by the present Mosul,—the name of which is probably a corruption of the old name,—and that the ruins of Ko-yunjik, in its immediate neighbourhood (now certainly ascertained, by Colonel Rawlinson’s decipherment of the inscriptions found there, to have been a vast palace erected by Semnacerib), are those which Xenophon beheld in a state much less injured by time and violence than they are at present. (Layard, Nineveh and Babylon, p. 638.)

MESSA (Messene), one of the nine cities of Laconia enumerated by Homer, who gives it the epithet of πολυτροφής, “abounding in pigeons” (II. ii. 502). Strabo says that the position of Messa was unknown (viii. p. 364), but Pausanius mentions a town and harbour, named Messa (iii. 25. § 9), which is identified by most modern scholars with the Homeric town. This Messa, now Messapo, is situated on the western coast of Mani, between Hippos and Oetylus; and the cliffs in the neighbourhood are said to abound in wild pigeons. (Leake, Moraeia, vol. i. p. 286; Bulcke, Recherches, &c. p. 91; Curtius, Peloponnées, vol. ii. p. 252.) Leake, however, has subsequently conjectured that Messa corresponds to Mistrà in the Spartan plain, partly on account of its site, and partly because the Messa of Pausanius could never, from its situation, have been a place of much importance. (Peloponnesia, p. 357.) But there does not appear any sufficient reason for rejecting the identity of the Messa of Pausanius with the Messe of Homer.

MESSABATENE (Plin. vi. 27. s. 31; Mesocásti, Strab. xii. p. 524; Euth. Mesobataba, Ptol. vi. 4. § 3), a narrow district in the mid-land of Susiana (as indeed its name implies), situated according to Pliny under Mt. Cambazidas (one of the southern spurs of Mt. Zagros), to the N. of the tribe of the Cossaei. Strabo states that it lies under Zagros, and is either a part of Media, or, as others hold, of Elamæa (xi. p. 524); in another place he calls Messabatane an eparchate of Elamæa, and aids that the best pass into Assyria lay through it. (xvi. p. 744.) Ptolemy (l. c.), who does not mention the district by its name, makes the Mesobatane the inhabitants of Paraëtaceum, itself a subdivision of Persia, adjoining Media. [V.]

MESSANA or MESSANE (Messanien in almost all Greek authors, but the Latin form was adopted in the Roman times; while in Pindar, it was universally in use among the citizens themselves, and was from them adopted by the Romans, who always write the name Messana; Euth. Messinos and Messanios, Messanines; Messine), an important city of Sicily, situated on the strait which divided that island from Italy, nearly opposite to Rhegium, and only a few miles from Cape Pelorus, the NE. extremity of the island. It was originally called Zancle (Zankle; Euth. Zagnakes), a name said to be of Sicilian origin, derived from Zagan, which in the language of that people meant a sickle, and was obviously applied to the spot from the peculiar configuration of the curved spit or point of sand which enclosed its port. (Thuc. vi. 4; Steph. Byz. s. v. Ζάγκλη; Strab. vi. p. 268; Diod. iv. 85.) From this derivation of the name it would appear probable that there was a Sicilian settlement on the spot, before it was occupied by the Greeks; but no mention of this is found in history, and all ancient writers describe Zancle as a Chalcidic colony. According to Thukydes it was at first founded by a band of pirates from the Italian Cuma, itself a colony of Chalcis, but the advantageous situation of the place soon led to the establishment there of a more regular colony, consisting of settlers from Celaesus and the other cities of Eubea, at the head of whom were Perieres of Chelaes and Cramasenes of Cutane, who became the joint founders or Oikists of the new colony (Thuc. vi. 4). This statement of Thucydides is confirmed in its leading points by Pausanias; while Scevynus Chius, as well as Strabo, though agreeing in its Chalcidic origin, represents it as founded immediately from the Chalcidic colony of Naxos in Sicily. (Paus. iv. 23. § 7; Strab. Ch. 284—286; Strab. vi. p. 268.) From this last version we may infer that it was looked upon as of more recent origin than Naxos, and therefore not founded till after 753 B.C.; but we have no clue to the precise, or even approximate date, of its establishment. Of its early history we know scarcely anything; but we may probably infer that it rose early to a flourishing condition, from the circumstance that the Zancleans were able before the close of the seventh century B.C. to establish two colonies on the N. coast of the island: Myleae, about 30 miles W. of Cape Pelorus, and Himera, much further to the W. (Thuc. vi. 5; Scevyn. Ch. 288; Strab. vi. p. 272.) The latter grew up into a great and powerful city, but Myleae appears to have continued for the most part a mere dependency of Zancle. (Strab. x. c.) The Zancleans appear to have been still desirous of extending their colonial system in this direction, and were endeavouring to induce fresh settlers from the Ionian cities of Asia to co-operate with them in this enterprise, when the fall of Miletus in B.C. 494 gave a fresh impulse to emigration from that quarter. A large body of Samians, together with some of the surviving Miletans, were in consequence induced to accept the invitation of the Zancleans, and set out for Sicily, with the purpose of establishing themselves on the N. coast between Myleae and Himera, which was commonly known as “the Fair Shore” (ι Καλή Ακτή). But having arrived on their way, at Locri Epizephyrii, they were here persuaded by Scevynaxias, tyrant of Rhegium, to take a treacherous advantage of the absence of the Zanclean troops, who were engaged in military operations elsewhere, and surprise the city of Zancle itself. That city was at this time under the government of a despot named Seythies, to whom Herodotus gives the title of king. On finding themselves thus betrayed by the Zancleans, the Seythies invoked the assistance of the powerful Hippocrates, despot of Gela; but that monarch in his turn betrayed them, and instead of aiding them to recover possession of Zancle, made common cause with the Samians, whom he confirmed in the possession of the city, while he threw Seythies into prison, and reduced the greater part of the Zancles in captivity. (Herod. vii. 22—24: Thuc. vi. 4; Scevyn. Ch. 293; Arist. Pol. v. 3.) By this sudden revolution, the Samians found themselves in undisputed possession of Zancle, but the latter were not dismayed by this reversal; and many years afterwards they were in their turn reduced to subjection by Anaxikas himself, who is said to have expelled them from the city, which he peopled with a mixed body of colonists, while he gave to it the name of Messene, in remembrance of the land of that name in Greece, from which his own ancestors derived their descent. (Thuc. vi. 4; Herod. vii. 164; Strab. vi. p. 265.) The exact period of this revolution cannot be determined with certainty; but the Zanclean settlement of the spot may be carried back further than B.C. 430, while their subsequent expulsion or
subjection by Anaxilus must have occurred some years prior to his death in n. c. 476. It is certain that at that period he had been for some time ruler both of Rhegium and Zancle, the latter of which, according to one account, he had placed under the nominal government of his son Cleophrion or Leophrion. (Diod. xi. 48; Schol. ad Paul. Pyth. ii. 34.) It is certain also, that before the close of his reign he had assumed the name of Messene or Messana, by which it has ever since been known. The error of Pausanias, who carries back the whole settlement, and with it the reign of Anaxilas to the close of the Second Messenian War, n. c. 668, has been sufficiently refuted by Bentley (Disser. on Phalaris, pp. 204—224.) It is probable that he contended the Second Messenian War with the Third, which was really contemporaneous with the reign of Anaxilas (Clinton, F. H. vol. i. p. 257); and it is not unlikely that some fugitives from the latter were among the fresh settlers established by Anaxilas at the time of the colonisation of Messana. It is probable also that the Samians were by no means absolutely expelled, as stated by Thucydides, but continued to inhabit the city together with the new colonists, though deprived of their exclusive ascendancy. (Herod. vii. 164; Siebert, Zanclo-Messana, p. 16.)

The Messanians for some time followed the fortunes of their neighbours of Rhegium, which, after the death of Anaxilas under the government of Myrillus, and subsequently of the two seas of Anaxilas; but, after the death of Hieron, and the expulsion of his brother Thamyrius from Syracuse, they took the opportunity, in conjunction with the other cities of Sicily, to drive out their despots and assert their freedom and independence, n. c. 461. (Diod. xi. 59, 66, 76.) A large body of the foreign settlers, who had been introduced into Sicily by the tyrants, were upon this occasion established in the territory of Messana, a proof that it was at this period still thinly peopled; but the city seems to have participated largely in the prosperity which the Sicilian republics in general enjoyed during the period that followed, n. c. 460—410. The great fertility of its territory, and the excellence of its port, were natural advantages which qualified it to become one of the first cities of Sicily; and this appears to have been the case throughout the period in question. In n. c. 426, their tranquillity was, however, interrupted by the arrival of the Athenian fleet under Laches, which established itself at Rhegium, on the opposite side of the strait; and from thence made an attack on Mylae, a fortress and dependency of the Messanians, which, though occupied by a strong garrison, was compelled to surrender. Laches, with his allies, hereupon marched against Messana itself, which was unable to resist so large a force, and was compelled to accede to the Athenian alliance. (Thuc. iii. 86, 90; Diod. xii. 54.) But the next year (n. c. 425) the Messanians hastened to desert their new alliance, and join that of the Syracusans; and from thenceforth their port became the chief naval station of the combined Syracusan and Locrian fleets. (Thuc. iv. 1, 24, 25.) They themselves, also, on one occasion, took courage to make a vigorous attack on their Chalcidian neighbours of Naxos, and were able to defeat the Naxians themselves, and shut them up within their walls; but were in their turn defeated by the Siculians and Leonines, who had hastened to the relief of Naxos, and who for a short time had siege, but without effect, to Messana itself. (Thuc. iv. 25.) The Messanians were included in the general pacification of Sicily, n. c. 424; but were themselves still divided by factions, and appear at one time to have for a short period passed under the actual dominion of the Locrians. (Id. v. 5.) At the time of the Athenian expedition to Sicily (n. c. 415) they were again independent, and on that occasion they persisted in maintaining a neutral position, though in vain solicited by the Athenians on one side, and by the Syracusans on the other. An attempt of the former to make themselves masters of the city by treachery proved wholly ineffectual. (Diod. xiii. 4; Thuc. vi. 48, 74.) A few years later, the Messanians afforded a hospitable refuge to the fugitives from Himera, when that city was taken by the Carthaginians, n. c. 409 (Diod. xiii. 61), and sent an auxiliary force to assist in the defence of Agrigentum against the same people. (Id. 86.)

It appears certain that Messana was at this period, one of the most flourishing and considerable cities in Sicily. Diodorus tells us, that the Messanians and Rhegians together could equip a fleet of not less than 80 triremes (xv. 8); and their combined forces were viewed with respect, if not with apprehension, even by the powerful Dionysius of Syracuse. (Id. 44.) But though unfavourably disposed towards that despot, the Messanians did not share in the strong sympathies of the Rhegians with the Chalcidian cities of Naxos and Catana (Rhegium), and pursued an uncertain and vacillating policy. (Diod. xiv. 8, 40, 44.) But while they thus sought to evade the hostility of the Syracusan despot, they were visited by a more severe calamity. Himilcon, the Carthaginian general, who had landed in Sicily in n. c. 396, having compelled Dionysius to fall back upon Syracuse, himself advanced with a large army from Panormus, along the north coast of the island. Messana was the immediate object of the campaign, on account of the importance of its port; and it was so ill prepared for defence, that notwithstanding the spirited resistance of its citizens, it was taken by Himilcon with little difficulty. Great part of the inhabitants made their escape to the surrounding country; but the rest were put to the sword, and not only the walls of the city levelled to the ground, but all its buildings so studiously destroyed as, according to the expression of Diodorus, to leave scarcely a trace of where it had formerly stood. (Diod. xiv. 56—59.)

After the defeat and expulsion of the Carthaginians, Dionysius endeavoured to repeople Messana with the fugitive citizens who survived, to whom he added fresh colonists from Locri and Melita, together with a small body of Messenian exiles, but the latter were soon after transferred to the newly founded city of Tyndaris. (Diod. xiv. 78.) Meanwhile, the Rhegians, who viewed with dissatisfaction the footing thus established by Dionysius on the Sicilian straits, endeavoured to obtain in their turn an advanced post against the Messanians by fortifying Mylae, where they established the exiles from Naxos, Catana, and other cities, who had been driven from their homes by Dionysius. (Id. xiv. 87.) The attempt, however, proved abortive: the Messanians recovered possession of Mylae, and continued to support Dionysius in his enterprises against Rhegium. (Id. 87, 103.) After the death of that despot, we hear but little of Messana, which appears to have gradually, but slowly, risen again to a flourishing condition. In n. c. 537 the Messa-
nians are mentioned as sending assistance to Dion against the younger Dionysius; and after the death of Dion, they repulsed an attempt of Callippos to make himself master of their city. (Diod. xvi. 9; Plut. Dion. 58.) At a somewhat later period, however, they fell under the yoke of a tyrant named Hippon, from whom they were freed by Timoleon, (n. c. 339), and at the same time detached from the alliance of Carthage, to which they had been for a time compelled to adhere. (Diod. xvi. 69; Plut. Timol. 20. 34.)

But Messana did not long enjoy her newly recovered freedom. Soon after the establishment of Agathocles at Syracuse, that monarch turned his arms against Messana, and, though his first attempts in n. c. 315, were unsuccessful, and he was even compelled to restore the fortress of Mylae, of which he had for a time made himself master, a few years later, n. c. 312, he succeeded in establishing his power at Messana itself. (Diod. xix. 65, 102.) But the severities which he exercised against the party which had opposed him completely alienated the minds of the Messanians, and they readily embraced the opportunity of the defeat of the tyrant at Himera in the following year, n. c. 311, to throw off his yoke and declare in favour of the Carthaginian alliance. (Id. xix. 110.) The death of Agathocles, soon after, brought upon the Messanians even heavier calamities than his enmity had done. The numerous bands of mercenary troops, chiefly of Campanian, or at least Oscan, extraction, which the despot had assemblèd in Sicily, were, after his death, compelled by the Syracusans, with the support of the Carthaginians, to quit the island. But, having arrived with that object at Messana, when they had been here not only received by the citizens, and quartered in their houses, they suddenly turned against them, massacred the male inhabitants, made themselves masters of their wives, houses, and property, and thus establisht themselves in undisputed possession of the city. (Pol. i. 7; Diod. xxi. 18, Exe. H. p. 493; Strab. vi. p. 268.) They now assumed the name of Mamertini (Macræpíron), or "the children of Mars," from Mamers, an Oscan name of that deity, which is found also in old Latin. (Diod. i. c.; Varr. L. L. v. 73.) The city, however, continued to be called Messana, though they attempted to change its name to Mamertina: Cicero, indeed, in several instances calls it "Mamertina civitas" (Cic. Ænn. ii. 5, 46, iii. 6, iv. 10, 85.), but much more frequently Messana, though the inhabitants were in his time universally called Mamertini. The precise period of the occupation of Messana by the Mamertines is nowhere stated. Polybius tells us that it occurred not long before that of Rhegium by the Campanians under Decius, which may be referred to the year 280 n. c., while it was necessary to give some place to the affairs of Agathocles in n. c. 289: the year 282 is that commonly assigned, but within the above limits this is merely conjectural.

The Mamertines now rapidly extended their power over the whole NE. angle of Sicily, and made themselves masters of several fortresses and towns. The occupation of Rhegium by the Campanians, under very similar circumstances, contributed to strengthen their position and they became one of the most formidable powers in Sicily. The arrival of Pyrrhus in the island (n. c. 278.) for a time gave a check to their aggrandisment: they in vain combined with the Carthaginians to prevent his landing; but, though he defeated their forces in a battle and took several of their fortresses, he did not attack Messana itself; and on his return to Italy the Mamertines sent a large force across the Straits which attacked the army of the king on its march, and inflicted on him severe losses. (Plut. Pyrrh. 23, 24; Diod. xxi. 7. p. 495.) The Mamertines, however, soon found a more formidable enemy in Hieron of Syracuse, who, shortly after the departure of Pyrrhus from Sicily, established himself in the possession of the chief power in that city. His efforts were early directed against the Mamertines; and after the fall of Rhegium, which was taken by the Romans in n. c. 271, he invaded their territory with a great army, reduced the fortress of Himera, and attacked the Mamertines in a battle on the banks of the river Longamus, with such slaughter that they were on the point of surrendering Messana itself without a blow; and the city was saved only by the intervention of a Carthaginian force under Hamilcar. (Pol. i. 8, 9; Diod. xxii. 13. pp. 499, 500.) The events which followed are obscurely known to us, and their chronology is very uncertain; but the Mamertines seem to have found that they were no longer able to stand either against the power of Himera; and, while one party was disposed to throw themselves into the arms of the Carthaginians, another sought protection from the power of Rome. The latter ultimately prevailed, and an embassy sent by the Mamertines, to invoke the alliance of the Romans, first gave occasion to the intervention of that people in the affairs of Sicily, and became the origin of the First Punic War, n. c. 264. (Pol. i. 10; Diod. xxii. 3; Zonar. viii. 8; Oros. iv. 7; Liv. Epit. xvi.) Before the arrival of the promised aid from Rome their position was critical; their land was occupied by a Carthaginian garrison; but this was expelled by the Mamertines themselves on the arrival of C. Claudius; and soon after the consul Appius Claudius landed at Messana, and drove off in succession the Carthaginians and Hieron, who had just before concluded an alliance against the Mamertines, and laid siege to the city with their combined forces. (Pol. i. 11, 12; Diod. xxii. 1, 3, p. 501; Zonar. viii. 8, 9; Dion Cass. Exe. Vat. 58—60.) Messana was now protected by a Roman garrison, and, during the course of the war which followed, continued to be one of their chief strongholds and the principal station of their fleets. The importance of its harbour, as well as its ready communication with Italy, rendered it a point of vital importance to the Romans; and the Mamertines either continued steadily faithful or were kept under by the constant presence of a Roman force. (Pol. i. 21, 25, 38, 52; Diod. xxii. 18. p. 505, xxiv. 1. p. 508; Zonar. viii. 10, 12.) At the close of the war the Mamertines obtained a renewal of their treaty, and continued to be supported with the nominal privileges of an allied city (favecra civitas), while they in reality passed under the dominion of Rome. (Cic. Ænn. iii. 6.) Even in the time of Cicero we find them still retaining this privileged condition; and though this alone would not have sufficed to protect them against the exactions of Verres, the Mamertines appear to have adopted the safer policy of supporting the pretor in all his oppressions and associating him by bribes, so that they were represented by the orator as the accomplices, as well as defenders, of all his iniquities. (Cic. Ænn. iii. 5, 46, iv. 8, 67, 85.)

Messana was certainly at this time one of the most populous and flourishing places in Sicily. Cicero
calls it a very great and very rich city ("civitas maxima et locupletissima," Verr. v. 17), and extols the advantages of its situation, its port, and its buildings. (Ib. iv. 2.) Like all other allied cities, it had its own senate and magistrates, and was legally subject to no other contributions than the furnishing ships and naval supplies in case of war, and the contributing a certain proportion of the corn furnished by Sicily to Rome at a given rate of remuneration. (Ib. v. 17—22.) Nor does Messana appear to have suffered severely from any of the wars that caused such ravages in Sicily, though it narrowly escaped being taken and plundered by Athenian during the First Punic War. (Dion Cass. Fr. Vol. p. 534.) In the Civil War, B. C. 48, it was the station of a part of the fleet of Caesar, which was attacked there by that of Pompey under Cassius, and the whole of the ships, thirty-five in number, burnt; but the city itself was protected by the presence of a Roman legion. (Caes. B. C. iii. 101.) At a somewhat later period it was the head-quarters and chief stronghold of Sextus Pompeius during his war with Octavian, B. C. 36; and its capacious harbour became the station of the fleet that he commanded (the coast of Sicily, as far as Tauromenion on the one side and Tyndaris on the other. It was from thence also that Pompeius, after the total defeat of his fleet by Agrippa, made his escape with a squadron of only seventeen ships. (Appian, B. C. v. 97, 103, 109, 122; Dion Cass. xiii. 1—12; Strab. vi. p. 268.)

It was in all probability in consequence of this war that Messana lost the privileged condition it had so long enjoyed; but its inhabitants received in exchange the Roman franchise, which it was placed in the ordinary position of a Roman municipium. It still continued to be a flourishing place. Strabo speaks of it as one of the few cities in Sicily that were in his day well peopled; and though no subsequent mention of it is found in history under the Roman Empire, it reappears during the Gothic wars as one of the chief cities and most important fortresses in the island,—a rank it had undoubtedly held throughout the intervening period. (Strab. vi. p. 268; Plin. iii. 8. s. 14; Poly. iii. 4. § 93; Strab. xi. 7. § 15.) The site of the town is situated on the site of the modern Messana, known as Vinum Manentum, enjoyed a great reputation in the days of Piny; it was first brought into vogue by the dictator Caesar. (Plin. iv. 6. s. 8.) Throughout the vicissitudes of the middle ages Messana continued to be one of the most important cities of Sicily; and still ranks as the second city in the island. It has, however, but few remains of antiquity. The only vestiges are some baths and tessellated pavements, and a small church supposed to have formed part of a Roman basilica. (Smith's Sicily, p. 118.) Another church, called S. Giovanni de' Fiorentini is believed, but wholly without authority, to occupy the site of the Scacarium or family chapel of Heins, from which Verres perjured a bronze statue of Hercules, attributed to Myron, and one of Cupid, which was believed to be the work of Praxiteles. (Cic. Verr. iv. 2. 3.)

The celebrated port of Messana, to which the city owed its chief importance in ancient as well as modern times, is formed by a projecting spit or tongue of sand, which curves round in the form of a crescent or sickle (where the name of Zancle was supposed to be derived), and constitutes a natural mole, rendering the harbour within perfectly secure. This singular bulwark is called by Diodorus the Acte (Ἀκτή), and its construction was attributed by false to the giant Orion (Diod. iv. 85), though there can be no doubt of its being of perfectly natural formation. The harbour within is said by Diodorus to be capable of containing a fleet of 600 ships (xiv. 56), and has abundant depth of water, even for the largest ships of modern days. The celebrated whirlpool of the Charybdis is situated just outside the Acte, nearly opposite the modern lighthouse, but out of the track of vessels entering the harbour of Messana. (Smyth's Sicily, p. 123.)

The one city itself is built close to the harbour on level ground, immediately at the back of it rise steep hills, forming the underfalls of a range of mountains which extends from the neighbourhood of Cape Pelorus to that of Tauromenium. This ridge, or at least the part of it next to Cape Pelorus, was known in ancient times as the Mons Neptuni; but a part of the same range forming one of the underfalls near Messana is called, both by Diodorus and Polybios, the Chalcis mount (τὰ Χάλκιαν Ὑπότοις, Pol. i. 11; ἄνθρακας δ' ἀκατάστατος Χάλκιαν, Dio, 64. 26), the origin of which is copied by Heron of Syracuse when he made siege to Messana, B. C. 264. But neither this, nor the position taken up by the Carthaginians at the same time at a place called Suses or Eumes (Σώες, Pol.; Εὐεσ, Dio.), can be identified with any degree of certainty.

The coins of Messana are numerous and interesting, as illustrating the historical vicissitudes of the city. There exist:—1. Coins of Zancle, before the time of Anaxilas, with the name written in old change in ΔΑΝΚΑΙ, a dialectic form of the name. 2. Coins of Messana, with the Ionic legend ΜΕΞΕΝΙΟΝ, and types taken from the coins of Suses. These must be referred to the period of Anaxilas immediately after his conquest of the city, while the Samian colonists still inhabited it. 3. Coins of Messana, with the type of a hare, which seems to have been adopted as the ordinary symbol of the city, because that animal is said to have been first introduced into Sicily by Anaxilas. (Pollux, Onom. v. 75.) These coins, which are uncommon, and range over a considerable period of time, show the gradual preponderance of the Doric element in the city; the ruder and earlier ones having the legend in the Ionic form ΜΕΞΕΝΙΟΝ, the latter ones in the Doric

COINS OF MESSANA.
form ΜΕΣΣΑΝΙΟΝ or ΜΕΣΣΑΝΙΝ. 4. Coins struck by the Mamertines, with the name of MA-
MEPTINII. These are very numerous, but in copper only. (Millingen, Trans. of Roy. Soc. of Lit.,
Vol. i. pt. ii. pp. 93—98; Eckhel, vol. i. pp. 219—
224.) [E. H. B.]

MESSAPIA (Μεσσαπία), was the name commonly
given by the Greeks to the peninsula forming
the SE. extremity of Italy, called by the Romans CA-
LABRIA. But the usage of the term was very
frequent; Iapygia and Messapia being used some-
times as synonymous, sometimes the latter con-
ceived as a part only of the former more general
designation. (Pol. iii. 88; Strabo vi. pp. 277, 282.)
This question is more fully discussed under CALA-
BRIA, Vol. i. p. 475.)

The same uncertainty pre-
vails, though to a less degree, in the use of the
name of the people, the MESSAPI (Μεσσαποί), who
are described by Herodotus (vii. 170) as a tribe of
the Iapygians, and appear to be certainly identi-
cal with the Calabri of the Romans, though we have no
explanation of the origin of two such different ap-
pellations. The ethnical affinities of the Messapians
have already been discussed, as well as their history
related, under the article CALABRIA.

Italian topographers in general admit the exist-
ence of a town of the name of Messapia, the site of
which is supposed to be marked by the village now
called Messene between Olbia and€™eontum, but the
passage of Pliny, in which alone the name is
found, appears to be corrupt; and we should proba-
ably read, with Chuerius and Mommsen, "Varia
(Uria) en cognomen ad discrimen Apulie Mes-
sapia." (Plin. iii. 11. s. 16; 100; Chuer, Ital.,
61.)

MESSAPIUM, mountain of Boeotia. [Vol. i.
p. 414, 4.]

MESSALES (Μέσσαλι). 1. A fountain of Pherae
in Thrace. [Therac.

2. A fountain of Therape in Lacoonia. (Pans. iii.
20. § 1.)

MESSENE (Μεσσήνη; Eth. and Adj. Me-
σσηνος; Adj. Μεσσηνικός), the later capital of
Messene, built under the direction of Epanomnadas
in B.C. 369. (Diod. xv. 66; Pans. iv. 27.)
The name of Messene had been applied in ancient times
to the country inhabited by the Messenians; but
there was no city of this name till the one founded
by Epanomnadas. The Thebans and their allies
assisted the Messenians in building it; and the best
architects and masons were invited from all Greece
to lay out the city with regularity, and to arrange
and construct properly the temples and other public
buildings. Epanomnadas also took especial pains
with the fortifications, which were regarded by
Pausanias as the most perfect in Greece. The walls,
as well as the towers and bulwarks, were built enti-
tirely of stone; and the excellence and solidity of
the masonry are still apparent in the existing
remains. (Pans. iv. 31. § 5.) The foundation of
the city was attended with great pomp and the
celebration of solemn sacrifices. First, sacrifices
were offered by Epanomnadas, who was recognised
as Osiket or Founder, to Dionysus and Apollo
I老旧en. — by the Argives to the Argive Hera and
Zeus Nemeus. — by the Messenians to Zeus Itho-
matas and the Dioscuri. Next, prayer was offered
to the ancient Heroes and Heroes of the Messenian
nation, especially to the warrior Aristomenes, that
they would come back and take up their whole in

the new city. After this, the ground was marked
out and the building begun, under the sound of Argive
and Boeotian flutes, playing the strains of Pronomus
and Sacaides. (Pans. iv. 28. § 6; Grote's Greece,
vol. ix. p. 309.) The history of this town is related
under Messenia, so that it is only necessary in this
place to give an account of its topography.

Messene is situated upon a rugged mountain,
which rises between the two great Messenian plains,
and which thus commands the whole country. This
mountain, about half-way up, divides into two sum-
mits, of which the northern was called Ithome and
the southern Eva. The sharp ridge connecting
them is about half a mile in length. Mt. Ithome
is one of the most striking objects in all Pelopon-
nessus. It rises to the height of 2631 feet, or more
than 700 feet higher than the Acrocorinthus; but
it looks much lofter than it really is, in consequence
of its precipitous sides and isolated position.
Upon this summit the Acropolis of Messene was
built; but the city itself was situated in a hollow
somewhat in the form of a shell, extending on the
west side of the sharp ridge which connects Ithome
and Eva. The city was connected by a continuous
wall with its acropolis. There are considerable
remains of the ancient city, and the walls may still
be traced in the greater part of their extent.
They are most perfect on the northern side, with the
Arcadian or Megalopolitan gate, as that is termed,
which may be followed up to the summit of Ithome,
and then along the ridge connecting Ithome and
Eva; but here towards the south-east traces of
them are sometimes lost. In this part, however,
the foundations of the eastern or Lacoonian gate,
as it has been called, are clearly seen. The sum-
mit of Mt. Eva was evidently not included within
the city walls. The direction of the southern
wall is most uncertain. From the eastern gate to
the ruins, which are supposed to be those of the
southern gate, and near which the present road runs
to the southern Messenian plain, no line of walls can
be traced; but on the western side the walls may
again be clearly followed. The circumference of
the walls is about 47 stadia, or nearly 6 English miles;
but it includes a large space altogether unfit for
the site of buildings; and the great extent was doubtless
intended to receive a part of the surrounding popu-
lalion in time of war.

The space included within the city-walls now con-
ists of corn-fields and pastures amidst woods of wild
deale and oak. Nearly in the centre of the ancient
town is the modern village of Monormúi; and near
the southern gate, at the foot of Mount Eva, are two
poor villages, named Simiáta. On the eastern slope
of Mount Eva is the monastery of Parkíno, embossed
in cypress and orange groves, and one of the most

---

PLAN OF ACRADIAN OR MEGALOPOLITAN GATE.
The northern gate, leading to Megalopolis in Arcadia (Paus. iv. 33. § 3), is one of the finest speci-
mens of Greek military architecture in existence. Its form is seen in the preceding plan. It is a small fortress, containing double gates opposite to one another, and connected by a circular court of 62 feet in diameter. In front of the outer gate on either side is a strong rectangular tower. Upon entering the court through the outer gate, there is a niche on each side for a statue, with an inscription over it. The one on the left hand is still legible, and mentions Quintus Plotius Euphemion as the restorer (Böckh, Inscr. No. 1460). Pausanias (iv. 33. § 3) notices in this gate a Hermes in the Attic style, which may possibly have stood in one of these niches. Leake observes that the interior masonry of the circular court is the most exact and beautiful he ever saw. The lower course is a row of stones, each about 3½ feet in length and half as much in height; upon this is placed another course of stones of equal length and of half the height, the joints of which are precisely over the centre of each stone in the lower course. The upper part of the walls has fallen; nice courses are the most that remain. Neither gateway retains its covering, but the flat architrave of the inner one lies in an oblique position upon the ruins of the wall by which it was formerly supported; it measures 18 feet 8 inches in length by 4 feet 2 inches in breadth, and 2 feet 10 inches in thickness. The road still leads through this gate into the circuit of the ancient city. The ruins of the towers, with the interjacent curtains, close to the gate on the slope of Mount Ithome, show this part of the fortifications have resembled a chain of strong redoubts, each tower constituting a fortress of itself. "A flight of steps behind the curtain led to a door in the flank of the tower at half its height. The upper apartment, which was entered by the door, had a range of loopholes, or embrasures, on a line with the door, looking along the parapet of the curtain, and was lighted by two windows above. The embrasures, of which there are some in each face of the towers, have an opening of 7 inches within, and of 3 feet 9 inches without, so that, with a small opening, their scope is very great. The windows appear to be too high for any purpose but to give light. Both the curtains and towers in this part of the walls are constructed entirely of large squared blocks, without rubble or cement. The curtains are 9 feet thick. The inner face of the towers has neither door nor window. The tower next to the gate of Megalopolis has had all the stones disjoined, like those of the Propylaea at Athens, probably by an earthquake." The towers are in general about 23 feet square, projecting about 14 feet from a curtain varying in length according to the nature of the ground, and 8 or 10 feet in thickness.

The ruins of Messene, originally called Messene, are in the district of the same name in the Peloponnesus, near the coast of Tiryns. It is entirely built of massive masonry, and was at one time surrounded by an outer wall 6 feet thick, with towers at intervals. The towers, of which the outer are three in number, are circular in form, but not in proportion. The inner ones are square, and the two gate towers are of the same description. The most remarkable part of the town is the open court, or circular square, which measures 62 feet in diameter, and has a gate on every side. This court contains the theatre, which stood to the eastward of it, and was very much larger than the modern. On the eastern side of the square, the temple of Artemis is placed at right angles, and is connected with the theatre by a wide colonnade. The temple is in the form of a rectangle, measuring 160 feet in length by 60 feet in breadth. The order of the temple is Doric, and the height of the columns is very considerable. The temple is now in a ruinous state, and is divided into two parts by a wall, which was formerly supported by pillars. The colonnade of the theatre is in a better state of preservation, and is entirely built of stone. The ruins of Messene are of great interest, and afford a fine specimen of ancient architecture.
Messenia.
In ascending Mount Ithome, there is about half way up a terrace of considerable size, which commands a fine view of the Messenian gulf. Here the French Commission discovered some ruins overgrown with shrubs, which appear to have been an Ionic temple facing the east, containing a porch with two columns and a cela. This was probably a temple of Artemis, as an inscription here found contains the names of Messenians, who had held the priesthood of Artemis Limnatis, and the remains of the statues destroyed in the cella appear to be those of the goddesses. Below the temple were terraces; and 60 feet further sideways, WSW, of the temple, is a kind of grotto cut out of the rock, with a portico, of which there are remains of five pillars. This was, perhaps, intended to receive the water of the fountain Clepsydra, which Pausanias mentions in his ascent to the summit of the mountain. The summit itself is a small flat surface, extending from SE to NW. On the northern and eastern sides the wall runs along the edge of the perpendicular cliffs, and some remains of a more recent fortification are perceived, which probably belonged to the earlier fortifications of Messene. At the northern and broader end of the summit are the deserted buildings of the monastery of Vurkanos; this was undoubtedly the site of the temple of Zeus Ithomatas. There is a magnificent view from the summit. Along the northern boundary of the horizon the Lycean range extends; to the east are seen the mountains now named Makryplát, which unite with the range of Taygetus; to the north-west the sea-coast between the rivers Cyrrhus and Neda is visible; while to the south the mouth of the Panasus and the Messenian gulf are spread open to view.

The similarity of Ithome to Acrocorinthus is noticed by Strabo (viii. p. 361). He observes, that both are lofty and precipitous mountains, overhanging their respective cities, but connected with them by a common line of fortifications. Messene continued to exist in the later times of the Roman empire, as we learn from inscriptions; but in the middle ages it had ceased to be a place of any importance; and hence the ancient ruins have been less disturbed by the hands of man than in most other parts of Greece. (Leake, Morea, vol. i. p. 366, seq.; More, Tour in Greece, vol. ii. p. 264; Boblaye, Richerche, òc., p. 107, seq.; Curtius, Peloponnesus, vol. ii. p. 138, seq.)

Messenia (Messēnia, Heroi., Thuc.; in older writers, Messēnia, Hom. Od. xxi. 15; Messēna, Pind. Pyth. iv. 126; shortened Messēn., Messēn., Steph. B. s. r. v. Messēn: Messēnē 7th, Thuc. iv. 41; Eth. and Adj. Messēnōs, Adj. Messēnian.,) through western part of district of Peneius, bounded on the east by Laconia, on the north by Elis and Arcadia, and on the south and west by the sea. It was separated from Laconia by Mt. Taygetus, but part of the western slope of this mountain belonged to Laconia, and the exact boundary between the two states, which varied at different times, will be mentioned presently. Its southern frontier was the coast of mountains, which form the watershed of the rivers Neda, Panasus and Alpheius. On the south it was washed by the Messenian gulf (ν. Μεσσηνικός κόλπος, Strab. viii. p. 335), called also the Coroanitic or Asinian gulfs, from the towns of Coroan and Asine, on its western shore, now the Gulf of Koroni. On the east it was bounded by the Sicilian or Ionian sea. The area of Messenia, as calculated by Chabris from Aruvalo's map is 1162 square miles.
MESSENIΑ.

I. General Description of the Country.

Mesσенииa, in its general features, resembles La-
conia. The Parnassus in Messenia, like the Eoratas in La-
conia, flows through the entire length of the country, from north to south, and forms its most cul-
vitat ed and fertile plains. But these plains are 
much larger than those in Laconia, and constitute a 
considerable portion of the whole country; while the 
mountains on the western coast of Messenia are 
much less rugged than on the eastern coast of La-
conia, and contain a larger proportion of fertile 
land. Hence the rich plains of Messenia are often 
contrasted with the sterile and rugged soil of La-
conia; and the climate of the former country is praised by 
the ancients, as temperate and soft, in comparison 
with that of the latter. The basin of the Parnassus is 
divided into two distinct parts, which are separated from 
each other on the east by a ridge of mountains 
extending from Mt. Taygetus to the Parnassus, and 
and on the west by Mt. Ithome. The upper part, 
called the plain of Stenchrades or Stenchrades (ἐν 
Στένχραδες πέδιαν), is of small extent and 
moderate fertility, and is entirely shut in by moun-
tains. The lower plain, which opens to the Men-
esian gulf, is much more extensive, and was some-
times called Macaria (Μακαρία), or the "Blessed," 
on account of its surprising fertility. (Strab. viii. 
p. 361.) It was, doubtless, to this district that 
Euripides referred, when he described the excellence of 
the Messenian soil as too great for words to 
explain, and the land as watered by innumerable 
streams, abounding in fruits and flocks; neither too 
hot in summer, nor too cold in winter. (Eurip. ap. 
Strab. viii. p. 366.) Even in the present day, 
although a part of the plain has become marshy by 
eglecting the embankments of the Parnassus, it is 
described by travellers as the most fertile district in 
the Peloponnese. It now produces oil, silk, figs, 
water, maize, cotton, vines, and honey, and presents 
as rich a cultivation as can well be imagined. 
(Leake, Morea, vol. i. pp. 347, 352.) Besides the 
Parnassus, numerous other streams or streams (ἐν 
έμελλενικά ὕδατα) gush in all directions from the base 
of the mountains. The most remarkable feature on 
the western coast is the deep bay of Pylos, now 
called Navarino, which is the best, and indeed the 
only really good harbour in the Peloponnese.

II. Mountains, Promontories, Rivers, and 
Islands.

1. Mountains.—The upper plain, in which are 
the sources of the Parnassus, was the original abode of 
the Messenians, and the stronghold of the nation. 
Here was Andania, the capital of the most ancient 
Messenian kings. Thither the Messenians retreated, 
as often as they were overpowered by their enemies in 
the lower plains, for here were their two great 
natural fortresses, Ithome and Eira, the former 
commanding the entrance to the lower plain, and 
the latter situated in the mountains, which rise in 
the northern part of the upper plain. These moun-
tains, now called Tetrádzi, form, as has been already 
said, the watershed of the rivers Neda, Parnassus, and 
Alpheius. From this central ridge, which is 4554 
feet high, a chain extends towards the west, along 
the banks of the Neda, and is also prolonged towards 
the south, forming the mountains of the western 
peninsula, and terminating at the promontory Acritas. 
From the same central ridge of Tetrádzi, another 
chain extends towards the east, dividing the Mes-
seenian plain from the upper basin of the Alpheus, 
and then uniting with Mount Taygetus, and form-
ning the barrier between the basins of the lower 
Parnassus and the Enoratas. These two mountain 
chains, which, issuing from the same point, almost 
meet about half-way between Mount Tetrádzi and the 
sea, leave only a narrow gulf through which the 
waters of the Parnassus force their way from the 
upper to the lower plain. South of this gulf the 
mountains again retire to the east and west, leaving 
a wide opening for the lower plain, which has been 
already described.

Scarcely in any part of Greece have the names of 
the ancient mountains been so little preserved as in 
Mesenia. Tetrádzi was perhaps the mountains of 
Eira. The eastern continuation of Tetrádzi, now 
named Makrypala, formed part of the ancient 
Mt. Nomia. (Nicias Ἰππ., Paus. viii. 38. § 11.) 
The western prolongation of Tetrádzi along the 
banks of the Neda was called Elafum (Ελαφοῦ), 
now Anoela, and was a part of the territory of 
Phlius. (Paus. viii. 41. § 7.) The mountains 
Ithome and Evan are so closely connected with 
the city of Messene that they are described under 
that head. (Messene.) In the southern chain 
extending down the western peninsula, the names 
only of Aegealeum, Buphars, Tomonos or Mathia, 
and Temathia have been preserved. AEGEALEUM 
(Αἰγαλέους) appears to have been the name of the 
long and lofty ridge, running parallel to the western 
shore between Gargarita and Coryphasmus (or Telch); 
though Strabo places the Messenian Pylus at the foot 
of Mt. Aegealeum (viii. p. 359); Leake, Morea, vol. i. 
pp. 426, 427. BUPHRAS (Βούφρας) and 
TOMEN (Τομεὺς) are mentioned by Thucydides 
(iv. 118) as points near Coryphasmus (Pylie), 
beating which the Lacedaemonian garrison in the 
latter place were not to pass. That they were 
mountains we may conclude from the statement of 
Stephanus B., who speaks of the Τομεὺς ἄκρον 
near Coryphasmus (Steph. B. s. τ. Τομεὺς.) 
TEMATIA (Τεμαθία) was the present sea.

3. Rivers.—The Parnassus (Παρνασσὸς) is described 
by Strabo as the greatest of the rivers within the 
Isthmus (viii. p. 361); but this name is only given 
by the ancient writers to the river in the lower 
plain, though the moderns, to facilitate the descrip-
tion of the geography of the country, apply this 
name to the whole course of the waters from 
their sources in the upper plain till they fall into the 
Messenian gulf. The principal river in the upper 
plain was called Balyra (Βαλύρα). It rises near 
the village of Salinia, and flows along the western 
side of the plain; two of the streams composing it

Digitized by Microsoft
were the Electra (Ἠλεκτρα) and the Coeus (Κόης). Near Ithome the Balyra receives the united waters of the Leucasia (Λευκασία) and the Amphius (Ἀμφιός), of which the former flows from the valley of Leopoς, in a direction from N. to E., while the latter rises in Mt. Makrypfi, and flows through the plain from E. to W. This river (the Amphius), which may be regarded as the principal one, is formed out of two streams, of which the northern is the Charadrus (Καράνδρος). (On the Balyra and its tributaries, see Paus. iv. 33, §§ 3—6.) The Balyra above the junction of the Amphius and Leucasia is called Ψαλίδικο, and below it Μασυζωμένω, though the latter name is sometimes given to the river in its upper course also. At the junction of the Balyra and the Amphius is a celebrated triangular bridge, known by the name of the bridge of Μασυζωμένω. It consists of three branches or arms meeting in a common centre, and corresponding to the three principal roads through the plain of Stynclerus. The arm, running from north to south passes over no river, but only over the low swampy ground between the two streams. At the southern end of this arm, the two others branch off, one to the SW., over the Balyra, and the other to the SE. over the Amphius, the former leading to Messene and the other to Thuria. The foundations of this bridge and the upper parts of the piers are ancient; and from the resemblance of their masonry to that of the neighbouring Messene, they may be presumed to belong to the same period. The arches are entirely modern. The distance of this bridge from the Megalopolitan gate of Messene agrees with the 30 stadia which Pausanias (iv. 33. § 3) assigns as the interval between that gate and the Balyra; and as he says immediately afterwards that the Leucasia and Amphius there fall into the Balyra, there can be little doubt that the bridge is the point to which Pausanias proceeded from the gate. (Leake, Morea, vol. i. pp. 480, 481.)

PLAN OF THE BRIDGE OF ΜΑΣΥΖΩΜΕΝΩ.

The Μασυζωμένω, shortly after entering the lower plain, received on its left or western side a considerable stream, which the ancients regarded as the genuine Pamisos. The sources of this river are at a north-eastern corner of the plain near the chapel of St. Φλυτο, and at the foot of the ridge of Σκάλα. The position of these sources agrees sufficiently well with that assigned by his same (iv. § 4) and Strabo (viii. p. 361), of whom the former writer describes them as 40 stadia from Messene, while the latter assigns to the Pamisos a course of only 100 stadia. Between two and three miles south of the sources of the Pamisos there rises another river called Πόλικημα, which flows SW. and falls into the Messene; and hence down in the plain below Νικέ, and at no great distance from the sea. Αρμ (Ἀρμ), was the ancient name of the Πόλικημα. (Paus. iv. 31. § 2.) The Μασυζωμένω, after the junction of the Πόλικημα, assumes the name of Πάλικημα, or the double river, and is navigable by small boats. Pausanias describes it as navigable 10 stadia from the sea. He further says that saltish ascend it, especially in the spring, and that the models of the river is 60 stadia from Messene (iv. 34. § 1).

The other rivers of Messenia, with the exception of the Neda, which belongs to Arcadia also [-Neda-, are little more than mountain torrents. Of these the most important is the Νεδον (Νέδον), not to be confounded with the above-mentioned Neda, flowing into the Messenian gulf, east of the Panias, at Φηνακα. It rises in the mountains on the frontiers of Laconia and Messenia, and is now called the river of Κάλτας, on it there was a town of the same name, and also a temple of Athena Nedaia. (Strab. viii. pp. 355, 360; Leake, Morea, vol. i. pp. 344, 345; Ross, Reisen in Peloponnes, p. 1.) The other mountain torrents mentioned by name are the Bia(ς) (Βιάς), flowing into the western side of the Messenian gulf, a little above Corone (Paus. iv. 34. § 4); and on the coast of the Sicilian or Ionian sea, the Νεδάς (Νέδας), Ptol. iii. 16. § 7, now the Λονγοράρδο, a little S. of the island Proto, and the Κυπαρισσος (Κυπάρισσος), or river of Argyrothous. See Vol. ii. p. 765.)

4. Islands.—THEGANASA (Θηγανάσα), now Βενετίκα, distant 3200 feet from the southern point of the promontory Acris, is called by Pausanias a desert island; but it appears to have been inhabited at some period, as graves have been found there, and ruins near a fountain. (Paus. iv. 34. § 12; Θηγανάσα or Θηγανάσα, Ptol. iii. 16. § 23; Plin. iv. 12. s. 19. § 56; Curtius, Peloponnesus, vol. ii. p. 172.) West of Theganassa is a group of islands called Οξινουσαν (Οξινουσαν), of which the two largest are now called Καβερνα (by the Greeks Κυκλιδα) and Νικόπλοιοι. They are valuable for the pasture which they afford to cattle and horses in the spring. On the eastern side of Σαπτενα there is a well protected harbour; and here are found cisterns and other remains of an ancient settlement. (Paus. iv. 34. § 12; Plin. iv. 12. s. 19. § 55; Leake, vol. i. p. 433; Curtius, vol. ii. p. 172.) On the western coast was the island of Σπαλαστερα, opposite the harbour of Πύλυς; and further north the small island of Προτε (Προτ), which still retains its ancient name. (Thuc. iv. 13; Plin. iv. 12. s. 19. § 55; Mela, ii. 7; Steph. B. s. r.)

III. HISTORY.

The earliest inhabitants of Messenia are said to have been Leleges. Polydemon, the younger son of Ledes, the king of Laconia, married the Argive Messene, and took possession of the country, which he named after his wife. He built several towns, and among others Andania, where he took up his residence. (Paus. i. 1.) At the end of five generations Aedon came into the country under Perieres, a son of Aedon. He named his son Aedon, who founded Arene, and received the Aedonian Nesus, a fugitive from Tissaly. Nesus founded Pylus, and his descendants reigned here over the western coast. (Paus. i. 2.) On the extinction of the family of Aedon, the eastern half of Messenia was united with Laconia, and came under the sovereignty of the Argives, while the western half con-
Messenia.

continued to belong to the kings of Pylus. (Paus. iv. 3. § 1.) Hence Euripides, in referring to the mythical times, makes the Pamnus the boundary of Lacedaemon and Messenia; for which he is reproved by Strabo, because this was not the case in the time of the geographer. (Strab. viii. p. 366.) Of the seven cities which Agamemnon in the Iliad (ix. 149) offers to Achilles, some were undoubtedly in Messenia; but as only two, Pherae and Cardamyle, retained their Homeric names in the historical age, it is difficult to identify the other five. (Strab. viii. p. 359; Diod. xi. 66.)

With the conquest of Peloponnese by the Dorians a new epoch commences in the history of Messenia. This country fell to the lot of Cresphontes, who is represented as driving the Nobeidae out of Pylus and making himself master of the whole country. According to the statement of Ephors (ap. Strab. viii. p. 361), Cresphontes divided Lacedaemon into five parts, of which he made Stenycherus the royal residence.* In the other four towns he appointed viceroys, and restored upon the former inhabitants the same rights and privileges as the Dorian conquerors. But this gave offence to the Dorians; and he was obliged to collect them all in Stenycherus, and to declare this the only city of Messenia. Notwithstanding these concessions, the Dorians put Cresphontes and all his children to death, with the exception of Aebytus, who was then very young, and was living with his grandfather Cypselus in Arcadia. When this youth had grown up, he was restored to his kingdom by the help of the Arcadians, Spartans, and Argives. From Aebytus the Messenian kings were called Aebytidae, in preference to Heraclidae, and continued to reign in Stenycherus till the sixth generation,—their names being Aebytus, Glauceus, Isthmus, Doteles, Syrotas, Phintas,—when the first Messenian war with Sparta began. (Paus. iv. 3.) According to the common legend, which represents the Dorian invaders as conquering Peloponnese at one stroke, Cresphontes immediately became master of the whole of Messenia. But, as in the case of Lacedaemon (Laconia), there is good reason for believing this to be the invention of a later age, and that the Dorians in Messenia were at first confined to the plain of Stenycherus. They appear to have penetrated into this plain from Arcadia, and their whole legendary history points to their close connection with the latter country. Cresphontes himself married the daughter of the Arcadian king Cypselus; and the name of his son Aebytus, from whom the line of the Messenian kings was called, was that of an ancient Arcadian hero. (Hom. Il. ii. 604, Schol. ad loc.; comp. Grote, Hist. of Greece, vol. ii. p. 437, seq.)

The Messenian wars with Sparta are related in every history of Greece, and need not be repeated here. According to the common chronology, the first war lasted from B.C. 743 to 724, and the second from B.C. 685 to 668; but both of these dates are probably too early. It is necessary, however, to glance at the origin of the first war, because it is connected with a disputed topographical question, which has only recently received a satisfactory solution. Mt. Taygetus rises abruptly and almost precipitously above the valley of the Eurotas, but descends more gradually, and in many terraces, on the other side. The Spartans had at a very early period taken pos-

* Of the other four parts Strabo mentions Pylus, Rhium, and Hyametis; but the passage is corrupt, and the name of Mesola should probably be added to complete the number. (Müller, Dorians, vol. i. p. 111, transl.) Stephanus B. calls Mesola, a city of Messene, one of the five (a t. Morlou); and Strabo in another passage (viii. p. 361) describes it as lying towards the gulf between Taygetus and Messenia; and as the latter name can only apply to the western part of the country, Mesola was probably the district between Taygetus and the Pamnus. Pylus apparently comprehended the whole western coast. Rhium is the southern peninsula, opposite Taucurum. (Strab. viii. p. 360.) The position of Hyametis, of which the city was called Hyameia (Tyanea, Steph. B. s. e.), is quite uncertain.
session of the western slopes, but how far their territory extended on this side has been a matter of dispute. The confines of the two countries was marked by a temple of Artemis Lithnatis, at a place called Lithnai, where the Messenians and Locacians offered sacrifices in common; and it was the murder of the Spartan king Teleclus at this place which gave occasion to the First Messenian War. (Paus. iii. 2, § 6, iv. 4, § 2, iv. 31, § 3; comp. Strab. vi. p. 257, viii. p. 362.) The exact site of Lithnai is not indicated by Pausanias; and accordingly Leake, led chiefly by the name, supposed it to have been situated in the plain upon the left bank of the Pamisus, at the marches near the confluence of the Ares and Pamisus, and not far from the site of the modern town of Naxa (Naxar, island), which derives that appellation from the similar circumstance of its position. (Leake, Morea, vol. i. p. 561.) But Ross has discovered the ruins of the temple of Artemis Lithnatis on the western slope of Mt. Taygetus, on a part of the mountains called Volimnos (Βόλυμνος), and amidst the ruins of the church of Panagia Volimnaiatissa (Παναγία Βολυμναίατις). Volimnos is the name of a hollow in the mountains near a mountain torrent flowing into the Nedaon, and situated between the villages of Sicyon and Poliani, of which the latter is about 7 miles N.E. of Kalamata, the ancient Phoe.- The fact of the similarity of the names, Bó-

lμνος and also of Παναγία Βολυμναίατις and Αστείμα Δωμάτις, as well as the ruins of a temple in this secluded spot, would alone make it probable that these are the remains of the celebrated temple of Lithnatis; but this is rendered certain by the inscriptions found by Ross upon the spot, in which this goddess is mentioned by name. It is also confirmed by the discovery of two boundary stones to the eastward of the ruins, upon the highest ridge of Taygetus, upon which are inscribed "Ο Ωσαντα Αριστολόχος φυλής Μεσσηνίας". These pillars, therefore, show that the boundaries of Messenia and Laconia must at one period have been at no great distance from this temple, which is always represented as standing near the confines of the two countries. This district was a frequent subject of dispute between the Messenians and Lacedaemonians even in the times of the Roman Empire, as we shall see presently. Tacitus calls it the "Dentibolae Acer" (Hist. iv. 43); and that this name, or something similar, was the proper appellation of the district, appears from other authorities. Stephanus B. speaks of a town "Dentiliba" (Δεντιλίβα, s. v.; others read Δελλιβία), which was a subject of contention between the Messenians and Lacedaemonians. Leaman also (ap. Athen. i. p. 31), in enumerating the different kinds of Laconian wine, mentions also a Dentian wine (Διένις αίρος), which came from a fortress Dentihades (ἐκ Δενθιδάδω ρώπο-

ματος τινος), as particularly good. Ross conjectures that this fortress may have stood upon the mountain of St. George, above the village of Nea Dentilida, where a few ancient remains are said to exist. The wine of this mountain is still celebrated. The position of the above-mentioned places will be best shown by the accompanying map.

But to return to the history of Messenia. In each of the two wars with Sparta, the Messenians, after being defeated in the open plain, took refuge in a strong fortress, in Ithome in the first war, and in Eira or Ira in the second, where they maintained themselves for several years. At the conclusion of the Second Messenian War, many of the Messenians left their country, and settled in various parts of Greece, where their descendants continued to dwell as exiles, hoping for their restoration to their native land. A large number of them, under the two sons of Aristomenes, sailed to Rhegium in Italy, and afterwards crossed over to the opposite coast of Sicily, where they obtained possession of Zancle, to which they gave their own name, which the city has retained down to the present day. (Mess.)

Those who remained were reduced to the condition of Helots, and the whole of Messenia was incorporated with Sparta. From this time (n. c. 668) to the battle of Leuctra (n. c. 371), a period of nearly 300 years, the name of Messenia was blotted out of history, and their country bore the name of Lacedaemonia, a fact which it is important to recollect in reading the history of that period. Once only the Messenians attempted to recover their independence. The great earthquake of n. c. 464, which reduced Sparta to a heap of ruins, encouraged the Messenians and other Helots to rise against their oppressors. They took refuge in their ancient stronghold of Ithome; and the Spartans, after besieging the place in vain for ten years, at length obtained possession of it, by allowing the Messenians to retire unmolested from Peloponnesus. The Athenians settled the exiles at Naupactus, which they had lately taken from the Locri Eubees; and in the Peloponnesian War they were among the most active of the allies of Athens. (Thuc. i. 101—103 ; Paus. iv. 24, § 5, seq.) The capture of Athens by the Lacedaemonians compelled the Messenians to quit Naupactus. Many of them took refuge in Sicily and Rhegium, where some of their countrymen were settled; but the greater part sailed to Africa, and obtained settlements among the Eune-periaca, a Libyan people. (Paus. iv. 26, § 2.) After the power of Sparta had been broken by the battle of Leuctra (n. c. 371), Epiromnindas, in order to prevent the land from regaining its former influence in the Peloponnesus, resolved upon forming an Arcadian confederation, of which Megalopolis was to be the capital, and at the same time of restoring the Messenian state. To accomplish the latter object, he not only converted the Helots into free Messenians, but he despatched messengers to Italy, Sicily, and Africa, where the exiled Messenians had settled, inviting them to return to their native land. His summons was graciously resorted to, and in n. c. 369 the Messenian exiles sailed from Africa, to the lands of the Apuli or acetopoli. Messene was placed upon the summit of St. Hellenon, while the town itself was situated lower down on the slope, though connected with its acropolis by a continuous wall. (Diod. xxv. 68 ; Paus. iv. 27.) (Messene.) During the 300 years of exile, the Messenians retained their ancient customs and Doric dialect; and even in the time of Pausanias they spoke the purest Doric in Peloponnesus. (Paus. iv. 27, § 11 ; comp. Müller, Dor, vol. ii. p. 421, transl.) Other towns were also rebuilt, but a great part of the land was continued uncultivated, and deserted. (Strab. viii. p. 362.) Under the protection of the Thebes, and in close alliance with the Arcadians (comp. Polyb. iv. 32), Messene maintained its independence, and the Lacedaemonians lost Messenia for ever. On the downfall of the Theban supremacy, the Messenians courted the alliance of Philip of Macedon, and consequently took no part with the other Greeks at the battle of Chaeroneia, n. c. 338. (Paus. iv. 28, § 2.) Philip rewarded them by compelling the Lacedaemonians to cede to them Limnai and certain districts. (Polyb. ix. 28 ; Tac. Ann.)
in the reign of Tiberius; but he differs from the latter writer in assigning the possession of the Lacedaemonians to a decision of C. Caesar and M. Antonius ("post C. Caesaris et Marci Antonii sententia redditum"). In such a matter, however, the authority of Pausanias deserves the preference. We learn, however, from Tacitus (l.c.), that Tiberius reversed the decision of Augustus, and restored the disputed districts to the Messenians. He seems to have kept possession of it in the time of Pausanias; for this writer mentions the woolly hollow called Chorinia, 20 stadia south of Abia, as the boundary between the two states in his time (iv. 1. § 1, iv. 30. § 1). It is a curious fact that the district, which had been such a frequent subject of dispute in antiquity, was in the year 1835 taken from the government of Mistra (Sparta), to which it had always belonged in modern times, and given to that of Kalamata. (Ross, Reisen in Peloponnes, p. 2.)

IV. TOWNS.

1. In the plain of Stenyclarus.—Andania, the capital of the Messenian kings before the Dorians. Oechalia, at the distance of 8 stadia from Andania, the reputed residence of Eurytos, occupied, according to Pausanias, the grove of cypresses called Carnism. Amphila, in the mountains on the borders of Arcadia. Two roads led into Arcadia: the more northerly ran along the river Charadus past Carnism (Paus. viii. 35. § 1); the more southern, went to Messene, and was a military road made by Eumenes, to connect more closely the two newly founded cities of Messene and Megalopolis. (Paus. viii. 34: comp. Leake, Morea, vol. ii. p. 296.)

Stenyclarus, the capital of the Doric conquerors, and which gave its name to the plain, was also on the borders of Arcadia. Ira or Eira, where the citizens maintained themselves during the Second Messenian War, was situated upon the mountain of this name, to the north of the plain above the river Neda. At the extreme south of this plain, commanding also the entrance of the plain Macara, was Messene, with its citadel Ithome. To the west part of the plain, on the road from Andania to Cyparissia, were Polichne and Domih.

2. In the plain of Macara. —Therai, the modern Kalamata, situated about a mile from the sea, on the left bank of the river Neda, was in antiquity, as it is at present, the chief town in the plain. Three roads lead from Therai: one southwards along the coast to Aita; said to be the Homerica Ira; a second up the valley of the Neda, across Mt. Taygetus to Sparta, one of whose gates was hence called the gate towards Pharae ("pora quae Pharae ductus," Liv. xxxv. 30); while the third road ran across the Neda in a north-easterly direction to Calamae, the modern Kalamis, where it divided into two, the one to the west going across the Pamisus, and the other to the north leading to Thuria, of which there were two towns so called, and from thence to the sources of the Pamisus. To the east of Therai was the mountainous district called the Ager Dentelitae, and containing Limnae, which has been already described.

3. In the western peninsula and on the western coast.—Colone and Asiae were on the Messenian gulf, and consequently on the east coast of this peninsula. The situation of Colonides is uncertain, some placing it on the Messenian gulf, and others near the harbour Phoenix, NW. of the promontory Arcus. At the extreme southern point

MESSEIA.

iv. 43.) That these districts were those of Alagonia, Geronia, Cardamyle, and Lencrut, situated northward of the smaller Pamisus, which flows into the Messenian gulf just below Luctea, we may conclude from the statement of Strabo (viii. p. 361) that this river had been the subject of dispute between the Messenians and Lacedaemonians before Philip. The Messenians appear to have maintained that their territory extended even further south of the ancient Pamisus, since they alleged that the island of Pepnus had once belonged to them. (Paus. iv. 26. § 3) [PEPNUS.] At a later time the Messenians joined the Achaean League, and fought along with the Achaeans and Antigonus Doson at the battle of Sellasia, n. c. 222. (Paus. iv. 29. § 9.) Long before this the Lacedaemonians appear to have recovered the districts assigned to the Messenians by Philip; for after the battle of Sellasia the boundaries of the two people were again settled by Antigonus. (Tac. Ann. l.c.) Shortly after Philip V. sent Demetrias of Pharos, who was then living at his court, on an expedition to surprise Messene; but the attempt was unsuccessful, and Demetrias himself was slain. (Polyb. iii. 19; Paus. iv. 29. §§ 1—5, where this attempt is erroneously ascribed to Demetrius II., king of Macedonia.) Demetrias of Pharos had observed to Philip that Mt. Ithome and the Acrocorinthus were the two horns of Peloponnese, and that whoever held these horns was master of the chief city of the Achaeans.
MESSENIACUS SINUS.

of the western coast stood Methone, supposed to be the Homeric Petasus. North of Methone, on the W. coast, was Pylos, on the promontory Coryphasion, opposite to which was the island Sphacteria. Further north, was the small town Erana, and then the more important Cyphhoria; beyond which was a place Aulon, at the entrance of the defile of this name, through which flowed the river Cyphorion.

(On the geography of Messenia, see Leake, Morea, vol. i. pp. 324, seq.; Bobbeye, Recerchees, p. 103, seq; Curtius, Peloponnesos, vol ii. p. 121, seq.)

METAPONTUM.

Leake, Northern Greece, vol. i. p. 150, seq.; comp. Thuring.

METAPONTUM OSTIUM. [Rhodian.] METAPONTUM or METAPONTUM (Metapon- ton): Trine, Strab., and all Greek writers have this form; the Latin almost universally Metapontum; Eth. Metapotouos, Paus., Steph. B., and others. Metapontum, in Lat. Metapontinum; Ru. near Torre di Maro, an important city of Magna Grecia, situated on the gulf of Tarentum, between the river Bradanus and the Cassentus. It was distant about 14 miles from Heraclea and from Tarentum. Historically speaking, there is no doubt that Metapontum was a Greek city founded by an Achaean colony; but various traditions assigned to it a much earlier origin. Strabo ascribes its foundation to a body of Pylians, a people who had followed Nestor to Troy (Strab. v. 222, vi. p. 264); while Justin tells us it was founded by Epeius, the hero who constructed the wooden horse at Troy; in proof of which the inhabitants showed, in a temple of Minerva, the tools used by him on that occasion. (Justin, xx. 2.) Another tradition, reported by Ephorus (ap. Strab. p. 264), assigned to it a Phocian origin, and called Daulus, the tyrant of Curi in Delphi, its founder. Other legends carried back its origin to a still more remote period. Anthicus of Syracuse said that it was originally called Meteabas, from a hero of that name, who appears to have been identified with the Metapontus who figured in the Greek mythical story as the husband of Melanippe and father of Aeneas and Bocceus. (Anth. ap. Strab. l. c.; Hygin. Fab. 186; Eustath. ad Dionys. Per. 368; Dios. iv. 67.)

Whether there may have really been a settlement on the spot more ancient than the Achaean colony, we have no means of determining; but we are told that at the time of the foundation of this city the site was unoccupied; for which reason the Achaean settlers at Crotona and Sybaris were desirous to colonise it, in order to prevent the Tarentines from taking possession of it. With this view a colony was sent from the mother-country, under the command of a leader named Leucippus, who, according to one account, was compelled to obtain the territory by a fraudulent treaty. Another and a more plausible statement is that the new colonists were at first engaged in a contest with the Tarentines, as well as the neighbouring tribes of the Oenotrians, which was at length terminated by a treaty, leaving them in the peaceful possession of the territory they had acquired. (Strab. vi. pp. 264, 265.) The date of the colonisation of Metapontum cannot be determined with certainty; but it was evidently from the circumstances just related, subsequent to that of Tarentum, as well as of Sybaris and Crotona: hence the date assigned by Eusebius, who would carry it back as far as B.C. 774, is wholly untenable; nor is it easy to see how such an error can have arisen. (Euseb. Arm. Chron. p. 99.) It may probably be referred to about 700-690 B.C.

We have very little of Metapontum during the first ages of its existence; but it seems certain that it rose rapidly to a considerable amount of prosperity, for which it was indebted to the extreme fertility of its territory. The same policy which had led to its foundation would naturally unite it in the bonds of a close alliance with the other Achaean cities, Sybaris and Crotona; and the first occasion on which we meet with its name in history is as joining with

COIN OF MESSENA.

MESSENIACUS SINUS. [Mesenian.]

Messua, in Gallia Narbonensis, is described by Mela (ii. 5) "as a hill surrounded by the sea almost on all sides, and it would be an island if it were not joined to the mainland by a narrow ager." The place is supposed to be Mece or Mecé, on the border of the Etang de Taur, between Aups and Montpellier. [G. L.]

METAGONITAE (Metagonitae, Petol. iv. 2, § 10), a people of Mauretanitza, between the Mulcort and the Pillars of Heracles. Their name recalls the UeBes Metagonicca (Metagonian πόλεις, Polyb. iii. 33), or settlements founded by the Carthaginians on the NW. coast, and which seem to have formed a regular chain from their frontier to the Pillars of Hercules (Seci. p. 61). These marts enabled the republic to carry on inland trade with the nomad tribes, as well as to keep open a communication by land with Spain. (Ileeren, African Nations, vol. i. p. 52, transl.) [E. B. J.]

METAGONITAE PROM. (Metagonitae Prop., Petol. iv. 1, § 7), a headland of Mauretanitza Tingitana, W. of the Maliuchza, now Cape Tres Forcas or Isis-nil-Dahir of the natives. [E. B. J.]

METAPONTIUM (Metapontion, Strab. xvii. pp. 827—828; Pomp. Mela, l. f. § 1), a headland of N. Africa, which Strabo (l. e.) places over against Carthage Nova, at a distance of 3000 stadia. He describes the district about it as being dry and barren, and bearing the same name; the headland is now called Ras-el-Harubah. (Comp. Shaw, Trav. p. 94.) [E. B. J.]

METALLINUM. [Metallinum.]

METALLUM. [Metal.] METAPA (By Metapa; Eth. Metapos, Metropolitan), a town in Aetolia, situated on the northern shore of the lake Trichonis, at the entrance of a narrow defile, and 60 stadia from Thurium. It was burnt by Philip, on his invasion of Aetolia, B.C. 218, as he returned from the capture of Thurium. Its site cannot be fixed with certainty, notwithstanding the description of Ptol. But places it immediately below Trochina, near the eastern extremity of the lake Hyria, or the smaller of the two lakes; supposing that as these two lakes are connected with one another, the larger division may often have given name to the whole. (Pol. v. 7, 13; Steph. B. s. r.;
these two cities in a league against Siris, with the view of expelling the Ionian colonists of that city. (Justin, xx. 2.) The war seems to have ended in the capture and destruction of Siris, but our account of it is very obscure, and the period at which it took place very uncertain. [Siris.] It does not appear that Metapontum took any part in the war between Crotona and Sybaris, which ended in the destruction of the latter city; but its name is frequently mentioned in connection with the changes introduced by Pythagoras, and the troubles consequent upon them. Metapontum, indeed, appears to have been one of the colonies which, according to Herodotus, adopted the code of that philosopher which contained the firmest footing. Even when the Pythagoreans were expelled from Crotona, they maintained themselves at Metapontum, whether the philosopher himself retired, and where he ended his days. The Metapontines paid the greatest respect to his memory; they consecrated the house in which he had lived as a temple to Ceres, and gave to the street in which it was situated the name of the Museum. His tomb was still shown there in the time of Vit. Sest. vi. 22. 666; Porphyri. Vit. Pyth. 172. 42; Plut. 326. 176; Plin. de Gen. Socr. 13; Dig. Lavi. vii. 11, § 49; Liv. i. 18; Cic. de Fin. v. 2.) The Metapontines were afterwards called in as mediators to appease the troubles which had arisen at Crotona; and appear, therefore, to have suffered comparatively little themselves from civil dissensions arising from this source. (Lamb. 262.) At the time of the Athenian expedition to Sicily, n. c. 415, the Metapontines at first, like the other states of Magna Graecia, endeavored to maintain a strict neutrality; but in the following year were induced to enter into an alliance with Athens, and furnish a small auxiliary force to the armament under Demosthenes and Eurymenon. (Diod. xiii. 4; Thuc. iv. 44, vi. 33, 57.) It seems clear that Metapontum was at this time a flourishing and opulent city; nor have we any reason to suppose that its decline began until long after. From its position it was secured from the attacks of Dionysius of Syracuse; and though it must have been endangered by the advance of the Lucanians, yet it appears that it took and probably suffered but little from their attacks. Its name is again mentioned in n. c. 345, when Timoleon took possession of his expedition to Sicily, but it does not appear to have taken any part in his favour. (Diod. xvi. 66.) In n. c. 332, when Alexander, king of Epirus, crossed over into Italy at the invitation of the Tarentines, the Metapontines were among the first to conclude an alliance with that monarch, and support him in his wars against the Lucanians and Bruttians. Hence, after his defeat and death at Pandosia, n. c. 326, it was to Metapontum that his remains were sent for interment. (Justin, xii. 2; Liv. viii. 24.) But some years later, n. c. 303, when Cleonymus of Sparta was in his turn invited by the Tarentines, the Metapontines, for what reason we know not, pursued a different policy, and incurred the resentment of that leader. He consequently turned his own arms, as well as those of the Lucanians, against them. He was then admitted into the city on friendly terms, but nevertheless exacted from them a large sum of money, and committed various other excesses. (Diod. xx. 104.) It is evident that Metapontum was at this period still wealthy; but its citizens had apparently, like their neighbours the Tarentines, fallen into a state of debauchery and luxuryc, so that they were become almost proverbial for their effeminacy. (Plut. Apothe. Locr. p. 233.) It seems certain that the Metapontines, as well as the Tarentines, lent an active support to Pyrrhus, when that monarch came over to Italy; but we do not find them mentioned during his wars there; nor have we any account of the precise period at which they passed under the yoke of Rome. Their name is, however, again mentioned repeatedly in the Second Punic War. We are told, however, that first to declare in favour of Hannibal after the battle of Cannae (Liv. xxii. 61); but notwithstanding this, we find their city occupied by a Roman garrison some years later, and it was not till after the capture of Tarentum, n. c. 212, that they were able to rid themselves of this force and openly espouse the Carthaginian cause. (Id. xxi. 11, 15; Pol. viii. 36; Appian, Amm. 53, 33.) Hannibal now occupied Metapontum with a Carthaginian garrison, and seems to have made it one of his principal places of deposit, until the final battle of the Metaurus having compelled him to give up the possession of this part of Italy, n. c. 207, he withdrew his forces from Metapontum, and, at the same time, removed from thence all the inhabitants in order to save them from the vengeance of Rome. (Id. xxxvii. 1, 16, 42, 51.) From this time the name of Metapontum does not again appear in history; and it seems certain that it never recovered from the blow thus inflicted on it. But it did not altogether cease to exist, for its name is found in Mela (G. 4, § 8), who does not notice any extinct places; and Cicero speaks of visiting it in terms that show it was still a town. (Cic. de Fin. v. 2; see also Appian, B. C. v. 93.) That orator, however, elsewhere alludes to the cities of Magna Graecia as being in his day sunk into almost complete decay; Strabo says the same thing, and Pan- sanias tells us that Metapontum in particular was in his time completely in ruins, and nothing remained of it but the theatre and the circuit of its walls; (Cic. de Amic. xxii. 226; Por. vi. 19, § 11) hence, though the name is still found in Italic, and the "ager Metapontinum" is noticed in the Liber Coloniarum (p. 262), all trace of the city subsequently disappears, and it is not even noticed in the Itineraries where they give the line of route along the coast from Tarentum to Thurii. The site was probably already subject to malaria, and from the same cause has remained deserted ever since. Though we hear much less of Metapontum than of Syracuse, Crotona, and Tarentum, yet all accounts agree in representing it as, in the days of its prosperity, one of the most opulent and flourishing of the cities of Magna Graecia. The fertility of its territory, especially in the growth of corn, vied with the neighbouring district of the Sitiri. Hence we are told that the Metapontines sent to the temple at Delphi an offering of "a golden harvest" (Diados xenos, Strab. vi. p. 264), by which we must probably understand a sheaf or bundle of corn wrought in gold. For the same reason an ear of corn became the characteristic symbol on their coins, the number and variety of which in itself sufficiently attests the wealth of the city. (Müller, Numismatique de l'Italie, p. 22.) We learn also that they had a treasury of their own at Olympia still existing in the days of Pausanias (Pans. vi. 19, § 11; Athen. xi. p. 179.) Herodotus tells us that they paid par-
ticular honours to Aristaeus, who was said to have appeared in their city 340 years after he had disappeared from Cyzicus. They erected to him a statue in the middle of the forum, with an altar to Apollo surrounded by a grove of boughs. (Herod. iv. 15; Athen. xiii. p. 605, e.) From their coins they would appear also to have paid heretic honours to Leucippus, as the founder of their city. (Müllingen, l.c. p. 24.) Strabo tells us, as a proof of their Pylian origin, that they continued to perform sacrifices to the Nereids. (Strab. vi. p. 266.)

The site and remains of Metapontum have been carefully examined by the Duc de Luynes, who has illustrated them in a special work (Metoponte, fol. Paris, 1833). It is remarkable that no trace exists of the ancient walls or the theatre of which Paestum speaks. The most important of the still-existing monuments is a temple, the remains of which occupy a slight elevation near the right bank of the Bradamus, about 2 miles from its mouth. They are now known as the Tardei dei Pagelini. Fifteen columns are still standing, ten on one side and five on the other; but the two ends, as well as the whole of the entablature above the architrave and the walls of the cela, have wholly disappeared. The architecture is of the Doric order, but its proportions are larger and more slender than those of the celebrated temples of Paestum; and it is in all probability of later date. Some remains of another temple, but portable, and a mere heap of ruins, are visible nearly 2 miles to the S. of the preceding, and a short distance from the mouth of the Bradamus. This spot, called the Chiesa di Santaione, appears to mark the site of the city itself, numerous foundations of buildings having been discovered all around it. It may be doubted whether the more distant temple was ever included within the walls; but it is impossible now to trace the extent of the ancient city. The Torre di Mare, now the only inhabited spot on the Bradamus, was at one time a castellated edifice of the middle ages; it is situated above 1½ miles from the sea, and the same distance from the river Bussiato, the ancient Casentino. Immediately opposite to it, on the sea-shore, is a small salt-water lagoon or lagoon, now called the Lago di Stu. Pologna, which, though neither deep nor spacious, is in all probability formed the ancient port of Metapontum.

Metapontum was thus situated between the two rivers Bradamus and Casentino, and occupied (with its port and appurtenances) a considerable part of the intermediate space. Appian speaks of "a river between Metapontum and Tarentum of the same name," by which he probably means the Bradamus, which may have been commonly known as the river of Metapontum. This is certainly the only river large enough to answer to the description which he gives of the meeting of Octavian and Antony which took place on its banks. (Appian, B. C. v. 93, 94.)

The coins of Metapontum, as already observed, are very numerous; and many of the later ones of very beautiful workmanship. Those of more ancient date are of the style called incuse, like the early coins of Crotona and Sybaris. The one in the annexed figure has on the obverse the head of the hero Leucippus, the founder of the city. But the more common type on the obverse is the head of Ceres, an Etruscan goddess. (Müllingen, l.c. p. 24.)

METAPONTUM.}

COIN OF METAPONTUM.
soon as the Carthaginian general discovered the arrival of Claudius, with an auxiliary force of 6000
foot and 1000 horse, he broke up his camp and re-
treated in the night to the Metaurus, which was
about 14 miles from Sena. He had intended to
cross the river, but encountered the ford, and
found the right
bank of the stream for some distance in search of
one, till, finding the banks steeper and higher the
further he receded from the sea, he was compelled
to halt and encamp on a hill. With the break of
time the Roman armies overtook him, and compelled
him to a general engagement, without leaving him
time to cross the river. From this account it is
clear that the battle was fought on the right bank of
the Metaurus, and at no great distance from its
mouth, as the troops of Hasdrubal could not, in
their night march from Sena, have proceeded many
miles up the course of the river. The ground,
which is well described by Arnold from personal
inspection, agrees in general character with the de-
scription of Livy; but the exact scene of the battle
cannot be determined. It is, however, certainly an
erorr to place it as high up the river as Fossombrone
(Forum Sempronii), 16 miles from the sea, or even,
as Caesar has done, between that town and the
mouth of the Furdo. Both he and Pausanias place
the battle on the left bank of the Metaurus, which
is distinctly opposed to the narrative of Livy. Appian
and Zonaras, though they do not mention the name
of the Metaurus, both fix the site of the Roman camp
at Sena; but the former has confounded this with
Sena in Eturia, and has thence transferred the whole
theatre of operations to that country. (Appian,
Arb. 2 b; Zonar. ix. 9; Arnold's Rome, vol. iii.
pp. 364-374; Vaudoncourt, Campagnes d'Annibal, vol.
iii. pp. 59-64; Cranner's Italy, p. 360.)

2. (Metelion), a river of Bruttium, flowing into
the Tyrrhenian sea, between Modena and the Scylla-
exan promontory. It is mentioned both by Pliny
and Strabo; and there can be no doubt that it is the
river now called the Marro, one of the most con-
siderable streams in this part of Bruttium, which
flows into the sea about 7 miles S. of the Messina,
and 18 from the rock of Scilla. (Strab. vi. p. 256; Plin.
iii. S. 5. 10; Romanelii, vol. i. p. 66.) There was a
town of the same name at its mouth. (Metel-
ium.)

METELLINUM. (It. Anton. p. 416; Metelion,
Geogr. Rv. iv. 44), or METALLINUM (Colonia
Metalinensis, Plin. iv. 21. s. 35), a Roman colony
of Lusitania on the Anas, 24 Roman miles from
Augusta Emerita, now Medellin. The modern town
lies on the shores of the river, so that the ancient
town ought to have been included in Baelo.
Hence some modern writers have conjectured that
the Anas may here have changed its bed. The form
of the word is certainly Latin, and united by means of
the letter "l" in the middle, the colony was founded by
Metelius, in which case METELLINUM would be a more
correct form than Metal-
linum.

METEON, a town of the Labeate, to which
Gentius removed his wife and family. (Liv. xlv.
52; Medlen, Geogr. Rv.) It may perhaps be
represented by the village of Miteres in the district
of Monte Negro, to the N. of Lake In etarii. (Wilkinson,
Dedalus, vol. i. p. 532.)

METHANA. 349

Ptol. iii. 16. § 12; Methana), a striking rocky
peninsula, connected by a narrow isthmus with the
territory of Troezen in Arcolis, and containing a
city of the same name. Pausanias describes
Troezen as an isthmus running far into the sea (ii.
14. § 1); Thyhecides more correctly distinguishes be-
tween the isthmus and chersonesus (iv. 45); and
Ptolemy also speaks of the chersonesus (iii. 16.
§ 12). The isthmus is only about 1000 feet broad,
but it immediately spreads out equally on both
sides. The outline of the peninsula is grand and picturesque.
The highest mountain, called Chelone, which is
2281 (French) feet above the level of the sea, is of
a conical form, and was thrown up by a volcano.
The whole peninsula bears marks of volcanic agency.
The rocks are composed chiefly of that variety of lava called trachyte; and there are hot sulphurous
springs, which were used in antiquity for medicinal
purposes. Pausanias speaks of hot baths at the
distance of 30 stadia from the city of Methana,
which were said to have first burst out of the ground
in the time of Antigonus, son of Demetrius, king of
Macedon, after a violent volcanic eruption. Pausanias
adds that there was no cold water for the use of the
bathers after the hot bath, and that he could not
plunge in the sea in consequence of the sea-dogs and
other monsters. (Paus. L.c.) Strabo, in describing
the same volcanic eruption to which Pausanias al-
ludes, says that a hill 7 stadia high, and fragments
of rocks as high as towers, were thrown up; that in
the day-time the plain could not be approached in
consequence of the heat and sulphureous smell, while
at night there was no unpleasant smell, but that the
heat thrown out was so great that the sea boiled at
the distance of 5 stadia from land, and its waters
were troubled for 20 stadia (i. p. 59). Ovid
describes, apparently, the same eruption in the lines
beginning

"Est prope Pitheum tumulus Troezenia"

(Met. xv. 296), and says that a plain was upheaved
into a hill by the confined air seeking vent. (Comp.
Lyell's Principles of Geology, pp. 10, 11, 9th ed.)
The French Commission point out the site of two
hot sulphurous springs; one called Vroome, in the
city of the isthmus running far into the sea; and the
other called Vromolimini, a little above the eastern
shore. There are traces of ancient baths at both places;
but the northern must be those alluded to by Pan-
sanias.

The peninsula Methana was part of the territory of
Troezen; but the Athenians took possession of the
peninsula in the seventh year of the Peloponnesian
War, B. C. 425, and fortified the isthmus. (Thuc.
iv. 45.) There are still traces of an ancient fortification,
removed in the middle ages, which the Veneti used
and united by means of two fortifications. In the pen-
ninsula there are Hellenic remains of three different
mountain fortresses; but the capital lay on the
west coast, and the ruins are near the small vil-
lage of the same name. Part of the walls of the
acropolis and an ancient town on the north side
still remain. Within the citadel stands a chapel,
containing stones belonging to an ancient building;
and two inscriptions on marble, one of which refers
so called in Macedon." This form is now found in
all the existing MSS. of Thucydides. But there can
be no doubt that Methanes, which has prevailed down
to the present day, is the genuine Doric form of the
name.

* Strabo says (viii. p. 374), "that in some copies of
Thucydides it was written Megara, like the town

1 Ptolemy refers to a different Methana, now called
Menas, near Corinth. (Ptol. vi. 2.)
to Ithaca. This, accordingly, was the site of the temple of Ithaca, mentioned by Pausanias, who also speaks of statues of Ithacas and Heracles, in the Agora.

METHONE. (Methon, Steph. B.), a town of Pieria in Macedonia, on the Thermaic gulf, mentioned in the Periphan of Sylacsus (p. 26), and therefore one of the Greek colonies established in early times on this coast. According to Plutarch (Quaest. Graec. p. 293), a party of Eritrians settled there, who were called by the natives '*ηληρωφεωμενοι, and who appear to have come there nearly at the same time as the occupation of Corecyra by the Corinthians b. c. 730—720.

The town was occupied by the Athenians with a view of annoying Perdiccas, by ravaging his territory, and affording a refuge to his discontented subjects. (Thuc. vi. 7.) It appears to have been in 334—333 B.C. that Philip attacked Methone, the last remaining possession of Athens on the Macedonian coast. The position was a convenient station for Athenian privateers to intercept trading vessels, not merely to and from Macedonian ports, but also from Olyanth and Potidaea. The siege was vigorously pressed by Philip; and the Methoneans, who gallantly held out until all their means were exhausted, were at length compelled to surrender. The inhabitants were allowed to depart with one garment; but the walls were razed to the ground, and the land apportioned among Macedonian colonists. Philip lost the sight of one eye in this siege. (Diod. xvi. 31—34; Dem. Olynth. i. p. 12. Philip. i. p. 41, iii. p. 117; Plut. Par. 8: Luc. de Scbr. Hist. 38; Strab. vii. p. 330; Justin. viii. 6.) Mr. Grote (Hist. of Greece, vol. xi. pp. 363, foll., comp. p. 488) is of opinion that this happened afterwards (H. C. 345). At another place called Methone, situated in the Chalcidic peninsula, near Olyanth and Apollonia, the epitomiser of Strabo (vii. p. 330) places Methone at a distance of 40 stadia from Pydna. This Methone on the Hellespont is assigned by Leake (North. Greece, vol. iii. p. 435) to Methone at Elephera-Khiari, 2 miles from the sea; but the Epitome is not much to be depended on in this passage.

[E. B. J]

METHONE. 1. (Methon, Strab.; Methon, Paus.; Sylacsus, p. 17; Eth Methonou, Paus. iv. 18, § 1, and Cines; Methanias, Steph. B. s. v.: Methonia, Modon), an ancient town in the SW. corner of Messenia, has always been an important place, both in ancient and in modern times, on account of its excellent harbour and salubrious situation. It is situated at the extreme point of a rocky ridge, which runs into the sea, opposite the island Sapienza, one of the group called in ancient times Oecusae. "Off the outer end of the town, is the little insulated rock which Pausanias (iv. 35, § 1) calls Methon, and which he describes as forming at once a narrow entrance and a shelter to the harbour of his time: it is now occupied by a tower and lantern, which is connected by a bridge with the fortification of Methoni. A modern harbour, from which runs a line parallel to the eastern wall of the town, and forms a breakwater for small vessels. It seems to be exactly in the position of the ancient port, the entrance into which was probably where the bridge now stands." (Irons.) According to the unanimous testimony of the ancient writers (Strab. viii. p. 539; Paus. iv. 33, § 1), Methone was the Homerid Pelops, one of the seven cities which Agamemon offered to Achilles. (Hom. II. ix. 294.) Homer gives to Pelops the epithet Δαιμονιστας, and Methone seems to have been celebrated in antiquity for the cultivation of the vine. The eponymous heroine Methone, is called the daughter of Oenous, the "wine-man" (Paus. i. c.); and the same name occurs in the islands Oeconese, lying opposite the city. The name of Methone first occurs in the Messenian wars. Methone and Pylas were the only two places which the Messenians continued to hold in the great war, after they had retired to the mountain fortress of Ira. (Paus. iv. 18. § 1, iv. 23. § 1.) At the end of the Second Messenian War, the Lacedaemonians gave Methone to the inhabitants of Nauplia, who had lately been expelled from their own city by the Argives. (Paus. iv. 34. § 4, iv. 35. § 2.) The descendants of the Nauplians continued to inhabit Methone, and were allowed to remain there even after the restoration of the Messenian state by Epaminondas. (Paus. iv. 27. § 9.) In the first year of the Peloponnesian War, i.e. 431, the Athenians attempted to obtain possession of Methone, but were repulsed by Brusidas. (Thuc. ii. 25.) Methone suffered greatly from an attack of some Illyrian privateers, who, under the pretext of purchasing wine, entered into intercourse with the inhabitants and carried off a great number of them. (Paus. iv. 35. §§ 6, 7.) Shortly before the battle of Actium, Methone, which had been strongly fortified by Antony, was besieged and taken by Agrippa, who found there Begud, king of Morea, whom he was about to hand over to the Romans. (Dion Cass. l. 11; Strab. viii. p. 359; Oros. vi. 19.) Methone was favourd by Trajan, who made it a free city. (Paus. iv. 35. § 3.) It is also mentioned by Mela (iii. 3), Pliny (iv. 5. s. 7), Ptolemy (iii. 15. § 7), and Hierocles (p. 647).

Pausanias found at Methone a temple of Athena Anemitis, the "storm-stiller," and one of Artemis. He also mentions a well of stibium water, similar both in smell and colour to the ointment of Cyzicus, but of which no trace is now found. In 1124 Methone was conquered by the Venetians, who converted it into a permanent possession of the republic till 1204. In the middle of the old Venetian piazza there still stands the shaft of an ancient granite column, about 3 feet in diameter and 12 feet high, with a barbarous base and capital, which appear to have been added by the Venetians, when they fixed upon the top of it, in 1493, a figure of the Lion of St. Mark. Five years afterwards it was taken by the Turks, and remained in their hands till it was recaptured by Morosini. In 1715 the Turks again took possession of it, and retained it till the last Greek revolution, when it was wrested from them by the French in 1828. Like other places in Greece, which have been continuously inhabited, Modon contains few ancient remains. Some Hellenic foundations may be traced in the city-walls, and ancient sepulchres may be seen above the suburb. (Leake, Morea, vol. ii. p. 429, seq.; Boblaye, Richerches, op. p. 113; Curtius, Peltospoulos, vol. ii. p. 169, seq.)

2. A town of Thessaly, mentioned by Homer (II. vii. 716) as belonging to Philoctetes. Later writers describe it as a town of Magnesia, but we have no further particulars respecting it. (Sylacsus, p. 25; Strab. iv. p. 436; Pinn. iv. 9. s. 16; Solin. c. 14; Steph. B. s. r.)

3. More properly called Methana, a town and peninsula of Trikalaen. (Methana.)
METHYNA (Μῆθυμνα), a city in Crete, near Rhoea, which Arrian (V. A. xiv. 20) mentions in connection with a curious story respecting a remedy for hydrophobia discovered by a Cretan fisherman. Mr. Pasley (Trans. v. ii. p. 40) considers that the remains near the chapel of Ἰησοῦς Γεωργίος, by Ἐγκύια, on the extreme eastern edge of the plain of Κικάννος-κοστῆς, represent Methymna. [E. B. J.]

METHYRDIUM (Μεθυρίδιον; Eth. Μεθυρίδιου), a town in Lesbos, the most important next after Mytilene. It was situated on the northern shore of the island, where a channel of 60 stadia (Strab. xiii. p. 618) intervened between it and the coast of the mainland near Assos.

One of the earliest notices of the Methymnaeans, is the mention of their conquest of Ariaia, another town of Lesbos, and their enslaving of its citizens. (Herod. i. 151.) The territory of Methymna seems to have been contiguous to that of Mytilene, and this may have been one cause of the jealousy between the two cities. The power and fame of Mytilene was on the whole far greater; but in one period of the history of Lesbos, Methymna enjoyed greater prosperity. She did not join the revolt of the other Lesbians from Athens in the Peloponnesian War (Thuc. iii. 2, 18), and she was therefore exempted from the severe punishment which fell on Mytilene. (Thuc. iii. 50.) Hence she retained the old privilege of furnishing a naval contingent instead of a tribute in money. (Thuc. vi. 55, viii. 57.) Shortly before the battle of Argoeia, Methymna fell into the power of the Lacedaemonians, and it was on this occasion that the magnum magnificum of Callistratidas presented so remarkable a contrast to that of the Athenians in reference to Mytilene. ( Xen. Hell. i. 6. § 14.) After this time Methymna seems to have become less and less important. It comes into notice, however, in every subsequent period of history. It is mentioned in the treaty forced by the Romans (n. c. 154) between Attalus II. and Pharnaces (Polyb. xii. 11.). It is stated by Livy (xv. 31.) and by Pliny (v. 31.) to have incorporated the inhabitants of Antissa with its own. Its coasts, both autonomous and imperial, are numerous. It was honourably distinguished [see LESESOS] for its resistance to the Mahomedans, both in the 12th and 15th centuries; and it exists on the same spot at the present day, under the name of Milos. We have no information concerning the buildings and appearance of ancient Methymna. It is merely said to have possessed a good harbour. Its chief fame was connected with the excellent wine produced in its neighbourhood. (Virg. Georg. ii. 90; Ovid. Art. Am. i. 57; Hor. Sat. ii. 8. 50.) Horace (Od. i. 17. 21) calls Lesbian wine "innocens;" and Athenaeus (ii. p. 43) applies the epithet ἐνότημαχος to a sweet Lesbian wine. In another place (i. p. 32) he describes the medicinal effect of the wine of this island. (See also i. pp. 28, 29; and Ani. Gell. xiii. 5.) Pliny says (iv. 9) that it had a stale taste, and apparently mentions this as a merit. Pausanias, in his account of Delphi (x. 19), tells a story of some fishermen of Methymna dragging in their nets out of the sea a rude image of Bacchus, which was afterwards worshipped.

Methymna was the birthplace of the poet and musician Arion. Myrtilus also, who is said to have written a history of Lesbos, is supposed to have been born here. [J. S. H.]

COIN OF METHYNA.

METHEMNA (Μηθημνα), a city in Crete, near Rhoea, which Arrian (V. A. xiv. 20) mentions in connection with a curious story respecting a remedy for hydrophobia discovered by a Cretan fisherman. Mr. Pasley (Trans. v. ii. p. 40) considers that the remains near the chapel of Ἰησοῦς Γεωργίος, by Ἐγκύια, on the extreme eastern edge of the plain of Κικάννος-κοστῆς, represent Methymna. [E. B. J.]

METHYRDIUM (Μεθυρίδιον; Eth. Μεθυρίδιου), a town in central Arcadia, situate 170 stadia north of Megalopolis (Paus. viii. 35. § 5), obtained its name from a lofty height between the two rivers Maloetas and Mylaos. (Paus. viii. 36. § 1.) It was founded by Orebomanes; but its inhabitants were removed to Megalopolis, upon the establishment of that city. It never recovered its former population, and is mentioned by Strabo (viii. p. 388) among the places of Arcadia which had almost entirely disappeared. It continued, however, to exist as a village in the time of Pausanias, who saw there a temple of Poseidon Hippasos on the river Mylaos. He also mentions, above the river Maloetas, a mountain called Thanassium, in which a cave where Rhea took refuge, when pregnant with Zeus. At the distance of 30 stadia from Methydrum was a fountain named Nymphaea. (Paus. viii. 36. 1—3, comp. viii. 12. § 2, 27, §§ 4, 7.) Methydrum is also mentioned in the following passages: Thuc. v. 58; Polyb. v. 10, 11, 13; Plin. iv. 6. s. 10; Steph. B. s. r.

There is some difficulty in determining the exact site of Methydrum. Some writers identify it with the Hellenic remains called Polaiata; but these are not on a lofty hill between two rivers, but in a low situation above the junction of the rivers on the right bank of one of them. Methydrum should rather be placed 45 minutes further, at the distance of 10 minutes SE. of the village of Nymnita, where there are some ancient ruins, one between two streams, on a height below Pyrgos, otherwise called Pyrgikos. It is true that this also is not a lofty hill; but Pausanias uses the expression καλοτέρας ψιλότης, and ἀκρόπως has reference to ψυκόν, which means only a slight elevation. (Leake, Morea, vol. ii. p. 57; Peloponnesiacce, p. 201; Boblaye, Recerreches, jfe. p. 151; Ross, Reisen im Peloponnes, p. 116; Curtius, Peloponnesos, vol. i. p. 309.)

METINA INSULA. [RHODANUS.]

METIOSEDUM. [MELOEDUM.]}

METORES (Μετορεῖς, Ptol. vi. 4. § 3), a branch of the great robber tribe of the 2d arch, who were settled in Persia. Their name is sometimes written Μετορεῖα. [V. Y.]

METROPOLIS (Μητρόπολις; Eth. Μητρόπολις), 1. A town in the Cretan plain in

551

Digitized by Microsoft
METROPOLIS.

Lydia, on the road from Smyrna to Ephesus, at a distance of 120 stadia from Ephesus, and 180 from Smyrna. The district of Metropolis produced excellent wine. (Strab. xiv. pp. 632. 637; Pol. v. 2. § 17; Steph. B. s. v.; Plin. v. 51; Hieroc. p. 600.) Not the modern village of Metropolis, but a celebrated part of the corruption of the ancient name, Metropolis, some ruins are still seen; and as their distance from Smyrna and Ephesus agrees with that mentioned by Strabo, there can be no hesitation in identifying the place. (Comp. Arundell, Seven Churches, p. 22, &c.; Hamilton, Researches, i. p. 542; Kusche, Lexic. Num. ii. 1, p. 633, &c.)

2. A town in the north of Phrygia, and, as the name seems to indicate, the capital of the ancient kingdom of Phrygia, though Stephanus Byz. (s. v.) derives the name from the mother of the gods. It was situated to the north of Smynda (Athen. xiii. p. 574) and must not be confounded with another town of the same name in the south of Phrygia. Its site is, in all probability, indicated by the ruins of Pismesh Kalasi, north of Dogana, which show a very antique style of architecture, and one mainly consisted of tombs cut into the rocks; one of these tombs is that of king Mihas. Leake (Asia Minor, p. 24) is inclined to think that these ruins mark the site of Nicoleia; but other travellers, apparently with less justice, identify them with Metropolis. (Franz, Fünf Inschriften, p. 42.) From the extent of the ruins, it would seem that in the time of the Roman emperors Metropolis was an important town; but afterwards it declined, though it is still mentioned by Hierocles (p. 677).

3. A town in the southern part of Phrygia, belonging to the conventus of Apamea. (Plin. v. 29.) That this town is different from No. 2, is quite evident, even independently of the fact that Stephanus B. mentions two towns of the name of Metropolis in Phrygia, and that Hierocles and the Notitiae speak of a town of this name in two different provinces of Phrygia. (Hierocel. p. 673; Strab. xii. p. 576, xiv. p. 663: Liv. xxxvii. 15.)

METROPOLIS (Μετρόπολις, Pol. iii. 5. § 25), a town of European Sarmatia, on the Borysthenes, near Olbia. [E. B. J.]

METROPOLIS (Μετρόπολις: Eth. Μετροπολιτής). 1. A town of Histiaeotis in Thessaly, described by Stephanus B. (s. v.) as a town in Upper Thessaly. Strabo says (ix. p. 436), that Metropolis was founded by three insignificant towns, but that a larger number was afterwards added, among which was Ithome. He further says, that Ithome was within a quadrangle, formed by the four cities Trieca, Metropolis, Pelinæaeum, and Gomphi. The position of Metropolis is also determined by its being on Caesar's march from Gomphi to Tharsus. (Caes. B C., vii. 81; Appian, B. C. ii. 64; Dion Cass. xii. 51.) It was taken by Flamininus on his descending into this part of Thessaly, after the battle of the Aenus, b. c. 193. (Liv. xxxii. 15.) We learn from an inscription that the territory of Metropolis adjoined that of Cierium (the ancient Arne), and that the adjustment of their boundaries was a frequent subject of discussion between the two peoples. [Cierium.] Metropolis is mentioned in the sixth century by Hierocles (p. 642), and continued to exist in the middle ages under the name of Neo-Phrygia (Nea Tâprâ, Constant. de Them., ii. p. 50, ed. Bunsen). The remains of Metropolis are placed by Leake at the small village of Pulekostro, about 5 miles SW. of Kardzali. The city had a circular form, and in the centre of the circle are the vestiges of a circular citadel, part of the wall of which still exists in the yard of the village church of Pulekostro, where there is a collection of the sculptured or inscribed remains found upon the spot within late years. Among other sculptures, Leake noticed one in low relief, representing a figure seated upon a rock, in long drapery, and a mountain rising in face of the figure, at the foot of which there is a man in a posture of adoration, while on the top of the mountain there are other men, one of whom holds a bow in his hands. Leake conjunctured with great probability that the seated figure represents the Aphrodite of Metropolis, to whom Strabo says (l. c.) that hogs were offered in sacrifice. (Leake, Northern Greece, iv. p. 506.)

2. Another town in Thessaly, which Stephanus B. calls simply a town in Thessaly. This appears to be the Metropolis mentioned by Livy in his account of the campaign of Antiochus, in b. c. 191, where it is related that the Syrian king having landed at Demetrias, first took Phere, then Cramon, then Cyrus, Metropolis, and all the neighbouring fortresses, except Atrax and Gyron, and afterwards proceeded to Larissa. (Liv. xxxvi. 10.) From this account it would appear that this Metropolis was in Phrygia; and its site has been discovered by Leake, in a low place called Kastri, where the name of Metropoleis occurs in an inscription. (Leake, Northern Greece, vol. iii. p. 371.)

3. (Lygortis), a town in the interior of Acrania, S. of Stratus, and on the road from the latter place to Comope in Aetolia. At a later time it fell into the hands of the Aetolians, but was taken and burned by Philip in his expedition against the Aetolians, b. c. 219. It is mentioned as one of the towns of Acrania, in a Greek inscription found at Actium, the date of which is probably prior to the time of Augustus. (Polyb. iv. 64; Steph. B. s. v.; Bickh, Corpus Inscription. No. 1793; Leake, Northern Greece, vol. iii. p. 576.)

4. A town in Amphibia, near Olpae. (Thuc. iii. 107.) As to its site, see ARGOS AMPHIONICUM.

5. A town of Doris. (Steph. B. s. v.)

6. A town of Euobea. (Steph. B. s. v.)

MEVANIA (Μεβανία, Strab.; Pol. iii. 36.)

MEVANIA (Μεβανία, Strab.; Pol.: Eth. Mevania, Att.; Beregus), a considerable city of Umbria on the Flaminian Way, between Corinaldo and Forninum. It was situated on the river Tinia, in a broad and fertile valley, which extends from the neighbourhood of Spoleto to the Tiber, separating the main chain of the Apennines from a lateral mass or offshoot of the same range, which extends from Mevania and Spoleto to Tuder and Ameria. It is this valley, about 8 or 10 miles in breadth, watered by the Cittumus and Tinia, with several tributary streams, the pastures of which were celebrated for their breed of white oxen, the only ones thought worthy to be sacrificed as victims on triumphal and other solemn occasions. Hence their praises are not less frequently associated with the name of Mevania than with that of the Cittumus. (Colum. iii. 8; Sil. Ital. vi. 647, viii. 458; Lucas. i. 473.) Mevania appears to have been an important place before the Roman conquest of this part of Italy. In b. c. 305 it was chosen by the Umbrians as the headquarters of their assembled forces, where they were defeated by Q. Fabius (Liv. iv. 41.) At a much
MIDAEIA. 353

later period it was occupied by the emperor Vitellius, with the intention of defending the passes of the Apennines against the generals of Vespasian, but he quickly abandoned it again, and retired to Rome. (Tac. Hist. iii. 55, 59.) As it was situated in the plain, it could scarcely be a very strong fortress; but Pliny notices it as one of the few cities of Italy that had walls of brick (xxxvi. 14. s. 49). Strabo speaks of it as in his time one of the most considerable towns in the interior of Umbria; it was only of municipal rank, but seems to have continued a flourishing place throughout the period of the Empire. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. i. § 54; Pline. Ant. p. 311; Orell. Inscr. 98.)

The modern Beverna is a very poor and decayed place, with little more than 2000 inhabitants, though retaining its episcopal see, and the title of a city. It contains some remains of an amphitheatre, and mosaic pavements which belonged to the ancient Thermae. (Calidru, Stato del Pontici; Stato, p. 104.)

Mevania appears to be indicated by the poet Propertius, and is assigned to the site of its birth (iv. 1. 123), though others understand this passage differently, and regard Hisپium as having the better claim. (Barth. Vit. Propert. ; Ruinod, ad l. c.) It was noted for the fogs to which it was subject. (Propert. l. c.; Sil. It. vi. 646.) Pliny speaks of its territory (Mevanas ager, xiv. 3. § 37) as producing a particular kind of vine, which he calls Friola; probably the same now called “Fuvazzola,” for which the district is still celebrated. (Harduin, loc. cit.; Rampoldi, Corographia, vol. iii. p. 333.)

MEVANIOLA. [UMBRA.] 

M IC A R O S or M I L C O R GUS (Μίακωρος, Μίλκωρος; Theopomp. ap. Steph. B. s. r.), a place which may be assigned to the interior of Chalidice, is placed in the Eumenias Chronography among the towns in the south of Britain. It has been conjectured that Midaion, in Sussex, is its modern representative; but this supposition is not warranted by existing remains. Middha (Μίδδηα), a city of the tribe of Benjamin, eastward from Bethel or Bethaven (1 Sam. xiii. 5), held by the Philistines, whilst Saul and the Israelites were in Gibeath. It was on the line of march of an invading army from the north, and the Assyrians are represented as depositing their baggage there when advancing against Jerusalem. (Isaiah x. 28.)

It is placed by Eusebius and St. Jerome in the borders of Adiab, and was then a considerable village, retaining its ancient name, 9 miles from Adia, near Rama. (Onomast. s. v.) The same description exactly applies to it at the present day. It is 3 hours distant from Jerusalem, near the north. The ruins stand on a low ridge between two small Wadys running south into the much larger valley named Wady es-Swailit. It bears marks of having been a much larger and stronger place than any in the vicinity. There are many foundations of town stones, and some columns among them. The Wady es-Swailit is "the Passage of Mikhail" spoken of in 1 Samuel (xiiii. 23), and Isaiah (x. 29). It is an extremely steep and rugged valley, which commences in the neighbourhood of Bethel, and a little below (E.) Malkhuna contracts between perpendicular precipices.

The rocks Bacez and Seneh, mentioned in connection with Jonathan's exploit (1 Sam. xiv. 4), may still be recognised in two conical rocky knolls projecting into the valley between Jobo (ancient Gibeah) and Malkhuna. (Robison, Bibl. Reser. vol. ii. pp. 116, 117.) In the Talmud the soil of Michael may be regarded as its fertility. (Isak., Palus-ch-tia, s. v. p. 897.)

MIDAEUM or MIDAIM (Μίδαιος) a town in the NE. of Phrygia, on the little river Bathys, on the road from Doryaeum to Pessinus, and belonging to the conventus of Symnada. (Steph. B. s. r.; Ptev. v. 52. s. 41; Ptol. v. 2. § 22; Strab. xiv. p. 576; Hieroc. p. 678, where it is wrongly called Međiów.) The town, as its name indicates, must have been built by one of the ancient kings of Phrygia, and has become celebrated in history from the fact that Sextus Pompeius, the son of Pompey the Great, was there taken prisoner by the generals of M. Antony, and afterwards put to death. (Dion Cass. xiii. 18.) It has been supposed, with some probability, that the town of Miýdium, mentioned by Ammianus Marcellinus (xxvi. 7), is the same as Midemian.

MIDEIA or MIDEA. 1. (Μίδεια, Paus.; Mideia, Strab.; Eth. Midestart), an ancient city of the Argean, was originally called Persepolis (Περσεόπης, Steph. B. s. r. Mideia), and is mentioned by Appollodorus (ii. 4, § 4) in connection with this hero. It was said to have derived its name from the wife of Electryon, and was celebrated as the residence of Electryon and the birthplace of his daughter Alcmene. (Paus. ii. 25. § 9; Schol. ad Pind. Ol. vii. 49.) But it is mentioned in the earliest division of the country, along with the Heraean and Tiryns, as belonging to Pretus. (Paus. ii. 16. § 2.) It was the residence of Hippodamia in her marriage. (Paus. vi. 20. § 7.) It was destroyed by Argoz, probably at the same time as Tiryns, soon after the Persian wars. (Paus. viii. 27. § 1; Strab. viii. p. 373.)

Strabo describes Midea as near Tiryns; and from its mention by Pausanias, in connection with the Heraean and Tiryns, it must be placed on the eastern edge of the Argean plain; but the only clue to its exact position is the presence of Pausanias, who says that, returning from Tiryns into the road leading from Argos to Epidaurus, “you will reach Midea on the left” (ib. 23. § 9).

Two different sites have been assigned to Midea. The French Commission place it at the Hellenic remains at Dendra, 53 geographical miles direct E. by N. from the citadel of Argos, as this place lies to the left of the road from Argos to Epidaurus. But Leake says that the distance of Dendra from this road — more than 3 geographical miles — is greater than is implied by the words of Pausanias. He therefore places Midea at the Hellenic remains near Katingri, 2 geographical miles due E. of Tiryns. The objection to the latter site is that it lies to the right of the road from Argos to Epidaurus, from which it is separated by a deep ravine. The ruins at Dendra stand upon a hill almost inaccessible on three sides, enclosed by four different walls, and is the work of different times. In one of them is a gateway formed of three pieces of stone, resembling the smaller gateway of the citadel of Mycenae. The ruins descend from the summit to a fountain, which springs out of a grotto near a chapel of the Panaghia. The surrounding meadows afford good pasture for horses, and thus illustrate the epitaph of Statius (Theb. iv. 44)
“aptor armentis Midea,” and the selection of this place as the residence of the horse-loving Hippe-
daimia being his ambush. (Balkay, Bercheres, iv. p. 52; Leake, Peloponnesiac, p. 268; Curtius, Peloponnesos, vol. ii. p. 395.)

2. A city of Boeotia. [Lebadea.]

MIDIANITAE (Μιδανιταί), the descendants of Midian, one of the sons of Abraham by Keturah, whom the patriarch is said to have sent away during his lifetime “eastward, unto the east country” (Gen. xxv. 2, 6), and whom we subsequently find reckoned among “the children of the east.” (Job ii. 3). In the third generation after Abraham they were a distinct people, trading between Gilead and Egypt; but are associated with, or confounded with, another Arab family, the Ishmaelites. (Gen. xxxviii. 25, 28, 36.)

The Midianites were probably a Bedawi tribe, and their situation may be pretty accurately determined, by the following notices, to the territory afterwards occupied by the Nabataeans, to the south and east of Palestine. Moses fed the sheep of Jethro, a priest of Midian, in the peninsula of Mount Sinai, and about Mount Horæ (Exod. iii. 1); subsequently Jethro came to his son-in-law from the land of Midian, while Israel was encamped in the vicinity of Horæ (xxviii. 2, &c.); and Moses was glad to avail himself of his local knowledge while traversing the desert to the north of the peninsula. (Num. x. 29—32.) The close alliance between the Midianites and the Moabites, to oppose the progress of Israel, indicates the proximity of the two peoples; and the hostility of the former proves that the alliance of Moses with one of their family did not conciliate the latter’s good will, and was never to an end. (Num. xxi. 4, 7; xxvi. xxxi. 8—12; Josh. xiii. 21.)

The Midianites continued the bitter enemies of the Israelites throughout the period of the Judges, when, in concert with “the Amalekites and the children of the east,” they invaded simultaneously, and in countless numbers, the southern frontier towards Gaza and the trans-Jordanic tribes in Gilead and Bashan (Judg. vi. vii.), from whence they extended their ravages to the west, and north as far as the confines of Naphthali and Asher. After their signal defeat by Gideon, they disappear from the records of history, but their slaughter became proverbial. (Psalm lxiii. 9; Isaiah, ix. 4, x. 25.)

The country of the Midianites, however, had still a traditionary recollection; and subsequent notice, consistently with the foregoing, place them between Edom and Paran, which bordered on Egypt (1 Kings, xi. 17, 18), in the country afterwards comprehended under the name of Idumaea, and still later associated with the Saracens. Indeed Josephus (Ant. ix. 7, § 1) asserts that Petra, the capital of Arabia (i.e. Idumaea), was called by the natives Areconé (Ἀρεκόντῆ), from the Midianitis king Rekoum, one of the five slain by Moses. (Num. xxxi. 8.) Eusebius and St. Jerome mention a city Midian, so named after one of the sons of Abraham by Keturah, situated beyond Arabia (i.e. Idumaea) to the south, in the desert of the Saracens, by the Red Sea, from which the district was called; and another city of the same name near the Arnon and Arapius; the ruins of which only existed in their days. (Onomast. s. v.; comp. Hieron. Comm. ad Jess. ix. and Esch. xxxv.)

The situation of these two cities would define the limits of the territory of the Midianites in their most palmy days. The former of these two cities (ill. doubtless that mentioned by Josephus (Ant. ii. 11, § 1) under the name of Madine (Μαδίνη), situated at the Red Sea, and is properly identified by Reland as the modern Mi-
dian (the Midian of Abulfeda), identical with the Madiana of Potemon. (Reland, Palaestina, pp. 98—100.) It is situated about half-way down the eastern coast of the Euphrates gulf. (Forster, Geog. of Arabia, vol. ii. p. 116; and see the references in his index under Midian.)

MIEZA (Μίζα), Eth. Míçacis, Míçacis, a Macedonian city, the capital of which it is not difficult to ascertain. Stephanus of Byzantium (s. v.), on the authority of Theagenes, assigns to an eponymous founder, Mieza, a sister of Boeocea, and grand-
dughter of Macedon; this legend implies that it was an important city. From the name it would seem most natural to look for it in the neighbourhood of Bereoa, which agrees with Potemon (iii. 13, § 39), who classes it among the cities of Lamath. Stephanus, on the other hand, still deriving his information apparently from Theagenes, alludes to it as a Leuc. M. 26, and in Mich. xv. 2, παρὰ τοιούτων, Αυθ. Ver. “tower of the rock” (near, “ Edar.”). From the first cited passage, it would appear to have been near Bethlehem; and St. Jerome mentions a shepherd’s tower a mile from Bethlehem, so called, as he suggests, in prophetic anticipation of the angelic announcement of the Nativity. (Onomast. s. v.; Reland, Palaestina, s. v. p. 598.)

MIGDOL, a Hebrew word signifying “a tower,” and used as a complement of several proper names of places in Holy Scripture.

1. MIGDOL-EDER, translated in Gen. xxxvii. 21 (v. 16 in LXX.), τοί φίλειαν Παδρ. Auth. Ver. “the tower of Eder” and in Mich. xv. 2, παρὰ τοιούτων, Αυθ. Ver. “tower of the rock” (near, “ Edar.”). From the first cited passage, it would appear to have been near Bethlehem; and St. Jerome mentions a shepherd’s tower a mile from Bethlehem, so called, as he suggests, in prophetic anticipation of the angelic announcement of the Nativity. (Onomast. s. v.; Reland, Palaestina, s. v. p. 598.)

2. MIGDOL-EL, a town in the tribe of Naphtali (Josh. xiii. 38), where the LXX. running two names together, read Μεγαδασθία for “Migtadol, Horeb.” Eusebius and St. Jerome mention it as a large village named Migdel, ix. M. P. (St. Jerome writes v. M. P.) from Dora on the road to Ptolemais, probably identical with the modern El-Migdel, in the plain of Esdraelon, a little to the SW. of Shefa ‘Amir, which is, however, more remote than even Eusebius states from Dora, i.e. the modern Tastura. Neither could this have any connection with the Migdal of Naphtali, as Reland, in agreement with his two authors, seems to imagine, seeing it was attributed to the tribe of Asher or Issachar. (Reland, Palaestina, p. 598.)

The Migdal of Gilece (now El-Migdel) is much more probably the Migdal of Naphtali. [MAGDALA.]

3. MIGDAL-GAD (Μηγαλαγάδ, LXX.), a city of the tribe of Judah. (Josh. xvi. 37.)

4. MIGDAL-SENN, corrupted to Meykal Yawd in Eusébius (Onomast. s. v. Senna), which, how-
ever, St. Jerome’s translation enables us to correct to Meykal Zawd, “quod interpretationis turris Senna.” There is yet another corruption of the Greek cor-
rected in the Latin; the former having from τὸν Μηγαλαγάδ, the latter, correctly, “terminus Judae.” A village of this name existed in their days 7 miles north of Jerusalem. [G. W.]

MIGONIUM, [Gythium.]}
MIGRON.

MIGRON, a town in the tribe of Benjamin, mentioned in 1 Samuel, xiv. 2 (where the LXX. reads Μηγιφων) as the extreme border of Gibeah, celebrated for its fig tree, and connected with Aiath (probably Ai) in Isaiah, x. 28 (where the LXX. reads Μηγιφων). Its site has not been recovered in modern times. Dr. Robinson remarks, "Migron must have been situated between Deir Dineh and Michmash;" and so the line of the Assyrian march in Isaiah would seem to require. But the passage in Sammel implies that it was S. of Michmash, which was then occupied by the Philistine garrison, watched by the Israelites in Gibeah, which lay to the S.W. of Michmash, and with which Migron is connected. (Robinson, Bibl. Res. vol. ii. p. 149.) [G. W.]

