Sidonius Apollinaris; and in a Latin poem of three or four centuries' later date the name is Wardius, from which the modern name Gardon is formed, according to a common change of V into G. [VA- PINCUM.] [G. L.]

VARDULI (OăÎpaouoi, Ptol. ii. 6. §§ 9, 66; Bă sălu, Strab. iii. p. 162; where we also learn that at an earlier period they were called Bă săltu- tuai), a people in Hispania Tarraconensis, who dwelt westward of the Vascones, as far as the N. coast (in the present Guipuscoc and Alava). (Mela, iii. 1; Plin. iii. 3. 4. iv. 20. s. 34.) [T. H. D.]

VARGONES (OăÎpaouai), a German tribe, between the eastern bank of the Rhenum and Mons Abona, which is perpetuated in the name of the Rhenum and the Rharne Alba (Ptol. ii. 11. § 9) (L. S.]

VARIA, 1. (OăÎpaia, Viceraro), a town of the Sabines, situated in the valley of the Anio, on the right bank of the river, about 8 miles above Tibur. The name is corruptly written in most editions of Strabo Valeria (OăÎpaia), for which there is no doubt that we should read Varia (OăÎpaia, Strab. v. p. 237; Kramer, ad loc.) Strabo there calls it a Latin city, as well as Carmedil and Alba, both of which were certainly Aeolian towns, and subsequently incided in Latium. But Horace speaks of it as the town to which the peasantry from his Sabine farm and the neighbouring villages used to resort (Hor. Ep. i. 14. 3), in a manner that certainly seems to imply that it was the municipal centre of that district, and if so, it must have then been reckoned a Sabine town. It is not mentioned by Pliny, but according to his limitation it was certainly included among the Sabines, and not in Latium. It was probably never a large place, though the remains of the ancient walls still extant prove that it must at one time have been a fortified town. But it early sank into a mere village; the old commentator on Horace calls it "Oppidum in Sabiniis olim, nunc vicus" (Schol. Croq. ad l.c.); and hence in the middle ages it came to be called Vicus Varia, whence its modern appellation of Vico- varo. It is still a considerable village of above 1000 inhabitants, standing on a hill to the left of the Via Valeria, and a short distance above the Anio, which flows in a deep valley beneath. The Tabula and the old commentary on Horace both place it 8 miles above Tibur, which is very nearly exact. (Tab. Peut. Comm. Croq. ad l.c.)

2. Pliny mentions among the cities of Calabria a place called Varia, " cui cognomen Apulae" (iii. 11. s. 16); but the name is otherwise unknown, and it is probable that we should read "Uria;" the place meant being apparently the same that is called by other writers Hyria or Uri (Hyria). [E. B.]

VARIA (OăÎpaia, Strab. iii. p. 162; OăÎpaia, Ptol. ii. 6 § 52), a town of the Berones in Hispania Tarraconensis, situated on the Iberus, which here be-
VARIANA.  

VARIANNA (Bassâedâ), a town in Lower Moesia on the Danube, was the garrison of a portion of the fifth legion and of a squadron of horse. (It. Ant. p. 220; Procop. de Aed. iv. 6; Notit. Imp., where it is called Variniana and Varina.) Its site is marked by the town of Oraceia or Oracea. [L. S.]  

VARIANAE, a place in Pannonia, on the road running along the left bank of the Sava from Scicilia to Sirmium. (It. Ant. pp. 260, 265.) Its exact site is only matter of conjecture. [L. S.]  

VARI'I, a German tribe mentioned by Pliny (iv. 28) as a branch of the Vinandi or Vandalii, while Tacitus (Germ. 40) speaks of them as belonging to the Suevi. But they must have occupied a district in the north of Germany, not far from the coast of the Baltic, and are probably the same as the Pharsodii (Quapw, county of Poleny) (ii. 12 § 13), in the country between the Chalnans and Suesbus; it is highly probable, also, that the Varni (Ovâov) of Procopius (B. Goth. ii. 15, iii. 35, iv. 20, &c.) are the same people as the Varini. The Virani (Ovâov) of Ptolemy (ii. 11 § 17), who dwelt north of the Albi, seem to have been a branch of the Varini. (Comp. Cassiod. Var. iii. 3, where they are called Guarini; Worscebo, Beschreib. der Gau zwischen Elbe, Saale, &c. p. 70.) [L. S.]  

VARISTI. [Namasi.]  

VARUS (Ovâov), a river which the ancient geographers make the boundary of Gallia and Italia, as it is now the boundary of France and Italy. (Meh. ii. 4; Ptol. ii. 10 § 1.) It is only the lower part of the Var which Ptolemy names when he fixes the limit between Italy and Gallia Narbonensis. D'Anville remarks on the line of Lucan (i. 404)—

"Finis et Hesperiae promoto limite Varus"—

that he alludes to the extension of the boundary of Italy westward from the summit of the Alps Maritime, which is Italy's natural boundary. He adds that the dependencies of the province of the Alpes Maritimae comprehended Cenamelin (Cenae) and its district, which are on the Italian side of the Var and east of Nicaea (Nizza). [Cemenelium.] But D'Anville may have mistaken Lucan's meaning, who seems to allude to the extension of the boundary of Italy from the Rubicon to the Varus, as Vilius Se-quester says: "Varus nunc Galliam dividit, ante Rubiconem" (ed. Oeuerl). However, the critics are not agreed about this passage. (D'Anville, Notices, &c.; Uebert, Gallien, p. 81.) [G. L.]  

VARUSANEA (Ovâovatia), a town of Lower Moesia, a little to the south-west of Laodicea (Ptol. v. 4 § 10; Hieroc. p. 675; Conc. Chalcis. p. 674, where it is miswritten Ovâovatia; Conc. Const. iii. p. 675, where it bears the name of Adâovatia). Its site is probably marked by the ruins near Chamuar Chanah, between Igun and Ladik. (Hamilton, Researches, ii. p. 190, in the Journal of the Roy. Geogr. Soc. viii. p. 144; Kiepert, in Franz, Fund Inscriptions, p. 36.) [L. S.]  

VASALETUS (Ovâovatario Ovâovatario, Ptol. iv. 3 §§ 18, 26), a mountain at the S. boundary of the Regio Syrteus. [T. H. D.]  

VASATIR (Ovâovatia), a town in Narbonensia. [C. E.]  

VASATES. It is probable that the name Vasses in Ptolemy (ii. 7 § 15) should be Vassiti, as D'Anville says, and so it is printed in some Greek texts. But Ptolemy makes them border on the Gala- bali and places them farther north than Bordeaux, though he names their chief town Coscinum. The Vo- cates are enumerated by Caesar (B. G. iii. 23, 27) among the Aquitanian peoples who submitted to T. Cassius in B. C. 56. (Cassio or Cassat.) [G. L.]  

VASCONES (Ovâovatov, Strak. iii. pp. 154, 116; Ovâovatov, Ptol. ii. §§ 10, 67), a people in the NE. part of Hispania Tarraconensis, between the Iberus and the Pyrenees, and stretching as far as the N. coast, in the present Navarre and Guipuscoa. Their name is preserved in the modern one of the Vasques; although people do not call themselves by that appellation, but Euskalduna, their country Euskalberg, and their language Euskera. (Ford's Handbook of Spain, p. 357; cf. W. v. Humboldt, Untersuch. &c. p. 54.) They went into battle bare- headed. (Sid. Ital. iii. 358.) They passed among the Romans for skillful soothsayers. (Lamp. Alex. Sec. 27.) Their principal town was Pomploma. (Pamplona.) (Cf. Malte-brun, Moeurs et Usages des anciens Habitans d'Espagne, p. 309.) [T. H. D.]  

VASCOUNI SALTUS, the W. offshoot of the Pyrenees, running along the Mare Cantabricum, and named after the Vascones, in whose territory it was. (Plin. iv. 20. s. 34; Auson. Ep. 15.) It may be more precisely defined as that portion of the chain now called Sierra de Oro, S. de Augiana, and S. Sejos, forming the E. part of the Cantabrian chain. [T. H. D.]  

VASIO (Ovâovio: Eti, Vassios), a town of the Vocontii in Gallia Narbonensis, and the only town which Ptolemy (ii. 10 § 17) assigns to them. Vasio is mentioned by Mele (ii. 5) as being one of the richest towns of the Narbonenians; and Pliny (iii. 4) names Vasio and Lucus Augusti as the two chief towns of the Vocontii. The ethnic name Vassios appears in the Notitia of the Gallic Provinces (Civitas Vassios), and in inscriptions. The place is Vaison in the department of Dracae, on the Ouvce, a branch of the Rhone. It is a now a small, decayed place; but there are remains which show that it may have been what Mele describes it to have been. The ancient remains are spread over a considerable surface. There is a Roman bridge of a single arch over the Ouvce, which still forms the only communication between the town and the faubourg. The bridge is built on two rocks at that part of the river where the mountains which sublet in the bed of the river approach nearest. There are also the remains of a theatre; the semicircle of the cave is clearly traced, and the line of the prosenium is indicated by some stones which rise above the earth. There are also the remains of a quay on the banks of the river which was destroyed by an inundation in 1616. The quay was pierced at considerable intervals by sewers which carried to the river the water and filth of the town; these sewers are large enough for a man to stand in upright. There are also traces of the aqueducts which brought to the town the waters of the great spring of Goussei.
VATEDO.

VATEDO, in Gallia, mentioned in the Table, is a place east of Bordeaux, supposed to be Vaire on the left bank of the Dordogne, a branch of the Garonne.

G. L.

VATENUS (Santerno), a river of Gallia Cispadana, one of the southern tributaries of the Padus. It had its sources in the Apenines, flowed under the walls of Forum Cornelian (Imola), and joined the southern branch of the River Po. The Spineticum (viarum) was noted far from its mouth, for which reason the port at the entrance of that arm of the river was called the Portus Vatreni. (Plin. iii. 16. 20.) The Santenov now flows into the Po di Primaevro (the modern representative of the Spinetic branch), above 16 miles from its mouth, but the canals of both are in this part artificial. In this lower part of its course it must always have been more of a canal than a river, whence Martial uses it as a metaphor, typical of a sluggish stream. (Martial, iii. 67. 2.) E. H. B.

UBERAE, a nation in India extra Gangam, mentioned by Pliny (vi. 19. s. 22). It possessed a large town of the same name. It is not possible to determine its exact position: but, from the names of other nations mentioned by Pliny in connection with the Uberae, it is probable that this people lived near the mouths of the Brahmaputra. [V.]

Ubii (Obüo), a German people who in Caesar's time lived on the east bank of the Rhine and opposite to the Treviri, for Caesar having made his bridge in the country of the Treviri passed over into the country of the Ubii. Owing to their proximity to the Rhine they were somewhat more civilised than the other Germans, being much visited by merchants and accustomed to Gallic manners. (B. G. iv. 3, 18, vi. 29, 35.) The Sigambri were the neighbours of the Ubii on the north. The Suevi were pressing the Ubii hard, when the Ubii applied to Caesar for help; they gave them hostages, and offered to supply him with a large number of boats to cross the river, from which they may infer that they were accustomed to navigate the Rhine. (B. G. iv. 16.) In the time of Augustus (Strab. iv. p. 194), the nation crossed the Rhine, and Agrippa assigned them lands on the west bank of the river, the policy of the Romans being to strengthen the Rheinisch frontier against the rest of the Germans. (Tacit. Germ. c. 28, Annal. xii. 27; Sueton. Aug. c. 21.) In the new territory of the Ubii was Colonia Agrrippina (Cohn), and hence the people had the name of Agrrippinenses, which was one of the causes why the Germans east of the Rhine hated them. They were considered as traitors to their country, who had assumed a new name. (Tacit. Hist. iv. 28.) North of the Ubii on the west side of the Rhine were the Gugerni (Gugernii) and south of them were the Treviri. [Colonia Agrrippina; Ara Uboren.]

UHORUFUM ARA. [Ara Uboren.] [G. L.]

UIDICCI. [IDENTICIENTE VIVISC]

UCENA (Ocitea), a town of the tribe of the Treuvi in Galatia. (Ptol. iv. 4. § 9.) [L. S.]

UCENI, a people of Gallia Narbonensis, who are mentioned in the trophy of the Alps quoted by Pliny (iii. 20), and placed between the Meduli and Caturiges. The site of these people is uncertain. D'Anville supposes that they were in that part of the mountain region of the Alps which contains the sources of the Oise. But other geographers place them in the district of Oice, or near Ivica, both of which places are on the right bank of the river Romansch, which flows into the Durance, a branch of the Isère. (Ubert, Gallien, p. 317.) [G. L.]

UCETIA, in Gallia Narbonensis, north of Nimes. This place is known only from the Roman remains which have been discovered there, and from the inscription vctela on a stone found at Nates. The place is Oxes, north of the river Gardon, from which place the water was brought to Nimes by the aqueduct over the Gardon. (Narbonenses.) Ucetia appears in the Notitia of the Provinces of Gaul under the name of Castrum Ucetense. Ucetia was a bishopric as early as the middle of the fifth century. [G. L.]

Uchallicenses (Oxchalekhit, Ptol. iv. 6. § 20), an Athoician tribe in the interior of Libya. [T. H. D.]

Ucheereum (Oxchumaur, Procop. B. Goth. iv. 14), a mountain fortress in the Regio Licae, in Caled. [T. H. D.]

Uelia, a place in Hispafia Baetica, on the road from Corduba to Castulo. (Hist. Ant. p. 403.) Variously identified with Marmolejo, Anaya, and S. Julian. [T. H. D.]

UCBUS, a place in Hispafia Baetica, in the neighbourhood of Corduba and the Flumen Salsum. (Hist. B. H. T.) According to Ubert (ii. pt. i. p. 361) between Osium and Antequera. [T. H. D.]

Uctulianicwm. [Coriica.]

Udia (Odeia, Ptol. v. 9. § 23), a people of Asiatic Sarmatia on the Caspian sea. They are probably the people mentioned under the name of Udini by Pliny (vi. 12. s. 15). They appear to have derived their name from the river Udun. [T. H. D.]

UDON (Odon, Ptol. v. 9. § 12), a river of Asiatic Sarmatia, which rises in the Caucasus and falls into the Caspian sea between the Ilva and the Alonta. Most probably the modern Kuma. [J. R.]

UDUBA. [Tereb.] [T. H. D.]

UDURA (Odeia, Ptol. ii. 6. § 72), a town of the Jaccetani in Hispafia Tarraconensis, probably the modern Corduba. [T. H. D.]

Veta or VECITIS (Ooeciris, Ptol. ii. 3. § 33), an island on the S. coast of Britannia Romana, lying opposite to the Portus Magnus (Portsmouth). It was known to the Romans before their conquest of Britain, through the Massiliotes, who had here a station for their tin trade. (Did. v. 22, 38.) At that time the channel between the island and the mainland become almost dry at ebb tide, so that the Britons carried their tin in carts to the island. It was first conquered by Vespasian, in the reign of Claudius. (Suet. Vesp. 4.) Now the Isle of Wight. (Cf. Hist. Ant. p. 509; Eum. Pan. Const. iii. 15; Mela. iii. 6; Ptol. iv. 16. s. 30.) [T. H. D.]

VECTURIONES, a subdivision of the Picts in Britannia Barbara, according to Ammianus (xxvii. 8.) [T. H. D.]

VEDDANTH (Oõdàatru, Ptol. iii. i. § 41), a Ligurian tribe, who inhabited the foot of the Maritime Alps near the mouth of the Var. Both Pliny (iii. 5. s. 7) and Ptolemy assign to them the town of Cemenelum or Cimiez near Nice; the latter also includes in their territory Santium; but this must certainly be a mistake, that town, which answers to the modern Senca, being far off to the NW. (D'Anville, Geogr. des Gauls, p. 682.) [E. H. B.]
VEDINUM

VEDINUM (Udine), a city of Venetia, mentioned only by Pliny (iii. 19. s. 23) among the municipalities of that country. It was situated in the plain of the Carì, 11 miles W. of Cividale (Forum Juli), and 22 NW. of Aquileia. In Pliny’s time it was apparently an inaccessible place, but rose into importance in the middle ages, and is now a flourishing and populous city, and the capital of the whole province of the Friuli. We are not in a position to write the name Vedinetum, which has been adopted both by Harduin and Silig, but it is probable that the old reading Vedinetis is correct. [E. H. B.]

VEDRIA (Odësia, Ptol. ii. 3. § 6), a river in the N. part of the E. coast of Britannia. The name would lead us to the conclusion that it is the Utirr (Camden, p. 944), yet Horsey (p. 103) and others have taken it to be the Tyne. [T. H. B.]

VEGIA (Ovijria or Ovijria, or Vegium (Pln. iii. 21. s. 52), a town of Liburnia, the present Vexe. [T. H. D.]

VEGISTUM (Ovidius), or, as some read, Vestestum (Ovidestum), a town of Galatia, in the territory of the Tolistohogii, between Mounts Didymus and Celenas (Ptol. v. 4. § 7), is perhaps the place where the Weisium of the Peutinger Table. [L. S.]

VEII (Ovinia, Strab. v. p. 286; Oosi, Dionys. H. ii. 54; Eth. Vcetum, Ctes. dios. i. 44; Liv. i. 15, &c.; Adj. Veiæ, PtoL. iii. 20. § 11), an ancient and purely Tuscan city of Etruria. According to Festus (ep. P. Diai. s. e.) Veii was an Oscan word, and signified a waggon (plaustrum); but there is nothing to show that this was the etymology of the name of the town.

Among the earlier Italian topographers, a general diversity of opinion prevailed respecting the site of Veii. Nardini was the first writer who placed it at the present Isola Farnese, the correctness of which view is now universally admitted. The distance of that spot northwards from Rome agrees with the distance assigned by Dionysius of Halicarnassus (l. c.) to Veii, namely, “about 100 stadia,” which is confirmed by the Tadula Peut., where it is set down at 12 miles. In Livy, indeed (v. 4), it is mentioned as being “within the 20th milestone”; but this is in a speech of App. Claudius, when the orator is using round numbers, and not solicitous about strict accuracy; whilst the two writers before cited are professedly giving the exact distance. Nor can the authority of Eutropius (i. 4), who places Veii at 18 miles from Rome, be admitted to invalidate the testimony of these authors, since Eutropius is notoriously incorrect in particulars of this description. There are other circumstances which tend to show that Isola Farnese is the site of ancient Veii. Thus the Tab. Peutinger, further indicates that the city lay on the Via Cassia. Now following that road for a distance of about 12 miles from Rome, the locality not only exactly corresponds with the description of Dionysius, but also the remains of city walls and sepulchres, and traces of roads in various directions, have been found there. Moreover at the same spot were discovered, in the year 1810, stones bearing inscriptions which related exclusively to Veii and the Veetines. We know little of the history of Veii but what concerns the wars it waged with the Romans. It is called by Eutropius (i. 20), “Veetiae sub pois Latinis situata,” and there can be no doubt that it was in a flourishing state at the time of the foundation of Rome. At that period the Etruscans, or Veetines, territory was separated from the Latin by the river Albula, afterwards called Tiberis; and consequently neither the Mons Vaticanus nor Janiculum was then belonged to the Romans. (Liv. i. 3.)

To the SW. of Rome it extended along the right bank of the Tiber down to the sea, where it contained some Saline, and salt-works, at the mouth of the river. (Dionys. ii. 53.) The district immediately opposite to Rome seems to have been called Septem Pagii (i. b.). On the N. of Rome the territory of Veii must at one time have extended as far as Mount Soracte, since the ager Capenatius belonged to it. Capena being a colony of Veii (Cato, ap. Serv. Aen. vii. 697); though in the history of the wars between Rome and Veii, Capena appears as an independent city. [CAPENA, Vol. i. p. 504.] On the NW. it may probably have stretched as far as the Mons Ciminius; but here, as well as more to the S., its limits are uncertain, and all we know is that in the latter direction it must have been bounded by the territory of Caere. (Cf. Müller, Etruscier, ii. 2. p. 1, &c.) The ager Veiens is stigmatised by Horace and others as producing an excusable sort of red wine (Sat. ii. 3. 143; cf. Pers. v. 147; Mart. i. 103. 9, ii. 53. 4, &c.). We learn from Dionysius (ii. 54) that the city was of about the same size as Athens, and therefore nearly as large as Rome within the walls of Servius. [ROMA, Vol. ii. p. 756.]

The political constitution of Veii, like that of the other Etruscan cities, was originally to have been republican, though probably aristocratically republican, with magistrates annually elected. It was perhaps their vicinity to ambitious and aspiring Rome, and the constant wars which they had to wage with that city, that induced the Veetines to adopt the form of an elective monarchy, in order to avoid the discontents occasioned by the election of annual magistrates under their original constitution, and thus to be enabled, under a single leader, to act with more vigour abroad; but this step procured them the ill-will of the rest of the Etruscan confederacy (Liv. v. 1, cf. iv. 17). Monarchy, however, does not appear to have been permanent among them; and we only know the names of two or three of their kings, as Toimunius (i. b.), Propertius (Serv. Aen. vii. 697), and Morrius (i. b. viii. 285).

The first time that the Veetines appear in history is in the war which they waged with Romulus in order to arrest the capture of their colony, Fidenae. According to the narrative of Livy, this war was terminated by one decisive battle in which Romulus was victorious (i. 15); but Dionysius (ii. 54, seq.) speaks of two engagements, and represents the Romans as gaining the second by a stratagem. Both these writers, however, agree with regard to the result of the campaign. The loss of the Veetines was so terrible, both in the battle and in the subsequent flight, in which numbers of them were drowned in attempting to swim the Tiber, that they were constrained to sue for peace. The terms imposed upon them by Romulus show the decisive nature of his victory. They were compelled to surrender that part of their territory in the neighbourhood of Rome called Septem Pagii, probably from its containing seven villages; to give up the salt-works which they possessed at the mouth of the Tiber; and to provide 50 hostages as security for the due execution of the treaty. Under these conditions they obtained a peace for 100 years, with the restoration of their prisoners; though such of the latter as preferred to remain at Rome were presented with the freedom of the city and lands on the left bank of the Tiber. The district of Septem Pagii thus acquired
probably comprehended the Vatican and Janiculum hills, and became the seat of the 5th Roman tribe, the Romilia or Romulia. (Varr. L. L. v. 9. § 63, Mull; Paul. ap. Fest. s. v. Romilia Trib.)

This peace seems to have lasted about 60 or 70 years, when war again broke out between the Veientines and Romans in the reign of Tullius Hostilius, and this time also on account of Fidenae, which appears to have become a Roman colony after its capture by Romulus. The cause of the war was the treacherous conduct of the Fidenates during the Roman struggle with Alba. When called to account, they refused to give any explanation of their conduct, and procured the assistance of the Veientines. Tullus crossed the Anio (Tecumone) with a large army, and the battle which took place at a spot between that river and the town of Fidenae was the most obstinate and bloody which had yet been recorded in the Roman annals. Tullus, however, gained a signal victory over the Fidenates and their allies the Veientines. The battle is remarkable for the vows made by Tullus, of twelve Salian priests, and of temples to Favor and Pallor. These were the second set of Salianas, or those attached to the worship of Quirinus [cf. Roma, p. 229]; and the appropriateness of the vow will be perceived when we consider that the Fidenates, in answer to the Romans, had asserted that all their engagements towards Rome had expired on the death of that deified hero. (Liv. i. 27; Dionys. iii. 23, sqq.)

The war was renewed under Ancus Marcus by forays on both sides, which, however, seem to have been begun by the Veientines. Ancus overthrew them in two pitched battles, the last of which was decisive. The Veientines were obliged to surrender all the tract on the right bank of the Tiber called the Silva Maesia. The Roman dominion was now extended as far as the sea; and in order to secure these conquests, Ancus founded the colony of Ostia at the mouth of the Tiber. (Liv. i. 33; Dionys. iii. 41.)

The next time that we find the Veientines in collision with Rome, they had to contend with a leader of their own nation. L. Tarchinquius, an emigrant from Tarquinii to Rome, had distinguished himself in the wars of Ancus Marcus against Velii, and was now in possession of the Roman sovereignty. The Veientines, however, on this occasion did not stand aloof, but were assisted by the other Etruscan cities, who complained of insults and injuries received from Tarquin. The Veientines, as usual, were discontented, and so thoroughly, that they did not dare to leave their city, but were the helpless spectators of the devastation committed on their lands by the Romans. The war was terminated by Tarquin's brilliant victory at Eretia, which enabled him to claim the sovereignty of all Etruria, leaving however, the different cities in the enjoyment of their own rights and privileges. It was on this occasion that Tarquin is said to have introduced at Rome the institution of the twelve lictors and their fasces, emblems of the servitude of the twelve Etruscan cities, as well as the other Etruscan insignia of royalty. (Dionys. iii. 57; Fier. l. c.) It should be observed that on this subject the accounts are very various; and some have even doubted the whole story of this Etruscan conquest, because Livy does not mention it. That historian, however, when he speaks of the resumption of the war under Servius Tullius, includes the other Etruscans with the Veientines, as parties to the truce which had expired ("bellum cum Veientibus et

enim indutae existant") alisque Etruscis summptum," i. 42), although the Etruscans had not been concerned in the last Veientine war he had recorded. (Of Dionys. iv. 27.) This war under Servius Tullius was the last waged with the Veientines during the regal period of Rome.

When the second Tarquin was expelled from Rome, the Etruscans endeavored to restore him. Veii and Tarquinii were the two most forward cities in the league formed for this purpose. The first battle, which took place near the Silvia Arsis, was bloody but indecisive, though the Romans claimed a dubious victory. But the Etruscans having obtained the assistance of Persena, Lars of Clusium, the Romans were completely worsted, and, at the peace which ensued, were compelled to restore to the Veientines all the territory which had been wrested from them by Romulus and Ancus Marcus. This, however, Persena shortly afterwards restored to the Romans, out of gratitude for the hospitality which they had displayed towards the remnant of the Etruscan army after the defeat of his son Aruns at Aricia. (Liv. ii. 6—15; Dionys. v. 14, sqq.; Plut. Publ. 19.)

The Veientines could ill brook being deprived of this territory; but, whilst the influence of Persena and his family prevailed in the Etruscan League, they remained quiet. After his death the war again broke out. (B. c. 483.) For a year or two it was a kind of border warfare characterised by mutual depredations. But in B. c. 481, after a general congress of the Etruscans, a great number of volunteers joined the Veientines, and matters began to assume a more serious aspect. In the first encounters the Romans were unsuccessful, chiefly through a mutiny of the soldiers. They seem to have been disheartened by their ill success; their army was inferior in number to that of the Veientines, and they endeavored to decline an engagement. But the insults of the enemy incensed the Roman soldiers to such a degree that they insisted on being led to battle. The contest was long and bloody. The Etruscans at one time were in possession of the Roman camp; but it was recovered by the valor of Titus Siccius. The Romans lost a vast number of officers, amongst whom were the consul Mamilus, Q. Fabius, who had been twice consul, together with many tribunes and centurions. It was a drawn battle; yet the Romans claimed the victory, because during the night the Etruscans abandoned their camp, which was sacked by the Romans on the following day. But the surviving consul, M. Fabius Vatulianus, on his return to Rome, refused a triumph, and abdicated his office, the duties of which he was prevented from discharging by the severity of his wounds. (Dionys. ix. 5, sqq.; Liv. ii. 42—47.)

Shortly after this, the Veientines, finding that they were unable to cope with the Romans in the open field, adopted a most annoying system of warfare. When the Roman army appeared, they shut themselves up within their walls; but no soilder had the legionaries retired, than they came forth and scoured the country up to the very gates of Rome. The Fabian family, which had given so many consuls to Rome, and which had taken so prominent a part in the late war, now came forward and offered to relieve the commonwealth from this harassing annoyance. The whole family appeared before the senate, and by the mouth of their chief, Cneo Fabius, then consul for the third time, declared, that, as a continued rather than a large guard was required for the Veientine war, they were willing to undertake the duty and to maintain the majesty of the Roman
name, without calling upon the state for either soldiers or money. The senate thankfully accepted the offer. On the following morning 306 Fabii met in the vestibule of the consul's house. As they passed through the city to the place of their destination, they stopped at the capitol and offered up vows to the gods for the success of their enterprise. Then they passed out of Rome by the right arch of the Porta Capena, and proceeded straight to the river Tiber, where there was a spot that seemed adapted by nature as a fortress for their little garrison. It appears, however, that the Fabii were accompanied by their clients and adherents, and the whole band probably amounted to 3000 or 4000. ( Dionys. i. 15; P. Dia. v. v. Scolerata Porta.) The place which they chose as the station of their garrison was a precipitous hill which seemed to have been cut and isolated by art; and they further strengthened it with entrenchments and towers. The spot has been identified with great probability by Nardini, and subsequently by other topographers, with a precipitous hill about 6 miles from Rome, on the left of the Via Flaminia, where it is traversed by the Cremera (now the Velcha), and on the right bank of that stream. It is the height which commands the present Ostia della Velchetta. (Nibby, Dintorni di Roma, vol. iii. p. 399; Dennis, Etruria, vol. i. p. 43.)

The position here taken up by the Fabii not only enabled them to put a complete stop to the marauding expeditions of the Veientines, but even to commit depredations themselves on the territory of Veii. The Veientines having made many vain attempts to dislodge them, at length implored the succour of the Etruscans; but the Fabii on their side were supported by a consular army under Asinius, and the Veientines and their allies were defeated. This success rendered the Fabii still more enterprising. After occupying their fortress two years with impunity they began to extend their excursions; and the Veientines on their side sought to draw them onwards, in which they at length succeeded. By a feigned flight, they enticed the Fabii into an ambuscade and slew them, 13th Feb. b. c. 476. (Ov. Fast. iii. 195, sqq.; Liv. ii. 48—50; Dionys. ix. 16—19; Florus, i. 12, &c.) Elated with this success, the Veientines, united with the Etruscans, and by the middle of the year pitched their camp on the Janiculum hill, at a distance of only 6 stadia from the city. Thence passing the Tiber, they penetrated as far as the ancient temple of Hope, which stood near the modern Porta Maggiore. Here an indecisive action took place, which was renewed at the Porta Collina with the same result; but two engagements of a more decisive character on the Janiculum hill obliged the allied army to retreat. In the following year the Veientines allied themselves with the Sabines, but were completely defeated under the walls of their own city by the consul Pub. Valerius. The war was brought to a termination in the following year, in the consulsiphip of C. Manlius, who concluded with them a truce of 40 years, the Veientines engaging to pay a tribute in corn and money. (Liv. ii. 51—54; Dionys. ix. 23, sqq.) But such terms were merely nominal, and in a few years hostilities were renewed, at theear of some force made by the Veientines in b. c. 442 (Liv. iv. i); but there was no regular war till seven years later, when the Veientines, who were at that time governed by Lars, or King, Tolminna,

excited the Roman colony Fidenae to rebel; and in order completely to compromise this Fidenates, Tol- minna offered the Romans the Massadours who had been despatched to demand an explanation. Both sides flew to arms; one or two obstinate engagements ensued; but the allies who had been joined by the Falisci also, were overthrown in a decisive battle under the walls of Fidenae, in which Tolminna was killed by the Roman military tribe, A. Cornelius Cossus. (Liv. iv. 17—19; cf. Propert. iv. 10, 29, sqq.)

Three years afterwards, Rome being afflicted with a severe pestilence, the Veientines and Fidenates were emboldened to march upon it, and encamped before the Porta Collina; but on the appearance of a Roman army under the dictator Aulus Servilius, they retreated. Servilius having pursued and routed them near Nomentum, marched to Fidenae, which he at length succeeded in taking by means of a culminia or mine. (Liv. iv. 32.)

Although the Veientines obtained a truce after this event, yet they soon violated it, and began to commit depredations in the Roman territory, b. c. 427; and even defeated a Roman army whose operations had been paralyzed through the dissensions of the three military tribes who commanded it. The Fidenates now rose and massacred all the Roman colonists, and again allied themselves with the Veientines, who had also enlisted a great number of Etruscan volunteers in their service. These events occasioned great alarm at Rome. Mamercus Ausinius was created dictator, and, marching against the enemy, encamped in the peninsula formed by the confluence of the Anio and the Tiber. Between this spot and Fidenae a desperate battle was fought: stratagems were employed on both sides; but at length the allies were completely defeated, and the Romans entered the gates of Fidenae along with the flying enemy. The city was sacked and destroyed and the inhabitants sold as slaves; but on the other hand the Romans granted the Veientines a truce of 20 years. (Liv. iv. 31—35.)

At the expiration of this truce, the Romans resolved to subdue Veii, as they had done Fidenae, and it was besieged by an army commanded by six military tribunes. At this news the national assembly of the Etruscans met at the face of Volturnus, to consider what course they should pursue. The Veientines had again resorted to the regal form of government; but unfortunately the person whom they elected for their king, though rich and powerful, had incurred the hatred of the whole Etruscan nation by his oppressions and imperious manners, but especially by his having hindered the performance of certain sacred games. The Etruscans consequently declared that, unless he was deposed, they should refuse the Veientines no assistance. But the latter were afraid to adopt this resolution, and thus they were abandoned to their fate. Nevertheless, they contrived to prolong the siege for a period of ten years, during which the Romans were several times discomfited. It was worthy of remark that it was during this siege that the Roman soldiers, being obliged to pass the winter out of Rome, first received a fixed regular stipend. The Capenates, the Falisci, and the Tuscans also were in various degrees reduced to receive the beleaguered city.

The length of the siege had begun to weary the Romans, when, according to the legend, the means of its capture was suggested by an extraordinary event. The waters of Lake Albacqua swelled
to such an extent that they threatened to inundate the surrounding country. The oracle of Delphi was consulted on the occasion, and the response involved not only the immediate subject of the application, but also the remoter one of the capture of Veii. According to the voice from the sacred tripod, that city would be taken when the waters of the lake were made to flow off without running directly into the sea; and the prophecy was confirmed by the revolution of a Veientine haruspex made during the interval of the embassy to Delphi. All that we can infer from this narrative is that the formation of the emissary for draining the Alban lake was contemporary with the siege of Veii [cf. **Albanus Laccus**, Vol. I. p. 29]; the rest must be referred to the projects of the ancients to avert every great event to the intervention of the gods; for we have already seen that Eideane was captured by means of a cuniculus, a fact which there does not appear to be any valid reason to doubt, and therefore the emissary of the lake cannot be regarded as having first suggested to the Romans the method of taking a city by mine.

The honour of executing this project was reserved for the dictator M. Furius Camillus. Fortunes were explicated, the question was mooted among the Veentiennes; for though the pleading of the Capeneses and Falisci on their behalf had made some impression on the national assembly of the Etruscans, their attention was diverted in another direction by a sudden irrigation of the Casiline Gauls. Meanwhile Camillus, having defeated some bodies of troops who endeavoured to relieve Veii, erected a line of forts around it, to cut off all communication with the surrounding country, and appointed some corps of miners to work on the cuniculus. When the mine was completed, he ordered a picked body of his most valiant soldiers to penetrate through it, whilst he himself diverted the attention of the inhabitants by feigned attacks in different quarters. So skilfully had the mine been directed that the troops who entered it emerged in the temple of Juno itself, in the highest part of the citadel. The soldiers who guarded the walls were thus taken in the rear; the gates were thrown open, and the city soon filled with Romans. A dreadful massacre ensued, the prisoners were murdered, and those citizens who had escaped the sword were sold into slavery. The image of Juno, the tutelary deity of Veii, was carried to Rome and pompously installed on Mount Aventine, where a magnificent temple was erected to her, which lasted till the abolition of paganism.

(Liv. v. 8, 12, 13, 15—22; Cic. Div. i. 44. ii. 32; Plut. Caes. 3, sq.; Flore 1. 12.)

Veii was captured in the year 396 n. c. Its territory was divided among the citizens of Rome at the rate of seven jugera per head. A great debate arose between the senate and the people whether Veii should be repopulated by Roman citizens, and thus made as it were a second capital; but the persuasion of Camillus the project was abandoned. But though the city was deserted, its buildings were not destroyed, as is shown by several facts. Thus, after the battle of the Allia and the taking of Rome by the Gauls, the greater part of the Romans retired to Veii and fortified themselves there; and when the Gauls were expelled, the question was mooted whether Rome, which had been reduced to ashes, should be abandoned, and Veii converted into a new capital. But the eloquence of Camillus again decided the Romans for the negative, and the question was set at rest for ever. This took place in B. C. 389. Some refractory citizens, however, who disliked the trouble of rebuilding their own houses at Rome, took refuge in the empty ones of Veii, and set at nought a senatusconsultum ordering them to return; but they were at length compelled to come back by a decree of capital punishment against those who remained at Veii beyond a day prescribed. (Liv. v. 49, sqq., vi. 4.)

From this time Veii was completely deserted and went gradually to decay. Cicero (ad Fam. vi. 9) speaks of the measuring of the Veientine territory for distribution; and it was probably divided by Caesar among his soldiers in B. C. 45. (Plut. Cæs. 57.) Propertius also describes its walls as existing in his time; but the statement was there on fields where the shepherd fed his flock, and which were then under the operation of the decempila (iv. 10. 29). It is, however, rather difficult to reconcile this chronology, unless there were two distributions. Caesar also appears to have planted a colony at the ancient city, and thus arose the second, or Roman, Veii, which seems to have been considerable enough to sustain an assault during the wars of the triumvirs. The inhabitants were again dispersed, and the colony was not restored till the time of the reign of Augustus, when it assumed the name of municipium Augustum Veiens, as appears from inscriptions. (Cf. Auct. de Colonial.) When Florus, who flourished in the reign of Hadrian, asserts (i. 12) that scarcely a vestige remained to mark the spot where Veii once stood, he either writes with great carelessness or is alluding to the ancient and Etruscan Veii.

The existence of the municiplum in the reigns of Augustus and Tiberius is attested by several monuments discovered in its ruins; and some inscriptions also found there prove that it was in existence at least as late as the reign of Constantinus Chlorus. The monuments alluded to consist partly of sculptures relating to those emperors and their families, and partly of inscriptions. Amongst the latter the most important is now preserved in the Capitoline Museum at Rome, recording the admission of Caius Julius Geleotes, a freedman of Augustus, to the office of an Augustalis, by the centurion of Veii. It is dated in the consilium of Gaetulicus and Calvusius Serapis, A. D. 779, or the 35th year of the reign of Augustus, when it was published by Fabretti (Jusc. p. 170), but more correctly from the original by Nibby in his *Pintorni di Roma* (vol. iii. p. 409). The accents are worthy of note. Among the centurions whose names are subscribed to this decree are those of two of the Tarquiniat family, namely, M. Tarquinius Saturninus and T. Tarquinius Rufus. This family, which produced a celebrated writer on Etruscan divination (Macrob. Sat. iii. 7), seems to have belonged to Veii and to have enjoyed considerable importance there, as two other inscriptions relating to it have been discovered. One of these records the restoration of a statue erected in honour of M. Tarquinius Saturninus by the 22nd Legion; the other is a tablet of Tarquinius Priscus dedicated to her husband M. Caecinius Marcellus. (Nibby, *ib.* p. 410, sq.) The family of Priscus is the most celebrated of the gens Tarquiniat. One of those was the accuser of Catullus in the reign of Claudius, and was himself condemned under the law of *requetundae* in the reign of Nero. (Tac. Ann. xii. 59, xiv. 44.)

There are various coins of the Tarquiniat. (Eckhel, *D. N. I.* p. 322.) After the era of Constantine
we have no notices of Veii except in the Tah. Pentingeriana and the Geographer of Ravenna. It was probably destroyed by the Lombards. At the beginning of the 11th century a castle was erected on the precipitous and isolated hill on the S. side of Veii, which was called Isola, and is now known by the name of the Isola Farnese.

Sir William Gell was the first who gave an exact plan of Veii in the Memoria dell’Istituto (Fasc. I.), and afterwards in his Topography of Rome and its Vicinity. He traced the vestiges and ancient walls, which were composed of irregular quadrilateral masses of the local tufta, some of which were from 9 to 11 feet in length. Mr. Dennis, however, failed to discover any traces of them (Etruria, vol. i. p. 15), and describes the stone used in the fortifications of Veii, as being cut into smaller pieces than usual in other Etruscan cities. These remains, which are principally to be traced in the N. and E., as well as the streams and the outline of the cliffs, determine the extent of the city in a manner that cannot be mistaken. They are a circumferential wall, or at least a wall of a circumferential city, which agrees with the account of Dionysius, before referred to, when he compares the size of Veii with that of Athens. It has been debated whether the isolated rock, called the Isola Farnese, formed part of the city. Nibby (Diornini, vol. iii. p. 424) and others are of opinion that it was the arx or citadel. On the other hand Sir William Gell and Mr. Dennis hold that this could not have been the case; and it must be confessed that the reasons advanced by the latter (vol. i. p. 42, note 5) appear decisive; namely, 1, the Isola is separated from the city by a deep glen, so that, had it been the citadel, Camillus by its capture would not have obtained immediate possession of the town, as we learn from Livy’s narrative, before referred to, that he did; 2, the remains of Etruscan tombs on the Isola show that it must have been a cemetery, and consequently without the walls. The two authorities last cited identify the citadel with the hill now called the Piazza d’Armi at the SE. extremity of the town, in the angle formed by the junction of the stream called Fosso dei due Fossi with that called Fosso di Formello. These two streams traverse the site of ancient Veii, and are bounded by the boundaries of ancient Veii. The latter of these streams, or Fosso di Formello, is thought to be the ancient Crerema. The other rivulet rises at La Torretta, about 12 miles from Rome. Near Veii it forms a fine cataract, precipitating itself over a rock about 80 feet high. From this spot it runs in a deep channel among precipices, and separates the Isola from the rest of Veii. It then receives the Rivo del Pino or della Storta, whence its name of Fosso dei due Fossi. After joining the Fosso di Formello, or Crerema, the stream is now called La Fosca, and falls into the Tiber about 6 miles from Rome, near the Via Flaminia.

Topographers have discovered 9 gates, to which they have assigned imaginary names from local circumstances. It would be impossible to explain the exact sites of these gates without the assistance of a plan, and we shall therefore content ourselves with enumerating them in the order in which they occur, presuming only that all writers do not call them alike. The westernmost gate, called the Porto de’ Sette Pari, from its being supposed to have led to the district called the Sette Pari, is situated near the Ponte dell’Isola. Then proceeding round the S. side of the city, the next gate occurs near the Fosso dell’Isola; and, from its leading to the rock of Isola, which

as we have seen, was thought by some topographers to be the ancient citadel, has been called the Porta dell’Arce. The next gate on the E. is the Porta Campana; and after that, by the Piazza d’Armi, is the Porta Ficulense. Near this spot was discovered, in 1840, the curious staircase called La Scolletta. Only eight steps of uncutened masonry, seated high in the cliff, remain, the lower part having fallen with the cliff. After passing the Piazza d’Armi, in traversing the northern side of the city by the valley of the Cremera, the gates occur in the following order: the Porta di Porta Flaminia; the Porta delle Are Musici; the Porta Capenate; the Porta del Lombario, so named from the colonnarium near it; and lastly the Porta Sutrina, not far from the Ponte di Formello.

The Municipium Veinii, which succeeded the ancient town, was undoubtedly smaller; for Roman sepulchres and columbaria, which must have been outside the Municipium, have been discovered within the walls of Etruscan Veii. It was perhaps not more than 2 miles in circumference. On the spot probably occupied by the Forum were discovered the colossal heads of Augustus and Tiburtius, and the colossal statue of the latter, crowned with oak and in a sitting posture, which are now in the Vatican, in the corridor of the Museo Chiaromonte. Several other fragments of statues have been found, as well as 24 marble columns, 12 of which now adorn the Piazza Colonna at Rome, and the rest are employed in the Chapel of the Sacrament in the new Basilica of St. Paul.

The remains of Etruscan Veii are portions of the walls, the bridge near the Porta di Pietra Postuera, the bridge, or tunnel, called Ponte Sodo, and the tombs and sepulchral grotoes. Of the walls we have already spoken. The remains of the bridge consist of a piece of wall about 20 feet wide on the bank of the stream, which seems to have formed the pier from which the arch sprang, and some large blocks of hewn tufo which lie in the water. The piers of the bridge called Ponte Formello are also possibly Etruscan, but the arch is of Roman brickwork. The Ponte Sodo is a tunnel in the rock through which the stream flows. Nibby (Diornini, vol. iii. p. 181), and describes it as 70 feet long, 20 wide, and 15 high; but Mr. Dennis, who visited it, says that it is 240 feet long, 12 to 15 wide and nearly 20 high (Etruria, vol. i. p. 14). It is in all probability an Etruscan excavation, or has at all events been enlarged by art. An ancient road ran over it; and from above it is scarcely visible. No trace remains of the cuniculus of Camillus. The vicinity of Veii abounds with tombs excavated in the rock, and sepulchral tumuli, some of which are Roman. Among the tombs is a remarkable one, discovered in the winter of 1842, and still open to inspection. It consists of a long passage in the tumulus, or mound, called Poggio Michele, leading to a door in the middle of the mound, and guarded at each end by sculptured lions. This is the entrance to a low dark chamber, hewn out of the rock, the walls of which are covered with paintings of the most grotesque character, consisting of horses, men, sphinxes, dogs, leopards, &c. On either side a bench of rock, about 2½ feet high, projects from the wall, on each of which, when the tomb was first opened, a skeleton reposed; but these soon crumbled into dust. One of them, from the arms lying near, was the remains of a warrior; the other skeleton was probably that of his wife. On the floor were large jars containing...
VELATODURUM.

Unfortunately the most archaic Etruscan pottery. Within was another smaller chamber also containing cinerary urns. A complete description of this remarkable sepulchre will be found in Mr. Denison's (Ant. Soc. v. vii.) work. For the history and antiquities of Veii the following works may be consulted: Sibby, Diarium di Roma, vol. iii., and Viaggio Antiquario, vol. i.; Canina, L'Antica Città di Veji descritta; Abeken, Mittelitalien; Müller, Etrurien; Sir W. Gell, Topography of Rome and its Vicinity; Dennis, Cities and Cemeteries of Etruria.

[ T. H. D.]

VELATODURUM, in Gallia, is placed by the Antonine Itin. on the road from Vencesio (Beqssan6) to Eparumundurum (Mandere) xxii. from Beqssan6 and xii. from Mandere. But these two numbers exceed the distance between Beneqssan and Mandere. The termination durum seems to show that Velatodurum was on a stream; and D'Anville conjectures that it is near Cleresol on the Dovs, where there is a place named Pont-pierre. But this is merely a guess. [EPAMUNDODURUM.]

VELAUNI, a people mentioned in the Trophy of the Alps (Plin. iii. 20), between the Nerusi and Sueiri. If the geographical position of these people corresponds to their position in Pliny's list of tribes, we know in a general way where to place them. [Nereti; Sueiri.] [G. L.]

VELDDEIAXA, one of the most important towns of Rhetaia, on the southern bank of the river Oenus, and on the road leading from Tridulentum to Augusta Vindelicorum. (It. Ant. pp. 258, 259, 275, 280.) According to coins which have been found on its site, it was made a Roman colony with the surname Augusta. Its site is now occupied by the convent of Wildein in the neighbourhood of Inapruin, on the little river Sihl. (See Boeschmann, Velddeiuxa Urbis antiquissima Augusti Colonia, Utn., 1744, 4to.)

[L. S.]

VELEIA (Etrh. Veleias, altis: ita. Ba near Montepolo), a town of Liguria, situated on the frontiers of Gallia Cisalpina, about 20 miles S. of Placentia (Piacenza), in the hills which form the lower slopes of the Apennines. The Veleiates are mentioned by Pliny among the Ligurian tribes; and in another passage he speaks of "oppidum Veletarum," which was remarkable for the longevity of some of its inhabitants (vii. 49. s. 50). He there describes it as situated "circa Placentium in collibus," but its precise site was unknown until its remains were discovered in 1760. From the mode in which these are buried, it seems certain that the town was overthrown by a vast landslide from the neighbouring mountain. Systematic excavations on the spot, which have been carried on since 1760, have brought to light several buildings of the ancient city, including the amphitheatre, a basilica, the forum, and several temples; and the great number of bronze ornaments and implements of a domestic kind, as well as statues, busts, &c., which have been discovered on the spot, have given celebrity to Veleia as the Pompeii of Northern Italy. Unfortunately the great weight of the superincumbent mass has crushed in the buildings, so that all the upper parts are in the present day, and the larger statues have suffered severely from the same cause. The inscriptions found there attest that Veleia was a flourishing municipal town in the first centuries of the Roman Empire. One of these is of peculiar interest as containing a detailed account of the investment of a large sum of money by the emperor Trajan in the purchase of hands for the main tenance of a number of poor children of both sexes. This remarkable document contains the names of numerous farms and villages in the neighbourhood of Veleia (Vrmeis), which in 49 B.C. was the capital of an extensive territory (probably the same once held by the Ligurian tribe of the Veleiates) which was divided into a number of Pagis, or rural districts. The names both of these and of the various "fundii" or farms noticed are almost uniformly of Roman origin,—thus affording a remarkable proof how completely this whole district had been Romanised before the period in question. The Tabula Alimentaria Trajana, as it is commonly called, has been repeatedly published, and illustrated with a profusion of learning, especially by De Lama. (Puris. Antiquariae Veleinte detta Trajana, 4to, Parma, 1819.) A description of the ruins and antiquities has been published by Antolini (Le Corine di Veleia, Milano, 1819). The coins found at Veleia are very numerous, but none of them later than the time of Probus: whence it is reasonably inferred that the catastrophe which buried the city occurred in the reign of that emperor. [E. H. B.]

VELIA (Oedilia, or Oedelia, Plt. ii. 6, § 65), a town of the Curtii in hispania Tarraconensis, on the road from Pompeii to Asturica (Itst. Ant. p. 464, where it is called Beletia). (Of. Plin. iii. 3. s. 4; Geo. Rv. iv. 43.) Variously identified with Visna, Berravia, and Yvina. [T. H. D.]

VELIA (Thr. Tlepia or Elepsia, Veliansia: Castell a Mare della Braccio), one of the principal of the Greek colonies in Southern Italy, situated on the shores of the Tyrrenhian sea, about midway between Posidonia and Pyius. There is some uncertainty respecting the correct form of the name. Strabo tells us that it was originally called Hyle (Thr. Tlepia, but in his day called Elea (Thr. Elepsia), and Dionysius Laertius also says that it was at first called Hyle and afterwards Elea. (Strab. vi. p. 252; Dioys. Laert. ix. 5, § 28; Steph. B. s. v.) But it is certain from the evidence of its coins, which uniformly bear the legends ΤΕΛΑΙ and ΤΕΛΕΙΤΩΝ, that the name of Hyle continued in use among the people themselves as long as the city continued; while, on the other hand, the name of Elea is already found in Sylax (p. 4, § 12), and seems to have been certainly that in use among Attic writers from an early period, when the Eleatic school of philosophy rendered the name familiar. Strabo also tells us that some authors wrote the name Ele (Thr. Elepsia), from a fountain of that name; and this form, compared with Ελη and the Latin term Veleia, seems to show clearly that the diversity of names arose from the Aeolic Dlmamn, which was probably originally prefixed to the name, and was retained in the native usage and in that of the Romans, while it was altogether dropped by the Attics. (Münster, Velia, p. 21.) It is not improbable that the name of Elea was derived from that of the neighbouring river, the Hales of Cicerio (Aleton), of which the name is written Ελης by Strabo and Beletia by Stephanus of Byzantium. (Cic. ad Fam. vii. 20; Strab. vi. p. 254.) Others, however, derived it from the marshes (Θρης), the mouth of the same river.

There is no trace of the existence of any town on the site of Velia before the establishment of the Greek colony there, and it is probable that this, like most of the Greek colonies in Southern Italy, was founded on a wholly new site. It was a colony from Pnoaea in Ionia, and derived its origin from the voluntary ex-
patriation of the inhabitants of that city in order to avoid falling under the Persian yoke, at the time of the conquest of Ionia by Harpagus, B.C. 544. The Phocaean emigrants proceeded in a body to Corsica, where they had already founded the colony of Alalia about 20 years before; and in the first instance established themselves in that island, but, having provoked the enmity of the Tyrrenhians and Sara-cilians by their piracies, they sustained such severe loss in a naval action with the combined fleets of these two powers, that they found themselves compelled to abandon the colony. A part of the emigrants then repaired to Massilia (which was also a Phocaean colony), while the remainder, after a temporary halt at Rhegium, proceeded to found the new colony of Hylee or Velia on the coast of Lucania. This is the account given, by Herodotus (i. 164—167), with which that cited by Strabo from Antiochus of Syracuse substantially agrees. (Strab. vi. p. 254.) Later writers have somewhat confused the narrative, and have represented the foundation of Massilia and Velia as contemporaneous (Hygin. ap. A. Cell. x. 16; Ammian. Marc. xvi. 9. § 7); but there is no doubt that the account above given is the correct one. Sclavus alone represents Velia as a colony of Thurii. (Sclav. p. 4. § 12.) If this be not altogether a mistake it must refer to the admission at a later period of a body of fresh colonists from that city; but of this we find no trace in any other author. The exact date of the foundation of Velia cannot be determined, as we do not know how long the Phocaens remained in Corsica, but it may be placed approximately at about 540 B.C.

There is no doubt that the settlers at Velia, like those of the sister colony of Massilia, followed the example of their parent city, and devoted themselves assiduously to the cultivation of commerce; nor that the city itself quickly became a prosperous and flourishing place. The great abundance of the silver coins of Velia still in existence, and which are found throughout the S. of Italy, is in itself sufficient evidence of this fact; while the circumstance that it became by degrees the head of an archipelago of cities, the leaders of which continued through successive generations to reside at Velia, proves that it must have been a place of much intellectual refinement and cultivation. But of its history we may be said to know absolutely nothing. Strabo tells us that it was remarkable for its good government, an advantage for which it was partly indebted to Parmenides, who gave his fellow-citizens a code of laws which the magistrates from year to year took an oath to obey. (Strab. vi. p. 254; Diog. Laer. i. 3. § 23.) But the obscure story concerning the death of Zenon, the disciple of Parmenides, who was put to death by a tyrant named Neurchus or Diomedon, would seem to show that it was not free from the same kind of violent interruptions by the rise of despotsims as were common to most of the Greek cities. (Diog. Laer. i. 5; Cic. Tusc. ii. 22.) Strabo also tells us that the Eleans came off victorious in a contest with the Posidonianians, but of the time and circumstances of this we are wholly ignorant; and he adds that they maintained their ground against the Lucanians also. (Strab. i. c.) If this is correct they would have been one of the most powerful cities which preserved their national existence against those barbarians, but their name is not found in the scanty historical notices that we possess of the wars between the Lucanians and the cities of Magna Graecia. But the statement of Strabo is in some degree confirmed by the fact that Velia was certainly admitted at an early period (though on what occasion we know not) to the alliance of Rome, and appears to have maintained very friendly relations with that city. It was from thence, in common with Neapalia, that the Romana habitually derived the priestesses of Ceres, whose worship was of Greek origin. (Cic. pro Balb. 24; Vel. Max. i. 1. § 1.) Cicero speaks of Velia as a well-known instance of a "fodera civitas," and we find it mentioned in the Second Punic War as one of those which were bound by treaty to contribute their quota of ships to the Roman fleet. (Cic. l. c.; Liv. xxvi. 39.) It eventually received the Roman franchise, apparently in virtue of the Lex Julia, B.C. 90. (Cic. l. c.) Under the Roman government Velia continued to be a tolerably flourishing town, and seems to have been from an early period noted for its mild and salubrious climate. Thus we are told that P. Aemilius was ordered to go there by his physicians for the benefit of his health, and we find Horace making inquiries about it as a substitute for Raise. (Plut. Aemil. 39; Hor. Ep. i. 15. 1.) Cicero's friend Trebatius had a villa there, and the great orator himself repeatedly touched there on his voyages along the coast of Italy. (Cic. Verr. ii. 40, v. 17, ad Fam. vii. 19, 20, ad Att. xvi. 6, 7.) It appears to have been at this period still a place of some trade, and Strabo tells us that the poverty of the soil compelled the inhabitants to turn their attention especially to maritime affairs and fisheries. (Strab. vi. p. 254.) It is probable that the same cause had in early times co-operated with the national disposition of the Phocaean settlers to direct their attention especially to maritime commerce. We hear nothing more of Velia under the Roman Empire. Its name is found in Pliny and Ptolemy, but not in the Itineraries, which may, however, probably proceed from its seconded position. It is mentioned in the Liber Coloniarum (p. 269) among the Prefectures of Lucania; and its continued existence as a municipal town is proved by inscriptions. (Mommsen, Inscrip. R. N. 190.) It has been supposed to have been incorporated in the early ages of Christianity, and still retained that dignity as late as the time of Gregory the Great (A.D. 599.) It is probable that the final decay of Velia, like that of Paestum, was owing to the ravages of the Saracens in the 8th and 9th centuries. The bishopric was united with that of Capaccio, which had succeeded to that of Paestum. (Müster, Velia, pp. 69—73.) During the middle ages there grew up on the spot a fortress which was called Castell' a Mare della Brusca, and which still serves to mark the site of the ancient city.

The ruins of Velia are situated on a low ridge of hill, which rises about a mile and a half from the mouth of the river Avento (the ancient Hades), and half a mile from the coast, which here forms a shallow but spacious bay, between the headland formed by the Monte della Stella and the rocky point of Porticello near Ascea. The mediaeval castle and village of Castell' a Mare della Brusca occupy the point of this hill nearest the sea. The outline of the ancient walls may be traced at intervals round the hill for their whole extent. Their circuit is not above two miles, and it is most likely that this was the old city or acropolis, and that in the days of its prosperity it had considerable suburbs, especially in the direction of its port. It is probable that this was an artificial basin, like that of Meta- postum, and its site is in all probability marked by

VELIA. 1267.
a marshy pool which still exists between the ruins of the ancient city and the month of the Alento. This river itself, however, was sufficient to afford a shelter and place of anchorage for shipping in ancient times (Cic. ad Att. xvi. 7), and is still resorted to for the same purpose by the light vessels of the country. No other ruins exist on the site of the ancient city except some masses of buildings, which, being in the reticulated style, are unquestionably of Roman date: portions of aqueducts, reservoirs for water, &c. are also visible. (The site and existing remains of Velia are described by Münzer, Velia in Lucania, Svo. Altona, 1818, pp. 15—20, and by the Duc de Laynes, in the Annali dell' Instituto, 1829, pp. 381—385.)

It is certain that as a Greek colony Velia never rose to a par with the more opulent and flourishing cities of Magna Graecia. Its chief celebrity in ancient times was derived from its celebrated school of philosophy, which was universally known as the Eleatic school. Its founder Xenophanes was indeed a native of Colophon, but had established himself at Velia, and wrote a long poem, in which he celebrated the foundation of that city. (Diog. Laer. ix. 2. § 20.) His distinguished successors Parnemides and Zeno were both of them born at Velia, and the same thing is asserted by some writers of Lycippus, the founder of the atomic theory, though others represent him as a native of Abdera or Melos. Hence Diogenes Laertius terms Velia "an inconsiderable city, but capable of producing great men" (ix. 5. § 28).

E. H. B.

COIN OF VELIA.