MILETUS (Μίλητος), a town in the north of Mycia, at the confluence of the rivers Maeceus and Rhynadus, and on the west of the lake which derives its name from it. (Strab. xii. p. 575, xiv. p. 681; Steph. B. s. v.; Plin. v. 32, 40.) Some modern geographers, as D' Aubin and Mainfort, have identified Miletopolis with the modern Beli Keser or Balceleri, but this site is too far S.W. of the lake, and identifies it with Miletus, which others regard as the site of the ancient Priamenum. The most probable view is, that the site of Miletopolis is marked by the modern Moallish or Mollisht, or by the place Hanamlit, near which many ruins of an ancient town are found. (Hamilton, Researches, &c., vol. i. p. 81, &c., vol. ii. p. 91.) [L. S.]

MILETOLITIS LACUS (ΜΙΛΕΤΟΛΙΤΙΣ ΛΑΚΟΣ), a lake in the north-west of Mycia, derived its name from the town of Miletopolis, near its western shore. (Strab. xii. pp. 575, 576.) According to Pliny (v. 40) the lake also bore the name Artyneas, and probably confounding the river Tarsus with the Rhynadus, he erroneously describes the latter river as having its origin in the lake, whereas, in fact, the Rhynadus enters the lake in the south, and issues from it in the north. It now bears the name of the lake of Monigma (Hamilton, Researches, &c., vol. ii. p. 105; Steph. B. s. v. [L. S.]), once the most flourishing city of Ionia, was situated on the northern extremity of the peninsula formed, in the south-west of the Latmicus Sinus, by Mount Grian. The city stood opposite the mouth of the Meander, from which its distance amounted to 80 stadia. At the time when the Ionian colonies were planted on the coast of Asia Minor, Miletus already existed as a town, and was inhabited, according to Herodotus (i. 146), by Carians, while Ephesus (ap. Strab. xiv. p. 634) related that the original inhabitants had been Leleges, and that afterwards Sarpedon introduced Cretan settlers. The testimony of Herodotus is born out by the Homeric poems, in which (I. i. 867) Miletus is spoken of as a place of the Carianians. That the place was successively in the hands of different tribes, is intimated also by the fact mentioned by Pliny (v. 30), that the earlier names of Miletus were Leleges, Pityusa, and Accacaria. (Comp. Pan. xii. 29; Steph. B. s. v.) On the arrival of the Ionians, Nicias, their leader, with a band of his followers, took forcible possession of the town, massacred all the men, and took the women for their wives,—an event to which certain social customs, regulating the intercourse between the sexes, were traced by subsequent generations. It appears, however, that Nicias did not occupy the ancient town itself, but built a new one on a site somewhat nearer the sea. (Strab. l. c.) Thus Tombi, fortifications, and other remains, attributed to the ancient Leleges, were shown at Miletus as late as the time of Strabo (xiv. p. 611; comp. Herod. ix. 97). As in most other colonies the Ionians had amalgamated with the ancient inhabitants of the country, the Milesians were believed to be the purest representatives of the Ionians in Asia. Owing to its excellent situation, and the convenience of four harbours, one of which was spacious enough to contain a fleet, Miletus soon rose to a great preponderance among the Ionian cities. It became the most powerful maritime and commercial place; its ships sailed to every part of the Mediterranean, and even into the Atlantic; but the Milesians turned their attention principally to the Enuine, on the coasts of which, as well as elsewhere, they founded upwards of 75 colonies. (Plin. v. 31; Senec. Cons. ad Helv. 6; Strab. xiv. p. 653; Athen. xii. p. 523.) The most remarkable of these colonies were Abydos, Lampæcus, and Parnese, and Parnese, too, seems to have been a part of Miletus. Those on the Enuine: while others were founded in Thrace, the Crimea, and on the Bosphoros. The period during which Miletus acquired this extraordinary power and prosperity, was that between its occupation by the Ionians and its conquest by the Persians, b. c. 494.

The history of Miletus, especially the earlier portion of it, is very obscure. A tyrannis appears to have been established there at an early time; after the overthrow of this tyrannis, the territory was split into two factions, one of which seems to have been an oligarchical and the other a democratic party. (Plut. Quae. Gr. 32.) The former gained the ascendant, but was obliged to take extraordinary precautions to preserve it. On another occasion we hear of a struggle between the wealthy citizens and the commonalty, accompanied with horrible excesses of cruelty on both sides. (Athen. xii. p. 524.) Herodotus (v. 28) also speaks of a Persian civil war which lasted on the Hellespont for two generations, and reduced the people to great distress. It was at length terminated by the mediation of the Persians, who seem to have committed the government to those landowners who had shown the greatest moderation, or had kept aloof from the contest of the parties. All these commotions took place within the period in which Miletus rose to the summit of her greatness as a maritime state. When the kingdom of Lydia began its career of conquest, its rulers were naturally attracted by the wealth and prosperity of Miletus. The first attempt to conquer it was made by Arvys, and then by Sadyattes, who conquered the Milesians in two engagements. After the death of Sadyattes, the war was continued by Alyattes, who, however, concluded a peace, because he was taken ill in consequence, it was believed, of his troops having burnt a temple of Athena in the territory of Miletus. (Herod. i. 17, &c.) At this time the city was governed by the tyrant Thraexybalus, a friend of Periander of Corinth (Herod. v. 92), and a crafty politician. Subsequently Miletus seems to have concluded a treaty with Cresus, whose sovereignty was recognised, and to whom tribute was paid.

After the conquest of Lydia by the Persians, Miletus entered into a similar relation to Cyrus
as that in which it had stood to Croesus, and was thereby saved from the calamities inflicted upon other Ionian cities. (Herod. i. 141, &c.) In the reign of Darius, the Ionians allowed themselves to be prevailed upon by Histiaeus and his unscrupulous kinsman and succe§-sor openly to revolt against Persia, n. c. 500. Miletus, having, in the person of its tyrant, headed the expedition, had to pay a severe penalty for its rashness. After repeated defeats in the field, the city was besieged by land and by sea, and finally taken by storm n. c. 494. The city was plundered and its inhabitants massacred, and the survivors were transplanted, by order of Darius, to a place called Ampe, near the mouth of the Tigris. The town itself was given up to the Carians. (Herod. vi. 6, &c.; Strab. xiv. p. 635.)

The battle of Mycale, in n. c. 479, restored the freedom of Miletus, which soon after joined the Athenian confederacy. But the days of its greatness and glory were gone. (Thuc. i. 15, 115, &c.); its ancient spirit of liberty, however, was not yet extinguished. In the war towards the end of the Peloponnesian War, Miletus threw off the yoke imposed upon her by Athens. In a battle fought under the very walls of their city, the Milesians defeated their opponents, and Phryniuchus, the Athenian admiral, abandoned the enterprise. (Thuc. vii. 25, &c.) Not long after this, the Milesians demolished a fort which the Persian Tissaphernes was erecting in their territory, for the purpose of bringing them to submission. (Thuc. viii. 85.) In n. c. 334, when Alexander, on his Eastern expedition, appeared before Miletus, the inhabitants, encouraged by the presence of a Persian army and fleet stationed at Mycale, refused to submit to him. Upon this, Alexander immediately commenced a vigorous attack upon the walls, and finally took the city by assault. A part of it was destroyed on that occasion; but Alexander pardoned the surviving inhabitants, and granted them their liberty. (Arrian, Anab. i. 18, &c.; Strab. l. c.) After this time Miletus continued, indeed, to flourish as a commercial place, but was only a second-rate town. In the interval between the Romans and Antiquus, Miletus sided with the former. (Liv. xxxvii. 16, xlvii. 6.) The city continued to enjoy some degree of prosperity at the time when Strabo wrote, and even as late as the time of Pliny and Pausanias. (Comp. Tac. Ann. iv. 63, 55.) From the Acts (xx. 17), it appears that St. Paul stayed a few days there, on his return from Macedonia and Thrace. In the Christian times, Ephesus was the see of a bishop, who occupied the first rank among the bishops of Caria; and in this condition the town remained for several centuries (Hieroc. p. 687; Mich. Dunc. p. 14), until it was destroyed by the Turks and other barbarians.

Miletus, in its best days, consisted of an inner and an outer city, each of which had its own fortifications (Arrian l. c.), while its harbours were protected by the group of the Trugusae islands in front of which Lade was the largest. Great and beautiful as the city may have been, we have now no means of forming any idea of its topography, since its site and its whole territory have been changed by the deposits of the Maeander into a pestilential swamp, covering the remains of the ancient city with water and mud. Chandler, and other travellers, not being aware of this change, mistook the ruins of Myus for those of Miletus, and describe them as such. (Leake, Asia Minor, p. 239.)

Great as Miletus was as a commercial city, it is no less great in the history of Greek literature, being the birthplace of the philosophers Thales, Anaximander, and Anaximenes, and of the historians Cadmus and Hecataeus.

The Milesians, like the rest of the Ionians, were notorious for their voluptuousness and effeminacy, though, at one time, they must have been brave and warlike. Their manufactures of couches and other furniture were very celebrated, and their woven cloths and carpets were particularly esteemed. (Athen. i. p. 28, xii. p. 548, xii. 549, 553, xx. 691; Virg. Georg. iii. 306, iv. 335; comp. Kambach, De Miletus ejusque coloniis, Halae, 1790, 4to; Schroeder, Comment. de Hebos Milesiorum, part. i. Stralsund, 1817, 4to; Soldan, Rerum Milesiœarum Comment. i. Darmstadt, 1829, 4to.)

**COIN OF MILETUS.**

**MILETUS,** a town of Myasia, in the territory of Seccis, on the river Eunus, which was destroyed as early as the time of Pliny (v. 32.). Another town of the same name in Pamphylia, on the road between Amastres and Sinope, is mentioned only in the Itinerary Table.

**MILETUS (Μίλητος), a town of Crete, mentioned in the Homeric catalogue. (II. ii. 647.) This town, which no longer existed in the time of Strabo, was looked upon by some writers as the mother-city of the Ionian colony of the same name. (Ephorus, ap. Strab. xii. p. 573, xiv. p. 634; Schol. Apoll. Rhod. i. 186; Apollod. iii. 1, 2, 3; Plin. iv. 12.)**

Mr. Pasley (Trav. vol. i. p. 269) explored the site of this Homeric city not far from Episkopoupolis, at which, considerable remains of walls of polygonal masonry, both of the acropolis and city are still to be seen. (Rack, Kreta, vol. i. pp. 15, 415.)

**MILETIM, a Roman "colonia" (Μιλητίαν coloniâ Pont. Tab.) in Numidia, which the Antonine Itinerary places at 25 M. P. from Cirta. There can be little doubt that this place, which, from the circumstance of two councils having been held there, was of some importance (Morelli, Africa Christiana, vol. i. p. 228), was the same as MILETIM (Mipar at Medepest, Ptol. iv. 3. § 28.)**

**MILICHIUS. [Achala, p. 13,b.]**

**MILONITHUM (It. Ant. p. 322; Melanocallum, It. Hieros, p. 602; Mytilodon, Geogr. Itav. iv. 6), a town in the interior of Thrace, on the road from Maximiapolis to Trajanopolis.**

**MILOXIA. [Milar.]**

**MILYAS (Μίλιας) is said to have been the ancient and original name of the country afterwards called Lyca (Herod. i. 173); but during the period of the Persian dominion, it was the name given to the whole mountainous country in the north of Lyca, the south of Pisidia, and a portion of eastern Phrygia. (Strab. xii. p. 573.)**

The boundaries of this country, however, were never properly fixed, and the whole of it is sometimes described as a part of Lyca. (Arrian, Anab. i. 25.) After the accession of the dynas-ty of the Seleucidae in Syria, the name Milyas was limited to the south-western part of
MIMACES.

Piddia, bordering upon Lycia, that is, the territory extending from Terræsus northward to the foot of mount Cadmus. (Polyb. v. 72; Strab. xii. p. 570, xii. p. 631, xiv. p. 666.) This district, the western part of which bore the name of Catabia, is afterwards described, sometimes as a part of Lycia (Ptol. v. 3. § 7, § 6), and sometimes as part of Pamphylia or Pisidia. (Plin. v. 42.) After the conquest of Antiocbus the Great, the Romans gave the country to Eumenes (Polyb. Exc. de Leg. 36), though Pisidian princes still continue to be mentioned as its rulers.

The greater part of Milies was rugged and mountainous, but it also contained a few fertile plains. (Strab. xii. p. 570.) The inhabitants were called Milies. (Mâcæu, Herod. vii. 77; Strab. xiv. p. 667; Plin. v. 53, 42.) This name, which does not appear in the Homeræan poems, probably belonged to the remnants of the ancient Solymi, the original inhabitants of Lycia, who had been driven into the mountains by the immigrating Cretans. The most important towns in Milies were Cibyra, Enooanda, Balbura, and Bubon, which formed the Cibyratian tetrapolis. Some authors also mention a town of Milies (Polyb. v. 72; Ptol. v. 2. § 12; Steph. B. s. v. Mâcæu), which must have been situated N. of Terrenus in Phidias. [L. S.]

MIMACES (Mînâiæ), a people in Byzasium (Ptol. v. 2. § 26), and also in Libya by Pliny (xiv. 4. § 70). [E. B. J.]

MIMAS (5 Mînas), a mountain range in Ionia, traversing the peninsula of Erythræa from south to north. It still bears its ancient name, under which it is mentioned in the Odyssey (iii. 172.) It is properly speaking, only a branch of Mount Tmolus, and was celebrated in ancient times for its abundance of wood and game. (Strab. xiv. pp. 613, 643.) The neck at the south-western extremity of the peninsula formed by Mount Mimas, a little to the north of Tces, is only about 7 Roman miles broad, and Alexander the Great intended to cut a canal through the isthmus, so as to connect the Cystrian and Hermæan bays; but it was one of the few undertakings in which he did not succeed. (Plin. v. 31; Pans. ii. 1. § 5; comp. vii. 4. § 1; Thucyd. viii. 34; Ov. Met. ii. 222; Amm. Marc. xxxi. 42; Callim. Hyym. in Del. 157; Sil. Ital. ii. 494.)

Mount Minas forms three promontories in the peninsula; in the south Corycæum (Korako or Korid), in the west Argemum (Cape Bithos), and in the north Melasæ (Kaura Baura). Chandler (Travels, p. 213) describes the shores of Mount Minas as covered with pines and shrubs, and garnished with flowers. He passed many small pleasant spots, well watered, and green with corn or with myrtles and shrubs. The summit of the mountain commands a magnificent view, extending over the bays of Smyrna, Chioææneæ, and Erythrae, the islands of Mimos, Chios, and several others. [L. S.]

MINAE (Mînâe), celebrated people of Yemen, in the SW. of Arabia, Strabo names them first of four great nations situated in this extremity of the peninsula, and bordering on the Red Sea: their principal town was Carra or Carana; next to these were the Sabæi, whose capital was Maribah. The Catabæans were the third, extending to the straits and the passage of the Arabian Gulf—the Straits of Ta'hel-Manal. Their royal city was Tama. To the east were the Chrematides, whose capital was named Cabatamum. From Elam to the country of the Minae was 70 days' journey. Thus far Strabo (xvi. pp. 768, 776); consistently with whose account, Ptolomy (vi. 7. § 23) mentions the Minae as a mighty people (Mînâeoi, μεγά λῆβος), bordering on the inner frankincense country, not far from the Sabæi, and places Carma Metropolis in long. 73° 30', lat. 23° 15', which would be on the coast of the Gulf of Arabia, distinct from the Carma of Cora, which was named, and identical with the Cornon of Pliny, a town of the Chrematides, who were contiguous to the Minae. Pliny represents the Minae as contiguous to the Atramitaï in the interior; which Atramitaï—identical no doubt with the Chratiothotæ of Strabo—he represents as a branch of the Sabæi, which last tribe extended along both seas, i. e. the Indian Ocean and the Arabian Gulf; and as the Carma, which he names as a city of the Sabæi, is doubtless the Carma which Strabo makes the capital of the Minae, he would seem to imply that these last were also another division of the same principal tribe of the Sabæi. Their country was reported by Aelius Gallus to be exceedingly rich. "Minaeas fertiles agros palmaris arbutusque, in pecore divitias." (Plin. vi. 82.) They are mentioned by Diosorus (as Mînâeoi), in connection with the Gerrhaëa, as transporting frankincense and other scented wares from Upper Arabia (ἐκ τῆς ἀνω λευκουρίας Ἀπαθίας), i.e. the interior (iii. 42). All these notices would serve to fix the seat of this tribe at the SW. part of the peninsula, in the modern Yemen. Pliny says that they were supposed to derive their origin from Mios, the king of Cyre, as their neighbours, the Khudæaui, were from his brother Khudanamithus (vi. 32), in which Mr. Forster thinks we may "easily recognise, under the thin veil of classical fiction, the important historical fact of the existence of an open trade between the Greeks and Arabs from very remote times, and of all the facilities implied by commercial intercommunication." (Arabia, vol. i. p. xxxvii, ii. pp. 74, 75.) In his account of the myrrh and frankincense, Pliny relates that this plant, which grew in the country of the Atramitaï, one canton (pagan) of the Sabæi, was conveyed by one narrow path through the neighbouring canton of the Minae, who were the first to carry on the trade, and always the most active in it; from which fact the frankincense came to be called Minaccum (xii. 30). And in speaking of the various qualities of myrrh, he mentions second, "Minaea, in qua Atramitaï," as most esteemed next to the Trogloëticas (xii. 35).

With regard to the position of this important tribe in the modern map of Arabia, there is a wide difference of opinion among geographers. D'Anville finds their capital Carana in the modern Almaharanah, which is, he says, a strong place. (Geograph. Anc. tom. ii. p. 221; comp. Forster, Arabia, vol. i. p. lili.) Gosselin contends that Almaharanah is too far south for the Carana of the Minae, and is disposed to find this capital in Carâ-al-Manâzul, as Bochart had suggested (Phaleg, lib. ii. cap. 22. p. 131) which Edrisi places two days' journey from Mekke, on the road to Somalia. (Gosselin, Recherches sur la Geographie des Anciens, tom. ii. p. 116.) Dean Vincent attempts to fix their position:—"The site of the Minacca is not easy to fix; by a comparison of different accounts, they were S. of Helis, N. of Hadramaut, and to the eastward of Sabæa; and they were the carriers to all these provinces: their caravans passed in 70 days from Hadramaut to Alfa, as we learn from Strabo; and Alfa is but 10 miles (2) from Petra." He re-
marks, in direct opposition to Gosselin, that Bochart, in placing them at Carma-Minaiasi (1. Karnel-Mayyad), only 3 stations of S. of Mecca, which he supposes to lose the Carma or Carana of Pliny, brings them too far to the N., for that "Podemy places them much farther S." (Peripus, cap. xxvii. p. 363, and note 234.) But M. Jordan holds that Wady Minia to the S. (?) of Mecca, corresponds with the ancient Minies: the distance to Aila he computes as 101 degrees, or 294 hours (ap. Mengin. Histoire de l'Egypte, &c. p. 377.). Mr. Forster assigns them a wide extent of territory in the modern provinces of Hedjaz, Nedj, and Yemen, even to the borders of Hodeirumant. The seat of this great commercial people, who divided with the Greeks, the South of the peninsula (transported by D'Arvieux to the heart of Yemen, and by Vincent to the country of the Agre Arabs), assuredly lay, if any reliance whatever may be placed in the position of Podemy, in an inland direction S.E., of Mecca. For the Minaei, according to him, lay immediately S. of the "regio interior myrrifera;" and this, again, was situated due S. of the Mantine. The Mantine being the same with the Mezcye, this description would identify the "interior myrrifera" with the fruitful mountain region E. of Tafq, and the Miniea, consequently, with the great Attybe tribe described by Pliny, as the most numerous of the tribes of Hedjaz, and inhabiting the rich inland country stretching eastward, under those mountains, from Lyg and Kolokkhi to Toraba." (Arabia, vol. ii. pp. 251, 252.) He adds, in a note (",) "its site (viz. that of the 'interior myrrifera;') with that of its inhabitants, the Minaei, may be determined independently, by the concurrent testimonies of Podemy and Pliny; the former places his Chargatha [Nagada, Pal. Nazabada], and the latter his Karvata, in conjunction with the Minaei. The town thus denominated is clearly that of Karvata; but Karvata is seated beneath, or rather upon, the mountains of Tafq." Having thus described the northern border of "S. of Karvata, or in the plains below the mountain chain running E.N.E. from Tafq," he thus defines their southern limits. "On the S., according to Podemy, the Minaei were bounded by the Doreni and the Mokereta. It is impossible to mistake, in the Doreni, the inhabitants of Zokran, or in the Mokereta, those of Mebbra, two adjoining provinces, lying S. of Mecca and Tafq, and crossing the entire space between the sea and the uninhabited desert. This decisive verification, shifts in the ancient Minaei between the mountains of Zokran and Mebbra, and those N. of Tafq" (p. 253). "The chief towns, the territory, and the national habits of the Minaei, as described by the ancient geographers, bear a remarkable correspondence to those of the Attybe Arabs, the present inhabitants of this district; and the coincidence of the palm-groves, and other fruit-trees of the Minaei, and their wealth in cattle, noticed by Pliny, with the excellent pasture-grounds, the great abundance of camels and sheep, possessed by the powerful tribe of Attybe, and with the plantations for which Tabora is remarkable, that furnish all the surrounding country with dates, environed, as Burckhardt describes both it and Tafq to be, with palm-groves and gardens, watered by numerous rivulets," must be allowed to corroborate, in a very remarkable manner, this verification of the ancient seats of the Minaei. (Forster, Arabia, vol. ii. pp. 254—257.)

Mr. Forster further identifies the principal town of the Minaei (the Carman Regio of Podemy) with Karan-al-Musul, a considerable town still in being between Tafq and Mebbra, and another; and Carnon with Karan-al-Mayyad, upon the mountains of Tafq; which former Bochart had already identified with the Carma or Carana of Pliny. "The site of their capital, within a few miles of Wady Minia (immediately to the E. of Meekka), suggests the not improbable derivation of their name from that famous seat of the idolatry of ancient Arabia" (p. 254 note); an hypothesis in which, it has been seen, Jordan coincides. But, though fixing the original and principal seat of the Minaei in the S. of the Hedjaz, he thinks "it still is certain, from Pliny's statement, that this people possessed a key to the commerce of the incense country, by having obtained the command of one of the two passes into the Djbal-al-Kamur (which is in the heart of Hodeirumant); and he hence infers that they possessed one of the twoemporiums of the trade in incense and myrrh, mentioned by Pliny, on the southern coast; "an inference which at once conducts us to Thasane or Dein [NE. of Res Furtak], and to the mountain pass immediately behind it" (p. 258, comp. vol. i. p. 135, 136). The arguments in proof of this position, and of the connection of the Minaei with the Jokanteen patriarch Jomard, are so fully stated and enforced by Mr. Forster, that for his usual ingenuity (vol. i. pp. 128—136); but it is an unfortunate circumstance that he has removed the central seat of this tribe,—descended, according to this hypothesis, from "the father of Yemen," into the territory of Hedjaz and for Nedj; he maintains that, "from E. to W. the Minaei stretched the entire breadth of the peninsula, their eastern frontier touching the Gerheenas, on the Persia Gulf;" while Carnon Regio, now Karan-al-Musul, their metropolis, is seated only 21 leagues ENE. of Meekka, in the great province of Al-Kurfey or Jemane" (vol. i. p. 113.)

The question of the position of the Minaeans has been investigated by M. Fresnel with a widely different result. (Journal Asiatique, 3me Sér., tome x. pp. 90—96, 176—200.) He confines them to the central part of Yemen, and denies their connection either with Wady Minia, near Meekka, or with Musul, an idol of the Hudaibites and the Khouzâles, between Meekka and Medina. He regards the name as a possible corruption of Yemmencei, the first syllable being converted into the Greek article, in its transmission from one language to another, but suggests also another derivation of the name from the patriarch Ayman, found in the native genealogies third in descent from Salih. In continuation of the former etymology, he maintains that the name Yemen, which now comprehends the eastern quarter of Southern Arabia, was formerly proper to the central portion of that province. He thinks that the capital of the Minaei—the Caro or Carma of Strabo, the Carnon of Pliny, identical also, with the Carman Regio of Podemy (to which that geographer assigns too high a latitude, as he does also the Minaei)—is to be found between the Tanb'a and Karan al-Musul of six days N., according to another authority, X.W.V. of Moollahat. Their other town, Marâba Baramacaum, he places in the same valley. (Maflaba. 2.) The position thus assigned to Carnon in the Wady Dein, enables us to fix the extent of the empire of the Minaei between the Sabacans and
MINARIACUM, in Belgium, is placed on a road from Castellum (Cassel) to Turnacum (Tournai); and a road also ran from Castellum through Minariacum to Nemetacum (Arras). The distance is xi. (leagues) from Cassel, a well-known position in Minariacum. D'Anville contends that the geographers are mistaken in placing Minariacum at Merium, or, as the French call it, Merivele, on the river Lys, instead of placing it at Estere, also on the Lys. The distances as usual cause a difficulty, and there is nothing else that decides the question. An old Roman road leads from Cassel to Estere, and Roman coins have been found at Estere. [G. L.]

MINAS SABBATHA (Meinae Zadarté, Zosim. iii. 23), a small fortified town in Babyonia, which Zosimus says was built by Tiberius. The name is that of the celebrated Parthis capite Ctesiphon. Abdulka (p. 253) speaks of a place in the neighbourhood called Sabath. [V.]

MINATICUM, in Belgica, is placed by the Antonine Itin. and the Table on a road from Bagacum (Barca) to Durcortorum (Reims). It is placed in the Itin. between Catusiacum (Clavours) and Auxezza or Axumeza. [AUXENNA.] Catusiacum is omitted in the Table, and Minatium appears under the form Nissitica, or Ninticae, as D'Anville wishes to believe the name of the Table. The table appears to be more exact, for Nissitaci is Nicy le Comte, which stands on an old Roman road that leads from Clavours to Reims. [G. L.]

MINCIUS (Myrioo: Minio), a considerable river of Gallia Cisalpina, and one of the most important of the northern tributaries of the Padus. (Plin. iii. 16. s. 20, 19. s. 23; Strab. iv. p. 209.) It has its sources in the Blenave Alps, at the foot of the Monte Tamele, from which it flows to the lake Benuas, or Lago di Fuzio, which is formed by the accumulation of its waters; whence it issues again at Peschiera (the ancient Ardeleca), and has from thence a course of about 40 miles, till it falls into the Po near Governo, about 10 miles above Hostilia. In the upper part of its course it is a mere mountain torrent; but after it leaves the lake Benuario it is a deep and clear stream, which holds a slow and winding course through the low and marshy plains of this part of Cisalpine Gaul. It is characteristically described by Virgil, who dwelt on its banks. (Verg. Eccl. vii. 13. Georg. iii. 15. Aen. x. 206.) In the immediate neighbourhood of Mantua the waters of the Minicius stagnate, so as to form shallow lakes of considerable extent, which surround that city on three sides, the fourth being also protected by artificial inundations. A battle was fought on the banks of the Minicius in B.C. 197, between the caesal Cornelius and the combined forces of the Insiders and Cenomani, in which Caeceleus, as it is highly defeated, and their leader, the Carthaginian Hamilcar, taken prisoner. (Liv. xxxii. 30.) At a much later period it was on the banks of the Minicius near its confluence with the Padus, at a place called by Jornandes Aeroventus, Mamboleus, that the celebrated interview took place between Ptolemeo I. and Attalus, which led the king of the Ilions to withdraw his forces from Italy. (Jornand. Gecl. 42; Pl. Dac. Hist. Miscell. xx. p. 549.)

MINERVIAE PROMONTORIUM (ei ' Atharwaq aqoutaypou, Strab.: Ponta della Campanella), a promontory on the coast of Campania, opposite to the island of Caprea, forming the southern boundary of the celebrated Crater or Bay of Naples. It is a bold and rocky headland, constituting the extremity of a mountain ridge, which branches off from the main mass of the Apennines near Niceria, and forms a great mountain promontory, about 25 miles in length, which was named by Ptolemy the Crater, or that of Paestum and Sibaros. The actual headland received its name from a temple of Minerva, situated on its summit, which was said to have been founded by Ulysses (Strab. v. p. 247): it was separated by a channel of only 3 miles in width from the island of Caprea (Capri). On the S. side of the promontory, but about 5 miles from the extreme headland, there are some small rocky islets now called Li Galli, very bold and picturesque in appearance, which were selected by tradition as the abode of the Sirens, and hence named the Sirens' Island. (Strab. v. p. 242; 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Strab. xii. 7. § 79; Plut. Strab. v. 247; 248; 249; 250; Liv. xii. 20.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

Tactus in one passage calls the headland Surrentum Promontorium, from its proximity to the town of Surrentum, from which it was only 5 miles distant; and Statius also speaks of the temple of Minerva as situated in vertice Surrentium. (Tac. Ann. iv. 67; Stat. Silv. v. 3. 165.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

The promontory of Minerva is a point of considerable importance in the coast-line of Italy, which, though small, lies near the point where the coast is the steepest. (Strab. v. p. 244, 247; Plin. iii. 5. s. 9; Ptolemy's Map of Italy; Ovid. Met. x. 709; Mel. ii. 4 § 9; Liv. xii. 20.)

MINUS, a river of Spain, rising in the north of Gallaecia, in the Cantabrian mountains, and falling into the Ocean. (Strab. iii. p. 153.) Strabo erroneously says that it is the
MINIUS.

MINIUS.

MINOCA (Minoa), a small island in front of Nissus, the port of Megara. [For details, see Megara.]

2. A city of Crete, which belonged to the district of Lyceus, and stood on the narrowest part of the island, at a distance of 60 stadia from Hierapytna. (Strabo. x. p. 475; Plut. iii. 17. § 5.)

3. Another name of the island of Paros. [Paros.]

4. A city of Sicily, usually called Heraclea Minus. [Heraclea Minus.]

5. A town in the island of Amorgos. [Amorgos.]

MINTURNAE. [Minturnae, Plut.; Mirturunae, Strab.; Mirtiurunae, Plut.; Mirtunae, Münch.], a city of Latium, in the more extended sense of that term; but originally a city of the Ausonians, situated on the right bank of the Liris (Gorgulione), about 3 miles from the sea. It was on the line of the Appian Way, which crossed the Liris. (Strab. v. p. 233.) The name of Minturnae is first mentioned in connexion with the great Latin War, B.C. 340—358, when it afforded the Latin forces after their defeat in Campania. (Liv. viii. 10.) It was not, however, at that time a Latin city, but belonged to the Ausonians, who appear to have been then in alliance with the Latins and Campanians. For, in B.C. 315, Livy tells us that there were three cities of the Ausonians, Ausona, Minturnae, and Vessia, which had declared themselves hostile to Rome after the battle of Lutatius, but were again betrayed into the hands of the Romans by some of the young nobles in each, and the inhabitants unsparingly put to the sword. (Liv. ix. 25.) Not many years later, in B.C. 296, a Roman colony was established at Minturnae, at the same time with one at Sinussa, a little further down the coast; they were both of them of the class called "Coloniae Maritimae," with the rights of Roman citizens (Liv. x. 21; Vell. Pat. i. 14); and were obviously designed to maintain and secure the communications of the Romans with Campania. During the Second Punic War both Minturnae and Sinussa were among the colonies which were renounced, but without success, to establish their exemption from the obligation to furnish military levies (Liv. xxvii. 38); and again, during the war with Antiochus (B.C. 191), they attempted, with equal ill success, to procure a similar exemption from providing recruits and supplies for the naval service. (Id. xxxvi. 3.) Minturnae was situated on the borders of an extensive marsh, which rendered the city unhealthy, but its situation on the Appian Way must have given it a certain importance, and it seems to have been already under the Republic, what it certainly became under the Empire, a flourishing and populous town. In B.C. 88 Minturnae was the scene of a celebrated adventure of C. Marius, who, while flying from Rome by sea, to escape from the hands of Sulla, was compelled to put into the mouth of the Liris. He at first endeavoured to conceal himself in the marshes near the sea-coast; but being discovered and dragged thence, he was cast into prison by order of the magistrates of Minturnae, who sent a slave to put him to death. But the man is said to have been so struck with the majestic appearance of the aged general that he was unable...
to execute his task; and hereupon the magistrates determined to send Marius away, and put him on board a ship which conveyed him to Africa. (Plut. Mar. 36—39; Appian, B. C. i. 61, 62; Vell. Pat. ii. 19; Val. Max. i. 13; § 5. ii. 10; § 6; Liv. Post. xxvii. 1; Juv. x. 276; Cic. de Proplane 10, pro Sect. 22.)

We bear little more of Minturnae under the Republic, though from its position on the Appian Way it is repeatedly noticed incidentally by Cicero (ad Att. v. 1, 3, vii. 13, xvi. 10.) It still retained in his time the title of a colony; but received a material accession from a fresh body of colonists established there by Augustus; and again at a later period under Caligula. (Lib. Colon. p. 235; Hygin. de Limit. p. 178; ramp. de Colon. p. 355.) We find it in consequence distinguished both by Pliny and Ptolemy by the title of a colony, as well as in inscriptions (Plin. iii. 5. s. 9; Prot. iii. 1, § 6; Orell. Inscri. 3762; Mommsen, I. R. N. 4058—1061); and notwithstanding its unhealthy situation, which is alluded to by Ovid, who calls it "Minturnae graves" (Met. xvi. 716), it appears to have continued throughout the Roman Empire to have been a flourishing and important town. Its prosperity is attested by numerous inscriptions, well as by the ruins still existing on the spot. These comprise the extensive remains of an amphitheatre, of an aqueduct which served to bring water from the neighbouring hills, and the substructions of a temple, as well as portions of the ancient walls and towers. (Romanelli, vol. iii. p. 430; Eustace, Classical Tour, vol. ii. p. 318.) All these remains are on the right bank of the Liris, but according to Pliny the city extended itself on both sides of the river; and it is certain that its territory comprised a considerable extent of both banks of the Liris. (Hygin. de Limit. p. 178.) The period of its destruction is unknown: we find it still mentioned in Procopius (B. G. iii. 26) as a city, and apparently possessed of a certain degree of strength; but at the commencement of the middle ages all trace of it is lost, and it was probably destroyed either by the Lombards or Saracens. The inhabitants seem to have withdrawn to the site of the modern Trojettu, a village on a hill about 1½ mile distant, the name of which is evidently derived from the ancient name of the Liris (Ad. Trojettam), though wholly inapplicable to its present more elevated position.

Between Minturnae and the sea-coast, at the mouth of the Liris, was the celebrated grove of Marica [Lucus Maricae], with a temple or shrine of the goddess of that name, which seems to have enjoyed a great reputation for sanctity. (Plut. Mar. 39; Strab. v. p. 253.) She appears to have been properly a local divinity; at least we do not meet with her worship under that name anywhere else in Italy; though many writers called her the mother of Latinus, and others, perhaps on that very account, identified her with Circce. (Verg. Aen. vii. 47; Serv. ad loc.; Lucant. Inst. Div. i. 21.) We may probably conclude that she was connected with the old Latin religion; and this will explain the veneration with which her grove and temple were regarded, not only by the inhabitants of Minturnae, but by the Romans themselves. Frequent allusions to them are found in the Latin poets, but they were in close connection with Minturnae and the Liris. (Hor. Carm. iii. 17, 7; Lucan. ii. 424; Martial, xii. 83; Claudian, Preb. et Ol. Cons. 259.)

Strabo calls Minturnae about 80 stadia from Formiae, and the same distance from Sinussa; the

Hillenuies give the distance in each case as 9 miles. (Strab. v. p. 233; Itin. Ant. pp. 108, 121.) After crossing the Liris a branch road quitk the Appian Way on the left, and led by Suessa to Teummi, where it joined the Via Latina. (E. H. B.)

MUNYÀ (Μυνύα), a city of Thessaly, said by Stephaneus B. (s. c.) to have been formerly called Halomnia ('Αλομνία), and to have derived its name from Minyas. It is mentioned by Pliny (iv. 8. s. 15) under the name of Almon, and in conjunction with Orchomenus Minyæus in Thessaly. (See Müller, Orchomenos und die Minger, p. 244. 2nd ed.)

MUNYAE (Μυναία), an ancient race in Greece, said to have been descended from Minyas, the son of Orchemoumenos, who originally dwelt in Thessaly, and afterwards migrated into Boeotia, and founded Orchomenus. [For details see OCHOMENUS.] Most of the Argonautic heroes were Minyæ; and some of them having settled in the island of Lemnos, continued to be called Myiæae. These Lemnian Minyæ were driven out of the island by the Tyrrhenian Pelasgians, and took refuge in Lacedæmon, from whence some of them migrated to Thess, and others to Triphylia in Elis, where they founded the six Minyan cities. (Herod. iv. 145—148; (Elis, p. 818.)

MUNYÆUS (Μυναία), the ancient name of the river Anigrus in Elis. (Hom. H. xii. 721.) (Anigr.)

NIORTHIGRA (Νιρθητίγρα), 1. Also called NIEEBRICA (Plin. iv. 12. a. 35; Coins), a town of the Celtici in Lusitania, upon the Ocean (Ptol. ii. 5. § 6), identified by some with Odentra, by others with Sinæs. (MeteUle, Exp. Anc. p. 260; UcKer, ii. p. 390.)

2. A Roman municipia, in the territory of the Turduli, in Hispania Baetica, on the road from Emerita to Caesaraugusta, now Capilla, N. of Fuente Ovejuna. (Ptol. ii. 4. § 13; Plin. iii. 1. a. 3; It. Anton. p. 444; Inscr. Gruter, pp. 76, 257.)

3. A town of the Oretani, in Hispania Tarraconensis, mentioned only by Ptolemy (iii. 6. § 59).

MUSEUM (Μουσεῖον), was the name of a remarkable promontory on the coast of Campania (MUSEUM PROMONTORIUM, Ptol. iv. 14. 4.; sometimes also MUSEI PROMONTORIUM, Liv. xiv. 13.; τὸ Μουσεῖον ἄκρα, Strab. : Capo di Miseno), together with the adjacent port (PONTUS MUSENIUS, Flor. i. 16), and a town which grew up adjoining it, after the harbour had become the station of the Roman fleet. The promontory of Misenum forms the northern limit of the celebrated gulf called the Crater or Sinus Cumanus (the Bay of Naples). It is an almost isolated headland, forming a hill of considerable elevation, and of a somewhat pyramidal form, joined to the mainland opposite to Procida only by a narrow strip of low land, between which and the continuation of the coast by Bauli and Baisa is a deep inlet forming the harbour or port of Misenum (Strab. v. p. 243). A large stagnant pool or basin, still deeper in, now called the Mare Morto, communicated with this outer port by a very narrow entrance, which could be closed by a bridge or causeway. It is probable that the headland of Misenum itself at one time formed part of the encircling heights of the crater of a long extinct volcano, of which the Mare Morto occupies the centre, and the Monte di Procida (as the headland opposite to the island of that name is now called) constituted the opposite margin. (Daubeny On Volcanoes, p. 202, 2nd edit.)
The name of the promontory of Misenum was derived, according to a tradition very generally adopted by the Roman writers, from the trumpeter of Aeneas, who was supposed to be buried there (Virg. Aen. vi. 163, 212—235; Propert. iv. 18, 3; Silv. Ital. xii. 150; Stat. Silv. iii. 1. 150; Mem. ii. 4. 9; Sophr. ii. 2. 13). Another legend, however, seems to have represented Misenum as once the close of the Ulysses (Strabo, v. p. 245). There is no trace of the existence of a town on the spot at an early period, though it is almost certain that its secure and land-locked port (already alluded to by Lycephon, Alex. 737) must have been turned to account by the Cumaean during the period of their naval and commercial power. Before the close of the Roman Republic the actual promontory of Misenum, as well as the neighbouring shores of Baalii and Baneas, became a favourite site for the villas of wealthy Romans; but it was not till the reign of Augustus that any considerable population was collected there. That emperor first introduced the custom of maintaining a fleet for the defence of the Tyrrhenian or Lower Sea, of which Misenum was made the permanent station (Suet. Aug. 49; Tac. Ann. iv. 5), as it continued throughout the period of the Empire. Thus we find the "classis Misensis" continually alluded to by Tacitus (Ann. xiv. 3, 62, xx. 51, Hist. ii. 100, iii. 56, &c.), and the elder Pliny was stationed at Misenum as one of the fleet of the Tyrrhenian (Plin. Ep. v. 1. 16), and was the scene of a naval engagement of the fleet of the Seleucids, in which the praefectus Classis Misenum, C. Marcius, was slain. The event is alluded to by Cicero, who refers to it in his 'De Cicero' (Plin. Ep. v. 70; Suet. Claud. 31; Seneca, Ep. 51; Tac. Ann. vi. 50; Suet. N. L. 72; 73).—Dion Cass. xiii. 28; Phaedr. Fab. ii. 36.)

Besides this celebrated villa of Lucullus, we learn from Cicero that M. Antonius the orator had a villa at Misenum, and that the triumvir, his grandson, made it a frequent place of residence. (Cic. de Or. ii. 14, ad Att. x. 8, xiv. 20; Phil. ii. 19.) At a much later period Misenum became the scene of exile or confinement of the unhappy Romanus Augustus, the last emperor of the West, to whom the villa of Lucullus was assigned as a place of residence by Odowar after his deposition, A. D. 478. (Jormard, Get. 46, Marcellin. Chron. p. 44.) Horace notices the sea off Cape Misenum as celebrated for its echiu or sea-urchins. (Hor. Sat. ii. 4. 33.)

Some ruins, still extant near the summit of the hill, are in all probability those of the villa of Lucullus. Of the town of Misenum the remains are not inconsiderable; they are situated on the north side of the port of Misenum, at a place now called Misenum, where the modern church of Santa Maria de la Misura is built. From the inscriptions discovered there, we learn that the site of the town was still occupied in the time of the emperor Domitian, A.D. 96, as the Latin inscription of a public building erected by the Emperor Trajan, A.D. 100, indicates. (Inscr. xiv. 10.)

Before it became thus memorable as the station of the Roman fleet, Misenum was remarkable in history for the interview between Octavian and Antony and Sextus Pompeius, in which the two former were received by Sextus on board his ship, and a treaty was concluded for the division of the Roman Empire between the three contracting parties. It was on this occasion that his admiral Menas proposed to Pompey to cut the cables and carry the two triremes off to sea. (Plut. Ant. 32; Dion Cass. xlviii. 36; Veit, Patr. ii. 77.) At about a somewhat earlier period Cicero notices it as having been infested by the Cilician pirates, who carried off from thence the daughters of M. Antonius, when he had retired to Italy against them. (Cic. pro Leg. Manil. 12.)

Nous learn from Pictarch that C. Marius had a villa there, which he describes as more splendid and luxurious than was suited to the character of the man (Plut. Mari. 34); nevertheless it was then far inferior to what it became in the hands of L. Lucullus, who subsequently purchased it for a sum of 2,500,000 denarii, and adorned it with his usual magnificence. It subsequently passed into the hands of the emperor Tiberius, who appears to have not unfrequently

**MITHRIDATIUM.**

The name of the promontory of Misenum was derived, according to a tradition very generally adopted by the Roman writers, from the trumpeter of Aeneas, who was supposed to be buried there (Virg. Aen. vi. 163, 212—235; Propert. iv. 18, 3; Silv. Ital. xii. 150; Stat. Silv. iii. 1. 150; Mem. ii. 4. 9; Sophr. ii. 2. 13). Another legend, however, seems to have represented Misenum as once the close of the Ulysses (Strabo, v. p. 245). There is no trace of the existence of a town on the spot at an early period, though it is almost certain that its secure and land-locked port (already alluded to by Lycephon, Alex. 737) must have been turned to account by the Cumaean during the period of their naval and commercial power. Before the close of the Roman Republic the actual promontory of Misenum, as well as the neighbouring shores of Baalii and Baneas, became a favourite site for the villas of wealthy Romans; but it was not till the reign of Augustus that any considerable population was collected there. That emperor first introduced the custom of maintaining a fleet for the defence of the Tyrrhenian or Lower Sea, of which Misenum was made the permanent station (Suet. Aug. 49; Tac. Ann. iv. 5), as it continued throughout the period of the Empire. Thus we find the "classis Misensis" continually alluded to by Tacitus (Ann. xiv. 3, 62, xx. 51, Hist. ii. 100, iii. 56, &c.), and the elder Pliny was stationed at Misenum as one of the fleet of the Tyrrhenian (Plin. Ep. v. 1. 16), and was the scene of a naval engagement of the fleet of the Seleucids, in which the praefectus Classis Misenum, C. Marcius, was slain. The event is alluded to by Cicero, who refers to it in his 'De Cicero' (Plin. Ep. v. 70; Suet. Claud. 31; Seneca, Ep. 51; Tac. Ann. vi. 50; Suet. N. L. 72; 73;—Dion Cass. xiii. 28; Phaedr. Fab. ii. 36.)

Besides this celebrated villa of Lucullus, we learn from Cicero that M. Antonius the orator had a villa at Misenum, and that the triumvir, his grandson, made it a frequent place of residence. (Cic. de Or. ii. 14, ad Att. x. 8, xiv. 20; Phil. ii. 19.) At a much later period Misenum became the scene of exile or confinement of the unhappy Romanus Augustus, the last emperor of the West, to whom the villa of Lucullus was assigned as a place of residence by Odowar after his deposition, A. D. 478. (Jormard, Get. 46, Marcellin. Chron. p. 44.) Horace notices the sea off Cape Misenum as celebrated for its echiu or sea-urchins. (Hor. Sat. ii. 4. 33.)

Some ruins, still extant near the summit of the hill, are in all probability those of the villa of Lucullus. Of the town of Misenum the remains are not inconsiderable; they are situated on the north side of the port of Misenum, at a place now called Misenum, where the modern church of Santa Maria de la Misura is built. From the inscriptions discovered there, we learn that the site of the town was still occupied in the time of the emperor Domitian, A.D. 96, as the Latin inscription of a public building erected by the Emperor Trajan, A.D. 100, indicates. (Inscr. xiv. 10.)

Before it became thus memorable as the station of the Roman fleet, Misenum was remarkable in history for the interview between Octavian and Antony and Sextus Pompeius, in which the two former were received by Sextus on board his ship, and a treaty was concluded for the division of the Roman Empire between the three contracting parties. It was on this occasion that his admiral Menas proposed to Pompey to cut the cables and carry the two triremes off to sea. (Plut. Ant. 32; Dion Cass. xlviii. 36; Veit, Patr. ii. 77.) At about a somewhat earlier period Cicero notices it as having been infested by the Cilician pirates, who carried off from thence the daughters of M. Antonius, when he had retired to Italy against them. (Cic. pro Leg. Manil. 12.)

Nous learn from Pictarch that C. Marius had a villa there, which he describes as more splendid and luxurious than was suited to the character of the man (Plut. Mari. 34); nevertheless it was then far inferior to what it became in the hands of L. Lucullus, who subsequently purchased it for a sum of 2,500,000 denarii, and adorned it with his usual magnificence. It subsequently passed into the hands of the emperor Tiberius, who appears to have not unfrequently
MITYLENE.

and gave it to a Galatian prince Bogelatatarus, or Bogelatarus, as he is called on coins. (Strab. xii. p. 567; Sectini, p. 129.)

MITYLENE. [Mitylene.]

MITYS, a river of Pieria in Macedonia, which the Roman army, in the third campaign against Perseus, under Q. Marcius, reached on the first day after their occupation of Diunum. (Liv. xiv. 7.) The Mitys was perhaps the river of Katerina. (Leake, North. Greece, vol. iii. p. 424.) [E. B. J.]

MIZAGUS. [Mizirus.]

MIZPAH v. JUDAH (Misa), This Hebrew apppellative (נִמְזַס), signifying "a commanding height," "a beacon," "watchtower," and the like (κατά τὴν έλιον Χαλθάν, Joseph. Ant. vi. 220), is called the proper name of several sites or towns in Palestine, doubtless from their positions.

1. The most important was Mizpah (once written Miaph, Josh. xviii. 26), in the tribe of Benjamin, where a convocation of the tribes of Israel was held on important occasions, during the times of the Judges, and was one of the stations in Samuel's annual circuit. (Judges, xx. 1, 3, xvi. 1; I Sam. vi. 9—17, x. 17, &e.) It was strengthened by Ahab, king of Israel, as a frontier garrison against Judah, and he used for his works the materials brought from the neighbouring Ramah, which Basba, king of Israel, had built on his southern frontier, "that he might not suffer any to go out or to come in to Ass, king of Judah." (1 Kings. xiv. 17—22; comp. 2 Chron. xvi. 6.) After the destruction of Jerusalem by Nebuchadnezzar it became, for a short time, the seat of the government, and there it was that Gedaliah and his officers were barbarously murdered by Ishmael and his company. (2 Kings, xxv. 22—26; Jer. xxvi. 1.) It is clear from this narrative that it was situated on the highroad between Samaria and Jerusalem (xli. 56); and it is evident from the narrative in Judges that it could not be far distant from Gibeah of Benjamin, as the head-quarters of the Israelites were at Mizpah while they were besieging Gibeah. It was restored and inhabited soon after the captivity ( Nehem. ii. 7, 15), and is mentioned in the book of Maccaebes as situated over against Jerusalem (Misa vār iariās, I Ezech. i. 9), as having been formerly an oratory of Israel; and there it was that Jadas Maccabaeus and his brothers inaugurated their great work with fasting and prayer. (1 Maccab. iii. 46.) It is frequently mentioned by Josephus in his narrative of the Scripture history, but his orthography is far from uniform. 1 Misa (vi. 2, § 1). 2 Misa (v. 4. § 4. x. § 2, 4, 5). 3 Misa (viii. 13. § 4). In the last cited passage he informs us that Mizpah was in the same place as Ramathoth (or Ramah) as far as the places 40 stadia from Jerusalem (§ 3). Eusebii and St. Jerome most unaccountably confound this Mizpah with the Mizpah of Gilead (infra, No. 3). They place it near Kirjathjearim. (Onomast. s. v. Misa.) Its site has not been satisfactorily identified. Dr. Robinson thinks that either Tell-el-Ful (Baan-hill), lying about an hour south of Er-Rim (Ramah) towards Jerusalem, or Nebi Samwil, somewhat farther distant from Er-Rim, to the west of the former site, would correspond to the site of Mizpah. He inclines strongly to the latter site (Bib. Res. vol. ii. p. 144); which, however, seems to be too far removed from the highroad between Jerusalem and Samaria, on which Mizpah was certainly situated. Possibly the modern village of Shophat, identical in meaning with Mizpah, situated on that road, near to Tell-el-Fil, may mark this ancient site; or another site, between this and Er-Rim, on the east of the road, still called 'Ain Nisap, may mark the spot. It is worthy of remark that the high ground to the north of Jerusalem is called by a name of kindred signification with Mizpah, and doubtless derived its name 2πωνισ from that town. It is on this ridge that Shophat lies.

2. Mizpah (LXX., Μασαφα) is mentioned among the cities of Judah (Josh. xv. 32), and is said to be "the house of vision" (Kábba, "the head", as in Josh. iii. 16), and, therefore, might be either the one which Eusebius mentions as still existing under the same name, in the borders of Eleutheropolis to the north, or the other in the tribe of Judah, on the way to Aelia. The former of these is probably Tell-es-Safieh, the Alba Speca of the middle ages; the latter may be Beit-Safieh, a little to the south of Jerusalem, between that city and Bethlehem.

3. Mizpah, in Mount Gilead, probably identical with Ramath-Mizpah in Gad (Josh. xiii. 26), derived its name from the ancient mention of the "house of vision" (Kábba), in the "middle" or "middle of the valley of unheaven stones called by Laban in Chaldee, "Yegar-sahadaoth," and by Jacob in Hebrew, "Galeed," both signifying "the heap of witness." The site was called "Mizpah" for, he said, The Lord watch between me and thee, when we are absent one from the other." This is doubtless the Mizpah of Jephthah the Gileadite, which seems to have had somewhat of a sacred character, and to have served for the national conventions of the trans-Jordanic tribes, as its name'sake in Benjamin did in Palestine Proper. (Judges, x. 17, xi. 11, 34.) Eusebii notices it as a Levitical city in the tribe of Gad. (Onomast. s. v. Μασαφα.)

4. A fourth Mizpah is named in Josh. xi. 3, more to the north of Perea, where we read of the "Hivite under Hermon, in the land of Mizpah," and presently afterwards of the "valley of Mizpah eastward" (ver. 8), which cannot be identical with the Gileadite Mizpah, but must have been at the southern base of Mount Hermon.

5. Mizpah of Moab is mentioned (in 1 Sam. xxxii. 3) in a manner which seems to intimate that it was the capital of that country in the time of David, as it was certainly the residence of its king. (Euseb. Onom. s. v. Μασαφα.)

MINUS, or MINISUS, a small town in Galatia, between Lagania and Ancyra, where the Emperor Augustus must have resided for some time, as several of his constitutions are dated from that place, both in the Codex Theodosianus and the Codex Justinianus. (Itin. Hieros. p. 575; It. Ant. p. 142; Notit. Episc, where it is called Mivofos; Hieroc. p. 697, where it bears the name Periyowych; Tab. Ptolem. calls it Mizaus; Cod. Theod. de his qui ad Eccles. i. 3; de Epist. i. 33; de Pcen. i. 16.) Mizus was the see of a bishop, as we know from several councils at which its bishops are mentioned. Kepert identifies the place with the modern Ajas.

MOAB (Μωάβ), vallis, regis, campestris, Ἰουρίου. [MOABITAE.] The notice of Eusebii may be here introduced (Onomast. s. v. Μωάβ):—"A city of Arabia, now called Arebolus. The country also is called Moab, but the city Rabbath Moab." [Arebolus.]

MOABITAE (Μωάβηται: the country Moabitica), the people descended from Moab, the son of
Lot, the fruit of his incestuous connection with his eldest daughter. (Gen. xix. 37.) Moses has preserved the very early history of their country in Deuteronomy (ii. 9—11):— "The Lord said unto me, Distress not the Moabites, neither contend with them in battle, for I will not give thee of their land for a possession; because I have given Ar unto the children of Lot for a possession. The Edumians dwelt there in times past, a people great, and many, and tall, as the Anakims." The Moabites, having dispossessed these gigantic aborigines, held possession of their country, which was bounded on the north by the river Arnon, which parted them from the Amorites. At an earlier period, indeed, they had extended their conquests far to the north of the Arnon, but had been forced to retire before the Amorites, to whom they had ceded their northern conquests, even before the children of Israel came into their coasts; and several fragments of the ancient war-songs relating to these times are preserved by Moses. (Num. xxii. 13—15, 26—30.) The boundary question was revived subsequently, in the days of Jephthah, when the Amorrites demanded the restoration of the land conquered by the Israelites between the Arnon and the Jabbok south and north, and to the Jordan westward, as of right belonging to them, their title not having been invalidated by 500 years' occupation by the Israelites. It appears from Jephthah's historical review of the facts, that the Israelites had neither invaded nor occupied any part of the territories of which Moab and Ammon were in actual possession at the period referred to; but only so much of their ancient possessions as Sihon king of the Amorites had already forced them to abandon (Judges, xi. 21—22); and it is remarkable that the memorial of the occupation of the territory north of Arnon by the Moabites has been preserved, through the Mosaic records, even to this day, in the name that is popularly assigned to that remarkable mountain district east of the Dead Sea, which forms so conspicuous and remarkable a feature in the distant view from Jerusalem towards the east, still called "the mountains of Moab," as in Deuteronomy that high table land is described as the "plains of Moab" (Deut. xxii. 1, xxiii. 49); and Josephus occasionally uses the name with the same latitude, of the country north of the Arnon, describing the Moabites as still a mighty nation of Cœle-Syria (Ant. i. 11. § 5); and reckoning among the Moabite cities occupied by the Jews under Alexander Jannaeus, Cheshbon (Heshbon), Medaba, Pella, and others that lay considerably north of the Arnon (Ant. xiii. 15. § 4), although in other passages he makes that river divide the Moabites from the Amorites (Ant. iv. 5. § 1), and describes the country of Moab (Judges, xii. 1—22); and it is certain, consistent with which notices he compares the country of the Amorites to an island, bounded by the Arnon on the S., the Jabbok on the N., and the Jordan on the E. (Ant. iv. 5. § 2.) It is then justly remarked by Reland (Palæstina, p. 102), that by "the plains of Moab," where the Israelsites were encamped before they crossed the Jordan (Num. xxxii. 48, 49, 50), which is described as being over against Jericho, and by the "land of Moab," in which Mount Hor is said to be situated (Deut. xxxii. 49, xxxiv. 1. 5. 6. 8.), it is not to be understood, as though that district was actually in possession of the Moabites at that time; but is so called because they formerly held it under their dominion. (Num. xxii. 26.) It may be added, that after it had been occupied by the tribes of Gad and Reuben, to whom Moses assigned it (Num. xxxii. 33—35), the Moabites again conquered it for a time, as it is clear that in the days of Jericho, on the west of that river. (Judges, iii. 12—30.) Their long and undisturbed tenure of their own proper country is forcibly described by the prophet Jeremiah. "Moab hath been at ease from his youth, and he hath settled on his lees, and hath not been emptied from vessel to vessel, neither hath he gone into captivity; therefore his taste remained in him, and his scent is not changed; although they have seen his children and his offspring, which shall not be counted; the LORD hath said, that the remnant of the Amorites have inhabited Seir; and the LORD sent forth a terror, and was very wroth, and emptied them out before them: and the LORD said unto me, Arise, go down into the wilderness of Zin, and in the plain thereof, in the mount of the daughter of Zin, Kadesh; and see if the land is good, whether it is fruitful, all the way unto the south; and, behold, if the land be good, make a survey thereof; that I may give commandment unto them, concerning all the land which I give them, to take it over against me. ..." (Jer. xxii. 3—8.)

MODICIA, a city of Gisauln Paul, situated on the river Luraflus, about 12 miles N. of Milan, the name of which is not found during the period of the Roman Empire, and it was probably in
those days a mere village, or at least a dependency of Mediolanum; but the Gothic king Theodeci constructed a palace there, and made it his summer residence. It continued to be a favourite abode of the Lombard kings, and Queen Theodolinda founded a Basilica there, which has ever since been one of the most celebrated churches in the N. of Italy, and still contains many interesting relics of the celebrated Lombard queen. (P. Dacie. Hist. Lang. iv. 22, 49.)

[Ε. Η. Ε.]

MODIN (Μοδίνα, LXX.; Μόδίνα, Μοδίνη, Joseph.; Μοδινα, Eusebius). The residence of Jonathan, the great Tribune of Alexander, and the first Temple of Judas Maccabæus and his four valiant brothers, who was however only a sojourner at Modin, being a native of Jerusalem, and a priest of the course of Jorib. It was probably the native place of the sons, as it was also their burying-place. Here it was that the first opposition to the impius edict of Antiochus Epiphanes was made, when Mattathias slew with his own hand the renegade Jew who had offered idolatrous sacrifice, and demolished the altar. (Jos. Ant. xiii. 8 §§ 1, 2.) Jerome affirms that the sepulchres of the Maccabees were shown there at their day. (Onomast. s. v.)

Josephus (xiii. 6 § 1) simply calls it a village of Judæas; but the last-cited authors speak of it as a village near to Dipsolis (Lydda). The author of the Ist Book of Maccabees writes that upon the pillars which were set about the pyramids, Simon "made all their armour for a perpetual memory, and by the armour ships carried, that they might be seen of all the earth." (xiii. 28, 29.) This would imply that these pyramids were not very far distant from the sea, and so far confirm the report of Eusebius and S. Jerome, who place the sepulchres in the vicinity of Lydda, and perhaps affords some countenance to the idea that the name "Maccabæus" was derived from the root Μόσιος the final radical of the names of the three patriarchs Abraham, Isaac, and Jacob, which the tribe of Dan, on whose borders Modin was situated, are said to have carried on their banner. (Ished., s. v. p. 901.)

A comparatively modern tradition has placed Modin on a remarkable conical hill, named Σίνθα, 2½ hours from Jerusalem, on the left of the Jaffa road; but this is, as Dr. Robinson has remarked "several hours distant from the plain, upon the mountains, and wholly shut out from any view of the sea." (Bib. Rev. vol. ii. p. 529.) He suggests that it may have been at Λατέρνα, which is also on the Jaffa road, on the very verge of the plain (ibid. note 4, and vol. iii. p. 30, n. 4.) But this is too far from Lydda, and so near to Nicopolis [EMMAUS], that Eusebius could doubtless have described it by its vicinity to that city, rather than to Dipsolis. Its site has yet to be sought.

[Γ. W.]

MODOGULLA (Μοδογούλλα, Ptol. vii. 1 § 83), a town mentioned by Ptolemy, on the western side of Hindostan. It is probably the present Mogoll, at no great distance from Calcutta. [V.]

MODOIAMISTIC (Μοδοιαμιστική, Ptol. vi. 6 § 2), one of the four divisions into which Ptolemy divides the province of Carmania Deserta (now Kirman). [V.]

MODRA (Μοδρὰ), a small town, which, according to Strabo (xii. p. 543), was situated in Phrygia Epipeteta, at the sources of the river Galbas; but as this river flows down from the northern slope of Mount Olympus, which there forms the boundary between Phrygia and Bithynia, Strabo must be mistaken, and Modra probably belonged to the south-west of Bithynia, and was situated at or near the modern Arne Calal. (Paul. Lyc.), some have supposed that Modra was no town at all, but only a name of a district; but it is known from Constantine Porphyrogenitus (de Terr. vi.) that the district about Modra was called Modrene. [L.S.]

MODUBARA (Ptol. xii. 2 § 22), one of the seven unknown tribes or nations placed by Pliny beyond the Ganges, in that part of India which was anciently called India extra Ganges. [V.]

MODUTA (Μοδοτά), Ptol. vii. 1 § 89). There are two places of this name mentioned in the accounts of ancient India; one described by Ptolemy (l. c.) as βασιλεὺς Πανθέως, the Palace of King Pandion; and the other as Μοδωτα ὑπὸ τῶν Κοτύρων, the Sacred Modura (vii. 1 § 50). The former of these towns was in the southern part of Bithynia, and is most probably the present ruined city, Modura; the second was in the land of the Casptreæi in the NW. part of India, either on the frontier or in the Panjab. Its exact position cannot now be determined. [V.]

MODUTTI (Μοδοττῖτου οἰκοδόμοι, Ptol. vii. 4 § 7), a port in the island of Taprobane or Ceylon, mentioned by Ptolemy. The strong resemblance of the name makes it extremely probable that it is the same with the present Mont уже, where there are still the remains of a great city, and with the great number of Roman coins of the times of the Antonines have been dug up. It appears to have been situated at the northern point of the island. The inhabitants were called Μοδοττίται. [V.]

MOENUS (the Main), a navigable river of Germany, which has its sources in the Sudeti Montes, near the town of Memmogau, and after flowing in a western direction through the country of the Herrnundari and the Agri Decumanus, empties itself into the Rhine, a little above Maguntiacum (Plin. ix. 17; Mela. iii. 3 § 3; Amm. Marc. xivii. 1; Tac. Germ. 29; Eunom. Plerig. Constant. 13.) [L. S.]

MOERIS LACUS (Μοῖρας λίμνη, Herod. ii. 13, 149, seq.; Diod. i. 52; Мοίρας λίμνη, Strab. xviii. p. 810; Ptol. iv. 5 §§ 20, 36; Moeris Lacus, Mela. i. 9 § 5; Moeridis, Plin. v. 9 § 9), was the most extensive and remarkable of all the Egyptian lakes. It formed the western boundary of the Arabeic nome [ANSMOR] in Middle Aegypt, and was connected with the Nile by the canal of Joseph (Yahr-Jusaf). A portion of its ancient bed is represented by the modern Birket-el-Kerim. Of all the remarkable objects in a land so replete with wonders, natural and artificial, as Aegypt, the lake of Moeris was the most enigmatical to the ancients. Herodotus (ii. 149), who is followed by Pliny (v. 9 § 9), regarded it as the work of man, and ascribes it to a
MOERIS LACUS.

We refer, therefore, that the lake Moeris is a natural lake, about the size of that of Geneva, and was originally a depression of the limestone plateau, which intersects in this latitude the valley of the Nile. Even in its diminished extent it is still at least 30 miles long, and 7 broad. Its direction is from SW. to NE., with a considerable curve or elbow to the E. The present level of its surface is nearly the same as that of the Mediterranean, with which indeed, according to a tradition mentioned by Herodotus, it was connected by a subterranean outlet into the Syrtos. If the lake, indeed, ever discharged any portion of its waters into the sea, it must have been in pre-historic times.

The waters of Moeris are impregnated with the alkaline salts of the neighbouring desert, and with the deposits—muriate of lime—of the surrounding hills. But, although brackish, they are not so saline as to be unsuitable for fish or to the crocodile, which in ancient times were kept in preserves, and tamed by the priests of the Aristeion nome. (Strab. xvii. p. 112: Aelian, Hist. A. x. 24.) The fisheries of the lake, especially at the point where the lakes regulated the influx of the Bahir-Jeesuf, were very productive. The revenue derived from them was, in the Pharaonic era, applied to the purchase of the queen's wardrobe and perfumes. Under the Persian kings they yielded, during the season of inundation, when the canal fed the lake, a talent of silver daily to the royal treasury (150£). During the rest of the year, when the waters ebbed towards the Nile, the rent was 30 minae, or 60l., daily. In modern times the right of fishing in the Birket-el-Keran has been farmed for 13 purses, or about 84l., yearly. (Labarde, Rehe Francois, 1829, p. 67.) It is probable, indeed, that a copious infusion of Nile water is required to render that of Moeris palatable to man, or salutary for fish.

To Thouthmes III. the Egyptians were probably indebted for the canal which connected the lake of Moeris with the Nile. It may have been, in part, a natural channel, but its dykes and embankments were constructed and kept in repair by man. There is, indeed, some difficulty respecting the influx and reflux of the water, since the level of the Bahir-Jeesuf is much higher than that of the Aristeion nome and the lake; and Herodotus seems to say (ii. 149) that the waters returned by the same channel by which they entered Moeris. As moreover the lake was supplied by a single point of junction, it is possible that a series of floodgates retained or impelled the water. The main dyke run between the Memphite and Aristeion nomes.

Belzoni found remains of ancient cities on the western side of Moeris, and is disposed to place the Great Labyrinth in that quarter. But if we may trust the accounts of the best ancient writers, it certainly was not on that side of the lake. Its shores and islands were, however, covered with buildings. Of the ruins of Ar-inoe mention has been made already. But Herodotus tells an extraordinary story of pyramids seated in the lake itself (t.e.)—"About the middle of it are two pyramids, each rising 300 feet above the water; the part that is under the water is just the same height. On the top of each is a colonnus of stone seated in a chair." This account is singular, as implying that pyramidal buildings were sometimes employed as the bases of statues. But it is impossible to reconcile this statement with the ascertained depth of the Birket-el-Keran, which on an average does
MOESIA.

not exceed 12 feet, and even where it is deepest is only 28. We may indeed admit, that, so long as the fisheries formed a royal monopoly, a larger body of water was admitted from the Nile, and the ordinary depth of the lake may thus have been greater than at present. It is also possible that much of the surrounding country, now covered with sand, may formerly, during the inundation, have been entirely submerged, and therefore that the pyramids which Herodotus saw, the sides of which even now bear traces of submersion (Vyme, On the Pyramids, vol. iii. p. 64), may have been these pyramids. The island of Raoum, now beyond the mouth of the Birket-el-Kerib, but within the range of the ancient Moesia. Herodotus, if, as is probable, he visited the Arsimite nome in the wet season, may have been struck with the elevation of these monuments above the lake, and exaggerated their proportions as well above as below its surface. Pococke (Travels, vol. i. p. 65) tells us that he saw on its western extremity, "a head of land setting out into the lake, in a semicircular figure, with white cliffs and a height of which the Egyptians may reasonably suppose to be part of the two pyramids described by Herodotus. And Père Lucas (Voyages en Egypte, vol. ii. p. 48) observed an island in the middle of the lake, a large league in circumference. He was assured by his guides that it contained the ruins of several temples and tombs, two of which were loftier and broader than the rest.

The region of Moesia awaits more accurate survey. The best accounts of it, as examined by modern travellers, will be found in Belzoni, Travels in the Delta of the Nile, vol. i. p. 329; Jomard, Description de l'Egypte, vol. i. p. 75; Ritter, Erdkunde, vol. i. p. 803. [W. B. D.]

MOESIA, a Roman province in Europe, was bounded on the S. by M. Haeumus, which separated it from Thrace, and by M. Orbelus and Scordus, which separated it from Macedonia, on the W. by M. Scordus and the rivers Drimis and Savus, which separated it from Hyrcania and Pannonia, on the N. by the Danube, which separated it from Dacia, and on the E. by the Pontus Euxinus, corresponding to the present Servia and Bulgaria. The Greeks called it Mysia (Moria), and the inhabitants Mysians (Mori), and sometimes European Mysia (Moria η εἰς Εἰπαρχίαν, Dion Cass. xliii. 36; Appian, Ill. 6), to distinguish it from Mysia in Asia.

The original inhabitants of Moesia were, according to Strabo, a tribe of Thracians, and were the ancestors of the Mysians of Asia (vii. p. 295). Of the early history of the country, little or nothing is known. In n. c. 277, a large body of Gaulish invaders entered Moesia, after the defeat and death of their leader Brennus, and settled there under the name of the Scordisci. The Romans first entered Moesia in n. c. 75, when C. Scribonius Curio, consul of Macedonia, penetrated as far as the Danube, and gained a victory over the Moesians. (S. Ital. Brev. 7; Jornand. de Regn. Secv. 50; Eutrep. vi. 2.) But the permanent subjugation of Moesia was not readily effected by M. Licinius Crassus, the grandson of the triumvirs, who was proconsul of Macedonia in n. c. 29. (Liv. Ep. 134, 135; Dion Cass. lxi. 25—27; Flor. iv. 12, 15.) This may be inferred from the statement of Dion Cassius (lili. 7), who represents Augustus two years afterwards (n. c. 27) speaking of the subjugation of Gallia, Moesia, and Aegypt. Further, in a. d. 6, Dion Cassius mentions the governor of Myisa (lv. 29), and in a. d. 14 Tacitus speaks of the legatus Moesiae (Ann. i. 79); so that there can be no doubt that it was reduced into the form of a province in the reign of Augustus, and that the statement of Appian is incorrect, that it did not become a Roman province till the reign of Tiberius. (Ill. 30.) In the reign of Tiberius, Moesia was laid waste by the Dacians and Sarmatians, being then without a garrison, contrary to the usual Roman practice, for a legion was generally stationed there. (Suet. Tiber. 41, 1 cap. 6; Tacit. Ann. xxvi. 6.) As a frontier province of the empire, it was strengthened by a line of stations and fortresses along the south bank of the Danube. A Roman wall was built from Axios to Torni, as a defence against the Sarmatians and Scythians, who inhabited the delta of the Danube. Moesia was originally onl one province, but was divided into two provinces, called Moesia Superior and Inferior, probably at the commencement of Trajan's reign. (Marquardt, in Becker's Römisch. Alterth., vol. iii. p. 106.) Each province was a considerable legatus, and was divided into smaller districts (regions et rectis). Moesia Superior was the western, and Moesia Inferior the eastern half of the country; they were separated from each other by the river Cebren or Clabrus, a tributary of the Danube. (Ptol. iii. 9, 10.) They contained several Roman colonies, of which two, Rhotaria and Oeceus, were made colonies by Trajan and Viminacium by Gordian III. (Marquardt, l. c.) The conquest of Dacia, by Trajan, removed the frontiers of the empire farther north, beyond the Danube. The emperor Hadrian visited Moesia, as we are informed by his medals, in his general progress through the empire, and games in his honour were celebrated at Pincum. In a. d. 250 the Goths invaded Moesia. Decius, who was then emperor, marched against them, but was defeated and killed in a battle with them in 251. What the value of Decius could not effect, his successor, Trebonianus Gallus, obtained by bribery; and the Goths withdrew to the coast of Pannonia. When the Goths gave up Dacia to the Romans, and withdrew his troops and part of the inhabitants to the south side of the river, he formed a settlement in the heart of Moesia, which was named from him Dacia Aureliana. (Dacia, Vol. i. p. 745.) In 335 the Ostrogoths, being hard pressed by the Huns, requested permission of the Romans to pass the Danube, and settle in Moesia. The request was acceded to by Valens, who was then emperor, and a large number took advantage of the privilege. They soon, however, quarrelled with the Roman authorities, and killed Valens, who marched to oppose them. The Goths, who settled in Moesia, are sometimes called Moes-Goths, and it was for their use that Ulphilas translated the Scriptures into Gothic about the middle of the fourth century. In the seventh century the Slavonians entered Moesia, and the Bulgarians about the same time, and founded the kingdoms of Bulgaria and Servia.

Moesia was occupied by various populations; the following are enumerated in Pliny: (Ptol. iii. 9; Plin. xii. 26): the Dardani, Celegers, Triballi, Timachi, Moesi, Thraces, Scythians, Tricorhnes, Pincensii, Troglydotes, and Paeconii, to which may be added the Scordisci. (Liv. xl. 57.) The relative situations of these people were somewhat as follows: the Dardani, said to be a colony from Dardania in Asia, dwelt on the borders of Macedonia. The Triballi dwelt near the river Clabrus; the
MOGETIANA.

Timachis by the river Timachus. The Trinomei, who derived their name from Trionomeum, were on the confines of Dalmatia. The Pteuni inhabited the island of Peuce, at the mouth of the Danube. The Thracians were near their own country; the Scordisci, between the Dardani and Dalmatia. The Mesi, or Myssi, proper, inhabited the heart of the country to which they gave their name, on the banks of the river Crisus. [A. L.]

MOGETIANS or MOGENTIANA, a place in Lower Pannonia, on the road from Sopianae to Saboria. (It. Ant, pp. 263, 283.) Its exact site is uncertain.

MOGONTIACUM or MAGONTIACUM (Mainz), a city of Gallia, on the Rhine. On this spot was built a monument in honour of Druses of the father of Germanicus. (Epitrop. vii. 13.) Magontiacum, as it is written in the text of Tacitus, is often mentioned in the history of the war of Cæcilius (Tacit. Hist. iv. 15, 24, &c.) Ptolemy (ib. 9, § 14) writes the name Molontiacos, and places the town in Germany Superior. In Epitropius the form of the word is Mogontiacum (ed. Verheyck); but the MSS. have also the forms Magnontia and Mogontia, whence is easily derived the French form Magonce, and the German Mainz. The position of Mogontiacum at Maintz on the Rhine is determined by the thats, which place it 18 M. from Bingium (Bingen), also on the Rhine. It was an important position under the Roman empire, and no great events are connected with the name. Ammianus Marcellinus (xx. 11) calls it a Municipium, which means a town that had a Roman form of administration. [G. L.]

MOGIUS (Mainz), a navigable river in Coelicia, flowing into the Euxine between the Phasis in the north, and the Iasus in the south; its mouth is just midway between the two, being 90 stadia distant from each. (Arrian, Perip. Pont. Eux. p. 7; Plin. vi. 4.) As an ancient reading in Pliny is Nogrus, and in Table of Med. 19, it is possible that the real name of the river may have been Nogrus, and that in Arrian also we must read Nogrus. [I. S.]

MOLADA (Malada), a town of Palestine, reckoned among the utmost cities of the tribe of Judah toward the coast of Edom southward (Joshua, xv. 21, 26), and indeed in that part which fell to the tribe of Simeon, "whose inheritance was within the inheritance of the children of Judah." (Ib. xix. 1, 2; 1 Chron. iv. 24, 26.)olland remarks, "Videtur esse caelestae Malatia" (Pallm. s. v. p. 901.), which Malatia is mentioned by Josephus as a castle of Idumea, to which Agrrippa, the son of Aristobulus and son-in-law of Herod the Great, retired in his distress after his return from Rome, and where he meditated suicide. (Ant. xvii. 7, § 2.) It is mentioned also by Eusebius and S. Jerome as iv. M. distant from Arad (Гpap~7), which they describe as an ancient city of the Amorites, situated in the wilderness of Kadesh (Καδσην), xx. M. from Hebron, on the road to Atlas. (Onomast. s. v. Αραδ. Μαλατα. Αττικα; Irod. Palaeont., s. v. Malatia, pp. 885, 886.) The site of Arad is still marked by a ruin of the same name, at the required distance S. of Hebron; near to which are wells and ruins named Ed Milh, which Dr. Robinson "was disposed to regard as marking the site of the ancient Malathah of the Old Testament, the Malatia of the Greeks and Romans." (Dibb. Res. vol. ii. p. 62.)

MOLINDAE (Plin. vi. 19, s. 22), a people mentioned by Pliny, who lived in the eastern part of India extra Gangem. It seems probable that they are the same as those noticed by Ptolemy with the name Mardane (Μαρδανα, vii. 2, § 14). [V.]

MOLOCATH. [MOLUCHE.]

MOLOEIS. [MOLUDEAE.]

MOLONSI, MOLOSIA. [MELIES.]

MOLUSURIS. [Mona, Plin. iii. 117, § 2.]

MOLYCHEMIA, MOLYCHEIA, or MOLYCHIA (Molycippus, Thuc. ii. 84; Molycippus, Strab. x. p. 451, et alii; Molycips, Polyb. v. 94; Paus. ix. 31, § 6; Eih. Molycippus, more rarely Molycippe, Molycippos, Molycippus, Molycippus, Molycippos, Molycippus, Molycippus, Molycippus), a town of Aetolia, situated near the sea-coast, and at a short distance from the promontory Antirrhium, which was hence called 'Ριον τον Μολυκηππον (Thuc. ii. 86), or Μολυκηππον Πειραιας. (Strab. viii. p. 336.) Some writers call it a Locrian town. It is said by Strabo to have been built after the return of the Hermidae into Peloponnesus. It was colonised by the Corinthians, but was subject to the Athenians in the early part of the Peloponnesian War. It was taken by the Spartan commander Eurylochus, with the assistance of the Aetolians, b.c. 426. It was considered sacred to Poseidon. (Strab. x. pp. 451, 460; Scyl. p. 14; Thuc. ii. 84, 311; Diod. xii. 60; Polyb., Paus., ii. cc.; Plin. iv. 2, s. 3; Ptol. iii. 15, § 3; Steph. Byz, s. e. 2.)

MENEPHIS (Μοιεψης, Strab. xvii. p. 803; Diodor. i. 66, 97; Steph. B. s. e.), the capital of the nome Memephis, in the Delta. It was seated in lat. 31° 5' N., on the eastern shore of the lake Mareotic, N. of the Nairot Lakes. Both its ancient and its modern appellation—Μοιεψης—indicate its position as the Lower Memphis, or Memphis in the marshes. During the troubles which led to the Dodecarchy, Memephis was a place of some strength, owing to the difficulties of its approaches. It was chiefly remarkable for its exportation of mineral alkalies from the neighboring Nairot Lakes. Athor or Aphrolite, under the form of a cow, was worshipped at Memephis. [W. B. D.]

MONA (Μωρα, Ptol. iii. 2, § 12; Μωρα, Dion Cass. xxi. 7), an island in Britain, off the coast of the Orvodies, the Isle of Anglesey.

Caesar describes Mona as situated in the middle of the passage from Britain to Ireland (B. G. v. 13), but by Mona in this passage he must mean the Isle of Man, which Pliny calls MONAPIA (iv. 16, s. 30); and Ptolemy that of MONAPUS or MONAPIA (Μωραπια, Μωρια). •

The Isle of Anglesey was first invaded by Su- tonius Paulinus, governor of Britain under Nero, a. d. 61. Previous to the appointment of Su- tonius Paulinus, the Romans had met with some reverses in the west of Britain. From the vigorous measures adopted by Paulinus on entering upon the government of Britain, it may be inferred that the Druids of Mona had excited the Orvodies and the Silures to rise in rebellion; or had assisted them; probably both. Tacitus states that Mona was a re- capitula for fugitives. The island was well populated, and there the priests of the Druidical religion had established themselves in great strength. Paulinus was recalled from the conquest of Anglesey by the recall of the Britons under Boudicea, and its subju- gation was not completed till a. d. 78 by Agricola. (Tac. Agric. pp. 15, 18, Ann. xiv. 29.) [C. R. S.]

MONAPIA. [MONA.]

MONA. [MONDA.]

MONESI, one of the many peoples of Aquitania.
MONETIUM

MONS SELECCUS. 369

2. A town on the Danube, at the foot of the mountain, 23 miles from Singidunum, (Tab. Peut.)

MONS BALBUS, a mountain fastness of N. Africa, to which Masinissa retired. (Liv. xxix. 31.) Shaw (Trav. p. 184) places the range in the district of Dakkil, E. of Tunisia; perhaps Sabdet-es-Sohib. (E. B. J.)

MONS BRISIACUS. This is one of the positions in the Roman Itins along the Rhine. They place it between Helvetum or Helebus (Helcebus) and Urunci. There is no doubt that is Vien-Brisach or Altbrischach, as the Germans call it. All the positions of the Itins, on the Rhine are on the west or Gallic side of the river, but the one on the east side. The Rhine has changed its bed in several parts, and this is one of the places where there has been a change. Breischach is described by Luitpand of Pavia (quoted by D'Anville), as being in the tenth century surrounded by the Rhine "in modum insulae." It may have been an island in the Roman period. The hill (mons) of Altbrischach is a well marked position, and was once crowned by a citadel. Altbrischach is now in the duchy of Baden, and opposite to Neubrirschach on the French side of the Rhine. (E. G. L.)

MONS MARIANNUM, a town in Hi-paia Bacotia, on the Mons Marianus, and on the road leading from the mouth of the Anas to Emerita, now Murines, in the Sierra Morena. (It. Ant. p. 442; Inser. ap. Caro, Ant. i. 20; Span. Miscell. p. 191; Florez, Esp. Sagra. vulg. p. 23.)

MONS SACER (το θεσπ茎 ύπος, Ptol. iii. 17, § 3), a mountain range on the SE. coast of Crete, near Hierapytta, identified with the Pyrrha (Πυrrha) of Strabo (x. p. 472; comp. Groeskurd, ἀντ. loc.; Höck, Kratz, vol. i. p. 16.)

[MONS SELECCUS, in Gallia Narbonensis, is placed in the mountain line, next to Vagium (Γαρπ) on a road from Vagium to Vienna (Pavia).]
MORSIUM.

It is 24 M. P. from Vapineum to Mons Seleneus, and 26 M. P. from Mons Seleneus to Lucus (Luc. The Jerusalem Itin. has two Mutations (Ad Fineus, and Davianum) between Vapineum and the Mansio Mons Seleneus, and the whole distance is 31 M. P. The distances would not settle the position of Mons Seleneus, but the name is preserved in Salone. The Batita Monta-Solone is only an abbreviation of the Batita Montis Selenei, a name that appears in some of the old documents of Dauphine. Many remains exist or did exist at Mons Seleneus; certain evidence that there was a Roman town here.

Magnentius was defeated A. D. 353 by Constantius at Mons Seleneus. (Tillemont, Histoire des Empereurs, vol. iv. p. 383.) The memory of the battle is preserved in several local names, as Le Champ l'Impereis, and Le Champ Batailles. (Ubert Gallien, p. 443.)

MOPSILUM (Μόψιλον; Eth. Mopalos; Steph. B. Mopocjcos, a dialectic form of Mopocjcos), a town of Pelagis in Thessaly, situated upon a hill of the same name, which, according to Livy, was situated midway between Larissa and Temes. Its ruins are still conspicuous in the situation mentioned by Livy, near the northern end of the lake Kastsfjär or Nessonos. (Steph. B. s. r.; Strab. ix. pp. 441, 443; Liv. xiii. 61, 67; Leake, Northern Greece, vol. iii. p. 377.)

MOPSIOPIA. (Μαραθυλία.)

MOPSIOPIA (Μαραθύλια), an ancient name of Attica, derived from the hero Mopsopus or Mopsops. (Strab. iv. p. 397; Lycophr. 1359; Steph. B. s. r.)

MOPUSCRENE (Μόποσκρένη), a town in the eastern part of Cilicia, on the river Cydnus, and not far from the valley of Catana, to which Ptolemy (v. 7, § 7), in fact, assigns it. Its site was on the southern slope of Mount Taurus, and in the neighborhood of the mountain pass leading from Cilicia into Cappadocia, twelve miles north of Taracis. It is celebrated in history as the place where the emperor Constantius died, A. D. 361. (Sozom. v. 1; Philostorg. vi. 5; Eutrop. x. 7; Amm. Marc. xx. 29; Itin. Ant. p. 145, where it is called Narstracron, / It. Hieros. p. 579, where its name is multiplied into Marsacron.)

MOPSUESTIA (Μόπσεστία or Mopacvestia; Eth. Mopsestia), a considerable town in the extreme east of Cilicia, on the river Pyramus, and on the road from Taracis to Issus. In the earlier writers the town is not mentioned, though it traced its origin to the ancient soothsayer Mopses, but Pliny (v. 22), who calls it Mopses, states that in his time it was a free town. (Comp. Strab. xiv. p. 676; Civ. ad FINN. iii. 8; Steph. B. s. r.; Procop. de Aed. v. 5; Amm. Marc. xiv. 8, Phot. Cod. 176; Procop. de Aed. v. 8; It. Ant. p. 705; Hieroc. p. 705; It. Hieros. p. 689, where it is called Mopsuestia.) A splendid bridge across the Pyramus was built at Mopacvestia by the emperor Constantius. (Malal. Chron. xiii.) It was situated only 12 miles from the coast, in a fertile plain, called / Αμφων πεδιόν. (Arrian, Anab. ii. 5; Eustath. ad Dionys.

MORGANTIA. (Per. 572.) In the middle ages the name of the place was corrupted into Manusa; its present name is Messis or Messoris. Ancient remains are not mentioned, and travellers describe Messis as a dusty and uninteresting place. (Leake, Asia Minor, p. 217; Otter's Helen, i. c. 8.)

MORBIUM, in Britain, is mentioned in the Notitia as the quarters of a body of horse Cataphractarii ("præfectus equitum Cataphractariorum Morbius"). We are justified by an inscription in placing Morbium at Morlsey near Whitleaven, where the remains of a Roman camp are yet to be traced. The inscription, preserved in a MS. of Dr. Stukeley, but not read by him, is upon a monument to the memory of a soldier of the Cataphractarii, which was found within the precincts of the Camp. (C.R.S.)

MORCULAMNE (Μορκολάμνη, Ptol. vii. 4. § 5), a port on the eastern coast of Taprobane (Ceylon). The name is probably a corruption of the MNS, and ought to be Μορκολάμνη or Μορκολάμνη. It is, perhaps, represented by the present Kottiyarop, where there are still extensive ruins. (Ritter, Ind. und Eri u. d. Kusten, vi. p. 22; Dary, Account of Ceylon, p. 420. [V.]

MORGANTIJA, MURGANTIJA, or MORGANTIUM (Μοργάντιον, Strab.; Μοργαντίον, Diod.: Eth. Μοργαντιών). The name is variously written by Latin writers Murgantia, Murgentia, and Morgen- tia; the inhabitants are called by Cicero and Pliny, Murgentina), a city of Sicily, in the interior of the island, to the SW. of Catana. It was a city of the Siculi, though Strabo assigns its foundation to the Morgesites, whom he supposes to have crossed over from the southern part of Italy. (Strab. v. 387, 270.) But this is improbable in consequence of the resemblance of name; Stephanus of Byzantium (s. r.), who is evidently alluding to the same tradition, calls Morgentium, or Morgenitia (as he writes the name), a city of Italy, but no such place is known. (Morgentes.) Strabo is the only author who notices the existence of the Morgesites in Sicily; and it is certain that when Morgantia first appears in history it is as a Siculian town. It is first mentioned by Diodorus in n. c. 439, when he calls it a considerable city (πόλις ἀξίωσης; Diod. xi. 78): it was at this time taken by Ducasites, who is said to have added greatly to his power and fame by the number of those towns which he captured after the battle, and it became again independent. We next hear of it in n. c. 424, when, according to Thucydidés, it was stipulated, at the peace concluded by Hermocrates, that Morgantia (or Morgenitia, as he writes the name) should belong to the Cannaramaeans, they paying for it a fixed sum to the Syracusans. (Thuc. iv. 65.) It is impossible to understand this arrangement between two cities at such a distance from one another, and there is probably some mistake in the name. * It is certain that in n. c. 396, Morgantia again appears as an independent city of the Siculi, and was one of those which fell under the arms of Dionysius of Syracuse, at the same time with Acrygium, Moneumum, and other places. (Diod. xiv. 78.) At a later period it afforded a refuge to Agathocles, when driven into exile from Syracuse.

* It has been suggested that we should read Karanarios for Karanarios; but the error is more probably in the other and less-known name. Perhaps we should read Morhantoun for Morgenaroun in the district of Motyca immediately adjoining that of Casarina.
MORGANTIA

and it was in great part by the assistance of a body of mercenary troops from Morgantia and other towns of the interior, that that tyrant succeeded in establishing his despotic power at Syracuse, n. c. 317. (Justin. xxi. 2; Diod. xix. 6.) Morgantia is repeatedly mentioned during the Second Punic War. During the siege of Syracuse by Marcellus it was occupied by a Roman garrison, and great magazines of corn collected there; but the place was betrayed by the inhabitants to the Carthaginian general Himilco, and was for some time occupied by the Syracusean leader Hippocrates, who from thence watched the proceedings of the siege. (Liv. xxiv. 36, 39.) It was ultimately recovered by the Roman general, but revolted again after the departure of Marcellus from Sicily, n. c. 211; and being taken by the praetor M. Cornelius, both the town and its territory were assigned to a body of Spanish mercenaries, who had deserted to the Romans under Mericus. (Id. xxvi. 21.)

Morgantia appears to have still continued to be a considerable town under the Roman dominion. In the great Servile insurrection of n. c. 102 it was besieged by the leaders of the insurgents, Tryphon and Athenien; but being a strong place and well fortified, offered a vigorous resistance; and it is not clear whether it ultimately fell into their hands or not. (Diod. xxxvi. 4, 7; Exc. Plut. pp. 533, 534.) Cicero repeatedly mentions its territory as one fertile in corn and well cultivated, though it suffered severely from the exactions of Verres. (Cic. Terr. iii. 18, 43.) It was therefore in its time still a municipal town, and we find it again mentioned as such by Pliny (iii. 8, s. 14); so that it must be an error on the part of Strabo, that he speaks of Morgantia as a city that no longer existed. (Strab. vi. p. 270.) It may, however, very probably have been in a state of great decay, as the notice of Pliny is the only subsequent mention of its name, and from this time all trace of it is lost.

The position of Morgantia is a subject of great uncertainty, and it is impossible to reconcile the conflicting statements of ancient writers. Most authorities, however, concur in associating it with the Sicilian towns of the interior, that border on the valleys of the Syracusans and its tributaries, Menacum, Agrigum, Assorns, &c. (Diod. xi. 78, xiv. 78; Cic. Terr. l. c.; Sil. Ital. xiv. 263); and a more precise testimony to the same effect is found in the statement that the Carthaginian general Hanno encamped in the territory of Agrigum, by the river Chrysus, on the road leading to Morgantia. (Diod. xiv. 95.) The account of its siege during the Servile War also indicates it as a place of natural strength, built on a lofty hill. (Diod. xxxvi. l. c.) Hence it is very strange that Livy in one passage speaks of the Roman fleet as lying at Morgantia, as if it were a place on the sea-coast; a statement wholly at variance with all other accounts of its position, and in which there must probably be some mistake. (Liv. xxiv. 27.) On the whole we may safely place Morgantia somewhere on the borders of the fertile tract of plain that extends from Catania inland along the Ninueto and its tributaries; and probably on the hills between the Dittaino and the Garna Longa, two of the principal of these tributaries; but any attempt at a nearer determination must be purely conjectural.

There exist coins of Morgantia, which have the name of the city at full, MOPPANTlNII; this is unfortunately effaced on the one figured in the preceding column. [E. H. B.]

MORGETES (Morgyrtes), an ancient people of southern Italy, who had disappeared before the period of authentic history, but are noticed by several ancient writers among the earliest inhabitants of that part of the peninsula, in connection with the Oenotrians, Itali, and Siculi. Antiochus of Syracuse (r. Dionys. i. 12) represented the Siculi, Morgetes and Italises as all three of Oenotrian race; and derived their names, according to the favourite Greek custom, from three successive rulers of the Oenotrians, of whom Italus was the first, Morges the second, and Siculus the third. This last monarch broke up the nation into two, separating the Siculi from their parent stock; and it would seem that the Morgetes followed the fortunes of the younger branch; for Strabo, who also cites Antiochus as his authority, tells us that the Siculi and Morgetes at first inhabited the extreme southern peninsula of Italy, until they were expelled from thence by the Oenotrians, when they crossed over into Sicily. (Strab. vi. p. 257.) The geographer also regards the name of Morgantium in Sicily as an evidence of the existence of the Morgetes in that island (Ibid. pp. 257, 270); but no other writer notices them there, and it is certain that in the time of Timæus their name must have been effectually merged in that of the Siculi. In the Etymologicum Magnum, indeed, Morges is termed a king of Sicily: but it seems clear the Siculi is intended; for the table there related, which calls Siris a daughter of Morges, evidently refers to Italy alone. (Figm. M. v. 253.) All that we can attempt to deduce as historical from the legends above cited, is that there appears to have existed in the S. of Italy, at the time when the Greek colonists first became acquainted with it, a people or tribe bearing the name of Morgetes, whom they regarded as of kindred race with the Chones and other tribes, whom they included under the more general appellation of the Oenotrians. [OENOTRIA.] Their particular place of abode cannot be fixed with certainty; but Strabo seems to place them in the southern peninsula of Bruttium, adjoining Rhegium and Locri. (Strab. vi. p. 257.) [E. H. B.]

MORGINNUM, in Gallia Narbonensis, is placed by the Table on the road from Vicinia (Vienna) to Alpis Cotta, and 14 M. P. short of Cularo (Grenoble). The place is Mairons. [G. L.]

MORiah. [JERUSALEM.]

MORICAMBA (Morocamba, Ptol. ii. 3, § 5), an estuary of Britain, Morecombe Bay, on the coast of Lancashire. [TCC.]

MORIDUNUM, in Britain, placed both by the Antonine Itin. and Geogr. Rav. near Iaca of the Dumnonii (Exeter); it was one of the stations termed mansioes and mutuoones, probably the latter; its site has by no means been ascertained upon by
It has been shown in the article Menapii that on the north the Morini were bounded by the Menapii. On the west the ocean was the boundary, and on the south the Ambiani and the Atrebates. The eastern boundary cannot be so easily determined. The element of Menapii seems to be the word mor, the sea, which is a common Flemish word still, and also found in the Latin, the German, and the English languages.

Caesar, who generally speaks of the Morini with the Menapii, has fixed their position in general terms. When he first invaded Britannia he went into the country of the Morini, because the passage from there to Britain was the shortest (B. G. iv. 21). In the next expedition, n. c. 54, he sailed from Portus Itius, having ascertained that the passage from that port to Britain was the most commodious. Portus Itius is in the country of the Morini [Trusc Poetis].

MORINI, a nation of Belgica. Virgil is the authority for the quantity:—

"Extremique hominum Morini." (Aen. viii. 727.)

PORTUS.

MORIUS. (Bosota, Vol. 1. p. 412, b.)

MORUS (Majae), a town of Lusitania upon the Tagus, where Brutus Callinicus made his head quarters in his campaign against the Lusitanians. (Strab. iii. p. 152.) Its exact site is unknown.

MORONTABRAIA (tā Morontabara, Arrian, Indic. c. 22), a place on the coast of Gadesia, at no great distance W. of the mouths of the Indus, noticed by Arrian in his account of Nearchus's expedition with the fleet of Alexander the Great. It does not appear to have been satisfactorily identified with any modern place.

MOROSI, a town of the Vorduli in Hispania Tarraconensis, identified by Uebert with St. Sebastian, which, however, more probably represents Menoppa. (Plin. iv. 20, s. 34; Uebert, ii. 1. p. 446; Forbiger, iii. p. 80.)

MORTUUM MARE. (Palaestina.)

MORTUUM MARE. (Septentrionalis.)

MOSCHA PORTUS.

MOSCA PORTUS.

MOSCA PORTUS.

MOSCA PORTUS. (Mostra Aqui.)

A haven on the S. coast of Arabia, near the extreme e. of the Ardathia, or more properly of the Asiatia, since the next named place is "Syagros extrem." (Syagros exqai), and the Asiatia extends from Syagros into the sea. (Ptol. vi. 7, p. 133. where M. Fabricius thinks there is no defi
2. A second harbour of this name is mentioned by the author of the Periplus, on the east of the Syagros Promontorium, in the large bay named by Ptolemy Sachalites Sinus (Σαχαλίτης κόλπος), and east of the smaller one, named Omana (Ομάνα), by the author of the Periplus, who places this Moscha Portus 1100 stadia east of Syagros. He calls it a port appointed for the lading of the Sachalite incense (ὅμας ἀποδειγμένου τοῦ Σαχαλίου λιθί-νου πρὸς ἑμιδόχθη), frequented by ships from Cane, and a wintering-place for late vessels from Limyrique and Barygaza, where they bartered fine linen, and coral, and oil for the native produce of this coast. Mr. Forster furnishes an ingenious etymological explanation of the recurrence of this name on the coast of the Sachalites Sinus. “The Arabic Moscha, like the Greek ἀκός, signifies a hide, or skin, or a boy of skin or leather blown up like a bladdcr. Now, Ptolemy informs us that the pearl divers who frequented his Sinus Sachalites (unquestionably the site of Arrian’s Moscha Portus), were noted for the practice of swimming, or floating about the bay, supported by inflated hides or skins. What more natural than that the parts frequented by these divers should be named from this practice? .... And hence, too, the name of the Ascatae of Ptolemy (‘floaters on skins’), the actual inhabitants of his Moscha Portus immediately west of his Syagros.” It is a remarkable fact mentioned by modern travellers, that this practice still prevails among the fishermen on this coast; for “as the natives have but few canoes, they generally substitute a single inflated skin, or two of these having a flat board across them. On this frail contrivance the fisherman sits himself, and either casts his small hand-net or plays his hook and line.” (Cane, p. 79, 80; cited by Forster, Arabia, vol. ii. p. 175, note*.) The identification of Arrian’s Moscha with the modern Omana, is complete. Arrian reckons 600 stadia from Syagros across the bay which he names Omana. This measurement tallies exactly with that of the Bay of Seger, in Commodore Owen’s chart of this coast; and from the extreme extremity of this bay to Moscha Portus, Arrian assigns a distance of 500 stadia, which measures with nearly equal exactness the distance to Rass-al-Steir (the Ascar of Ptolemy), situated about 60 Roman miles to the east of the precede headland. The identity of the Moscha Portus of Arrian with the Ascar of Ptolemy is thus further corroborated. “Arrian states his Moscha Portus to have been the emporium of the incense trade; and Pliny proves Ascarra to have been a chief emporium of this trade, by his notice of the fact that one particular kind of incense bore the name of Ausaritis.” (Plin. xii. 35; Forster, L. c. pp. 176, 177.)

[MOSELI. 373]

In the time of Strabo (xi. pp. 497—499) Moschiace (Μοσχιάκης)—in which was a temple of Leucotea, once famous for its wealth, but plundered by Thracians and Mithridates—was the residence of the Cibeleans, Albaniens, and Iberians (comp. Mela, iii. 5. § 4; Plin. vi. 4). Procopius (B. G. iv. 2), who calls them Moschi, says that they were subject to the Iberians, and had embraced Christianity, the religion of their masters. Afterwards their district became the appanage of Lipariotes, the Abasian prince. (Cedren. vol. ii. p. 770; Le Beau, Bas Empire, vol. xiv. p. 355; St. Martin, Memories sur l’Armenie, vol. ii. p. 222.)

[E. B. J.]

MOSCHIC MONTES (τὰ Μόσχικα ὅρη, Strab. i. p. 61, xi. pp. 492, 497, 521, 527, xii. p. 548; Plin. Pont. 34 ; S. Mer. p. 63; Phlb. vii. 1; Procopius, B. G. iv. 13; Plin. vii. 6 § 13; Moschic, M., Plin. v. 27), the name applied, with that of Paryadres, and others, to the mountain chain which connects the range of Anti-Taurus with the Caucasus. Although it is obviously impossible to fix the precise elevation to which the ancients assigned this name, it may be generally described as the chain of limestone mountains, with volcanic rocks, and some granite, which, branching from the Caucasus, skirts the E. side of Irizert, and afterwards, under the name of the Perengah Teigh, runs nearly SW. along the deep valley of Ayvold in the district of Ticlidir; from whence it turns towards the S. E., and again to the W. along the valley of the Accapusin, to the W. of which, bearing the name of the Kop Teig, it enters Lesser Asia. (Ritter, Erdkunde, vol. x. p. 816; Chesney, Explo. Eastern, vol. i. p. 25.)

[MOSE.]

In Gaulia appears in the Table on a road from Durocestorum (Rècus) to Mediamontum. (Memoranda.) The place appears to be Mouzon on the Mosc. D’Avville says that the place is called Mosmacum in the oldest middle age records. (G.L.)

MOSELLA. (Mousel, Mosville), a river of Gallia, which joins the Rhine at Coblenz (Confidentes). In the narrative of the Roman military history, Teutoburg Caesar (B. G. iv. 15) speaks of driving them into the water “ad confuentem Mosae et Rheni.” One of the latest and best editors of Caesar, who however is singularly ignorant of geography, supposes this confluence of the Mosc and the Rhene to be the junction of the Mosc and a part of the Rhens which is mentioned by Caesar in another place (B. G. iv. 10; Mosc.) But this is impossible, as D’Avville had shown, who observes that the Usipetes (Mennph) had crossed the Ilione in the lower part of its course, and landed on the territory of the Menapii. Having eaten them up, the invaders entered the country of the Eburones, which we know to be between the Rhine and the Mosc, and higher up than the country of the Menapii. From the Eburones the Germans advanced into the Conduri in the latitude of Liège; and they were here before Caesar set out after them. (B. G. iv. 6.) Caesar’s narrative shows that the German invaders were not thinking of a retreat: their design was to penetrate further into Gallia, where they had been invited by some of the Gallic states, who hoped to throw off the Roman yoke. After the defeat of the Germans on the river, Caesar built his wooden bridge over the Rhine, the position of which was certainly somewhere between Coblenz and Andernach. The conclusion is certain that this confluence of the Rhens and the Mosc is the confluence of the Rhens and the Mosc at Coblenz; and we must explain Caesar’s

B. E. S.
mistake as well as we can. It is possible that both rivers were called Mos; and Mosella or Mosula, as Vobrus has it, seems to be a diminutive of Mos, but that reading is somewhat doubtful. (Vobrus, iii. 10. ed. Dink.) There is no variation in Caesar's text in the passage where he speaks of the confluence of the Rhenus and the Mos. (Caesar, ed. Schneider.) Several of the affluents of the Mosel are mentioned in the ancient writers, and chiefly by Ausonius: the Sura, (Sow.) Pronea (Frum.), Nemesa (Vima), Gelias (Kyll.), Erabras (Racer), Lesura (Leser), Drahonus (Orane), Saravus (Sear), and Salonna (Salon).

The Mosella is celebrated in one of the longer poems of Ausonius, who wrote in the 4th century A.D. The vine at that time claimed the slopes of the hills and the cliffs which bound this deep and picturesque river valley in its course below Trier:

"Q)a sublimis apex longo super ardua tractu,
Et ripes et apicis juici, flexusque sinuque
Viribus adsumgent naturalique teatro."

(V. 154.)

There is a German metrical translation of this poem by Bücking with notes.

The Mosel rises on the western face of the Vosges, and its upper course is in the hill country, formed by the offsets of the mountains. It then enters the plain of Lorraine, and after passing Tullum (Tonti), it is joined by the Meurthe on the right bank. From the junction of the Meurthe it is navigable, and has a general north course past Divodurum (Metz), and Thionville, to Augstta Trevirorum (Tréves or Trèves). From Trier its general course is about NNE. with many great bends, and in a bed deep sunk below the adjacent country, to its junction with the Rhine at Coblenz. The whole course of the river is somewhat less than 300 miles. It is navigable for steamboats in some seasons as far as Metz.

A Roman governor in Gallia proposed to unite the Moselle and the Arar (Soine) by a canal, and the Senate voted a navigation from the Mediterranean to the North Sea. [Gallia Transalpina, Vol. i. p. 967.] [Lit. L.]

MOSTENI (Mostovëi), a town of Lydia in the Ilyrian plain, south-east of Thatria, and on the road between this latter town and Sardis. In a.d. 17, Mosteni and many other towns of that country were visited by a fearful earthquake. (Pt. v. 2. § 16; Tac. Ann. ii. 17; Herod. c. 671, where it is erroneously called Mostyren buffer Mostovia; Colum. Chal. p. 240, where it bears the name Mostyren.) Its exact site is unknown. (Comp. Rassche, L. Ann. iii. 1. p. 685.) 

MOSYCHILLIS. [Elemsinos.]

MOSYNOCR, MOSSYNOCEI, MOSYNI, MOSSYNI (Mostovëi, Mossoinëi, Mostovai, Mossyovai), a tribe on the coast of Pontus, occupying the district between the Tiberian and Maeonites, and containing the towns of Cerasus and Pharnacia. The Mosynocri were a brave and warlike people, but are at the same time said to have been the rudest and most uncivilised among all the tribes of Asia Minor. Many of their peculiar customs are noticed by the Greeks, who planted colonies in their districts. They are said to have lived on trees and in towers. (Strab. xiv. p. 549.) Their kings, it is said, were elected by the people, and dwelt in an isolated tower rising somewhat above the houses of his subjects, who watched his proceedings closely, and provided him with all that was necessary for what he was anything that displeased them, they stopped their supplies, and left him to die of starvation. (Xen. Ancb. v. 4 § 26; Apollon. Biod. i. 1027; Diod. xiv. 30. Scymnus, Fragm. 156.) They used to cut off the heads of the enemies they had slain, and carry them about amid dances and songs. (Xen. Ancb. iv. 4 § 17; v. 4 § 15.) It is also related that they knew nothing of marriage (Xen. Ancb. v. 4 § 33; Diod. l. c.), and that they generally tattooed their bodies. Eating and drinking was their greatest happiness, while the children of the wealthy among them were regularly fattened with salt dolphins and chestnuts, until they were as thick as they were tall (Xen. Ancb. v. 4 § 32). Their arms consisted of heavy spears, six cubits in length, with round or globular handles; large shields of wicker-work covered with ox-hides; and leather or wooden helmets, the top of which was adorned with a crest of hair. (Xen. L. c., v. 4 § 12; Herod. vii. 78.)

The fourth chapter of the fifth book of Xenophon's Anabasis is full of curious information about this singular people. (Comp. also Strab. i. p. 528; Herat. Fragm. 193, 193; Steph. B. s. v.; Herod. iii. 94; Seylax, p. 33; Amm. Marc. xxii. 8; Orph. Argon. 740; Mela, i. 19; Tabull. iv. 1. 146; Curtius, vi. 4, 17; Plin. vi. 4; Val. Flacc. v. 125; Dionys. Per. 765.) [L. S.]

MOTENI. [Open.]

MOTYA (Moti; Eth. Moryvus; S. Pantaleo), a port in Genua, between Drapetenum and Lilybaenum. It was situated on a small island, about three quarters of a mile (six stadia) from the mainland, to which it was joined by an artificial causeway. (Diod. xiv. 48.) It was originally a colony of the Phoenicians, who were fond of choosing similar sites, and probably in the first instance merely a commercial station or emporium, but gradually rose to be a flourishing and important town. The Greeks, however, according to their custom, assigned it a legendary origin, and derived its name from a woman named Motya, whom they connected with the fabulous concerning Heracles. (Steph. B. s. v.) It forms in Genua with the other Phoenician settlements in Sicily, at a later period under the government or dependency of Carthage, whence Diodorus calls it a Carthaginian colony; but it is probable that this is not strictly correct. (Thuc. vi. 2; Diod. xiv. 47.) As the Greek colonies in Sicily increased in numbers and importance the Phoenicians gradually abandoned their settlements in the immediate neighbourhood of the new comers, and concentrated themselves in the three principal colonies of Selinus, Panormus, and Motya. (Thuc. l. c.) The last of these, from its proximity to Carthage and its opulent condition, for communication with Africa, as well as the natural strength of its position, became one of the chief strongholds of the Carthaginians, as well as one of the most important of their commercial cities in the island. (Diod. xiv. 47.) It appears to have held, in both these respects, the same position which was attained at a later period by Lilybæum. [Lilybaenum.] Notwithstanding these accounts of its early importance and flourishing condition, the name of Motya is rarely mentioned in history until just before the period of its memorable siege. It is first mentioned by Hecataeus (ap. Steph. B. s. v.), and Thucydides mentions it among the chief colonies of the Phoenicians in Sicily, which still subsisted at the period of the Athenian expedition, B. C. 415. (Thuc. vi. 2.) A few years later, in B. C. 410, with the Carthaginian army under...
MOTYA.  

Hamilcar landed at the promontory of Lilybaeum, that general laid up his fleet for security in the gulf around Motya, while he advanced with his land forces along the coast to attack Selinus. (Diod. xiii. 54, 61.) After the fall of the latter city, we are told that Hermocrates, the Syracusean exile, who had established himself on its ruins with a numerous band of followers, laid waste the territories of Motya and Panormus (Id. xiii. 63); and again during the second expedition of the Carthaginians under Hamilcar (c. 407), these two cities became the permanent station of the Carthaginian fleet. (Id. xiii. 88.)

It was the important position to which Motya had thus attained that led Dionysius of Syracuse to direct his principal efforts to its reduction, when in B.C. 397 he in his turn invaded the Carthaginian territory in Sicily. The citizens on the other hand, relying on succour from Carthage, made preparations for a vigorous resistance; and by cutting off the causeway which united them to the mainland, compelled Dionysius to have recourse to the tedious and laborious process of constructing a mound or mole of earth across the intervening space. Even when this was accomplished, and the military engines of Dionysius (among which the formidable catapult on this occasion made its appearance for the first time) were brought up to the walls, the Motyans continued a desperate resistance; and after the walls and towers were carried by the overwhelming forces of the enemy, still maintained the defence from street to street and from house to house. This obstinate struggle only increased the previous exasperation of the Sicilian Greeks against the Carthaginians; and when at length the troops of Dionysius made themselves masters of the city, they put the whole surviving population, men, women, and children, to the sword. (Diod. xiv. 47—53.) After this the Syracusan despot placed it in charge of a garrison under an officer named Bito; while his brother Leptines made it the station of his fleet. But the next spring (c. 396) Himilcon, the Carthaginian general, having landed at Panormus with a very large force, recovered possession of Motya with comparatively little difficulty. (Id. vi. 55.) That city, however, was not destined to recover its former importance; for Himilcon, being apparently struck with the superior advantages of Lilybaeum, founded a new city on the promontory of that name, to which he transferred the few remaining inhabitants of Motya. (Diod. xxii. 10. p. 498.) From this period the latter altogether disappears from history; and the little islet on which it was built, has probably ever since been inhabited only by a few fishermen.

The site of Motya, on which earlier geographers were in much doubt, has been clearly defined and described by Captain Smyth. Between the promontory of Lilybaeum (Capo Rossa) and that of Argitallus (S. Teodoro), the coast forms a deep bright, in front of which lies a long group of low rocky islets, called the Statogene. Within these, and considerably nearer to the mainland, lies the small island called S. Pantaleo, on which the remains of an ancient city may still be distinctly traced. Fragments of the walls, with those of two gateways, still exist, and coins as well as pieces of ancient brick and pottery—the never failing indications of an ancient site—are found scattered throughout the island. The circuit of the latter does not exceed a mile and a half, and it is inhabited only by a few fishermen; but is not devoid of fertility. (Smyth's Sicily, pp. 235, 236.) The confined space on which the city was built agrees with the description of Diodorus that the houses were lofty and of solid construction, with narrow streets (στὴραχοι) between them, which facilitated the desperate defence of the inhabitants. (Diod. xiv. 49, 51.)

It is a singular fact that, though we have no account of Motya having received any Greek population, or fallen into the hands of the Greeks before its conquest by Dionysius, there exist coins of the city with the Greek legend MOTAION. They are, however, of great rarity, and are apparently imitated from those of the neighbouring city of Segesta. (Eckhel, vol. i. p. 225.) [E. H. B.]

COIN OF MOTYA.

MOTYCA, or MUTYCA (MOTyCA, Ptol.; Eth. Mutyceis, Cic. et Plin.; Modica), an inland town in the SE. of Sicily, between Syracuse and Camarina. It was probably from an early period a dependency of Syracuse; and hence we meet with no mention of its name until after the Roman conquest of Sicily, when it became an independent municipality, and apparently a place of some consequence. Cicero tells us that previous to the exactions of Verres, its territory (the "aiger Mutyceis") supported 187 farmers, whence it would appear to have been at once extensive and fertile. (Cic. Ferr. iii. 43, 51.) Motya is also mentioned among the inland towns of the island both by Pliny and Ptolemy; and though its name is not found in the Itineraries, it is again mentioned by the Geographer of Ravenna. (Plin. iii. 8; § 14; Ptol. iii. 4; § 14; Geogr. Rav. v. 23.) Silius Italicus also includes it in his list of Sicilian cities, and immediately associates it with Netum, with which it was clearly in the same neighbourhhood. (Sil. Ital. xiv. 268.) There can be no doubt that it is—represented by the modern city of Modica, one of the largest and most populous places in the Ial di Nota. It is situated in a deep valley, surrounded by bare limestone mountains, about 10 miles from the sea.

Polemio notices also a river to which he gives the name of Motychus (Morygus purtou), which has places on the S. coast, and must evidently derive its name from the city. It is either the tribing stream now known as the Fiume di Scilli, which rises very near Modica; or perhaps the more considerable one, now known as Fiume di Ragusa, which flows within a few miles of the same city. [E. H. B.]

MOTYUM (MOTyUM), a small town or fortress of Sicily, in the territory of Agrigentum. It was besieged in B.C. 451 by the Sicilian chief Ducretius, and fell into his hands after a battle in which he defeated the Agrigentines and their allies; but was recovered by the Agrigentines in the course of the following summer. (Diod. xi. 91.) No other mention of it is found, and its site is wholly unknown. [E. H. B.]

MOXOHEME, one of the five provinces beyond the Tigris, ceded by Nareses to Galerius and the Romans, and which Sapor afterwards recovered
from Jovian. (Ann. Marc. xxv. 7. § 9, comp. xxiii. 3. § 5; Le Beau, Bas Empire, vol. i. p. 380, vol. iii. p. 161; Gibbon, cc. xii. xxiv.) Its exact position cannot be made out, but it must have been near Karthala. (Ritter, Erdkunde, vol. x. p. 309; E.B.J.)

MUCURIAE (Μουκορία) al. Mucor'gia. (Procop. B. G. iv. 2, 15, 16), a canton of Lazica, populous and fertile: the vine, which does not grow in the rest of Colchis, was found here. It was watered by the river Hieon (Πεώρ). Archaeopolis, its chief town, was the capital of Colchis, and a place of considerable importance in the Lazic war. (Le Beau, Bas Empire, vol. i. p. 217; Gibbon, c. xiii.)

MUCRAE or NUCRAE (the reading is uncertain), a town of Samnia, mentioned only by Silus Italicus (viii. 566), the situation of which is wholly unknown. [E.H.B.]

MUCUNI. [Muretania.]

MUDUTII. [Modulti.]

MUGILLA, an ancient city of Latium, mentioned only by Dionysius (viii. 36), who enumerates the Mugillini (Μυκελλίνοι) among the places conquered by Coriolanus, at the head of the Volcan army. He there mentions them (as well as the Albiiates, who are equally unknown) between the cities of Pollasia and Corioli, and it is therefore probable that Mugilla lay in the neighbourhood of those cities; but we have no further clue to its site. The name does not again appear, even in Pliny's list of the extinct cities of Latium; and we should be apt to suspect some mistake, but that the cognomen of Mugillanus, borne by one family of the Papirian gens, seems to confirm the correctness of the name. [E.H.B.]