VELINUS (Velino), a considerable river of Central Italy, which has its sources in the lofty group of the Apenines between Nursia (Noricum) and Intercarea (Antrodooe). Its actual source is in the immediate neighbourhood of the ancient Falacerium, the birthplace of Vespuian, where an old church still bears the name of Sta Maria di Fonte Velino. The upper part of its course is from X to S, but near Antrodooe it turns abruptly to the W., pursues that direction as far as Retti, and thence flows about NNW. till it discharges its waters into the Nar (Vesor) about 3 miles above Terni (Interamna). Just before reaching that river it forms the celebrated cascade now known as the Falls of Terni or Cascata delle Marmore. This waterfall is in its present form wholly artificial. It was first formed by M. Curius Dentatus, who opened an artificial channel for the waters of the Velinus, and thus carried off a considerable part of the Lucus Velinus, which previously occupied a great part of the valley below Reate. There still remains, however, as there does to this day, a considerable lake, called the Lucus Velinus, and now known as the Lago di Pic di Lugo. It was on the banks of this lake that the villa of Axins, the friend of Cicero and Varro, was situated. (Cic. ad Att. iv. 15; Varro, R.R. ii. 1. 8.) Several smaller lakes still exist a little higher up the valley: hence we find Pliny speaking in the plural of the Velini Lacus (Plin. iii. 12. s. 17; Tac. Ann. i. 79; Vib. Seq. p. 24.) The character and conformation of the lower valley of the Velinus are fully described in the article Reate. Pliny has made a complete confusion in his description of the Nar and Velinus. [NAR.] The latter river receives near Retti two considerable streams, the Salto and the Turano: the ancient name of the first is the only one. The latter river receives near Retti two considerable streams, the Salto and the Turano: the ancient name of the first is the only one.

VELITRAE. (OEBITRAE: Eth. OEBITRw., Velitrerea, Veleru-tris,) a city of Latium situated on the southern slope of the Alban hills, looking over the Tompentine Marshes, and on the left of the Via Appia. There can be no doubt that it was included within the limits of Latium, as that name was usually understood, at least in later times; but there is great uncertainty as to whether it was originally a Latin or a Volscian city. On the one hand Dionysius includes the Veliterni in his list of the thirty cities of the Latin League, a document probably derived from good authority (Dionys. v. 61). On the other hand both Dionysius himself and Livy represent it as a Volscian city at the earliest period when it came into collision with Rome. Thus Dionysius, in relating the wars of Ancus Marcius with the Volscians, speaks of Velitrae as a city of that people which was besieged by the Roman king, but submitted, and was received to an alliance on favourable terms. (Id. iii. 41.) Again in n. c. 494, just about the period when its name figures in Dionysius as one of the Latin cities, it is mentioned both by that author and by Livy as a Volscian city, which was wrested from that people by the consul P. Virginius (Id. vi. 42; Liv. ii. 30). According to Livy a Roman colony was sent there the same year, which was again recruited with fresh colonists two years afterwards. (Liv. ii. 31. 34.) Dionysius, on the contrary, makes no mention of the first colony, and represents that sent in n. c. 492 as designed to supply the exhausted population of Velitrae, which had been reduced to a low state by a pestilence. (Dionys. vii. 13. 14.) It appears certain at all events that Velitrae received a Roman colony at this period; but it had apparently again fallen into decay, as it received a second body of colonists in n. c. 404. (Diod. xiv. 34.) Even this did not suffice to give a glance to Rome: shortly after the Gallic war, the Roman colonists of Velitrae joined with the Volscians in their hostilities, and after a short time broke out into open revolt. (Liv. vi. 13. 21.) They were indeed defeated in n. c. 381, together with the Praenestines and Volscians, who supported them, and their city was taken the next year (id. 22. 29); but their history from this time is a continued succession of outbreaks and hostile enterprises against Rome, alternating with intervals of dubious peace. It seems clear that they had really assumed the position of an independent city, like those of the neighbouring Volscians, and though the Romans are said to have more than once taken this city, they did not again restore it to the position of a Roman colony. Thus notwithstanding its capture in n. c. 380, the citizens were again in arms in 370, and not only ravaged the territories of the Latins in alliance with Rome, but even laid siege to Tusculum. They were quickly defeated in the field, and Velitrae itself in its turn was besieged by a Roman army; but the siege
VELITRÆ. was protracted for more than two years, and it is not quite clear whether the city was taken in the end. (Liv. vi. 36, 37, 38, 42.) In 89, Cicero writes that the town broke out, and ravaged the Roman territories, but we hear nothing of their punishment (Liv. vii. 15); and in n. c. 340, on the outbreak of the great Latin War, they are represented as among the first to join in the defection. It is evident indeed that they were at this time still a powerful people; their troops bore an important part in two successive campaigns, but shared in the general defeat of the Latins on the banks of the Astura, n. c. 338. (Liv. viii. 3, 12, 13; Fast. Capit.) After the close of the war they were selected for the severest punishment, on the especial ground of their having been originally Roman citizens. Their walls were destroyed, and their local senators transported beyond the Tiber, under a severe penalty in case of their return. Their place was, however, supplied by a body of fresh colonists, so that the city continued to be not less populous than before. (Liv. vii. 14.)

From this time Velitrae sank into the condition of an ordinary municipal town, and we hear little of it in history. It is mentioned incidentally on occasion of some dispute which occurred there (Liv. xxx. 38, xxxii. 1, 9), but with this period its name is not again mentioned till the close of the Republic. We hear, however, that it was a flourishing municipal town, and it derived some celebrity at the commencement of the Empire from the circumstance of its having been the native place of the Octavian family, from which the emperor Augustus was descended. The Octavi indeed claimed to be descended from the ancient Roman family of the same name; but it is certain that both the grandfather and great-grandfather of Augustus were merely men of equestrian rank, who held municipal magistracies in their native town. (Suet. Aug. 1, 2 ; Dion Cass. xiv. 1.) According to the Liber Coloniarum, Velitrae had received a fresh body of colonists in the time of the Gracchi; but it continued to retain its municipal rank until the reign of Claudius, when it received a military colony, and from this time assumed the title of a Colonia, which we find it bearing in inscriptions (Lib. Colon. p. 238; Zumpt, de Col. p. 383; Orell. Inscr. 1740, 3652). No mention of the city occurs in history under the Roman Empire, but its name is preserved to the geographers, and inscriptions testify that it continued a flourishing town down to near the close of the Empire. (Strab. v. p. 237; Plin. iii. 5. s. 9; Sil. Ital. viii. 376; Nibby, Diatriom., vol. iii. p. 450.) It appears to have subsequently suffered severely from the ravages of the barbarians, but continued to subsist throughout the middle ages: and the modern city of Vellètri still occupies the site of the ancient one, though it has no remains of antiquity. Its position is very similar to that of Lanuvium (Civitas Lanticini), on a projecting rock or spur of hill, standing out from the more elevated group of the Albano hills, and rising like a headland above the plain of the Pontine Marshes, which lie stretched out beneath it. The inscriptions which have been discovered there have been published by Cardinali (Inscript. Antiche Vellètrii, 4to, Roma, 1823). From one of these we learn that the ancient city possessed an amphitheatre, which was repaired as late as the reign of Valentinian, but no traces of it are now visible. It had also temples of Apollo, Hercules and Mars, as well as of the Sabine divinity Sances. (Liv. xxxii. 1.)

Pliny notices the territory of Velitrae as producing a wine of great excellence, inferior only to the Falernian (Plin. xiv. 6. 8). [E. H. K.]

VELLEI, the N. E. E. of VELVANI, a people of Gallia. In the passage of Caesar (B. G. vii. 75) some editions have Velvani, but it is certain that whatever is the true form of the name, these Velvani are the Velvanii (Velvaniis) of Strabo (p. 190). The Gabali and Velvani in Caesar's time were subject to the Arverni. In Ptolemy (ii. 7. § 20) the name is Velvani (Ovelawo), but he puts them next to the Aucii, which is a great mistake. D'Anville says that the diocese of Poli represents their territory, but that this cannot be of the small province of Velloc, which was annexed to Langueçoc in the new Roman diocesan division of the 3rd century. Notit. of the Provinces of Gallia, the capital of the Velvani is Civitas Vellorumum [Revessio]. [G. L.]

VELLEI. [Velleia.]

VELLAUNODUNUM, in Gallia. In n. c. 52 Caesar, leaving two legions and all the baggage at Agedicum (Senons), marches on Genamum (Orelans). On the second day he reaches Vellauonodum. (B. G. vii. 11.) In two days Caesar made a Vallum round Vellauonodum, and on the third day the place surrendered, and the people gave up their arms. There is no evidence about the site of Vellauonodum, except that it was on the road from Sena to Orelans, and was reached in the second day's march from Sena, and that Caesar reached Orelans in two days from Vellauonodum. Caesar was marching quick. D'Anville conjectures that Vellauonodum may be Boume, in the old province of Gétiniois; for Boume is about 40 Roman miles from Sena, and the Roman army would march that distance in two days. Boume is named Belna in the Pagnus Vasthenes (Gatiniois, Gastiniois, Vatiniois; Vavinum; Vafinum), in the acts of a council held at Soissons in 362, and D'Anville thinks that Belna may be a corruption of Veluna, which is the name of Vellauonodum, if we cut off the termination dumum. (D'Anville, Notisc, &c.) [G. L.]

VELLEIA [Velleia].

VELLICA (Ovelia, Ps. ii. 6. § 51), a town of the Cantabri in Hispamia Tarraconensis. Ubent (ii. p. 1. p. 144) places it in the neighbourhood of Vellioa, to the N. of Aguilar de Campo. [T.H.D.]

VELLCASSEZ (Vellcasses.)

VELLCASSEZ, as Caesar (B. G. ii. 4) writes the name, Vellocassez (Ps. iv. 18), and in Ptolemy (ii. 8. § 8). Caesar places them in the country of the Belgae, and consequently north of the Scine. The number of fighting men that they could muster in n. c. 57 was estimated at 10,000, unless Caesar means that they and the Veronundati together had this number. In the division of Gallia by Augustus, the Vellocasses were included in Lugdunensis. Their chief town was Rotomagus (Rouen) on the north bank of the Seine. West of the Vellocasses were the Caleti, whose country extended along the coast north of the Scine. That part of the country of the Vellocasses which is between the rivers Andelle and One, became in modern times Vexin Normand and Vexin Fransais, the little river Epte forming the boundary between the two Vexins. [G. L.]

VELPLI MONTES (væ Ovela drm., Ps. iv. 4, § 8), a range of mountains on the W. borders of Cyrenaica, in which were the sources of the river Lathan. [T. H. D.]

VELTAE (Ovela, Ps. iii. 5. § 22), a people of European Sarmatia, dwelling on both banks of
VEMANIA.

the river Rubbon, identical, according to Ukert (iii.
pt. ii. p. 435), with the Schavonian Veleti, or Lutizi,
who dwelt on the Oder. [T. H. D.]

VEMANIA, a town of Vindelicia, on the road be-
 tween Augusta Vindelicorum and Brigantium (II. Ant.
pp. 237, 251, 259; Tab. Pent.), seems to have been a
place of some importance, as it was the station of the
prefect of the third legion, who had to guard the frontier
from this place to Campodunum. (Not. Imp.) The place
now occupying the site is called Haugem. [L. S.]

VENAEFRIUM (Ocziwnov) Etch. Venaefrum; 
Venafrus), an inland city of Campania, situated
n the upper valley of the Vulturus, and on the Via
Latina, 16 miles from Casinum and 18 from Teanum.
(Rein. Ant. p. 302.) It was the last city of Cam-
pania towards the N., its territory adjoining on the
W., that of Casinum (S. Germano), which was in-
cluded in Latium, in the more extended sense of that
name, and that of Aserma on the NE., which formed
part of Samnium. It stood on a hill rising above
the valley of the Vulturus, at a short distance from the
right bank of that river. (Strab. v. p. 2383.)

The name of Venaefrum is preserved in history of
Venafrum before the Roman conquest of this part of
Italy, and it is uncertain to what people it originally belonged; but
it is probable that it had fallen into the hands of the
Samnites before that people came into collision with
Rome. Under the Roman government it appears as
a flourishing municipal town: Cato, the most ancient
author by whom it is mentioned, notices it as having
manufactures of spades, tiles, and ropes (Cato, R. R.
135): at a later period it was more noted for its
oil, which was celebrated as the best in Italy, and
supplied the choicest tables of the great at Rome
under the Empire. (Hor. Carma. ii. 6. 16. Sat. ii.
4. 69; Juv. v. 86; Martial, xiii. 98; Strab. v. p. 238, 
242; Varr. R. R. i. 2. § 6; Plin. xx. 2. s. 3.)

The only occasion on which Venafrum figures in
history is during the Social War. r. c. 88, when it
was betrayed into the hands of the Samnite leader
Marius Egnatius, and two Roman cohorts that formed
the garrison were put to the sword. (Appian, B. C.
ii. 41.) Cicero more than once alludes to the great
fertility of its territory (Cic. de Leg. Agr. ii. 25.
pro Flane. 9), which was one of those that the tri-
bune Bulla proposed by his agrarian law to divide
among the Roman citizens (Cf. Nancy in France).
This project proved abortive, but a colony was planted at
Venafrum under Augustus, and the city continued henceforth
to bear the title of a Colonia, which is found both in
Pliny and in inscriptions. (Plin. iii. 5. 9.; Lib.
Cod. p. 259; Zumpt, de Colon. p. 347; Mommsen.
Inscr. R. N. 4643. 4703.) These last, which are very
numerous, sufficiently attest the flourishing condition of
Venafrum under the Roman Empire; it continued
to subsist throughout the middle ages, and is still a
town of about 4000 inhabitants. It retains the an-
cient name (Venafrum), and is built, as in ancient
times, on the same site. It has been held in great
esteem, the exception inscriptions above mentioned
and some shapeless fragments of an edifice supposed
to have been an amphitheatre. The inscriptions are
245—249.) [E. H. B.]

VENANTODUMUM, apparently a town of the
Catticychlain in Britania Romana, perhaps Hant-
tumplon. The name appears in the Not. Imp.;
though Camden (p. 502) notes it as coined by
Leland. [T. H. D.]

VENASA (Oliva), a rather important town in the
district of Morinum in Cappadocia, possessing a
celebrated temple of Zeus, to which less than

VENETI

3000 slaves belonged. The high priest enjoyed an
annual income of fifteen talents, arising from the
produce of the lands belonging to the temple. This
sacerdotal dignity was held for life, and the priest
was next in rank to the high priest of Comana.
(Strab. xii. p. 557.) [L. S.]

VENEDUM (Obervar, Strab. iii. p. 207, vii.
p. 314), a town of the Lapodes in Illyria, and on the
borders of Pannonia. It is probably the modern
Windisch-Grau; but some have identified it with
Braisjt. [T. H. D.]

VENENAE (Obervs, Plut. iii. 5. § 19), or
VENEDI (Tac. Germ. 46; Plin. iv. 13. s. 27), a
considerable people of European Sarmatia, situated
on the N. declivity of the mountains named after them,
and along the Sinus Venecidus about the river Chro-
nos, and as far as the E. bank of the Vistula. They
were the northern neighbours of the Gallindae and
Gythones; but Tacitus was doubtful whether he should
call them Germans or Sarmatians, though they more
resembled the former than the latter in some of their
customs, as the building of houses, the carrying of
shields, and the habit of going on foot, whilst the
Sarmatians travelled on horseback or in waggons.
They sought a precarious livelihood by scoring the
woods and mountains which lay between the Pencini
and the Kenni. Whether they were the forefathers
of the Wends is very problematical. (Cf. Schaffarc, 
Stai. Altherth. i. p. 75, seq.; Var. d. Urbem
the Abkunft der Slaven. p. 24.) [T. H. D.]

VENEDICI MONTES (voc Obervsbc npn, Plut.
iii. 5. § 13), certain mountains of European Sarmatia,
bounding the territory of the Venecidus on the S.
They were probably the low chain of hills which
separates East Pressia from Poland. [T. H. D.]

VENEDICUS SINUS (Obervsbc kulo, Plut.
iii. 5. § 1), a bay of the Sarmatian ocean, or Baltic,
named after the Venecidus who dwelt upon it. It lay
to the E. of the Vistula, and was in all probability
the Gulf of Riga; a view which is strengthened by
the name of Vinndiakau belonging to a river and town
in Courland. [T. H. D.]

VENELLI [Unelli.]

VENELIACASII. [Velescaen.]

VENEBIS MONNI. [Aphroditius Mons.]

VENEBIS PORTUS. [Doveris Venetis.]

VENEBIS PROM. [Hispania, Vol. I. p. 1084.]

VENETTI (Or centa), a Celtic people, whose coun-
try Caesar names Venetia (B. G. iii. 9). The Ve-
eti lived on the coast of the Atlantic (B. G. ii. 34),
and were one of the Armoric and Maritime states of
Celtica. On the south they bordered on the Nam-
netes or Xannetes, on the east they had the Redones,
and on the north the Osamii, who occupied the most
western part of Britain. Strabo (iv. p. 193) made
a great mistake in supposing the Veneti to be Belgae.
He also supposes them to be the progenitors of the
Veneti on the coast of the Adriatic, whom others
supposed to be Paphlegianae; however, he gives all
this only as conjecture. The chief town of the
Veneti was Dariorigum, afterwards Veneti, now
Pannes [Darioriggum. The river Vilaine may have
been the southern boundary of the Veneti.

Caesar (B. G. i. 9) describes the coast of Venetia
as cut up by estuaries, which interrupted the com-
munication by land along the shore. Most of the
towns (ib. 12) were situated at the extremity of
inlets of land or peninsulas, so that when the
water was high the town could be reached only
on foot, or could ships touch them on the ebb, for
the water was then too shallow. This is the character
of the coast of the French department of Morbihan, which corresponds pretty nearly to Caesar's Venetia. On this coast there are many bays and many "li- gulee" as Caesar calls them (Pointes). The most remarkable peninsula is Quiberon, which runs out into the sea near 10 miles, and is insulated at high water. The Veneti commanded the sea in these parts, and as the necessities of navigation often drove vessels to their ports, they made them pay for the shelter. The Veneti had trade with Britain, with Devonshire and Cornwall, the parts of the island which were nearest to them. They were the most powerful maritime state on the Atlantic.

Their vessels were made nearly flat-bottomed, in order that they might the better take the ground when they were left dry by the ebb. The heads were very high, and the stems strong built, to stand the violence of their seas. The material was oak. Instead of ropes they had chain cables, the use of which has been revised in the present century. Strabo (iv. p. 193) writes as if the ropes of the rigging were chains, which is very absurd, and is contradicted by Caesar, who says that the yards were fastened to the masts by ropes, which the Romans cut asunder in the sea-fight with the Veneti (iii. 14). Instead of sails they used skins and leather worked thin, either because they had no flax and did not know its use, or, as Caesar supposes it to be mentioned casually, because flax was not suited for the tempests of that coast.

The Veneti rose against the Romans in the winter of B.C. 57, and induced many other neighbouring states to join them, even the Morini and Metapii. They also sent to Britain for help. Caesar, who was absent in Italy during the winter (B.C. 57—56), sent orders to build ships on the Loire, probably in the territory of the Andes, Turones and Carnutes, where his legions were quartered, and the ships were floated down to the Ocean. He got his rivers from the Provincia. In the meantime he came himself into Gallia. He protected his rear against attack by sending Labienus to the country of the Treviri, to keep the Belgae quiet and to stop the Germans from crossing the Rhine. He sent P. Crassus with twelve cohorts and a large body of cavalry into Aquitania to prevent the Celtii from receiving any aid from these parts; and he kept the Unelli [Uxelli], Curio-solites and Lexovi in check by sending Q. Titurius Sabinus into those parts with three legions. D. Brutus commanded Caesar's fleet and the Gallic ships furnished by the Pictones and Santones, and other states that had been reduced to obedience.

Caesar began the campaign by besieging the Venetian towns that were situated on the extremities of the tongues of land; but as the Veneti had abundance of ships, they removed themselves by water from one town to another, when they could no longer resist the besieger. They did this during a great part of the summer, and Caesar could not prevent it, for he had not yet got together all his ships. After taking several of their towns he waited for the remainder of his fleet. The Veneti with about 220 of their best equipped ships came out of port to meet the Romans. The Roman ships could not do the Gallic ships any damage by driving the heads of their vessels against them, for the Gallic ships were too high at the prow and too strong; nor could the Romans have attacked them by raising wooden frameworks on their decks, for the Gallic ships were too high. The only advantage that the Roman ships had was in the oars, which the Gallic ships had not. They could only trust to their sails. The Romans at last fixed sharp hooks at the end of long poles, and laying hold of the enemy's rigging with them, and then putting their own vessels in motion by the oars, they cut the ropes asunder, and the yards and sails falling down, the Venetian ships were useless. Everything now depended on courage, in which the Romans had the advantage; and the men were encouraged by the presence of Caesar and the army, which occupied all the hills and higher ground which commanded a view of the sea. The Roman ships got round the Venetian, two or three about each, for they had the advantage in number of vessels, and the men began to board the enemy. Some ships were taken and the rest tried to sail away, but a dead calm came on and they could not stir. A very few ships escaped to the land at nightfall. The battle lasted from the fourth hour in the morning to sunset. Thus was destroyed the first naval power that was formed on the coast of the Atlantic. The Veneti lost their ships, all their young men of fighting age, and most of their men of mature age and of rank. They surrendered unconditionally. Caesar put to death all the members of the Venetian state assembly, on the ground that they had violated the law of nations by inquiring after Q. Venetus. Caesar also sent T. Silius, who had been sent into their country in the previous year, to get supplies for the Roman troops who were quartered along the Loire (B.G. iii. 7, 8). The rest of the people were sold by auction; all, we must suppose, that Caesar could lay hold of. Thus the territory of the Veneti was nearly depopulated, and an active commercial people was swept from the earth. The Veneti never appear again as a powerful state. When Vercingetorix was rousing all Gallia to come against Caesar at Alesia (B.C. iii. 52), the contingent of all the Armorician states, seven or eight in number, was only 6000 men (B.G. vii. 75).

Dion Cassius (xxxix. 40—43) has four chapters on the history of this Venetian war, which, as usual with him, he puts in confusion, by misunderstanding Caesar and making his own silly additions. [G. L.]

VENETIA (Ouevetia; Eth. Uwetos or "Epetos, Venetus), a province or region of Northern Italy, at the head of the Adriatic sea, extending from the foot of the Alps, where those mountains descend to the Adriatic, to the mouths of the Po, and westward as far as the river Athius (Aforge), or the lake Benezia. But the body, or area of the district seems to have varied at different times, and there is some difficulty in determining them with accuracy. In early times, indeed, before the Roman conquest, we have no account of the exact line of demarcation between the Veneti and the Cenomani, who adjoined them on the W., though according to Livy, Verona was a city of the latter people (v. 55). After the Roman conquest, the whole of Venetia was at first included as a part of Cisalpine Gaul, and was not separated from it till the time of Augustus, who constituted his Tenth Region of Venetia and Istria, but including within its limits not only Verona, but Brixia and Cremona also (Plin. iii. 18. s. 22, 19. s. 23), both of which were certainly cities of the Cenomani, and seem to have continued to be commonly considered as belonging to Cisalpine Gaul. (Ist. iii. 1. § 31.) Some authors, however, extended the appellation of Venetia still further to the W., so as to include not only Brixia and Cremona, but Bergamo also, and regarded the Adda as the boundary.
VENETIA.

(P. Dac. Hist. Long. ii. 14.) But in the later period of the Roman Empire the Athesis seems to have been generally recognised as the W. boundary of Venetia, though not so strictly as to exclude Verona, the greater part of which was situated on the right bank of the river. Towards the N. the boundary was equally indefinite; the valleys and southern slopes of the Alps were occupied by Rhaetian and Euganean tribes; and it is probable that the limits between these and the Venetii, on their S. frontier, was always vague and arbitrary, or at least determined merely by nationality, not by any geographical boundary, as is the case at the present day with the German and Italian races in the same region. Thus Tridantium, Feltria, and Belenam, were all of them properly Rhaetian towns (Plin. iii. 19. s. 23.), though included in the Tenth Region of Augustus, and for that reason often considered as belonging to Venetia.

On the E. the limits of Venetia were more definite. The land of the Carni, who occupied the greater part of the modern Friuli, was generally considered as comprised within it, while the little river Formio (Rinano), a few miles S. of Tergeste, separated it from Istria. (Plin. iii. 18. s. 22.) Several authors, however, regard Tergeste as an Istrian city (Tergestr), and must therefore have placed the boundary either at the Timavus, or where the Alps come down so close to the sea, between that river and Tergeste, as to prevent the road being continued along the coast. There can be no doubt that this point forms the natural boundary of Venetia on the E., although the Formio continued under the Roman Empire to constitute its political limit.

The physical peculiarities of the region thus limited are very remarkable. The greater part of Venetia is, like the neighbouring tract of Cisalpine Gaul, a broad and level plain, extending, without interruption, to the very foot of the Alps, and farrowed by numerous streams, which descend from those mountains with great rapidity and violence. These streams, swollen by the melting of the Alpine snows, or by the torrents of rain which descend upon the mountains, sometimes, as they reach the plain, spread themselves over the country, forcing broad beds of sand and pebbles, or inundating the fertile tract on each side of their banks. Continually stagnating more and more, as they flow through an almost perfectly level tract, they form, before reaching the sea, considerable sheets of water; and the action of the tides (which is much more perceptible at the head of the Adriatic than in any other part of that sea or of the Mediterranean) combining to check the outflow of their waters, causes the formation of extensive salt-water lagunes, communicating with the sea only through narrow gaps or openings in the long line of sandy barriers that bounds them. Such lagunes, which occupy a great extent of ground S. of the present mouth of the Po (Padus), are continued on from its N. bank to the neighbourhood of Altinum; and from thence, with some interruptions, to the mouth of the Isonzo, at the head or utmost height of the Adriatic. So extensive were they in ancient times that there was an uninterrupted line of inland navigation by these lagunes, which were known as the Septem Maria, from Ravenna to Altinum, a distance of above 80 miles. (Itin. Ant. p. 126.) Great physical changes have naturally taken place in the course of ages in a country so constituted. On the one hand there is a constant tendency to the filling up of the lagunes with the silt and mud brought down by the rivers, which convert them first into marshes, and eventually into firm land. On the other hand the rivers, which have for ages been confined within artificial banks, keep pushing on their mouths into the sea, and thus creating backwaters which give rise to fresh lagunes. At the same time, the rivers thus confined, from time to time break through their artificial barriers and force new channels, sometimes at the expense of the old; or it may happen that the main streams of the lagunes are carried off by new and artificial outlets. Thus all the principal streams of Venetia, from the Adige to the Piave, are at the present day carried to the sea by artificial canals; and it is doubtful whether any of them have now the same outlet as in ancient times.

In the eastern portion of Venetia, from the Piave to the foot of the Alps near Aquileia, these physical characters are less marked. The coast is indeed bordered by a belt of marshes and lagunes, but of no great extent; and within this, the rivers that descend from the Alps have been for the most part left to wander unrestrained through the plain, and have in consequence formed for themselves broad beds of stone and shingle, sometimes of surprising extent, through which the streams in their ordinary condition roll their diminiushed waters, the trilling volume of which contrasts strangely with the breadth and extent of their deposits. Such is the character especially of the Tagliamento, the largest river of this part of Italy, as well as of the Torre, the Natisone, and other minor streams. The irregularity of their channels, resulting from this state of things, is sufficiently shown by the fact that the rivers Turrus and Natiso, which formerly flowed under the walls of Aquileia, have now changed their course, and join the Isonzo at a distance of more than 4 miles from that city. [Aquileia.]

Of the history of Venetia previous to the Roman conquest we know almost nothing. It was occupied at that time by two principal nations, the Veneti from whom it derived its name, in the W., and the Carni in the E.; the former extending from the Athesis to the Plavis, or perhaps to the Thalvenpus, the latter from thence to the borders of Istria. But the origin and affinities of the Veneti themselves are extremely obscure. Ancient writers represent them as a very ancient people (Polyb. ii. 17.), but at the same time are generally agreed that they were not the original inhabitants of the tract that they occupied. This was reported by tradition to have been held in the earliest ages by the Euganeans (Liv. i. 1), a people whom we still find lingering in the valleys and underfalls of the Alps within the historical period, but of whose origin and affinities we know absolutely nothing. [Euganei.] In regard to the Veneti themselves it cannot fail to be remarked that we meet with three tribes or nations of this name in other parts of the world, besides those of Italy, viz. the Gaulish tribe of the Veneti on the coast of Armorica; the Veneti or Veneti of Tacitus, a Sarmatian or Slavonian tribe on the shores of the Baltic; and the Heneti or Eneti, who are mentioned as existing in Paphlgonia in the time of Homer. (Ritual. ii. 85.) The name of this last people does not subsequently appear in history, and we are therefore wholly at a loss as to their ethnical affinities, but it is not improbable that it was the remnant of one of the four principal tribes of the Veneti, who had been driven away by the former expansion of that of the Italian Veneti (according to the Greek form of the latter) that gave rise to the strange story of Antesor having migrated to Venetia after
VENETIA.

1273

the siege of Troy, and there founded the city of Patavium. (Liv. i. 1; Virg. Aen. i. 242; Serv. ad loc.) This legend, so generally adopted by the Romans and later Greeks, seems to have been current as early as the time of Sophocles. (Strab. xiii. p. 603.) Some writers, however, omitted all mention of Antenor, and merely transmitted the tribe of the Hertidotus, after having lost their leader Pylaemenes in the Trojan War, as wandering through Thrace to the head of the Adriatic, where they ultimately established themselves. (Id. xii. p. 543; Scymn. Ch. 389.) Whether there be any foundation for this story or not, it is evident that it throws no light upon the national affinities of the Italian Veneti. The other two tribes of the same name would seem to lead our conjectures in two different directions. From the occurrence of a tribe of Veneti among the Transalpine Gauls, just as we find among them a tribe of Cenomani and of Senones, corresponding to the two tribes of that name on the Italian side of the Alps, it would seem a very natural inference that the Veneti also were a Gaulish race, who had migrated from beyond the Alps. To this must be opposed the fact that, while a distinct historical tradition of the successive migrations of the Gaulish tribes in the N. of Italy has been preserved and transmitted to us (Liv. v. 34, 35), no trace is recorded of a similar migration of the Venetis; but, on the contrary, that people is uniformly distinguished from the Gauls: Livy expressly speaks of them as occupying the same tract which they did in his time not only before the first Gaulish migration, but before the plains of Northern Italy were occupied by the Etruscans (B. 33); and Polybius emphatically, though briefly, describes them as a different people from the Gauls their neighbours, and using a different language, though resembling them much in their manners and habits (ii. 17). Strabo also speaks of them as a distinct people from the Gauls, though he tells us that one account of their origin derived them from the Gaulish people of the same name that dwelt on the shores of the ocean. (Strab. iv. p. 195, v. p. 212.) But there is certainly no ground for rejecting the distinct statement of Polybius, and we may safely acquiesce in the conclusion that they were not of Celtic or Gaulish origin.

On the other hand the existence of a tribe or people on the southern shores of the Baltic, who were known to the Romans (through their German neighbours) as Veneti or Veneti, a name evidently identical with that of the Veneda or Veneds, by which the Slavonian race in general is still known to the Germans, would lead us to regard the Italian Veneti also as probably a Slavonian tribe: and this seems on the whole the most plausible hypothesis. There is nothing improbable in the circumstance that the Slavonians may at an early period have extended their migrations as far as the head of the Adriatic, and left there a detached branch or offshoot of their main stock. The commercial intercourse of the Veneti with the shores of the Baltic, a traffic which we find already established at a very early period, may be the more readily explained. Therefore, as a tribe of the same origin. Herodotus indeed represents the Veneti as an Illyrian tribe (i. 196, v. 9); but it seems probable that the name of Ilyrians was applied in a vague sense to all the mountaineers that occupied the eastern coasts of the Adriatic, and some of these may in ancient times have been of Slavonian origin, though the true Illyrians (the ancestors of the present Albanians) were undoubtedly a distinct people.

Of the history of the Veneti as an independent people we know almost nothing; but what little we do learn indicates a marked difference between them and their neighbours the Gauls on one side, and the Liburnians and Illyrians on the other. They appear to have been a commercial, rather than a warlike, people: and from the very earliest dawn of history carried on a trade in amber, which was brought overland from the shores of the Baltic, and exchanged by them with Phoenician and Greek merchants. Hence arose the fables which ascribed the production of that substance to the land of the Veneti, and ultimately led to the identification of the Eridans of Northern Europe with the Padus of Northern Italy. (Eridanus.) Herodotus mentions a peculiar custom as existing among the Veneti in his day, that they sold their daughters by auction to the highest bidder, as a mode of disposing of them in marriage (iv. 196). We learn also that they habitually wore black garments, a taste which may be said to be retained by the Venetians down to the present day, but was connected by the poets and mythographers with the fables concerning the fall of Phaeton. (Scymn. Ch. 396.) Another circumstance for which they were distinguished was the excellence of their horses, and the care they bestowed on breeding and training them, a fact which was appealed to by many as a proof of their descent from Antenor and "the horsetraining Trojans." (Strab. v. pp. 212, 213.) It is clear that they were a people considerably more advanced in civilisation than either the Gauls or the Ligurians, and the account given by Livy (x. 2) of the landing of Cleonymus in the territory of Patavium (n. c. 302) proves that at that period Patavium was at least a powerful and well organised city. Livy indeed expressly contrasts the Veneti with the Illyrians, Liburnians, and Istrians, "gentes ferace et magna ex parte latroniciis maritimis infames." (i. 6.) On this occasion we are told that the citizens of Patavium were kept in continual alarm on account of their Gaulish neighbours, with whom they seem to have been generally on unfriendly terms. Thus at a still earlier period we are informed by Polybius that the retreat of the Senonian Gauls, who had taken the city of Rome, was caused by an irruption of the Venetians into the Gaulish territory (ii. 18). It was doubtless this state of hostility that induced them, as soon as the Roman arms began to make themselves felt in Northern Italy, to conclude an alliance with Rome against the Gauls (n. c. 215), to which they appear to have subsequently adhered with unabated fidelity. (Polyb. ii. 23, 24.) Hence while we afterwards find the Romans gradually carrying their arms beyond the Veneti, and engaged in frequent hostilities with the Carni and Istrians on the extreme verge of Italy, no trace is found of any collision with the Venetians. Nor have we any account of the steps by which the latter passed from the condition of independent allies to that of subjects of the Roman Republic. But it is probable that the process was a gradual one, and grew out of the mere necessity of the case, when the Romans had conquered Istria and the land of the Carni, in which last they had established, in n. c. 181, the powerful colony of Aquileia. It is certain that before the close of the Republic the Veneti had ceased to have any independent existence, and were comprised, like the Gaulish tribes, in the province of Gallia Cisalpina, which was placed under the authority of Caesar, B. C.
59. The period at which the Veneti acquired the Roman franchise is uncertain: we are only left to infer that they obtained it at the same time as the Transpadane Gauls, in B. C. 49. (Dion Cass. xii. 56.)

Under the Roman Empire, Venetia (as already mentioned) was included, together with Istria, in the Tenth Region of Augustus. The land of the Carni (Carnorum regio, Pline. Hist. ii. 18, s. 22) was at this time considered, for administrative purposes, as a part of Venetia; though it is still described as distinct by Ptolemy (Hist. i. §§ 25, 26), and there is no doubt that the two provinces were originally separate. But the population of both districts became thoroughly Romanised, all traces of this distinction were lost, and the names of Venetia and Istria alone remained in use. These two continued to form one province, and we meet with mention, both in inscriptions and in the Notitia, of " Corrector Venetiae et Histriae," down to the close of the Roman Empire. (Notit. Dign. ii. p. 65; Boecking, ad loc. p. 441; Ord. Inscr. 1050. 3191.) The capital of the united provinces was Aquileia, which rose under the Roman Empire to be one of the most flourishing cities of Italy. Its importance was derived, not from its wealth and commercial prosperity only, but from its situation at the very entrance of Italy, on the highroad which became the great means of communication between the Eastern and Western Empires. The same circumstance led to this part of Venetia being the scene of repeated contests for power between rival emperors. Thus it was before Aquileia that the Emperor Maximian perished in A.D. 238; it was on the banks of the river Ahs (Arsen) that the younger Constantine was defeated and slain, in A.D. 340; again, in 388, the contest between Maximus and Theodosius the Great raged in the same locality; and in 425, that between the usurper Joannes and the generals of Theodosius II. [Aquileia.] Finally, in A.D. 459, it was on the river Sontius (Isonzo) that Odoacer was defeated by the Gothic king Theodoric. (Hist. Miscell. xvi. p. 561.)

It seems certain that Venetia had become under the Roman Empire a very opulent and flourishing province: besides Aquileia, Patavium and Verona were provincial cities of the first class; and many other towns such as Concordia, Altinum, Forum Juli, &c., whose names are little known in history, were nevertheless opulent and considerable municipal towns. But it suffered with peculiar severity from the incursions of the barbarians before the close of the Empire. The passage across the Julian Alps from the valley of the Save to the plains of Aquileia, which presents few natural difficulties, became the highway by which all the barbarian nations in succession descended into the plains of Italy; and hence it was Venetia that felt the first brunt of their fury. This was especially the case with the invasion of Attila in A.D. 452, who, having at length reduced Aquileia after a long siege, raged it to the ground; and then, advancing with fearful rapidity, devastated in like manner the cities of Concordia, Altinum, Patavium, Vicentia, Verona, Brixia, and Bergomum, not one of which was able to oppose any effectual resistance. (Hist. Miscell. xv. p. 549.) The expression of the chronicler that he levelled these cities with the ground is probably exaggerated; but there can be no doubt that they suffered a blow from which three of them at least, Concordia, Altinum, and Aquileia, never recovered. In the midst of this devastation many fugitives from the ruined cities took refuge in the extensive lagoons that bordered the coasts of Venetia, and established themselves on some small islands in the midst of the waters, which had previously been inhabited only by fishermen. It was thus that the refugees from Aquileia gave origin to the episcopal city of Grado, while those from Patavium settled on a spot then known as Rivas Altus, in the midst of the lagoons formed by the Meduecus, where the new colony gradually grew up into a wealthy city and a powerful republic, which retained the ancient name of the province in that of Venice or Venice. It is certain that "Venetia" is not attested by any contemporary evidence; but the fact is proved by the event, and the circumstances might be preserved by tradition." (Decl. and Fall., ch. 35, note 55.) A curious letter of Cassiodorus (Par. xii. 24), written in A.D. 523, describes the islands of Venetia as inhabited by a population whose sole occupation and resource was derived from their fisheries; and it is remarkable, that he already appears to confine the appellation of Venetia to these islands, an usage which had certainly become prevalent in the time of Paulus Diaconus, who says, in speaking of the ancient province, "Venetia enim non solam in partibus insulis, quas nunc venetias dicimus, constat." (iii. 14.) It is clear, therefore, that the transfer of the name of the province to the island city, which has continued ever since, was established as early as the eighth century.

The original land of the Veneti, as already observed, was almost entirely a plain. The underfalls of the Alps, and the hills that skirt the foot of that range, were for the most part inhabited by tribes of mountaineers, who were of the same race with the Illyrians and Euganeans, with whom, so far as we can discover, the Veneti themselves had nothing in common. But a portion of this district was comprised within the limits of the province of Venetia, as this came to be marked out under Augustus; so that the boundary line between Venetia and Raetia was carried apparently from the head of the Lake Bencus (Lago di Garda) across the valley of the Atessa (Adige) to the ridge which separates the valley of the Piave from that of the Meduecus, so as to exclude the Val Sugana, while it included the whole valley of the Fuce (Piave), with the towns of Feltria and Bellmum, both of which are expressly ascribed by Pliny to the Tenth Region. Thence the Veneti appears to have followed the ridge which divides the waters that fall into the Adriatic from the valleys of the Drave and Gail, both of which streams flow eastward towards the Danube, and afterwards swept round in a semicircle, till it nearly touched the Adriatic near Trieste (Tergeste).

Within these limits, besides the underfalls of the Alps that are thrust forward towards the plain, there were comprised two distinct groups of hills, now known as the Colli Euganei and Monti Berici, both of them wholly isolated from the neighbouring ranges of the Alps, and, in a geological sense, unconnected with them, being both clearly of volcanic origin. The name of the Euganean hills, applied to the more southerly of the two groups, which approaches within a few miles of Patavium (Padova), is evidently a relic of the period when that people possessed the greater part of this country, and is doubtless derived from a very early time. The appellation is not noticed by any ancient geographer, but the name of Euganean Colis is given by Lucan...
VENETIA.

to the hill above the baths of Apennus, one of the group in question; and Martial gives the name of "Euganean Orae" to the hills near the town of Ateste (Este), at the southern extremity of the same range. (Lucan. vii. 192; Martialis. x. 93). There can, therefore, be no doubt that this beautiful range of hills was known in ancient times as the Euganei (Euganei).

The rivers of Venetia are numerous, but, for the reasons already mentioned, not always easy to identify. Much the largest and most important is the Athesis (Adige), which at one period formed the boundary of the province, and which, emerging from the Alps, near Verona, sweeps round in a great curve till it pours its waters into the Adriatic only a few miles N. of the mouths of the Padus. The next river of any magnitude is the Mediacus or Brenta, which flows under the walls of Padua, and receives as a tributary the Bacchiglione, apparently the Medusus Minor of Pliny. After this (proceeding eastwards) comes the Solis (Sile), a small stream flowing by the town of Altimus: next, the Plavis (Piave), a much more important river, which rises in the Alps above Belluno (Belenus), flows past that city and Feltria (Feltere), and enters the sea a few miles E. of Altimus; then the Luentilia (Livenza), and the Romanus (Lemene), a small river flowing under the walls of Concordia. Next to this comes the Talvemius (Taligamento), the most important of the rivers of the E. portion of Venetia, having its sources in the high ranges of the Alps above Julianium Carnicum, whence it traverses the whole plain of the Carni, nearly in a direct line from N. to S. Beyond this come several minor streams, which it is not easy to identify with certainty; such are the Varanus and Ananus of Pliny, probably the Stella and the torrent of Cormor; and the Alsa, which still bears the name of Assa. E. of these, again, come three considerable streams, the Tercus, Natice, and Sontius, which still preserve their ancient names, as the Torre, Natone, and Isone, but have undergone considerable changes in the lower part of their course, the Natice having formerly flowed under the walls of Aquileia, about 4 miles W. of its present channel, while the Isone, which now unites with it, originally followed an independent channel to the sea, near Montalcione.

The Isone receives a considerable tributary from the E., the Wippach or Vipacco, which descends from the elevated table-land of the Kores, and was known in ancient times as the Siculus Frigidus. It was by the valley of this river that the great high-road from the banks of the Danube, after crossing the dreary highlands of Carnieola, descended to Aquileia and the plains of Venetia. On the extreme confines of the province the little river Timavus must be mentioned, on account of its classical celebrity, though of no geographical importance; and the Formo (Risano), a few miles S. of Tergeste, which, from the time of Pliny, constituted the limit between Venetia and Istria. (Plin. iii. 18. s. 22.)

The cities and towns of Venetia may now be enumerated in geographical order. Farthest to the W., and situated on the Athesian, was the important city of Verona. Considerably to the E. of this was Vicentia, and beyond that again, Ictunum, the modern city of Vicenza, at the southern extremity of the Euganean hills, was Ateste (Este). On the border of the lakes, at their N. extremity, was Altinum, and 30 miles farther to the E., Concordia. Inland from these by Oppitergium and Tarvisium, both of them considerable towns; and on the slopes of the hills forming the lower underfalls of the Alps, the smaller towns of Acelum (Asolo) and Ceneta (Cenoë), the name of which is found in Agathias and Paulus Diaconus (Agath. Hist. Goth. ii. 8; P. Diacon. ii. 19), and was in all probability a Roman town, though not mentioned by any earlier writer. Still farther inland, in the valley of the Tagliamento, were Feltria and Beliscum. E. of the Talvemius, and therefore included in the territory of the Carni, were Aquileia, near the sea-coast; Forum Julii, N. of the preceding; Venedix (Udine), farther to the W.; and Julianum Carnicum, in the upper valley of the Talvemius, and in the midst of the Alps. Tergeste, on the E. side of the bay to which it gave its name, was the last city of Venetia, and was indexed by many writers considered as belonging to Istria. [TERGESTE].

Besides these, there were in the land of the Carni several smaller towns, the names of which are mentioned by Pliny (iii. 19. s. 23.), or are found for the first time in Paulus Diaconus and the Geographer of Ravenna, but were in all probability Roman towns, which had grown up under the Empire. Of these, Flaminia (Pinn.) is probably Plagagni, in the valley of the Tagliamento; Osopo (P. Diacon. iv. 38) is still called Ospeda, and Gemonia, Gemonia, higher up in the same valley; and Artemia, Artegona, a few miles S.E. of the preceding. Curunos (ii.) is still called Cormons, a small town between Cividale and Gorizia; and Putsina, (Pinn. Pat.) is Duvina, near the sources of the Timavus.

The other obscure names mentioned by Pliny (1. c.), and of which he himself says, "quos scrupulis dicere non attineas," were apparently for the most part mountain tribes or communities, and cannot be determined with any approach to certainty.

Venetia was traversed by a great line of high-road, which proceeded from Aquileia to Verona, and thence to Mediolanum, and formed the great high-way of communication from the latter city to the Danube and the provinces of the Eastern Empire. It passed through Cambodunum, Altimus, Patavium, Vicentia, and Verona. From Patavium a branch struck off through Ateste and Annaeum (probably Legnago on the Adige) to join the Aemilian Way at Mutina. A still more direct line of communication was established from Altimus to Ravenna by water, through the lagoons and artificial canals which communicted from one to another of these sheets of water. This line of route (if it such it can be called) is briefly indicated by the Antonine Itinerary ("imile [a Ravenna] navigatur septem Maria Altimus nipe," p. 129), while the stations are given in detail by the Tabula; but from the fluctuations that the lagoons have undergone, few of them can be identified with any certainty. [E. H. B.]

VENETIA, in Gaul. [VENETI.]

VENETICA INSULAE, in Gallia, mentioned by Pliny (iv. 19), are the numerous small islands along the coast of Venetia, or the modern department of Maribane. The largest is Belle-ile. The others are Houat, Helle, Groain, and some others. Perhaps the peninsula of Quiberon may be included [VENETI; VINDOBIS.]

VENETIUS SACUS. [BRIGANTINUS LACUS.]

VENETIATIA, a place in Galliaecia in Hispania Tarraconensis, on the road from Baecra to Astu-ricula. (Ibn. Ant. p. 423.) Variously identified with Vina, Avenza, and Revejo. [T. H. D.]

VENICONES (Obsetivones, Plut. iii. 3. § 14), a
people on the E. coast of Britannia Barbara, S. of the
estuary of the Teneus. (Murray & Frith, in
Forskeshire and Aberdeenshire.) [T. II. D.]

VENNESSES, a tribe of the Cantabri in His-
pania Tarraconensis. (Plin. iii. 3. 4.) [T.H.D.]
VENNICNI (Oviciaevius, Ptol. ii. 2. § 3) a
people in the NW. part of Hibernia, between the
promontories Boren and Venuceanum. [T. II. D.]
VENNICNIUM PROM. (Oviciaevius &por,
Ptol. ii. 2, § 2), the most northerly headland of
Hiberna, usually identified with Malet Head; but
Camden (p. 1411) takes it to have been Rome's
Head. [T. II. D.]

VENNOSES (Oviciaevi or Ovicirose), a tribe of
the Rhetia (Ptol. ii. 12. § 3), or according to
Strabo (iv. pp. 294, 296), of Viennaedia. They are
described as the wildest among the Rhaetian tribes,
and are no doubt the same as the Venonenses who, according
to Pliny (iii. 24), were mentioned among the nations
of the Alpine Trophy. They seem to have inhabited
the district about the sources of the Athesis, which
bore the name of Venonesgowe or Finesgowe as late
as the eleventh century. (Von Hormay, Gesch.
Tirols, l. i. p. 53.) [L. S.]

VENOLAE, a town in Britannia Romana appa-
rently belonging to the Coritani, at which the road
from London to the NW. part of Britain separated,
one branch proceeding towards Deva, the other taking
a NE. direction towards Lindum and Eboracum.
There was also another branch to the SW. towards
Vesta Siluram, so that the two main roads which
troaversed the whole island must have crossed here.
(Itin. Ant. pp. 470, 477, 479.) Variously identi-
cified with Highcross, Claybrook, and Wiseton
Porea. [T. II. D.]

VENOSTIES, probably a branch of the Venones,
Rhaetian tribe, were mentioned in the Alpine
Trophy, of which the inscription is quoted by Pliny
(iii. 24). In the middle ages their district bore the
name of Venusta Vallis. (Zeuss, Die Deutschen,
p. 237.) [L. S.]

VENIA, the name of several towns in Britannia
Romana. 1. Venta Belgarum (Ovoci, Ptol. ii. 3.
§ 28), in the SW. of Britain, on the road from Lon-
dinium to Calleva and Isca Duvanumierum. (Itin.
Ant. p. 478, &c.; Geogr. Rv. v. 31.) Now Winc-
chester, where there are some Roman remains.
(Camden, p. 138.)

2. Venta Siluram on the W. coast of Britannia
Romana, on the road from Londinium to Isca Sila-
rum, and near the estuary of the Sibrina. (Itin.
Ant. p. 485.) Now Cow Went in Monmouthshire,
where there are traces of the ancient walls, and where
Roman antiquities are (or were) occasionally found.
(Camden, p. 718.)

3. Venta Icenorum, a town of the Iceni, on the E.
estuary of Britannia Romana (Ptol. ii. 3. § 21),
to which there was a road from London. (Itin. Ant.
p. 479.) Most probably Caistor, on the river Win-
sum, a little S. of Norwich, which probably rose
from the ruins of Caistor. Here are traces of Roman
remains. (Camer. p. 460.) [T. II. D.]

VENIA, (Ovica, in Gallia Narbonensis,
a town of the Allobroges, mentioned only by Dion
Cassius, xxxvi. 47) in his history of the war
between the Allobroges and C. Pompeius the gov-
ernor of Gallia Provincia (ib. c. 62). Manlius
Lentinus, a legatus of Pompeius, came upon this
town, but was driven from it. The place appears
to be near the Isara (Isere) from Dion's narrative,
and D'Aulnile following De Valois supposed it to be

VENUSIA.

Vini, between Moirine and S. Marcelin, at some
distance from the bank of the Isere. As Venusia
is unknown otherwise, it may be a blunder of Dion,
and the place may be Vienna. [G. L.]

VENOCIPONTE, a town in Hispania Baetica
(Hirt. B. Hisp. 27), which appears from still extant
inscriptions to have been not far from Puente de
Don Gonzalo. (Uertk, ii. p. 1. 368.) It appears
on coins under the name of Ventipo. (Flores, Med.
p. ii. 617 ; Ecbekk, i. p. 31; Monnet, i. p. 27; Sezinni, p. 92.)

COIN OF VENITISPONTE OR VENTIFO.

VENUSIA (Oviciaevia ; Eth. Vumessa ; Ven-
essa), a city of Apulia, situated on the Appian Way,
about 10 miles S. of the river Aufidus. It nearly
adjoined the frontiers of Lucania, so that, according
to Dionysius, Horace, himself a native of the place, it
was doubtful whether it belonged properly to Lucania or
to Apulia, and the territory of the city, as assigned to
the Roman colony, included a portion of that of both
nations. (Hor. Srt. i. 34, 35.) This statement of
Horace leaves it doubtful to what people Venusia
originally belonged, though it is more probable that
it was an Apulian city, and that it received only an
accession of territory from Lucania. Later writers,
doubtless, indeed, distinctly assigned it to Apulia.
(Plin. iii. 11. s. 16; Ptol. iii. 1. § 73; Lib. Colon. p. 210.)
But no mention of it is found in history till the
occasion of its capture by the Roman consul L. Pos-
tiumius, in B. c. 262 (Dionys. Exc. Ind. p. 2335),
when we are told that it was a populous and impor-
tant town. A large part of the inhabitants was put
unto the sword, and, shortly afterwards, a Roman colony
was established there by order of the senate. (Dis-
yus, l. c.; Vell. i. 14; Hor. l. c.) The colonists are
said to have been 20,000 in number, which must be
either a mistake or an exaggeration; but there
seems no doubt that the new colony became a popu-
los and flourishing place, and was able to render
important services to the Roman state during the
Second Punic War. It was at Venusia that the
cosal Terentius Varrus took refuge with 700 horse
after the great defeat at Cannae (n. c. 216), and
where he was gradually able to gather around him
a force of about 4000 horse and foot. The Venusians
vied with one another in showing them the utmost
attention, and furnished them with clothing, arms,
and other necessaries. (Liv. xxi. 49, 54; Polyb. i. 116, 117.) Again, at a later period of the war,
when so many of the Roman colonies proved unable
to satisfy the repeated demands of the senate, the
Venusians were among those who continued stead-
fast, and declared themselves ready to furnish the
troops and supplies required of them. (Liv. xxvii.
10.) It was after this, through several successive
campaigns, the head-quarters of the Roman com-
manders in Apulia. (Ib. 20, 41; Appian, Annal. 56.)
But the colony suffered severely from all
these exertions, and, in B. C. 200, after the close of
the war, it was found necessary to recruit its ex-

Digitized by Microsoft®
VENUSIA.

haunted strength with a fresh body of colonists. (Liv. xxxi. 49.) From this time Venusia seems to have always continued to be a flourishing town and one of the most considerable places in this part of Italy. It bore an important part in the Social War, having early joined in the outbreak, and became one of the principal strongholds of the allies in the south of Italy. (Appian, B. C. ii. 39, 42.) In the second year of the war its territory was ravaged by the Roman praetor Cocconius, but we do not learn that the city itself fell into his hands. (Ib. 52.) At all events it did not suffer severely, as it is afterwards mentioned by Appian as one of the most flourishing cities of Italy (Ib. iv. 3); and Strabo also notices it as one of the few cities in this region which retained their consideration in his time (v. p. 250). It received a colony of veterans under the Triumvirate (Appian, B. C. iv. 3; Zumpt, de Colon. p. 332), and seems to have retained the rank of a Colonia under the Empire, as we find it bearing that designation both in Pliny and in inscriptions. (Plin. iii. 11. s. 16; Orell. Inscr. 867; Mommsen, Inscr. R. N. 735, 745.) Its position on the Appian Way doubtless contributed to its prosperity, and it is mentioned more than once by Cicero as a customary halting-place in proceeding from Rome to Brundium. (Cic. de Att. v. 5, xvi. 5.) It appears indeed that the great orator had himself a villa there, as one of his letters is dated "de Venusino" (ad Fam. xiv. 20.). But the chief interest of Venusia is undoubtedly derived from its having been the birthplace of Horace, who was born there in the consulship of L. Manlius Torquatus and L. Aurelius Cotta, B.C. 63. (Hor. Carm. iii. 21. 1.) The works of the poet abound in allusions to the neighbourhood of his native city, the fountain of Bandusia, the forests of Mount Vultur, &c. But it does not appear that he ever resided there in the latter years of his life, having lost his paternal estate, which was confiscated in the civil wars. (I. d. Ep. ii. 2.)

We hear nothing of Venusia under the Roman Empire, but it is certain from the Liber Coloniaren, which mentions it among the Civitatis Apuaniæ, and from the Itineraries, that it continued to exist as a city, and apparently one of the most considerable in this part of Italy. (Ptol. iii. 1. § 73; Lib. Colon. pp. 210, 261; Itin. Ant. pp. 104, 113, 121; Tab. Peut.) This is further confirmed by inscriptions, in one of which it is called "splendida civitas Vensinorum." (Mommsen, I. R. N. 706.) It retained the same consideration throughout the middle ages, and is still an episcopal city with about 6000 inhabitants. Its antiquities have been illustrated with a profusion of erudition by Italian writers, but it has few ancient remains of much interest; though fragments of ancient edifices, mosaic pavements, &c. have been found on the site, as well as numerous inscriptions. These last have been collected and published by Mons. Lupoli, in his "Marmora Venusina" (added as an appendix to the Iter Venerinum, 4to.-Neapoli, 1797), and more recently by Mommsen, in his Inscriptiones Regni Neapolitani (pp. 39—48). Concerning the antiquities of Venusia in general, see the work of Lupoli above quoted, and that of Cimaglia (Antiquitates Venusinae, 4to. Neapoli, 1757). E. E. B. [VERBICAE or VERBICES, a place in the district occupied by the Venestos in Illyria, between Veldidena and Tridemunt. (It. Ant. pp. 275, 280; Tab. Peut.) Its modern representative is, in all probability, the town of Sterzing on the Eisach, at the foot of the Brenner. [L. S.] VERAGRI (Oberzwergen). The Veragri are placed by Caesar (B. G. iii. 1, 6) in the Valais of Switzerland between the Nantuates and the Seduni, [NANTUATES: SEDUNI]. Their town was Octodurus (Martigny), and the Veragri are called Octodurenses by Pliny [Octodurus]. Dion Cassius (xxxix. 5), using Caesar as he generally used him, says that the Veragi extended from the territory of the Allalorges and the Leman lake to the Alps; which is not true. Strabo (iv. p. 204) mentions the Veragi, as he calls them, between the Caturiges and the Nantuates; and Pliny (iii. 20) between the Seduni and the Sulassi; the Sulassi are on the Italian side of the Alps in the Val d'Aosta. Livy (xxvi. 38) places the Veragi among the Alps and on the coast of the Pelvian Alps, or, the Great St. Bernard, which is correct. He says that the pass was occupied by half German tribes. [G.L.]

VERBANUS LACUS (Oberzursee, Lago Maggiore), one of the principal lakes of Northern Italy, formed by the river Ticinus, where it first issues from the valleys of the Alps. (Plin. iii. 19. s. 24.) It is the largest of the three great lakes of Northern Italy, whence its modern name of Lago Maggiore; though Virgil appears to have considered the Larius as the largest, as he calls it, "Te, Lari maxime," and singularly enough does not mention the Verbanus at all. (Georg. ii. 159.) Strabo, by a strange mistake, describes the river Adda as flowing from the Lake Verbanus, and the Ticinum from the Larius (iv. p. 209): this may, perhaps, be an error of the copyists, but is more probably an accidental blunder of the author. He gives the length of the lake at 400 stadia, or 40 geog. miles, which is somewhat below the truth, the actual length being 46 geog. miles; its breadth does not exceed 4 or 5 miles, except in one part, where it expands to a width of from 8 to 10 miles. [E. H. B.]

VERBICAE or VERBICES (Oberzulsee, Oberzwegers), Plt. iv. 1. § 10), a people of Maurenia Tingitana. [T. H. D.]

VERBIGNUS PAGUS. [HELVEI, Vol. i. p. 1041.]

VERBINUM, in Gallia, is placed by the Insus, on a road from Bagacum (Basvi) to Duroctorum (Reims). Durium is between Bagaccum and Verbum (Durocortorum) [DURONUM]. All the several distances between Bagacum and Duroctorum do not agree in the Antonine Itin. and the Table. The sum total of these distances in the Table is 53 M. P., but the it, though it makes the several distances amount to 63 M. P., still gives the sum total at 53 M. P. But these must be Gallic leagues, as D'Anville shows. He supposes Verbinum to be Vervins, which in fact is the same name as Verbinum. The table writes it Vironum. Vervins is in the department of Aisne, about 20 miles N.E. of Lann. [G. L.]