MUCURIAM (Μουκορήστρα), a place on the coast of Illyricum, near Salona, which was taken by Teuthis, king of the Goths, by Hann. (Procop. B. G. iii. 33; Le Beau, Bas Empire, vol. i. p. 82.) [E.B.J.]

MILELACHA, a town upon a promontory of the same name on the W. coast of Africa (Polyb. ap. Plin. v. 1), now Melbi Bu Sulhaim, the old Mahora of the charts. (Comp. London Geog. Journ. vol. vi. p. 302.) [E.B.J.] MULACHA, a river of Muratania, which Salust (Jug. 92, 110), Nicola (5. §§ 1, 5), and Pliny (c. 2) assign as the boundary between the Minus and Masaevii, or the subjects of Bocchus and Jugurtha. As Strabo (xvii. pp. 827, 829) makes the Molocathi (Μολοκαθῆ, Molachai, Plut. iv. 1. § 7) serve the same purpose, there can be no doubt that they are one and the same river. The Malva (Malva, Plut. l. c.) of Pliny (l. c.), or the Malavii, which forms the frontier between Marocco and Algeria, is the same as the river which bounded the Maors from the Numidians. This river, rising at or near the S. extremity of the lower Maors, and flowing through a diversified country, as yet almost un trodden by Europeans, falls into the sea nearly in the middle of the Gulf of Melita of our charts. (Shaw, Trav. pp. 10—16.) [E.B.J.]

MUNSA (Μουσά). 1. An important town of Hispания Baetica, and a Roman colony belonging to the conventus of Astica. (Strab. iii. p. 141; Plin. iii. 1. s. 3.) Strabo (l. c.) says that it is 1400 stadia from Carteia. It was celebrated on account of two battles fought in its vicinity, the first in n. c. 216, when Caio Scipio defeated the Cartaginians (Liv. xxiv. 42; Plut. iii. in Mip.); and the second in n. c. 43, when Aulus Caesar gained a victory over the Carthaginians. (Dion. Cass. xliii. 39; Anc. Bell. Hisp. 30, seq.; Strab. iii. pp. 141, 160; Flor. iv. 2.; Val. Max. v. 6.) It was taken by one of Caesar's generals, and, according to Pliny, from that time it ceased to exist. ("Fuit Munsa cum Pompeio filio rapta," Plin. iii. 1. s. 3.) But this cannot be correct, as Strabo (l. c.) describes it as an important place in his time. It is now identified with the village of Munda, SW. of Malaga; but it has been pointed out that in the vicinity of the modern Munda, there is no plain adapted for a field of battle, and that the ancient city should probably be placed near Cordova. It has been supposed that the site of Munda is indicated by the remains of ancient walls and towers lying between Martos, Alcañete, Espejo, and Bena. At all events this site agrees better with the statement of Strabo, that Munda is 1400 stadia from Carteia, for the distance from the modern Munda to the latter place is only 400 stadia; and it is also more in accordance with Pliny, who places Munda between Attali and Uro. (Forbiger, vol. iii. p. 51.)

2. A town of the Celtiberi in Hispánia Tarraconensis, probably near the frontiers of the Carnutes. (Liv. al. 47.)

3. A river on the W. coast of Lusitania, falling into the sea between the Tagus and Durius, now the Mondego. (Plin. iv. 21. s. 33; Morais, Strab. iii. p. 153; Morais, Ptol. ii. 5. § 4; Marc. p. 43.)

MUNDOBIRGA. [Medoiberia.]

MUNIXCHIA. [Athenea. p. 306.]

MURANUM (Morano), a town of the interior of Lucania, the name of which is not found in any ancient author; but its existence is proved by the Itinerary of Antoninus, which places a station Summarum, evidently a corruption of Sub Murano, on the road from Neronula to Consuevia; and this is confirmed by the inscription found at La Pella (Forum Povilli), which gives the distance from that place to Muranum at 74 M. P. It is therefore evident that Muranum must have occupied the same site as the modern town of Morano, on a considerable hill, at the foot of which still runs the high road from Naples to Reggio, and where was situated the station noticed in the Itinerary. Near it are the sources of the river Caselle, the ancient Speris. (Itin. Ant. pp. 105, 110; Orell. Inscr. 3309; Romanielli, vol. i. p. 387.) [E.H.B.]

MURBOOGI (Μουβογια, Ptol. ii. 6. § 52), a people in Hispánia Tarraconensis, the southern nation of the Murisci, are the same as the people called Termobigio by Pliny (iii. 3. s. 4.) and Orosius (vi. 21). This may be inferred from the fact that Pliny calls Segisiano a town of the Turcomodi, and Ptolomy calls Desbriglia a town of the Murisci; while in the Antonine Itinerary (p. 449) these two towns are only 15 miles apart. (Forbiger, vol. iii. p. 102.)

MURGANIA. 1. A city of Samnia, mentioned only by Livy, who calls it "a strong city" (validam urbem, x. 17), notwithstanding which it was taken by assault, by the Roman consul P. Decius, in a single day, in 356. Its position is same as that of Romanielli at Bascula, a considerable town near the coast of the Tyrrhenian Sea (Frutio), in the territory of
MURGIS, the hipri, about 20 miles W. of Laceria. An inscription found here would seem to attest that Murgantia existed as a municipal town as late as the reign of Severus; but considerable doubts have been raised of its authenticity. (Romanielli, vol. ii. p. 481; Mommsen, Topografia degli Ippini, pp. 4. 5; in Bull. dell' Inst. Arch. 1848.) The coins, with an Ocean legend, which have been generally attributed to Murgantia, in reality belong to Traces (Friedländer, Römische Mit., p. 49.)

2. A city of Sicily, the name of which is variously written Murgantia, Murgentia, and Murgantia. [Morgantia.]

MURGIS (Mogapis), a town of Hispia Baetica, near the frontiers of Tarraconensis, and on the road from Castulo to Malaca, probably near Puesta de la Guardia vieja. (Ptol. ii. 4. § 11; Plin. iii. 3. s. 4; Itin. Ant. p. 405; Ubert, ii. 1. p. 332; Forsiger, iii. p. 56.)

MURIANE (Murnawv), one of the four districts of Catania in Cappadocia, on the west of Lavaicene, and south-west of Melitea. It is mentioned only by Ptolemy (v. 7. § 8), and must not be confounded with Marimen.

[L. S.]

MURIUS (Muhur), a tributary of the Drave (Drurus), which is mentioned only in the Peuting. Table, though the antiquity of the name is undoubted, and attested by the station "in Murio," which was situated on the road leading from Augusta Vindelicorum through Noricum. (Muchar, Noricum, l. p. 280.)

[M. S.]

MUBOCINCOTA, an imperial villa in Pannonia, where Valentinian II. was residing with his mother Justina, when he was proclaimed emperor. (Amm. Marcellus, xix. 10.)

MUSA or MUSRA (Mupora, Moupaia), also called Musa Major, to distinguish it from Mursella (Mersella) or Musa Minor, was an important Roman colony, founded by Hadrian in Lower Pannonia, and had the surname Aelia. It was the residence of the governor of the country, on the Dravus, and there the roads met leading from Aquincum, Celina, and Petovia. In its neighbourhood, Gallicanus gained a victory over Ingelbis; and Constantine the Great made the town the seat of a bishop. A.D. 338. Its modern name is Eseko, the capital of Slavonia. (Ptol. ii. 16. § 8, viii. § 6; Aurel. Vict. de Caes. 33; Zosim. ii. 43; Steph. B. s. v. Moipora; Geogr. Rev. iv. 19; It. Ant. pp. 243, 265, 267, 351; It. Hieros. p. 562; Orelli, Inscript. Nos. 3066, 3281.)

The lesser Mursa (Mursa Minor or Mursella) was likewise situated in Lower Pannonia, ten miles to the west of Mursa Major, on the road from this latter place to Petovia, near the modern village of Petrovice, on the right bank of the Danube. (Ptol. ii. 16. § 7; Geogr. Rev. iv. 19; It. Hieros. p. 562; Tir. Pent.)

[M. S.]

MURSELLA. [Mursa.]

MURSA CAESARIS. [Helvetii, vol. i. p. 1042.]

MUSAGORES (Musdrwutopon, Pomp. Mela, ii. 7. § 13), three islands lying off the E. coast of Crete, the position of which is described by Pline (iv. 12. s. 20): "Circumvectis Cretametopon, tres Musagores appellatae." In Mr. Pashley's map they are represented by Elaphoconis. (Comp. Hock. Kreta, vol. i. p. 372.)

[M. B. J.]

MUSARNA (Mupora, Ptol. vi. 21. § 5, viii. § 9; Marvian, Peripol. 29—32, vol. Geogr. Graece Minor, ed. Müller, 1855.), a spot on the shore of Gordosia, may be inferred from the connexion of the authorities. Ptolemy mentions two places of the name one in Gedrosia, and the other in Caramania; but there can be no doubt that the place is intended. Arrian speaks of a place which he calls τα Μοσσάραα, on the coast of Gordosia, which was occupied by the Ichthyophagi (Indice. 26). Vincent, who has examined this geographical question with much care, thinks that this port must have been situated a little west of the modern cape Passos or Passene. (Voyage of Nearchus, vol. i. p. 242.) The difference of position in the ancient geographers may be accounted for by the fact that Musarna must have been on the boundary between Gedrosia and Caramania. Ptolemy speaks of a tribe, whom he calls Musarnaei (Mourapouiai, vi. 21. § 4). There can be little doubt that they were the people who lived around Musarna.

[V.]

MUSONES (Amm. Marcellus, xxix. 5. § 27; Moisoum, Ptol. iv. 3. § 24; Musonii, V. 4. s. 4; Musonii, Pent. Tbeb.), a Moorish tribe, who joined in the revolt of Firmus. (Amm. Marcellus, i. c.; comp. St. Martin, Le Beau, Bas Empire, vol. iii. p. 475.)

[M. B. J.]

MUSII (Mousti, Ptol. iv. 3. § 23), a town of Numidia, which the Antoine Itinerary places at 54 M.P. (32 P. Pent. Tab.), from Sicera Veneria, 92 M.P. from Safeltula, 86 M.P. from Carthage, 119 M.P. (by Tippasa) to Cirta; all which distances (considering that the roads are indirect) agree with the position assigned to it by Shaw (Truce, p. 179) and Barth (Vanderns, p. 221) at "Abel-er-Robbi," so called from the tomb of a "Marabout." According to Villius Susemer (de Flum., p. 7), it was near the river Bagudras; but Shaw (I. c.), who first discovered the site, by the remains of a triumphal arch, and a stone with an inscription bearing the ethnic name "Misticenium," speaks of it as being at some distance from the present course of the Mejeridh.

[M. B. J.]

MUSULAMA (Tae. Ann. ii. 52, iv. 24; Musulama, Ptol. iv. 3. § 24; Missinanti, Pent. Tbeb.), a Moorish tribe, whom Ptolemy (I. c.) places to the S. of Cirta, at the foot of Aquinian. Tacitus (I. c.) gives them a more westerly position, and describes the defeat of this powerful tribe under Tacfarinas, their leader.

[M. B. J.]

MUTENUM, a place in Upper Pannonia, on the road from Vindobona to Celidea, and probably occupying the same site as the modern Mozai. (H. Ant. pp. 233, 266; Claver, Pictur. 5.)

[M. S.]

MUTHAL, a river of Numidia, which, from its being in the division belonging to Atherbal, must be looked for towards the E. of that country. (Sail. Jug. 48.)

[M. B. J.]

MUTINA (Mutos, Strab. ; Merion, Pol.; Mutvra, Ptol. ; Eth. Matienensis, Modere.) An important city of Gallia Cispadana, situated on the Via Aemilia, between Parma and Bononia. It was 35 miles distant from the former, and 25 from the latter city. (Strab. v. p. 216; Itin. Ant. p. 127; Itin. Hier. p. 616.) It appears to have certainly existed previous to the conquest of this part of Italy by the Romans, and was not improbably of Etruscan origin. Livy tells us, that the district or territory in which it was situated, was taken from the Boans, and had previously belonged to the Etruscans (Livy. xxxix. 55); but he does not mention the name Mutina, and it is during this period the latter fell into the hands of the Boans, though it was probably during the Gannish War (423—227 B.C.?) that it fell in their undisturbed
possessed shortly after, at the commencement of the Second Punic War, B.C. 218. At that period Mutina must have already been a considerable place and well fortified; as we are told that, when the sudden outbreak of the Gauls interrupted the proceedings of the tribunes who were appointed to found the new colony of Placentia, and compelled them to fly for safety, they took refuge within the walls of Mutina, which afforded them an effectual protection against the arms of the barbarians. (Liv. xxi. 23, 26, xxvii. 21; Pol. iii. 49.) Polybius calls it at this period a Roman colony; but it seems probable that this is a mistake; for we have no account of its foundation as such, nor does Livy ever allude to Mutina as a colony, where he expressly notices those of Cremona and Placentia (xxvii. 10). But whether it had been fortified by the Romans or was a regular walled city previously existing (in which case it must have been, like its neighbour Bononia, of Etruscan origin), we have no means of determining, though the latter supposition is perhaps the more probable. In any case it continued to be held by the Romans not only during the Second Punic War, but throughout the long wars which followed with the Cisalpine Gauls and Ligurians. (Liv. xxxv. 4, 6.) It was not till after the final defeat of the Boians in B.C. 191, on which occasion they were deprived of a large portion of their lands, that the Romans determined to secure the newly acquired territory, by planting there the two colonies of Parma and Mutina, which were accordingly established in B.C. 153. (Liv. xxxix. 53.) They were both of them “coloniae civium ;” so that their inhabitants from the first enjoyed the full rights of Roman citizens: 2000 settlers were planted in each, and these received 5 jugera each for their portion. (Liv. l. c.) The construction of the great military high road of the Via Aemilia a few years before, B.C. 187 (Liv. xxxix. 2), must have greatly facilitated the foundation of these new colonies, and became the chief source of their prosperity. But shortly after its foundation Mutina sustained a serious disaster. The Ligurians, who still occupied the heights and valleys of the Apennines bordering on the Boian territory, in B.C. 177 made a sudden descent upon the new colony, and not only ravaged its territory, but actually made themselves masters of the town itself. This was, however, recovered with little difficulty by the consul C. Claudius, 8000 of the Ligurians were put to the sword, and the colonists re-established in the possession of Mutina. (Liv. xii. 14, 16.) For a considerable period after this, we do not again meet with its name in history; but it appears that it must have risen rapidly to prosperity, and become one of the most important fortresses of the towns along the line of the Via Aemilia. Hence it bears a conspicuous part in the Civil Wars. When Lepidus, after the death of Suilla, B.C. 78, raised an insurrection in Cisalpine Gaul against the senate, Mutina was almost the only place which was able to offer any resistance to the arms of Pompeius, and was held against him by Brutus for a considerable period. (Plut. Pompi. 16.) But it was the siege which it sustained, and the battles fought in its neighbourhood after the death of Caesar, B.C. 44, that have rendered the name of Mutina chiefly celebrated in history, and are referred to by Suetonius under the name of “Bellum Mutinense.” (Suet. Aug. 9.) On that occasion D. Brutus, to whom the province of Cisalpine Gaul had been intrusted, advanced with three legions to a place named three miles from himself into Mutina with three legions and a large body of auxiliary troops. Here he was besieged by M. Antonius with a numerous army; but the senate having declared against the latter, the two consuls, Hirtius and Pansa, as well as the young Octavian, were despatched to the relief and succour of Brutus. (Jan. B.C. 43.) Antonius at this time occupied Bononia, as well as Parma and Regium, with his garrisons, while he himself, with the bulk of his forces, maintained the siege, or rather blockade, of Mutina. Hirtius on his arrival seized on Claterna, while Octavian occupied Forum Cornelii (Imola). From thence they advanced after considerable delays, took possession of Bononia, and approached Mutina itself, but were unable to open communications with Brutus. Meanwhile the other consul, C. Pansa, was advancing with a force of 4 newly raised legions to their support, when he was attacked by Antonius, at a place called Forum Gallicum, about 8 miles from Mutina on the road to Bononia. [FORUM GALICUM.] A severe contest ensued, in which Pansa was mortally wounded; but the other consul, Hirtius, having fallen on Antony’s army in the rear, completely defeated it, and compelled him to retire to his camp before Mutina. A second battle took place some days afterwards (April 27, B.C. 43), under the walls of that city, in which Hirtius was slain; but the forces of Antonius were again worsted, and that general found himself compelled to abandon the siege (which had now lasted for above four months), and retire westward, with a view of crossing the Alps. (Appian, B. C. iii. 49—51, 61, 65—72; Dion Cass. xli. 33—38; Cic. ad Fam. x. 11, 14, 30, 33, Phil. v.—viii.; Vell. Pat. ii. 61; Suet. Aug. 10.)

Mutina was evidently at this period a flourishing and important town, as well as strongly fortified. Cicero calls it “firmissima et splendissima populi Romani colonia” (Phil. v. 9); and these praises are confirmed by Appian (B. C. iii. 49), who calls it “a wealthy city,” as well as by the fact, that it was capable of supporting so large an army as that of Brutus for so long a time. Mela also, since it had been, as Martin tells us, a refuge for the Romans, as is also attested by Cicero, it is probable that Mutina, together with Bononia and Patavium, as the most epiplent cities in this part of Italy, (Mela, ii. 4, § 2.) The same inference may fairly be drawn from the circumstance, that it was at Mutina the numerous body of senators who had accompanied the emperor Otho from Rome, in A.D. 69, remained, while Otho himself advanced to meet the generals of Vitellius, and where they very nearly fell victims to the animosity of the soldiery, on the first news of his defeat and death. (Tac. Hist. ii. 52—54.) But with this exception, we meet with scarcely any mention of Mutina under the Roman empire until a late period, though the still extant inscriptions attest the fact of its continued prosperity. Some of these give to the city the title of Colonia, as do also Mela and Pliny. (Mela, l. c.; Plin. iii. 15. s. 20; Cavedoni, Marini Modena, pp. 120, 165.) We learn also from Pliny and Strabo, that it was famous for the excellence of the wool produced in its territory, as well as for its wine, and the city itself possessed considerable manufactures of earthenware, as well as woolen goods. (Strab. v. p. 218; Plin. xiv. 3. s. 4, xxxv. 12. s. 46, Colum. vix. 2. s. 4.) In A.D. 312, Mutina was taken by Constantine during his war with Maxentius, but appears to have suffered but little on this occasion. (Nazar. Paneg. 17.) But the last half of the century, however, both
the city and its territory had begun to feel severely the calamities that were pressing upon the whole of this fertile and once flourishing tract of country. In A. D. 377, the remains of the conquered tribe of the Taifali were settled, by order of the emperor Gratianus, in the country around Mutina, Regium, and Parma (Amm. Marc. xxvi. 9, § 4)—a plain indication that the population was already deficient; but St. Ambrose, writing not long after the same date, describes Mutina, Regium, and the other cities along the Aeumilian Way, as "in a state of ruin and decay, while their territories were uncultivated and desolate." (Ambros. Ep. 39.) The same district again suffered severely in A.D. 432, from the ravages of Attila, who laid waste all the cities of Aeumilia with fire and sword. (Hist. Miscell. xvi. p. 549.) They, however, survived all these calamities, from which, nevertheless, Mutina appears to have suffered more severely than its neighbours. Under the Lombard kings, it became the frontier city of their dominions towards the Exarchate; and though taken by the Greek emperor Mauricius in 590, it was again annexed by Aculgopus to the Lombard kingdom of Italy. (Muratori, Antiq. Ital. vol. i. p. 63.) At this period it fell into a state of great decay. P. Diaconus, who mentions Ebonia, Parma, and Regium as wealthy and flourishing cities, does not even notice the name of Mutina (Hist. Lang. ii. 18); and a writer of the 10th century draws a lamentable picture of the condition to which it was reduced. The numerous streams which irrigated its territory having been then neglected, inundated the whole surrounding tracts; and the site of the city had become in great part a mere morass, in which the ruins that attested its ancient grandeur, were half buried in the mud and water. (Murat. Ant. vol. ii. pp. 154, 155.)

At a later period of the middle ages, Modena again rose to prosperity, and became, as it has ever since continued, a flourishing and opulent city. But the truth of the description above cited is confirmed by the fact, that the remains of the ancient city are wholly buried under the accumulations of alluvial soil on which the buildings of the modern city are founded, and are only brought to light from time to time by excavations. (Murat. l.c.) Large portions of the ruins were also employed at various periods, in the construction of the cathedral and other churches; and no remains of ancient buildings are now extant. But a valuable collection of sarcophagi and inscriptions, discovered at various periods on the site of the modern city, is preserved in the museum. These have been fully illustrated by Cavaldi in his Antichi Marmi Modenesi (Svo. Modena, 1829), in which work the facts known concerning the ancient history of the city are well brought together.

Modena is situated between the river Secchia, which flows about 3 miles to the W. of the city, and the Panaro, about the same distance on the E. The latter is unquestionably the ancient Scultenna, a name which it still retains in the upper part of its course. The Secchia is probably the Gabellas of Pliny; but seems to have been also known in ancient times as the Seca; for the Jerusalem Itinerary marks a station called Pons Seciae, 3 miles from Modena, where the Aeumilian Way crossed this river. (Itin. Hierosol. ii. 34.) The ancient town may be said to rise about 10 miles to the S. of the city; and the ancient territory of Mutina seems to have included a considerable extent of these mountains, as Pliny makes a prodigy which occurred "in agro Mutinenem," when two mountains were dashed against one another with great violence, so that they appeared to recoil again from the shock. (Plin. ii. 83 s. 85.) This phenomenon, which occurred in B. C. 91 was doubtless the result of an earthquake, and not, as has been sometimes supposed, of an eruption of a volcano.

[ ]

MUTUSCÆ. [ThEORBA MUTUSCA.] MUTYCA. [NOTYCA.]

MUZA (Μοζα, Arrian; Μοδεα and Μοδοξοντωρων, Ptol.) was an important mercantile town on the Arabian coast of the Red Sea, not far north of the Straits of Bab-el-Mandeb, in the country of Elshiari: planted by Polymny in long. 74° 30', lat. 14° or 30' west, and 24° north of Oreads ('Οραδες Σουτερον) close to the straits. (Ptol. vii. 15, p. 152.) He states that its longest day is 12 hours, that it is 1° east of Alexandria, and within the tropics (viii. Tab. vi. Asiae, p. 241); Pliny (vii. 23) names Musa as the third port of Arabia Felix "quem Indica navigatio non petit, nec nisi turis odoraneque Arabierorum mercatores." The author of the Peripius frequently alludes to it, and gives a full account of it and its trade. He describes it as situated in the southernmost gulf of this coast, a regular mart; inhabited altogether by Arab mariners and merchants, distant about 12,000 stadia from Berenice to the south, and 300 north of the straits. (Vincenzo, Periplos, p. 296. n. 100; Gosselin, Recherches, g. tome ii. pp. 263, 266.) It was not only an emporium of Indian merchandise—a manifest contradiction of Pliny's statement already cited—but had an export trade of its own. It was distant three days' journey from the city of Save (Σαύο), which was situated inland, in the country of Maphoritis. It had no proper harbour, but a good roadstead, and a sandy anchorage. Its principal import trade was in fine and common purple cloth; Arab dresses with sleeves—probably the kend—a silk and common, others embroidered with needlework and in gold; saffron; an aromatic plant, named cyperus (κυπέρος); fine linen; long robes—among the others; striped garments; perfumes of a middling quality; spice in abundance; and small quantities of wine and grain, for the country grew but little wheat, and more wine. To the king and tyrant they were given horses, pack-mules, vessels of silver and brass, and costly raiment. Besides the above named articles of merchandise, which were chiefly supplied to its markets from Adula, on the opposite coast, the great emporium of African produce (Adula), Musa exported a precious myrrh of native growth, an aromatic gum, which the author names σαφουίται, and a white malacite or alabaster (Αλαβαστός). (Arrian, Peripl. ap. Hudson, Geog. Min. p. 13, 14.) Vessels from this port visited all the principal mercantile towns of the south coast of Arabia. B-historic's identification of the Musa with the Mecca mentioned by Isis, as one extreme point of the Joktanite Arabs,—Sepher being the other (Gen. x. 30),—is thought by Mr. Forster to be untenable, on account of the narrow limits to which he would confine this large and important race; for the site of Sepher is clearly ascertained. (MAPHORITAE, SAPHRITAE.) (Geog. of Arabia, vol. i. pp. 93, 94.) M. Gosselin (Recherches, g. tome ii. pp. 263, 266) thinks that the present desolated, and frequented port of Yemen is now more than six leagues from the sea, and is replaced as a port by Mokha, the foundation of which dates back no more than 400 years (Machias, Voyage en Arabie,
MUCIRIS.

As it stands, the document appears to be a page from a historical or geographical text discussing the town of Muciris. Here is a plain text representation of the content:

**MUCIRIS.**

(tone i. p. 349); as indeed he maintains, that some of the maritime towns of the coast of Hellespont and Yemen date more than 400 or 500 years from their foundation, and that the towns whose walls were once washed by the waters of the gulf, and which owed the existence to their vicinity to the sea, have disappeared since its retirement, with the exception of those whose soil was sufficiently fertile to maintain their inhabitants. In a sandy and arid country these were necessarily few, so that there are not more than six or seven that can be clearly identified with ancient sites. Among these Mucir still exists under its ancient name unchangeable (ib. pp. 238, 239, 234) at the required distance from the Straits of Bab-el-Mandeb, viz. 300 stadia, reckoning 500 stadia to a degree. (ib. pp. 269, 270.) Vincent makes it short of 40 miles. (Pierper, p. 319.) In the middle ages when the sea had already retired from Mucir, another town named Mosek or Munsilij was built as a seaport in its stead, which seems to have usurped the name of the more ancient town, and to have been mistaken for it by some geographers. This Mosek still exists, in its turn abandoned by the sea; but about 25 miles of the true position of Mucir. (ib. p. 270.) The mart of Yemen at the present day is Mokha. . . . Twenty miles inland from Mokha Niebuhr discovered a Mosa still existing, which he with great probability supposes to be the ancient mart, now carried inland to this distance by the recession of the coast.” (Vincent, l. c. p. 313.) There is a circumstance narrated by Bruce of the roadstead of Mokha, which coincides with a statement cited from Arrian with regard to Bruce. Bruce says that “the cables do not rot, because the bottom is sand, while it is coral in almost every other port.” (ib. p. 313, n. 142.) Mosa itself Niebuhr found to be 6 hours = 4; German miles, due east of Mokha, at the commencement of the mountain country, the intervening space being extremely dry and thinly peopled. It is an ordinary village, badly built, only recommended by its water, which is drunk by the wealthier inhabitants of Mokha. (Voyage en Arabie, tome ii. pp. 295, 297; Description de l’Arabie, pp. 194, 195.)

[G. W.]

MUCIRIS. (Muciphs, Peripl. M. Eryth., c. 54, p. 297, ap. Geogr. Graec. Min. ed. Müller, 1855), a port on the west coast of Hindostan, situated between Tyndis and Nedyana, and at the distance of 500 stadia from either, where, according to the author of the Periplus, ships came from Arica and Greece (that is, Alexandria). Thedon calls it an emporium (vii. 1, 8), and places it in Linyria. There can be little doubt that it is the place which is now called Mangalore, and which is still a considerable port.

MYCALE (Mukan), the westernmost branch of Mt. Messogis in Lydia; it forms a high ridge and terminates in a prominent called Troytium, now cape 8. Mavri. It runs out into the sea just opposite the island of Samos, from which it is separated only by a narrow channel seven stadia in breadth. It was in this channel, and on the mainland at the foot of Mount Mycale, that the Persians were defeated, in n. c. 479. It is probable that at the foot of Mount Mycale there was a town called Mycale or Mycalissus, for Stephanus Piz. (s. e.) and Seydack (p. 37) speak of a town of Mycale in Caria or Lydia. The whole range of Mount Mycale now bears the name of Samosus. (Hom. H. ii. 869; Horod. i. 148, vii. 80, ix. 96; Thuc. i. 14, 89; viii. 79; Diod. ib. 51; Herod. ii. 80.)

[Strab. 6ii. pp. 621, 629, Ptol. v. 2, § 13; Agath. p. 3.)

MYCALESUS (Μυκαλησας: Eth. Mykalēsas), an ancient town of Boeotia, mentioned by Homer. (H. ii. 498, Hymn. Apoll. 224.) It was said to have been so called, because the cow, which was guiding Calumus and his confreres to Thebes, lowered (μυκαλησα) in this place. (Paus. i. 19, § 4.) In n. c. 413, some Thracians, whom the Athenians were sending home to their own country, were landed on the Euripus, and surprised Mycalissus. They not only sacked the town, but put all the inhabitants to the sword, not sparing even the women and children. Thucydides says that this was one of the greatest calamities that had ever befallen any city. (Thuc. vii. 29; Paus. i. 23, § 3.) Strabo (ix. p. 404) calls Mycalissus a village in the territory of Tamga, and places it upon the road from Thebes to Chalcis. In the time of Pausanias it had ceased to exist; and this writer saw the ruins of Harma and Mycalissus on his road to Chalcis. (Paus. i. 19, § 4.) Pausanias mentions a temple of Demeter Mycalissus, standing in the territory of the city upon the sea-coast, and situated to the right of the Euripus, by which he evidently meant south of the strait. The only other indication of the position of Mycalissus is the statement of Thucydides (l. c.), that it was 16 stadia distant from the Hermaea, which was on the sea-shore near the Euripus. It is evident from these accounts, that Mycalissus stood near the Euripus; and Leake places it, with great probability, upon the halt immediately above the southern bay of Ephigia, where the ruined walls of an ancient city still remain. (Northern Greece, vol. ii. pp. 249, seq., 264.) It is true, as Leake remarks, that this position does not agree with the statement of Strabo, that Mycalissus was on the road from Thebes to Chalcis, since the above-mentioned ruins are nearly two miles to the right of that road; but Strabo writes loosely of places which he had never seen. Mycalissus is also mentioned in Strab. ix. pp. 405, 410; Paus. ix. 7, § 12.

MYCENAE, a town in Crete, the foundation of which was attributed by an historian of the Augustan age (Vell. Patere. i. 1) to Agamemnon.

Harduin (ad Plin. iv. 12) proposed to read Mycena for Mykina, which is mentioned as a city of Crete in the text of Pliny (l. c.). Sieber (Reise, vol. ii. p. 78) believed that he had discovered the remains of this city at a place called Meca or Masis, on the river Armgro. (Hick, Kreta, vol. i. p. 435.)

[Mykina, M. Euryb. Hist. vol. ii. 125; Eth. Mykalēsas, Mycelissus, Mykalissus: Kharrethi, one of the most ancient towns in Greece, and celebrated as the residence of Agamemnon. It is situated at the north-eastern extremity of the plain of Argos upon a rugged height, which is shut in by two commanding summits of the range of mountains which border this side of the Argive plain. From its retired position it is described by Homer (Od. iii. 263) as situated in a recess (μυκής) of the Argeian land, which is supposed by some modern writers to be the origin of the name. The ancients, however, derived the name from an eponymous heroine Mycena, daughter of Inachus, or from the word μύκης, for which various reasons were assigned. (Paus. ii. 17, § 3; Steph. B. s. v.) The position was one of great importance. In the first epoch-war it was the more part of the great Ar-
Mycenae.

The ruins of Mycenae are still very extensive, and, with the exception of those of Tiryns, are more ancient than those of any other city in Greece. They belong to a period long antecedent to all historical records, and may be regarded as the genuine relics of the heroic age.

The ruins of Mycenae consist of an Acropolis and a lower town, each defended by a wall. The Acropolis was situated on the summit of a steep hill, projecting from a higher mountain behind it. The lower town lay on the south-western slope of the hill, on either side of which runs a torrent from east to west. The Acropolis is in form of an irregular triangle, of which the base fronts the south-west, and the apex the east. On the southern side the cliffs are almost precipitous, overlooking a deep gorge; but on the northern side the descent is less steep and rugged. The summit of the hill is rather more than 1000 feet in length, and around the edge the ruined walls of the Acropolis still stand in their entire cir-
excit, with the exception of a small open space above the precipitous cliff on the southern side, which perhaps was never defended by a wall. The walls are more perfect than those of any other fortress in Greece; in some places they are 15 or 20 feet high. They are built of the dark-coloured limestone of the surrounding mountains. Some parts of the walls are built, like those of Tiryns, of huge blocks of stone of irregular shape, no attempt being made to fit them into one another, and the gaps being filled up with smaller stones. But the greater part of the walls consists of polygonal stones, skilfully hewn and fitted to one another, and their faces cut so as to give the masonry a smooth appearance. The walls also present, in a few parts, a third species of masonry, in which the stones are constructed of blocks of nearly quadrangular shape; this is the case in the approach to the Gate of Lions. This difference in the masonry of the walls has been held to prove that they were constructed at different ages; but more recent investigations amongst the ruins of Greece and Italy has shown that this difference in the style of masonry cannot be regarded as a decisive test of the comparative antiquity of walls; and Col. Murray has justly remarked that, as there can be no reasonable doubt that the approach to the Gate of Lions is of the same remote antiquity as the remainder of the fabric, it would appear to have been the custom with these primitive builders to pay a little more attention to symmetry and regularity in the more ornamental portions of their work.

The chief gate of the Acropolis is at the NW. angle of the wall. It stands at right angles to the adjoining wall of the fortress, and is approached by a passage 50 feet long and 30 wide, formed by that wall and by another wall exterior to it. The opening of the gateway widens from the top downwards; but at least two-thirds of its height are now buried in ruins. The width at the top of the door is 9½ feet. This door was formed of two massive uprights, covered with a third block, 15 feet long, 4 feet wide, and 6 feet 7 inches high in the middle, but diminishing at the two ends. Above this block is a triangular gap in the masonry of the wall, formed by an oblique approximation of the side courses of stone, continued from each extremity of the lintel to an apex above its centre. The vacant space is occupied by a block of stone, 10 feet high, 12 broad, and 2 thick, upon the face of which are sculptured two lions in low relief, standing on their hind-legs, upon either side of a covered pillar, upon which they rest their fore-feet. The column becomes broader towards the top, and is surmounted with a capital, formed of a row of four circles, enclosed between two parallel fillets. The heads of the animals are gone, together with the apex of the cone that surmounted the column. The block of stone, from which the lions are sculptured, is said by Leake and other accurate observers to be a kind of green basalt; but this appears to be a mistake. We learn from Mure (Tour in Greece, vol. ii. p. 324) that the block is of the same palomino, or dove-coloured limestone, of which the native rock mainly consists, and that the erroneous impression has been derived from the colour of the polished surface, which has received from time and the weather a bluish green hue. The column between the lions is the customary symbol of Apollo Argievus, the protector of doors and gates. (Müller, Den. ii. 6. § 5.) This is also proved by the invocation of Apollo in the Agamemnon of Aeschylus (1078, 1082, 1271), and the Electra of Sophocles (1374), in both of which tragedies the scene is laid in front of this gate.

**GATE OF THE LIONS AT MYCENAE.**

It has been well observed that this pair of lions stands to the art of Greece somewhat in the same relation as the Lind and the Odyssey to her literature; the one, the only extant specimens of the plastic skill of her mythical era, the other, the only genuine memorials of its chivalry and its song. The best observers remark that the animals are in a style of art peculiar to themselves, and that they have little or nothing of that dry linear stiffness which characterises the earlier stages of the art of sculpture in almost every country; and present consequently as little resemblance to the Archaic style of the Hellenic works of a later period as to those of Egypt itself. " The special peculiarities of their execution are a certain solidity and rotundity amounting to clumsiness in the limbs, as compared with the bodies. The hind-legs, indeed, are more like those of elephants than lions; the thighs, especially, are of immense bulk and thickness. This unfavourable feature, however, is compensated by much natural ease and dignity of attitude. The turning of the body and choripans is admirable, combining
MYCENAE.

strength with elegance in the happiest proportions. The belles of both are slender in comparison with the rest of the figure, especially of the one on the right of the beholder. The muscles, sinews, and joints, though little detailed, are indicated with much spirit. The finish, both in a mechanical and artistic point of view, is excellent; and in passing the hand over the surface, one is struck with the smooth and easy blending of one of the very portion of the figure." (More, vol. ii. p. 171.)

Besides the great Gate of Lions, there was a smaller gate or postern on the northern side of the Acropolis, the approach to which was fortified in the same manner as that leading to the great gate. It is constructed of three great stones, and is 5 feet 4 inches wide at the top.

Near the Gate of Lions the wall of the lower city may be traced, extending from N. to S. In the lower town are four subterraneous buildings, which are evidently the same as those described by Pausanias, in which the Atreids deposited their treasures. Of these the largest, called by the learned the "Treasury of Atreus," and by the Greek cicerone the "Grave of Agamemnon," is situated under the aqueduct which now conveys the water from the stream on the northern side of the Acropolis to the village of Kharaveit. (See Plan, C.) This building is in nearly a perfect state of preservation. It is approached by a passage now in ruins, and contains two chambers. The passage leads into a large chamber of a conical form, about 50 feet in width and 40 in height; and in this chamber there is a doorway leading into a small interior apartment. The ground-plan and section of the building are figured in the Dict. of Antiq. p. 1127. The doorway terminating the passage, which leads into the large chamber, is 8 feet 6 inches wide at the top, widening a little from thence to the bottom. "On the outside before each door-post stood a semi-column, having a base and capital not unlike the Tuscan order in profile, but enriched with a very elegant sculptured ornament, chiefly in a zigzag form, which was continued in vertical compartments over the whole shaft. These ornaments have not the smallest resemblance to anything else found in Greece, but they have some similarity to the Persianian style of sculpture." (Leake, Moren, vol. ii. p. 374.) These remains are of a second subterraneous building near the Gate of Lions (Plan, D); and those of the two others are lower down the hill towards the west.

There has been considerable discussion among modern scholars respecting the purpose of those subterraneous buildings. The statement of Pausanias, that they were the treasuries of the Atreids, was generally accepted, till More published an essay in the Kleischesisches Museum for 1839 (vol. vi. p. 240), in which he endeavoured to establish that all such buildings were the family tombs of the ancient heroes by whom they were constructed. In the great edifice at Mycenæ he supposes the inner apartment to have been the burial-place, and the outer vault the heroan or sanctuary of the deceased. This opinion has been adopted by most modern scholars, but has been contested by Leake, who adheres to the ancient doctrine. (Peloponnesica, p. 256.) The two opinions may, however, be to some extent reconciled by supposing that the inner chamber was the burial-place, and that the outer contained the arms, jewels, and other ornaments most prized by the deceased. It was the practice among the Greeks in all ages for the dead to carry with them to their tombs a portion of their property; and in the heroic ages the burial-places of the powerful rulers of Mycenæ may have been adorned with such splendour that the name of Treasuries was given to their tombs. There is, indeed, good reason for believing, from the remains of brazen nails found in the large chamber of the "Treasury of Atreus," that the interior surface of the chamber was covered with brazen plates.

MYCENI. [Mauretanias.]

MYCHUS. [Bulus.]

MYCONUS (Μύκονος; Edh. Μυκόνας; Mykonos), a small island in the Aegean sea, lying E. of Delos, and N. of Naxos. Pliny says (iv. 12. s. 22) that it is 15 miles from Delos, which is much greater than the real distance; but Scylax (p. 55) more correctly describes it as 40 stadia from Rheneia, the island W. of Delos. Myconus is about 10 miles in length, and 6 in its greatest breadth. It is in most parts a barren island, whence lived great numbers of Mournikas (Mot. vii. 463); and the inhabitants had in antiquity a bad reputation on account of their ava¬rice and meanness (Athen. i. p. 7; hence the proverb Μυκόνας γάιτον, Xenob. Prov. v. 21; Suidas, Hesid., Phot.). The rocks of Myconus are granite, and the summits of the hills are strewn with immense blocks of this stone. This circumstance probably gave rise to the fable that the giants subdued by Hercules lay under Myconus; whence came the proverb, "to put all things under Myconus," applied to those who ranged under one class things naturally separate. (Strab. x. p. 487; Stephan. B. s. v.) The tomb of the Locran Ajax was also shown at Myconus. (Tzetz. ad Lycofr. 401.) Of the history of the island we have no account, except the statement that it was colonised from Athens, by the Neldie Hippocoes. (Zenob. v. 17; Schol. ad Dionys. Per. ap. Geogr. Min., vol. iv. p. 37, Hudson.) Myconus is mentioned incidentally by Herodotus (vi. 118) and Thucydides (iii. 29). Ancient writers relate, as one of the peculiarities of Myco¬nus, that the inhabitants lost their hair at an early age. (Strab. I. c.; Plin. xi. 37. s. 47; Myconi palux ominis juvenatunm, Donat. ad Ter. Hevir. iii. 4. 19.) The highest mountain, which is in the northern part of the island, has a summit with two peaks, whence it is called Dinastus by Fliny (iv. 12. s. 22).

The promontory of Phoinix (Φωινίξ, Ptol. iii. 15. § 29) was probably on the eastern side of the island. Scylax mentions two cities (Μύκωνας, αὐτὴ Σιράλας, p. 22). Of these one called Myconus occupied the site of the modern town, which presents, however, scarcely any ancient remains. The name and position of the other town are unknown. The coins of Myconus are rare; and in general very few remains of antiquity are found in any part of the island. (Ross, Reisen auf den Griechischen Inseln, vol. ii. p. 28, seq.)

MYGDONES (Μύγδονες), a tribe dwelling in Bithynia, about the river Odysseus and the coast of the Propontis, but extending into Mysia, where they occupied the district about Mount Olympus and lake Dascylitis. They had immigrated into Asia Minor from Thrace, but were afterwards subdued or expelled by the Bithynians. (Strab. vii. 295, xii. pp. 564, 575.) The district inhabited by them was called Mygdonia. (Strab. xii. pp. 556, 558, 576; Plin. vi. 41; Solin. 40, 42.)
MYDONIA.

MYDONIA (Μύδονια: Eth. Μύδουνος, Steph. B.), a district of Macedonia, which comprised the plains round Thessalonica, together with the valleys of Kithaid and Beotikia, extending towards the E. as far as the Axius (Herod. vii. 128), and in the N. the lake Bileto, to the E. (Thuc. i. 588.) To the N. it was joined by Cretonia, for the Eubidas, which flowed into the gulf near the marshes of the Axius, had its sources in Cretonia (Herod. vii. 124), while the pass of Almus or Arethusa was probably the boundary of Mydonia towards Beotia. The maritime part of Mydonia formed a district called Amphaxitis, a distinction which first occurs in Polybius (v. 98), who divides all the great plain at the head of the Thracian gulf into Amphaxitis and Botthina, and which is found three centuries later in Ptolemy (ii. 13. § 36). The latter introduces Amphaxitis twice under the subdivisions of Macedonia,—in one instance placing under that name the mouths of the Eubidas and Axius, with Thessalonica as the only town, which agrees with Polybius, and particularly with Strabo (vii. p. 330). In the other place, Ptolemy includes Stagira and Arethusa in Amphaxitis, which, if it be correct, would indicate that a portion of Amphaxitis, very distant from the Axius, was separated from the remainder by a part of Mydonia; but as this is improbable, the word is perhaps an error in the text. The original inhabitants, the Mydonians, were a tribe belonging to the great Thracian race, and were powerful enough to be mentioned at the time even after the Macedonian conquest. (Thuc. ii. 99.) The cities of this district were Thessa- lonica, Sincus, Chalasta, Altus, Strepia, Chisus, Missusurgis, Herculæcestes. Besides these, the following obscure towns occur in Ptolemy (L. C.):—Cenetus, Mervulus, Antigoneia, Callindena, Boerus, Phu-ca, Trepolis, Carabia, Xel-polis, Assorus, Leto, Philoeos. As to the towns which occupied the fertile plain between Mt. Chisus and the Axios, their population was no doubt absorbed by Thessalonica, on its foundation by Cassander, and remains of them are not likely to be found; nor are the ancient references sufficient to indicate their sites. One of these would seem, from ancient inscriptions which were found at Khusoia, to have stood in that position, and others probably occupied similar positions on the last falls of the heights which extend nearly from Khusoia to the Axios. One in particular is inscribed by some large "tumuli" or barrows, situated at two-thirds of that distance. (Leake, North, Greece, vol. i. p. 44.)

E. B. J.

MYDONIA (Μύδωνια, Prot. Lucull. c. 32; Polyb. v. 31), a district in the NE. part of Mesophaia, adjoining the country now called the Neaia. According to Strabo, the people who were named Mydonians were originally from Macedonia, and occupied the district extending from Zagna to Thapsacus (xvi. p. 747); as, however, he states in the same place that Xanipus was called by the Macedonians "Antoleia in Mydonia," and places it in the Ampeia just north of M. Musias, he would appear to have thought that it was on the western side of Mesophaia. Plutarch relates the same story of the Greek name of Niciss (Li. xii. v. 52). In Sequential Bys. the name is written Mydonaria, which is probably an error. In many of the earlier editions of Niciss, a people are assigned to Mydonia, and in the later and more circumstantial, however, Macedon, which is more likely. (Iph. v. 3. § 4.)

MYLAE.

MYDONIUS (Μύδωνιος, Julian. Orat. p. 27), the river which flows by the town of Nisibis (now Nisibin). It takes its rise, together with the Khaur and one or two other streams, in the M. Musias (see Kirya Bagliar). Its present name is the Hermos as described by Strabo.

MYLAE (Μύλαι: Eth. Mylaeurgus, Steph. B.; Musonius, Diod. c. Milaza), a city on the N. coast of Sicily, about 30 miles from Cape Pelorus, and 20 from Tyn- durus, though Strabo calls it 25 miles from each of these points. (Strab. vi. p. 266.) It was situated on the narrow neck or isthmus of a projecting peninsular headland, about 5 miles in length, the furthest point of which is only about 15 miles from the island of Hiera or Vulcano, the nearest to Sicily of the Lipari islands. Mylae was undoubtedly a Greek colony founded by the Zancanians, and appears to have continued subject to, or dependent on its parent city of Zancle. (Strab. vi. p. 272; Sevign. Cb. 288.) Hence Thucydides speaks of Himera as in his time the only Greek city on the N. coast of the island, omitting Mylae, because it was not an independent city or state. (Thuc. vi. 62.) The period of its foundation is wholly uncertain. Sieffert would identify it with the city called Chersonesus by Euse- bins, the foundation of which author assigns to a period as early as b. c. 716, but the identification is very questionable. (Euseb. Chron. ad. Io. 161; Sieffert, Zinkle-Messana, p. 4.) It is certain, however, that it was founded before Himera, b. c. 619, as, according to Strabo, the Zancanians at Mylae took part in the colonisation of the latter city. (Strab. vi. p. 272.) Mylae itself does not appear to have ever risen to any great importance; and after the revolution which changed the name of Zancle to that of Messana, still continued in the same dependent relation to it as before. It was, however, a strong fortress, with a good port; and these advantages which it derived from its natural situation, rendered it a place of importance to the Messanians as securing their communications with the N. coast of the island. Sevigny speaks of it as a Greek city and port (Sevign. p. 4. § 19), and its castle or fortress is mentioned by Pliny. The only historical notice of the city is found in b. c. 427, when the Athenian fleet under Laches which was stationed at Rhegium, made an attack upon Mylae. The place was defended by the Messanians with a strong garrison, but was compelled to surrender to the Athenians and their allies, who thenceupon marched against Messana itself. (Thuc. iii. 90; Diod. xii. 54.) After the destruction of Messana by the Carthaginian general Himilcon, Mylae appears to have for a time shaken off its dependence; and in b. c. 354, the Rhegians, becoming alarmed at the restoration of Messana by Dionysius, which they regarded as directed against themselves, proceeded to establish at Mylae the exiles from Naxos and Catana, with a view to create a countercheck to the rising power of Messana. The scheme, however, failed of effect; the Rhegians were defeated and the Messanians recovered possession of Mylae. (Diod. xiv. 87.) That city is again noticed during the war of Timoleon in Sicily; and in b. c. 315 it was wrecked by Agathocles, from the Messanians, though he was soon after compelled to restore it to them. (Xen. xix. 63; Plut. Timol. 37.) It was in the immediate neighbourhood of Mylas also (in the χώρα τοῦ Μυλανού παραβ. λíc) that the forces of the Mamertines were defeated in a great battle, by Hieron of Syracuse, b. c. 270 (Vol. i. 9; Diod. xvi. 13); though
the river Longa, on the banks of which the action was fought, cannot be identified with certainty.

[LONGANUS.]

It is probable that, even after the Roman conquest of Sicily, Mylae continued to be a dependency of Messana, as long as that city enjoyed its privileged condition as a “federata civitas;” hence no mention is found of its name in the Verrine oracles of Cicerone; but in the time of Pliny it had acquired the ordinary municipal privileges of the Sicilian towns. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 2.) It never, however, seems to have been a place of importance, and was at this period wholly eclipsed by the neighbouring colony of Tyndaris. But the strength of its position as a fortress caused it in the middle ages to be an object of attention to the Norman kings of Sicily, as well as to the emperor Frederic II.; and though now much neglected, it is still a military position of importance. The modern city of Mylazzo is a tolerably flourishing place, with about 8,000 inhabitants; it is built for the most part on a sandy neck of land, connected by a narrow isthmus, and connected by a high wall with the mainland. But the old town, which probably occupied the same site with the ancient city, stood on a rocky hill, forming the first rise of the rocky ridge that constitutes the peninsula or headland of Capo di Milazzo. The modern castle on a hill of greater elevation, commanding both the upper and lower town, is probably the site of the ancient Acropolis. (Thuc. iii. 90; Smyth’s Sicily, pp. 103, 104; Hoare’s Classical Tour, vol. ii. p. 215.)

The promontory of Mylae, stretching out abruptly into the sea, forms the western boundary of a bay of considerable extent, affording excellent anchorage. This bay was memorable in ancient history as the scene of two great naval actions. The first of these was the victory obtained by the Roman fleet under C. Duilius, over that of the Carthaginians in the First Punic War, b. c. 260, in which the Roman consul, by means of the engines called Carvi (then used for the first time), totally defeated the enemy’s fleet, and took fifty of their ships. (Pol. i. 23.) More than two centuries later, it was in the same bay that Agrippa, who commanded the fleet of Octavian, defeated that of Sextus Pompeius, b. c. 56. Agrippa advanced from the island of Hiero, where his fleet had been before stationed, while the ships of Pompey lined the shores of the bay of Mylae. After their defeat they took refuge at the mouths of the numerous small rivers, or rather mountain torrents, which here descend into the sea. After this battle, Agrippa made himself master of Mylae as well as Tyndaris; and some time afterwards again defeated the fleet of Pompeius in a second and more decisive action, between Mylae and a place called Xanlochus. The latter name is otherwise unknown, but it seems to have been situated somewhere in the neighbourhood of Cape Roscelano, the Phalacrian promontory of Ptolemy. (Appian, B. C. v. 195—106, 115—122; Dion Cass. xlix. 2—11; Vell. Pat. i. 79; Suet. Aug. 16.)

In the account of this campaign Appian speaks of a small town named Artemesium, which is noticed also by Dion Cassius, and must have been situated a little to the E. of Mylae, but is not mentioned by any of the geographers. (Appian, B. C. v. 116; Dion Cass. xlix. 8.) It is, however, obviously the same place alluded to by Silius Italicus as the “fossae Facelitanae.” (Sil. Ital. xiv. 260), and called by Lucullus, in a fragment of his satires, “Facelitis templum Dianae.”

Vibius Sequester also mentions a river which he calls Phaenelus, and describes as “junta Poliodem, coninis templum Dianae.” (Vib. Seq. p. 16.)

It is, however, obvious, from Appian, that the temple was not situated in the neighbourhood of Ptolus, but at a short distance from Mylae, though the precise site cannot be determined. It was designated by popular tradition as the spot where the sacred cattle of the Sun had been kept, and were slaughtered by the companions of Ulysses. (Appian, L. c.; Plin. ii. 98. s. 101.) The Moss Tholus, mentioned by Diodorus in his account of the battle of the Longanus (Dio. xxi. 13), must have been one of the underfalls of the Neptunian Mountains, which throughout this part of Sicily descend close to the sea-shore; but the particular mountain meant is wholly uncertain.

[MYLAE.]

Pliny (iv. 12) speaks of two islands of this name, lying off the coast of Crete. They belonged to the group of three islands off Phalasarna (Karti), called by the Anonymous Coast-describer Jusagora, Mylasse (Myale). The one which Pliny says is the name of the northernmost of the three little islands, the second, opposite to which is Karis, is called Megaloenis, in spite of its very moderate size; and the third Perseus. (Lashley, Trav., vol. ii. p. 61.)

[MYLAE (Mylasai: Eth. Mλαϊαίων), a town of Peribaena in Thessaly, taken by Perseus in b. c. 171. (Liv. xiiii. 54; Steph. B. s. v.) As Livy describes it as a strong place near Cyretia, it is placed by Leake at Dhamani, “which is not only strong in itself, but very important, as commanding the pass of the Tifarises, leading into Peribaena from the Pelasgites,” (Northern Greece, vol. i. p. 47.)

MYLASSA, or MYLE (Μυλᾶς), a promontory on the coast of Cilicia, between cape Aphrodisias in the west and cape Sarpedon in the east. On or close to it was a small town of the same name (Plin. v. 22; Stadiom. Mar. Mag. §§ 165, 166). As the Stadiasmus calls Mylas a cape and chersonese, Leake (Asia Minor, p. 203) is inclined to identify it with cape Cassiarea, which answers exactly to that description.

[MYLASSA or MYLASSA (Μυλασσα or Μυλᾶς: Eth. Mλασσαίων), the most important town of Caria, was situated in a fertile plain, in the west of the country, at the foot of a mountain, abounding in beautiful white marble, of which its buildings and temples were constructed. Hence the city was exceedingly beautiful on account of its white marble temples and porticoes, and many wondered that so fine a city was built at the foot of a steep overhanging mountain. The two most splendid temples in the city were those of Zeus Osages and Zeus Labdrannians, the latter of which stood in the neighbouring village of Labranda, on a hill, and was connected with the city by a road called the sacred, 60 stadia in length, along which the processions used to go to the temple. The principal citizens of Mylassa were invested with the office of priests of Zeus for life. The city was very ancient, and is said to have been the birthplace and residence of the Carian kings before Halicarnassus was raised to the rank of a capital. Its nearest point on the coast was Phyesus, at a distance of 80 stadia, which was the port of Mylassa; though Stephens B. calls Passala its port-town. (Strab. xiv. p. 638, &c.; Aeschyl. Frang. 48, where it is called Mylas; Steph. B. s. v.; Herod. i. 171. Pol. v. 2, § 20; Plin. v. 29; Paus. viii. 10.)

(M. de C.)
andote preserved in Athenaeus (vii. p. 348) of the witty museian Stratonisus, who, on coming to Myndus, and observing its many temples, but few inhabitants, placed himself in the middle of the market-place, and exclaimed, "Hear me, oh ye temples." As to the history of this city, we know that Philip of Macedon, the son of Demetrius, endeavoured in vain to obtain possession of it; and it was probably to reward the place for its opposition to him that the Romans, after the war with Antiocbus, declared its citizens free (Polyb. xvi. 24, xxii. 27; Liv. xxxviii. 39). In a petty war with the neighbouring Euromenians, the Myndians were victors, and took some of their towns; but were afterwards compelled to submit to the Rhodians (Polyb. xxxviii. 20; Liv. xiv. 25.) In the time of Strabo, the town appears to have been still flourishing, and two eminent orators, Eu thydenus and Hybreas, exercised considerable influence over their fellow-citizens. Hybreas, however, incurred the enmity of Labienus, his political adversary, whose pretensions he tried to resist. But he was obliged to take refuge in Rhodes; whereupon Labienus marched with an army against Myndus, and did great damage to the town. (Strab. xiv. p. 660.) It is mentioned, however, as late as the time of Hierocles (p. 688). It is generally admitted that the site of the ancient Myndus is marked by the modern Melasos or Melassa, where considerable ancient remains have been observed by travellers. A temple, erected by the people of Myndus in honour of Augustus and Roma, considerable ruins of which had existed until modern times, was destroyed about the middle of last century by the Turks, who built a new mosque with the materials (Pococke, Travels, tom. ii. p. 2. c. 6.) Chandler (Asia Minor, p. 234) saw beneath the hill, on the east side of the town, an arch or gateway of marble, of the Corinthian order; a broad marble pavement, with vestiges of a theatre; and round the town ranges of columns, the remains of porticoes. (Comp. Leake, Asia Minor, p. 230; Fellows, Journal of an Exc. p. 260, Discoveries in Lycia, p. 67.) On the summit of an ancient mound, the remains scattered about the place; Rasche, Lex. Num. iii. 1. p. 999, &c.)

COIN OF MYNDUS.

MYNDUS (Μνυνδος; Eth. Μνυνδος), a Dorian colony of Troad, on the coast of Caria, situated on the northermost of the three Dorian peninsulas, a few miles to the northwest of Halicarnassus. It was protected by strong walls, and had a good harbour. (Paus. ii. 30. § 8; Strab. xiv. p. 658; Arrian, Anab. i. 20. ii. 5.) But otherwise the place is not of much importance in ancient history. Both Pliny (v. 29) and Stephanus Byz. (α. e.) mention Palae myndus as a place close by Myndus; and this Palae myndus seems to have been the ancient place of the Carians which became desert after the establishment of the Dorian Myndus. (Comp. Strab. xiv. p. 661.) Mela (i. 16) and Pliny (i. c.) also speak of a place called Neapolis in the same peninsula; and no other authors mention such a place in that part of the country. It has been supposed that Myndus (the Doric form of the name Myndus) is the same name, but it ought to be remembered that Pliny mentions both Myndus and Neapolis as two different towns. Myndian ships are mentioned in the expedition of Amazaeus against Naxos. (Herod. v. 33.) At a later time, when Alexander besieged Halicarnassus, he was anxious first to make himself master of Myndus; but when he attempted to take it by surprise, the Myndians, with the aid of reinforcements from Halicarnassus repulsed him with some loss. (Arrian, l.c.; comp. Hecat. Fragm. 229; Polyb. xvi. 15. 21; Skylax, p. 38; Ptol. v. 2. § 9; Liv. xxxviii. 15; Hieroc. p. 657.) Athens (i. 32) states that the wine grown in the district of Myndus was good for digestion. It is generally believed that Mentesia or Mentesia marks the site of Myndus; but Col. Leake (Asia Minor, p. 228) identifies Myndus with the small sheltered port of Gomukhia, where Captain Beaufort remarked the remains of an ancient pier at the entrance of the port, and some ruins at the head of the bay. (Comp. Rasche, Lex. Num. iii. 1. p. 1002, &c.; Eckhel, Doctr. Num. vol. ii. pt. 1. p. 585.)

POLENY (v. 2. § 30) mentions a small island called Myndus in the Icarian Sea. [L. S.]

COIN OF MYNDUS.

MYONIA or MYON (Μυονία, Paus.; Μυών, Stephan. B. Efh. Μυώνιος, Paus., Thuc.), a town of the Locri Oenobii, situated on the most difficult of the passes leading from Actolia into Locris. (Thuc. iii. 101.) Pausanias describes it as a small town (πόλεμα), situated upon a hill 30 stadia from Amphissa island, containing a grove X. an altar of the gods called Mellechis, and above the town a temple of Poseidon. (Paus. x. 38. § 8, comp. vi. 19. § 4) Leake (Northern Greece, vol. ii. p. 592) and other authorities place Myonia at Agioi Thymin, or Abymin, a small village, containing Hellenic remains, distant 11 hour from Salona (Amphissa) on the road to Gallazelli on the coast; but this cannot be correct, as, according to the passage in Pausanias, Myonia lay further inland than Amphissa. (Arv. μὲν Αμφισσας την Μυό σαν Μυονία ὀ ου βον. éν, both the Moeusian, μὲν την Μυσισσαν Αμφί σας ου την Μυονιαν ου την Μυσισσαν, &c.) Accordingly Kierpert places Myonia in his map of Amphissa, on the road from the latter place to Cypinthus in Doris.

MYONNEUS (Μυόναιος, Μυόνειος), a promontory on the south-west of Lebedus, on the coast of Ionia, at the northern extremity of the bay of Ephesus. It is celebrated in history for the naval victory there gained by the Romans under L. Aemilius over Antiochos the Great, in b. c. 190. (Steph. B. s. v.; Strab. xiv. p. 643; Thucyd. iii. 42; Liv. xxxvii. 27.) Livy describes the promontory as situated between Samos and Teos, and as rising from a broad basis to a pointed summit. There was an approach to it on the land side by a narrow path; while on the sea side it was girt by rocks, so much worn by the waves, that in some parts the overhanging cliffs extended further into the sea than the ships stationed under them. On this promontory the Medes was ascribed on the name of Myoneus,
(Steph. B., Strab. II. cc.), which belonged to Tors. The rocks of Myonas are now called Hypsiillo-

MUS. (H. N. v. 37) mentions a small island of the name of Myonas near Ephesus, which, together with two others, Anthinae and Dariaigna, formed a group called Pisistrati Insulae. [L.S.]

MYONESUS (Μυώνεσσας; Eth. Μυώνεσσιον), a small island lying off the coast of Phthisiotis in the bay between Larissa Cremaste and Antron. (Strab. ix. p. 435; Steph. B. l.c.)

MYOS-HORMOS (Μυος-Ηόρμος), a small island, with the name of Myos-Hormos near Ephesus, which, together with two others, Anthinae and Dariaigna, formed a group called Pisistrati Insulae.

The principal town of the island of Myos-Hormos, which indicates its Greek origin, may signify the "Harbour of the Mouse," but more probably means the "Harbour of the Muscle" (μουσ, mouse to close, e.g. the shell), since on the neighbouring coast the seal-muscle or Pluma marina (comp. the Hebrew pisinath, Job, xxviii. 18; Prov. xxxiii. 10) is collected in large quantities. (Bruce, Travels, vol. vii. p. 314, Svo. ed.)

The name was afterwards changed, according to Agatharchides and those writers who copied him, to that of Aphrodite-Hormos; but the elder appellation is more generally retained. Myos Hormos seems to have obtained the designation of Aphrodite (beam of the sea), from the abundance of sea-sponge found in its bay.

The latitude of Myos-Hormos is fixed by Bruce, D'Aurille, &c., at 27° 2' N. Its situation is determined by a cluster of islands, called Jeffatien by modern navigators, of which the three largest are opposite to an entrance of the Egyptian coast. Behind these islands and on the curve of the shore was the harbour. Its entrance was oblique (Strab. xvi. p. 769); but it was spacious and sheltered, and the water, even to the land's edge was deep enough for vessels of considerable burden.

Myos-Hormos owed its prosperity, as well as its foundation, to the trade with Africa, Arabia, and India. The vesels bound for Africa or the S. coast of Arabia left this harbour in the month of September, and thus fell in with the wind, which at the equinox blows steadily from NW., and carried them down the African coast, bringing them back in the following May. The furthest S. point of the African trade was the town of Rhaptam, in the Regio Barbarica, about 160° S. of the equator. The vessels bound for India (the coast of Malabar or Ceylon) left Myos-Hormos in July; and if they cleared the mouth of the Red Sea before the 1st of September, they had behind them the monsoon for nearly three months. The voyage out usually occupied about 40 days. We are not informed of the extent of the Indian trade under the Ptolemies; but in the reign of Claudius, when the route through Egypt to Malabar first became really known to the Romans, we have a detailed account of it in Pliny vi. 28. s. 26). That writer calculated the worth of gold and silver sent yearly from Rome to the east at 400,000, sterling, in exchange for which goods were received of at least four times the value of that amount, when sold again in Rome or Constantinople. The caravans went up the Nile as far as Coptos, whence they travelled through the desert for 7 or 8 days to Berenice or Myos-Hormos, and exchanged their gold for textiles, spices, porcelain, and perfumes. A pound of silk was considered equivalent to a pound of gold. Philadelphus first opened the road between Coptos and Myos-Hormos. At first the caravans carried their water with them across the desert, and Thessaly, in the bay between Larissa Cremaste and Antron. (Strab. ix. p. 435; Steph. B. l.c.)

The prosperity of Myos-Hormos as an empire, however, seems to have been fluctuating, and it was finally supplanted as a depot at least by Berenice, which, being lower down the Red Sea, was yet more convenient for the southern trade. That it was fluctuating may be inferred from the mention of it by the geographers. Agatharchides, who composed his work in the reign of Philometer (n. c. 180-145), in his account of the Indian trade, makes no mention of Berenice. Dioleoros, who wrote in the age of Augustus, speaks of Myos-Hormos, but not of its rival. Strabo, who was nearly contemporary with Dioleoros, says that Berenice was merely a roadstead, where the Indian vessels took in their cargo, but that they lay in port at Myos-Hormos. Pliny, on the other hand, in his description of the voyage to India does not notice Myos-Hormos at all, and speaks of it incidentally only in his account of the W. coast of the Red Sea. Accordingly, in the reigns of Vespasian and Trajan it must have been on the decline.

There is one difficulty in the relations between these harbours—their distance from each other. According to the Periphus, Berenice was 1500 stadia, or 225 miles, from Myos-Hormos, and even this is under the mark, if Cape Ras-el-ain be the Lepte Promontorium of Ptolemy. As the pretext for founding either city was the superior convenience of each, as compared with Arsinoe (Suec.), for the Indian trade, it seems strange that the ships should have been kept at Myos-Hormos, but the lading taken in at Berenice. It is more reasonable to suppose that the latter became the principal emporium of the Indian traffic; and as that increased in importance, the port where it was principally carried on became the more frequented and opulent place of the two.

It is uncertain whether the ruins at the village of Abushevar represent the site of the ancient Myos-Hormos. [W. B. D.]

MYRA (τὰ Μύρα or Μυραῖα; Eth. Μυραῖον), one of the most important towns of Lycia, situated on the river Andracus, partly on a hill and partly on the slope of it, at a distance of 20 stadia from the sea. (Strab. xiv. p. 666; Steph. B. s. r.; Plin. xxxiii. 8; Ptol. v. 6. § 3, viii. 17. § 53.) The small town of Andracus formed its port. It is remarkable in history as the place where the apostle Paul landed (Acts, xxxv. 5); and in later times the importance of the place was recognised in the fact that the emperor Theodosius II. raised it to the rank of the capital of all Lycia. (Hieroc. p. 684.) The town still exists, and bears its ancient name Myra, though the Turks call it Dembre, and is remarkable for its fine remains of antiquity. (Leake (Asia Minor, p. 183) mentions the ruin of a theatre 350 feet in dia-

MYRinus, one of the Aeolian cities on the western coast of Myrina, about 40 stadia to the southwest of Gryneum. (Herod. i. 149.) It is said to have been founded by one Myrinnus before the other Aeolian cities (Mela, i. 18), or by the Amazon Myrina (Strab. xi. p. 505, xii. p. 573, xiii. p. 623; Diod. iii. 64). Artaxerxes gave Gryneum and Myrina to Cunigunde, an Etruscan, who had been banished from his native city for favouring the interests of Persia. (Xenop. Hel. iii. 1. § 4.) Myrina was a very strong place (Liv. xxi. 30), though not very large, and had a good harbour. (Sylax, p. 36; Agath. Proc. p. 9, ed. Bonn.) Pliny (v. 32) mentions that it bore the surname of Sebastopolis; while, according to Syncellus, it was also called Smyra. For some time Myrina was occupied by Philip of Macedonia; but the Roman, compelled him to evacuate it, and declared the place free. (Liv. l. e.; Polyb. xviii. 27.) It was twice visited by severe earthquakes; first in the reign of Tiberius (Tac. Ann. ii. 47), on which occasion it received a remission of duties on account of the loss it had sustained; and a second time in the reign of Trajan (Oros. vii. 12). The town was restored, enriched, and continued to exist until a late period. (Steph. Byz. s. v.; Ptol. v. 2. § 6; Anth. Rhod. i. 604; Hisc. l. p. 661; Ger. Rh. v. 9, where it is called Myrena, while in the Pent. Tab. it bears the name Mariana.) Its site is believed to be occupied by the modern Sandarlik.

LYSIA.

MYRINAX. [Lemnos.]

MYRINAX. [Myrinax, No. 1.]

MYREA. [Apameia, No. 4.]

MYREMECUM (Mopsuestia, Strab. xi. p. 530; Pomp. Mela, i. 1. § 3; Plin. iv. 46, v. iv. 4, § 4; Steph. B.; Jornand. Get. 5), a colony on the Cimmerian Bosporus, 20 stadia N. of Panticapæum. (Strab. vii. p. 310.) Near the town was a promontory of the same name. (Plut. iii. 6. § 4; Leo Diaec. ix. 6.) It is the modern Tendalje or Jenzakul, where many ancient remains have been found. (Clarke, Trav. vol. ii. pp. 98, 102; Dabois de Montferrand, Voyage en Crimee, vol. v. p. 231.)

MYREMEX (Mopsuestia, Ptol. iv. 4, § 15), an island off the coast of Cyreneia, which is identified with the Aemidna (Aemidna) of Hecataeus (Fr. 300), where the chart shows an islet, between Ptolemais and Phœbus.

MYRMIDONES. [Aegina.]

MYRMIDON. [Attica, p. 332, No. 95.]

MYRMIDONUS. [Myrmidonus.]

MYRMIDONUS. [Issues.]

MYRMICUS (Mopsus), a town on the coast of Troez, "opposite," as Steph. B. (c. e. p. 19) says, to Tenedos and Lesbos, whence it is impossible to guess its situation. It is not mentioned by any other writer.

MYRNA (Myrina; Eth. Mopsia). One of the Aeolian cities on the western coast of Myrina, about 40 stadia to the southwest of Gryneum. (Herod. i. 149.) It is said to have been founded by one Myrinus before the other Aeolian cities (Mela, i. 18), or by the Amazon Myrina (Strab. xi. p. 505, xii. p. 573, xiii. p. 623; Diod. iii. 64). Artaxerxes gave Gryneum and Myrina to Cunigunde, an Etruscan, who had been banished from his native city for favouring the interests of Persia. (Xenop. Hellen. iii. 1. § 4.) Myrina was a very strong place (Liv. xxi. 30), though not very large, and had a good harbour. (Sylax, p. 36; Agath. Proc. p. 9, ed. Bonn.) Pliny (v. 32) mentions that it bore the surname of Sebastopolis; while, according to Syncellus, it was also called Smyra. For some time Myrina was occupied by Philip of Macedonia; but the Roman compelled him to evacuate it, and declared the place free. (Liv. l. e.; Polyb. xviii. 27.) It was twice visited by severe earthquakes; first in the reign of Tiberius (Tac. Ann. ii. 47), on which occasion it received a remission of duties on account of the loss it had sustained; and a second time in the reign of Trajan (Oros. vii. 12). The town was restored, enriched, and continued to exist until a late period. (Steph. Byz. s. v.; Ptol. v. 2. § 6; Anth. Rhod. i. 604; Hisc. l. p. 661; Ger. Rh. v. 9, where it is called Myrena, while in the Pent. Tab. it bears the name Mariana.) Its site is believed to be occupied by the modern Sandarlik.

LYSIA. [Myrina; Eth. Mopsus Myria], the same
of a province in the north-west of Asia Minor, which according to Strabo (xii. p. 572) was derived from the many beech-trees which grew about Mount Olympus, and were called by the Lydians μουσι. Others more plausibly connect the name with the Celtic mo(o)e, a marsh or swamp, according to which Μυσια would signify a marshy country. This supposition is supported by the notion prevalent among the ancients that the Mysians had immigrated into Asia Minor from the marshy countries about the Lower Danube, called Μοe(a), whence Μυσια and Μουσια would be only dialectic varieties of the same name. Hence, also, the Mysians were sometimes mentioned with the appellation of the "Asiatic," to distinguish them from the European Mysians, or Moesians. (Eustath. ad Dion. Per. 809; Schol. ad Apollon. Rhod. i. 1115.)

The Asiatic province of Mysia was bounded in the north by the Propontis and the Hellespont, in the west by the Aegean, and in the south by Mount Taurus and Lydia. In the east the limits are not accurately defined by the ancients, though it was bounded by Bithynia and Phrygia, and we may assume the river Rhymdeaus and Mount Olympus to have, on the whole, formed the eastern boundary line. (Strab. xii. pp. 564, 571.) The whole extent of country bearing the name of Mysia, was divided into five parts:—1. Μυσια Μίνωρ (Μυσια ἡ μίνωρ), that is, the northern coast-district on the Hellespont and Propontis, as far as Mount Olympus; it also bore the name of Mysia Hellepontica, or simply Hellepontus, and its inhabitants were called Hellepontii (Ptol. v. 2. §§ 2, 3, 14; Xenoph. Ages. i. 14); or, from Mount Olympus, Mysia Olympea (Μυσια ἡ Ολύμπη), forming the southern part of the interior of the country, including a tract of country extending between Tros and Aeolis as far as the bay of Adramyttium. The principal city of this part was Pergamum, from which the country is also called Mysia Pergamoena (Μυσια ἡ Περγαμημα; Strab. l. c.; Ptol. v. 2. §§ 5, 14.) 2. Τρωες (ἡ Τρώες), the territory of ancient Troy, that is, the northern part of the western coast, from Sigeum to the bay of Adramyttium. 4. Αεολις, the southern part of the coast, especially that between the rivers Caicus and Hermus. 5. Τευθρανία (ἡ Τευθρανία), or the district on the southern frontier, where in ancient times Teutras is said to have formed a Mycian kingdom. (Strab. xii. p. 551.)

These names and divisions, however, were not the same at all times. Under the Persian dominion, when Mysia formed a part of the second satrapy (Herod. iii. 90), the name Mysia was applied only to the north-eastern part of the country, that is, to Mysia Minor; while the western part of the coast of the Hellespont bore the name of Lesser Phrygia, and the district to the south of the latter that of Troyes. (Sclav. p. 53.) In the latest times of the Roman Empire, that is, under the Christian emperors, the greater part of Mysia was contained in the province bearing the name of Hellespontus, while the southern districts as far as Troyes belonged to the province of Asia. (Herod. p. 658.)

The greater part of Mysia is a mountainous country, being traversed by the north-western branches of Mount Taurus, which gradually slope down towards the Aegean, the main branches being

**MYRIA.**

389

Mount Ida and Mount Temenus. The country is also rich in rivers, though most of them are small, and not navigable; but, notwithstanding its abundant supply of water in rivers and lakes, the country was in ancient times less productive than other provinces of Asia Minor, and many parts of it were covered with marshes and forests. Besides the ordinary products of Asia Minor, and the excellent wheat of Assos (Strab. xv. p. 723), Mysia was celebrated for a kind of stone called τάπης αἰθίαν (σαρκοφαγόν), which had the power of quickly consuming the human body, whence it was used for coffins (σαρκοφαγοί), and partly powdered and strewn over dead bodies. (Dioscor. v. 141; Plin. ii. 28, xxxvi. 27; Steph. B. x. v. Ἀσσως.) Near the coasts of the Hellespont there were excellent oyster beds. (Plin. xxxii. 21; Catull. xviii. 4; Vitr. Georg. i. 207; Lucan, ix. 959; comp. Theophrast. Hist. Plant. i. 6. 13.)

The country of Mysia was inhabited by several tribes, as Phrygians, Trojans, Aeolians, and Mysians; but we must here confine ourselves to the Mysians, from whom the country derived its name. Mysians are mentioned in the Iliad (ii. 588, x. 430, xii. 5), and seem to have been looked upon as dwelling on the Hellespont in that part afterwards called Mysia Minor. Thence they seem, during the period subsequent to the Trojan War, to have extended themselves both westward and southward. (Strab. xii. p. 665.) Herodotus (vii. 74) describes them as belonging to the same stock as the Lydians, with whom they were always stationed together in the Persian armies (Herod. l. i. 171), and who probably spoke a language akin to theirs. Strabo (vii. pp. 295, 303, xii. pp. 542, 564, &c.) regards them as a tribe that had immigrated from Asia into Europe. It is difficult to see how these two statements are to be reconciled, or to decide which of them is more entitled to belief. As no traces of the Mysian language have come down to us, we cannot pronounce a positive opinion, though the evidence, so far as it can be gathered, seems to be in favour of Strabo's view, especially if we bear in mind the alleged identity of Mysians and Mysians. It is, moreover, not quite certain as to whether the Mysians in Homer are to be conceived as Asians or as Europeans. If this view be correct, the Mysians must have crossed over into Asia either before, or soon after the Trojan War. Being afterwards pressed by other immigrants, they advanced farther into the country, extending in the south-west as far as Pergamum, and in the east as far as Catacanumene. About the time of the Aeolian migration, they founded, under Teutras, the kingdom of Teuthrania, which was soon destroyed, but gave the district in which it had existed its permanent name. The people which most pressed upon them in the north and east seem to have been the Bithynians.

In regard to their history, the Mysians shared the fate of all the nations in the west of Asia Minor. In B.C. 190, when Antiochus was driven from Western Asia, they became incorporated with the kingdom of Pergamum; and when this was made over to Rome, they formed a part of the province of Asia. Respecting their national character and institutions we possess scarcely any information; but if we may apply to them that which Posidonius (in Strab. vii. p. 296) states of the European Moesians, they were a pious and peaceable nomadic people, who lived in a very simple manner on the produce of their flocks; and had not made great advances in
civilisation. Their language was, according to Strabo (xii. p. 572), a mixture of Lydian and Phrygian, that is, perhaps, a dialect akin to both of them. Their comparatively low state of civilization seems also to be indicated by the armour attributed to them by Herodotus (vii. 74), which consisted of a common breast-plate, a small shield, and a javelin, the javelin of the Caecanius having been found; at a later time, the influence of the Greeks by whom they were surrounded seems to have done away with everything that was peculiar to them as a nation, and to have drawn them into the sphere of Greek civilization. (Comp. Forliger, *Handbuch der alten Geographie*, vol. ii. p. 110, &c.; Cramer, *Asia Minor*, i. p. 30, &c.; Niebuhr, *Lect. auf Anc. Hist.* vol. i. p. 83, &c.)

*MYSIUS* (Μυσίοι), a tributary of the Caicus, on the frontiers of Mysia, having its sources on Mount Tenmusa, and joining the Caicus in the neighbourhood of Bergama. (Strab. xiii. p. 616.) According to Ovid (Met. xv. 277) Mysius was only another name for Caicus, whence some have inferred that the upper part of the Caicus was actually called Mysius. It is generally believed that the Mysius is the same as the modern Bergama. [L. S.]

*MYSOMAC EONGE* (Μυσομακένων), a tribe of the Mysians, probably occupying the district about the sources of the small river Mysias. (Plut. v. 2. § 15; Plin. v. 31.) In the time of the Romans this tribe belonged to the conventus of Ephesus; but further particulars are not known of them. [L.S.]

*MYSTIA* (Μυστία:Eth. Μυστιάδος: Monastario), a town of Bruttium, which seems to have been situated on the E. coast of that province, between Seylacum and the Zephyran promontory, apparently not far from Cape Circulus (Capo di Sito). (Mela. ii. 4. § 8; Plin. iii. 10. s. 15.) Stephanus of Byzantium cites Phliusus as calling it a city of the Samnites, by which he must evidently mean their Lucanian or Bruttian descendants. (Steph. B. s. c.) Its position cannot be more exactly determined, but it is placed conjecturally at Mounta race, near the Capo di Sito. (Cluer. Ital. p. 1305; Romancelli, vol. i. p. 175.) [E. B. B.]

*MYTHETOLIS* or *MYTHOPOLIS* (Μυθητολίς, Μυθόπολις), a town of Bithynia, of uncertain site, though it was probably situated on the north-west side of the Lake Asintha. It is said that during the winter all the artificial wells of the place were completely dried up, but that in summer they became filled again to the brim. (Aristot. Hist. Anim. 55; Antig. Caryst. 188.) Stephanus Byz. (s. v. Ποθιόπολις) and Pliny (v. 43) mention a town of the name of Pythopolis in Mysia, which may possibly be the same as Mythetolis. [L. S.]

*MYTILENE* or *MYTILENE* (Μυτιληνή: Eth. Μυτιλήναος or Μυτιληναος), the most important city in the island of Lesbos. There is some uncertainty about the orthography of the name, and various inscriptions use both *Mutiilen* and *Muttihen*. Inscriptions vary. Greek inscriptions have generally Mitylene; but Velius Paterculus, Pomponius Mela, and sometimes Pliny, have Mytilene. In some cases we find the Latin plural form *Mitylenae*. (Suet. Cesar. 2, Tib. 10; Liv. Epit. 89.) Tacitus has the adjective *Mytileneus* (Ann. xiv. 53). It is generally agreed now that the word was taught to be written Mitylene; but it does not seem necessary to alter those passages where the evidence of MSS. preponderates the other way. A full discussion of this subject may be seen in Phelin (*Lesbiacorum Liber*). The modern city is called Mytilene, and sometimes Castro.

The chief interest of the history of Lesbos is concentrated in Mytilene. Its eminence is evident from its long series of coins, not only in the autonomous period, when they often bore the legend ΠΡΩΤΗ ΑΕΟΒΟΤ ΜΥΤΙΛΗΝΗ, but in the imperial period down to the reign of Gallienus. Lesbos, from the earliest to the latest times, has been the most distinguished city of the island, whether we consider the history of poetry or politics, or the annals of naval warfare and commercial enterprise.

One reason of the continued pre-eminence of Mytilene is to be found in its situation, which (in common with that of Methymna) was favourable to the coasting trade. Its harbours, too, appear to have been excellent. Originally it was built upon a small island; and thus (whether the small island were united to the main island by a causeway or not) two harbours were formed, one on the north and the other on the south. The former of these was the harbour for ships of war, and was capable of being closed, and of containing fifty triremes, the latter was the mercantile harbour, and was larger and deeper, and defended by a mole. (Strab. xiii. p. 617; *Paus.* viii. 30.) The best elucidation of its situation in reference to the sea will be found in the narratives contained in the 3rd book of *Thucydides* and the 1st book of *Xenophon's Hellanics*. The northern harbour seems to have been called *Megale* [Malea]. This harmonises with what we find in *Thucydides*, and with what Aristotle says concerning the action of the NE. wind (κανάρι) on Mytilene. The statement of Pliny, that the former of these harbours was named after Mr. Grote (Hist. of Greece, vol. viii. p. 230), we suppose the *Euripus* of Mytilene to be that arm of the sea which we have mentioned, in the article *Lesbos*, under the name of Portus Hermens, and which runs up into the interior of the island, to the very neighbourhood of Mytilene. A rude plan is given by Tournefort; but for accurate information the English Admiralty charts must be consulted. The beauty of the ancient city, and the strength of its fortifications, are celebrated both by Greek and Roman writers. (See especially *Cic. Rull. ii. 16.*) Plutarch mentions a theatre of the 1st century (p. 422), and Athenaeus a Pytanum (x. p. 425). Vitruvius says (i. 6) that the winds were very troublesome in the harbour and in the streets, and that the changes of weather were injurious to health. The products of the soil near Mytilene do not seem to have been distinguished by any very remarkable peculiarities. Theophratus and Pliny make mention of its mushrooms; Galen says that its wine was inferior to that of Methymna. In illustration of the appearance of Mytilene, as seen from the sea, we may refer to a view in Choisel-Guiller; and to another, which shows the fine forms of the mountains immediately behind, in Courbeaux and Howson's *Life and Epochs* of Lesbos.
MYTILENE.

The first passage in which the history of Mytilene comes prominently into view is in the struggle between the Aeolians and Athenians for Sigeum (Plut. 606), at the NW. corner of Asia Minor. The place and the time are both remarkable, as illustrating the early vigour with which Mytilene was exercising its maritime and political power. We see it already grasping considerable possessions on the mainland. It was in this conflict, too, that Pittacus, the sage and lawgiver of Mytilene, acted so noble a part, and that Aelleus, her great poet, lost his shield. The mention of these two names reminds us that this time of rivalry with Athens coincides with the famous internal contests of the nobles and commons in Mytilene. For the history and results of this struggle, see the lives of Aelleus, Pittacus, and Naxios, in the Dict. of Biography.

It may be difficult to disentangle the history of the Mytileneans from that of the Aeolians in general, during the period of the Persian ascendancy on these coasts. But we have a proof of their mercantile enterprise in the fact that they alone of the Aeolians took part in the building of the Heilenium at Naucratis (Herod. ii. 179); and we find them taking a prominent part in the invasion of Egypt by Cambyses. (Ib. iii. 13, 14.) They supplied a contingent to Darius in his Scythian expedition (Ib. iv. 97). They were closely connected with the affairs of Histiaeus (Ib. vi. 5); and doubtless, though they are not separately mentioned, they were the best portion of those Aeolians who supplied sixty ships to Xerxes in his invasion of Greece. (Ib. vii. 95.)

The period of the Athenian supremacy and the Peloponnesian War is full of the fame of Mytilene. The alliance of its citizens with those of Athens began soon after the final repulse of Persia. They held a very distinguished position among the allies which formed the Athenian confederacy; but their revolt from Athens in the fourth year of the Peloponnesian War brought upon them the most terrible ruin. Though the first dreadful decision of the Athenian assembly was overruled (Thucyd. iii. 36), the walls of Mytilene were pulled down, and her fleet given up; her territory was divided among Athenian shareholders, and she was deprived of her possessions and forts on the mainland. (Ib. iii. 50.)

Towards the close of the Peloponnesian War, Conon was defeated by Calliarchidas off Mytilene, and blocked in the harbour. (Xen. Hell. i. 6.) We pass now to the period of Alexander, with whose campaigns this city was conspicuously connected. The Lesbians made a treaty with Macedonia. Memnon reduced the other cities of the island; and his death, which inflicted the last blow on the Persian power in the Aegean, took place in the moment of victory against Mytilene. It was retaken by Hegesiarbus, in the course of his general reduction of the islands, and received a large accession of territory. Two Mytileneans, Lacedemon and Erigyius, the sons of Lariuchus, were distinguished members of Alexander's staff. The latter fell in action against the Bactrians; the former was governor of Syria even after Alexander's death.

The first experience of the Roman power in the Aegean was disastrous to Mytilene. Having espoused the cause of Mithridates, and having held out to the last, it was sacked by M. Thermus, on which occasion J. Caesar honourably distinguished himself. Pompey's friendship with the Mytileneans led to the recognition of Mytilene as a free city. (Plin. v. 31.) After the defeat of Pharsalia, Pompey touched there for the last time to take Corinna on board. His son Sextus met with a friendly reception there, after his defeat at sea, by Agrippa. (Dion Cass. xlix. 17; App. B. C. v. 133.) Agrippa himself resided there for some time in retirement, ostensibly on account of his health, but really through mortification caused by the preference shown to M. Marcellus (Tac. Ann. xiv. 53; Suet. Aug. 66, Tib. 10); and this residence is commemorated by an inscription still extant. (See Pococke.) The last event which we need mention in the imperial period is the crossing over of Germanicus with Agrippina from Eubora to Lesbos, and the birth of Julia. (Tac. Ann. ii. 54.) This event, also, was commemorated both by coins and inscriptions. (See Eckel and Pococke.) It appears that the privilege of freedom was taken away by Vespasian, but restored by Hadrian. (Thelm. Lesb. p. 83.)

Mytilene is one of the few cities of the Aegean, which have continued without intermission to flourish till the present day. In the course of the middle ages it gradually gave its name to the whole island. Thus, in the synedrae of Hierocles, Mytilene and Methymna are both mentioned under the Province of the Islands; but in the later Byzantine division, Mytilene is spoken of as an island, like Lemnos and Chios, in the Theme of the Aegean Sea. (Const. Porphyrius, de Them. i. pp. 42, 43, ed. Bonn.) The fortunes of Mytilene during the first advances of the Mahomedans in the Levant, and during the ascendancy of the Venetians at a later period, are noticed in Fronte's History of the Byzantine and Greek Empires, vol. ii. pp. 72, 171, 223. The island of Lesbos was not actually part of the Mahomedan empire till nearly ten years after the fall of Constantinople.

With the exception of the early struggles of the time of Aelleus and Pittacus, there is little to be said of the internal constitutional history of Mytilene. It shared, with all Greek cities, the results of the struggles of the oligarchical and democratical parties. We find a commonalty (Saqoia) and a council (BaBaa) mentioned on coins of the period of Alexander; and the title of magistrates, called spatrarpia (praecon), appeared on coins of Lucius Verus. In connection with this part of the subject we may allude to two creditable laws; one which enacted (doubtless in consequence of the great quantity of wine in the island) that offences committed by the drunk should be more severely punished than those committed by the sober (Arist. Pol. ii. 9. 9); the other making a singular provision for the punishment of faithlessness in tributary allies, by depriving them of the privilege of educating their children. (Aelian, Var. Hist. vii. 13.)

COIN OF MYTILENE.

tainty. It was probably a small town, though strongly fortified, whence Philipus (ap. Steph. B. s. r.) called it "a fortress of Sicily." It is conspicuously mentioned during the First Punic War, when it was in the hands of the Carthaginians, and was besieged by the Romans, but for some time with- out success, on account of the great strength of its position; it was at length taken by the consul A. Atius Calatinus B.C. 258. The inhabitants were either put to the sword or sold as slaves, and the town itself entirely destroyed. (Pol. ii. 24; Diod. xiii. 9, Eze. Hoesch. p. 503; Zonar. viii.) It was, however, again inhabited at a later period, as we find the Mainistratini mentioned by Phiny among the municipal towns of the interior of Sicily. (Plin. iii. s. 14.) But no notice of its name occurs in the interval, and Chuvorius (who has been followed by many modern geographers) would, therefore, identify Mystras with Amestratus; an assumption for which there are certainly no sufficient grounds, both names being perfectly well attested. [Amestra- tus.] (Cherew. Sicil. p. 383.) [E. H. B.]

MYUS (Moois: Eth. Monitos), an ionian town in Caria, on the southern bank of the Macedon, at a distance of 30 stadia from the mouth of that river. Its foundation was ascribed to Cythereus, a natural son of Cadmus. (Strab. xiv. p. 635.) It was the smallest among the twelve Ionian cities, and in the days of Strabo (xiv. p. 536) the population was so reduced that they did not form a political community, but became incorporated with the Carian tribes. In the end the Myusians transferred themselves, abandoning their own town altogether. This last event happened, according to Dares (vii. 2, § 7), on account of the great number of flies which annoyed the inhabitants; but it was more probably on account of the frequent inundations to which the place was exposed. (Vatruv. iv. 1.) Myus was one of the three towns given to the Ionians by the Persian king (Thucyd. i. 138; Diod. Sic. xi. 57; Plut. Them. 29; Athen. i. p. 29; Nep. Them. 10.) During the Peloponnesian War the Athenians experienced a dark near this place from the Carians. (Thucyd. iii. 19.) Philip of Macedon, who had obtained possession of Myus, ceded it to the Magnesians. Athen. iii. p. 78.) The only edifice noted by the ancients at Myus was a temple of Dionysus, built of marble. (Paus. i.c.) The immense quantity of deposits carried down by the Macedon have considerably removed the east-line, so that even in Strabo's time the distance between Myus and the sea was increased to 40 stadia (sic. p. 579), while originally the town had no doubt been built on the exact site. There still are some ruins of Myus which must have grazed the changes wrought by the Macedon, with the taking for those of Macedon, while those of Heraclea have been mistaken for those of Myus. (Comp. Leake, Asia Minor, p. 239, &c.) The mistake is repeated by S. C. Fellow (Journal of a Tour in Asia, Min. p. 263), though it had been pointed out long before his time. [L. S.]
the captivity. They were the friends and allies of the Jews in their struggle for independence; for when Judas Maccabaeus, with his brother Jonathan, found them 3 days 8 of the Jordan (cir. n. c. 161), they received him amicably, and gave him information which led to rescuing Jerusalem of the besieged Jews pitched from the Ammonites under Timotheus (Joseph. Ant. xii. 8, § 3; 1 Maccab. v. 24, &c.); and when preparing for an engagement with Baccchides (cir. n. c. 161), the same Jonathan pro-
pessed to place all their movable property in their custody. (Ib. xiii. 1. § 2; 1 Maccab. ix. 33.) But the earliest and fullest notice of this people and of their country occurs in Diodorus Siculus, who men-
tions them frequently. In n. c. 312, Antigonus, having recovered Syria and Palestine out of the hands of Ptolemy, resolved on an expedition against the Nabataeae, and detached his general Athenaeus on this service, with 4000 light-armed troops and 600 light cavalry. The manners of these Arabs and their country is described by the historian in this connection. They inhabited tents in a vast desert tract, which offered neither streams nor fountains to an invading army. Their institutions, as described by him, bear a striking resemblance to those of the Rechabites in every particular, "to drink no wine, nor to build houses, nor to have vine-
yard, nor field, nor seed, but to dwell in tents." (Jer. xxxvi. 6—11.) Diodorus mentions that the violation of any of these customs was a capital crime. Their occupations were chiefly pastoral; some possessing canes and others sheep in much greater abundance than the other Arabs, although their number did not exceed 10,000; but they also acted as carriers of the aromatic drugs of Arabia Felix, which were discharged at their great mart at Petra, and by them transported to the Mediterraneaen, at Ehinocorupa. The love of liberty was a passion with them; and their custom, when attacked by a more powerful enemy, was to retire to the wil-
derness, whether the invaders could not follow them for want of water. They themselves had provided for such emergencies vast subterranean water-courses, and rain water, dug in the clayey soil, or excavated in the soft rock, and plastered, with very narrow mouths—which could be easily stopped and con-
pected from sight, but which were marked by indica-
tions known only to themselves—but gradually expanding until they attained the dimensions of 100 feet square. They lived on flesh and milk, and on the spontaneous produce of the country, such as pepper and wild honey, which they drank mixed with water. There was an annual fair held in their country, to which the bulk of the males used to resort for purposes of trade, leaving their flocks with their most aged relatives and the women and children at Petra, naturally a very strong place, though unwalled, two days distant from the inhab-
ted country. Athenaeus took advantage of the absence of the Nabataeae at the fair, to attack Petra; and making a forced march of 3 days and 3 nights from the eparchy of Idumaes, a distance of 2200 stadia, he assaulted the city about midnight, slaughtered and wounded many of its inhabitants, and carried off an immense booty in spicery and silver. [PETRA.] On his retreat, however, he was surprised by the Nabataeae, and all his forces cut to pieces, with the exception of 50 horsemen. Shortly afterwards Antigonus sent another expedi-
tion against Petra, under the command of Demetrius; but the inhabitants were prepared, and Demetrius

NABATAEAE

was glad to withdraw his army on receiving such gifts as were most esteemed among them. (Diod. xix. 44—48, comp. ii. 48.) In the geographical

section of his work the author places them on the Latanites Sinus, a bay of the Arabian gulf, and de-

scribes their country, from their ancient villages, both on the coast and in the interior. Their country was most populous, and incredibly rich in cattle; but their national character had degenerated when he wrote (cir. n. c. 8). They had formerly lived ho-

nestly, content with the means of livelihood which their flocks supplied; but from the time that the kings of Alexandria had rendered the gulf navig-
able for merchant vessels, they not only practised violence as wreckers, but made piratical attacks from their coasts on the merchantmen in the passage through the gulf, imitating in ferocity and lawless-
lessness the Tauri in Pontus. Ships of war were sent against them, and the pirates were captured and punished. (Ib. iii. 42, comp. Strabo, xvi. p. 777.)

The decrease of their transport trade and profits, by the new channel opened through Egypt, was doub-

less the real cause of this degeneracy. The trade, however, was not entirely diverted; later writers still mention Petra of the Nabataeae as the great en-

trepit of the Arabian commerce (Arrian, Peripus, p. 11, ap. Hudson, vol. i.), both of the Gerghaei of the west, and of the Minæi of the south of that peninsula. (Strabo, xvi. p. 776.) The account given by Strabo agrees in its main features with the earlier record of Diodorus Siculus; and he records at length the deception practised on his friend Aelius Gallus by Syllaenus, the procurator (ἐγρήγορος) of the Na-

bataeae, under the king Obodas; a false friend of the Romans, through whose territory he first led them on leaving Leuce Coma, where they had landed. The policy of Syllaenus illustrates the remark of Strabo (xvi. p. 783), that the Nabataeaeans are prudent and acquisitive; so much so, that those who wasted their property were punished, and those who in-

creased it rewarded by the state. They had few slaves among them; so they either waited on them-
selves, or practised a sort of semi-slavery in families, even in the royal family. They were much add-

icted to feasting, and their domestic manners marked considerable progress in luxury and refine-

ment, from the rude simplicity of the primitive times described by the more ancient author (p. 783, seq.). He mentions that they were fire-worship-

pers, and sacrificed daily to the sun on their house-tops. Their government may be styled a

limited monarchy, as the king was subject to be publicly called to account, and to have to defend himself before the people. Their cities were un-

walled, and their country fruitful in everything but the olive. The duties of their country are not clearly defined; Strabo places them above the

Syrians, with the Sabæi, in Arabia Felix (xvi. p. 779); but this must be a corrupt reading, and is in-

consistent with his other notices of them. Thus he speaks of the promontory near Seal Island—the

peninsula of Mount Sinæi—as extending to Petra of the Arabs called Nabataea (p. 779), which he describes as situated in a desert region, particularly towards Judæa, and only three or four days' journey from Jericho (p. 779). The approach to Egypt from the east, towards Phœnicæ and Judæa, was difficult by way of Palæstina, but from Arabia Nabataea it was easy. All these and similar notices serve to show that, from the age of

Antigonus to this period, the Nabataeae had in-
NABATAEI.

The Nabataeans inhabited the land of Edom, commonly known as Idumea, and estimate that there was no connection whatever between the inhabitants of Petra in the Augustan period, and the children of Esau; they were, in fact, Nabataeans, and therefore, according to Josephus and other ancient authorities, Ishmaelites of Arabia. How or when they had dismissed the Edomites does not appear in history, nor what had become of the remnant of the Edomites. (Robinson, "Bib. Res." vol. ii. pp. 558, 559.) But while Judas Macabeus was on terms of friendship with the Nabataei, he was carrying on a war of extermination against the Edomites. (Joseph. "Ant." xvi. 10, § 1; 1 Maccab. v. 3.) It is worthy of remark, however, that the Idumeans with whom Hyrcanus was in alliance, over whom Arctes was reigning, and from whom Herod was sprung, are expressly said to be Nabataeans (Ant. xiv. 2, § 3, 3 §§ 3, 4), whose alliance was refused by Pompey, on account of their inimicite for war. And this identity is further proved by Strabo, who writes that the Idumeans and the lake (A-phaladice) occupy the extreme west (?) corner of Judea. — "These Idumeans are Nabataeans; but being expelled thence in a sedition, they withdrew to the Jews and embraced their customs." (xvii. p. 760.) This recognition of the Nabataean origin of the later Idumeans, however, that the latter is to be regarded as a geographical, rather than a genealogical designation. Pliny (vi. 22) throws little light upon the subject, merely making the Nabataeans contiguous to the Scenite Arabs, with whom they were more probably identical, and stating that the ancients had placed the Timnaeans next to them (i.e. on the E.); in the place of whom he names several other tribes, as the Tavenae, Suedaei, Arraceni, &c. ("Idrib") But the statement of Josephus that the Nabataeans extended from the Euphrates to the Red Sea, is confirmed by the fact that the name is still to be found in both these regions. Thus the name Nabat is applied to a marshy district, described by Gibbon as part of the "palustris Chalcæa," between Wasit and Bostra, which was called "paludes Nabataeorum," (Gibbon, cited by Forster, "Geog. of Arabia," vol. i. p. 214 n.), while at the other extremity the name Nabot is given to a town two days beyond (i.e. south) of El-Houra in the Hedja, by an Arabian geographer (Sculius, cited by Quatremere, "Mém. de l'Acad. des Nabatéens," p. 38), near where the river Nabat is named in the maps. The occurrence of this name in this locality is recorded by M. Quatremere as an offshoot or branch of the river of El-Houra in Lebanon, proving that the country of the Nabataei did actually extend far south. The fact of the origin of the Nabataeans from Nabot, the son of Ishmael, resting as it does on the respectable authority of Josephus, followed as he is by S. Jerome ("Quast. Hebr. in Gen." tom. ii. p. 330), and all subsequent writers in the western world, has been called in question by M. Quatremere in the Mémorial above referred to; who maintains that they are in no sense Ishmaelites, nor connected by race with any of the Arab families, but were Amaranites, and identical with the Chalcæans. He cites a host of ancient and modern Arab authorities to prove of this theory; according to which state, names the name Nabats or Nabataeans designated the primitive and indigenous population of Chalcæa and the adjoining province. Subsequently these when Edomites designated Babylonians in contradistinction from the Chalcæans. ("Geog. of Arabia," pp. 214 n.)

NACOLEIA.

That country afterwards called Irak-Arab, in the most extended sense of that name, even comprehending several provinces beyond the Tigris; and it is worthy of remark, that Masudi mentions a remnant of the Babylonians and Chaldæans existing in his day in the very place which is designated the marshes of the Nabataeans, i.e. in the villages situated in the swampy ground between Wasit and Baara. (Ib. p. 66.) Other authors mention Nabataeans near Jathrib or Medîna, which would account for the Jebel Nobat in that vicinity; and another section of them in Behrein, on the eastern coast of the peninsula, who had become Arabs, as the Arab inhabitants of the province of Omra are said to have become Nabataeans. (Ib. p. 80.) Thus settlements of Nabataeans in the Persian Gulf may be alluded to by Strabo, who relates that the Chaldæans, banished from their country, settled themselves in the town of Gerrha, on the coast of Arabia (xvi. p. 766); which fact would account for the commercial intercourse between the merchants of Gerrha and those of Petra above referred to; the Nabataei of Petra being a branch of some family also from Babylon and perhaps driven from their country by the same political revolution that dispossessed the refuges of Gerrha. However this may have been, it must be admitted that the very ingenious and forcible arguments of M. Quatremere leave little doubt that this remarkable people, which appears so suddenly and comparatively late on the stage of Arabian history, to disappear as suddenly after a brief and brilliant career of mercantile activity and success, were not natives of the soil, but aliens of another race and family into which they were subsequently merged, again to reappear in the annals of their original seats. (Ib. pp. 88-90.) Reland gives a different account of the identity of the names in the two quarters. ("Palæstina," p. 94.)

NABATHEA. (Arab. Nabatâ.)

NABATIAN (Nabatian), a tribe of the Cateceans, whom Strabo (xi. p. 506) couples with the Panaxi (Pâxâz), about the Palus Mæoticus. ("B. J.".)

NABLIS, a river of Germany, flowing into the Danube from the north, and probably identical with the Nâvel in Bavaria. (Venet. Fort. vi. 11; Geogr. liv. iv. 26, who calls it Nabus or Xavus.) (L. S.)

NABRISSA or NEBRISSA (Nâbrīṣ‫ة‬), Strab. iii. pp. 140, 143; Ptol. ii. 4 § 12; Nebrixa, in old cott. of Plin. iii. 1. s. 3, but Silius reads Nabrisa; Nebrixa, Silius, iii. 393), surnamed Veneria, a town of the Turdetani in Hispania Baetica, situated upon the estuary of the river Baeticus. According to Silius (l.c.) it was celebrated for the worship of Dionysus. Now Lesbrija. (Flores, Exp. Afr., xii. p. 60.)

NABRUM, a river of Gecrosis, mentioned by Pliny (vi. 23. s. 26). It must have been situated near the mouth of the Arabs, between this river and the Indus; but its exact position cannot be determined. It is not mentioned in the voyage of Nearchus. (V.)

NACMU'SIL. (MACRISTANIA.)

NACOLEIA, NACOLIA (Nâkōlia, Nâkōlia), a town in Phrygia Ephicetus, between Dorylaeum and Cæsarea, on the upper course of the river Thymbres. (Strab. xii. p. 576; Steph. B. s. v.; Ptol. v. 2 § 22.) In the earlier times, the town did not seem to have been a place of much consequence, but later writers often mention it. It has acquired some celebrity from the fact that the emperor Valens there defeated the usurper Procopius. (Annon. Marc. xxix. 27; comp. Zosim. iv. 8; Sozom. Hist. Eccl. ii. 30; xxvii. iv. 8.) In the reign of
NACONAX.

Arcadius, Nacoelia was occupied by a Gothic garrison, which revolted against the emperor. (Plut. laid. xi. 8; comp. Hieroc. p. 678; Conc. Chalc. ed. p. 524.) The Pontus. Table places it 20 miles south of Dorylaeum, and Col. Leake (Asia Minor, p. 284) is inclined to identify the place with Pismas Kolesi, near Dogana, where he saw some very remarkable, apparently sepulchral, monuments. But the monuments alluded to by Leake seem to have belonged to a more important place than Nacoelia, and Teixier (Descrip. de l'Asie Min. vol. i.) asserts that it is proved by coins that Nacoelia was situated on the site of the modern Sidonie, on the northwest of Dogana. [L. S. J.]

NACONAX (Νακωνάξ, Steph. B.: Etd. Nακωνάζ, a town of Sicily mentioned only by Stephanus of Byzantium, who cites Philistus as his authority. The accuracy of the name is, however, confirmed by coins, the earliest of which bear the legend NAKO-NAION, while those of later date have NAKO-NAION. From one of the latter we learn that the town had been occupied by the Campanians, apparently at the same period with Acta and Entelia. (Millingen, Ancient Coins, pp. 35-35; Sestini, Lett. Num. vol. vii. pl. 1.) There is no information as to its position. [E. H. B.]

NAKRASA (Νάκρασα), a town in the north of Lydia, on the road from Thyatira to Pergamum. (Ptol. v. 2. § 16; Hieroc. p. 670, where it is called Αξιρασ.) Chishull (Ant. Asiait. p. 146) has identified the place by means of coins with Bakir, or Bakri, somewhat to the north-east of Somma. (Comp. Arundell, Seven Churches, p. 276.) [L. S.]

NAEBIS or NEBIS. (Gall. Eccl., Vol. I. p. 933; Minnus.)

NAELUS (Naedes, Ptol. ii. 6. § 5), a river on the north coast of Hispania Tarraconensis, in the territory of the Paeacii, a tribe of the Astures. Now the Nalon.

NAGADIBA (Ναγαδιβα, Ptol. vii. 4. § 7; Etd. Nagadibou, Ptol. vii. 4. § 9), a town in the N.E. corner of the island of Tapphire or Ceylon, at no great distance from the capital Amurangium. Ptolemy gives the same name to one of a group of islands which he states, surrounded Ceylon. (vii. 4. § 13.) The name may be a corrupiton of the Sanscrit Nagadeipa, which would mean Island of Snakes.

NAGARA (Ναγάρα), a city in the N.W. part of India intra Gangem, distinguished in Ptolemy by the title και Δωαωαυολος (vii. 1. § 43). It is no doubt the present Nagar, between the Kâbâl river and the Indus. From the second name which Ptolemy has preserved, we are led to believe that this is the same place as Nysa or Nissa, which was spared from plunder and destruction by Alexander because the inhabitants asserted that it had been founded by Bacclus or Dionysus, when he conquered the Indians. (Arrian, Anab. v. 1; Cart. viii. 10. § 7.) A mountain called Meron was said to overhang the city, which was also connected with the legend of Bacclus having been reared in thrugh of Zeus.

NAISSUS. 393

NAGLA. (Marsyabae.)

NAGEIIRI (Ναγγειρι or Nageiirou, Ptol. vii. 4. § 9), one of the two most southern tribes of Taprobane (Ceylon). They appear to have lived in the immediate neighbourhood of which Ptolemy calls, and what are still, "the Elephant Pastures," and to have had a town called the city of Dionysus (Δωαωαυολος or Ναγαρα), which is probably represented now by the ruins of Kutteguain (Darv, Account of Cey- lon, p. 420; litter, Erdkunde, vi. p. 22); if these are not, as some have supposed, the remains of Mor- dulamme. [V.]

NAGIDUS (Ναγίδος; Etd. Ναγίδες), a town of Cilicia on the coast, said to have been colonized by the Samians. Stephanus B. mentions an island named Nagidus, which corresponds to a little rock about 200 feet long, close to the castle of Anamour. (Strab. xiv. p. 670; Melia, i. 13. § 5; Scylax, p. 40; Steph. B. s. r.; Beaufort, Karamania, p. 206; Cra- mer, Asia Minor, vol. ii. p. 326.

COIN OF NAGIDUS.

NAGNATA (Νάγνατα), Ptol. ii. 2. § 4, in the old edit. Ναγνατα), an important town (πολις οικι- σμος) on the west coast of Ireland, in the territory of the Nagnatae (Νάγναται, Ptol. ii. 2. § 5), probably situated upon Shigga Bay.

NAHALAL. (Naadal, L.XX.), a city of the tribe of Zabulon, mentioned only in Joshua (xix. 15). Ebeneboh identifies it with a village named Xila (Naada), in Bataana, but Reland justly remarks, that this is without the territory of the tribe of Zabulon. (Palaestina, s. v. p. 904.) [G. W.]

NAHARIVALLI, one of the most powerful tribes of the Lygii, in the north-east of Germany. Tacitus ( Germ. 43) relates that the country inhabited by them (probably about the Vistula) contained an ancient and much revered grove, presided over by a priest in female attire. It was sacred to twin gods called Aelis, whom Tacitus identifies with Castor and Pollux. (Latham on Tac. Germ. l. c.; Spen- gel, Erdkunde, ito Tac. Germ. p. 140.) [L. S.]

NAIN (Naab), a village of Palestine, mentioned by St. Luke as the scene of the raising of the widow's son (vii. 11). Ebeneboh places it two miles S. of Mount Tabor, near Euder, in the district of Scythopolis (Onomast. s. v. Ἠλίας and Naas), where a poor village of the same name is found at the present day, on the northern slope of Little Hermon, and a short distance to the W. of 'Ain-dor. (Robinson, Bib. Rev. vol. iii. p. 226.) [G. W.]

NAIOTH (Naad or Ναώθ, L.XX. in i Sam. xix. 18, 19, 22, 23). [Rama.] [G. W.]

NAISSUS (Naissos, Steph. B. s. r.; Naissos, Ptol. iii. 9. § 6; Naissos, Zosim. iii. 11; Naissos, Hieroc. p. 654), an important town in Upper Mes- sia, situated in the district Dardania, upon an eastern tributary of the river Margus, and upon the military road running through this country. It was in the neighborhood of Naissos that Claudius II. gained
his victory over the Gothis in A.D. 269 (Zosim. i. 43); but the town is chiefly memorable as the birthplace of Constantine the Great. (Steph. B. z. v.; Const. Porph. de Thesm. ii. 9. p. 56, ed. Bonn.) It was destroyed by the Huns under Attila (Priscus, p. 171, ed. Bonn.), but was restored by Theodosius (iv. 1, where it is called Naisapei). It still exists under the name of Nesso, upon the river Nissava, an affluent of the Maritsa.

**Nalata.**

**Naminates, Nanninetes (Namoartei, Pol. ii. 8. § 9), for there is authority for both forms, were a Gallic people on the north side of the Liger (Loire), and on the sea. The river separated them from the Pictones or Pictavi. (Strab. iv. p. 190.) Their chief town was Condivicnium (Nanentes). When Caesar was carrying on his war with the Veneti, these maritime Galli called in to aid their old friends, the Nannetes, and other neighbouring people. (Cass. B. G. iii. 9.) The Britons of Poreleny is written, as the limits of the Nanentes, the former diocese of Nantua exceeded the limits of the territory of the Nannetes.**

**Nanaguna (Nanaguna, Pol. vii. i. §§ 3, 31, 62, 63), a considerable river of Western India, which, after rising in the M. Vindius (Vindhy Mountains), falls into the S. Erygzenus (Gulf of Cambodia), not far from the river of Anrosch. In the Praep. M. Erythr. (Geogr. Graec. vol. i. p. 291, ed. Miller) the river is called Namnulius (Namnatur). The present name is Nerbodius, which, like the Greek form, is doubtless derived from the Sanscrit Narmada, "pleasant." (Forbes, Oriental Mon. ii. pp. 104—112.)

**Nangetis, Nannetes (Narnupetæ, Pol. ii. 8. § 9), for there is authority for both forms, were a Gallic people on the north side of the Liger (Loire), and on the sea. The river separated them from the Pictones or Pictavi. (Strab. iv. p. 190.) Their chief town was Condivicnium (Nanentes). When Caesar was carrying on his war with the Veneti, these maritime Galli called in to aid their old friends, the Nannetes, and other neighbouring people. (Cass. B. G. iii. 9.) The Britons of Poreleny is written, as the limits of the Nanentes, the former diocese of Nantua exceeded the limits of the territory of the Nannetes.**

**Nalanus (Nalanus, Pol. vii. i. §§ 8, 32, 36), a considerable river of Western India, which, rises, like the Narhobita, in the Vindhy Mountains, and flows into the Indian Ocean to the S. of the former river, not far from Sarat. Its present name is the Japati or Japli. (Lassen, Ind. Alterth. vol. i. p. 88.)

**Naxoeri, Naxenitae.**

**Nantuates, a people who bordered on the Allobroges, who in their time were included within the limits of the Province. Caesar (L. G. iii. 1) at the close of the campaign of B.C. 57 seq. Servius Galba with some troops into the country of the "Nantuates Veragi and Seduni, who extend from the borders of the Allobroges, the Lacus Lemanus and the river Rhone to the summits of the Alps." The position of the Seduni in the valley of the Rhone about Situm or Situm, and of the Veragi lower down at Maritigny or Maritimach, being ascertained, we must place the Nantuates in the Chablais, on the south side of the Leman lake, a People who is comprised in the "part of Savoy which lies between the Arve and the Valtia. It is not certain how far the Allobroges extended along the Leman lake east of Geneva, which town was in their territory. It has been observed that the word Nant in the Celtic language signifies "running water;" it is possible that in the dialect of Savoy, every little mountain stream is called Nant, and that there are many streams of this name. Nant is also a Welsh word for stream.

There is another passage in Caesar, where the name Nantuates occurs in the common texts (B. G. iv. 10), which has caused great difficulty. He says that the Rheus rises in the country of the Leponti who occupy the Alps, and that it flows by a long distance (longo spatio) through the country of the Nantuates, Helvetii, and others. Walckenaer affirms (Geogr. sce. vol. i. p. 558) that the best and the greater part of the Missis of Caesar have Vatuarium; but this is not true. The readings in this passage are Nantuanum, Natuantum, Vatuantum, Vatuanum, and some other varieties. (Caesar, ed. Schneck.) Strabo (iv. p. 192) says that the Astuatae (Aitavatæ) inhabit the first part of the course of the Rhe, and that the sources of the river are in their country near Mount Adulas, Casaubon changed Astuatae into Nantuates to make it agree with Caesar's text, and Olivier changed it into Helvetii. Both changes are opposed to sound criticism. The name in Caesar's text is not certain, and in Strabo it may be wrong, but nothing is plainer than that these people, whatever is their name, are in the valley of the Rhone. Oellerin in his edition of Caesar has put the name "Samnetium" in place of "Nantuantum;" but the Sannetes of Pliny were in the valley of Sargana. Groskurd (Transl. Strab. vol. i. p. 192) has adopted the alteration "Helvetii" in his translation; and very injudiciously, for the Helvetii were not in the high Alps. Ukert (Gallien, p. 349) would also alter Strabo's Astuatae into Nantuates to fit the common text of Caesar; and he gives his explanation of the position of the Nantuates, which is a very bad explanation. The Nantuates occur among the Alpine peoples who are mentioned in the Proverbs of Augustus (Pius. iii. 29), and they are placed thus: "Lepontii, Uaberi, Nantuates, Seduni, Veragi," from which, if we can conclude anything, we may conclude that these Nantuates are the Nantuates of the Lower Valtia.**

**Napata.**

**Taucia Chersonesos.**

**Naparits (Naparou, Herod. iv. 48), an affluent of the Ister, identified by Schafarik (Slavische Alterthumer, vol. i. p. 506) with the Aspas of the Peutinger Table. It is one of the rivers which take their source in the Transeuillan Alps, probably the Arinart (Arinartaeus in Strabo i. 209).**

**Napatia (Napara, Serv. xiv. p. 820; Pol. iv. 7. § 19, viii. 16. § 8; Narpæi, Steph. B. z. v.; Tapamn. Dom Cass. liv. 5.), was the capital of an Aethopian kingdom, north of the insular region of Meroe, and in about lat. 19° S. There is, however, great difficulty in determining the true position of Napata, as Strabo (L. c.) places it much farther N. than Pliny, and there is reason for supposing that it is the designation of a royal residence, which might be moveable, rather than of a fixed locality. Ritter (Erdfuhrte, vol. i. p. 391) brings Napata as far north as Primus (Ibrim), and the runs it Puntulent, while Mannert, Ukert, and other modern scholars believe it to have been Mauari, on the farthest north part of the insular region of Meroe. It is, how-

NAPATTA.

ever, generally placed at the E. extremity of that great bend of the Nile, which skirts the desert of Bahha nada [Nubia], and near Mount Birkel [Gebel-el-Birkel], a site which answers nearly to the description of Napata, in Piny (L. c.). Napata was the furthest point S. beyond Egypt, whether the limits of Kame penetrated, and it was taken and plundered by Petreumus, the Lieutenant of Augustus, in B. C. 22. (Dion Cass. liv. 5.) Nor does Napata seem ever to have recovered its earlier greatness; for Nero's surveyors found only an inconceivable town there, and after rards all traces of this city vanished. The government of Napata, like that of Meroe, was often committed to the hands of women, who bore the title of Candace (Acts of Apost. viii. 27; Ezech. Hist. Eccles. ii. 1; Tatzerz, Chilaid. iii. r. 885); and in the kingdom of Schendy, Burchardt found in the present century a similar regimen. Napata, if not a colony, was probably at one time among the dependencies of Meroe. The government and religion were the same in both; and from the monuments discovered in either, both seem to have been in a similar state of civilisation. If Meroe, indeed, represent the ancient Napata, it seems to follow that the latter was the second capital of the Mesoopotamian region of Meroe.