VERCELLAE (Oberzellenai, Plt. iii. i. § 36;
VEREANUCA.

Oepeiun. Strab. v. p. 218; Bereaun. Plut. Mar. 25: Verellii), the chief city of the Libici, in Gallia Cisalpina. It lay on the W. bank of the Sesites (Sessio); but perhaps the ancient town should be sought at Borgo Verceil, about 2 miles from the modern city. In the time of Strabo it was an unfortified village (L. c.), but subsequently became a strong and not unimportant Roman municipium. (Tac. Hist. i. 70; cf. De clar. Orat. 8; also Orell. Inscr. 3044, 3945.) Here the highroad from Tichium to Augusta Praetoria was crossed by a road running westwards from Mediolanum. (Itin. Ant. pp. 282, 344, 347, 350.) At the beginning of the 5th century it was rapidly falling to decay. (Hieron. Epist. 17.) There were some gold mines at a place called Ictimulli, or Vicus Ictimoluralum, in the district of Verceilae (Strab. l. c.; Plin. xxxii. 4. s. 21), which must have been of considerable importance, as the last cited authority mentions a law forbidding that more than 5000 men should be employed in them. The true position of these mines has, however, been the subject of some dispute. The question is fully discussed by Durandi in his treatise De ordine del Prodromi del Verceilae. The city was distinguished for its worship of Apollo, whence it is called Apollineae Verceilae by Martian (x. 12. 1); and there was in its vicinity a grove, and perhaps a temple sacred to that deity (Stat. Silv. i. 4. 59), which is probably to be sought at a small place called Pollione, at the foot of the Alps. (Cf. Cic. Fam. xi. 19; Plin. iii. 17. s. 21; Belini, Antichita di Verell.)

VEREANUCA, a harbour belonging to the town of Argenaeumsc. in the territory of the Cantabri, in Hispania Tarraconens. (Plin. iv. 20. s. 54) Probably Puerta de S. Martin. (Cf. Flores. Esp. Sear. xxiv. p. 44.)

VERELA. [Varia.]

VERETUM (Oepepru, Strab. Ptol.: Edh. Vere- tinus: Sta Maria di Vereto), a town of Calabria, in the district or territory of the Salentines, and within a few miles of the Iapygian promontory. Strabo tells us that it was formerly called Baris, and describes it as if it were a seaport town; but both Pliny and Ptolemy rank it among the inland towns of the Salentines; and there seems no doubt that its site is marked by the old church of Sta Maria di Vereto, the name of which is found on old maps, between the villages of Soter and Lagunam, about 6 miles from the Capo di Lenze, and 10 from Ugeato, the correct distance given in the Tabula from Uxentum to Veretum. (Strab. vi. p. 281; Plin. iii. ii. 16; Ptol. iii. 1. § 76; Tab. Peut. Gallate, de Sit. Iapopi. p. 99; Hobsten ad Oliver. p. 283; Romanelli, vol. ii. p. 55.) The "ager Ve- retinus" is mentioned also in the Liber Colonarum (p. 262) among the "e civitates Calabriac," and doubtless comprised the whole district as far as the Iapygian promontory. (E. H. B.)

VERGELLA. [B.R.TU.L.]

VERGELLIUS, a rivulet or torrent, which crossed the field of battle of Cannae. It is not indeed mentioned by either Livy or Polybius in their circumstantial accounts of the battle, but it is noticed by both Florus and Valerius Maximus in connection with a story that seems to have been current among the Romans, that its course was choked up by the dead bodies of the slain, to such an extent that the Carthaginian troops crossed over them as a bridge. (Flor. ii. 6. § 18; Val. Max. ix. 2, Ext. § 2.) The same incident is alluded to by other writers, but without mentioning the name of the stream. (Sill. Ital. vii. 668; Lucian, Dial. Mort. 12. § 2.) The stream meant is probably a rivulet which falls into the Aenius on its right bank between Canae and Cannusium, and is wholly dry in summer. ([E. H. B.]

VERGENTUM, a place in Hispania Baetica, with the surname of Julii Genius. (Plin. iii. 1. s. 3.) Now Gelvez or Gines. [T. H. D.]

VERGILIA (Oepepiam. Ptol. ii. 6. § 61: Eth. Vergilienia, Plin. iii. 3. s. 4.), a town of the Baste- tani, in Hispania Tarraconenses. It has been identified by some writers with Vericta. (D'Anville, Geogr. Anc. i. p. 31; Montelle, Exp. Anc. p. 186.)

VERGILIA, a fortress in Hispania Tarraconenses (Liv. xxxiv. 21). Reichard, but perhaps without adequate grounds, identifies it with the present Berga. [T. H. D.]

VERGOANUM. [Lerina.]

VERGONNI, the name of an Alpine people mentioned in the Trophy of the Alps (Plin. iii. 29). They are supposed to be represented by the name Vergona or Vergoa, between Suses [SANITIUM] and Giumeza, and about half-way between these two places. [G. L.]

VERISA (Bepoura), a town in the interior of Pontus, on the road from Sebastopolis to Sebastia. (It. Ant. pp. 205, 214; Basil. Magn. Epist. ult.) Its site is yet uncertain, some identifying it with Cora, others with Batis. [L. S.]

VEELUCIO, a place in Britannia Romana, on the road from Isca Silurum to Calleva (Itin. Ant. p. 456), and apparently in the territory of the Ebubani. It has been variously identified with the village of Lechham on the Aren, with Westbury, Spy Park, and Witham. [P. T. H.]

VERNEA, a fort in Rhedia, on a steep height above the banks of the river Athenis, not far from Tridestum, where its site is still marked by the Dos di Trent. (Cassiod. Var. iii. 48; Paul. Diae iii. 31, where it is called Ferrage; Pallhausen, Beschreib. der Röm. Heerstrasse von Verona nach Augsburg, p. 28.)

VERINDOBRUM, a river of Gallia Narbenis- sium mentioned by Pliny (iii. 4) after the Tescum, which is the Tichis [Ticins] of Men. Pliny does not mention the Telis or Telis (Tet), and it has been conjectured that he gives the name of Verindoe- brum to the Telis. But there is a river Glys or Agly, north of the Tet and not far from it, which flows into the Mediterranean past Rivescelis, and a branch of the Glys is still named Verdoublé or Verdoubré, which is certainly the Verindobrum. (D'Anville, Notice, &c.)

VERINOSOL, in Aquitania, is placed in the Anto- mine ltm. on a road from Beneharnum [Benehar- num] to Tolosa (Toulouse). This circuitous road ran through Lugdunum Convenarum and Calagurris. Verinosis is between Calagurris (Cassares) and Toulouse. Verinosis is Vernois. [G. L.]

VERODUNENSES. This name does not occur in any document earlier than the Notitia of the Gallic Provinces, which was probably drawn up at the commencement of the fifth century of our era. civitas Verodunensiis in the Notitia is the capital of a people, and is named last in the first of the two Belgicæ. The name Virodunum occurs in the Anto- mine ltm. and so the name is written on some medals. It is placed on a route from Dunoctorium (Ricus) to Duvodurum (Meix). In the middle age
VERODUXUM.

writing it is Viridunum, Viridunum, and Viridunum, which last abbreviated form comes nearest to Verdun, which is the capital of the Verdonenses. Verdun is west of Metz, in the department of Meuse, and on the line of Meuse or Moselle. There was a place in antiquity called Verdonum or Verdonium, and Verdunum and Divodurum, which probably marked the limit between the Verdonenses and the Mediomatrici. [G.L.]

VERODUNUM. [VERONENSES.] VELO/RUM and VE/RAUM (Ovopad-row, Ptol. ii. 5 § 21), the capital of the Catuvellauni in Britannia Romana, on the road from Londinium to Lindum and Eboracum. (Itin. Ant. pp. 471, 476, 479.) It was probably the residence of Cassio-vellaunus, which was taken by Caesar (B. Gall. v. 21), and subsequently became a considerable Roman municipality. (Tac. Ann. xiv. 33.) It is Old Ver- vulum, near St. Albans, in Hertfordshire, which latter town rose from its ruins; and its celebrated abbey church is said to be built in great part of Roman bricks. (Cameron, p. 350, seq.) [T.H.D.]

VEROMANDUI (Ovopad-rum, Ptol. iii. 9 § 11), a Belgic people, who in B.C. 57 were supposed to be able to raise 10,000 fighting men (Caesar, B. G. ii. 4); unless Caesar's text means that they and the Vel-ocasses together mustered this number (Ve-locasses). They joined the Nervii and the Atrebates in the attack on Caesar's army on the Sabis (Sandre). The Veromandui attacked the eleventh and eighth legions, which were in Caesar's centre, and they were driven back to the river. They are not mentioned again in the Commentaries. The Veromandui had the Ambiani and the Atrebates on the west, and the Suessiones on the south. On the north they were neighbours of the Nervii. Their chief town was afterwards Augusta Veromanduorum, St. Quentin, on the Somme, in the department of Aisne, and in the modern division of France named Vermandois. The name Civitas Ve-romanduorum occurs in the Notitia of the Gallic Provinces. [AGUSTA VEROMANDUORUM.] [G.L.]

VEROMETUM, a town of the Cortiani in Brit-annia Romana, between Ratae and Margidunum. (Itin. Ant. pp. 477, 479, where it is also called Verometum.) Cambridge (p. 575) places it at Bur- rough Hill, near Wiltshire on the Wold, in the S. part of Nottinghamshire. [T. H. D.]

VERONA (Ovophwos, Ptol. iii. 1 § 31 ; Ovophwos, Strab. iv. 206, v. p. 213; Bepow, Procop. B. G. ii. 29, iii. 3, &c.; and Bepow, I. v. 33 ; Ed. Ver- onensis; Verona), an important town in Gallia Transpennata, seated on the river Adige (“Verona Athene circumflua,” Sil. It. viii. 595), and chiefly on its W. bank. There is some difficulty in determin- ing whether Verona was a city of the Euganei or of the Cenomani, from the little knowledge which we possess of the respective boundaries of those peoples, and from the confusion which prevails upon the subject in ancient authors. By Itolemi (l. c.), who does not mention the Euganei, it is ascribed to the Cenomani; and Catullus (livii. 34), in a passage, however, which has been banished by some editors as not genuine, Biprixa, which undoubtedly belonged to the Cenomani, styled the mother city of Verona. Inio, on the other hand (iii. 19. s. 23), gives Verona partly to the Rhaeti and partly to the Euganei, and Strabo (l. c.) attributes it to the former. Some have sought a solution of this difficulty by assuming that the city belonged originally to the Euganei, but was subsequently occupied by the Cenomani, referring to Livy, v. 35. (Cfr. Justin, xx. 5.) We know little or nothing of the early history of Verona. Under the Roman dominion it became a colony with the surname of Augusta, and one of the finest and most flourishing cities in that part of Italy (Tac. ii. iii. 8; Itin. Ant. p. 213; Gratt. Rer. Ital. p. 166. 2.) The surrounding country was exceedingly fruitful, producing good wine, excellent apples, and abundance of spelt (alba, Plin. xviii. 11. s. 29, xiv. i. s. 3, xv. 14. s. 14; Cassiod. Var. xii. 4.) The Rhetae wine also is praised by Virgil. (G. ii. 94; cf. Strab. iv. 206; Suet. Oct. 77.) The situation of Verona rendered it a great thoroughfare and the centre of several highways (Itin. Ant. pp. 128, 174, 275, 282; Itin. Hier. p. 538.) Verona was celebrated in history for the battle fought by Marius in the Campi Ramelli, in its vicinity near the Cimbri. (Veil. Pat. ii. 12; Florus, iii. 3.) From an inscription still extant on one of its gates, now called the Porta de' Borromi, the walls of Verona appear to have been newly erected in the reign of the emperor Gallienus, A. D. 265. It was besieged by Constantine on his march from Gaul to Rome, and, though obstinately defended by Ruricius Pomponianus, obliged to surrender at dis- cretion. (Paneg. Vet. i. 9, sqq.) It was likewise the scene of the victory of Theodoric over Odoacer. (Jornald. Oct. 57.) Theodoric made it one of his residences; but his attempt to make his capital in the situation of his palace is still extant upon a seat. (Gibbon, Decl. and Fall, vol. v. p. 22, ed. Smith.) It was at Verona that the splendid wedding took place between king Autharius and Theudelinda. (Procop. B. G. iii. 5; Paul. Diaec. iii. 29.) But, more than by all these events, Verona is illustrious as having been the birthplace of Catullus (Ovid. Amor. iii. 15. 7; Mart. x. 103; Plin. xxxvi. 6. s. 7); though it is exceedingly doubtful whether the re- mains of a villa on the Lago di Garda, commonly called the villa of Catullus, could really have be- longed to him. The honour sometimes claimed for Verona of having given birth to the architect Vitruvius Pollio arises from a mistaken interpretation of the inscription on the arch of the Gavi, formerly existing at Verona, but pulled down in the year 1805. The inscription related to the great architect's less celebrated namesake, Vitruvius Cerdo. (Descriz. d' terona, pt. i. p. 86.) Some are of opinion that the elder Pliny also was born at Verona, but it is more probable that he was a native of Commum. In the life of him ascribed to the pen of Suetonius, he is named Nocerensis; and when he calls himself in his Preface the conterraneus of Catullus, that epi- thesis by no means necessarily implies that he was the fellow-citizen of the poet, but rather that he was merely his fellow-countryman, or from the same province.

The amphitheatre at Verona is a very striking monument of antiquity. Although not nearly so large as the Colosseum, it is in a much better state of preservation, owing to the pains which have al- ways been taken to keep it in repair. It is also of a more costly material than the Roman amphitheatre; for whilst the latter is built of concrete, that at Verona is of marble, from some quarries in the neigh- bourhood. The substructions are of Roman brick- work. The date of its erection cannot be ascer- tained, but it must undoubtedly have been posterior to the time of Augustus. A great part of the ex- ternal arcade was thrown down by an earthquake in the year 1184. Its form is elliptical, the larger
VERONES.

The two remains of a Roman theatre, on the left bank of the Adige, at the foot of the hill immediately under the castle of S. Pietro, It appears from two decrees of king Bonaparvis, dated in 895 and 913, that the theatre was then regarded as of the highest antiquity, and had in great part gone to ruin; on which account its destruction was allowed. (Descriz. di Verona, pt. ii. p. 108, sqq.)

We have already alluded to the ancient gate called the Porta de' Foroni. It is evidently older than the walls of Gallienus, the elevation of which in the space of 8 months is recorded upon it; since a previous inscription has been erased in order to make room for the new one. It is a double gate, of a very florid style of architecture, containing the merits of which architects have held widely different opinions. The walls of Gallienus, to judge of them from the vestiges which still remain, were of a construction sufficiently solid, notwithstanding the shortness of the time in which they were erected. The other remains of antiquity at Verona, as the Porta de' Leoni, the baths, &c., do not require any particular description in this place.

The chief works on Verona and its antiquities are the splendid ones of Count Seip. Maffei, entitled Verona Illustrata, and Museo leronense. Onuphrius Panvicius also describes the remains (Aned. vol. i. ed. 1639, B. e. Pat. 1668). Some account of them will likewise be found in the Descrizione di Verona e della sua provincia, by Giovannafaita da Pertico, 8vo, Verona, 1829. [T. H. D.]

VERONES. [B. E.]

VERRUCINI, a Gallic people near the Alps in the Province. Piny (iii. 4) says: "Regio Cama-
tutilico-rana, dein Sueltii, supraque Verrincini." [Camatulici; Selteri.] There is nothing to guide us in fixing the position of the Verrucini, except their position with respect to these two other tribes, and the fact that there is a place named Verrum, between Alatrium and Riez; Divaginara is in the department of Var, and Riez is on the site of Reii (Rei Apollinaries). [G. L.]

VERRUO or VERRUCA (Epihoca, Diss. Colla Ferro?), a town or fortress in the territory of the Volsci, which is repeatedly mentioned during the wars of the Romans with that people. The name first occurs in n. c. 445, when we are told that the place had been recently occupied and fortified by the Romans, evidently as a post of offence against the Volsci; a proceeding which that people resented so much that it became the occasion of a fresh war. (Liv. iv. 1.) We do not know at what period it fell again into the hands of the Volsci, but in n. c. 409 it was recovered and again garrisoned by the Romans. (Liv. 53, 56; Diss. xiv. 11.) It, however, fell once more into the hands of the Volsci in n. c. 407 (Liv. iv. 58), and apparently continued in their possession till n. c. 394, when it was again occupied with a garrison by the military tribune C. Aemilius, but lost soon after in consequence of the defeat of his colleague Sp. Postumius. (Liv. v. 28; Diss. xiv. 98.) From this time it wholly disappears from history. It is very doubtful whether it ever was a town, the manner in which it is mentioned by Livy, in connection with the Arc Carventana, seems to prove that it was a mere fort or stronghold, garrisoned and fortified, on account of its natural strength and advantageous position. Its site cannot be determined with any certainty, but from the name itself there can be no doubt that it was situated on a projecting knoll or peak; hence its site has been sought by Nibby (followed by Abeken) at Colle Ferro, near Segis; Colle Sucoa, in the same neigh-
bourhood, has as plausible a claim. (Nibby, Diss. tert., vol. iii. p. 473; Diss. Top. di Roma, p. 453; Abeken, Mittel-Italien, p. 75.) [E. H. B.]

VERTACOMORI, a pagina of the Voscenti in Gallia Provincia, to whom Plyn (iii. 17) attributes the foundation of Novaria in Gallia Cisalpina [Novara]. The name seems to be preserved in Vercoo, a district in the old country of the Voscenti, in the northern part of the diocese of Die [Die Vocontiorum]. In some middle age documents the name appears in the abbreviated form Vercoorium, which is the next step to Vercoor (D'An-
ville, Notice, &c.).

VERTAECA, a town of the Brigantes, in Provincia Romana. (Hist. Ant. pp. 467, 476.) Variously identified with Brough in Westmoreland and Boree.

[TH. H. D.]

VERTINAE (Opesavia; Vercini), a small town of Brutium, mentioned only by Strabo (vi. p. 254), who places it in the interior of that country. Its name is still retained by the village of Vercini, about 7 miles NW. of Strongoli, the ancient Pet-
tina. [E. H. B.]

VERUCBUM (Oeposaviana, Ptol. ii. 3 § 5), a promontory on the N. coast of Britannia Barba, most probably near Hecate, in the county of Merioneth. [TH. H. D.]

VERVES (Oeposavita, Ptol. iv. 1 § 10), a people of Manetania Tingitana. [TH. H. D.]

VERULAE (Eth. Verulamus; Eoroli), a city of the Hernici, but included in Latium in the more extensive sense of that name, situated in the Apen-
nines N. of the valley of the Sacco, between Alatrium and the valley of the Liris. It was apparently one of the chief cities of the Hernici, and was cer-
tainly a member of the Hernicn League; but its name is not mentioned separately in history till the final war of that people with Rome, in n. c. 306. On that occasion the citizens of Verulae, together with those of Faesulae and Forum atque Rieti, fought against the Anagnians, and refused to join in the hostilities against Rome. For this reason they were rewarded after the termination of the war by being left in possession of their own laws and magistrates, which they preferred to receiving the Roman "citizens." (Liv. ix. 42, 43.) The period at which they ultimately became Roman citizens is uncertain. Florus vaguely asserts that a triumph had been celebrated over the people of Verulamiae (Flor. i. 11 § 6), but this is probably a mere rhetorical flourish; there is no occasion known in history to which it can be referred. Under the Roman dominion Verulae became a quiet and somewhat obscure country town. According to the Liber Coloniarium it received a body of colonists in the time of the Gracchi, and again under the reign of Nerva. But it is probable that it always retained its municipal rank. It is mentioned by Piny among the municipal towns of the Fifth Region (P. iii. 5. 9), but is not again noticed in history. Its seceded position probably rendered it a place of small importance. The
VERULAMIUM.

ancient site is still occupied by the modern town of Verulamium, which retains also some portions of the ancient walls in the polygonal or Cyclopean style. (Westphal, Kön. Kath. p. 57; Aeschn. Morettian. Italic. p. 147.) [E. H. B.]

VERULAMIUM. [VERULAMIUM.]

VERURIM (Ozana, Proil. ii. 5. § 7), a town in the N. part of Lusitania, perhaps the same as the present Casablanca. [V.]

VESCELLIA, a town of the Oretani in Hispania Tarraconensis (Liv. xxxv. 22), perhaps Viches. (Uberti, ii. pt. i. p. 419.) [T. H. D.],

VESCIUM or VESCELLIUM, a town of the Hirpinii, of uncertain site. Its name is mentioned by Livy (xxiii. 37) as having been recovered by the praetor M. Valerius, after it had reverted to the Carthaginians. The reading in Livy is very uncertain, but Pliny also mentions the Vesclennii among the municipal communities of the Hirpinii. (Plin. iii. 11. s. 16.) [E. H. B.]

VESCI AVENTIA (Ozana, Proil. ii. 4. § 11), a town in Hispania Baetica, between Singili and Astigi. (Plin. iii. 1. s. 3.) [T. H. D.]

VESIA (E. Vesia), a city of Messana, in the island of Sicily, extended once to that name, but originally a city of the Ausones, situated in a plain to the S. of the Liris (Garigliano). Livy in one passage tells us distinctly that the Ausones had three cities, Ausona, Mistarumae, and Vesia, all of which were betrayed into the hands of the Romans by a party within their walls, and the inhabitants put to the sword in n. c. 314. (Liv. ix. 25.) The name of Vesia is mentioned also about 25 years before as affording shelter to the remains of the Latin army defeated by the consuls Manlius and Decius in n. c. 310. (Id. viii. 11.) But after the capture of the city in 314, no mention of it again occurs, and it is probable that it never recovered from that calamity. Mistarumae indeed is the only one of these three cities which again appears in history; but the "ager Vesium" is repeatedly mentioned (Liv. x. 20, 21, 31), and would seem to have extended from the banks of the Liris as far as the extreme point of the ridge of Mount Massicus. The Roman colony of Simeassa, which was situated just where that ridge abuts upon the sea, is expressly said to have been planted on the territory of the "Vesinom." (Livy. x. 21.) But all traces of the city seems to have been lost. Pliny does not even notice the name among the extinct cities of Latiun and Campania, and we are wholly without a clue to its precise situation. [E. H. B.]

VESCTANAY, a district in Spain mentioned only by Pliny (iii. 3. s. 4). [Osca. [T. H. D.]

VESDIANTII. [VESENDIANTII.]

VESERES, a river of Campania, the name of which is known only in connection with the great battle fought with the Latinis by T. Manlius Torquatus and P. Decius Mus, in n. c. 490. That battle is described by Livy as having been fought "band procul radicibus Vesavi militibus, qua via ad Veserum forebat." (viii. 8), an expression which would leave us in doubt whether Veseris was the name of a town or of a river. In another passage he refers to the same battle as having been fought "ad Vesperum" (s. 28); and Cicero also twice notices it as "paga ad Vesperum" or "apud Veserin." (Cic. de Fin. i. 7, de Off. i. 31.) Valerius Maximus usess the latter phrase (vi. 4. § 1). The only author whose expressions are free from ambiguity is Aurelius Victor, who distinctly speaks of that celebrated battle as having been fought "in Vesperis et Vicinatis," (ibid. III. 28), and adds that the Romans had pitched their camp on its banks ("positis apud Vesperum flavium castris," Ibid. 26). The authority of Victor is not indeed worth much on points of detail, but there is no reason to reject it in this instance, as it is certainly not at variance with the phrases of Livy and Cicero. The Veseris was probably a small stream, and is not mentioned on any other occasion, or by any geographer, so that it is wholly impossible now to identify it. [E. H. B.]

VESOMA (OvOoVdov, Proil. i. 3. § 12), a town in Media Atropatene, perhaps the same as the present Caubin. [V.]

VESASPE (OvOoVdov, Proil. vi. 2. § 12), a town in the N. part of Lusitania, perhaps S. Vincent of Beira. [T. H. D.]

VESANIO (OvOoVdov, Proil. vi. 2. § 12), a town in Umbria mentioned only by Pliny, which names the Vesaniones among the municipal communities of that country. (Plin. iii. 14. s. 19.) It is supposed to be represented by Civitella di Benezzone, in the upper valley of the Trebbia, 7 miles S.E. of Pergusa. (Cluer. Ital. p. 627.) [E. H. B.]

VESANTIO (OvOoVdov, Proil. ii. 9. § 21; Besançon), in Gallia, the chief city of the Sequani. The name occurs in Dion Cassius (xxxviii. 54, lxxii. 24), where Reinmarus has written Besançois for the MSS. reading OvOoVdov, without any reason. In Ausonius (Carm. v. 40) the form Vesanio occurs, and he speaks of a "municipia schola" in the place. The orthography of the word varied, as we might expect; and other forms occur in Amnianus. D’Arville says that the name is Vesanat on a milestone which bears the name of Trajan, and was found at Manslevre [Epamandodurium, in which article the name is incorrectly printed Vesanot].

When Caesar (n. c. 56) was marching through the country of the Sequani towards the German king Ariovistus, he heard that the German was intending to carry Vesontio, but Caesar got there before him. (B. C. i. 38.) He describes the town as nearly surrounded by the Donze [Dorus], and he says that the part which was not surrounded by the river was only 600 Roman feet wide. That neck of land was filled by an eminence, the base of which on each side was washed by the river. There was a wall along this neck of land, which made it a strong fortress, and the wall connected the heights with the town. Caesar’s description is exact except as to the width of the neck of land, which D’Arville says is about 1500 Roman feet; and accordingly either Caesar was mistaken or there is an error in the text in the nummularia, which is always a possible thing. Vesontio when Caesar took it was well supplied with everything for war, and its position made it a strong place. Caesar set out from Vesontio to fight the German king, whom he defeated in the plain between the Vesiges and the Rhine. The battle-field was only 3 miles from the Rhine (B. G. i. 53, in which passage the true reading is "milia passum...circler quamque," not quinquaginta.) In the winter of n. c. 53-57 Caesar quartered his men among the Sequani, and it may assume that Vesontio was one of the places where he fixed his troops.

Vesontio has been several times sacked and destroyed by Alamanni, by Huns, and others. It is a town built on the ruins of former towns. The ground has been raised above 20 feet, and where it has been dug into, Roman remains, medals, and other antiquities have been discovered. The modern town of Besançon consists of two parts. The upper town, once called Le Ville, is built on the peninsula, and the citadel stands on the steep
VESPASIAE.

rock which Caesar describes as occupying the neck of land, where the river does not flow. The lower town is on the other side of the river opposite to the peninsula, with which it is connected by a stone bridge, the foundations of which are Roman.

There is a Roman triumphal arch with a single passage. The date of its construction does not appear. This arch which was nearly hidden by rubbish and buildings has been partially uncovered and restored within the present century. It is decorated with sculptures. There are some remains of the aqueduct which supplied Vespontio with water from a distant source. It was constructed of a soft stone. It terminated in the town in a vast reservoir of an oval form, which was covered by a roof supported by columns. The water was distributed from the reservoir all through the town; and in many parts of Besançon there have been found traces of the conduits which conveyed the water to the private houses. (Penny Cyclopaedia, art. Besançon; Richard et Hecquet, Guide du voyageur.) [G. L.]

VESPERIES, a town of the Vanduli in Hispania Tarraconensis. (Plin. iii. 20. s. 34.) It is identified with the present Bornaco. (Cf. Mestelle, Esp. Mod. p. 37.) [T. H. D.]

VESTINI (Ovovtovs), a people of Central Italy, who occupied a mountainous tract extending from the coast of the Adriatic to the lofty mountains near the sources of the Aternum. Here they met the Sabines, whose territory bounded them on the W.; thence they were bounded by the high mountain range which forms the southern barrier of the valley of the Aternum, and separated them from the Aequi and Marsi; while towards the S. and E. the river Aternum itself, from the point where it takes the sudden bend towards the NE., became the limit of their territory, and their frontier towards the Peligni and Marrucini. Along the coast of the Adriatic they held only the narrow space between the mouth of the Aternum and that of the Matrinus, a distance of about 6 miles; the latter river apparently formed the northern limit of their territory from its mouth to its source, and thence to the high ridge of the Central Apennines their exact frontier cannot be traced. But it is almost immediately after passing the point where the Vestini adjourned the Praetutri on the one hand and the Sabines on the other, that the chain of the Apennines rises abruptly into the lofty group or mass, of which the Monte Corvo (commonly called the Gran Sasso d'Italia) is the highest summit. This mountain is the most elevated in the whole range of the Apennines, attaining to a height of 9,500 feet; and those immediately adjoining it are but little inferior, forming a rugged and irregular mass of mountains, which is continued without interruption by a range of inferior but still very considerable elevation, in a SE. direction. This range is almost continually continued with a gradually lofty ridge of the Monte Marrone, the two being separated only by the deep and narrow gorge below Popoli, through which the Aternum finds its way to the sea. Hence the territory of the Vestini is naturally divided into two distinct regions, the one consisting of the upper valley of the Aternum, W. of the lofty mountain range above described, the other of the tract on the E. of the same mountains, sloping gradually thence to the sea. This last district is very hilly and rugged, but has the advantage of a far milder climate than that of the basin of the Aternum, which is a break and cold upland region, having much analogy with the valley of the Peliigni (of which it may be considered in some degree as a continuation), but from its considerable elevation above the sea (2380 feet in its upper part) suffering still more severely from cold in winter. The Vestini, however, did not occupy the whole of the valley of the Aternum; Amilcar, near the sources of that river, which was one of the oldest abodes of the Sabines, having continued, even in the days of Pliny, to belong to that people, and though Ptolemy assigns it to the Vestini, it is probable that in this, as in many similar cases, he was guided by geographical views rather than the real ethnical distribution of the tribes. (Strab. v. p. 228; Plin. iii. 12. s. 17; Ptol. iii. 1. § 59.) But the precise line of demarcation between the Vestini and the Sabines, cannot now be determined.

No author has left us to any distinct statement concerning the origin and affinities of the Vestini, but there seems to be no reason to doubt that they were, in common with the other tribes by which they were surrounded, a Sabine race. It would indeed have been almost impossible for people to have extended themselves to the SE., and sent forth their numerous colonies, the Peligni, the Marrucini, &c., had not the valley of the Aternum been already occupied by a kindred and friendly race. The close connection which we find subsisting between the four tribes of the Vestini, Marrucini, Peligni, and Marsi, may be also taken as a strong presumption of their common origin, and there seem good reasons for supposing them all to have been derived from a Sabine stock. The first mention of the Vestini in history occurs in n. c. 324, when they concluded an alliance with the Samnites against Rome. It was feared that their example would be speedily followed by the Marrucini, Peligni, and Marsi, but this was not the case, and the Vestini, unsupported by their allies, were unable to resist the Roman arms: they were defeated and dispersed by the consul D. Junius Brutus, and took refuge in their fortified towns, of which Cutina and Cingilia were successively taken by assault. (Liv. viii. 29.) From this time we hear nothing more of the Vestini till n. c. 301, when they concluded a treaty with the Romans, which appears to have been an alliance on favourable terms (id. x. 9); and from this time the Vestini became the faithful allies of the rising republic. In the enumeration of the forces of the Italian allies in n. c. 223, Polyaenus mentions the Vestini, together with the Marsi, Marrucini, and Frentani (the Peligni being omitted), and estimates their joint contingent at 20,000 foot and 4000 horse soldiers (ii. 24); but we have no means of judging of the proportion furnished by each nation.

No other mention is found in history of the Vestini, with the exception of casual notices of their troops serving as auxiliaries in the Roman armies (F tolerant. Ann. Fr. viii. 6; Liv. xlv. 49), until the outbreak of the Social War, in n. c. 89. On that occasion they followed the example of the Marsi and Peligni, as well as of their more immediate neighbours the Picentes, and were among the first to declare themselves in insurrection against Rome. Liv. Epit. Ixix.; Oros. v. 18; Appian, B. C. i. 39.) There can be no doubt that throughout that contest they furnished their contingent to the armies of the Marsi; but their name is not specially mentioned till towards the close of the war, when we learn that they were defeated and reduced to submission, apparently somewhat sooner than the other confeder-
rate. (Liv. Epit. lxxx, lxxvi; Appian, B. C. i. 52; Oros. v. 18.) There is no doubt that they at this time received the Roman franchise, and henceforth became merged in the ordinary condition of Roman citizens. Hence we hear nothing more of them in history, though it is evident that they retained their existence as a separate tribe, which is recognised by all the geographers, as well as by inscriptions. (Strab. v. p. 241; Pto. iii. 12. s. 17; Ptol. iii. 1. § 59; Orell. Insacr. 4036.) From the last source we learn that they were enrolled in the Quirinal tribe. Their territory was included in the Fourth Region of Augustus (Plin. l.c.), but in the later division of Italy it was separated into two, the maritime district being united with Picenum, while the inland portion or valley of the Aternus was included (together with the Sabines and Peligni) in the province of Valeria. (Lib. Colon. pp. 227, 228; Bingham's Eccles. Antiq. ix. ch. 5, sect. 3.) We learn from Juvenal that they continued to retain their primitive simplicity and rustic habits of life even under the Roman Empire. (Juv. xiv. 181.) Silius Italicus speaks of them as a race, hardy and warlike, and habituated to chase; their rugged mountains were doubtless still the reliable habitation of the wild animal of the Italian vil. 513.) The more inland parts of their territory abounded in excellent upland pastures, which produced a kind of cheese that was highly esteemed at Rome. (Plin. xi. 42. s. 97; Martial, xi.ii. 31.)

The most important physical feature of the territory of the Vestini is the Monte Canova or Gran Sasso d'Italia, which, as already observed, is the highest summit of the Apennines. This was identified by Cluver, who has been followed by most later writers, with the Cunarus Mons of Servius (cld. Aen. x. 183). But Silius Italicus (vii. 517) places the Mons Fiscellus, a name much better known, among the Vestini; and though this is opposed to the statement of Pliny that that mountain contains the sources of the Nar, there seems much reason to believe that Pliny has here confounded the Nar with its tributary the Velinus [Nar], which really rises in a group closely connected with the Gran Sasso, and that it was therefore that remarkable mountain range which was known to the ancients as the Mons Fiscellus.

The following towns are noticed by ancient writers as belonging to the Vestini: (i.) the town now called Civita di Pienne, appears to have been the chief of those which were situated on the eastern slope of the mountains. Lower down, and only a few miles from the sea, was Angulius, now Civita S. Angelo. Aternium, at the mouth of the river of the same name, now Pesaro, was the seaport of the Vestini, and, being the only one along this line of coast for some distance, served also as that of the Marrucini. In the valley of the Aternus were: Pelitunum (Ansedonin), about 14 miles S. of Aquila; Aveia, the remains of which are still visible at Fossa, about 6 miles S. of Aquila; and Pitinem, still called Torre di Pitino, about 2 miles E. of the same city, which must have immediately adjoined the territory of Anniurium. Furciunum, the ruins of which are still visible at Civito di Bisagno, a little to the S. of Aquila, though an important place in the early part of the middle ages, is not noticed by any writer before Paulinus Diaconus (Hist. Lang. ii. 20), and was certainly not a municipal town in the time of the Romans. Piferternum (mentioned only in the Tab. Peut.) is of very uncertain site, but is supposed to have been near Aseria, Aquila, the present capital of this district, is a wholly modern city, having been founded by the emperor Frederic II. in the 13th century, when its population was gathered together from the surrounding towns of Amiurium, Aveia, Furciunum, &c., the complete desolation of which apparently dates from this period. Aupina, which according to Pliny (iii. 12. s. 17) was in his time united for municipal purposes with Pelitunum, still retains the name of Ofena. Cutina and Cinghia, two towns of the Vestini mentioned by Livy (vii. 29), are wholly unknown, and the sites assigned to them by Romanelli, at Civita Aquapena and Civita Retanga, respectively, are merely conjectural.

The topography of the Vestini is specially illustrated in the work of Giovenazzi (Della Città d'Aquila nei Vestini, 4to, Roma, 1773), as well as by Romanelli (vol. iii. pp. 241—284). [E. H. B.]

VESUBI'A'NI, a people mentioned in the inscription of the arch of Saca. The resemblance of name has led geographers to place the Vesubiani in a valley through which runs a torrent called Vesubia, which falls into the Var. The Esibiani, who are mentioned in the inscription of the Trophy of the Alps (Pliny, v. 129), by Romanelli, at Civita Aquapena and Civita Retanga, respectively, are more conjectural.

The most important feature of the territory of the Vestini is the Monte Canova or Gran Sasso d'Italia, which, as already observed, is the highest summit of the Apennines. This was identified by Cluver, who has been followed by most later writers, with the Cunarus Mons of Servius (cld. Aen. x. 183). But Silius Italicus (vii. 517) places the Mons Fiscellus, a name much better known, among the Vestini; and though this is opposed to the statement of Pliny that that mountain contains the sources of the Nar, there seems much reason to believe that Pliny has here confounded the Nar with its tributary the Velinus [Nar], which really rises in a group closely connected with the Gran Sasso, and that it was therefore that remarkable mountain range which was known to the ancients as the Mons Fiscellus.

The following towns are noticed by ancient writers as belonging to the Vestini: (i.) the town now called Civita di Pienne, appears to have been the chief of those which were situated on the eastern slope of the mountains. Lower down, and only a few miles from the sea, was Angulius, now Civita S. Angelo. Aternium, at the mouth of the river of the same name, now Pesaro, was the seaport of the Vestini, and, being the only one along this line of coast for some distance, served also as that of the Marrucini. In the valley of the Aternus were: Pelitunum (Ansedonin), about 14 miles S. of Aquila; Aveia, the remains of which are still visible at Fossa, about 6 miles S. of Aquila; and Pitinem, still called Torre di Pitino, about 2 miles E. of the same city, which must have immediately adjoined the territory of Anniurium. Furciunum, the ruins of which are still visible at Civito di Bisagno, a little to the S. of Aquila, though an important place in the early part of the middle ages, is not noticed by any writer before Paulinus Diaconus (Hist. Lang. ii. 20), and was certainly not a municipal town in the time of the Romans. Piferternum (mentioned only in the Tab. Peut.) is of very uncertain site, but is supposed to have been near Aseria, Aquila, the present capital of this district, is a wholly modern city, having been founded by the emperor Frederic II. in the 13th century, when its population was gathered together from the surrounding towns of Amiurium, Aveia, Furciunum, &c., the complete desolation of which apparently dates from this period. Aupina, which according to Pliny (iii. 12. s. 17) was in his time united for municipal purposes with Pelitunum, still retains the name of Ofena. Cutina and Cinghia, two towns of the Vestini mentioned by Livy (vii. 29), are wholly unknown, and the sites assigned to them by Romanelli, at Civita Aquapena and Civita Retanga, respectively, are merely conjectural.

The topography of the Vestini is specially illustrated in the work of Giovenazzi (Della Città d'Aquila nei Vestini, 4to, Roma, 1773), as well as by Romanelli (vol. iii. pp. 241—284). [E. H. B.]

VESULUS MONS (Monte Viso), one of the most lofty summits of the Alps, which, from its prominent position near the plains of Italy, and its great superiority in height over any of the neighbouring peaks, is one of the most conspicuous mountains of the whole Alpine range as viewed from the Italian side. Hence it is one of the very few individual summits of the Alps of which the ancient name can be identified with certainty. It is mentioned by both Pliny and Mela as containing the sources of the Padus; and the former adds that it was the highest summit of the Alps, which is a mistake, but not an unnatural one, considering its really great elevation (12,580 feet) and its comparatively isolated position. (Plin. iii. 16. s. 20; Mela, ii. 4. § 4.) Virgil also mentions the forests of the "pine-clad Vesubius" as affording shelter to numerous wild bears of the largest size. (Virg. Aen. x. 708; Serv. ad loc.)

VESUNNA (Obisrovia), according to Ptolemy (ii. 7. § 12) the capital of the Petrocorii, a people of Aquitania. In inscriptions the name is written Vesuna. The place occurs in the Itins, and its position is Périgueux, in the old province of Périgord, which name as well as Périgoux is a memorial of the name of the people, Petrocorii. But it is said that the remains of the old town are still called La Véone. Périgoux is on the Ille, a branch of the Dordogne, and it is the capital of the department of the Dordogne.

There is no Roman city in France of which we know so little that contains so many remains as Périgoux. Foundations of ancient buildings, mosaics, statues, and ruins of edifices show its former magnitude. The tour de l'Épine, a round building constructed of small stones and of rough materials, is supposed to have been the cells of a temple, or a tomb, as some conjecture. It is about 200 feet in circumference. There were seven bridges at Vesuna, four of which have been repaired or rebuilt. There are some remains of an amphitheatre of large dimensions. Several aqueducts supplied the

4 N 2
town with water. There are also remains of a Roman cistern. On a hill which commands Vesuvius, and is separated from it by the river Illa, there are the remains of a Roman camp, which is called Camp de César, though Caesar never was there; but some of his successors may have been. There are several other Roman camps about Pergine. Several Roman roads have been traced leading to Pergina. Vesuvius seems to have been an important position in Aquitania during the imperial government of Rome. There is a French work on the antiquities of Vesuvius by M. Vigirin de Taillefer, 2 vols. 4to, 1821, Périgues, [G. L.]

VESUVIUS MONS (Oeoevov, or Oeoevis); Mount Vesuvius is sometimes also called by Latin writers Vesuvius, and Vesuvius or Vesuvius (Rer. Ser., Dion Cass.), a celebrated volcanic mountain of Campania, situated on the shore of the gulf called the Crater or Bay of Naples, from which it rises directly in an isolated conical mass, separated on all sides from the ranges of the Apennines by a broad tract of intervening plain. It rises to the height of 4020 feet, and its base is nearly 30 miles in circumference.

Though now celebrated for the frequency as well as violence of its eruptions, Vesuvius had in ancient times been so long in a quiescent state that all tradition of its having ever been an active volcano was lost, and until after the Christian era it was noted chiefly for the great fertility of the tract that extended around its base and up its sloping sides (Verg. Georg. ii. 227; Strab. v. p. 217), a fertility which was in great measure owing to the deposits of fine volcanic sand and ashes that had been thrown out from the mountain. There were not indeed wanting appearances that proved to the accurate observer the volcanic origin and nature of Vesuvius; hence Dionysius speaks of it as "bearing many signs of its having been a burning mountain in times long past" (Diod. iv. 21); but though he considers it as having on this account given name to the Phlegrean plains, he does not allude to any historical or traditional evidence of its former activity. Strabo in like manner describes it as "surrounded by fields of the greatest fertility, with the exception of the summit, which was for the most part level, and wholly barren, covered with ashes, and containing clefs and hollows, formed among rocks of a burnt aspect, as if they had been eaten away by fire; so that a person would be led to the conclusion that the spot had formerly been in a state of conflagration, and had craters from which fire had burst forth, but that these had been extinguished for want of fuel" (v. p. 247). He adds that the great fertility of the neighbourhood was very probably owing to this cause, as that of Catania was produced by Mount Etna. In consequence of this fertility, as well as of the beauty of the adjoining bay, the line of coast at the foot of Vesuvius was occupied by several flourishing towns, and by numbers of villas belonging to wealthy Roman nobles.

The name of Vesuvius is twice mentioned in history before the Christian era. In n. c. 340 it was at the foot of this mountain that was fought the great battle between the Romans and the Latins, in which P. Decius devoted himself to death for his country. (Liv. viii. 8.) The precise scene of the action is indeed uncertain, though it was probably in the plain on the N. side. Livy describes it as "a hand procul radicibus Vesuvii montis, quae via ad Veserim erected; but the situation of the Veseris is wholly uncertain. [Veseris.] Again, at a later period (n. c. 74) we are told that Spartacus, with the fugitive slaves and gladiators under his command, took refuge on Mount Vesuvius as a stronghold, and by a sudden sally from it defeated the Roman general Claudius Pulcher, who had been sent against him. (Flor. iii. 20. § 4; Plut. Cress. 9; Appian, B. C. i. 116; Vell. Pat. ii. 30; Oros. v. 24; Frontin. Strat. i. 5. § 21.)

But it was the fearful eruption of the 24th of August, A. D. 79, that first gave to Vesuvius the celebrity that it has ever since enjoyed. That great catastrophe is described in detail in a well-known letter of the younger Pliny to the historian Tacitus; and more briefly, but with the addition of some fabulous circumstances, by Dion Cassius. (Plin. Ep. vi. 16, 20; Dion Cass. lxvi. 21—23; Vict. Epit. 10.) It is remarkable that in recording this, the earliest eruption of the mountain, Pliny particularly notices the form assumed by the cloud of ashes that, rising from the crater in a regular column to a considerable height, afterwards spread out laterally so as to form a head like that of a stone-pine: an appearance which has been observed in many subsequent eruptions. The other phenomena described are very much the same as are common to all similar eruptions: but the mass of ashes, sand, and pumice stone thrown out was so vast as not only to bury the cities of Herculanum and Pompeii at the foot of the volcano under an accumulation many feet in depth, but to overwhelm the more distant town of Stabiae, where the elder Pliny perished by suffocation, and to overspread the whole bay with a cloud of ashes such as to cause a darkness more profound than that of night even at Misenum, 15 miles distant from the foot of the mountain. (Plin. l. c.) On the other hand the outflow of lava was incomprehensible, and if any streams of that kind broke out at this time they probably did not descend to the inhabited regions; at least we hear nothing of them, and the popular notion that Herculanum was overwhelmed by a current of lava is certainly a mistake. [Herculaneum.] So great and unexpected a calamity naturally excited the greatest sensation, and both the poets and the prose writers of Rome for more than a century after the event abounds with allusions to it. Tacitus speaks of the Bay of Naples as "pulverimus sinus, ante quam Vesuvius mons ardescens faciem loci vereret." (Ann. iv. 67.) Martial, after descending on the beauty of the scene when the mountain and its neighborhood were covered with the green shade of vines, adds:—

"Cuncta jacent flammas et tristi meris favilla." (iv. 44; and Statius describes Vesuvius as "Aenula Trinacriae volvens incendia flammis." (Silv. iv. 80.)

(See also Val. Flacc. iii. 208, iv. 507; Sili. Ital. xvii. 594; Flor. i. 16. § 5.)

A long interval again elapsed before any similar outbreak. It is probably indeed that the mountain continued for some time at least after this first eruption to give signs of activity by sending forth smoke and sulphurous vapours from its crater, to which Statius probably alludes when he speaks of its summit still threatening destruction (" necFundalum minari cessat apex," Silv. iv. 85). But the next recorded eruption, and probably the next of any magnitude, occurred in A. D. 203, and is noticed by Dion Cassius (lxvi. 2). This is pro-

VESUVIUS MONS.

hably the one alluded to by Galen (de Meth. v. 12),
and it seems certain from the description given by
Dion Cassius of the state of the mountain when he
wrote (under Alexander Severus) that it was then
in a state of occasional, but irregular, activity, much
resembling that which exists at the present day.
(Dion Cass. lxxvi. 21.) The only other eruption
that we found mentioned under the Roman Empire oc-
curred in a.d. 472 under the reign of Anthemiues.
(Marcell. Chron. ad num.) A fourth, which
took place in the reign of Theodoric king of the
Goths (a.d. 512), is noticed by both Cassiodorus and
Procopius, who describe in considerable detail
the phenomena of the mountain. It appears certain
that these later eruptions were accompanied by the
dischARGE of streams of lava, which caused great mis-
chiefs to the surrounding country. (Cassiod. Ep.
iv. 50; Procop. B. G. ii. 4, iv. 35.)

It would be foreign to our subject to trace the history
of the mountain through the middle ages, but it may
be mentioned that its eruptions seem to have been far
more rare and separated by longer intervals than
they have been for more than two centuries past;
and in some instances at least these intervals were
periods of perfect quiescence, during which the moun-
tain was rapidly losing its peculiar aspect. Even as
late as 1611, after an interval of little more than a
century, the sides of the mountain were covered with
forests, and the crater itself was overgrown with
shrubs and rich herbage. (Daubeney on Vesuv.
p. 225.)

At the present day Vesuvius consists of two dis-
tinct portions: the central cone, which is now
the most elevated part of the mountain; and a ridge
which encircles this on three sides at some distance,
as is separated from it by a level valley or hollow
called the Atrio del CaVallo. This outer ridge, of
which the highest point, near its X-terminity, is called
Monte Somma, was probably at one time continuous
on all sides of the circle, but is now broken down on
the S. and W. faces: hence the appearance of Vesu-
vius as viewed from Naples or from the W. is that of
a mountain having two peaks separated by a deep
depression. This character is wholly at variance with
the description given by Pliny, who says that before
the summit was nearly level, but with cliffs and
fissures in it, from which fire appeared to have for-
merly issued (v. p. 247). Hence it is probable
that the mountain was then a single truncated cone,
and that the vast crater-like hollow of which the Atrio
del CaVallo forms part, was first created by the
great eruption of A. D. 79, which blew into the air
the whole mass of the then existing summit of the
mountain, leaving the present ridge of Monte Somma
standing, enclosing a vast crater, within which the
present cote has gradually formed. (Daubeney on
Vesuv., p. 213; Lyell's Principles of Geology
p. 365, 8th edit.) It has indeed been frequently
assumed from the accounts of the operations of Spar-
taucs already mentioned (Flor. iii. 29; Plint. Crass. 9)
that the mountain had even then a crater, within
which that leader and his band were enclosed by the
Roman general; but it is very doubtful whether the
passages in question bear out this interpretation, which
seems at variance with the account given by Strabo,
whose description has every appearance of being de-
}rived from personal observation.

Concerning the history of the different eruptions
of Vesuvius see Della Torre, Storia del Vesuvio, 4to.,
Napoli, 1755; and the geological work of Dr. Da-
ubeney, ch. xii.)

[V. E. B.]

VETERA. [Castra Vetera.]

VETTONA (Eth. Vettonensis; Bettona), a mu-
}nicipal town of Umbria, situated about 5 miles E.
of the Tiber, between Perusia and Meravna. It is
mentioned by Pliny among the municipalities of
Umbria, and its name is found also in an inscription
among the "xv Populi Umbriae;" while another
mentions it in connection with Perusia, from which
It was only about 10 miles distant, as measured on
the map, though the Taimina calls it 14 miles from
that city and 20 from Tudor. (Plin. iii. 14. s. 19;
Orell. Inscr. 95, 98: Tab. Pent.) Vettona con-
tinued in the middle ages to be a city of con-
siderable importance, but it was destroyed by the
Perugians in 1352. The ancient site is, however,
still marked by the village of Bettona, about a mile
from the left bank of the Terni. [E. H. B.]

VETTONES (Obëtranes, Strab. iii. p. 152;
Obëtrones, Ptol. ii. 5, § 9), one of the principal
peoples of Lusitania. (Caes. B. C. i. 98; Plin.
iv. 21. s. 38; Grut. Inscr. p. 383, 7.) Strabo alone
(l.c.) assigns them to Ibiher Iberia, or the Provencia
Tarracoensis. We find their country called Vet-
tonia by Prudentius (Hygn. in Eulal. v. 186) and
in an inscription. (Orelli, no. 3664.) It was
watered by the Tagus, and separated by the Durius
from Asturia on the N. On the W., where their
boundary corresponded very nearly with that of
modern Portugal, they adjoined the proper Lusi-
tani. On the E. they neibhorced on the Carpetani
in Hispania Tarraconensis, and their boundary would
be described by a line drawn from the modern
Sinumica in a SW. direction over Puente del Arzo-
bigo to Truxillo. On the S. they were bounded
by the province of Baetica, so that their country
comprehended a part of Extremadura and Leon.
Their principal towns were Salamantica (Salamavercos),
Cecilionium (Baños?), Capara (las Ventas de Ca-
pora), Sentice (in the neighborhood of Los Santos),
Cottaebroga (Almeida), Augustobriga (Cidad
Rodrigue), &c. In their country grew the herb
Vettonica (Plin. xxv. 7. s. 46), still known under
the name of betony; an account of which is given
in the treatise De Herba Betonica, ascribed to
Galen. (Plin. xxv. 8. 14.)

VETULONIA or VETULONIUM (Vetovul-
avum, Ptol. iii. 1. § 49; Eth. Vetulonienesis), one of
the twelve principal cities of the Etruscan confedera-
tion (Dionys. iii. 51; Plin. iii. 5. s. 5). Yet we
hear nothing of its political history; and all we
know respecting it is, that it was reputed to be the
town in which the Etruscan insignia of magistracy,
afterwards adopted by the Romans, such as the
lictors, fasces, sella curulis, toga praetexta, &c.,
as well as the trumpet, were first used. (Sil. It. viii.
483; Flor. iii. 61; Orell. Inscr. 694; Strab. v. p. 220;
Macro. S. i. 6; Flor. i. 5; &c.)

The destruction of Vetulonia, and the silence of
history respecting it, have caused even its site to be
a matter of doubt. Thus it has been sought at or
near Viterbo (Annio, Antiqq. Var. Volum.), at
Massa Maritima, the ancient Massa Vetulonia
(Amm. Marc. xiv. 11. § 25), or in a dense wood 5
miles to the W. of that town (Ximenas, ap. Inghirami,
Ricerche di Vetulonia, p. 62; cf. Targioni-Tozzetti,
Viaggi in Toscana, iv. p. 116); on the site of
Valle (Luc. Buon. Vetulonna, iv. p. 15); at
Como, and Valerianum, Mus. Chins. i. p. 68); on the hill
of Castigliano Bernardi, near Monte Roduno (In-
ghirami, Ricerche di Vetulonia, Ambrosio), and at
Orbietello (Emoidee Barbaro, ap, Dempster, Etrur.
4 N 3
VIA AEMILIA.

Reg. ii. 56). But till very recently the opinion most commonly adopted was that of Leandro Alberti, an antiquary of the 16th century, who placed it on Monte Culei (Descriu. d'Italia, p. 27), in a wood called Secca di Vetrella; and who has been followed by Cluverius (Ital. Ant. ii. 2. p. 472), by Müller (Etrusker, i. p. 211), &c. It is now, however, generally admitted that Vetulonia is to be identified with the remains of a city, discovered in 1842 by Sig. Pasquini, an Italian engineer, at Magliano, a village between the Osci and the Albegna, and 8 or 10 miles to the N. of Orbetello. To Mr. Dennis (Cities and Sepulchres of Etruria, vol. ii. ch. 48), however, is to be assigned the credit of first identifying these remains as those of the lost Etruscan city. Their site agrees with what we learn respecting that of Vetulonia. Pliny and Ptolemy (ll. c.) agree in placing the latter among the inland colonies of Etruria; yet Pliny (ii. 103. s. 106) also describes it as being not far from the sea, and as having hot springs, the Aque Veturiones, in its neighbourhood. Now, all the necessary conditions are fulfilled by the remains already noticed. The circuit of the walls, about 4½ miles, shows it to have been an important city; its situation with regard to the sea agrees with the account of Pliny; and near Telamoneacito, at a distance of only 200 or 300 yards from the coast, and in the vicinity of the newly found city, warm springs still exist. For other reasons which led Mr. Dennis to the opinion which he formed, the reader is referred to his work before cited, and to his paper in the Classical Museum, vol. ii. p. 229, seq. For coins of Vetulonia, see Eckhel, vol. i. pt. i. p. 94. [T. H. D.]

VETURII. [Gen.]

VETERI (Ov. viii. 365), a city in Lusitania, called (Ov. poet. ii. 3. § 3) a bay on the W. coast of Britannia Romana, near the mouth of the river Sabrina, now Bridgewater Bay. [T. H. D.]

UFENS (Ufente), a river of Latium, rising at the foot of the Volscian mountains, and flowing through the Pontine Marshes, whose course is slow and stagnant, and it is described by both Virgil and Silius Italicus, as a sluggish and muddy stream. (Virg. Aen. vii. 801 ; s. ital. viii. 382.) Claudian also calls it "tardus subs erroribus Ufens." (Prob. et Ol. Cons. 257.) It joins the Amusans (still called Amaseno) during its course through the marshes to the sea at Tortalonica, but the present channels of both rivers are artificial, and it is uncertain whether they united their streams in ancient times or not. The name is corrupted by Strabo into Ausidus (Aesidos, V. p. 238), but he correctly describes it as one of the chief agents in the formation of the Pontine Marshes. The ancient form of the name was Oufens, whence the Roman tribe Oufentina derived its name, being composed originally of citizens settled in the territory and neighbourhood of Privenum (Fest. s. v. Oufentina, p. 194). [E. H. B.]

UFFUGUM [Bruttii].

UGERNUM (Oxyepon), a town of Gallia Narbonensis, on the road from Nemausus through Ugernum and Tarascos to Aquae Sextiae (Aix.). Strabo (iv. p. 178) has described this road. The genitive verb oxen occurs in an inscription found at Mirce. Ugernum is represented by Boucaire. The Table marks the distance from Nemausus (Nimes) to Ugernum xv., which is near the truth. In the last century the Roman road between Nemausus and Ugernum was discovered with several milestones on it in their original position, and numbered, as it seems, from Nemausus the ancient capital of the district. These milestones gave the opportunity of ascertaining the length of the Roman mile. The name of Boucaire is a corruption of the middle-age name of Bellum-quadrum. If any trace of the name Ugernum exists, it is in the name of Gernyke, the lower part of Tarascos, which is on the opposite side of the river, for Boucaire and Tarascos stand face to face. But in order to admit this, we must suppose that Gernyke represents an island Gernica, which, according to a middle-age document, was between Beaucaire and Tarascos, and that by some change in the river the island has become part of the mainland on the east side of the river; and it is said that this fact about the island is certain. (D'Anville, Notice, &c.; Penny Cyclopaedia, art. Boucaire.) [G. L.]

UGIA (Ogya, Ptol. ii. 4. § 12), a town of the Tarditani in Hispania Baetica, on the road from Cades to Corduba. (Itin. Ant. p. 410.) It is probably the town called Uria by Pliny (ii. 1. s. 3), with the surnames of Castrum Julium or Castrum Salutaris, and possessing the Jus Latio. Now Las Casas have been here, there are some antiquities. (Cf. Uxorit. ii. pt. i. p. 356.) [T. H. D.]

VIA AEMILIA (οί Αέμιλια δόξα), one of the most celebrated and important of the Roman highways, and the first that was constructed by them in Northern Italy. The period of its first construction is clearly marked by Livy, who tells us that M. Aemilius Lepidus, the consul of B.C. 187, after having effectually subdued the Ligurians, carried a highroad from Placentia to Ariminum, that it might there join the Flaminian Way ("Viam ab Placentia, ut Flaminiae committeret, Ariminum perduxit," Liv. xxxix. 2). Strabo indeed gives a different view of the case, and speaks of the Aemilian Way as constructed in the first instance only from Ariminum to Bononia, and thence sweeping round the marshes, and skirting the roots of the Alpi a Aquileia (v. p. 217). But there is every reason to suppose that this branch of the road was not constructed till long afterwards; and there is no doubt of the correctness of Livy's statement that the original Via Aemilia, and the only one that was generally recognized as such, was the line of road from Ariminum to Placentia. It was this celebrated highway—which is still in use at the present day, and, being carried all the way through a level plain, preserves almost a straight line during a course of 180 miles—that became the means of carrying Roman civilization into the heart of Cisalpine Gaul; and so great was its influence upon the population that it traversed, that the whole district between the Apennines and the Padus, constituting the Sixth Region of Augustus, and commonly called by geographers Gallia Cispadana, came to be known as Aemilian, and was eventually constituted into a province under that name. The period at which this took place is uncertain, but the appellation was doubtless in popular use long before it became an official designation; and as early as the first century we find Martial employing the expressions, "Aemiliae de regione iacie," and even "tota in Aemilia" (Martial iii. 4. 2, vi. 83. 6). As indeed all the principal towns of the district (with the single exception of Ravenna) were situated on the Via Aemilia, the use of this designation seems extremely natural.