Napata owed much of its wealth and importance to its being the terminus of two considerable caravan routes;— (1) One crossing the desert of Bahloulata; (2) The other farther to the N. running from the city to the island Goggolades in the Nile (Plin. vi. 35), the modern Ayoos. (Russeegeger, Karte von Nubien.) Although Napata was surrounded by Nomade heroes, its proper population was probably as civilised as that of Meroe, at least its wealth presupposes settlement and security. Its commerce consisted in an interchange of the products of Libya and Arabia, and it was near enough to the marshes of the Nile to enjoy a share in the profitable trade in ivory and hides which were obtained from the chase of the hippopotamus and elephant. If the ruins which are found near Mount Birkel represent Napata, the city can have been second only to the golden city of the Achtoiopians, Meroe itself. (Dis- don, B. 6.) On the western bank of the Nile are found two temples and a considerable necropolis. The former were dedicated to Osiris and Ammon; and the sculptures representing the Ammonian and Osirian worship, are inferior in execution and design to none of the Nubian monuments. Avenues of sphinxes lead up to the Ammonium, which exhibits in its ruins the plan of the great temples of Egypt. On the walls of the Osirian temple, which Callian (L'Isle de Meroe) calls a Typhonium, are represented Ammon-Ra and his usual attendants. The inscriptions exhibit Ammon or Osiris receiving gifts of fruit, cattle, and other articles, or offering sacrifices, c. strings of captives who are kneeling before their conqueror. On the gateway leading to the court of the necropolis, Osiris was carved in the act of receiving gifts as lord of the lower world. The pyramids themselves are of considerable magnitude; but having been built of the sandstone of Mount Birkel, have suffered greatly from the periodical rains, and have still been more injured by man.

Among the ruins, which probably cover the site of the ancient Napata are two lions of red granite, one bearing the name of Amenophi III. the other of Amuntrouch. They were brought to England by Lord Prudhoe, and now stand at the entrance to the Gallery of Antiquities in the British Museum. The style and execution of these figures belong to the most perfect period of Egyptian art, the xvith dynasty of the Pharaohs. Whether these lions once marked the southern limit of the dominions of Egypt, or whether they were trophies brought from Egypt, by its Aethiopian conquerors, can not be determined. (Hoskins, Travels, pp. 161. 288; Callian, L'Isle de Meroe; Transact. of Royal Soc. Lit. 2nd Ser. vol. i. p. 54.)

NAPETINUS SINUS (ο Ναπητινος καλώς) was the name given by some writers to the gulf on the W. coast of Bruttium more commonly known as the Terraeus Sinus, and now called the Gulf of St. Eugenia. We have no account of the origin of the name, which is cited from Antochus of Syracuse both by Strabo and Dionysius. (Strab. vi. p. 265; Dionys. l. 55.) Aristotle calls the same gulf the Lametria Gulf (ο λαμητριας καλός, Arist. Pol. vii. 19), from a town of the name of Lametra or Laminti; and in like manner it has been generally assumed that there was a town of the name of Nape- tinus, situated on its shores. But we have no other evidence of this; an inscription, which has been frequently cited to show that there existed a town of the name as late as the time of Trajan, is almost certainly spurious. (Mommsen, Inser. Regn. Nep. App. No. 936.)

[E. H. B.]

NAPHTALI. [PALAESTINA.]

NAPPOCA. [DAEA, Vol. i. p. 744. b.]

NAR (ο Νάρ, Strab. Nero), a considerable river of Central Italy, and one of the principal tributaries of the Tiber. It rises in the lofty group of the Apennines known as the Monti della Sibilla (the Mons Fiscellins of Piny). on the confines of Umbria and Picenum, from whence it has a course of about 40 miles to its confluence with the Tiber, which it enters 5 miles above Orliculum, after flowing under the walls of Interamna and Narium. (Strab. v. pp. 227, 236; Plin. iii. 5. s. 9; Lucan. l. 475; VIII. Sec. p. 15.) About 5 miles above the former city, it receives the tributary stream of the Velinus; a river as large as itself, and which brings down the accumulated waters of the Lake Velino, with those of the valleys that open out at Beato. The Nar and Velinus together thus drain the whole western declivity of the Central Apennines through a space of above 60 miles. The Nar is remarkable for its white and sulphurous waters, which are alluded to by Ennius and Virgil as well as Piny. (Ennius. Ann. vii. Fr. 19; Virg. Aen. vii. 517; Plin. iii. 12. s. 17.) It is singular that the last writer has confounded the Nar with the Velinus, and speaks of the former as draining the Lake Velini, into which it falls near Beato. Both Cherio and Tacitus, on the contrary, correctly represent the mouth of the lake as being at the Nar, which is now effected by an artificial cut forming the celebrated Cascade of the Velino, or Falls of Terni. This channel was first opened by M. Curius, about B. c. 272, but there must always have been some natural outlet for the waters of the Velino. (Plin. l. c.; Cicad. Att. iv. 13; Tac. Ann. l. 79.) The Nar was reckoned in ancient times navigable for small vessels; and Tacitus speaks of Tisco, the murderer of Germanicus, as embarking at Narium, and descending from thence by the Nar and the Tiber to Rome. (Tac. Ann. iii. 9; Strab. v. p. 227.)

NARAGGERA, a town of Numidia, near which P. Cornelius Scipio pitched his camp, and had an
interview with Hannibal, before the great battle of the 19th of October, n. c. 202 (Liv. xxi. 39, the reading Magyol... P. 258. v. 5. is false). Narbo was 30 or 32 M. P. to the W. of Sicca (12 M. P. Pent. Tib., and 20 M. P. to the E. of Thapsae (Anon. Itin.)) which has been conjectured that the name of the Roman colony was given to the place because of the war-like nature of the country against whom the settlers had to protect themselves. But this is not probable.

But others, again, have conjectured that a part of the name is derived from the Legio Martia (Vell. Pater. ii. 8, ed. Barmann); and the orthography Martia is defended by an inscription, Narbo Mart. (Gruter, cxxix.), and a coin of Gallicans. To this it is objected by a writer quoted by UBERT (Gallica, p. 410), that the Legio Martia was first formed by Augustus, and that Cicero mentions the title Martius. (Ad Fam. x. 35.) Forbiger copies UBERT. It appears that neither of them looked at Cicero's letter, in which he speaks, not of Narbo Martius or Marcianus, but of the Legio Martia, which existed before the time of Augustus. Cicero, however, does speak of Narbo Marcus, as it stands in ORELLI'S text. (Pro Font. c. 1.) The Latin MSS. write the word both Marcianus and Martius; and the same variation occurs in many other words of the same termination. The most probable conclusion is, that the name Martius or Marcianus is the name of the consul Marcus (p. c. 118), who was sent that year against a Ligurian people, named Sestia. The name may have been written Narbo Marcus in Cicero's time, and afterwards corrupted.

Narbo was an old town, placed in a good position on the road into Spain and into the basin of the Garonne; a commercial place, we may certainly assume, from the earliest time of its existence.

There was a tradition that the country of Narbo, or Narbo Martius, was once occupied by Bebyreeses. (Dion Cass. Frag. Fab. vi. ed. Reim, and the reference to ZOAR.)

The earliest writer who mentions Narbo is Hecataeus, quoted by Stephanus; and, accordingly, we conclude that Narbo was well known to the Greeks in the fifth century before the Christian era.

The first Roman settlement in South Gallia was Aquae Sextiae (Aix), on the east side of the Rhone. The second was Narbo Martius, by which the Romans secured the road into Spain. Cicero calls Narbo "a colony of Roman citizens, a watch tower of the Roman people, and a bulwark opposed and placed in front of the nations in those parts." During Caesar's wars in Gallia this Roman colony was an important position. When P. Crassus invaded Aquitania (n. c. 56), he got help from Tolosa, Carcaso, and Narbo, at all which places there was a master-roll of the fighting men. (B. G. iii. 20.)

In the great rising of the Galli (n. c. 52), Narbo was threatened by Lucertus, but Caesar came to its relief. (B. G. vii. 7.) A second colony was settled at Narbo, or the old one rather strengthened by a supplement, under the dictator Caesar. (Sueton. Tiber. c. 4.)

Tiberius Claudius Nero, the father of the emperor Tiberius, some of the tenth legion, Caesar's favourite legion, were settled here, as we may infer from the name Decumanoorum Colonia. (Phin. iii. 4.)

The name Julia Paterna, which appears on inscriptions and in Martialis, is derived from the dictator Caesar. The establishment of Narbo was the cause of the decline of Massilia. Strabo, who wrote in the time of Augustus and Tiberius, says (iv. p. 186): "that Narbo is the port of the Volcae Aretcomici, but it might more properly be called the port of the rest of Celtic; so much does it surpass other towns in trade." (The latter part of Strabo's text is corrupt here.) The tin of the north-west part of the Spanish peninsula and of Britain passed by way of Narbo, as...
it did also to Massalia. (Dioc. v. 38.) There was at Narbo a great variety of dress and of people, who were attracted by the commercial advantages of the city. It was adorned with public buildings, after the fashion of Roman towns. (Martial, vi. 72; Auson. Narbo; Sidon. Apollin. Carm. 25.) A temple of Parian marble, probably some poeticalansion, is spoken of by Ausonius; and Sidonius ammonius, in half a dozen miserabiles lines, the glories of ancient Narbonese, its gates, porticoes, forum, theatre, and other things. He speaks of a mint, and a bridge over the Atux. The coast of Narbonensis was and is famed for oysters.

Not a single Roman monument is standing at Narbonne, but the sites of many buildings are ascertained. Numerous architectural fragments, friezes, bas-reliefs, tombs, and inscriptions, still remain. Some inscriptions are or were preserved in the courts and on the great staircase of the episcopal palace. There is a museum of antiquities at Narbonne, which contains fragments of mosaic, busts, heads, cinerary urns, and a great number of inscriptions. [G. L.]

NARDI'Nimi (Naphwivcs, Ptol. ii. 6. § 34), a town of the Sactani, a tribe of the Astures, in Hispania Tarraconensis, probably near Villapandus on the Esla. (Sestini, p. 172.)

NARISC'I, a German tribe of the Suevi, occupying the country in the west of the Gabreta Silva, and east of the Hermunduri. They extended in the north as far as the Sudales Montes, and in the south as far as the Dambae. In the reign of M. Aurelius, 3000 of them emigrated southward into the Roman province. (Dion Cass. lxxi. 21, where they are called Naporstal.) After the Marcomannian war, they completely disappear from history, and the country once occupied by them is inhabited, in the Pouting, Table, by a tribe called Arruanahus. (Tac. Germ. 42; Jul. Capitol. M. Ant. 22.)

Potamies (i. 11. § 23) calls them Varistis (Ovaporstal), which is possibly the more genuine form of the name, since in the middle ages a portion of the country once inhabited by them bore the name of Provincia Varissia. (L. S.)

NARNIA (Napvii, Strab., Ptol.: Eth. Narnia; Narni), one of the most important cities of Umbria, situated on the left bank of the river Nar, about 8 miles above its confluence with the Tiber. It was on the line of the Via Flaminia, by which it was distant 56 miles from Rome. (Itin. Ant. p. 125; Itin. Hier. p. 618; Westm. Rom. Camp. p. 145.) It appears to have been an ancient and important city of the Umbrians, and previous to the Roman conquest bore the name of Nequinum. (Plin. iii. 14. s. 19; Liv. x. 9; Steph. Byz. writes the name Npovcii.) In n. c. 300, it was besieged by the Roman consul Appuleius; but its natural strength enabled it to defy his arms, and the siege was prolonged till the most trying time when it was at length surprised and taken by the consul M. Fulvius, n. c. 299. (Liv. x. 9, 10.) Fulvius was in consequence honored with a triumph "de Summilibus Nequininatibus" (Fast. Capit.) and the Roman senate determined to secure their new conquests by sending thither a colony, which assumed the name of Narnia from its position on the banks of the Nar. (Liv. x. 10.) It is strange that all mention of this colony is omitted by Velhinos Paterculus; but its name again occurs in Livy, in the list of the thirty Latin colonies during the Second Punic War. On that occasion (6. c. 200), it was one of those which professed themselves exhausted and unable any longer to bear the burdens of the war; for which it was subsequently punished by the imposition of a double contingent and increased contribution in money. (Liv. xxvii. 9; xxv. 15.) Yet the complaint seems, in the case of Narnia at least, to have been well founded; for a few years afterwards (a. d. 195), the colonists again petitioned their decree being restored to the senate, and obtained the appointment of tribum, who recruited their numbers with a fresh body of settlers. (Id. xxxii. 2.)

During the Second Punic War, Narnia was the point at which, in b. c. 207, an army was posted to oppose the threatened advance of Hasdrubal upon Rome; and hence it was some Narnian horsemen who were the first to bring to the capital the tidings of the great victory at the Metaurus. (Liv. xxvii. 43. 50.) These are the only notices we find of Narnia under the republic, but it seems to have risen into a flourishing municipal town, and was one of the chief places in this part of Umbria. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. 1. § 54.) It probably owed its prosperity to its position on the great Flaminian highway, as well as to the great fertility of the subjacent plain. In the civil war between Vitellius and Vespasian, Narnia bore an important part, having been occupied by the generals of the former as a stronghold, where they hoped to check the advance of the army of Vespasian; but the increasing disaffection towards Vitellius caused the troops at Narnia to lay down their arms without resistance. (Tac. Hist. iii. 58—63, 67, 78.)

The natural strength of Narnia, and its position as commanding the Flaminian Way, also rendered it a fortress of the utmost importance during the Gothic wars of Belisarius and Narses. (Procop. B. G. i. 16, 17; ii. 11; iv. 33.) It became an episcopal see at an early period, and continued throughout the middle ages to be a considerable town.

The position of Narnia on a lofty hill, precipitous on more than one side, and high encircled by the waters of the Nar, which wind through a deep and picturesque wooded valley immediately below the town, is alluded to by many ancient writers, and described with great truthfulness and accuracy by Chaucien, as well as by the historian Procopius. (Chlausian. de Cons. Hist. v. 515—519; Plin. viii. 438; Martial. vii. 93; Procop. B. G. i. 17.)

It was across this ravine, as well as the river Nar itself, that the Via Flaminia was carried by a bridge constructed by Augustus, and which was considered to surpass all other structures of the kind in boldness and elevation. Its ruins are still regarded with admiration by all travellers to Rome. It consisted originally of three arches, built of massive blocks of white marble; of those the one on the left bank is still entire, and has a height of above sixty feet; the other two have fallen in, apparently from the foundations of the central pier giving way; but all the piers were original, one of which the whole structure justifies the admiration which it appears to have excited in ancient as well as modern times. Martial alludes to the bridge of Narnia as, even in his day, the great pride of the place. (Procop. b. c.; Martial. vii. 93. 8; Clever. Ital. p. 636; Eustace's Italy, vol. i. p. 339.) The emperor Nerva was a native of Narnia, though his family would seem to have been of foreign extraction. (Vicr. Epit. 11; Cass. 12.) [E. H. B.]

NARO. (6 Napwv, Ptol. ii. 16. § 5; Plin. iii. 26; Nar, Pomp. Meta, h. 3. § 13; Narnium, Geogr. Rav. iv. 17; Nar, and the river of Illiria, in which Stylos, (pp. 8, 9) describes as navigable from its
NAROA.

month, for a distance of 80 stadia up to its "emporium" now Fort Opoa, where there are some vestiges of Roman buildings. The Massi occupied this district. In the interior was a vast lake, extending to the Avaritiate. A fertile island of 180 stadia in circuit was in the lake (Paludeto Cava, or Popora). From this lake the river flowed, at a distance of one day's sail from the river Arnos (Apion, Schylx, L. c.: Orbule: comp. Pennycuile, Voyage dans la Grece, vol. i. p. 25.) This river formed the S. boundary of Dalmatia, and its banks were occupied by the Daorci, Arabari and Paraei. (Strab. viii. pp. 315, 317.) These banks were famous in former times among the professors of pharmacy, who are advised by Niceran (Theurica, v. 607) to gather the "iris" there. (Plin. viii. 22, xxi. 19; Theophr. ap. Athen. xvi. p. 681.) Strabo (vii. p. 317) rejects the statement of Theopomatus that the potter's clay of Chios and Thasos was found in the river. For the valley of the Neronia, see Wilkinson, Dalmitia and Montenegro, vol. ii, pp. 1-59.

NARYCA (Naroca), a mistake for Napoca, Ptol. iii. 17, § 12, viii. 7, § 8, a town in Dalmitia, and a Roman "colonia." It appears from the letters of P. Antinus to Cicero (ad Fam. v. 9, 10), dated Narona, that the Romans made it their head-quarters during their conquest of Dalmitia. (Comp. Pomp. Mela, ii. 3, § 13; Itin. Antun.: Pest. Tab.: Geog. Rav. iv. 16.) Narona was a "conventus," at which, according to M. Varro (ap Plin. iii. 26) 89 cities assembled; in the time of Pliny (i. c.) this number had diminished, but he speaks of as many as 540 "decuriae," submiting to its jurisdiction. The ancient city stood upon a hill quite occupied by the village of Velo, and extended probably to the marsh below; from the very numerous inscriptions which have been found there, it appears that there was a temple to Liber and Libera, as well as other buildings dedicated to Jupiter and Diana. (Lanza, supra locantia elae de Narona, Bsev. 1842; Nexauer, Die Sed-Statten, pp. 116, 122.) A coin of Tyas has been found with the epigraph Col. Narona. (Ovili, Thesaur. p. 241; Racke, vol. ii. pp. 1048.)

When the Seobs or W. Slaves occupied this country in the reign of Herodes, Narona, as it was called one of the four "coloniae," into which the Servians were divided. The Sarmatian pirates, who for three centuries had been the terror of Dalmitia and the Venetian traders, were in A.D. 997 overcome by the ft. of Venice, c. 1111 and 1 by the Doge in person. (Schubart, Scrit. Ant. vol. ii. p. 260.)

NARKHACHOM (Naphekos u. Ed. Naphegeus), the name of a city and mountain of Phthiotis in Thessaly, in the neighborhood of which Agesilus, on his return from Asia in B.C. 394, landed a victory over the Thessalian cavalry. The Thessalians, after this defeat, took refuge on Mount Narcissa, between Arideas and the plain named Pseis. Although it is a wretched town. On the following day he crossed the mountains of the Arcadian Phthiotis. (Aes. Hell. iv. 3. §§ 3-9; Apol. 2. §§ 3-5; P. H. iv. p. 211; Diod. iv. 82.)

Nassacus is a common name, given by Lebe and Kiepert both of Phalas in the valley of the Elpis; and the name of the river is probably the one which rises immediately to the southwest of Farouli. In dear he refers to the town of Memnonium to have lived on the remains as far from ever

NARCYNUS or NARCYUS (Narvusus, Strab. iv. p. 425; Narki, Steph. B. s. r.); Narycium, Plin. iv. 7. s. 12; in Diod. xiv. 82 and xvi. 38, "Aporus" and "Apura" are false readings for Narycium; (Eth. Napary). a town of the Opuntian Locrians, the reputed birthplace of Ajax, son of Odus (Strab. Steph. B. B. c.); who is hence called by Ovid (Met. iv. 468) Narycins heros. In n. c. 394, Isanenus, a Boeotian commander, undertook an expedition against Phocis, and defeated the Phocians in the coast of Locria, whence we may conclude with Lebe and Kiepert that Narcyus was also a town of Phocis. (Diod. xiv. 82.) In 352 Narys was taken by Phialius, the Phocian commander. (Diod. xvi. 38.) It is placed by some at Talamus, but by Lebe at the small village of Kalopodihi, where there are a few ancient remains. (Northern Greece, vol. ii. p. 187.) As Locri in Bruttium in Italy was, according to some of the ancients, a colony of Narys (Verg. Aen. iii. 399), the epithet of Narycian is frequently given to the Bruttian pitch. (Verg. Georg. ii. 438; Colum. x. 386; Plin. xiv. 20. s. 25.)

NAROSAENES (Nasavavos, Hierol. ii. 32, iv. 172; Radd. iv. 5 §§ 20; Plin. xxvii. 10. s. 64; Dianys. Periegetes, v. 209; Scylx, n. p. 1. b. s. r.) were, according to Herodotus, the most powerful of the Nomadic tribes on the northern coast of Libya. There is some discrepancy in his account of their situation, as well as in those of other ancient writers. (Comp. ii. 32, iv. 172.) They appear, however, to have occupied at one time part of Cyrenaica and the Syrtes. Strabo (xvii. p. 857) places them at the Greater Syrtis, and beyond them the Psylli, whose territory, according to both Herodotus and Strabo, they appropriated to themselves. Pliny (v. 5. s. 2) says that the Nasamones were originally named Macedonians by the first, because they dwelt between two quicksands—"the Syrtes, Petroleum" (vol. iv. § 21) and Diodorus (iii. 3) again remove them to the inland region of Argilia; and all these descriptions may, at the time they were written, have been near the truth; since not only were the Nasamones, as Nomades, a wandering race, but they were also pressed upon by the Greeks of Cyrene, on the one side, and by the Carthaginians, on the other. For when, at a later period, the boundaries of Carthage and the Regio Cyreniaca touched at the Philetane Altars, which were situated in the inner recess of the Syrtes, it is evident that the Nasamones must have been displaced from a tract which at one time belonged to them. When at its greatest extent, their territory, including the lands of the Psylli and the coasts of Argilia, must have reached inland and along the shore of the Mediterranean about 400 geographical miles from E. to W.

So long as they had access to the sea the Nasamones had the evil reputation of wreckers, making up for the general barrenness of their lands by the plunder of vessels stranded on the coasts. (Lucan, Phars. x. 443; Quint. Curt.
NASAVA.

iv. 7.) Their modern representatives are equally insipid, as the traveller Bruce, who was shipwrecked on their coast, experienced. (Bruce, Travels, Introduction, vol. i. p. 131.) The Nasamones, however, were breeders of cattle, since Herodotus informs us (iv. 172) that in the summer season, "they leave their herds on the coast and go up to Angilia to gather the date harvest"—the palms of that oasis being numerous, large, and fruitful. And here, again, in existing races we find correspondences with the habits of the Nasamones. For according to modern travellers, the people who dwell on the coast of Derna, gather the dates in the plain of Gezehib, five days' journey from Angilia. (Proceedings of Afric. Association, 1790, ch. x.)

Herodotus describes the Nasamones as practising a kind of hero-worship, sacrificing at the graves of their ancestors, and swearing by their names. They were polygamists on the widest scale, or rather held their women in common; and their principal diet, besides dates, was dried locusts reduced to powder and kneaded with milk into a kind of cake—polkata. Their houses produced also a precious stone called by Pliny (xxxvii. 10. s. 64) and Solinus (c. 27) Nasamouia; it was of a blood red hue with black veins.

Herodotus introduces his description of this tribe, with a remarkable story relating to the knowledge possessed by them of the sources of the Nile. He says (ii. 32) that certain Nasamones came from the neighbourhood of Cyrene, and made an expedition into the interior of Libya; and that they explored the continent as far as the kingdom of Timbuctoo, is rendered probable by his account of their adventures. For, after passing through the inhabited region, they came to that which was infested by wild beasts; next their course was westward through the desert (Sahara), and finally they were taken prisoners by black men of diminutive stature, and carried to a city washed by a great river flowing from W. to E. and abounding in crocodiles. This river, which the historian believed to be the upper part of the Nile, was more probably the Niger. The origin of the story perhaps lies in the fact that the Nasamones, a wandering race, acted as guides to the caravans which annually crossed the Libyan continent from the territories of Carthage to Athurchia, Meroe, and the ports of the Red Sea. [W. B. D.]

NASAVA (Naxa, al. Naxávaxh, Plut. vi. 2. § 9). a river, Toremetria Casarimianis, the mouth of which is to the E. of Saldae. This river of Borjeghath, is made by a number of rivulets which fall into it from different directions, and, as the banks are rocky and mountainous, occasion inundations in the winter. (Shaw, Trav. p. 90.) [E. B. J.]

NASCI. (Khiphni Montes.)

NASCUS (Nákos, al. Náaksókos mpvtrpómais), an inland city of Arabia Felix, in long. 81° 15', lat. 20° 40' of Ptolomy. (Ptol. vi. 7. § 35.) Mr. Forster takes it to be the chief town of the Amathie, who occupied the present district of Yenâm. (Geography of Arabia, vol. ii. pp. 266, 267.) [G. W.]

NASIL. (Capheia).

NASIUM (Násiun), in Gallia. Ptolemy names two cities of the Leci, Tullum (Toul) and Nasium, which he places 20 minutes further south than Tullum, and as many minutes east. Both these indications are false, as the Itins, show, for Nasium is only a road from Durectorum (Retines) to Tullum, and consequently west of Toul, and it is not south. An old chronic place Nasium on the Ornaun or

ORNES, a branch of the Maris; and its name exists in Naix or Nais, above Ligny. The Antoine Irru, makes it 16 leagues from Nasium to Tullum. The Table places Ad Fines between Nasium and Tullum, 14 leagues from Nasium and 51 from Tullum. (As to Ad Fines, see Fines, No. 14.) [G. L.]

NA'TUS. [M. Oxidam.]

NATISIO (Nasius, Strab.; Natasha, Limone), a river of Venetia, which flowed under the walls of Aquileia, on the E. side of the city, and is noticed in connection with that city by all the geographers as well as by several other ancient writers. (Plin. iii. 18. s. 22; Strab. v. p. 214; Mela. ii. 4. § 3; Ptol. iii. i. § 26; Ammian. xxii. 12. § 8; Jornand. Get. 42.) Pliny speaks of the Natisio together with the Turus (Natisio cum Turro), as flowing by the colony of Aquileia. At the present day, there is a considerable stream which descends from the Alps near Cleiole, falls into the Turro (evidently the Turus of Pliny), and that again into the Isonzo; so that neither of them now flows by Aquileia; but it is probable that they have changed their course, which the low and marshy character of the country renders easy. A small stream, or rather canal, communicating from Aquileia with the sea, is still called Natisio; but it is clear that the Natisio of Jor- nadus, which he describes (L. c.) as flowing under the walls of Severia, must be the far more important stream, now called the Natisio, as he tells us it had its sources in the Mons Picus, and it would be vain to look for any mountains nearer than the Alps. Strabo (L. c.) also speaks of the Natisio as navigable for ships of burden as far as Aquileia, 60 stadia from the sea; a statement which renders it certain that a considerable river must have flowed under the walls of that city. [E. H. B.]

NAVA, the river Naia in Tacitus (Hist. iv. 70) and in Ausonius (Musa, v. 1) is the Natisio, a small stream which flows into the Rhine, on the left bank just below Bingium (Bingen). [G. L.]

NAVALIA or NABATIALA (Nasuliana), a small river on the north-west coast of Germany (Tac. Hist. v. 26), either an eastern branch of the Rhine, at the mouth of which Ptolemy (ii. 11. § 28) places the fort Navalia, or some river in the country of the Frisians. [L. S.]

NAVAL [Nur.]

NAVAR [Nur.]

NAVARBUL [Nur.]

NAUCRATIS (Naucratis, Herod. ii. 179; Strab. xiv. p. 801; Ptol. iv. 5. § 9; Callimach. Epigr. 41; Plin. v. 10, s. 11; Steph. B. s. c. Eth. Naucratitis or Naucratightis), was originally an emporium for trade, founded by colonists from Mil- letus, in the Saitie nome of the Delta. It stood upon the eastern bank of the Canopic arm of the Nile, which, from the subsequent importance of Nauratis, was sometimes called the Nauratis or Nauratium (Plin. v. 10, s. 11.) There was, doubtless, on the same site an older Aegyptian town, the name of which has been lost in that of the Greek dockyard and haven. Nauratis first attained its civil and commercial eminence in the reign of Amasis (B. C. 550) who rendered it, as regarded the Greeks, the Canton of Aegypt. From the date of his reign until the Persian invasion, or perhaps even the founding of Alexandria, Nauratis possessed a monopoly of the Mediterranean commerce; for it was the only Deltae harbour into which foreign vessels were permitted to enter; and if accident or stress of weather had driven them
NAUCRATIS.

Pans.

Naucratis was a port and trading center in northern Egypt, established by the Pharaoh Necho II in the 6th century BC. It served as a strategic point on the Nile River and was a major trading hub for goods from all over the Mediterranean region.

Historians estimate that Naucratis was founded in the 6th century BC and thrived from then until the 3rd century BC. It was a major center for the production and trade of pottery, especially Attic black-figure and red-figure vases. These vases were exported to other parts of the Mediterranean region, including the Italian cities.

The port of Naucratis was located at the mouth of the Nile River, about 250 kilometers north of Alexandria. It was connected to Alexandria by a canal, which was constructed to facilitate trade and navigation. The port was also connected to the Nile River by a system of canals and docks, which allowed ships to enter and leave the port easily.

In addition to pottery, Naucratis was also a major center for the production of other goods, including cloth, wine, and olive oil. The port was known for its fine temples and luxurious homes, which were inhabited by wealthy merchants and traders.

The port of Naucratis was also a major center for the production of porcelain and other fine ceramics. These ceramics were exported to other parts of the Mediterranean region and were highly prized for their quality and beauty.

Despite its wealth and prosperity, Naucratis was destroyed by a series of earthquakes and flooding in the 3rd century BC. The port was eventually abandoned and fell into ruins, leaving behind a rich legacy of art and culture.

NAUPLIA.

Third Messenian War, n. c. 455; and during the Peloponnesian War it was the head-quarters of the Athenians in all their operations in Western Greece. (Paus. iv. 24. § 7; Thuc. i. 103, ii. 83, seq.) After the battle of Aegospotami the Messenians were expelled from Naupactus, and the Locrians regained possession of the town. (Paus. x. 38. § 10.) It afterwards passed into the hands of the Achaeans, from whom, however, it was wrested by Eumenes (Diod. xx. 75.) Philip gave it to the Aetolians (Strab. ix. p. 427; Dem. Phil. iii. p. 120), and hence it is frequently called a town of Aetolia. (Sylax, p. 14; Mele, ii. 3; Plin. iv. 2. s. 3.) The Aetolians vigorously defended Naupactus against the Romans for two months in b. c. 191. (Liv. xxxvi. 30, seq.; Polyb. v. 103.) Ptolemy (ii. 15. § 3) calls it a town of the Locris Odae, to which it must therefore have been assigned by the Romans after Philip's time.

Pausanias saw at Naupactus a temple of Poseidon near the sea, a temple of Artemis, a cave sacred to Aphrodite, and the ruins of a temple of Asclepius (x. 38. §§ 12, 13). Naupactus is mentioned by Hierocles (p. 643); but it was destroyed by an earthquake in the reign of Justinian. (Procop. B. Goth. iv. 25.) The situation and present appearance of the town are thus described by Leake:—"The fortress and town occupy the south-eastern and southern sides of a hill, which is one of the roots of Mount Erymanth, and extends to the sea. The place is fortified in the manner which was common among the ancients in positions similar to that of Epaktos,—that is to say, it occupies a triangular slope with a citadel at the apex, and one or more cross walls on the slope, dividing it into subordinate enclosures. At Epaktos there are no less than five enclosures between the summit and the sea, with gates of communication from the one to the other, and a side gate on the west leading out of the fortress from the second enclosure on the descent. It is not improbable that the modern walls follow exactly the ancient plan of the fortress, for in many parts they stand upon Hellenic foundations, and even retain large pieces of the ancient masonry amidst the modern work. The present town occupies only the lowest enclosure; in the middle of which is the small harbour which made so great a figure in ancient history: it is now choked with rubbish, and is incapable of receiving even the larger sort of boats which navigate the gulf." (Leake, Morea, vol. ii. p. 608.)

NAUPLIA (Ναυπλία), a rock above Delphi. (Delf., p. 764, a.)

NAUPLIA (ναυπλία: Eik. Ναυπλίας), the port of Argos, was situated upon a rocky peninsula, connected with the mainland by a narrow isthmus. It was a very ancient place, and is said to have derived its name from Nauplis, the son of Poseidon and Amyonne, and the father of Palmacedes, though it more probably owes its name, as Strabo has observed, to its harbour (κατά τόν ταύτα τομην ἐπαισθάνεται. Strab. viii. p. 368; Paus. ii. 38. § 2.) Pausanias tells us that the Nauplians were Egyptians belonging to the colony which Darnans brought to Argos (iv. 33. § 2); and from the position of their city upon a promontory running out into the sea, which is quite different from the site of the earlier Grecian cities, it is not improbable that it was originally a settlement made by strangers from the East. Nauplia was at first independent of Argos, and a member of the maritime confederacy which held its meetings in the island of Calaurea. (Strab. viii. p. 374.) About the time of the Second Messenian War, it was conquered by the Argives; and the Lacedaemonians gave to its expelled citizens the town of Methone in Messenia, where they were compelled to reside even after the restoration of the Messenian state by Epaminondas. (Paus. iv. 24. § 4, iv. 27. § 8, iv. 35. § 2.) Argos now took the place of Nauplia in the Calaurean confederacy; and from this time Nauplia appears in history only as the seaport of Argos (ναυπλίας Λυμνη, Eurip. Ort. 767; τιμίους Ναυπλίου, Elect. 451). As such it is mentioned by Strabo (i. c.), but in the time of Pausanias the place was deserted. Pausanias noticed the ruins of the walls of a temple of Poseidon, certain forts, and a fountain named Caunthus, by washing in which Hera was said to have renewed her virginity every year. (Paus. ii. 38. § 2.)

In the middle ages Nauplia was called τὸ Ναυπλιόν, τὸ Ἀμυντιόν, or τὸ Ἀμυντία, but has now resumed its ancient name. It became a place of considerable importance in the middle ages, and has continued so down to the present day. In the time of the Crusades it first emerges from obscurity. In 1205 it was taken by the Franks, and became the capital of a small duchy, which commanded the plain of Argos. Towards the end of the 14th century it came into the hands of the Venetians, who regarded it as one of their most important places in the Levant, and who successfully defended it both against the emperor Michael Palaeologus and Sultan Bayezid. They ceded it to the Turks in 1540, but wrested it from them again in 1636, when they constructed the strong fortifications on Mt. Palaminthi. This fortress, although reckoned impregnable, was stormed by the Turks in 1715, in whose hands it remained till the outbreak of the war of Grecian independence. It then became the seat of the Greek government, and continued such, till the king of Greece removed his residence to Athens in 1804.

The modern town is described by a recent observer as having more the air of a real town than any place now existing in Greece under that title; having continuous lines of houses and streets, and offering, upon the whole, much the appearance of a second-rate Italian seaport. It is built on the peninsula; and some remains of the Hellenic fortifications may be seen in the site of the walls of Fort Iakalé, which is the lower citadel of the town, and occupies the site of the ancient Acropolis. The upper citadel, called Palaminthi (Palamidi), situated upon a steep and lofty mountain, and is one of the strongest fortresses in Europe. Although its name is not mentioned by any ancient writer, there can be little doubt, from the connection of Palamides with the ancient town, that this was the appellation of the hill in ancient times. (Leake, Morca, vol. ii. p. 356, Peloponnesier, p. 252; Mure, Tour in Greece, vol. ii. p. 187; Böblay, Recherches, etc. p. 50; Curtius, Peloponnesos, vol. ii. p. 389.)

NAUPORTUS (Ναυπόρτος). 1. (Laupbach), a small but navigable river in the south-west of Pannonia, flowing by the town of Naupactus, and emptying itself into the Savus a little below Aeonia. (Strab. iv. p. 207, comp vii. p. 314, where see Naupontus; Plin. iii. 23.)

2. A town in the south-west of Pannonia, on the small river of the same name, was an ancient and once flourishing commercial town of the Tauresil, which carried on considerable commerce with Aquileia. (Strab. vii. p. 514, Tac. Ann. i. 10; Plioii. iii. 22; Vell. Paterc. ii. 110.) But after the

DD 2
NAXOS.

NAUSTALO, a place on the south coast of Gallia, west of the Rhodanes, mentioned in the *Ora Maritima* of Avienus (v. 613).

"Tu in Musa vixis, oppidumque Naustalo Et urbem."

The name Naustalo looks like Greek, and if it is genuine, it may be the name of some Greek settlement along this coast. Nothing can be determined as to the site of Naustalo further than what Ueber says (Gellius, p. 412): it is somewhere between Chorax and Libyae.

[G. L.]

NAUSTATIMUS (Naustratimus), a port-town on the Euxine, in the western part of Pontus, on a salt lake connected with the sea, and 90 stadia to the east of the river Halys. (Arrian, Peripil. p. 16.

Tab. Peut., where it is erroneously called Nautazato.) The Peripatus of the Anonymous places it only 40 stadia east of the mouth of the Halys.

Curt. Halicarn. (Roscher. i. p. 295), who has compared the salt lake with the modern Hourmat Goliad, holds the remains of Naustatimus have been found.

[1. S.]

NAUSTATIMUS (Naustratimus), an abode on the coast of Cynoeides, 100 stadia from Apollonia, C. i. 415; Strab. viii. p. 838; viii. p. 4. § 5; Pomp. Meta. i. 8. § 2.) It is identified with El-Abid, which Besshy (*Exped. to the West Coast of Africa*, p. 475) describes as a point on the mainland on which little ships might find shelter. Two remains which have been found there have been identified with the places of *El-Beid* and *El-Abyad.*

[A. B. J.]

NAUTACA (Nauteaca, Arrian, Anab. iii. 28, 31, 18), a town of Sardis, in the neighbourhood of the Oxus (Jenom), on its eastern bank. It has been identified by Professor Wilson that it may be the *Nautesuba.* (Arrian, p. 163.)

[V.]

NAUXOS (Naxios, Naos): Eth. Naos; Capo Xaou. On an island of Sicily, in the E. coast of the island between Catana and Messana. It was founded on a low point of land at the mouth of the Acaces (Mussone), and at the foot of the hill which was afterwards built the city of Tauromene.

All antiquers write in agreement.

In the age of Athenian power (in the 5th century B.C.) it was the nest of all the Greek colonists in Sicily; it was the chief city of the colony before Syracuse, or a little after it, being a city of colonists from Chama in Phocis, with whom there was mingled, according to Ephorus, a certain number of Leucanians. This was the name transferred to Tauromene, or Tauromenion, the place of the colony and the seats of the city, as an Athenian by birth; but Tauromenion takes no notice of this, and describes the city as a purely Chalcidian colony; and it seems certain that in later times it was seriously so regarded. (Thuc. vi. 3; Por. ap. Strab. vi. p. 267; Strab. vii. p. 270; 277; Diod. xiv. 88. Concerning the date of its foundation, see Clinton, F. H. vol. i. p. 164; Euseb. Chron. at vi. 11. 1.)

The memory of Naxos as the last of all the Greek settlements in Sicily was preserved by the dedication of an altar outside the town to Apollo Archegetes, the divine patron under whose authority the colony had sailed; and it was a custom (still retained long after the destruction of Naxos itself) that all Theoroi or envoys proceeding on sacred missions to Greece, or returning therefrom, should offer sacrifice on this altar. (Thuc. l. c.; Appian, B. C. v. 109.) It is singular that none of the writers above cited allude to the origin of the name of Naxos; but there can be little doubt that this was derived, as stated by Hellenicus (ap. Steph. B. s. v. Xaouo), from the presence among the original settlers of a body of colonists from the island of that name.

The new colony must have been specially joined by fresh settlers from Greece, as within six years after its first establishment the Chalcidians at Naxos were able to send out a fresh colony, which founded the city of Leontini, n. c. 750; and this was speedily followed by the foundation of Catana by Thaulos himself. The latter became the Oecist, or recognised founder, of the former, and Eurethos, probably a Chalcidian citizen, of the latter. (Thuc. l. c.; Syrnkn. Ch. 283-286; Strab. vi. p. 268.) Strabo and Simeon Chius both represent Zanze also as a colony from Naxos, but no allusion to this is found in Thucydides. But, as it was certainly a Chalcidian colony, it is probable that some settlers from Naxos joined those from the parent country. (Strab. vi. p. 268; Syrnyn. Ch. 285; Thuc. vi. 4.) Callicleus also, a citizen of uncertain site, and which ceased to exist at an early period, is stated to have been a colony of Naxos. (Strab. vi. p. 272; Syrnyn. Ch. l. c.) But notwithstanding these evidences of its early prosperity, we have very little information as to the early history of Naxos; and the first facts transmitted to us concerning it relate to disasters that it sustained. Thus Herodotus tells us that it was one of the cities which was besieged and taken by Hippocrates, despot of Gela, about n. c. 495-491 (Herod. vii. 154); and his expressions would lead us to infer that it was held by Catana under permanent possession. It appears to have afterwards successively passed under the authority of Gela of Syracuse and his brother Hieron, as we find it subject to the latter in B. C. 476. At that time Hieron, with a view to strengthen his own power, removed the inhabitants of Naxos at the same time with those of Catana, and settled them together at Leontini, while he repeopled the two cities with fresh colonists from other quarters (Diod. xi. 49). The name of Naxos is not specifically mentioned during the revolutions that ensued in Sicily after the death of Hieron; but there seems no doubt that the city was restored to the old Chalcidian citizens at the same time as these were reinstated at Catana, B. C. 106 (Id. xi. 76); and hence we find, during the ensuing period, the three Chalcidian cities, Naxos, Leontini, and Catana, generally united by the bonds of amity, and maintaining a close alliance, as opposed to Syracuse and the other Doric cities of Sicily, (Id. xii. 56, xiv. 14; Thuc. iii. 86, iv. 23.) Thus, in B. C. 427, when the Leon- tinians were pressed by their neighbours of Syracuse, their Chalcidian brethren afforded them all the assistance in their power (Thuc. iii. 86); and when the first Athenian expedition arrived in Sicily under Lichas and Characodes, the Naxians immediately joined their alliance. With them, as well as with the Rhegians on the opposite side of the straits, it is
probable that enmity to their neighbours at Messana was a strong motive in inducing them to join the Athenians; and during the hostilities that ensued, the Messanians having on one occasion, in B.C. 425, made a sudden attack upon Naxos both by land and sea, the Naxians vigorously repulsed them, and in their turn inflicted heavy loss on the assailants. (Id. iv. 23.)

On occasion of the great Athenian expedition to Sicily (B.C. 415), the Naxians from the first espoused their alliance, even while their Lindian cities of Rhegium and Catana held aloof and not only furnished them with supplies, but received them freely into their city (Diod. xiii. 4; Thuc. vi. 50). Hence it was at Naxos that the Athenian fleet first touched after crossing the straits; and at a later period the Naxians and Catanaeans are enumerated by Thucydides as the only Greek cities in Sicily which sided with the Athenians. (Thuc. vii. 57.) After the failure of this expedition the Chalcidice cities were naturally involved for a time in hostilities with Syracuse; but these were suspended in B.C. 409, by which time they seemed to have been all the Greek cities alike from the Carthaginians. (Diod. xiii. 56.) Their position on this occasion preserved the Naxians from the fate which befall Agrigentum, Gela, and Camarina; but they did not long enjoy this immunity. In B.C. 403, Dionysius of Syracuse, deeming himself secure from the power of Carthage as well as from domestic sedition, determined to turn his arms against the Chalcidice cities of Sicily; and having made himself master of Naxos by the treachery of their general Procles, he sold all the inhabitants as slaves and destroyed both the walls and buildings of the city, while he bestowed its territory upon his neighbouring Siculi. (Diod. xiv. 1, 15, 66, 68.)

It is certain that Naxos never recovered this blow, nor rose again to be a place of any consideration; but it is not easy to trace precisely the events which followed. It appears, however, that the Siculi, to whom the Naxian territory was assigned, soon after formed a new settlement on the hill called Mount Tauromenium, which rises immediately above the site of Naxos, and that this gradually grew up into a considerable town, which assumed the name of Tauromenium. (Diod. xiv. 58, 59.) This took place about B.C. 396; and we find the Siculi still in possession of this stronghold some years later. (Id. 88.) Meanwhile the exiled and fugitive inhabitants of Naxos and Catana formed, as usual in such cases, a considerable body, who as far as possible kept together. An attempt was made in B.C. 394 by the Rheginans to settle them again in a body at Myhse, but without success; for they were speedily expelled by the Messanians, and from this time appear to have been dispersed in various parts of Sicily. (Diod. xiv. 87.) At length, in B.C. 345, Andromachus, the father of the historian Timaeus, is said to have collected together again the Naxian exiles from all parts of the island, and established them on the hill of Tauromenium, which thus rose to be a Greek city, and became the successor of the ancient Naxos. (Diod. xvi. 7.) Hence Pliny speaks of Tauromenium as having been formerly called Naxos, an expression which is not strictly correct. (Plin. iii. 8. s. 14.)

The fortunes of the new city, which quickly rose to be a place of importance, are related in the article Tauromenium. The site of Naxos itself seems to have been never again inhabited; but the altar and shrine of Apollo Archgetes continued to mark the spot where it had stood, and are mentioned in the war between Octavian and Sextus Pompey in Sicily, B.C. 36. (Appian, B. C. v. 109.)

There are no remains of the ancient city now extant, but the site is clearly marked. It occupied a low but rocky headland, now called the Capo di Schisò, formed by an ancient stream of lava, immediately to the N. of the Alecantara, one of the most considerable streams in this part of Sicily. A small bay to the N. affords good anchorage, and separates it from the foot of the bold and lofty hill, still occupied by the town of Tauromenium; but the situation was not one which enjoyed any peculiar natural advantages.

The coins of Naxos, which are of fine workmanship, may almost all be referred to the period from B.C. 460 to B.C. 403, which was probably the most flourishing in the history of the city. [E. H. B.]

COIN OF NAXOS IN SICILY.

NAXOS or NAXUS (Ναξος, Suid. s. c.), a town of Crete, according to the Scholast (ap Pind. Isthm. vi. 107) celebrated for its whetstones. Hillig (Kreta, vol. i. p. 417) considers the existence of this city very problematical. The islands Crete and Naxos were famed for their whetstones (Plin. xxxvi. 22; comp. xvii. 28), and hence the confusion. In Mr. Pasley’s map the site of Naxos is marked near Spina Longa. [E. B. J.]

NAXOS or NAXUS (Ναξος; Eth. Ναξος; Ναξία), the largest and most fertile of the Cyclades, situated in the middle of the Aegean sea, about halfway between the coasts of Greece and those of Asia Minor. It lies east of Paros, from which it is separated by a channel about 6 miles wide. It is described by Pliney (iv. 12. s. 22) as 75 Roman miles in circumference. It is about 19 miles in length, and 15 in breadth in its widest part. It bore several other names in ancient times. It was called Strongyle (Στρογγυλη) from its round shape, Dionysias (Διονυσιας) from its excellent wine and its consequent connection with the worship of Dionysus, and the Smaller Sicily (μικρά Σικυωνία) from the fertility of its soil (Flin. iv. 12. s. 22; Diod. v. 50—52); but the poets frequently give it the name of Dia (Δήα) (comp. Ov. Met. ii. 690, viii. 174.). It is said to have been originally inhabited by Thracians, and then by Carians, and to have derived its name from Naxos, the Carian chieftown. (Diod. v. 50, 51; Steph. B. s. v. Ναξος.) In the historical ages it was colonised by Ionians from Attica (Herod. vii. 46), and in consequence of its position, size, and fertility, it became the most powerful of the Cyclades. The government of Naxos was originally an oligarchy, but was overthrown by Lydadamis, who made himself tyrant of the island. (Aristot. op. Ath. viii. 348.) Lydadamis, however, appears not to have retained his power long, for we find him assisting Pelastratus in his third restoration to Athens, and the latter in return subduing Naxos and committing the tyranny to Lydadamis. (Herod. i. 61, 64; comp. Aristot. Pol. v. 3.) But new revolutions followed. The
Aristotelian party appear to have again got the upper hand; but they were after a short time expelled by the people, and applied for assistance to Aristogoras of Miletus. The Persians, at the persuasion of Aristogoras, sent a large force in B.C. 501 to subdue Naxos: the expedition proved a failure; and Aristogoras, fearing the anger of the Persian court, persuaded the Ionians to revolt from the great king. (Herod. v. 30—34.) At this period the Naxians had 8000 hoplites, many ships of war, and numerous slaves. (Herod. v. 30, 31.) From the 8000 hoplites we may conclude that the free population amounted to 50,000 souls, to which number we may add at least three times as many slaves. In B.C. 490 the Persians under Datis and Artaphernes landed upon the island, and in revenge for their former failure had it waste with fire and sword. Most of the inhabitants took refuge in the mountains, but those who remained were reduced to slavery, and their city set on fire. (Herod. v. 96.) Naxos became a dependency of Persia; but their four ships, which were sent to the Persian fleet, deserted the latter and fought on the side of Grecian independence at the battle of Salamis. (Herod. viii. 46.) They also took part in the battle of Plateae. (Diod. v. 52.) After the Persian wars Naxos became a member of the confederacy of Delos under the headship of Athens; but about B.C. 471 it revolted, and was subdued by the Athenians, who reduced the Naxians to the condition of subjects, and established 500 Athenian cleruchs in the island. (Thuc. i. 98, 137; Plut. Periyl. 11; Paus. i. 27, § 6.) From this time Naxos is seldom mentioned in ancient history. It was off Naxos that Chabrias gained a signal victory over the Spartan fleet. (Xen. art. v. 13.) His fame rested upon the island under the empire of the sea. (Xen. Hell. v. 4, § 60, seq.; Diod. xxv. 34.) During the civil wars of Rome Naxos was for a short time subject to the Rhodians. (Appian, B. C. v. 7.) After the capture of Constantinople by the Latins in 1204, the Aegean sea fell to the lot of the Venetians; and Marco Sanudo, in 1207, took possession of Naxos, and founded there a powerful state under the title of the Duchy of the Aegean Sea (Dux Adriani Pelagi). He built the large castle above the town, now called the castle of the Turks, and fortified it with walls. His dynasty ruled over the greater part of the Cyclades for 360 years, and was at length overthrown by the Turks in 1566. (Fichard, Medieval Greece, p. 320, seq.) Naxos now belongs to the new kingdom of Greece. Its population does not exceed 12,000, and of these 300 or 400 are Latins, the descendants of the Venetian settlers, many of whom bear the names of the noblest families of Venice.

The ancient capital of the island, also called Naxos, was situated upon the SW. coast. Its site is occupied by the modern capital. On a small detached rock, called Puliti, about 50 yards in front of the harbour, are the ruins of a temple, which tradition calls a temple of Dionysus. The western part still remains, consisting of three huge marble steps, two peripteral and one laid across, and is of elegant, though simple workmanship. A drawing of it is given by Tournefort. Stephanus B. mentions another town in Naxos called Tragia or Tragaca (a. a. T颗να), but which Ross believes to be the island Milotarsa, between Naxos and Donousa. Aristotle also (ap. Athen. viii. p. 348) mentions a place, named Lestadae (Λεστάδαι), of which nothing further is known.

In the centre of the island a mountain, now called Zia, rises to the height of 3000 feet. From its summit 22 islands may be counted; and in the distance may be seen the outline of the mountains of Asia Minor. This mountain appears to have been called Drinus (Δρινός) in antiquity (Diod. v. 51); its modern name is probably derived from the ancient name of the island (Dia). On it there is a curious Helicon tower; and near the bottom, on the road towards Piloli, an inscription, μονος Δωδιος Μητραπολος. Another mountain is called Κυριαυνος (το Κύριαύνο), which is evidently an ancient name, and reminds one of the Naxian nymph Coronis, who brought up the young Dionysus (Diod. v. 52). The mountains of Naxos consist partly of granite and partly of marble, the latter being scarcely inferior to that of Paros. Good whetstones were also obtained from Naxos. (Hesych. s. v. Ναξία λιθος; Plin. xxxvi. 6, s. 9.) There are several streams in the island, one of which in ancient times was called Biblus (Βίβλος, Steph. B. s. v. Βίβλος). The fertility of Naxos has been equally celebrated in ancient and modern times. Herodotus says that it excelled all other islands in prosperity (v. 28). It produces in abundance corn, oil, wine, and fruit of the finest description. Corn, however, is the excellence of its wine Naxos was celebrated in the legends of Dionysus, particularly those relating to Ariadne. [See Dict. of Biog. art. Ariadne.] Moreover, the priest of Dionysus gave his name to the year, like the Archon Eponymus at Athens. (Böckh, Inscr. 2263.) The finest wine of Naxos is now produced at a place called Aperúthos. It is a superior white wine, and is celebrated in the islands of the Aegean under the name of Bacchus-Wine.

The plant which produces ladanum is found at Naxos; and in Theronet's time it was collected from the beard of goats, in the manner described by Herodotus (iii. 112). Emery is also found there, particularly in the southern part of the island, and forms an article of export. The goats of Naxos were celebrated in antiquity. ( Athen. xii. p. 540.) One of the most remarkable curiosities in the island is an unfinished colossal figure, still lying in an ancient marble quarry near the northern extremity of the island. It is about 24 feet in length, and has always been called by the inhabitants a figure of Apollo. On the side of the hill, at the distance of five minutes from the statue, we still find the inscription, χρυσός χειρος ιερος Ἀπόλλωνος, Ross conjectures that the statue may have been intended as a dedicatory offering to Delos. (Theronet, Travels, p. 103, Engl. trans.; Tournefort, Voyage, vol. i. p. 163, Engl. trans.; Leake, Northern Greece, vol. iii. p. 22; Ross, Reisen auf den Griech. Inseln, vol. i. p. 22; seq.; Grütter, Die Insel Naxos, Hal. 1833—Curtius, Naxos, Berl. 1846.)

COIN OF THE ISLAND OF NAXOS.

NAXI A'NA (Ναξιανα, Pol. v. 13, § 12), a city on the N. bank of the river Araxes, now Nach'-dyer'is, a city of some importance in Armenian his-
NAZARETH.

NAEAE PATRAE. [ΠΥΤΑΤΑ]

NAEAETHUS (Ναίαθος, Strab.; Ναυλθος, Theocr.; Ναυλθοσ, Lycochr.), a river on the E. coast of Bruttium, falling into the gulf of Tarantum about 10 miles N. of Crotone, still called the Nito or Nito. Strabo derives its name from the circumstances that here there were Thracian women who were conducted as captives by a Greek fleet, set fire to the ships of the victors, and thus compelled them to settle in this part of Italy. (Strab. vi. p. 262; Plin. iii. 11. s. 15.) It is well known that the same legend is transferred by other writers to many different localities, and appears to have been one of those which greatly travelled along the coast of Italy, in the same manner as the myths relating to Aeneas. The form of the name Naeathus employed by Lycochrorn (Aez. 921) points evidently to the same fanciful derivation (from αἴα and αἴαω). Theorertus alludes to the rich and varied herbage which grew on its banks (Iud. iv. 24), and for which, according to a modern traveller, it is still remarkable. (Swinburne, Travels, vol. i. p. 313.)

NEANDRYNTHUS, NEANDRION, NEANDRUS (Νέανδρυς, Ναένδρου, Νέανδρος; Εἴθ. Νεάνδρυς or Νεάνδρος), a town in Traus, probably founded by Aeolians; in the time of Strabo it had disappeared, and in its place there was the vast plain and the small town of Neapolis, the modern town of Enna. Strabo might perhaps be supposed to mistake in placing it in the interior above Hannaxus; but he is so explicit in his description, marking its distance from New Him in 130 stadia, that it is scarcely possible to conceive him to be in the wrong. Hence Leake (Asia Minor, p. 274), adopting him as his guide, seeks the site of Neandrythos in the lower valley of the Scamander, near the modern town of Enne. (L. S.)

NEANBRIA. [ΝΑΙ.]

NEANISSUS (Νεάνισσος or Νειάσσος), a town in Armenia Minor, on the south-east of Pherae, and between this latter town and Diceareia. (Ptol. v. 6. § 14.) No further particulars are known about the place. (L. S.)

NEAPOLIS, i. e. "the New City." 1. In Europe. 1. (Ναύπολις; Εἴθ. Νεάπολις, and Stephan. B.; but coins have Νεάπολις, Neapolis; in French and English Naples), one of the most considerable cities of Campania, situated on the northern shore of the gulf called the Crater or Sinus Cumanus, which now derives from it the name of Bay of Naples. All ancient writers agree in representing it as a Greek city, and a colony of the neighbouring Cumeans; but the circumstances of its foundation are very obscurely related. Such was China tells as it was founded in pursuance of an oracle; and Strabo calls it a Cumean colony, but adds that it subsequently received another additional body of Chalcidean and Athenian colonists, with some of the settlers from the neighbouring islands of the Pithekuses, and was on this account called Neapolis, or the New City. (Strab. v. p. 246; Scuryn. Ch. 253; Vell. Pat. i. 4.) Its Chalcideic or Kubecan origin is repeatedly alluded to by Statius, who was himself a native of the city (Silv. 1. 3. 263, ii. 9. 94, iii. 5. 12; but these expressions probably refer to its being a colony from the Chalcidean city of Cumae. The name itself sufficiently points to the fact that it was
a more recent settlement than some other previously existing in the same neighbourhood; and that this did not refer merely to the parent city of Cumae, is proved by the fact that we find mention (though only in a comparatively late period) of a place called Palaeopolis or "the Old City." (Liv. viii. 22.) But the relations between the two are very obscure. No Greek author mentions Palaeopolis, of the existence of which we should be ignorant were it not for Livy, who tells us that it was not far from the site of Neapolis. From the passage of Strabo above cited, it seems clear that this was the original settlement of the Cumaeans colonists; and that the name of Neapolis was given to the later colony. The legends (though not signified until after the foundation of the new city) appears to have been Parthenope (Plin. iii. 5. s. 9; Philargyr. l.c.), a name which is used by the Roman poets as a poetical appellation of Neapolis. (Virg. Georg. iv. 564; Ovid. Met. xv. 711, &c.) Steph. of Byzantium notices Parthenope as a city of Ociia (the ancient designation of Campania; but it is singular enough that both he and Strabo call it a colony of the Eubolians, without mentioning either the Chalcidians or Cumaeans). (Steph. B. s. c. Strab. xiv. p. 634.) On the other hand, Lygourion alludes to the place where the Siren Parthenope was cast on shore, by the name of Palerum (Φαλαιρον τηρισ, Lygour. Ach. 717); and Steph. also says that Palerum was a city of Ociia, the same which was afterwards called Neapolis. (Steph. B. s. c. Φαλαιρον.) The name of Palerum has a Tyrrhenian or Pelasgic aspect; and it is not improbale, as suggested by Aeben (Mit. l.c. p. 110), that there was originally a Tyrrhenian or Pelasgic settlement on the same or a similar promontory opposite the extirpation of the Siren Parthenope with the site or neighbourhood of Neapolis was well established, and universally received; hence Dionysus designates the city as the abode of Parthenope; and Strabo tells us that even in his time her tomb was still shown there, and games celebrated in her honour. (Strab. v. p. 246; Dionys. Per. 358; Eustath. ad loc.; Plin. iii. 5. s. 9.)

The site of the original settlement, or Old City (Palaeopolis), is nowhere indicated, but it seems most probable that it stood on the hill of Portuslyrus or Pontypa, a long ridge of moderate elevation, which separates the bay of Pozzuoli or Baiae from that of Neapolis itself. The new town, on the contrary, adjoined the river Seleucus, a small stream still called the Scheto, and near, therefore, had occupied the same site with the more easterly portion of the modern city of Naples. (Aeben, Mitt. Italian, p. 111; Nobili, vol. ii. p. 175.) The latter city seems rapidly to have grown to great prosperity, and, in great measure, eclipsed the old settlement; but it is clear from Livy that Palaeopolis continued to subsist by the side of the new colony, until they both fell under the dominion of the Samnites. It does not appear that either the old or the new city was reduced by force of arms by the Campanian conquerors; they seem rather to have entered into a compromise with them, and admitted a body of the Campanians to the rights of citizenship, as well as to a share of the government. (Strab. v. p. 246.) But notwithstanding this, the Greek element still greatly predominated; and both Palaeopolis and Neapolis were, according to Livy, completely Greek cities at the time when they first came into contact with Rome, nearly a century after the conquest of Campania by the Samnites. (Liv. viii. 22.)

On that occasion the Palaeopolitans, who had bad the temerity to provoke the hostility of Rome by insurrection, were vividly punished after the manner of the Samnites, whom Hannibal had submitted to, and who submitted to the will of the Roman Senate. (Liv. xxiii. 22.) The Neapolitans were not ordered to pay a tribute, but only to acknowledge their dependency upon Rome, either as an ally (Liv. xxiii. 22, 25, 26). The Palaeopolitans would appear to have followed their example without offering any resistance; and this circumstance may explain the fact that while Publius Syrus celebrated a triumph over the Palaeopolitans (Liv. viii. 26: Fast. Capt.), the Neapolitans were admitted to peace on favourable terms, and their liberties secured by a treaty (Iulius Neapolitanum, Liv. l.c.). From this time all mention of Palaeopolis disappears from history: Livy tells us that the chief authority, which appears to have been previously enjoyed by the older city, was now transferred to Neapolis; and it is probable that the former town sank gradually into insignificance, while the community or "populus" was merged in that of Neapolis. So completely was this the case, that Dionysius, in relating the commencement of this very war, speaks only of the Neapolitans (Dionys. Exc. Leg. pp. 2314—2319); while Livy, evidently following the language of the older authors, distinguishes them from the Palaeopolitans, though he speaks of them as forming only one community ("dubius urbibus populus idem habitabit," Liv. viii. 22.)

From this time Neapolis became, in fact, a mere dependency of Rome, though retaining the honourable title of an allied state (foedera civitates), and enjoying the protection of the powerful republic, with but a small share of the burdens usually thrown upon its dependent allies. So favourable, indeed, was the condition of the Neapolitans under their treaty that, at a later period, when all the cities of Italy offered themselves to Hannibal for the purpose of forming a fifth Italian Republic, the Heraclean, as the Knidian, were long unwilling to accept the proffered boon. (Cic. pro Balb. 8, 24.) Hence it is no wonder that they continued throughout faithful to the Roman alliance, though more than once threatened by hostile armies. In B. C. 280, Pyrrhus approached the walls of Neapolis, with the view of making himself master of the city, but withdrew without accomplishing his purpose (Zonar. viii. 4); and in the Second Punic War, Hannibal, though he repeatedly ravaged its territory, was deterred by the strength of its fortifications from assailing the city itself. (Liv. xxiii. 1, 14, 15, xxiv. 13.) Like the other maritime allies of Rome, the Neapolitans continued to furnish ships and sailors for the Roman
Though Neapolis thus passed gradually into the condition of a mere provincial town of the Roman state, and, after the passing of the Lex Julia, became an ordinary municipal town (Cic. pro Balb. 8, ad Fam. xiii. 30), it continued to be a flourishing and populous place, and retained, to a far greater extent than any other city in this part of Italy, its Greek culture and institutions, while its Greek was still almost exclusively Greek. Thus Strabo tells us that, in his time, though they had become Roman citizens, they still had their gymnasia and quinquennial games, with contests of music and gymnastic exercises after the Greek fashion; and retained the division into Phratries, a circumstance attested also by inscriptions still extant. (Strab. v. p. 246; Var. L. L. v. 85; Bocch., C. I. vol. iii. p. 715.) Before the close of the Republic, the increasing love of Greek manners and literature among many of the upper class among the Romans to resort to Neapolis for education, or cultivation of these pursuits; while many more were attracted by the delightful and luxurious climate or the surpassing beauty of the scenery. It possessed also hot springs, similar to those of Baiae, though inferior in number (Strab. L. c.); and all these causes combined to render it one of the favourite resorts of the Roman nobility. Its prosperity received a rude shock, in B. C. 82, during the Civil War of Marius and Sulla, when a body of the partisans of the latter, having been permitted by treachery into the city, made a general massacre of the inhabitants (Appian, B. c. i. 89); but it seems to have quickly recovered this blow, as it was certainly a flourishing city in the time of Cicero, and continued such throughout the period of the Roman Empire.

It is not improbable that it received a body of fresh colonists under Sulla, but certainly did not then assume the title of a Colonia, as it is repeatedly alluded to by Cicero as a Municipium. (Cic. ad Fam. xiii. 46; Plin. H. N. xxx. 13.) Under the Empire we find it in inscriptions bearing the title of a Colonia (Gruter, Insr. p. 110. S. p. 373. 2); but there is much doubt as to the period when it obtained that rank. It is, however, noticed as such by Petronius, and would seem to have first received a colony under Claudius, to which subsequent additions were made under Titus and the Antonines. (Lib. Colon. p. 233; Zumpt, de Colon. pp. 259, 384; Petron. Satyr. 44, 76; Bocch., C. I. vol. iii. pp. 717, 718.)

Besides its immediate territory, Neapolis had formerly possessed the two important islands of Caprea and Aenaria (Iscchia); but the latter had been wrested from it by force of arms, probably at the period of its first war with Rome. Capreae, on the other hand, continued subject to Neapolis without interruption till the time of Augustus, who, having taken a fancy to the island, annexed it to the imperial domain, giving up to the Neapolitans in exchange the richer and more important island of Aenaria. (Suet. Aug. 42; Dion. Cass. iv. 43.)

The same attractions which had rendered Neapolis a favourite residence of wealthy Romans under the Republic operated with still increased force under the Empire. Its gymnasia and public games continued to be still celebrated, and the emperors themselves condescended to preside at them. (Suet. Aug. 58, Ner. 40; Vell. Pat. ii. 123; Dion. Cass. iv. 26.) Its strong tincture of Greek manners, which caused it to be frequently distinguished as "the Greek city," attracted thither many grammarians and others; so that it came to acquire a reputation for learning, and is called by Martial and Columella "docta Parthenope" (Martial, v. 78. 14; Colum., x. 134); while its soft and luxurious climate rendered it the favourite resort of the indolent and effeminate. Hence Horace terms it "otiosa Neapolis;" and Ovid, still more strongly, "in otia zatim Parthenopen." (Hor. Epod. 5. 43; Ovid, Met. xv. 711; Stat. Silv. iii. 78—88; Sili. Ital. ii. 31.) The小子 on both sides of it were lined with villas, among which the most celebrated was that of Velinus Pollio, on the ridge of hill between Neapolis and Puteoli, to which he had given the name of Pansylpia (Πανσυλπία); an appellation afterwards extended to the whole hill on which it stood, and which retains to the present day the name of Monte Posilipo. (Dion Cass. liv. 29; Plin. iii. 85. s. 78.) Neapolis was a favourite residence of the emperor Nero, as well as of his predecessor Claudius, and a favourite resort in the theatre there that the former made his first appearance on the stage, before he ventured to do so publicly at Rome. (Tac. Ann. xiv. 10, xv. 33; Dion Cass. ix. 6.) It is well known also that it was for a considerable period the residence of Virgil, who composed, or at least finished, his Georgics there. (Virg. Georg. iv. 564.) Thither, also, his remains were transferred after his death; and his tomb was still extant there in the time of the poets Statius and Silvius Italics, who paid it a visit at the time of the Tragedy in 14 B.C. (Sili. Ital. vi. 6.)

It is certain that Neapolis was at this period a provincial city of the first class; and though we meet with little historical mention of it during the later ages of the Empire, inscriptions sufficiently prove that it retained its ancient reputation and importance. It appears to have escaped the ravages of the Goths and Vandals, which inflicted such severe blows upon the prosperity both of Capua and Nola (Hist. Mis. Coll. xv. p. 553); and under the Gothic king Theodicor, Cassiodorus speaks of it as still possessing a numerous population, and abounding in every kind of delight, both by sea and land. (Cassiod. Var. vi. 23.) In the Gothic wars which followed, it was taken by Belisarius, after a long siege, and a great part of the inhabitants put to the sword, A.D. 556. (Procop. B. G. i. 8—10.) It was retaken by Totila in A.D. 542 (Ib. iii. 6—8), but again recovered by Narses soon after, and continued from this time subject to the supremacy of the Byzantine Empire, as a dependency of the exarchate of Ravenna, but under the government of its own dukes. In the eighth century Paulus Diaconus still speaks of it as one of the "quattuor insulae urbes" of Campania. (Hist. Lang. ii. 17.) It was about this period that it threw off the yoke of the Byzantine emperors, and continued to enjoy a state of virtual independence, until it was conquered in A.D. 1140 by the Normans, and became thenceforth the capital of the kingdom of Naples.

It is certain that the ancient city of Neapolis did not occupy nearly so great a space as the modern Naples, which is the largest and most populous city in Italy, and contains above 400,000 inhabitants. It appears to have extended on the E. as far as the river Sebuthus, a small stream still called the Selevo,
though more commonly known as the Fiume della Maddalena, which still forms the extreme limit of the suburbs of Naples on the E. side; from thence it probably extended as far as the mole and old castle, which bound the port on the W. Tinny speaks of the small island which he calls Megarits, and which can be no other than the rock now occupied by the Castel dell' Ovo, as situated between Paestumus and Neapolis (Plien. iii. 6. s. 12); it is therefore clear that the city did not extend so far as this point. Immediately above the ancient portion of the city rises a steep hill, now crowned by the Castle of St. Elmo; and from thence there runs a narrow volcanic ridge, of no great elevation in itself and abrupt, which continues without interruption in a S.W. direction, till it ends in a headland immediately opposite to the island of Nisida. It is the western portion of this ridge which was known in ancient times as the Monu Paestumus, and is still called the Hill of Posilipo. It formed a marked barrier between the immediate environs of Neapolis and those of Puteoli and Baiae, and must have been a great obstacle to the free communication between the two cities; hence a tunnel was opened through the hill for the passage of the highway, which has remained almost intact ever since. This passage, called in ancient times the Crypta Neapolitana, and now known as the Grotta di Posilippo, is a remarkable work of its kind, and has been described by many modern travellers. It is 2244 feet long, and 21 feet broad; its height is unequal, but, towards the entrance, is not less than 70 feet. It is probable, however, that the work has been much enlarged in later times. Seneca, in one of his letters, gives a greatly exaggerated view of its fancied horrors, steep from abruptness and of a frightful darkness (Ep. 57.) Strabo assigns its construction to Coecina, probably the M. Coecinae Nerva, who was superintendent of aqueducts under Tiberius, and who constructed a similar tunnel from the lake Averno to Cumae (Strab. v. p. 245); and there is no reason to doubt this statement, though many Italian antiquaries have maintained that the work must be much more ancient. On the hill immediately above the E. entrance of the grotto is an ancient sepulchre designated by tradition as the tomb of Virgil; and though popular tradition says that it is a very ancient one, there seems in this instance no sufficient reason to reject its testimony. We know, from the grecoe statement of Dionysius, that the poet was buried on the road to Puteoli, within less than two miles from Naples ("via Puteolana intra lapidem immemorem," Donat. Vit. Verg.; Hieron. Chron. ad ol. 190), which agrees well with the site in question, especially if (as is probable) the high-read at that time passed over the hill, and not through the grotto. The argument against the inscription, which inferred, from the description of Statius (Silv. iv. 4. 50—55), that the tomb of Virgil was situated at the foot of Mount Vesuvius, is certainly untenable. (Chlver. Itali. i. 1153; Estace's Classical Tour, vol. ii. pp. 376—380; Jorio, Guida di Pazzolai, pp. 118, &c.)

Near the Capo di Posilippo, as the headland opposite to Nisida is now called, are the extensive ruins of a Roman villa, which are supposed to be those of the celebrated villa of Vettius Pollio, which gave name to the whole hill, and which he bequeathed by his will to Augustus. (Dien d. Cis. iv. 23; Plien. ix. 53. s. 78.) Immediately opposite to the headland, between it and the island of Nisida (Nisio), lie two small inlets, or rather rocks, one of which now serves for the Lazzaretto,—the other, which is uninhabited, is called La Gogola; these are supposed to be the islands called by Statius Lypia and Edpeo. (Stat. Silv. ii. 2. 79, iii. 1. 149.) From their trifling size it is no wonder that they are not noticed by any other author. Recent excavations on the supposed site of the villa of Pollio have brought to light far more extensive remains than were previously known to exist, and which afford a strong illustration of the magnificent scale on which these edifices were constructed. Among the ruins thus brought to light are those of a theatre, the seats of which are cut out of the tufo rock; an Odeon, or theatre for music; a Basilica; besides numerous porticoes and other edifices, and extensive reservoirs for water. But the most remarkable work connected with these remains is a tunnel or gallery pierced through the promontory, which is actually longer than the Grotto di Posilippo. This work appears from an inscription to have been restored by the emperor Honorius; the period of its construction is wholly uncertain. (Bullet. de Inst. Arch. 1841, pp. 147—160; Avellino, Bullet. Arch. 1851.) Many writers have assigned the extensive ruins visible on the hill of Posilippo to a villa of Lucullus; and it is certain that the state and a Neapolitan villa distinct from that at Misenum (Gic. Acad. ii. 3), but its site is nowhere indicated; and the supposition that it was the same which afterwards passed into the hands of Vettius Pollio is not warranted by any ancient authority.

Though the neighbourhood of Naples abounds on all sides in ancient remains, those which are still visible in the city itself are not considerable. Two arches of a Roman theatre in the street called Anti-caglia, a fragment of an aqueduct known by the name of the Porti Rossi, and the remains of a temple dedicated to Castor and Pollux, incorporated into the church of S. Paolo, are all the ancient remains now visible. But the inscriptions which have been discovered on the site, and are for the most part preserved in the museum, are numerous and interesting. They fully confirm the account given by ancient writers of the Greek character so long retained by the city, and notice its division into Phratries, which must have continued at least as late as the reign of Hadrian, since we find one of them named after his favourite Antinonos. Others bore the names of Eumelidae, Eunostidae, &c., the origin of which may possibly be traced back to the first foundation of the Cumaean colony. From some of these inscriptions we learn that the Greek language continued to be used there, even in public documents, as late as the second century after the Christian era. (Boeckh, C. R. vol. iii. pp. 714—750; Mommsen, Inschr. Regn. Nap. pp. 127—131.)

COIN OF NEAPOLIS IN CAMPAVIA.

2. (Napoli), a city of Sardinia, and apparently one of the most considerable places in that island, was situated on the W. coast, at the southern extremity of
NEAPOLIS.

the gulf of Ortisian. The Itineraries place it 60 miles from Soli, and 15 from Othoca (Ortisian). (Plin. Ant. v. 84.) The name would clearly seem to point to a Greek origin, but we have no account of its foundation or history. It is noticed by Pline as one of the most important towns in Sardinia; and its name is found also in Ptolemy and the Itineraries. (Plin. iii. 7. s. 13; Ptol. iii. 3. § 2; Plin. Ant. l. c.; Taba. Petr.; Geogr. Rav. v. 26.) Its ruins are still visible at the mouth of the river Po-

bilia, where that stream forms a great estuary or
delta, called the Steina di Marcelli, and present considerable remains of ancient buildings as well as the vestiges of a Roman road and aqueduct. The spot is marked by an ancient church called Sta Maria di Nuboli. (De la Mara, Voy. en Sar-
daigne, vol. ii. p. 357.)

The Aqua Neapolitanae, mentioned by Ptol-
emy as well as in the Itinerary, which places them at a considerable distance inland, on the road from Othoca to Caralis, are certainly the mineral sources now known as the Bagni di Sardara, on the high-
road from Alghero to Ortisian. (Plin. Ant. p. 82; Ptol. iii. 3. § 7; Geogr. Rav. v. 26; De la Mara, l. c. p. 406.)

3. A city of Apulia, not mentioned by any ancient writer, but the existence of which is attested by its coins. There seems good reason to place it at Polignano, between Barium and Egattia, where numerous relics of antiquity have been discovered (Ranucelli, vol. ii. p. 148—152; Millingen, Numism. de Italie, p. 147.)

4. A town near the lathamus of Pallas, and the E.
contes, between Apbytis and Aegae. (Herod. vi. 123.) In Leake's map it is represented by the modern Polignaro.

5. A town of Macedonia, and the haven of Phil-
ippus, from which it was distant 10 M. P. (Strab. vii.
p. 330; Ptol. iii. 13. § 9; Sceym. 655; Plin. iv. 11: Hieroc.; Procop. Avd. iv. 4; Plin. Hieroc.) It probably was the same place as Datum (Adros), famous for its gold-mines (Herod. i. 75; comp. Bickh., Pub. Econ. of Athens, pp. 828, 238, tr.), and a sepulchre, as (Strab. vii. p. 391) intimates, whence the aqueduct which celebrates Datum for its "good things." (Zenob. Proe. Gracce. Cont. iii. 71; Harcoprat. s. e. Adros.) Scylax (p. 27) does, indeed, distinguish between Neapolis and Datum; but, as he adds that the latter was an Athenian colony, which could not have been true of Datum's original text, has perhaps, corrupt in this place, as in so many others, and his real meaning may have been that Neapolis was a colony which the Athenians had established at Datum. Zenobius (l. c.) and Eustathius (ad Dios. Perieq. 517) both assert that Datum was a colony of Thessalian, which is highly probable, as the Thessians had several colonies on this coast. If Neapolis was a settlement of Athens, its foundation was, it may be inferred, later than that of Ampip-
olis. At the great struggle at Philippi the galleys of Brutus and Cassius were moored off Neapolis. (Appian, B. C. iv. 106; Dion Cass. xlvii. 35.)

It was at Neapolis, now the small Turkish village of Kairabs (Leeke, North. Greece, vol. iii. 150, com., p. 217, 224), that Paul (Acts xvi. 11) landed. The shore of the mainland in this part is low, but the mountains rise to a considerable height behind. Towards the W. of the channel which separates it from Thassos, the coast recedes and forms a bay, within which, on a promontory with a port on each side, the town was situated. (Conybear and Howson, Life and Epist. of St. Paul, vol. i. p. 308.) Traces of paved military roads are still found, as well as remains of a great aqueduct on two tiers of Roman arches, and Latin inscriptions. (Clarke, Trac., vol. viii. p. 49.) For coins of Neapolis, see Eckhel, vol. ii. p. 72; Testa, vol. iii. p. 1. 1149.

COIN OF NEAPOLIS IN MACEDONIA.

NEAPOLIS. II. In Acte. 1. Thessalonica, an important city of Macedonia, was commonly supposed to be identical with the Sichem or Schchem of the Old Testament. Thus Ephasius uses the names as synonomous (in Zuvv. Euv. I)-s Wos niu Wos nol Neapolis, ad. Haer. lib. iii. tom. i. p. 1055, comp. 1068). Eusebius and St. Jerome, however, place Sichem (Xuvia, Xwv, vuvv) in the suburbs of Neapolis (Onomast. s. sv. Terebintum, Sýchemin) and Luz is placed near to, and, according to the former, viii. M. F., according to the latter, iii. M. F., from Neapolis (c. v. Acte, 2), which would imply a considerable interval between the ancient and the modern city. In order to reconcile this discrepancy, Relland suggests that, while the ancient city gradually decayed, the new city was extended by gradual accretion in the opposite direction, so as to widen the interval; and he cites in illustration the parallel case of Urech and Vecheen. (Palaestina, pp. 1004, 1005.) Another ancient name of this city occurs only in one passage of St. John's Gospel (iv. 3), where it is called Sichar (Sx exhib,); for although St. Jerome, in his important reading for Sychar (Epist. Paulae, Ep. xxxvii. Op. tom. iv. p. 676, Quast, in Genes. c. xviii. ver. 22, tom. ii. p. 545), his correction of what he allows was an ancient and common error, even in his age, has no authority in any known codex or version. Another of its ancient names which has exercised the ingenuity of the learned, occurs in Pliny, who reckons among the cities of Samaria, "Neapolis quod antea Mamoritha diebatur" (v. 13), evidently a mistake for Malathrea, which Josephus gives for the native name of Neapolis (B. J. iv. 8, § 2); unless, as Relland conjectures, both readings are to be corrected from coins, which he shrewdly remarks are less liable to corruption than MSS., and which read Moraith (Mophia), which that learned writer takes to be the classical form of the Hebrew word Mereh, which was associated with Sichem, both in the Old Testament and the Rabbinical commentaries. (Gen. xii. 6; Deut. xi. 30; Relland, Discorations Miscell. pars i. pp. 138—140.) The same writer explains the name Sichaer, [S. J.], that is, a name of reproach, contemptuously assigned to the city by the Jews as the seat of error (the Hebrew Mereh, signifying mendacium, falsum), and borrowed from the prophet Habakkuk, where the two words Merech Skler (Mereh, MereX) occur in convenient
NEAPOLIS.

It is frequently mentioned in the history of the earliest patriarchs. It was the first place of Abrahams's settlement on the coast of the Tanais, and this is the place to which Josephus wrote, and the exact spot is one, whose situation is near the same realm.

Simon was an exceedingly ancient town, and is frequently mentioned in the history of the earliest patriarchs. It was the first place of Abraham's settlement on the coast of the Tanais, and this is the place to which Josephus wrote, and the exact spot is one, whose situation is near the same realm.

In the vicinity of the land, there fell to the tribe of Ephraim, and is described as situated in Mount Ebzel; it was a Levitical city, and one of the three cities of refuge the west of Jordan. (Josh. v. 7. xxii. 20, 21.) There it was that Joshua erected the national convention shortly before his death (xxiv. 1, 25); at which time "he took a great pile of stones, set it up thereon, an ephah, that was by the height of a man standing; and Joshua commanded that the place where it was set should be called Horeb, probably in the ancient place, the memory of which the Samaritan Synagogue has perpetuated to this day. (Eral: xxiv. 25.)"

The pile erected by Joshua continued to be in veneration throughout the time of the Judges; there the Samarians "made Almond and Elisha the prophet (Elisha the prophet) of the pile that was in Ebal,"—his own birthplace, and the scene of his famous victory over the Moabites (Judges, xii. 1. xvi. 31. ix 6), and there it was that the Levites of the house of Kohath took their king. (1 Kings. xii. 1. 2 (Gen. x. 1.)

The remainder of its history is marked with that of its sacred Mount Gerizim that it has been anticipated under that head. There is but little doubt that this is the place of Samuel's anointing and the Acts of the Apostles, and Philip's conversion, with such success, and which occasioned the church of the Samaritans, and one of its earliest and most celebrated missions, and its first and most ancient visit of the Apostles. Nor that Simon Magnus, a pious Jew at Neapolis, but of a village of Samaria called Gennesaret, (Gen. xix. 38). Eusebius, H. E. ii. 11, but Neapolis was the principal seat of the Inhabitants, and the Temple of Seraphim was the temple of Mount Gerizim, and Josephus says, built his palace there (Int. viii. 4, § 4).—and the city of refuge in Mount Ephraim, which they assign to Manasseh, and, with strange inconsistency, immediately identify with the preceding by the fact that Joseph's bones were buried there (Onomast. s. v. Sæmua.) The author of the Jerusalem Itinerary places it xii. M. P. from Jerusalem.

The modern town of Neapolis is situated in a valley lying between Mount Ebal on the N., and Mount Gerizim on the S., giving to the valley a direction from E. to W. On the E., the Neapolis valley opens into a much wider valley, about 2 miles from the town; this valley is called Erel-Makhma. Where the Neapolis valley meets the Erat-Makham, at the NE. foot of Mount Gerizim, is Jacob's well, and hard by the well, is the traditional site of Joseph's tomb, both of them close to the Meslem village of Askar, situated at the SE. base of Mount Ebal. Possibly this Askar may mark the site of ancient Sychar, the names present only an anagrammatical variation. This would satisfy the language of Eusebius and St. Jerome, cited at the commencement of the article, and remove the obvious difficulty of supposing the well so far distant from the city as is Neapolis, particularly as Neapolis abounds with running streams, and there is little distance between it and the well. One of these, not noticed by any traveller, situated about midway between the well and the town, in the middle of the valley, is called 'Ain Daphné, so named, no doubt, at the time when Greeks inhabited Neapolis, from the infamous fountain and grove near Antioc. The modern Neapolis is a large and well-built town, containing a population of from 12,000 to 14,000 souls, almost entirely Mohammedans; the Samaritans having been reduced to something under 200 souls of both sexes. (Bunney, Palestine, pp. 144—148, notes ; Robinson, Bib. Res. vol. iii. pp. 95—136.)

The coins of Neapolis are very frequent under the emperors from Titus to Volusianus. The common inscription is ΦΑ. ΝΑΣΧΟΛΟΣ, more rarely ΦΑΟΥ, as in the one below, in which is also added, as in many examples, the name of the region. The more usual emblem on the reverse is a temple situated on the summit of a mountain, to which is an ascent by many steps. The temple is doubtless that mentioned by Damausus as ΔΑ. ΝΙΑΟΥ ΕΥΚΑΡΟΤΙΟΣ (op. Phil. Bibl. p. 1055), the steps there attested by the Bordeaux Pilgrim in A. D. 333— "Ascensionem usque ad summum montem gradus numero cccc." On the coins of Titus, however, before the Mount Gerizim was introduced, a palm, as in the example below, was the type; or a laurel, with
the name of the city written among its branches. (Eckhel, vol. iii. pp. 433—435: see Gerizin, Vol. I. p. 992.)

[4. W.]

2. A town of Colchis, south of Dioscurias, and north of Phasis, on the river Chobos or Choeisse. (Svyl. p. 27; Ptol. v. 10. § 2.)

3. A town on the coast of Ionia, south of Ephesus, on the road between Anaea and Marathusus. It was a small place which at first belonged to the Ephesians, and afterwards to the Samians, who received it in exchange for Marathusus. (Strab. xiv. p. 639.) Most writers identify its site with the modern Scala Nova, at a distance of about three hours' walk from the site of ancient Ephesus, but Cad. Leake (As. Minor, p. 261) believes that this place marks the site of the ancient Marathusus, and that the ancient remains found about halfway between Scala Nova and Teshagliti, belong to the ancient town of Nepolis. (Comp. Tomnepfort, Letters, xx. p. 402; Follows, Journal of an Exc. in As. Min. p. 271, who identifies Nepolis with Teshagliti or Chelipit.)

4. A town in Caria, between Orthasia and Aphrodisias, at the foot of Mount Cadmus, in the neighbourhood of Harpasus. (Ptol. v. 2. § 19; Hieroc. p. 688.) Richter (Wallfahrten, p. 539) identifies it with the modern Jeribola, near Arpas Kalesi, the ancient Harpasus. Another town of the same name is mentioned on the coast of Caria by Mela (i. 16) and Pliny (v. 29); and it is clear that this cannot be the same town as that near Harpasus; it is probably only another name for New Myndus. (Myndus.)

5. A town in Psidias, a few miles south of Antioch. (Ptol. v. 4. § 11; Hieroc. p. 672.) Pliny (v. 42) mentions it as a town of the ancient province of Galatia, which embraced a portion of Psidias. Franz (F. Inschriften, p. 35) identifies its site with Tutnack, where some ancient remains still exist. ([L. S.]

6. A small place situated on the Ephrates, at the distance of 14 schenio (about 40 miles) below Besebana. Ritter has tried, but unsuccessfully (if the present number be correct) to identify it with Maidia. (Asd. Man. Purb. i. 12, ed. Müller, 1855.)

NEAPOLIS. III. In Africa. I. In Egypt. [CAESEPOLIS.]

A town of Cyrenaica, which Ptolemy (iv. 4. § 11) places in 31° 10' lat. and 49° long. The town of Mamby or Malby, with which it has been identified, and which appears to be a corruption of the old name, with no other change than what might be expected from the Arabic pronunciation, does not quite agree with the position assigned by Ptolemy to Nepolis. (Beecley, Ed. to the N. Coast of Africa, p. 350; Barth, Wanderungen, pp. 391, 405.)

[A. T. MAGNA.]

3. A town of Lycia, with a harbour (Seylax, p. 47; Stedalium, § 107), the same as the Macromasses of Pliny (v. 3; Maacidasia, Ptol. iv. 3. § 11), a "municipium," as it appears from the Antonine Itinerary (Macromasses Minores, P. Tott. Tab. Geog. Rav. iii. 5); this latter name indicates a Phoenician origin. (Loxvers, Phoenix. Albert. vol. ii. p. 494.) It has been identified with Koseir Omeiya, on the N. of the Gulf of Hanamarin.

5. A factory of the Carthaginians upon the Sinus Neapolitanus, from which it was the shortest distance to Sicily—a voyage of two days and a night. (Thuc. vii. 50; Seylax, p. 49; Stedalium, § 107; Strab. xiv. p. 834.) It was taken by Agathocles in his African campaign, (Diodor. xx. 17.) Under the earlier emperors it was a "liberum oppidum" (Plin. v. 3), afterwards under Hadrian a "colonia." (Ptol. iv. 3. § 8: Hins. Anton.; Punt. Tab.; Geog. Rav. v. 5.) The old name is retained in the modern Nibol, where Barth (Vanduerungen, p. 141; comp. Shaw, Trav. p. 161) found some remains of antiquity. [E. B. J.]

NEBIS. [GALLAECIA. Vol. I. p. 933, a.]

NEBO. I. (Nebu, LXX.), the mountain from which the patriarch Moses was permitted to view the Promised Land. Its situation is thus described:

"—Get thee up into this mountain Abarim, unto Mount Nebo, which is in the land of Moab, that is over against Bethpeor, and trouble the heart of the country, and view it; and thou shalt be gathered unto thy people, as Aaron thy brother." (Deut. xxix. 49; and Moses went up from the plains of Moab unto the mountain of Nebo, to the top of Pisgah, that is over against Jericho," We have here three names of the mount, of which, however, Abarim may designate the range or mountain region rising from the high table-land of Moab (comp. Numbers, xxvii. 12, xxxiii. 47); while Pisgah is an appellation for a hill, —as it is rendered in our margin, wherever the name occurs in the text (Num. xxi. 20; Deut. iii. 27, xxxiv. 1), and in several oriental versions (Lxx. e. v. 47, 52).—Nebo the proper name of some one particular peak. This name is regarded by M. Quatremere de Quincy as the name of the mountain from which Moses was permitted to view the sanctuary, and the summit of which was called the Chaldean divinity (Loziah, xlv. 1) so frequently compounded with the names of their most eminent kings, &c; and he discovers other names of like origin in the same parts. (Mémoire sur les Nabatèens, p. 87.) It is placed by Eusebius and St. Jerome 6 miles west of Esbon (Heshbon), against over Jericho, on the road from Livias to Esbon, near to Mount Phogor (Peor): it was still called by its ancient name (Onomast. s. v. Nebo, Abarim). Dr. Robinson has truly remarked that over against Jericho "there is no peak or peak perceptibly higher than the rest; but all is apparently one level line of summit, without peaks or caps." ... "Seetzen, Burchhardt, and also iby and Mangels, have all found Mount Nebo in Jebel Attar, a high mountain south of the Zerka Main." (Avnon.) This, however, is far south of the latitude of Jericho. (Bib. Rec. vol. iii. pp. 306, 307.)

2. A town of the tribe of Ruben, mentioned with Heshbon, Elealeh, and others (Numbers xxix. 38); doubtless not a site now marked by Nebus in the Balka, south of El-Soit (Robinson, Bib. Rec. vol. ii. p. 307, n. 1, vol. iii. appendix, p. 170), j. e. in the same district with Heshbon and Ed-El, the modern representatives of Heshbon and Elealeh. Whether this town was connected with the synonymous mountain is very uncertain.

3. A town in Judah. (Erva, ii. 29; Nehem. vii. 33.)

NEBIRISA. [NABIRIBA.]

NEBRODES MONS. (va Nepii in Sp., Strab.; Monti di Madunio), one of the most considerable ranges of mountains in Sicily. The name was evidently applied to a part of the range which comes nearest Cape Peloruni, and extends along the northern side of the island, the whole way to the neighbourhood of Panormus. Though broken into various mountain groups, there is no real interruption in the chain throughout this extent, and the names applied to different parts of it seem to have been employed (as usual in such cases) with much vagueness. The part of the chain nearest to Cape Peloruni, was called Mons Neptunius, and therefore the Mona Nebrodus must have been farther to the

Digitized by Microsoft®
NECTIBERES.

NECTIBERES. (MaKretanias.)

NECA (Neca), a small river of Peloponnesus, rises in the Mt. Causanum, a branch of Mt. Lycaeus in Arcadia, and flows with many windings in a westerly direction past Phigalia, first forming the boundary between Arcadia and Messenia, and afterwards between Elis and Messenia. It falls into the Iolian sea, and near its mouth is navigable for small boats. (Paus. iv. 20. §§ 1, 2, iv. 36. § 7, v. 6 § 3; vii. 38. § 3, viii. 41. §§ 1, 2; Strab. viii. pp. 344, 345; Leake, Morea, vol. i. pp. 56, 483; Ross, Reisen im Peloponnes, p. 84; Curtius, Peloponnesos, vol. ii. pp. 152, 218.)

NEDAO, a river of Pannonia, mentioned only by Jornandes (de Reb. Get. 50.), as the river on the banks of which the Huns were defeated by the Gepidae. The name is in some MSS. Necho, and the river is believed to be the modern Nepera. [L. S.]

NEDICUM (Nedicus, Petol. ii. 16. § 10; Geog. Rav. iv. 16; Neidit, Inscr. 3452.), a town of the Lacedaemonians, on the road from Secacia to Ictera (Pent. Tab.), identified with the ruins near Nedia. Orelli (L.c.) refers it to the Neda of Nearchus (Wilkinson, Dacia Iudaea et Montenegro, vol. i. p. 93.) [E. B. J.]

NEDON. (Messenia, p. 342, b.)

NECRA. (Marsyabae, pp. 284, 285.)

NELYnda (πά Νελυνδα, Peripl. §§ 53, 54, ed. Müller, 1855), a port on the W. coast of India, in the province called Luniyrica, without doubt the same as that now called Neluderam. It is in lat. 12° 10' N. It is mentioned in various authorities under names slightly modified from the other; thus, it is the Melynda of Ptolemy (vi. 1. § 9), in the country of the Ais; the "parta gentis Nemyndoni" of Pliny (vi. 26. s. 104), which was also called Bacara or Bareca; the Nicylda of the Ptolemaic Table; and Nikonina of the Geogr. Raven. (n. 1). The name is certainly of Indian origin, and may be derived, as suggested by Ritter (p. 515) from Nilakhanda, the blue county. Other derivations, however, have been proposed for it. (Vincent, Periplus, ii. p. 445; Bennell, Mem. Hist. Indostan, p. 49; Josellin, ii. p. 227.)

NELIA (N Liga), a town of Magnesia in Thessaly, between which and Ileus Demetrias was situated. Leake identifies it with the remains of a small Hellenic town above Lebbonia. (Strab. ix. p. 436; Leake, Northern Greece, vol. iv. p. 379.)

NELO, a small river of Iapamia Taraceanum, in the territory of the Astures, and on the N. coast of Spain; probably the Rio de la Puenta. (Pin. iv. 20. s. 34.)

NEMALONI, an Alpine people. In the Trophy of the Alps the name of the Nemaloni occurs between the Brodionitii and Edeanuts. (Plin. iii. 20.)

The site of this people is uncertain. It is a mere guess to place them, as some do, at Medias, in the valley of Barvalone. [G. L.]

NEMEAUS (Nemaeus: Eth. Nemusios, Nemaeusis: Neme). a city of Gallic Narbonensis on the boundary between the Arvernii (Aurunci) and the Aedui (Avarbono) into Spain. Ptolomy (ii. 10. § 10) calls it Nemaeusus Colonia, but he places it in the same latitude as Arausio (Orange), and more than a degree north of Arilate; which are great blunders. Nemaeusus was the chief place of the Vulcana Aerocomitini: "with respect to number of foreigners and those engaged in trade (says Strab. iv. p. 186) much inferior to Narbo, but with respect to its population much superior; for it has subjected to it twenty-four villages of people of the same stock, populous villages which are contributory to Nemaeusus, which has what is called the Latium (Jas Latii or Latinitas). By virtue of this right those who have obtained the honour of an aedileship and quaestorship in Nemaeusus become Roman citizens; and for this reason this people is not under the orders of the governors from Rome. Now the city is situated on the road from Jberia into Italy, which road in the summer is easy travelling, but in the winter and spring is muddy and washed by streams. Some of these streams are passed by ships and barges, and others by bridges of wood or stone. The wintry torrents are the cause of the trouble from the water, for these torrents sometimes as late as the summer descend from the Alps after the melting of the snow."

Strabo fixes the site of Nemaeusus about 100 stadia from the Rhone, at a point opposite to Tarascon, and 720 stadia from Narbo. In another place (iv. p. 178) Strabo estimates the distance from Narbo to Nemaeusus at 88 M. P. One of the Itea routes makes it 91 M. P. from Narbo to Nemaeusus. Strabo's two distances do not agree for 720, which are 90 M. P.

The site of the place is certain. In the middle age documents the name is written Nemae (D'Anville). There seems to be no authority for writing the modern name Nemae; and yet Nemae, as it is now properly written, suggests a prior form Nomes. Nemes is the present capital of the arrendassment of Gard, the richest in Roman remains of all the districts of France.

The twenty-four smaller places that were attached (attributae) to Nemaeusus are not listed by Pliny (iii. 4). The territory of Nemaeusus produced good cheese, which was carried to Rome (Plin. xi. 42).

This cheese was made on the Cocannus, and Pliny appears to include Mens Leusa in the territory of Nemaeusus. Latera [Latera] on the Ledus (Loc) west of Nemaeusus was in the territory, which probably extended through Ugernum eastward to the Rhone. Nemaeusus was an old Gallic town. The name is the same that Strabo gives with a slight variation (Nemossus) to Augustobonum or Clermont in Arvernum. The element Nem appears in the name of several Gallic towns. Nemaeusus was made a Colony probably by the emperor Augustus. An inscription on one of the gates, called the gate of Augustus, records the eleventh or twelfth consulsiphip of Augustus, and that he gave gates and walls to the colony. There is a bronze medal of Nemausus in the Museum of Avignon, the so called Pied de Biche, on one side of which there is the legend COL. NEM. with a crocodile chained to a palm-
NEMEAUS.

Tree, which may probably commemorate the conquest of Egypt; on the other are two heads, supposed to be Augustus and Agrippa, with the inscription IMP. P. P. DIVL. F. This medal has also been found in other places. It is figured below.

COIN OF NEMAUS.

Nimes contains many memorials of its Roman splendour. The amphitheatre, which is in good preservation, is larger than that of Verona in Italy; and it is estimated that it would contain 17,000 persons. It stands in an open space, cleared of all buildings and obstructions. It has not the massive and imposing appearance of the amphitheatre of Arles; but it is more complete. A man may make the circuit on the flat which runs round the upper story, except for about one-sixth of the circuit, where the cornices and the flat are broken down.

The greater diameter is about 437 English feet, which includes the thickness of the walls. The exterior height on the outside is nearly 70 English feet. The exterior face of the building consists of a ground story, and a story above, which is crowned by an attic. There are sixty well proportioned arches in the ground story, all of the same size except four entrances, larger than the rest, which correspond to the four curvilinear portals. These arches open on a gallery, which runs all round the interior of the building. The story above has also sixty arches. All along the circumference of the attic there are consoles, placed at equal distances, two and two, and pierced in the middle by round holes. These holes received the poles which supported an awning to shelter the spectators from the sun and rain. When it was complete, there were thirty rows of seats in the interior. At present there are only seventeen. The stones of the upper seats are of enormous dimensions, some of them 12 feet long, and 2 feet in width.

The temple now called the Maison Carrée is a parallelogram on the plan, about 76 English feet long, and 40 wide. It is what is called pseudo-peripteral, with thirty Corinthian fluted pillars, all of which are engaged in the walls, except six on the face and two on each side of the front portico, ten in all. The portico has, consequently, a considerable depth compared with the width. The columns are ten diameters and a quarter in height. The temple is highly enriched in a good style. Seguier (1758) attempted to prove that this temple was dedicated to C. and L. Caesar, the sons of Agrippa by Julia the daughter of Augustus. But M. Auguste Pelet has within the present century shown that it was dedicated to M. Aurelius and L. Verus. The excavations which have been made round the Maison Carrée since 1821 show that it was once surrounded by a colonnade, which seems to have been the boundary of a forum, within which the temple was placed. The Maison Carrée, after having passed through many hands, and been applied to many purposes, is now a museum of painting and antiquities. Arthur Young (Travels in France, 2nd ed. vol. i. p. 48) says "that the Maison Carrée is beyond comparison the most light, elegant, and pleasing building I ever beheld." Nobody will contradict this.

THE TEMPLE AT NEMAUS, now called THE MAISON CARRÉE.

The famous fountain of Nemausus, which Ause- nius mentions (Ordo Nob. Urb. Burdigala)—

"Non Aponus potu, vitrea non luce X-nemansus Purior"—

still exists; and there are some traces of the ancient construction, though the whole is a modern restoration. But the great supply of water to Nemausus was by the aqueduct now called the Pont du Gard, and it is said that this aqueduct terminated by a subterraneous passage in the side of the rock of the fountain. A building called the Temple of Diana, and a large edifice called Tour Magne (Tourris Magna), which appears to have been a sepulchral monument, the gate of Augustus, and the gate called of France, are the chief remaining monuments of Nemausus.

The noblest Roman monument in France is the aqueduct called the Pont du Gard, which is between three and four leagues from Nimes. Over this aq-
duct the waters of the springs of the Ever and the Acro near Luxor, were brought to Nemausus. The rise of the Garden, the ancient Vardos, is deep just above the aqueduct. The channel is sunk between rocks, on which scattered shrubs grow. The river rises in the Cerroco, and is subject to floods, which would have destroyed a less solid structure than this Roman bridge. The bridge is built where the valley is contracted by the rocks, and in its ordinary state all the water passes under one arch. The best view of the bridge is from the side above it. The other side is disfigured by a modern structure of the same dimensions as the lower range of arches; it is a bridge attached to the lower arches of the Roman bridge, and is used for the passage of carts and horses over the Garden.

There are three tiers of arches. The lowest tier consists of six arches, that under which the water flows is the largest. The width of this arch is said to be about 50 English feet, and the height from the surface of the water is about 63 feet. The second tier contains eleven arches, six of which correspond to those below, but they appear to be wider, and the piers are not so thick as those of the lowest tier. The height of the second tier is said to be about 64 feet; but none of these dimensions may not be very accurate. The third tier has thirty-five arches, or three points, making a length, as it is said, of about 870 English feet. It is about 26 feet high to the top of the great slabs of stone which cover it. These slabs lie across the channel in which the water was conveyed over the river, and they project a little so as to form a cornice. The whole height of the three tiers, if the several dimensions are correctly given, is about 155 feet. It is generally said that the bridge is entirely built of stones, without mortar or cement. The stones of the two lower tiers are without cement; but the arches of the highest tier, which are built of much smaller stones, are cemented. At the north end of the aqueduct the highest tier of arches and the water channel are higher than the ground on which the aqueduct abuts, and there must have been a continuation of small arches along the top of this hill; but there are no traces of them, at least near the bridge. On the opposite or south side the aqueduct abuts against the hill, which is higher than the level of the channel. There is no trace of the hill having been pierced; and an intelligent man, who lives near the bridge, says that the aqueduct was carried round the hill, and that it pierced another hill further on, where the tunnel still exists.

**ROMAN ARCHITECTURE AT NEMAUSUS, now called the PONT DU GARD.**

The stone of this bridge is a yellowish color. Seen under the sun from the west side, the bridge has a brownish yellow tint, with patches of dark brown owing to the weather. The stone in the lowest tier is a concretion of shells and sand, and that in the lower tiers appears to be the same. In the stones in the higher tier there are halves of a lioD. hill, shell completely preserved. The stone also contains bits of south spar and rock, and many small rounded pebbles. In the clays the Garden river 30 feet above its ordinary level, and the water will then pass under all the arches of the bridge. The three tiers show some marks of erosion, but most are covered by the water. But the bridge is still standing, and is a magnificent monument of the skill of Roman engineers, and of the boldness of their action.

In his work which treat of the antiquities of Nemausus, Numa quotes and describes from the Roman note on the "Gardens of the Egyptians," by Eustathius: "Here the Garden." [G. L.]

II. 6. 4. (a Studia, loc. Optiam. Adj. Num. Nemausus, Nemausus, Nemausus), the name of a valley in the territory of Corinthus, where Hercules slew the Nemean lion, and where the Nemean games were celebrated every other year. It is described by Strabo as situated between Cleonae and Phlius (vid. p. 372). The valley rises in a direction nearly north and south, and is about two or three miles long, and from half to three quarters of a mile in breadth. It is shut in every side by mountains, and is hence called by Pindar a deep vale (Sauteres, N. g. ii. 18.) There is a remarkable mountain on the NE., called in ancient times APEXAS (Ἀπέκας), now Fuka, nearly 3000 feet high, with a flat summit, which is visible from Argos and Corinth. On this mountain Perseus is said to have first sacrificed to Zeus Apaantis. (Paus. ii. 15. § 3; Steph. B. s. v. Ἀπικας; Stat. Theb. iii. 460, seq.) Theocritus gives Nemausus the epithet of "well-watered." (Cic. de Nat. de Orat. II. 44. 872. 182.)

Several rivulets descend from the surrounding mountains, which collect in the plain, and form a river, which flows northward through the rivers of Apeas, and falls into the Corinthian gulf, forming in the lower part of its source the boundary between the territories of Sicyon and Corinth. This river also bore the name of Nemausus (Strab. viii. p. 382; D. d. xiv. 83; Liv. xxxii. 15), but as it was dependent for its supply of water upon the winter season of the year, it was sometimes called the Nemean Charadra. (Aesch. de Faut. Leg. § 168; ed. Bekker; Thesp. Ἐπικ. X. 7. 8. § 15.) The mountains, which enclose the valley, have several natural caverns, one of which, at the distance of 15 stadia from the sacred grove of Nemausus, and on the road named Trexus, from the latter place to Myceae, was pointed out as the cave of the Nemean lion. (Paus. ii. 15. § 2.)

The name of Nemausus was strictly applied to the sacred grove in which the games were celebrated. Like Olympia and the sanctuary at the Corinthian
Isthmus, it was not a town. The sacred grove contained only the temple, theatre, stadium, and other monuments. There was a village in the neighbourhood called Bembina (Bémbare), of which, however, the exact site is unknown. (Strab. viii. p. 377; Steph. B. s. v.) The haunts of the Ne- mean lion are said to have been near Bembina. (Theocr. xxv. 202.)

The chief building in the sacred grove was the temple of Zeus Neimenes, the patron god of the place. When visited by Pausanias the roof had fallen, and the structure was no longer the same (G.v. v. 15, § 2). Three columns of the temple are still standing, amidst a vast heap of ruins. "Two of these columns belonged to the pronao, and were placed as usual between aaeata; they are 4 feet 7 inches in diameter at the base, and still support their architrave. The third column, which belonged to the outer range, is 5 feet 3 inches in diameter at the base, and about 34 feet high, including a capital of 2 feet. Its distance from the corresponding column of the pronao is 18 feet. The total height of the three columns of the entablature was 8 feet 2 inches. The general intercolumniation of the peristyle was 7 feet; at the angles, 5 feet 10 inches. From the front of the pronao to the extremity of the cell within, the length was 95 feet; the breadth of the cell within, 31 feet; the thickness of the walls, 3 feet. The temple was a hexastyle, of about 65 feet in breadth on the upper step of the stylobate, which consisted of three steps; the number of columns on the sides, and consequently the length of the temple, I could not ascertain." (Leake.) Though of the Doric order, the columns are as slender as some of the specimens of the Ionic, and are so different from the older Doric examples, that we ought probably to ascribe to the temple a date subsequent to the Persian wars.

Among the other monuments in the sacred grove were the tombs of Opheltes, and of his father Ly- curgus. The former was surrounded with a stone enclosure, and contained certain altars; the latter was a mound of earth. (Paus. ii. 15. § 3.) Pausanias also mentions a fountain called Aderasteia. The latter is, doubtless, the source of water near the Turkish fountain, which is now without water. At the foot of the mountain, to the left of this spot, are the remains of the stadium. Between the stadium and the temple of Zeus, on the left of the path, are some Hellenic foundations, and two fragments of Doric columns. Near the temple are the ruins of a small church, which contains some Doric fragments. (Leake, Morea, vol. ii. p. 327, seq.; Curtius, Peloponnesos, vol. ii. p. 505, seq.)

For an account of the Nemean festival, see Dict. of Antiq. s. v.

NEMENTURI, one of the several Alpine peoples enumerated by Pliny (iii. c. 20) among the races inscribed on the Trophy of the Alps. Their position is unknown. (G. L.)

NEMESA, a river of Gallia mentioned by Aus- sennus (Mosella, v. 353), is the Nives, which joins the Prena (Prena). The united streams flow into the Sura (Sour), and the Sura into the Mosella. (G. L.)

NEMETACUM or NETECTIONNA (Arras), the chief town of the Atrebates, a Belgic people. Caesar (B. G. viii. 46) spent a winter at Nemetacum in the course of his Galliccampaigns. In the inscriptions of Arras there is a route from Castellum (Cassell) to Nemetacum, which is the same place as Nemeton. The distance from Cassel through Bethune to Arras is 43 M. P. The distance according to the Antonine Itin. from Cassel to Miniacum [Miniacum] is 55 M. P. There is also a route from Tournai (Thérouanne) of 33 M. P. to Nemetacum. There is no place where these roads can meet except Arras. In the Greek texts of Ptolemy (ii. 9. § 7) the capital of the Atrebates is Origacum (Oprijacum); but it is said that the Palatine MS. has Metacum, and all the early editions of Ptolemy have Metacum. It seems possible, then, that Ptolemy's Metacum represents Nemetacum. But Ptolemy incorrectly places the Atrebates on the Seine; he also places part of their territory on the sea-coast, which may be true. Origacum is supposed to be Orchies, between Tourneai and Douai. The town Nemetacum afterwards took the name of the people Atrebates or Atrebatii, and the name was finally corrupted into Arras. [ATRE-

The traces of the Roman roads from Arras to Thérouanne and to Cambrai are said to exist. It is also said that some remains of a temple of Jupiter have been discovered at Arras, on the Place du Cloître; and that there was a temple of Isis on the site of the Hôtel-Dieu. (D'Anville, Notice, &c.; Waleckener, Géog. &c. vol. i. p. 431.) (G. L.)

NEMETATAE. (Galliaecia, Vol. i. p. 983, a.) NEMETES (Neimedes). This name first appears in Caesar (B. G. i. 51), who speaks of the Nemetes as one of the Germanic tribes in the army of Ari- viatus. In another passage (B. G. vi. 25) he describes the Hercynia Silva as commencing on the west at the borders of the Helveti, the Nemetes, and the Rauraci; and as he does not mention the Nemetes as one of the nations on the left bank of the Rhine (B. G. iv. 10), we may probably infer that in his time they were on the east or German side of the Rhine. The Vangiones and Nemetes were afterwards transplanted to the west side of the Rhine. (Tac. Germ. c. 28.) Ptolemy makes No-

Niohonous (Speyer) the capital of the Nemetes, but he incorrectly places them north of the Vangiones, whose capital was Berobomagus (Worms). Pliny (iv. 17) mentions the Nemetes, Triboci, and Vangiones in this order; but Tacitus mentions them first in the inverse order, Vangiones, Triboci and Nemetes. From none of these writers could we determine the relative positions of these peoples; but the fact that Nov/ionous (Novionacum) is mentioned by Ptolemy as the chief town of the Nemetes, and that Novionous is proved to be Speyer by the Itineraries along the west bank of the Rhine, deter-

mine the position of the Nemetes.

In Aminianus Marcellinus (xv. 11) and the Not. Imp. Novionous appears under the name of the people Nemetes or Nemetae. Aminianus calls it a municipium, by which he probably means a Roman town. In the Notitia of the Gallic prov-

inces, Civitas Nemetum belongs to Germania Prima. In some later writings the expression "civilis Nemetum id est Spa:" The name of Speyer is from the Speyerbach, which flows into the Rhine at Speyer. (D'Anville. Notice, &c.; Waleckener, Géog. &c. vol. ii. p. 277.) (G. L.)

NEMETOBRYGA (Nuncdy), a town of the Tiburi in Asturia, on the road from Bracara to As-

NEMETOCENNA (Nemetacum). [p. e]

NENTIDAVA. [Dacia, Vol. I, p. 774.]

NEOCAESARIEA (NEOCAESARIEA: Etb. NEOCaesar-ropis). 1. A town in Pontus Ponominaecus, which, on account of its late origin, is not mentioned by any writer before the time of Pinyay, was situated on the eastern bank of the river Lyca, 65 miles to the east, Amumia. (Plien. vi. 3; Tact, Penterg.) It was the capital of the district, and celebrated for its size and beauty, and is of historical importance on account of the ecclesiastical council held there in A. D. 314. We possess no information about the date of its foundation; but the earliest coins we have of its image bear the name of the emperor Tiberius; whence it is probable that Neocaesariea was founded, or at least received that name, in the reign of Tiberius, when Strabo, who does not notice it, had already composed his work. It must have rapidly risen in extent and prosperity, as in the time of Cicerianus, Thannatargus, who was a native of the place, it was the most considerable town in Pontus. (Greg. Nescios, Tit. p. 557; Aem. Mare. xxvii. 12; Hieroc. p. 708; Basil. Epist. 210; Acta Eutych. 7; comp. Steph. B. s. v.; Solin. 45; Ped. v. 6, § 10.) According to Paulus Diaconus (Hist. Misc. ii. 18), the town was once destroyed by an earthquake; and from Stephanius Reg. it seems that in one time it was called Almianopoli. The town still exists under a corrupt form of its ancient name, Tliscar or Nicaea, at a distance of two days' journey north of Tobot. As to the supposed identity of Calibri and Neocaesariea, see Calibra.

2. A town of Bithynia, of uncertain site. (Steph. B. s. v.; Hieroc. p. 693; Concil. Const. vol. iii. p. 668.)

NEOCLAUDIOPOLIS. [Andrew.] 3. [Clem.]