We have no account of the period at which the Via Aemilia was continued from Placentia to Mediolanum, though there is little doubt that it would take
VIA AEMILIA.

place soon after the complete subjugation of the Transpadane Gauls. Nor do we know with any certainty whether the name of Via Aemilia was ever applied in common usage to this portion of the road, or to the branches that led from Mediolanum to the foot of the Alps, as well as from that city by Verona to Patavium. But as Strabo distinctly applies the name to the branch that led from Patavium to Aquileia, we may here most conveniently include all the principal highroads of the N. of Italy under one view in the present article.

1. The main or trunk line of the Via Aemilia from Ariminum to Placentia. The stations on this road are thus given in the Antonine Itinerary, where they are repeated more than once (pp. 99, 126, 287); and, from the direct line of the road, the distances are subject to no doubt:

From Ariminum (Rimini) to
Casena (Casena) - - - xx. m. p.
Faventia (Faenza) - - - xiv.
Forum Cornelli (Imola) - - - x.
Bologna (Bologna) - - - xiv.
Mutina (Modena) - - - xx.
Regium (Reggio) - - - viii.
Parma (Parma) - - - viii.
Fidentina (Borgo S. Donino) - - - xv.
Placentia (Placentia) - - - xiv.
The same line is given more in detail in the Jerusalem Itinerary (p. 613, &c.), with which the Tabula substantially agrees; but the distances are more correctly given in the latter.

The stations enumerated are:

I. Compete (J. H.) Ad Com-
fuentes (Tab.) - - - xii. m. p.
Casena (Casena) - - - viii.
Forum Populi (Fordlimpopoli) - - - vii.
Forum Livii (Forli) - - - vii.
Faventia (Faenza) - - - x.
Forum Cornelli (Imola) - - - x.
Claterna (Quaderina) - - - xiv.
Bologna (Bologna) - - - x.
Forum Gallorum - - - vii.
Mutina (Modena) - - - vii.
Regium (Reggio) - - - vii.
Tannetum (Tanceto) - - - xi.
Parma (Parma) - - - vii.
Fidentina (Borgo S. Donino) - - - xvi.
Fiorenza (Firenzeuola) - - - x.
Placentia (Placentia) - - - xv.

The general agreement in the distances given above (which are those of the Tabula) with those of the Antonine Itinerary, though the division is different, sufficiently shows the accuracy of the two. The distances in the Jerusalem Itinerary are, for this line of route, generally less accurate. Some obscure Mutations mentioned in the one document, and not in the other, have been omitted in the above list.

2. Continuation of the Via Aemilia from Placentia to Mediolanum. This line is summarily given in the Antonine Itinerary thus:

From Placentia to Laus Pompeia (Lodi Vecchio) - xxiv. m. p.
Thence to Mediolanum (Milan) - xvi.
The same distances are thus divided in the Jerusalem Itinerary:

Ad Patum - - - xi. m. p.
Tres Tabernae - - - x.
Laus - - - viii.
Ad Nonum - - - vii.
Mediolanum - - - vii. (ii. ?)
The intermediate stations are unknown, and are expressly called mere Mutationes, or places for changing horses.

3. From Mediolanum to Augusta Praetoria, at the foot of the Alps, the distances, as given in the Antonine Itinerary, are:

From Mediolanum to
Novaria (Novara) - - - xxxiii. m. p.
Vercellae (Vercelli) - - - xvi.
Eporedia (Ivrea) - - - xxxii.
Virxiunum (Verse) - - - xvi.
Augusta Praetoria (Asto) - xxv.
The same authority gives a circuitous line of route from Mediolanum to Vercellae (where it rejoins the preceding) by

Tindia (Pavia) - - - xxvi. m. p.
Laumellum (Lomello) - - - xii.
Vercellae (Vercelli) - - - xvi.

4. From Mediolanum to Aquileia. The stations given in the Itineraries are as follows:

Med. to Argentina - - - x. m. p.
Pons Aurelii (Pontirallo) x.
Bergamum (Bergamo) xii.
Brixia (Brescia) - - - xxxviii. (xxxii.)
Siracusa (Sermone) - - - xii.
Verona (Verona) - - - xii.
Vicentia (Vicenza) - - - xxxiii.
Patavium (Padova) - - - xiv. (xxii.)
Altinum (Altino) - - - xiii.
Concordia (Concordia) - - - xxi.
Aquileia (Aquileia) - - - xxv.

(In the above line of route the minor stations (Mutationes) given in the Jerusalem Itinerary are omitted. For an examination of them, and a careful comparison of all the Roman roads through Cisalpine Gaul, see Walckenaer, Géographie des Gaules, vol. iii. pp. 2—13.)

5. From Bononia to Aquiléa. This is the road of which Strabo expressly speaks as a continuation of the Via Aemilia (v. p. 217), but it is probable that he did not mean to say that it branched off directly from Bononia; at least the only line given in the Itineraries turns off from the main line of the Via Aemilia at Matina, and thence proceeds to

Vicus Serninus (?) - - - xxxii. m. p.
Vicus Varianus (Bariano, on
the N. bank of the Po) - - - xx.
Aneanum (Legnago?) - - - xvii.
Ateste (Este) - - - -xx.
Patavium (Padova) - - - xiv.
whence it followed the same line to Aquileia as that given above. Another line of road, which though more circuitous was probably more frequented, led from Matina by Colicaria (an uncertain station) to Hostilia (Ostiglia), where it crossed the Padus, and thence direct to Verona (xxx. M. P.). (Itin. Ant. p. 282.)

6. From Placentia to Dertona, where it communicated with the road constructed by Aemilius Scipio across the Apennines to Vada Sabata. (Strab. v. p. 217.) The stations on this short line were:

From Placentia to
Colimomagus - - - - -xxxv. M. P.
Iria (Voghera) - - - xvi.
Dertona (Tortona) - - - x.
The first station, Colimomagus, or Camiliomagus, as the name is written in the Tabula, is unknown, but must have been situated a short distance to the W. of Broni.

7. Lastly, a branch of the Via Aemilia led from Placentia to Ticianum (Pavia), whence it was carried westwards to Augusta Taurinorum (Turin) and
the foot of the Cottian Alps. This was therefore one of the great highroads leading to Gaul. But the stations on it, as given in the Tabula, are very confused, and can only partially be restored by the assistance of the Antonine Itinerary, which nowhere gives this road in its entirety. At Ticinium it was joined by another road leading from Mediolanum to that city. The stations, as given in the Jerusalem Itinerary (p. 556), are as follows:—

Ticinium
Durti (Duroe)  -  -  -  xii. M. P.
Laemmellum (Lumello)  -  -  -  ix.
Ad Cottias (Cicco)  -  -  -  xii.
Ad Medias  -  -  -  xiiii.
Rigmansus (Trino Vecchio)  -  xiiii.
Ceste (?)  -  -  -  viii.
Quadratae (near Longobaglio)  -  xi.
Ad Decinum  -  -  -  xii.
Taurini (Turini)  -  -  -  x.
Ad Fines (Alvignano)  -  -  -  xvi.
Ad Duodecinum  -  -  -  xiiii.
Segusio (Suse)  -  -  -  xiiii.

The rest of the route over the Cottian Alps is given in the article ALPS.

VIA AEMILIA SCAIUI, is the name given, for the sake of distinction, to a road which was constructed by Aemilius Scarrus long after the more celebrated Via Aemilia above described. Strabo, the only author who distinctly mentions the two, says that Aemilius Scarrus, after having drained the marshes on the S. side of the Padus, constructed the Aemilian Way through Pisae and Luna as far as Sabata, and thence through Dertona. (Strab. v. p. 217.) Whether "the other Aemilian Way," as Strabo calls it, had been already continued from Placentia to Dertona, or this also was first effected by Scarrus, we know not; but it is clear that the two were thus brought into connection. The construction of this great work must be assigned to the censorship of M. Aemilius Scarrus, in B.C. 109, as we learn from Aurelius Victor (V. i. 72), who, however, probably confounds it with the more celebrated Via Aemilia from Placentia to Aemillium. But a comparison of the two authors leaves no doubt as to the road really meant. The name seems to have gradually fallen into disuse, probably on account of the ambiguity arising between the two Viae of the same name; and we find both the coast-road from Pisae to Vada Sabata, and the road across the mountains from the latter place by Aquiae Statiellae to Dertona, included by the Itineraries as a part of the Via Aurelia, of which the former at least was in fact a mere continuation. Hence it will be convenient to discuss the stations and distances along these lines, under the general head of VIE AURELIA. [E. H. B.]

VIA AMERINA, is the name given in an inscription of the time of Hadrian (Orell. Inscr. 3306) to a line of road, which must obviously be that leading direct from Rome to Ameria. This, as we learn from the Tabula, branched off from the Via Cassia at Bacaeus (Baccano), and proceeded through Nepote and Falerno to Ameria. The stations and distances as there given are:

Rome to Bacaeus  -  -  -  xii. M. P.
Nepote (Nepi)  -  -  -  ix.
Falerno (Sta Maria di Falerno)  -  -  -  v.
Castellum Amerinum  -  xii.
Ameria (Amerola)  -  -  -  ix.

The sum of these distances (56 miles) agrees precisely with the statement of Cicero, who, in the
starting from Brundisium, meet at Beneventum. Thence to Rome the road is called the Appian, passing through Caerulium, Calata, Capua, and Casilinum, to Sinnaisis. The whole distance from Rome to Brundisium is 360 miles. There is yet a third road, from Rhegium, through the Bruttians and Lucanians, and the lands of the Sammites to Campania, where it joins the Appian; this passes through the Apennine mountains, and is three or four days' journey longer than that from Brundisium." (Strab. v. p. 283.) It is not improbable that the first of these branches, which Strabo distinctly distinguishes from the true Appian Way, is the Via Numicia or Minucia (the reading is uncertain), mentioned by Horace as the alternative way by which it was customary to pass from Brundisium to Appi. (Ep. 1. 14. 18. 20.) But Strabo gives us no information as to how it proceeded from Herdonia, in the plains of Apulia, through the mountains to Beneventum. It is, however, probable that it followed nearly the same line as the high road afterwards constructed by Trajan, through Aecae and Equus Tutticus. This is indeed one of the principal natural passes through this part of the Apennines, and is still followed, with little deviation, by the modern highroad from Naples to Brundisi and Taranto. But it is worthy of remark, that Horace and his companions in their journey to Brundisium of which he has left us a part of the poetical itinerary (Sat. i. 5.), appear not to have followed this course, but to have taken a somewhat more direct route through Trivicum, and a small town not named ("opidulum quod versus dicere non est"), to Cannusium. This route, which does not agree with either of those mentioned by Strabo, or with those given in the Itineraries, was probably disused after that constructed by Trajan, through Equus Tutticus and Aecae, had become the frequented line. It was to that emperor that the Appian Way was indebted for many improvements. He restored, if he was not the first to construct, the highroad through the Pontine Marshes from Forum Appii to Tarracina (Dion Cass. lxviii. 15; Horace, Class. Tour. vol. i. p. 28); and he at the same time constructed, at his own expense, a new line of highroad from Beneventum to Brundisium (Gruter, Insocr. p. 151. 2), which is undoubtedly the Via Trajana celebrated by cow. (Eckhel, vol. iv. p. 421.) It is probable (as already pointed out) that he did no more than render practicable for carriages a line of route previously existing, but accessible only to mules; and that the Via Trajana coincided nearly with the road described by Strabo. But from the time that this road was laid open to general traffic, the proper Via Appia through Venusia to Tarentum, which traversed a wild and thinly-peopled country, seems to have fallen much into disuse. It is, however, still given in the Antonine Itinerary (p. 120) though not as the main line of the Appian Way. The latter appellation seems indeed to have been somewhat vaguely used under the Empire, and the same Itinerary bestows the name on the line, already indicated by Strabo (i. c.), that proceeded S. through Lucania and Bruttium to Rhegium, on the Sicilian Strait, a route which never went near Beneventum or Brundisium at all.

The Appian Way long survived the fall of the Western Empire. That portion of it which passed through the Pontine Marshes, which was always the most liable to suffer from neglect, was restored by Theodoric (Gruter, Insocr. p. 152. 8); and Procopius, who travelled over it 40 years later, speaks with admiration of the solidity and perfection of its construction. "The Appian Way (says he) extends from Rome to Capua, a journey of five days for an active traveller. Its width is such as to admit of the passage of two wagons in contrary directions. The road itself is worthy of the highest admiration, for the stone of which it is composed, a kind of mill-stone, and by nature very hard, was brought by Appius from some distant region, since none such is found in this part of the country. He then, after having smoothed and levelled the stones, and cut them into angular forms, fitted them closely together, without inserting either bronze or any other substance. But they are so accurately fitted and joined together, as to present the appearance of one compact mass naturally united, and not composed of many parts. And notwithstanding the long period of time that has elapsed, during which they have been worn by the continual passage of so many carriages and beasts of burden, they have neither been at all displaced from their original position, nor have any of them been worn down, or even lost their polish." (Procop. B. G. i. 14.) The above description conveys an accurate impression of the appearance which the Appian Way must have presented in its most perfect state. The extraordinary care and accuracy with which the blocks that composed the pavement of the Roman roads were fitted together, when first laid down, is well seen in the so-called Via Triumphalis, which led to the Temple of Jupiter, on Mons Albanus. (Altanus Mons.) But it is evident from many other examples, that they became much worn down with time; and the pavement seen by Procopius had doubtless been frequently restored. He is also mistaken in supposing that the hard basaltic lava (silex) with which it was paved, had to be brought from a distance: it is found in the immediate neighbourhood, and, in fact, the Appian Way itself, from the Copo di Bore to the foot of the Alban Hills, runs along a bank or ridge composed of this lava. Procopius also falls into the common mistake of supposing that the road was originally constructed by Appius Claudius such as he beheld it. But during the long interval it had been the object of perpetual care and restoration; and it is very doubtful how far any of the great works along its line, which excited the admiration of the Romans in later ages, were due to its original author. Cains Graccius in particular had bestowed great pains upon the improvement of the Roman roads; and there is much reason to believe that it was in his time that they first assumed the finished appearance which they ever afterwards bore. (Plut. C. Gracch. 7.) Caesar also, when a young man, was appointed "Curator Viae Appiae," which had become a regular office, and laid out large sums of money upon its improvement. (Plut. Caes. 5.) The care bestowed on it by successive emperors, and especially by Trajan, is attested by numerous inscriptions. It is very doubtful, indeed, whether the original Via Appia, as constructed by the censor Appius, was carried through the Pontine Marshes at all. No mention is found of his draining those marshes without which such a work would have been impossible; and it is much more probable that the road was originally carried along the hills by Cosa, Norba, and Setia, by the same line which was again in use in the last century, before the Pontine Marshes had been drained for the last time by Pius VI. This conjecture is confirmed by the circumstance that Lucilius, in
VI APPIA.

describing his journey from Rome to Capua, complains of the extremely hilly character of the road in approaching Setia. (Lucil. Frugileg. iii. 6, ed. Ger- lach.) Even in the time of Horace, as we learn from his well-known description of the journey to Brundisium, it was customary for travellers to continue their route from Forum Appii by water, embarking at that point on the canal through the Pontine Marshes (Hor. Sat. i. 5. 11, &c.). But the very existence of this canal renders it probable that there was at that time a road by the side of it, as we know was the case in Strabo's time, notwithstanding which he tells us that the canal was much used by travellers, who made the voyage in the night, and thus gained (Strab., v. p. 283.)

It will be convenient to divide the description of the Appian Way, as it existed under the Roman Empire, and is given in the Itineraries, into several portions. The first of these from Rome to Capua was the main trunk line, upon which all its branches and extensions depended. This will require to be described in more detail, as the most celebrated and frequented of all the Roman highways.

1. From Rome to Capua. The stations given in the Antonine Itinerary are:-

From Rome to Aricia (Lariccia) - xvi. m. p.

Tre Taborone - xvi. 1.

Appii Forum - xx.

Tarracina (Terracina) - xvii.

Fundi (Fondi) - xvi. (xiii.)

Formiae (Mola di Gaeta) xiii.

Minturnae (near Tregiletto) ix.

Simessa (Mendragonc) - ix.

Capna (Sto Maris) - xvi. (xxvi.)

The above stations are for the most part well known, and admit of no doubt. Those in the neighbourhood of the Pontine Marshes have indeed given rise to much confusion, but are in fact to be easily determined. Indeed, the line of the road being almost perfectly straight from Rome to Tarracina renders the investigation of the distances a matter of little difficulty.

The Jerusalem Itinerary (p. 611) subdivides the same distance as follows:

Rome to Ad Nonum (mutatio) - ix. m. P.

Aricia (civitas) - vii.

Sponsaer Ad Sponsas (mutatio) - xix.

Appii Forum (do.) - vii. (xii.?)

Ad Medias (do.) - ix.

Tarracina (civitas) - x.

Fundi (do.) - xxi.

Formiae (do.) - ix.

Minturnae (do.) - ix.

Simessa (do.) - ix.

Pons Campanum (mutatio) - ix.

Ad Octavum (do.) - ix.

Capna (civitas) - viii.

The intermediate stations were (as they are expressly called in the itinerary itself) mere Mutations, or posthouses, where relays of horses were kept. The determination of their position is therefore of no interest, except in connection with the distances given, which vary materially from those of the other Itinerary, though the total distance from Rome to Capna (125 miles) is the same in both.

The Appian Way issued from the Porta Capena, in the Servian walls of Rome, about half a mile outside of which it separated from the Via Latina, so that the two roads passed through different gates in the walls of Aurelian. That by which the Via Appia finally quitte Rome was known as the Porta Appia; it is now called the Porta S. Sebastianu. The first milestone on the road stood about 120 yards outside this gate, the distances always continuing to be measured from this old Porta Capena, and tombs which bordered the Via Appia in that portion of it which lay between the two gates, are described in the article ROMA, p. 821. It was apparently in this part of its course, just outside the original city, that it was spanned by three triumphal arches, erected in honour of Drusus (the father of the emperor Claudius), Trajan, and L. Verus. One only of these still remains, just within the Porta S. Sebastianu, which, from its plain and unadorned style of architecture, is probably that of Drusus. Outside the town the Via Appia the road descends to a small stream or brook, now called Acquaetacca, which it crosses by a bridge less than a half mile from the gate: this tripping stream is identified, on good grounds, with the river Almo, celebrated for the peculiar sacred rites with which it was connected [ALMO]. A short distance beyond this the road makes a considerable bend, and ascends a bank or ridge before it reaches the second milestone. From that point it is carried in a straight line direct to the remains of Bowila at the foot of the Alban Hills, running the whole way along a slightly elevated bank or ridge, formed in all probability by a very ancient current of lava from the Alban Mountains. This long, straight line of road stretching across the Campagna, and bordered throughout by the remains of tombs and ruins of other buildings, is, even at the present day, one of the most striking features in the neighbourhood of Rome, and, when the edifices which bordered it were still perfect, must have constituted a magnificent approach to the Imperial City. The whole line has been recently cleared and carefully examined. It is described in detail by the Car. Cennini (in the Annali dell' Instituto di Corrispondenza Archeologica for 1852 and 1853; and more briefly by Desjardins, Essai sur la Topographie du Latium, 4to. Paris, 1854, pp. 92—130. We can here mention only some of the most interesting of the numerous monuments that have been thus brought to light, as well as those previously known and celebrated.

On the right of the road, shortly after crossing the Almo, are the remains of a vast sepulchre, which now serve to support the osteria dell'Aquae- taccia: this is clearly identified by the inscriptions discovered there in 1773, as the monument of Ata- scantius, a freedman of Domitian, and of his wife Priscilla, of which Statius has left us in one of his poems a detailed description (Stat. Silv., v. 1). On the left of the road, almost exactly 3 miles from Rome, is the most celebrated of all the monuments of this kind, the massive sepulchre of Caecilia Me- tella, the daughter of Q Metellus Creticus, and wife of Crassus the triumvir. Converted into a fortress in the middle ages, this tower-like monument is still in remarkable preservation, and, from its commanding position, is a conspicuous object from all points of the surrounding country. It is popularly known as the Capo di Bove, from the burram which appears as an ornament in the frieze. (A view of this remarkable monument is given in the article ROMA, p. 892.) Beyond the Capo di Bove, the Via Appia, the brightness road passes some extensive remains of buildings on the left, which appear to have formed part of an imperial villa constructed by the emperor Maxentius, attached to which are the remains of a circus, also the work of the same emperor, and which, from their remarkably perfect condition, have thrown much light
on the general plan of these edifices. [ROMA, p. 844]

Proceeding onwards from the tomb of Caecilia Metella, the road is bordered throughout by numerous sepulchres, the most remarkable of which is the tomb of Servo Poplicola, on the left, about 33 miles from Rome. The remarkable preservation of the ancient road in this part of its course, shows the accuracy of the description above cited from Procopius; but it is remarkable that this, the greatest and most frequented highway of the Roman empire, was only just wide enough to admit of the passage of two carriages abreast, being only 15 feet broad between the raised crepidines which bordered it. After passing a number of obscure tombs on both sides of the way, there occurs, just beyond the fifth mile from Rome, a remarkable enclosure, of quadrangular form, surrounded by a low wall of Alban stone. This has frequently been supposed to be the Campus Sacer Horatiorum, alluded to by Martial (iii. 47) as existing on the Appian Way, and which preserved the memory of the celebrated combat between the Horatii and Curiti. This was believed to have been fought just about 5 miles from Rome (Liv. i. 23), which would accord well with the position of the enclosure in question; but it is maintained by modern antiquaries that this, which was certainly of a sacred character, more probably served the purposes of an Ustrinum, or place of deposit of the dead who were buried thereto by being deposited in the numerous sepulchres that lined both sides of the Appian Way. These still form a continuous cemetery for above two miles farther. The most massive of them all, which must, when entire, have greatly exceeded even that of Caecilia Metella in magnitude, and from its circular form is known as the Casal Rotondo, occurs near the 6th mile from Rome, on the left of the Via Appia. From a fragment of an inscription found here, it is probable that this is the tomb of Messala Corvinus, the friend of Augustus and patres of Tibullus, and is the very monument, the massive solidity of which is more than once referred to by Martial ("Messalae saxa," vili. 3. 5; "marmora Messalae," x. 2. 9).

Somewhat nearer Rome, on the same side of the road, are extensive ruins of a different description, which are ascertained to be those of a villa of the Quintili, two brothers celebrated for their wealth, who were put to death by Commodus (Dion Cass. lxi. 5), after which the villa in question probably became an imperial residence.

Some remains of a small temple, just 8 miles from Rome, have been supposed to be those of a temple of Hercules, consecrated or restored by Domitian at that distance from the city (Martial, iii. 47. 4, iv. 65. 4, 102. 12); but though the site of the temple in question is clearly indicated, it appears that the existing remains belong to an edifice of earlier date. Exactly 9 miles from Rome are the ruins of a villa of imperial date, within which is a large circular monument of brick, supposed with good reason to be the tomb of Gallicanus, in which the emperor Flavius Severus also was buried. (Vic. Epit. l.x.) Close to this spot must have been the station of An Ninus, mentioned in the Jerusalem Itinerary (L. c.). The road is still bordered on both sides by tombs; but none of these are of any special interest. At the Osteria delle Fratocchie (between 11 and 12 miles from Rome) the ancient Via is joined by the modern road to Albano: here commences the ascent of the Alban Hills, which continues (though at first very gradually) for above 3 miles. A little farther on are the remains of Bovilla; the principal ruins of which lie a short distance to the right of the road. [BOVIUM.

The Tabula marks that place as a station on the Via Appia, but erroneously places it 10 miles from Rome, while the real distance is 12 miles. Thence the road (still retaining its straight line) ascended the hill to Albano, nearly on the site of the Albanum of Domitian, which, as we learn from Martial, was just 14 miles from Rome. (Martial, ix. 65. 4, 102. 12.) The remains of the imperial villa border the road on the left for some distance before reaching the modern town. Two miles farther was Aricia, which is correctly placed by both the Itineraries 16 miles from Rome. The station was probably below the town, outside of the walls, as the Via Appia here deviates from the straight line which it has pursued so long, and descends into the hollow below the city by a steep slope known as the Clivus Aricianus. A little farther on it is carried over the lowest part of the valley by a causeway or substruction of massive masonry, one of the most remarkable works of the kind now extant. [ARICIA.]

The remainder of the road will not require to be described in such detail. From Aricia it was continued, with a slight deviation from the direct line, avoiding the hills of Genzano and those which bound the Lake of Nemi; on the left of these, and leaving Lanuvium at some distance on the right, till it descended again into the plain beyond the Alban Hills and reached the station of Tres Tabernae. An intermediate station, Sub Lanuvio, indicated only in the Tabula, must have been situated where a branch road struck off to the city of Lanuvium. The position of Tres Tabernae has been much disputed, but without any good reason. That of Forum Appii, the next stage, is clearly established [FORUM APPII], and the 43rd milestone of the ancient road still exists on the spot; thus showing that the distances given in the Antonine Itinerary are perfectly correct. This being established, it is clear that Tres Tabernae is to be placed at a spot 10 miles nearer Rome, and about 3 miles beyond the modern Cisterna, where there are still ruins of ancient buildings, near a mediaval tower called the Torre d'Anablare. The ancient pavement is still visible in many places between Aricia and Tres Tabernae, and no doubt can exist as to the course of the road. This was indeed carried in a perfectly straight line from the point where it descended into the plain, through the Pontine Marshes to within a few miles of Terracina. The position of the station Ad Sponsas, mentioned in the Jerusalem Itinerary, cannot be determined, as the distances there given are incorrect. We should perhaps read xii. for vii. as the distance from Forum Appii, in which case it must be placed 2 miles nearer Rome than Tres Tabernae. Between the latter station and Forum Appii was Treronium, at which commenced the canal navigation called Decennium from its being 19 miles in length. The site of this is clearly marked by a tower still called Torre di Tre Ponti, and the 19 miles measured thence along the canal would terminate at a point 3 miles from Terracina, where travellers quitted the canal for that city. An inscription records the paving of this part of the road by Trajan. The solitary posthouse of Mesen

* It was probably this long ascent that was known as the Clivus VibEn, mentioned by Persius (vi. 55).
VIA APPIA.

is evidently the station Ad Medias of the Jerusalem Itinerary. A short distance from Terracina the Via Appia at length deviated from the direction it had so long pursued, and turning to the left ascended the steep hill on which the ancient city stood [TARRACINA], while the modern road is carried round the foot of this hill, close to the sea. The distance of Terracina from Rome is correctly given at 61 miles in the Antonine Itinerary.

From Terracina the line of the ancient road may still be traced distinctly all the way to Fondi, and is flanked by ruins of villas, dilapidated tombs, &c., through a great part of its course. It first ascended the hill above the city as far as the convent of San Francesco, and afterwards descended into the valley beneath, joining the modern highroad from Rome to Naples about 3 miles from Terracina, just before crossing the frontier of the Papal States. The narrow pass at the foot of the mountains, which the road here follows, between the rocks and the marshy lake of Fondi, is the celebrated defile of LASTULAE, or Ad Lastulas, which more than once bears a conspicuous part in Roman history. [LASTULAE.] The distance from Terracina to Fondi is stated in the Antonine Itinerary: the true distance does not exceed 13 miles, as correctly given in the Jerusalem Itinerary. From Fondi to Formiae (Mola di Gaeta), a distance of 13 miles, the road passed through a rugged and mountainous country, crossing a complete mountain pass: the substructions of the ancient way are in many places still visible, as well as portions of the pavement, and numerous ruins of buildings, for the most part of little interest. The bridges also are in several instances the ancient ones, or at least rest upon ancient substructions. The ruins of Formiae and of the numerous villas with which it was adorned line the shores at Mola di Gaeta, and bound the road for a space of more than 2 miles: other ruins, principally sepulchral, are scattered along its line almost all the way thence to MINTURNAE. The ruins of this latter city stand on the right bank of the Liris (Garigliano), a short distance from its mouth, and about a mile and a half below the village of Traghetto. The line of the ancient road from Mola thither is clearly traced and susceptible of no doubt; the distance is correctly given as 9 miles. Here the Via Appia crossed the Liris, and was continued nearly in a straight line through a level and marshy district along the seacoast to Sinuessa, the ruins of which are found near the village of Mondragone. The distance of 9 miles between the two (given in both Itineraries) is somewhat less than the truth. It was at Sinuessa that the Appian Way finally quitted the coast of the Tyrrhenian sea (Strob. v. p. 233), and struck inland towards Capua, passing by the stations of Pons Campanus and Ad Octavum. But this part of its course has not been very distinctly traced, and there is some difficulty as to the distances given. The three subdivisions of the Jerusalem Itinerary would give 26 miles for the total distance from Sinuessa to Capua; and the coincidence of this sum with the statement of the Antonine Itinerary, as given by Yseulting, is a strong argument in favour of the reading xxvi. M. P. instead of xvi, adopted by Pincher. The latter number is certainly too small, for the direct distance between the two points is not less than 21 miles, and the road must have deviated from the straight line on account of the occurrence of the marches of he Savo, as well as of the river Vulturnus. It is probably, therefore, that it made a considerable bend, and that the distance was thus prolonged; but the question cannot be settled until this part of the road has been more accurately traced than has hitherto been done. The distances given in the Tabulae are too inaccurate to be of any use; but it appears probable from that document that the Pons Campanus was a bridge over the little river Savo, and not, as might have been suspected, over the Vulturnus, which the Appian Way did not cross till it arrived at Cassilium, 3 miles from Capua. It was here that it united with the Via Latina. (Strab. v. p. 229.)

The total distance from Rome to Capua (if we adopt 26 miles as from Sinuessa) was therefore 131 miles. This portion of the Via Appia as far as Minturnae has been traced with much care by Westphal (Römische Kampagne, pp. 22—70), as well as by Chaupy (Maison d'Horaec, vol. iii. pp. 365—461) and Sir R. Hoare (Classical Tour, vol. i. pp. 81—148); but all these accounts are deficient in regard to the portion between Minturnae and Capua.

Several minor branches or cross lines parted from the Via Appia during this first portion of its course. Of these it may suffice to mention: 1. The Via ARDEATINA, which quitted the Via Appia at a short distance beyond the Almo, just after passing the Ostestia dell'Acquateccio: it proceeded in a nearly straight line to Ardea, 23 miles from Rome. [ARDEA.] 2. The VIA ANTILATINA, which branched off from the Appian Way just before reaching Bovillae, and proceeded direct to Antium, 38 miles from Rome. It probably followed nearly the same line as the modern road, but its precise course has not been traced. 3. The VIA SEFINA quitted the Appian Way, shortly after passing Trepontum, and proceeded in a direct line to Sezze (Sezze); considerable portions of the ancient pavement still remain. 4. A branch road, the name of which is unknown, diverged from the Via Appia at Minturnae, and proceeded to Teumum (18 miles distant) on the Via Latina, whence it was continued through Allilite and Telesia to Beneventum. [VIA LATINA.] 5. The VIA DOMITIANA, constructed by the emperor of that name, of which Statius has left us a pompous description. (Silv. iv. 3.) It was a continuation of the coast-road from Sinuessa, being carried across the Vulturnus close to its mouth by a bridge which might really have been a work of great difficulty; thence it followed closely the line of the coast as far as Cumae, whence it struck across to Puteoli. The communication between that city and Neapolis was previously in existence. The distances on this road, as given in the Antonine Itinerary (p. 122), are:

From Sinuessa to Litterum xxiv. m. p. (this must be a mistake for xiv.) thence to Cumae - vi. Puteoli - iii. Neapolis - xxvi.

There was also a direct road from Capua to Neapolis (Tab. Pent.), passing through Atelia, which was midway between the two cities.

2. From Capua to Beneventum.

This portion of the road may be very briefly disposed of. From Capua it was continued along in the plain as far as Calatia, the site of which is fixed at Le Galazze, near Maddaloni; it then entered the Apennines, and, passing through the valley of Ariano, commonly supposed to be the celebrated
valley of the Caudine Forks, reached Canadium, which must have been situated about 4 miles beyond Arpaja, on the road to Beneventum. The distances given along this line are:

From Capua to Calatia — — vii. m. p.
From Al Novas — — xi.
From Canadium — — xiii.
From Beneventum — — xiv.

It was at Beneventum, as above shown, that the two main branches of the Appian Way separated: the one proceeding by Venasia and Tarentum to Brundusium; the other by Equus Tucicus and Cassiusium to Barium, and thence along the coast of the Adriatic.

Proceed to give these two branches separately.

3. From Beneventum to Brundusium, through Venasia and Tarentum.

The line of this road is given in the Antonine Itinerary (p. 120) as well as in the Tabulae; but in this last it appears in so broken and confused a form that it would be unintelligible without the aid of the other authority. But that this line was the original Via Appia is proved not only by the distinct testimony of Strabo, and by incidental notices which show that it was the frequent and customary route in the time of Cicero (Gic. ad Att. v. 5, 7), but still more clearly by an inscription of the time of Hadrian, in which the road from Beneventum to Aequaeanum is distinctly called the Via Appia. The greater part of the line from Beneventum to Venasia, and thence to Tarentum, was carried through a wild and mountainous country; and it is highly probable that it was in great measure abandoned after the more convenient line of the Via Trajana was opened. It appears that Hadrian restored the portion from Beneventum to Aequaeanum, but it is doubtful whether he did so farther on. Nevertheless the general course of the road can be traced, though many of the stations cannot be fixed with certainty. The latter are thus given in the Antonine Itinerary:—

From Beneventum to:

Aequaeanum — — — — xv. m. p.
Sub Romulea — — — — xvi.
Poso Auedil — — — — xvii.
Venasia (Venosa) — — xxii.
Silvium (Varagione) — — xxiii.
Biera (Gravidia) — — xiv.
Sub Lupata — — — — xiiii.
Canales — — — — xiiii.
Tarentum (Tarento) — — xx.

Aequaeanum, or Ecalum a is the name written in the Itineraries, is fixed beyond a doubt at Le Grotte, near Micelle, just 15 miles from Beneventum, where a town grew up on its ruins in the middle ages with the name of Quintodecimum. [Aequaeanum.] The site of Romulea is much less certain, but may perhaps be placed at Bisaccio, and the station Sub Romulea in the valley below it. The Pons Auedil is the Ponte Sta Venere, on the road from Lacedogna to Venosa, which is unquestionably an ancient bridge, and the distance from Venasia agrees with that in the Itinerary, which is confirmed also in this instance by the Tabula. The latter authority gives an intermediate station between Romulea and the Pons Auedil, Aquilania, which is probably Lacedogna; but the distances given are certainly incorrect. In this wild and mountainous country it is obviously impossible at present to determine these with any accuracy. From Venasia again the Via Appia appears to have passed, in as direct a line as the nature of the country will allow, to Tarentum; the first station, Silvium, may probably be placed at Garagnone, and the second, Biera, or near Gravidia; but both determinations are very uncertain. Those of Sub Lupata and Canales are still more vague, and, until the course of the ancient road shall have been traced upon the spot by some traveller, its line to multiply conjectures.

From Tarentum to Brundusium the Antonine itinerary gives 44 M. P., which is nearly correct; but the intermediate stations mentioned in the Tabula, Messoricon, Urbius, and Scannum, cannot be identified. Urbius may perhaps be a corruption of Urian or Hyrium, the modern Orio, which is nearly midway between the two cities.

Besides the main line of the Via Appia, as above described, the Itineraries mention several branches, one of which appears to have struck off from Venasia to Potentia, and thence to have joined the highroad to Rhegium, while another descended from Venasia to Heraclea on the Gulf of Tarentum, and thence followed the E. coast of the Bruttian peninsula. These lines are briefly noticed in the articles Lucania and Brutthi, but they are very confused and uncertain.

4. From Beneventum by Cassiusium and Barium to Brundusium.

It was this line of road, first constructed by Trajan, and which was originally distinguished as the Via Trajana, that became after the time of that emperor the frequent and ordinary route to Brundusium, and thus came to be commonly considered as the Via Appia, of which it had in fact taken the place. Its line is in consequence given in all the Itineraries, and can be traced with little difficulty. It passed at first through a rugged and mountainous country, as far as Aecae in Apulia, from which place it was carried through the plains of Apulia to Barium, and afterwards along the sea-coast to Brundusium: a line offering no natural difficulties, and which had the advantage of passing through a number of considerable towns. Even before the construction of the Via Trajana it was not uncommon (as we learn from the journey of Horace) for travellers to deviate from the Appian Way, and gain the plains of Apulia as speedily as possible.

The first part of this road from Beneventum to Aecae may be traced by the assistance of ancient milestones, bridges, &c. (Mommsen, Topog. degli Itinarii, in the Bull. dell. Ist. Arch. for 1848, pp. 6, 7.) It proceeded by the villages of Paduli, Buonalbergo, and Cavallo, to a place called S. Eleuterio, about 2 miles S. of Castelfrancese, which was undoubtedly the site of Equus Tucicus, a much disputed point with Italian topographers. [Equus Tucicus.] This is correctly placed by the Antonine itinerary 21 miles from Beneventum; the Jerusalem Itinerary, which makes it 22 miles, divides the distance at a station called Forum Novum, which must have been situated at or very near Buonalbergo. From Equus Tucicus, the road followed a NE. direction to Aecae (the site of which is clearly known as that of the modern Troja), and thence turned in a direction nearly due E. to Herculis (Ortona). The object of this great bend was probably to open a communication with Luceria and the other towns of Northern Apulia, as well as perhaps to avoid the defile of the Cervaro, above Bovino, through which the modern road passes. At Aecae the Via Trajana descended into the great plain of Apulia, across which it was carried in a nearly
VIA APPIA.

straight line to Barium (Bar.). The remainder of its course presents no difficulties, and the stations are, for the most part, well-known towns. The whole line is thus given in the Antonine Itinerary (pp. 112, 116):—

From Beneventum to
Equus Tuticus (S. Eleveteria) — — — m. P.
Aeae (Trojan) — — — viii.
Herdonia (Ordoma) — — — viii.
Capusium (Casusum) — — — xxvi.
Rubi (Rave) — — — xiii.
Barium (Bari) — — — xii.
Turrea (? — — — xix.
Egnatia (Torre di Gancio) — — vii.
Splenusea (? — — — x.
Brundusium (Brivilia) — — — viii.

The two stations of Turrea between Barium and Egnatia, and Splenusea between Egnatia and Brundusium, cannot be identified; it is evident from the names themselves that they were not towns, but merely small places on the coast so called. The Jerusalem Itinerary has two stations, Turrea Aurelianae, and Turrea juliae, between Egnatia and Barium, but, from the distances given, neither of these can be identified with the Turrea of the Antonine Itinerary. The other intermediate stations mentioned by the same authority are unimportant Mutations, which can be identified only by a careful survey on the spot.

The Tabula gives (though in a very confused manner) an intermediate line of route, which appears to have been the same as that indicated by Strabo (v. p. 283), which quitted the coast at Egnatia, and proceeded through Casilia to Brundusium. The stations given are—

Casusium to Rudiae — — — xii. m. P.
Rubi — — — xiv.
Butantum — — — ix.
Caesia (Ceglie) — — ix.
Eebetium (Aeetium?) — — —
Nove (?) — — — ix.
Ad Veueris (?) — — vii.
Egnatia — — — vii.

It is certain that the Via Trajana was continued, probably by Trajan himself, from Brundusium to Hydruntum (Otranto), and was thence carried all round the Calabrian peninsula to Tarentum. The road from Brundusium to Hydruntum passed through Lupiae (Lecce), in the interior of the peninsula, which is correctly placed 25 miles from each of the above cities. (Itin. Ant. p. 118.) The stations on the other line, which is given only in the Tabula, are as follow:—

M. P.

Hydruntum to Castrum Minervae (Castro) viii.
Veretum (Sta Maria di Vereto) — — — xii.
Usantum (Eugento) — — — x.
Baetium (Aetium) — — — —
Nucetum (Nardo) — — — —
Manduria (Manduria) — — — —
Tarentum (Tarento) — — — —

The above distances appear to be correct.

Lastly, a branch struck off from the Via Trajana at Barium which proceeded direct to Tarentum. It is probable that this came to be adopted as the most convenient mode of reaching the latter city when

the original Via Appia had fallen into disuse. The distance is correctly given as 60 miles. (Itin. Ant. p. 119.)

Besides the above, which may be considered as all in some degree branches of the Via Trajana, there was another line, probably constructed at a late period, which struck across from Equus Tuticus to Venusia, so as to form a cross communication between the Via Trajana and the old Via Appia. This is set down in the Antonine Itinerary (p. 163) as part of a long line proceeding from the N. of Italy to the S., but the intermediate stations between Equus Tuticus and Venusia cannot be determined.

5. From Capua to Nuceria to Rhegium.

This line of road is indicated by Strabo in the passage above cited (v. p. 283) as existing in his time, but he certainly did not include it under the name of the Via Appia. It seems, however, to have subsequently come to be regarded as such, as the Antonine Itinerary puts it under the heading, "Ab Urbe Appia via recto itinere ad Columniam" (Itin. Ant. p. 106.)*, and inasmuch as it was a continuation of the original Appian Way, it was, strictly speaking, as much entitled to bear the name as the Via Trajana. Strabo does not tell us whether it was passable in his day for carriages or not, and we have no account in any ancient author of its construction. But we learn the period at which it was first opened from a remarkable inscription discovered at La Polla, in the valley of Diavco, which commemorates the construction of the road from Rhegium to Capua, and adds the distances of the principal towns along its course; unfortunately the first line, containing the name of the magistrate by whom it was opened, is wanting; and the name of M. Aquilus Gallus, inserted by Gruter and others, is a mere conjecture.

There is little doubt that the true name is that of P. Popilii Laenas, who was prefect in B.C. 134. and who, after clearing the mountains of Lucania and Bruttium of the fugitive slaves who had taken refuge in them, appears to have first constructed this highroad through that rugged and mountainous country. (Mommsen, Inscr. R. N. 6276; Kisch. Mon. Epigr. pp. 11, 12.) There is, therefore, no foundation whatever for the name of Via Aquilia, which has been given by some modern writers (Romellini, Cramer, &c.) to this line of road: it was probably at first called Via Popilla, after its author, who, as was usual in similar cases, was situated at the same time a town which bore the name of Forum Popillii, and occupied the site of La Polla (Forum Popillii); but no mention of this name is found in any ancient author, and it seems to have been unknown to Strabo. The distances given in the inscription above mentioned (which are of the greatest value, from their undoubted authenticity), are:—

M. P.

From Capua to Nuceria — — — — xxxiii. —
— Forum Popillii — — — li. —
Muranum — — — lxiv. —
Concenta — — — xiii. —
Valentia — — — li. —
Ad Statum — — — vi. —
Rhegium — — — vi. —

The point designated as "Ad Frentum ad Statum" is evidently the same as the Columna of the Itinaries, which marked the spot from which it was

The words "Appia via" may, however, refer only to the first part of this route, which certainly followed the true Appian Way as far as Capua.

* The words "Appia via" may, however, refer only to the first part of this route, which certainly followed the true Appian Way as far as Capua.
usual to cross the Sicilian straits. The total distance from Capna to Rhegium, according to the above description, is 321 miles. The Antonine Itinerary makes it, 337 miles. It is difficult to judge how far this discrepancy is owing to errors in the distances as given in our MSS., or to alterations in the line of road; for though it is evident that the road given in the Itinerary followed generally the same line as that originally constructed by Popilius, it is probable that many alterations had taken place in particular parts; and in the wild and mountainous tracts through which the greater part of it was carried, such alterations must frequently have been rendered necessary. The determination of the particular distances is, for the same reason, almost impossible, without being able to trace the precise course of the ancient road, which has not yet been accomplished. The stations and distances, as given in the Antonine Itinerary, are as follow:

M. P.

From Capna to Nola - - - - xxi. (xix.)*
Nuceria (Nocera) - xvi.* (xiv.)
Ad Tarsarium - - - - xv.
Ad Caborem - - - - xiv.
In Marcelliana - - - - xxv.
Caesarisana - xxi.
Nerulum (Laratonda) - xxii.
Sub Murano (near Murano) - - - - xxv.
Capraeis (Tursis) - xxi.
Consentia (Cosenza) xxvii.
Ad Sabatium fluvium xvii.
Ad Turres - - - - xvii.
Vibona (Monte Leone) xxii.
Nocera (Nicoteria) - xvii.
Ad Mallias - - - - xv.
Ad Colummum - - - - xiv.

The stations between Nuceria and Nerulum cannot be determined. Indeed the only points that can be looked upon as certain, in the whole line from Nuceria to Rhegium, are Sub Murano, at the foot of the hill on which stands the town of Murano, Consentia (Cosenza), Vibo Valentia (Monte Leone), and Nicoteria, which retains its ancient name. Nerulum and Capraeis may be fixed with tolerable certainty by reference to these known stations, and the distances in this part of the route appear to be correct. The others must remain uncertain, until the course of the road has been accurately traced.

At Nerulum the above line of road was joined by one which struck across from Venosa through Potentia (Potenza) to that place. It was a continuation of the cross-road already noticed from Equus Taticus to Venosia; this line, which is given in the Antonine Itinerary (p. 104), was called, as we learn from the inscriptions on milestones still extant, the Via Herculla, and was therefore in all probability the work of the Emperor Maximianus. (Mommsen, j. R. N. p. 548.) The stations mentioned in the Itinerary (L. c.) are:-

From Venosia to Opinum - - - - xv. M. P.
Ad fluv. Bradaunum xxix.

* Both these distances are overstated, and should probably be corrected as suggested by the numbers in parentheses. The same distances are given in the Tab. Putei. thus:—

Capua to Suesula - - - - ix. M. P.
Nola - - - - - - ix.
Ad Teglanum - - - - v.
Nuceria - - - - - - ix.

From Venosia to Potentia (Potenza) xxiv.
Acidii (?) - - - - xiv.
Grumentum (Sopra) - - - - xii.
Seminasa (?) - - - - xxviii.
Nerulum - - - - xvi.

None of the above stations can be identified, except Potentia and Grumentum, and the distances are in some cases certainly erroneous. The same line of route is given in the Tabula, but in a very confused and corrupt manner. The stations there set down are wholly different from those in the Itinerary, but equally uncertain. Anxia (Anzi), between Potentia and Grumentum, is the only one that can be identified.

The principal work on the Via Appia is that of Pratelli (Della Via Appia, fol. Napoli, 17:45); but, unfortunately, little dependence can be placed upon it. Parts of the route have been carefully and accurately examined by Westphal, Chauz, and other writers already cited, but many portions still remain to be explored; and accurate measurements are generally wanting. Nor does there exist any map of the kingdom of Naples on which dependence can be placed in this respect.

[1. E. H. B.]

VIA AQUILAIA. [VIA APPIA, No. 5.]
VIA ARDEATINA. [ARDEA.]
VIA AURELIA, one of the principal highways of Italy, which led from Rome to Pisa in Etruria, and thence along the coast of Liguria to the Maritime Alps. It was throughout almost its whole extent a maritime road, proceeding, in the first instance, from Rome to Alsinum on the Tyrrhenian sea, whence it followed the coast-line of Etruria, with only a few trifling deviations, the whole way to Pisa. The period of its construction is quite uncertain. Its name sufficiently indicates that it was the work of some magistrate of the name of Aurelius; but which of the many illustrious men who bore this name in the latter ages of the Republic was the author of it, we are entirely uninform. We know with certainty that it was in use as a well-known and frequented highway in the time of Cicero, who mentions it as one of the three roads by which he might proceed to Cassipane Gaul ("ab infero mazi Aurelia," Phil. xif. 9). It may also be probably inferred that it was in existence as far as Pisan, when the road was carried from that city to Vada Salata and Dertona, the construction of which is ascribed by Strabo to Augustus. (Strab. v. p. 217.)

[VIA A. CASSIPANE.

This continuation of the Aurelian Way seems to have been commonly included under the same general name as the original road; though, according to Strabo, it was properly called the Accinionian Way, like its more celebrated nameakes in Cassipane Gaul. It was apparently not till the reign of Augustus that the line of road was carried along the foot of the Maritime Alps, from Vada Sabata to Cenemelium, and thence into Gaul. It is certain, at least, that the ancient road, of which the traces are still visible, was the work of that emperor; and we know also that the Ligurian tribes who inhabited the Maritime Alps were not completely subdued to subjection till that period. (Liguria.)

The Itineraries, however, give the name of Via Aurelia to the whole line of road from Rome to Arelate in Gaul; and though little value can be attached to their authority on this point, it is not improbable that the name was frequently used in this more extended sense; just as that of the Via Appia was applied to the whole line from Rome to Brundusium, though originally carried only as far as Capua.

Digitized by Microsoft®
The stations from Rome, as far as Luna in Etruria, are thus given in the Antonine Itinerary (p. 299, &c.):

Lorium (near Castel Guido) — xii. m.p.
Al Turres (Monteorto) — x.
Pyrgi (Sta Serena) — xii.
Castrum Novum (T. di Chiusa) — viii.
Centum Cellae (Civita Vecchia) — v.
Martha (Ad Martum fl.) — x.
Forum Aurelii (Montauro) — xxiv.
Cosa (Asendania) — xxv.
Ad lacum Aprilium (Virilium) — xii.
Selerio (?) — — xii.
Maniliana (?) — — ix.
Popolonomii (Rt. of Popolonia) — xii.
Vada Volaterrana (Volto) — xxv.
Ad Herculeum (near Liovoro) — xvii.
Pisea (Pise) — — xii.
Papiniana (Viareggio?) — — xi.
Luna (Luni) — — xxiv.

The stations thence along the coast of Liguria as far as the river Varus have been mentioned in the article Liguria; and the distances along this part of the line, in both the Antonine Itinerary and the Tabula, are so confused and corrupt that it is useless to attempt their correction. Even of this part of the Via Aurelia above given, along the coast of Etruria, several of the stations are very uncertain, and some of the distances are probably corrupt. From Rome to Centum Cellae, indeed, the road has been carefully examined and the distances verified (Westphal, Rom. Komp. pp. 162—169); but this has not been done farther on; and as the road traversed the Maremma, which was certainly in the latter ages of the Roman Empire, as at the present day, a thinly-peopled and unhealthy district, several of the stations were probably even then obscure and unimportant places. The Tabula, as usual, gives a greater number of such stations, several of which may be identified as the points where the road crossed rivers and streams whose names are known. But the route is given very confusedly, and the distances are often incorrect, while in some cases they are omitted altogether.

From Rome to

Lorium (Castel Guido) — xii. m.p.
Bacchana (?) — — —
Alsimum (?) — — vi.
Pyrgi (Sta Novia) — — x.
Tarquinia (Sto Marinella) —
Castrum Novum (Torre di Chiusa) — ix.
Centum Cellae (Civita Vecchia) — iv.
(Ad) Minucium fl. (River Mignone) —
Graviasce —
Tabellaria (?) — — — v.
Ad Martum fl. — — ii.
Forum Aurelii (Montauro) — iii.
(Ad) Armimium fl. (River Fiora) — iv.
Ad Novas, or Al Nonas — iii.
Sub Cosam — — ii.
Cosa (Asendania) — —
(Ad) Albium fl. (R. Allegra) — —
Telamonum (Porto Talamonia) — — iv.
Hastam — — vii.
(Ad) Umbrennum fl. (R. Ombrone) — viii. (2)
Salerno (?) — — xii.
Maniliana (?) — — ix.
Populonum (Rt. of Populonia) — xii.
Vada Volaterrana (Vada) — xx. (2)
Ad Fines — — viii. (2)
(Ad) Pescinas — — xii. (2)
Turrita (Tirrittura) — — xvi. (2)
Pisea (Plia) — — ix. (2)

The distances between Populonum and Pisa, as well as those between Centum Cellae and Cosa, are in many cases unintelligible; and it is often impossible to say to which of the stages they are meant to refer.

The Via Aurelia (in the more extended sense of the term, as used in the Itineraries) communicated with Cassilpine Gaul and the Via Aemilia by two different routes; the one, which according to Strabo was constructed by Aemilius Scarrus at the same time that he continued the Via Aurelia to Vada Sabata, led from that place across the Apennines to Aquae Salviae, and thence to Dortona, to which place the Via Aemilia had probably already been prolonged. (Strab. v. p. 217.) The other, which was known as the Via Postumia, and was therefore probably constructed at a different period, led from Dortona across the mountains direct to Genua. Both these lines are given in the Antonine Itinerary and in the Tabula; though in the former they are confused and mixed up with the direct line of the coast-road. [Liguria.]

1. From Genua to Dortona the stations were —
Liburnum (Rt. between Argyata and Serravalle) — — xxxvi. m.p.
Dortona (Dortona) — — xxxv.
The continuation of this route thence to Placentia will be found under Via Aemilia.

2. From Dortona to Vada Sabata:—
D. to Aquae Salviae (Aquae) xxvii. m.p.
Crisia (?) — — xx. (xxii. Tab.)
Catalanium (?) — — x. (xx. Tab.)
Vada Sabata (Vado) — — xii.

(For the correction of these distances and more detailed examination of the routes in question, see Wallaken, Geographie des Gaules, vol. iii. p. 22.) [E. H. B.]

VIA CANDA VIVA. [Via Egnatia.]

VIA CASSIA, was the name given to one of the principal highroads of Italy which led from Rome through the heart of Etruria to Arretium, and thence by Florentia to Luca. The period of its construction, as well as the origin of its name, is unknown. We learn only from a passage of Cicero that it was a well-known and frequented highway in his time, as that orator mentions it as one of the three roads by which he could proceed to Cassilpine Gaul. (Cic. Phil. xii. 9.) In the same passage, after speaking of the Flaminian Way as passing along the Upper Sea, and the Aurelian along the Lower, he adds: "Etrurian discriminat Cassia." Hence it is clear that it was the principal road through the centre of that province, and is evidently the same given in the Antonine Itinerary (p. 285), though it is there erroneously called the Via Clodia. But indeed the occurrence of the Forum Cassii upon this line is in itself a sufficient proof that it was the Cassian and not the Clodian Way. The stations there set down, with their distances, are as follow:—

From Rome to Baccano (Buccano) — — xxii.
Sutrium (Sutr) — — xii.
Forum Cassii (near Vescvola) — — —
Ad Umbrennum fl. (R. Ombrone) — viii. (2)
Salerno (?) — — xii.
Maniliana (?) — — ix.
Populonum (Rt. of Populonia) — xii.
Vada Volaterrana (Vada) — xx. (2)
Ad Fines — — viii. (2)
(Ad) Pescinas — — xii. (2)
Turrita (Tirrittura) — — xvi. (2)
Pisea (Pisia) — — ix. (2)

VIA AURELIA.

Digitized by Microsoft®
VIA CIMINIA.

The Via Cassia branched off from the Via Flaminia just after crossing the Tiber by the Milvian Bridge, 3 miles from Rome. It then ascended the table-land, and proceeded over a dreary and monotonous plain to Becanno (Boccono), situated in the basin or crater of an extinct volcano. Two intermediate small stations are given in the Tabula: Ad Sextum, which, as its name imports, was situated 6 miles from Rome, and therefore 3 from the Pons Milvius; and Veii, 6 miles farther; but it is probable that the ancient Via Cassia, like the modern highway, passed by, but not through, the ancient city; so that the station indicated was probably that where the road turned off to Veii, near the Isola Parnese. The Via Clodia separated from the Cassia about 8 miles beyond the station Ad Sextum, and struck off through Carisea (Galera) and Sabate (Bracciano) to Forum Clodi. The Tabula again gives an intermediate station, between Satrium and Forum Cassii, called Vicius Matrini, the ruins of which are still visible 7 miles beyond Satriu; and that of the Aqua Passeris, now called the Bagni di Serpa, 12 miles beyond Forum Cassii. The stations given in that document can thus be identified as far as Clusium. They are:

Ad Sextum - - vi. m.p.
Veii (near Isola Parnese) - vi.
Boccano (Boccano) - ix.
Satrium (Satriu) - xii.
Vicius Matrini - - (omitted, but should be vii.)

Forum Cassii (Tetralla) - iv.
Aqua Passeris (Bagni di Serpa) xi.
Volsinii (Boleva) - - ix.
Aii Palantium Fluvium (R. Puglia) -
Clusium (Claista) - - ix.

But from Clusium to Florentia the names of the stations are wholly unknown, and cannot be identified, with the exception of Arretium; and the entire route is given in so confused a manner that it is impossible to make anything of it.

Livy tells us that C. Flaminius, the colleague of M. Aemilius Lepidus in B.c. 187, after having effected substantially the Lignarian tribes that had infested the territory of Bononia, constructed a road from Bononia to Arretium (Liv. xxxix. 2). But it is remarkable that we never hear anything more of this line of road, which would seem to have fallen into disuse; though this pass across the Apennines, which is still traversed by the modern highway from Florence to Bologna, is one of the easiest of all. Cicero indeed might be thought to allude to this route when he speaks of proceeding into Cisalpine Gaul by the Via Cassia (f. c.); but the absence of any allusion to its existence during the military operations at that period, or on any other occasion, seems to prove conclusively that it had not continued in use as a military highway. (For a careful examination and description of the portion of the Via Cassia near Rome, see Westphal, Rom. Komp. pp. 147—153; Nibby, Vie degli Antichi, pp. 75—82.)

VIA CIMINIA, a name known only from an inscription of the time of Hadrian (Orell. Inscr. 3306), was probably a short cut constructed across the range of the Ciminian hills, leaving the Via Cassia to the left, and following nearly the same line as the modern road over the same hills. (Holsten. Not. ad Clav. p. 67.) [CIMINUS MONS.] [E. H. B.]

VIA CLODIA, was the name of a highroad that branched off from the Cassia, to the left, about 10 miles from Rome, near the inn of La Storta, where remains of the ancient pavement, indicating its direction, may still be seen. The name of the Via Clodia is known to us only from the Itineraries, and from inscriptions of imperial date (Orell. Inscr. 522, 3143); but from the form of the name there can be no doubt that it dates from the republican period, though we have no account when or by whom this line of road was constructed. The Itineraries indeed seem to have regarded the Via Clodia as the main line, of which the Via Cassia was only a branch, or rather altogether confounded the two; but it is evident from the passage of Cicero above quoted, that the Via Cassia was properly speaking, the main line, and the Clodia merely a branch of it. At the same time, the occurrence of a Forum Clodi on the one branch, as well as a Forum Cassii on the other, leave no doubt which were the true lines designated by these names. The course of the Via Clodia as far as Sabate (Bracciano) admits of no doubt, though the distances given in the Tabula are corrupt and uncertain; but the position of Forum Clodi is uncertain, and the continuation of the line is very obscure. It appears indeed to have held a course nearly parallel with that of the Via Cassia, through Blera, Tarsacina, and Saturnia; but from the latter place the Tabula represents it proceeding to Successa (Sub Cassa), which would be an abrupt turn at right angles, and could never have been the direction of the principal line of road. It is probable that this was either carried up the valley of the Ombrone to Siena (Sena Julia), or proceeded across the marshy plains of that river to join the Via Aurelia. But this is mere conjecture. The stations, as given in the Tabula (the only one of the Itineraries in which the true Via Clodia is found), are as follows:

From Rome to Ad Sextum - vi. m.p.
Careiæ (Calera) - ix.
Ad Novas - - viii.
Sabate (Bracciano) - Tuesday.
Forum Clodi - -
Blera (Bleda) - xvi. (7)
Marta (Ad Martam fl.) - ix.
Tuscania (Toscanello) -
Maternum (Farnese?) xii.
Saturnia (Sartonia) - xviii.

The Antonine Itinerary, without giving the route in detail, says simply—A Roma faro Clodi, m.p. xxxii.

If this distance be correct, Forum Clodi must be placed either at or a little beyond Oriulo, which is 6 miles beyond Sabate (Bracciano). The distance of Oriulo from Rome by the line of the Via Clodia (as measured on Belli's map), somewhat exceeds 31 miles. But the distance from Blera must, in that case, be greatly overstated; the actual distance from Oriulo to Bleda being scarcely more than 10 miles. (Westphal, Rom. Kompagne, pp. 154—158; Den- nel's Itinaria, vol. i. p. 275; but the distances there cited, in the note from the Tabula, are incorrect.)

[ E. H. B.]

VIA DOMITIANA. [VIA APPIA, No. 1] VIA EGNATIA (7 Ἑγνατία ἐδώρικ, Strab. vii. p. 322, seq.), a Roman military road, which connected Illyria, Macedonia, and Thrace. We are almost totally in the dark with regard to the origin of this road. The assumption that it was constructed by a certain person named Egnatius, who was likewise the founder of the town Egnatia, or Gnatia, between Bariun and Brundusium, on the coast of Apulia, is
VIA EGNATIA

We will consider the road as far as Thessalonica, or the Via Candavia, first, and then proceed to the remainder of the Egnatian Way. Strabo (L.c. and p. 326) lays down the general direction of the road as follows: After passing Mount Candavia, it ran to the towns of Lychnidus and Pylon; which last, as its name implies, was the border town between Illyria and Macedonia. Hence it proceeded by Barms to Heraclea, and on through the territory of the Lyncestae and Easlae to Eslada and Pella to Thessalonica. The whole extent of this line, as we have already seen, was 267 Roman miles; and this computation will be found to agree pretty accurately with the distance between Dyrrachium and Thessalonica as laid down in the Antonine Itinerary. According to that work, as edited by Parthey and Pinder (Berlin, 1848), who have paid great attention to the numbers, the stations and distances between those two places, starting from Dyrrachium, were as follows (p. 151).

The difference of 2 miles probably arises from some variation in the MSS. of the Itinerary. It should be observed, however, that, according to Wesseling's edition (p. 318, seq.), the distance is 11 miles more, or 289 miles, owing to variations in the text. According to the Tab. Peut, the whole distance was 279 miles, or 10 more than that given in the Itinerary; but there are great discrepancies in the distances between the places.

The last-named work gives 307 miles as the sum of the distances between Apollonia and Thessalonica; or 38 miles more than the route between Dyrrachium and the latter town. Both these routes united, according to the Itinerary, at Clodiana; and the distance from Apollonia to Clodiana was 49 miles, while that from Dyrrachium to the same place was only 33. This accounts for 16 miles of the difference, and the remainder, therefore, must be sought in that part of the road which lay between Clodiana and Thessalonica. Here the stations are the same as those given in the route from Dyrrachium, with the exception of the portion between Lychnidus and Heraclea; where, instead of the single station of Nicia, we have two, viz., Scirtiana, 27 miles from Lychnidus, and Castra, 15 miles from Scirtiana. And as the distance between Castra and Heraclea is stated at 12 miles, it follows that it was 11 miles farther from Lychnidus to Heraclea by this route than by that through Nicias. This, added to the 16 miles extra length to Clodiana, accounts for 27 miles of the difference; but there still remain 11 miles to make up the discrepancy of 38; and, as the stations are the same, this difference arises in all probability from variations in the MSS.

According to the Itin. Hierosol. (p. 283, seq., Berlin ed.), which names all the places where the horses were changed, as well as the chief towns, the total distance between Apollonia and Thessalonica was 300 miles; which differs very slightly from that

a mere conjecture, which cannot be supported by any authority. We may, however, make some approximation towards ascertaining the date of its construction, or, at all events, that of a portion of it. Strabo, in the passage cited at the head of this article, says that Polybius estimated the length of the via, between the coast of the Adriatic and the city of Thessalonica, at 267 Roman miles; whence it appears that this portion of it at least was extant in the time of Polybius. Consequently, as that historian flourished in the first half of the 2nd century B.C., we may infer with tolerable certainty that the road must have been commenced shortly after the reduction of Macedonia by the Romans in n.c. 168. Whether the eastern portion of the road, namely, that between Thessalonica and Cyzeps, a town 10 miles beyond the left, or E, bank of the Hebros, was also completed in the time of Polybius, is a point which cannot be so satisfactorily ascertained. For although Strabo, in the same passage, after mentioning the length of the road, from its commencement to its termination at Cyzeps, proceeds to say that, if we follow Polybius, we must make up the number of Roman miles, because that writer computed 8 stadia and 2 plethra, or 8 stadia, to the Roman mile, instead of the usual computation of exactly 8; yet Strabo may then be speaking only of the historian’s general practice, without any reference to this particular road. And, on the whole, it may perhaps be the more probable conclusion that the eastern portion of the road was not constructed till some time after the Romans had been in possession of Macedonia.

According to the same geographer, who is the chief authority with regard to this and all other whole lengths, was 525 Roman miles, or 4280 stadia; and although the first portion of it had two branches, namely, one from Epidanus or Dyrrachium and another from Apollonia, yet, from whichever of those towns the traveller might start, the length of the road was the same. Into the accuracy of this statement we shall inquire further on. Strabo also mentions that the first part of the road was called in Candaviun (έων Κάνδαβιαν), and this name frequently occurs in the Roman writers. Thus Cicero (ad Att. iii. 7) speaks of travelling "per Candaviam," and Caesar (B. C. iii. 79) mentions it as the direct route into Macedonia. It is evident, however, that very clearly appear to how much of the road this name was applicable. Tafel, who has written a work on the Via Egnatia, is of opinion that the appellation of Candavia may be considered to extend from the commencement of the via, including the two branches from Dyrrachium and Apollonia, to the town of Lychnidus. (De Via mil. Rom. Egnatia, Prolog. p. xix. Tuining, 1842.) But this limitation is entirely arbitrary, and unsupported by any authority; and it would perhaps be a juster inference from the words of Strabo to assume that the name "Candavia" was applicable to the road as far as Thessalonica, as Cal. Leake appears to have done. (Northern Greece, vol. iii. p. 311.) The point to be determined is, what does Strabo mean by "the first part?" The road in its whole extent he says is called "Via Egnatia," and the first part "in Candaviun" (Η μεν οιόν πάσα Υμναία καλλίται, Η δε πρώτη επί Κάνδαβιαν λέγεται, κ. τ. λ.); and from what follows it is evident that he contemplated the division of the parts at Thessalonica, since he gives the separate measurement as far as that town, which is just half the whole length of the road.
of the Itinerary, though there are several variations in the route.

Now, if we apply what has been said to the remark of Strabo, that the distance from Thessa-
lonica was the same whether the traveller started from Epidamus (Dyrrachium) or from Apollonia, it is difficult to perceive how such could have been the case if the junction of the two branches existed in his time also at Clodiana; since, as we have already seen, it was 16 miles farther to that place from Apollonia than from Dyrrachium according to the Itin. Ant.; and the Itin. Hierosol. makes it 24 miles farther. Indeed the maps would seem to show that if the two branches were of equal length their junction must have taken place to the E. of Lake Lycnitis; the branch from Dyrrachium passing to the N. of that lake, and that from Apol-
lonia to the S. But, although Burmeister, in his review of Tafel's work (in Zimmermann's Zeitschrift für die Alterthums- wissenchaft, 1840, p. 1145), adopted such an hypothesis, and placed the junction at Heracleia, it does not appear that the assumption can be supported by any authority.

Clodiana, where the two branches of the Via Egnatia, or Candava, united, was seated on the river Genusus (the Tjerna or Sjamba). From this point the valley of the river naturally indicated the course of the road to the E. (Leake, Northern Greece, vol. iii. p. 312.)

We will now proceed to consider the second, or eastern, portion of the Egnatian Way, viz., that between Thessalonica and Cypsea.

The whole length of this route, according to Strabo, was 268 Roman miles; and the distances set down in the Itin. Ant. amount very nearly to that sum, or to 265, as follows. (Pind. and Parth. p. 157; Wess. p. 330, seq.)

Another route given in the same Itinerary (Wess. p. 320, seq.) does not greatly vary from the above, but is not carried on to Cypsea. This adds the following stations:—Meilasurgia, between Thessalonica and Apollonia, Neapolis, between Philippi and Acontissa, Cosirtius, which according to Tafel (pars ii. p. 21) is meant for the river Cassinete, between Tupiras and Maximianopolis, and Melitiun and Tempyra, between Brendice and Trajanopolis. The Itin. Hierosol. makes the distance only 250 miles.

Many remains of the Egnatian Way are said to be still traceable, especially in the neighborhood of Thessalonica. (Beaujour, Voy. militaire dans l'Empire Othoman, vol. i. p. 205.) [T. H. D.]

VIA FLAMINIA (ἡ Φλαμίνια δῖας), one of the most ancient and important of the highways of Italy, which led from Rome direct to Ariminum, and may be considered as the Great North Road of the Romans, being the principal and most frequented line of communication with the whole of the north of Italy. It was also one of the first of the great highways of which we know with certainty the period of construction, having been made by C. Flaminius during his censorship (n. c. 220), with the express purpose of opening a free communication with the Gallic territory, which he had himself reduced to subjection a few years before. (Liv. Epit. xx.) It is therefore certainly a mistake, when Strabo ascribes it to G. Flaminius (ibid. of the preceding), who was consul together with M. Aemilius Lepidus, the author of the Aemilian Way, in n. c. 187, and him-
self constructed a road from Bononia to Arretium. (Liv. xxxix. 2; Strab. v. p. 217.) It is certain that the Flaminian Way was in existence long before, and its military importance was already felt and known in the Second Punic War, when the consul Sempronius proceeded by it to Ariminum, to watch the movements and oppose the advance of Hannibal. (Liv. xxii. 11.) Throughout the period of the Republic, as well as under the Empire, it was one of the best known and most frequented of the highways of Italy. Cicero, in one of the Philippics, says there were three ways which led from Rome to Cisalpine Gaul: the Flaminian by the Upper Sea (the Adriatic), the Aurelian by the Lower, and the Cae-
sian through the midst of Etruria (Phil. xiii. 9). During the contest between the generals of Vespas-
ian and Vitellius (A. d. 69) the military importance of the Flaminian Way was fully brought out, and it was felt that its possession would be almost decisive of the victory. (Tac. Hist. i. 86, iii. 52, &c.) Tertullus alludes to the extent to which this great highway was at this period frequented, and the conse-
quently bustling and crowding of the towns on its course (Ib. ii. 64). Most of these, indeed, seem to have grown up into flourishing and populous places, mainly in consequence of the traffic along the line of road.

So important a highway was naturally the object of much attention, and great pains were taken not only to maintain, but to restore and improve it. Thus, in n. c. 27, when Augustus assigned the care of the other highways to different persons of consular dignity, he reserved for himself that of the Via Flaminia, and it was completely repaired throughout its whole length from Rome to Ariminum, a service which was acknowled-
ged by the erection of two triumphal arches in his honour, one at Rome, the other at Ariminum, the latter of which is still standing. [ARIMINUM.] Again, at a later period, Vespasian added materially to the convenience of the road by constructing a tunnel through the rock at a place called Itericina, now known as Il Faro, a work which still subsists in its integrity. [ITERICINA.] This remarkable passage is particularly noticed by the poet Claudian, who has left us a general description of the Flaminian Way, by which the emperor Honorius proceeded, in a. d. 404, from Ravena to Rome. (Claudian, de Vi. Cons. IIon. 494—522.) Indeed, it is evi-
dent that in the latter ages of the Empire, when the emperors for the most part took up their residence at Mediolanum or Ravena, the Flaminian Way, which constituted the direct line of communication between those cities and Rome, must have become of still greater importance than before.

One proof of the important influence exercised by this great line of highway, is afforded by the circum-
cstance that, like the Aemilian Way, it terminated in one of the provinces of Italy in the later division of that country under the Empire; though, by a strange confusion or perverseness, the name of Flaminius was given, not to the part of Umbria which was actually traversed by the Via Flaminia, but to the eastern
VIA FLAMINIA.

The Via Flaminia, one of the main roads of ancient Rome, was named after the Roman family Flaminii. It was originally a dirt road, later paved, and is named near the modern Flaminio (Piazza del Popolo) in Rome. The Via Flaminia is about 250 km long and connected Rome to the ports of Ostia and Brindisi. It was used for military campaigns and trade routes, and was the basis for the modern-day Via Flaminia, which runs from Rome to France.

Along the Via Flaminia, there were numerous settlements and ruins, including the ancient city of Narnia, which was crossed by a bridge. The Via Flaminia was also the route of the Tabula Peutingeriana, an ancient road map, which is now used to describe the route of the Via Flaminia.

The Via Flaminia was especially useful for the transportation of goods due to the presence of numerous bridges, especially the Rhenum Bridge. The Via Flaminia was also the main road for the Roman Empire and was used for military campaigns and trade routes.

The Via Flaminia was eventually replaced by the Via Appia, which was a more direct route. However, the Via Flaminia remains a significant part of Roman history and is still used today as a major road in Italy.
VIA FLAMINIA.

VIA LATINA.

The whole distance from Rome to Ariminum according to this itinerary is therefore 222 miles, while the Antonine (following the more direct line) makes it 210 miles. The Tabula adds nothing to our knowledge of this route; and the distances are much less correct in the other two Itineraries.

The branch of the Flaminian Way which struck off from the main line at Nuceria and crossed the Apennines direct to Ancona, is thus given in the Antonine Itinerary (p. 311):—

From Nuceria to
dubii (?) — — — viii. m. p.
prolaqueum (Pioraco) — — viii.
septempeda (S. Severino) — — xv.
trelia (Ru. near Treie) — — ix.
auximum (Ostimo) — — xvii.
Ancora — — .

There a road was carried along the coast by Sena Gallica to Fannum Fortunae, where it rejoined the main line of the Via Flaminia. The stations were:

Ad Aselim fl. (R. Eino) — — viii. m. p.
Sena Gallica (Sinyigaglia) — — xii.
Ad Pium (?) — — — vii.

Fannum Fortunae (Fano) — — vii.

All the above distances appear to be at least approximately correct. (For a full and careful examination of the line of the Via Flaminia, and the distances of the stations upon it, see D'Anville, Analyse Geographique de l'Italie, pp. 147–162.)

[Note E. H. B.]

VIA LABICANA (ἡ Λαβικάνη ἐδώδος) was one of the highroads that issued from the Porta Esquilina at Rome. It was evidently originally nothing more than a road that led to the ancient city of Labicum (16 miles from Rome), but was subsequently continued in the same direction, and, after sweeping round the E. foot of the Alban hills, it joined the Via Latina at the station Ad Pictas, in the plain between them and the Velican mountains. (Strab. v. p. 257.) This route was in many respects more convenient than the proper Via Latina, as it avoided the ascent and descent of the Alban hills: and hence it appears to have become, in the later ages of the Empire, the more frequented road of the two; so that the Antonine Itinerary gives the Via Labicana as the regular highroad from Rome to Beneventum, and afterwards gives the Via Latina as falling into it. (Itin. Ant. pp. 304, 306.) But this is decidedly opposed to the testimony of Strabo (l. c.), and the usage of the Augustan age, which is generally followed by modern writers. It appears the Via Labicana will be here given only as far as the point where it joins the Latina.

The stations set down in the Antonine Itinerary are merely:

From Rome to Ad Quintanas — — xv. m. p.
Ad Pictas — — x.

The Tabula subdivides the latter stage into two; viz., Ad Statnas, iii. M. P., and thence to Ad Pictas, vii.; thus confirming the distance in the Itinerary. The station Ad Quintanas was undoubtedly situated at the foot of the hill on which stands the village of La Colonna, occupying the site of the ancient LABICUM. The line of the ancient road from Rome thither followed nearly the same course, though with fewer windings, as the modern road to Palestrina and Valmontone. It is described in the article LABICUM.

[Note E. H. B.]

VIA LATINA (ἡ Λατινή ἐδώδος) was one of the principal of the numerous highroads that issued from the gates of Rome, and probably one of the most ancient of them. Hence we have no account of the time of its construction, and it was doubtless long in use as a means of communication before it was paved and converted into a regular highroad. Some road or other must always have existed between Rome and Tusculum; while again beyond the Alban hills the valley of the Sauce (Ternus) is one of the
natural lines of communication that must have been in use from the earliest times. But it is not probable that the complete line of the Via Latina was completed as a regular road till after the complete reduction of both the Latins and Volscians under the Roman authority. It is true that Livy speaks of the Via Latina as if it already existed in the time of Coriolanus (ii. 39), but he in fact uses the name only as a geographical description, both in this passage and again in the history b. c. 296, when he speaks of Interamnia as a colony "qua via Latina est" (x. 36).

Neither passage affords any proof that the road was then in existence; though there is no doubt that there was already a way or line of communication. The course of the Via Latina is, indeed, more natural for such a line of way than that of the more celebrated Via Appia, and must have offered less difficulties before the construction of an artificial road. Nor did it present any such formidable passes in a military point of view as that of Lautulae on the Appian Way, for which reason it was the route chosen both by Pyrrhus when he advanced towards Rome in n. c. 280, and by Hannibal in n. c. 211. (Liv. xxvi. 8, 9.) On the latter occasion the Carthaginian general seems certainly to have followed the true Via Latina across Mount Algidus and by Tusculum (Liv. i. c.); Pyrrhus, on the contrary, turned aside from it as he approached Praeneste, which was the farthest point that he reached in his advance towards Rome.

Whatever may have been the date of the construction of the Via Latina, it is certain that long before the close of the Republic it was one of the best known and most frequented highways in Italy. Strabo speaks of it as one of the most important of the many roads that issued from the gates of Rome (v. p. 257), and takes it as one of the leading and most familiar lines of demarcation in describing the cities of Latium. (ib.) It was, however, in the repect very inferior to its neighbour the Via Appia, that it was not capable of any considerable extension, but terminated at Casilinum, where it joined the Via Appia. (Strab. l. c.) There was, indeed, a branch road that was continued from Teanum by Alliae and Telesia to Beneventum; but though this is given in the Itineraries in connection with the Via Latina (Itin. Ant. pp. 122, 304), it certainly was not generally considered as forming a part of that road, and was merely a cross line from it to the Appian. On the other hand, the main line of the Via Latina, which descended the valley of the Soriceto the way the two subordinate lines of road called the Via Labicana and Via Pernestina, which issued from Rome by a different gate, but both ultimately joined the Via Latina, and became merged in it. (Strab. l. c.) Such at least is Strabo's statement, and doubtless was the ordinary view of the case in his time. But it would seem as if at a later period the Via Labicana came to be the more frequented road of the two, so that the Antonine Itinerary represents the Via Latina as joining the Labicana, instead of the converse. (Itin. Ant. p. 306.)

The stations, as given in the Itinerary just cited, are as follow:—

VIA LATINA.

- Fregellum (Ceprenum) - xiv. m.p.
- Faberata (S. Giovanni in Coriceto) - iii.
- Aquinum (Aquino) - viii.
- Casinum (S. Germano) - vii.
- Tannum (Tenna) - xxvii.
- Cailes (Caii) - vi.
- Cassilum (Capowo) - vii.
- Capna (Sta Maria) - iii.

(From the four last stages are supplied from the Tabula. The Antonine Itinerary gives only the branch of the road that led, as above noticed, to Beneventum.)

It will be observed that, in its course, as above set down, from Rome to Feronitium, the Via Latina did not pass through any town of importance, the stations given being mere Mutations, or places for changing horses. But, on account of the importance of this line of road, it will be necessary to describe it somewhat more in detail.

The Via Latina issued from the Porta Capena together with the Via Appia. It was not till about half-way between that gate and the later Porta Appia (Porta di S. Sebastiano), that the two separated, and the Via Latina pursued its own course through the gate in the walls of Aurelian that derived from its the name of Porta Latina. From this gate (now long closed) to a point 2 miles from the Porta Latina, where it crosses the modern road from Rome to Albano, the line of the ancient road may be readily traced by portions of the pavement, and ruins of sepulchres, with which the Latin Way, as well as the Fiamonian and Appian (Juv. Sat. i. 171), was bordered. From that point the road may be seen proceeding in a perfectly straight line, which is marked from distance to distance by tombs and other ruins, to the foot of the Tuscanian hills. The only one of these ruins which deserves any notice is that commonly called the temple of Fortuna Muliebris, which is in reality a sepulchre of imperial times. About 9 miles from the Porta Capena is a farm or hamlet called Morrena, near which are the extensive remains of a Roman villa, supposed to be that of Lucullus; and about a mile farther must be placed the station Ad Decimum, the 10 miles being undoubtedly reckoned from the Porta Capena. Almost immediately from this point began the ascent of the Tuscanian hills; the road still preserved nearly its former direction, leaving Grotta Ferrata on the right, and the citadel of Tuscanum on the left; it then passed, as it is described by Strabo (v. p. 237), between Tuscanum and the Allum Mount, following the line of a deep valley or depression between them, till it reached the foot of Mount Algidus, and, passing through a kind of notch in the ridge of that mountain, at a place now called La Cara, descended to the station Ad Pictas in the plain below. The course of the ancient road may be distinctly traced by remains of the pavement still visible at intervals; the second station, Roboraria (if the distance of six miles given in some MSS. be correct), must have stood near the ruins of a mediaeval castle called Motara. Thence to Ad Pictas the distance is stated at 17 miles, which is certainly greatly above the truth. It was at this station that the Via Labicana joined the Latina; and from this circumstance, compared with the distances given thence to Feronitium, we may place the site of Ad Pictas somewhere near the Osteria di Mezza Selva, about 10 miles beyond Roboraria. Strabo calls it 210 stadia 26 miles)
from Rome, but it is not clear whether he measured the distance by the Via Latina or the Labicana (v. p. 257). The actual distance of Ferentum (concerning which there is no doubt) from Venafrum is 45 miles; and the Compitum Anagninum is correctly placed 8 miles nearer the city, which would exactly agree with the point on the present highroad where the branch to Anagnia still turns off. Both the Itinerary and the Tabula place Ad Pictas 15 miles from the Compitum Anagninum, and this distance would fix it 10 miles from Roboraria, or 26 from Rome, thus agreeing closely with the statement of Strabo. We may, therefore, feel sure that the position above assigned to Ad Pictas, a point of importance, as that where the two roads joined, is at least approximately correct.

The next stations aim at no doubt, and the distances are correct. It was at the Compitum Anagninum, 15 miles beyond Ad Pictas, that the Via Praenestina joined the Latina, which was carried thence down the valley of the Sacco, nearly in the line of the present highroad, by Ferentum and Frusino, both of which still retain their ancient names, to Fragellum (Ceprenae) on the Liris, whence it turned S. to Fabrateria Nova (the ruins of which are still visible at S. Giovanni in Carciano), on the right of which it crossed the road that by a bridge, of which the ruins are still extant, whence the course of the ancient road may be traced without difficulty through Aquinum, Casinum, Teanum, and Cales to Cassinum on the Valturruns, where it fell into the Via Appia. Portions of the ancient pavement, sepulchres, and other ruins mark the line of the ancient way throughout the latter part of its course. At a station given in the Tabula under the name of Ad Flexum (9 miles from Casinum) a branch road turned off to Venafrum, whence it ascended the valley of the Vulturruns to Aessernia, and thence into the heart of Sauniunm. The Antonine Itinerary represents the Via Latina as following this cross-road, and making a bend round by Venafrum, but there can be no doubt that the regular highroad proceeded direct to Teanum. The remains of the ancient road may be distinctly traced, proceeding from Teanum nearly due N. through Cajanello and Tora to S. Pietro in Fine, which was probably the site of the station Ad Flexum. This would be 18 miles from Teanum. The Tabula gives the distance as vii., for which there is no doubt we should read xvii.

The branch of the Via Latina, already alluded to, which was carried to Beneventum, quitted the main road at Teanum, crossed the Vulturruns to Allifae, and thence was carried up the valley of the Calor by Telesia to Beneventum. The distances are thus given in the Antonine Itinerary (p. 304):—

Teanum to Allifae (Aljfé) - - xvii. M.P.
Teesis (Telese) - - xxv.
Beneventum xvii.

(The first part of the Via Latina from Rome to the valley of the Liris is examined and discussed in detail by Westphal, Rom. Künst. pp. 78—87; and Nibby, L'ite degli Antichi, pp. 110—119.) [E.H.B.]

VIA LAURENTINA. [LAURENTUM.]
VIA NOMENTANA. [NOMENTUM.]

VIA OSTENSIS, was, as its name imports, the road leading from Rome to Ostia, which must naturally have been an extremely frequented route when the city was at the height of its prosperity. It followed in its general direction the left bank of the Tiber, but cutting off the more considerable heads and windings of the river. It issued from the Porta Ostiensis, now called the Porta S. Paolo, from the celebrated basilica of St. Paul, about 12 miles outside the city, where, as we learn, it was in the line of the ancient road. Thrice miles from Rome it passed through a village, or suburb, known as the Vicus Alexandri (Ammian. xvi. 4. § 14): it was at this point that the Via Laurentina struck off direct to Laurentum, 16 miles distant from Rome [LAURENTUM]; while the Via Ostiensis, turning a little to the right, pursued thenceforth nearly a straight course all the way to Ostia. On this line, 11 miles from Rome, is the Ostetra di Malo Fede, where a road branches off to Porciplano, which undoubtedly follows the same line as that mentioned by the younger Pliny, by which his home village might be approached, as conveniently as by the Via Laurentina. (Plin. Ep. ii. 17.) Five miles farther the highroad reached Ostia, which was 16 miles from Rome. (Itin, Ant. p. 301.) [OSTIA].

VIA POPILLIA. [VIA APPIA, No. 5.]

VIA PORTUENSIS, was the road that led from Rome to the Portus Traiani, or the new port of the city constructed under the Empire on the right bank of the Tiber. [OSTIA.] The name could not, of course, have come into use until after the construction of this great artificial port to replace the natural harbour of Ostia, and it is only found in the enumeration of the Viae in the Curiosum Urbis and Notitia (pp. 28, 29, ed. Preller). But the line of the road itself may still be traced without difficulty. It issued from the Porta Portuensis, in the walls of Aurelian, and followed, with little deviation, the right bank of the Tiber, only cutting off the minor windings of that river. The Antonine Itinerary places the city of Portus 19 miles from Rome (p. 300); but this is certainly a mistake, the real distance being just about the same as that of Ostia, or 16 miles. (Nibby, Diatrali, vol. iii. p. 624.) From Portus a road was carried along the coast by Fregeana (9 miles) to Asium (9 miles), where it joined the Via Aurelia. (Itin, Ant. p. 300.) [E. H. B.]

VIA POSTUMIA, was, as we learn from an inscription (Orell. Inscr. 3121), the proper name of the road that crossed the Apennines direct from Der- tona to Genoa. But it appears to have fallen into disuse; at least we do not find it mentioned by any ancient writer, and the road itself is included by the Itineraries under the general name of the Via Aurelia. It has therefore been considered more convenient to describe it in that article. [E. H. B.]

VIA PRAENESTINA (γα Πραενεστινή δήσ, Strab.), was the name of one of the highroads that issued from the Porta Esquilina at Rome, and led (as its name implies) direct to Praeneste. The period of its construction is unknown; but it is evident that there must have been from a very early period a highway, or line of communication from Rome to Praeneste, long before there was a regular paved road, such as the Via Praenestina ultimately became. The first part of it, indeed, as far as the city of Gabii, 13 miles from Rome, was originally known as the Via Gabina, a name which is used by Livy in the history of the early ages of the Republic (Liv. ii. 11), but would seem to have afterwards fallen into disuse, so that both Strabo and the Itineraries give the name of Via Praenestina to the whole line. (Strab. v. p. 238; Itin, Ant. p. 302.) In the latter period of the Republic, indeed, Gabii had fallen very much into decay, while Praeneste was still an important and flourishing town, which will suf-

40 4
sufficiently account for the one appellation having become merged in the other. A continuation of the same road, which was also included under the name of the Via Praenestina, was carried from the foot of the hill at Praeneste, through the subjacent plain, till it fell into the Via Latina, just below Anagnia.

The stations on it mentioned in the Antonine Itinerary (p. 302) are:

From Rome to Gabii
Praeneste
Sub Anagnia

The Tabula gives the same distances as far as Praeneste, which are very nearly correct. Strabo reckons it 100 stadia (12 miles) from Rome to Gabii, and the same distance thence to Praeneste. The continuation from Praeneste to Sub Anagnia is given only in the Antonine Itinerary, but the distance is overstated; it does not really exceed 18 miles.

The Via Praenestina issued from the Porta Equilina at Rome, together with the Via Labicana (Strab. v. 237, vii. 9), then issued in the later circuit of the walls, now called Porta Maggiore; and separated from the Via Labicana immediately afterwards, striking off in a nearly direct line towards Gabii. About 3 miles from Rome it passed the imperial villa of the Gordians, the magnificence of which is extolled by Julius Capitolinus (Gordian, 32), and is in some degree attested by the imposing and picturesque ruins at a spot called Torre dei Schiavi. (Nibby, Dioritici, vol. iii. pp. 707—710.) Nine miles from Rome the road is carried over the valley of a small stream by a viaduct of the most massive construction, still known as the Ponte di Nona: and 3 miles farther it passes the still existing ruins of the city of Gabii. Thence to Praeneste the line of the road was not so direct; this part of the Campagna being intersected by deep gullies and ravines, which necessitated some deviations from the straight line. The road is however clearly marked, and in many places retains its ancient pavement of basaltic lava. It is carried nearly straight as far as a point about 5 miles beyond Gabii, where it passes through a deep cutting in the tufo rock, which has given to the spot the name of Commodo: shortly afterwards it turns abruptly to the right, leaving the village of Gallicano (the probable site of Pedum) on the left, and thence follows the line of a long narrow ridge between two ravines, till it approaches the city of Praeneste. The highroad doubtless passed only through the lower part of that city. Portions of the ancient pavement may be seen shortly after quitting the southern gate (Porta del Sole), and show that the old road followed the same direction as the modern one, which leads through Curi and Paterno, to an inn on the highroad below Anagni, apparently on the very same site as the station Sub Anagnia (or Campus Anagninum, as it is called in another route) of the Itinerary.

VIA SALARIA (Σαλαρία ὁδός, Strab.), one of the most ancient and well-known highroads of Italy, which led from Rome up the valley of the Tiber, and through the land of the Sabines to Reate, and thence across the Apennines into Picenum, and to the shores of the Adriatic. We have no account of the period of its construction as a regular road, but there can be little doubt that it was a first

The quoted route of communication long before it was laid down as a regular highway: and the tradition that its name was derived from its being used by the Sabines to carry into their own country the salt that they obtained from the Roman salt-works at the mouth of the Tiber, in itself seems to point to an early age. (Fest. s. v. Salaria.) It was indeed, with the exception of the Via Latina, the only one of the great Roman highways, the name of which was not derived from that of its first constructor. But it cannot be inferred from the expressions of Livy that the battle of the Allia was fought "ad undecimum lapidem," and that the Gauls on a subsequent occasion encamped "ad tertium lapidem via Salaria trans pontem Aniniens." (Liv. v. 37, vii. 9), that the regular road was then in existence, though there is no doubt that there was a much frequented line of communication with the land of the Sabines. We learn from the latter passage that a bridge had been already constructed over the Anio; and it is probable that the Via Salaria was constructed in the first instance only as far as Reate, and was not extended to Reate till far afterwards. Even in the time of Strabo there is no evidence that it reached to the Adriatic: that author speaks of it merely as extending through the land of the Sabines, but as not of great extent (ὁ παλλή ὅσσα, Strab. v. p. 228), which readers it improbable that it had then been carried to the Upper Sea. But the Itineraries give the name of Salaria to the whole line of road from Rome to Castrum Truentinum on the Adriatic, and thence to Atri.

The Salarian Way issued from the Porta Collina of the ancient city together with the Via Nomentana (Strab. l. c.; Fest. s. v. Salaria); but they diverged immediately afterwards, so that the one quitted the outer circuit of the city (as bounded by the walls of Aurelian) through the Porta Salaria, the other through the Porta Nomentana. Between 2 and 3 miles from Rome the Via Salaria crossed the Anio by a bridge, called the Pons Salarious, which was the scene of the memorable combat of Manlius Torquatus with the Gaul. (Liv. vii. 9.) The present bridge is ancient, though not strictly of Roman date, having been constructed by Nares, to replace the more ancient one which was destroyed by Totilla. On a hill to the left of the road, just before it descends to the river, is the site of the ancient city of Antenae; and a hill to the right of the road immediately after crossing the river is worthy of notice, as the spot where the Gauls encamped in b. c. 361 (Liv. l. c), and where Hannibal pitched his camp when he rode up to reconnoitre the walls of Rome. (Id. xxvi. 10.) Between 5 and 6 miles from Rome, after passing the Villa Spada, the road passes close to Castel Giubileo, a fortress of the middle ages, which serves to mark the site of the ancient Fidenae. From this point the road is carried through the low grounds near the Tiber, skirting the foot of the Crustubian hills, which border it on the right. Several small streams descend from these hills, and, after crossing the road, discharge themselves into the Tiber; and there can be no doubt that one of these is the far-famed Allia, though which of them is entitled to claim that celebrated appellation is still a very disputed point. [Allia.] The road continued to follow the valley of the Tiber till, after passing Monte Rotondo, it turned inland to Etruria, the site of which is probably to be fixed at Grotta Marozza.
and is marked in the Itineraries as 18 miles from Rome. Here the Via Nomentana again fell into the Salaria. (Strab. v. p. 228.) Hence to Reate the latter road traversed a hilly country, but of no great interest, following nearly the same line as the modern road from Rome to Rieti. The immediate station of Ad Novas or Vicus Novus, as it is called in the Antonine Itinerary is still marked by ruins near the Osteria Nuova, 32 miles from Rome, and 16 from Rieti. Here an old church still bore at a late period the name of Vico Nuovo.

The stations on the original Via Salaria, from Rome to Reate, are correctly given, and can clearly be identified.

From Rome to
Eretum (Grotta Morava) - xvi. m. p.
Vicus Novus (Ost. Nuova) - xiv.
Reate (Rieti) - - - xvi.

From Reate the Via Salaria (or the continuation of it as given in the Itineraries) proceeded nearly due E. by Cutitiae, which is identified by its celebrated lake, or rather mineral springs, to Interocrea (Antrodoco), situated at the junction of two natural passes or lines of communication through the central Apennines. The one of these leads from Interocrea to Atternum, in the upper valley of the Aternum, and was followed by a cross-road given in the Tabula, but of which both the stations and the distances are extremely confused: the other, which is the main valley of the Velinus, and bears nearly due N., was ascended by the Via Salaria as far as Falacerium, 16 miles from Interocrea, and near the sources of the Velinus. Hence that road crossed the ridge of the Apennines and descended into the valley of the Tronto (Truentus), which rifer it followed to its mouth at Castrum Truentium, passing on the way by the strongly situated city of Asculum (Ascoli). The distances on this line of route are thus correctly given in the Antonine Itinerary (p. 307):

From Reate to
Cutitiae (near Paterno) - - - viii. m. p.
Interocrea (Antrodoco) - - - vi.
Falacerium (near Civita Reale) - - - vii.
Vicus Baules - - - - - - ix.
Ad Centesimum* - - - - - x.
Asculum (Ascoli) - - - - - xii.
Castrum Truentium - - - - - xx.

From this last point two roads branched off, the one turning N. and proceeding along the coast of the Adriatic to Ancona; the other proceeding S. along the same coast to Castrum Novum (near Giulia Nuova), and thence to Adria (Atri). The latter branch is given in the Itinerary as a part of the Via Salaria; but it is clear that neither of them properly belonged to that highway, both being in fact one of the later lines of the long line of road which followed the coast of the Adriatic continuously from Ancona to Brundisium, and which is given in the Antonine Itinerary in connection with the Via Flaminia (Itin. Ant. pp. 313—316). (The course of the Via

Salaria is examined, and the distances discussed in detail by D'Amville, Analyse Géographique de l'Italie pp. 163—169.) (E. H. B.)

VIA SUBLACENSIS. [VIA VALERIA.]

VIA TIBERINA, a name found in inscriptions, and noticed by the Notitia and Carlo-Annun among the roads that issued from the gates of Rome, was in all probability the road that quitted the Via Flaminia at Saxa Rubra, and followed the right bank of the Tiber until it rejoined the Via Flaminia, between Aquia Rhea and Bongheto. The existence of such a road is known from remains of it still visible; and it is the only one to which the name of Via Tiberina can well be applied. (Westphal, Rom. Komp. pp. 134, 138.) (E. H. B.)

VIA TIBURTINA. [VIA VALERIA.]

VIA TRAJANA. [VIA APPIA. No. 4.]

VIA VALERIA (6 Obbaopia 566s, Strab.), one of the most celebrated and important of the Roman highways, which led from Rome, or, more strictly speaking, from Tibur, to the lake Fucinus and the head of the Marsi, and thence was subsequently continued to the Adriatic, at the mouth of the Aternum. The period of its construction is uncertain. It has indeed been frequently supposed to have derived its name from, and to have been the work of, M. Valeria Maximus, who was censor with C. Junius Bubulcus in b. c. 307; but the expression of Livy, that the two constructed roads "per aequos," would certainly seem to refer to cross-roads in the neighbourhood of Rome; and it is very improbable that the construction of so celebrated a highway as the Via Valeria should not have been more distinctly stated. (Liv. iv. 43.) The Via Valeria, indeed, was properly only a continuation of the Via Tiburtina, which led from Rome to Tibur; and though the Itineraries include the whole line of route under the name of the Via Valeria, it appears that the distinction was still kept up in the time of Strabo, who distinctly speaks of the Valerian Way as beginning from Tibur, and leading to the Marsi, and to Corninum, the metropolis of the Peligni (Strab. v. p. 258). The expressions of the geographers would naturally lead us to conclude that the Via Valeria was in his time carried as a regular highway as far as Corninum; but we learn from an inscription, that this was not the case, and that the regularly constructed road stopped short at Cerfennia, at the foot of the Mons Imeus or Forcea de Caruso, a steep and difficult pass, over which the highway was not carried till the reign of Claudius, who at the same time continued it to the mouth of the Aternum. (Orell. Inscr. 711.) It appears that the portion thus added at first bore the name of the Via Claudia Valeria (Inscr. l.c.); but the distinction was soon lost sight of, and the whole line of route from Rome to the Adriatic was commonly known as the Via Valeria. (Itin. Ant. p. 308.) It will be convenient here to adopt the same usage, and consider the whole course of the road under one head.

The Via Tiburtina, as the road from Rome to Tibur was properly called, must undoubtedly have been of very ancient origin. There must indeed have existed from the earliest ages of Rome a frequent highway or communication between the two cities; but we are wholly ignorant as to the time when a regularly made road, with its solid pavement and all the other accessories of a Roman via, was constructed from the one city to the other. The road as it existed in the time of the Roman Empire may be distinctly traced by portions still remaining of the

* It is clear from the name that this station was distant 100 miles from Rome, while the distances above given would make up only 97 miles; but it is uncertain at which precise point the deficiency occurs. The Tabula gives 9 miles from Cutitiae to Cutitiae, and 7 to Interocrea; if these distances be adopted the result is 99 miles, leaving a discrepancy of only one mile. In either case the approximation is sufficient to show the general correctness of the itineraries.
VIA VALERIA.

An ancient road, sometimes called the Via Appia, extended from Rome to Tarquinia. This road was constructed by the ancient Romans to connect the capital city with the Tiber valley and the coast of the Adriatic Sea. The road was marked by milestones and other markers that have been used to study the history and topography of ancient Rome.

From Rome, the Via Appia proceeded through the valley of the Tiber, then turned northeast to the lake of Bolsena, which it crossed by a bridge about 4 miles from Rome. The bridge, known as the Ponte Molmolo, is still visible today.

The Via Appia continued along the coast, passing through the valley of the lake of Bolsena, which is a combination of two lakes, the Lake of Bolsena and the Lake of Viterbo. The lake of Bolsena is one of the largest freshwater lakes in Italy and is a popular destination for tourism.

Near the lake of Bolsena, the Via Appia passed through the city of Tarquinia, which is a UNESCO World Heritage Site. The city is known for its ancient ruins and the Tarquinia Necropolis, which is one of the largest and best-preserved Etruscan necropoleis in Italy.

The Via Appia continued northward, passing through the city of Viterbo, which is located on the eastern side of the lake of Bolsena. Viterbo is a historic city with a long and rich history, and it is known for its beautiful old town and its medieval architecture.

The Via Appia continued northward, passing through the valley of the lake of Bolsena, which it crossed by a bridge about 4 miles from Rome. The bridge, known as the Ponte Molmolo, is still visible today.

The Via Appia continued northward, passing through the valley of the lake of Bolsena, which it crossed by a bridge about 4 miles from Rome. The bridge, known as the Ponte Molmolo, is still visible today.

VIADUS.

from Rome to that sea, served to connect the Valerian, Salarian, and Flaminian ways. For this reason it may be useful to set down here the stations and distances along this line of coast, from the mouth of the Aternum to Ancona. They are thus given in the Antonine Itinerary (p. 313):

From the Ostia Aterna (Pescaro) to

Halria (Atri) - - - - - xvi. m.p.

Castrum Novum (near Giulia) Nuvola - - - - - - - - - xv.

Castrum Truentum (at the mouth of the Trento) - - - - - - - xii.

Castellum Firmanum (Porto di Fermo) - - - - - - - xxiv.

Potentia (Potenza) - - - - - - - - - xxxi.

Numana (Humana) - - - - - - x.

Ancona - - - - - - - - - - viii.

Here the coast-road joined one branch of the Via Flaminia; and the distances from Ancona to Ariminum will be found in the article on that road. [VIA FLAMINIA.]

The Via Valeria, like the Aeumilia and Flaminia, was one of the main roads of ancient Italy and the provinces of Italy under the Roman Empire, which was called Valeria. It comprised the land of the Marsi. It was, according to Strabo, a road of ancient date and one of the earliest Roman roads. It was also called Via Flaminia because of the Flamines, who were the guardians of the road.

VIADUS (Oviàos), a river of Germany, west of the Vistula, mentioned by both Ptolemy (ii. 11. § 2) and Marcianus (p. 53) as flowing into the Mare Suevicum or Baltic. Neither of these authors mentions either its source or its course, but it is generally assumed to be the Oder. Ptolemy in another passage (ii. 11. § 15) mentions, according to the commentator, a river Itâöacum, which some regard as a tributary of the Viadus, and others as a name of the upper Viadus; but Wilberg, the latest editor of Ptolemy, treating Itâöacum as a corrupt reading, has altered it to Oviàos. [L. S.]

VIANA (Oviàia), a place in Rhetia, on the road from Venamia to Augusta Vindelicorum (Polyb. ii. 12. § 4); it is marked in the Peutinger Table as Vina, and its site is now occupied by a place called Wagrek. [L. S.]

VIBIA. [BELIT.

VIBIBORIUM. [FORUM VIBIBL.

VIBINUM, or VIBIONUM (1620: Bovino), a town of Apulia, in the interior of that country, 7 miles S. of Acce (Troja) and 15 from Luceria. Its correct name is given by Pliny, who enumerates the Vibites among the municipal communities of Apulia, and by inscriptions which are still extant at Bovino, an episcopal town situated on one of the lower slopes of the Appennines, on the right of the river Carvoro (Cerbaus). (Plin. iii. 11. s. 16; Holsten, Not. ad Claud. p. 272.) There is no doubt that it is the place of which the name is corruptly written in Ptolemy, Viburnum (Oibhònon, iii. l. § 72), and which is called by Polybion Vibionum (1620: Bovino, for which we should probably read Oibhònon, Schweig. ad loc.) The latter authority distinctly places it among the Daunian Apullians, and mentions that Hannibal established his camp there, and thence laid waste the territory of Arpi and other neighbouring cities. (Polyb. iii. 88.) [E. H. B.]

VIBONES (Oibhònon or Ïblònon, Polyb. iii. § 23), a people of European Sarmatia, on the N. side of Mount Beliums, on the river Iser or Jerta in Ciliana. [T. H. B.]

VIRO, VIBO VALENTIA. [HIPPONIUM.

VIBONENSIS SINUS, another name of the Hippoponiti Sius. [HIPPONIUM.]

VICENTIA or VICETIA (Ovîteria: Eth. Vicentius: Vicenna), a city of Venetia in the N. of Italy, situated between Pavia and Verona, and distant 22 miles from the former and 33 from the latter city. (Hist. Ant. p. 128; Hist. Hier. p. 559.) No mention is found of Vicentia before the Roman conquest of this part of Italy, and the earliest record of its existence is an inscription of the republican period which informs us that the limits between its territory and that of the Aestetini were fixed and determined by the processus Sex. Atilius Sarnus in B.C. 136. (Orell. Incus. 3110.) It is also incidentally mentioned as one of the municipal towns in the N. of Italy, in B.C. 43. (Ciss. ad Fam. xi. 19.) Strabo notices it as one of the minor towns of Venetia, and Tacitus tells us that it was taken by Antonius, the general of Vespasian, on his advance from Pavia to Verona, in a manner that sufficiently proves it not to have been a town of any great importance. (Tac. Ann. xvi. 21.)

VIETIA (Ovitia), called also the Commune or Suevicum, of which we are told by Ptolemy (i. 11. § 15) that it is the name of the upper Viadus, and by Pliny, who has given it the name of Tiracum. (Plin. iii. l. § 30; Orell. Incus. 3219.) It suffered severely in common with most of the cities of Venetia from the invasion of Attila (A.D. 452), by whom it was laid waste with fire and sword (Hist. Miscell. xv. p. 549), but it recovered from this catastrophe, and appears again under the Lombards as a considerable city of Venetia (P. Dac. ii. 14. v. 39). During the middle ages it became for some time an independent republic, and is still a populous city with about 30,000 inhabitants, but has no remains of antiquity.

The name of Vicentia is in inscriptions Vicetia, which has been restored by recent editors as the true reading both in Pliny and in Tacitus, but it is certain that before the close of the Roman Empire the name Vicentia (which has been retained in the modern Vicenza) was already in use. [E. H. B.]

VICIANUM, a place in Mesia (Tab. Peut.), probably the Bebropolis of Pecoploanes (de Aed. iv. p. 281), and the present Nova Berda. [T. H. D.]

VICTORIA (Ovitapria, Polyb. iii. § 9), the most eastern place belonging to the Damosini in Britannia Barbara. Camden (p. 1190) thinks that it is Bede's Cornui Cantiarii, and that it stood on Inishkeith Island, in the Frith of Forth; but Horsey is of opinion that it is Abernethy, near Perth. [T. H. D.]

VICTORIAE MONS, a mountain in Hispania Citerior, near the Iberus. (Liv. xxi. 41.) [T. H. D.]

VICTIMALIA. [TICINUS.]

VICUS ALEXANDRI. [VIA OSTENSIS.

VICUS AMBIATINUS. [Ambiatius.

VICUS ANTHRUS, a place in the territory of the Vaucini in Hispania Tarraconensis. (Hist. Ant,
VICUS AQUENSIUS.

p. 439.) Variously identified with Uilla fossa and Villasecco. [T. H. D.]

VICUS AQUENSIUS. [Aquae Convenarium.]

VICUS CAECILIUS, a place in Lusitania belonging to the Vettones, on the road from Augustoburgo to Caesaraugusta. [Ann. Antiq. 434.]

Variously identified with Naralewecus and S. Estevan. [T. H. D.]

VICUS CUMINAIUS, a place of the Carpetani in Hispania Tarraconensis, somewhat S. of the Tagus, and E. of Tetulon. Probably the modern St. Cristo de la Zarca, which is still renowned for its cunnin. [Morales, Antig. p. 77; Florez, Esp. Situr. v. p. 22.] Others have identified it with Ocaia and Bayona. [T. H. D.]

VICUS DOLUCENSIUS, in Gallia. The name occurs only on an inscription found at Halhingen, near Boulogne, the ancient Gesoriacum. [Gesoriacum.] Vicus Dolucensis may be the old name of Halhingen. [Ukert, Gallien.] [G. L.]

VICUS HELENAE, in Gallia, mentioned by Sidonius Apollinaris (Major. Carm. 5. 216), in the country of the Atrebates; but geographers disagree about the site. Some place it at Hedin or Hesidin, on the Canche, but that river is in the country of the Moriini. Others fix it at a place called Lens, and others in other places. [Ukert, Gallien.] [G. L.]

VICUS ICTIMULORUM. [Ictimull.]

VICUS JULI or AURES, in Aquitania. The name Civitas Aurensium occurs in the Notitia of the Gallic Provinces. The name Atures also occurs in Sidonius Apollinaris (ii. ep. 1). In the passage of Tibullus, cited under Arures [Vol. i. p. 336] "Atur" is said to be a corruption of Scaliger, the MSS. having Atax: —

"Quem tremetrum forti militae victus Atur;",

but the great critic probably is right.

At the council of Agde (Agatha), A. D. 506, there is a subscription by a bishop "de civitate Vico Julii," and the same name occurs in Gregory of Tours. D'Anville affirms that Atures and Vicus Julii are the same place, relying on a Notice, where we read "Civitas Adorcionum Vico Julii." The name of the river Atur was also given to a people Atures, who have given their name to the town of Aire, which is on the Aduor. [D'Anvile, Notice, &c.]

VICUS JULIUS, in Gallia, is mentioned only in the Notitia of the Empire as a post under the goods of the general residing at Mornacium (Moneiz). It is placed between Tabernae (Rhein-Zabern) and Nenetes (Speier). D'Anville supposes Vicus Julius to be Germersheim, at the place where the Quich ends the Rhine. [G. L.]

VICUS MATERNI. [Via Cassia.]

VICUS NOVUS. [Via Salaria.]

VICUS SPACORUM. [SpaCorum Vicus.]

VICUS VARIANUS. [Via Armillia, No. 5.]

VIDICUS (Odojôs), a small coast river in the west of Germany, between the Rhenus and the Amida (Ptol. ii. 11. § 1; Marcian, p. 51), is probably the same as the Wecht. [L. S.]

VIDICA (Odobôs, Ptol. ii. 2. § 2), a river on the N. coast of Hibernia; according to Camden (p. 141), the Corredagh. Others identify it with the Culmore to Caesaraugusta. [L. S.]

VIDICUS or VIDURIO, in Gallia, appears in the Table on a road from Andemutatum (Langres) to Cabilla, which is Cabilleum (Chalon sur-Seine). The road passes through File or Tile [(Tile.)] to Vi-

dubia. The distance in the Table between Tile and Chalon, 39 leagues, is correct; and it is 19 from Tile to Vidubia. D'Anville fixes Vidubia at St. Bernard, on the little river Vone, a branch of the Seine. [D'Anville, Notice, &c.]

VIDUCASSES, a Celtic people in Gallic Burgundy. Pliny (iv. 18) mentions them before the Bodicasses, who are supposed to be the Baioasseri [Baioasses]. Peteleny (ii. 8. § 5) writes the name Ouiducassior or Ouiducassio, for we must assume them to be the Viducasses, though he places the Viducasses next to the Osimii, and the Veneti between the Viducasses and the Lexovi. But the Viducasses are between the Baioasses and the Lexovi. The boundary between the Viducasses and the Baioasses is indicated by a name Fins (Fines), which often occurs in French geography.

There is a place named Vieux SW. of Citen, in the department of Calvados, some distance from the left bank of the river Orne. This place is mentioned in the titles or monuments of the neighbouring abbey of Fontenay, on the other side of the Orne, under the name of Videcoce or Voeceae, of which Vieux is a manifest corruption, as D'Anville shows, like Tricasses, Trecce, Troies, and Durocasses, Droceae, Dreux. There is or was a stone preserved in the château of Tourigny, in the arriernement of Saint Lé, in the department of Manche, which contains the inscription ORDO CIVITATIS VIDVCAS. This marble, which was found at Vieux in 1850, is said to be the pediment of a statue placed in the third century of our era in honour of T. Sennius Solensis. In the excavations made at Vieux in 1705 were found remains of public baths, of an aqueduct, a gymnasium, fragments of columns, of statues, and a great number of medals of the imperial period, besides other remains. Inscriptions, of the date A. D. 238, found on the spot show that this city had temples and altars erected to Divus, to Mars, and to Mercury. (Nouveaux Essais sur la Ville de Citen, par M. L'Abbé Delarue, 2 vols. Cuen, 1842, cited by Richard et Hocquart, Guide du Voyageur.)

The name of this old town is unknown, but the remains show that it was a Roman city, probably built on a Celtic site; and several Roman roads branch off from it. Some geographers suppose it to be the Araeagens or Araeagenae of the Table, which D'Anville would fix at Bayeux. But the site of Araeagenes is doubtful. [Augustodurum.]

VIENNA. (Viéna, Vienne; Ethon. Vienmensis: Viene), a city of the Allobroges (Ptol. ii. 10. § 11) in (galla) Narbonensis, on the east bank of the Rhône; and the only town which Peteleny assigns to the Allobroges. Stephanus (s. v. Bierôs) gives this form of the word and an Ethnic name Bierôs, and he suggests also Bierôsios and Bierôsios from a form Bireius. He has preserved a tradition about Vienna being a Cretan colony from Bierôs in Crete; and accordingly, if this were true, its origin is Hellenic. Dion Cassius (xxvi. 50) has a story about some people being expelled from Vienna by the Allobroges, but he does not say who they were. [Lugdunum.]

The position of this Vienna is easily fixed by the name and by its being on the Roman road along the east side of the Rhône. There is a difficulty, however, as D'Anville observes, in the Antonine Itinerary, which makes Vienna xxiii. from Lugdunum, and adds the remark that by the shorter cut it is xvi. The number xvi. occurs also in the
VIENNA.

VIAGESIUM, AD. 1309.

Table. It is remarked, too, that Seneca (De Morte Claudi, c. 6) says that Claudius was born at Lug-
dunum (Lyom), “ad sextum decimum lapsedam a
Vieanna.” The real distance from Vienna to the
Rhône at Lyon is about 17 M. P.; but J’Avrille
suggests that the territory of Lugdunum may have
had a narrow strip on the south side of the Rhône.
There can be no road of 233 M. P. from Lug-
dunum to Vienna, unless it be one on the west bank
of the Rhône. Strabo (iv. pp. 184, 186) makes the
distance between Lugdunum and Vienna 200 stadia
or 20 M. P., which is too much.

Vienna is first mentioned by Caesar (B. G. vi. 9),
and only once mentioned. He had crossed the 
Cé
vannes into the Auvergne in the depth of winter,
and he went again over the mountains to Vienna to
meet a newly-leveled cavalry force, which some time
before he had sent on thither. Under the Empire
Vienna was a great city, and there was rivalry and
enmity between it and Lugdunum. (Tacit. Hist.
i. 65.) Mela speaks of it as a flourishing place;
and under the Empire it was a Colonia (Plin. iii. 4; 
Tacit. Hist. i. 66), before the time of Claudius, who
spoke of it in his Oratio (super Civitate Galliae danada);
“Ornatissima ecce Colonia valentissimaque Vien-
nianum, quam longo jam tempore senatores huius
lit. xi.) This passage shows that Vienna had
already supplied members to the Roman senate, and
it must have been a Roman Colonia. Martial (vii.
88) calls it “pulcra”:

“Fertur habere moes, si vera est fama, Hibelio,
poster delicias pulcra Vienne suis.”

So Pliny says that his works were in the booksellers’
shops at Lugdunum. [LUGDUNUM.] These facts
present a curious contrast between the book trade in
a French provincial town under the Empire and at
the present day, when a man would not find much.
Vienna was also noted for the wine (Martial, xiii.
107) that grew in the neighbourhood; and some of
the best wines of the Rhône are still made about
Vienna. This town towards the subdivision of
Narbonensis named Viennoise.

The modern town of Vienn is in the department
of Isère, on the little river Gêre, which flows through
Vienna to the Rhône. The modern town is in
the narrow valley of the Gêre, and extends to the banks
of the Rhône. The Roman town was placed on two
terraces in the form of amphitheatres. There still
exist the foundations of the massive Roman walls above
19,000 feet in circuit which enclosed Vienna. These
walls, even in the weakest parts, were about 20 feet
thick; and it appears that there were round towers
at intervals throughout. There are at Vienna the
remains of some arcades, which are supposed to have
formed the entrance to the Thermes. They are commonly
called triumphal arches, but there is no reason for
this appellation. One of the arcades bears the name
of the emperor Gratian. There is a temple which
M. Schneider has conjectured to have been dedicated
to Augustus and Livia, if his deciphering of the
inscription may be trusted. This is one of the best
preserved Roman monuments of its kind in France
after the Maison Carrée de Nîmes [NEMESIUS].
It is now a Museum, and contains some valuable
ancient remains and inscriptions. This building is
of the Corinthian order, with six columns in front
and eight on each side; the columns are above 3
feet in diameter, and 35 feet high, including the
base of the capitals.

There is a singular monument near Vienna, some-
times called Pontius Pilate’s tomb, there being a
tradition that Pilate was banished to Vienna. But
even if Pilate was sent to Vienna, that fact will not
prove that this is his monument. It is a pyramid
supported on a quadrangular construction, on the
sides of which there are four arcades with some cur-
lar arches at the top; and there are columns at each
of the angles of the construction. Each side of
the square of this basement is about 21 feet long,
and the height to the top of the entablature of the
basement is nearly 22 feet. The pyramid with its smaller
base rests on the central part of the quadrangular
construction; it is about 30 feet high, and the whole
is consequently about 32 feet high. The edifice
is not finished. It has on the whole a very fine
appearance. There is a drawing of it in the Penny
Cyclopaedia (art. Vienne), made on the spot in
1838 by W. B. Clarke, architect.

The remains of the amphitheatre have been found
only by excavation. It was a building of great
magnitude, the long diameter being above 500 feet
and the smaller above 400 feet, which dimensions
are about the same as those of the amphitheatre of
Verona. It has been used as a quarry to build the
modern town out of. Three aqueducts supplied
Vienna with water during the Roman period. These
aqueducts run one above another on the side of
the hill which borders the left bank of the Gêre, and
they are nearly parallel to one another, but at dif-
ferent elevations. The highest was intended to
supply the amphitheatre when a maumachia was
exhibited. There are also remains of a fourth
aqueduct large enough for four persons to walk in
upright and abreast. These aqueducts were almost
entirely constructed under ground, with a fall of
about one in a thousand, and for the most part lined
inside with a red cement as high up as the spring
of the arches.