NEON (NEOS: Etb. NEOSIS), an ancient town of Phocis, said to have been built after the Trojan war (Strab. x. p. 430), was situated at the foot of Mt. Tithorea, one of the peaks of Mt. Parnassus. Herodotus relates that, when the Persian army invaded Phocis, many of the Phocians took refuge in Tithorea near Neos (viii. 32), and that the latter city was destroyed by the Persians (viii. 53). It was, however, afterwards rebuilt; but was again destroyed, with the Stephanus Reg. it seems that the last destruction was towards the S. by the steep sides of Mt. Parnassus. The walls are almost 9 feet broad. The Cachales, which now bears the name of Kakewaremu, or the evil torrent, flows in a ravine below the village, and thus illustrates the statement of Pansanias, that the inhabitants descended to it in order to obtain water. Behind Velitsa, ascending the Cachales, there is a cavern on the steep side of the rock, which, during the last war of independence, received a great number of fugitives. It is very spacious, is supplied with excellent water, and is quite impenetrable. This is probably the place where the inhabitants of Neos and the surrounding places took refuge in the Persion invasion, as the Delphiens did in the Corycian cave [see Vol. I, p. 768], more especially as the height immediately above Velitsa is not adapted for such a purpose. A difficult mule path leads at present through the ravine of the Cachales across the heights of Parnassus to Delphi. In the time of Pansanias there were two roads from Tithorea across the mountain to Delphi, one direct, the other longer, but practicable for carriages. Pansanias assigns 80 stadia as the length of the shorter road; but this number cannot be correct, as Leake observes, since the direct distance is hardly less than 12 geographical miles.

Most modern writers have followed Pansanias in identifying Tithorea and Neos; but Ulrichs, for the reasons which have been already stated, supposes that Tithorea is the name of the present city, and places Neos at the Hellenic ruins on the Cephissus, called Pael Frica, distant 11 hours, or 34 English miles, from Velitsa. (Leake, Northern Greece, vol. ii. p. 77, seq.; Ulrichs, in Rheinisches Museum, 1843, p. 544, seq.)

NEONTEICHOS. (Neov téxos), an Aeolian town not far from the coast of Misya, situated between the Hermus and the town of Larissa, from which its distance was only 30 stadia. It is said to have been founded by the Aeolians, as a temporary post on their first arrival in Asia; according to Strabo (xiii. p. 621), the place was more ancient even than Cyme; but according to a statement in the Vita.
NEONTEICHOS.

Homeri (c. 10), it was built eight years later than Cyme, as a protection against the Pelagians of Larissa. (Plin. v. 32; Herod. i. 149; Scyl. p. 28; Steph. B. s. c.) Remains of this town, says Cramer, ought to be sought for on the right bank of the Hermus, and above Quisel-Hissar, on the road from Smyrna to Bergama. [L. S.]

NEONTEICHOS (Νεώτειχος), a fortress on the coast of Thrace, mentioned by Scylax (p. 28) and by Xenophon (Anab. viii. 5. § 8), supposed to be the modern Ainanbeylix. [H. H. D.]

NEOPTOLEMUS (Νεώπτωλεμος), a fortress of the same named, was, according to Cramer, mentioned in the stadion of Marius Magni (§§ 181, 182), it ought to be looked for between modern Cremnisci and Celenderis. [L. S.]

NEPETE (Νεπητα), a city of Etruria, situated in the southern part of that province, at a distance of 30 miles from Rome and 8 miles E. of Sutrium. There is no doubt that it was an ancient Etruscan town, though not exactly of the first rank, and was probably a dependency of Veii. Hence we meet with no mention of the name, any more than of its neighbour Sutrium, until after the fall of Veii; but from that period these two cities became places of much importance as the frontier fortresses of the Roman dominion on the side of Etruria (Liv. vi. 9). The name of Nepete is first mentioned in n. c. 356, when it was in alliance with Rome, and being attacked by the Etruscans, sent to sue for assistance from the Romans. But before the military tribunes Valerius and Furius could arrive to support the city, the Gauls had surrendered to the Etruscan arms, and was occupied with a strong garrison. It was, however, speedily retaken, and the leaders of the party who had been instrumental in bringing about the surrender were executed (Liv. vi. 9, 10). A few years later a more effectual step was taken to secure its possession by sending thither a Roman colony. The establishment of this is fixed by Livy in n. c. 356, while Velleius Paterculus would date it 10 years later, or 17 years after the capture of Rome by the Gauls (Liv. vi. 21; Vell. Pat. i. 14). It was a Latin colony like most of those established at this period. In n. c. 297, Nepete is again mentioned as one of the frontier towns on this side against the Etruscans (Liv. x. 14); but with this exception we hear no more of it during the wars of the Romans in Etruria. In the Second Punic War it was one of the twelve Latin colonies which declared themselves exhausted with the burdens of the war, and unable to furnish any other supplies for which it was punished, before the end of the war, by the imposition of double contributions (Liv. xxvii. 9, xxix. 15). From this time Nepete seems to have sunk into the condition of a subordinate provincial town. Like the other Latin colonies, it obtained the Roman franchise by the Lex Julia, in n. c. 90, and became from thenceforth a municipality; which rank it appears to have retained under the Empire, though it is said in the Liber Colonarium to have received a colony at the same time with that sent to Faberia (Fest. s. v. Municipium, p. 127; Gruter, Insocr. p. 308. 2, p. 441. 7; Lib. Col. p. 217; Zumpt, de Colon. p. 337). Its existence as a municipal town throughout the period of the Roman Empire is proved by inscriptions as well as by Pliny, Ptolomy, and the Tabula (Strab. v. p. 226; Plin. iii. 5. s. 8; Ptol. iii. 1. § 50; Tab. Punt.; Orell. Insocr. 879, 3991); but no mention occurs of it in history till after the fall of the Western Empire, when it figures in the Gothic wars as a place of some importance from its strength as a fortress, and was one of the last strongholds maintained by the Goths against Narses (Procop. B. G. iv. 34). It early became an episcopal see, a dignity which it has retained without intermission till the present time, though now but an insignificant town with about 1500 inhabitants.

The only remains of antiquity now visible at Nepi are some ancient sepulchres hewn in the rock, and some portions of the ancient walls, much resembling in their construction those of Sutrium and Falerni. These are considered by Dennis as belonging to the ancient Etruscan city; but it is more probable that they date only from the Roman colony. (Dennis's Etruria, vol. i. p. 111; Nibby, Diuotinn, vol. ii. p. 398.) [E. H. B.]

NETHELIS (Νεθηλεία), a small town on the coast of Cilicia, situated, according to Ptolomy (v. S. § 1), between Antioch and Anemurium; but if, as some suppose, it be the same place as the Zaphelos mentioned in the Stadion of Maria Magni (§§ 181, 182), it ought to be looked for between modern Paplin and Celerentor. Near the place was a promontory of the same name, where, according to Livy (xxiii. 20), the fleet of Antiochus the Great was stationed, when, after reducing the towns of Cilicia as far as Selinus, he was engaged in the siege of Coraceium, and where he received the ambassadors of the Rhodians. (Comp. Leake, Asia Minor, p. 119.) [L. S.]

NEITHERIS (Νεθηρεία), a natural fortress situated on a rock, 180 stadia from the town of Carthage. (Strab. xvii. p. 834.) [E. B. J.]

NEPU'NIUS MONS. [PELORUS.]

NEQU'NUM. [NAZINIA.]

NEREA, a tribe, mentioned with several others, who are equally unknown, by Pliny, and placed by him in the neighbourhood of the Insula Pataleone, the modern Saurashtra (vi. 20. s. 23). [V.]

NERET'UM, or NERETUM (Νερέτος, Ptol. viii. Nereitum: Nardo), a city of the Salentini, in the ancient Calabria, mentioned both by Ptolomy and Pliny among the inland towns of that people. Its name is also found in the Tabula, which fixes its position 29 M. P. from Manduria on the road to Usentum (Eugeto), and 20 M. P. from the latter city. These data enable us to identify it with certainty with the modern town of Nardo, a considerable place about 9 miles N. of Gallipoli. It is clear from Pliny that it was a town of municipal rank, and the same thing is confirmed by inscriptions; but there are no ancient remains at Nardo. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 76; Tab. Punt.; Orell. Insocr. 3108. Other inscriptions, with the name of Munic., Nerit. published by Muratori, vol. ii. pp. 1113, 1120, and by Romanelli, vol. ii. pp. 49, 50, are probably spurious. See Orelli, 138.) [E. H. B.]

NERICUS. [LEUCAS.]

NERIGOS. Pliny (iv. 16. s. 30), in speaking of the islands in the north of Britain, says that, according to some, Nerigós was the largest, and that from it people used to sail to Thule. As besides this passage we have no other information, it is impossible, with absolute certainty, to say what island is meant; but as Norway is in Danish still called Norge, and in Swedish Norriga, it is now generally assumed that Nerigós is the modern Norway; the southwestern headland of which, projecting into the sea, might easily lead the ancients to the belief that it was an island. In the same passage Pliny mentions the island of Berig, which may possibly be only the
The Nerii had no cavalry, and their country was made almost impenetrable to any attack from the cavalry of their neighbours by quickset hedges which a man could not get through, and indeed hardly see through them. (B. G. ii. 17.) On the banks of the Somme Caesar had a desperate fight with the Nerii, commanded by Bodoineatus. During this invasion the old men, the women, and children of the Nerii, were removed to the austurias and marches, somewhere near the coast. The Nerii lost a great number of men in this battle: “the nation and the name were nearly destroyed.” (B. G. ii. 27.) Their “senators” as Caesar calls them, their chief men, were reduced from 600 to three, and out of the 60,000 who were in the battle there were said to be only 500 left capable of bearing arms. After this terrible slaughter the Nerii rose again in arms against Caesar (n. c. 54), when they joined the Eburones and others in the attack on Quintus Cicero’s camp. (B. G. v. 38.) Some of the commentators have found a difficulty about the appearance of the Nerii again in n. c. 54, after having been nearly destroyed in n. c. 57. We must suppose that Caesar wrote of the events as they occurred, and that he did not alter what he had written. In n. c. 57 he supposed that he had destroyed most of the fighting men of the Nerii. In n. c. 54 he found that he was mistaken. In n. c. 53 the Nerii were again preparing to give trouble to the Roman governor; but he entered their country in the winter season, and before they had time to rally or to escape, he took many prisoners, drove off many head of cattle, and ravaged their land, and so compelled them to come to terms. (B. G. vi. 2.) When the meeting of the Gallic states in n. c. 52 was settling the forces that each nation should send to the relief of Alesia, the contingent of the Nerii was 5000 men. (B. G. vii. 75.)

Some of the nations between the Seine, the sea, and the Rhine, were Germans in Caesar’s time, but these Germans were invaders. The Nerii (Tac. Germ. c. 28) claimed a Germanic origin, and they may have been a German or a mixed German and Gallic race; but there is no evidence which can settle the question. Appian (de Bell. Gall. i. 4) speaks of the Nerii as descendants of the Teutones and Cumiri; but this is worth very little. Appian had probably no authority except Caesar, whom he used carelessly; and he may have applied to the Nerii what Caesar says of the origin of the Ambiani. (B. G. ii. 29.) Strabo (p. 194) also says that the Nerii were a Germanic nation, but he does not even know the position of the Nerii, and he misplaces them.

Caesar mentions some smaller tribes as dependent on the Nerii (B. G. v. 38); these tribes were Gruthi, Lervi, Thumessii, Geiduni, of all whom we know nothing.

Pliny (iv. 17) mentions in Belgium as inland people, the Castolgi (apparently a corrupted name), Atrebates, Nerii Iberi, Veromandui; an order of enumeration which corresponds with the position of the Nerii between the Atrebates and the Veromandui; for the chief place of the Atrebates is Arras, of the Nerii Béthune, and of the Veromandui St. Quentin. (Aug. Veromand. i.) As Pliny calls the Nerii Iberi, we must suppose that in his time they were exempt from the payment of taxes to the Romans, and retained their own internal government; probably in Pliny’s time the Romans had not yet fully reduced their country.
NERULUM.  

The territory of the Nervii did not extend beyond the limits of the old diocese of Cambrensi, which was, however, very large. The capital of the Nervii was Bagnacum (Baenae), but Cambrensi was also a town of the Nervii. [Camaracum.]

NERULUM, a town in the interior of Lucania, mentioned in the wars of the Romans in that country, when it was taken by assault by the consul Aemilius Barbula, b. c. 317 (Liv. ix. 20). The only other notice of it is found in the Itineraries, from which we learn that it was situated on the high-road from Capua to Rhegium, at the point of junction with another road which led from Venusia by Potentia and Grumentum towards the frontiers of Bruttium (Ptol. iv. pp. 105, 110; Tod. Pent.). The names and distances in this part of the Tabula are too corrupt and confused to be of any service: the Itinerary of Antoninus places it 14 miles (or according to another passage 16 miles) N. of Murasium, the site of which is clearly ascertained. If the former distance be adopted as correct, it must have been situated at, or in the neighbourhood of, La Rotunda, near the sources of the river Lao (Holsten. Not. ad Clav. p. 293; Romanelli, vol. i. p. 389). [E. H. B.]

NERSUSI (Nersos). This name of a people occurs in the Trophy of the Alps (Plin. iii. 20, s. 24), between the Orelati and Velanii. Petelmy (iii. 1. § 41) places them within Italy among the Maritime Alps. Their chief town was Vintium, which is Venice, on the west side of the Tar, and not far from Nicaea (Nissa). [G. L.]

NESCIAITUM (Nesacton, Ptol.), a town of Istria, situated to the E. of Pola, on the Flaminian Sinus, and not far from the river Arsin, which was the boundary of Istria on this side. Hence Ptolomy calls it the last city of Italy. It is mentioned by Livy as a city of the Istrians before their conquest by Rome, and a strong fortress, so that it stood a long siege, and was only taken by the Roman consul C. Claudius Pulcher, by cutting off its supply of water (Livy xii. 11). It afterwards appears both in Pliny and Ptolemy as a municipal town of Istria under the Romans, and seems to have survived the fall of the Western Empire, but the period of its destruction is unknown (Ptol. iii. 19, s. 23; Plut. iii. 1. § 27; Tac. Pont.; Anc. Rav. iv. 31). The fact of its proximity to the Arsin (Arsen), combined with Livy's mention of a river flowing by the walls, render it probable that it was situated immediately on the right bank of the Arsin; but its exact site has not been determined. [E. H. B.]

NESAIA (Nesaia), a district mentioned in two places in Strabo, with slightly differing descriptions: 1. as a country belonging to Hyrcania, and watered by the Oebus, now Tejjen (xi. p. 509); 2. as a distinct and independent land (xi. p. 511). The geographer probably meant to imply a narrow strip of land, whose boundaries were Hyrcania, Ariana, and Parthia respectively, and corresponding with the present Khorasan. It may be identified with the existing Nisa, a small town to the N. of the Alzara chain of mountains, between Azernosh and Meshed. (Wilson, Ariana, pp. 142—148.)

There has been some doubt as to the orthography of the name, which, in some of the editions, is called Nesia; but, on the whole, the above is probably the best. It is not unlikely that the place called by Isidorus Paschalynista, "which the Greeks call Nissa," must also be identified with the present Nissa. The same district answers to the "regio Nisiana Parthynos nobilis" in Pliny (vi. 25. s. 29). [V.]

NESCANIA, a municipal town in Hispania Baetica, stood on the site of the modern village El Talle de Abdalucia, 2 leagues W. from Antequera. It is still famed for its ruins, and during many centuries the existence of which in ancient times is attested by inscriptions. (Ubert. vol. ii. pt. i. p. 363.) [T. H. D.]

NESTIOTIS (Nestorius, Ptol. v. 9., § 17), a district of Asiatic Sarmatia, formed by the windings of the river Itha, and occupied by the Asa, Mathari, and Putheirephagel. [E. B. J.]

NESIS (Nisa), a small island on the coast of Campania, between Putetoli and Neapolis, and directly opposite to the extremity of the ridge called Mons Pausilipus (Seneca, Ep. 53). It may be considered as forming the eastern headland of the bay of Baiseae or Putetoli, of which Cape Museion is the western limit. The island is of small extent, but considerable elevation, and undoubtedly constituted at a remote period one side of the crater of a volcano. This must, however, have been extinct before the period of historical memory; but it appears that even in the days of Statius and Lucan it emittedopluminous and noxious vapours, which has long ceased to be the case (Stat. Silv. ii. 2. 78; Lucan, vi. 90). It was nevertheless, like the adjoining hill of Pausilipus, a pleasant place of residence. Brutus had a villa there, where he was visited by Cicero shortly after the death of Caesar, and where they conferred, together with Cassius and Lilio, upon their future plans (Cic. ad Att. xvi. 1—4). Pliny tells us that it was famous for its asparages, a celebrity which it still retains (Ptol. viii. 8. s. 42); but the wells which overflowed from the base of Statius (Silv. iii. 1. 148), has long since disappeared. [E. H. B.]

NESTIS (Nisus, Arrian Peripil. p. 18), a small river, 60 stadia from the Borgys, which discharges itself into the Enuse by the Prom. Herculis, Cape Constantiowski (Cape Adler of Gauvitt's map), where there is now a river called Miozoumata. [E. B. J.]

NESSON (Nessognis Lucus.)

A NESSONIS LACUS (§i Nessaonis Almus), a lake of Pelasgiotis in Thessaly, lying east of Larissa, now called Karrakteis or Mousolimy. In summer it is only a marsh, and contains very little water, but in winter it is filled by the overflowing of the Peneus. When the basin is filled, its subterranean waters are conducted by a channel into the lake Boeotis, now called Karsto. (Strabo, iv. p. 440; Leake, Northern Greece, vol. i. p. 443, vol. iv. p. 403.) Strabo regarded the lakes Nessonis and Boeotis as the remains of the great lake which covered Thessaly, before the rivers found an outlet through the vale of Tempe to the sea; but he is mistaken in saying that Nessonis is larger than Boeotis. (Strabo, iv. p. 430.) Nessonis received its name from a town Nessos, which is mentioned only by Stephanus B. (s. v. Nessos). [E. B. J.]

NESTAI. [Nesti.]

NESTANE. [Martineia, Vol. ii. p. 264, b.]

NESTI, NESTAEI (Nestos, Scolys, s. p.; Nestos, Enatriou, Brucknas, op. Steph. B. a. v. col. 1929, 1926), a people of Illyricum, with a town of the same name, near the river Nestus (Nestos, Scolys, l. c. Artemidorus, op. Steph. B. a. v. col. 1929), which has been identified with the Kerkos. [E. B. J.]

NESTUS or NESSUS (Nestos, Scolys, pp. 8, 29; Scaurus, 672; Pomp. Mela, ii. 2. §§ 29; Plin. e e 3]
iv. 11, viii. 16; Néstor, Hised. Théog. 341; Pod. iii. 12, § 2, iii. 13, § 7; Mésos, Zocar. ix. 28: Nesto, Turkish Karaca, the river which constituted the boundary of Thrace and Macedonia in the time of Philip and Alexander, an arrangement which the Romans continued on their conquest of the latter country. (Strab. vii. p. 331; Liv. xiv. 29.) Thucydes (ii. 96) states that it took its rise in Scione, whereas the Hekros descended; being, in fact, that cluster of great summits between which, Glaucus still bears the name in Slavonic of Norskaæmje, with its chief town Nur, and a river Nurez. Some time before the expedition of Dareius, they had been obliged to quit their original seats, on account of a quantity of serpents with which it was infested, and had taken refuge with the Budini in the district about the Bug, which had till then belonged to that people. Though not of the same origin, in customs they resembled the Scythians, and bore the reputation of being enchancers (γυρόπες), like the "Schamans" among the Siberian nomads of the present day.

Though not of the same origin, in customs they resembled the Scythians, and bore the reputation of being enchancers (γυρόπες), like the "Schamans" among the Siberian nomads of the present day.

NETOPIA (Netouphb), a town of Judah, mentioned by Ezra (ii. 22) and Nehemiah (vii. 26), between Bethlehem and Anathoth, if anything may be concluded from the order in which the names occur, which is no questionable, that Betl-Nettîfî may be, perhaps, solely regarded as its modern representative. It is situated on the highest point of a lofty ridge, towards the NW, of the ancient tribe of Judah. (Robinson, Bib. Res. vol. ii. pp. 341—347; Edkins, Palæstina, pp. 659, 950b; (W. W.)

NETUM or NICETUM (Nîaw, Prot. iii. 4. § 13; Nautum, Cic., Sil. Ital.: Eth. Nautous, Cic., Plin.: Noto Vecchio), a considerable town in the S. of Sicily, near the sources of the little river Asinarus (Falconara), and about 20 miles SW. of Syracuse. We find no mention of it in early times, but it was probably subject to Syracuse; and it is in accordance with this, that, by the treaty concluded in n. c. 263 between the Romans and Hieron king of Syracuse, Nêton was noticed to belong to the cities left in subjection to that monarch. (Diod. xxii. Exc. II. p. 502.) We have no account of the circumstances which subsequently earned for the Nêtoni the peculiarly privileged position in which we afterwards find them; but in the days of Cicero Nêton enjoyed the rights of a "föderata civitas" like Messana and Taormina; while, in Pliny's time, it still retained the rank of a Latin town (civitas Lattuâe conditionis), a favour then enjoyed by only three cities in the island. (Cic., I. ii. 26, v. 22, 51; Plin. iii. 8, s. 14; Ptol. l. c.; Sil. Ital. xiv. 268.) Ptolemy is the last ancient writer who mentions the name; but there is no doubt that it continued to exist throughout the middle ages; and under the Norman kings rose to be a place of great importance, and the capital of the southern province of Sicily, to which it gave the name of Val di Noto. But having suffered repeatedly from earthquakes, the inhabitants were induced to emigrate to a site nearer the sea, and founded the modern city of Noto, in 1703. The old site, which is now known as Noto Vecchio, was on the summit of a lofty hill about 8 miles from the modern town and 12 from the sea-coast; some remains of the ancient amphitheatre, and of a building called a gymnasium, are still visible, and a Greek inscription, which belongs to the time of Hieron II. (Favell. de Rab. Soc. iv. 2; Castell. Inser Soc. ii. p. 172; E. H. B.)

NEUDRUS (Neudrós, Arrian, Indic. c. 11, 4), a small stream of the Tunib which flowed into the Hydrides (Iara or Itmaru) from the country of the

NICAEA.

NICYRNUM [Noviodunum.]

NEUFI (Neuf), a nomad people of the N. of Europe, whom Herodotus (iv. 17, 51, 100, 125) places in the centre of the region which now comprises Poland and Lithuania, about the river-basin of the Bug. They occupied the district (die Neufide γης) which lay to the NW. of the lake out of which they were driven; and which still bears the name in Slavonic of Norskaæmje, with its chief town Nur, and a river Nurez. Some time before the expedition of Dareius, they had been obliged to quit their original seats, on account of a quantity of serpents with which it was infested, and had taken refuge with the Budini in the district about the Bug, which had till then belonged to that people.

I. I. ii. 268.) Ptolemy is the last ancient writer who mentions the name; but there is no doubt that it continued to exist throughout the middle ages; and under the Norman kings rose to be a place of great importance, and the capital of the southern province of Sicily, to which it gave the name of Val di Noto. But having suffered repeatedly from earthquakes, the inhabitants were induced to emigrate to a site nearer the sea, and founded the modern city of Noto, in 1703. The old site, which is now known as Noto Vecchio, was on the summit of a lofty hill about 8 miles from the modern town and 12 from the sea-coast; some remains of the ancient amphitheatre, and of a building called a gymnasium, are still visible, and a Greek inscription, which belongs to the time of Hieron II. (Favell. de Rab. Soc. iv. 2; Castell. Inser Soc. ii. p. 172; E. H. B.)

It has not been identified with any modern river.

I. I. ii. 268.) Ptolemy is the last ancient writer who mentions the name; but there is no doubt that it continued to exist throughout the middle ages; and under the Norman kings rose to be a place of great importance, and the capital of the southern province of Sicily, to which it gave the name of Val di Noto. But having suffered repeatedly from earthquakes, the inhabitants were induced to emigrate to a site nearer the sea, and founded the modern city of Noto, in 1703. The old site, which is now known as Noto Vecchio, was on the summit of a lofty hill about 8 miles from the modern town and 12 from the sea-coast; some remains of the ancient amphitheatre, and of a building called a gymnasium, are still visible, and a Greek inscription, which belongs to the time of Hieron II. (Favell. de Rab. Soc. iv. 2; Castell. Inser Soc. ii. p. 172; E. H. B.)
According to another account (Menon, op. Phot. Cod. 224, p. 233, ed. Bekker), Nicaea was founded by men from Nicaea near Thermopylae, who had served in the army of Alexander the Great. The town was built with great regularity, in the form of a square, measuring 16 stadia in circumference; it had four gates, and all its streets intersected one another at right angles, so that from a monument in the centre all the four gates could be seen. (Strab. xii. pp. 566, 566a.) This monument stood in the gymnasium, which was destroyed by fire, but was restored with increased magnificence by the younger Pliny (Epist. x. 48), when he was governor of Bithynia.

Soon after the time of Lysimachus, Nicaea became a city of great importance, and the kings of Bithynia, whose era begins in n. c. 288 with Zipoetes, often resided at Nicaea. It has already been mentioned that in the time of Strabo it is called the metropolis of Bithynia; an honour which is also assigned to it on some coins, though in later times it was enjoyed by Nicomedea. The two cities, in fact, kept up a long and vehement dispute about the precedence, and the 38th oretion of Dom Chrysostomus was expressly composed to settle the dispute. From this circumstance, it appears that Nicomedea alone had a right to the title of metropolis, but both were the first cities of the country. The younger Pliny makes frequent mention of Nicaea and its public buildings, which he undertook to restore when governor of Bithynia. (Epist. x. 40, 48, &c.) It was the birthplace of the astronomer Hipparchus and the historian Dom Cassius. (Suid. s. v. Terrapinos.) The numerous coins of Nicaea which still exist attest the interest taken in the city by the emperors, as well as its attachment to the rulers; many of them commemorate great festivals celebrated there in honour of gods and emperors, as Olympia, Isthmia, Dionysia, Pythia, Commagia, Severia, Philadelphia, &c. Throughout the imperial period, Nicaea remained an important place; for its situation was particularly favourable, being only 25 miles distant from Thrasi (Plin. v. 32), and 44 from Constantinople. (H.I. Nat. p. 141.) When the last mentioned city became the capital of the Eastern Empire, Nicaea did not lose in importance; for its present walls, which were erected during the last period of the Empire, enclose a much greater space than that ascribed to the place in the time of Strabo. In the reign of Constantine, a.d. 325, the celebrated Council of Nicaea was held there against the Arian heresy, and the palates there assembled drew up the creed called the Nicene. Some travellers have believed that the council was held in a church still existing; but it has been shown by Prokesch (Erinnernngen, iii. p. 234) that that church was built at a later period, and that the council was probably held in the new ruined mosque of Orchan. In the course of the same century, Nicaea suffered much from an earthquake; but it was restored in a.d. 368 by the emperor Valens. During the middle ages it was for a long time a strong bulwark of the Greek emperors against the Turks, who did not conquer it until the year 1078. During the first crusade, in 1097, it was recovered from them by the Christians, but in the peace which was afterwards concluded it was ceded to the Turks. In the 13th century, when Constantinople was the capital of the Latin empire, Theodore Lascaris made Nicaea the capital of Western Asia; in the end, however, it was finally captured and incorporated with the Ottoman empire by Orchan. Many of its public buildings were then destroyed, and the materials used by the conquerors in erecting their mosques and other edifices. The modern Leuk is a very poor place, of scarcely more than 100 houses, while in Pococke's time, there still existed about 300. The ancient walls, with their towers and gates, are in tolerably good preservation; their circumference is 14,500 feet, being at the base from 15 to 20 feet in thickness, and from 30 to 40 feet in height; they contain four large and two small gates. In most places they are formed of alternate courses of Roman tiles and large square stones, joined by a cement of great thickness. In some places have been inserted columns and other architectural fragments, the ruins of more ancient edifices. These walls seem, like those of Constantinople, to have been built in the fourth century of our era. Some of the towers have Greek inscriptions. The ruins of mosques, baths, and houses, dispersed among the gardens and cornfields, which now occupy a great part of the space within the Greek fortifications, show that the Turkish town, though now so inconsiderable, was once a place of importance; but it never was so large as the Greek city and it seems to have been almost entirely constructed of the remains of the Greek Nicaea, the walls of the ruined mosques and baths being full of the fragments of Greek temples and churches.

2. (Nicaea, Arrian, v. 19; Strab. xv. p. 698; Curt. ix. 3. 233), a city in the Punjib, on the banks of the Hydaspes (or Jelma), built by Alexander the Great to commemorate his victory over Porus, who ruled the flat country intermediate between that river and the Axiosines. It was at Nicaea or Bucephalia, which appears to have been on the opposite bank, that Alexander (according to Strabo, l. c.) built the fleet which Nearchus subsequently commanded, the country in the immediate neighbourhood having abundance of wood fit for ship-building. No town now exists which can with any probability be identified with Nicaea. [V.C.]

**Nicaea.** II. In Europe. 1. (Nicaea: Eth. Nicaeas; Nize, in French Nice), a city on the coast of Liguria, situated at the foot of the Maritime Alps, near the frontier of Gallia Narbonensis. On this account, and because it was a colony of Massilia, it was in early times commonly reckoned as belonging to Gaul (Steph. B. s. v.); and this attribution is still followed by Mela (ii. 5. § 3); but from the time that the Varus became fixed as the limit of Italy, Nicaea, which was situated about 4 miles
to the E. of that river, was naturally included in Italy, and is accordingly so described by Strabo, Pline, and Polian. (Strab. iv. p. 184; Plin. n. s. 7; Pol. iii. 1. § 2.) We have no account of its early history, beyond the fact that it was a colony of Massilia, and appears to have continued always in a state of dependency upon that city. (Strab. iv. p. 180, 184; Plin. l. c.; Steph. B. s. r.) It was situated on the borders of the Ligurian tribes of the Gaul and Consules, and as well as its near neighbour Antipolis, was continually harassed by the incursions of these barbarians. In b. c. 154 both cities were actually besieged by the Ligurians, and the Massilians, finding themselves unable to repulse the assailants, applied to Rome for assistance; the consul Q. Oppianus, who was despatched with an army to their succour, quickly compelled the Ligurians to lay down their arms, and decided the whole of a considerable part of their territory, which was annexed to the jurisdiction of Massilia. (Pol. xxxii. 4. 7; Liv. Epit. xvii.) From this time, nothing more is heard in history of Nicaea, which continued to belong to the jurisdiction of Massilia, and, even after it came to be subject to the Romans, received no indication from Italy, to be affected by municipal purposes dependent upon its parent city. (Strab. iv. p. 184.) At a later period, the new division of the provinces again transferred to Gaul the towns of Nicaea and Connelium, together with the whole district of the Maritime Alps, westward of the Trough of the Alps. Hence, we find Nicaea described by Ammianus (xx. 11. § 15) as belonging to Gaul; and during the decline of the Empire, after it had become an episcopal see, the names of its bishops are found among the Gaulish prelates. It does not appear to have ever been a town of much importance under the Roman Empire; and was apparently swamped by the city of Connelium (Comœ.) in its immediate neighbourhood. But it had a good port, which must always have secured it some share of prosperity, and after the fall of Connelium, it rose to be the most important city in this part of Gaul, and became the capital of an independent district called the Cantuata de Nice (County of Nice). This eventually fell into the hands of the House of Savoy, and now forms part of the dominions of the king of Sardinia. Nice itself is a flourishing place, with about 60,000 inhabitants, but it has lost its ancient city probably occupied the height, now the site of the castle, and the immediate neighbourhood of the port, which though small, is secure. Nice is situated at the mouth of the river Lygione, a considerable mountain torrent, evidently the stream called Paule by Pline and Mela. (Plin. l. c.; Mela. ii. 4. § 9.)

About 2 miles E. of Nice is a deep bay or inlet between two rocky promontories, forming a spacious natural harbour now known as the Gulf of Villefranque, from a town of that name, which has however existed only since the 13th century. This is probably the Portus Olula of the Maritime Itinerary (p. 501). The Anxio Portus of the same itinerary is probably a small cove, forming a well-sheltered harbour for small vessels on the E. side of the headland, called Capo di S. Ospizio, which forms the eastern boundary of the Gulf of Villefranque. A similar cove a few miles further E. just below the modern village has no remains of the Anxio Portus of the same authority; but the distances given between these points are greatly overstated. (E. II B.)
river into a new channel for the purpose of protecting the walls of a fort erected on its banks from being undermined and washed away by its waters. (Amn. Marc. xxvili, 2; Vopisc. Probc. 13, where it is called Niger; Asson. Mosell. 423; Sidon. Apollin. Paneg. ad Aevit, 324; Euenen. Paneg. Const. 13; Symmach. Laud. in Valentin. ii. 9, 10.) The remains of Roman antiquities on the banks of the Nicer are very numerous, and a few of the monuments, such as the Armisa (Eurus) and Murra (Murr), are mentioned in inscriptions found in the country. [L. S.]

NICIA. [Castra, Vol. i. p. 562, a.]

NICODEIMAE (Nicoδημα; Eth. Nicoδηματος; Isanvedi or Isami), the capital of Bithynia, situated on the north-eastern coast of the Sinus Astacenus, a part of the Propontis. The town of Astacus, a little to the south-east of Nicomedia, was destroyed, or greatly damaged, by Lysamachus; and some time after, B.C. 264, Nicomedia I. built the town of Nicomedia, to which the inhabitants of Astacus were transferred (Steph. B. d. c. Strab. xii. p. 563; Paus. v. 12. § 5; Euseb. Chron. Ol. 129; 1). The founder of the new city made it the capital of his kingdom, and in a short time it became one of the largest and most flourishing cities, and continued to prosper for more than six centuries. Pliny, in his letters to the emperor Trajan, mentions several public buildings of the city, such as a senate-house, an aqueduct, a forum, a temple of Cybele, &c., and speaks of a great fire, during which the place suffered much (Epist. x. 42. 45). Respecting its rivalry with Nicaea, see Niccaea. According to Pliny (v. 43), Nicomedia was 624 miles to the south-east of Chalcedon, while according to others it was only 60 or 61 miles distant (It. Ant. pp. 124, 140; It. Hieros. p. 572; Tab. Peut.) Under the Roman empire Nicomedia was the residence of the emperors, such as Diocletian and Constantine, especially when they were engaged in war against the Parthians or Persians. (Aurel. Vict. de Caes. 39; Nicephor. viii. in fin.) The city often suffered from earthquakes, but owing to the munificence of the emperors it was always restored (Amn. Marc. xviil. 7; Philostorg. iv. p. 506). It also suffered much from an invasion of the Scythians (Amn. Marc. xxii. 9, 12, 13). The orator Libanius (Orat. 62, tom. iii. p. 337, ed. Reiske) mourns the loss of its thermae, basilicae, temples, gymnasia, schools, public gardens, &c., some of which were afterwards restored by Justinian (Procop. de Aed. v. 1; comp. Pol. v. 1. § 3, viii. 17. § 4; Hieroc. p. 691). From inscriptions we learn that in the later period of the empire Nicomedia enjoyed the honour of a Roman colony (Orelli, Inscript. No. 1060). The city is also remarkable as being the native place of Arrian, the historian of Alexander the Great, and as the place where Hannibal put an end to his chequered life. Constantine breathed his last at his villa Accentum, near Nicomedia (Casiod. Chron. Const.; Philostorg. ii. p. 494). The modern Ismid still contains a number of interesting remains, respecting which see Pococke, vol. iii. p. 143, &c.; Description de l'Afrique, tom. i.; comp. Eschene, Lexic. Rom. num. iii. 1. p. 1435, &c. [L. S.]

NICOLIUS DROMUS (Nikolwv δρομος, Perip. Mar. Ergythr. p. 9, ed. Hudson; Troian. Pol. iv. 7. § 11; Nicu, Pol. i. 17. § 12), one of the "Runs" of Azania, on the E. coast of Africa, seven (days') stations in all. Passing the Noti Corau of Poltemy (El-Ashif), the voyager arrived at the "Strandia" (§ 5), the Little and the Great, extending six days according to the Periplus, eight according to Poltemy's authorities, though he would reduce the distance to four natural days. The Little Strand, which occurs first, is doubtless the Seif Taosil, or "Long Sword," of the Arab pilots, so called from its curvature. The Great Strand is probably the district now called Merit, "Dry Desert." These have an extent of 360 miles. Next comes the peopled shore where Poltemy (1. 17. § 11) places 3 towns, Euxia, (Ezen), the Sarapion (Euxia), the Portes (Zeami), the Thepotch (Avky), and the Tonic or Nica, the Nicon of the Periplus. These towns must be placed in the Baro Somaui, or the land of the Somaui, or Shimail, a mild people of pastoral habits, confined to the coast, which they occupy from the Red Sea to the river Juba. The "Port of Sarapion" corresponds with Markob, while the "Run of Nicon" agrees with the point called Torre in Owen's map. (Narrative of Voyages to explore the Shores of Africa, Arabia, and Melagaouzou, performed in H. M. ships Leven and Barracouta, London, 1833; comp. Cooley, Claudius Poltemy and the Nile, p. 64.) [E. B. J.]

NICIONIES (Nikionies, Seylax, p. 29), a city of European Sarmatia, which Strabo (vii. p. 306) places at 180 stadia from the mouth of the Tyrius, while the anonymous Coast-describer (p. 9) fixes it at 300 stadia from the Isinorum Fortus, and 30 stadia from the Tyrians on the coast. Stephans of Byzantium (x. v.) states that it was at the mouth of the Ister, but the Isterportus, Tyrium, as already seen, probably be read. Poltemy (iii. 10. § 16) has removed it from the coast, and placed it too far to the N. Its position must be looked for near Odriolopol. [E. B. J.]

NICOPOLIS (Nikopolis, Nicopolis, Eikon L. Nikopolai, i. e., the "City of Victory." 1. In Asia. 1. A town of Bithynia, on the coast of the Bosporus, a few miles north of Chalcedon. (Plin. v. 43; Steph. B. d. v.) 2. A town in Cappadocia or Armenia Minor, founded by Pompey on the spot where he had gained his first decisive victory over Mithridates. (Strab. xii. p. 555; Appian, Mithrid. 101, 105; Dion Cass. xxxv. 33; Cass. Bell. Alex. 36; Plin. vii. 40.) It was situated in a valley of the river Lycaus, a tributary of the Iris (Acta Martyr. tom. iii. Jul. p. 46), at a distance of 100 miles to the north-west of Satala, and 98 to the north-east of Sebastia. It was a populous town as early as the time of Strabo; but during the last period of the Empire it appears to have suffered much, and its decayed walls were restored by Justinian. (Procop. de Aed. iii. 4; comp. Pol. v. 7.)
NICOPOLIS.

§ 3: *Hist. Ant.* pp. 183, 207, 215; *Hieroc. p. 703; Steph. B. s. c.* Most travellers and antiquaries are agreed, that Nicopolis is represented by the modern Turkish town of Derrélik; but as this place is situated on a tributary of the Ephryus, the opinion is opposed to the statements of our authorities, especially the "Acta Martyrum." Others are inclined to regard Kara-liissar, on the Lycus, as marking the site of Nicopolis; but still the routes indicated in the itineraries are in favour of Derrélik; whence D'Avolle identifies this place with Nicopolis, assuming that the error lies with the author of the "Acta Martyrum," who expressly places Nicopolis on the river Lycus.

3. An episcopal see of uncertain site, in Lydia or Ionia, mentioned by Hierocles (p. 650). [L. S.]

4. A town in Cilicia. [Issus.]

5. A town in Palestine. [Esmal. No. 2.]

NICOPOLIS. II. *In Africa.* A town in Egypt, founded by Augustus Caesar, in b. c. 24, on the field where he defeated, for the last time, M. Antonius, and in commemoration of the surrender of Alexandria. (Strab. xix. p. 759; Joseph. B. Jud. v. i. 18; B. s. c. 3.) The conqueror was at the moment highly incensed with the Alexandrians; and, by the foundation of a Roman town in their immediate neighborhood, sought to inflict a permanent blow on their political and commercial supremacy. Nicopolis was built a little west of the Delta proper, on the banks of the canal which connected Canopus with the capital, and about three and a half miles from its eastern gate.

That it was intended for a city of the first rank appears from its ground plan, which, however, was never executed. Its founder built an amphitheatre and a diobol, and established there Ludii Quinquennales, in honour of his victory (Acts 26, § 3, ed. Mervell); and coins bear on their reverse the legend ΝΙΚΟΠΟΛΗΣ ΣΕΒΑΣΤ. ΚΣΙΣ.

He also designed to erect to them the principal sacrifices and priestly ceremonies of the Macedonian capital. But the whole scheme was a failure; the natural advantages of Alexandria were irrecoverable; and the Roman "City of Victory" was never more than a suburb of its rival. Within less than a century after its foundation, the name of Nicopolis disappears from history. A town called Julopolis, mentioned by Pliny alone (vi. 23. § 26), as seated on the same canal, and about the same distance (20-30 stades) from Alexandria, is apparently Nicopolis (see Mammert, vol. x. p. 626). [W. B. D.]

NICOPOLIS. III. *In Europe.* 1. A city of Epeirus, erected by Augustus, in commemoration of the victory of Actium, a. d. 31. It was situated near the entrance of the Ambraciot gulf, on the promontory of Epeirus, which is immediately opposite that of Actium in Aelasania. The extremity of the Epeiroit promontory is now occupied by the town of Pireas; and Nicopolis lay 3 miles to the N. of this town, on a low isthmus separating the Ionian sea from the Ambraciot gulf. It was upon this isthmus that Augustus was encamped before the battle of Actium. His own tent was pitched upon a height immediately above the isthmus, from whence he could see the outer sea towards Pagi, and the Ambraciot gulf, as well as the ports towards Nicopolis. He fortified the camp, and connected it by walls with the outer port, called Comaros. (Dion Cass. l. 12.) After the battle he surrounded with stones the place where his own tent had been pitched, adorned it with naval trophies, and built within the enclosure a sanctuary of Neptune open to the sky. (Dion Cass. l. 12.) But, according to Suetonius (Aug. 18), he dedicated this place to Neptune and Mars. The city was peopled by inhabitants taken from Ambracia, A.consumer, Thyrium, Argos Amphilechium, and Calydon. (Dion Cass. l. 1; Suet. Aug. 12; Strab. viii. pp. 324, 325; Paus. v. 23. § 3, vii. 18. § 8, x. 38, § 4.) Augustus instituted at Nicopolis a quinquennial festival, called Actia, in commemoration of his victory. This festival was sacred to Apollo, and was celebrated with music and gymnastic games, intended to resemble those of the Ambraciot festival. It was revived at the revival of an old festival, since there was an ancient temple of Apollo on the promontory of Actium, which is mentioned by Thucydides (i. 29), and was enlarged by Augustus. The festival was declared by Augustus to be a sacred contest, by which it was made equal to the four great Grecian games; it was placed under the superintendence of the Lacedaemonians. (Dion Cass., Suet., Strab., &c.) Augustus caused Nicopolis to be admitted into the Amphictyonic council (Paus. x. 38. § 9), and made it a free city (Dion Cass. l. 12.) The town, however, was not a part of the revival of the fifth century it was plundered by the Goths. (Procop. B. Goth. iv. 22.) It was again restored by Justinian (de Aedif. iv. 2), and was still in the sixth century the capital of Epeirus. (Hieroc. p. 651, ed. Wessel.) In the middle ages Nicopolis sunk into insignificance, and the town of Prevesa, built at the extremity of the promontory, at length absorbed all its inhabitants, and was doubtless, as in similar cases, chiefly constructed out of the ruins of the ancient town.

The ruins of Nicopolis are still very considerable. They stretch across the narrowest part of the isthmus already described. Strabo (vii. p. 324) erroneously describes the isthmus as 60 stadia in breadth; but the broadest part, from the south-eastern extremity of the lagoon called Mæcusa to Myîka, is only three miles; while the narrowest part is less than half that distance, since the eastern half of the isthmus is occupied by the lagoon of Mæcusa. This lagoon is separated from the Ambraciot gulf only by a narrow thread of land, which is a mile long, and has openings, where the fish are caught in great numbers, as they enter the lagoon in the winter and quit it in the summer. This illustrates the statement of an ancient geographer, that fish was so plentiful at Nicopolis as to be almost disgusting. (Geogr. Graec. Min. vol. iii. p. 13, ed. Hudson.) Nicopolis had two harbours, of which Strabo (vii. p. 324) says that the nearer and smaller was called Comaros (Kîhapus), and the further and larger one, was near the mouth of the gulf, distant about 12 stadia from Nicopolis. It would appear, that Strabo conceived both the ports to have been on the western coast out-side the gulf; but it is evident from the nature of the western coast that this cannot have been the case. *M. reverer., Dion Cassins (l. 12) calls Comaros...*
the outer port; and there can be little doubt that the
second harbour, intended by Strabo, was the port of
Vathy within the gulf, the distance of which from
Nicopolis corresponds to the 12 stadia of Strabo, and
where there are some Roman ruins a little within
and on the eastern shore of the creek. The port of
Corinna was doubtless at Mityka, but the name of
Gomero is now given to the wide bay north of
Mityka.

The ruins of Nicopolis are now called Paleokó
straon. On approaching them from Próressa, the
traveller first comes to some small arched buildings
of brick, which were probably sepulchres, beyond
which are the remains of a strong wall, probably the
southern enclosure of the city. Near the south-
western extremity of the lagoon Mázoma, is the
Paleókóstraon or castle. It is an irregular pentagonal
enclosure, surrounded with walls and with square
towers at intervals, about 25 feet in height. On
the western side, the walls are most perfect, and here
too is the principal gate. The extent of the enclosure
is about a quarter of a mile. The variety of brick
fragments and even the remains of inscriptions of the
time of the Roman Empire, inserted in the
masonry, prove the whole to have been a repair,
though perhaps upon the site of the original acro-
polis, and restored so as to have been sufficiently
large to receive the diminished population of the place.
It may have been, as Leake conjectures, the work of
Justinian, who restored Nicopolis.

Three hundred yards westward of the Paleókóstraon
are the remains of a small theatre but little dilapi-
dated. Col. Leake says that it appears to be about
200 feet in diameter; but Lieut. Wolfe describes it
as only 60 feet in diameter. Being built upon level
ground, the back or highest part is entirely sup-
ported upon an arched corridor. Between this

MAP OF THE NEIGHBOURHOOD OF NICOPOLIS.

A. Site of Nicopolis.
B. Port Comarna, Mýtika.
C. Port Vathy.
D. Lagoon Mázoma.
E. Próressa.
F. Actium. La Punta.
1. Pórókóstraon.
2. Small Theatre.
3. Palace.
4. Large Theatre.
5. Stadium.
6. Aqueduct.

THEATRE AND THE SHORE, ARE THE RUINS OF A QUADRA-
TANGULAR BUILDING OF BRICK, WHICH WAS PERHAPS A
PALACE, AS IT HAS NUMEROUS APARTMENTS, WITH MANY NICHES
IN THE WALLS FOR STATUES, AND SOME REMAINS OF A STONE
Pavement. It stands just within an aqueduct, sup-
ported upon arches, which entered Nicopolis on the
north, and was 30 miles in length. Considerable
remains of it are met with in different parts of
Epirus.

Further north, at the foot of a range of hills, are
the remains of the great theatre, which is the most
conspicuous object among the ruins. It is one of the
best preserved Roman theatres in existence. The
total diameter is about 300 feet. The scene is 120
feet long, and 30 in depth. There are 27 rows of
seats in three divisions. From the back of the
theatre rises the hill of Mikhalití, which was un-
doubtably the site of the tent of Augustus before the
battle of Actium. Close to the theatre are the
ruins of the stadium, which was circular at both
ends, unlike all the other stadia of Greece, but
similar to several in Asia Minor, which have been
constructed or repaired by the Romans. Below the
stadium are some ruins, which are perhaps those of
the gymnasium, since we know from Strabo (vii. p.
325) that the gymnasium was near the stadium.
The accompanying map is taken from Lient. Wolfe's
92, seq.)

2. A town of Thrace, not far from the mouth
of the Nestus, and therefore called by Ptolemy (iii. 11,
§ 13) Níkocóleia & τερπ Νέσσον. It appears
to have been founded by Trajan, as it is named
Ulpi on coins. The Scholiast upon Ptolemy
says that it was subsequently named Christopolis;
but it is still called Nicopolis by Socrates (H. E.
vii. 36) and Hierocles (p. 635).

3. A town of Thrace at the feet of Mt. Haemus.
(Ptol. iii. 11, § 11.)

4. A town of Thrace, situated at the place where
the Iatus runs into the Danube, and erected by
Trajan in memory of his victory over the Dacians.
(Amm. Marc. xxxi. 5; Jornand. de Rob. Got. c. 18;
Hieroc. p. 636.)

NICO'TEIA (Nicoteia), a town of Bruttium,
known only from the Antonine Itinerary (pp. 106,
111), which places it 18 M. P. south of Vibo
Valentia, on the road to Rhegium. It is repeatedly
mentioned in the middle ages, and still exists under
its ancient name as a considerable town and an
episcopal see.

[N. E. B.]

NIDUM or NIDUS, a town of Britain, situated
according to the Itinerary (p. 484), on the road from
Isca Dununnorianum to Isca Silurum, and consequently
in the territory of the Belgae. This site, however,
is in all probability false; and it appears rather to
have been a town of the Silures, the modern Neath,
on the river of that name in Glamorganshire.
(Camden, p. 785.)

[T. H. D.]
And this greatest the flowing mate.

The pjiiit in length, divided by a great river, a part of interior Libya, flowing from W. to E. It has long been a moot point among geographers whether the Niger of the ancients should be identified with the river now known as the Ijdbiba or quorra, which, after taking its course through the vast plains or lowlands of Central Africa, turns southwards towards the Bight of Biafra, where it enters the sea. For instance, Gesselin (Geographie des Anciens, vol. i. pp. 125—135) came to the conclusion that the ancients possessed no knowledge of N.W. Africa to the S. of the river Num. Walckaer (Rercherches Geographiques sur l'Intérieur de l'Afrique Septentrionale, Paris, 1821) also, who has carefully discussed this point, sums up the result of his inquiries by asserting that none of Ptolemy's rivers can be the same as the Ijubiba or any other stream of the Bileda-Idul-Budda, as that region was quite unknown to antiquity, and was, in reality, discovered by the Arab, Shebab, in the same track, Mr. Colebrooke (Chald. Ptol. Ph. and the Nile, London, 1854) regards the Niger as a hypothetical river, representing collectively the waters of the Bileda-I-Idul. On the other hand, Colonel Leké (Journ. Geog. Soc. vol. ii. pp. 1—28), whose views are adopted in the present article, considers that Ptolemy's information on the Idjubiba or Quorra, although extremely imperfect, was real. There seems, indeed, to be reason for believing that its discovery may be placed at a much earlier period, and that its banks were reached by the young Nasamoth, the son-in-law of Ptolemy (Ptol. vi. 11, 8). Ptolemy's statements (L.C.) are annexed, from which it will be seen that the arguments in favour of the identity of his Niger with the Quorra were very strong. He believed that the earth was spherical; he divided the great circle into 360°; of these degrees he placed the same number in the breadth of N. Africa, that modern observations confirm; in the length of the same country he erred only one-tenth in excess. While in the interior, proceeding from a point of the W. coast, where the positions approximate to modern geography, he placed a great river, flowing from W. to E., exactly in the latitude where the Quorra flows in that direction.

In considering the exact meaning of this passage, it should be remembered that the word ékertio, translated "divergent," simply indicates the point of junction of two streams, without any reference to the course of their waters. At present, our acquaintance with a great river in a part of interior Libya, NIGER, (Nf, Isid. Portli. 16. ed. Miller), a small place in Ariana, probably the present Nok, in Kotharim.

NIGER (Npyip, Phil. iv. 6, § 14; \nNpyip, Aracten. ii. 10; \nNiger, gen. 8), in Ptolemy's division of Libya, is a great river of interior Libya, flowing from W. to E. It has long been a moot point among geographers whether the Niger of the ancients should be identified with the river now known as the Ijdbiba or quorra, which, after taking its course through the vast plains or lowlands of Central Africa, turns southwards towards the Bight of Biafra, where it enters the sea. For instance, Gesselin (Geographie des Anciens, vol. i. pp. 125—135) came to the conclusion that the ancients possessed no knowledge of N.W. Africa to the S. of the river Num. Walckaer (Rercherches Geographiques sur l'Intérieur de l'Afrique Septentrionale, Paris, 1821) also, who has carefully discussed this point, sums up the result of his inquiries by asserting that none of Ptolemy's rivers can be the same as the Ijubiba or any other stream of the Bileda-Idul-Budda, as that region was quite unknown to antiquity, and was, in reality, discovered by the Arab, Shebab, in the same track, Mr. Colebrooke (Chald. Ptol. Ph. and the Nile, London, 1854) regards the Niger as a hypothetical river, representing collectively the waters of the Bileda-I-Idul. On the other hand, Colonel Leké (Journ. Geog. Soc. vol. ii. pp. 1—28), whose views are adopted in the present article, considers that Ptolemy's information on the Idjubiba or Quorra, although extremely imperfect, was real. There seems, indeed, to be reason for believing that its discovery may be placed at a much earlier period, and that its banks were reached by the young Nasamoth, the son-in-law of Ptolemy (Ptol. vi. 11, 8). Ptolemy's statements (L.C.) are annexed, from which it will be seen that the arguments in favour of the identity of his Niger with the Quorra were very strong. He believed that the earth was spherical; he divided the great circle into 360°; of these degrees he placed the same number in the breadth of N. Africa, that modern observations confirm; in the length of the same country he erred only one-tenth in excess. While in the interior, proceeding from a point of the W. coast, where the positions approximate to modern geography, he placed a great river, flowing from W. to E., exactly in the latitude where the Quorra flows in that direction.

In considering the exact meaning of this passage, it should be remembered that the word ékertio, translated "divergent," simply indicates the point of junction of two streams, without any reference to the course of their waters. At present, our acquaintance with a great river in a part of interior Libya, NIGER, (Nf, Isid. Portli. 16. ed. Miller), a small place in Ariana, probably the present Nok, in Kotharim.

NIGER (Npyip, Phil. iv. 6, § 14;...
NIGEREA. [NIGERIAE.]

NIGER-PULLUS, Negropullum, or Negropallo, in North Gallia, is placed by the Theodosian Table on a road from Lugudunum Batavorum (Leiden) to Noviomagus (Nymegen). The distance is marked 11 from Albimiana (Alfen), ascending the Rhine. Uckert (Gallen, p. 533) quotes a Dutch author, who says that there is a village near Hoveen still called Ziverto Kuikshoorn. (D'Anville, Notice, etc.)

NIGERITAE, NIGERETES (Neritae, Strab. ii. p. 131, xvii. p. 826; Ptol. iv. 6 § 16; Agathem. ii. 5; Mela, ii. 4 § 3, iii. 10 § 4; Plin. v. 8; Nilgyntr., Strab. xvii. p. 828; Dionys. v. 215; Steph. B.), an African tribe who with the Pharusii were said to have destroyed the Tyrian settlements on the coast of the Atlantic, and though adjacent to the W. Nile, were distant from its journeys from Luxor or Luxus (El-Aswâd). Strabo, as it appears, had no knowledge, or, at least, placed no confidence, in any information which may have reached him as to the countries more to the S. than Fezzân. But if he was so ignorant of Libya, and particularly of the position of the W. Aethiopians (comp. p. 893), no great weight can be attached to his testimony, that the Nigeritae and Pharusii, whom he expressly states to have been near these Aethiopians, were a tribe of the desert, whose name was called Nilus; that it flowed from thence through sandy deserts, in which it was concealed for several days; that it reappeared in a great lake in Mauretania Caesariensi; that it was again hidden for twenty days in deserts; and that it rose again in the sources of the Nigirs, which river, after having separated Africa from Aethiopia, and then flowed through the middle of Aethiopia, at length became the branch of the Nile called Aastacus. The same fable, though without the Niger being mentioned, is alluded to by Strabo (xvii. p. 826; comp. Vitruv. viii. 2 § 16); while Mela (iii. 9 § 8) adds that the river at its source was also called Dara, so that the river which now bears the name El-Dhara would seem to be the stream which was the reputed commencement of the Nile. The Niger of Pliny was obviously a different river, both in its nature and position, from the Ger of the same author. It was situated to the S. of the great desert on the line separating Africa from Aethiopia; and its magnitude and productions, such as the hippopotamus and crocodile, cannot be made to correspond to any of the small rivers of the Atlas. Neither do these swell at the same season as the Nile, being fed, not by tropical rain, falling in greatest quantity near the summer solstice, but by the waters of the maritime ridges, which are most abundant in winter. The Niger is not mentioned by the Geographer of Ravenna, nor the Arabs, until the work of Joannes Leo Africanus—a Spanish Moor—which was written at Rome, and published in Latin, a.d. 1556. Though his work is most valuable, in being the only account extant of the foundation of the Negro empires of Sudân, yet he is in error upon this point, as though he had sailed on the river near Timbuktu; he declares that the stream does not flow to the E., as it is known to do, but to the W. to Gänia or Jamaa. This mistake led Europeans to look for its estuary in the Senegál, Gambia, and Rio Grande. The true course of the river, which has now been traced to its mouth, confirms the statements of the ancients as to the great river which they uniformly describe as flowing from W. to E. [E. B. J.]

NIGERIA. [NIGERITAE.]

NIGRIUS. [Mogruus.]

NILI PALAUDES (ai των Νετούς Αίμων, Ptol. iv. 9 § 3; Strab. xvii. p. 786) were described by the ancient geographers as two immense lagoons, which received the first floods of the periodical rains that from May to September fall upon the Abyssinian highlands and swell all the rivers flowing northward from that table-land. From these lagoons the Astapus (Bahir-el-Azrek, Blue River) and the Bahir-el-Abiad, or White River, respectively derived their waters; and since they were the principal tributaries of the Nile, the lakes which fed them were termed the Nileotic Marshes. The ancients placed the Nili Paludes vaguely at the foot of the Lianae Montes; and the exploring party, sent by the emperor Nero, described them to Seneca the philosoper as of boundless extent, covered with floating weeds, and containing black and slimy water, impassable either by boats or by wading. There is, however, some probability that this exploring party saw only the series of lagoons produced by the level and sluggish stream of the White River, since the descriptions of modern travellers in that region accord closely with Seneca's narrative (Nat. Quaest. vi. 8). The White River itself, indeed, resembles an immense lagoon. It is often from five to seven miles in width, and its banks are so low as to be covered at times with slime to a distance of two or three miles from the real channel. This river, as less remote than the Abyssinian highlands from the ordinary road between Syene and the S. of Meroe (Sennar), is more likely to have fallen under the notice of Nero's explorers; and the extent of slimy water overspread with aquatic plants, corresponds
with Senec's description of the Nile Paludes as "immensas quaram exitus nec incola neveeaeae nec speram quisquam posset," [Nile.] [W. B. D.]

NILEPOLIS (ΝΙΛΟΠΟΛΙΣ, Ptol. v. 5. § 57; Steph. B. s. r. : Νείλοπολις), was a city of Middle Egypt, built upon an island of the Nile, in the Hermopolitic nome, and about eight miles N. of Heracleopolis Magna. Nilepolis is sometimes called simply Nilus, and appears to be the town mentioned in the latter name by Heracetas (Fragment. 277). It was existing as late as the 5th century A. D., since it is mentioned in the Acts of the Council of Ephesus, A. D. 430. [W. B. D.]

NILUS (Νίλος), the river Nile in Egypt. Of all the more important rivers of the globe known to the Greek and Roman writers, the Nile was that which from the remotest periods arrested their liveliest curiosity and attention. It ranked with them as next in magnitude to the Ganges and the Indus, and as surpassing the Danube in the length of its course and the volume of its waters. (Strab. xvi. p. 792.) Its physical phenomena and the peculiar civilisation of the races inhabiting its banks attracted alike the historian, the mathematician, the satirist, and the romance-writer; Herodotus and Diodorus, Eratosthenes and Strabo, Lucian and Heliodorus, expatiate on its marvels; and as Aegypt was the resort of the scientific men of Greece in general, the Nile was more accurately surveyed and described than any other river of the earth.

The word Nilus, if it were not indigenous, was of Semitic origin, and probably transmitted to the Greeks by the Phoenicians. Its epithets in various languages—e. g. the Hebrew Sihkor (Siaiwh, xxiii. 3; Jerem. ii. 18), the Egyptian Chein, and the Greek Νεῖλος (Servius, ad Virgil. Georg. iv. 291)—point to the same peculiarity of its waters, the line imparted by their dark slime. The Egyptians entitled the Nile Nilah-Misraim, or river of Aegypt; but the natives called it simply πυθρό (wherein probably the Nabhan Kier) or τη» εγκές (i. e. river). Lydus (de Mensibus, c. 8) says that it was sometimes termed Ilas or dark; and Pliny (v. 9. s. 9; comp. Dionys. Perieg. v. 213) observes, somewhat vaguely, that in Aethiopia the river was called Siris, and did not acquire the appellation of Nileus before it reached Syene. With few exceptions, however, the Greeks recognised the name of Nilus as far south as the present Mediterranean region; they merely added to which of its tributaries they should assign the principal name. Homer, indeed (Od. iii. 300, iv. 477, &c.), calls the river Aegyptus, from the appellation of the land which it intersects. But Hierod (Theog. 338) and Heracetas (Frgm. 279—

380), and succeeding poets and hist. scanns uniformly designate the river of Aegypt as the Nile.

It is unnecessary to dwell on a theory at one time received, but generally discarded by the ablest of the ancient geographers—that the Nile rose in Lower Mauretania, not far from the Western Ocean (Juba, ap. Plin. v. 9. s. 10; Dion Cass. Lxv. 13; Solin. c. 37); that it flowed in an easterly direction; was engulfed by the sands of the Sihuara; reappeared as the Nile; again sunk in the earth, and came to light once more near the Great Lake of Debitia, as the proper Nile.

Historically, the Nile derives its principal importance from the civilisation, to which it contributed so materially, of the races inhabiting its shores, from the S. of Meroe northwards to the Mediterranean. But for geographical purposes it is necessary to examine its course, in the first instance, through less known regions, and to ascertain, if possible, which of its feeders above Meroe was regarded by the ancients as the true Nile. The course of the stream may be divided into three heads:—(1) the river S. of Meroe; (2) between Meroe and Syene; and (3) between Syene, or Philae, and the Mediterranean.

(1) The Nile above Meroe.—The ancients briefly described the Nile as springing from marshes (Nile Paludes) at the foot of the Mountains of the Moon. But as all the rivers which flow northward from the Abyssinian highlands rise from lagoons, and generally expand themselves into broad marshes, this description is too vague. Neither is it clear whether they regarded the White River, or the Blue, or the Astaboras (Taenazzi), as the channel of the true Nile. The names of rivers are often given capriciously: it by no means follows that they are imposed upon the principal arm or tributary; and hence we can assign neither to the Astapus nor to the White River, usually considered as the main stream, the distinction of being absolutely the "true Nile."

The Nile, as Strabo sagaciously remarks (xi. p. 493), was well known because it was the channel of active commerce; and his observation, if applied to its southern portions, may lead us to the channel which was really regarded as the principal river even in remotest ages. The stream most frequented and accessible to navigation, and whose banks were the most thickly peopled, was doubtless the one which earliest attracted attention, and this we believe to have been the Astapus (Bahr-el-Azrek, or Blue River).

As the sources both of the Blue River and of the Bahr-el-Abiad or the White River are uncertain, it will be proper to examine these streams above their point of junction near the modern military station at Kharbian, lat. 15° 37' N., long. 33° E. The Astaboras (Taenazzi) may for the present be dismissed, both as an inferior tributary, and as below the meeting of the two main streams.

The White River, which has been often designated as "the true Nile," has at no period been either a road for traffic nor favourable to the settlement of man on its banks. It is rather an immense lagoon than a river, is often from 5 to 7 miles in breadth, and its sides are in general so low as to be covered at times with alluvial deposit a distance of from 2 to 3 miles beyond the stream. On its shores there is neither any town, nor any tradition of there having ever been one; nor indeed, for many leagues up the stream, do there occur any spots suited either to the habitation of men, to pasture, or to tillage. On the contrary, it is represented by travellers much in the same terms in which Seneca (Natur. Quaeat. vi. 8) speaks of the Nile Paludes, as seen by Nero's surveyors. The latter are described as the "former philosophers" of the Nile, by their monstrous paludifoms, quarae exitus nec incola nemo, nec speram quisquam posset, its impicitate aquis herbaceae sunt," &c.; the former by recent explorers as "an interminable sea of grass," "a fertile stagnant marsh," &c. As the White River indeed approaches the higher table-land of the S., its banks become less depressed, and are inhabited; but the weedy lagoons extend nearly 100 miles SW. of Kharbian.

But if we trace upwards the channel of the Blue River, a totally different spectacle presents itself.
The river nearly resembles in its natural features and the cultivation of its banks the acknowledged Nile below the junction lower down. The current is swift and regular: the banks are firm and well defined: populous villages stand in the midst of clumps of date-trees or fields of millet (dhourra), and both the land and the water attest the activity of human enterprise.

A difference corresponding to these features is observable also in the respective currents of these rivers. The White River moves sluggishly along; without rapids or cataracts; while the Blue, though strongly affected at all seasons, and after the periodical rains with the force and speed of a torrent. The diversification is seen also on the arrival of their waters at the point of junction. Although the White River is fed by early rains near the equator, its floods ordinarily reach Khartum three weeks later than those of the Blue River. And at their place of meeting the superior strength of the latter is apparent. For while the stronger flood discharges itself through a broad channel, free from bars and shoals, the White River is contracted at its mouth, and the more rapid current of its rival has thrown up a line of sand across its influx. Actual measurement, too, has proved the breadth of the Blue River at the point of junction to be 768 yards, while the mouth of the White is only 483, and the body of water poured down by the former is double of that discharged by the latter. From all these circumstances it is probable that the Bahri-el-Azrek [i.e., the Blue Nile] is the true Nile; and this supposition accords with an ancient tradition among the people of Semenar who hold the Blue River in peculiar veneration as the "Father of the Waters that run into the Great Sea."

The knowledge possessed by the ancients of the upper portions and tributaries of the Nile was not altogether in a direct proportion to the date of their intercourse with those regions. Indeed, the earlier track of commerce was more favourable to acquaintance with the interior than were its later channels. The overland route declined after the Ptolemies transferred the trade from the rivers and the roads across the desert to Axum, Adulis, Berenice, and the ports of the Red Sea. Eratosthenes and other geographers, who wrote while Aethiopia still flourished, had thus better means of information than their successors in Roman times, Strabo, Ptolomy, &c. Diodorus (i. 30), for example, says that a voyage up the Nile to Meroe was a costly and hazardous undertaking; and Nero's explorers (Pline, v. 9. s. 10; Senec. N. Q. vi. 8) seem to have found in that once populous and fertile kingdom only solitude and decay. At the close of the third century a.d. the Romans abandoned every station on the Nile above Philæ, as not worth the cost and care of defence,—a proof that the river-traffic, beyond Aegypt, must have dwindled away. As the trade with Arabia and Taprobane (Ceylon) by sea developed itself, that with Nubia would become of less importance; and in proportion as the Red Sea was better known, the branches and sources of the Nile were obscured.

(2) The Nile below the point of junction.—The two streams flow in a common bed for several miles N. of Khartum, without, however, blending their waters. The Bahri-Abiad retains its white saipy hue, both in the dry season and during the inundations, while the Bahri-Azrek is distinguished by its dark colour. For 12 or 15 miles below the point of junction the Nile traverses a narrow and gloomy defile, until it emerges among the immense plains of herbage in the mesopotamian district of Meroe. Beyond Meroe, already described [Meroe], the Nile receives its last considerable affluent, the Astobor or Tocazzæ; the only other accessions to its stream in its course northward being the torrents or wadys that, in the rainy season, descend from the Arabian hills. From the N. of Meroe to Syene, a distance of about 700 miles, the river enters upon the region of Cataracts, concerning which the ancients invented or credited so many marvels. (Cic. Sems. Scip. 5; Senec. N. Q. iv. 2.)

These rapids are seven in number, and are simply dams or weirs of granite or porphyry rising through the sandstone, and being little affected by the attrition of the water, resist its action, divide its stream, and render its fall per mile double of the average fall below Philæ. So far, however, from the river descending lofty precipices with a deafening noise, even the steepest of the rapids may, shot, though not without some danger, at high water; and at the great Cataract the entire descent in a space of 5 miles is only 80 feet. [Philæ.—] Increased by the stream of the Astoboras, the Nile, from lat. 17° 45' N., flows in a northerly direction for 120 miles, through the land of the Berbers. Then it comes its great SW. elbow or bend, commencing at the rocky island of Mogred (lat. 19° N.), and continuing nearly to the most northern point of Meroe. During this lateral deflection the Nile is bounded W. by the desert of Bahiouda, the region of the ancient Nubae, and E. by the Arabian Desert, inhabited, or rather traversed, by the nomades Blemmyes and Megabari. [Mahomm.—] Throughout this portion of its course the navigation of the river is greatly impeded by rapids, so that the caravans leave its banks, and regain them by a road crossing the eastern desert at Derr or Syene, between the first and second Cataracts. No monuments connect this region with either Meroe or Aegypt. It must always, indeed, have been thinly peopled, since the only cultivable soil consists of strips or patches of land extending about 2 miles at furthest beyond either bank of the Nile.

While skirting or intersecting the kingdom of Meroe, the river flowed by city and necropolis, which, according to some writers, imparted their forms and civilisation to Aegypt, according to others derived both art and polity from it. The desert of Baskonda severa the chain of monuments, which, however, is resumed below the fourth Cataract at Nauri, Gebel-el-Birkel, and Mervace. (Lat. 20° N.) Of thirty-five pyramids at Nauri, on the left bank of the river, about half are in good preservation; but the purpose which they served is uncertain, since no ruins of any cities point to them as a necropolis, and they are without sculptures or hieroglyphics. On the western side of Gebel-el-Birkel, about 8 miles lower down, and on the right bank, are found not only pyramids, but also the remains of several temples and the vestiges of a city, probably Napata, the capital of Candace, the Aethiopian queen. [Napata.—] (Cailiaud, l'Isle de Meroe, vol. iii. p. 197; Hoskins, Travels, p. 136—141.) About the 18th degree of N. latitude the Nile resumes its northerly direction, which it observes generally until it approaches the second Cataract. In resuming its direct course to N., it enters the kingdom of Dongola, and most of the features which marked its channel through the
desert now disappear. The rocky banks side by side, the inundation fertilizes the borders to a considerable distance; and for patches of arable soil fine pastures abound, whence both Arabia and Aegypt imported a breed of excellent horses. (Russegger, Karte von Nubien.) But after quitting Napata (?), no remains of antiquity are found before we arrive at the Gagandes Ismula of Pliny (vi. 29. s. 35.), lat. 19° 35', the modern Argo, a little above the third Cataract. The quarries of this island, which is about 12 miles in length, and causes a considerable eddy in the river, were worked both by Ethiopians and Aegyptians. A little to N. of this island, and below the third Cataract, the Nile makes a considerable bend to the E., passing on its right the banks ofsegk, or Scocch. On its left bank are found the remains of the temple of Soleb, equally remarkable for the beauty of its architecture, and for its picturesque site upon the verge of the rich land, "the river's gift," and an illimitable plain of sand stretching to the horizon. (Cailliaud, l'ile de Meroc, vol. i. p. 375; Hoskins, Travels, p. 245.) The Nile is once again divided by an island called Sais, and a little lower down is contracted by a wall of granite on either side, so that it is hardly a stone's-throw across. At this point, and for a space of several miles, navigation is practicable only at the season of the highest floods.

Below Sais are found the sites of the small temple of Amara, and at Semneh those of two temples which, from their opposite eminences on the right and left banks of the river, probably served as fortresses also at this narrow pass of the Nile. That a city of great strength once existed here is the more probable, because at or near Semneh was the frontier between Aethiopia and Aegypt. We have now arrived at the termination of the porphyry and granite rocks; hereforward, from about lat. 21° N., the river-banks are composed of sandstone, and acquire a less rugged aspect. The next remarkable feature is the Cataract of Waide-Hoyle, the Great Cataract of the ancient geographers. (Strab. avii. P. 786.)

In remote anti-historic periods a bar of primitive rock, piercing the sandstone, probably spanned the Nile at this point (lat. 22° N.) from shore to shore. But the original barrier has been broken by some natural agency, and a series of islands now divides the stream which rushes and eddies between them. It is indeed less a single fall of water than a succession of rapids, and must be ascended, as Belzoni did, during the inundation. (Travels in Nubia, p. 86.) The roar of flood waters may be heard at the distance of half a league, and the depth of the fall is greater than that of the first Cataract at Syene. On the left bank of the river a city once stood in the immediate neighborhood of the rapids; and three temples, exhibiting on their walls the names of Setosathan, Aethiopia, and Amonopolis II., have been partially surveyed here. Indeed, with the second Cataract, we may be said to enter the province of Aegypt, which, for good reason, is called the Nile below Syene—a distance of 290 miles, either bank of the Nile presents a succession of temples, either excavated in the sandstone or separate structures, of various sizes and styles of architecture. Of these the most remarkable and the most thoroughly explored is that of Abu-Elbel or Iteinabul, the ancient Ischis, on the left bank, and two days' journey below the Cataract. This temple was first cleared of the incidental sand by Belzoni (Researches, vol. i. p. 316), and afterwards more completely explored, and identified with the reign of Rameses III., by Champollion and Rosellini. Prinmis (Fbrimus) is one day's journey down the stream; and below it the sandstone hills compress the river for about 2 miles within a mural escarpment, so that the current seems to force itself rather than to flow through this barrier. (The Nile below Syene. — At Syene (Amenophis II. and 1), N., lat. 25° 30', E., this formation continues without any resumption of the sandstone, until both the Libyan and the Arabian hills diverge finally at Cercasaurus. The river thus flows beneath the principal quarters out of which the great structures of the Nile valley were built, and was the high road by which the blocks were conveyed to Thebes and Apollonopolis, to Sais and Buabastis, to the Great Liberth in the Aisorite nome, to the Pyramids and Menmphis, and thence to the Greek and Roman architects of Alexandria and Antinoopolis. Again, from Syene to Latopolis, the shores of the river are sterile and dreary, since the inundation is checked by the rock-walls E. and W. of the stream. But at Apollonopolis Magna, lat. 23°, and at Latopolis, 23° 30', the rocks leave a broader verge for the fertilizing deposit, and the Nile flows through richly cultivated tracts. At Thebes, for the first time, the banks expanded into a broad plain, which is again closed in at the N. end by the hills at Gourna. Here, and not at Trench, may be seen the ancient road, a mile and a quarter in breadth. It has hitherto followed a northerly direction; but at Coptos, where a road connected the stream with the ports of the Red Sea [Berenice], it bends to the NW., and follows this inclination for some distance. At Panopolis, however, it resumes its general N. bearing, and retains it to the fork of the Delta.

Near Diospolis Parva (Houe), on the left bank, and opposite Obenosbomis, on the right, begins the canal, or, perhaps, an ancient branch of the Nile, called the Canal of Joseph [Bahr-Jumf]. This lateral stream flows in a direction nearly parallel to the main one, through the Aisorite nome (El-Foum). From this point the Nile itself presents no remarkable feature until it reaches Sossos-Arimonides, or the grottos of Benihaman, where the eastern hills, approaching close to the river, limit its inundation, and consequently also the cultivable land. In lat. 29° N. the Libyan hills, for a space, recede, and curving at first NW., but soon resuming a SE. direction, embrace the Aisorite nome. Lastly, a little below Memphis, and after passing the hills of Gebel-el-Mobattam, both the eastern and western chains of rocks finally diverge, and the river expands upon the great alluvial plain of the Delta.

At Cercasaurus, where the bifurcation of the river begins, or, perhaps, at a remoter period, still nearer Memphis, the Nile probably met the Mediterranean, or at least an estuary, which its annual deposits of
NILUS.

1. Beginning from the E. was the Pelusian arm (τὸ Πελούσιον ὑπάρξεως, Strab. xvii. p. 801; Ostitum Pelusiacum; cf. Strab. v. 9. s. 9). This has now become dry; and even when Strabo wrote a little before the first century A.D., Pelusium, which stood on its banks, and from which it derived its name, was nearly 2 miles from the sea (xiv. p. 806). The remains of the city are nearly more than four times that distance. Upon the banks of the Pelusian arm stood, on the eastern side, and near the apex of the Delta, Heliopolis, the θέα τῶν Βυζαντίων; and 20 miles lower down, Bubastos (Τελ Βυστάς).

2. The Tanitic arm (τὸ Τανιτικὸν στόμα, ο ὑπάρξεως, Herod. ii. 17; comp. Strab. xvii. p. 802; Mela, i. 9. § 9, Catapytæum). The present canal of Moegosa probably coincides nearly with the Tanitic branch, though, together with the Ostitum Bolbiticum, has been absorbed in the lower portion of its course by the lake Menzaleh. It derived its name from Tanis, the θέα τῶν Βυζαντίων, the modern Sin, in lat. 31°, one of the oldest cities of the Delta.

3. The Mendesian arm (τὸ Μενδειαῖον στόμα, Strab. &c.) was a channel running from the Sebentnic Nile-arm. It is now lost in the lake Menzaleh.

4. The Phatnian or Pathmetic arm (τὸ Φατνιτικὸν στόμα, Strab.; Φαθμιτικόν, Dial. i. 33; Phathomitenum, Ptol. iv. 5. §§ 10, 40; Pathmeticæm, Mela. i. 9. § 9.) This was the Βουκολικὸν στόμα of Herodotus (ii. 17); but it seems doubtful whether it was an original channel, and not rather a canal. It corresponds with the lower portion of the present Damiatta branch of the Nile.

5. The Sebentnic arm (τὸ Σεβεντνιτικὸν στόμα) derived its name from the city of Sebennytos, the present Sennachoub. As far as this city the Damiatta branch represents the ancient Sebentnic; but northward of this point, lat. 31°, the earlier channel is lost in the marshes or sands, which separate the present Delta from the Mediterranean; and its mouth, which was nearly due N. of Memphis, is now covered by the lake of Bourlas. The Sebentnic arm, continuing in the direction of the Nile before its division, i.e. running nearly in a straight course from N., has some claims to be regarded not so much as one of the diverging branches as the main stream itself. This channel, together with the most easterly, the Pelusian, and the most westerly, the Canopic, were the three main arms of the Nile, and carried down to the sea by far the greater volumes of water.

6. The Bolbitic or Bolbitine arm (τὸ Βολβίτιτικὸν στόμα, Strab. xvii. p. 803; Scyl. p. 43; or Βολβίτιτιτων, Herod. ii. 17; Dio. i. 33; Βολβίτιτων, Ptol. iv. 5. §§ 10, 43; Bolbiticum, Mela. i. 9. § 9; Ammian. xxii. 15), was, like the Phatnian, originally an artificial canal, and one of the times of Herodotus to have been a branch connecting the Sebentnic with the Canopic channels (ii. 17), having, however, an outlet of its own, probably as a back-water during the inundation, to the Mediterranean. The Bolbitic arm is now represented by so much of the Rosetta branch of the Nile as runs between the sea and the ancient course of the Ostium Canopicum.

7. The Canopic arm (τὸ Κανωπικὸν στόμα, Strab. l. c.; comp. Aristot. Meteorol. i. 14; Ostium Canopicum, Mela. i. 9. § 9; Ptol. vi. 10. s. 11) was also termed the Nanarcic arm of the Nile, Ostium Nancricum (Plin. L. c.), from the city of Nancratis, which was seated on its left bank. This was the most westerly, and one of the three great branches of the Nile (see Pelusian, Sebennytic). In the first portion of its descent from the point of the Delta the Canopic arm skirted the Libyan desert. At the city of Terauthis (Teresaph), a road, about 35 miles in length, through the sandy waste of the desert, was connected it with the Natron Lakes. On its right bank, below this point, stood the ancient city of Sais, and a few miles lower down, Nancratis. From its vicinity, at first, to this city, the Canton of Aegypt, and afterwards, by means of the canal which connected it with the lake Mareotis on the one hand, and Alexandria on the other, the Canopic branch retained its importance; and its embankments were the care of the government of Aegypt long after its rival branches, the Sebentnic and Pelusian, were deserted or had been suffered to flow uselessly into the marshes. It is now represented in the upper portion of its channel by the Rosetta branch of the Nile. But they diverge from each other at lat. 31°, where the elder arm turned off to the W., and discharged itself into the Mediterranean near the present bay and foreland of Abousir. Its mouth is now covered by a shallow lagoon, intersected by strips of sand and alluvial deposit, called the lake of the Pelusian arm of the Nile, although not actually the western boundary of Aegypt, was, at least, in the Pharaonic era, the limit of its commerce on the NW. base of the Delta, since beyond it, until the building of Alexandria, there was no town of any importance.

The canals which were derived from the Nile for the convenience of local intercourse and irrigation, were very numerous; and the prosperity of Aegypt, especially on the Arabian side of the river, depended in great measure upon their being kept in good repair, and conveyning to the arid waste a sufficient supply of water. Hence the condition of the canals was almost synonymous with the good or bad administration of Aegypt; and we find that among the first cares of Augustus, after adding this kingdom to his provinces, in B.C. 24, was to repair and rehabilitate the canals, which had fallen into decay under the misrule of the later Ptolemies. (Suet. Aug. 18; Dion. ii. 68; Aurel. Vict. Epit. i. 5.) For national commerce, however, there were only two of these artificial channels upon a large scale between Syene and the sea. (1) The canal called, in different ages, the river of Ptolemy (Ποταμὸς Πτολεμαίος, Dio. i. 33; Plin. v. 29. s. 23), and the river of Trajan (Ποταμὸς Τραiani, Ptol. iv. 5. § 54). This had been commenced by Pharaoh Necho II. (B.C. 480), was
continued by Darius Hystaspis (n. c. 520—527), but only completed by Ptolemy Philadelphus (n. c. 274). It began in the Pelusian branch of the Nile, a little above the city of Rodostas (T. D. Basta), and passing by the city of Thoam or Patamus, was carried by the Persians as far as the Bitter Lakes, NE. of the Delta. Here, however, it was suspended by the troubles of both Aegypt and Persia, under the successors of Dareus, and was, in a great measure, choked up with sand. (Herod. ii. 158.) At length Philadelphus, after cleansing and repairing the channel, carried it onward to Arsinoe, at the head of the branch, in 133 of the Hellenic era (Pline, v. 20, 33). The Ptolemaic canal, however, suffered the fate of its predecessor, and even before the reign of Cleopatra had become useless for navigation. The connection by water between Arsinoe and the Nile was renewed by Trajan, A. D. 106: but his engineers altered the direction of the cutting. They brought the stream from a higher part of the river, in order that the current might run in, instead of from, the Red Sea, and that the intervening sandy tracts might be invaded by fresh lake water, instead of salt water. The canal of Trajan accordingly began at Babylon, on the eastern bank of the Nile, opposite Memphis, and, passing by Helopolis, Sceneae Veteranorum, Heropolis, and Scropon, it entered the Red Sea about 20 miles S. of Arsinoe, at a town called Kysismon, in the locks of its neighborhood. The work of Trajan was either more carefully preserved than that of the Macedonian and Persian kings of Aegypt had been, or, if like them, it fell into decay, it was repaired and reopened by the Mahommedan conquerors of the country. For, seven centuries after Trajan's decease, we read of Christian pilgrims sailing along its canal on their route from England to Palestine. (Deneire, de Man.nus. Orbis, vi. ed Letronne.)

2. The Canopic canal (I. Kavw2Gv2 8, 8, 2 8, 2. 2. Xwv. p. 800: Steph. B. s. c.) connected the city of Canopus with Alexandria and the lake Maroeitis. Its banks were covered with the country houses and gardens of the wealthy Alexandrians, and formed a bend of water submarine to both the Aegyptian and Macedonian cities. [Canopus.]

Physical Character of the Nile. The civilisation of all countries is directly influenced by their rivers, and in none more so than in Aegypt, which has been truly called the gift of the Nile. (Herod. ii. 5; Strab. xi. p. 493.) To its stream the land owed not only its peculiar cultivation, but its existence also. Without it the Libyan waste would have extended to the shores of the Red Sea. The limestone which lies under the soil of Aegypt, the sands which bound it to E. and W., were rendered by the deposits of the river fit for the habitation of man. The Delta, indeed, was absolutely created by the Nile. Its periodical floods at first narrowed a bay of the Mediterranean into an estuary, and next filled up the estuary with a plain of teeming alluvial soil. The religion, and many of the peculiar institutions of Aegypt, are derived from its river; and its physical characteries have, in all ages, attracted the attention of historians and geographers.

Its characteristics may be considered under the heads of (1) its deposits; (2) the quality of its waters; and (3) its periodical inundations.

(1) Its deposits. — Boreings made in the Delta to the depth of 45 feet, have shown that the soil consists of vegetable matter and an earthy deposit, such as the Nile now brings down. The ingredients of this deposit are clay, lime, and silicious sand; but their proportion is affected by the soil over which the river flows. Calcereous and argillaceous matter abound in the neighbourhood of Cairo and the Delta; silex preponderates in the granite and sandstone districts of Upper Aegypt. The amount of this deposit corresponds generally to the slope of the banks and the distance from the river. In Lower Nubia and Upper Aegypt alluvial cliffs are formed to the height of 40 feet; in Middle Aegypt they sink to 20; at the point of the Delta to about eighteen. The latitude of the Nile is only 29. The larger quantity lying close to the stream, the smaller at the verge of the inundation. As a consequence of this fall from the banks towards the desert, the limit to which the inundation reaches is slowly extending itself, but as the Nile raises its own bed as well as its banks, their relative proportion is preserved. The deposit of the Nile is found to consist of (1) clay, constituting 48 in 100 parts; (2) carbon, 9 parts; (3) carbonate of lime 15 parts, and 4 parts of carbonate of soda. These deposits are partially separated by a green oxide of iron. These form a compost so rich, that the land on which they are perennially deposited requires no other manure, and produces without further renovation successive harvests of corn. (Athen. ii. 41, 42; Plin. xiii. 19. s. 21.)

(2) The quality of its waters. — The water itself is not less important to Aegypt than the ingredients which it precipitates or holds in solution. Except some short streams in the Arabian hills, torrents at one season and dry at another, the Nile is the only river in Aegypt. Natural springs do not exist in the upper country; and the wells of the Delta afford only a turbid and brackish fluid. The river is accordingly the single resource of the inhabitants; and the frequent ablutions enjoined by their religion rendered a copious supply of water more than ordinarily important to them. Between its highest and lowest periods, the water of the Nile is clear. When lowest, it is fetid. (Athen. ii. 42); and at the beginning of the inundation it is covered with a greenish vegetable matter, that is said to cause eruptive disease. But even when most turbid, it is not unwholesome, and is always capable of filtration. The water in its medium state was pure and delicious to the taste. The Persian kings, after the conquest of Aegypt, imported it for their own drinking to Susa and Babylon (Athen. ii. 54, 67); and the emperor Pescennius Niger replied to his soldiers' demand for wine, "Have you not the water of the Nile." (Spartian. ap. August. Hist. Script. Pescenn. Niger. c. 7.) These changes in the hue and quality of the water were ascribed to the overflowing of the Nubian lakes, or to the passage of the stream over various strata. But until the channels of the White and Blue Rivers have been explored to their sources, we must be content to remain ignorant of the real causes of these phenomena.

(3) Its periodical inundations. — The causes of the inundation early attracted the curiosity of ancient observers; and various theories were devised to account for them. It was believed to arise from the melting of the snow on the Caucasian mountains (Schol. in Apoll. Rhod. iv. 269; Eurip. Helen. init.); and Herodotus rejects this supposition, because, as he conceived, although erroneously, that snow was unknown in Aethiopia (ii. 22). It was ascribed to the Etesian winds, which, blowing from the N. in summer, force back the waters
NILE.

from the mouth of the river upon the plain of the Delta. (Hieron. ii. 29—40.) This, however, though partially true, will not account for the inundation of Upper Aegypt, or for the periodical rising of the rivers N. of Aethiopia. It was attributed to the connection of the Nile with the great Southern Ocean, whose waters, from long exposure to the sun, were deprived, it was thought, of their saline ingredients in their course through the Nile-valley. (Diodor. i. 40.) By Ephorus (ed. Marx, p. 23) it was derived from evaporation from the sands, while Herodotus suggested that the vertical position of the sun in winter reduced the waters of Southern Libya to the lowest cisth. But this hypothesis kept out of sight their overflow in summer. Agatharchides of Cnidus, who wrote in the second century n. c., was the first to divine the true cause of the inundation. The rains which fall in May upon Aethiopia occasion the rise of the rivers that flow northward from it. As the sun in his progress from the equator to the tropic of Cancer becomes successively vertical over the Nile, and the sun in winter, depressed, and the cold currents set in from the Mediterranean to restore the equilibrium. They pass over the heated plains of Aegypt; but as soon as they reach the lofty mountains of Abyssinia, they descend in torrents of rain. Sheets of water fall impetuously from their northern slope upon the grand tableau, from the grand tableau upon the plains which contain the sources of the White and Blue Rivers, and through their channels and confluent pass into the Nile. In the last days of June, or at the beginning of July, the rise is visible in Aegypt: about the middle of August the dykes are cut, and the flood drawn off E. and W. by innumerable canals; and between the 20th and 30th of September the maximum height is attained. For a fortnight the flood remains stationary; after the 10th of November, it has perceptibly diminished, and continues to decrease slowly until it attains its minimum; at this time its depth at Cairo is not more than 6 feet, and in the Delta its waters are nearly stagnant. In the time of Herodotus (ii. 13) the height of a good Nile was 15 or 16 cubits; and around the statue of the Nile, which Periplus brought from Aegypt and set up in the Temple of Peace, were grouped sixteen diminutive figures emblematic of these measures. (Plin. xxxvi. 9. s. 14.) The rise of the Nile was carefully noted on the Nilometers at Prims (Urim), Elephantine, and Memphis; and the progress or decline of the inundation was reported by letters to different parts of Aegypt in order that the farmers might calculate on the time when sowing might commence. A flood of the height of 30 feet is minus—undermining houses, sweeping away cattle, and destroying the produce of the fields. The land, also, is rendered too spongy for the ensuing seed-time; the labours of tillage are delayed; and epidemic diseases arise from the lingering and stagnant waters. On the other hand, if the waters do not rise 24 feet, the harvest is scanty; and if they are below 18, terrible famines are the consequence, such as that of which Diodorus speaks (i. 84), and which are not unknown in more recent times (Volney, Mém. de Syrie et d’Égypte, vol. i. ch. 11; Abbaldati’s Hist. of Egypt, p. 197, White’s edit.), during which the starving population have been driven to feed on human flesh.

Upper and Middle Egypt during the inundation present the appearance of a vast inland lake, bordered by mountains. But the usual means of intercourse are not interrupted, since the immediate banks of the river are seldom under water, which is discharged through the frequent apertures of the dykes, at first upon the verge of the desert, and afterwards upon the land nearer the flood. The Delta, however, being devoid of hills, is, during an extraordinary rise, laid entirely under water, and the only means of communication between the towns and villages are boats and rafts. Herodotus (ii. 97) compares the appearance of Lower Aegypt at this season to the Aegean sea, studded by the Sporades and Cyclades. As the direct highway between the Mediterranean and Meroe, the Nile, in all periods, at least during the prosperous ages of Aegypt, presented a busy and animated spectacle. The Egyptians, who shunned the sea as the element of the destroying Typhon, regarded their river with affection and reverence, as the gift and emblem of the creating and preserving Osiris. Its broad and capacious bosom was in all seasons of the year studded with river-craft, from the raft of the village carpenter to the Baris or Nile barges. Up the Nile to the markets of Diospolis passed the grain and fruits of the Delta; and down the stream came the quarr’d limestone of the Thebaid to the quays of Sais and Canopus. No bridge spanned the river during its course of 1500 miles; and the ferrying over from bank to bank was an incessant cause of life and movement. The fishermen and fowlers of the Nile diversified the scene. Respecting the qualities of the fish there is considerable discrepancy among ancient writers; some describing it as rare or insipid, others as highly nutritious and delicate in its flavour. (Athen. vii. p. 312.) Fifty-two species of fish are said to be found in the Nile. (Russeger, Relics, vol. i. p. 300.) Of these the genus Silurus was the most abundant. Fish diet is well suited to the languid appetites of a hot climate; and the Israelites, when wandering in the desert, regretted the fish as well as the vegetables of Aegypt. (Numbers, xi. 5.) They were caught in greatest abundance in the pools and lakes during the season of inundation. In the marshy districts of the Delta, where grain, owing to the spongy and bilious character of the soil, could not be raised, the inhabitants lived principally upon fish dried in the sun; and, in later times at least, they were salted, and exported in great quantities to the markets of Greece and Syria. The modes of catching them are represented in the paintings, and were the line, the net, and the prong. (See Abbaldati, op. Rosellini, M. C. vol. i. p. 290.) The great extent of mar-h-had in Aegypt, and the long continuance of the inundation, caused it beyond all other countries to abound in water-fowl. The fowlers are represented in the paintings as spreading nets, or as rowing in their boats among the aquatic plants, in which the birds nestled, and knocking them down with sticks. The use of decoy-birds was not unknown; and smoked or salted wild-fowl were an article of export. The edible water-fowl are mostly of the goose and duck (ana) tribe; the quack also is mentioned by Herodotus (ii. 77) as among birds that we drive away in the sun and slightly salted for home consumption and export.

The Fauna of the Nile were the hippopotamus and the crocodile, with many lesser species of the saurian genus. In the more remote ages both were found through the whole course of the river (Diodor. i. 33), although at present the hippopotamus rarely descends below the second Cataract, or the crocodile below 27° N. lat. The chase of the
The Nile.—As Oceaneus, or the watery element,—was a member of the first Ogdoad of the Egyptian theology (Diodor. i. 6—26), the opponent of Thoth, the god of the moon;—and the air (Demeter), the air (Neit), Zeus or Amun, the quickening spirit, Osiris and Isis, the Sun and Moon. It was thus one of the primitive essences, higher than any member of the second Ogdoad, or the visible objects of adoration. (Heliod. Aethiop. ix. 9: Schol. in Pind. Pyth. iv. 99.) It had its own hieratic emblem on the monuments, sometimes as the ocean embracing the earth, sometimes, as in the temple of Osiris at Philae, as the assistant of Ptah in the creation of Osiris. The wild crocodile was an emblem of Typhon (Pindaric, Is. et Osir. p. 371); but the tamed crocodile was the symbol of the gently swelling, beneficent Nile. (Euseb. Praep. Evangel. iii. 11.) Osiris is sometimes, but incorrectly, said (Tibull. Eleg. i. 7, 27) to be the Nile itself (Plut. Is. et Osir. c. 33): there is no doubt, however, that it was personified and received divine honours. A festival called Nilea was celebrated at the time of the first rise of the waters, i.e. about the summer solstice, at which the priests were accustomed to drop pieces of coin, and the Roman prefect of the Thebaid golden ornaments, into the river near Philae (SeneC. Nat. Quaest. iv. 2, 7): indeed there must have been a priesthood specially dedicated to the great river, since, according to Herodotus (ii. 101), none but a priest of the Nile could bury the corpse of a person drowned in its waters. Temples were rarely appropriated to the Nile alone; yet Hecataius (op. Steph. x. v. N. G.) says that in the town of Philae, a statue stood in the Hercules-polete nome, near the entrance of the Fyoun. In the quarries at Silsils several stele are inscribed with acts of adoration to the river, who is joined with Pne and Ptah. Its symbol in hieroglyphics is read Moun, and the last in the group of the characters composing it, is a symbol of water. According

NINUS. [ISTRIA.]

NIVINE. [NILES.]

NIVIN ASCI. [MINATICUM.]

NINUS § Ninus or Niras, Herod i. 193, ii. 150; Ptol. vi. i. § 3; Ninus § kal Nova, Ptol. viii. 21. § 3; Nivev, Joseph. Ant. Jud. ix. 10. § 2; Ninus, Tacit. Ann. xii. 13; Ninive, A;vve. Marc. xviii. 7, xxii. 6: Eth. Nisipe, Stephan. B. s. v.), a great city, and for many centuries the capital of ancient Assyria. It will be convenient to notice here such accounts as we have from the Bible and ancient historians, and then to state succinctly the curious results of the recent discoveries of Mr. Layard, Colonel Rawlinson, and other modern travellers.

I. Nineveh is first mentioned in the Bible among the eight primeval cities in Genesis (x.i1), and is there stated to have been founded either by Ninrood himself, or, according to another reading, by his lieutenant, Assur, the Ασσοραξ of Joseph. Ant. Jud. i. 6. § 4, and the Eupronymus of Assyria. The latter view is the most agreeable to the construction of the Hebrew text. From this period we have no mention of it in History, except for more than a thousand years and when it is noticed again, on Jonah being sent thither to preach repentance, it is described as a "city of three days' journey" (Jonah, iii. 3), and as "that great city wherein are six score thousand persons, that cannot discern between their right hand and their left hand." (Jonah, iv. 11.) Subsequently to this time, it is not referred to by name, except in 2 Kings, xix. 37, and Isaiah, xxxvi. 57, as the residence of Semnacherib, after his return from the invasion of Judaea; in the prophets Nahum and Zechariah, who predict its speedy downfall; and in the apocryphal books of Tobit and Judith, the former of whom long lived in the great city.

II. The earliest classical mention of Nineveh is by Herodotus, who places it on the Tigris (i. 193, ii. 150), but does not state on which bank it stood; in this he is confirmed by Arrian (Hist. Ind. c. 42) and Strabo, who in one place calls it the metropolis of Syria, i.e. Assyria (ii. p. 84), in another states it to have been a city more vast than even Babylon, lying in the plain of Aturia (a dialectical change of name for Assyria), beyond the Lyceans (or Great Zula) with reference to Arbelia (xvi. p. 737). Pliny places it on the east bank of the Tigris "ad solis occasum spectans" (vi. 13. s. 16); Polonely, along the Tigris, but without accurate definition of its position (vi. i. § 3). The same may he said of the notice in Tacitus (Annal. xii. 13), and in Ammianus, who calls it a "city of the same name." On the other hand, Diodorus, professing to be a Ctesiuean, who has preserved a portion of Ctesias, is still extant, in which Nineveh occupies its correct position on the Tigris. (Frag. Hist. Gracc, vol. iii. p. 858, ed. Müller.) It may be remarked that in much later times the name appears to have been applied to more than one town. Thus Ammianus in one passage seems to think that Hierapolis was the "vetus Ninus" (xiv. 8). Philostoruces (Vit. Apoll. Tyman. i. 19) speaks of a Ninus on this side of the Euphrates; and Eusebius, in his Chronicon, in his time it was called Nisibis. No doubt much of the obscurity in the minds of ancient writers, both as to its position and the real history of the empire of which it was the capital, arose from the circumstance that its entire overthrow preceded the earliest of the Greek historians by nearly 200 years, and that it does not appear to have been rebuilt at any period of the classical ages. So complete was its destruction, that, though Ninus, when marched within a few miles of it, he was not aware of its existence, though, in his allusion to the "Median city of Mespiia," he doubtless is describing one of the great outworks of the Assyrian capital (Anab. iii. 4. § 10); while, with the exception of Arrian, none of the historians of the campaigns of Alexander, who, like Xenophon, must have passed it on his way to fight the battle of Arbela, allude to it. That the ancients generally believed in its entire destruction, is clear from Pausanias, who classes it with Mycenae, Thebes, and other ancient cities (vi. 33. § 2); from Lucian (Charon. c. 23), and from Strabo (xvi. p. 737). The last, indeed, has an argument that Homer, who mentions Thebes in Egypt, and the wealth of Pheoeucia, could not have omitted Babylon, Nineveh, and Ecbatana, had he ever heard of them (xv. p. 755). But though so early a ruin, the ancients generally had a correct idea of the wonderful greatness of Nineveh, and many passages throughout the classical authors are manifest proof of this belief of the people. Thus Strabo himself, as we have seen, considered Nineveh greater than Babylon (xvi. p. 737); while Diodorus has a long and exaggerated narrative of the vast extent of Ninus's capital (which, as we stated before, he places incorrectly on the Euphrates, ii. p. 7). Some curious incidental facts are preserved. Thus, the vast mound Semiramis erected as a tomb for her husband Ninus, by the river-side, is almost certainly the Pyramid at Nimroud, though the results of Mr. Layard's last excavations have not proved that this structure was a tomb. (Diod. ii. 7: comp. with Layard, Nineveh and Babylon, p. 128.) Again, Amyntas (as quoted by Athenaeus) states, that at the town of Ninus there was a high mound, which was thrown down by Cyrus when he attacked the city, that this was traditionally the tomb of Sarina-napalus, and had a stèle on it inscribed with Chaldaic, i.e. Assyrian letters. (Amynt. Fregus p. 136, ed. Müller; cf. also Ptolema. vii. 25.) Nor must we omit the presence of what has been held by all nunnists to be a traditional representation of this celebrated tomb on the Tetradracmae of Antiochus VIII., king of Syria, which were struck at Tarsus, and on the imperial coin of Anamulta (both places connected with the name of Sarina-napalus). Again we have the legend of Diodorus, that the Assyrians sent assistance to the Trojans against the Greeks (ii. 22; cf. Plut. Leg. p. 296, ed. Beiker); the "bana Ninus" (Stam. ix. 88), though referred by him wrongly to Babylon,—and the occurrence, in several of the poets, of the name of Aasaracus (now known through Colonel Rawlinson's interpretations to be a Graecized form of the genuine Assyrian Asharak, the Ασσαράκ of F F 3
or "Erzögy of the LXX., Rawlinson, As. Jour., 1850), as in Hild, xx. 232; Post. Homeric, vi. 143; Virg. Aen. v. 127; Juven. Sat. x. 259, &c. It is therefore, perhaps, less remarkable, that though Nineveh had so early in history ceased to be a city of any importance, the tradition of its former existence remained in its own country till a comparatively recent period. Thus, as we have seen, Tacitus and Ammianus allude to it, while coin exists (of the class termed by numismatists Greek Imperii) struck under a Roman emperor Claudius, Trajan, Maximi- nations, and Gordianus Pius, proving that, during that period, there was a Roman colony established in Assyria, bearing the name of Niniva Claudopolis, and, in all probability, occupying its site. (Sestini, Mus. de Claudioir, tab. ii. fig. 12, Clas. General, p. 159.) In later times the name is still extant. Thus, Ibn Athir (quoting from Beladheri, in the annals of those years) speaks of the forts of Ninued to the east, and of Mosul to the west, of the Tigris, and of the city of Abd-al-ahn Ibn Ma-

erneus, A. H. 16 (A. D. 637), and of Otheh Ibn Fardak, A. H. 20 (A. D. 641). (Rawlinson, As. Jour. 1850.) Again, Benjamin of Tudela, in the twelfth century, speaks of it as opposite to Mosul (Travels, p. 91, ed. Asher, 1840); and Abulfaraj notices it in his Hist. Dynast. (pp. 404—441) under the name of Ninive (cf. also his Chronicon, p. 464).

Lastly, Assennani, in his account of the mission of Salukah, the patriarch of the Chaldæans, to Rome, in A. D. 1552, while describing Mosul, says of a "qua ex altera ripa parte antie Ninive his milie passibus" (Bibl. Orient. i. p. 524). In the same work of Assennani are many notices of Nineveh, as a Christian bishopric, first under the metropolitan of Mosul, and subsequently under the bishop of Assyria and Adiabene (Bibl. Orient. vol. ii. p. 549, vol. iii. pp. 104, 269, 344, &c.).

We have already noticed under Assyria the chief points recorded in the Bible and in the classical historians relative to the history of Nineveh, and have seen that it is impossible entirely to reconcile the various conflicting statements of ancient authors. It only remains to mention here, as briefly as possible, the general results of the remarkable discoveries which, within the last few years, have thrown a flood of light upon this most obscure part of ancient history, and have, at the same time, afforded the most complete and satisfactory confirmation of those notices of Assyrian history which have been preserved in the Bible. The names of all the Assyrian kings mentioned in the Bible, with the exception, perhaps, of Shalmanesser, who, however, occurs under his name in Isaiah, Sargon, are now clearly read upon the Assyrian records, besides a great many others whose titles have not as yet been identified with those in the lists preserved by the Greek and Roman chronicists.

III. It is well known that in the neighbourhood of Mosul travellers had long observed some remarkable mounds, resembling small hills; and that Mr. Rich had, thirty years ago, given to colonel Laysard a copy of the "Koyunjik," in which fragments of sculpture and pottery had been frequently discovered. In the year 1843, M. Batta, the French consul at Mosul, at the suggestion of Mr. Layard, commenced his excavations,—first, with little success, at Koyunjik, and then, with much greater good fortune, in a mound called Khorsabad, a few miles NE. of Mosul. To M. Batta's success at Khorsabad the French owe all the Assyrian monuments in the collection of the Louvre. In 1845, Mr. Layard began to dig into the still greater mound of Nineved, about 17 miles S. of Mosul; and was soon rewarded by the extensive and valuable collection now in the British Museum. These researches were continued by Mr. Layard during 1846 and part of 1847, and again during 1850 and 1851; together with a far more satisfactory examination of the remains at Koyunjik than had been made by M. Botta. Some other sites, too, in the neighbourhood were partially explored; but, though of unambitious Assyrian origin, they yielded little compared with the greater mounds at Nineved, Khorsabad, and Koyunjik. It would be foreign to the object of this work to enter into any details of the sculptured monuments which have been brought to light. A vast collection, however, of inscriptions have been disinterred during the same excavations; and from these we have been enabled by the labours of Colonel Rawlinson and Dr. Hincks to give names to many of the localities which have been explored, and to reconstruct the history of Assyria and Babylon in a foundation more secure than the fragments of Ctesias or the history of Herodotus. It is also necessary to state that very extensive researches have been made during 1854 in Southern Babylonia by Messrs. Loftus and Taylor in mounds now called Warka and Muqayyar; and that from these and other excavations Colonel Rawlinson has received a great number of inscribed tablets, which have aided him in drawing up a précis of the earliest Babylonian and Assyrian history. Muqayyar he identifies as the site of the celebrated "Ur of the Chaldees." From these various sources, Colonel Rawlinson has concluded that the true Nineveh is represented by the mounds opposite to Mosul, and probably by that one which bears the local name of the Nabi Yunas; that this city was built about the middle of the thirteenth century B.C.; and that, from it, the name of Nineveh was in after times transferred to several other sites in the neighbourhood. The great work of Nineved (the seat of Mr. Layard's chief labours), which it was natural, on the first extensive discoveries, to suppose was the real Nineveh, is proved beyond question by both Col. Rawlinson and Dr. Hincks to have been called by the Assyrians Calah, or Calah. We cannot doubt but that this is the Calah of Genesis (x. 12), and the origin of the Calahene of Strabo (xi. p. 329, xvi. p. 733), and of the Calahene of Ptolemy (vi. 1. § 2). From the inscriptions, it may be gathered that it was founded about the middle of the twelfth century B.C. The great ruin of Khors- sadab (the scene of the French excavations), which has also been thought by some to have formed part of Nineveh, Colonel Rawlinson has ascertained to have been built by the Sargon of Isaiah (xx. 1),— the Shalmanesser of 2 Kings, xvii. 3,—about the year n. c. 729; and he has shown from Tacitthat it retained the name of Sarghan down to the time of the Mohammedan conquest. Koyunjik, the principal city opposite to Mosul, and adjoining the Nabi Yunas, we know from the inscriptions to have been constructed by Senancharib, the son of Shal- manesser, about n. c. 700. The whole of this district has been surveyed with great care and minute- ness by Capt. Jones, within the last few years; and his account, with three elaborate maps, has been published in the Journal of the Asiatic Society for 1855. From this we learn that the whole enclosure of Koyunjik and the Nabi Yunas (which we may
NINUS.

fairly presume to have been, in an especial sense, the city of Ninveh) comprehends about 1800 English acres, and is in form an irregular trapezium, about 74 miles round. The two mounds occupy respectively 100, and 40 acres of this space, and were doubtless the palaces and citadels of the place. Capt. Jones calculates that, allowing 50 square yards to each inhabitant, the population may have amounted to about 174,000 souls.

From an elaborate examination of the inscriptions preserved on slabs, on cylinders, and on tablets, Colonel Rawlinson has arrived at the following general conclusions and identifications in the history of the Babylonian and Assyrian empires.

He considers that the historical dates preserved by Berosus, and substantiated by Callisthenes (who sent to Aristotle the astronomical observations he had found at Babylon, extending as far back as 1903 years before the time of Alexander, i.e. to B.C. 2233), are, in the main, correct; and hence that authentic Babylonian chronology ascends to the twenty-third century B.C. The Chaldean monarchy which followed was established in B.C. 1976, and continued to B.C. 1518; and to this interval of 458 years we may refer the destruction of the great cities of Babylonia, in the ruins of which we now find bricks stamped with the names of the Chaldean founders. At the present time, the names of about twenty monarchs have been recovered from the bricks found at Sippara, Niffer, Warla, Senkerch, and Mucuyere (Ur), belonging to the one genuine Chaldean dynasty of Berosus, which reigned from B.C. 1976—1518. Among the Scriptural or historical names in this series, may be noticed those of Assurbanipal and Arioch, Belus and Horus, and possibly the Thilgamus of Acian. An Arab family succeeded from B.C. 1518 to B.C. 1273, of whom, at present, no certain remains have been found. The independence of Assyria, or what is usually called the Ninus dynasty, commenced, Colonel Rawlinson believes, in B.C. 1273, 245 years after the extinction of the first Chaldean line, and 526 years before the aera of Nabonassar in B.C. 747. Of the kings of this series, we have now nearly a complete list; and, though it be often more or less in the reading of parts of some of the names, we may state that the identifications of Dr. Hincks and Colonel Rawlinson agree in all important particulars. To the kings of this race is attributable the foundation of the principal palaces at Ninirid. The series comprehends the names of Ashurbanipal, probably the warlike Sardanapalus of the Greeks, the founder of Tarsus and Antioch (Schol. ad Aristoph. Aeschin. 1021), and the contemporary of Ahab, about B.C. 950; and Phal-ukha, the Pharaoh of the LXX, and the Pul of 2 Kings (xxv. 19), who received a tribute from Menahem, king of Israel; and Semiramis, the wife of Phal-ukha, whose name with her husband's has been lately found on a statue of the god Nebu, excavated from the SE. palace at Ninirid.

Colonel Rawlinson considers the line of the family of Ninus to have terminated with Phal-ukha or Pul in B.C. 747, and that the celebrated aera of Nabonassar, which dates from this year, was established by Sennacherib, either as a solutio in rebus or as a conqueror in that year, at Babylon. The last or Scriptural dynasty, according to this system, commences with Tiglat-Pileser in B.C. 747. It is probable that he represents the Balear of Polyhistor and Polycrates' Canon, and possibly the Deesis of Ctesias, who is said (Dodd. ii. 27) to have been the actual taker of Ninveh. From this period the names on the Assyrian inscriptions are coincident with those in the Bible, though, naturally, many additional particulars are noticed on them, which are not recorded in Sacred History. Some of the individual facts the inscriptions describe are worthy of notice, thus, the campaigns with the king of Samaria (Hoshea) and with a son of Rezin, king of Syria, are mentioned in those published by the British Museum (pp. 66—72); the names of Jeho and of Hazael have been read (independently) by Colonel Rawlinson and Dr. Hincks on the black obelisk from Ninirid, the date of which is, therefore, must be early in the nineteenth century B.C.; and the latter scholar has detected on other monuments the names of Menashe, Basha, and Menezach, kings respectively of Israel and Judah.

Lastly, the same students have discovered in the Annals of Sennacherib (which are preserved partly on slabs and partly on cylinders) an account of the celebrated campaign against Hezekiah (described in 2 Kings xviii. 14), in which Sennacherib states that he took from the Jewish king "30 talents of gold," the precise amount mentioned in Scripture, besides much other treasure and spoil.

There is still considerable doubt as to the exact year of the final destruction of Ninveh, and as to the name of the monarch then on the throne. From the narratives in Tobit and Judith (if indeed these can be allowed to have any historical value), compared with a prophecy in Jeremiah written in the first year of the Jewish captivity, B.C. 605 (Jerem. xxv. 18—26), it might be inferred that Ninveh was still standing in B.C. 609, but had fallen in B.C. 605. Colonel Rawlinson, however, now thinks (and his view is confirmed by the opinion of many of the elder chronologists) that it was overthrown B.C. 625, the Assyrian sovereignty being from that time merged in the empire of Babylon, and the Canon of Ptolemy giving the exact dates of the various succeeding Babylonian kings down to its capture by Cyrus in B.c. 536, in conformity with what we now know from the inscriptions. We may add, in conclusion, that among the latest of the discoveries of Colonel Rawlinson is the undoubtedly identification of the name of Babelazzar as the son of Nadan or Nabonassar, the last king of Babylon; and the finding the names of the Greek kings Seleucus and Antiochus written in the eneiform character on tablets procured by Mr. Loftus from Warla. (Rawlinson, Asia Journ. 1850, 1852, 1855; Athenaeum, Nos. 1377, 1381, 1383, 1388; Hincks, Roy. Soc. of Liter. vol. iv.; Trans. Roy. Irish Acad. 1850, 1852, 1855; Layard, Nineveh and Babylon; and, for an entirely new view of the Assyrian chronology, Basopcut, Sacred and Profane Chronology, Lond. 8vo. 1853.)

NINUS. (DeaDAlA.)

NIKHATES (ΝΗΦΑΣΤΗΣ, Strab. xi. pp. 522, 523, 527, 592; Ptol. v. 13. § 4, vi. 1, § 1; Meis, i. 15. § 2; Plin. v. 27; Amm. Marc. xxiii. 6. § 13; Virg. Geog. iii. 30; Horat. Carm. i. 9. 20; the later Roman poets, by a curious mistake, made Niphates a river; comp. Lucan, iii. 245; Sil. Ital. xiii. 775; Juven. vii. 409), the "snowy range" of Armenia, called by the native writers Nebod or Nbađegn (St. Martin, trans.; vol. i. p. 49) Taurus, stretching E. of Commagene (Ars Tab) separates Sophene (Kharpaut Davoasst), which is contained between Taurus and Anti-Taurus (Strab. xi. p. 521), from Osroene (Ur/sah), and then divides itself into three portions. The most northerly, and highest, are the Niphates (Asia Tur) in Acilisene.
NISA.

The structure of this elevated chain, consisting of the lofty groups of Sir Sarak, the peaked heights of Matt Khan, the Ali Tigha, Sogan, Nimroud, and Darshik, Tigha, which are probably the highest range of Taurus, rising above the line of perpetual snow (10,000 feet?), remains yet undetermined. Limestone and gypseous prevail, with basalt and other volcanic rocks. Deep valleys separate the parallel ridges, and also break their continuity by occasional passes from the N. to the S. sides. (Ainsworth, Assyria, Babylonia, and Chaldaea, p. 18; Chesney, Exped. Euphrat. vol. i. p. 69; Ketter, Erdkunde, x. 91.)

NISA. [See.] NISA. [NASYA.] NISAEA. [NESAIAE.] NISAEA. [MEGARA.]