The Roman road, sometimes called the Via Do-
milita, ran from Arlate (Arles) along the E. side
of the river to Lugdunum (Lyom). Where it enters
Vienna, it is not more than 3 feet below the surface
of the ground, and this depth increases as it goes
further into the town. It is constructed of large
blocks of stone. Another road went from Vienna
to the Alpis Graia (Little St. Bernard) through
Berignium; and it is an interesting fact to find
that several villages on this road retain names given
to them in respect of the distance from Vienna;
thus Septème is 7 miles, Oytier 8 miles, and Die-
mozel 10 Roman miles from Vienna. Another road
led from Vienna through Culoar (Grenoble) to
the Alpis Cottia (Mont St. Genèvre). (See Richard
and Heoquet, Guide du Voyageur, for references
to modern works on the antiquities of Vienna, and
particularly M. Mermet’s work, 8vo. Vienna, 1829,
which contains the answers to a series of questions
proposed by the Académie des Inscriptions et Belles
Lettres; also the references in Ubert, Gallien,
p. 453.)

VIAGESIUM, AD. 1. A station in Gallia Narbonensis, the
distance of which from a given
point determined its name, as we see in the case
of other names of places derived from numerals. [Dec-
ium.]

2. VIENNA. The place is xx. M. P.
from Narbo (Varbonae) on the road to Spain,
and may be at or near a place called La Palme.

3. There is another Ad Vigesimum which occurs
in the Itin. of Bordeaus to Jerusalem, on the road from
Toulouse. These numerals show that such cities

Digitized by Microsoft®
had the privilege of reckoning their roads from the capital to the limit of their territories, which a Fines often occurs. [Fines.] (D’Anville, Notice, g.c.)

VILLA FAUSTINI, a plaoe of the Iceni in Britania Romana, on the road from Londinium to the northern boundary. (Itin. Ant. p. 474.) Cambden (p. 438) identifies it with St. Edmund’s Burg; but others have placed it near Thetford, at Wulphit, and at Tornhauz Parva. [G.L.]

VILLA FAUSTINI, an important town of Moesia Superior, lying somewhere between the mouth of the Maros, and connected with Constantinople by a highroad which passed through Naisus. (Itin. Ant. p. 133; Itin. Hierosol. p. 564.) It was the head-quarters of the Legio VII Claudia. (Ib.; cf. Entrop. ix. 13; Procop. de Aed. iv. 6. p. 287; Theophyl. i. 5, viii. 12, &c.) By the later Greeks the name is written Βασιλακος. Various identified with Ram or Rama, and Kostolac. (Cf. Marsili, Danub. ii. p. 10; Mannert, vii. p. 78.)

VIMAECIUM (Oiomybaio, Ptol. ii. 6. § 50), a town of the Vaccei in Hispania Tarraconensis, to the E. of Pallancus. (Itin. Ant. pp. 449, 458.) Identified with Valerodurum or Becovacium. [T. H. D.]

VINCEIA, a town of Moesia Superior, between Mons Aearus and Margum, and 6 miles from the former. (Itin. Ant. p. 132.) In the Itin. Hierosol. p. 564) it is called Vengeius or Vingicium. Lapie identifies it with Semendria. [T. H. D.]

VINCUM. [Ringum.]

VINDA (Ουίξα, Ptol. v. 4. § 7), a place in Galatia, between Pesinus and Ancyra, near the modern Ρέθυνος. (It. Ant. pp. 201, 202) [L.S.]

VINDALIUM, or VINDALIUM (Ουίξαθα, in Gallia Narbonensis, a place where Domitius Alernarius defeated the Allobrogos, B.C. 121. [Gallia Transalpina, Vol. i. p. 954.) Strabo (iv. p. 185) says that Vindalum is at the confluence of the Sulgas [Sulga] and the Rhône. Florus (iii. 2) names this river Vindelicus or Vindelicus. The Sulgas is the Sorgue, D’Anville, relying, as he often does, on a mere resemblance of name, would place Vindalum at Vediene, which is about a mile from the junction of the Sorgue and the Rhône. Others would place Vindalum at Port de la Trille, the place where the Sorgue joins the Rhône. [G. L.]

VINDAULITIA (Ουίξαλωντα, Ptol. ii. 8. § 1), and placed by Ptolemy between the mouth of the Hierus [Hierius] and the Promontorium Gobaeum. D’Anville supposes the Vindana to be the bay of Morôbian, at the bottom of which was the capital of the Veneti, now Vannes. Other geographers have made other guesses; the bay of Donacum, the mouth of the Brivet, and others still. [G. L.]

VINDELICIA (Ουίδελικα or Βαελικα), the most western of the four Dalmatian provinces of the Roman empire. In the time of Augustus, it formed a distinct province by itself, but towards the end of the first century after Christ it was united with Raetia. At a still later period the two countries were again separated, and Raetia Proper appears under the name Raetia Prima, and Vindelicia under that of Raetia Secunda. We have here to speak only of the latter or Vindelicia, as it appears in the time of Augustus, when it was bounded on the north by Germania Magna, that is, by the Danube and the Vallum Hadriani or Limes, on the west by the territory of the Helvetii, on the south by Raetia, and on the east by Noricum, from which it was separated by the river Oenus (Инн). The line of demarcation between Vindelicia and Raetia is not mentioned anywhere, but was in all probability formed by the ridge of the Rhetaetic Alps. Vindelicia accordingly embraced the north-eastern parts of Swizerland, the south-eastern part of Baden, the southern part of Wurttemberg and Bavaria, and the northern part of Tirol. (Ptol. ii. 12. § 1, 13. § 1, viii. 7. § 1; Sext. Ruh. 8; Agathem, ii. 4.) The country is for the most part flat, and only its southern parts are traversed by offshoots of the Rhetaetic Alps. As to the products of Vindelicia in ancient times, we have scarcely any information, though we are told by Dion Cassius (liv. 22) that its inhabitants carried on agriculture, and by other authors that the country was very fertile. (Solin. 21; Iud. Orig. l. 4.) The chief rivers of Vindelicia are; the Danube, the upper part of which flowed through the country, and farther down formed its boundary. All the other rivers and tributaries of the Danube, such as the Iargus, Gentia, Licus, Vindius, Isaris, and the Oenus, which separated Vindelicia from Noricum. The Lucas Brigantinius in the south-west also belonged to Vindelicia.

The inhabitants of Vindelicia, the Vindelici, were a kindred race of the Rhaeti, and in the time of Augustus certainly Celts, not Germans, as some have supposed. Their name contains the Celtic root Vind, which also occurs in several other Celtic names. (Cf. Vindobona, Vindelinus, Vindemus, Vindelicio, and others. (Zens, Die Deutschen, p. 228, foll.; Dienesbach, Celtica, ii. p. 134, foll.) Others, without assuming that the Vindelici were Germans, believe that their name is connected with the German Wenden, and that it was used as a general designation for nations or tribes that were not Germans, whence the modern Wend and also the name of the Vandal or Vindili. (Comp. Horat. Carm. iv. 4. 18; Strab. iv. pp. 193, 207, vii. pp. 293, 313; Tac. Ann. ii. 17, Hist. iii. 5; Suet. Aug. 21; Vell. Pat. ii. 39; Plin. iii. 24.) After their subjugation by the Tiberes, many of them were transplanted into other countries. (Cf. Tac. vii. p. 287; Dom Cass. liv. 22.) The principal tribes into which, according to Strabo, Pliny, and Ptolemy, the Vindelici were divided, were; the Briganti, Limnicatæ, Leuni, Consuntæ, Beneacum, Breuni, and Licatit. Their more important towns were; Augusta Vindelicorum, their capital, Regium, Arbor Felix, Brigantium, Vemania, Campodannum, Abodiaeum, Abusina, Quin-tiana Castra, Batava Castra, Vallatun, Isinsca, Rons Oeni, and a few others, which are treated in separate articles. (Comp. Bayer, Der Obergermanische Kreis Bayerns unter den Romaren, Augsburg, 1800; J. Becker, Drusus und die Vindelicier, in Schmidt’s Philologus, vol. 119, foll.)

VINDELICAE, a place in Upper Moesia, on the road from Naisus to Scodra. (Tab. Peut.) [T. H. D.]

VINDERAS (Ουίνδερας ποταμων ένδολος, Ptol. ii. 2. § 8), a little river on the E. coast of Hibernia, perhaps that which falls into Strangford Bay; but Camden (p. 1403) places it more to the N. near Carrickfergus. [T. H. D.]

VINDILL (Vandel.)

VINDLIS INSULA, on the Atlantic coast of
VINDIMUM.

Vindinum, is mentioned in the Maritime Itin. under Uxants and Sina or Sema. Middle age documents prove that the island of Gotland was also known as Gudel, and that the name Vinlandes, the interlocution of Go or G and W or V being common. [VAPIN-

cum.] Though this is the only evidence, it is suf-

ficient, for the names agree, and Belle-Bo is not likely to have been omitted in the Itin., when smaller islands along the coast are mentioned. [G.L.]

VINDINUM. [SOUNDNUM.]

VINDIBUS MONS (Obidubios, Ptol. vii. 1. § 28), a chain of mountains in Minohitis, extending NE. and SW. nearly, along the N. bank of the Namadus (now Nerburuddo), in lat. 21°, long. 117° 30', high. The chain was formed by the rivers Minus and Vyder, and the principal watershed of the Nerbur-

dud and Tunzi, which flow into the Indian Ocean, a little to the N. of Bombay, and of the Soane and An-

domati, which are great tributaries of the Ganges. [V.

V"INDIVUS or VINNIUS (Oidubios, Ptol. ii. 6. § 21), a mountain in Hispania Tarracoensis, which ran in a W. direction from the Saktus Vasi-

comm and formed the boundary between the Can-

tabri and the Astures. It formed, therefore, the W. portion of the Cantabrian chain. The Iberus had its source in it. [T. H. D.]

VINDOBALA (Sarum, Ptol. vi. 119), a station on the wall of the Danube in Britain, which was garrisoned by the Cohors i. Frigia-

gorum. Camden (p. 1090) identifies it with Wal-

fisland; whilst Horsley (p. 103) and others take it to be Ruthecaster. (Not. Imp.; Geo. Rav. v. 31.) [VALLUM ROMANUM.] [T. H. D.]

VINDOBONA or VINDOBONA (Oidubobona; Vienna), a town on the Danube in Upper Pannonia, was originally a Celtic place, but afterwards became a Roman municipium, as we learn from inscriptions, (Gruter, Inscript. p. 4.) This town, according to Ptolemy (ii. 15. § 3) for some time bore the name of Juliasbona (Touulobona), was situated at the foot of Monte Catus, on the road running along the right bank of the river, and in the course of time became one of the most important military stations on the Danube; for after the decay of Car-

nuntum it was not only the station of the principal part of the Danubian fleet, but also of the Legio x. Gemina. (It. Ant. pp. 233, 245, 261, 266; Top. Pont.; Aurel. Vict. de Caesar. 16; Agathem. ii. 4; Jornald. Gt. 50, where it is called Vindobona.) Vindobona suffered severely during the invasion of the Huns under Attila, and soon after became a flourishing place, especially under the domination of the Longobards. (Jornald. l. c.) It is well known that the emperor M. Aurelius died at Vindobona. (Aurel. Vict. de Caesar. 16, Epit. 18; comp. Fischer, Brevis Notice Urbis Vindobonae, Vindobonae, 1767; Von Hornear, Geschichte Wiens, i. p. 43, fol. ; Muehar, Novum, vol. i. p. 166, fol.) [L.S.]

VINDOGODLAI, a place in Britannia Romana, probably in the territory of the Belgae on the road from Venta Belgarum to Issa Dumnoniunc. (Itin. Ant. pp. 483, 486.) The Geogr. Rav. (v. 31) calls it Bin-

doglated. Some place it at Pontbridge, near Old 

Serum, where are remains of Roman fortifications. Camden, however (p. 61), identifies it with Winaburum, and Horsley (p. 473) with Cranbrook. [T. H. D.]

VINDOLANA, a station on Hadrian's boundary wall in Britain, where the Cohors iv. Gallorum lay in garrison. (Not. Imp.) By the Geo. Rav. (v. 31) it is called Vindolanda. Camden (p. 1087) identifies it with Old Winchester, Horsley (p. 89, &c.) with Little Chester. [VALLUM ROMANUM.] [T. H. D.]

VINDOMAGUS (Obidubarios), in Gallia Narro-

densis, one of the two cities which Ploweny (i. 10. § 140) and Jerome (in loc.) name Arcoecemia. There is nothing to determine the position of Vindomagus, except the fact that there is a town Vigan, where some remains have been found. Le Vigan is NW. of Nîmes, and on the southern border of the Cé-

vennes. [G. L.]

VINDOMIS or VINDOMUM, a place belonging probably to the Belgae in Britannia Romana on the road from Venta Belgarum to Calleva. (Itin. Ant. pp. 483, 486.) Horsley (p. 439) identifies it with 

Farnham; others have sought it at E. Sherborne, and at W. Sherborne. [T. H. D.]

VINDOMO, a town of the Brittoni in the N. part of Britannia Romana. (Itin. Ant. p. 464.) It is commonly identified with Ebodycester at the NW. boundary of Durham (Horsley, p. 398), where there are remains of a fort, and where Roman anti-

quities have been discovered. (Cf. Camden, p. 1086; Philos. Trans. No. 278.) [T. H. D.]

VINDONISSA, in Gallia, is mentioned by Tacitus (Hist. iv. 61, 70). It was the station of the twenty-

first legion, a.d. 71, which entered Rhetaia from Vindonissa. The place is Vindisch, in the Swiss canton of Appenzel, near the junction of the Aar, Rhone, and Sihl; and it was once a large place, and many Roman remains and coins have been found there. In the Bärnagysche there are traces of an amphitheatre, and on the road from Brumwiek-

to Königfelden there remains of an aqueduct. The name of the XXI. Legion has been discovered in inscriptions found at Vindisch. Near Windisch is the former convent and monastery of Königfelden, where some of the members of the Habsburg family are buried. Several Roman roads help to fix the position of Vindonissa. The Table places it at the distance of xxii. from Augusta Rauracorum (Augur) [Augusta Rauracorum]; and another road went from Vindonissa past Viderum (Vid-

durum) to Arbor Felix in the Rhaetia. Vindonissa is named Vindio in a Panegyric of Constantine by Eumenius, and Caesrum Vindonisense in Maxima Se-

quorum in the Notitia of the Gallic Provinces. When Christianity was established in these parts, Vindonissa was the see of the first bishopric, which was afterwards removed to Constanz. In the third and fourth centuries Vandals and Alamanni damaged the town. The Huns afterwards ravaged Vindonissa, who was the Frankish king of this place, destroyed it in the sixth century. (D'Anville, Notice, &c.; Ernesti, Note auf Teutol. Hist. iv. 70; Neigebaur, Neuesten Gemälde der Schweiz.) [G. L.]

VINIOLOGAE, a place of the Oretani in Hispania Tarracoensis, between Acctauci and Mentes Basta. (Itin. Ant. p. 402.) Variousy identified with Havi-

jares and placed as a point on the river Borosa. [T. H. D.]

VINNIUS. [VINDUS.]

VINOVIA (in Ptol. Obiduburio, ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana. (Itin. Ant. p. 465.) Now Bitchester near Bishop Auckland, with remains of Roman walls and other antiquities. (Camden, p. 94.) In the Not. Imp. and by the Geogr. Rav. (v. 31) it is called Vinonia. [T. H. D.]

VINTUM (Ovdovor; Vence), in Gallia Narro-

densis, the chief town of the Venerali. [Nera-

sh.] Inscriptions have been found at Vence with the words civit. vint.; and in the Notitia of the Gallic Provinces it is placed in the Alpes Marit-

mae under the name of Civitas Vindeonensis or
VIENZELA.  

Venicianis. Vienne is in the department of Tar, near the river Var. (V'any, Notice, &c.) [G.L.]

VIENZELA (Ojïjtila), a town of Galatia, in the territory of the Tectases. (Ital. v. 4, § 8. A second town of the same name is mentioned by Ptolemy (v. 5, § 8) in the south-east of Sidia. [L.S.]

VIOLVASCENSI PAGUS. [Martialis.]

VIPITENUM, a town in Raetia belonging to the Veneti, situated between Veldalena and Triticum. (Itin. Aut. pp. 275, 286.) Some place in the Ocer-Wulphel; others identify it with Sterzing on the Einzach, at the foot of the Brenner. [T. H. D.]

VIPOSCIA, a place in Mauretania Tingitana, on the road from Tocolesia to Tingis. (Itin. Aut. p. 23.) Mannert (x. pt. ii. p. 487) supposes that it is the place it is termed Piccia by Melia (iii. 10. sub fin.), and Hircania or Picada by Ptolemy (iv. 1. § 14). The same author identifies it with Verga, whilst lapie takes it to be Sec-el-Abba, and Graberg de Hensso, Dar-el-Elhamara. [T. H. D.]

VIRACELLUM (Bipâkelaw, Ptol.), a town of Etruria, mentioned only by Ptolemy (iii. 1. § 47), who places it among the inland towns in the NW. corner of that country. It is supposed by Cluverius to be represented by Ferruola or Ferrucchias in the mountains between the Savoia and the Magra. (Cluver. Ital. p. 75), but the identification is very doubtful. [E. H. B.]

VIETO (the Wirtoch), a small river in the territory of the Ligati in Vinodulcia, a tributary of the Licus, which it joins a little below Augusto Vinodulcaem. (Paul. Diae. Langob. ii. 13.; Venant. Fort. Vita S. Mart. iv. 646, where it is less correctly called Vindo or Vindea. [L.S.]

VIRGULAE. [Bergule, Vol. I. p. 393, a.]

VIRIBALUM. [Consica, Vol. I. p. 691, a.]

VIRITIUM (Ophirion), a place in northern Germany, mentioned only by Ptolemy (ii. 11. § 27), was probably in the territory of the Sidini, on the site of the modern town of Wrintzen on the Oder. (Wilhelm, Germanien, p. 275.) [L.S.]

VIPRIO'NIX (Obrpokdron, Ptol. ii. 3. § 19), a town of the Cornavii in Britannia Romana, on the road from Deva to Londinium, with a by-road from Maridumnum. (Itin. Aut. pp. 482, 484.) It is the town called Ursicconium in another route of the itinerary (p. 469). Now Wroclaw, with ruins and antiquities. (Cedren, p. 652.) [T. H. D.]

VIPROSINUM. [Verodcenenses.]

VIROGAMES. [Bromagiios.]

VIROSINDUM (Nat. Imp.), a fort or castle at the N. boundary of Britannia Romana and in the territory of the Brigantes, the station of the Colours vri. Nerviorum. Cedren (p.1022) places it near Warwick Cumberland; whilst others seek it on the S. coast of Solway Firth, and at Preston. [T. H. D.]

VIROVICIA, in Galatia, in the tribe Marauus, is placed on a route from Castellum (Cassel) to Turinum (Towneum). The Antonine itinerary fixes it xvi. from each place. The distances in the Table do not agree; but the site is certain. It is in Verow, or Vercov, a large village on the Lyne, 3 leagues from Lilbe in the French department of Nord. In 1514 a medal of C. Julius Caesar was dug up at Verwe, and some time afterwards other medals of the time of the Antonini. There is a tradition also of the remains of an ancient edifice having been seen here, and a fragment of a statue (Bust, Recueil d'Antiquities Romaines et Gauloises trouvées dans la Flambe propement dite, Gand, 1804.) [G.L.]

VIROYEDRUM (Oivjepisav Bopov, Ptol. ii. 3. § 5), a promontory on the N. coast of Britannia Barbarum, and the most N. point of the island. It is apparently the present Dangby Head. (Camden, p. 1:280.) [T. H. D.]

VIRUNI. [Varini.]

VI'RUNUM (Oivjepowovo). 1. One of the most important towns in the interior of Noricum, south of Noria, and on the road from Aquileia to Lamiacum. (Plin. iii. 27; Ptol ii. 14. § 3; Steph. Byz. s. v. Beipovos; Suid. s. v. Beipovos; It. Aut. p. 276; Tab. Peut., where it is called Varunum.) But notwithstanding its importance, which is attested by its widely scattered remains about the village of Marisvan near Klagenfurt, no details about it are known, except, from inscriptions, the fact that it was a Roman colony, with the surname of Claudia. (Gruter, Inscript. p. 569; Orelli, Inscript. no. 1317, 5074; comp. Orelli, Noricum, vol. i. p. 271.)

2. A town in the country of the Sidini in Germany, of an unknown site, and mentioned only by Ptolemy (ii. 11. § 27). [L.S.]

VIRUS (Oivjepov eVatla), Ptol. ii. 6. § 3), a river in the N. part of the W. coast of Hispania Tarraconensis. Variously identified with the Lanimore and the Alones. [T. H. D.]

VISBURGH (Oivjepovopir), a tribe in the south-east of Germany, about the sources of the Vistula, and placed by Ptolemy (ii. 11. § 21) near the Quadri, in the district to which Tacitus (Germ. 43) assigns the Gothini. [L.S.]

VISONTUM (Oivjepotwv, Ptol. ii. 6. § 54), a town of the Pelopenes in Hispania Tarraconensis, perhaps Vinesca or Rinneca. [T. H. D.]

VISPI (Oivjepo), a tribe in the south-west of Germany, is mentioned only by Ptolemy (ii. 11. § 10): nothing certain can be said as to the precise district they inhabited. [L.S.]

VISTULA, VISTILLUS (Oivjepotiva, Oivjepodiva: Vistula or Weichsel), one of the great rivers of Germany, separating, according to Ptolemy (viii. 10. § 2; comp. ii. 11. § 4, iii. 5. § 5). Germany from Sarmatia, while Pomp. Mela (iii. 4), who calls the river Visula, describes it as forming the boundary between Scythia and Sarmatia. It cannot be expected that either Greeks or Romans should have possessed much information about this distant river. Ptolemy says that it had its origin in the Hercynia Silva, and discharged itself into the Sarmatian ocean (the Baltie), and Marcianus (p. 53) ascribes to it a course of from 1850 to 2000 stadia in length. This is all the information to be gathered from the ancient authors. (Comp. Plin. iv. 27, s. 28; Solin. 20; Geogr. Rav. iv. 4; Amm. Marc. xxii. 8, where it is called Bisula; Jornand, Get. 3.) Jorane in two passages (Get. 5 and 17) speaks of a river Visca which some geographers regard as identical with the modern Warta, a tributary of the Vistula, but it is probably no other than the Vistula itself, whose modern German name Weichsel seems to have been formed from Visca. [L. S.]

VISURGIS. (Oivjepovovpwos, Bisurpis, Oivjepowvos, or Oivjepovovpis: Wezer), one of the principal rivers in north-western Germany, which was tolerably well known to the Romans, since during their
VITIELLA.

wars in Germany they often advanced as far as its banks, and at one time even crossed it; but they seem to have been unacquainted with its southern course, and with its real origin; for it is formed by the confluence of the Wierra and the Fulda, while Tylenny (ii. 11. § 1) imagined that it was its southern source. Moreover, Vitellius, in his letter (p. 51) states that its length amounted to from 1600 to 1780 stadia. The Visarigis flowed into the German Ocean in the country of the Chauci. (Comp. Pomp. Mela, iii. 4; Plin. iv. 27; Tac. Ann. i. 70; ii. 9; Vell. Pat. ii. 105; Suid. Apoll. Carus. xxiii. 243; Strab. vii. p. 291; Dion Cass. xlii. 33, lv. 1, 2, 8, lv. 18.)

[L. S.]

VITIELLA (Bovellia, Steph. B.; Ect. Brevi-\(\text{\textdagger}\)vior, Villeneuveis), an ancient town of Latium, which was, however, apparently situated in the territory of the Aequi, or at least on their immediate frontiers, so that it is hard to determine whether it was properly a Latin or an Aequian town. But the circumstance that its name is not found in the list of the cities of the Latin League given by Dionysius (v. 61) is strongly in favour of the latter supposition. Its name is first mentioned by Livy (ii. 39) in the account of the celebrated campaign of Coriolanus, whom he represents as taking Vitellia at the same time as Corbio, Labicum, and Pedum: but in the more detailed narratives of the same campaign by Dionysius and Plutarch, no notice is found of Vitellia. The name is again mentioned by Livy in v. 393, when the city fell into the hands of the Aequi, who surprised it by a night attack (Liv. v. 29). He there calls it "Coloniam Romanam," and says it had been settled by them in the territory of the Aequi; but we have no previous account of this circumstance; nor is there any statement of its recovery by the Romans. A tradition preserved to us by Suetonius recorded that the Roman colony was at one time entrusted to the sole charge of the family of the Vitellii for its defence (Suet. Vitell. 1): but there can be little doubt that this is a mere family legend of the name of Vitellia, as well as of Tolrium and other towns in the same neighbourhood, disappears after the Gaulish invasion, and the only subsequent mention of the name occurs in the list given by Pliny (iii. 5. s. 9) of the cities of Latium which were in his time utterly extinct. The site is wholly uncertain, though it seems probable that it may be placed in the same part of Latium as Tolrium, Bola, Labicum, and other towns on the frontiers of the Aequian territory. It has been placed by Gell at Valmontone, a place which in all probability occupies an ancient site, and this would do very well for Vitellia, but that it is equally suitable for Tolrium, which must be placed somewhere in the same neighbourhood, and is accordingly fixed by Nibby at Valmontone [Tolernum.]

The latter writer would transfer Vitellia to Civitella (called also Civitella d'Olerana), situated in the mountains between Olerana and Subiaco; but this seems decidedly too far distant from the other cities with which Vitellia is connected. It would be much more plausible to place Vitellia at Valmontone and Tolrium at Lugnano, about 3 miles NW. of it, but that Lugnano again would suit very well for the site of Bola, which we are at a loss to fix elsewhere [Bola]. The fact is that the determination of the position of these cities, which disappeared in such early times, and of which no record is preserved by inscriptions or other ancient monu-

COIN OF ULIA.

[V.]

VITIUS [Ute].

VITODORUM or VITUDURUM, in Gallia, is mentioned in an inscription, in which it is said that the emperors Dioecletian and Maximiannus "suum Vitodurenum a solo instauraverunt" The Antonine Itin. places it between Vindonissa (Windisch) and Fines (Filmis) [Itin. Nos. 15.]. At Winterthur in the Swiss canton of Zürich there is in the town library a collection of Roman coins and cut stones, most of which have been found in the neighbourhood of the town and in the adjacent village of Oberwinterthur, which is the site of Vitodurum. (D'Anville, Notice, &c.)

[V.]

VITRICUM (Tervo), a town or village of the Salassi, on the high road leading from Egerdia (Iervica), to Augusta Praetoria (Acosta). It is known only from the Itineraries, which place it 25 miles from Augusta, and 21 from Egerdia (Itin. Ant. pp. 345, 347, 351), but is undoubtedly identical with Tervo; a large village in the Val d'Acosta, at the entrance of the Val Chillon. [E. H. B.]

VIVANTVARUM (Odvavarausium, Pol. iii. 5. § 30), a place in Europea Sarmatia, between the rivers Axios and Tyras. [T. R. D.]

VIVISCI, VIVISCI. [Bituriges Vivisci.]

VIVISCUS, in Gallia. In the Antonine Itin. the name is Bibiscus. The place is Vevey, or near it, in the Swiss canton of Waadt or Vaud. See the article PENNELOCUS. [G. L.]

ULCAEII LACUS (Odvana Epy), a succession of lakes and swamps in Pannonia, between the mouths of the Dravus and Savus. (Dion Cass. iv. 92.) They seem to be the same as the Phalas Huiles mentioned by Aurelius Victor (Epit. 41) as being near Cilaeus in Pannonia. (Comp. Zosim. ii. 18.) Those lakes now bear the name of Laxiacae. [L. S.]

ULCISIA CASTRA, a fort in Pannonia, on the road running along the right bank of the Danubius from Aquincum to Brégio (It. Ant. p. 269), is now called Szent Endre. [L. S.]

ULIA (Ovalia, Strab. iii. p. 141), a town in Hispania Baetica, on a hill, on the road from Gadis to Corduba. (Itin. Ant. p. 412.) It was a Roman municipality, with the surname of Fidentia, and belonged to the jurisdiction of Corduba (Plien. iii. 3. s. 4; Hirt. B. H. 3, 4, B. Alc. 61; Dion Cass. xliii. 31.) From inscriptions it appears to be the present Monte Mayor, where there are ruins. (Cf. Morales, Ant. p. 5; Florence, Esq. Saur. x. p. 150, xii. p. 5; coins in Florence, Med. ii. p. 620, iii. p. 130; Mlonnet, i. p. 27, Suppl. i. p. 47.) [T. H. D.]

COIN OF ULIA.

4 P
ULIARUS INSULA.

ULIARUS INSULA (Ethis. Olariemensia, Sidoniaeus Aquitanius), is placed by Pliny in the Aquitanicus Sicilia (iv. 19). It is the Ile d'Oleron, which belongs to the department of Charente Inferieure, and is separated from the mainland by a narrow strait. [G. L.]

ULIZIBERA (Oulisbetes, or Oulisbetta, Ptol. iv. 3. § 37), the Unibusritnnum of Pliny (v. 4. s. 4), a town of Byzacena in Africa Proper, S. of Hadrumetum. [T. H. D.]

ULLA (called by Ptolemy Oila, ii. 6. § 2), a river on the W. coast of Hispania Tarraconensis, which enters the sea between the Minuses and the principal river of Xerium. (Melis. iii. 1.) It is still called Ulla. [T. H. D.]

ULMANETES. [Silvanectes.]

ULMI or ULUS, a place frequently mentioned in the Itineraries as situated in the interior of Lower Pannonia on the road leading from Sicia to Cibalae and Sirmium (It. Ant. pp. 131, 232, 261, 267; It. Hieros. p. 563; Tab. Peut.); but its exact site is uncertain. [L. S.]

ULMUS, a place in Upper Mœsia, between Naissus and Remesiana. (Itin. Hieros. p. 566.) According to the Itineraries near Panoeus (Ptolemy, H. D.)

ULPIANEM I. (Oliapiaus, Ptol. iii. 9. § 6), called also Upliana (Oolaios, Hieroc. p. 656), a town of Upper Mœsia on the southern declivity of Mt. Scopus. It was enlarged and adorned by Justinian, whence it obtained the name of Justinian Sea. (Procop. de Aed. iv. 1. Goth. iv. 25.) It is commonly identified with the present Giustiendi; but Leake (Northern Greece, iii. p. 475) takes that town to represent the ancient Pantalio or Pantalla in Thrace.

2. A place in Dacia, apparently in the neighbourhood of Kasselburg. (Ptol. iii. 8. § 7.) [T. H. D.]

ULTEIR OR PORTU (Neraus, Ptolemy; Ptolemy.

ULUZRAE (Ethis. Ulubrensis), a small town of Latium on the borders of the Pontine Marshes. It is not mentioned in history previous to the establishment of the Roman dominion, but is noticed repeatedly by Latin writers of the best period, though always as a poor and decayed town, a condition which appears to have resulted from its marshy and unhealthy position. Hence Cicero jestingly terms its citizens little frogs (ramunculi, Ep. ad Fam. viii. 16), and both Horace and Juvenal select it as an almost proverbial example of a deserted and melancholy place. (Hor. Ep. iii. 10. 30; Juven. x. 211.) Still it appears from the expressions of the latter, that it still retained the rank of a municipal town, and had its own local magistrates; and in accordance with this, we find the Ubrensenes enumerated by Pliny among the municipal towns of the First Region. (Plin. iii. 5. s. 9.) The same thing is attested by inscriptions (Orell. Inscr. 121—123), and the discovery of these at the place now called Claterna, about eight miles from Velletris, and 53 from Rome, immediately at the entrance of the Pontine Marshes, leaves no doubt that Uluzae was situated somewhere in that neighbourhood. But the village of Cisnera (called in the middle ages Cisterna Neronis), does not appear to occupy an ancient site, and the exact position of Uluzae is still undetermined. (Nabyle, Dintorni di Roma, vol. i. p. 463.) [E. L. B.]

UMBENNUM, in Gallia Narbonensis, is placed in the Jerusalem Itin. between Batiana (Batiana) and Valentia (Valentia). [G. L.]

UMBRAE, one of many tribes placed by Pliny near the mouth of the Indus, adjoining, perhaps within, the larger district of Pattalene (vi. 20. s. 23).

UMBRAVICI, a people of Gallia Narbonensis, who had the Jus Latini. (Plin. iii. 4.) There is no further notice of these people who had this political privilege, except the occurrence of the name Umbrancia or Umbrancia in the Table. [G. L.]

UMBRIA (♀ Ομβρία: Ethis. Umbri, Umbri, Ομ- βρίας), was one of the principal divisions of Central Italy, situated to the E. of Etruria, and extending from the valley of the Tiber to the shores of the Adriatic. The name was, however, at different periods applied within very different limits. Umbria, properly so called, was never directly connected with the Tiber, which formed its W. limit through the greater part of its course, and separated Umbria from Etruria, to the great central range of the Apennines from the sources of the Tiber in the N. to the Monti della Sibilla in the S. But on the other side of this range, sloping down to the Adriatic, was an extensive and fertile district extending from the frontiers of Picenum to the neighbourhood of Ariminum, which had probably been at one time also occupied by the Umbrians, but, before it appears in Roman history, had been conquered by the Gallic tribe of the Semones. Hence, after the expansion of these invaders, it became known to the Romans as "Gallicus aequus," and is always so termed by historians in reference to the earlier period of Roman history. (Liv. xxiii. 14, xxxix. 44.; Cic. Brut. 14, &c.) On the division of Italy into regions by Augustus, this district was again united with Umbria, both being included in the Sixth Region. (Plin. iii. 14. s. 19.) But even Pliny, in describing this union, distinguishes the " aequus Gallicus" from Umbria Proper ("Jungitur his sexta regio Umbriam complexa agrumque Gallicum circa Ariminum," ib.); it is evident therefore that the name of Umbria did not at that time in common usage include the territory on the shores of the Adriatic. In like manner Ptolemy designates the coast from Ancemia to Ariminum (termed by Pliny the "Gallican oras") as "the land of the Semones" (Ptol. iii. 1. § 22), a term which had certainly become inappropriate long before his time. It was according to Pliny (L. c.) this portion of the Gaulish territory which was properly designated as Galia Togata, a name afterwards extended and applied to the whole of Cispaline Gaul. (Hirt. B. G. vii. 24; Cic. Phil. viii. 9, &c.) It was not until the name of Umbria came into general use as including the whole of the Sixth Region of Augustus, or the land from the Tiber to the Adriatic.

Umbria, in this more extended sense of the name, was bounded on the W. by the Tiber, from a point near its source to a little below Orceumium, which was the most southern city included within the province. Thence the L. frontier ascended the valley of the Nar, which separated Umbria from the land of the Sabines, almost to the sources of that river in the great central chain of the Apennines. Thence it followed a line nearly parallel with the main ridge of those mountains, but somewhat farther to the E. (as Camerium, Matricula, and other towns situated on the E. slopes of the Apennines were included in Umbria), as far as the sources of the Aesus (Esino), and then descended that river to its mouth. We know that on the coast the Aesus was the recognised boundary between Umbria and Picenum on the S., as the little river Rubicon was between Umbria and Gallia Cisalpina on the N.
From the mouth of the latter stream the frontier must have followed an irregular line extending to the central range of the Apennines, so as to include the upper valleys of the Saps and Bedessis; thence it rejoined the line already traced from the sources of the Tiber.

All ancient authors agree in representing the Umbrians as the most ancient people of Italy (Plin. iii. 14. s. 19; Flor. i. 17; Dionys. i. 19), and the traditions generally received described them as originally spread over a much more extensive area than that which ultimately retained their name, and occupying the whole tract from sea to sea, including the territories subsequently wrested from them by the Etruscans. That people, indeed, was represented as gaining possession of its new settlements step by step, and as having taken not less than 300 towns from the Umbrians. (Plin. i. c.) This number is doubtless fabulous, but there seems to be good reason for regarding the fact of the conquest as historical. Heerodotus, in relating the Lybian tradition concerning the migration of the Trrhennians, represents the Taurisci as having occupied, at the time of their arrival, by the Umbrians. (Herod. i. 94.) The traditions reported by Dionysius concerning the settlements of the Pelasgians in Italy, all point to the same result, and represent the Umbrians as extending at one period to the neighbourhood of Spina on the Adriatic, and to the mouths of the Padus. (Dionys. i. 16—20.) In accordance with this we learn incidentally from Pliny that Butrium, a town not far from Ravenna, was of Umbrian origin. (Plin. iii. 15. s. 20.) The name of the river Umbro (Umbone), on the coast of Etruria, was also in all probability a relic of their dominion in that part of Italy.

On the whole we may fairly assume as a historical fact, the existence of the Umbrians at a very early period as a great and powerful nation in the northern half of Central Italy, whose dominion extended from sea to sea, and comprised the fertile districts on both sides of the Apennines, as well as the mountains themselves. According to Zenodotus of Trozzen (ap. Dionys. ii. 49), the powerful race of the Sabines itself was only a branch or offshoot of the Umbrians; and this statement is to a great extent confirmed by the result of recent philological researches. (Sabini.)

If the Umbrians are thus to be regarded as one of the most ancient of the races established in Italy, the question as to their ethnological affinities becomes of peculiar interest and importance. Unfortunately it is one which we can answer but very imperfectly. The ancient authorities upon this point are of little value. Most writers, indeed, content themselves with stating that they were the most ancient people of Italy; and apparently consider them as Aborigines. This was distinctly stated by Zenodotus of Trozzen, who had written a historical history of the Umbrian people (Dionys. i. 49); and the same idea was probably conveyed by the fanciful Greek etymology that they were called Ombricians or Ombrions, because they had survived the deluge caused by floods of rain (ἡδρα; Plin. iii. 14. s. 19).

Some writers, however, of whom the earliest seems to have been one Boccinus, frequently quoted by Solinus, represented the Umbrians as of Gaulish origin (Solin. 2. § 11; Serv. ad Aen. xii. 733; Isidor. Orig. ii. 32); and the same view has been maintained by several modern writers, as Bocchius, whom the searches of this latter kind have indeed of late years thrown much light upon the affinities of the Umbrian language, of which we possess an important monument in the celebrated tables of Iguvium. (Iguvium.) They have clearly established, on the one hand its distinctness from the language of the neighbouring Etruscans, on the other its close affinity with the Ocean, as spoken by the Sabellian tribes, and with the old Latin, so that the three may fairly be considered as only dialects of one and the same family of language (Trism. p. 86.) The same researches tend to prove that the Umbrian is the most ancient of these cognate dialects, thus confirming the assertions of ancient writers concerning the great antiquity of the nation. But, while they prove beyond a doubt that the Umbrian, as well as the nearly related Ocean and Latin, was a branch of the great Indo-Turtonic family, they show also that the three formed to a great extent a distinct branch of that family or an independent group of languages, which cannot with propriety be assigned to the Celtic group, any more than to the Turtonic or Slavonic.

The history of the Umbrians is very imperfectly known to us. The traditions of their power and greatness all point to a very early period; and it is certain that after the occupation of Etruria as well as of the plains of the Padus by the Etruscans, the Umbrians shrank up into a comparatively obscure mountain people. Their own descendants the Sabines also occupied the fertile districts about Rieti and the valley of the Velinus, which, according to the traditions reported by Dionysius, had originally been held by the Umbrians, but had been wrested from them by the Pelagians (Dionys. ii. 49.) At a much later period, but still before the name of the Umbrians appears in Roman history, they had been expelled by the Sesostrian Gauls from the region on the shores of the Adriatic. Livy indeed represents them as having previously held also a part of the territory which was subsequently occupied by the Boians, and from which they were driven by the invasion of that people (Liv. v. 35).

It was not till the Romans had carried their arms beyond the immediate neighbourhood of the city, and penetrated beyond the barrier of the Ciminian forest, that they came into contact with the Umbrians. Their first relations were of a friendly nature. The consul Fabius having sent secret envoys through the land of the neighbouring Etruscans into Umbria, received from the tribe of the Camerets promises of support and assistance if he should reach their country. (Liv. ix. 36.) But the Umbrian people seem to have been divided into different tribes, which owned no common government and took different lines of policy. Some of these tribes made common cause with the Etruscans and shared in their defeat by Fabius (Liv. ix. 37.) This disaster was followed by two other defeats, which were sustained by the Umbrians alone, and the second of these, in which their combined forces were overthrown by the consul Fabius near Mevania (Liv. c. 308), appears to have been a decisive blow. It was followed, we are told, by the submission of all the Umbrian tribes, of whom the people of Oercinum were received into the Roman alliance on peculiarly favourable terms. (Liv. ix. 39, 41.)

From this time we hear no more of hostilities with the Umbrians, with the exception of an expedition against a mere marauding tribe of mountaineers (Liv. x. 38.), and when the Samnite leader Gellius Egnatius succeeded in organizing a general confederacy against Rome, in which the Umbrians and Sesanian Gauls took part, as well as the Etrus-
Ombrians, the ancient Ager Gallicus, was now again separated from Umbria, and became known by the name of Picenum Annonarium. (Mommsen, de Lib. Col. p. 211.)

Of the history of this as a nation during their period of independence we know almost nothing. We learn only that they enjoyed the reputation of brave and hardy warriors; and the slight resistance that they opposed to the Roman arms was probably owing to their want of political organisation. So far as we learn, they appear to have been divided into several tribes or "populi," such as the Camerets, Sarsinates, &c., each of which followed its own line of policy without any reference to a common authority. No trace is found in history of the existence among them of any national league or council such as existed among the Etruscans and Latins; and even where the Umbrians are spoken of in general terms, it is often doubtful whether the whole nation is really meant.

The physical characters of Umbria are almost wholly determined by the chain of the Apennines, which, as already described, enters the province near the sources of the Tiber, and extends thence without interruption to the lofty group of the Monti della Sibilla (the ancient Mons Fiscellus) at the sources of the Nar, and on the confines of Picenum and the land of the Sabines. The Apennines do not rise in this part of the chain to so great an elevation as they attain farther south, but their principal summits within the Umbrian territory range from 4000 to 5500 feet in height; while their numerous ramifications fill up a space varying from 30 to 50 miles in breadth. A very large portion of Umbria is therefore a mountain country (whence it is termed "montana Umbria") by Martial, iv. 10), though less rugged and difficult of access than the central regions of Italy farther to the S. On the W. the mountain district terminates abruptly on the edge of a broad valley or plain which extends from near Spoleto to the neighbourhood of Perugia, and is thence continued up the valley of the Tiber as far as Città di Castello. But beyond this plain rises another group of hills, connected with the main chain of the Apennines by a ridge which separates Spoleto from Terni, and which spreads out through almost the whole extent of country from the valley of the Nar to that of the Tiber. It is on the outskirts of the valley or underfalls of this range that the ancient Umbrian cities of Tuder and Ameria were placed. The broad valley between this group and the main mass of the central Apennines is a fertile and delightful district, and was renowned in ancient times for the richness and luxuriance of its pastures, which were watered by the streams of the Tima and Clitunnum. Here we find within a short distance, none other than the towns of Treba, Hispellum, Mevania, and Assismum. This district may accordingly be looked on as the heart of Umbria properly so called.

On the E. of the central chain the Apennines descend more gradually to the sea by successive stages, throwing off like arms long ranges of mountains, sinking into hills as they approach the Adriatic. The valleys between them are furrowed by numerous streams, which pursue nearly parallel courses from SW. to NE. The most considerable of these are the Arsus (Erino), which formed the established limit between Umbria and Picenum; the Sena, which flowed under the walls of Senna Gallica (Sinigorgia); the far more celebrated Metaurus, which entered the sea at Fano Urbanum (Fano); the Pisaurus, which gave name to the city of Fi-
saurum (Pesarò); the Cristiumus, now called the Conca; and the Ariminus (Mar eccia), which gave its name to the celebrated city of Ariminum, and seems to have been regarded by Pliny as the northern boundary of Umbria, though that limit was certainly marked at an earlier period by the far-famed though trifling stream of the Rubicon. The river Saps also flowed through the Umbrian territory in the upper part of its course, and gave name to the Samnia Tribus, mentioned by Livy as one of the divisions of the Umbrian nation.

All the waters which descend on the W. of the Umbrian Apennines discharge themselves into the Tiber. None of them are considerable streams, and the Tenia and Clitumnus are the only two the ancient names of which have been preserved to us. The Nai, a much more important river, the sources of which are in the Sabine territory, seems to have formed the boundary between Umbria and the land of the Sabines, through a considerable part of its course; but it entered the Umbrian territory near Interamna (Torre), and traversed it thence to its junction with the Tiber.

Two principal passes crossed the main chain of the Apennines within the limits of Umbria, and served to maintain the communication between the two portions of that country. The one of these was followed by the main line of the Flaminian Way, which proceeded almost due N. from Forum Flaminii, where it quitted the valley of the Clitumnus, and passed by Nuceria, Tadum, and Helvillum, to the crest of the mountain chain, which it crossed between the last place and Cales (Cogli), and descended by the narrow ravine of the Furlo (Intercisa) into the valley of the Metaurus, which it then followed to the Adriatic at Fano (Fanum Fortunae). This celebrated road continued throughout the period of the Roman Empire tobe the main line of communication, not only from the plains of Umbria to the Adriatic, but from Rome itself to Ariminum and Casalpina Gaul. Its military importance is sufficiently apparent in the civil war between Vitellius and Vespasian. (Tac. Hist. i. 86, iii. 50, 52, &c.) Another line of road giving another route to the same place ran nearly due N. at Nuceria, and, turning abruptly to the E., crossed a mountain pass to Prolaqueum (Fiorace), in the valley of the Potenza, and descended that valley to Septempedia in Picenum (S. Sacerino), and thence to Ancona. This pass has been in modern times wholly abandoned. The present road from Rome to Ancona turns to the E. from Foligno (Ful ginium) and crosses the mountain ridge between that place and Camerino, descending to Tofentino in the valley of the Chienti (Fusor).

The towns of Umbria were numerous, though few of them bore much municipal importance. 1. On the W. of the Apennines, and beginning with those nearest to Rome, were: Orciculum, near the left bank of the Tiber; Narnia and Interamna, on the banks of the Nar; Amerlia and Caisulae, a few miles to the N. of Narnia; Tudum, on a hill on the left bank of the Tiber; Spoletum, in the hills which separate the valley of the Marovgia from that of the Nar; Treba, Meyania, Hispellum, Fulchinium, and Assisi, all situated in or bordering on the broad valley above mentioned; Arna and Tiferentum Tiberinum in the upper valley of the Tiber, and Iovis uberi, at a short distance from it. Vessonica was probably situated at Civitella di Benevento, also in the valley of the Tiber. On the Flaminian Way, exactly at the entrance of the mountains, stood Forum Flaminii, and higher up, on the same line of road, Nuceria, Tadum, and Helvillum.

2. On the E. of the central ridge of the Apennines, but still high up among the mountains, were situated Camerium, near the sources of the Flusus; Pro laqueum (Fiorace), near those of the Potentia; Pitulum (Pitoli), in the same valley; Mattiaca and Attidium, both in the upper valley of the Aesia; Sentinum, in a lateral branch of the same valley; Tuficum and Suasa, both of them in the valley of the Cesum; Calles (Coglia), on the Flaminian Way; Tiferentum Metaurencum and Urbium Metaurensis, both of them in the upper valley of the Metaurus; Forum Sempronii (Fossombrone), lower down in the same valley; Umbium Horticense (Urbino), between the valleys of the Metaurus and the Pisaurum; Sentinum (Sentino), near the sources of the latter river; Pitumini Pisaurense, probably at Pingine in the same valley; Sarsina, in the upper valley of the Saps; and Meyancia, which is fixed by Clucerius, on the faith of inscriptions discovered there, at Galeatea, in the upper valley of the Bedesia or Ronco (Cluer. Ital. p. 623), and is therefore the most northerly town that was included in Umbria.

3. Along the coast of the Adriatic were the important towns of Sena Gallica, Fanum Fortunae, Pisaurum, and Ariminum. To the above must be added Aeneum or Aenium (Josi), on the left bank of the river of the same name, and Ostrea, the rains of which are said to exist between the rivers Cesano and Nigolo. (Abaken, Mittel-Ital. p. 41.)

In addition to the above long list of towns, the position of which can be assigned with tolerable certainty, the following obscure names are enumerated by Pliny among the towns or communities of Umbria still existing in his time: the Casentillani. Dolates surname Salentini, Forquilienses named Con cubienses, Forribrentiani, Peletini, Vinadates, and Viventani. The above towns being totally unknown, the correct form and orthography of the names is for the most part uncertain. The same is the case with several others which the same writer enumerates as having in his day ceased to exist. (Plin. ii. 14. s. 19.) Strabo also mentions a place called Laredum as being situated on the Flaminian Way, in the neighborhood of Narnia and Ocreium (v. p. 227), which is otherwise wholly unknown, and the name is probably corrupt.

Of the natural productions of Umbria the most celebrated were its cattle, especially those of the valley of the Clitumnus [Clitumnum] but its mountain tracts afforded also pastureage to flocks of sheep, which were driven southwards as far as Metapontum and Heraclea. (Var. R. ii. 9. § 8.) The lower portions of the country abounded in fruit-trees, vines, and olives; but when Propertius teritis his native Umbria " terris fertillis uberibus," this can be understood only of the tracts on the W. of the Apennines, of which he is there speaking (Propert. i. 22. 9), not of the more extensive mountain regions.

The name of Umbria is still given to one of the provinces of the Papal States, of which Spoleto is the capital; but this is merely an official designation, the name having been wholly lost in the middle ages, and being no longer in use as a popular appellation. (C. F. R. ii. 349.)
UNELLI.

has a course of about 30 miles in a SSW. direction till it flows into the Tyrrhenian sea, about 16 miles N. of the promontory of Monte Argentario. Play terms it a navigable river ("navigatorium capax"), and Batinius describes it as forming at its mouth a tranquil and secure port, (P. l. 5. 5. s. 8; Rutil. H. i. 337—340.) It flows near the modern city of Grosseto, and within a few miles of the ruins of Usellia. The name of Umbro is considered to be connected with the Umbrians, who held this part of Italy previous to its conquest by the Etruscans: and Pliny, the coast district extending from its mouth to Talamo, was still known as the "tractus Umbriacae." (Plin. L. c.) [E. H. B.]

UNELLI or UNELLI (Ουσσάλια), one of the Armaric or maritime states of Gallia. (B. G. iii. 34. ii. 11.) Caesar mentions them with the Veneti, Osanni, Curiosolitae, and other maritime states. The Unelli and the rest submitted to P. Cassius in B.C. 57; but in B.C. 56 it was necessary to send a force again into the country of the Unelli, Curiosolitae, and Lexovii.

Q. Titurius Sabinus had the command of the three legions who were to keep the Unelli and their neighbours quiet. The commander of the Unelli was Viridovix, and he was also at the head of all the forces of the states which had joined the Unelli, among whom were the Aulerici Eburowices and the Lexovii. The force of Viridovix was very large, and he was joined by desperate men from all parts of Gallia, including those who were too idle to till the ground. The Roman general entrenched himself in his camp, and made the Galli believe that he was afraid and was intending to slip away by night. The trick deceived the Galli, and they attacked the Roman camp, which was well placed on an eminence with a sloping ascent to it about a mile in length. On the Galli reaching the Roman camp exhausted by a rapid march up the hill and encumbered with the fassines which they carried for filling up the ditch, the Romans called out by two gates and parried the enemy well for their temerity. They slaughtered an immense number of the Galli, and the cavalry pursuing the remainder were victorious. This severe blot of arms is told clearly in the Commentaries.

The Unelli sent a contingent of 6000 men to attack Caesar at the siege of Alesia. (B. G. vii. 75.)

Ptolomy (ii. 8. § 2) names Crotacatum the capital of the Veneti. [CROCATOEM.] The people occupied the peninsula of Cotentin or Cotanin, which is now comprehended in the department of La Manche, except a small part which is included in the department of Calvados. [G. L.]

UNINSIG, according to a reading in Tacitus (Ann. ii. 70), a river in the north-west of Germany, but the correct reading in that passage is ad Amni- sium, as Ritter has shown in his note upon it, Uninsiun being only a conjecture of Altung manufactured out of the modern name of a river called Uurse or Humes. [L. S.]

VOBAIXA [Brixia].

VOCANUS AGER, a district in Africa Prapris, between Carthage and Thapsus. (Liv. xxxiii. 48.) [J. E.]

VOCARIUM or VACORIUM (Ούκοριογαριος), a place in Noricum, on the great road leading from Augusta Vindelicorum to Aemona. (Ptol. 14. § 3; Tab. Ptol.) Its exact site is marked of conjecture only. [L. S.]

VOCATES. [VASATES.]

VOCKETUS MONS. This name occurs in Tacitus (Hist. i. 68), and nowhere else. The history shows that Tacitus is speaking of the country of the Helvetii. The Vockeins is conjectured to be that part of the Jura which is named Boetberg. The road from Bâle runs through the Frickthal over the Boetberg to Baden and Zurich. The Helvetii fled from Cecina (A. D. 70) into the Vockeins, where many were caught and massacred. Avetium, the chief city (caput gentis), surrendered to Cecina. [AVENTICUM.] It has been proposed to write Vosges for Vockeins in the passage of Tacitus; but there is no reason for the alteration. [G. L.]

VOCONIUS FORUM. [FORUM VOCONIT.]

VOCOCTHI (Ουσσόρκτοι), a people of Gallia Narbonensis, between the Rhone and the Alps. The only city which Ptolomy (ii. 10. § 17) assigns to them is Vasio [Vasiol]. On the north they bordered on the Allobroges, as we learn from Caesar's march (B. G. i. 19). Strabo places the Cavares west of the Voccithi, but he has not fixed the position of the Cavares well [Cavares]. The position of the Voccithi, and the extent of their country, are best shown by looking at the position of Vasio, which was in the south part of their territory, and of Dea [Dea], which is in the north part, and Lucas Augusti, which lies between them [Lucus Augusti]. In the Notitia of the Gallic Provinces we find both Civitis Deantium and Civitas Vasisomerium or Vasisomerium.

The Voccithi were between the Jura and the Durance, their southern limit being probably a little south of Vaison. D'Anville supposes that the Voccithi occupied the diocese of Vaison and Die, and also a part of the country comprised in the diocese of Gap [Vapincun], and a part of the diocese of Sisteron, which borders on Vaison. Pliny (iii. 4) calls the Voccithi a "Civitas foederata," a people who had a "foedus" with Rome; and besides the chief places, Vasio and Lucas Augusti, he says they have nineteen small towns. Pliny (ii. 58) mentions that he had been in the country of the Voccithi, where he saw an aerolite which had fallen in "Arvernium" and which he perhaps be "delapsum"). The Voccithi occupied the eastern part of the department of Drôme, which is a mountainous country, being filled with the lower offsets of the Alps, and containing numerous valleys drained by mountain streams. Part of the country is fitted for pasture. Silius Italicus (iii. 466) has—

"Tum faciles campos, jam rara Voscita capris,"

for he makes Hamilcar pass through the Voccithi to the Alps, as Livy (xxi. 31) does. [G. L.]

VODOBIRACUM, in Gallia, is the first place in the Rhins, on the road from Bagacum (Bregius) to Adnatica (Tongers). This remarkable Roman road is called the Chaussee de Breguett, or the Haut Chemin. The distance of Vodobiracum from Bregius is xii., and the place is supposed to be Vodrui or l'Eindre. (D'Anville, Notice, etc.) [G. L.]

VOGESUS. [VOGSEUS.]

VOLANCA. [SAMNICA.]

VOLANDUM, a castle in Armenia Major, lying a day's journey W. of Artaxata. (Tac. Ann. xiii. 39.) [T. H. D.]

VOLATERRAE (Ουσσαλετρας: Etruscan; Volterras: Volterra), one of the most important and powerful of all the Etruscan cities. It was situated on a lofty hill, rising above the valley of the Cecina, about 5 miles N. of that river and 15 from the sea. Strabo has well described its remark-
VOLATERRAE.

The city of Volterra was situated on the summit of a hill, which required a steep ascent of 15 stadia from whatever side it was approached, while the summit itself presented a level surface of considerable extent, bounded on all sides by precipices, and crowned by the walls of the ancient city. (Strab. v. p. 223.) The hill on which it stands is, according to modern measurements, more than 1700 English feet in height above the sea, and completely overlooks all the surrounding country, so that the position of the city is extremely commanding. It is indeed the most striking instance of the kind of position which the Etruscans seem to have generally preferred for their cities.

There can be no doubt of the great antiquity of Volterra, nor that it was, from the earliest period of Etruscan history with which we have any acquaintance, one of the twelve principal cities of the Etruscan confederation: this conclusion, to which we should be irresistibly led by the still existing proofs of its ancient greatness, is confirmed by the earliest notice of it that we find in history, where it appears as one of the five Etruscan cities which furnished support to the Latians in their war with Tarquiniius Priscus. (Dionys. iii. 51.) But from this time we find no subsequent mention of Volterrae in history till a much later period. Its remoteness from Rome would indeed sufficiently account for the fact that its name never figures in the long protracted wars of the Romans with the southern Etruscans; but even after the Roman arms had been carried into the heart of Etruria, and the cities of Perusia and Arretium took active part in the wars, we find no mention of Volterrae. In a c. 298, however, we are told that the Roman consul L. Scipio was encountered near Volterrae by the combined forces of the Etruscans (Liv. x. 12), among which there is little doubt that those of the Volterrans themselves were included, though this is not expressly stated. But we do not again find their name noticed in the extant accounts of these wars, and the terms on which they were finally reduced to submission by the Romans are unknown to us. We learn only that in common with most of the Etruscans they were received on the footing of "dependent allies," and that their "sobriety" who in the Second Punic War came forward to furnish supplies for the fleet of Scipio, b. c. 205. On that occasion the Volterrans provided materials for shipbuilding as well as corn. (Liv. xxvii. 45.) From this time we hear no more of Volterrae till the civil wars between Marius and Sulla, when the city espoused the cause of the former, and from its great natural strength became the last stronghold of the Marian party in Etruria, and indeed in Italy. It was besieged by Sulla himself long after every other city in Italy had submitted, and did not yield to his assiduous labour till after a siege or rather blockade of two years' duration. (Strab. v. p. 223; Liv. Epit. lxxxiv.; Cic. pro Rosc. Amer. 7, pro Caeo. 7.) As a punishment for its obstinacy, its territory was confiscated by the conqueror; but it appears that it was never actually divided, and the citizens who had survived the calamities of the war remained in possession of their lands, as well as of the rights of Roman citizens, which had been doubtless conferred upon them in common with the other Etruscans by the Lex Julia in b. c. 89. (Cic. pro Dom. 30, ad Fam. xiiii. 4, 5, ad Atti. i. 19.) It appears that another attempt was made to dispossess them by an agrarian law in the consulship of Cicero, but this calamity was averted from them by the efforts of the great orator, to whom the citizens in consequence became warmly attached (Id. ad Fam. xiii. 4), and it appears probable that Caesar subsequently confirmed them in the possession both of their lands and municipal privileges. (B.)

Volterrae, however, certainly received a colony under the Triumvirs (Lith. Col. 114), but does not appear to have retained the title of a Colonia; it is expressly included by Pliny among the municipal towns of Etruria. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 48.) We find no mention of the name in history under the Roman Empire; but it is certain that the city continued to exist; and it appears again, after the fall of the Western Empire, as a place of importance during the wars of the Goths with Narses (Agath. B. G. i. 11). It continued to subsist throughout the middle ages, and still retains the title of a city and its episcopal see; though it has little more than 4000 inhabitants, and occupies only a small portion of the area of the ancient city. The latter is clearly marked out, having comprised the whole level surface of the hill, a very irregular space, above a mile and a half in length and more than 1000 yards in its greatest breadth; the whole circuit of the ancient walls is above three miles and a quarter. Very large portions of these walls are still visible, and these massive fortifications are incontestably the finest specimens of the kind now existing in Etruria: they resemble in their general style of construction those of Faesulae and Cortona, but are composed of a different material, a soft, arenaceous limestone, which composes the whole summit of the hill on which Volterra stands. This stone, however, like the macigno of Fiesole and Cortona, lends itself readily to the horizontal structure, and is wholly distinct from the hard Apennine limestone of which the polygonal walls of Cusa and other cities are composed. These walls may be traced, at intervals, all round the brow of the hill, following the broken and irregular outlines of its summit, and frequently taking advantage of projecting points to form bold salient angles and outworks. Two of the ancient gates are still in existence, which projecting the one called the Porta all' Arco still serves as the principal entrance to the city. It is of very massive construction, but regularly built, and surmounted by an arch of perfectly regular form and structure, adorned with three sculptured heads, projecting in relief from the keystone and two of the principal voussoirs. The antiquity of this arch has been a subject of much dispute among antiquarians; some maintaining it to be a specimen of genuine Etruscan architecture, others ascribing it to the Roman period. The arguments in favour of the latter view seem on the whole to preponderate; though there is no reason to doubt that the Etruscans were acquainted with the true principles of the construction of the arch. (Dennis's Etruria, vol. ii. pp. 146—150; Micai, Antichi Topoli Italiani, vol. iii. pp. 4, 5.) The other gate, on the N. side of the Etruscan walls, now known as the Porta di Diana or Portone, is of similar plan and construction to the Porta all' Arco; but the arch is wanting. No other remains of ancient edifices are now extant on the site of Volterra, except some portions of Thermae, of Roman date and little interest; but the sepulchres which have been excavated in many places of the city, by far the most notable of which are those of the N. slope of the hill, have yielded a rich harvest of Etruscan antiqui-

* The gate itself is figured by Micai, pl. 7, 8; and by Abeken, Mittel-Italien, pl. 2, fig. 4.
ties. Among these the most conspicuous are the sepulchral urns, or rather chests, for ashes, re-embalmed small sarcophagi, and generally formed of alabaster, a material which is quarried in the immediate neighbourhood. Many of them are adorned with sculptures and bas-reliefs, some of them purely Etruscan in character, others taken from the Greek mythology, and there is no doubt that many of them belong to a period long after the fall of Etruscan independence.

The inscriptions are for the most part merely sepulchral, and of little interest; but those of one family are remarkable as preserving us the original Etruscan form (Cecena) of the well-known family of the Cae-
cinae, who figure frequently in Roman history [Cae-
cina, Biogr. Dict.]. Indeed, the first of this family of whom we have any knowledge—the Anius Caecina defended by Cicero in n. c. 69—was himself a native of Volaterrae (Cic. pro Caece. 7). His son was the author of a work on the "Etruscan discipline," which is frequently referred to as a valuable source of information in regard to that department of antiquities (Cic. ad Fam. vi. 6; Plin. i. Arg. Lib. ii; Senec. Nat. Quaest. ii. 39).

There is no doubt that Volaterrae in the days of its independence possessed an extensive territory. Strabo distinctly tells us (v. p. 223) that its territory extended down to the sea-coast, where the town of Vada, or as it was called for distinction's sake, VADA VOLATERRANA, constituted its sea-port. It was not indeed a harbour or port in the strict sense of the word, but a mere rock-head, where the ships, from which it derived its name, anchored and some shelter to shipping. Indeed it was, in the Roman times, a frequented station for vessels proceeding along the coast of Etruria (Cic. pro Quinct. 6; Plin. iii. 5. 8 8; Iun. Marit. p. 901), and Rutulius, in particular, has left us an exact description of the locality (Rutul. H. i. 453—462). The site is still marked by a medieval tower on the coast, called Torre di Vada.

The coins of Volaterrae are numerous, and belong to the class called Aes Grave, from their large size and weight; but they are distinguished from all other Etruscan coins of this class by their having the name of the city in full; whence we learn that the Etruscan form of the name was Velathrii, or Velathiri, as on the one of which a figure is annexed. [E. H. B.]

COIN OF VOLATERRAE.

VOLCAE. a people of South Gallia, divided into Volcae Arecomici and Volcae Tectosages (Ov. Locii, 'Ariaiqioi, Ov. Luc. Tectosages, Rod. ii. 10. §§ 9,10; Ov. Leg. 'Ariaiqioi, Strabo)." Voltey says that the Tectosages occupied the most western parts of the Narbonensis, and that these are their cities: illiberis, Biscino, Tolosa Colonia, Cessaro, Carcass, Baeterrae, and Narbo Colonia. Next to these and extending to the Rhone he places the Arecomici, or Aricomi, as the name is in Voltey's text; and he assigns to the Arecomii only Vindomagus [Vindomagus] and Nemanusus Colonia (Vtueu). These two nations occupied all the Provincia from the Rhone to its western limits; and if Livy is not mistaken (xxi. 26), at the time of Hannibal's invasion of Italy, the Volcae had also possessions east of the Rhone.

The Cebenna (Circumus) formed a natural boundary between the Volcae Arecomici and the Gabul and Buteni. As to the limits between the Tectosages and the Arecomici there is great difficulty; for while Ptolemy assigns Narbo to the Tectosages, Strabo (p. 203) says that Narbo is the port of the Arecomici; and it is clear that he supposed the Arecomici to have possessed the greater part of the Provincia, which is west of the Rhone, and that he limited the country of the Tectosages to the part which is in the basin of the Garonne. He makes the Tec-
tosages extend also northwards to the Circumus, in the western prolongation of this range. The chief city of the Arecomici was Nemanusus [Nemanusus]; and the chief city of the Tectosages was Tolosa; and if Narbo belonged to the Arecomici, we must limit the Tolostes, as already observed, to the basin of the Garonne. [Narbo; Tolosa.] There is some resemblance between the names Volcae and Belgae, and there is some little evidence that the Volcae were once named Belgae or Belgae. But it would be a hasty conclusion from this re-
sembleance to assume a relationship or identity be-
tween these Volcae and the Belgae of the north of Gaul. There was a tradition that some of the Volcan Tectosages had once settled in Germany about the Hercynia Silva and Caesar (B.G. vi. 24) affirms, but only from hearsay, that these Volcae in his time still maintained themselves in these parts of Germany, and that they had an honorable character and great military reputation. He adds that they lived like the other Germans. The Tec-
tosages also were a part of the Gallic invaders who entered Macedonia and Greece, and finally fixed themselves in Asia Minor in Galatia [Galatia]. With the Roman conquest of Tolosa ended the fame of the Volcae Tectosages in Europe. [G. L.]

VOLCAEUM. STAGNA. [STAGNA VOLCAE.

VOLCEIUM or VOLCENTUM (Eth. Volcan-
tannis, Plin.; Volcei, Insocr.; Bucceio), a munici-
pal town of Lucania, situated in the mountains W. of Potentia, a few miles from the valley of the Ta-
nager. The name is variously written by ancient authors. Livy mentions the Volcentes as a people who in the Second Punie War revolted to Hannibal and received a Carthaginian garrison into their town, but, in n. c. 209, returned to the Roman alliance. (Liv. viii. 15.) There can be no doubt that these are the same people as the Volcentani of Pliny, who are enumerated by that author among the munici-
pal communities of the interior of Lucania (Plin. iii. 10. s. 15), and it is certain that the Uli or Volci of Ptolemy (Oéako, Plin. iii. 1. § 70) refers to the same place, the correct name of which, as we learn from inscriptions, was Volcei orumblei, and the people Volceani. (Mommsen, Insocr. R. A. pp. 13, 16.) The discovery of these inscriptions at Bucceio leaves no doubt that this town occupies the site of the Lucanian city of Volcei. (Romanel, vol. i. p. 122; Holken, Nat. ad Citer. p. 290.) It appears to have been a considerable municipal town under the Roman Empire, and is one of the "Praetorae Lucaniae" mentioned in the Liber Cologiarum (p. 209). [E. H. B.]
VOLCI.

VOLCI (Οὖλκαι, Ptol.: Eth. Volcens: Ra. near Ponte della Badia), a city of Etruria, situated on the plain on the right bank of the river Armina (Florus), about 8 miles from its mouth. Very little mention is found of it in history. The name of the city is known as well as that of Pliny, who enumerates, among the municipal towns of Etruria, the "Volcentini cognominem Etrusci," an appellation evidently used to distinguish them from the people of Volcentum in Lucania. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 49.) The name is quoted also by Stephans of Byzantium, who writes it "Οὖλκαι, from Polybius. (Steph. B. s. v.) But the only indication that they had once been a powerful people, and their city a place of importance, is found in the Fasti Capitolini, which record a triumph in the year B. C. 280 over the Volcensiones and Volctici (Fast. Capit. ad ann. 479). This was one of the last struggles of the Etruscans for independence, and it was doubtless in consequence of the spirit shown on this occasion by the Volcenses that the Romans shortly afterwards (in B. C. 273) established a colony at Cosa, in their territory. (Vell. Pat. i. 14; Plin. iii. 5. s. 8.) It is expressly stated on this occasion by Pliny, that Cosa was a dependency of Volci (Cosa Volcantium), a statement which has been ignored by those modern writers who have represented Cosa as an independent, and important Etruscan city. But while this is very doubtful in the case of Cosa, the evidence, though scanty, is conclusive that Volci was such; and there is even reason to suppose, from a monument discovered at Corc cliffs, that it was at one time reckoned one of the twelve chief cities of the Etruscan League. (Ann. d. Inst. Arch. 1842, pp. 37-40.)

But notwithstanding these obscure hints of its greatness, the name of Volci was almost forgotten, and its site unknown, or at least regarded as uncertain, when the first discovery of its necropolis in 1828 led to subsequent researches on the spot, which have brought to light a number of painted vases greatly exceeding that which has been discovered on any other Etruscan site. The unprecedented number, beauty, and variety of these works of art have given a celebrity in modern times to the name of Volci which is probably as much in excess of its real importance in ancient times as in the somewhat parallel case of Pompeii. It is impossible here to enter into any detailed account of the result of these excavations. It is calculated that above 6000 tombs in all have been opened, and the contents have been of the most varied kind, belonging to different periods and ages, and varying from the coarsest and roughest pottery to the finest painted vases. The same tombs have also yielded very numerous objects and works of art in bronze, as well as delicate works in gold and jewellery; and after making every allowance for the circumstance that the cemetery at Volci appears to have enjoyed the rare advantage of remaining undisturbed through ages, it affords incontestable proof that it must have belonged to a wealthy and populous city. The necropolis and its contents are fully described by Mr. Dennis (Etruria, vol. i. pp. 397-427). The results of the excavations, in regard to the painted vases discovered, are given by G. de Rossi, Rep. par. d. Acad. e. Rapp. delle Acc. dell’Istituto per 1831. It is remarkable that only one of the thousands of tombs opened was adorned with paintings similar to those found at Tarquinii, and, in this instance, they are obviously of late date. The site of the city itself has been carefully explored since these discoveries have attracted so much interest to the spot. It stood on the right bank of the river Armina, just below the point where that stream is spanned by a noble bridge, now called the Ponte della Badia, opened about a week after the discovery of the painted vases. The city was probably built on a high site and was first inhabited in the time of Remus, though the foundations may be Etruscan. The few remaining relics of antiquity still visible on the site of the city, which occupied a plateau of about 2 miles in circumference, are also of Roman date, and mostly belong to a late period. Inscriptions also have been discovered, which prove it to have continued to exist under the Roman Empire; and the series of coins found there shows that it was still in existence, at least as late as the fourth century of the Christian era. In the middle ages it seems to have totally disappeared, though the plain in which it stood continued to be known as the "Pian di Voci," whence Holstenius correctly inferred that this must have been the site of Volci, (Holsten. Nat. ad Clerc. p. 40.) The necropolis was, for the most part, on the other side of the river; and it is here that the excavations have been carried on most diligently. The site of Volci (which is now whollyslashless) is about 8 miles from Montalto, a small town at the mouth of the Flora, where that river was crossed by the Via Aurelia. (Den- ris. l. c.) [E. H. B.]

VOLCIANS, a people in Hispania Tarraconensis. (Liv. xxx. 19.)

VOLENOS, a fort in Rhetia, in the territory of Tridunum, which was destroyed by the Franks (Paul. Diae. Longob. iii. 31), and is generally identified with the modern village of Volano on the Adige, south of Caliano. (L. S.)

VOLIBA (Οὖλίβα, Ptol. ii. 3. § 30), a town of the Dumnones in Britanna Romana, near the W. extremity of the island. Most probably Falmouth. (Camden, p. 16.) [T. H. D.]

VOLOBRIGA (Οὐλόβριγα, Ptol. ii. 6. § 41), a town in Gallasia in Hispania Tarraconensis belonging to the Nemetaceni. [T. H. D.]

VOLOGATIS, in Gallia Narbonensis, is placed by the Jerusalem Itin. after Lucus (Luce), on the road to Vasionem (Gupp) past Mons Salicens. The distance from Lucus is ii.; and D'Anville supposes that Vologatis may be a place named Lices, but the distance is too much. Others fix the place at Beuavire; and others propose Lethes or Beaumont. All this is uncertain. [G. L.]

VOLÖGESIA (Οὐλόγεσία, Ptol. v. 20. § 6), a city built by and named after Volgeses, one of the Arcadian kings of Parthia, in the immediate neighbourhood of Seleucia upon the Tigris. It is described by Pliny, (V. H. 30), and by Holstenius (Itin. III. 37—40), the latter portion of the name implying the "city of." The extensive ruins, still existing, on both sides of the Tigris, are probably those of the two great cities of Selucia and Vologesia. (V.)

VOLASAS (Οὐλασάς κόλπος, Ptol. ii. 3. § 1), a bay on the W. coast of Britain, probably Loch Brig. (Horsley, p. 378.) [T. H. D.]

VOLSCI (Οὐλόσκαι,Strat.;Οὐλόδοσκοι, Di-onym), an ancient people of Central Italy, who bear a prominent part in early Roman history. Their territory was comprised within the limits of Latium as that name was employed at a late period, and under the Roman Empire; but there is no doubt that the Volscans were originally a distinct people from the Latins, with whom, indeed, they were almost always on terms of hostility. On the other hand they appear as constantly in alliance with the Aeques; and
But the dissolution of the power of Tarquin, and the loss of the supremacy of Rome over the Latins, seem to have allowed the Volscians to regain their former superiority; and though the chronology of the earliest years of the Republic is hopelessly confused, we seem to discern clearly that it was the increasing pressure of the Volscians and their allies the Aequians upon the Latins that caused the latter people to demand the celebrated treaty with Rome under Sp. Cassius, b. c. 493, which became the foundation of the permanent relation between the two states. (Liv. ii. 33; Dionys. vi. 95.) According to the received annals, the wars with the Volscians had already recommenced prior to this period; but almost immediately afterwards occurs the great and sudden development of their power which is represented in a legendary form in the history of Coriolanus. Whatever may have been the origin of that legend, and however impossible it is to receive it as historically true, there is no doubt that it has a historical foundation in the fact that many of the Latin cities at this period fell successively into the power of the Volscians and their allies the Aequians; and the two lines of advance, so singularly mixed up in the received narrative of the war, which represents all these conquests as made in a single campaign, appear to represent distinctly the two separate series of conquests by which the two nations would respectively press on towards Rome. (Niebuhr, vol. ii. pp. 95, 259; Schwefiger, Rom. Gesch. vol. ii. pp. 274, 275.)

It is impossible here to give more than a very brief outline of the long series of wars with the Volscians which occupy so prominent a place in the early history of Rome for a period of nearly two centuries. Little historical value can be attached to the details of those wars as they were preserved by the annalists who were copied by Livy and Dionysius; and it belongs to the historian of Rome to endeavour to dispel their confusion and reconcile their discrepancies. But in a general point of view they may be divided (as remarked by Niebuhr), into four periods. The first of these would comprise the wars down to b. c. 439, a few years preceding the Decemvirate, including the conquests ascribed to Coriolanus, and which would seem to have been the period when the Volscians were at the height of their power. The second extends from b. c. 439 to 431, when the dictator A. Postumius Tabrertus is represented as gaining a victory over the allied forces of the Volscians and Aequians (Liv. iv. 26—29), which appears to have been really an important success, and proved in a manner the turning point in the long struggle between the two nations. From this time till the capture of Rome by the Gauls (b. c. 390) the wars with the Volscians and Aequians assume a new character; the tide had turned, and we find the Romans and their allies recovering one after another the towns which had fallen into the hands of their enemies. Thus Labianum and Bolsa were regained in b. c. 418 and 414, and Forentinum, a Hleramic city, which but had been taken by the Volscians, was again wrested from them in b. c. 413. (Liv. iv. 47, 49, 51.) The frontier fortresses of Verruca and Carventum were indeed taken and retaken; but the capture of Anxur or Tarraucina in b. c. 399, which from that period

* It is worthy of notice that Antium, which at the commencement of the Republic appears as a Latin city, or at least as subject to the supremacy of Rome, is found at the very outbreak of these wars already in the hands of the Volscians.
continued constantly in the hands of the Romans, must have been a severe blow to the power of the Volscians, and may be considered as marking an era in their decline. Throughout this period it is remarkable that Antium, one of the most powerful cities of the Volscians, continued to be on peaceful terms with Rome; the war was carried on almost exclusively upon the NE. frontier of the Volscians, where they were supported by the Aequeans, and Ecetra was the city which appears to have taken the lead in it.

The capture of Rome by the Gauls marks the commencement of the fourth period of the Volscian Wars. It is probable that their Aequian allies suffered severely from the same invasion of the barbarians that had so nearly proved the destruction of Rome [Aequi], and the Volscians who adjourned their frontier, may have shared in the same disaster. But on the other hand, Antium, which was evidently at this period a powerful city, suddenly broke off its friendly relations with Rome; and during a period of nearly 13 years (B.C. 386-374), we find the Volscians engaged in almost perpetual hostilities with Rome, in which the Antiates uniformly took the lead. The site of a war was now transferred from the Aequean frontier to the southern foot of the Alban hills: and the towns of Velitrae and Satricum were taken and retaken by the Volscians and Romans. So soon after the conclusion of the peace we hear for the first time of Privernum, as engaging in hostilities with Rome, B.C. 358, and it is remarkable that it comes forward single-handed. Indeed, if there had ever been any political league or bond of union among the Volscian cities, it would seem to have been by this time completely broken up. The Antiates again appear repeatedly in arans; and when at length the general defection of the Latins and Campanians broke out in B.C. 340, they were among the first to join the enemies of Rome, and laid waste the whole sea-coast of Latium almost to the walls of Ostia. But they shared in the defeat of the Latin armies, both at Pedum and on the Astura: Antium itself was taken, and received a colony of Romans within its walls, but at the same time the citizens themselves were admitted to the Roman franchise. (Liv. viii. 14.) The people of Fundi and Formiae, both of them probably Volscian cities, received the Roman franchise at the same time, and Tarquinia was soon after occupied with a Roman colony. The Privernates alone ventured once more to provoke the hostility of the Romans in B.C. 327, but were severely punished, and their city was taken by the consul C. Plautius. Nevertheless, the inhabitants were admitted to the Roman Civitas; at first, indeed, without the right of suffrage, but they soon afterwards obtained the full franchise, and were enrolled in the Urbanite tribe. The greater part of the Volscians, however, was included in the Pompide tribe.

Of the fate of the cities that were situated on the borders of the valley of the Tiber, or in that of the Liris, we have scarcely any information; but there is reason to suppose that while the Antiates and their neighbours were engaged in hostilities with Rome, the Volscians of the interior were on their side fully occupied with opposing the advance of the Samnites. Nor were their efforts in all cases successful. We know that both Arpinum and Fregellae had been wrested from the Volscians by the Samnites, before the Romans made their appearance in the contest (Liv. viii. 23, ix. 44), and it is probable that some of the other cities of the Volscians really took shelter under the protection of Rome, for security against their common enemy. It seems certain, at all events, that before the close of the Second Samnite War (B.C. 304), the whole of the Volscian people had submitted to the authority of Rome, and been admitted to the privileges of Roman citizens.

From this time their name disappears from history. Their territory was comprised under the general appellation of Latium, and the Volscian people were merged in the great mass of the Roman citizens.

(VOLSCI.)

VOLSIENSI S LACUS (Λυκαίον Βολσίονος Λίκος, Strab. v. p. 226; Lago di Bolsena), a considerable lake of Etruria, scarcely inferior in size to that of Trasimene. It took its name from the town of Volsiun, which stood on its NE. shore; but it was also sometimes called Lacus Tarquiniiensis, as its western side adjoined the territory of Tarquinii. (Plin. ii. 96.) Notwithstanding its great size, it is probable, from the nature of the surrounding hills and rocks, that it is the crater of an extinct volcano (Dennis, Etruria, vol. i. p. 514). In this lake the river Marta has its source. It abounded in fish, and its seedy shores harbored large quantities of water-fowl, with which articles it supplied the Roman markets. (Strab. l. c.; Colum. viii. 16.) It contained two islands, of which, as well as of the lake itself, wonderful stories were related by the ancients. They were remarked to be ever changing their forms (Plin. l. c.), and on one occasion during the Second Punic War its waters are said to have flowed with blood. (Liv. xxxvii. 23.) The shores of the lake were noted for their quarries. (Plin. xxxvi. 22, a. 49.) In a castle on one of the islands Queen Amalasonta was murdered by order of her husband Theodatus. (Procop. B. Goth. i. c. 4, p. 23, ed. Bonn.)

(VOLSIINI or VOLSIINI (Οβολσίινος, Strab. v. p. 226; Obovulgus, Pol. lii. i. § 60; Bolsena), an ancient city of Etruria, situated on the shore of a lake of the same name (Lacus Volsciensis), and on the Via Clodia, between Clusium and Forum Cassii. (Itin. Ant. p. 256; Tab. Peut.) But in treating of Volsciini we must distinguish between the Etruscan and the Roman city. We know that the ancient town lay on a steep height (Zonaras, Ann. viii. 7; cf. Aristot. Mir. Ausc. 96) while Bolsena, the representative of the Roman Volsciini, is situated in the plain. There is considerable difference of opinion as to where this height should be sought. Abeken (Mitteleurop., p. 94, seq.) looks for it at Monte Fiascone,
VOLSINII.

at the southern extremity of the lake; whilst Müller (Etrusker, i. p. 451) seeks it at Ortevieto, and deduces the name of that place=Urbs Vetus, "the old city," as an argument in favour of his view; but Mr. Dennis (Etruria, vol. i. p. 508) is of opinion that there is no reason to believe that it was so far from the Roman town, and that it lay on the summit of the hill, above the amphitheatre at Bolsena, at a spot called Il Piazzone. He adduces in support of this hypothesis the existence of a good deal of broken pottery there, and of a few caves in the cliffs below.

Volsinii appears to have been one of the most powerful cities of Etruria, and was doubly so one of the 12 which formed the Etruscan confederation, as Volsinii is designated by Livy (x. 37) and Valerius Maximus (i. 1. extern. 2) as one of the "capita Etrariae." It is described by Juvenal (iii. 191) as seated among well-wooded hills.

We do not hear of Volsinii in history till after the fall of Veii. It is possible that the success of the Roman arms may have excited the alarm and jealousy of the Volsinenses, as their situation might render them the next victims of Roman ambition. At all events, the Volsinenses, in conjunction with the Salpinites, taking advantage of a famine and pestilence which had desolated Rome, made incursions into the Roman territory in B.C. 391. But they were easily beaten; 8000 of them were made prisoners; and they were glad to purchase a twenty years' truce on condition of restoring the booty they had taken, and furnishing the pay of the Roman army for a twelvemonth. (Liv. v. 31, 32.)

We do not again hear of Volsinii till the year B.C. 310, when, in common with the rest of the Etruscan cities, except Arretium, they took part in the siege of Sutrium, a city in alliance with Rome. (Liv. xx. 52.) This year was terminated by the defeat of the Etruscans at lake Vadino, the first fatal shock to their power. (Ib. 39.) Three years afterwards we find the consul P. Decius Mus capturing several of the Volsinian fortresses. (Ib. 41.) In 295 B.C. Postumius Megellus ravaged their territory and defeated them under the walls of their own city, slaying 2800 of them; in consequence of which they, together with Persia and Arretium, were glad to purchase a forty years' peace by the payment of a heavy fine. (Ib. x. 37.) Not more than fourteen years, however, had elapsed, when, with their allies the Vulcenes, they again took up arms against Rome. But this attempt ended apparently in their final subjugation in B.C. 280. (Liv. Ep. xi.; Fast. Cons.) Pliny (xxxiv. 7. a 16) retells an absurd story, taken from a Greek writer called Metrodorus Scæpius, that the object of the Romans in capturing Volsinii was to make themselves masters of 2000 statues which it contained. The story, however, suffices to show that the Volsinians had attained to a great pitch of wealth, luxury, and art. This is confirmed by Valerius Maximus (L. c.), who also adds that this luxury was the cause of their ruin, by making them so indolent and effeminate that they at length suffered the management of their commonwealth to be usurped by slaves. From this degrading tyranny they were rescued by the Romans. (Flor. i. 21; Zonaras, l. c.; A. Victor, Vir. Illustre. 36; Oros. iv. 5.)

The Romans, when they took Volsinii, razed the town, and compelled the inhabitants, as we have already intimated, to migrate to another spot. (Zonaras, l. c.) This second, or Roman, Volsinii continued to exist under the Empire. It was the birthplace of Sejanus, the minister and favourite of Tiberius. (Tac. Ann. iv. 1, vi. 8.) Juvenal (x. 74) alludes to this circumstance when he considers the fortunes of Sejanus as dependent on the favour of Nursia, or Nursia, an Etruscan goddess much worshipped at Volsinii, into whose temple there, as in that of Jupiter Capitolinus at Rome, a nail was annually driven to mark the years. (Liv. viii. 3; Tertull. Apol. 24.) According to Pliny, Volsinii was the scene of some supernatural occurrences.

He records (ii. 54) that lightning was drawn down from heaven by King Poromma to destroy a monster called Volta that was ravaging its territory. Even the commonplace invention of hand-mills, ascribed to this city, is embellished with the traditional prologue that some of them turned of themselves! (ib. xxxvi. 18. s. 29.) Indeed, in the whole intercourse of the Romans with the Etruscans, we see the ignorant wonder excited by a cultivated people in their semi-barbarous conquerors.

From what has been already said it may be inferred that we should look in vain for any traces of the Etruscan Volsinii. Of the Roman city, however, some remains are still extant at Bolsena. The most remarkable are those of a temple near the Florence gate, vulgarly called Tempio di Norsia. But the remains are of Roman work; and the real temple of that goddess most probably stood in the Etruscan amphitheatre. This amphitheatre is small and a complete ruin. Besides these there are the remains of some baths, cippus, sepulchral tablets, a sarcophagus with reliefs representing the triumph of Baæhus, &c.

For the coins of Volsinii, see Müller, Etrusker, vol. i. pp. 324, 333: for its history, &c., Adam, Storia di Volsinii; Dennis, Etruria, vol. i.; Aiken, Mittelitalien. [T. H. D.]

VOLUMINAE FINUM [FANUM VOLUSTANA].

VOLUBILIS. [VOLUBILIS.]

VOLUBILIS (Οὐλοβιλί, Potl. iv. 1. § 14), a town of Mauretania Tingitana, seated on the river Subur, and on the road from Tocioheda to Tingis, from the former of which places it was only 4 miles distant. (Itin. Ant. p. 28.) It lay 35 miles SE. from Bamass, and the same distance from the coast. (Plin. v. i. s. 1; Mela, iii. 10.) It was a Roman colony (Itin. Ant. l. c.) and a place of some importance. Ptolemy calls the inhabitants of the surrounding district, Volubilantii (Οὐλοβιλαντίου, Potl. l. § 10). In the time of Leo Africanus (p. 273, ed. Lorsbach) it was a deserted town between Fez and Mequinez, bearing the name of Villili or Guaillis, the walls of which were 6 Italian miles in circumference. That position is now occupied by the town of Zanitiat-Mulis-Diriss, on mount Zarkon. At some distance to the NW. are the splendid ruins of Ksar Faram (Piaroï's castle), with Roman inscriptions; but to what ancient city they belong is unknown. (Cf. Manner, x. p. ii. p. 486; Graberg, bei Hensio, p. 28; Wimmer, Gemälde von Afriken, l. p. 438.) From here it was ravaged by Ksar (T. H. D.)

VOLUCE (probably the Οὐλοκέα of Potl. ii. 6. § 56), a town of the Pelendones in Hispania Tarraconensis, on the road from Asturica to Cesar augmentation, and 25 miles W. of Namantia. (Itin. Ant. p. 442.) Variously identified with Valence (Valence), Valecha, and Calatañazor. [T. H. D.]

VOLLINTH (Οὐλολίνθως, Potl. ii. 2. § 9), a people on the E. coast of Hiberia. [T. H. D.]

VOLUSTANA. [CAMBRUNI MONTES.]
VOMANUS (Vomano), a river of Picenum, which rises in the lofty group of the Apennines now known as the Gran Sasso d'Italia, and flows into the Adriatic, after passing within a few miles to the N. of the city of Adria (Arta). Its name is mentioned by Pliny only (cit. 13. § 183). [E. H. B.]

VODENSES, in Gallia Narbonensis, an ethnic name which occurs in an inscription found at Apt, the site of Apta Julia (Apta Julia). The inscription states that the "Vodenses pagani" dedicate this monument to their patrons, who is designated "III vir" of the Colonia Aptu. The place is supposed to be Gordes, which is contiguous to the diocese of Apt, and in that of Carcassonne. The change of Gord into Gerd is easily explained. [Variscum.] (D'Anville Notice, &c) [G. L.]

VOREDA, a town of the Briantates in Britannia Romana, on the road from Cataractonium to Lugdunum. (Itin. Ant. p. 467.) It is variously identified with Old Penwith, Whelp Castle, and Coal Hills. By the Geogr. Rav. (v. 31) it is called Bereda. [T. H. D.]

VORGANIA (Olgydpav), in Gallia Lugdunensis, the capital of the Osismii (Osismi), a Celtic people in the north-west part of Bretagne (Ptol. ii. 8. § 5). This seems to be the same place as the Vorgium of the Table; and it appears on a route which leads from the capital of the Namnetes through the capital of the Veneti, and ends on the coast at Gersibhara, or Gessibrivate, as some would write it. Between the capital of the Veneti and Vorgium is Sulis, supposed to be at the junction of the Suel and the Blacat (Sulis). From Sulis to Vorgium the distance is marked xxiii., and this brings us to a place named Karhes (D'Anville). But all this is very uncertain. Others fix Vorgium at a place named Guemencé [G. L.]

VORGUM, in Gallia, is placed in the table on a road from Augustumnetum (Clermont Ferrand) through Aquae Calidiae (Vichy) to Ariolica (Aurrillé). The distance is marked viii., from Aquae Calidiae, and xiii. from Vorgium to Ariolica. There is a place named Voruna, which is the same name as Vorgium. Voruna is near the small town of Varennes, and somewhat nearer to the banks of the Allier. The direct distance from the springs of Vichy to Varennes is somewhat less than the Itin. distance of viii. Gallie leagues, but the 8 leagues are not more than we may assign to the distance from Vichy to Varennes along the river. But the Itin. distance from Vorgium to Ariolica is somewhat too large compared with the real distance. (D'Anville, Notice, &c.) [G. L.]

VOSALIA. [Vosava.]

VOSAVA or VOSAVIA, in North Gallia, is placed by the Table on the Roman road along the west bank of the Rhine, and between Bontorbica or Bandorbrica (Boppard) [Baudorbrica] and Bingium (Bingen). It stands half-way between these places and at the distance of viii. Vosava is Oberwesel on the Rhine, north of Bingen; and it is almost certain, as D'Anville supposes, that the name is erroneously written in the Table, and that it should be Vasseges. [G. L.]

VOSAVES (Vogesen, Vosges, Voges). The form Vosaves has better authority than Vogenus (Schneider's Caesar, B. G. iv. 10); and the modern name also is in favour of the form Vosagus. Lucan is sometimes quoted as authority for the form Vosages:

"Castraque quae Vogesii curvam super ardua rupem
Pugnaque pictis cohensit Lingonum armis." (Pharsal. i. 297.)

The name is Βοςαγός in the Greek version of the Commentaries.

Cæsar says that the Mosa (Maus) rises in the Vosges, by which he means that the hills in which the Mau rises belong to the Voyages. But he says no more of this range. The battle with Ariovistus, b. c. 58, was fought between the southern extremity of the Vosges and the Rhine, but Cæsar (B. G. i. 43. 48) gives no name to the range under which Ariovistus encamped in the great plain between the Vosges and the Rhine. D'Anville observes that an inscription in honour of the god Vosagus was found at Berg-Zehren on the confines of Alesia and the Palatinate, which proves that the name Vosegus extended as far as that place. It seems likely that the name was given to the whole range now called Vosges, which may be considered as extending from the depression in which is formed the canal of the Rhine and Rhine, between Belfort and Altkirch, to the bend of the Rhine between Mainz and Bingan, a distance of about 170 miles. The range of the Vöges is parallel to the Rhine. The hilly country of the Faucilci in which the Mau rises is west of the range to which the name of Vosges is now given. The Vosges are partly in France, and partly in Rhénisch Bavaria and Hesse-Darmstadt.

The territory of the Sequani originally extended to the Rhine, and the southern part of the Vosges was therefore included in their limits. North of the Sequani and west of the Vosges were the Lusci and Mediomatrici; and east of the Vosges and between the Vosges and the Rhine were the Rannaci, Triboci, Nemetzi, Vangiones, and Caracates.

In the Table the Silva Vosages is marked as a long forest on the west side of the Rhine. Pliny (xvi. 39) also speaks of the range of the Vosages as containing timber. [G. L.]

UR, a castle of the Persians mentioned by Ammianus Marcellinus (xxv. 8), in his account of the war between Julian and the Persians. It must have been situated in Mesopotamia, at a great distance from Hatra (Al-Hathir). It has been generally supposed that Ur is the same place as that mentioned in Genesis (xi. 28); but the recent researches of Colonel Rawlinson have demonstrated that the Ur which Abraham started was situated in the S. part of Babylonia, at a place now called Mugheir. (Journ. Roy. As. Soc. 1855.) [V.]

URANOPTOLIS (Obranoptolos), a town in the peninsula Acte of Chalcidice in Macedonia, of which we know nothing, except that it was founded by Alexander, the brother of Cassander, king of Macedonia (Athen. iii. p. 98; Plin. iv. 10. s. 17). As Pliny does not mention Sane in his list of the towns of Acte, it has been conjectured by Leake that Urano-polis occupied the site of Sane. (Northern Greece, vol. iii. p. 149.) [L. S.]

URANOPTOLIS (Obranoptolos), a town of Pisidia, in the district of Cabafia, in the north-west of Taurus, and south-east of Iasos. (Ptol. v. 5. § 6.) [L. S.]

URBA, a town of Gallia, in the territory of the Helvetii. It is placed in the Antonine Itin. between Lucus Lausonius and Ariolica [Ariolica], xviii. from Lucus Lausonius and xxiii. from Ariolica. Urba is Orbe in the Swiss Canton Waadtl or Pays de Vaud, on the road from the Lake of Neuf-
URBANA COLONIA.

The text is not fully legible, but it appears to be discussing the history and geographical details of URBANA COLONIA, possibly referring to a location in ancient Roman times. The text mentions various names, terms, and locations such as URBANA, Pampoldi, Urbisaglia, and other geographical features.

URGAI.

The text seems to be discussing URGAI, possibly referring to a location in ancient Roman times. It mentions various names, terms, and locations such as URGAI, Pliny, and other geographical features.

The text contains references to ancient Roman figures and places, indicating a study of historical geography and ancient Roman history.
URGO. [Gorgona.]

URIA. [Hyrium.]

URIA LACUS. [Aetolia, p. 64, a.]

URIAS SINUS. [Auffa.]

URISIUM (L. Hier. p. 569), a town in Thrace, on the road between Tarspius and Bergile: according to Reisch it corresponds to the modern Ahbail or Alптіі, but according to Lapie, to Kirk-Куладо.

[J. R.]

URIUM (Obisdrw, Ptol. ii. 4. § 12). 1. A town in Hispania Baetica, on the borders of Lusitania; according to Reisch, now Torre del Oro.

2. A river in Hispania Baetica, between the Baetis and the Anas, which entered the sea near the town just named. (Plin. iii. i. s. 3.) Now the Tinto.

[TH. D.]

URIPANUS, a small river of Pannonia, a tributary of the Sarus, is now called the Veronae. (Plin. iii. 28; Tab. Peut., where it is called Ursus.) [L. S.]

URS M PROMONTORIUM. [Sardina.]

URSO (Obisdrw, Strab. iii. p. 141), a strong mountain town in Hispania Baetica, the last refuge of the Pompeians. It was a Roman colony, with the surname of Genua Urbanorum, and was under the jurisdiction of Astigi. (Plin. iii. i. s. 3; Hirt. B. H. 26. 41. 65; Appian, B. H. 16.) It is the modern Osuna, where some inscriptions and ruins have been found. (Cf. Muratori, p. 1095; Floriz, Esp. Sagr. x. p. 77.) For coins of Ursos, see Floriz, Med. ii. p. 624, iii. p. 139; Monnet, i. p. 28, Suppl. i. p. 47; Sentini, p. 94.

[TH. D.]

COIN OF USRO.

URSOLAE, or URSOLI, a place in Gallia Narbonensis, fixed by the Antonine Itin. on the road between Valenta (Valence) and Vienna (Vienne), xxii. from Valenta, and xxvi. from Vienna. This agrees pretty well with the whole distance between Valenta and Vienne. There are no means of determining the site of Ursoli except the distances; and D'Avillle fixes on S. VALER, a place on the right bank of the Galature near the place where it enters the Rhone. [G. L.]

URUNCH, a place in Gallia between the Vagges and the Rhine. It occurs twice in the Antonine Itin., and in both cases the road from Urunch runs to Mons Brisiaecus, [Mons Brissiacus. In one route it is placed between Larga (Largisiten) and Mons Brisiaecus, xvi. from Larga, and xxiii. from Brisiaecus. This route is from south to north-east. The other route is from Arielumum, supposed to be Bulling near Basle, to Mons Brisaicus, from south to north, and Urunch is xxiii. M. P. or 15 leagues from Mons Brisaicus. D'Avillle supposes that Urunch may be a place named Bouca or Riceno, on the line of the road from Larga to Mons Brisi- aecus or Brissiaci. [G. L.]

USAR, the most easterly river of Mauretanian. (Plin. v. 2. s. 1.) It seems to be called Zara by Ptolemy (iv. 2. § 10), and is probably the Aflhibby, which falls into the gulf of Bugiae. [TH. D.]

USARGALA (Оборгала, Ptol. iv. 6. § 7, &c.), a very extensive mountain chain in the country of the Garamantes on the N. border of Libya Interior, and S. of Numidia and Mauretanias, stretching in a NW. direction as far as Atlas. It is in this mountain that the river Bagradas has its source.

[TH. D.]

USBRIUM (Обориум), a town mentioned by Ptolemy (ii. 11. § 30) in the south-east of Germany, probably in the territory of the Murcanians, seems to be identical with the modern Isern, on a rivulet of the same name. [L. S.]

USCANA, the chief town of the Penestae, a people of Illyricum, which contained 10,000 inhabitants at the time of the Roman war with Persae. At the commencement of this war it appears to have been in the hands of Persae, and the first attempt of the Roman commander, App. Claudio, to obtain possession of the place proved unsuccessful, a. c. 170. (Liv. xlvi. 10.) It would seem, however, to have been afterwards taken by the Romans, since we read that Persae in the following year surprised Ursca, marching thither in three days from Stubera. (Liv. xlii. 17, 18.) Shortly afterwards L. Coelius, the Roman commander in Illyricum, made an unsuccessful attack upon Ursca. (lvi. 21.) The site of this town is uncertain.

USCENUM (Оборенум, or Оборсам), Ptol. iii. 7. § 2), a town of the Jazgyes Metanatias. [TH. D.]

USCUKAMA, a town belonging to the Bessi, near Mount Haemus, which M. Lucullus took by assault. (Entr. vi. 10.) [J. R.]

USELLIS (Оборис, Ptol. Usealla), a city of Sardinia, situated in the interior of the island, about 16 miles from the Gulf of Oristano on the W. coast, and the same distance S. of Forum Trajani. Its name is not found in the Itineraries, and the only author who mentions it is Ptolemy (iii. 3. § 2), who erroneously places it on the W. coast of the island; but the existing ruins, together with the name of Useius, still borne by a village on the site, leave no doubt of its true situation. It is about 3 miles N.E. of the modern town of Alca. Ptolemy styles it a colony, and this is confirmed by an inscription in which it bears the title of "Colonia Julia Augusta." It would hence appear probable that the colony must have been founded under Augustus, though Pliny tells us distinctly that Turris Libysanis was the only colony existing in Sardinia in his time. (De la Marmora, Voy. en Sardaigne, vol. ii. pp. 367, 466.) [E. H. B.]

USILLA (Оборила, Ptol. iv. 3. § 10), a place in Dyrrachium in Africa Proper. It is the city of the Itin. Ant. (p. 59), lying between Thradra and Thenmes. Various identified with Inchilla or Sidi Makelof, and Inshillah. [TH. D.]

USPETES, or USPETI (Оборета, Оборета), a German tribe, mostly mentioned in conjunction with the Teneteri, with whom they for a long time shared the same fate, until in the end, having crossed the lower Rhine, they were treacherously attacked and defeated by Julius Caesar. (Caes. B. G. iv. 4, &c.; Appian, de Reb. Gall. 18; comp. Tenetiris.) After this calamity, the Uspetes returned across the Rhine, and were received by the Sigambri, who assigned to them the district on the northern bank of the Loppia, which had previously been inhabited by the Chamavi and Tubantes, and in which we henceforth find the Uspetes as late as the time of Tacitus. (Ann. xiii. 55, Hist. iv. 37, Gemma 32; Dion Cass. liv. 32, foll.) Afterwards the Uspetes are met with
farther south, opposing Germanicus on his return from the country of the Marsi. (Tac. Ann. ii. 50, 51; comp. Dion Cass. xxxix. 47; Plut. Cass. 22.)

In Strabo (vii. p. 292) they appear under the name of Óðávía, and Ptolomy (ii. 11. § 10) mentions a tribe of the name of Óðávía, whom some believe to be the same as the Usipotes; but if this be correct, it would follow that the Usipotes migrated still farther south, as Ptolomy places these Vasi in the upper Ebin; but as no other authority places them so far south, the question is altogether uncertain.

About the year A. D. 70, the Usipotes took part in the siege of Magonuntacum (Tac. Ann. xii. 54), and in A. D. 83 a detachment of them is mentioned as serving in the Roman army in Britain. (Id. Agric. 27.) Afterwards they disappear from history.

(U. C. Z. Zeitschr. Die Deutschen, p. 88; Wilhelm, Germanica, p. 139.)

USPE, a town of the Siraci in Sarmatia, lying E. of the Tanais. It lay on a height, and was fortified with a ditch and walls; but the latter were composed only of mud confined in hurdles. (Tac. Ann. xii. 16.)

[U. C. Di.]

USSADIAM (Οὐσαδίαμ, or Οὐσαδίων Ἀμφων; Plut. iv. 5. §§ 4 and 12). a promontory of Mauretania Tingitana, lying SW. of the promontory of Hercules. Now Cape Osan. [U. C. Di.]

USTICA. [OSTEODES.]

USURNA or USTERVA. [HOSHERNAS.]

UTINA (Ουτίνα, Plut. iv. 3. § 34), a town of Zenegitana, in Africa Propria, between Tabraca and the river Bagradas. (Cf. Id. viii. 14 § 11; Plut. v. 4. s. 4.) Erroneously written Utica in Tab. Peutre. Now El-Mine. [U. C. Di.]

UTICA (Στύρεν, Polyb. i. 75; Plut. iv. 3. § 6; Ov. Pot, Dion Cass. xii. 41; Eth. Uticensis; Liv. xxxix. 35; Caes. B. C. ii. 36), a colony founded by the Tyrians on the N. coast of Zenegitana in Africa. (Vell. Pat. i. 2; Meli, i. 7; Justin. viii. 4. &c.) The date of its foundation is said to have been a few years after that of Gades, and 287 years before that of Carthage. (Vell. Pat. l. c.; Aristol. Mirab. Ausc. 146; Gesenius, Monum. Script. Linguarum Phoenic. p. 291; Sili. Ital. Pont. iii. 241, sqq. &c.) Its name signified in Phoenician, "a fountain," or "watering-place." (Athen. i. 429; and Tac. Ann. l.c.) Uthica was situated near the mouth of the Bagradas river, or rather that of its western arm, in the Bay of Carthage, and not far from the mouth of the Braciosa river, which forms the western boundary of the bay. (Strab. xvii. p. 832; Liv. l. c.; Plut. l. c.; Appian, B. C. ii. 44, seq.;Procop. B. V. ii. 15, &c.) It lay 27 miles NW. of Carthage. [Itin. Ant. p. 222.] The distance is given as 60 stadia in Appian (Pan. 75), which is probably an error for 160; and as a day's sail by sea. (Scylax, Geogr. Min. i. p. 50, ed. Hilds.) Both Utica and Tungritana were described from Carthage.

(Strab. l. c.; Polyb. i. 75; Liv. xxxix. 9.) Utica possessed a good harbour, or rather harbours, made by art, with excellent anchorage and numerous landing places. (Appian, l. c.; cf. Barth, Wanderungen durch die Küstenländer des Mittelmeeres, pp. 111, 125.) On the land side it was protected by steep hills, which, together with the sea and its artificial defences, which were carefully kept up, rendered it a very strong place. (Liv. xxxix. 33; App. Pan. 16. 30. 75; Diod. xx. 54; Plut. Cat. Min. 58.) The surrounding country was exceedingly fertile and well cultivated, and produced abundance of corn, of which there was a great export trade in Rome. (Liv. xxxv. 31.)

The hills behind the town, as well as the district near the present Porto Forina, contained rich veins of various metals; and the coast was celebrated for producing vast quantities of salt of a very peculiar quality. (Plin. xxxvi. 7. s. 39; Caes. B. C. ii. 37; Polyb. xii. 3, seq.; Diod. xx. 8, &c.) Among the buildings of the town, we hear of a temple of Jupiter (Plut. Cat. Min. 59) and of one of Apollo, with its sacred plaques described still farther south, as Ptolomy places these Vasi on the upper Ebin; but as no other authority places them so far south, the question is altogether uncertain.

About the year A. D. 70, the Usipotes took part in the siege of Magonuntacum (Tac. Ann. xii. 54), and in A. D. 83 a detachment of them is mentioned as serving in the Roman army in Britain. (Id. Agric. 27.) Afterwards they disappear from history. (Comp. Zeux, Die Deutschen, p. 88; Wilhelm, Germanica, p. 139.)

USPE, a town of the Siraci in Sarmatia, lying E. of the Tanais. It lay on a height, and was fortified with a ditch and walls; but the latter were composed only of mud confined in hurdles. (Tac. Ann. xii. 16.)

[T. H. D.]

USSADIAM (Οὐσαδίαμ, or Οὐσαδίων Ἀμφων; Plut. iv. 5. §§ 4 and 12). a promontory of Mauretania Tingitana, lying SW. of the promontory of Hercules. Now Cape Osan. [T. H. D.]

USTICA. [OSTEODES.]

USURNA or USTERVA. [HOSHERNAS.]

UTINA (Οὐτίνα, Plut. iv. 3. § 34), a town of Zenegitana, in Africa Propria, between Tabraca and the river Bagradas. (Cf. Id. viii. 14 § 11; Plut. v. 4. s. 4.) Erroneously written Utica in Tab. Peutre. Now El-Mine. [T. H. D.]

UTICA (Στύρεν, Polyb. i. 75; Plut. iv. 3. § 6; Ov. Pot, Dion Cass. xii. 41; Eth. Uticensis; Liv. xxxix. 35; Caes. B. C. ii. 36), a colony founded by the Tyrians on the N. coast of Zenegitana in Africa. (Vell. Pat. i. 2; Meli, i. 7; Justin. viii. 4. &c.) The date of its foundation is said to have been a few years after that of Gades, and 287 years before that of Carthage. (Vell. Pat. l. c.; Aristol. Mirab. Ausc. 146; Gesenius, Monum. Script. Linguarum Phoenic. p. 291; Sili. Ital. Pont. iii. 241, sqq. &c.) Its name signified in Phoenician, "a fountain," or "watering-place." (Athen. i. 429; and Tac. Ann. l.c.) Uthica was situated near the mouth of the Bagradas river, or rather that of its western arm, in the Bay of Carthage, and not far from the mouth of the Braciosa river, which forms the western boundary of the bay. (Strab. xvii. p. 832; Liv. l. c.; Plut. l. c.; Appian, B. C. ii. 44, seq.;Procop. B. V. ii. 15, &c.) It lay 27 miles NW. of Carthage. [Itin. Ant. p. 222.] The distance is given as 60 stadia in Appian (Pan. 75), which is probably an error for 160; and as a day's sail by sea. (Scylax, Geogr. Min. i. p. 50, ed. Hilds.) Both Utica and Tungritana were described from Carthage.

(Strab. l. c.; Polyb. i. 75; Liv. xxxix. 9.) Utica possessed a good harbour, or rather harbours, made by art, with excellent anchorage and numerous landing places. (Appian, l. c.; cf. Barth, Wanderungen durch die Küstenländer des Mittelmeeres, pp. 111, 125.) On the land side it was protected by steep hills, which, together with the sea and its artificial defences, which were carefully kept up, rendered it a very strong place. (Liv. xxxix. 33; App. Pan. 16. 30. 75; Diod. xx. 54; Plut. Cat. Min. 58.) The surrounding country was exceedingly fertile and well cultivated, and produced abundance of corn, of which there was a great export trade in Rome. (Liv. xxxv. 31.)
UTICA

call it her alliance with Carthage, and, with other cities of N. Africa, to have joined the Sicilian Agathocles, the opponent of Carthage; to have afterwards revolted from that conqueror, but to have been again reduced to obedience (Diod. xx. 17, 54; cf. Polyb. i. 82). In the First Punic War, Utica remained faithful to Carthage; afterwards it joined the Libyans, but was compelled to submit by the victorious Carthaginians (Polyb. ib. 88 ; Diod. Fr. xxxv.). In the Second Punic War also we find it in firm alliance with Carthage, to whose fleets the excellent harbour of Utica was very serviceable. But this exposed it to many attacks from the Romans, whose freebooting excursions were frequently directed against it from Livy and Polybius (Puli b. xiv. 2; Appian, Punic. 16, 25, 30). In the third war, however, the situation of Carthage being now hopeless, the Uticenses indulged their ancient grudge against that city, and made their submission to Rome by a separate embassy (Polyb. xxxvi. 1; Appian, Pan. 75, 110, 113). This step greatly increased the material prosperity of Utica. After the destruction of Carthage, the Romans presented Utica with the title of civitas, a distinction between that city and Hippo Diarrhytus. It became the chief town of the province, the residence of the Roman governor, the principal emporium for the Roman commerce, and the port of debarcation for the Roman armaments destined to act in the interior of Africa. Owing to this intimate connection with Rome, the name of Utica appears very frequently in the later history of the republic, as in the accounts of the Jugurthine War, of the war carried on by Pompey at the head of Sulla's faction, against the Marian party under Domitius and Hasdrubal the Numidian king Ibarbas, and in the struggle between Caesar and the Punicians, with their ally Juba. It is unnecessary to quote the numerous passages in which the name of Utica occurs in relation to these events. In the last of these wars, Utica was the scene of the celebrated death of the younger Cato, so often related or adverted to by the ancients (Plut. Cat. Min. 58, seq.; Dion Cass. xiii. 10, seq.; Val. Max. iii. 2 § 14; Cic. pro L. Calpurn. 1, &c.; cf. Dict. of Beech. Vol. 1. p. 649). Augustus presented the Uticenses with the Roman citizenship, partly as a reward for the inclination which they had shown for the party of his uncle, and partly also to indemnify them for the spoils of Carthage (Dion Cass. xiii. 16 ; cf. Sext. Enufus, 4rev. 4). We know nothing more of Utica till the time of Hadrian, who visited N. Africa in his extensive travels, and at whose desire the city changed its ancient constitution for that of a Roman colony (Spar. Hadr. 13; Gall. N. Att. xvi. 13). Thus it appears in the Tab. Peut. with the appellation of Colonia, as well as in an inscription preserved in the museum of Leyden (Col. Jul. Ael. Hadr. Utic. ap. Janssen, Mus. Lugd. Batav. Inscr. Gr. et Lat.), as well as its writs and its birthplace Lepcis Magna, with the Jus Italicum. We find the bishops of Utica frequently mentioned in the Christian history from the time of the great Synod under Cyprian at Carthage in 256, down to 654, when a bishop of Utica appeared in the Council of Toledo. The city is said to have witnessed the martyrdom of 300 persons at one time (cf. Morcelli, Afr. Christ. i. p. 362, ii. p. 150; Munter, Prim. Cod. Eccl. Afr. p. 82; Augustin, c. Donat. viii. 8). Utica probably fell with Carthage, into the hands of the Vandals under Generice in 439. Subsequently it was recovered by the Byzantine emperors, but in the reign of the Chalif Abd el-Malik it was conquered by the Franks under Hassan; and though it appears to have been again recovered by John the prophet or patrician, it finally sank under the power of the Saracens during the reign of the same Chalif, and on its second capture was destroyed (cf. Papencondit, die Vandal Hessenschatz in Afr. p. 72, sq., 151, sq.; Weil, Gesch. der Chalifer, i. p. 473, sqq.; Gibbon, Decl. and Fall, vi. 350, sqq. ed. Smith). The remains of its marble columns were carried away in the preceding century, to serve as materials for the great mosque of Tunis (Semhass, p. 43.)

Several coins of Utica are extant bearing the heads of Tiberius or Livia; a testimony perhaps of the gratitude of the city for the rights bestowed upon it by Augustus (cf. Momont, Med. Ant. vi. p. 589; Supp. viii. p. 208). UTIDAVA (Obrilova, Ptol. viii. 8 § 7), a town in Dacia, E. of the Alata. Identified with the ruins at Kosmin, near the confluence of the Katachar and the Frath (cf. Uepat, iii. pt. ii. p. 620). [T. H. D.] UTHI (Obr.ova), one of the nations belonging to the fourteenth satrapy of the Persian empire (Herod. iii. 932), which was armed in the same manner as the Partes (Id. vii. 68), and, according to Eobrik's conjecture, perhaps swelt in Partyca. (Geo. des Heral. p. 181.) UTUS or VITIS (Montone), a river of Gallia Cisalpina, which rises in the Apennines, flows under the walls of Forli (Forum Iulii), and subsequently by the city of Ravenna, and enters the Adriatic about 5 miles from that city. At the present day it joins the Ronce (the Bedesia of Pliny), before reaching the latter city, but in ancient times it probably discharged its waters by a separate channel into the lagunes which at that time surrounded Ravenna. The name is written Vitis by Pliny (iii. 14 s. 19), but it is probable that Utus or Utens is the more correct form, which is found in Livy. According to that author it at one time formed the boundary between the Boan and Senonian Gauls. (Liv. vi. 35.) [E. H. B.] UTtauus, a town of the Galliatae in the NW. of Hispania Tarraconensis, on the road from Lucus Augusti to Asturica, between Pons Nerviae and Berigium. (Itin. Ant. pp. 425, 430.) Variousy identified with Cerceda, Donora, and Castellum de Ventosa. [T. H. D.] UTVUS, an affluent of the Danube in Moesia. The Utus had its sources in Mount Haemus, and formed the E. boundary of Dacia Ripensis (Plin. iii. 26 s. 29). Now the Yida. [T. H. D.] UTVUS (Obr. or Prov. de Aed. iv. i.), a town of Moesia interior, a little to the S. of the confluence of the like-named river with the Danube, and between Osacus and Securisca (Itin. Ant. p. 221). Variousy identified with Starolesltzi, Hutulechek, and a place near Brestovac. [T. H. D.] VULCANI FORUM. [Puteoli.] VULCANIAE INSULAE. [Aegoliana Insulae.] VULCHALO is mentioned by Cicer (pro Font. 9) as a place in the west part of Gallia Narbonensis, but nothing more is known of it. [G. L.] VULGENITES. [Arta Julia.] VULSINI. [Volsini.] VULTUR MONS (Monte Voltore), one of the most celebrated mountains of Southern Italy, situated on the confines of Apulia, Lucania, and the country of the Hirpinii. It commences about 5 miles
to the S. of the modern city of Melfi, and nearly due W. of Venosa (Venusia), and attains an elevation of 4433 feet above the level of the sea. Its regular conical form and isolated position, as well as the crater-like basin near its summit, at once mark it as of volcanic origin; and this is confirmed by the nature of the rocks of which it is composed. Hence it cannot be considered as properly belonging to the range of the Apennines, from which it is separated by a tract of hilly country, forming as it were the base from which the detached cone of Monte Vulture rises. No ancient author alludes to the volcanic character of Mount Vultur; but the mountain itself is noticed, in a well known passage, by Horace, who must have been very familiar with its aspect, as it is a prominent object in the view from his native city of Venusia. (Carm. iii. 4. 9—16.) He there terms it "Vultur Apulus," though he adds, singularly enough, that he was without the limits of Apulia ("aliaextra limina Apulieae") when he was wandering in its woods. This can only be explained by the circumstance that the mountain stood (as above stated) on the confines of three provinces. Lucan also incidentally noticed Mt. Vultur as one of the mountains that directly fronted the plains of Apulia. (Lucan, i. 185.)

The physical and geological characters of Mount Vultur are noticed by Romanelli (vol. ii. p. 233); and more fully by Daulessy (Description of Volcanoes, chap. 11).