NISAEI CAMP, plains of considerable extent in the mountain district of Media, which were famous for the production of a celebrated breed of horses. According to Strabo, they were on the road of those who travelled from Persis and Babylon in the direction of Arbela and Cassian Gates (xi. p. 530), and for the rearing of 50,000 breed mares for the royal stables. In another place, the same geographer states that the Nisaean horses were reared in the plains of Armenia (xi. p. 330), from which we infer that the plains themselves extended from Armenia southward through Media. Again, in the Epitome of Strabo (iii. p. 536, ed. Kramer), the Nisaean plain is stated to be near the Cassian Gates, which lead into Parthia. The fact is, the district was not accurately defined. Herodotus states that the place, from which he tells his horses (which were reserved for the use of the king) came, was a great plain in Media (vii. 40). And the same view is taken by Eustathius in his Commentary on Dionysius (v. 1017), and confirmed by the notice in Arrian's account of Alexander's march (vii. 13). Anamiasus, on the other hand, states that the Nisaean horses were reared in the plains S. of M. Comnas (now Demauewood). It appears to have been the custom on the most solemn occasions to sacrifice these horses to the sun (Phil. iv. cap. 31, Gell. iv. 5); and the horses were then transferred from Herodotus that they were also used to draw the chariot of the Sun (vii. 40). (Cf. also Steph. B. s. v.; Synes. Epist. 40; Themist. Orat. v. p. 72; Heliodor. Aethop. ix. p. 437; Suid. s. v. Nisaea.) Colonel Rawlinson has examined the whole of this geographical question, which is much perplexed by the ignorance of the ancient writers, with his usual ability; and he has concluded that the statements of Strabo are, on the whole, the most trustworthy, while they are, in a great degree, born out by the existing character of the country. He states that in the rich and extensive plains of Alishtar and Khaisak, he recognises the Nisaean plains, which were visited by Alexander on his way from Baghistan to Susa and Edetana; and he thinks that the Nisaean horse came originally from the Nisaean of Khorsasan, which is still famous for its Turkoman horses. Colonel Rawlinson further believes that Herodotus, who was imperfectly acquainted with Median geography, transferred the name Nisaea from Khorsistan to Media, and hence was the cause of much of the confusion which has arisen. Strabo, on the other hand, describes correctly the great horse pastures as extending along the whole line of Media, from the road which led from Babylon to the Cassian Gates to that conducting from Babylon into Persia. The whole of this long district, under the names of Khosar, Alishtar, Hurun, Silbuah, Barburos, Asulak, and Persistan, is still famous for its excellent grazing and abundance of horses. Colonel Rawlinson, indeed, thinks that Strabo's epithet, pantikottars, is a translation of Silukhtar, which means "a full manger." It was from this plain that Python brought his supply of beasts of burden to the camp of Antigonus (Diod. xix. 2) after the perilous march of the Greeks across the mountains of the Cossaeans. (Rawlinson, Royal Geogr. Journ. vol. ix. p. 100.)

NISIBIS (Nisibis). 1. A small place in Ariana, mentioned by Ptolemy (v. 18 § 11) and Ananias (xxii. 6). It would appear to have been at the foot of the chain of the Paropamisus. There are some grounds for supposing it the same place as the Nis of Isidorus [Nis], and that the latter has undergone a contraction similar to that of Bitixa into Bis.

2. The chief city of Mydonsia, a small district in the NE. end of Mesopotamia, about 200 miles S. of Tigranocerta; it was situated in a very rich and fruitful district, famous for its abundance of sheep, and for the extensive trade, and the great northern emporium for the merchandise of the E. and W. It was situated on the small stream Mydonius (Julian, Orat. i. p. 27; Justin. Excerpt. e. Legat. p. 173), and was distant about two days' journey from the Tigris. (Procop. Bell. Pers. i. 11.) It was a town of such great antiquity as to have been thought by some to have been one of the primate cities of Gedeoia, Accad. (Hieron. Quaest. in Genes. cap. x. 19; and cf. Michael, Epit. cap. ix. 225.) It is probable, therefore, that it existed long before the Greeks came into Mesopotamia; and that the tradition that it was founded by the Macedonians, who called it Antiocchia Mydonias, ought rather to refer to its rebuilding, or to some of the great works erected there by some of the Seleucid princes. (Strab. xvi. p. 747; Plut. Lucull. c. 92; Plin. vi. 13. s. 16.) It is first mentioned in history (under its name of Antiocchia) in the march of Antiochus against the satrap Maken (Polyb. v. 51); in the latter wars between the Romans and Parthians it was constantly taken and retaken. Thus it was taken by Lucullus from the brother of Tigranes, after a long siege, which lasted the whole summer (Dion Cass. xxxiv. 6, 7), but, according to Ptolearch, towards the close of the autumn, without much resistance from the enemy. (Plut. i. c.) Again it was taken by the Romans under Trajan, and was the cause of the title of "Parthicus," which the senate decreed to that emperor. (Dion Cass. lvi. 23.) Subsequently to this it appears to have been besieged by the Osroeni and other tribes who had revolted, but who were subdued by the arms of Sept. Severus. Nisibis became on this occasion the head-quarters of Severus. (Dion Cass. lxxx. 2. 3.) From this period it appears to have remained the advanced outpost of the Romans against the East, till it was surrendered by the Persians on the treaty which was made with that people by Julian, after the death of Julian. (Zosim. iii. 33; Arab. Marz. xxxiv. 1.) Its present name is Nisibis, in the neighbourhood of which are still extensive ruins of the ancient city. (Niebuhr, vol. ii. p. 379.)

NISYRUS. (Nisyros), a rocky island opposite to Chidus, between Cos in the north and Telos in the south, about 124 Roman miles distant from Cape Triopion in Caria. (Plin. v. 36; Strab. xiv. p. 656.)
NITRAE. 441

NITAZI (It. Ant. p. 144), Ntazao (Geogr. Rav. ii. 17; Tab. Pent.), or Nitais (It. Hieros. p. 576), a town in Cappadocia, on the road between Mecamis and Archeiaios, but its site is uncertain. [L. S.]

NITIOBRIGES (Nitioberges), a people of Aquitania. In Pliny (iv. 19) the name Antobrogis occurs; "rursus Karbonenses provinciae contemnti Ruteni, Caducari, Antobroges, Tarpenique annu discrict a Teleosanm Petcrocris." There is no doubt that Antobrogis is an error, and that the true reading is Nitiobriges or Nitiobrigis. The termination 

briges appears to be the same as that of the word Aliobrogis. The chief town of the Nitiobriges, Aginnaon (Agen), is mentioned by Ptolemy (ii. 7 § 4), who places them next to the Petcrocris on one side, and to the Va-ari on the other. Strabo enumerates them between the Caducari and the Petcrocris (Strab. iv. p. 190): "the Petcrocris, and next to them the Nitiobriges, and Caducari, and the Bitnriges, who are named Cubi." The position of the Nitiobriges is determined by these facts and by the site of Aginnum, to be on the Garonne, west of the Caducari and south of the Petcrocris. D'Anville makes their territory extend beyond the then limits of the diocese of Agen, and into the diocese of Condom.

When Caesar (B. G. vii. 46) surprised the Galli in their encampment on the bill which is connected with the plateau of Taur, it is evident that the Nitiobriges narrowly escaped being prisoner. The element Tent in this king's name is the name of a Gallic deity, whom some authorities suppose to be the Gallic Mercurius (Laurent. De falsa Relig. i. 21; and the Schol. on Lucan, i. 445, ed. Omdendorp). Others have observed that it is the same element as Tent in the Teutonic language, and as Dis, from whom the Galli pretended to spring (Pelloutier, Hist. des Celtes Liv. i. c. 14). The Nitiobriges sent 5000 men to the relief of Alisea when it was blockaded by Caesar (B. G. vii. 73). [G. L.]

NITRA (Nitra), a place which Ptolemy calls an euméopou, on the W. coast of Hindostan, in the province of Limyrica. There can be no doubt that it is the same as that called by Piny Nitrasi (vi. 23. 26), which he states was held by a colony of pirates. The author of the Periplos speaks of a place, in this immediate neighbourhood, named Naura, and which is, in all probability, the same as Nitra. (Peripl. Mar. 467 ed. Müller.) It is most likely the present Honolulu (V.).

NITRIAIE (Ntiriafie, Strab. xvii. p. 803; Sozomeno, H. E. vi. 31; Socrates, H. E. iv. 23; Steph. B. s. v. Nitriaei, Potl. iv. 5 § 25; Nitriariae, Plin. xxxi. 10. s. 16; Eth. Nitritos et Neptuoni, the Nalon Lakes (Rioket-of-Durawah), were six in number, lying in a valley SW. of the Egyptian Delta. The valley, which is bounded by the limestone terrace which skirts the edge of the Delta, runs in a NW. direction for about 12 miles. The sands which stretch around these lakes were formerly the bed of the sea, and were strongly impregnated with saline matter, e. g. murrate, snalpate, and carbonate of soda. Rain, though rare in Egypt, falls in this region during the months of December, January, and February; and, consequently, when the Nile is lowest, the lakes are at high water. The salt with which the sands are encrusted as with a thin coat of ice (Virtna. VIII. 3), is carried by the rains into the lakes, and held there in solution during the wet season. But in the summer months a strong evaporation takes place, and a glaze or crust is deposited upon the surface and edges of the water, which, when collected, is employed by

NIYSYRUS, a town in the island of Carpathius.

x. p. 489; Steph. B. s. v.) It also bore the name of Porphyry, on account of its rocks of porphyry. The island is almost circular, and is only 80 stadia in circumference; it is said to have been formed by Poseidon, with his trident, knocking off a portion of Cos, and throwing it upon the giant Polyboles. (Strab. x. p. 489; Apollod. i. 6; § 2; Paus. i. 2; § 4; Eustath. ad Dion. Perip. 530, ad Hom. ii. ii. 62.) The island is evidently of volcanic origin, and was gradually formed by volcanic eruptions of lava from a central crater, which in the end collapsed, leaving at its top a lake strongly impregnated with sulphur. The highest mountain in the north-western part is 2271 feet in height; another, a little to the north-east, is 1800, and a third in the south is 1700 feet high. The hot springs of Nisyrus were known to the ancients, as well as its quarries of milostones and its excellent wine. The island has no good harbour; but near its north-western extremity it had, and still has, a tolerable readstead, and there, on a small bay, was situated the town of Nisyrus. The same spot is still occupied by a little town, at a distance of about 10 minutes' walk from which there are very considerable remnants of the ancient acropolis, consisting of mighty walls of black chalcedy, with square towers and gates. From the acropolis two walls ran down towards the sea, so as to embrace the island, which was built on the slope of the hill. Of the town itself, which possessed a temple of Poseidon, very little now remains. On the east of the town is a plain, which anciently was a lake, and was separated from the sea by a dike, of which considerable remains are still seen. The hot springs (Aphratis) still exist at a distance of about half an hour's walk east of the town. Stephanus B. (s. v.) mentions another small town in the south-west of Nisyrus, called Argos, which still exists under its ancient name, and in the neighbourhood of which hot vapours are constantly issuing from a chasm in the rock. As regards the history of Nisyrus, it is said originally to have been inhabited by Carians, until Theessalus, a son of Heracles, occupied the island with his Doriacs, who were governed by the kings of Cos. (Diod. v. 54; Hom. ii. 67.) It is possible that, after Agamemnon's return from Troy, Argives settled in the island, as they did in Calymanus, which would account for the name of Argos occurring in both islands. (Herod. i. 99.) Moreover, calls the inhabitants of Nisyra Epidaurians. Subsequently the island lost most of its inhabitants during repeated earthquakes, but the population was restored by inhabitants from Cos and Rhodes settling in it. During the Persian War, Nisyus, together with Cos and Calymanus, was governed by queen Artemisia (Herod. i. c.). In the time of the Peloponnesian War it belonged to the tributary allies of Athens, to which it had to pay 100 drachmae every month; subsequently it joined the victorious Laconians; but after the victory of Cuidos, n. c. 394, Conon induced it to revolt from Sparta. (Diod. xiv. 84.) At a later period it was for a time probably governed by the Ptolemies of Egypt. Throughout the historical period the inhabitants of Nisyra were Doriacs; a fact which is attested by the inscriptions found in the island, all of which are composed in the Doric dialect. An excellent account of Nisyra, which still bears the same name Nisyra or Nisaea, is found in L. Ross, Reisen auf den Griech. Inseln, vol. ii. pp. 67—81. [L. S.]
the bleachers and glassmakers of Egypt. Parallel with the Natrix Lakes, and separated from them by a narrow ridge, is the Bahir-be-la-Ma, or Waterless River, a name given by the Arabs to this and other hollows which have the appearance of having once been channels for water. It has been surmised that the lake Moeris (Birket-el-Keroun) may have been connected with the Mediterranean at some remote period by this outlet. The Bahir-be-la-Ma contains agatized wood. (Wilkinson, Mod. Egypt and Thebes, vol. i. p. 300.)

The valley in which the Natrix Lakes are contained, was demarcated the Nitriote nome (νόμος Νιτριώτης or Νιτρυότης, Strab. viii. p. 803; Steph. B. s. v. Nitra). It was, according to Strabo, a principal seat of the worship of Scapis, and the only nome of Egypt in which sheep were sacrificed. (Comp. Macrob. Saturn. i. 7.) The Scarpaeus worship, indeed, seems to have prevailed on the western side of the Nile long before the Sicopic deity of that name (Zeus Scopitos) was introduced from Phocis by Ptolemy Soter, since there was a very ancient temple dedicated to him at Bha- cotis, the site of Alexandria (Tac. Hist. iv. 83), and another still more celebrated outside the walls of Memphis. The monasteries of the Nitriote nome were notorious for their rigorous asceticism. They were many of them strong-hills and well-guarded fortresses, and offered a successful resistance to the recruiting sergeants of Vaivisis, when they attempted to enforce the imperial rescript (Cod. Theodos. xii. tit. 1. lex. 63), which decreed that episcopal vows should not exempt men from serving as soldiers. (Photius, p. 81, ed. Bekker; Dionys. Perieg. v. 255; Eустath. ad loc; Pansan. i. 18; Strab. xvii. p. 807; Crol. Alex. Strom. i. p. 43.)

**NIVARIA INS.** [Fortunata Ins., Vol. i. p. 906, b.]

**NOAKUS (Νάκος), a river of Pannonia, into which, according to Strabo (vii. p. 314), the Dravus emptied itself in the district of Segestica, and which thence flowed into the Danube, after having received the waters of another tributary called the Colapis. This river is not mentioned by any other writer; and as it is well known that the Dravus flows directly into the Danube, and is not a tributary to any other river, it has been supposed that there is some mistake in the text of Strabo. (See Grousard, Strabo, vol. ii. p. 337, 552.)

**NOEGAR (NÖgör), a small city of the Astures, in Hisp. Tarracoensis. It was seated on the coast, not far from the river Melias, and from an estuary which formed the boundary between the Astures and Cantabri, in the neighborhood of the present Oviedo. Hence Ptolemy (ii. 6, § 6), who gives it the additional name of Ucinia (Οὐκινιώνια), places it in the territory of the Cantabri. (Strab. iii. p. 167; Mela, iii. i.; Plin. iv. 20. s. 34.)

**NOLA.**

**NOEODONIA (Νοιόδωνα),** was the chief city of the Diaebantes [Dialabantes], or of the Aebilici Diaulitiae, as the name appears in the Greek texts of Ptolemy (ii. 8, § 7). There is no doubt that the old Gallic name of the town was exchanged for that of the modern Diabantes, which name it is probable middle age document, referred to by D'Anville, is written Jublains, and hence comes the corrupted name Juba- leins, a small place a few leagues from Muyange. There are said to be some Roman remains at Jublains.

A name Nudomicum occurs in the Theodosian Table between Araecenus and Subdinium (Muns), and it is marked as a capital town. It appears to be the Nozdomicum of the Diabantes. [G. L.]

**NOEOMAGUS (Νοιομάγος),** a town of Galia Lugdunensis, and the capital of the Vadicussi (Ptol. ii. ii. § 16). The site is uncertain. D'Anville supposes that it may be Vesa, a name apparently derived from the Viduciasses. Others suppose it to be Neville, apparently because Neville means the same as Nocolagus. [G. L.]

**NOES (Νόης, Herod. iv. 49) or NOAS (Vaker. Place, vi. 160), a river which takes its source in Mount Haemus, in the territory of the Corbyzi, and flows into the Danube. It has not been satisfactorily identified.

**NOHODENOLEX, a place in the country of the Helvetii, which is shown by inscriptions to be Vexau Chatel, near Neufchatel.** Foundations of old buildings, pillars and coins have been found there. One of the inscriptions cited by Uberti (Gallen, p. 494) is:—"Publ. Martius Miles Veteranum Leg. xxi. Civium Noioidonieicus curator." [G. L.]

**NOIODONUM.** [Colonia Equestris Nodi- duinum.]

**NOLEA (Νόληα; Eth. Νολεάς, Noles: Nola), an ancient and important city of Campania, situated in the interior of that province, in the plain between Mt. Vesuvius and the foot of the Apennines. It was distant 21 miles from Capua and 16 from Nuceria (Itin. Ant. p. 499). Its early history is very obscure; and the accounts of its origin are contradictory, though they may be in some degree reconciled by a due regard to the successive populations that occupied this part of Italy. Hecataeus, the earliest author by whom it is mentioned, appears to have called it a city of the Ausones, whom he regarded as the earliest inhabitants of this part of Italy. (Hecat. ap. Steph. Bza. e. v.) On the other hand, it must have received a Greek colony from Cumae, if we can trust to the authority of Justin, who calls both Nola and the neighbouring Abella Chalcidic colonies (Justin, xx. 1); and this is confirmed by Silinus Italicus (Chalcidicum Nolam, xii. 161.) Other authors assigned it a Tyrrhenian or Etruscan origin, though they differed widely in the date of its foundation; some writers referring it together with that of Capua, to a date as early as B.C. 800, while Cato brought them both down to a period as late as B.C. 471. (Vell. Pnt. i. 7.) This question is more fully discussed under the article Capua. But whatever be the date assigned to the establishment of the Etruscans in Campania, there seems to doubt that Nola was one of the cities which they then occupied, in the same manner as the
neighbouring Capua (Pol. ii. 17); though it is most probable that the city already existed from an earlier period. The statement of Solinus that it was founded by the Tyrrhenus Dionysius of Carthage; (Solin. Hist. iv. 16; Niebuhr, vol. i. p. 74; note 235.) We have no account of the manner in which Nola afterwards passed into the hands of the Samnites; but there can be little doubt that it speedily followed in this respect the fate of Capua [CAPUA]; and it is certain that it was, at the time of the first wars of the Romans in this part of Italy, a Campanian city, occupied by an Ocean people, in close alliance with the Samnites. (Liv. viii. 23.) Dionysius also intimates clearly that the inhabitants were not at this period, like the Neapolitans, a Greek people, though he tells us that they were much attached to the Greeks and their institutions. (Dionys. Fr. xv. 5. p. 2315. R.)

We may probably infer from the above statements, that Nola was originally an Aetolian or Ocean town, and subsequently occupied by the Etruscans, in whose hands it appears to have remained, like Capua, until it was conquered by the Samnites, who subsequently assumed the name of Campania, about B.C. 440. The evidence in favour of its having ever received a Greek colony is very slight, and is certainly outweighed by the contrary testimony of Hecataeus, as well as by the silence of all other Greek writers. The circumstance that its coins (none of which are of early date) have uniformly Greek inscriptions (as in the one figured below), may be sufficiently accounted for by that attachment to the Greeks, which is mentioned by Dionysius as characterizing the inhabitants.

The first mention of Nola in history occurs in B.C. 328, just before the beginning of the Second Samnite War, when the Greek cities of Palaepolis and Ncapolis having rashly provoked the hostility of Rome, the Nolans sent to their assistance a body of 2000 troops, at the same time that the Samnites furnished an auxiliary force of twice that amount. (Liv. viii. 23.) But their efforts were frustrated by disaffection among the Palaepolitans; and the Nolans retired from the city of Nolana, into the hands of the Romans. (D. 25, 26; Sueton.) Notwithstanding the provocation thus given, it was long before the Romans were at leisure to avenge themselves on Nola; and it was not till B.C. 313 that they laid siege to that city, which fell into their hands after a short resistance. (Id. ix. 28.) It appears certain that it continued from this period virtually subject to Rome, though enjoying, it would seem, the privileged condition of an allied city (Liv. xxiii. 44; Postum. s. v. Municipia, p. 127); but we do not meet with any subsequent notice of it in history till the Second Punic War, when it was distinguished for its fidelity to the Roman cause, and for its successful resistance to the arms of Hannibal. That general, after making himself master of Capua in B.C. 216, hoped to reduce Nola in like manner by the cooperation of a party within the walls. But though the lower people in the city were ready to invite the Carthaginian general, the senate and nobles were faithful; and when attacked, either in all haste to the praetor Marcellus, who threw himself into the city with a considerable force. Hannibal in consequence withdrew from before the walls; but shortly after, having taken Nuceria, he renewed the attempt upon Nola, and continued to threaten the city for some time, until Marcellus, by a sudden sally, inflicted upon him considerable loss, and led him to abandon the enterprise (Liv. xxxii. 14—17; Plat. Mar. 10, 11; Eutrop. iii. 12; Flor. ii. 6. § 29.) The advantage thus obtained, though incalculable in itself, was of importance in restoring the spirits of the Romans, which had been almost crushed by repeated defeats, and was in consequence magnified into a great victory. (Liv. i. c.; Sil. Ital. xii. 270—280.) The next year (n. c. 215) Hannibal again attempted to make himself master of Nola, to which he was encouraged by fresh overtures from the democratic party within the city; but he was again anticipated by the vigour of Marcellus, and, having encamped in the neighbourhood of the town, with a view to a more regular siege, was attacked and defeated by the Roman general (Liv. xxiii. 39, 42—46; Plat. Mar. 12.) A third attempt, in the following year, was not more successful; and by these successive defences the city earned the praise bestowed on it by Silius Italicus, who calls it "Poeno non pervia Nola," (Sil. Ital. viii. 534.)

Nola again bears a conspicuous part in the Social War. At the outbreak of that contest (n. c. 90) it was protected, as a place of importance from its proximity to the seaboard, by a Roman garrison of 2000 men, under the command of the praetor L. Postumius, but was betrayed into the hands of the Samnite leader C. Papius, and became from thenceforth one of the chief strongholds of the Samnites and their allies in this part of Italy. (Liv. Epit. lxiii.; Appian, B. C. i. 42.) Thus we find it in the following year (n. c. 89) affording shelter to the shattered remains of the army of L. Cluentius, after its defeat by Sulla (Appian, i. e. 50); and even after the greater part of the allied nations had made peace with Rome, Nola still held out; and a Roman army was still occupied in the siege of the city, when the civil war first broke out between Marius and Sulla. (Vell. Pat. ii. 17, 18; Dio. lxxvii. Exc. Phot. p. 540.) The new turn thus given to affairs for a while retarded its fall: the Samnites who were defending Nola joined the party of Marius and Cinna; and it was not till after the final triumph of Sulla, and the total destruction of the Samnite power, that the dictator was able to make himself master of the reoccupied city. (Liv. Epit. lxiii.) We cannot doubt that it was severely punished; we learn that its fertile territory was divided by Sulla among his victorious soldiers (Lib. Colon. p. 236), and the old inhabitants probably altogether expelled. It is remarkable that it is termed a Colonia before the outbreak of this war (Liv. Epit. lxiii.); but this is probably a mistake. No other author mentions it as such, and its existence as a municipium, retaining its own institutions and the use of the Latin language, is distinctly attested at a period long subsequent to the Second Punic War, by a remarkable inscription still extant. (Mommsen, L'Ant. Ital. Dial. p. 125.) It afterwards received a second colony under Augustus, and a third under Vespasian; hence Pliny enumerates it among the Coloniae of Campania, and we find it in inscriptions as late as the time of Diochotian, bearing the titles of "Colonia Felix Augusto Nolana." (Lib. Colon. i. c.; Plin. iii. 5. s. 9; Zumpt, de Colon. pp. 472, 473; Zumpt, de Colonii Indur. p. 472; Zumpt, de Colon. p. 473.)

It was at Nola that Augustus died, on his return from Beneventum, whither he had accompanied Tiberius, A. D. 14; and from thence to Bovillae his funeral procession was attended by the senators of the cities through which it passed. (Suet. Aug. 98; Dion Cass. lvi. 29, 31; Tac. Ann. i. 5; Vell. Pat. l. b.)
123.) The house in which he died was afterwards consecrated as a temple to his memory (Dion Cass. lvi. 46). From this time we find no historical mention of Nola till near the close of the Roman Empire; but there is no doubt that it continued throughout this period to be one of the most flourishing and considerable cities of Campania. (Strab. v. pp. 247, 249; Pol. iii. i. § 69; Hist. Ant. p. 109; Orell. Inscr. 2420, 3855, &c.; Mommsen, Inscr. R. N. n. pp. 101—107.) Its territory was ravaged by Alaric in A. D. 410 (Augustin, Civ. Des. v. 10); but the city itself would seem to have escaped, and is said to have been still very wealthy ("urbs difftitima") as late as A. D. 455, when it was taken by Genseric, king of the Vandals, who totally destroyed the city, and sold all the inhabitants into captivity. (Hist. Miscell. xv. pp. 552, 553.) It is probable that Nola never recovered this blow, and sank into comparative insignificance in the middle ages; but it never ceased to exist, and is still an episcopal city, with a population of about 10,000 souls.

There is no doubt that the ancient city was situated on the same site with the modern one. It is described both by Livy and Silius Italicus as standing in a level plain, with no natural defences, and owing its greatness as a fortress solely to its walls and towers (Liv. xxiii. 44; Sili. Ital. xii. 163); a circumstance which renders it the more remarkable that it should have held out so long against the Roman arms in the Social War. Scarcely any remains of the ancient city are now visible; but Ambrosius Leo, a local writer of the early part of the 16th century, describes the remains of two amphitheatres as still existing in his time, as well as the foundations of several ancient buildings, which he considers to be the temples, baths, and pavements, &c. (Ambrosii Leonis de Urbe Nolut, i. 8, ed. Vent. 1514.) All these have now disappeared; but numerous inscriptions, which have been discovered on the spot, are still preserved there, together with the interesting inscription in the Oscan language, actually discovered at Abellia, and thence commonly known as the Cippus Abellanus [Abella]. From this curious monument, which records the terms of a treaty between the two cities of Nola and Abellia, we learn that the name of the former city was written "Novia." (Mommsen, Litter. Ital. Dialecte, pp. 119—127.) But the name of Nola is most celebrated among antiquaries as the place from whence a countless multitude of the painted Greek vases (commonly known as Etruscan) have been supplied to almost all the museums of Europe. These vases, which are uniformly found in the ancient sepulchres of the neighbourhood, are in all probability of Greek origin; it has been a subject of much controversy whether they are to be regarded as products of the art which was manufactured at the spot, and as imported from some other quarter; but the latter supposition is perhaps on the whole the most probable. The great love of these objects of Greek art which appears to have prevailed at Nola may be sufficiently accounted for by the strong Greek predilections of the inhabitants, noticed by Dionysius (Exc. Leg. p. 2315), without admitting the existence of a Greek colony, for which (as already stated) there exists no sufficient authority. (Kraemer, unter den Stgl. u. die Herkunft Griechischen Thongefasses, pp. 149—159; Abeker, Mittel Italien, pp. 332—339.)

Nola is celebrated in ecclesiastical history as the see of St. Paulinus in the 5th century; and also as the place where, according to tradition, the use of bells was first introduced in churches; whence they were derived the names of "nola" and "campania," usually applied to such bells in the middle ages. (Du Cange, Glossary, s. v.)

The territory of Nola, in common with all the Campanian plain, was one of great natural fertility. According to a well-known anecdote related by Aulus Gellius (vii. 20), it was originally mentioned with great praise by Virgil in the Georgics (ii. 225); but the people of Nola having given offence to the poet, he afterwards struck out the name of their city, and left the line as it now stands. [E. H. B.]

**Coin of Nola.**

**NOLIBA or NOBILI, a town of the Oretani in Hispania Tarraconensis, probably situated between the Auras and Tagus; but its site cannot be satisfactorily determined. It is mentioned only by Livy (xxxv. 22). [T. H. D.]

**Nomades.** [Numida.]

**Nomiae (Nomaedita), a town of Sicily, mentioned only by Diodorus (xi. 91) as the place where Dacetus was defeated by the Syracusans in B. C. 451. Its site is wholly uncertain. Some authors identify it with Noma [Nome]; but there is no authority for this. [E. H. B.]

**Nomeuntum (Nomeuntum, Nomeuntus, Nomeontia, Nomeontus, Nomentana), an ancient city of Latium, situated on the Sabine frontier, about 4 miles distant from the Tiber, and 14 1/2 from Rome, by the road which derived from it the name of Via Nomentana. It was included in the territory of the Sabines, according to the extension given to that district in later times, and hence it is frequently reckoned a Sabine town; but the authorities for its Latin origin are decisive. Virgil enumerates it among the colonies of Alba (Aen. vi. 772); and Dionysius also calls it a colony of that city, founded at the same time with Curtumimum and Fidenae, both of which are frequently, but erroneously, called Sabine cities. (Dionys. ii. 53.) Still more decisive is the circumstance that its name occurs among the cities of the Princeps Latini which were reduced by the elder Tarquin (Liv. i. 38; Dionys. iii. 50), and is found in the list given by Dionysius (v. 61) of the cities which concluded the league against Rome in B. C. 493. There is, therefore, no doubt that Nommentum was, at this period, one of the 50 cities of the Latin League (Niebuhr, vol. ii. p. 17, note); nor does it appear to have ever fallen into the hands of the Sabines. It is again mentioned more than once during the wars of the Romans with the Fidenates and their Etruscan allies; and a victory was gained under its walls by the dictator Servius Priscus, in B. C. 435 (Liv. iv. 22, 30, 32); but the Nomentanens themselves are not noticed as taking any part. They, however, joined with the other cities of Latium in the great Latin War of B. C. 338: and by the peace which followed it obtained the full rights of Roman citizens. (Liv. viii. 14.) From this time we hear no more of Nomeuntum in history; but it seems to have continued a tolerably flourishing town; and we
NOMIA. [LYCAEUS.]

NOMISTHRICUM (NOUSARTHRION), a town in the country of the Marcomanni (Bohemian), not far from the banks of the Alcis; but its site cannot be determined. (Ptol. ii. 11. § 29; Wilhelm, Germanien, p. 222.)

[5. L. S.]

NONACRIS (NAOMAIRES: ETHE. NAOMAIRES, NAOMAIRES). 1. A town of Arcadia, in the district of Pheneatis, and NW. of Phenaeus, which is said to have derived its name from Nonacris, the wife of Lycaeus. From a lofty rock above the town rose the waters of the river Styx. [Str. v.] Pliny speaks of a mountain of the same name. The place was in ruins in the time of Pausanias, and there is no trace of it at the present day. Leake conjectures that it may have occupied the site of Mesovrighi. (Herod. vi. 74; Paus. viii. 17. § 6; Steph. B. s. v.; Plin. iv. 6. s. 10; Sen. Q. N. iii. 25; Leake, Morce, vol. iii. pp. 165, 169.) From this place Hermes is called Nomaristases (NAOMAIRES, Steph. B. s. v.), Frander Nonacris (Or. Fast. v. 97), Atalanta Nonacria (Or. Met. viii. 426), and Callisto Nonacria virgo (Or. Met. ii. 409) in the general sense of Arcadia.

2. A town of Arcadia in the territory of Orchomenus, which formed, together with Callia and Dipeona, a Triopolis. (Paus. viii. 27. § 4.)

NOORDA. [NEARDA.]

NORA (NAOS: ETHE. NOSAROS, Steph. B.; NORENSIA: CAPO DI POLA), a city of Sardinia, situated on the S. coast of the island, and on a promontory now called the Capo di Pula, about 20 miles S. of Casti
dari. According to Pausanias (x. 17. § 5) it was the most ancient city in the island, having been founded by an Iberian colony under a leader named Noraus, who was a grandson of Geryones. Without attaching much value to this statement, it seems clear that Nora was, according to the traditions of the natives, a very ancient city, as well as one of the most considerable in later times. Pliny notices the Norenses among the most important towns of the island; and their name occurs repeatedly in the fragments of Cicero's oration in defence of M. Ac
cius Scaurus. (Cic. pro Scaur. 1. 2, ed. Orell.; Plin. iii. 7. s. 13; Ptol. iii. 3. § 3.) The position of Nora is correctly given by Ptolemy, though his authority had been discarded, without any reason, by several modern writers; but the site has been clearly established by the recent researches of the Comte de la Marmora: its ruins are still extant on a small peninsular promontory near the village of Pula, marked by an ancient church, and the buildings which, as we learn from ecclesiastical records, was erected on the ruins of Nora. The remains of a theatre, an aqueduct, and the ancient quays on the port, are still visible, and confirm the notion that it was a place of importance under the Roman government. Several Latin inscriptions with the name of the city and people have also been found; and others in the Phocelian or Punic character, which must belong to the period of the Carthaginian occupation of Sardinia. (Ible de la Marmora, l'Evage en Sardaigne, vol. ii. p. 355.)

The Antonine Itinerary (pp. 84, 84), in which the name is written Nura, gives the distance from Caras
cilis as 32 M. P., for which we should certainly read 22: in like manner the distance from Sulci should be 59 (instead of 69) miles, which agrees with the true distance, if we allow for the windings of the coast. (De la Marmora, ib. p. 441.) [E. H. B.]

NOBA (red NAPA), a mountain fortress of Cappa
docia, on the frontiers of Lycaonia, at the foot of Mount Taurus, in which Emmeus was for a whole
winter besieged by Antigonus. (Diod. xviii. 41; Plut. Eum. 10; Corn. Nep. Eum. 5; Strab. xii. p. 537.) In Strabo’s time it was called Norbaeus (Νορβαίς), and served as a treasury to Sicius, who was striving to obtain the sovereignty of Cappadocia. [L. S.]

NORBA (Νόρβα: Efh. Nophavos, Norbasus: Norma), an ancient city of Latium, situated on the border of the Volscian mountains, overlooking the Pontine Marshes, and about midway between Cora and Setia. There seems no doubt that Norba was an ancient Latin city; its name is found in the list given by Dionysius of the thirty cities of the League; and again, in the passage, where Polybius calls it a city of the Latin nation. (Dionys. v. 61, vi. 13; Niebuhr, vol. ii. note 21.) It appears, indeed, certain that all the three cities, Cora, Norba, and Setia, were originally Latin, before they fell into the hands of the Volscians. The statement that Norba received a fresh colony in n. c. 492, immediately after the conclusion of the league of Rome with the Latins, points to the necessity, already felt, of strengthening a position of much importance, which was well calculated to be added as another substructions, to the citadel of the surrounding country (‘qua arx in Pomptino essest,” Liv. ii. 31: Dionys. vii. 13). But it seems probable that Norba, as well as the adjoining cities of Cora and Setia, fell into the hands of the Volscians during the height of their power, and received a fresh colony on the breaking up of the latter. (Niebuhr, vol. ii. p. 108.) For it is impossible to believe that these strong fortresses had continued in the hands of the Romans, and Latins throughout their wars with the Volscians so much nearer home; while, on the other hand, when their names reappear in history, it is as ordinary “coloniae Latiae,” and not as independent cities. Hence none of the three are mentioned in the great Latin War of n. c. 340, or the settlement of affairs by the treaty that followed it. But, just before the breaking out of that war, and again in n. c. 327, we find the territories of Cora, Norba, and Setia ravaged by their neighbours the Fri vernates, whose presence was upon the occurrence of the Peace of Rome. (Liv. vii. 42, viii. i. 19.) No further mention occurs of Norba till the period of the Second Punic War, when it was one of the eighteen Latin colonies which, in n. c. 209, expressed their readiness to bear the continued burdens of the war, and to whose fidelity on this occasion Livy ascribes the preservation of the Roman state. (Liv. xxvii. 10.) It seems to have been chosen, from its strong and secluded position, as one of the places where the Carthaginian hostages were kept, and, in consequence, was involved in the servile conspiracy of the year n. c. 198, of which the neighbouring town of Setia was the centre. (Liv. xxxii. 2, 26.) [SETIA.]

Norba played a more important part during the civil wars of Marius and Sulla: having been occupied by the partisans of the former, it was the last city of Italy that held out, even after the fall of Praeneste and the death of the younger Marius, n. c. 82. It was at last betrayed into the hands of Augustus, as the designs of Sulla, but the cession was made without the consent of the citizens, and the inhabitants of the city, which was so entirely destroyed that the conquerors could carry off no booty. (Appian, B. C. i. 94.) It seems certain that it was never rebuilt: Strabo omits all notice of it, where he mentions all the other towns that bordered the Pontine Marshes (v. p. 237); and, though Pliny mentions the Norbani among the existing “populi” of Latium, in another passage he reckons Norba among the cities that in his time had altogether disappeared (iii. 5, §§ 84, 68). The absence of all subsequent notice of it is confirmed by the evidence of the existing remains, which belong exclusively to a very early age, without any traces of buildings that can be referred to the period of the Roman Empire.

The existing ruins of Norba are celebrated as one of the most perfect specimens remaining in Italy of the style of construction commonly known as Cyclopean. Great part of the circuit of the walls is still entire, composed of very massive and rude blocks of solid limestone, without regular towers, though the principal gate is flanked by a rude projecting mass which serves the purpose of one; and on the E. side there is a great square tower or bastion projecting considerably in advance of the general line of the walls. The position is one of great natural strength, and the defences have been skilfully adapted to the natural outlines of the hill, so as to take the fullest advantage of the extremely slight elevation of the site. The ground in the fall is very great, and as abrupt as that of a cliff on the sea-coast: on the other sides the escarpment is less considerable, but still enough to render the hill in great measure detached from the adjoining Volscian mountains. The only remains within the circuit of the ancient walls are some foundations and substructions, in the same massive style of construction as the walls themselves; these probably served to support temples and other public buildings; but all traces of the structures themselves have disappeared. The site of the ancient city is wholly uninhabited, the modern village of Norma (a very poor place) being situated about half a mile to the S. on a detached hill. In the middle ages there arose, in the plain at the foot of the hill, a small town which took the name of Ninfa, from the sources of the river of the same name (the Nymphæus of Pliny), close to which it was situated; but this was destroyed in the 15th century, and is now wholly in ruins. The ruin of Norba remains a subject of special interest in the first volume of the Annali dell’ Instituto di Corrispondenza Archeologica (Rome, 1829); and views of the walls, gates, &c. will be found also in Dodwell’s Pelasgic Remains (vol. Lond. 1834, pl. 72—80). [E. H. B.]

NORBA CAESARIA’NA or CAESAREA’ (Nepha Canaparea, Ptol. ii. 5, § 8, viii. 4, § 3), a Roman colony in Lucania, on the left bank of the Tagus, lying NW. of Emerita Augusta, and mentioned by Pliny (iv. 20, s. 55) as the Colonia Norbasii Caesariana. It is the modern Alcantara, and still exhibits some Roman remains, especially a bridge of six arches over the Tagus, built by Trajan. This structure is 600 feet long by 28 broad, and 245 feet above the usual level of the river. One of the arches was blown up in 1809 by Col. Mayce, to prevent the French from passing; but it was repaired in 1812 by Col. Sturgeon. It is still a striking monument of Roman magnificence. The arches are of great length, and the ancient laces are still there, and its entrance a chapel still exists containing an inscription to his memory. (Ford, Handbook of Spain, p. 272; Gruter, Inscr. p. 162; Muratori, Nor. Theor. Insocr. 1064. 6.; Ukert, vol. ii. pt. 1. p. 396; Setnini, Moneta Vetin, p. 14; Florez, Exp. S. xiii. p. 128.)

NOLEIA (Nepheia or Nepheis), the ancient
Noricum.

The inhabitants of Noricum, called by the general name Norici (Nepu-ud, Plin. iii. 23; Polyb. xxxiv. 10; Strab. iv. pp. 206, 208), were a Celtic race (Strab. vii. pp. 293, 296), whose ancient name was Taurisci (Plin. iii. 24). The Celtic character of the people is sufficiently attested also by the names of several Norian tribes and towns. About the year B.C. 58, the Boii, a kindred race, emigrated from Bohemia and settled in the northern part of Noricum (Caes. B. G. i. 5). Strabo (v. p. 213) describes them as forming having hereafter settled in Italy. They had resisted the Cimbri and Teutones, but were afterwards completely annihilated by the Getae, and their country became a desert. Ptolemy does not mention either the Norici or the Boii, but enumerates several smaller tribes, such as the Savaces (Scavaces) in the west, the Abanti or Halauini (Ἀλαυωνί) in the south, and the Ambisontii (Ἀμβισοντιοι), the inhabitants of the banks of the Isenta. In the east the same authority mentions the Norici (Norici); Polybius, the character of their country is described by Strabon (v. p. 12). The country, after the descent of the Ambicravi (Ἀμβικραί), i.e., dwellers about the Dravus and the Ambilici (Ἀμβιλίκοι), or dwellers about the Licius or Lichias, or Lech). It must be observed that, in this enumeration of Ptolemy, the Norici, instead of forming the great body of the population, were only one of the six smaller tribes.

As to the history of Noricum and its inhabitants, we know that at first, and for a long time, they were governed by kings (Caes. B. C. i. 18; Strab. vii. pp. 304, 313); and some writers speak of a regiment of Norici even after the country had been incorporated with the Roman Empire. (Vell. Pat. ii. 39, 109; Suet. Tib. 16.) From early times, the Noricans had carried on considerable commerce with Aquileia (Strab. iv. p. 207, vii. p. 314); but when the Romans, under the command of Tiberius and Drusus, made themselves masters of the adjoining countries south of the Danube, especially after the conquest of Illyricum, Noricum also was subdued; and about B.C. 15, the country, after desperate struggles of its inhabitants with the Romans, was conquered by Tiberius, Drusus, and P. Silius, in the course of one summer. (Strab. iv. p. 206; Dion Cass. liv. 20.) The country was then changed into a Roman province, probably an imperial one, and was accordingly governed by a procurator. (Tac. Hist. i. 11, Ann. ii. 63.) Partly to keep Noricum in subjection, and partly to protect it against foreign invasions, a strong body of troops (the legio II. Italica) was stationed at Lausiacum, and three fleets were kept on the Danube, viz. the classis Comageneensis, the cl. Arlapensis, and the cl. Lausiacensis. Roads were made through the country, several Roman colonies were founded, as at Lausiacum and Ovilaba, and fortresses were built. In the time of Ptolemy, the province of Noricum was not yet divided; but in the subsequent division of the whole empire into smaller provinces Noricum was cut into two parts, Noricum Ripense (the northern part, along the Danube) and Noricum Medterraneum (embracing the southern and more mountainous part), each of which was governed by a praeses, the whole forming part of the diocese of Illyricum. (Not. Imp. Occid. p. 5, and Orient. p. 5.) The more important rivers of Noricum, the Savus, Dravus, Murus, Arlape, Ies, Joyavus or Isenta, are described under their respective heads.

The ancient capital of the country was Noribia; but, besides this, the country under the Roman
Empire, contained a great many towns of more or less importance, as Bolodurum, Joviacum, Ovilaia, Lenta, Laureacum, Arexale or Aralea, Namara, Cethum, Bediaum, Juvenum, Vhunum, Cellia, Agustem, Lonsum, and Tejenia.

An excellent work on Noricum in the time of the Romans is Mauch's. *Das Römische Noricum*, in two volumes, 1823; compare also the papers in *Deutsche*, p. 240, &c.* [L. S.]

**NOROSIES.** [N. ROSSUS.]

**NOROSI.** [N. ROSSUS.]

**NOROSUS** (Nórṓsas, ἄρα, Plut. vi. 14, §§ 5, 11), a mountain of Scythia in inner Scythia, near which were the tribes of Norosies (Nórṓsōs) Noroiss (Nórṓsas) and Cachagae (Kακαγεί). It must be referred to the S. portion of the great meridian chain of the Alps. [B. J. L.]

**NOSTALENE** (Nostałen), a town of Armenia Minor, on the northern slope of Mount Anamaus, in the district called Laviinias. (Plut. v. 7. § 10.)

**NOTCI-CORN* (Nótov κόραν, Strab. xvi. p. 774; Plut. iv. 7. § 11), or South Horn, was a promontory on the western coast of Asia Minor. Ptolemy was the first to name this headland *Aromata.* [W. B. D.]

**NOTCI-CORN* (Nótov κόραν, Hanno, ap. Geogr. Græca, Min. p. 19, ed. Müller: Plut. iv. 7. § 10), a promontory on the western coast of Asia Minor. Hanno's name given the following statement: "On the third day after our departure from the Chariot of the Gods (Ωτών ἄραμα), having sailed by those streams of fire (previously described), we arrived at a bay called the Southern Horn, at the bottom of which lay an island like the former, having a lake, and in this lake another island, full of savage people, the greater part of whom were women, whose bodies were hairy, and whom our interpreters called Gorillae. Though we pursued the men, we could not seize any of them; but all fled from us, escaping over the precipices, and defending themselves with stones. Three women were, however, taken; but they attacked their conductors with their teeth and hands, and could not be prevailed upon to accompany us. Having killed them, we flayed them, and brought their skins with us to Carthage. We did not sail further on, our provisions failing us." A similar story is told by Eudoxus of Cyzicus, as quoted by Plut. iv. 7. § 10, and by Pliny. Upon fire, however, the island did not prove volcanic action, as it must be re-collected that the custom common in those countries— as, for instance, among the Măndingos, as reported by Mungo Park—of setting fire at certain seasons to the forests and dry grass, might have given rise to the statements of the Carthaginian navigator. In our own times, the island of Amsterdam was set down as v δαμα from the same mistake. (Dauenhuy, *Tellurium*, p. 441.) The "Chariot of the Gods" has been identified with sacred fire; the distance of three days' sail agrees very well with Scheheraz, to the S. of Sierra Leone, while Hanno's island coincides with that called Maccaboy in the charts, the peculiarity of which is, that it has on its S. shore, or sea face, a lake of pure fresh water of considerable extent, just within high-water mark; and inside of, and close to it, another still larger, salt. (Journ. Geog. Soc. vol. ii. p. 89.) The Gorillae, no doubt, belonged to the family of the anthropoid apes; the Măndingos still call the "Ong-Gu-Don肩" by the name "Toorilla," which, as Kingle (ap. Malker, &c.), the latest editor of Hanno, observes, might easily assume the form it heard in the Greek text. [E. B. J.]

**NOTIUM** (Nótov ἄρπαν, Plut. ii. 2. § 5), the SW. cape of Ireland, now *Mizen Head.* (Cadden, p. 1536.)

**NOTIUM.** [CALYMNIA.]

**NOTIUM.** [COPHONIA.]

**NOVA AUGUSTA (Novāsβαύσαβα, or Novās Avgusötā, or Novās Avgusötā, Plut. ii. 6. § 56), a town of the Arvaci in Hispania Tarraconensis, the site of which cannot be identified. (Plin. iii. 3. s. 4.) [T. H. D.]

**NOVAE** (Novā, Plut. iii. 10. § 10; called Nozai by Procop. de Aedific. iv. 11. p. 308, and Hieroc. p. 636; and Novesius Civ. by Marcellin. Chron. ad an. 457), a town of Lower Moesia on the Danube, and according to the Hist. Ant. (p. 221) and the Nat. Imp. (c. 29), the station of the legio 1. Italica. It is identified either with *Gorzelubbi.* At a later period it obtained the name of Estesium. (Jornand. Get. Is. 1.) [T. H. D.]

**NOVANA,** a town of Picenum, mentioned only by Pliny (iii. 13. s. 18), who appears to place it in the neighbourhood of Asculum and Cupra. It is probably represented by Monte di Nove, about 8 miles N. of *Accoli.* (Ciner, Italy, p. 741.) [E. H. B.]

**NOVANTA** (Novāvta, Plut. ii. 3. § 7), a town in the SW. of Britannia Barba, or Caledonia, from whom the town of *Pomona,* on the I. of Man, is said by Pliny to have been called *Lepicophia and Requgium.* [T. H. D.]

**NOVANTARUM PROMONTORIUM** (Novānantovāv ἄρπαν, Plut. ii. 3. § 1), the most N. point of the peninsula of the Novantae in Britannia Barba, now *Corwall Point,* in Wigtownshire. (Marsian, p. 59, Hudson.)

**NOVANUS,** a small river of the Ve-tiuni, mentioned only by Pliny (ii. 103. s. 106), who places it in the territory of Pitium, and notices it for the peculiarity that it was dry in winter and full of water in summer. This circumstance (evidently arising from its being fed by the snows of the highest Alpemines) seems to identify it with the stream flowing from a source called the *Laghetto di Petto,* (Romani, vol. iii. p. 281.) [E. H. B.]

**NOVARIA** (Nоварia, Plut. Novaria, a considerable city of Cisalpine Gani, situated on the high-road from Mediolanum to Vercellae, at the distance of 33 miles from the former city. (Hist. Ant. pp. 344, 350.) It was in the territory of the Iunobres (Plut. iii. 10. § 3), and was finally confirmed to them by Pliny, as a place to which a people whom he calls Vetvaxamoricari, who were of the tribe of the Votoviti, a Gaulish race, according to Pliny, and not, as asserted by Cato, a Ligurian one. (Plin. iii. 17. s. 21.) No mention is found in history of Novaria previous to the Roman conquest; but it seems to have been in the days of the Empire a considerable municipal town. It is reckoned by Tacticus (Hist. i. 70) among the *firmaissima Transpadanae regionis municipia," which declared in favour of Vetovulins, a.D. 69, and was the native place of the rhetorician C. Albucius Nilius, who exercised municipal functions there. (Suet. Iht. 6.) Its municipal rank is confirmed also by inscriptions (Gruter. Inscri. p. 393. 8, &c.); and we learn from Pliny that its territory was fertile in vives (xvii. 23. s. 35). After the fall of the Western Empire Novaria is again mentioned as a fortified town of some importance; and it seems to have retained its consideration under the Lombard rule. (Procop. B. 6. ii. 12: P. Dicte. Hist. Lang. vi. 18.) The modern city of *Novara* is a flourishing place, with about 16,000 inhabitants, but has no ancient remains. [E. H. B.]
NOVIAS, AD.

NOVIAS, AD, a fortress of Upper Moesia, situated on the Danube, and on the road from Viminacium to Nicomedia. (Itin. Ant. p. 218.) It lay about 48 miles E. of the former of these towns. It is identified with Kolumbath, where there are still traces of ancient fortifications. [T. H. D.]

NOVIAS, AD, a station in Illyricum (Anton. Rm.), which has been identified with Removicius in the lexicon, where several Latin inscriptions have been found, principally dedications to Jupiter, from soldiers of the 1st and 13th legions, who were quartered there. (Wilkinson, Dalmatia and Montenegro, vol. ii. p. 149.)

NOVEM CRARIIS, in South Gallia, is placed by the Jerusalem Itin. between Lectoce and Acarnum, supposed to be Antium on the Rhone. [G. L.]

NOVEM PAGI is the name given by Pliny (iii. 5. 85) to a "populus" or community of Etruria, the site of which is very uncertain. They are generally placed, but without any real authority, in the neighbourhood of Forum Clodi. (Dennis's Etruria, vol. i. p. 273.)

NOVESIUM, a fortified place on the Gallic side of the Rhine, which is often mentioned by Tacitus (Hist. iv. 26, 33, 35, &c., v. 22). It is also mentioned in the Antonine Itin. and in the Table. There is no difficulty about the position of Novesium, which is the Neuss, between Colonae Agrippina (Cuba) and Gelduba (Gelbel or Gelge). (Geldea.) Novesium fell into ruins, and was repaired by Julian, A.D. 359. (Amm. Marc. xviii. 2.)

NOVIMAGUS, in Gallia, is placed in the Table after Mossa (Meuse). Mossa is placed by the Antonine Itin. on the road between Andomatus (Langres) and Tulunt (Toul). Novimagus is Niveshalor, on the same side of the river Mossa as Meuse, but the distance in the Table is not correct.

NOVIDUNUM (Noviodunum). 1. A town of the Bituriges, in Gallia. Caesar, after the capture of Genabum (Orleans), B. c. 52, crossed the Loire, to relieve the Boii, who were attacked by Vercingetorix. The position of the Boii is not certain [Boii]. On his march Caesar came to Noviodunum of the Bituriges (B. G. vii. 12), which surrendered. But on the approach of the cavalry of Vercingetorix, the townsman shut their gates, and manned the walls. There was little fighting between the Romans and Vercingetorix before the town, and Caesar got a victory by the help of the German horse. Upon this the town again surrendered, and Caesar marched on to Avaricum (Bourges).

There is nothing in this narrative which will determine the site of Noviodunum. D'Anville thinks that Caesar must have passed Avaricum, leaving it on his right; and so he supposes that Novum, a name something like Noviodunum, may be the place. De Valois places Noviodunum at Novia sur Beuzenjy, where it is said there are remains; but this proves nothing.

2. A town of the Aedui on the Loire. The place was afterwards called Neuvirmin, as the name appears in the Antonine Itin. In the Table it is corrupted into Euvirmin. There is no doubt that Nevirium is Nevers, which has its name from the little river Nièvre, which flows into the Loire.

In n. c. 52 Caesar had made Noviodunum, which he describes as in a convenient position on the banks of the Loire, a depot (B. G. vii. 55). He had his hostages there, corn, his military chest, with the money in it allowed him from home for the war, his own and his army's baggage, and a great number of horses which had been bought for him in Spain and Italy. After his failure before Gerovia, the Aedu on Noviodunum massacred those who were there to look after stores, the negotiators, and the travellers who were in the place. They divided the money among them and the horses, carried off in boats all the corn that they could, and burnt the rest or threw it into the river. Thinking they could not hold the town, they burnt it. It was a regular Gallic outbreak, performed in its true national style. This was a great loss to Caesar; and it may seem that he was imprudent in leaving such great stores in the power of treacherous allies. But he was in straits during this year, and probably he could not do otherwise than he did.

Dion Cassius (xi. 30) tells the story out of Caesar of the affair of Noviodunum. He states incorrectly what Caesar did on the occasion, and he shows that he neither understood his original, nor knew what he was writing about.

3. A town of the Suessiones, mentioned by Caesar (B. G. ii. 12). Caesar (b. c. 57), after leaving the Azoa (Aisne), entered the territory of the Suessiones, and making one day's long march, reached Noviodunum, which was surrounded by a high wall and a broad ditch. The place surrendered to Caesar. It has been conjectured that the Noviodunum which was the place afterwards called Augusta Suessionum, but it is by no means certain. [G. L.]

NOVIDUNUM (Noviodunum). 1. A place in Pannonia Superior, on the great road leading from Aemona to Scicia, on the southern bank of the Savus. (Ptol. ii. 15. § 4; Itin. Ant. p. 239; Geogr. Kav. iv. 19, where it is called Novidunum.) Its modern name is Novigrad.

2. A town and fortress in Lower Moesia, a little above the point where the Danube divides itself into several arms. (Ptol. iii. 10. § 11.) Near this town the emperor Valens constructed a bridge over the Danube for his expedition against the Greuthungi. (Amm. Marc. xxvii. 1.) Some writers have supposed, without any good reason, that Noviodunum is the point at which Darins ordered a bridge to be built when he set out on his expedition against the Scythians. The town, as its name indicates, was of Celtic origin. It has been conjectured that the Noviodunum (p. 226) Noviodunum was the station of the legio II. Heraclea, while according to the "Notitia Imperii" it had the legion I. Jovia for its garrison. During the later period of the Western Empire, the fortifications of the place had been destroyed, but they were restored by Justinian (Procop. de Aed. iv. 11; comp. Hieroc. p. 637; and Constant. Pontif. de Thesm. ii. 1, where the place is called Nasibobavos and Naosibovos). The Civitas Nova in Jornandes (Got. 5) is probably the same as Noviodunum; and it is generally believed that its site is occupied by the modern Iosoci.

[ L. S.]

NOVIOMAGUS (Novium). 1. A town in Gallia, which afterwards had the name Lexovi [Lexovii], which was that of a people of Celta. In the Greek text of Ptolemy (ii. 8. § 2), as it is at present printed, the word Lumen (Lynea) is put after the name Noviomagus. But this is not true, for Noviomagus is Lisigna, which is not on the sea, though the territory of the Lexovi extended to the sea.

2. Afterwards Nemetas, in Gallia, the capital of the Nemetae or Nemetae [Nemetae.] The name
NOVIOMAGUS.

is Noemagus in Ptolemy (ii. 9, § 17). In Ammianus Marcellinus (xxi. 11, xvi. 2) and the Notitia Ital. Insip. it occurs under the name of the people, Nemetes or Nemetae. It is now Speicher, near the small stream called Speierbach, which flows into the Rhine. In some of the late Notitiae we read "civitas Nemetana, id est, Spira." (D'Anville, Notice, etc.)

3. A town of the Batavi, is the Dutch town of Nymegen, on the Vaaliss (Waal). It is marked in the Table as a chief town. D'Anville observes that the station Ad Durocetorum ([Durocetum, Ad]) is placed by the Table on a Roman road, and next to Noviomagus; and that this shows that Noviomagus had a territory, for capital places usually to reckon the distances from their city to the limits of their territory.

5. A town of the Reni, is placed by the Table on a road which, leading from Durocetorum (Reims) to a position named Moso, must cross the Moso at Monsan [MOSOMAGUS.] Noviomagus is xii. from Durocetorum, and it is supposed by D'Anville to be Novi even.

6. A town of the Treveri, is placed in the Anto-

nine Itin. xiii. from Trier, on the Mosel. In the Table it is viii., but as viii. is far from the truth, D'Anville supposes that the vi. in the Table should be x. The river bends a good deal below Trier, and in one of the elboos which it forms is Neumagen, the representative of Noviomagus. It is mentioned in Ammianus's poem (Mosella, v. 11):—

"Noviagum divi castra inculta Constantinii."

It is said that many Roman remains have been found at Neumagen.

7. A town of the Veromandi. In the Anto-

nine Itin. this place is fixed at 27 M. P. from Soissons, and 34 M. P. from Amiens. But their distances, as D'Anville says, are not exact, for Noviodunum is Noyon, which is further from Amiens and nearer to Soissons than the Itin. fixes it. The alteration of the name Noviodunum to Noyon is made clearer when we know that in a middle age document the name is Noviominum, from which to Noyon the change is easy.

NOVIOREGUM (Noudacus, Ptol. ii. 3, § 28), capital of the Requi in Britannia Prima, marked in the Itin. Ant. (p. 472) as the first station on the road from London to Durocetorum, and as 10 miles distant from the former town. It has been variously placed at Woodcote in Surrey, and Holwood Hill in Kent. Camden, who adopts the former site in his description of Surrey (p. 192), seems in his description of Kent (p. 219) to prefer the latter; where on the little river Ravensbourne, there still remain traces of ramparts and ditches of a vast extent. This site would also agree better with the distances in the Itinerary.

[ T. H. D.]

NOVIOREGUM, in Gallia, is placed by the Anto-

nine Itin. on a road from Bardigala (Bordeaux) to Mediolanum Sarthinum (Saintes), and between Tannum (Tolominum or Tellation) and Mediolanum. D'Anville supposes Noviodregum to be Rouen on the north side of the Gironde; but this place is quite out of the direct road to Saintes, as D'Anville admits. He has to correct the distance also in the Itin. between Tannum and Noviodregum to make it agree with the distance between Tolomin and Rouen.

[ G. L.]

NOVIIUM (Nodobi, Ptol. ii. 6 § 22), a town

of the Artabri in Hispamica Tarraconensis, identified by some with Porto Novo, by others with Novegum.

NOVIUS (Nodobis, Ptol. ii. 3, § 9), a river on the W. coast of Britannia Barbarea, or Caledonia, flowing into the estuary Ituna (or Solway Firth), now the Nith.

[ T. H. D.]

NOVUM COMUM. [COMUM.]

NUAEUS (Novaciorum, a town of Germany, mentioned only by Ptolemy (ii. 11, § 29). It was probably situated in the country of the Chatti, though others identify it with the village Nienhus in Westphalia, near Neheim. (Wilhelm, Germania, p. 188.) [L.S.]

NUBA LACUS. [NIGEB.]

NUBAE (Noubi, Strab. xxvii. pp. 786, 819; Ptol. iv. 7, § 30; Steph. B. s. v.; also Noubaioi and Nubades; Nubei, Plin. vi. 30. s. 34), were a negro race, situated S. of Meroe on the western side of the Nile, and when they first appear in history were composed of independent clans governed by their several chieftains. From the Nubaes is derived the modern application of Nubia, a region which properly does not belong to ancient Egypt; yet the ancient Nubaes differed in many respects, both in the extent of their country and their national character, from the modern Nubians.

Their name is Egyptian, and came from the Nile-valley to Europe. From remote periods Aegypt and Aethiopia imported from the regions S. of Meroe ivory, ebony, and gold; and gold, in the language of Aegypt, was Noub; and thus the gold-producing districts S. of Sennar (Meroe), and in Kordofan, were designated by the merchants trading with them as the land of Noub. Even in the present day the Copts who live on the lower Nile call the inhabitants of the country above Assuan (Syene) Nubah,—a name indeed disowned by those to whom it is given, and of which the origin and import are unknown to those who give it. Kordo-

fham, separated from Aegypt by a desert which can be easily crossed, and containing no obstructing population, is inhabited by Nubian tribes, who roam over the wastes between the S. of Meroe and the shores of the Red Sea. Nor, indeed, were they without settled habitations; the country immediately N. of Kordofan is not entirely barren, but lies within the limit of the periodical rains, and the hamlets of the Nubaes were scattered over the meadow tracts which divide the upper branches of the Nile. The independence of the tribes was probably owing to their dispersed habitations. In the thirteenth century A.D. they seem to have become more compact and civilized, for when the Romans, in the reign of Diocletian, A. D. 285—

305, withdrew from the Nile-valley above Philæ, they placed in it and in the stations up the river colonies of Nobatae (Nubaes, Noubades) from the western desert. These settlements may be regarded as the germ of the present Nubia. Supported by the Romans who needed them as a barrier against
the Blemmyes, and reinforced by their kindred from SW., civilised also in some measure by the introduction of Christianity among them, these wandering negroes became an agricultural race, maintained themselves against the ruder tribes of the eastern deserts, and in the sixth century A. D. were firmly established as far S. perhaps as the second Cataract. (Proc. Brit. Ass. 1854, i. 105.) In the following century the Nubae were for a time overwhelmed by the Arabs, and their growing civilization was checked. Their employment as caravan-guides was diminished by the introduction of the camel, and their numbers were thinned by the increased activity of the slave-trade; since the Arab invaders found these sturdy and docile negroes a marketable commodity on the opposite shore of the Red Sea. But within a century and a half the Nubae again appear as the predominant race on the Nile, and its tributaries. The entire valley of the Nile, from Dongola inclusive down to the frontier of Egypt, is in their hands, and the name Nubia appears for the first time in geography.

The more ancient Nubae were settled in the hills of Kordofan, SW. of Moroe. (Rüppell, Reisen in Nubien, p. 32.) The language of the Nubians of the Nile at this day is radically the same with that of northern Kordofan; and their numbers were possibly underrated by the Greeks, who, acquainted with such only as wandered northward in quest of service with the caravans from Coptos and Philae to the harbours of the Red Sea. The ancient geographers, indeed, mention the Nubae as a scattered race. Pliny, Strabo, and Ptolemy each assign to them a different position. Pliny (iv. 6. § 16) dismisses them from the Nile, doubtless erroneously, and places them W. of the Egyptian mountains, near the river Gir and in close contact with the Garamantes. Strabo (xvii. p. 819) speaks of them as a great nation of Lyd. Kordofan, and dwelling in numerous independent communities between the latitude of Moroe and the great bend of the Nile,—i.e. in Dongola. Lastly, Pliny (vi. 30. s. 34) sets them 8 days W. of the island of the Samberraeae (Semenara). All these accounts, however, may be reconciled by assuming Kordofan to have been the original home of the Nubae, whence they stretched themselves N. and W. accordingly as they found room for tilla, caravan routes, or weaker tribes of nomad negroes. The Pharaohs made many settlements in Nubia, and a considerable Egyptian population was introduced among the native Aethiopian tribes as far S. as the island of Gaiacapae (Argo), or even Gebel el-Birkel. (Lat. 18° 25' N.) It is not certain whether any of the present races of Nubia can be regarded as descendants of these colonists. Their presence, however, is attested by a series of monuments embracing nearly the whole period of Egyptian architecture. These monuments represent three eras in architectural history. (1) The first comprehends the temples cut in the sides of the mountains; (2) the second, the temples which are detached from the rocks, but emulate in their massive proportions their original types; (3) the third embraces those smaller and more graceful edifices, such as are those of Gartaca and Daudour, in which the solid masses of the first style are wholly laid aside. Of these structures, however, though seated in their land, the Nubae were not the authors; and they must be regarded either as the works of a race cognate with the Aethiopians, who spread their civilization northward through the Nile-valley, or of colonists from the Thebaid, who carved upon the walls of Ispandahl, Semanah, and Satch the titles and victories of Rameses the Great. [W. B. D.]

NUCERIA. (Nuœria: Eth. Nuœripis or Nuœripos: Nuœrii.) I. Surnamed Alfeterna (Nocera del Poigani), a considerable city of Campania, situated 16 miles S.E. from Nola, on the banks of the river Sarnus, about 9 miles from its mouth. (Strab. v. p. 247; Plin., iii. 5. s. 9; Itin. Ant. p. 109.) The origin of its distinctive appellation is unknown; the analogous cases of Teanum Silicium and others would lead us to suppose that the Alfeterni were a tribe or people of which Nuceria was the chief town; but no mention is found of them as such. Pliny, however, notices the Alfeterni among the "populi" of Campania, apart from Nuceria (Plin., iii. 5. s. 9); and we learn from their coins that the inhabitants themselves, who were of Oscan race, used the designation of Nuceria Alfeterna ("Nuœriunam Alfeternam"), which we find applied to them both by Greek and Roman writers (Nuœria ή Άλφετερην καλουρίνην, Diod. xix. 65; Nuceria Alfeterna, Liv. ix. 41; Friedländer, Ostische Münzen, p. 21). The first mention of Nuceria in history occurs in B.C. 315, during the Second Samnite War, when its citizens, who were at this time on friendly terms with the Romans, were attacked by Parthians, and were forced to abandon the town, which was again made common cause with the Samnites (Diod. xix. 65). In B.C. 308 they were punished for their defection by the consul Fabius, who invaded their territory, and laid siege to their city, till he compelled them to an unqualified submission. (Liv. ix. 41.) No subsequent notice of it occurs till the Second Punic War, when, in B.C. 216, Hannibal, having been foiled in his attempt upon Nola, turned his arms against Nuceria, and with much better success; for though the citizens at first offered a vigorous resistance, they were soon compelled by famine to surrender; the city was given up to plunder and totally destroyed, while the surviving inhabitants took refuge in the other cities of Campania. (Liv. xxii. 15; Appian, Pun. 63.) After Hannibal had been compelled to abandon his hold on Campania, the fugitive Nucerians were restored (n.c. 210); but, instead of being again established in their native city, they were, at their own request, settled at Atella, the inhabitants of that city being transferred to Campania. (Liv. xxii. 18; Appian, M. A. 45.) How Nuceria itself was re-peopled we are not informed; but it is certain that it again became a flourishing municipal town, with a territory extending down to the sea-coast (Pol. iii. 91), and is mentioned by Cicero as in his day one of the important towns of Campania. (Cic. de Leg. Agr. ii. 31.) Its territory was ravaged by C. Papus in the Social War, b.c. 90 (Appian, B. C. i. 42); and if we may trust the statement of Florus, the city itself was taken and plundered in the same war. (Flor. iii. 18. § 11.) It again suffered a similar calamity in b.c. 73, at the hands of Spartaces (I. iii. 20. § 5); and, according to Appian, it was one of the towns of which the Triumvirs assigned to their veterans for occupation (Appian, B. C. iv. 3); but from the Liber Coloniarum it would appear that the actual colony was not settled there until after the establishment of the Empire under Augustus. (Lib. Colon. p. 235.) It is there termed Nuceria Constantinii, an epithet found also in the Itinerary, a.N. Ant. p. 120.) Ptolemy also attests its colonial rank (Ptol. iii. 1. § 69); and we learn from Tacitus

G. G. 2
NUCERIA.

This: received a fresh accession of veteran soldiers as conscripts under Nero. (Tac. Ann. xiv. 31.) It was not long after this new settlement that a civil war broke out between the colonists of Posidonia and Nocera, which ended in a serious tumult without aTELUS. (18, xiv. 17) This is the last mention of Nuceria that we find in history, until the reign of Domitian; but its name appears in the Itineraries, and is ultimately entered by Procopius under Nocera. The active rivalry between Nocera and Tarentum, which but an end to the Greek supremacy in Italy, A.D. 404, was sought in its neighbourhood, on the banks of the Sinni, owned by Procopius the historian. (Proc. hist. iv. 5.) We may also that it received in the early part of the Christian era, which it retained without interruption for many centuries. Its modern appellation is Nuceria, and its origin is ascribed to the same family of Sabellans who were associated with the Nucerii of Friuli. IV. There are many curious instances of the change of the Appian Way at Capua, proceeded from the fact that it began to assume the range of the Subiaco and the Etruscan route from that of the valley south of, as it was called by the Romans, Strabo reckons as the distance from Pometia to Marsea, on the latter bay, 321 miles, or 519 from Stras. v. p. 291, the truth, Nuceria being 2 miles, in fact, 305 miles, from Naples the same distance as from the sea; the modern Severn. The Appian Way begins at P. from N. P. it gives the name of Nuceria at 31 M. P. it is 31 miles from Capua. The Itineraries from Nuceria to Nola, and 21 from Nuceria to Campania, the modern Inscrip. 3308; M. Jensen, idem. iv. Ant. p. 474). ON NUCERIA IN CAMPANIA.

N. Nuceria, a town of Umbria, situated on the Roman Way, between Perugia and the Apennines. It is mentioned by Cæsarius as the residence of a philosopher, owing to the luxuriant culture of the land for oil. It may be, therefore, the inhabitants as "Nucerii," the same as Naturni, an obscure place, is quite unknown. Procopius (lib. ii. c. 6.) tells us: "if this is not a mistake, the suburbs around the city and the sea at Naturna, i.e. 400.) The modern name is Nucri, and is now corrupted into Nucri.

The modern name, however, is expressed as "Nucri." The modern appellation is Nuceria, and its origin is ascribed to the same family of Sabellans who were associated with the Nucerii of Friuli.

COIN OF NUCERIA IN BRUTTIUM.

NUDION BULL, in the table, is probably the same place as Nocedal of the Diatribes. (Nezno-

SUDIUM (Nach), a town founded by the Ionians in Triclybia in Elis, but which was destroyed by the Eleans in the time of Herodotus (v. 141). NUTHONES, a German tribe, mentioned by Tacitus (Germ. 40) as inhabiting the banks of the Abis (Elbe), to the S.W. of the Longobards. They were in common with their neighbouring tribes worshipped Ertha, that is, the Earth. In some editions the name is written Nurtones; so that nothing definite can be said with regard to the place of their residence, or the exact locality they inhabited. [L.S.] NUXUS (Novo. le Anf. P. i. v. 6. § 6. in the Latin translation, "Nulci oris"), a river of Interior Italy, with discharged itself into the sea of Mauretania Tingitana. It has been identified with that which is called in the Ship-journal of Livy, Lixus (Mela, Geog. Graec. Min. p. 5. ed. Mallet), and by Stylax of Cariania (of the present text be correct), Xen. (Mem. 2. 10. § 6), and Poly.

B. a. (Phin. v. 1. Cosensus). The Lybian river must not be confounded with the Mauretanian river, and the town of the same name, mentioned by Stylax.

Steph. B. s. r. Arg. A. H. Geat. Cr. 326 A. L. Ber. iv. 1. §§ 2. 13; P. p. Mela, id. 10. § 6; Phin. v. 1. and with is now represented by the river Wady-el-Khas, falling into the sea at El-Ahmar, where Barth (Wanderungen, pp. 20-25) makes the ancient Lixus. The Latus or Lixus, or Nucri of Ptolemy, is the Quadra (Wad-el-Khas, H. P. 1. 358, the S. coast of the Atlas of Morlot), called the Sahara in lat. 32° a river for the greater part of the year nearly dry, and which reason Erst (Alg. But. et Geogr. v. 1. 65-78) "it is not a sixth and a half." that it was a river at first from N. to S. namely, in lat. 29° 3'. W. 3° it turns almost at right
angles to its former course, runs to the W., and after passing through the great fresh-water lake of Debaud, enters the sea at Cape Num. The name of this cape, so celebrated in the Portuguese discoveries of the 15th century, appears to have a much older origin than has been supposed, and goes back to the time of Polemo. Edrisi speaks of a town, Naf or Wadi Num, somewhat more to the S., and three days' journey in the interior: Leo Africanus calls it Belad de Nom. (Humboldt, Aspects of Nature, vol. i. pp. 115, 116.)

NUMANIA (Noujavas: Eth. Numanae: Lavinia), a town of Picenum, situated on the sea-coast of that province, 8 miles S. of Ancona, at the southern extremity of the mountain promontory called Mons Camerus. (Pline. iii. 13, 18; Ptol. iii. i. § 21; Mel. i. 4, § 6; Itin. Ant. p. 312.) Its foundation is ascribed by Pliny to the Siculi; but it is doubtful whether this is not a mistake; and it seems probable that Numana as well as Ancona was colonised by the Greeks in the late as the time of Dionysius of Syracuse. No mention of it is found in history; but Silius Italicus enumerates it among the towns of Picenum in the Second Punic War; and we learn from inscriptions that it was a municipal town, and apparently one of some consideration, as its name is associated with the important cities of Aesis and Auxinum. (Sil. Ital. viii. 431; Gruter, Inscr. p. 446. 1, 2; Orell. Inscr. 3899, 3900.)

The Itineraries place it 8 miles from Ancona and 40 miles from Picenum. (Itin. Ant. p. 312; Tobi. Pent. 312.) It was in early ages an episcopal see, but which was afterwards united with that of Ancona. The ancient city was destroyed by the Lombards in the eighth century; and the modern Umoa is a poor place.

[ED. B. B.]

NUMANTIA (Novavaria, Ptol. ii. 6, § 56; Novavia, Steph. B. s. v.), the capital of the Areovaci in Hispania Tarraconensis, and the most famous city in all Celtiberia, according to Strabo (iii. p. 162) and Mela (i. 6). Pliny however (iii. 3, 4), places it in the territory of the Pelenodones, which also agrees with the Itin. Ant. (p. 442). It is represented as situated on an eminence of moderate height, but great steepness, and approachable only on one side, which was defended by ditches and intrenchments. (Flor. ii. 18; Oros. v. 7; Appian, B. Hisp. 76, 91.) The Durius flourished near it, and also another small river, whose name is not mentioned. (Appian, B. Hisp. 76; Dion Cass. Pr. 82, ed. Frbr. i. p. 53.) It was on the road from Asturica to Caesaraugusta (Itin. Ant. i. c.), and had a circumference of 24 stadia (Appian, B. Hisp. 90; Oros. i. c.); but was not surrounded with walls. (Florus, i. c.) Its memorable siege and destruction by Scipio Africanus, c. 134, is related by Appian (48—98), Eutropius (iv. 17), Cicero (de Offi. ii. 11), Strabo (i. c.), &c. The ruins at Puente de Don Quixaray probably mark the site of this once famous city. (Aldrete, Ant. Hisp. i. 6; Flores, Esp. Ant. c. vi. p. 276; D'Anville, Mem de l'Acad. de Inscr. vol. xl. p. 770, cited by Uckert, vol. ii. pt. 1. p. 455.)

T. H. D.

NUMENIUM (Numeropum, Stadium. 298), a small island with a spring of fresh water, 55 stadia from Paphos; perhaps the same as that described by Pliny ("contra Neemaphum Hierocopia," v. 85). Strabo (xiv. pp. 683, 684) has an inland town Hierocopia. [E. B. F.]

NUMICIUS (Noucius: Rio Torto), a small river of Latinum, flowing into the sea between Latinum and Ardea. It is mentioned almost exclusively in reference to the legendary history of Arenaeus, who, according to the poetical tradition, founded by the Roman historians, was buried on its banks, where he was worshipped under the name of Jupiter Indiges, and had a sacred grove and Hieroum. (Livy i. 2; Dionys. i. 64; Vict. Orig. Ccnt. Rom. 14; Ovid. Met. xiv. 598—608; Tibull. ii. 5. 39—44.) Immediately adjoining the grove of Jupiter Indiges was one of Anna Perenna, originally a Roman divinity, and probably the tutelary nymph of the river, but who was brought also into connexion with Arenaeus by the legends of later times, which represented her as the sister of Dido, queen of Carthage. The fables connected with her are related at full by Ovid (Fast. iii. 545—564), and by Silius Italicus (viii. 28—201). Both of these poets speak of the Numicius as a small stream, with stagnant waters and reedy banks: but they afford no clue to its situation, beyond the general intimation that it was in the Laurentine territory, an appellation which is sometimes used, by the poets especially, with very vague latitude. But Pliny, in enumerating the places along the coast of Latinum, mentions the river Numicius between Laurentum and Ardea; and from the narrative of Dionysius it would seem that he certainly conceived the battle in which Arenaeus was slain to have been fought between Livinum and Ardea, but nearer the former city. Hence the Rio Torto, a small river with a sluggish and winding stream, which forms a considerable marsh near its outlet, may fairly be regarded as the ancient Numicius. It would seem from Pliny that the Lucus Jovis Indigetis was situated on its right bank. (Pline. iii. s. 9; Dionys. i. 64; Nibby, Dietorni, vol. ii. p. 418.)

[ED. H. B.]

NUMIDIA, the central tract of country on the N. coast of Africa, which forms the largest portion of the country now occupied by the French, and called Algeria or Algérie.

I. Name, Limits, and Inhabitants.

The continuous system of highlands, which extends along the coast of the Mediterranean, was in the earliest period occupied by a race of people consisting of many tribes, of whom the Berbers of the Algerine territories, or the Kabyles or Quabylis, as they are called by the inhabitants of the cities, are the representatives. These peoples, speaking a language which was once spoken from the Fortunate Islands in the W., to the Catarracta of the Nile, and which still explains many names in ancient African topography, and embracing tribes of quite different characters, whites as well as blacks (though not negroes), were called by the Romans NUMIDAE, not a proper name, but a common denomination from the Greek form νομίδαι. (Strab. ii. p. 131, xvi. pp. 833, 837.) Afterwards NUMIDA and NUMIDIA (Novasidia and Νομίδαι of Novasabri, Ptol. iv. 3; Pomp. Mela, i. 6; Pline. v. 2, vi. 99) became the name of the nation and the country. Sometimes they were called Magna NUMIDIAE (Magna Novasidia Appian, B.C. ii. 44), while the later writers always speak of them under the general name of MAURI (Ann. Mare, xxix. 5; Procop. B. V. i. 4.) The most powerful among these tribes were the Massili (Μασσιλιοί, Polyb. iii. 44; Strab. ii. p. 131, xvi. p. 829; Dionys. 187; Massiliae, Polyb. vii. 19; Massili, Sil. Ital. xvi. 170; Massyli gens, Liv. xxiv. 48), whose territories extended from the river Amagona to Tretum Prom. (Sceta Rêz); and the Massaentia (Massa-

11. PHYSICAL GEOGRAPHY.

III. HISTORY AND POLITICAL GEOGRAPHY.

THE ROMANS BECAME ACQUAINTED WITH THESE TRIBES IN THE FIRST PUNIC WAR, WHEN THEY SERVED AS THE CARthaginian cavalry. AFTER THE GREAT VICTORY OF REGULUS, THE NUMIDIANs THREW OFF THE YOKE OF CARTHAGE. (POLYB. III. 31; DIO. xxxvi. 3.)

WHEN MASINISSA DIED, HE LEFT HIS KINGDOM TO HIS THREE SONS, GULASSA, MISIPA, AND MASTANABAAL. GULASSA AND MASTANABAAL DIED; THE LATTER LEFT NO LEGITIMATE CHILDREN, BUT ONLY JUGURTHA AND GANDA, SONS BY A CONCUBINE; AND THUS THE VAST DOMINIONS OF NUMIDIA FELL INTO THE HANDS OF MISCAPA, THE PHIHELLENE. HE HAD TWO SONS, ADHERBAL AND HIEMPSAL, WITH WHOM HE ASSOCIATED JUGURTHA IN THE THRONE. THE LATTER, SPURNING THEM, TOOK POWER AND FORGED HIEMPSAL; AND CONQUERED ADHERBAL TO FLY TO ROME, WHERE HE APPEALED TO THE SENATE AGAINST THE NARCISATION OF HIS COUNTRY. THE
NUMIDIA NOVA.

NUMIDICUS SINUS. [NUMIDIA NOVA.] (NUMIDICUS, Plut.; NUMIDICUS Phl.: Eth. Numidium, a town of Lucania, apparently near the frontiers of Apulia, near which a battle was fought between Hannibal and Marcellus, in B.C. 210, without any decisive result (Liv. xxvii., 2; Plut. Mar., 24). From the narrative of Livy, which is copied by Plutarch, it is clear that Numistro was situated in the northern part of Lucania, as Marcellus marched out of Samnium thither, and Hannibal after the battle drove off his forces, and withdrew towards Apulia, but was overtaken by Marcellus near Venusia. Pliny also enumerates the Numistriani (evidently the same people) among the municipal towns of Apulia, and places them in the neighbourhood of the Voleetani. Hence it is certainly a mistake on the part of Pliny that he transfers Numistro to the interior of Bruttium, unless there were two towns of the name, which is scarcely probable. Cluverius, however, follows Pliny, and identifies Numistro with Nicastro in Calabria, but this is certainly erroneous (Plin. iii. 11. s. 15; Porlol. III. 1. § 74; Ovler. Ital. p. 1519). The site conjecturally assigned to it by Romanelli, near the modern Murro, about 20 miles N.W. from Potenza, is plausible enough, and agrees well with Pliny's statement that it was united for municipal purposes with Voleetum (Bucceus), which is about 12 miles distant from Murro (Romanelli, vol. i. p. 434). Some ancient remains and inscriptions have been found on the spot.

[Ed. H. B.]

NURIA. [BALEARES, p. 574, a.]

NUSTRUMIA (Nusoria; Eth. Nursiumus; Nursia), a city of the Sabines, situated in the upper part of the valley of the Nera, at the foot of the lofty group of the Apennines, now known as the Monti della Sibilla. The coldness of its climate, resulting from its position in the midst of high mountains, is celebrated by Virgil and Silius Italicus. (Virg. Aen. vii. 716; Sil. Ital. viii. 417.) The first mention of it in history is in the Second Punic War (n. c. 205), when it was one of the cities which came forward with volunteers for the armaments of Scipio. (Liv. xxxvii. 45.) As on this occasion the only three cities of the Sabines mentioned by name are Nursia, Beate, and Amiternum, it is probable that Nursia was, as well as the other two, one of the most considerable places among the Sabines. It was a municipal town under the Roman government (Orell. Inscr. 3966; Plin. iii. 12. s. 17; Porlol. III. 1. § 55), and we learn that its inhabitants were punished by Octavian for their zealons adherence to the republican party, and the support they afforded to L. Antonius in the Peruvian War. (Suet. Aug. 12; Dion Cass. vii. 18.) The site of the city was not far from the Eth. Nursiumus, the mother of the emperor Vespasian; and the monuments of her family existed in the time of Suetonius at a place called Vespasian, 6 miles from Nursia on the road to Spoliaunum. (Suet. Isp. I.) The "ager Nursinum" is mentioned more than once in the Liber Colonarium (pp. 227, 257), but it does not appear that it ever received a regular colony. We learn from Columella and Pliny that it was celebrated for its turnips, which are also alluded to by Martial (Colom. x. 421; Plin. xvii. 18. s. 34; Martial. xili. 20.) From its secluded position Nursia is not mentioned in the Itineraries, but there is no doubt that it continued to exist throughout the period of the Roman Empire. It became an episcopal see at an early period, and is celebrated in ecclesiastical history as the birthplace of St. Benedict, the founder of the first great monastic order.

It is said that remains of the ancient walls still exist at Nursia, in the same massive polygonal style as those near Beate and Amiternum (Petit-Kaeld, Am. d. Inst Arch. 1829, p. 51), but they have never been described in detail. [Ed. H. B.]

G G 4
NYCBIL. [Syrtica.]

NYGBENI. [Syrtica.]

NYMPHAEA, NYMPHAEUM. 1. (Nymphėia, Scylax, p. 29; Nymphes, Strab. vii. p. 309; Appian, B. M., 105; Plin. iii. 6. § 3; Ann. Perip. p. 3; Plin. iv. 26; Gruterus, ap. Harpoc. n. s.; Nympheus, Georg. 4, r. v. 2), a Miletan colony of the Tauric Chersonese, with a good harbour. (Strab. l. c.) The ruins of this town are to be found on the S. point of the gulf now called the Lake of Techarbache. (Tubiae du Montreux, Voyage Autour du Caucase, vol. v. pp. 246—251; Marigny Taitbout, Portulan de la Mer Noire, p. 74.) Pallas (Reise d. Sudl., Statthalts. Russland, vol. ii. p. 341) fixes it between the Pisafluka Battery and Kamysch-burna.

2. The harbour of Lissus in Illyricum, and 3 M.P. from that town (Caesar, B. C. iii. 26), on a promontory of the same name. (Plin. iii. 26.) [E. B. J.]

NYMPHAEA (Nymphėia), a small island off the coast of Lonia, is mentioned only by Pliny (v. 37). Respecting Nymphaea as a name of Cos, see Cos. [L. S.]

NYMPHAEUM (Nymphoar. Strab. vii. p. 330; Plin. iii. 13. § 11), the promontory to the S. of the peninsula of Acts, from whence Mt. Athos rises abruptly to the very summit. It is now called Kara Hiçglio Chıörgı. (Leake, North Greece, vol. iii. pp. 114, 149.) [E. B. J.]

NYMPHAEUM (Nymphoar.) 1. A place on the eastern coast of Bithynia, at a distance of 30 stadia west of the mouth of the Oxines (Arrian, Peripl. Pont. Eur. p. 14), or, according to the Periphan of the Anonymus (p. 4), 45 stadia from Tyndaradea.

2. A place in Cilicia, between Celeredins and Soli, is mentioned only by Pliny (iii. 5. 29), as the site of the famous town of that name. (Strabo, 1. c.)

NYMPHAEUS (Nymphês), a small river of Latium, mentioned only by Pliny (iii. 5. 29), which describes it as flowing into the sea between Astura and Circei. There can be no doubt that the stream meant is the one still called the Nymphês, though this does not now flow into the sea at all, but within a few miles of its source (which is at the foot of the Volscian mountains, immediately below the site of Norna, forming a pool or small lake of beautifully clear water) stagnates, and loses itself in the Pontine Marshes. A town called Nymphês arose, in the middle ages, close to its source, but this is now in ruins. We have no account of any ancient town on the site. [E. B. B.]

NYMPHAN. [Megaleopolis, p. 309, b.]

NYMPHANIA. [Methodium.]

NYSSA or NYSSYS (Νήσα or Νήσσα), is said to have been the name of the place in which the god Dionysus was born, whence it was transferred to a great many towns in all parts of the world which were distinguished for the cultivation of the vine.

1. In Asia. 1. A town in Caria, on the southern slope of mount Messicus, on the north of the Macander, and about midway between Tralles and Antioch. The mountain torrent Endon, a tributary of the Macander, flowed through the middle of the town by a deep ravine spanned by a bridge, connecting the two parts of the town. (Strab. xiv. p. 630; Hom. Hymn. iv. 17; Plin. v. 29; Ptol. v. 2. § 18; Hieroc. p. 659; Steph. Byz. s. v.) Tradition assigned the foundation of the place to three brothers, Athymbrus, Athymbrudos, and Hydryus, who emigrated from Sparta, and founded three towns on the north of the Maecander; but in the course of time Nyssa absorbed them all; the Nyssaeans, however, reconized more especially Athymbrus as their founder. (Steph. B. s. v. Ἀθυμβρᾶς; Strab. l. c.) The town derived its name of Nyssa from Nyssos, one of the wives of Antiochus, the son of Seleucus (Steph. B. s. v. Ἀλκίδακτα), having previously been called Athymbras (Steph. B. s. v. Ἀθυμβρᾶς) and Pythopolis (Steph. B. s. v. Πυθόπολις).

Nyssa appears to have been distinguished for its cultivation of literature, for Strabo mentions several eminent philosophers and rhetoricians; and the geographer himself, when a youth, attended the lectures of Aristodemus, a disciple of Pancrates; another Aristodemus of Nyssa, a cousin of the former, had been the instructor of Pompey. (Strab. l. c.; Cic. ad Fam. xiii. 64.) Hierocles classes Nyssa among the seas of Asia, and its bishops are mentioned in the Councils of Ephesus and Constantinople. The coins of Nyssa are very numerous, and exhibit a series of Roman emperors from Augustus to Gallienus.

The site of Nyssa has been recognised by Chandler and other travellers at Sultam-hissar, above the plain of the Maecander, on a spot much resembling that described by Strabo; who also mentions a theatre, a forum, a gymnasion for youths, and another for men. Remains of a theatre, with many rows of seats almost entire, as well as of an amphitheatre, gymnasion, &c., were examined by Chandler. (Leake, Asia Minor, p. 248; Fellows, Discover. vol. ii. p. 544.) The country round Nyssa is described as bearing evidence of the existence of subterraneous fires, either by exhalations and vapours, or by its hot mineral springs.

COIN OF NYSSA IN CARIA.

2. A place in the district of Milyas in Pisidia, situated on the river Xanthus, on the south of Podalasa. (Ptol. v. 3. § 7; Hieroc. p. 654, where the name is misspelled.)

3. A town in Cappadocia, in the district called Mariane, not far from the river Halya, on the road from Ancyra to Caesarea. (Ptol. v. 7. § 8; Strab. vi. p. 505, 506; Hieroc. p. 659; Niceph. xii. 44.) Its site is now occupied by a village bearing the name of Nihr or Nihsa (Hamilton, Researches, ii. p. 265.)

NYSSA (Νήσα). 2. In Europe. 1. A village in Beocia on Mt. Helicon. (Strab. ix. p. 405; Steph. B. s. v. Νήσα.)

2. A town in Thrace, in the district between the rivers Strymon and Nestus, which subsequently formed part of Macedonien. It is called Nyssos by Pliny. (Steph. B. s. v.; Plin. iv. 10. s. 17.)
3. In Euboea, where the vine was said to put forth leaves and bear fruit the same day. (Steph. B. c. t.)

4. In the island of Naxos. (Steph. B. s. v.)

NYSSOS. [NYS, in Europe, No. 2.]

The Oases, a town of the Penestae, situated on a road leading into the country of the Labaeotes, which overlooked a narrow pass, formed by a mountain and the river AiuTANT. It was taken by Perseus in the campaign of B. c. 169. (Liv. xiii. 19.)

OAEONES (Mela. iii. 6. § 8; Solin. 19. § 6) or OONAE (Plin. iv. 13. § 27), islands in the Baltic off the coast of Sardinia, the inhabitants of which were said to live on the eggs of birds and wild beasts.

OANUS (Garos, Pind. Od. v. 25; Probolus), a small river on the S. coast of Sicily, flowing beneath the walls of Camarina. [Camarina.] [E. H. B.]

OARACTA. [Ogyris.]

OARUS. [Rha.]

OASES (OaDub or AoDus, Strab. ii. p. 130, xvii. pp. 790—791; Amasis polis Àgyútop, Steph. B. s. v.: Eth. OaDubis or Am musiał), was the general appellation among ancient writers given to spots of habitable and cultivable land lying in the midst of sandy deserts; but it was more especially applied to those verdant and well-watered tracts of the Libyan desert which connect like stepping-stones Eastern with Western and Southern Africa. The word oasis is derived from the Coptic Ouah (mansion), a resting-place. (Peiron, Lexic. Ling. Copt. s. v.) Kant, indeed (Phys. Geoq. vol. ii. pt. 1. p. 349), traces it, with less probability, to the Arabic Hauza, a habitation, and Si or Z a wilderness (comp. the Hebrew Ziph). Their physical circumstances, rather than their form, size, or position, constitute an oasis; and the term is applied indifferently to kingdoms like Angola and Plassania (Fezuun) and to petty slips of pasture, such as the Oasis of El-Gerah, which is only four or five miles in circumference. The ancient writers described them as verdant islands, rising above the ocean of sand, and by their elevation escaping from being buried by it with the rest of the cultivable soil. Herodotus, for example (iv. 182), calls them κωλωδω.

But, so far from rising above the level of the desert, the Oases are actually depressions of its surface, dints and hollows in the general bed of limestone which forms its basis. The bottom of the Oases is of sandstone, on which rests a stratum of clay or marl, and these retain the water, which either percolates to them through the surrounding sand, or descends from the edges of the limestone rim that encircles these isolated spots, like a battleground. Within these moist hollows springs a vegetation presenting the most striking contrast to the general bareness of the encircling wilderness. Timber, of various kinds and considerable girth, wheat, millet, date and fruit trees, flourish in the Oases, and combined with their verdant pastures to gain for them the appellation of "the Islands of the Blest." (Herod. iii. 36.) Both commercially and politically, the Oases were of the greatest importance to Aegypt and Aegipt, which they connected with the gold and ivory regions of the south, and with the active traffic of Carthage in the west. Yet, although these kingdoms lost no opportunity of

pushing their emporia or colonies eastward towards the Red Sea and the Regio Aromatum, there is no positive monumental proof of their having occupied the Oases, at least while under their native rulers. Perhaps the difficulty of crossing the desert before the camel was introduced into Aegypt—and the camel never appears on the Pharaonic monuments—may have prevented them from appropriating these outposts. The Persians, after their conquest of Aegypt in B. c. 523, were the first permanent occupants of the Oases. Cambyses, indeed, failed in his attempt to reach Ammonium (Siwah); but his successor Dareius Hystaspis established his authority securely in many of them. At the time when Herodotus visited Aegypt, the Oases were already military or commercial stations, permeating Libya from the Red Sea to the Atlantic Ocean. Under the Ptolemies and the Caesars, they were garrisoned by the Greeks and Romans, and were the seats of a numerous fixed population as well as the stopping-places of the caravans; under the per-sessions of the Pagan emperors, they afforded shelter to fugitives from the magistrate; and when the church became supreme, they shielded heretics from their orthodox opponents.

The natural productions of these desert-islands will be enumerated under their particular names. One article of commerce, indeed, was common to them. Their alum was imported by the Egyptians, as essential to the purity of their materials. Ammon, according to Herodotus (ii. 180), contributed 1000 talents of alum towards the rebuilding of the temple at Delphi; and the alum of El-Khor/py (Oasis Magna) still attracts and rewards modern speculators. Herodotus describes the Oases as a chain extending from E. to W. through the Libyan Desert. He indeed comprehended under this term all the habitable spots of the Sahara, and says that they were in general ten days' journey apart from one another (iv. 181). But it is more usual to consider the following only as Oases proper. They are, with reference to Aegypt, live in number; although, indeed, Strabo (xviii. p. 1168) speaks of only three, the Great, the Lesser, and that of Ammon.

1. Ammonium (El-Siwa), the most northerly and the most remote from the Nile. There seem to have been two roads to it from Lower Aegypt; for when Alexander the Great visited the oracle of Ammon, he followed the coast as far as Panetopus in Libya, and then proceeded inland almost in a direct northerly line. (Arrian. Anab. iii. 4; Quint. Curt. iv. 35.) He appears, however, to have returned to the neighbourhood of Memphis by the usual route, viz. a WSW. road, which passes the Natron Lakes (Nitriae) and runs to Teranisch, on the Rosetta branch of the Nile. (Dimuthi, Journey to the Temple of Jupiter Ammon.) There is some difficulty in understanding Herodotus' account of the distance between Thebes and Ammonium. He says that it is ten days' journey apart. (Bennell, Geogr. of Herod. vol. i. p. 577.) But the actual distance between them is 400 geographical miles; and as the day's journey of a caravan never exceeds twenty, and is seldom more than sixteen of these miles, double the time allowed by him— not ten, but twenty days—is required for performing it. Either, therefore, a station within ten days' journey of Upper Aegypt has been dropped out of the text of Herodotus, or he must intend another Oasis, or El-Siwa is not the ancient Ammonium. If we bear in mind, however, that the Greater Oasis (El-
Khargel) and the Lesser (El-Dakkel) were both accounted names of Aegypt, we may fairly infer that the ten days' journey to Ammonium is computed from one of them, i.e. from a point considered as proper Aegyptian ground. Now, not only does the road from Thebes to Ammonium lie through or beside the Greater and Lesser Oasis, but their respective distances from the extremities of the journey will give nearly the number of days required. For El-Khargel, the Great Oasis, is seven days' journey from Thebes; and thirty hours, or (15 x 2) nearly two days more, are required for reaching the Lesser Oasis; from whence to Ammonium is a journey of eight days, which, allowing two days for passing through the Oases themselves, give just the number of six days requisite for performing the distance. There were two roads which led from Thebes to Oasis Magna. The shorter one bearing N. by Abydos, the other bearing S. by Liotoplis. For the former forty-two hours, for the latter fifty-two, were required, to reach the Great Oasis. (Cailliaud, Voyage a Oasie de Thèbes, 1813.) The Oasis of Ammonium is about six miles in length, and three in breadth. The soil is strongly impregnated with salt of a fine quality, which was abundantly in great request, both for the sake of its its medicinal virtues, and of the ancient title given by the Aegyptian kings. (Arrian, Anab. iii. 41.) But notwithstanding its saline ingredients, the ground is abundantly irrigated by water-springs, one of which, "the Fountain of the Soo," attracted the wonder of Herodotus, and ancient travellers generally (iv. 181; comp. Wilkinson, Mod. Egypt and Thebes, vol. ii. p. 328). It rises in a grove of dates, S. of the Temple of Ammon, and was probably one of those tepid springs, found in other Oases also, the high temperature of which is not observed during the heat of the day, but which, by night, are perceptibly warmer than the surrounding atmosphere. A small brook running from this fountain flows soon into another spring, also arising in the date-grove; and their united waters run towards the temple, and, probably because their ancient outlets are blocked up, end in a swamp. The vicinity of these springs confirms the statement of Herodotus, that in Ammonium are many wells of fresh water (iv. 181).

The early and high cultivation of this Oasis is still shown by the remains of its irrigation and the tables of its dates, pomegranates, and other fruits. The dates are obtained in vast quantities, and are of very fine flavour. In favourable seasons the whole area of Ammonium is covered with this fruit, and the annual produce amounts to from 5000 to 9000 camel-loads of 500 pounds each. Oxen and sheep are bred in considerable numbers; but the camel does not thrive in Ammonium, probably because of the dampness of the soil. The inhabitants accordingly do not export the wool, but chiefly obtain their subsistence from the crops which they convey to Aegypt and the Mediterranean ports. (Minutoli, pp. 89, 90, 91, 174, 175, &c.) The present population of this Oasis is about 8000; but anciently, when it was at once the seat of an oracle, the centre of attraction to innumerable pilgrims, and one of the principal stations of the Libyan trade, the permanent as well as the casual population must have been much more considerable. The ruins of the Temple of Ammon are found at Ummadbed, sometimes called Ibn, and the tables of Horne-mann (Iv. iii. 106), about 2 miles from the principal village and castle. Its style and arrangement bespeak its Aegyptian origin and its appropriation to the worship of Amun, the ram-headed god of Ammonium; yet the buildings (the oracle itself was much older) are probably not earlier than the Persian era of Aegypt. The remains of the Ammonium consist of two parts—a promontory and a sekos, or sanctuary proper. The walls are entirely composed of brown stones, obtained from quarries about 2 miles off. The surface of the temple, both within and without, was covered with hieroglyphics emblematic of the story and transfigurations of Zeus-Ammon. The plain surface of the walls was highly coloured; and though many of the sculptures are much defaced, the blue and green colours are still bright. The temple itself was of moderate size, and the cartilage or enclosure of the whole is not more than 70 yards in diameter, and 30 feet in height.

The population of this Oasis was, in the time of Herodotus (ii. 32), partly Aegyptian and partly Aethiopian,—both nations agreeing in their devotion to Zeus-Ammon. The Greeks, indeed, who must have become acquainted with Ammonium soon after their colonisation of Cyrene in the seventh century B.C., put in their claims to a share, at least, in its foundation. According to one tradition, Damasus led a colony thither (Diodor. xvii. 50); according to another, its oracle was established contemporaneously with that of Amon at Sais, which was called Shargel, old enough to have been occupied by a Roman garrison. (Minutoli, pp. 165—167.) It is governed by its own chiefs or shiefs, who pay a small annual tribute to the vicerey of Aegypt. This Oasis, though known to Arabic writers of the thirteenth century A.D., was first reopened to Europeans by the travels of Browne and Hornemann in the last century.

2. In proceeding in a SW. direction, and approaching nearer to Aegypt, we come to the Oasis now called El-Sucoh, of which the ancient name was Shargel, old enough to have been occupied by a Roman garrison. It lay nearly N. of Oasis Minor, at a distance of about 80 miles, and served as an intermediate station both to Ammonium and Oasis Magna.

3. Oasis Minor (Oasis waqfed, Ptol. iv. 5. § 37; Μετριόπης, Strab. xvi. p. 813; O. Minor, Not. Imp. Or. c. 143: the modern El-Dakkel), was situated SE. of Ammonium, and nearly due W. of the city of Oxyrhynchos and the Arsinote nome (El-Fyrum), lat. 29° 10'. N. Like El-Sucoh, the Lesser Oasis of Aegypt was strongly favoured throughout the Roman period, as is shown by its rich remains, which have been well explored by Petrie, and the Romans it was celebrated for its wheat; but now its chief productions are dates, olives, pomegranates, and other fruits. It has a temple and tombs of the Ptolemaic era. The Lesser Oasis is separated from the Greater by a high calcareous ridge, and the station between them was probably at the little temple of Ain Amour. (Cailliaud, Minutoli, &c.) Oasis Minor seems to be the same with that entitled by some Christian writers (e. g. Palladius, 1st. Chrysoput, p. 193) "Aegypti quoth quod in Maris colut Oasis, qui cum est Machimorum" (Joann. in Iul. Ptolem. c. 12.), the Masacy of the Regio Marcarica being the people indicated.

4. Oasis Triniciencies, or the Oasis of El-Ba-
Oases.

chorich, is the nearest of these desert-islands to the frontiers of Aegypt, and nearly due N. from Oasis Maqna. It lies in lat. 28°, a little below the parallel of the city Hermopolis in Middle Aegypt. There is a road to it from Ἱγύωμ, and its principal village is named Zabou. The soil is favourable to fruit; but there are no traces of its permanent occupation either by the Egyptian or the Persian. It had its earliest monuments as a Roman triumphal arch, and the ruins of an aqueduct and hypogeae, containing sarcophagi. In this Oasis was made the discovery of some ancient artisan wells.

The description of the wonders of the Oases by an historian of the fifth century A. D. (Olympiodor. ap. Phot. Bibl. p. 61, ed. Bekker) leaves no doubt of the existence of such artificial springs; but as their construction was unknown to the Greeks and Romans no less than to the Egyptians, the secret of it was probably imported from the East, like the silk-worm, at some period anterior to A. D. 400. Several of these wells have recently been discovered and reopened (Rassegger, Reiser, vol. ii. pp. 284, 399); and the depth disclosed does not materially differ from that mentioned by Olympiodorus (supra), viz., from 200 to 500 cubits. This far exceeds the bore of an ordinary well; and the spontaneous rise of the water in a rushing stream shows that no pump, siphon, or machine was employed in raising it. In this Oasis, also, alum abounds. (Kerckh, Anc. Egypt, vol. i. p. 74.)

5. OASIS MAGNA ('OÁsís megalás, Ptol. iv. 5. § 27; ἡ πολύτρωμα, Strab. xvi. p. 813; ἡ ἀνώ, Olympiod. ap. Phot. Bibl. p. 212, ed. Bekker), the Great Oasis, sometimes denominated the Oasis of Thebes, as its centre lies nearly opposite to that city, is called El-Kharga by the Arabs, from the name of its principal town. This, also, is the χώρα ΟÁsias and ρεῖος παραδείγματος of Herodotus (iii. 26), and is meant when the Oases are spoken of indiscriminately, as by Josephus (c. Apion, ii. 3). In the hieroglyphics its name is Jeb, and in the Notitia Imperii Orient. (c. 143) its capital is termed Hibe. The Oasis Magna is distant about 6 days' journey from Thebes, and 7 from Abydos, being about 90 miles from the western bank of the Nile. It is 80 miles in length, and from 8 to 10 broad, stretching from the lat. of Tenyra, 25° N., to the lat. of Abydos, 26° 6' N. It is a large oasis, 465 feet in length, was dedicated to Amun-Ra. The style of its architecture resembles that of the temples at Hermoutis and Apollinopolis Magna. Like other similar spots in the Libyan Desert, the Great Oasis was a place of

Obrianga.

E 459

banishment for political offenders (Dig. xlviii. t.t. 16. 1. 7. § 4), and for Christian fugitives from the Pagan emperors. (Socrat. ii. 28.) At a later period it abounded with monasteries and churches. The Greater and the Lesser Oases were reckoned as forming together a single nome, but by the Roman emperors were annexed to the prefecture of the Thebaid. (Ptol. iv. 5. § 6, κατά τύμβων ποιουσας ταῖς ἅγιας ΟΑΣΙΑΣ; see Hekking, Visit to the Great Oasis; Langles, Mémo sur les Oases; Ritter, Erdkunde, vol. i. p. 964.)

OAXES, OAXUS. [AUXUS.]

OBLA (Oées, Ptol. ii. 5. § 9), a town of the Vettones in Hispania Tarraconensis, the site of which is difficult to determine, but it is supposed to be the modern Arilla. (Hieron, de Vir. Ill. c. 121; and Florus, Exp. S. xiv. 3, ap. Ukert, vol. ii. pt. 1. p. 431.) Reckhard, however, identifies it with

OILA. [MARIMAICA.]

OBELLUM, a place in Gallia Narbonensis, written Olilonna in the Table, on a road which passes through the Tarrentoaise to the pass of the Alpis Graia, or Little St. Bernard. The site is uncertain, but the distance is marked iii. from Ad Publicanos. [T. H. D.]

OBELIONIS, FLUMEN, called also Aulias, Limias, Limia, &c. [GALLACIA], Vol. i. p. 933.)

OBOCA (Oéés, Ptol. ii. 2. § 8), a river on the W. coast of Ireland, now the Boyne. [T. H. D.]

OBIRIMAS, a river of Phrygia, an eastern tributary of the Maeander, had its sources, according to Livy (xxxviii. 15), on the eastern side of Mount Causin, near the town of Aspendos, and flowed in the neighbourhood of Apamea Cibotus (Plin. v. 9. s. 9, s. Oasias: Ptol. iv. 143). This is all the direct information we possess about it; but from Livy's account of the expedition of Maimius, who had pitched his camp there, when he was visited by Seleucus from Apamea, we may gather some further particulars, which enable us to identify the Obrimas with the Sandilki Chai. Maimius had marched direct from Sagallas, and must have led his army through the plains of Dombat, passing in the rear of Apamea. Thus Seleucus would easily hear of the usual being in his neighbourhood, and, in his desire to propitiate him, would have started after him and overtaken him the next day (see the third day of the plan.) Maimius, moreover, at the sources of the Obrimas required guides, because he found himself hemmed in by mountains and unable to find his way to the plain of Metropolis. All this agrees perfectly well with the supposition that the ancient Obrimas is the modern Sandilki Chai (Hamiton, Researches, ii. p. 172, &c.). Franz (Fünf Inschriften, p. 37), on the other hand, supposes the Kudikha Chai to correspond with the Obaimus. Arundel (Duose, in Asia Min. m. p. 251), again, believes that Livy has confounded the sources of the Marsyas and Maeander with those of the Obrimas. [L. S.]

OBIRINGA ('Oůrínga). Potelomy (ii. 10. § 17) makes the Obirings river the boundary between Lower and Upper Germany. The most southern place in Lower Germany according to his map is Moguntiacum (Moguntianum), Mainz. He places in the following order the cities of Upper Germany, which are south of the Obirings:—Neumagnum (Speier), Barbolarens (Worms), Argentoratum (Strassburg), and so on. But Worms is north of Speier; and the relative position of these two places is therefore wrong in Potelony. He has also placed
Mogenteicum in Lower Germania, but it was the chief place of Upper Germania. Ptolemy has not mentioned the Moesella (Moesel), and some geographers have assumed that it is the Odering; but this is so, the position of Mainz is wrong in Ptolemy, for Mainz is south of the Moesel. D'Anville observes that, according to the Notitia, the district of the general who resided at Mainz comprised Antuennicum or Andermarch, on the Rhine, which is below the junction of the Moesel and the Rhine. If Andermarch was always in the Upper Germania, and if the boundary between the Lower and the Upper Germania was a river-valley, there is none that seems so likely to have been selected as the rugged valley of the Ahr, which lies between Bonn and Andermarch, and separates the lowlands or hilly country on the south from the hilly country on the north. [G. L.]

OBUCULA (Ὀβοκολά, Ptol. ii. 4. § 44), called by Pline (iii. 1. s. 3) Obolula, and by Appian (Hist. 68) Ὀβοκολα, a town of hispania Baetica, on the road from Hispalis to Emerita and Corduba (Plan. Ant. pp. 413, 414), now Moncloa. Some ruins are still visible (Canz, Ant. Hist. i. 19; Florence, Esp. S. xiii. p. 384). [T. H. B.]

OBULCO (Ὀβολοκός, Strab. iii. pp. 141, 150; Ὀβολοκός, Ptol. ii. 4. § 11, Ὀβολοκός, Steph. B. P. c.), called by Pline (iii. 1. s. 3) Obulcous Pontificens, a Roman municipium of hispania Baetica, in the jurisdiction of Corduba, from which it was distant about 300 stadia according to Strabo (p. 160). It had the privilege of a mint (Floren, Med. ii. p. 496, iii. p. 101; Monnet, Suppl. i. p. 11; Sestini, p. 71; Gruter, Incert. pp. 105, 458; Muratori, p. 1052. 4). It is commonly identified with Forcena. [T. H. D.]

COIN OF OBULCO.

OBULENSI (Ὀβολένσιον, Ptol. iii. 10. § 9), a people of Moesia Inferior, on the S. side of the mouth of the Danube. [T. H. D.]

OCALEA or OCALEIA (Ὠκάλεα, Ὠκαλέα, Εἰθ. Ὠκαλέα), an ancient city of Boreotia, mentioned by Homer, situated upon a small stream of the same name, at an equal distance from Halaurtus and Alachawas. It lay in the middle of a long narrow plain, bounded on the east by the heights of Halaurtus, on the west by the mountain Tilpheus, on the south by a range of low hills, and on the north by the lake Copias. This town was dependent upon Halaurtus. The name is probably only a dialectic form of Oechala. Its site is indicated by several squared blocks on the right bank of the stream. (Homo. ii. ii. 50; Hymn. Apoll. 242; Strab. iv. p. 410; Apollod. ii. 4. § 11, Pline. iv. 7. s. 12; Steph. B. E. v.; Leske, Nomencl. Grece, vol. ii. p. 205, seq. For hammer, Hellenika, p. 184.)

OCEANUS. [ATLANTICUM MARE.]

OCEANUS SEPTENTRIONALIS, the northern portion of the waters of the all-encircling Ocean.

1. The name and divisions.—According to a fragment of Phavorius the word Παράριος is not Greek, but one borrowed from the barbarians (Sporhn, de Niceraphe, Bclmam, Geogr. Lips. 1818, p. 23); but there seems reason for believing it to be connected with the Sameric root "oigia" and "oigia." (Hamboldt, Cosmos, vol. ii. note 210, trans.) When the peoples living on the coasts of the Interior Sea passed as Herodetus (iv. 152) significantly adds, "not without divine direction," through the gate into the Ocean, and first saw its primeval waters, the origin as they believed of all waters, the sea that washed the shores of the remote North was long regarded as a miry, shallow, misty sea of darkness, lying under "the Bear," who alone is never bathed in the Ocean; and hence the names Septentrionalis (ὁ Βόρεως ὁκανός, Plut. Consil. 15; Agathem. ii. 14; Tac. Germ. i. 1; Plin. iv. 27; ὁ ἀρχιτόνος ὁκ., Agathem. l. c.; δάκτιοι ἄροιοι ὁκ., Diod. xviii. 5) and Scythicus (Plin. vi. 14); though this, according to Agathemerus (l. c.) is the E. division of the Northern Ocean, while the Mare Germanicum and Mare Britannicum formed the W. This sea appears with the epithets "Oceanus glacialis" (Juv. iii. 11).” M. (Apollod. iv. 1; Strab. iii. 6. § 30); "concentum" (Plin. l. c., § 23); "pignum" (Tac. Agr. 13, Germ. 45); "mortuum" (Plin. iv. 27; Agathem. l. c.; Diod. Per. 33). Its divisions were:—Mare Germanicum (Plin. iv. 30; Ptol. ii. 3. § 5), or M. Cimbiricum ("Cimbriae Tethys," Claudian, de Bell. Get. 353), or the German Ocean, united by the Breatum Gallicum (Strait of Dover, Portus de Cala) with the M. Britannicum (Plin. iv. 33; The English Channel), and by the Oceanus Sinus (Kattegatt, ore Sund) and Lagnus Sinus (Store Belt, Little Belt), with the M. Sarmatianum (Σαρματικὸς ὁκ., Ptol. vii. 5. §§ 2, 6) or Suevicum (Tac. Germ. 43; Oester Strom, or Baltic). A division of this latter was the Sinus Venedicus (Οὐκεδενὸς κόλπος, Ptol. iii. 5. § 19; Gulf of Danzig). The M. Amalchian, according to Hecataeus (ap. Plin. iv. 27), commences with the river Parnampus; the Cimbri, according to Philenon (ap. Plin. l. c.), called it Murianum, which he interprets by M. mortuum; beyond was the sea called Cronium, or the sea into which the river Chronos (Niemen) flowed, or what is now called the Kurisches Haff, off Memel. (Scharafkin, Slav. Alt. vol. i. p. 496.)