VULTURNUM (OoovaxtpopV; Castel Vulturno), a town of Campania, situated on the sea-coast at the mouth of the river of the same name, and on its S. bank. There is no trace of the existence of any town on the site previous to the Second Punic War, when the Romans constructed a fortress (castellum) at the mouth of the river with the object of securing their possession of it, and of establishing a magazine of corn for the use of the army that was besieging Capua. (Livy xxv. 20, 22.) It is probable that this continued to exist and gradually grew into a town; but in n. c. 194, a colony of Roman citizens was established there, at the same time with Litternum and Puteoli. (Id. xxxiv. 43; Varr. L. L. v. 5.) The number of colonists was in each case but small, and Vulturum does not appear to have ever risen into a place of much importance. But it is noticed by Livy as existing as a town in his time ("et Vultur estat, ubi nunc urbs est." xxx. 20), and is mentioned by all the geographers. (Strab. v. p. 238; Plin. i. 5. 9; Mel. ii. 4. § 9; Postol. iii. 1. § 6.) We learn also that it received a fresh colony under Augustus (Lib. Colon. p. 239), and retained its colonial rank down to a late period. It became an episcopal see before the close of the Roman Empire, and appears to have continued to subsist down to the 9th century, when it was taken by the Saracens. In the 17th century a new fortress was built nearly on the ancient site, which is called Castel Vultorno or Castell'a Mare di Vultorno. But from the remains of the ancient city still visible it appears that this occupied a site somewhat nearer the sea than the modern fortress. Several inscriptions have been found on the spot, which attest the colonial rank of Vulturum as late as the age of the Antonines. (Mommsen, I. K. N. 3339—3339.)

VULTURNUS (Oororropv; Vultorno), the most considerable river of Campania, which has its sources in the Apennines of Sannumin, about 5 miles S. of Avellena, flows within a few miles of Aressena on its left bank, and of Vesuvius on its right, thence pursues a SE. course for about 35 miles, till it receives the waters of the Calor (Colo-
lore), after which it turns abruptly to the WSW., passes under the walls of Casinum (Capova), and finally discharges itself into the Tyrrhenian sea about 20 miles below that city. Its mouth was marked in ancient times by the town of the same name (Vulturum), the site of which is still occupied by the modern fortress of Castel Vultorno (Vulturum). (Strab. v. pp. 238, 249; Plin. iii. 5. s. 9; Mel. ii. 4. § 9.) The Vulturum is a deep and rapid, but turbid stream, to which character we find many allusions in the Roman poets. (Virg. Aen. vii. 729; Ovid. Met. xv. 714; Lucan, i. 423; Claudian. Pamp. Prob. et al. 256; Sil. Ital. viii. 530.) A bridge was thrown over it close to its mouth by Domitian, when he constructed the Via Domitia that led from Sinussa direct to Cnaeae. (Stat. Silv. iv. 3, 67, &c.) From the important position that the Vulturum occupies in Campania, the fertile plains of which it traverses in their whole extent from the foot of the Apennines to the sea, its name is frequently mentioned in history, especially during the wars of the Romans with the Campanians and Samnites, and again during the Second Punic War. (Livy. viii. 11, x. 20, xxi. 14, &c.; Polyb. iii. 92.) Previous to the construction of the bridge above mentioned (the remains of which are still visible near the modern Castel Vultorno), there was no bridge over it below Casinum, where it was crossed by the Via Appia. It appears to have been in ancient times navigable for small vessels at least as far as that city. (Livy. xxxii. 9; Stat. Silv. iv. 3, 77.)

Its only considerable tributary is the Calor, which brings with it the waters of several other streams, of which the most important are the Tamars and Sarates. These combined streams bring down to the Vulturum almost the whole waters of the land of the Hirpinii; and hence the Calor is at the point of junction nearly equal in magnitude to the Vulturum itself. (E. H. B.)

VANGUS, VICUS, in North Gallia, is placed by the Antonine Itinerary on the road from Duuroctorum (Reims) to Augusta Treverorum (Trier). Vangus is between Duuroctorum and Eupusus (Uptich, Iovis), or Eupusus (Eoussus), and marked xxii. league from each place. The direction of this road from Reims is to the passage of the Maus or Munus at Mouson; and before it reaches Iovis it brings us to a place named Vone, near the river Aisne, a little above Attigni. This is a good example, and there are many in France, of the old Gallic names continuing unchanged. Flodoard, in his history of Reims, speaks of "Municipium Vangus," and the Pagus Vangensis circa Axonan ripaspitam. The Axonan is the Aisne. The Roman road may be traced in several places between Reims and Vone; and there is an indication of this road in the place named Vau d'Eté (de strata), at the passage of the river Suippe. [G. L.]

UXACONAS, a town belonging apparently to the Cornuvi in Britannia Romana, on the road from Deva to Londinium, and between Uriconium and Penmonerecum. Camden (p. 633) and others identify it with Okenygate, a village in Shrop-
sire; Horsley (p. 419) and others with Sheriff Hales. [T. H. B.]

UXAMA (Ooovra Apyralaa, Postol. ii. 6. § 56), a town of the Areopagi in Hispania Tarraconensis, on
the road from Asturica to Caesaraugustä, 50 miles W. of Namantia, and in the neighbourhood of Chalia (Iun. Ant. p. 441), where, however, the more recent editions read Vassamia. (Pline. iii. 3. s. 4; Flor. iii. 22; Sul. Ital. iii. 384.) It is called Uxuma in the Geographia Romana (iv. 43); and according to Ukert (ii. pt. i. p. 455), it is probably the *A'cim Texture* (vi. 47). Now Omaa.

UXAMABAICA (Οξιμαβαϊκα, Ptol. ii. 6. § 53), a town of the Auiriones in Hispania Tarraconensis. (Mar. Inscr. p. 1095. 8.) Ukert (ii. pt. i. p. 416) identifies it with Oma in Biscaya. [T. H. D.]

UXAN INSULA, for so the name should be read in the Maritime Itun., is *Ibinius* A'sanitos (iv. 30), an island off the Atlantic coast of Gallia. A'sanitos is Oaessant, or Ushant, as the English often write it, a small island belonging to the department of Finistere, and nearly in the latitude of Brest.

UXELLODUNUM, in Gallia. In n. c. 51 Drappes a Senen and Lucterins a Cadurcan, who had given the Romans much trouble, being pursued by C. Caninius Rebilus, one of Caesar's legates, took refuge in Uxelodunum, a town of the Cadurci (B. G. viii. 32—44); Uxelodunum was in a position naturally strong, protected by rocks so steep that an armed man could hardly climb up, even if no resistance were made. A deep valley surrounded nearly the whole elevation on which the town stood, and a river flowed at the bottom of the valley. The interval where the river did not flow round the steep sides of this natural fortress was only 300 feet wide, and along this part ran the town wall. Close to the wall was a large spring, which supplied the town during the siege, for the inhabitants could not get down the rocks to the river for water without risk of their lives from the Roman missiles. Caninius began his blockade of Uxelodunum by making three camps on very high ground, with the intention of gradually drawing a vallum from each camp, and surrounding the place. On the river side his camps were of course separated from the town by the deep valley in which the river flowed; he may have planted two camps here and one on the land side of Uxelodunum.

The townsmen remembering what had happened at Alesia the year before, sent out Lucterins and Drappes to bring supplies into the place. Lucterins and Drappes took all the fighting men for this purpose except 2000, and they collected a large quantity of corn; but as Lucterins was attempting to carry it into the town by night, the Romans surprised him, and cut his men to pieces. The other part of the force which had gone out was with Drappes about 12 miles off. Caninius sent his cavalry and light German troops against Drappes to surprise him, and he followed with a legion. His success was most complete. Drappes was taken prisoner and his force destroyed or captured. Caninius was enabled to go on with his vallation without fear of interruption from without, and C. Fabius arriving the next day with his troops undertook the blockade of part of the town.

Caesar hearing the news about Uxelodunum and resolving to check all further range in Gallia by one signal example more, hurried to the place with all his cavalry, ordering C. Calenus and two legions to follow him by regular marches. He found the place shut in, but it was well supplied with provisions, as the deserters told him; and there remained nothing to do but to cut off the townsmen from the water. By his archers and slingers, and by his engines for discharging missiles (tormenta) placed opposite those parts of the town where the descent to the river was easiest, he attempted to prevent the enemy from coming down to the river to get water. His next operation was to cut them off from the spring, and this was the great operation of the siege on which depended the capture of the town. Caesar dealt with his enemies as a doctor with a disease—he cut off the supplies. (Frontius, Strat. iv. 7. 1.) He moved his vineyes towards that part of the town where the spring lay under the wall, and this was the isthmus which connected the hill fort with the open country. He also began to construct mounds of earth, while the townsmen from the higher ground annoy the Romans with missiles. Still the Romans pushed on their vineeyes and their earthworks, and at the same time began to form mines (cuniculi) to reach the source of water and draw it off. A mound of earth 9 feet high was constructed, and a tower of ten stories was placed upon it, not high enough to be on a level with the top of the wall, but high enough to command the summit level of the spring. Thus the townsmen were prevented from reaching the spring, and a great number of cattle, horses, and men died of thirst. The townsmen now tumbled down blazing barrels filled with fat, pitch, and chips of wood, and began a vigorous onset to prevent the Romans from quenching the flames; for the burning materials being stopped in their descent by the vineyes and mounds, set the Roman works on fire. On this Caesar ordered his men to scale the heights on all sides and to divert the defendents from the land side by a feint of attacking the walls. This drew the enemy from the fire; and all their force was employed in manning the walls, in the meantime the mounds cut the wall off. The obstinate resistance of the enemy was terminated by the spring being completely dried up by the diversion of the water through the subterraneous passages which the Romans had constructed; and they surrendered after many of them had died of thirst. To terrify the Galli by a signal example, Caesar cut off the hands of all the fighting men who remained alive.

The attack and defence of Uxelodunum contain a full description of the site. This hill-fort was surrounded by a river on all sides except one, and on this side also there appeared to be no approach. It is agreed that Uxelodunum was somewhere either on the Olta (Lot) or on the Duriansus (Dordogne). D'Anville places it at Puech d'Issoual, on a small stream named the Tourmente, which flows into the Dordogne after passing Puech d'Issoual. He was informed by some person acquainted with the locality that the spring still exists, and we may assume that to be true, for Caesar could not destroy the source; he only drew off the water, so that the besieged could not get at it. D'Anville adds that what appeared to be the entrance of the place is called in the country le portail de Rome, and that a hill which is close to the Puech, is named Bel-Castel. Thus this distinguished geographer had no exact plan of the place, and had not seen it. Walckenaer (Geog. de Gaulle, p. 364) affirms that the plan of Puech
UXELLODUNUM.  

UXELLODUNUM, a station on the wall of Hadrian in Britannia Romana, where the Cohors I. Romanorum was in garrison (Not. Imp.). Probably Brough.  

UXEUM (Ugubon), Ptol. ii. 3. § 8), a town of the Selgovae in Britannia Britanna. Camden (p. 1193) takes it to have been on the river Euar in Euseba, whilst Horsely (p. 366) identifies it with Caerharivoc near Dunfrises.  

UXEUM (Uegon, Ptol.: Etb. Uxentias: Ucenho), a town of Cambria, in the territory of the Salentinii, situated about 5 miles from the sea-coast, and 16 from the Lapponian Frontier (Cap. cit Lucan). It is mentioned by both Pliny and Ptolemy among the inland towns which they assign to the Salentinii, and is placed by the Tabula on the road from Tarentum to the extremity of the peninsula. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 76; Tab. Pent.) The name is corruptly written in the Tabula Ubintum, and in Pliny the MSS. give Ulteni, for which the older editors had substituted Valentii. Hence Ptolemy is the only authority for the form of the name (though there is no doubt that the place meant is in all cases the same); and as coins have the Greek letters OZAN, it is doubtful whether Uxentum or Uzentum is the more correct form. The site is clearly marked by the modern town of Ugento, and the ruins of the ancient city were still visible in the days of Galateo at the foot of the hill on which it stands. (Galateo, de Sit. Impag. p. 100; Romanelli, vol. ii. p. 43.) Many tombs also have been found there, in which coins, vases, and inscriptions in the Messapian dialect have been discovered.  

[El. H. B.]  

COIN OF UXENTUM.  

UXENTUS (to Oegon, Ptol. vii. 1. §§ 24, 76), a chain of mountains in the Decuman of India, between lat. 22° and 24° and long. 156° and 158°, probably those called Gondawana. They formed the watershed of several rivers which flowed into the Bay of Bengal, as the Adamas, Dosaron and Tyndis. [V.]  

UXII (Oegon, Arrian, Arab. iii. 17; Strab. xi. p. 524, xvi. pp. 729, 744), a tribe of ancient Persis, who lived on the northern borders of that province between Persis and Susiana, to the E. of the Pasigiris and to the W. of the O creatis. They were visited by Alexander the Great on his way from Susa; and their capital town, Uxia (Strab. xvi. p. 744), was the scene of a celebrated siege, the details of which are given by Arrian and Curtius. It has been a matter of considerable discussion whether this city was Uxentum. The whole question has been carefully examined by the Baron de Bodde, who has personally visited the localities he describes. (Geogr. Journ. xiii. pp. 108—110.) He thinks Uxia is at present represented by the ruins near Shikaskhali-Sukman in the Bakhtyar Mountains, to the E. of Sinjar. [V.]  

UX, a district of Western Asia, to which the prophet Job belonged. (Job, i. 1.) It cannot be determined where it was; hence, learned men have placed it in very different localities. Winier, who has examined the question, inclines to place it in the neighbourhood of Edom, adjoining Arabia and Chaldrea. (Biblisch. Reallorbeitb. t. q. Ux.) The people are perhaps represented in classical geography by the Aodaita or Aedhita of Ptolemy (v. 19. § 2), a tribe who lived on the borders of Babylonia. In Genesis x. 23, Us is called the son of Aram: hence Josephus says, Οδαν Κτίς των Πρωτανων και Δαμανων (Antig. i. 6. § 4); but there is no sufficient evidence to show that the "land of Us" of Job is connected with Northern Mesopotamia.  

UXITA (Oegon, or Odga, Ptol. iv. 3. § 37), a town of Byzantium in Africa Propra, lying S. of Hadrumetum and Ruspina, and W. of Thydisus. (Clr. Hist. E. Afr. 41, 51.)  

[El. H. D.]  

XANTHUS.  

XANTHUS (Záthous: Eth. Záthoas), the greatest and most celebrated city of Lycia, was situated according to Strabo (xiv. p. 666) at a distance of 70 stadia from the mouth of the river Xanthus, and according to the Stadiasmus (§ 247) only 60 stadia. Pliny (v. 28) states the distance at 15 Roman miles,
XANTHUS.

Respecting Xanthus as a name of the Trojan river Scamander, see SCAMANDER. [L. S.]

XANTHUS. [Buthrotum.]

XATHIRI (Σάθηρι, Arrian, Amb. vi. 13), a tribe of free Indians, who resided along the banks of the Hydronotes (Ιρώνιτης) in the Punjab. There can be little doubt that they derive their name from the Indian caste of the Kshatriyas. [V.]

XENAGORAE INSULAE (Ἐναγοραῖοι νησίων), according to Pliny (v. 35), a group of eight small islands off the coast of Lycia, which the Stadiasmus (§ 218) states were situated 60 stadia to the east of Patara. They are commonly identified with a group of islands in the bay of Kalamaki. [L. S.]

XENIPPA, a small place in the NE. part of Sogiana, noticed by Curtis (viii. 2. § 14); perhaps the present Urtya. [V.]

XEROGYPSUS (Ξέρογυπους, Anna Comm. vii. 11, p. 378, Bonn), a small river in the SE. of Thrace, which falls into the Propontis, not far from Perinthus. In some maps it is called the Erginus, upon the authority of Mela (ii. 2). [J. R.]

XERXENES (Ξέρξενος, Strab. xi. p. 328), a district on the Euphrates, in the NW. part of Armenia, more properly, however, belonging to Cappadocia. It is called Derxene by Pliny (v. 24. s. 20), and this perhaps is the more correct name. (Cf. Ritter, Erdm. 1759, p. 765.) [T. H. D.]

XILEMNE (Ξηλημνή), a district in the first part of Pontus, on the Halys, and near the frontiers of Cappadocia, was celebrated for its salt-works. (Strab. xii. p. 561.) [L. S.]

XION (Ξίον, Syclax, p. 53), a river on the W. coast of Libya Interior. [T. H. D.]

XIPHONIUS PORTUS (Ξιφονίους λιμήν, Sycl. p. 4: Bay of Augusta), a spacious harbour on the E. coast of Sicily, between Catana and Syracuse. It is remarkable that this, though one of the largest and most important natural harbours on the coast of Sicily, is rarely mentioned by ancient authors. Syclax, indeed, is the only writer who has preserved to us its name as that of a port. Strabo speaks of the Xiphonian Promontory (τό τῆς Ξιφωνίας ἀπορριμέων, vi. p. 267), by which he evidently means the projecting headland near its entrance, now called the Capo di Santa Croce. Diodorus also mentions that the Carthaginian fleet, in n. c. 263 touched at Xiphonia on its way to Syracuse (εἰς τῆν Ξιφωνίαν, xxii. 4. § 502). None of these authors allude to the existence of a town of this name, and it is probably a mistake of Stephanus of Byzantium, who speaks of Xiphonia as a city (α. ν.'). The harbour or bay of Augusta is a spacious gulf, considerably larger than the Great Harbour of Syracuse, and extending from the Capo di Santa Croce to the low peninsula or promontory of Magnesia (the ancient Thapsus). But it is probable that the port designated by Syclax was a much smaller one, close to the modern city of Augusta, which occupies a low peninsular point or tongue of land that projects from near the N. extremity of the bay, and strongly resembles the position of the island of Ortygia, at Syracuse, except that it is not so well separated from the mainland. It is singular that so remarkable and advantageous a situation should not have been taken advantage of by the Greek colonists in Sicily; but we have no trace of any ancient town on the spot, unless it was the site of the ancient Megara. [Mega.] The modern town of Augusta, or Agosta, was founded in the 13th century by Frederic II. [E. H. B.]

4 q 3

which is much too great. (Comp. Steph. B. s. v.; Ptol. v. 3. § 8; Mela, i. 15; Polyb. xxix. 7.) This famous city was twice destroyed, on each of which occasions its inhabitants defended themselves with undaunted valour. The first catastrophe befell Athens as a city in the reign of Cyrus, when Harpagus besieged it with a Persian army. On that occasion the Xanthians buried themselves, with all they possessed, under the ruins of their city. (Herod. i. 175.) After this event the city must have been rebuilt; for during the Roman civil wars consequent upon the murder of Caesar, Xanthus was invested by the army of Brutus, as its inhabitants refused to open their gates to him. Brutus, after a desperate struggle, took the city by assault. The Xanthians continued to live in the streets, and passed with their wives and children in the flambeau, rather than submit to the Romans. (Dion Cass. xlvii. 34; Appian, B. C. iv. 18, foll.) After this catastrophe, the city never recovered. The chief buildings at Xanthus were temples of Sardeson (Appian, l. c.), and of the Lycean Apollo. (Diod. v. 77.) At a distance of 60 stadia down the river and 10 stadia from its mouth, there was a sanctuary of Leto on the bank of the Xanthus. (Strab. l. c.) The site of Xanthus and its magnificent ruins were first discovered and described by Sir C. Fellows in his Excursion to Asia Minor, 1825, foll. (except his Lyca, p. 164, foll.) These ruins stand near the village of Koonik, and consist of temples, tombs, triumphal arches, walls, and a theatre. The site, says Sir Charles, is extremely romantic, upon beautiful hills, some crowned with rocks, others rising perpendicularly from the river. The city does not appear to have been very large, but its remains show that it was highly ornamented, particularly the tombs. The architecture and sculptures of the place, of which many specimens are in an excellent state of preservation, and the inscriptions in a peculiar alphabet, have opened up a page in the history of Asia Minor previously quite unknown. The engravings in Fellows' works furnish a clear idea of the high perfection which the arts must have attained at Xanthus. (See also Spratt and Forbes, Travels in Lycia, i. p. 5, and ii., which contains an excellent plan of the site and remains of Xanthus; E. Bramm, Die Marmorwerke von Xanthos in Lykien, Rhein. Mus. Neue Folge, vol. iii. p. 481, foll.) A large collection of marbles, chiefly sepulchral, discovered at Xanthus by Sir C. Fellows, and brought to England in 1842 and 1843, has been arranged in the British Museum. Of these a full account is given in the Supplement to the Penny Cyclopaedia, vol. ii. p. 713, foll. [L. S.]

XANTHUS (Ξανθός), an important river in the W. of Lycia, which is mentioned even in Homer (II. ii. 877, v. 479), and which, according to Strabo (xiv. p. 665), was aeciantedly called Sirbes, that is in Phoenician and Arabic "reddish yellow," so as to be the Greek name Xanthus is only a translation of the Semitic Sirbes or Zirba. The Xanthus has its sources in Mount Taurus, on the frontiers between Lycia and Pisidia, and flows as a navigable river in a SW. direction through an extensive plain (τηρεν ξαιδος, Herod. l. i. 176), having Mount Bragan on the W. and Massicytes on the E., towards the sea, into which it discharges itself about 70 stadia S. of the city of Xanthus, and a little to the NW. of Pinarna. (Herod. l. c.; Ptol. v. 3. § 2; Dion. Per. 845; Ov. Met. ix. 645; Mela, l. 15; Plin. v. 28.) Now the Etchon or Essewade. (Fellows, Lycia, pp. 123, 278.)
XOIS (Zois, Strab. xvii. p. 802; Ptol. iv. 5. § 50; Ζώις, Steph. B. s. v.), a town of great antiquity and considerable size, was situated nearly in the centre of the Delta, upon an island formed by the Sobocynitic and Phatnic branches of the Nile. It belonged to the Schenynitic Nome. The 14th dynasty, according to Manetho, consisted of 76 Xoite kings. This dynasty immediately preceded that of the shepherd kings of Egypt. It seems probable, therefore, that Xoïs, from its strong position among the marshes formed by the intersecting branches of the river, held out during the occupation of the Delta by the Hyksos, or at least compromised with the invaders by paying them tribute. By some geographers it is supposed to be the Taparina of Herodotus (ii. 59, iii. 12). Kapparon (L'Egypte sous les Pharaons, vol. ii. p. 214) believes its site to have been at Sakka, which is the Arabian synonyme of the Coptic Σκοι and of the old Egyptian Σκήνο (Niebuhr, Travels, vol. i. p. 75.) The road from Tanis to Memphis passed through Xoïs. [W.B.D.]

XYLENOPOLIS, a town said by Pline, on the authority it would seem of Oenocritus or Nearchus, to have been founded by Alexander the Great (vi. 23. s. 26). It must have been in the southern part of Sinade; but its position cannot be recognised, as Pline himself states that the authors to whom he refers did not say on what river it was situated. [V.]

ZACENICAE (ZXACENICAE), a town of Macedon, Ptol. iv. 6. § 23), an Aescharian people in Libya Interior, between the mountains Arangas and Armaltes. [T.H.D.]

XYLINE COME, a village in Psidia, between Corbusa and Termessus, is mentioned only by Livy (xxxviii. 15). A place called Xylone, in the country of the Cisians in Pontus, is noticed by Ptolemy (v. 6. § 6). [L. S.]

XYLONPOLIS (Συλόνπολις), a town of Myconia in Macedonia (Ptol. iii. 13. § 36), whose inhabitants, the Xylopolitae, are mentioned by Pline also (iv. 10. s. 17).

XYNIA or XYNIÆ (Εύνια or Εύνιας), a town near the southern confines of Tessaly, and the district of the Aenianes (Liv. xxxiii. 3), which gave its name to the lake Xynias (Εύνιας), which Stephanus confounds with the Boeboea (Apollon. Rhod. i. 67; Catull. lxxii. 287; Stephan. B. s. v. Εύνιας). Xynias, having been deserted by its inhabitants, was plundered by the Aetolians in B.C. 198 (Liv. xxxiii. 13). In the following year Flamininus arrived at this place in three days' march from Heraclea (Liv. xxxiii. 23; comp. Liv. xxxix. 26). The lake of Xynias is now called Tunkili, and is described as 6 miles in circumference. The site of the ancient city is marked by some remains of ruined edifices upon a promontory or peninsula in the lake. (Leake, North. Grec. vol. i. p. 460, vol. iv. p. 517.)

XYPETE. [Attica, p. 325, a.]

Z.

ZABA (Ζάβα), a small place on the northern coast of Taprobanæ or Ceylon, noticed by Ptolemy (vii. 4. § 13). It has not been identified with any modern site. [V.]

ZABAE (Ζαβά), Ptol. i. 14. §§ 1. 4. 6, 7, vii. 2. § 6, viii. 27. § 9) is a town of some importance in this island. Gaisuin, on the island Gaisuin, perhaps the modern Ligur.

ZABATUS (Ζαβάταος), a river of Assyria, first noticed by Xenophon (Anc. ii. 5. § 1, iii. 3. § 6), and the same as the Lacus of Polybius (v. 51),

ZACYNTHUS.

Arrian (Anc. iii. 15), and Strabo (ii. p. 79, xvi. p. 737). It is called Zabas by Ammianus (viii. 14) and Zerbis by Pline (vi. 26. a. 30). There can be no doubt that it is now represented by the Greater Zacynthos, a river of considerable size, which runs over the mountains on the confines of Armenia and Kurdistan, flows into the Tigris a little to the S. of the great mound of Nimrud (Tavernier, ii. c. 7; Layard, Nineveh and its Remains, i. p. 192.) [V.]

ZABE. [BERZEBBA.]

ZABE (Ζάβη), Procop. B. Vandal. ii. 20, p. 501, ed. Bonn), a district in Mauretania Tingitana. According to the Not. Imp. it contained a town of the same name, which must be that called Zabi in the Ins. Ant. (p. 30). Lapis identifies it with the present Mokh (T. H. D.)

ZACATAE (Ζακαταῖ), Ptol. v. 9. § 18), a people of Asiatic Sarmatia. [T. H. D.]

ZACYNTHUS (Σακυνθοι) Eth. Ζακυνθια; Zante), an island in the Sicilian sea, lying off the western coast of Peloponnesus, opposite the promontory Chelonatas in Elis, and to the S. of the island of Cephallenia, from which it was distant 25 miles, according to Pline, (iv. 12. s. 19) but according to Strabo, only 60 stadia (x. p. 458). The latter is very nearly correct, the real distance being 8 English miles. Its circumference is stated by Pline at 56 m. r., by Strabo at 160 stadia; but the island is at least 54 miles round, its greatest length being 23 English miles. The island is said to have been originally called Hyrie (Plio. l. c.), and to have been colonized by Zacynthus, the son of Dardanus, from Thessaly in Arcadia, whence the acropolis of the city of Zacynthus was named Posphus. (Paus. viii. 24. § 3; Stephan. B. s. v.) We have the express statement of Thucydides that the Zacynthians were a colony of Achaeanas from Peloponnesus (ii. 66). In Homer, who gives the island the epithet of "woody" (βόσκεις and ἄλισσος), Zacynthus forms part of the Ionians of Ulysses. (Il. ii. 634. Od. i. 246, iv. 24. vii. 260; Strab. x. p. 457.) It appears to have attained considerable importance at an early period; for according to a very ancient tradition Saguntum in Spain was founded by the Zacynthians, in conjunction with the Rutuli of Ardea. (Liv. xxxi. 7; Plin. xxxvi. 40. s. 79; Strab. iii. p. 159.) Bocchus stated that Saguntum was founded by the Zacynthians 200 years before the Trojan War (ap. Plio. l. c.) In consequence probably of their Achaean origin, the Zacynthians were hostile to the Lacedaemonians, and hence we find that fugitives from Sparta fled for refuge to this island. (Herod. vi. 70, iv. 37.) In the Peloponnesian War the Zacynthians sided with Athens (Thuc. ii. 7. 9); and in B.C. 430 the Lacedaemonians made an unsuccessful attack upon their city. (Ib. 66.) The Athenians in their expedition against Pylius found Zacynthus a convenient station for their fleet. (Id. iv. 8. 13.) The Zacynthians are enumerated among the autonomous allies of Athens in the Sicilian expedition. (Id. vii. 57.) After the Peloponnesian War, Zacynthus seems to have passed under the supremacy of Sparta; for in B.C. 374, Timotheus, the Athenian commander, on his return from Corcyra, landed some Zacynthian exiles on the island, and assisted them in establishing a free republic. These must have belonged to the anti-Spartan party; for the Zacynthian government applied for help to the Spartans, who sent a fleet of 25 sail to Zacynthus. (Xen. Hell. vi. 2. § 3; Diodor. xiv. 45, seq.; as to the statements of Diodorus, see Grote, Hist. of Grec. vol. x. p. 192.) The Zacynthians
ZACYNTHUS.

assisted Dion in his expedition to Syria; but Strabo, 22, seq.) At the time of the Roman wars in Greece we find Zacynthus in the possession of Philip of Macedon. (Polyb. v. 102.) In n. c. 211 the Roman proctor M. Valerius Lævis, took the city of Zacynthus, with the exception of the citadel. (Liv. xxvi. 24.) It was afterwards restored to Philip, by whom it was finally surrendered to the Romans in n. c. 191. (id. xxxvi. 32.) In the Mitridatic War it was attacked by Archelaus, the general of Mithridates, but he was repulsed. (Appian, Mithr. 45.) Zacynthus subsequently shared the fate of the other Ionian islands, and is now subject to Great Britain. The chief town of the island, also named Zacynthus (Liv. xxvi. 14; Strab. x. p. 458; Ptol. iii. 14, § 19), was situated upon the eastern shore. Its site is occupied by the modern capital, Zante, but nothing remains of the ancient city, except a few columns and inscriptions. The situation of the town upon the margin of a semi-circular bay is very picturesque. The citadel probably occupied the site of the modern castle. The beautiful situation of the city and the fertility of the island have been celebrated in all ages (καλά πόλις & Ζάκυνθος, Theor. Id. iv. 32; Strab. Plin., ii. ec.). It no longer deserves the epithet of "wooly," given to it by Homer (l. c.) and Virgil ("memorosa Zacynthus," Aen. iii. 270); but its beautiful olive-gardens, vineyards, and gardens, justify the Italian proverb, which calls Zante the "flower of the Levant."

The most remarkable natural phenomenon in Zante is the celebrated pitch-wells, which are accurately described by Herodotus (iv. 195), and are mentioned by Phiny (xxxv. 15. s. 51). They are situated about 12 miles from the city, in a small marshy valley near the shore of the Bay of Chieri, on the SW. coast. A recent observer has given the following account of them: "There are two springs, the principal surrounded by a low wall: here the pitch is seen bubbling up under the clear water, which is about a foot deep over the pitch itself, with which it comes out of the earth. The pitch-bubbles rise with the appearance of an India-rubber bottle until the air within bursts, and the pitch falls back and runs off. It produces about three barrels a day, and can be used when mixed with pine-pitch, though in a pure state it is comparatively of no value. The other spring is in an adjoining vineyard; but the pitch does not bubble up, and is in fact only discernible by the ground having a burnt appearance, and by the feet adhering to the surface as one walks over it. The demand for the pitch of Zante is now very small, vegetable pitch being preferable." (Bowen, in Murray's Handbook for Greece, p. 93.)

The existence of these pitch-wells, as well as of numerous hot springs, is a proof of the volcanic agency at work in the island; to which it may be added that earthquakes are frequent.

Phiny mentions Mt. Eclus in Zacynthus ("Mons Elaus iti nobilis," Plin. l. c.), probably Mt. Skopo, which raises its curiously jagged summit to the height of 1300 feet above the eastern extremity of the bay of Zante. (Bodwell, Tour through Greece, vol. i. p. 83, seq.)

ZADRARACATA. [Tagae.]

ZAGATIS (Ζάγατης), a coast river in the E. part of Pontus, discharging itself into the Euxine about 7 stadia to the east of Athenea; probably the same river as the modern Sucba Dere. (Arrian, Peripl. P. E. p. 17; Anon. Peripl. P. E. v. 15.) [L. S.]

ZAGORUS, or ZAGORUM (Ζάγορος, or Ζάγωρος, Marcian. p. 73; Ζαγώρα, Ptol. v. 4. § 5; Ζαγωρα, Arrian, Peripl. P. E. p. 15; Zavoria, Tab. Pent.) a town of Paphalagonia, on the coast of the Euxine, between Sinope and the mouth of the Halys, from the latter of which it was distant about 400 stadia. [L. S.]

ZAGRUS MONS (ὁ Ζάγωρος, τὸ Ζάγωρον ὄρος, Polyb. v. 44); Ptol. vi. 2. § 4; Strab. xi. p. 522), the central portion of the great chain of mountains which, extending in a direction nearly N. and S. with an inclination to the W. at the upper end, connects the mountains of Armenia and the Caucasus with those of Susiana and Persia. It separates Assyria from Media, and is now represented by the middle and southern portion of the mountains of Kurdistan, the highest of which is the well-known Rovenazia. Near this latter mountain was the great highroad which led from Assyria and its capital Nineveh into Media, and, at its base, was in all probability the site of the pass through the mountains, called by Ptolemy Αἰαὶ τοῦ Ζάγωρου πόλιαi (vi. 2. § 7), and by Strabo, ἡ Μυδική πόλις (xi. p. 525). Ptolemy notices the difficulty and danger of this pass (v. 44), which, from Colonel Rawlinson's narrative, would seem to have lost none of its dangers (Rawlinson, in Trans. Geogr. Soc. vol. x., Pias and Pillar of Keli-Sheik).

ZAIHTHA or ZAUTHA (Ζαύθη, Zosim. iii. 14), a small town or fortified place in Mesopotamia, on the Euphrates, to the SE. of Circiumus. It is said by Ammianus to have been called Zaihta (or more properly Zaitia) from the olive trees (xxiii. 5. § 7), which we must suppose grew there, though the climate is very hot for that tree. He adds that it was celebrated for the monument erected by the soldiers to the emperor Gordianus. Zosimus, on the other hand, places this monument at Dara (l. c.), in which Entropius agrees with him (ix. 2). Ptolemy calls it Zaihta (Ζαιητα, v. 18. § 2) [DURA.]. [V.]

ZALACUS (τὸ Ζάλακουν ὄρος, Ptol. iv. 2. §§ 14, 19), a mountain chain of Mauretania near the river Chimalah, the highest and most rugged branch of the Atlas in this neighbourhood. Now the Wun-ness-ree or Guernesers. (Cf. Shaw, Travels, i. p. 74.)

[ T. H. D.]

ZALDAPA (Ζάλδαπα, Procop. de Aed. iv. 11. p. 308), a town in the interior of Lower Moesia. It is called Saldapa by Theophylact (2 Ζάλδαπα, l. 8), and Zeldapa by Hierocles. (ZeASeTra, p. 637.)

[ T. H. D.]

ZALECSUS (Τζάλεκσος, or Ζάλεκσος, in Ptol. v. 4. § 3), a small river on the coast of Paphalagonia, discharging itself into the Euxine at a distance of 210 stadia west of the Halys. (Marcian. p. 73.) At its mouth there was a small town of the same name, about 90 stadia from Zagarus, or Zagarum (Anon. 4 q 4)

COIN OF ZACYNTHUS.

(ZARADEIUY (Zapadopor, Ptol. vii. 1. § 27), the upper portion of the Hyphasis, the most eastern of the five rivers of the Punjab, now the Satlej. There is some doubt about the orthography of this name, which in some editions is written Zarades. There can be no doubt that in either case it is derived from the Sanscrit name Satadru, and that it is the same as the Hezardus of Pliny (vi. 17. s. 21).

ZARA, a town in the interior of Numidia, on the road from Lagmura to Stiriaphon, mentioned in the Tab. Peut, it is called Zara. Various authorities identify with Jophah, Nygma, and Zeryuk. [T.H.D.]

ZARANG [DRAENGAE].

ZARATAE, or ZARETAE (Zaparta, Ptol. vii. 14. § 11), a people of Scythia on the Imaus. [T.H.D.]

ZARAES (Zapal, Paus., Polyb.; Zaphn, Ptol.: Eth. Zapunais, Steph. B.), a town on the eastern coast of Laconia, with a good harbour, situated upon a promontory, which is a projection of Mt. Zara. [Vol. II. p. 109. b.] Like Prasae and some other places on this part of the Laconian coast, it passed into the hands of the Argives in the time of the Macedonian supremacy; and this was apparently the reason why it was destroyed by Cleonymus, the son of Cleomenes. From this disaster it never recovered. Augustus made it one of the Eleutherian-Laconian towns; but Pausanias found in it nothing to mention but a temple of Apollo at the end of the harbour. It is now called Hiéракa, which is evidently a corruption of Zara, and there are still ruins of the ancient town. The promontory bears the same name, and the port, which is on its northern side, is described as small but well sheltered. Pausanias says that Zara was 100 stadia from Epilauros Limera, but this distance is too great. (Paus. iii. 24. § 1; comp. i. 38. § 4. 21. § 7; Polyb. iv. 36; Ptol. iii. 15. § 10; Plin. iv. 5. s. 17; Steph. B. s. v.; Leake, Morea, vol. i. p. 210; Boblaye, Recherches, d.e. p. 101; Curtius, Peloponnesos, vol. ii. p. 291.)

ZARAK MONS. [LACONIA, p. 109, b.]

ZARGIDAYA (Zagýia, Ptol. iii. 10. § 15), a town of Moesia Inferior, on the Danube. [T. H. D.]

ZARIASPA. [BACTR.]

ZARIASPAE. [BACTRA.]

ZARIASPIS. [BACTRUS.]

ZARMAI/EGETHUSA. [SARMAZEGETHUS.A.]

ZARMAI (Herod. iv. 193), people of Libya, dwelling in a woolly and mountainous country abounding in wild beasts, to the S. of the subsequent Roman province of Africa, and near the tribe of the Maxyes. A custom prevailed among them for women to drive the chariots in war; which Heraclana conjectures may have occasioned the placing of the Amazons in this neighbourhood. (Idem, ii. 1. p. 41.)

ZAUTHA. [Zaut.]

ZETA POTUUS. [Athenae, p. 301, seq.]

ZEULON. [Talaecest.]

ZEGBRESI (Zegesi, Ptol. iv. 1. § 10), a people of Mauretania Tingitana. [T. H. D.]

ZELIA (Zéia, Ptol. iv. 3. § 12), a promontory of the Regio Strytus forming the E. point of the Strytus Minor. [T. H. D.]

ZELA (ra Záa), a town in the interior of Pontus, on the left bank of the Iris, towards the Galatian frontier, was believed to have been erected on a mound constructed by Semiramis. (Strab. xii. p. 561, comp. pp. 512, 559.) It seems to have originally been a
place consecrated to the worship of the goddess Anah, to whom a temple was built there by the Persians in commemoration of their victory over the Scyths. The site of the temple was regarded as the sovereignty of Zela and its territory (Zela'sium). Notwithstanding this, however, it remained a small place until Pompey, after his victory over Mithridates, raised it to the rank of a city by increasing its population and extending its walls. Zela is celebrated in history for a victory obtained in its vicinity by Mithridates over the Romans under Triarius, and still more for the defeat of Pharnaces, about which Caesar sent to Rome the famous report

A Veni, Vidi, Vici. (Plin. vi. 3; Appian. Mithrid. vii. 89; Plut. Caes. 21. 4.) For the place is erroneously called Zelaeia; Hirt. Bell. Alex. 73, where it is called Zela; Ptol. v. 6. § 10; Hieroc. p. 701; Step. B. s. v.) Zela was situated at a distance of four days' journey (according to the Penta. Table 80 miles) from Tavium, and south-east of Amanus. The elevated ground on which the town was situated, and which Strabo calls the mound of Semiramis, was, according to Hirtius, a natural hill, but so shaped that it might seem to be the work of human hands. According to Hamilton (Researches, i. p. 360), it is a black-coloured isolated hill rising from the plain, and is crowned with a Turkish fortress, which still bears the name of Zileh.

zeλαισιον. [posidium, p. 662, no 4]

ZELAIPA. [ZALADA.]

ZELAEIA (Zélaia), a town of Trosa, at the foot of Mount Ida and on the banks of the river Aesus, at a distance of 80 stadia from its mouth. It is mentioned by Homer (I. ii. 324, ii. 103), who calls it a holy town. (Comp. Strab. xii. p. 565, xiii. pp. 585, 587, 608, Step. B. s. v.) Arrian (Anab. i. 13) mentions it as the head-quarters of the Persian army before the battle of the Granicus: it existed in the time of Strabo; but afterwards it disappears. Some travellers have identified it with the modern Rigia, between Bosaecus and Sorricui. [L. S.]

ZELETIS. [ZELA.]

ZENOBIU INSAUE (Zenobiu yπαία, Ptol. vi. 7. § 47), seven small islands lying in the Sinus Sagaxi, at the entrance of the Arabian Gulf. (Cf. Arrian. Per. M. Eryth. p. 19.) [V.]

ZENODOTIUM (Zeno'dotow, Dion Cass. xi. 12; Step. B. s. v.), a strong castle in the upper part of Mesopotamia, which was held by the Parthians during the war between them and the Romans under Crassus. It is called by Plutarch, Zenodotia (Crass. c. 17). It cannot be identified with any modern site, but it was, probably, not far distant from Edessa. [V.]

ZENONIS CHERSONESUS (Zē'ρωνις χερσόνης, Ptol. iii. 6. § 4), a point of land on the N. coast of the Chersonese Taurica in European Sarmatia, probably the narrow tongue of Arachat between the Sea of Azof and the Parthid Sea. [T.H.D.]

ZEPHYRE, a small island off the promontory Sammonium in Crete. (Plin. iv. 12. 20.)

ZEPHYRIA. [HALICAREANS.]

ZEPHYRIUM (Ze'phyrion), the name of a great number of promontories, as 1. At the western extremity of the peninsula of Myndus in Caria, now called Gumichelo or Angelii. (Strab. xiv. p. 658.)

2. On the coast of Cilicia, between Cilicia Trachia and Pedias, a little to the west of the town of Ancialae. (Strab. xiv. p. 671.) It contained a fort of the same name, and was 120 stadia from Tarsus, and 13 miles east of Soll. (Stadium. § 157; Tab. Pest. comp. Scyl. p. 40; Ptol. v. 8. § 4; Liv. xxi. 23. 20; Plin. v. 22; Hirtoc. p. 704.)

When Pliny (xxxiv. 50) states that the best molybdena was prepared at Zephyrium, he no doubt alludes to this place, since we know from Dioscorides (v. 100) that this mineral was obtained in the neighbouring hill of Corysens, and that there it was of excellent quality. Leake (Asia Minor, p. 214) cites it for near the mouth of the river Martin.

3. On the coast of Cilicia, near the mouth of the river Calycadnus. (Strab. xiv. p. 670; Ptol. v. 8. § 5.)

4. A town on the coast of Paplagonia, 60 stadia to the west of Cape Carambula. (Anab. Perip. P. E. p. 15; Anon. Perip. P. E. p. 60; Ptol. v. 4. § 2.)

5. A town and promontory on the coast of Pontus, in the country of the Mosynoci, 90 stadia to the west of Tripolis. (Ptol. v. 6. § 11; Arrian, Perip. P. E. p. 17; Strycl. p. 33; Anon. Perip. P. E. p. 13; Tab. Pest.) The cape still bears the name of Zafra or Zfred, and Hamilton (Researches, i. p. 261) regards the modern Kakli Liman as occupying the site of the ancient Zephyrium. [L. S.]

ZE'PHYRIUM PROMONTORIUM (to Zephyra/ Capo di Brusazano), a promontory on the E. coast of the Bruttian peninsula, between Locri and the SE. corner of Bruttium. It is mentioned principally in connection with the settlement of the Locrian colonists in this part of Italy, whose city thence derived the name of Locri Epizephyrum. According to Strabo, indeed, these colonists settled in the first instance on the headland itself, which had a small port contiguous to it, but after a short time removed to the site of their permanent city, about 15 miles farther N. (Strab. vi. pp. 259, 270.) The Zeephyrian Promontory is mentioned by all the geographers in describing the coast of Bruttium, and is undoubtedly the same now called the Capo di Brusazano, a low but marked headland, about 10 miles N. of Cape Spartivento, which forms the SE. extremity of the Bruttian peninsula. (Strab. l. c.; Plin. iii. 5. s. 10; Meli. ii. 4. § 8; Ptol. iii. 1. § 10; Step. Byz. s. v.) [E. H. B.]

ZE'PHYRIUM (Zephyra\ ξεργον, Ptol. iii. 17. § 5). 1. A promontory on the E. part of the N. coast of Crete, near the town of Apollonia. Now Ponta di Tignari.

2. A promontory on the W. coast of Cyprus, near Paphos, probably the cape which closes the bay of Bagio to the W. (Ptol. v. 14. § 1; Strab. xiv. p. 683.)

3. A promontory in the E. part of Cyrenaica, 150 stadia to the W. of Daram. (Strab. xvii. p. 799, who attributes it to Marmarica; Ptol. iv. 4. § 5; Stadias. M. Magni, §§ 47, 48.) Now Cape Deve.

4. Another promontory of Cyrenaica, with a harbour. (Strab. xvii. p. 838.)

5. A promontory near Little Taposiris in Lower Egypt, having a temple of Aminhid-Aphrodite. (Strab. xvii. p. 800.) Hence that goddess derived the epithet of Zephyritis (Ze'phyrini, Athen. vii. p. 318, D.; Callim. Ep. 31; Step. B. s. v.).

6. A town of the Chersonese Taurica, mentioned only by Fluty (iv. 12. s. 26.). [T. H. D.]

ZE'NIS (Ze'pwn), Procop. de Aed. iv. 6. § 288), a fortress in Upper Moesia, apparently the present Old Orsovo, at the mouth of the Teavna. [T.H.D.]

ZERYNTHUS (Ze'ρινθος, Lycophr. 77; Step. B. s. v.), a town of Thrace not far from the borders of the Aenians. It contained a cave of Hecate, a tetu-
ple of Apollo, and another of Aphrodite, which two deities hence derived the epithet of Zeugitana.

( Cf. Liv. xxviii. 41; Ov. Trist. i. 10. 19; Tzetz. ad Lycophr. 449, 938.)

[ T. H. D. ]

ZESUTER. (It. Hier. p. 602), a town in the SE. of Thrace, on the Egnatian Way, between Apri and Siracelae, which Lapiq identifies with Kohraman.

[ J. R. ]

ZEUGITANA REGIO, the more northern part of the Roman province of Africa. Pliny seems to be the earliest writer who mentions the name of Zengitana (v. 4. s. 3). A town of Zengia is mentioned by Aelinius (Cosmogr. p. 63), and a Zengitanus, apparently a mountain, by Solinus ("a pede Zegitana," c. 27), which is perhaps the same as the Mons Zignisius of Victor (de Persic. Vandali. iii.), the present Zeww-wan; and according to Shaw (Travels, i. p. 191, sq.), if the existence of a town or mountain so named is not altogether problematical, the province probably derived its name from either one or the other. The district was bounded on the S. by Byzacium, on the W. by Numidia, from which it was divided by the river Tusca (now Zuine), and on the N. and E. by the Merae Internae. After the time of Caesar it appears to have been called Province Vetus, or Africa Propria, as opposed to the later acquired Numidia. (Dion Cass. xiii. 10; Plin. l. c. Mela, i. 7.) Strabo mentions it only as Ναζιγνοσία, or the province of Carthage (vi. p. 267, &c.). It embraced the modern Frigibah (which is doubtless a corruption of the ancient name of Africa) or northern part of the kingdom of Tunis. Zengitana was walled by the Bagradas, and was a very fertile country. There were no towns of importance in the interior, but on the coast we find Scagn, Neapchas, Chrebas, Aquia, &c. Carthage, Tunis, Carthago, Castra Cornelia, Utica, and Hippo Diarrhytus. For further particulars concerning this province see AFRICA.

[ T. H. D. ]

ZEGMA. 1. (Σεζγμα, Plut. v. 15. § 14), a town founded by Selencis Nicatur, in the province of Cyrhystea, in Syria. It derived its name from a bridge of boats which was here laid across the Euphrates, and which in the course of time became the sole passage over the river, when the elder one at Thapsacus, 2000 stadia to the S., had become impracticable, or at all events very dangerous, owing to the spreading of the Arabian herds. (Plin. vii. 24. s. 21; Strab. xvi. p. 749; Tab. Peut.) It was therefore opposite to the modern Bir or Bircedjik, which occupies the site of the ancient Zengma. (Cf. Kitter, Erdbounde, x. p. 944, seqq.) In the time of Justinian, Zengma had fallen into decay, but was restored by that emperor. (Procop. de Aed. ii. 9, p. 237, ed. Boon.)

Polyb. v. 43; Dion Cass. xi. 17, xlix. 13; Lucan, viii. 236; Justin. Ant. pp. 184, 185, &c.)

2. A place in Dacia. (Ptol. iii. 8. § 10.) Mannert (iv. p. 210) identifies it with the Pons Augusti of the Geogr. Rav. (iv. 14) and Tab. Peut.; concerning which see above, p. 656.)

[ T. H. D. ]

ZICCHI (Zizcoi, Arrian, Perip. F. Eux. p. 19), ZINCII (Zizcoi, Plut. v. 9. § 18), or ZINGI (Plin. vi. 7. s. 7), a savage piratical tribe of Asiatie Sar-matia, on the coast of the Pontus Euxinus, between Sangiae and Acahnti. They are called by Procopius Zizcoi and Zicchae (B. Goth. iv. 4. B. Pers. ii. 29), and by Strabo, Zizyai (i. p. 129, x. pp. 492, 493); if, indeed, he means the same people, as he places them in the interior on the Caucasus.

[ T. H. D. ]

ZIGAE, a people of Sarmatia, on the Tanais (Plin. vi. 7. s. 7.)

ZIGER, a place in Lower Moesia, in the neighbourhood of Axiopolis (Plin. iv. 11. s. 18). [T. H. D.]

ZIGENKIS MONS. [ZEUGITANA.]

ZIKLAG, a town in the tribe of Simeon (Jos. xix. 5), which at first belonged to the Philistine city of Ghath (1 Sam. xxvii. 5), but was annexed to the kingdom of Israel by David. (1 Chron. xii. 1.) It appears to have been named as that called Ziklag by Josephus (Ant. vi. 14) and ZeE Anas by Stephanius B. It is now entirely destroyed. (Robinson, Travels, ii. p. 424.)

ZILLA (Mel. iii. 10; Zela or Aziela, Plut. iv. 1. § 2), a river on the W. coast of Mauretania Tingitana, which fell into the sea near the town of the same name, N. of the Lixins. It is still called Azilda.

[ T. H. D. ]

ZILLA (Mel. iii. 10; Zulia, Zelania, and Zulia, Plut. iv. 1. § 13, viii. 13. § 4; Zilias and Zeulas, Strab. xvii. p. 927, iii. p. 140), a town of some importance in the part of Mauretania Tingitana, at the mouth of the little-names rivers, and on the road from Lix to Tingis, from which latter place it was 24 miles distant (Hist. Ant. p. 8, where, and in Plin. l. c. 1, it is called Zilis). It was founded by the Carthaginians, and made a colony by the Romans, with the surname of Julia Constancia. (Plin. l. c.) According to Strabo (iii. p. 140), the Romans transplanted the inhabitants, as well as some of the citizens of Tingis, to Julia Joza in Spain. The place is still called Azilia, Azilda, Ar-Zilla.

[ T. H. D. ]

ZIMARA (Zizman), a town in Armenia Minor, on the road from Satala to Melitena, between Amatli and Taucini. (It. Hier. p. 200, Zizman, vii. § 2; Tab. Peut.) The exact site is still matter of uncertainty, some finding traces of it near Persk/^ath, others near Divili, and others near Kennaah. (Kitter, Erdbounde, x. p. 800.)

[ZINISI PROMONTORIUM (Σεζεμπις Proi. l. 17. § 9. iv. 7. § 11), probably the Modern Moro, was a headland on the eastern coast of Africa about lat. 10° N. It was conspicuous from its forked head and its elevation above a level shore of nearly 400 miles in extent.

[ W. B. D. ]

ZIBERI, a small river of Parthia mentioned by Curtius (vi. 4. § 4). It is probably the same as the Silbites (Σιλβιται) of Dio Cassius (xvi. 75), which flowed under the earth in some places, and at length fell into the Indus (Curit. vi. 4. § 6). [V.]

ZICN. [See.]

ZIGIZI. [See.]

ZIPIH [See.]

ZIPIHA (Zifpa, Zifpha, or Ziphaf, Plut. iv. 8. § 6), a mountain in the interior of Libya. [T. H. D.]

ZIPHIEN [See.]

ZOEFE, Joseph, Antiq. vi. 13), a district of Palæstina, in the neighbourhood of Mt. Oceanus.
Carmel, which probably took its name from Ziph. (Josh. xv. 14.) Steph. Byz. notices it, quoting from Josephus. [Sylv.]

ZIRIDAVA (Zupidava, Ptol. iii. 8. § 8), a town in Dacia, most probably Zvgritae, on the Brochos (cf. Katanesich, Istvi Accolutae, ii. p. 296). [T.H.D.]

ZIRINAE (Tab. Peut.; Zosia, Steph. B. p. 287; Zernae, with various readings, in It. Ant. p. 322), a town in Thrace, on the Hebrus, between Trajanopolis and Pliotinopolis. Reichard places it on the site of Zernite; but Lapic identifies it with Terman-

[19x279]avos. [20x232]Roman

Zitha. [20x196]part

mountain.

(pei. 209), the only author that notices them, as having been subdued by Marcho-

duas. [L.s.]

ZUPHONES (Zoppiwtes, Dioec. xx. 38), a Nutidian tribe in the vicinity of Carthage. [T.H.D.]

ZURMENTUM (Zeurmertun, Ptol. iv. 3. § 37), a town of Byzacian, in Africa Propria, lying to the S. of Hadrumetum. [T.H.D.]

ZUROBARA (Zupdrapa, Ptol. iii. 8. § 9), a town of Dacia, situated where the Marchov falls into the Theis. [T.H.D.]

ZUZIDAVA (Zuzdrava, Ptol. iii. 8. § 8; Tarrac. 15), a town in Dacia, probably on the site of the ruins called Tachetalia de Pomunt, below Burlau (cf. Ukert, iii. pt. ii. p. 621). [T.H.D.]

ZYDRETAE (Zydrfetai or Zydtrtetai, Arrian, Peripl. Pont. Eux. p. 11), a people of Colchis, on the coast of the Pontus Euxinus, on the S. side of the Phasis, and between the Machelones and the Lazi. [T.H.D.]

ZYGANTIS (Zyantis, Hecat. Fr. ap. Steph. B. p. 290), a town of Libya, whose inhabitants were noted for their preparation of honey. Hence Klausen (ad Hecat. p. 154) identifies them with the Gyanites of Herodotus (iv. 194), on the W. side of the lake Tritonis, of whom that historian relates the same thing. [T.H.D.]

ZYGENES (Zygetes, Ptol. iv. 5. § 22), a people on the coast of the Libyan Nomos in Marmaria. [T.H.D.]

ZYGI (Zygi, Strab. xi. p. 496), a wild and savage people on the Pontus Euxinus in Asiatia Sarmatica, and on the heights stretching from the Caucasus to the Cimmerian Bosporus. They were partly nomad shepherds, partly brigands and pirates, for which latter vocation they had ships specially adapted (cf. Id. ii. 129, xi. 492, xvii. 839). Stephanus B. (p. 290) says that they also bore the name of Zygigaon; and we find the form Zygi (Zyiwitch) in Dionysius (Perig. 687) and Avienus (Descrip. Orb. 871). [T.H.D.]

ZYGOPOLIS (Zygosounds, Strab. xii. p. 518), a town in Pontus, in the neighbourhood of Colchis. Stephanus B. (p. 290) conjectures that it was in the territory of the Zygii, which, however, does not agree with Strabo's description. [T.H.D.]

ZYGROS (Zygro, Ptol. iv. 5. § 4), a village on the coast of the Libyan Nomos in Marmaria, which seems to have given name to the people called Zygritos dwelling there (Zygriti, Ptol. § 22). [T.H.D.]

ZYGRTACE (Zygris).

ZYMETIUS (Zymepia, Ptol. iv. § 4. § 11), a town in the interior of Cyrenaica. [T.H.D.]

ZUCHABBARI [Succabar.]

ZUCHIS (Zuiias, Strab. xvii. p. 835), a lake 400 stadia long, with a town of the same name upon it, in Libya, not far from the Lesser Syrtis. Stephanus B. (p. 290) mentions only the town, which, according to Strabo, was noted for its purple dyes and salt fish. It seems to be the place called Zosinth by Ptolemy (iv. 3. § 41). [T.H.D.]

ZUGAR (Zugar, Ptol. iv. 3. § 40), a town of Africa Propria, between the rivers Bagradas and Triton. [T.H.D.]

ZUHII (Zuhw), a German tribe occupying a district in the neighbourhood of the Lugii, are mentioned by Strabo (vii. p. 209), the only author that notices them, as having been subdued by Marcho-

duas. [L.s.]

ZUIRONA (Zurona, Steph. B. s. n.), a small town at the southern end of the Lacus Asphalteus in Judaea, to which Lot escaped from the burning of Sodom. (Gen. xiv. 2, § 6.) Josephinus, in describing this site, states that it extends from the promontory of Apollonia (iv. c. 27). During the latter times of the Roman Empire, there was a garrison maintained in that part of the country, a corps of native mounted bowmen ("Equites saevitiae Indigenae Zoranae") who were under the command of the Lux Palatinae. (Notit. Impcr. [V.]

ZOLEA, a town of the Astures in Hispania Tarraconensis, not far from the sea, and noted for the cultivation of flax. (Plin. iii. 3. s. 4, xiv. 1. s. 2; comp. Florio, Ep. Soq. xvi. p. 17; Inscrip. in Spon. Msc. p. 278. 3; Orelli, no. 156.) [T.H.D.]

ZOETIA. [Megalopolis, p. 309, h.]

ZOMBIS (Zoebis, Steph. B. s. v.), a small place in Upper Media, noticed by Ammianus (xxxii. 6.). [V.]

ZONNE (Plin. iv. 11. s. 18; Melia, ii. 2. § 8; Zewn, Herodot. vii. 59; Scyl. p. 27; Steph. B. p. 291; Schol. Nicand. Ther. 462; Schol. Apoll. Rhod. i. 29), a town on the S. coast of Thrace, on a promontory of the same name, a short distance to the W. of the entrance of the Lacus Scintorius. According to Apollonius and Melas (U. cc.) it was to this place that the woods followed Orpheus, when set in motion by his wonderful music. [J. R.]

ZORAMEUS (Zorabadus), a small stream on the coast of Gedrosia, mentioned by Marcian (Peripl. c. 29, ed. Miiiler), called Zorambe by Ptolemy (vi. 8. § 9). [V.]

ZORLANAE (Tab. Peut.; in Geog. Rav. v. 12, Strolanarac), a place in Thrace, on the road from Saracellae to Aenus. [J. R.]

ZOREANEA (Plin. vi. 27. s. 31), a place on the range of Mount Taurus, where the Tigris fell into a cleft, and reopened on the other side of the mountain; perhaps the spot discovered by Rich, 11 leagues from Judementik, where an eastern tributary of the Tigris suddenly falls into a chasm in the mountain. (Bich, Koordistan, i. p. 757; cf. Ritter, Erolk, x. p. 86, sec.; D'Anville, l'Euphr. et le Tigre, p. 74.) [J. R.]

ZOSTER. [Attica. p. 330, b.]

ZUCHABBARI (Zuydabari, Ptol. iv. 3. § 20), a mountain at the S. borders of the Regio Syr-

tica. [T.H.D.]