2. Progress of discovery.—The enterprise of the Phoenician navigators brought them into contact with those countries, in the N. of Europe, from whence tin was brought; but it was the trade in amber which must have been most effectual in opening up a knowledge of these coasts. This amber was brought by sea, at first, only from the W. Cimbrian coast, and reached the Mediterranean chiefly by sea, being brought across the intervening countries by means of barter. The Massilians, who under Pythoas followed the Phoenicians, hardly went beyond the mouths of the Weser and the Elbe. The amber islands (Glossaria or Australia) are placed by Pline (iv. 27) decidedly W. of the Cimbrian promontory in the German Ocean; and the connection with the expedition of Germanicus sufficiently shows that an island in the Baitie is not meant. Moreover the effects of the ebb and flow tides in the estuaries which throw up amber, where, according to the expression of Servius, "Mare vicissim tum accedit tum recedit," suits the coast
between the Hellespont and the Cimmerian peninsula; but does not suit the Baltic, in which Timnaeus places the island Baltia. (Plin. xxxvii. 11.) Abalus, a day’s journey from an “aestuarium,” cannot therefore be the Karsische Nehrung. Pytheas probably sailed to the W. shores of Judæa. Tacitus (Germ. 43), not Pliny, is the first writer acquainted with the theory that impounded the Baltic shore, in the hand of the Austrians and the Veneti. The more active, direct communication with the Sambian coast of the Baltic, and with the Austrians by means of the overland route through Pannonia by Car-
nuntum, which was opened by a Roman knight under Nero (Plin. l. c.), appears to have belonged to the later times of the Roman Caesars. The relation between the Prussian coast, and the Milesian colonies on the Euxine, are shown by the evidence of fine coins, probably struck more than 400 years B.C., which have been found in the Nat. district. (Humboldt, Cosmos, vol. ii. note 171, trans.) A curious story is related by Cornelius Nepos (Fragm. vii. 1, ed. Van Staveren; comp. Mela, iii. 5. § 8; Plin. ii. 67) of a king of the Bois, others say of the Suevi, having given some shipwrecked dark-coloured men to Q. Metellus Celer when he was Proconsul of Gaul. These men, who are called Indians, were, if any credence is to be given to the story, most probably natives of Labrador or of Greenland, who had been driven on these coasts by the effect of currents such as are known now in these seas, and violent NW. winds. [E. B. J.] OCELIS (Οἰκήλα ἐμπύρων), a port of Arabia Felix, placed by Ptolemy (i. 7. § 4, i. 13, § 11, vi. § 7, viii. 22. § 7) a little to the north of the straits of the Red Sea (Bab-el-Mandeb). Its geographical position, according to his systems, was as follows: Its longest day was 12½ hours. It was 1° east of Alexandria, between the tropics, 52° 50’ removed from the summer tropic. It is placed by the author of the Periplus 300 stadia from Musa, and is identical with the modern Ghella or Ceila, which has a bay immediately within the straits, the entrance to which is two miles wide, and its depth little short of three. (Vincent, Periplus, p. 288; Forster, Arabia, vol. ii. p. 148.) Ocelis, according to the Periplus, was not so much a port as an anchorage and watering-place, it belonged to the Eissiri, and was subject to Chelobas. (Hudson, Geog. Min. tom. i. p. 14; Ptolemy vi. § 7.) The same author places it 1200 stadia from Arabia Felix (Aden); but the distance is two short. (Gos- selin, Richerches, tom. iii. p. 9.) [G. W.] OCELLODURUM, a town of the Vesciae in Hispania Tarraconensia, on the road from Emerita to Caesargranda (Ant. Itin. pp. 434, 439); vari- ously identified with Zamora, Toro, and Feron- noule the “glossum” of the Baltic coast. [T. H. D.] OCELUM (Οἰκήλαμ: Erculanum), a town of Cisalpine Gaul, mentioned by Caesar as the last place in that province (“ceterioris provinciae extremum,” Caes. B.G. i. 10) from whence he had to fight his way through the independent tribes which held the passes of the Alps. In Strabo’s time Ocelum was the frontier town of the kingdom of Cottius towards the province of Cisalpine Gaul (Strab. iv. p. 179); and it was from thence that a frequent road led over the pass of the Mont Genèvre by Scenanganaus (Sezione), Brigantium (Briançon), and Eburodumum (Évian), to the territory of the Voconci. D’Anville has clearly shown that Ocelum was at Écune, a village in the valley of the Fenestrelle, and not, as sup- posed by previous writers, at Outez in the valley of the Dora. (D’Anville, Notice de la Gaul., p. 500.) [E. H. B.] O’CELUM (Οἰκήλαμ, Ptol. ii. 5. § 9). A town of the Vettones in Lucania, whose inhabitants are called by Pliny (iv. 22. § 35) Ocelenses, and are identified with Calabria, by others with Formosellae or Ciudad Rodrigo. (Uberti, vol. ii. pt. 1. p. 431.) 2. A town of the Citharici Lacedaeon in Gallaecia (Ptol. ii. 6. § 23.) 3. (Οἰκήλαμ: Ercul. Ptol. ii. 3. § 6), a promontory on the N.E. coast of Britannia Romana, and X. of the mouth of the river Abus or Nenemus; probably Spern Head. [T. H. D.] OCHE. [Τεβρεϊα.] OCHOISBANES (Οὐχούσβανες) or OCHTHO- MANES, a small river of Paphlagonia, falling into the bay of Armenia, a little to the north of Sinope. (Marcian. Hercl. p. 72; Anonym. Peripil. Pont. Eurip. p. 7.) This is probably the same river which Sylax (p. 33) calls Ocheernus. [I. S.] OCHRAS, a place in Cappadocia. (It. Ant. p. 202.) Ptolemy (v. 6. § 12) mentions a place Odoeca or Odogaca, in the district of Chasmamene in Cappadocia, between the river Halys and Mount Ariaeus, which is possibly the same as the Ochras of the Antonine Itinerary. [L. S.] OCHUS (Οχοῦς. Strab. xi. p. 509; Ptol. vii. 11. §§ 2, 4; Amm. Marc. xxii. 6), a river of Central Asia, which has been attributed to the provinces of Hyrcania and Bactriana by Strabo and Ptolemy respectively, as flowing through them both. It took its rise on the NW. side of the Paropamisus (or Hindk-Kasch), and flowed in a NW. direction through part of Bactriana towards the Caspian Sea, and parallel with the Oxus. Pliny makes it a river of Bactriana, and states that it and the Oxus flow from opposite sides of the same mountain (vi. 16. § 18). There can be no reason for doubting that it is represented by the present Tcheden. It is clear that in this part of Asia all Ptolemy’s places are thrown too much to the east by an error in longitude. (Wilson, Ariana. p. 145.) OCHUS MONS (Οχοῦς, Arrian, Ind. vii. 26), a mountain in Persis, mentioned by Arrian, supposed by Forbiger to be that now called Nakhilu. [V.] OCHILE (Οκίλη, Appian, B. Hist. 75), a town of Hispania Baetica, probably near Iliqua or Illipa, besieged by the Lusitanians, and relieved by Mun- nius (Uberti, vol. ii. pt. 1. p. 572). [T. H. D.] OCLIS (Οκίλη, Appian, B. Hist. c. 47, sqq.), a town of the Celtiberi, which served the Romans as a magazine in the time of the Celtiberian war. It was probably in the S.E. part of Celtiberia, and Riechhard identifies it with Ucena. [T. H. D.] OCINARUS (Οκιναρός), a river on the W. coast of Bruttium, mentioned only by Lycophron (Alx. 729, 1009), who tells us that it flowed by the city of Terina. It is generally supposed to be the same with the Salatus of the Itineraries (the modern Saruto); but its identification depends upon that of the site of Terina, which is very uncertain. [Terina]. [E. H. B.] OCITIS (Οκίτης, Ptol. ii. 3. § 31), a town on the N. coast of Britain, and N. from the Orkesmus, probably Ronalda. [T. H. D.] OCRA MONS (Οκρα, Macrobius, Sat. i. 17. 18), a name given by Strabo to the lowest part of the Julian or Carnic Alps, over which the pass leading from Aquileia to Aenomna (Lajinbach), and from thence into Pannonia
and the country on the Danube. (Strob. p. 207, vi. p. 314.) The mountain meant is evidently that between Ardecbria and Latobrac, which from all ages have been the principal line of communication from the Danube and the valley of the Seine with Italy.

[ E. H. B. ]

OCRICULUM (ο' Οκρικόλαν, Strab.; Οκρικόλα, Steph. B.; Οκρικόλα, Ptol.; Eub. Ocriculum and Oriculun; Oricolii), a considerable town of Umbria, situated on the Via Flaminia, near the left bank of the Tiber. It was the southernmost town of Umbria, and distant only 44 miles from Rome. (Itin. Hier. p. 613; Westphal, Rom. Kunst, p. 145.) We learn from Livy that Ocriculum was a native Umbrian city, and in B.C. 308 it appears to have separated from the other cities of the confederacy, and concluded an alliance with Rome. (Liv. ix. 41.) This is only the notice that we find of it prior to the conquest of Umbria by the Romans; but after that period it figures repeatedly in history as a municipal town of some importance. It was here that in B.C. 212 Galba, the Roman general, took command of the army of Servilius, after the battle of the lake Trasimene. (Id. xxi. 11.) In the Social War Ocriculum suffered severely; and, according to Florus, was laid waste by fire and sword (Flor. iii. 18, § 11); but it seems to have quickly recovered, and in Strabo's time was a considerable and flourishing town. It is mentioned in Tacitus as the place where the army of Vespasian halted after the surrender of the Vitielian legions at Narbon (Tac. Hist. iii. 75). From its position on the Flaminate Way it is repeatedly mentioned incidentally under the Roman Empire (Plin. Ep. vi. 25; Amm. Marc. xvi. 10. § 4, xxvii. 1. § 22); and it is evident that it was indebted to the same circumstance for its continued prosperity. The name is found in Pliny and Ptolemy, as well as in the Itineraries; and its municipal importance down to a late period is attested also by inscriptions, in some of which it bears the title of "splendidissimas civitas Oriculana." From these combined, with the still extant remains, it is evident that it was a more considerable town than we could have inferred from the accounts of ancient writers (Plin. iii. 5. s. 9, 14. s. 19; Ptol. iii. i. § 54; Itin. Ant. pp. 125, 311; Gruter, Inschr. p. 422, s. 9; Orell. Inschr. 3852, 3857; Marius, Atti dei Fratelli Avveni, vol. ii. p. 582.). The site of the ancient city is distant about 2 miles from the modern village of Oricolii, in the plain near the Tiber. The ruins of ancient edifices are, in their present state, of but little interest; but excavations which were carried on upon the spot in 1789 brought to light the remains of several public buildings on a splendid scale, the plan and arrangement of which could be traced with little difficulty; among these were a Basilica, a theatre, an amphitheatre, Thermae, and several temples, besides other buildings, of which the purpose could not be determined. The beauty of many of the architectural decorations and works of art discovered on this occasion (especially the celebrated mosaic floor now in the Vatican, and the colossal head of Jupiter in the same museum) prove that Ocriculum must have been a municipal town of no ordinary splendour. (Westphal, Romische Kunsptage, p. 144; Guattani, Monumenti Inediti, 1784, where the results of the excavation are described in detail and accompanied with a plan of the ancient remains.) Its proximity to Rome probably caused it to be reported to by wealthy nobles from the city, and as early as the time of Cicero we learn that Miltiades built a villa there. (Cic. pro Mil. 24.) The period of the destruction of the ancient city is uncertain. In A.D. 413 it witnessed a great defeat of Herachianus, Count of Africa, by the armies of Honorus (1st. Chron. ad. ann.). And it is mentioned as an episcopal see after the fall of the Western Empire. But the circumstances that led the inhabitants to migrate to the modern village of Oricolii, on a hill overlooking the Tiber, are not recorded. The corruption of the name appears to have commenced at an early date, as it is written Oricolus in ancient authors and in many MSS. of the classical authors. [E. H. B.]

OCRINUM. [DAMNATIONUM].

OCTAPITARUM (Οκταπίταρος, Ptol. iii. 3. § 3), a very prominent headland above the estuary of the Sabrina, or Severn, on the W. coast of Britain, now St. David's Head. [T. H. D.]

OCTODURUS (Martinchak, or Martigny, as the French call it), is in the Swiss canton of Wallis or Valais, on the left bank of the Rhone, near the town of Sion. It is supposed to be the ancient Romano-Celtic town of the lake of Geneva. The Durance, one branch of which rises at the foot of the Great St. Bernard, joins the left bank of the Rhone at Martigny. The road over the Alps from Martigny ascends the valley of the Durance, and the summit of the road is the Alp Pennina, or Great St. Bernard. This pass has been used from a time older than any historical records. When Caesar was in Gallia (B. c. 57—56) he sent Servius Gallus with the twelfth legion and some cavalry into the country of the Nantuates, Venarj, and Seduni. His purpose in sending this force was to open the pass over the Alps, the pass of the Great St. Bernard, "by which road the mercatores had been used to travel at great risk, and with the payment of great tolls." (B. G. iii. 1.) The people of the Alp allowed the Italian merchants to pass, because if they plundered them the merchants would not come; but they got as much out of them as they could. Gallus, after taking many strong places, and receiving the submission of the people, sent two cohorts into the country of the Nantuates, and with the remaining cohorts determined to winter "in a town of the Venarj named Octodurus, which town being situated in a valley with no great extent of level ground near it, is confined on all sides by very lofty mountains." There is some level ground at Martigny, and the valley of the Rhone at this part is not very narrow. Caesar says that the town of Octodurus was divided into parts by a river, but he does not mention the river's name. It is the Durance. Gallus gave one part of the town to the Galli to winter in, and assigned the other to his troops. He fortified himself with a ditch and rampart, and thought he was safe. He was, however, suddenly attacked by the Galli before his defences were complete or all his supplies were brought into the camp. The Romans obstinately defended themselves in a six hours' fight; when, seeing that they could no longer keep the enemy out, they made a sortie, which was successful. The Romans estimated the Galli at more than 30,000, and Caesar says that more than a third part were destroyed. The slaughter of the enemy was prodigious, which has been made an objection to Cae- sar's veracity, or to Gallus's, who made his report to the commander. It has also been objected that the valley is not wide enough at Martigny to hold the 30,000 men. There may be error in the number that attacked, and also in the number who perished.
But it is not difficult to answer some of the objections made to Caesar's narrative of this fight. Rosch has answered the criticism of General Warne-
ner, who, like many other of Caesar's critics, began his work by misunderstanding the author. (Roesch, Commentar über die Commentarien, ssc. p. 220, 
Halle, 1783.) After this escape Galba prudently 
withdrew his troops, and marching through the 
country of the Nautiates reached the land of the 
Allobroges, where he wintered.

The position of Octodurus is determined by 
Caesar's narrative and by the Antonine Itinera 
and the Tabula Peutingeriana. It is certain that the Oto-
durenses received the Latinitas (Latici donati) in 
the Notitia. Prov. the place is called "Civitas Val-
lensium Octodurus." The modern names Wallis 
and Valais are formed from the word Vallenses. 
At a later period it was called Forum Claudii Valen-
sium Octodurenses, as an inscription shows. 
One authority speaks of the remains of a Roman aca-
duct at Martigny. Many coins, and other memo-
rals of the Roman time, have been found about the 
place.

The name Octodur is manifestly Celtic. The 
second part of the name is Dur, "water." The first 
part, probably some corrupt form, is not explained. 
The distances on the Roman road from Augusta 
Practoria (Aosta) in Italy to Octodurus are stated 

OCTOGESA, a town of the Hergetes, in His-
pania Tarraconensis, seated on the river Iberus 
(Caes. B. C. i. 61). It is identified by some with 
Megacentra; but Uebler (Set. i. p. 432) seeks 
it to the S. of the Secoris (or Sercro), in the neigh-
bourhood of La Graufa. [T. H. D.]

OCTOLOPHUS. 1. A place belonging to the 
Lycasteas, in Macedonia, to which the consul 
Sulpicius moved his camp in the campaign of B. C. 200, 
against king Philip. (Liv. xxxi. 36; comp. Cas-
tra, Vol. I. p. 562. a.)

2. A place in Peribbaea, from which Persons 
had retired, and which was afterwards occupied by 
the consul Q. Marcius Philippus, in his daring march 
over the mountain ridge of Olympus, B. C. 169. 
(Liv. xiv. 3.) It was probably near the issue of 
the Titaresius or Elasuntoniko, from Mt. Olympus 
in the valley of Elassiona. (Leake, Northern 
Greece, vol. iii. pp. 308, 310, 417.) [E. E. J.]

ODESSUS (Οδησσας, Strab. vii. p. 319; Scymn. 
748; Diod. xix. 73, xx. 112; Appian, Ill. 30; Arri-
an, Per. p. 24; Anon. Per. p. 13; Poli. iii. 10. 
§ 8, viii. 11. § 68; Steph. B. a. e.; Mela, ii. 2. § 5; 
Plin. iv. 18; Ovid, Trist. i. 9. 37; the reading 
Οδησσας, Seyl. p. 29, is simply a corruption for 
Οδησσας rônis, for the name was written both with 
the single and the double e; the latter form 
occurring on the autonomous coins, the former on 
those of the Empire: Ωδησσας, Herod. Procop. de Aed. 
iv. 11; Oliosus, Ann. Marc. xxii. 8. § 493), a town on 
the W. coast of the Euxine, at the mouth of the river 
Pannos, 24 M. P. (Anton. Itin.), or 34 M. P. 
(Pont. Tab.), from Dionysopolis, and 360 stadia 
from the E. termination of Haemus (Enischei Beren). 
Odessus was founded by the Milesians (Strab. L. c.; 
Plin. l. c.), if credit may be given to the author 
of the poem which goes under the name of Sceymus 
(l. c.), as early as the reign of Astyages, or B. C. 
594—560. (Clinton, F. H.; Roux-Rochette, Col. 
Gr. vol. iii. p. 786.) From the inscriptions in 
Bisch (Inscr. Nos. 2036, a, b, c), it would seem to 
have been under a democratic form of government, 
and to have preserved over the union of five Greek 
cities on this coast, consisting of Odessus, Troad, 
Clazomai, Messenia, and Apollonia. When the 
Bulgarians swept over the Danubian provinces in 
A. D. 679 they are found occupying Tarna (Bôvô, 
Theophan. p. 298; Niceph. p. 23; Cedren, vol. i. 
p. 440), which is described as being near Odessus. 
(St. Martin, ap. Le Beau, Bass Empire, vol. xi. 
p. 447; Schafarik, Stat. Alt. vol. ii. p. 217.) The 
autonomous coins of Odessus exhibit "types" refer-
bring to the worship of Serapis, the god imported by 
Ptolemy into Alexandria, from the shores of Pontus. 
The series of imperial coins ranges from Trajan to 
Saloninus, the wife of Galerius. (Eckel, vol. i. p. 
36; Racche, vol. iii. pt. 2. p. 51; Momont, Descr. des 

ODRYSAE. 463

ODOMANTIS (Οδωμάντις, Herod. viii. 112; 
Thuc. ii. 101, v. 6; Steph. B. a. c.; Odovantes, 
Plin. iv. 18), a Paeanian tribe, who occupied the 
district, called after them, ODODIANTIS (Οδω-
μαντις, Poly. iii. 13, § 31; Liv. iv. 4; Οδώμαντις, 
Steph. B.) This tribe were settled upon the whole 
of the great mountain Orbelus, extending along the 
NE. of the lower Strymonic plain, from about 
Mele-
niko and Demirsdr to Zikhu innschive, where 
they bordered on Pangaeus, the gold and silver 
mines of which they worked with the Pieres and 
Satræ. (Herod. l. c.) Secure in their inaccessible 
position, they defied Megabarns. (Herod. v. 16.) 
The NW. portion of their territory lay to the 
right of Stalacas as he crossed Mt. Ceryne; and 
their general situation agrees with the description 
of Timcydiles (ii. 101), according to whom they dwelt 
behind the Strymon to the N., that is to say, to the 
N. of the Lower Strymon, where, alone, the river 
takes such a course to the E. as to justify the 
expression. Cleon invited Polies, their chieftain, to 
join him with as many Thracian mercenaries as could 
be levied. (Thuc. v. 6; Aristoph. Ach. 156, 164; 
Suid. s. v. Ωδωμαντις: Leake, Northern Greece, 

[E. B. J.]

ODOMANTIS. [Sophien.] 

ODRYSAE (Οδρυσαί), a people seated on both 
banks of the Artiscus, a river of Thrace, which 
discharges itself into the Hebrus. (Herod. iv. 92.) 
Their territory, however, must undoubtedly have 
extended considerably to the W. of the Artiscus; 
since Pliny (iv. 18) informs us that the Hebrus 
had its source in their country: a fact that is cor-
robated by Ammianus Marcellinus (xxvi. 4, 10). 
They appear to have belonged to that northern 
swarm of barbarians which invaded Thrace after 
the Trojan War; and their names are often found 
interwoven in the ancient myths. Thus the Thra-
cian singer Thamyris is said to have been an 
Odryssian (Paus. iv. 33, § 4); and Orpheus is 
represented as their king. (Conon, ap. Phot. 
pp. 140.)

A rude and barbarous people like the Odryssians
cannot be expected to have had many towns; and in fact we find none mentioned either by Thucydides or Xenophon. The first of their towns recorded is Philippopolis, founded by Philip II. of Macedonia, as there will be occasion to relate in the sequel; and it may be presumed that all their towns of any importance were built after they had lost their independence.

The name of the Odrysae first occurs in history in connection with the expedition of Dareius Hy- stasagis against the Scythians. (Herod. l. c.) Whilst the Persians oppressed the southern parts of Thrace, the Odrysae, protected by their mountains, retained their independence; and the strength which they thus acquired enabled Teres to incorporate many Thracian tribes with his subjects. He extended his kingdom to the Euxine in spite of a signal defeat which he sustained in that quarter from the Thyini (Xen. Anab. vii. 2. § 22); and the dominion of his son Sitaecho embraced the greater part of Thrace; having been bounded on the N. by the Danube, and extending from Abdera on the W. to the Euxine on the E. (Thucyd. ii. 96—98.) Indeed, so much is this the case that his kingdom was vaguely counted by both the Athenians and Macedo-nonians at the breaking out of the Pol-pomnian War. (Thucyd. ii. 29; Herod. vii. 137; Aristoph. Acharn. 136—150.) The expedition which he undertook in n. c. 429, at the instance of the Athenians, and of Amyntas, pretender to the throne of Macedonia, against Perdiccaus II., the reigning sovereign of that country, is also a striking proof of the power of the Odrysae at that period; as the army which Sitaecho assembled on the banks of the Axios, was received on the banks of the Pindus by 150,000 men, of which one-third was cavalry. (Thuc. ii. 98; Diod. xii. 50.) For the latter force, indeed, the Odrysae were renowned, and the extensive plains of the Hebrus afforded pasture for an excellent breed of horses. (Thuc. l. c.; Polyb. xxiv. 6; Liv. xiv. 42.) With this army Sitaecho overran Chalcidice, Anthemus, Crestonia, and Mygdonia; but the non-appearance of the Athenian contingent, coupled with the approach of winter, obliged the army to retire and the troops to carry out their campaign. In n. c. 424 Sitaecho fell in an engagement with the Triballi, and was succeeded by his nephew Seuthes I. Under his reign the Odrysae attained the highest pitch of their power and prosperity. Their yearly revenue amounted to 400 talents, besides an equal sum in the shape of presents and contributions. (Thuc. ii. 97, iv. 101.) But from this period the power of the Odrysae began sensibly to wane. After the death of Seuthes we find his dominions divided among three sovereigns, Medocns, or Macedons, who was most probably his son, ruled the ancient seat of the monarchy; Ma-cadns, brother of Medocns, reigned over the Thyini, Melandia, and Traniasca; whilst the region above Byzantium called the Delta was governed by Teres. (Xen. Anab. vii. 2. § 32, vii. 5. § 1.) It was in the reign of Medocns that Xenophon and the Ten Thousand passed through Thrace on their return from the Persian expedition, and helped to restore Seuthes, son of the exiled Macedon to his dominions. We gather from this writer that Seuthes exercised only a subordinate power over Medocns, with the title of Archon, or governor, of the Coast. (vii. 3. § 16.) Subsequently, however, he appears to have asserted his claim to an independent sovereignty, and to have waged open war with Medocns, till they were reconciled and gained over to the Athenian alliance by Thrasybulus. (Xen. Hell. iv. 8. § 25; Diod. xiv. 94.) When we next hear of the Odrysae, we find them engaged in hostilities with the Athenians respecting the Thracian Chersonese. This was under their king Cotys I., who reigned from B.C. 382 to 333. It was in the reign of the same monarch (B.C. 376) that the Triballi invaded their territories, and penetrated as far as Abdera. (Diod. xv. 36.) When Csero-bletes, the son and successor of Cotys, ascended the throne, the Odrysae appear to have still retained possession of the country as far as the coast of the Euxine. (Diod. xv. 36.) It is possible that the same monarch and Berisades and Amadocus, who were probably his brothers, and to whom Cotys had left some portions of his kingdom. The Athenians availed themselves of these dissensions to gain possession of the Chersonese, which appears to have been finally ceded to them in B.C. 357. (Diod. xvi. 34.) But a much more fatal blow to the power of the Odrysae was struck by Philip II. of Macedonia. After nine or ten years of warfare, Philip (at least in B.C. 352) succeeded in subjugating them, and reducing them to the condition of tributaries. (Diod. xvi. 71; Dem. de Chers. p. 105.) The exact nature of their relations with Philip cannot be ascertained; but that their subjugation may have been complete appears from the fact of his having founded colonies in their territory, especially Philippopolis, on the right bank of the Hebrus, and in the very heart of their ancient seat. Their subjection is further shown by the circumstance of their cavalry being mentioned as serving in the Macedonian army against Antiochus, king of Syria. (Arrian. iii. 12. § 4.) But a still more decisive proof is, that after Alexander's lieutenant Zophriu had been defeated by the Getae, the Odrysae were incited by their king, Seuthes III., to rebel against the Macedonians. (Curt. x. 1. § 45; Justin. xii. 1.) After the death of Alexander, Seuthes took the field against Lysimachus, to whom Thrace had devolved, with an army of 20,000 foot and 8000 horse,—a sad falling off from the forces formerly assembled by his predecessors. (Livy. xxxix. 6.) The struggle with Lysimachus was carried on with varied success. Under Philip III. of Macedon, the Odrysae were still in a state of revolt. In B.C. 211 that monarch assembled an army with the ostensible design of marching to the relief of Byzantium, but in reality to overawe the malcontent chieftains of Thrace. (Livy. xxxix. 35.) In 163 we find Philip undertaking an expedition against the Odrysae, Benthelaee, and Bessi. He succeeded in taking Philippopolis, which the inhabitants deserted at his approach, and where he established a garrison, which was expelled shortly after his departure. (Livy. xxxix. 33; Polyb. Ex. Leg. xviii.) It may be assumed from Livy that on this occasion the Odrysae were supported in their revolt by the Romans (xlii. 19, xiv. 42). After the fall of the Macedonian kingdom, the Odrysae appear to have been treated with consideration by the Romans, who employed them as useful allies against the newly-conquered districts, as well as against the other Thracian tribes; amongst whom the Bessi had now raised themselves to some importance. After this period the history of the Odrysae is for some time involved in obscurity, though they were doubtless gradually falling more and more under the Roman dominion. In the year
The reign and survival of the Odrysian monarch Dion (of Solyveis) was in many respects a romanticised figure. He was not only renowned for his military prowess and his ability to restore order to the region, but also for his dramatic and mysterious life. His appearance, as described by various sources, was striking and memorable. He was said to have been of exceptional beauty, with a face that was considered divine. His personal charm and mannerisms were said to have captivated the hearts of many who entered his presence. His influence was far-reaching, as his presence was felt throughout the region, from the Thracian tribes to the Greek and Roman communities.

The influence of Dion extended beyond his lifetime. His legend and reputation continued to grow, and he became a symbol of heroism and virtue. His story, though often embellished by later writers, remains a testament to the power of the human spirit and the enduring legacy of great leaders. The story of Dion, and his role in shaping the history of the region, serves as a reminder of the enduring impact that great leaders can have on the course of events.
the situation of Galazidi. The Oecanthians (Oικανθίοις) are mentioned among the Locri Oscae by Strabo (xii. 101), 

The modern town is inhabited by a serving population, who possessed 180 ships when Urichs visited the place in 1837.

(Oeasoun, [Ep. vol. 11, § 7, § 2], a promontory of Hispania Tarraconensis, in the territory of the Vascons, formed by the N. extremity of the Pyrenees, now C. Higueras. [T. H. D.]

OECHALIA (Οεαχαλία: Εθή. Οικανθίας), the name of several ancient towns in Greece. 1. In Messenia, in the plain of Stényclea. It was in ruins in the time of Epaminondas (Paus. iv, 26, § 6), and its position was a matter of dispute in later times. Strabo identified it with Andania, the ancient residence of the Messenian kings (viii. pp. 339, 350, 360, x, p. 448), and Pausanias with Carmenis, which was only 8 stadia distant from Andania, and upon the river Charadus. (Paus. iv. 2, § 2, iv. 33, § 4.) Carmenis, in the time of Pausanias, was the name given to a grove of cypress trees, in which were statues of Apollo Carmenus, of Hermes Criophilus, and of Pперсфес. It was here that the mystic rites of the great goddesses were celebrated, and that the urn was preserved containing the bones of Eurytus, the son of Meleager. (Paus. iv. 33, §§ 4, 5.)

2. In Eubea, in the district of Eretria. (Hebut ap. Paus. iv. 2, § 3; Soph. Trach. 74; Strab. x. p. 438, x. p. 448; Steph. B. s. v.)

3. In Thessaly, on the Peneus, between Pelinna to the east and Itriou to the west, not far from Ithome. (Strab. vi. pp. 339, 350, ix. p. 438, x. p. 448; Paus. iv. 2, § 3; Steph. B. s. v.)

4. In the territory of Trachis. (Strab. vii. p. 339, x. p. 438; Strab. x. p. 448.)

5. In Aetolia. (Strab. x. p. 448.) Each of these cities was considered by the respective inhabitants as the residence of the celebrated Eurytus, who was conquered by Heracles, and the capture of whose city was the subject of an epic poem called Οἰκανθίας Εὐρύτους, which was ascribed to Homer or Cresphynis. Hence among the Æolians there was a difference of opinion upon the subject. The Messenian Oecanthia was called the territory of Eurytus in the Iliad (ii. 596), and the Odyssey (xiv. 15), and this statement was followed by Pherecydes (ap. Schol. ad Soph. Troch. 354) and Pausanias (iv. 2, § 3).

The Euboean city was selected by the writer of the poem on the Capture of Oecanthia (Schol. ap. Soph. L. c.), by Hecataeus (ap. Paus. L. c.), and by Strabo (x. p. 448). The Thessalian city is mentioned as the residence of Eurytus in another passage of the Iliad (ii. 730); and K. O. Müller supposes that this was the city of the original fable. (Dorians, vol. i. p. 426, seq., transl.)

OENIADES. [Oικανθίας, Ptol. vi. 16, §§ 3, 4], a river of Serica, the sources of which Ptolemy (L. c.) places in the Axausii M., Asmiraci M., and Cassi M., the latter of which mountain ranges we may safely identify with the chain of Kascghar. The statement of Ptolemy, coming through Marinas, who derived his knowledge of the trading route of the Seres from Titians of Macedonia, also called Maex, the son of a merchant who had sent his commercial agents into that country (Ptol. i. 11, § 7), indicates a certain amount of acquaintance with that singular depression in Central Asia which lies to the E. of Tumit, the structure of which has been inferred from the direction of its water-courses. The Oechalidians may be considered to represent the river formed by the union of the streams of Khotan, Yarkand, Kascghar, and Ushi, and which flows close to the hills at the base of Thien-Schan.

The Oechalidias (Οεαχαλίας, Ptol. vi. 16, § 4) deriving their name from the river must be assigned to this district. [Serica.]

[F. B. J.]

OENANDA. [Oικανθάνοι.] OENEOX (Οενόξ), a town of the Locri Oscae, east of Naupactus, possessing a port and a sacred enclosure of the Nemean Zeus, where Hippod. is said to have been killed. It was from this place that Demosthenes set out on his expedition into Aetolia, in B. C. 426, and to which he returned with the remnant of his forces. Leake supposes that the territory of Oecnea was separated from that of Naupactus by the river Mornio, and that Oenoe perhaps stood at Mygula, and to the west of the fountain Ambla. (Thuc. iii. 93, seqq. B. s. v.; Leake, Northern Greece, vol. ii. p. 616.)

OENUS (Οενός), a river of Pannonia, a tributary of the Savus (Ptol. ii. 17, § 2). In the Peuting. Table it is called Indenes, and now bears the name of Unes. [L. S.]

OENIADAE. 1. (Οικανθίας, Thuc. et alii; Οικανθάνοι, Steph. B. s. v.) Eth. Oικανθάνων: Trikardhaos), a town in Acraniasia, situated on the W. bank of the Acheulus, about 10 miles from its mouth. It was one of the most important of the Acranius towns, being strongly fortified both by nature and by art, and commanding the whole of the south of Acraniasia. It was surrounded by marshes, many of them of great extent and depth, which rendered it quite inaccessible in the winter to an invading force. Its territory appears to have extended on both sides of the Acheron, and to have consisted of the district called Parmaces, which was very fertile. It seems to have derived its name from the mythical Oenaeus, the great Aetolian hero. The town is first mentioned about B. C. 455. The Messenians, who had been settled at Naupactus by the Athenians at the end of the Third Messenian War (455), shortly afterwards made an expedition against Oenaeae,
which they took; but after holding it for a year, they were attacked by the Acarnanians and com-
pelled to abandon the town. (Paus. iv. 25.) Oeni-
adæ is represented at that time as an enemy of Athens, which is said to have been one of the rea-
sons that induced the Messenians to attack the place. Twenty-three years before the Peloponnesian War (v. c. 454) Pericles laid siege to the town, but was unable to take it. (Thuc. i. 111; Diod. xi. 85.) In the Peloponnesian War, Oeniadæ still continued opposed to the Athenians, and was the only Acar-
نانian town, with the exception of Acastus, which sided with the Lacedaemonians. In the third year of the war (429) Phormion made an expedition into Acarnania to secure the Athenian ascendency; but though he took Acastus, he did not continue to march against Oeniadæ, because it was the winter, at which season the marshes secured the town from all attack. In the following year (428) his son Asopius sailed up the Achelous, and ravaged the ter-
ritory of Oeniadæ; but it was not till 424 that Deme
thenses, assisted by all the other Acarnanians, compell
ed the town to join the Athenian alliance. (Thuc. ii. 102, iii. 7, iv. 77.) It continued to be a
place of great importance during the Macedonian and Roman wars. In the time of Alexander the
Great, the Aetolians, who had extended their domi-
nions on the W. bank of the Achelous, succeeded in obtaining possession of Oeniadæ, and expelled its inhabi
tants in so cruel a manner that they were threatened with the vengeance of Alexander. (Diod. xvii. 8.) Oeniadæ remained in the hands of the
Aetolians till 219, when it was taken by Philip, king of Macedonia. This monarch, aware of the
importance of the place, strongly fortified the citadel, and commenced uniting the harbour and the arsenal
with the citadel by means of walls. (Polyb. iv. 65.)
In 211 Oeniadæ, together with the adjacent Naeus
(Νέαος) or Nasus, was taken by the Romans, under M. Valerius Laevinus, and given to the Aetolians, who were
then their allies; but in 189 it was restored to the
Acarనianse by virtue of one of the conditions of the peace made between the Romans and Aetolians in
that year. (Pol. ix. 39; Liv. xxvi. 24; Polyb.
xii. 15; Liv. xxxvii. 11.) From this period Oeniadæ disapp
ears from history; but it continued to
exist in the time of Strabo (x. p. 459).
The exact site of Oeniadæ was long a matter of
dispute. Dodwell and Gell supposed the ruins on the
eastern side of the Achelous to represent Oeniadæ; but these ruins are those of Pleuron.
[Pleuron.] The true position of Oeniadæ has now
been fixed with certainty by Leake, and his ac
count has been confirmed by Mure, who has since
visited the spot. Its ruins are found at the modern
Trikardho, on the W. bank of the Achelous, and are
surrounded by morasses on every side. To the
N. these swamps deepen into a reedy marsh or lake,
now called Leaini or Katokhi, and by the ancients
Melite. In this lake is a small island, probably the
same as the Nasos mentioned above. Thucydides
is not quite correct in his statement (ii. 102) that
the marshes around the city were caused by the
Achelous alone; he appears to take no notice of the
lake of Melite, which afforded a much greater pro-
tection to the city than the Achelous, and which has
no connection with this river. The city occupied an
extensive insulated hill, from the southern extremity
of which there stretches out a long slope in the di-
rection of the Achelous, connecting the hill with the
plain. The entire circuit of the fortifications still
exists, and cannot be much less than three miles.
The walls, which are chiefly of polygonal con-
struction, are in an excellent state of preservation,
often to a height of from 10 to 12 feet. Towards the
N. of the city was the port, communicating with the
sea by a deep river or creek running up through the
contiguous marsh to Potidea on the coast.
Leake discovered the ruins of a theatre, which stood
near the middle of the city; but the most inter-
esting remains in the place are its arch'd pos-
terns or sally-ports, and a larger arched gateway
leading from the port to the city. These arched
gateways appear to be of great antiquity, and prove
that the arch was known in Greece at a much earlier
period than is usually supposed. Drawings of sev-
eral of these gateways are given by Mure. (Leake,
Northern Greece, vol. iii. p. 556, seq.; Mure,
Journal of a Tour in Greece, vol. i. p. 106, seq.;
see also, respecting the arches at Oeniadæ, Leake,
Peloponnesica, p. 121.)
Strabo (x. p. 450) speaks of a town called Old
Oenian (ἡ παλαιὰ Ὀινιονία*), which was deserted in
his time, and which he describes as midway be-
 tween Stratus and the sea. New Oenian (ἡ νῦν Ὀι
ιονία), which he places 70 stadia above the
mouth of the Achelous, is the celebrated town of Oeniadæ,
specked of above. The history of Old Oenian is un-
known. Leake conjectures that it may possibly
have been Eryshleie (Ερυσχέλης), which Stephani
supposes to be the same as Oeniadæ; but this is
a mistake, as Strabo quotes the authority of the poet
Apollodorus to prove that the Erysichaei were a
people in the interior of Acarnania. Leake places
Old Oenian at Paleo Masi, where he found some
Hellenic remains. (Steph. B. s. s. Oivēdaiā; Strab.
x. p. 460; Leake, Northern Greece, vol. iii. p. 524,
seq.)
2. A city of Thessaly, in the district Octeæ
(Στράβ. ix. p. 434, Steph. B. s. c.)

**COIN OF OENIADÆ.**

OENIUS (Οινίος), also called Oenoth (Οινόθη), Arrian, Peripl. Pont. Eux. p. 16), a small river of
Pontus, emptying itself into the Euxine, 30 stadia
east of the mouth of the Thoaris. (Anonym. Peripl.
Pont. Eux. p. 11.)

[OENIOANDA. (Οινοάνδα), a town in the extreme
west of Pisidia, belonging to the territory of Cibyra,
with which and Balbaru and Bubon it formed a
tetrapolis, a political confederacy in which each
town had one vote, while Cibyra had two. (Strab. xiii.
p. 631; Steph. B. s. e.; Liv. xxxvii. 37; Plut. v.
28; comp. Cibyra.) The town is mentioned as late
as the time of Hierocles, who, however (L. 685),
calls it by the corrupt name of Ancandia.

[O. S.]

* The MSS. of Strabo have Alvaia, which Leake
was the first to point out must be changed into
Oivēa. Kramer, the latest editor of Strabo, has
inserted Leake's correction in the text.

HII 2
OENOBARAS (Οινοβάρας or Οινώβαρας), a river of the plain of Antioch, in Syria, at which, according to Strabo (xi. p. 751), Porphyry Philometer, having conquered Alexander Balas in battle, died of his wounds. It has been identified with the Uphonus, modern Abreens, which, rising in the roots of Amanus Mons (Aenadagaya), runs southward through the plain of Cyrene, until it falls into the small lake, which receives also the Labatas and the Arectus, from which their united waters run westward to join the Orontes coming from the south. The Oenobaras is the easternmost of the three rivers. It is amply described by Strabo. (Tabula Sagr. Supplementa, p. 132. ed. Koehler; Chesney, Expedition, vol. i. pp. 407, 423.)

G. W.

OENOE (Οίνωη), 1. A small town on the north-west coast of the island of Icaria. (Strab. xiv. p. 639; Steph. B. s. v.; Athen. i. p. 30.) This town was probably situated in the fertile plain below the modern Messaria. The name of the town seems to be derived from the wine grown in its neighbourhood on the slopes of Mount Pramnus, though others believe that the Icarians Oinow and Oinias was a colony of the Attic town of the same name. (Cic. de Nat. deorum, ii. p. 159, 162.)

3. An ancient name of the island of Scinia. [Scinias.] [L. S.]

OENOE (Οίνωη; Eth. Οινώαις, Οινώαισ). 1. An Attic demus near Marathon. [Marathon.]

2. An Attic demus near Eleuthereum, upon the confines of Bocotia. [Vol. i. p. 329, No. 43.]

3. A fortress in the territory of Corinth. [Vol. i. P. 685, b.]

4. Or Oense (Οίνης, Steph. B. s. v.), a small town in the Argia, west of Argos, on the left bank of the river Charadrus, and on the southern (the Primus) of the two roads leading from Argos to Mantinea. Above the town was the mountain Artemision (Maleris), with a temple of Artemis on the summit, worshipped by the inhabitants of Oenoe under the name of Oenotes (Οινωτης). The town was named by Oenocles after his grandfather Oenous, who died here. In the neighbourhood of this town the Athenians and Argives gained a victory over the Lacchaeumani (Paus. ii. 15. § 2, i. 13. § 10. § 4; Apollod. i. 8. § 6; Steph. B. s. v.) Leake originally placed Oenoe near the left bank of the Charadrus; but in his later work he has changed his opinion, and supposes that it must have stood near the right bank of the Inachus. His original supposition, however, seems to be the correct one; since there can be little doubt that Ross has rightly described the course of the two roads leading from Argos to Mantinea. (Leake, Morea, vol. ii. p. 443, Pelopon. p. 260; Ross, Reisen im Peloponnes, p. 132.)

Dr Bonnier, a town of Elis, near the Hemic Fighia. (Strab. viii. p. 338. [Vol. I. p. 839, b.])

OENOLADOW (Οινόλαδων, Studiasm, § 96), a river in the district of the African Syrtis, near the town of Amarea (Ααιαία, Studiasm, i. c.), where there was a tower and a cove. Barth (Wanderungen, pp. 300, 359) refers it to the Wady Milid, where there is a valley with a spring of sweet water in the sandy waste; and Müller, in his map to illustrate the Coast-describer (Tab. in Geog. Gracac, Min. Par. 1835), places Amarea at Ras-al Hamrak, where Admiral Smyth (Mediterranea, p. 436) marks core ruins, and Admiral Beechey (Expid. to N. Coast of Africa, p. 72) the ruins of several baths with tessellated pavements, to the W. of which there is a stream flowing from the Wady Mata. [E. B. J.]

OENO'NE or OENOPHIA. [Aegina.]

OENOTRHYTA (τά Οινοτρύπα), a place in Bœotia, where the Athenians under Mornixilies gained a signal victory over the Boeotians in B. C. 456. As this victory was followed by the destruction of Tanagra, there can be little doubt that it was in the territory of the latter city, not far from the frontier of Attica. Its name, moreover, shows that it was the place where the wine was chiefly produced, for which the territory of Tanagra was celebrated. Leake therefore places it at Ilia (written Oliva, perhaps a corruption of Oivofyta), which stands in a commanding position near the left bank of the Asopus, between Tanagra and Oropus. (Thuc. i. 108, iv. 55; Leake, Northern Greece, vol. ii. p. 463.)

OENO'TRIA (Οινοτρια), was the name given by the Greeks in very early times to the southernmost portion of Italy. That country was inhabited at the period when the Greeks first became acquainted with it, and began to colonise its shores, by a people whom they called Oenothri or Oenothri (Οινοθρηι or Οινοθρηι), while the name of Itali was, according to the account generally received, applied to the Oenotrians in general. Antiochus of Syracuse distinctly spoke of the Oenothri and Itali as the same people (op. Strab. vi. p. 254), and defined the boundaries of Oenotria (under which name he included the countries subsequently known as Lucania and Bruttium exclusive of Iapygia) as identical with those of Italy (op. Strab. l. c.). A well-known tradition, adopted by Virgil, represented the Oenotrians as taking the name of Italians, from a chief or king of the name of Italus (Bonys. i. 12. 35; Virg. Aen. i. 533; Arist. Pol. vii. 10); but it seems probable that this is only one of the mythical tales so common among the Greeks: and whether the name of Italy was only the native appellation of the people whom the Greeks called Oenothri, or was originally that of a particular tribe, like the Chones and Moretges, which was gradually extended to the whole nation, it seems certain that, in the days of Antiochus, the names Oenothri and Itali, Oenotria and Italy, were regarded as identical in significance. The former names, however, had not yet fallen into disuse; at least Herodotus employs the name of Oenothri, as one familiar to his readers, to designate the country in which the Phoccean colony of Veia was founded. (Herod. i. 167.) But the gradual extension of the name of Italy, as well as the conquest of the Oenotrian territory by the Sabellian races of the Lucanians and Bruttians, naturally led to the disuse of their name; and though this is still employed by Aristotle (Pol. vii. 10), it is only in reference to the ancient customs and
OEOTRIDES INSULAE.

Habits of the people, and does not prove that the name was still in current use in his time. Sceynus Chias uses the name Oenoria in a different sense, as distinguished from Italy, and confines it to a part only of Lucania; but this seems to be certainly opposed to the common usage, and probably arises from some misconception. [Sceynn. Ch. 244, 300.]

There seems no doubt that the Oenotrians were a Pelasgic race, akin to the population of Epirus and the adjoining tract on the E. of the Adriatic. This was evidently the opinion of these Greek writers who represented Oenotrius as one of the sons of Lycaon, the son of Pelasgus, who emigrated from Arcadia at a very early period. [Pirgyscles, ap. Dionys. i. 13; Paus. viii. 3. § 5.] The statement of Pausanias, that this was the most ancient migration of which he had any knowledge, shows that the Oenotrians were considered by the Greeks as the earliest inhabitants of the Italian peninsula. But a more conclusive testimony is the incidental notice in Stephanus of Byzantium, that the Greeks in Southern Italy called the native population, whom they had reduced to a state of inequality, the Oenotrians. These name and the Heles in Lucania, by the name of Pelasgi. [Steph. Byz. s. v. Xon.] These serfs could be no other than the Oenotrians. Other arguments for their Pelasgic origin may be deduced from the recurrence of the same names in Southern Italy and in Epirus, as the Chones and Choenes, Pan- dosia, and Acheron, &c. Aristotle also notices the custom of aeqon, or feasting at public tables, as subsisting from a very early period among the Oenotrians as well as in Crete. [Arist. Pol. vii. 10.]

The relation of the Oenotrians to the other tribes of Italy, and their migration by the Lucanians, a Sabellian race from the north, have been already given in the article ITALIA. [E. H. B.]

OEOTRIDES INSULAE (Oeotes). Two small islands off the shore of Lucania, nearly opposite Velia. [Strab. vi. p. 252; Pliny. iii. 7. s. 13.] Their individual names, according to Pliny, were Pontia and Isicia. Olivierus (Ital. p. 1260) speaks of them as still existing under their ancient names; but they are mere rocks, too small to be marked on ordinary modern maps. [E. H. B.]

OENUS (Oenius; Eth. Oeoubros), a small town in Thrace, lying on the banks of the river Oenus, a tributary of the Eurotas, appears to have derived its name. From its being described by Athenaeus as near Pitane, one of the divisions of Sparta, it was probably situated near the junction of the Oenus and the Eurotas. [Steph. B. s. r.; Athen. i. p. 31.] The river Oenus, now called Keloypa, rises in the watershed of Mt. Parnon, and, after flowing in a general south-western direction, falls into the Eurotas, at the distance of little more than a mile from Sparta. [Polyb. ii. 65, 66; Liv. xxxiv. 28.] The principal tributary of the Oenus was the Geogryss (Cygeopus, Polyb. ii. 56), probably the river of Oousia. [Leake, Peloponnesius, p. 347.]

OENUSAE (Oenusa, Oenusa). 1. A group of islands off the coast of Messenia. [Vol. ii. p. 342, b.]

2. A group of islands between Chios and the Asiatic coast. [Herod. i. 165; Thuc. viii. 24; Steph. B. s. r.] They are five in number, now called Spoldodhys or Ergonisi. Pliny (v. 31. s. 38) mentions only one island.

OEROE. [Plataeae.]

OECUS. 1. (Oeuros, Plt. iii. 10, 10, viii. 11. § 6), a town of the Thallii in Lower Moesia, seated near the mouth of the river of the same name, and on the road from Viminacium to Nicomedea, 12 miles E. from Valeriania, and 14 miles W. from Uthum. [Uthn. Ant. p. 220.] It was the station of the Legio V. Maced. Procopius, who calls the town Ixos, says that it was fortified by Justinian (de Aed. iv. 6). Usually identified with Ogresoris, though some hold it to be Glarea.

2. A river of Lower Moesia, called by Thucydides (ii. 96) *Oeuros*, and by Herodotus (iv. 49) *Hecos*. Pliny (iii. 26. s. 29) places its source in Mount Rhodope; Thucydides (i. c.) in Mount Scopas, which joined Rhodope. Its true source, however, is on the W. side of Haemus, whence it pursues its course to the Danube. It is now called the Iler or Eker. [T. H. D.]

OESTRYMNIDES. [Britanniae Insulae, Vol. i. p. 433.]

OENOME (Oenous, Thuc. iv. 107; Scyl. p. 27 (the MS. incorrectly *Oeoudes*); Sceynn. Ch. 655; Diod. Sic. xii. 68 (by an error of the MS. *Sena*); Plt. iii. 15. § 9; Plin. iv. 18; Armenias, ap. Athen. p. 313; L. Oenotrias, Steph. B.), a Thracian colony in Pieria, which, with Galepsus, was taken by Brasidas, after the capture of Amphipolis. [Thuc. i. c.] Its position must be sought at some point on the coast between *Neos* and the mouth of the Strymon. [Leake, Northern Greece, vol. iii. p. 179; Consinery, Voyage dans la Macedoine, vol. ii. p. 69.] [E. B. J.]

OETA (Oetia; El. Oeirais), a mountain in the south of Thessaly, which branches off from Mt. Pandus, runs in a south-easterly direction, and forms the northern barrier of Central Greece. The only entrance into Central Greece from the north is through the narrow opening left between Mt. Oeta and the sea, celebrated as the pass of Thermopylae. [Thermopylae.] Mt. Oeta is now called Katakas- thra, and its highest summit is 7071 feet. [Journal of Geogr. Soc. vol. vii. p. 94.] The mountain immediately above Thermopylae is called Calidromon both by Strabo and Livy. [Strab. ix. p. 428; Liv. xxxvi. 15.] The latter writer says that Calidromon is the highest summit of Mt. Oeta; and Strabo agrees with him in describing the summit nearest to Thermopylae as the highest part of the mountain. In this opinion they were both mistaken, Mt. Patri- tikos, which lies more to the west, being considerably higher. Strabo describes the proper Oeta as 200 stadia in length. It is celebrated in mythology as the scene of the death of Hercules, whence the Roman poets give to this hero the epithet of Octaeus. From this mountain the southern district of Thessaly was called Oetaea (Oeirais, Strab. ix. pp. 430, 432, 434), and its inhabitants Oetaei (Oeiras, Herod. vii. 217; Thuc. iii. 92; Strab. iv. p. 416). There was also a city, Oeta, said to have been founded by Amphipolus, son of Apollo and Deidameia (Deidameia) of Crete. [Stephanus B. (s. r.) describes a city of the Malians. Leake places it at the foot of Mt. Patri- tikos, and conjectures that it was the same as the sacred city mentioned by Callimachus. (Hymn, in Del. 287.) [See Vol. ii. p. 255.] (Leake, Northern Greece, vol. ii. p. 4, seq.)

OETENSE (Oetara, Plt. iii. 10, 9), a tribe in the eastern part of Moesia Inferior. [T. H. D.]

OETYLUSS (Oetulos, Homer, Paus. Steph. B; Beitrage, Böckh, Inscr. no. 1323; Böckh, Plt. iii. 16. § 22; Oetob, καλεσται ὅ ἐπὶ των Βετολος, Strab. viii. p. 360, corrected in accordance with the inscription), a town of Laconia on the eastern side.
of the Messenian gulf, represented by the modern town of Vitlygo, which has borrowed its name from it. Pausanias says that it was 80 stadia from Thalamnae and 150 from Messa; the latter distance is too great, but there is no doubt of the identity of Octylus and Vitlygo; and it appears that Pausanias made a mistake in the names, as the distance between Octylus and Caepenopolis is 150 stadia. Octylus is mentioned by Homer, and was at a later time, by the Keoheanae-Laconian towns. It was still governed by its ephors in the third century of the Christian era. Pausanias saw at Octylus a temple of Sarapis, and a wooden statue of Apollo Carneius in the agora. Among the modern houses of Vitlygo there are remains of Hellenic walls, and in the church a beautiful Ionic column supporting a beam at one end of the aisle, and three or four Ionic capitals in the wall of the church, probably the remains of the temple of Sarapis. (Hom. H. ii. 583; Strab. viii. p. 360; Pausan. iii. 21. § 7, 25. § 10, 26. § 1; Steph. B. s. viz.; Probl. l. c.; Bäckstr. l. c.; Mommsen, Thesaurus, vol. ii. p. 313; Boldyaye, Recerches, gr. p. 92; Curtius, Ptolomaeus, vol. ii. p. 283.)

OEUM (Olavi), a mountain fortress situated in eastern Locris, above Opus, and destroyed by an earthquake. (Strab. i. p. 60.) According to Gell its ruins are to be seen on a steep hill, 25 minutes above Linaetis. (Itin. p. 232.)

OEUM or UUM (Olavi, Ovam, Ovä; Eth. Oidari, Ītāri), the chief town of the district Seiritis in Laconia, commanded the pass through which was the road from Tegea to Sparta. It probably lay in the Elcera, or narrow pass through the water-bed of the mountains forming the natural boundary between Laconia and Arcadia. When the Thelian army under Epaminondas first invaded Laconia in four divisions, by different passes, the only division which encountered any resistance was the one which marched through the pass defended by Oeum. But the Spartan Isthmians, who commanded a body of troops at this place, was overpowered by superior numbers; and the invading force thereupon proceeded to Soliata, where they were joined by the rest of the forces of the army. (Xen. Hell. iii. 5. §§ 24—26.) In Xenophon the town is called the 'Iaima of the inhabitants Teirai; but the form Oeum or Oüa is probably more correct. Such towns or villages, situated upon mountainous heights, are frequently called Oeum or Oya. (Comp. Harpocrat. s. v. Oöva.) Probably the Oeum in Seiritis is referred to in Steplamus under OvastiOfijnatar Thegias. Aσγχηλος Μονος: οι πολίται Οινιτα. Oeum is not mentioned subsequently, unless we suppose it to be the same place as Ixsos (Ioxos), which Pausanias describes as situated within the frontiers of Laconia, but belonging to the Achaeans. (Paus. vii. 13. § 7; comp. Suid, s. v. Ioxos; Leake, Morae, vol. i. p. 30; Ross, Reins im Peloponnes, p. 179; Curtius, Ptolomaeus, vol. ii. p. 264.)

Oeum ceramics. (Attica, p. 326, &c.)

Oeum Dicilegium. (Attica, p. 330, &c.)

Ogdaem. (Marmarica.)

Ogala, a small island in the Tyrrhenian or Ligurian sea, between Corsica and the coast of Etruria. (Düm. iii. 6. s. 12.) It is now called Monte Cristo. (It. lib. iv.)

Ogyria (Ogygien) is the name given by Homer in the Odyssey to the island inhabited by the nymph Calypso. He describes it as the central point of navigable of the sea (Met. vii. 148, &c.) Ogyri is the name of the island supposed to have derived its name. It was probably necessary to observe that the Homeric geography in regard to all these distant lands must be considered as altogether fabulous, and that it is impossible to attach any value to the distances above given. We are wholly at a loss to account for the localities assigned by the Greeks in later days to the scenes of the Odyssey; and it is certain that nothing can less accord with the data (such as they are) supplied by Homer than the identifications they adopted. Thus the Island of Calypso was by many fixed on the coast of Bruttium, near the Lachian promontory. There was nothing in the description to give the name of the island as one of beauty and size, and close to the shore. (Plio. i. 10. 15; Swinburne's Travels, vol. i. p. 225.) Others, again, placed the abode of the goddess in the island of Gaulos (or Coza), an opinion apparently first advanced by Callimachus. (Strab. i. p. 44, vii. p. 299.), and which has at least some semblance of probability. But the identification of Phaeacia with Corcyra, though more generally adopted in antiquity, has really no more foundation than that of Ogyria with Gaulos; so that the only thing approaching to a geographical statement falls on examination. It is indeed only the natural desire to give to the creations of poetic fancy a local habitation and tangible reality, that could ever have led to the associating the scenes in the Odyssey with particular spots in Sicily and Italy; and the view of Eratosthenes, that the geography of the voyage of Ulysses was wholly the creation of the poet's fancy, is certainly the only one tenable. At the same time it cannot be denied that some of the fables there related were founded on vague rumours brought by voyagers, probably Phoenicians, from these distant lands. Thus the account of Scylla and Charybdis, however exaggerated, was probably the result of the view of the marble group, far west, and the tales concerning them, in itself excludes the idea that there was any accurate geographical knowledge of them. The ancients themselves were at variance as to whether the wanderings of Ulysses took place within the limits of the Mediterranean, or were extended to the ocean beyond. (Strab. i. pp. 22—26.) The fact, in all probability, is that Homer had no conception of the distinction between the two. It is at least very doubtful whether he was acquainted even with the existence of Italy; and the whole expanse of the sea beyond it was undoubtedly to him a region of mystery and fable. The very fact of these marvels of the far west, and the tales concerning them, in itself excludes the idea that there was any accurate geographical knowledge of them. The ancients themselves were at variance as to whether the wanderings of Ulysses took place within the limits of the Mediterranean, or were extended to the ocean beyond. (Strab. i. pp. 22—26.) The fact, in all probability, is that Homer had no conception of the distinction between the two. It is at least very doubtful whether he was acquainted even with the existence of Italy; and the whole expanse of the sea beyond it was undoubtedly to him a region of mystery and fable. The very fact of these marvels of the far west, and the tales concerning them, in itself excludes the idea that there was any accurate geographical knowledge of them.
states that he obtained this story from Nearchus and Orthogoras (or Pythagoras), who learnt it from Mithropastes, the son of a Phrygian satrap, to whom he had given a passage in his fleet to Persia. The same name is given to the island in many other geographers (as in M. iii. 8. § 6; Dionys. Per. 607; Plin. vi. 28. s. 32; Plsicin, Perig. 606). The other editions of Strabo read Τηφηνη and Τηφηνη, possibly a corruption of Πενυρι or Πενυρι,—the form which Vossius (in Melan. L. c.) has adopted. The account, however, preserved in Arrian's Voyage of Nearchus (Indic. 37), differs much from the above. According to him, the fleet sailing westward passed a desert and rocky island called Organa; and, 300 stadia beyond it, came to anchor beside another island called Oraeca: that where the tomb of Erythras was said to exist, and the fleet obtained the aid of Mazene, the chief of the island, who volunteered to accompany it, and piloted it to Sosa. It seems generally admitted, that the Organa of Arrian and Ptolemy (vi. 7. § 46, who, placing it along the Arabian coast, has evidently adopted the distances of Strabo) is the modern Hormuz, which bears also the name of Gerun, or Jerun. Vincent, however, thinks that it is the modern Arak, or L'Arak. (Voy. Nearchus, i. p. 348.) The distance in Strabo is perhaps, confounded with the distance the fleet had sailed along the coast of Carmania. Again Nearchus places the tomb of Erythras, not in Organa, but in Oraeca; and Acatharchides mentions that the land this king reigned over was very fertile, which applies to the latter, and not to the former. (Agatharch. p. 2, ed. Hudson.) The same is true of what Pliny states of its size (L. c). Curtius, without mentioning its name, evidently alludes to Ogyris (Orymuz), which he places close to the continent (x. 2), while the Geographer of Ravenna has preserved a remembrance of all the places under the head of "Colfo Persico," in which he places "Ogiri, Oracia, Durscandia, Rachos, Orgina" Oraeca is called in Strabo (L. c) Δωροκετη; in Pliny, Oracia (vi. 28. s. 98); in Ptolemy, Ορυμος (v. 8. § 15). The ancient name is said to be Orym, or Oracta; and it also derivates the name of Kioshmi from the quantity of grapes now found on it. Edrisi calls Jezirah-taleh, the old long island (l. p. 364; cf. also Weisell's Travel, vol. i. p. 62). The whole of this complicated piece of geography has been fully examined by Vincent, Voy. of Nearchus, vol. i. p. 348, &c.; Ritter, vol. xii. p. 435. [IV.]

OISPORIS (Οισπορω, Plut. iv. 3. § 14; Opinns, Pent. Tab.; Ευπορος, Stephanus, § 86), a town of the Greater Syria, which Barth (Vanderwagen, pp. 368, 378) identifies with Limmn Nois, where there is a sandy bay into which ships may sail, on their backs, with almost all winds, for water, at three wells, situated near the beach. (Seechey, Expedit. to N. Coast of Africa, p. 173.) The tower, of which the Coast-describer speaks, must be the ruins at Rais Eski, to the E. of Noain. [E. B. J.]

OLASA (Ολάσα), 1. A town in Cilicia Aspera, at the foot of Mount Taurus, on a tributary of the Calycadnus. (Plut. v. 8. § 6.) Col. Leake (Asia Minor, p. 320) identifies the town of Olassa with the Olba mentioned by Strabo (xiv. p. 673); while in another passage (p. 117), he conjectures that Olba, on a later map, has changed its name into Claudium-opolis, with which accordingly he is inclined to identify it. The former supposition is possible, but not the latter, for Strabo places Olba in the interior of Cilicia, between the rivers Laurus and Cydymus, that is, in the mountainous districts of the Taurus. According to tradition, Olba had been built by Ajax, the son of Tencor; it contained a temple of Zeus, whose priest once offended Estrabos (Strab. L. c.) In later times it was regarded as belonging to Isauria, and was the seat of a bishop. (Hieroc. p. 709; Basil, Vit. Theclae, ii. 8.) We still possess coins of two of those priestly princes, Polyemon and Ajax. (Eckehel, Doct. Num. vol. iii. p. 26, &c.) It should be observed that Stephanus Byz. (s. v. Ολάσια) calls Olassa or Olba Olbia.

2. A town in the Lycaenian district Antiochiana, in the western part of Cilicia. (Ptol. v. 6. § 17; Hieroc. p. 709.)

3. A town in the northern part of Pisidia, between Pednelisius and Seide. (Ptol. v. 5. § 8; Hieroc. p. 680.)

OLBE. [OLBASA, No. 1.]

OLBIA (Ολβία, Strab. iv. p. 200, vii. p. 206; Sceyn. 806; Ptol. iii. 5. § 28; Arrian, Pers. p. 20; Anon. Pers. p. 8; Meil. ii. § 6; Jornand. R. Get. 5; with the affix Olbia, Ωλβία, Anon. i. c.; on coins in the Ionic form always 'Ολβία.) Pliny (iv. 26) says that it was formerly called OLBIOPOLIS, and MILETOLIPS; the former of these names does not occur elsewhere, and is derived probably from the ethnic name OLBIOPOLITAE (Ολβιοπόλιται, Heral. iv. 18; Suid. s. v. Orbeburos), which appears on coins as late as the date of Caracalla and Alexander Severus. (Kohler, Mem. de l'Acad. de St. Peterb. vol. xiv. p. 106; Blaramberg, Choix des Méd. Antiques d'Olbipolis ou d'Olbia, Paris, 1822; Monnet, Descr. des Méd. vol. i. p. 349.) Although the inhabitants always called their city Olbia, strangers were in the habit of calling it by the name of the chief river of Scythia, BORYSTHINES (Βορυσθηνές, Boposthes), and the people BORYSTHENTAI (Βορυσθηνείται, Herod. L. c.; Dion Chrys. Ost. xxvi. vol. ii. p. 74; Lucian, Toxar. 61; Menand. ap. Schol. ad Pindar. Apollon. iv. 110; Apollod. i. 311; Pomp. ap. Steph. B. ii. 31, 89; Anc. Marc. xxii. 8 § 40; Macrobr. Not. i. 10.) A Greco-Hellen colony in Scythia, on the bank of the Hypanis, 240 stadia (Anon. L. c.; 200 stadia, Strab. p. 200; 15 M. P., Plin. L. c.) from its mouth, the ruins of which are now found at a place on the W. bank of the Bug, called Stonemigli, not far from the village Rainsboeke, about 12 Eng. miles below Nicholson. This important settlement, which was situated among the Scythian tribes of the Callipidae and Alazones, owed its origin to the Illyric Milesians in B. c. 653. (Anon. Peripl. L. c.; Esseb. Chron.) At an early period it became a point of the highest importance for the inland trade, which, issuing from thence, was carried on in an easterly and northerly direction as far as Central Asia. It was visited by Herodotus (iv. 17, 18, 53, 78), who obtained his valuable information about Scythia from the Greek traders of Olbia. From the important series of inscriptions in Böckli's collection (Böckli, 2098—2096), it appears that this city, although at times dependent upon the Scythian or Sarmatian princes, enjoyed the privileges of a free government, with institutions framed upon the Illyric model. Among its eminent names occur those of Novidus (Novidus, s. v.), a sophist and historian, and Siclaurus the stoic, a disciple of Zeno of Citium. (Plut. Chron. 2.) There has been much controversy as to the date of the famous inscription (Böckli, No. 2638)

H. 4
which records the exploits of Pradogenes, who, in the extreme distress of his native city, added it both with his purse and person. This inscription, apparently belonging to the period B.C. 218-201, mentions the Galatians and Sciri (perhaps the same as those who are afterwards found united with the Hurni and Rungi) as the worst enemies of Olbia, a clear proof that in the third century B.C. Celtic tribes had penetrated as far as to the E. as the Barythenes. Dion Chloridostom (Orat. xxxvi. p. 76), who came to Olbia when he escaped from Damiatis's edict, relates how it had been destroyed by the Goths about 150 years before the date of his arrival, or about B.C. 462, but had been restored by the old inhabitants. From the inscriptions it appears that Augustus and Tiberius conferred favours on a certain Ambrog of Olbia (No. 2060), who, in gratitude, erected a portrait in their honour (No. 2057), while Antoninus Pius assisted them against the Tauro-Skythians. (Jul. Capit. Anton. 9.) The citizens erected statues to Caruncula and Geta (No. 2091). The city was in all probability destroyed in the wars against the Goths A.D. 250, as the name does not occur henceforth in history. For coins of Olbia, besides the works already quoted, see Eckel, vol. ii. p. 3. (Pallas, Reise, vol. ii. p. 507; Clarke, Trav. vol. ii. p. 351; Muravieh Apostol. Reise, p. 27; Bichli, Inschr. vol. ii. pp. 86-89; Nebelh., Reine Schrift, p. 352; Schafarik, Star. Alt. vol. i. p. 397; Creuter, Heidelberg. Jahrbiich, 1822, p. 1253; Bahr, Excurs. ad Herod. iv. 18.) [E. B. J.]

OLBIA.

Olbia (Olaia: Eth. Olaies, Olibienses; Terranova), one of the most considerable cities of Sardinia, situated on the E. coast of the island not far from its NE. extremity, in the innermost recess or bight of a deep bay now called the Golfo di Terranova. According to Pausanias it was one of the most ancient cities in the island, having been founded by the colonists of Thapsus under Idajus, the companion of Hercules, with whom were associated a body of Athenians, who founded a separate city, which they named Ogyrie. (Paus. x. 17: § 5; Dial. iv. 29; Solin. 1: § 61.) The name of Olbia certainly seems to indicate that the city was of Greek origin; but, with the exception of this mythical legend, we have no accounts of its foundation. After the Roman conquest of the island it became one of the most important towns in Sardinia; and from its proximity to Italy and its opportune port, became the ordinary point of communication with the island, and the place where the Roman governors and others who visited Sardinia usually landed. (Cic. ad Q. Fr. ii. 3: § 7, 6 § 7.) In the First Punic War it was the scene of a naval engagement between the consuls Cornelius and a Carthaginian fleet, which had taken refuge in its spacious port; but was attacked and defeated there by Cornelius, who followed up his advantage by taking the city, B.C. 219. (Zonar. viii. 11; Flor. ii. 2: § 16; Val. Max. vi. 1: § 2.) In the Second Punic War (B.C. 210) its territory was covered by a Carthaginian fleet. (Liv. xxvii. 6.) Under the reign of Hannibal, Olbia is still mentioned by Claudian as one of the principal sea-ports of Sardinia; and the itineraries give more than one line of road proceeding from thence towards different parts of the island. (Claudian, B. Gild. 519; Itin. Ant. pp. 79, 80, 82.) The name is there written Ulibia; in the middle ages it came to be known as Cieiba, and obtained its modern appellation of Terranova from the Spaniards.

Poeleny distinguishes the port of Olbia (Olaia lambda, iii. 3: § 4) from the city itself: he probably applies this name to the whole of the spacious bay or inlet now known as the Gulf of Terranova, and the position given is that of the entrance.

[B. E. B.]

OLIBA (Olaia: Eth. Olaies, Olibienses, and Olaivasis). Stephanus (s. v. "Olia"") speaks of one city of this name as a Ligurian city, by which he means the Olbia on the Ligurian coast of Gallia; for the name Olbia appears to be Greek. Vida (ii. 5.), who proceeds from east to west in enumerating the cities on the Mediterranean coast of Gallia, places Olbia between Forum Julii (Frejus) and Massilia (Marseilles). The order of place is this: Forum Julii, Atholophia, Olbia, Tauris, Citharisthes, Massilia. Strabo (iv. p. 184.), who proceeds from west to east in his enumeration of the cities of this coast, mentions Massilia, Taurontium, Olbia, and Antipolis, and Nicea. He adds that the port of Augustus, which they call Forum Julii, is between Olbia and Antipolis (Antibes). The Massaliots built Olbia, with the other places on this coast, as a defence against the Salyes and the Ligures of the Alps. (Strab. p. 186.) Pline (Hist. Nat. x. 10: § 8) estimates the distance between the promontory Citharistes (Cap Ciciei) and the mouth of the river Argentae (Argentea), west of Frejus. There is nothing that fixes the site of Olbia with precision; and we must accept D'Anville's conjecture that Olbia was at a place now called Eoube, between Cap Combe and Briegnion. Forbiger accepts the conjecture that Olbia was at St. Tropez, which he supports by saying that Strabo places Olbia 600 stadia from Massilia; but Strabo places Forum Julii 600 stadia from Massilia. [G. L.]

OLIBA (Olia). 1. A town in Bithynia, on the bay called, after it, the Sinus Olibanus (commonly Sinus Astacenni), in all probability only another name for Astacus [Astavta]. Piloy (v. 43) is probably mistaken in saying that Olbia was the ancient name for Nicea in Bithynia; he seems to confound Nicea with Astacus.

2. The westernmost town on the coast of Pamphylia. (Strab. xiv. pp. 666, foll.; Plin. v. 26.) Ptolemy (v. 5: § 2.), consistently with this description, places it between Piusilis and Attaleia. Stephanus B. (s. v.) blames Philo for ascribing this town to Pamphylia, since, as he asserts, it was situated in the territory of the Solymoi, and its real name was Olia; but the critic is here himself at fault, confounding Olbia with the Pisdian Olba. Strabo describes our Olbia as a strong fortress, and its inhabitants colonised the Lycian town of Cydrena.

3. A town of Cilicia, mentioned only by Stephanus Byx. (s. v.), who may possibly have been thinking of the Cilician Olba or Olba.

OLIBA. [Olba.]

OLIBANUS SINUS (Olibanos kéfanos), only another name for the Sinus Astacenni, the town of Olba being also called Astacus. (Synax. p. 35; comp. Astacus, and Olba; No. 1.) [L. S.]
OLCADES. (Oλακάδες), a people of Hispania Baetica, dwelling N. of Carthago Nova, on the upper course of the Anas, and in the E. part of the territory occupied at a later date by the Oretani. They are mentioned only in the wars of the Carthaginians with the Iberians, and after that period vanished entirely from history. Hauniul during his wars in Italy transplanted a colony of them into Africa. Their chief town was Althaac. (Polyb. iii. 14. 23. and 13. 5; Liv. xxii. 5; Steph. B. s. v.; Suidas, s. v.)

T.H.D.

OLCIronymium (Ολκίσηνωμ, Polyb. ii. 17. § 3; Olichium, Plin. iii. 26: Etli. Olcinaiates), a town of some importance in Illyricum, which surrendered to the Romans at the commencement of hostilities with Gentius, and which, in consequence, received the privilege of freedom and immunity from taxation. (Liv. xiv. 26.) Dubigny or Ulikin, as it still called, is identified with this town. (Huhn, Albasianische Studien, p. 262.) [E. B. J.]

OLAEARUS. [Oλαιαρός.]

OLEASTRUM (Ολεαστρος, Polyb. ii. 4. § 14). 1. A town in Hispania Baetica, in the jurisdiction of Gades, with a grove of the same name near it. (Mela, iii. 1. § 4; Plin. iii. i. s. 3.)

2. A town of the Costeani in Hispania Tarraconensis, on the road from Dertosa to Tarraco (Mura. Antiq. iii. 299). Probably the same town mentioned by Strabo (iii. p. 159), but erroneously placed by him near Saguntum. It seems also to have given name to the lead mentioned by Pliny (xxxiv. 17. s. 9). Variously identified with Balanuqer, Miramur, and S. Lucar de Barrameda (Marco, Hisp. ii. 11. p. 142.) [T. H. D.]

OLEASTRUM PROM. (Ολεαστρος, Polyb. iv. 1. § 6), a promontory of Macraetania, between Rassarid and Abyla, called in the Antonine Itinerary, Barnari Prom. now Punta di Mazara, in the height of Tithoen, or Tettion. [E. B. J.]

OLENACUM, a fortress in the N. of Britannia Romana, and the station of the Ala Prima Hercules. (Not. Prov.) It lay close to the Picis' wall, and Camden thinks (p. 1022) that it occupied the site of Lusart Castle in the barony of Crosby, not far from Carlisle. Horsey, however (p. 112) takes it to be Old Carlisle near Wigton, where there are some conspicuous Roman remains. [T. H. D.]

OLENUS (Ολένος), a town in Galatia, in the west of Ancyra, and belonging to the territory of the Tectosages, is mentioned only by Polyen (v. 4. § 8). [L. S.]

OLENUS (Ολένος: Eth. Αλένοες). 1. An ancient town in the S. of Aetolia, between the Acheulon and the Evenus, was named after a son of Zeus or Hephastes, and is mentioned in the Homeric catalogue. It was situated near New Pleuron, at the foot of Mount Araeasbuthus; but its exact site is uncertain. It is said to have been destroyed by the Aeolians; and there were only a few traces of it in the time of Strabo. (Strab. x. pp. 451, 460; Hom. ii. 638; Apollod. i. s. 4; Hyg. Poet. Astron. 2, § 13; Stat. Theb. iv. 104; Steph. B. s. v.) The Roman poets use Olenus as equivalent to Aetolian; thus Tydones of Calydon in Achilles is called Olenus Tydonis. (Stat. Theb. i. 402.)

2. A town of Achaia, and originally one of the 12 Achaean cities, was situated on the coast, and on the left bank of the river Peiras (Piæas), and Eurytania (Tepias). (Paus. vi. 22, § 11; Ptol. iv. 6, Olcnum; Leake, Morea, vol. ii. p. 157, Peloponnesiaca, p. 208; Thrirlwall, Hist. of Greece, vol. viii. p. 82.)

OLEHUS (Ολόχοος, Xenien, ap. Steph. B. s. v.; Eth. Ολόχοοες, Böckl. Inscrip. vol. ii. 255; Eustath. ad ii. ii. p. 664), a town of Crete, situated on a small promontory, with a hill, and a temple to Athena. In the struggle between Caunus and Lyctus, the people of Olenus sided with the latter. (Polyb. iv. 53, where the reading Ολόχοοος appears to be a mistake.) In the Descrizione dell' Isola di Candia, a. d. 1538 (ap. Mus. Class. Antiq. vol. ii. p. 271), the site is occupied by a place called Castel Messelarena. (Hick, Areta, vol. i. pp. 17, 424.) [E. B. J.]

OLGASSYS (Ολγασσος), a lofty and inaccessible mountain on the frontiers of Phalagmonia and Galatia, extending from the Halys in a south-western direction towards the Sangarius, and containing the ruins of the cities of the Phalagmonians. The surrounding country was filled with temples erected by the Phalagmonians. (Strab. xii. p. 562.) The mountain is mentioned by Ptolemy (v. 4. § 4) under the name of Ligas, Gigas, or Oliggs, is probably the same as the Olgassys of Strabo. It still bears its ancient name in the corrupt form of Ulygus, and modern travellers state that some parts of the mountain are covered with snow nearly all the year. [L S.]

OLIARUS (Ολιαρος, Olearus, Plin., Virg.: Eth. Ολιαρος: Antiparos), an island in the Aegean sea, one of the Cyclades, said by Heracleides to have been colonised by the Sidonians and to be 38 stadia from Paros. (Heracleid. ap. Steph. B. s. v.; Strab. x. p. 485; Plin. iv. 12. s. 22; Verr. Aem. iii. 126.) It possesses a celebrated subterranean cavern, which has been described by several modern travellers. (Tournouef, Voyage, gc. vol. i. p. 146, seq. Eng. transl.; Leake, Northern Greece, vol. iii. p. 87, seq.; Fiedler, Reise durch Griechenland, vol. ii. p. 191, seq.)

OLIABA (Ολιαβα, Polyb. ii. 6. § 55), a town of the Bernones in the N. of Hispania Tarraconensis. Ukrct (vol. ii. pt. 1. p. 458) takes it to be the same town as Oliva in Iberia, mentioned by Steph. B. [T. H. D.]

OLICANA (Ολικανα, Polyb. ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana; according to Camden (p. 867), Ikley, on the river Wharf in Yorkshire. [T. H. D.]

OLIGYETUS (Ολιγγετος, Polyb. iv. 11. 70; Ολιγγετος, Plut. Chron. 26), a mountain and fortress situated in a pass between Stymphalus and Caphyae. Leake places it on a small advanced height of Mt. Skipezi, projecting into the Stymphalian plain, on the crest of which are the foundations of a Helencian wall, formed of large quadrangular stones. (Leake, Morea, vol. iii. p. 114; Bollaye, Recherches, gc. p. 154; Curtius, Piloponnesiaca, vol. i. p. 217.)

OLINA. [GALLAECA, p. 934, b.]

OLINAS (Ολινα ποτομου Ιππολατι). Ptolemy (ii. 8. c. 2) places the mouth of the Olinas river on the coast of Celtogalatia Lugudunensis in the country of the Veneti or Unceli; and the next place which
OLINTIGI, a maritime town of Hispания Baetica, lying E. of Osuna. (Mela, iii. 1, § 4.) Its real name seems to have been Olintigias, as many coins are found in the neighborhood bearing the inscription OLINTI G. (Flavius, Med. ii. pp. 495, 509, iii. p. 103; Monet, Sup. i. p. 111, ap. Ukert, vol. ii. pt. 1. p. 340.) Variously identified with Moguer and Palos. [T. H. D.]

OLISISO (Ολίσισσος, Vol. ii. 5, § 4), a city of Lusitania, on the right bank of the Tagus, and not far from its mouth. The name is variously written. Thus Pliny (iv. 35) has Olissippa; so also the Itin. Ant. pp. 416, 418, seq. In Mela (iii. 1. § 6), Solinus (c. 23), &c., we find Ulysppa, on account probably of the legend mentioned in Strabo, which ascribed its foundation to Ulysses, but which is more correctly referred to Odysseia in Hispания Baetica. [ΟΔΥΣΕΙΑ.] Under the Romans it was a municipium, with the additional name of Felicitas Julia. (Plin. i. c.) The neighbourhood of Olissipo was celebrated for a breed of horses of remarkable fleetness, which gave rise to the fact that the naves were impregnated by the west wind. (Plin. viii. 67; Var. R. R. ii. 19; Vol. vi. 27.) It is the modern Lisboa or Lisbon.

OLYMPIA (Ολυμπία, Euth. Ολυμπία), an ancient town of Magnesia in Thessaly, mentioned by Homer, who gives it the epithet of "v. argoll." (Hom. Il. ii. 717.) It possessed a harbour (Συλαξ, p. 25); and as it was opposite Artemision in Euboea (Plut. Them. 8), it was placed by Leuke on the isthmus connecting the peninsula of Trikkhiri with the rest of Magnesia. (Strab. ix. p. 436; Plin. iv. 9. s. 16; Steph. B. s. v.; Leuke, Northern Greece, vol. iv. p. 384.)

OLIUS (Ολιος), a river of Cisalpine Gaul, and one of the more considerable of the northern tributaries of the Tiber. It rises in the Alps near the foot of the Cisalpine Cottian Alps, flows through the Val Camonica (the district of the ancient Camunni), and forms the extensive lake called by Pliny the Lacus Scenius, now the Lago d'Iseo. From thence it has a course of about 80 miles to the Padus, receiving on its way the tributary streams of the Mela or Mella, and the Chiusian or Chiasso. Though one of the most important rivers of this part of Italy, its name is mentioned only by Pliny and the Geographer of Ravenna. (Plin. iii. 16. s. 20, 19. s. 23; Geogr. Rev. iv. 36.) [E. H. B.]

OLMELIS. [Ολμελης, Vol. i. p. 413, a.]

OLMIANAE. [Ολμιαναι, Vol. i. p. 685, a.]

OLMONES (Ολμονες; Euth. Ολμονες), a village in Boeotia, situated 22 stadia to the left of Copae, and 7 stadia from Hyettus. It derived its name from Olmus, the son of Siecplus, but contained nothing worthy of notice in the time of Pausanias. Forchhammer places Olmones in the small island in the lake Copae, SW. of Copae, now called Treto-Yani. [See the Map, Vol. i. p. 411, where the island lies SW. of No. 16.] (Paus. ix. 24. § 3; Steph. B. s. v.; Forchhammer, Βοιωτία, p. 178.)

OLYSTHENES.

OLYSÆRUS (Ολυσαρευς, Plat. Aen. Paul. 20), a mountain near Pydna, in Macedonia, represented by the last falls of the heights between Apia and Elefsinæo-horia. (Leake, Northern Greece, vol. iii. p. 433.)

OLYSOSSON (Ολυσσόσων: Euth. Ολυσσόσων), a town of Perylaeum in Thessaly, mentioned by Homer, who gives to it the epithet of "white," from its white argillaceous soil. In Preponias the name occurs in the corrupt form of Loxysus. It now called Elassona, and is a place of some importance. It is situated on the edge of a plain near Thermæ, and at the foot of a hill, on which there is a large ancient monastery, defended on either side by a deep ravine. The ancient town, or at least the citadel, stood upon this hill, and there are a few fragments of ancient walls, and some foundations behind and around the monastery. (Hom. ii. ii. 739; Strab. ix. p. 440; Lycephr. 905; Steph. B. s. v.; Procop. de Aedif. iv. 14; Leake, Northern Greece, vol. iii. p. 345.)

OLYPHYSUS (Ολυφύς, Herod. vii. 22; Thuc. iv. 109; Syl. p. 27; Strab. vii. p. 331; Steph. B.), a town on the peninsula of Akté, the site of which is probably represented by the Arsenali of Khilamdris, the tenth and last monastery of the E. shore of the Monte Santo. It is reported that here there were Helenic remains found, in particular those of a mole, part of which is now left. (Leake, Northern Greece, vol. iii. pp. 141, 151.) [E. B. J.]

OLIÆ (Ολιαί; Euth. Ολίαι). 1. A fortress on the Ambrian gulf, in the territory of Argos Amphipoleichum. (See Vol. i. pp. 207, 208.) 2. A fortress of the Lucii Oliace, the position of which is uncertain. (Thuc. iii. 101.)

OLIS. Dr. Daleis proposed, and D'Anville adopts his opinion, that we ought to read Otilis instead of Clitis in the verse of Sidonius Apollinaris (Prop. 30):—

"Clitis, Elaris, Atax, Vacaliss." D'Aville observes that the same river is named Otilis in a poem of Theodulf of Orleans. Accordingly the river ought to be named Olt or L' Olt; but usage has attached the article to the name, and we now speak of Le Lot, and so use the article twice. The Lot rises near Mont Louvière on the Cévennes, and has a long and west course until it joins another river called the Garonne. It joins the Garonne a few miles below Agen, which is on the Garonne. [G. L.]

OLURIS. [Dorium.]

OLUTUS. [Πελενές.]

OLUS (Ολος, Syl. p. 19; Xenian, ap. Steph. B. s. v.; Vol. iii. 17. § 5; al. Ολώς; Stad. iii. 350; Euth. Ολοστίπα, Ολότιπα), a town of Crete, the citizens of which had entered into a treaty with those of Lato. (Boëth., Insocr. vol. ii. No. 2534.) There was a temple to Britomartis in this city, a wooden statue of whom was erected by Daedalus, the mythical ancestor of the Daedalides, and father of Cretan art. (Pausan. ix. 40. § 3.) Her effigy is represented on the coins of Olus. (Eckehl, vol. ii. p. 316; Monet, Descr. vol. ii. p. 289; Conbe, Mus. Hunter.) There is considerable difficulty in making out the position of this town; but the site may probably be represented by Albicathia near Syrha Linga, where there are ruins. Mr. Pasheley's map erroneously identifies these with Naxos. (Comp. Hock, Kreut. vol. i. p. 417.) [E. B. J.]

OLYMPENE (Ολυμπανη), a district of Myia, on the northern slope of Mount Olympus, from which
OLYMPIA.

The plain of Olympia is open towards the sea on the west, but is surrounded on every other side by hills of no great height, yet in many places abrupt and precipitous. Their surface presents a series of sandy cliffs of light yellow colour, covered with the pine, ilex, and other evergreens. On entering the valley from the west, the most conspicuous object is a bold and nearly insular eminence rising on the north from the level plain in the form of an irregular cone. (More, vol. ii. p. 281.) This is Mount Cronius, or the hill of Cronus, which is frequently noticed by Pindar and other ancient writers. (Pind. Ol. i. 111: πάχυς Κρόνου, Ολ. ι. 49; Αλπείος πάρα Ελπίδως Κρώνου, Ολ. ι. 64: Κρώνος παρ’ αὐτόν διόγην, Λυκοφρ. 42; Κρώνας, Xen. Hell. vii. 4. § 14: τὸ δρόσον τὸ Κρόνος, Paus. v. 21. § 2, vi. 19. § 1, vi. 29. § 1; Ptol. iii. 16. § 14.) The range of hills to which it belongs is called by modern writers the Olympia, on the authority of a passage of Xenophon. (Hell. viii. 4. § 14.) Leake, however, supposes that the Olympia hill alluded to in this passage was no other than Cronius itself; but it would appear, that the common opinion is correct, since Strabo (viii. p. 356) describes Pisa as lying between the two mountains Olympus and Ossa. The hills, which bound the plain on the south, are higher than the Cretan ridge, and, like the latter, are covered with evergreens, with the exception of one bare summit, distant about half a mile from the Alpheus. This was the ancient Typaeus (Τυπαῖος), from which women, who frequented the Olympic games, or crossed the river on forbidden days, were compelled to be huddled headlong. (Paus. v. 6. § 7.) Another range of hills closes the vale of Olympia to the east, at the foot of which runs the rivulet of Mirisara. On the west the vale was bounded by the Cladeus (Κλάδηος), which flowed from north to south along the side of the sacred grove, and fell into the Alpheus. (Paus. v. 7. § 1; Κλάδηος, Xen. Hell. vii. 4. § 29.) This river rises at Lada in Mount Pheos. The Alpheus, which flows along the southern edge of the plain, constantly changes its course, and has buried beneath the new alluvial plain, or carried into the river, all the remains of buildings and monuments which stood in the southern part of the Sacred Grove. In winter the Alpheus is full, rapid, and turbid; in summer it is scanty, and divided into several torrents flowing between islands or sand-banks on either side of the bed. The present Sacred Grove is now called Anthedon (i.e. opposite to Lada), and is uninhabited. The soil is naturally rich, but swampy in part, owing to the inundations of the river. Of the numerous buildings and countless statues, which once covered this sacred spot, the only remains are those of the temple of Zeus Olympius. Pausanias has devoted nearly two books, and one fifth of his whole work, to the description of Olympia; but he does not enumerate the buildings in their exact topographical order: owing to this circumstance, and the number of ancient remains, and to the changes in the surface of the soil by the fluctuations in the course of the Alpheus, the topography of the plain must be a great extent conjectural. The latest and most able attempt to elucidate this subject, is that of Colonel Leake in his Peloponnesiacs, whose description is here chiefly followed.

Olympia lay partly within and partly outside of the Sacred Grove. This Sacred Grove bore from the most ancient times the name of Altis (ἡ Ἀλτίς), which is the Peloponnesian Acetic form of Ἀλέως (Paus. v. 10. § 1.) It was adorned with trees, and in its centre there was a grove of planes. (Paus. v. 27. § 11.) Pindar likewise describes it as well wooded (Παῦσας εὐθυδιαν ἐν' Ἀλέως Ἀλέως, Ol. viii. 12.) The space of the Altis was measured out by Hereules, and was surrounded by this hero with a wall. (Pind. Ol. xi. 44.) On the west it ran along the Cladeus; on the south its direction may be traced by a terrace raised above the Alpheus; on the east it was bounded by the stadium. There were several gates in the wall, but the principal one, through which all the processions passed, was situated in the middle of the western side, and was called the Pompic Entrance (ἡ Πομπικ Ἀλεως, Paus. v. 15. § 2). From this gate, a road, called the Pompic Way, ran across the Altis, and entered the stadium by a gateway on the eastern side.

1. The Olympicum, Olymposium, or temple of Zeus Olympius. An oracle of the Olympic god existed on this spot from the most ancient times (Strab. viii. p. 353), and here a temple was doubtless built, even before the Olympic games became a Pan-Hellenic festival. But after the conquest of Pisa and the surrounding cities by the Eleians in B.C. 572, the latter determined to devote the spoils of the conquered cities to the erection of a new and more splendid temple of the Olympic god. (Paus. v. 10, §§ 2, 3.) The architect was Libon of Elis. The temple was not, however, finished till nearly a century afterwards, at the period when the Attic school of art was supreme in Greece, and the Parthenon on the Athenian Acropolis had thrown into the shade all previous works of art. Shortly after the dedication of the Parthenon, the Eleians invited Pheidias and his school of artists to remove to Elis, and adorn the Olympic temple in a manner worthy of the king of the gods. Pheidias probably remained at Olympia for four or five years from about 437 to 434 or 433. The colossal statue of Zeus in the cela, and the figures in the pediments of the temple were executed by Pheidias and his associates. The pictorial embellishments were the work of his relative Panaceus. (Strab. viii. p. 334) [Comp. Dict. of Biogr. Vol. Ill. p. 248.] Pausanias gives a minute description of the temple (v. 10); and its site, plan, and dimensions have been well ascertained by the excavations of the French Commission of the Morea. The foundations are now exposed to view: and a few fine fragments of the sculptures, representing the labours of Hercules, are now in the museum of the Louvre. The temple stood in the south-western portion of the Altis, to the right hand of the Pompic entrance. It was built of the native limestone, which Pausanias called pones, and

Digitized by Microsoft®
which was covered in the more finished parts by a surface of stucco, which gave it the appearance of marble. It was of the Doric order, and a peripteral hexastyle building. Accordingly it had six columns in the front and thirteen on the sides. The columns were fluted, and 7ft. 4in. in diameter, a size greater than that of any other existing columns of a Grecian temple. The length of the temple was 230 Greek feet, the breadth 93, the height to the summit of the pediment 68. The roof was covered with slabs of Pentelic marble in the form of tiles: At each end of the pediment stood a gilded vase, and on the apex a gilded statue of Nike or Victory; below which was a golden shield with the head of Medusa in the middle, dedicated by the Laconians on account of their victory over the Athenians at Tanagra in B.C. 457. The two pediments were filled with figures. The eastern pediment had a statue of Zeus in the centre, with Oceanus on his right and Pelops on his left, prepared to contend in the chariot-race; the figures on either side consisted of their attendants, and in the angles were the two rivers, Chaeus to the right of Zeus, and Alpheus.

OLYMPIA.

476

OLYMPIA.

2. The Pelopium stood opposite the temple of Zeus, on the other side of the Pompic way. Its position is defined by Pausanias, who says that it stood to the right of the entrance into the temple of Zeus and to the north of that building. It was an enclosure, containing trees and statues, having an opening to the west. (Paus. v. 13. § 1.)

3. The Heraeum was the most important temple in the Altis after that of Zeus. It was also a Doric peripteral building. Its dimensions are unknown, Pausanias says (v. 16. § 1) that it was 63 feet in length; but this is clearly a mistake, since no peripteral building was so small; and the numerous statues in the cells, described by Pausanias, clearly show that it must have been of considerable dimensions. The two most remarkable monuments in the Heraeum were the table, on which were placed the garlands prepared for the victors in the Olympic contests, and the celebrated chest of Cypselus, covered with figures in relief, of which Pausanias has given an elaborate description (v. 17—19). We learn from a passage of Dion Chrysostom (Orat. xi. p. 163), cited by Leake, that this chest stood in the opisthodomus of the Heraeum; whence we may infer that the cells of the temple consisted of two apartments.

4. The Great Altar of Zeus is described by Pausanias as equidistant from the Pelopium and the Heraeum, and as being in front of these both.

5. The Column of Oceanus stood between the great altar and the temple of Zeus. It was said to have belonged to the house of Oceanus, and to have been the only part of the building which escaped when it was burnt by lightning. (Paus. v. 20. § 6.)

6. The Metron, or temple of the Mother of the Gods, was a large Doric building, situated within the Altis (Paus. v. 20. § 9). It is placed by Leake to the left of the Pompic Way near opposite the Heraeum.

7. The Prytaneion is placed by Pausanias within the Altis, near the Gymnasion, which was outside the sacred enclosure (v. 15. § 8).

8. The Bouleuterion, or Council-House, seems to have been near the Prytaneion. (Paus. v. 23. § 1, 24. § 1.)

9. The Philippeum, a circular building, erected by Philip after the battle of Chaeronia, was to the left in proceeding from the entrance of the Altis to the Prytaneion. (Paus. v. 17. § 4, v. 20. § 10.)
10. The Theecocleion, a building belonging to the superintendents of the sacrifices (Paus. v. 15. § 8). Its position is uncertain.

11. The Hippodaminion, named from Hippodameia, who was buried here, was within the Altis near the Pompic Way. (Paus. vi. 20. § 7.)

12. The temple of the Olympian Eileithyia (Lucina) appears to have stood on the neck of Mount Cronius. (Paus. vi. 20. § 2.)

13. The Temple of the Olympian Aphrodite was near that of Eileithyia. (Paus. vi. 20. § 6.)

14. The Theauri or Treasuries, ten in number, were, like those at Delphi, built by different cities, for the reception of their dedicatory offerings. They are described by Pausanias as standing to the north of the Heraeum at the foot of Mount Cronius, upon a platform made of the stone pores. (Paus. vi. 19. § 1.)

15. Zanes, statues of Zeus, erected from the produce of fines levied upon athletes, who had violated the regulations of the games. They stood upon a stone platform at the foot of Mount Cronius, to the left of a person going from the Metroon to the Stadium. (Paus. vi. 21. § 2.)

16. The Studio of Pheidias, which was outside the Altis, and near the Pompic entrance. (Paus. v. 15. § 1.)

17. The Leonidaeum, built by Leonidas, a native, was near the Studio of Pheidias. Here the Roman magistrates were lodged in the time of Pausanias (v. 15. §§ 1, 2).

18. The Gymnasium, also outside the Altis, and near the northern entrance into it. (Paus. vi. 21. § 2.) Near the Gymnasium was (19) the Palaeastre. 20 and 21. The Stadium and the Hippodrome were two of the most important sites at Olympia, as together they formed the place of exhibition for all the Olympic contests. Their position cannot be determined with certainty; but as they appear to have formed a continued area from the circular end of the Stadium to the further extremity of the Hippodrome, the position assigned to them by Leake is the most probable. He places the circular end of the Stadium at the foot of the heights to the NE. of the summit of Mount Cronius, and the further end of the Hippodrome on the bank of the Alpheius.

The Stadium is described by Pausanias as a mound of earth, upon which there was a seat for the Hellanodice, and over against it an altar of marble, on which sat the priestess of Demeter Chamyne to behold the games. There were two entrances into the Stadium, the Pompic and the Secret. The latter, through which the Hellanodice and the agnostae entered, was near the Zanes; the former probably entered the area in front of the rectilinear extremity of the Stadium. (Paus. vi. 20. § 8, seq.) In proceeding towards the Hippodrome from that part of the Stadium where the Hellanodice sat was the Hippophais or starting place of the horses (ἡ ἱππόφαι), in form it resembled the prow of a ship, the embolus or beak being turned towards the racecourse. Its widest part adjoined the stoa of Agnaptus. At the end of the embolus was a brazen dolphin standing upon a pillar. Either side of the Hippophais was more than 400 feet in length, and contained apartments, which those who were going to contest in the horse-races obtained by lot. Before the horses a cord was extended as a barrier. An altar was erected in the middle of the prow, on which was an eagle with outstretched wings. The superintendent of the race elevated this eagle by means of machinery, so as to be seen by all the spectators, and at the same time the dolphin fell to the ground. Thereupon the first barriers on either side, near the stoa of Agnaptus, were removed, and then the other barriers were withdrawn in like manner in succession, until all the horses were in line at the embolus.

One side of the Hippodrome was longer than the other, and was formed by a mound of earth. There was a passage through this side leading out of the Hippodrome; and near the passage was a kind of circular altar, called Taraxippus (Ταραξίππος), or the terrifier of horses, because the horses were frequently seized with terror in passing it, so that cha-

riots were broken. There was a similar object for frightening horses both at the Corinthian Isthmus and at Nemea, in consequence of which the difficulty of the race was increased. Beyond the Tarasippus were the terminal pillars, called στραταί, round which the chariots turned. On one of them stood a bronze statue of Hippodamus about to bind the tail to the neck of Poseidon after his victory. The other side of the Hippodromus was a natural height of no great elevation. On its extremity stood the temple of Demeter Chamyne. (Paus. vi. 20. § 15 —v. 21. § 1.) The course of the Hippodromus appears to have been two diani, or four stadia. (Δρόμον δέ εἰς τοιούτου μέγιστον κανόνα διοίκησεν, Paus. vi. 16. § 4.) Mure, indeed (vol. ii. p. 527), understands μέγιστον in this passage to refer to the length of the arena; but Leake (Pelopeonnaios, p. 94) maintains, with more probability, that it signifies the length of the circuit.

22. The Theatre is mentioned by Xenophon (Hell. vii. 4. § 31), but it does not occur in the description of Pausanias. A theatre existed also at the Isthmus and Delphi, and would have been equally useful at Olympia for musical contests. Xenophon could hardly have been mistaken as to the existence of a theatre at Olympia, as he resided more than 20 years at Scillus, which was only three miles from the former spot. It would therefore appear that between the time of Xenophon and Pausanias the theatre had disappeared, probably in consequence of the musical contests having been discontinued.

Besides the buildings already mentioned, there was a very large number of statues in every part of the Sacred Grove, many of which were made by the greatest masters of Grecian art, and of which Pausanias has given a minute description. According to the vague computation of Pliny (xxxiv. 7. s. 17) there were more than 3000 statues at Olympia. Most of these works were of brass, which accounts for their disappearance, as they were converted into objects of common utility upon the extinction of Paganism. The temples and other monuments at Olympia were, like many others in different parts of Greece, used as materials for modern buildings, more especially as quarries of stone are rare in the district of Elis. The chiefs of the powerful Albanian colony at Lalai had in particular long employed the ruins of Olympia for this purpose.

The present article is confined to the topography of Olympia. An account of the games and of everything connected with their celebration is given in the Dictionary of Antiquities.

(Stanhope, Olympia, Lond. 1824; Kranse, Olympia, 1838; Mure, Tour in Greece, vol. ii. p. 280, seq.; Leake, Pelopeonnaios, p. 4, seq.; Curtius, Pelopeonnaios, vol. ii. p. 51, seq.)

OLYMPUS (Ολυμπός). 1. One of the loftiest mountains in Greece, of which the southern side forms the boundary of Thessaly, while its northern base encloses the plains of Macedonia. Hence it is sometimes called a mountain of Macedonia (Strab. vii. p. 329; Ptol. iii. 15, § 19), and sometimes a mountain of Thessaly. (Heron. vii. 128; Plin. iv. 8. s. 15.) It forms the eastern extremity of the Capcomian range, and extends to the sea as far as the mouth of the Peneus, being separated by the vale of Tempi. On the base of Olympus, which measured the perpendicular height of Olympus from the town of Pythium, ascertained its elevation to be ten stadia and nearly one plethron (Plut. Aemil. 15); which Holland, Doolwell, Leake, and others regard as not far from the truth, since they estimate its height to be between six and seven thousand feet. But these writers have considerably undervalued its elevation, which is now ascertained to be 9754 feet. Herodotus relates that Mt. Olympus was seen by Xerxes from Thermia (vii. 128); and when travelling, for pleasure, he marvelled at the mountain in clear weather it is visible from Mt. Athos, which is 90 miles distant. (Journ. Geogr. Soc. vol. vii. p. 69.) All travellers, who have visited Mt. Olympus, dwell with admiration upon its imposing grandeur. One of the most striking descriptions of its appearance is given by Dr. Holland, who beheld it from Litökboro at its base:— "We had not before been aware of the extreme vicinity of the town to the base of Olympus: but when leaving it, and accidentally looking back, we saw through an opening in the fog, a faint outline of vast precipices, seeming almost to overhang the place; and so trivial in their aspect, that for a few minutes we doubted whether it might not be a delusion to the eye. The fog, however, dispersed yet more on this side, and partial openings were made, through which, as through arches, we saw the sunbeams resting on the snowy summits of Olympus, which rose into a dark blue sky far above the belt of clouds and mist that hung upon the sides of the mountain. The transient view we had of the mountain from this point showed us a line of precipices of vast height, forming its eastern front toward the sea; and broken at intervals by deep hollows or ravines, which were richly clothed with forest trees. The oak, chestnut, beech, pine, fir-tree, &c., are seen in great abundance along the base and skirts of the mountain; and towards the summit of the first ridge, large forests of pine spread themselves along the acclivities. Behind this first ridge, others rise up and recede towards the loftier central heights of Olympus. Almost opposite the town of Litökboro, a vast ravine penetrates into the interior of the mountain, through the opening of which we saw, though only for a few minutes, what I conceive to be the summit,—from this point of view, with a somewhat ascending line on each side." (Holland, Travels, vol. ii. p. 27.) Though the lower sides of Olympus are well wooded, the summit presents a wide extent of a bare light-coloured rock. (Leake, Northern Greece, vol. i. p. 434.) The broad summit of Olympus is alluded to by Homer, who gives it to the epithet of μακρός more frequently than any other. Next to that, is ἀλμονικός (II. i. 420), from its being covered with snow during the greater part of the year. Hesiod (Theog. 118) also alludes to this epithet of νέφωσ. Below the summit its rugged outline is broken into many ridges and precipices, whence Homer describes it as πολιόδρομος. (II. i. 499. v. 754.) The forests, which covered the lower sides of Olympus, are frequently alluded to by the ancient poets. (πολιόδρομος, Eurip. Bacch. 560; Ossae frounodosum involveb Olympus, Virg. Georg. 281; oμαις οὐκ ὡτος, Hor. Carm. iii. 4. 52.) The mountain is now called Ólymbo, i. e. Ἑλμοός, by the surrounding inhabitants, which name Leake observes is probably not a modern corruption, but the ancient dialectic form, for the Aeolic tribes of Greece often substituted the epsilon for the omicron, as in the instance of ὄρος, which the Boeotians called ἐρομέδος. (Dodwell, Tour through Greece, vol. ii. p. 13.) The site, Northern Greece, vol. iii. pp. 341, 472.) Olympus was believed to be the residence of Zeus and the other gods; and as its summit rose above the clouds into
the calm ether, it was believed that here was an opening into the vault of heaven; a lofty cloud, a door. (II. v. 753) [See Dict. of Bingo, Vol. III. p. 23; Liddell and Scott, Greek Lex. e. s. c.]

OLYMPUS (Ολυμπός). 1. A mountain range of Mycena, extending eastward as far as the river Sangara, and dividing Phrygia from Bithynia. To distinguish it from other mountains of the same name, it often is called the Mycian Olympus. Its height rises towards the west, and that part which is of the greatest height, is the highest mountain in all Asia Minor. The country around this mountain was well peopled, but its heights were thickly clad with wood, and contained many safe retreats for robbers, bands of whom, under a regular leader, often rendered the country unsafe. (Strab. xii. p. 574. comp. x. p. 470, xii. p. 571; Herod. i. 36, vii. 74; Ptol. v. 1. § 10; Steph. B. s. v.; Plin. viii. 40, 43; Pompl. Mel. i. 19; Amm. Marc. xxvi. 9, Schol. ad Apollon. Rhod. i. 598.) The lower regions of this great mountain are still covered with extensive forests; but the summit is rocky, devoid of vegetation, and during the greater part of the year covered with snow. The Turks generally call it Anadoli Daghi, though the western or highest parts also bear the name of Keshekh Daghi, that is, the Monk's Mountain, and the eastern Tousmanadji or Donoum Daghi. The Byzantine historians mention several fortresses to defend the passes of Olympus, such as Pitheca (Nicet. Chon. p. 35; B. Cinnam. p. 21), Acernum, and Calogreea (B. Cinnam. L. c.; Cedren. p. 553; Anna Comm. p. 441; comp. Brown, in Walsh's 'Turkey,' tom. ii., pp. 109, fol.; Pococke, Travels, ii. p. 178).

2. A mountain in the north of Galatia, which it separates from Bithynia. It is properly speaking, only a continuation of the Mycian Olympus, and is remarkable in history for the defeat sustained on it by the Troadobouë, in a battle against the Romans under Maelus. (Liv. xxxviii. 19. Ec. ; Polyb. xxii. 20, 21.) Its modern name is Ala Daghi.

3. A volcanic mountain in the east of Lycia, a little to the north-east of Caryallia. It also bore the name of Phoenicus, and near it was a large town, likewise bearing the name Olympus. (Strab. xiv. p. 666.) In another passage (xir. p. 671) Strabo speaks of a mountain Olympus and a stronghold of the same name in Cilicia, from which the whole of Lycia, Pamphylia, and Pisidia could be surveyed, and which was in its time taken possession of by the Aethiopian robber Zenecetas. It is, however, generally supposed that this Cilician Olympus is no other than the Lycian, and that the geographer was led into his mistake by the fact that a town of the name of Corycus existed both in Lycia and Cilicia. On the Lycian Olympus stood a temple of Hephaestus. (Comp. Stadium, Mar. Mag. § 265; Ptol. vi. 3. § 3; Sylvis (39) does not mention Olympus, but his Heraclus is evidently no other place. (Loc. Asia Minor, p. 189; Fellows, Lycia, pp. 212, fol.; Spratt and Forbes, Travels in Lycia, i. p. 192.) Mount Olympus now bears the name Janus Daghi, and the town that of Deliktos; in the latter place, which was first identified by Beauchot, some ancient remains still exist; but it does not appear ever to have been a large town, as Strabo calls it. [L. S.]

OLYMPUS (Ολυμπός). See p. 632, 633. OLYNTHUS. Ptole. v. 14. § 5), a mountain range in the holy island of Cyprus. One of its eminences—breast-shaped (υδροκοσμή) — was a temple to Zeus, named "of the heights" (αντίωνα), into which women were not permitted to enter. (Strab. l. c.) This probably implies that all but the "hieroduleae" were excluded. (Comp. Claudian, Nupt. Hon. et Mar. 48—95; Achill. Tal. viii. 13.) According to Pococke (Trav. vol. ii. p. 212; comp. Marit. Vigni, vol. i. p. 206), this part of the plain is now called Hephois Staurus, or Sta. Croce, from a convent dedicated to the Cross. (Engel, Kypros, vol. i. p. 392. [E. B. J.]

OLYNTHA. [Ολυνθια.] OLYNTHUS (Ολυνθος). Ptol. vii. 330; Steph. B.; Pomp. Mela, u. 2. § 9; Plin. iv. 17: Æth. Oλυνθος, a town which stood at the head of the Corinthian gulf, between the peninsula of Pallene and Siphonia, and was surrounded by a fertile plain. Originally a Boetian town, at the time of the Persian invasion it had passed into the hands of the Chalcidian Greeks (Herod. vii. 122: Strab. x. p. 447), to whom, under Critobulus of Torone, it was handed over, by the Persian Artabazus, after taking the town, and slaying all the inhabitants (Herod. viii. 127). Afterwards Perdiccas prevailed on many of the Chalcidians to abandon the small towns on the sea-coast, and make Olynthus, which was several stadia from the sea, their central position (Thuc. i. 68). After this period the Bottiaeans seem to have been the humble dependents of the Chalcidians, with whom they are found joined on two occasions (Thuc. i. 65, ii. 79). The expedition of Brasidas secured the independence of the Olynthians, which was distinctly recognised by treaty (Thuc. v. 19.) The town, from its maritime situation, became a place of great importance, n. c. 392. Owing to the weakness of Amyntas, the Macedonian king, they were enabled to take into their alliance the smaller towns of maritime Macedonia, and gradually advanced so far as to include the larger cities in this region, including even Pella. The military force of the Olynthian confederae had now become so powerful from the just and generous principles upon which it was framed, including full liberty of intermarriage, of commercial dealings, and landed proprietorship, that Acanthus and Apollonia, jealous of Olynthian supremacy, and menaced in their independence, applied to Sparta, then in the height of its power, n. c. 383, to solicit intervention. The Spartan Eumelidas was at once sent against Olynthus, with such force as could be got ready, to check the new power. Teletius, the brother of Agesilus, was afterwards sent there with a force of 10,000 men, which the Spartan assembly had previously voted, and was joined by Derdas, prince of Elysia, with 400 Macedonian horse. But the conquest of Olynthus was no easy enterprise; its cavalry was excellent, and enabled them to keep the Spartan infantry at bay. Teletius, at first successful, becoming over confident, sustained a terrible defeat under the walls of the city. But the Spartans, not deheartened, thought only of repairing their dishonour by fresh excursions. Agesilus, their king, was placed in command, and ordered to prosecute the war with vigour; the young
called because black beetles could not live there. 

Eckhel (vol. ii. p. 73) speaks of only one extant coin of Olynthus — the "type" a head of Hercules, with the lion's skin; but Mr. Millingen has engraved one of those beautiful Old Macedonian coins on which the "legend" OSYNO surrounds the head of Apollo on the one side, and the word XAAXIΔEON, his lyre, on the reverse. (Consinser, l'Empere, vol. ii. p. 161; Ledcke, North. Greece, vol. iii. pp. 154. 457—459; Voemel, de Olythi Situs, civitate, potentia, etuer-
•sione, Francof. ad M. 1829; Winewski, Comm. ad Don. de Cor. pp. 66, seq.)

E. B. J.

OMANA ("Ovaa", Peripl. Mar. Erythr. c. 27, 36; Marcian, Peripl. c. 28, ed. Muller, 1853), a port of some importance on the coast of Carmania, which is noticed also by Pliny (vi. 28, § 32). Its position was near the modern bay of Tabubur, perhaps where Mannert has suggested, at Cape Tanka (v. 2, p. 421). Vincent places it a little to the E. of Cape Ask. In Ptolemy, the name has been corrupted into Commana (vi. 8. § 7).

OMANA (rā "Ovaa"), a deep bay on the south coast of Arabia east of Syagros, 600 stadia in diameter, according to the Periplus, bounded on the east by lofty and rugged mountains (ap. Hudson, Geog. Min. tom. i. p. 18), doubtless identical with the Omanum emporium, or Ptolemy places in long. 27° 40', lat. 19° 43', which must have belonged to the Omani to which mentioned by the same geographer (vi. 15), separated only by the Cattabani from the Montes Asaborum, doubtless the mountains mentioned in the Periplus. If Rās Furta be correctly taken as the ancient Syagros, the ancient Oman must have been far to the west of the district of Arabia now called by that name, and within the territory of Hadramaut. The modern Oman is the south-eastern extremity of the peninsula, and gives its name to the sea outside the mouth of the Persian Gulf, which washes it on the east and south. (Gosselin, Recherches, tom. iii. pp. 32, 33; Vincent, iii. 16; Forster, Geogr. of Arabia, vol. ii. pp. 173, 180, note †) [G.W.]

OMANI or OMANNI (Ἀσάνια of "Ovaaor" or "Ovaaorvov"), a branch of the Lygii, in the N.E. of Germany, between the Oder and the Vistula, to the S. of the Burgundiones, and to the N. of the Lygi Diduni (Ptol. ii. 11. § 18). Tacitus (Germ. 43) in enumerating the tribes of the Lygii does not mention the Omani, but a tribe occurs in his list bearing the name of Manini, which from its resemblance is generally regarded as identical with the Oman. But nothing certain can be said.

L. S.

OMBI ("Oμo", Ptol. iv. 5. § 73; Steph. B. s. s.; It. Auton. p. 165; Ombos, Jav. xv. 35; Ambus, Not. Imp. sect. 20; Eth. "Oumītīr"; comp. Arlian, Hist. An. x. 21), was a town in the Thebaid, the capital of the Nomos Ombite, about 30 miles N. of Syene, and situated upon the E. bank of the Nile; lat. 24° 6' N. Ombi was a garrison town under every dynasty of Aegypt, Pharaonic, Macedonian, and Roman; and was celebrated for the magnificence of its temples and its hereditary feud with the people of Tentya.

Ombi was the first city below Syene at which any remark of the effigy of antiquity occur. The Nile, indeed, at this point of its course, is ill-suited to a dense population. It runs between steep and narrow banks of sandstone, and deposits but little of its fertilising slime upon the dreary and barren shores. There are two temples at Ombi, constructed of the stone obtained from the neighbouring quarries
of Hadrian-seleuk. The more magnificent of the two stands upon the top of a sandy hill, and appears to have been a species of Pantheon, since, according to extant inscriptions, it was dedicated to Auroæs (Apollo) and the other deities of the Ombite nome by the soldiers quartered there. The smaller temple to the NW. was sacred to Isis. Both, indeed, are of an imposing architecture, and still retain the brilliant colours with which their builders adorned them. They are, however, of the Ptolemaic age, with the exception of a doorway of sandstone, built into a wall of brick. This was part of a temple built by Thothmes II. in honour of the crocodile-headed god Sevak. The monarch is represented on the door-jamb, holding the measuring reed and chisel, the emblems of construction, and in the act of dedicating the temple. The Ptolemaic portions of the larger temple present an exception to an almost universal rule in Egyptian architecture. It has no propylon or dromos in front of it, and the portico has an uneven number of columns, in all fifteen, arranged in a triple row. Of these columns thirteen are still erect. As there are two principal entrances, the temple would seem to be two united in one, strengthening the supposition that it was the Pantheon of the Ombite nome. On a cornice above the doorway of one of the adyta is a Greek inscription, recording the erection, or perhaps the restoration of the sebos by Ptolemy Philometor and his sister-wife Cleopatra, b. c. 180—145. The hill on which the Ombite temples stand has been considerably excavated at its base by the river, which here strongly inlines to the Arabian bank.

The crocodile was held in especial honour by the people of Ombi; and in the adjacent catacombs are occasionally found mummies of the sacred animal. Juvenal, in his 15th satire, has given a lively description of a fight, of which he was an eye-witness, between the Ombitae and the inhabitants of Tentyra, who were hunters of the crocodile. On this occasion the men of Ombi had the worst of it; and one of their number, having stumbled in his flight, was caught and eaten by the Tentyrites. The satirist, however, has represented Ombi as nearer to Tentyra than it actually is, these towns, in fact, being nearly 100 miles from each other. The Roman coins of the Ombite nome exhibit the crocodile and the effigy of the crocodile-headed god Sevak. The point of Kyme, which is opposite to the hill of Ombus, covers part of the site of the ancient Ombi. The ruins have excited the attention of many distinguished modern travellers. Descriptions of them will be found in the following works:—

OMBIKSONES (Πομπαίοι, Ptol. iii. 5 § 21), a people of European Sarmatia, whose seat appears to have been on the flanks of the Carpathians, about the sources of the Tisza. Schafarik (Slav. Alt. vol. i. pp. 389—391, 407) considers them to be a Celtic people, grounding his arguments mainly upon the identity of their name with that of the Celtic — as he considers it to be — Umbrians, or the most ancient inhabitants of the Italian peninsula. Recent inquiry has thrown considerable doubt upon the derivation of the Umbrians from a Celtic stock. [Italia, Vol. ii. p. 86, b.] This is one proof, among others, of the futility of the use of names of nations in historical investigations; but, as there can be no doubt that there were Gallic settlements beyond the Carpathians, names of these foreign hordes might still linger in the countries they had once occupied long after their return westward in consequence of the movement of nations from the East.

[E. B. J.]

OMINOQARA (Ομινογάρα), a town in the district of Ariaca, in the division of India intra Ganges. There is no reason to doubt that it is the present Ahmed-nagar, celebrated for its rock fortress. (Ptol. vii. 1. § 82; comp. Pott. Ettm. Forsch. p. 78.)

OMIRAS. [Εμηρατής.]

OMPHALIUM (Ομφαλίος), a plain in Crete, so named from the legend of the birth of the babe Zeus from Reia. The scene of the incident is laid near Thenea, Cossus, and the river Triton. (Callim. Hygian. ad. Jov. 45; Dios. v. 70; Schol. ad Nicand. Alexipharm. 7; Steph. B. s. v. Höck, Kreta, vol. i. pp. 11, 404; Pashley, Trav. vol. i. p. 267.)

OMPHALIUM (Ομφαλίος), one of the inland cities of the Chalons in Epeirus. (Ptol. iii. 14. § 7.) Stephanus B. (s. v.) erroneously calls it a city of Thessaly. Leake places it at Prenelli, in the valley of the Vjosa (the Aoos). (Northern Greece, vol. i. p. 120.)

ON. [Ηλιοπολίς.]

ONCAE. [Θεραία.]

ONCEIUM (Οντσείου), a place in Arcadia upon the river Ladon, near Ithelpus, and containing a temple of Demeter Erinys. (Paus. viii. 25. § 4; Steph. B. s. v.) The Ladon, after leaving this temple, passed that of Apollo Omphalæs on the left, and that of the boy Asclepius on the right. (Paus. viii. 25. § 11.) The name is derived from Onæus, a son of Apollo, who reigned at this place. Leake supposes that Tombikli, the only remarkable site on the right bank of the Ladon between Ithelpus and the Tutha, is the site of the temple of Asclepius. (Morea, vol. ii. p. 103.) Other writers mention a small town Oncae (Οντσεία) in Arcadia, which is probably the same as Onceium. (Tzetzes, ad Epyodh. 1225; Etym. M. p. 613; Phavorin. s. v.)

ONHEMUS (Ονθημός), a port-town of Chersones, Epeirens, in the north-western point of Crete, and the next port upon the coast to the south of Patermos. (Stab. vii. p. 324; Ptol. iii. 14. § 2.) It seems to have been a place of importance in the time of Cicero, and one of the ordinary points of departure from Epeirus to Italy, as Cicero calls the wind favourable for making that passage an Oncheiites. (Cic. ad Att. vii. 2.) According to Dionysius of Halicarnassus (Ant. Rom. i. 51) the real name of the place was the Port of Anchises (Αγίναις λιμήν), named after Anchises, the father of Aeneas; and it was probably owing to this tradition that the name Onchemus assumed the form of Anchises under the Byzantine emperors. Its site is that of the place now called the Ὀγνῆται. (Leake, Northern Greece, vol. i. p. 11.)

ONCHEUMENOS. I. (Ονχησότος: Εθ. Ονχησότας), an ancient town of Boötea in the territory of Haliartus, said to have been founded by Onchestus, a son of Poseidon. (Paus. ix. 26. § 5; Steph. B. s. v.) It possessed a celebrated temple and grove of Poseidon, which is mentioned by Homer (Ονχησότας Εθ. Ονχησότας, ἡμείς Ομίλιοι, ἄλλων ἄλος, II.)
OE. 506), and subsequent poets. (Pind. Isthm. i. 44; iv. 32; Lyocphr. 64.) Here an Amphictyonic council of the Boeotians used to assemble. (Strab. ix. p. 512.) Pausanias (l. c.) says that Onchestus was 15 stadia from the mountain of the Sphinx, the modern Fagiti; and its position is still more accurately defined by Strabo (l. c.). The latter writer, who censures Alcaeus for placing Onchestus at the foot of Mt. Helicon, says that it was in the Pawonia, on a naked hill near the Teneic plain and the Copaic lake. He further maintains that the grove of Poseidon existed only in the imagination of the poets; but Pausanias, who visited the place, mentions the grove as still existing. The site of Onchestus is probably marked by the Heleneic remains situated upon the low ridge which separates the two great Boeotian basins, those of lake Copais and of Thebes, and which connects Mount Fagiti with the roots of Helicon. (Leake, Northern Greece, vol. ii. p. 213, seq.; Geil, Itiner., p. 125.)

2. A river of Thebes, flowing near Secotusa, through the battle-field of Cyncospephalae into the lake Boephis. It was probably the river at the source of which Dederiana stands, but which bears no modern name. (Liv. xxxiii. 6; Polyb. xviii. 3; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 473.) It is probably the same river as the Onchos (Oooyxos, Herod. vii. 129; Plin. iv. 8. s. 15), whose waters were exhausted by the army of Xerxes. It is true that Herodotus describes this river as flowing into the Penes; but in this he was probably mistaken, as its course must have been into the lake Boephis. (Leake, Northern Greece, iv. p. 514.)

ONCENA. [Corinthiis. Vol. i. p. 674.]

OXCUM (Oxoxum, Ptol. ii. 16. § 4; Ptole. Tch.; Geog. Rav.), a town of Dalmatia, which has been identified with Almisum, at the mouth of the Cettina. (Niebuhr, Die Sud-Seeu., p. 25.) [E. B. J.]

ONIGIS. [Aurina.]

ONISIA, an island near Crete, on the E. side of the promontory Itanos. (Plin. iv. 12. s. 20.)

ONOBIA AESTUARIA (Ooosia Aqortoxia, Ptol. ii. 4. § 5), called also simply Onoba (Strab. iii. p. 143; Meila, iii. 1. § 5). 1. A marshy town of the Tarcelandi in Hispiae Boetica, between the rivers Anas and Baetis. It was seated on the estuary of the river Lucius, and on the road from the mouth of the Anas to Augusta Emerita. (Hirt. Ant. p. 431.) It is commonly identified with Hades, where there are still some Roman remains, especially of an aqueduct; the vestiges of which, however, are fast disappearing, owing to its being used as a quarry by the boorish agriculturists of the neighbourhood. (Murray’s Handbook of Spain, p. 170.) Near it lay Heronius Insula, mentioned by Strabo (iii. p. 170), called ‘HedasAgum by Steph. B. (s. v.), now Soltan. Onoba had a market, and both the coins have been found there bearing the name of the town, with a slight alteration in the spelling,—Onuba. (Florez. Med. ii. pp. 510, 649; Mignet, i. p. 23, Suppl. p. 39; Sestini, Med. Itsp. p. 75, ap. Ubert, vol. ii. pt. i. p. 540.)

2. Another town of Baetica, near Corduba. (Plin. iii. i. s. 3.) In an inscription in Gruter (p. 1049. 5) it is called Corduba. Ubert (vol. ii. pt. i. p. 566) places it near Villa del Carpio. [T. H. D.]

ONOBALAS. [Acesines, No. 1.]

ONOBASILIS is a people in Apatana, Asia Minor, the name stands in the common texts of Pliny (iv. 19); who has “Onobrastes, Belendis, Saltus Pyreneus.”

D’Anville (Notice, &c.) ingeniously supposes that Onobrastes ought to be Onobuses, which is the least possible correction; and he thinks that he discovers the old name in the modern Nebousan, the name of a canton on the left side of the Neste towards the lower part of its course. The Neste is one of the branches of the Garonne, and rises in the Pyrenees.

ONOHIONUS. [Onchestus, No. 2.]

ONUGNATHIUS (Oouo ypdodos), “the jaw of an ass,” the name of a peninsula and promontory in the south of Laconia, distant 200 stadia south of Amous. It is now entirely surrounded with water, and is called Elefantenos; but it is in reality a peninsula, for the isthmus, by which it is connected with the mainland, is only barely covered with water. It contains a harbour, which Strabo mentions; and Pausanias saw a temple of Athena in ruins, and the sepulchres of Cimius, the steersman of Menelaus. (Paus. iii. 22. § 10, iii. 23. § 1; Strab. viii. pp. 363, 364; Curtius, Ptolomaica, vol. ii. p. 295.)

ONUPHIS (Onophes, Herod. ii. 166; Steph. B. s. v.; Ptol. iv. 5. § 51; Plin. v. 9. s. 9; Eth. Ooonofyris), was the chief town of the Nomoi Onuphites, in the Egyptian Delta. The exact position of this place is fixed by geographers. D’Anville believes it to have been on the site of the modern Bannoub, on the western bank of the Sebennytic arm of the Nile. Mannert (vol. x. pt. i. p. 578) places it south of the modern Mansour. Belley (Mem. de l'Acad. des Inscrip. tom. xxviii. p. 549) identifies it with the present village of Nenuph, in the centre of the Delta, a little to the E. of Buto, about lat. 31° N. Champollion, however, regards the site of this name as altogether uncertain (L'Egypte sous les Pharaons, vol. ii. p. 227.) The Onuphan nome was one of those assigned to the Calasarian division of the native Egyptian army. Coins of Onuphis of the age of Hadrian—obverse a laureated head of that emperor, reverse a female figure, probably Isis, with extended right hand—are described in Busche (Lex. R. Num. III. pars posterior, s. e.). This town is mentioned by ecclesiastical writers, e.g. by Athanasius (Athanaus. Opera, tom. i. pt. ii. p. 776, ed. Paris, 1695; Le Quien, Oriens Christian. tom. ii. p. 326, Paris, 1740; comp. Pococke, Travels in the East, vol. i. p. 423.) [W. B. D.]

ONOEAE. [Ooocenes.]

OPHAIKUS, a small river of Sarmatia Asiatica, mentioned by Pliny (vi. 7. s. 7) as a tributary of the Lagus, which flowed into the Palus Maestit. Herodotus mentions two streams, which he calls the Lyceus and Oaros, which had the same course and direction (iv. 123, 124). It is therefore possible that the rivers in Pliny and Herodotus are the same. It is not possible now to identify them with certainty.

OPHEL. [Jerusalem, p. 20, b.]

OPHODES (O0o8wv, Strab. xvi. p. 770; Diod. iii. 39; Agatharch., ap. Hadron, Geog. Greek. Min. p. 54), or Serpent-isle, was an island in the Red Sea, in East Boy, nearly opposite the mouth of the harbour of Berenice; lat. 24° N. The topazes produced in this island were greatly prized both in the Arabian and Egyptian markets; and it seems from Pliny (v. 29. s. 54) to have been by some denounced Topaz-isle (Topazes). The cause of its most unusual value is doubtful; but there has always been a tradition in the East that serpents and precious stones are found near one another. The island of Agathon, i.e. the good genius (Ayo6wos) 112
OPHIONOMES.

Oroph, Ptol. iv. 5, § 77) was probably the same with Ophides, and answers to the present Zmageros. The island of Kornaka, opposite the headland of Rostin, is believed, by some geographers supposed to be the true Ophides Insula. (Cassio, Hist, Gen. des Voyages, vol. i. p. 205.) [W.B.D.]

OPHIONOMES or OPHIONES. [ACTOLIA, p. 65, a.]

Ophir (Oophi; Ophi; Σαφι; Σαφειρ; Σαφειρ; Σαφοι; Σαφοι; Σαφειρ; Σαφειρ; Σαφοι, LXX. ; Joseph. Ant. viii. 6, § 4. ), a district, the name of which first appeared in the ethnographic table of Genesis, x. 29. Solomon caused a fleet to be built in the Euboic ports of the Red Sea, and Hiram supplied him with Phoenician mariners, well acquainted with navigation, and also Tyrian vessels, "ships of Tarshish," (1 Kings, ix. 28; 2 Chron. viii. 18.) The articles of merchandise which were brought back once in three years from Ophir were gold, silver, red sandal-wood ("calmungm"). (1 Kings, x. 11; "algumminn," 2 Chron. ix. 10), precious stones, ivory, apes ("kopihum"). and peacocks ("thikyum") (1 Kings, x. 22; "thikyum," 1 Chron. ix. 21). The gold of Ophir was considered to be of the most precious quality. (Job, xx. 11, 24, xxvii. 16; Ps. xiv. 9; Isa. xiv. 12; Jer. ii. 18.) In Jer. x. 9, "the gold from Ophir," and in Psam. x. 5, "the fine gold of Ophir," is, by a slight change of pronunciation, the same as that of Ophir.

Many elaborate treatises have been written upon the subject of Ophir. The researches of Gesenius (Thesaur. Lingue Hebr. vol. i. p. 141: and in Erach und Goumber's Encycl. art. Ophir), Benfey (Italian, pp. 30—32) and Lassen (Ind. Alt. vol. i. pp. 537—539) have made it extremely probable that the W. shores of the Indian peninsula were visited by the Phoenicians, who, by their colonies in the Persian Gulf, and by their intercourse with the Garames, were early acquainted with the periodically blowing monsoons. In favour of this Indian hypothesis is the remarkable circumstance that the names by which the articles of merchandise are designated are not Hebrew but Sanscrit. The peacock, too, is an exclusively Indian bird; although from their gradual extension to the W. they were often called by the Greeks "Median and Persian birds;" the Samians even supposed them to have originally belonged to Saros, as the bird was reared at first in the sanctuary dedicated to Hera in that island. Niles, Abu, which are first mentioned in Ptolemy, xxxvi. 22, could alone have been brought from India. Ophir (Mon. de l'Acad. des Ins. vol. xiv. 12. ii. 1843, pp. 349—402) agrees with Heeren (Recherches, vol. ii. pp. 73, 74, 76), who place Ophir on the E. coast of Africa, and explains "thikyum" to mean not peacocks, but parrots or guinea-hens. Ptolemy (vi. 7. § 41) speaks of a Saphara (Σαφαρα) as a metropolis of Arabia, and again of a Saphara (Σαφαρα, vii. 1. § 6) in India, on the Barygazoon Sinus, or Gulf of Cambay, a name which in Sanscrit signifies "far-shores." (Lassen, Dissert. de Tropoviafian Is. p. 19: comp. Ind. Alt. vol. i. p. 537.) Saphara, on the E. coast of Africa, called by some geographers Massagena (London Geog. Journ. vol. iii. p. 267), is described by Kisi (ed. Jaubert, vol. ii. p. 67) as a country rich in gold, and subsequently by the Portuguese, after Gama's voyage of discovery. The letters r and l so frequently interchanged make the name of the Saphara often written for that of Sophara, which is used in the Septuagint with several other forms for the Ophir of Solomon's and Hiram's fleet. Ptolemy, it has been seen, has a Sophara in Arabia and a Sophara in India. With the significant Sanscrit names of the mother-country had been repeated or reflected on neighbouring or opposite coasts, as in the present day occurs in many instances in the English and Spanish Americas. The range of the trade to Ophir might thus be extended over a wide space, just as a Phoenician voyage to Tartessus might include touching at Cyrene and Carthage, Gadeira and Cerne. (Humboldt, Cosmos, vol. ii. pp. 132, 133, notes 179—182, trans.) [E.B.J.]

OPHIS (Οφίς), a river of Pontus, the mouth of which was 90 stadia to the east of Port Hyacynthus, and which separated Colchis from the country of the Thianians. (Arrian, Peripil. Pont. Eux. p. 6; Anonym. Peripil. p. 14, where it is called "Ofiius"). This river still bears the name of Of. [L.S.]

OPHIS. [MANTINEIA.]

OPHUSA INS. [PITIUSAE.]

OPHUSA, OPHUSUA. 1. [TYRUS.]

2. An island off the coast of Crete (Plin. iv. 20), which is probably represented by Guedapundo or Anti-Gozzo, unless it be the same as the Ophusa Ins. (Ophisa, Stadium, 321), which the anonymous Cosmopolitan describes places, near Lebanon. [E.B.J.]

OPHUSUA (Οφύσωερα), a small island in the Propontis, off the coast of Mytilus, is mentioned only by Pliny (iv. 44) and Stephanus B. (s. v. Βεθυκώς, where it is called "Οφύσωσα"); it still bears its ancient name under the corrupt form of Afisia. (Paucocke, Travels. iii. p. 167.) [L.S.]

OPHULIUS (Οφύλιος), a branch of Mount Paryade in the north-west of Pontus, enclosing with Mount Lathrus, the extensive and fertile district called Phanarra. (Strab. xii. p. 556.) According to Hamilton (Researches, i. p. 439), it now bears the name of Komen Dagh and Ottez Dagh. [L.S.]

OPHRADUS, a river mentioned by Pline (vi. 25. s. 23) as belonging to the province of Drangiana. Forager conjectures that it may be a tributary of the Erymanthus (Ianno), now called the Khob Râd. [V.]

OPHRAH, a city of Benjamin, written Εφραάδ by the LXX. (Joshua, xviii. 23) and Γεφρα (1 Sam. xiii. 17). It is placed by Eusebius and S Jerome v. M.P. east of Bethel. (Onomast. s. v. Αφραή.) Dr. Robinson says that this accords well with the position of E-Touibeh, a village of Greek Christians, on a conical hill on a high ridge of land, which would probably not have been left unoccupied in ancient times. (Bib. Rer. vol. ii. pp. 123—125.)

2. Ophrah of the Alcrites (Εφραάδα πατρίς τοῦ Εσφρό), LXX. : Ἰαῦγα, vi. 11. 24. viii. 27; in ver. 32. Αἰόλο όφραδ, a town in the half-tribe of Manasseh, west of Jordan, the native place of Gideon, where also he was buried. [G. W.]

OPHRYNium (Οφρύνιον), a small town in the north of Tarsus, near lake Petcoes, and between Parmans and Rhoeaenius, with a grave sacred to Ajax. Sophara (43. 1: Archa. vol. i. 8. 513) is mentioned first by Theopompos. (Comp. Rauche, Lexic. Rel. Num. ii. 2. p. 136.) [L.S.]

OPIC. [Οπίς.]

OPIS (Ομῆς, Herod. i. 189), a city of Babylonia, named first by the scribes, who simply states that
OPISTERGIUM (Opîtergïum; Eth. Opitergiius: Odero), a city of Venetia, situated about 24 miles from the sea, midway between the rivers Plavis (Plate) and Liquentia (Licenza), on a small stream (now called the Pratza) flowing into the latter. No mention of it is found before the Roman conquest of Venetia; but it appears to have under its rule become a considerable municipal town, and is mentioned by Strabo as a flourishing place, though not a city of the first class. (Strab. v. p. 214.) In the Civil War between Caesar and Pompey a body of troops furnished by the Opitergii is mentioned as displaying the most heroic valour, and offering a memorable example of self-devotion, in a naval combat between the fleets of the two parties. (Liv. Ep. cx.; Flor. iv. 2. § 33; Lelius, iv. 462—571.) Tacitus also notices it as one of the more considerable towns in this part of Italy which were occupied by the generals of Vespasian, Primus, and Varus. (Tac. Hist. iii. 6.) It is mentioned by all the geographers, as well as in the Itineraries; and though Ammianus tells us it was taken and destroyed by an irruption of the Quadi and Marcomanni in A.D. 372, it certainly recovered this blow, and was still a considerable town under the Lombards. (Plin. iii. 19. s. 23; Poll. iii. 1. § 30; Itin. Ant. p. 280; Tab. Peut.; Ammian. xxix. 6. § 1; P. Dac. iv. 40.) In an inscription of the reign of Alexander Severus, Opitergium bears the title of a Colonia; as it is not termed such either by Pline or Tacitus, it probably obtained that rank under Trajan. (Orell. Inscr. 72; Zumpt, de Colon. p. 492.) It was destroyed by the Lombard king Redarius in A.D. 641, and again, in less than 30 years afterwards, by Grimealdus (P. Dac. iv. 47, v. 28); but seems to have risen again from its ruins in the middle ages, and is still a considerable town and an episcopal see. Opitergium itself stood quite in the plain; but its territory, which must have been extensive, comprised a considerable range of the adjoining Alps, as Pline speaks of the river Liquentia as rising "ex monte Opitergii." (Plin. iii. 18. s. 22.) The Itinerary gives a line of cross-road which proceeded from Opitergium by Feltria (Feltrè) and the Val Sugana to Tridentum (Triest). (Itin. Ant. p. 280.) [E. H. B.]

O'PLIS (O'pisô), a small port-town on the coast of Pootus, probably on or near the mouth of the river Opis. (Ptol. v. 6. § 6; Tab. Peuting.) It is placed 120 stadia west of the river Blizuris, although it is not to be found in the Itinerary. [L. S.]

OPONE (Orôné; Orôné or Orône; Ptol. iv. 7. § 11; Peripl. Mar. Ergythr. p. 9), the modern Ho-fooom or Afoum, was a town situated upon the eastern coast of Africa, immediately N. of the region called Azania (Khaosyn), lat. 9° N. The author of the Periplan, in his account of this coast, says that Opone stood at the commencement of the highland called by the ancients Mount Elephas. He further defines its position by adding that since there was only an open roadstead at the Aromatum Emperiorum — the cape Guardafui or Jerdaffoon of modern charts — ships in bad weather ran down to Tabah for shelter,—the promontory now known as Ras Banmah, where stood the town called by Ptolemy (i. 17. § 8, iv. 7. § 11) Para'w môyin, the Banmah of the Arabsians. From thence a voyage of 400 stadia round a sharply projecting peninsula terminated at the emperor of Opone. Here ended to S. the Regio Aromata of the ancients. Opone was evidently a place of some commercial importance. The region in which it stood was from remotest ages the seat of the spice trade of Libya. Throughout the range of Mount Elephas the valleys that slope seawards produce frankincense, while inland the cassia or cinnamon of the ancients attained perfection. But the Greeks, until a comparatively late period, were unacquainted with this coast, and derived from the Arabians its distinctive local appellations. Opone, which doubtless occupied the site, probably, therefore, represents also the Arabic name of a town called Afäin or Hafoom, i. e. Afoum, fragrant gums and spices; which, again, is nearly equivalent to the Greek designation of the spice-land of Eastern Libya — Aromata. And this derivation is rendered the more probable, when taken in connection with the neighbouring bluff or headland of Guardafui or Jerdaffoon, since Afin enters into the composition of both names, and Jerd or Guard resembles the Punic word Kartha, a headland. Thus Jerd-Afoum is the promontory of Opone. Ptolemy (iv. 7. § 11) places Opone too far S. of cape Jerdaffoon. The author of the Periplus more correctly sets it a degree further N., six days' voyage from a river which runs from the southern base of the Red Sea or Mount Elephas. The characteristics of the entire tract, of which Opone formed one extremity, are those of an elevated ridge lying between two seas,—the Red Sea and the ocean,—and which, from its elevation and exposure to the NE. monsoon, is humid and fertile,afoiding a marked contrast to the generally sterile and arid shore above and below the highland of Elephas. S. of Opone there is no trace of ancient commerce. The articles of export from this emporium were, according to the author of the Periplus, cinnamon, distinguished as "native," aramon, fragrant gums generally, molu, or cinnamon of inferior quality; slaves of a superior kind (Δωλικα κρησιμοτ)5 principally for the Egyptian market; and tortoise-shell of a superior quality as well as quantity. (See Vincent, Commerce and Navigation of the Ancients, vol. ii. p. 152—157.) [W. B. D.]

OPPIDUM NOVUM (OppîduNoVîN, Ptol. iv. 2. § 25), a town of Mauretania, colonised in the reign of the emperor Claudius, by the veterans (Ptol. i. 1), which Ptolemy (L.c.) places 10' to the E. of
Oppidum Novum, at Karlbehnitz, a village situated an hour to the south-eastward of Tulanada, at a distance from the sea corresponding to the 15 stadia of Strabo, and where exist the remains of an ancient city. (Northern Greece, vol. ii. p. 173, seq.)

2. A town in the mountainous district of Acretia in Elis, taken by the Spartans, when they invaded Elis at the close of the Peloponnesian War. The Sciolast on Pindar mentions a river Opus in Elis. The site of the town is perhaps represented by the Hellenic ruins at Sĩādã, and the river Opus may be the stream which there flows from a small lake into the Poneius. (Didot. xiv. 17; Steph. B. s. r.; Strab. iv. p. 425; Schol. ad Pind. Ol. ix. 64; Leake, Peloponnesica, p. 220; Curtius, Peloponnesos, vol. i. p. 41.)

ORA ("Opa"), a place mentioned by Ptolemy (vi. 8. § 14) in Carmania, but apparently on the confines of Gedrosia. It seems not improbable that he has confounded it with Ora, or Oraea, which was certainly in the latter province. Strabo (xv. p. 223) and Aelian (vol. vii. 24) both apparently thinking from the same authority, speak of a place of this name in Gedrosia,—the capital, probably, of the Oritea. (V.)

ORA ("ropa"), a town in the NW. part of Ilind, apparently at no great distance from the Kebul river, of which Arrian describes the capture by Alexander the Great, on his march towards the Panjâb (v. c. 27). It does not appear to have been identified with any existing ruins; but it must have been situated, according to Arrian's notice, between the Gurea (Gaur) and the celebrated rock fortresses. (Arrian, v. 2.)

ORAE ("ora"), Arian, vi. 22, 28), the chief town, in all probability, of the people who are generally called Oritea, though their name is written in different ways. It was situated in Gedrosia, and is most likely the same as is called in the Periplus of the Erythraean Sea, the Emporium Oraea (c. 37, ed. Miiller). The neighbouring country was rich in wine, barley, and dates. (V.)

ORATHA ("Opatia"), a city described by Stephana B. (z. r. c.) as in the district of Mesene, on the Tigris. As he does not state in which Mesene he supposed it to have been, it is impossible now to identify it. Some commentators have supposed that it is the same as "Ur of the Chaldees." It is, however, more likely that it is "Ur castellum Persarum" (Amm. Marc. xix. 8), now believed to be represented by the ruins of Al-Hathâr; or, perhaps, the Ura of Pliny (v. 24, s. 21). (V.)

ORBELLUS. (Drabolos, Herod. v. 16; Strab. vii. p. 329; Dioec. xx. 19; Arrian, Anab. i. 1. § 5; Ptol. iii. 9. § 1, i. 11. § 1; Pompon. Mela, ii. 2. § 2; Plin. iv. 17), the great mountain on the frontiers of Thrace and Macedonia, which, beginning at the Strymonic plain and lake, extends towards the sources of the Nymphaeum, where it unites with the summit called Sceonum, in which the river had its origin. The amphibious inhabitants of lake Trasias procured their planks and piles, on which they constructed their dwellings, from this mountain. (Herod. l. c.) Cassander, after having assisted Auleoten, king of Paedia, against the Illyrian Autaritae, and having conquered them, transported 20,000 men, women, and children to Mt. Orbellos. (Dioec. l. c.) The epitomiser of Strabo (l. c.), who lived not long before the commencement of the 11th century, applies this name to the range of Haemus and Rhodope. (Curtier, Conques de Byz. Got. vol. iv. p. 99, vol. vi.)
ORCADES.

p. 33; comp. Peppa, Prologyn. in Thuc. pars i. vol. ii. p. 321), in consequence, was inclined to believe that there were two mountains of this name. Kiepert (Karte der Europ. Türeke) identifies Orbelaus with Perin Dagh. The district called Orbelia (Opf: Να, Ttol. iii. 13. § 25), with the town Garabes, derived its name from the mountain. (Leake, Northern Greece, vol. i. pp. 211, 463.) [E. B. J.]

OICADAE (Οικαδαίς νησίοι, Ttol. ii. 3. § 31), a group of small islands lying off the northern extremity of Britannia Barbara. According to Ptolemy (l.c.) and Mela (iii. 6. § 7) they were 30 in number; Plyn (iv. 16. § 30) reckons them at 40; Orsios (i. 2) at 33, of which 20 were inhabited and 13 uninhabited. This last account agrees very nearly with that of Jornandes (B. Get. 1), who makes them 34 in number. See also Tacitus (Agric. 10) and the Itinerary (p. 508). The modern Orkney and Shetland Islands. [T. H. D.]

ORCAIOICII (Ορκαίοικοι), a place in a rough district of Galatia, devoid of a sufficient supply of water, near Pessinus, on the borders of Phrygia, not in Phrygia itself (Strab. xii. pp. 567, 568, 574, 575). [L. S.]

ORCAS (Ορκάσες, Ttol. ii. 3. § 1), a promontory on the N. coast of Britannia Barbara, now Donnet Head. It should be remarked, however, that Ptolemy (l. c.) places it on the E. coast, and gives it the additional name of Tarvedum (Ταρβεδομ). [T. H. D.]

2. An inland town of Thrace. (Ttol. iii. 2. § 11.) [T. H. D.]

ORCHINIA (Οιχίνια), a people of Arabia Deserta, placed by Ptolemy on the Persian Gulf, i.e. to the NE. of his Arabia Felix. (Ttol. v. 19. § 6.) They were perhaps the inhabitants of Orchoe mentioned below. [G. W.]

ORCHISTENIA (Ορχιστηνία, Strab. xii. p. 528), a caution of Armenia, which Strabo (l. c.) describes as abounding in horses, but does not mention its position. [E. B. J.]

ORCHOE (Ορχώη), a city of southern Babylonia, placed by Ptolemy among the narthes in the direction of Arabia Deserta (vi. 20. § 7). There can be little doubt that it is to be identified with one of the great mounds lately excavated in those parts, and that the one now called Warka represents its position. It was supposed that another mound in the immediate neighbourhood, Muyneyer, was the same as the "Ur of the Chaldees"; and there is now good reason for identifying it as the site of that celebrated place. The name of Warka reads on inscriptions lately discovered by Mr. Taylor, Hur or Hurik, which is nearly the same with the "Oryx" of the LXX. and the Ορχώη of Ptolemy (l. c.). Moreover, Hur and Warka are constantly connected in the inscriptions, just as Ezech and Aced are in the Bible. It is most probable that the Orcheni (Ορχώη), described in Strabo as an astronomical sect of Chaldeans, dwelling near Babylon (xxi. p. 739); in Ptolemy, as a people of Arabia, living near the Persian Gulf (v. 19. § 2); and in Phig, as an agricultural population, who banked up the waters of the Euphrates and compelled them to flow into the Tigris (vi. 27. 31), were really the inhabitants of Orchoe and of the district surrounding it. We now know that this country was ruled in very early times by a Chaldaean race, some of the kings of which Berosus has recorded. (Rawlinson, in Athenaeum, 1854, No. 1377; Euseb. Frusepar, Evang. ix. 17.) It is worthy of notice that Eusebius has preserved an ancient fragment from Eupolemus, who speaks of a city of Babylonia, Camarina, "which some call Urie (Οὐρία)," as the Assyrian name of Warka is written with a monogram which signifies "the Moon," and as the name Camarina would naturally be derivable from the Arabic Kanara, "the Moon," there is an additional connection between the two names. (Euseb. L. C.) It is also clear from the inscriptions that the names of the two cities were constantly interchanged. [V.]

ORCHO'MENUS. 1. (Ορχομένως: in in. c. and coins, Ερχόμενος: Ἐθ. Θρομένων, Ἐρχόμενος), usually called the MINYEAN ORCHOMENUS (Ορχομένως Μίνυκας, Ιαν. II. ii. 511; Thuc. iv. 76; Strab. ix. p. 414), a city in the north of Boeotia, and in ante-historical times the capital of the powerful kingdom of the Minyae. This people, according to tradition, seem to have come originally from Thessaly. We read of a town called Minya in the Thessalians (Steph. B. s. e. Marc.), and also of a Thessalian Orchenomenus Minyllae, (Pllin. iv. 8. s. 15.) the first king of the Boeotian Orchenomenus is said to have been Andres, a son of the Thessalian river Peneus, from whom the country was called Andreis, (Paus. ix. 34. § 6; οἱ Ορχομένων ἄντων οἴκες ἔστη Θεσσαλία, Schol. ad Apoll. Rhod. ii. 1190.) Andrews assigned part of his territory to the Aeolian Athamas, who adopted two of the grandsons of his brother Sisyphus: they gave their names to Haliartus and Coronia. Andrews was succeeded in the other part of his territory by his son Eteocles, who was the first to worship the Charites (Graces) in Greece. Upon the death of Eteocles the sovereignty devolved upon the family of Halimus or Almus, a son of Sisyphus. (Paus. ix. 34. § 7—iix. 35.) Halimus had two daughters, Chryse and Chrysogoneia. Chryse by the god Ares became the mother of Phlegyas, who succeeded the childless Eteocles, and mothered the country Phlegyantia after himself. He also gave his name to the fierce and sacrilegious race of the Phlegyae, who separated themselves from the other Orchenomenians, and attempted to plunder the temple of Delphi. They were however all destroyed by the god, with the exception of a few who fled into Phocis. Phlegyas died without children, and was succeeded by Chryses, the son of Chrysogoneia by the god Poseidon. Chryses was the father of the wealthy Minyas, who built the treasury, and who gave his name to the Minyan race. Minyas was succeeded by his son Orchenomenus, after whom the city was named. (Paus. ix. 36. §§ 1—6.) Some modern scholars have supposed that the Minyae were Aeolians (Thirlwall, Hist. of Greece, vol. i. p. 91); but as they disappeared before the historical period, it is impossible to predicate anything certain respecting them. There is, however, a concurrence of tradition to the fact, that Orchenomenus was in the earliest times not only the chief city of Boeotia, but one of the most powerful and wealthy cities of Greece. It has been observed that the genealogy of Orchenomenus glitters with names which express the traditional opinion of his unbounded wealth (Chryses, Chrysogoneia). Homer even compares the treasures which flowed into the city to those of the Egyptian Thebes (II. ix. 381; comp. Eustath. L. C.) It would seem that at an early period Orchenomenus ruled over
the whole of Northern Boeotia; and that even Thebes was for a time compelled to pay tribute to Arginus, king of Orchomenus. From this tribute, however, the Thebans were delivered by Hercules, who made war upon Orchomenus, and greatly reduced its power. (Paus. ix. 37. § 2; Strab. ix. p. 414; Diod. iv. 18.) In the Homeric catalogue Orchomenus is mentioned along with Aespieon, but distinct from the other Boeotian towns, and as sending 30 ships to the Trojan War (II. iii. 511). Sixty years after the Trojan War, according to the received chronology, the sovereignty of the Mycenae seems to have been overthrown by the Boeotian immigrants from Thebes; and Orchomenus became a member of the Boeotian confederacy. (Strab. ix. p. 401; comp. Thuc. i. 12.) The city now ceased to be the Mycenian and became the Boeotian Orchomenus (Thuc. iv. 76); but it still remained a powerful state, and throughout the whole historical period was second only to Thebes in the Boeotian confederacy. The town of Chaeronea appears to have been always one of its dependencies. (Thuc. iv. 76.) In the Persian War Orchomenus, together with the other Boeotian towns, with the exception of Thebes and Plataea, deserted the cause of Greek independence. Orchomenus possessed an aristocratical government, and continued on friendly terms with Thebes, as long as the aristocratical party in the latter city had the direction of public affairs. But when, after the close of the Peloponnesian War, a revolution placed the government of Thebes in the hands of the democracy, Orchomenus became opposed to Thebes. Accordingly, when war broke out between Sparta and Thebes, and Lysander invaded Boeotia in b. c. 393, Orchomenus revolted from Thebes, and sent troops to assist Lysander. (Diod. xvi. 48.) In the battle of Chaeronea (b. c. 338), Orchomenus delivered to the Thebans, who were anxious to destroy the city, and reduce the inhabitants to slavery. Epaminondas, however, dissuaded them from carrying their wishes into effect, and induced them to pardon Orchomenus, and re-admit it as a member of the Boeotian confederation. (Diod. xvi. 47.) The Thebans appear to have yielded with reluctance to the generous advice of Epaminondas; and they took advantage of his absence in Thebes, in b. c. 368, to carry their original design into effect. The pretext was that the 300 knights at Orchomenus had entered into a conspiracy with some Theban exiles to overthrow the democratical constitution of Thebes. It is not improbable that the whole story was a fiction; but the Thebans eagerly listened to the accusation, condemned the 300 Orchomenians, and decreed that the city should be destroyed. A Theban army was immediately sent against it, which burnt it to the ground, put all the male inhabitants to the sword, and sold all the women and children into slavery. (Diod. xvi. 79.) (Paus. ix. 15. § 3.) This atrocity act of vengeance remained as an indelible stigma upon the Theban character (Dem. c. Lept. p. 490.)

Orchomenus remained a long time in ruins, though the Athenians were anxious for its restoration, for the purpose of humbling Thebes. (Dem. Megal. pp. 203, 208.) It appears to have been rebuilt during the Phocian War, when the Phocians endeavourd to expel the Thebans from the northern parts of Boeotia. In b. c. 553 we find the Phocian leader Osmarchus in possession of Orchomenus and Coronea (Diod. xvi. 33, 35); and in the following year Phylaxus was defeated in the neighbourhood of these towns. (Diod. xvi. 37.) Orchomenus, Coronea, and Corisae were the three fortified places in Boeotia, which the Phocians had in their power (Diod. xvi. 58); and from which they made their devastating forays into the other parts of Boeotia. On the conclusion of the Sacred War, in b. c. 346, Orchomenus was given by Philip to its implacable enemy the Thebans, who, under Philip’s eyes, destroyed the city a second time, and sold all its inhabitants as slaves. (Aesch. de Pala. Leg. p. 309; Dem. Phil. ii. p. 69, of Pher. p. 62, of Pala. Leg. p. 375.) It did not, however, remain long in ruins; for after the defeat of the Thebans and Athenians at the battle of Chaeronea, in b. c. 338, it was rebuilt by Philip’s order (Paus. iv. 27. § 10, ix. 37. § 8; according to Arrian, Anab. i. 9, it was rebuilt by Alexander the Great after the destruction of Thebes). From this time the name of Orchomenus is seldom mentioned in history. Under the Romans it shared the common fate of the Boeotian towns, all of which were, in Strabo’s time, only ruins and names, with the exception of Thebes and Tanagra.

The ruins of Orchomenus, and of the Charites or Graces, and for the festival in their honour, celebrated with musical contests, in which poets and musicians from all parts of Greece took part. Hence Pindar calls Orchomenus the city of the Charites (Pyth. xii. 45), and Theocritus describes them as the goddesses who love the Mycenaean Orchomenus (xvi. 104). An ancient inscription records the names of the victors in this festival of the Charites. (Müller, Orchomenos, p. 172, seq.) Pindar’s fourteenth Olympic ode, which was written to commemorate the victory of Aespieon, an Orchomenian, is in reality a hymn in honour of these goddesses, and was probably sung in their temple. It was in the marshes in the neighbourhood of Orchomenus that the nubic or flute-creeds grew, which exercised an important influence upon the development of Greek music. [See Vol. i. p. 414, b.]

The ruins of Orchomenus are to be seen near the village of Skripai. The city stood at the edge of the marshes of the Copais lake, and occupied the triangular face of a steep mountain. The Cephalus *’ winds like a serpent* round the southern base of the mountain (δαχτυλίως, δρακάνως, Δη. op. Strab. p. 424). At its northern base are the sources of the river Meles. [See Vol. i. p. 413, a.] Leake observes that the upper part of the hill, forming a very acute angle, was fortified differently from the customary modes. Instead of a considerable portion of it having been enclosed to form an acropolis, there is only a small castle on the summit, having a long narrow approach to it from the body of the town, between walls which, for the last 200 yards, are almost parallel, and not more than 20 or 30 yards asunder. Below this approach to the citadel the breadth of the hill gradually
widens, and in the lowest part of the town the enclosed space is nearly square. It is defended on the lowest side by a wall, which crossed the slope of the hill along the crest of a ledge of rock, which there forms a division in the slope. In this wall, which is at three-fourths of the distance from the castle to the monastery, there are some foundations of the gate which formed the lower entrance into the city; and on the outside are many large masses of wrung-off stone, the remains, apparently, of some temple or other public building. The southern wall of the city, which follows a line parallel to the Cephissus, is traceable, with scarcely any intermission, through a distance of three-quarters of a mile; and in many places several courses of masonry are still extant. The wall derives its flank defence from square towers, placed for the most part at long intervals, with an intermediate short flank or break, in the line of wall. In a few places the masonry is of a very early age, but in general it is of the third kind, or almost regular." The former belongs to the earlier Orchomenus, the latter to the later city, and dates from the time of its restoration either by Philip or the Phocians. "Towards the middle of the northern side the hill of Orchomenus is most precipitous, and here the walls are not traceable. The circumference of the whole was about 2 miles. The citadel occupies a rock about 40 yards in diameter, and seems to have been an irregular hexagon; but three sides only remain, no foundations being visible on the eastern half of the rock. At the northern angle are the ruins of a tower, and parallel to the north-western side there is a ditch cut in the rock, beyond which are some traces of an outwork. The hill is commanded by the neighbouring part of Mount Aconium, but not at such a distance as to have been of importance in ancient warfare. The access to the castle from the city was first by an oblique flight of 44 steps, 6 feet wide, and cut out of the rock; and then by a direct flight of 50 steps of the same kind."

The monuments, which Pausanias noticed at Orchomenus, were temples of Dionysus and the Charites,—of which the latter was a very ancient building,—a fountain, to which there was a descent, the treasury of Minyas, tombs of Minyas and Hesiod, and a brazen figure bound by a chain of iron to a rock, which was said to be the ghost of Actaeon. Seven stadia from the town, at the sources of the river Melas, was a temple of Heracles. The Treasury of Atreus was a circular building rising to a summit not very pointed, but terminating in a stone, which was said to hold together the entire building. (Paus. ix. 38.) Pausanias expresses his admiration of this building, and says there was nothing more wonderful either in Greece or in any other country. The remains of the treasury still exist at the eastern extremity of the hill towards the lake, in front of the monastery. It was a building similar to the Treasury of Atreus at Mycenae. It was a circular vault of massive masonry embedded in the hill, with an arched roof, surmounted probably by a tumulus. The whole of the stone-work of the vault has now disappeared, but its form is vouched for by the circular cavity of the ground and by the description of Pausanias. It had a side-door of entrance, which is still entire, though completely embedded in earth up to the base of the architrave. There were probably two great slabs in the architrave, as at Mycenae, that is, one only is left, which is of white marble, and of which the size, according to Leake, is 16 feet in its greatest length, 8 in its greatest breadth, and 3 feet 2½ inches in thickness. The diameter of the vault seems to have been about 41 feet. Respecting the origin and destination of this, and other buildings of the same class, some remarks are made under Mycenae. [Vol. II. p. 383.] Strabo remarks (ix. p. 416) that the Orchomenus of his time was supposed to stand on a different site from the more ancient city, the inundations of the lake having forced the inhabitants to retire from the plain towards Mt. Aconium. And Leake observes, that this seems to accord with the position of the treasury on the outside of the existing walls, since it can hardly have been placed there originally. The acropolis, however, must always have stood upon the hill; but it is probable, that the city in the height of its power extended to the Cephissus.

The monastery of Skripá, which stands about midway between the treasury and the river, probably occupies the site of the temple of the Charites; for the pedestal of a tripod dedicated to the Charites, which is now in the church, was found in an excavation made upon the spot. Some very ancient inscriptions, of which two are now in the British Museum, were found in the church of the monastery. They are in the Orchomenian-Aeolic dialect, in which the digamma was used. (K. O. Müller, Orchomenos und die Minyer, Breslau, 1844, 2nd ed.; Dodwell, Classical Tour, vol. i. p. 227, seq.; Leake, Northern Greece, vol. ii. p. 144, seq.; Mure, Tour
in Greece, vol. i. p. 223, seq.; Ulrichs, Reisen in Griechenland, p. 178, seq.)

2. An ancient city of Arcadia, called by Thucydides (v. 61) the Arcadian (ἡ Ἀρκαδική), to distinguish it from the Boeotian town. It was situated in a plain surrounded on every side by mountains. This plain was bounded on the S. by a low range of hills, called Arcisias, which separated it from the territory of Mantinea; on the N. by a lofty chain, called Olygyaros, through which the passes into the territories of Pleuron and Symphiai; and on the E. and W. by two parallel chains running from N. to S., which bore no specific name in antiquity: the eastern range is in one part 5100 feet high, and the western about 4000 feet. The plain is divided into two by hills projecting on either side from the eastern and western ranges, and which approach so close as to allow space for only a narrow ravine between them. The western hill, on account of its rough and rugged form, was called Trachy (Τράχυς) in antiquity; upon the summit of the western mountain stood the acropolis of Orchomenus. The northern plain is lower than the southern; the water of them, which ran through the ravine between Mount Trachy and that upon which Orchomenus stands into the northern plain, where, as there is no outlet for the waters, they form a considerable lake. (Paus. viii. 13. § 4)

The acropolis of Orchomenus, stood upon a lofty, steep, and insulated hill, nearly 3000 feet high, resembling the strong fortress of the Messenian Ithome, and, like the latter, commanding two plains. [see Vol. II. p. 338.] From its situation and its legendary history, we may conclude that it was one of the most powerful cities of Arcadia in early times. Pausanias relates that Orchomenos was founded by an eponymous hero, the son of Lycon (viii. 3. § 3); but there was a tradition that, on the death of Arcas, his dominions were divided among his three sons, of whom Elatus obtained Orchomenos as his portion. (Schol. ad Íthome, Paus. 415.) The kings of Orchomenos are said to have ruled over nearly all Arcadia. (Heraclid. Pont. op. Íthome, Lact. i. 94.) Pausanias also gives a list of the kings of Orchomenus, whom he represents at the same time as kings of Arcadia. One of these kings, Aristocrates, the son of Arcisias, was stoned to death by his people for violating the virgin priestess of Artemis Hymnia. A Lacedaemonian who had deserted by his son Hieron, and Hieras by his son Aristocrates II., who, having abandoned the Messenians at the battle of the Trench in the second war against Sparta, experienced the fate of his grandfather, being stoned to death by the Arcadians. He appears to have been the last king of Orchomenus, who reigned over Arcadia, but his family was not deprived of the kingdom of Orchomenos, as is stated in some authorities, since we find his son Aristocrates represented as king of the city. (Paus. vi. 5; Polyb. iv. 3; Heraclid. Pont. 5.) It would appear, indeed, that royalty continued to exist at Orchomenos long after its abolition in most other Grecian cities, since Theophrastus related that Peisistratus, king of Orchomenos, was put to death by the aristocracy in the Peloponnesian War. (Plut. Pausell. 32.)

Orchomenos is mentioned by Homer, who gives it the epithet of παλικενησα (II. ii. 605) and it is also called παρος by Ovid (Met. vi. 416), and παρος by Apollonius Rhodius (viii. 512). In the Persian wars Orchomenus sent 120 men to Thermopylae (Herod. viii. 102), and 200 to Plataea (vii. 28). In the Peloponnesian War, the Lacedaemonians despoiled in Orchomenus the hostages they had taken from the Arcadians; but the walls of the city were then in a dilapidated state; and accordingly, when the Athenians and their Peloponnesian allies advanced against the city in n. c. 418, the Orchomenians dared not offer resistance, and surrendered the hostages. (Thuc. v. 61.) At the time of the foundation of Megalopolis, we find the Orchomenians exercising supremacy over Theben, Methycirion, and Teuthis; but the inhabitants of these cities were then transferred to Megalopolis, and their territories assigned to the latter. (Paus. viii. 27. § 4.) The Orchomenians, through their enmity to the Mantinians, refused to join the Arcadian confederacy, and made war upon the Mantinians. (Xen. Hell. vi. 5. § 11; Dod. xiv. 62.) Henceforth Orchomenos lost its political importance; but, from its commanding situation, its possession was frequently an object of the belligerent powers in later times. In the war between Cassander and Polyophrus, it fell into the power of the former, n. c. 313. (Diod. xiii. 63.) It subsequently exposed the side of the Aetolians, who was then by Cassander invaded, and afterwards retaken by Antigonus Doson, who placed there a Macedonian garrison. (Polyb. i. 54. iv. 6; Pint. Arat. 5.) It was given back by Philip to the Aetolians. (Liv. xxxii. 5.) Strabo mentions it among the Arcadian cities, which had either disappeared, or of which there were scarcely any traces left (viii. p. 338); but this appears to Pausanias to have been an exaggeration. When this writer visited the place, the old city upon the summit of the mountain was in ruins, and there were only some vestiges of the agora and the town walls; but at the foot of the mountain there was still an inhabited town. The upper town was probably deserted at a very early period; for such is the natural strength of its position, that we can hardly suppose that the Orchomenians were dwelling there in the Peloponnesian War, when they were unable to resist an invading force. Pausanias mentions, as the most remarkable objects in the place, a source of water, and temples of Poseidon and Aphrodite, with statues of stone. Close to the city was a wooden statue of Artemis, enclosed in a great cedal tree, and hence called Cedratio. Below the city were several heaps of stones, said to have been erected to some person slain in battle. (Paus. viii. 13.)

The village of Kolpiki stands on the site of the lower Orchomenos. On approaching the place from the south the traveller sees, on his left, tumuli, chiefly composed of collections of stones, as described by Pausanias. Just above Kolpiki are several pieces of white marble columns, belonging to an ancient temple. There are also some remains of a temple at a ruined church below the village, near which is a copious fountain, which is evidently the one described by Pausanias. On the summit of the hill are some remains of the walls of the more ancient Orchomenos.

In the territory of Orchomenus, but adjoining that of Mantinea, consequently on the northern slope of Mt. Anchischia, was the temple of Artemis Hymnia, which was held in high veneration by all the Arcadians in the most ancient times. (Paus. viii. 5. § 11.) Its site is probably indicated by a chapel of the Virgin Mary, which stands east of Leridi.

In the southern plain is an ancient canal, which conduces the water from the surrounding mountains
through the ravine into the lower or northern plain, which is "the other Orichemonian plain" of Pausanias (viii. 13. § 4). After passing the ravine, at the distance of 3 stadia from Orichemonus, the road divides into two. One turns to the left along the northern side of the Orichemonian acropolis to Calp浑身, the other crosses the torrent, and passes under Mt. Trachy to the tomb of Aristocrates, beyond which are the fountains called Teneice (Tενεία). Seven stadia further is a place called Anitius (Ἀνίτιος). Here, in ancient times, the road divided into two, one leading to Syrmaphus and the other to Phenae. (Paus. viii. 13. § 4, seq.) The above-mentioned fountains are visible just beyond Trachy, and a little further are some Hellenic ruins, which are those of Anitius. (Diss. Cr. Cl. vi. p. 9, seq.; Leake, Itin., vol. iii. p. 99, seq.; Robin, Recherches, gr. vol. i. p. 149; Curtius, Peloponnese, vol. i. p. 219, seq.)

3. A town in Thessaly. [See above, p. 487.]

ORCISTUS, a town in the north-east of Phrygia, near the borders of Galatia. It was the see of a bishop (Geog. Sac. p. 256; Cuncil. Chalced.; Tab. Peutinger). It is placed by Col. Leake (Asis Minor, p. 71), on the authority of an inscription found there by Pococke, at Akkiana, and, perhaps more correctly, by Hamilton (Researches, i. p. 446) about 3 or 4 miles to the south-east of the village of Akkiana, where considerable remains of antiquity are found. [L. S.]

ORDEUSIS. [Isaacorem Portus.]

ORDEUSUS. [Orcusus.]

ORDEUSUS (Ὀρδέουσος, Herod. iv. 48), an affluence of the Ister, which the commentators usually identify with the Sereth. (Schaffarik, Sac. Ant. vol. i. p. 506.) [E. B. J.]

ORDOVICES (Ορδόβικος, Ptol. ii. 3. § 18), a people on the W. coast of Britannia Romana, opposite to the island of Mona. They occupied the N.W. portion of Wales, or that lying between Cardigan Bay and the river Der, viz., Montgomeryshire, Merionethshire, Caernarvonshire, Denbighshire, and Flintshire. (Camden, p. 777; Tac. Ann. ii. 33, Agric. 18.) [T. H. D.]

ORESCH (Ὀρήσχος), a people of Macedonia or Thrace, known only from their coins. These have been by some writers referred to the Orestae; but it is more probable, as suggested by Leake, that they were one of the Thracian tribes who worked the silver mines of Pangaeum; a circumstance which will account for our finding silver coins of large size and in considerable numbers struck by a people so obscure that their name is not mentioned by any ancient author (Leake, Northern Greece, vol. iii. p. 213; Numismata Hellenica, p. 81). The coins in question, one of which is annexed, closely resemble in style and fabric those of the Bitolites and Edoni in the same neighborhood. [E. H. B.]

ORESTAEA (Ὀρήστεια, Hevat. op. Steph. B. s. v.; Thuc. ii. 89; Polyb. xviii. 30; Strab. vii. p. 326, ix. p. 434; Plin. iv. 17), a people who are shown by Thucydides (L. c.) to have bordered upon the Macedonian Pannonicus; and who partly, perhaps, as having been originally an Epithian tribe (Steph. B. s. r. terms them a Moesian tribe), were united with the other Epithians, under their prince Antiochus, in support of the expedition of Cynernus and the Ambracians against Acrania. Afterwards they were incorporated in the Macedonian kingdom. In the peace finally granted to Philip, B. C. 196, by the Romans, the Orestae were declared free, because they had been the first to revolt. (Liv. xxxiii. 34.)

ORESTES (Ὀρήστης, Ptol. iii. 13. §§ 5, 22; Steph. B. r. s.; Liv. xxvii. 33, xxxvi. 40) or ORESTAS (Orestwar, Strab. vi. p. 326), the name given to the district which they occupied, though it is not named by Livy and Diodorus among the countries which entered into the composition of the Fourth Macedonia, was probably included in it, because the greater part, at least, of Orestes was situated to the E. of Findus. This subdivision of Upper Macedonia is represented by the modern districts of Gräntia, Anas, and Kastoria. (Leake, Northern Greece, vol. iii. p. 305, vol. iv. pp. 121—124.) [E. B. J.]

ORESTHASMUS (Ὀρήσθασμος, Tus.; Ὀρήσθασμος, Thuc. Ὀρήστασμος, Her., Eur.), a town in the south of Arcadia, in the district of Messenia, a little to the right of the road, leading from Megalopolis to Pallantium and Tegea. Its inhabitants were removed to Megalopolis on the foundation of the latter city. Its territory is called Oresthias by Thucydides (iv. 134), and in it was situated Laloceia, which became a suburb of Megalopolis. (Ladocela.) Leake places Oresthiasmus at or near the ridge of Tzibamari, and conjectures that it may have occupied the site of the village of Maranara or Marinaria, a name often attached in Greece to places where ancient wreathed or sculptured stones have been found. (Paus. viii. 44. § 2.; comp. viii. 3. § 1, 27, § 3, 39. § 4; Herod. ii. 11; Plut. Arist. 10; Thuc. v. 64; Empir. Orest. 1642, Electr. 1274; Steph. B. s. r.; Leake, Peloponnesea, p. 247.)

ORESTHIS. [Oresthamus.]

ORESTIS. [Orestae.]

ORESTIAS. [Haddhianopolis, No. 1.]

ORETANI (Ὀρέταιοι, Ptol. ii. 6. § 59), a powerful people in the 8. of Hispania Tarraconensis, inhabiting the territory E. of Baetica, as far as Carthago Nova, and spreading to the N. beyond the river A чис. The Baets flowed through their country in its earliest course. (Polib. x. 38, xi. 30; Strab. iii. pp. 152, 156; Plin. iii. 3. s. 4; Liv. xxi. 11, xxxvi. 7.) Thus they inhabited the E. part of Granada, the whole of Málaga, and the W. part of Murcia. Their chief city was Castulo, now Castluna. [T. H. D.]

ORETUM GERMANORUM (Ὀρετός Περιοχής, Ptol. ii. 6. § 59). Germani was another name for the Oretani ("Oretani, qui et Germani nominabant," Plin. iii. 3. s. 4), and Oretum was one of their towns; probably the Orcita of Armentiborusa, quoted by Steph. B. s. r. c.; and the Oria of Strabo (iii. p. 152). It has been identified with Granadula, a village near Almegro, where there is a hermitage still called De Oretu, and close by several ruins, a Roman bridge, &c. (Morales, Ant p. 8, b. p. 76. a.; Flores, Esp. S. viii. p. 233; Uckert, vol. ii. pt. 1. p. 152.) [T. H. D.]
OREUS (Ὅρεος; Eth. Ὄρεης): the territory 'Oria, Strab. xvi. p. 445), formerly called Histiaea (Ἱστιαία, Histiaia; Eth. Ἰστιαίης), a town in the north of Euboea, situated upon the river Calba, at the foot of Mt. Telethrum, and opposite Autron on the Thessalian coast. From this town the whole northern extremity of Euboea was named Histiaeotis (Ἱστιαιετίς, Ion. Ἰστιαίετίς, Herod. vii. 23). According to some it was a colony from the Attic demes of Histiaea (Strab. x. p. 445); according to others it was founded by the Thessalian Pheraiheui. (Seym. Ch. 578.) It was one of the most ancient and most important of the Euboean cities. It occurs in Homer, who gives it the epithet of παντόκρατειοι (II. ii. 337); and Sicyon mentions it as one of the four cities of Euboea (p. 22). After the battle of Artemisium, when the Grecian fleet sailed southwards, Histiaeotis was occupied by the Persians. (Herod. vii. 23.) Upon the expulsion of the Persians from Greece, Histiaeotis, with the other Euboean towns, became subject to Attica. In the revolt of Euboea from Athens in b.c. 445, we may conclude that Histiaeotis took a prominent part, since Pericles, upon the reduction of the island, expelled the inhabitants from the city, and peopled it with 2000 Athenian colonists. The expelled Histiaeots were said to have been compelled to withdraw to Marcus and Macedonia. (Thuc. i. 114; Dum. xii. 7; Plut. Per. 23; Theopomp. ap. Strab. x. p. 445.) From this time we find the name of the town changed to Oreus, which was originally a demus dependent upon Histiaeotis. (Strab. l. c.; Paus. vii. 26, § 4.) It is true that Thucydides on one occasion subsequently calls the town by its ancient name (vii. 57); but he speaks of it as Oreus, in relating the second revolt of Euboea in b.c. 441, where he says that it was the only town in the island that remained faithful to Athens. (Thuc. viii. 95.) At the end of the Peloponnesian War, Oreus became subject to Sparta; the Athenian colonists were doubtless expelled, and a portion at least of its ancient inhabitants restored; and accordingly we read that this town remained faithful to Sparta and cherished a lasting hatred against Athens. (Diod. xvi. 30.) Neogenes, supported by Jason of Pherae, made himself tyrant of Oreus for a time; but he was expelled by Therpippas, the Laconian commander; and the Athenian Chabrias endeavoured in vain to obtain possession of the town. (Diod. l. c.) But shortly afterwards, before the battle of Lerntra, Oreus revolted from Sparta. (Xen. Hell. vi. 4, § 56.) In the subsequent war between Philip and the Athenians, a party in Oreus was friendly to Philip; and by the aid of this monarch Philetides became tyrant of the city (Dem. Phil. iii. pp. 119, 127, de Cor. p. 248; Strab. l. c.); but the Athenians, at the instigation of Demostenes, sent an expedition against Oreus, which expelled Philetides, and, according to Charax, put him to death. (Dem. de Cor. p. 252; Charax, ap. Steph. s. r. Ὅρεως.) In consequence of its geographical position and its fortifications, Oreus became an important place in the subsequent wars. In the conflict between Antigonus and Cassander it was included on the one side, when Cassander, elbowed to retire upon the approach of Antigonus, the general of Antigonus. (Diod. xix. 75, 77.) In the first war between the Romans and Philip, it was betrayed by the former to the commander of the Macedonian garrison, b.c. 207. (Livy xxviii. 6.) In the second war it was taken by the Romans by assault, b.c. 200. (Livy xxviii. 62.) It's situation, in n. v. 196, it was declared free by T. Quintius Flamininus along with the other Grecian states. (Polyb. xviii. 28, 30; Liv. xxxii. 31, 34.) Pliny mentions it among the cities of Euboea no longer existing in his time (Plin. iv. 21, s. 21), but it still occurs in the lists of Ptolemy, under the corrupt form of 'Ορεαδ (iii. 13, § 25).

Strabo says that Oreus was situated upon a lofty hill named Deumus (x. p. 445). Livy describes it as having two citadels, one overlooking the sea and the other in the middle of the city (xxviii. 6). There are still some remains of the ancient walls at the western end of the bay, which is still called the Bay of Oreus. (Stephani, Itales, giv. pp. 33, seqq. locate, Northern Greece, vol. iv. p. 362.)

ORIGNA. [Ogrynis.]

ORIGAS (Ὀρίγας), a little tributary of the Macedon in Pheriss, flowing into the main river on the south-east of Celaena (Strab. xii. p. 578; Plin. v. 29, where it is called Oryga). It is probably the stream crossed by Mr. Arundell (Discov. in As. Min. i. p. 185) between Dainar and the bridge of the Macedon near Digetoiz; but its modern name is unknown. [L. S.]

ORIGUS, ORIGYSUS. [Dassaretae, Vol. I. p. 792.]

ORIGIA. [Hergetes.]

OROCYNI. [Tautica Chersonesus.]

ORIA, ORISIA. [Oetetum Germanorum.]

ORICUM, ORICUS (Ὀρίκος, Iiec:at. Fr. 75 ap. Steph. B. s. e.; Herod. ix. 192; Syl. p. 10; Polyb. vii. 19; Sycin. 440; Eust. ad Dion. 321; Ὀρίκος, Ptol. iii. 14, § 2; Pomp. Mela. iii. § 12; Plin. iii. 26), a town and harbour of Illyricum, not far from Apollonia and the mouth of the Aups. Legend ascribes its foundation to the Euboeans on their return from Troy (Sycin. l.c.); and Apollonius (Argon. iv. 1246) speaks of the arrival of a party of Colchians at this port; and thus Pliny (l.c.) calls it a Colchian colony. Oricum is known in history as a haven frequented by the Romans in their communications with Greece, from its being very conveniently situated for the passage from Brundisium and Hydumtrum. b.c. 214, the town was taken by Philip V. of Macedonia; but it afterwards fell into the hands of the Romans and M. Valerius Laevinus, who commanded at Brundisium, with a single legion and a small fleet. (Liv. xxiv. 40.) After the campaign of b.c. 167, Aemilianus Paulus embarked his victorious troops from Oricum for Italy. (Plut. Aemil. Paul. 29.) Caesar, after he had disembarked his troops at Palaestra (Lanc. iv. 460; comp. Caes. B. C. iii. 6, where the reading Pharsalus or Pharsalia, is a mistake or corruption of the MSS.), or the sheltered beach of Patidia, surrounded by the dangerous promontories of the Ceraunian mountains, within one day of his landing marched to Oricum, where a squadron of the Pompeian fleet was stationed. (Caes. B. C. iii. 11; Appian, B. C. ii. 54.) The Oreni declared their unwillingness to resist the Roman consul; and Torquatus, the governor, delivered up the keys of the fortress to Caesar. The small fleet in which he had brought the squadron over was landed at Oricum where the harbour was blocked up by sinking a vessel at its mouth. Caesus, the son of Pompeius, made a spirited attack on this stronghold, and, cutting out four of the vessels, burnt the rest. (Caes. B. C. iii. 40.) It continued as an important haven on the Adriatic. (Hor. Carm. iii. 7. 77; Plut. Cato, 67; C. 387; Lucan, iii. 187.) The
name of its harbour was Panormus (Πάνωρμος, Strab. vii. p. 316), now Porto Ragusa; while the Celts (Κλέτες, Ptol. iii. 13. §§ 2, 5) is identified with the river of Dukhides. It would seem from Virgil (Aen. x. 136) that Orcium was famous for its turpentine, while Nicander (Ther. 316) alludes to its boxwood. The town was restored by the munificence of Herodes Atticus. (Paus. iii. 14. § 4.) To the E. of the mouth of the river of Dukhides is a succession of lagoons, in the midst of which lies Orcium, on the desert site now called Eriklé, occupied (in 1818) only by two or three huts among the vestiges of an aqueduct. (Smyth, Mediterranean, p. 46.) The present name (Иерикле, Anna Comm. xiii. p. 389) is afforded on the last syllable, as in the ancient word, and E substituted for O by a common dialectic change. (Ponquerye, Voyage 21, p. 264; Leake, North. Greece, vol. i. pp. 36, 90.) A coin of Orcium has for type a head at Apollo. (Eckel, vol. ii. p. 167.) [E. B. J.]

ORIGENOMESCI

ORIGIACUM (Οριγιάκο), Polodyni (ii. 9. § 7) makes this town the chief place of the Attic or Attabates in Belgica. There is nothing that fixes the position of Origienum except its resemblance to the name Orchies, which Clauer suggested. Orchies is between Douay and Tourmany, and appears to be beyond the limits of the Attabates, whose chief town in Caesar’s time was Nemecum (Αντρας). [G. L.]

ORIGIS (Όριγις). [Aurinxxx.]

ORIPPO, a town of Hispania Baetica, on the road from Gades to Hispalis. (Plin. iii. i. 3; Itin. Ant. p. 410.) Commonly identified with Villa de los Hermeños, though some have mentioned Alosa de Guadalca and Torre de los Hermeños. Ancient coins of the place have a bunch of grapes, showing that the neighbourhood was rich in vines, a character which it still preserves. (Caro, Ant. ii. 20; Flores, Esp. Segr. ix. p. 111, Med. ii. p. 512; Miojnet, i. p. 23, Suppl. i. p. 39; Sestini, Med. p. 77.) [T. H. D.]

COIN OF ORIPPO

ORITAE (Ορίται), a people inhabiting the seacoast of Gersonia, with whom Alexander fell in on his march from the Indus to Persia (Arrian, vi. 21, 22, 24, &c.) Their territory appears to have been bounded on the east by the Arabs, and on the west by a mountain spur which reached the sea at Cape Moran. (Vincent, Voy. of Nearchus, i. p. 217.) There is considerable variation in the manner in which their names are written in different authorities; thus they appear as Oritae in Arrian (Indic. 23, Expul. Alex. vi. 22); Ορίται in Strabo (xv. p. 720), Dionysius Perieget. (v 1996), Plutarch (Alex. c. 66), and Stephanus B.; as Ori in Arrian (vi. 28) and Pliny (vi. 23, § 25) and Herodotus in Curtius (ix. 10. 6); yet there can be no doubt that they are one and the same people. Arrian and Strabo have described them at some length. According to the former, they were an Indian nation (vi. 21; cf. Died. xvii. 105), who wore the same arms and dress as these people, but differed from them in manners and institutions (Ind. c. 23). According to the latter they were a race living under their own laws (vi. p. 720), and armed with javelins hardened at the point by fire and poisoned (vi. p. 729). In another place Arrian appears to have given the true Indians to the river Arabis (or Paralēf), the eastern boundary of the Orissae (Indic. c. 22); and the same view is taken by Pliny (vii. 2). Pliny calls them “Ichiyophagi Orissai” (vi. 23. c. 25); Curtius “Indi maritimii” (ix. 10. 8). It is probable that the true form of the name was Heritae, as the Nabian geographer places a town called Ḥâvar on the route to Firavan in Mekein. (Comp. D’Auvillie, Earlscassemes, &c. p. 42; Edrisi, Geog. Nub. p. 58.)

ORIUNDUS, [Barbara.]

OEMENIUM (Οϊμενίων), a town of Thessaly, mentioned in the Catalogue of Slios along with Hypereia and Asterium as belonging to Euryphylus (Hom. Il. ii. 734). It was said to have been founded by Ormenus, the grandson of Aeolus, and was the birthplace of Phoenix. (Dem. Scepsius, ap. Strab. ix. p. 438, seq.) Strabo identifies this town with a place in Magnesia named Ornium, situated at the foot of Mt. Pelon, at the distance of 27 stadia from Demetrias, on the road passing through Iolcos, which was 7 stadia from Demetrias and 20 from Ornium. (Strab. l. c.) Leake, however, observes that the Ornium of Homer can hardly have been the same as the Ornium of Strabo, since it appears from the situation of Asterium that Euryphylus ruled over the plains of Thessaliotis, which are watered by the Apidanus and Enipeus. (Leake, Northern Greece, vol. iv. p. 434, seq.)

ORMINUM (Ορμίνων ὄρος), a mountain in the north-eastern part of Bithynia, terminating in Cape Posidion (Ptol. iii. 1 §§ 10, 11). Alinus supposed it to be the same as the mountain now called Doreus Julianus (L.N.)

ORNEAE (Ορνέα). [Th. Ορνέασς.], a town in the Argaeia, mentioned in the Iliad (li. 571), which is said to have derived its name from Orneus, the son of Erechtheus. Orneus retained its ancient Cynurian inhabitants, when Argos was conquered by the Dorians. It continued independent of Argos for a long time; but it was finally conquered by the Argives, who removed the Orneutae to their own city. (Paus. ii. 25. § 6, viii. 27. § 1.) Thucydides mentions (v. 67) the Orneutae and Cleonei as allies (εδύμαξος) of the Argives in n. c. 418; and the same historian relates (vi. 7) that Orneus was destroyed by the Argives in n. c. 416. (Comp. Diod. xii. 81.) It might therefore be inferred that the destruction of Ornium by the Argives in n. c. 416 is the event referred to by Pausanias. But Müller concludes from a well-known passage of Herodotus (vii. 73) that Orneus had been conquered by Argos long before; that its inhabitants were reduced to the condition of Perioeci; and that all the Perioeci in the Argaeia were called Orneutae from this place. But the Orneutae mentioned by Thucydides could not have been Perioeci, since they are called allies; and the passage of Herodotus does not require, and in fact hardly admits of Müller’s interpretation. "The Cynurians," says Herodotus (l. c.), "have become Doricized by the Argives and by time, being Orneutae and Perioeci." These words would seem
clearly to mean that, while the other Cymriæ, who
became Perseciæ, the Ornetæ continued independent,—an interpretation which is in accordance with the account of Thucydides. (Müller, Archívica, p. 48, seq.; Dörries, v. 4, § 2; Arnold, ad Thuc. v. 67.)

With respect to the site of Orneæ we learn from Pausanias (v. 23, § 5) that it was situated on the confines of Phælia and Sicyonia, at the distance of 120 stadia from Argos, being 60 stadia from Lyr-
cæia, which was also 60 stadia from Argos. Strabo (viii. p. 582) says that Orneæ was situated on a river of the same name above the plain of the Sicy-
onians; for the other passage of Strabo (viii. p. 578), which states that Orneæ lay between Corinth and Sicyon, and that it was not mentioned by Homer, is probably an interpolation. (See Kranmer's Strabo, vol. ii. p. 186.) Orneæ stood on the northern of the two roads, which led from Argos to Mantinchia. This northern road was called Cimææ, and followed the course of the Inachus. [Arcus, p. 201.]

PÄRNI ("Oνων"), a town of Thrace mentioned only by Herodotus (p. 632). [T. H. D.]

Ornici (Ορνίται, Pol. ii. 6, § 37), a tribe of the Astures in Hispania Tarraconensis. Their chief town was Interaria. [T. H. D.]

Ornichon Polis (Ορνίτηον πόλις), a city of the Sabellæns, according to Sylas (ap. Rehahn, Tabulet, p. 431). It is placed more exactly by Strabo between Tyre and Salamis (v. 578). Pliny mentions together "Sarepta et Ornithon oppida et Sile." (v. 19.) Rehahn suggests that it may be "Tomeneola superior," which the Thalmai places above Caesarea; Tarnegola in Hebrew being equivalent to the Gallus of Latin = αυρακ in Greek. (Ptol. p. 916.) Dr. Robinson, following Pococke, conjectures that it may be represented by an ancient site on the shoal of the Phocian plain, where he placed "the traces of a former site called 'Adlar, consisting of confused heaps of stones, with several old wells." There are also "many sepulchral cavities cut out of the hard limestone rock," in the precipitous base of the projecting mountain which here approaches the coast,—braving clear indications of an ancient city in the vicinity. (Jbo. Res. vol. iii. p. 411, and note 2; Pococke, Observations, vol. ii. p. 84.) [G. W.]

Oronda, a town in the mountains of Pisidæ, near the south-western shore of lake Trogitis (Liv. xxxvii. 57, 39; Plin. v. 24). From this town the whole district derived the name of Orundianæ, the inhabitants of which called Orundianæ or Orundis (Οροντίανοι), possessing, besides the chief town Oronda, also Mustha and Pappa (Liv. xxxvii. 18, 19; Polyb. xxi. 257; Pol. v. 4, § 12). Hamilton (Researches, i. p. 478) believes that the ruins he found on the slope of a hill near lake Egydris, may mark the site of Oronda: but it would seem that its remains must be looked for a little further east. [L. S.]

Orontes. [Αροντα]s

Oröblicæ (Ορόβλιται), a town on the western coast of Euboea, between Aegaeus and Aegae, which possessed an oracle of Apollo Schinarius, (Strab. 2. p. 443, comp. ii. p. 406.) The town was partly destroyed by an earthquake and an inundation of the sea in n. c. 426. (Chre. ii. 59.)

This town seems to be the one mentioned by Stephanus under the name of Oröbo (Ορόβος), who describes it as "a city of Euboea, having a very renowned temple of Apollo." (Steph. B. s. v. Ορόβος.) There are some remains of the walls of Oröblicæ at Rocicë, which word is only a corruption of the ancient name. (Leake, North Grecian vol. ii. p. 176.)

Oröbii, a tribe of Cicalpine Gauls, mentioned only by Pline (iii. 17, s. 21), upon the authority of Catæ, who said that Bérgümum and Commum had been founded by them, as well as Forum Licinian, by which he must mean the Gaulish town that preceded the Roman settlement of that name. Their original abode, according to Catæ, was at a place called Barra, situated high up in the mountains; but he professed himself unable to point out their origin and descent. The statement that they were a Greek people, advanced by Cornelius Alexander (ap. Pline, l. c.), is evidently a mere inference from the name, which was probably corrupted or distorted with the time. [Oröbii, or Öröbii (Ορόβιοι), a river of Nássosia in Gallia. Pulleniy (i. 10, § 2) places the mouth of the Örörbiæ between the mouth of the Anax (Ανάξ) and the Amarius (Ἀμάριος), which shows that it is the Örörbiæ. In Strabo's text (iv. p. 482) it is written Örörbiæ, which Gessulard unnecessarily corrects, for Örörbiæ and Örörbiæ were probably used indifferently, and it seems that Örörbiæ is the original reading in Mela (ii. 5, ed. J. Vossius, note). Mela says that the Örörbiæ flows past Baternæ (Βάτερναια), and Strabo also places Baternæ on the Örörbiæ. In the Oræ Marittimæ (v. 99) the name is Örörbiæ. The Örörbiæ rises in the Cevenæ in the northeast part of the department of Hérault, and has a very winding course in the upper part. It is above 60 miles long.

Örólaxum, in the north part of Gallia, is placed by the Antoine Itin. on a road from Duro-
cortorum (Roton) to Téorique. It is placed halfway between Eppuria (İptüs) and Andelheimæ, which Örölus supposes to be Epturias, which he means Echtensch; other places Andelheimæ ab at Ancien. The name Arlon clearly derives the name Örölusæn, where Roman remains, as it is said, have been found. Arlon is in the duchy of Luxembourg. [G. L.]

Örömarsi, a people of North Gallia, whose position is thus described by Pline (iv. c. 17), who is proceeding in his description from the Schéde southwards:—"Deinde Menajæ, Morini, Òromarsiæ junctæ, qua possit Gers oricus vocari." In Hardian's text the name is written Öromansiæ, and yet he says that the Missæ have Öromarsiæ. The name is otherwise unknown. Örölus supposes that the name Öromarsiæ is represented by the name of a tract of country between Calais and Gréville, which is Mark or Meur, and borders on the Bou-
lonnœsæ, in which the pagus Gessulard was. [Ges-
sollum. This is more guess, but it is all that we can have. [G. L.]

Örönöter (Ορόντης), the most renowned river of Syria, used by the poet Juvenal for the country "in Tiberim defunct Orôntes." (Juv. iii.) Its original name, according to Strabo, was Typhon (Τυφών), and his account both of its earlier and later names, follows his description of Antochus, the river Oröntes, a town near the city. The.
ORONTES.

river rising in Coele-Syria, then sinking beneath the earth, again issues forth, and, passing through the district of Apamea to Antiochia, after approaching the city, runs off to the sea. It received its name from one Orontes, who built a bridge over it, having been formerly called Typhon, from a mythic dragon, who being stuck with lightning, fell in quest of a hiding-place, and after marking out the course of the stream with its trail, plunged into the earth, from whence forthwith issued the fountain. He places its embouchure 40 stadia from Seleucia (xvi. p. 750). He elsewhere places the source of the river more definitely near to Libanus and the Paradise, and the Egyptian wall, by the country of Apamea (p. 756). Its sources have been visited and described in later times by Mr. Barker in 1835. The river is called by the people El-'A'lei, the rebel," from its refusal to water the fields without the compulsion of water-wheels, according to Abulfeda (Tub. Sgr. p. 149), but according to Mr. Barker, "from its occasional violence and windings, during a course of about 200 miles in a northerly direction, passing through Homs and Hamah, and finally discharging itself into the sea at Sussideh near Antioch." (Journal of the Geog. Soc. vol. vii. p. 93.) The most remote of the sources is only a few miles north of Baboolch, near a village called Lobabech, "at the foot of the range of Anti-libanus on the top of a hilllock, near which passes a small stream, which has its source in the adjoining mountains, and after flowing for several hours through the plain, falls into the basin from which springs the Orontes." These fountains are about 12 hours north of Lobabech, near the village Kurraul, where is a remarkable monument, "square, and solid, terminating above in a pyramid from 60 to 70 feet high. On the four sides hunting scenes are sculptured in relief of which the drawings borders on the grotessae." (Robinson, Journal of Geog. Soc. vol. xxiv. p. 52.) There can be no difficulty in connecting this monument with the Paradise or hunting park mentioned by Strabo near the source of the Orontes, similar, no doubt, in origin and character, to those with which the narrative of Xenophon abounds, within the territories of the Persian monarchs. The rise and course of this river and its various tributaries has been detailed by Col. Chesney (Expedition, vol. i. pp. 594—598), and the extreme beauty of its lower course between Antioch and the sea has been described in glowing terms by Captains Iby and Mangels. (Travels, pp. 225, 226.)

G. W.

ORONTES (Ορώντης, Potl. vi. 2, § 4), a mountain chain of Media, which extended in a south-east direction, passing the Ecbatana of Greater Media (Horandia). It must be considered as an outlying portion of the still greater chain of the Zagros. It is now called the Eyrevend or Elvend. It is probable that the name is preserved in the celebrated mountain of Kurdistana, now called Rowendiz. In Armenian geography this mountain district is called Rowendiz; which is evidently connected with the ancient Orontes. (St. Martin, Armenia, ii. pp. 363, 429.)

ORONTES, a people of ancient Assyria, described by Pliny as being to the east of Guamgamel (vi. 26, s. 30). There can be no doubt that these are the present Rowendiz, a tribe living, as in ancient times, about the great mountain Rowendiz, in Kurdistan, and doubtless connected with the Orontes of Pontic (vi. 2, § 4). They derive their name from Eyrevend, a pure old Persian root, which was usually Hellenized into Eyrevend or Orontes. (Kavlinson, Journal, of Geo. Soc. x. 176.)

OROPUS (Όροπος, rarely Ὁροπός, Paus. vii. 11. § 4; comp. Steph. B. s. r. Ἐβρ., Ἐβράτος, and according to Steph. B. Ὁρόπωτος), a town on the borders of Attica and Boeotia, and the capital of a district, called after it Oropia (Ὑροπία). This district is a maritime plain, through which the Asopus flows into the sea, and extends for 5 miles along the shore. It is separated from the inland plain of Tanagra by some hills, which are a continuation of the principal chain of the Cercian mountains. Oropus was originally a town in Attica and, and, from its position in the maritime plain of the Asopus, it naturally belonged to that country. (Paus. i. 34, § 1.) It was, however, a frequent subject of dispute between the Athenians and Boeotians; and the former people obtained possession of it long before the Peloponnesian War. It continued in their hands till n. c. 412, when the Boeotians recovered possession of it. (Thuc. viii. 60.) A few years afterwards (n. c. 402) the Boeotians, in consequence of a sedition of the Oropians, removed the town 7 stadia from the sea. (Diod. xiv. 17.) During the next 60 years the town was alternately in the hands of the Athenians and Boeotians (comp. Xen. Hell. vii. 4, § 1, &c.), till a long Philip, after the battle of Chersonoea gave it to the Athenians. (Paus. i. 34, § 1.) In n. c. 315 the Oropians recovered their liberty. (Diod. xviii. 56.) In n. c. 312 Cassander obtained possession of the city; but Polemon, the general of Antigonus, soon afterwards expelled the Macedonian garrison, and handed over the city to the Boeotians (Diod. xix. 77.) It has been concluded from a passage of Dicaráurchus (p. 11, ed. Hudson) that Oropus continued to belong to Thessal in the next century; but the expression oixía Ὑροπίων is corrupt; and no safe conclusion can therefore be drawn from the passage. Leake proposes to read ἄρωκα Ὑροπίων, Wordsworth aκία Ὑροπίων, but C. Müller, the latest editor of Dicaráurchus, reads Ὑροπία Ὑροπίων. Dicaráurchus calls the inhabitants Athenian Boeotians, an epithet which he also applies to the inhabitants of Phataenae. Strabo also describes Oropus as a Boeotian town (ix. p. 404); but Livy (xlv. 27), Pausanias (l. c.), and Pliny (iv. 7, s. 11) place it in Attica. How long the Oropi inhabited the inland city is uncertain. Pausanias expressly says that Oropus was upon the sea (ἐπὶ δαλαμασιντης, i. 34, § 1); and the inhabitants had probably returned to their old town long before his time.

Although Oropus was so frequently in the hands of the Athenians, its name is never found among the Athenian demes. Its territory, however, if not the town itself, appears to have been made an Attic deme under the name of Graea (Γραεα). In Homer Oropus does not occur, but Græa is mentioned among the Boeotian towns (II. ii. 498); and this ancient name appears to have been revived by the Athenians as the official title of Oropus. Aristotle said that Oropus was called Graea in his time (ap. Steph. B. s. r. Ὁροπότης); and accordingly we find in an inscription, belonging to this period, the Γραῖα (Γραῖα) mentioned as a deme of the tribe Pandionis (Roes & Meier, Die Demen von Attica, p. 6, seq.) in the passage of Thucydides (ii. 29) παραστέσται τοῦ Ὑροπών τῶν τῆς Πειραιακῆς καλομενῶν, ἵνα ρε- μοῦνται Ἀρωπῶν ἄνδρων ἐπτῆςον, ἀδύνατον, etc., all the existing MSS. have Πειραιαῖ, but Stephanus, who quotes the passage, reads Γραῖας, which Herodot
OROPUS.

and other modern editors have received into the text. It is, however, right to observe that the district of Oropus was frequently designated as the border country or country over the border (τῆς περιαρ γῆς, Thuc. iii. 91).

According to Dicaearchus (I. c.) the Oropians were notorious for their grasping exactions, levied upon all imports into their country, and were for this reason satirised by Xenon, a comic poet: —

Πάντες τέκναι, πάντες εὐδοκίαι.

Κακών τέλος γενοτα τοῖς Ἰρραγέν.

The position of Oropus is thus defined by Strabo.

"The beginning of [Boeotia] is Oropus, and the sacred harbour, which they call Delphinium, opposite to which is old Eretria in Euboea, distant 60 stadia. After Delphinium is Oropus at the distance of 20 stadia, opposite to which is the present Eretria, distant 40 stadia. Then comes Dellium." (Strab. ix. p. 463.) The modern village of Oropó stands at the distance of nearly two miles from the sea, on the right bank of the Pouriéd, anciently the Asopus: it contains some fragments of ancient buildings and sepulchral stones. There are also Hellenic remains at the Ξάδα or wharf upon the bay, from which persons usually embark for Euboea: this place is also called εὐς τοὺς ἁγίους ἄστρακούς, from a ruined church dedicated to the "Holy Apostles." Leake originally placed Oropus at Oropó and Delphinium at Skîla; but in the second edition of his Demi he leaves the position of Oropus doubtful. It seems, however, most probable that Oropus originally stood upon the coast, and was removed inland only for a short time. In the Peloponnesian War Thucydides speaks of sailing to and anchoring at Oropus (vol. ii. 91, viii. 95); and Pan-

sanias, as we have already seen, expressly states that Oropus was upon the coast. Hence there can be little doubt that Skîla is the site of Oropus, and that Oropus is the inland site which the Oropians occupied only for a time. It is true that the distance of Oropó from the sea is more than double the 7 stadia assigned by Diodorus, but it is possible that he may have originally written 17 stadia. If Oropus stood at Skîla, Delphinium must have been more to the eastward nearer the confines of Attica.

In the territory of Oropus was the celebrated temple of the hero Amphaiocles (xiv. 27), who, we know from Pausanias, was worshipped conjointly with Amphaiocles. Livy further describes it as a place rendered agreeable by fountains and rivers; which leads one to look for it at one of two torrents which join the sea between Skîla and Kalamo, which is probably the ancient Paspheis. The mouth of one of these torrents is distant about a mile and a half from Skîla, at half a mile from the mouth are some remains of antiquity. The other torrent is about three miles further to the eastward; on which, at a mile above the plain, are remains of ancient walls. This place, which is near Kalamo, is called Marro-Dhálisai, the epithet Marro (black) distinguishing it from Dhálisai, the site of Delum. The distance of the Hellenic remains on the first-mentioned torrent agree with the 12 stadia of Pausanias; but, on the other hand, inscriptions have been found at Marro-Dhálisai and Kalamo in which the name of Amphaiocles occurs. Dicaearchus (L. c.) describes the road from Athens to Oropus as leading through bay-trees (δία δασφίδων) and the temple of Amphaiocles. Wordsworth very ingeniously conjectures ἷ Ἀσφίδων instead of δία δασφίδων, observing that it is not probable that a toponographer would have described a route of about 30 miles, which is the distance from Athens to Oropus, by telling his readers that it passed through "bay-trees and a temple." Although this reading has been rejected by Leake, it is admitted into the text of Dicaearchus by C. Müller. (Leake, Northern Greece, vol. ii. p. 444, seq., Demi of Attica, p. 112, seq.; Finley, Remarks on the Topography of Oropus and Dionysia, in Transactions of the Royal Society of Literature, 1839, p. 396, seq.; Wordsworth, Athens and Attica, p. 22, seq.)

OROSINES, a river of Thrace, flowing into the Euxine. (Plin. iv. 18.) [T. H. D.]

OROSPEDA (ὁ Ὀροίπεδα, Strab. iii. p. 161, seq.), called by Polyen. Orispoda (Ὀροισπόδα, ii. 6. § 21), a mountain chain in Hispalia Tarraconensis, the direction of which is described under His-

paxia. [Vol. I. p. 1085] It is only necessary to add here the following particulars. It is the highest inland mountain of Spain (11,000 feet), at first very rugged and bold, but becoming wooded as it approaches the sea at Calpe. It abounds in silver mines, whence we find part of it called Mons Argentarius. [ARGENTARIUS MONS.] It is the present chain of Sierra del Mundo, as far as Sierra de Altara and Sierra de Ronca. [T. H. D.]

OBERA I. (Ὀβέρα, Plut. ii. 3. § 14), a town of the Venetiów, on the E. coast of Britannia Barba-

ra. Horsley (Brit. Rom. p. 372) identifies it with Orock, on the little river Orosvat in Fif-

shire.

2. A town in Moeisa Superior (Plut. iii. 9. § 5). [T. H. D.]

ORSA, a mountain with a bay, on the east coast of Arabia, without the straits of the Persian Gulf. (Pliny, vi. 28. s. 32.) Mr. Forster explains the name to mean literally in Arabic "the translucent mountain." He adds: "Its position is effectually determined from the East India Company's Chart, where, about a third of a degree south of Daba, a great mountain, at right angles with the mountains of Luma, runs right down to the sea, while at its base lies the fort of Choriban." (Geog. of Arabia, vol. ii. p. 228.)

ORSINUS, a tributary of the Maeander, flowing in a north-western direction, and discharging itself into the main river a few miles below Antioch (Plin. v. 29). As some MSS. of Pliny have Mosynus, and as Hierocles (p. 665) and other ecclesi-

astical writers (Notit. Episc. Phryg. Pac. p. 27) speak of a town Mosyn in those parts, the river was probably called Mosynus. Its modern name is said to be İnpaşık, that is the river described by Col. Leake (Asia Minor, p. 249) as descending from Clevia and Karacca.

ORTACEA, a small stream of Elysma, which Pliny states flowed into the Persian Gulf; its mouths were blocked up and rendered unfit for navigation by the mud it brought down (vi. 27. s. 31). [V.]

ORTAGNÉA. [Maroneia.]

ORTHAGORIA (Ὄρθαιογορία), a town of Macedo-

nia, of which coins are extant. Pliny (vi. 11. s. 18) says that Ortagnéa was the ancient name of Maroneia; but we learn from an ancient geographer (Hudson, Geogr. Min. vol. iv. p. 42) that Orth-
goria was the ancient name of Stageira, to which accordingly the coins are assigned. (Eckhel, vol. ii. p. 73.)

COIN OF ORTHOGORIA.

ORTHE. ('Orthy), a town of Pheraebin in Thessaly, mentioned by Homer (II. ii. 739), was said by Strabo (ix. p. 440) to have become the acropolis of Philaena. [Philanassa.] It occurs, however, in the lists of Pliny (iv. 9. s. 16) as a distinct town from Philaena.

ORTHOSIA ('Orthwia'), a town of Syria mentioned by Strabo and Ptolemy, near the river Elenuthers, contiguous to Simyra, between it and Tripoli. (Strab. xvi. p. 753; Ptol. v. 15. § 4.) The former makes it the northern extremity of Phoenicia, Pelusium being the southern (p. 756), a distance, according to Artemidorus, of 3650 stadia (p. 760). It was 1130 stadia south of the Orontes. (Ib.) Ptolemy places both Simyra and Orthosia south of the Elenuthers; but Strabo to the north of it: "agreeable whereabouts," writes Shaw, "we still find, upon the north banks of this river (Nahr-el-Bord), the ruins of a considerable city in a district named Ortona. In Penteugus's table, also, Orthosia is placed 30 miles south of Antarabus and 12 miles north of Tripoli. The situation of it is likewise further illustrated by a medal of Antoninus Pius, struck at Orthosia, upon the reverse of which we have the goddess Astarte treading upon a river; for this city was built upon a rising ground, on the northern banks of the river, within half a furlong of the sea: and as the rugged eminences of Mount Libanus lie at a small distance, in a parallel with the shore, Orthosia must have been a place of the greatest importance, as it would have hereby the entire command of the road (the only one there is) betwixt Phoenicia and the maritime parts of Syria." (Travels, p. 270, 271.) The difficulties and discrepancies of ancient authors are well stated by Pococke. (Observations, vol. ii. pp. 204, 205, notes d. e.) He assumes the Nahr Kibeer for the Elenuthers, and places Orthosia on the river Accar, between Nahr Kibeer and El-Bord. (Maundrell, Journey, March 8.) [G. W.]

ORTHOSIA ('Orthwia'), a town of Cretta, not far from Alabanda, on the left bank of the Maeander, and apparently on or near a hill of the same name (Strab. xiv. p. 650; Plin. xxxvii. 25). Near this town the Rhodians gained a victory over the Carians (Polyb. xxx. 5; Liv. xiv. 25; comp. Ptol. v. 2. § 19; Plin. v. 29, xxxvii. 9, 25; Hieroc. 688). The ancient remains near Karposuli probably mark the site of Orthosia (Leake, Asia Minor, p. 234); though others, regarding them as belonging to Alabanda, identify it with Doheni-sheer.

ORTHURA ('Orthwra, Ptol. vii. 1. § 91, viii. 37. § 18), a town on the eastern side of the peninsula of Hindostan, described by Ptolemy as the Palace of Sormax. It was in the district of the Soretetes, and has been identified, conjecturally, by Forbiger with the present Uttar or Utacour. [V.]

ORTONA ('Ortov'). 1. An ancient city of Latium, situated on the confines of the Aeuvian territory. It is twice mentioned during the wars of the Romans with the latter people: first, in B.C. 481, when we are distinctly told that it was a Latin city, which was besieged and taken by the Aequians (Liv. ii. 43; Dionys. viii. 91) and again in 457, when the Aequians, by a sudden attack, took Corbio, and, after putting to the sword the Roman garrison there, made themselves masters of Ortona also; but the consul Horatius engaged and defeated them on Mount Algidus, and after driving them from that position, recovered possession both of Corbio and Ortona. (Liv. iii. 30; Dionys. x. 26.) From these accounts it seems clear that Ortona was situated somewhere in the neighbourhood of Corbio and Mount Algidus; but we have no more precise clue to its position. No mention of it is found in later times, and it is agreed that it has ceased to exist. The name is much corrupted in both the passages of Dionysius; in the first of which it is written Ὄρονες, but the Vatican MS. has Ὄρονα for Ὀρτώνα; in the second it is written Ὀρτώνα. It is very probable that the Hortenses, a people mentioned by Pliny (iii. 5. s. 9) among the "populi Alenses," are the inhabitants of Ortona; and it is possible, as suggested by Niebuhr, that the Ὀρτωνεῖος (a name otherwise wholly unknown), who are found in Dionysius's list of the thirty cities of the Latin League, may be also the same people. (Dionys. v. 61; Niebuhr, vol. ii. p. 18, note.) The sites which have been assigned to Ortona are wholly conjectural.

2. (Ortona a Mare), a considerable town of the Frontier, situated on the coast of the Adriatic, about midway between the mouth of the Aternum (Pescara) and that of the Sagrus (Sangro). Strabo tells us that it was the principal port of the Frontier (v. p. 242). He erroneously places it S. of the Sagrus; but the passage is evidently corrupt, as is one in which he speaks of Ortona or Histionon (for the reading is uncertain) as a resort of pirates. (Strab. i. c., and Kramer ad loc.) Ptolemy correctly places it between the Sagrus and the Aternum; though he erroneously assigns it to the Pergami. Pliny mentions it among the municipal towns of the Frontier; and there seems no doubt that it was one of the principal places possessed by that people. (Plin. iii. 12. s. 17; Ptol. iii. 1. § 19.) Some inscriptions have been published in which it bears the title of a colony, but these are of dubious authenticity (see Zumpt, de Colon. p. 358, note): it is not mentioned as such in the Liber Coloniarum. The Itineraries place it on the road from the mouth of the Aternum to Aequam (Lancisiom). The name is still retained by the modern town of Ortona; and antiquities found on the spot leave no doubt that it occupies the same site with the ancient one. (Itin. Ant. p. 313; Tab. Peut.; Romanelli, vol. iii. p. 67.) [F. H. B.]

ORTOPLA ('Ortopla', Ptol. ii. 17. § 3; Ortopola, Plin. iii. 25), a town of the Liburni, identified with Carolopago or Carlobago, in the district of the Moraccia, where several Roman remains have been found. (Neugebauer, Die Sul-Slaven, pp. 225, 228.) [T. B. J.]

ORTOSPAXA ('Ortopsaxa, Strab. xi. p. 514, xv. p. 723; κωραύα ]._1_ καὶ Ὀρτοπασκα, Plin. v. 29. § 5; Ann. Marc. xxiii. 6), an ancient city of Byzantium, which there is good reason for supposing is identical with the modern town of Kabul. The name is written variously in ancient authors OrtoSpa or Ortospanum; the latter is the form adopted by Pliny (vi. 17. s. 21). Three principal roads
leading through Bactriana met at this place; hence the notice in Strabo (l. c.) of the Ἰ ἐκ Βακτριανας τοιαύτας. Gisckard has (as appears to us), on no sufficient ground, identified Orthospa with the present Koundalar. If the reading of some of the MSS. of Ptolemy be correct, Kābul may be a corruption of Ḳāshāpa.

It is worthy of note, that in the earlier editions of Ptolemy (vi. 18. § 3) mention is made of a people whom he calls Ḳašāzar; in the latest of Nobbe (Tannichitz, 1843) the name is changed to Bašara. It is not improbable that Ptolemy here is speaking of Kābul, as Lassen has observed. (Ind. Alterthumsk. vol. i. p. 29.) The three roads may be, the pass by Bambūn, that by the Hindū-Kūth, and that from Ardherā to Khāsāvar. [V.]

ORTOSPEDA. [OROSPEDA.]

ORTYGIQA. [DELIOS.]

ORTYGIQA. [SYRACUSE.]

ORUS [ἡ Ὠρυξ, Ὀρός, Plt. vii. 1. §§ 25. 36], a chain of mountains in India intra Ganges, which were, according to Ptolemy, the source of the river Tyna (now Peninos). It is difficult now to identify them with certainty, but Forbiger conjectures that they may be represented by the present Nāgala-Mela. [V.]

ORUX. [ARCADIA, Vol. i. p. 193, 3.]

OSCA. 1. ('Oσκα, Plt. ii. 6. § 68), a town of the Hergetes in the N. of Hispania Tarraconensis, on the road from Tarraco and Herda to Caesaraugusta (Itin. Ant. pp. 391, 451), and under the jurisdiction of the last-named city. Phiny alone (iii. 3. s. 4) places the O-senses in Vescitania, a district mentioned nowhere else. It was a Roman colony, and had a mint. We learn from Pintarch (Sert. c. 14) that it was a large town, and the place where Sertorius died. It is probably the town called Hescom ('Hdskos) by Strabo, in an apparently corrupt passage (iii. p. 161; c. Ubert, vol. ii. pt. 1. p. 541.). It seems to have possessed silver mines (Liv. xxxiv. 10, 46, xl. 43), unless the "argentum Oseense" here mentioned merely refers to the mined silver of the town. Florcz, however (Med. ii. 520), has pointed out the impossibility of one place supplying such vast quantities of mined silver as we had recorded in ancient writers under the terms "argentum Oscense," "signalum Oscense;" and is of opinion that Oscense in these phrases means Spanisch, by a corruption from the national name, Euscara, (C.C. Cäs. B. C. i. 60; Vell. Pat. ii. 30.) It is the modern Huesca in Aragon. (Florcz, Med. ii. p. 518; Sestini, 176; Miéret, i. p. 46; Suppl. i. p. 92; Murray's Handbook of Spain, p. 448.)

2. A town of the Tardecini in Hispania Baetica, which some have identified with Horescar, but which Ubert (vol. ii. pt. 1. p. 370) thinks must be sought to the W. of that place. (Plt. ii. 4. § 42; Plin. ii. l. s. 3.) The pretended coins of this town are not genuine. (Florcz, Med. l. c.; Sestini, p. 78; Miéret, i. p. 43; Suppl. i. p. 40; Sestini, p. 78; Ubert, l. c.)

OSCULA. [LEPTONYM.]

OSCI or OPIICI (in Greek always Ὀσκών; the original form of the name was OSCUS, which was still used by Ennius, ap. Fest. s. r. v. p. 198.), a nation of Central Italy, who at a very early period appear to have been spread over a considerable part of the peninsula. So far as we can ascertain they were the original occupants, at the earliest time of which we have anything like a definite account, of the central part of Italy, from Campania and the borders of Latium to the Adriatic; while on the N. they joined the Oscanians, whom there is good reason to regard as a Pelasgic tribe. Throughout this extent they were subsequently conquered and reduced by subjection by tribes called Sabines or Sabellians, who issued from the lofty mountain tracts of the Apennines N. of the territory then occupied by the Oscans. The relation between the Sabellians and the Oscans is very obscure; but it is probable that the former were comparatively few in number, and adopted the language of the conquered people, as we know that the language both of the Campanians and Samnites in later times was Oscan. (Liv. v. 20.) Whether it remained unmixed, or had been modified in any degree by the language of the Sabellians, which was probably a cognate dialect, we have no means of determining, as all our existing monuments of the language are of a date long subsequent to the Sabellian conquest. The ethnical affinities of the Oscans, and their relations to the Sabellian and other races of Central Italy, have been already considered under the article ITALIA; it only remains to add a few words concerning what is known of the Oscan language.

Niebuhr has justly remarked that "the Oscan language is by no means an inexplicable mystery... like the Etruscan. Had a single point in it been preserved, we should be perfectly able to decipher it out of itself." (Nie. vol. i. p. 68.) Even with the limited means actually at our command we are able in great part to translate the extinct inscriptions in this language, few and mostly brief as they are; and though the meaning of many words remains uncertain or unknown, we are able to arrive at distinct conclusions concerning the general character and affinities of the language. The Oscan was closely connected with the Latin; not merely as the Latin was with the Greek and other branches of the great Indo-Tartonic family, as offshoots from the same original stock, but as cognate and closely allied dialects. This affinity may be traced throughout the grammatical forms and inflections of the language not less than in the vocabulary of single words. The Latin was, however, in all probability a composite language, derived from a combination of this Oscan element with one more closely akin to the Greek, or of Pelasgic origin (Latium, p. 137); while the Oscan doubtless represents the language of Central Italy in its more unmixed form. In many cases the older and ruder specimens of the Latin retain Oscan forms, which were laid aside in the more refined stages of the language; such is the termination of the ablative in d, which is found in the Duilian and other old Latin inscriptions, and appears to have been universal in Oscan.

The few notices of Oscan words which have been preserved to us by Latin writers, as Varro, Festus, &c., are of comparatively little importance. Our chief knowledge of the language is derived from extant inscriptions; of which the three most important are: 1. The Tablet Bărtărea, a bronze tablet found in the
neighbourhood of Bantia, on the borders of Apulia and Lucania, and which refers to the municipal affairs of that town; 2. the Ciprus Abellians, so called from its having been found at Abellia in Campania, and containing a treaty or agreement between the two neighbouring cities of Nola and Abelia; and 3. a bronze tablet recently discovered in the neighbourhood of Agnone in northern Samnium, containing a dedication of various sacred offerings. It is remarkable that these three monuments have been found in nearly the most distant quarters of the Oscan territory. By the assistance of the numerous minor inscriptions, we may fix pretty clearly the limits within which the language was spoken. They include, besides Campania and Samnium Proper, the land of the Hippini and Frentani, and the northern part of Apulia. No inscriptions in Oscan have been found in Lucania (except immediately on its borders) or Bruttium, though it is probable that in both of these countries the Sabellian conquerors introduced the Oscan language, or closely connected with it; and we are distinctly told by Festus that the Bruttii speak _Oscinum_.

We learn also with certainty that not only the vernacular, but even the official, use of the Oscan language continued in Central Italy long after the Roman conquest. Indeed few, if any, of the extant inscriptions date from an earlier period. The comic poet Titinius alludes to it as a dialect still in common use in his time, about n. c. 170. (Fest. s. v. Opacum, p. 189.) The coins struck by the Samnites and their allies during the Social War (n. c. 90—88) have Oscan inscriptions; but it is probable that, after the close of that contest and the general admission of the Italians to the Roman franchise, Latin became universal as the official language of Italy. Oscan, however, must have continued to be spoken, not only in the more secluded mountain districts, but even in the towns, in Campania at least, until a much later period; as we find at Pompeii inscriptions rudely scratched or painted on the walls, which from their hasty execution and temporary character cannot be supposed to have existed long before the destruction of the city in a. d. 79.

(Concerning the remains of the Oscan language see Mommsen, _Unter-Italischen Dialekte_, 4to. Leipzig, 1850; Klenze, _Philologische Abhandlungen_, 8vo. Berlin, 1839; and Donaldson, _Varro's Annals_, pp. 104—138.)

We have no evidence of the Oscans having any literature, proper so called; but it was certainly from them that the Romans derived the dramatic entertainments called Atellane, a kind of rude farces, probably bearing considerable resemblance to the performances of Pulcinello, still so popular at Naples and in its neighbourhood. When these were transplanted to Rome they were naturally rendered into Latin; but though Strabo is probably mistaken in speaking of the Fabulae Atellanei of his day as still performed at _Rome_ in Oscan, it is very natural to suppose that they were still so exhibited in Campania as long as the Oscan language continued in common use in that country. (Strab. v. 233; concerning the Fabulae Atellanei see Mommsen, l. c. p. 118; Bernhardy, _Romische Literatur_, p. 578, &c.; Munk, _de fabula Atellana_, Lips. 1840.)

OSCINEIUM, a name which appears in the Jerusalem Itin. on the road from Vatasa (Bocico) to Elusa (Elusa). (Cossoio; _Ellusae_;). The order of names is Vatasa, Tres Arborae, Oscineium, Satium or Satium, and Ellusa. Oscineium is marked at the distance viii. from the two places between which it lies. D'Anville finds on this road a place named _Esquies_, which in name and position agrees pretty well with the Oscineium of the Itin. (L. G.)

OSIERATES (Osierariis), a tribe of Pannonia Superior, dwelling on the banks of the river Dravus; but nothing is known about them but their name. (Proc. ii. 15, § 2; Plin. iii. 28.)

OSI, a German tribe mentioned only by Tacitus (Germ. 28, 45), as dwelling beyond the Quadi, in a woody and mountainous country. But their national customs, as well as their language, were those of the Pannonians. They were, moreover, tributary to the Quadi and Sarmatae. The exact districts they inhabited cannot be determined, nor do we know whether they had migrated into Germany from Pannonia, or whether they were an ancient remnant of Pannonians in those districts. (L. S.)

OSIANA, a town in the west of Cappadocia, between the river Halys and lake Tatius, and near from Ancyra. (Jos. Ant. p. 206.) Its site must probably be looked for in the district of _Jurjup_ or _Urgub_.

OSISHI or OSISCHI (Osiris), a Celtic people who joined the Veneti in the war against Caesar, b. c. 56. (B. G. iii. 9.) There is nothing in Caesar which shows their position further than this, that they were in the peninsula of _Bretogae_. Ptolemy (ii. 8. § 5) makes them extend as far south as the Gobaum headland, and he names _Verginanium_ as their chief city. (Gobaunum.) If we accept the authority of _Mela_, who says (iii. 6) that the island _Seine_ is opposite to the shores of the Osismii, this will help us to determine the southern limit of the Osismii, and will confirm the conjecture of Gobaum being the headland called _Rizo Pointe_, which is opposite to the small island _Sein_, or as it is improperly called _Isle des Saints_; or being somewhere near that headland. In another passage (iii. 2) _Mela_ makes the great bend of the west coast of Gallia commence where the limits of the Osismii end: "ab illis enim iterum ad septentriones from _Litorum recipit_, perintegre ad ultimiores Galliarum gentium _Mormones_." (Pliny (v. 18))

_Gallia Lugdunensis_ contains a considerable peninsula, which runs out into the ocean with a circuit of 625 miles, beginning from the border of the Osismii, the neck being 125 miles in width; south of it are the _Nannetes_. It is plain then that _Pliny_ placed the Osismii along the north coast of _Bretogae_, and there is _Mela's_ authority for placing them on the west coast of the peninsula. The neck of the peninsula which _Pliny_ describes, may be determined by a line drawn from the bay of _St. Étienne_ on the north to _Lorient_ on the south, or rather to the same bays east of it, or _Morbihan_. It seems a fair conclusion, that the Osismii occupied a large part of the peninsula of _Bretogae_; or as _Strabo_ (iv. p. 195) says: "Next to the Veneti are the Osismii, whom _Pytheas_ calls _Timmii_, who dwell in a peninsula which runs out considerably into the ocean, but not so far as _Pytheas_ says and those who believe him._

He does not tell us how far _Pytheas_ said that the peninsula ran out into the sea, but if we had _Pytheas'_ words, we might find that he knew something about it. The conclusion of _D'Anville_ is justified by the ancient authorities. He says: "It seems that it has been agreed up to the present time to limit the territory..."
of the Ossiai to the northern coast of Rasse Bre
tagne, though there are the strongest reasons for
thinking that they occupied the extremity of the
same continent in all its breadth and that the diocese
of Quiapar was a part of the territory as well as the
diocese of Lion." D'Anville observes that there is
no part of ancient Gaul the geography of which is
more obscure.

[ G. L.]

OSMIDA (Ossidi, Seyl. p. 18), a district of
Creté, which Mr. Parry's map places at the
sources of the Megalo-potamo.

(Hick, Kreta, vol. i. p. 396.)

[ E. B. J.]

OSPHAGUS, a branch of the river Erigon, in
Lyceastis, upon which the consul Sulpicius pitched
his camp in the campaign of n. c. 200 (Liv. xxxi.
39); perhaps the same as the Semelitis, an
affluent of the Erigon, which falls into it to the N.
of Ossida.

[ E. B. J.]

OSQUIDATES, one of the peoples of Aquitania
mentioned by Piny (iv. 19). He mentions Osqui-
dates Montani and Osquidates Campestres, but he
enumerates many names between the two, from
which we may conclude that the Campestres did not
border on the Montani, for if they had, it is probable that
he would have enumerated the Campestres immediately
after the Montani instead of placing between them
the names of eleven peoples. Besides this, we must
look for the Montani on the north side of the Pyrenees
and in the valleys of the Pyrenees, and the Cam-
pestres in the low country of Aquitania. There are no
means for determining the position of either the
Montani or the Campestres, except from the resem-
blance between the ancient and the modern names in
this part of Gallia, which resemblance is often very
great. Thus D'Anville supposes that the Osquidates
Montani may have occupied the valley of Oasus,
which extends from the foot of the Pyrenees to
Obron, on a branch of the Adour. This is proba-
ble enough, but his attempt to find a position for
the Campestres is unsuccessful.

[G. L.]

OSRHOE, a small district in the NW. corner of
Mesopotamia (taken in its most extended sense),
which then was more extensive than it would be in
the comparatively written Osroene. It does not appear
in any writer earlier than the times of the Auto-
tines, and is not therefore mentioned by either
Strabo or Ptolomy. Pausanias states that it de-
verted its name from a certain Osroes, who ruled
there in former times (Pers. i. 17); and Dion Cas-
cred, declares that the name of the man who
ruled the Roman army under Crassus was Abgarus the
Osroean (xl. 19); see for the same name, lxviii.
18, and lxvii. 12.) Again, Herodian calls
the people who dwelt in these parts Osromei (iii. 9. iv.
7, vi. 1). Anniusus writes the name Osroene (Cosroene, 3. 8. 18). The name persists in the
country as late as the seventh century. (Hieroc. p.
713.) In the Notitia Imperii, Osroene was
placed under a "Præses Provinciæ," and appears
to have been sometimes included in Mesopotamia,
sometimes kept separate from it. (See Justinian,
Notiti. cit. § 11; Joan. Malalas, x. p. 274, ed.
Honn; Noris. de Epis. ii. p. 110.) It is most
likely that the correct form of the name is Orhoene;
and that this is connected with the Macrobius of
Idabrus. (Struth. Pach. 1. 1.; and see Dion, lxvii. 2,
for the name of Mannus, a chief of the Mesopotamian
Arabs, who gave himself up to Trajan. Not im-
possibly, the Osroes of Pilgr may refer to the same
district. (vi. 30, 119.) [Eades.]

[ V.]

OSSA ("Ossae, Pil. Book of Asia," the
Asiatic

Bisalta, which, before the annexation of Bisalta
to the kingdom of Macedonia, must have been
a place of some importance from the fact of its pos-
sessing an autonomous ch. image. (Eckiel, vol. ii.
p. 75.) It has been identified with Sokhia, a large vil-
lage on the S. side of the Nigritas mountain, where
some Hellenic remains are found on the surrounding
heights. Another ancient site at Lakkaon, on the
N. road from Serrés to Saloniki, has also claims to
be considered the representative of Osse. (Leake,

[ V.]

COIN OF OSSA.

OSSA ("Ossae," a lofty mountain in Thessaly
on the coast of Magnesia, separated from Olympus
only by the narrow vale of Tempe. Hence it was sup-
posed by the ancients that these mountains were
once united, and had been separated by an earth-
quake. (Herod. vii. 129; Strab. ix. pp. 430, 442;
Lucan, vi. 347; Claudian, Rapt. Prosop. i. 183.)
Ossa is conical in form and has only one summit.
Polybius mentions it as one of the highest moun-
tains in Greece (xxxix. 10); but it is considerably
lower than Olympus, and according to Ovid even
lower than Pelion. (Ox. Fast. iii. 441.) Accord-
ing to Dodwell, who speaks, however, only from
conjecture, Ossa is about 5000 feet high. To the
south of Ossa rises Mt. Pelion, and the last falls of
the two mountains are united by a low ridge.
(Herod. vii. 129.) Olympus, Ossa, and Pelion
differ greatly in character; and the conical peak,
standing between the other two, is well contrasted
with the broad majesty of Olympus, and the ex-
tended outline of Pelion. The length of Ossa along
the coast is said by Strabo to be 80 stadia (x. p.
443). It is hardly necessary to allude to the
passages in the poets, in which Ossa is mentioned,
along with Olympus and Pelion, in the war of the
giants and the gods. (Hom. Od. xii. 312; Virg. Georg.
i. 929, &c.) The modern name of Ossa is Kissava.
(Hollond, Travels, &c. vol. ii. pp. 95; Dodwell,
Classical Tour, vol. ii. p. 106; Leake, Northern
Greece, vol. i. p. 434, vol. iv. pp. 411, 513; Mé-
moires. Mémoire sur le Pelion et l'Ossa, Paris,
1853.)

2. A mountain in Elis near Olympia. [Vol. i.
p. 817, 6.]

OSSIAEAE (Ossiaean), a people who dwelt in
the Panias along the banks of the Acesines (Cho-
nab), and who surrendered themselves to Augustus
the Great after the conquest of the Malli (Maltia).
(Arrian, vi. 15.)

[ V.]

OSSARENE (Ossapiro, Pol. v. 13 § 9; Tz-
apiro, Interp.), a canton of Armenia situated
on the banks of the river Cyrus. S. Martin
(Histoire de l'Arme., vol. i. p. 81) is of opinion
that it may be the same as the Gogaron of
Strabo.

[ E. B. J.]

OSSET, also called Julia Constancia (Pilin.
iii. 3), a town of Bactria, on the right bank of the river
Bactris, and opposite to Hulnistan. It is probably
the modern S. Juan de Alfange, near Castello de la
Reina, and some Roman remains.

[ V.]
OSTIARDA.

(Flores, Exp. S. ii. p. 106; Med. ii. p. 528; Mom- 
net, i. p. 25; Sestini, Med. Isp. p. 79.) [T. H. D.]

COIN OF OSSET.

OSTIARDA OR OSICERDA (Ostiea, Ptol. ii. 6. § 63), a town of the Edetani in Hispania Tarra-
conensis. It was a municipium in the jurisdiction of 
Caesaragusta. (Plin. iii. 3. s. 4, who calls the 
inhabitants Osicerdenses.) It had a mint. 
(Flores, Med. ii. p. 532, iii. p. 109; Momnet, i. p. 
47. Suppl. i. p. 53; Sestini, p. 177.) Ubert 
(vol. ii. pt. 1. p. 417) identifies it with Cosa, near 
Saragossa. [T. H. D.]

OSTIGIACONICUM, a town on the borders of 
Hispania Baetica, at the place where the Baeticus 
enters that country (Plin. iii. 3): now Marqués, 
where there are Roman ruins and inscriptions. 
(Flo-
rez, Esp. S. xii. 367, v. 24.) [T. H. D.]

OSISOBOA (Osióboia, Ptol. ii. 5. § 3), a 
town of the Turdetani in Lusitania, between the 
rivers Tagus and Anas, on the road from Esuris to 
Elora and Pax Julia. (Ptol. Ant. p. 418, 426.) 
[LUSITANIA, p. 220, a.] It is the same town 
mentioned by Strabo in a corrupt passage (Cii. p. 
149), by Mela (iii. 3. § 6) Pliny (iv. 21. s. 33), and 
others. Commonly identified with Estog, lying a 
little N. of Faro, near the mouth of the Siles, 
where Roman ruins and inscriptions are still found. 
One of the latter has RESPB. OSIBON. (Ubert, vol. ii. 

OSTEOIDES (Osteóides), a small island in the 
Tyrrhenian sea, lying off the N. coast of Sicily, and 
W. of the Aeolian Islands. Diodorus tells us that it 
derived its name (the Rose Island) from the circum-
stance of the Carthaginians having on one occasion 
got rid of a body of 6000 turbulent and disaffected 
mercenaries by hanging them on this island, which 
was barren and uninhabited, and leaving them there 
to perish. (Diod. v. 11.) He describes it as situated 
in the open sea, to the west of the Liparac or 
Aeolian islands; a description which applies only to 
the island now called Ustica. The difficulty is, that 
both Pliny and Ptolemy distinguish USTICA (Ost-
ítica) from Osteeides, as if they were two separate 
islans (Plin. iii. 8. s. 14; Ptol. iii. 4. § 17). The 
former writer says, "a Solane itxxv. M. Osteeodes, 
contraque Paropinos Ustica." But as there is in 
fact but one island in the open sea W. of the Lipari 
Islands (all of which are clearly identified), it seems 
certain that this must have been the Osteeodes of the 
Greeks, which was afterwards known to the Romans 
as Ustica, and that the existence of the two names 
led the geographers to suppose they were two distinct 
islans. Mela does not mention Ustica, but notices 
Osteeides, which he reckons one of the Aeolian group; 
and its name is found also (corruptly written Ostodei) 
in the Tabula, but in a manner that affords no real 
cue to its position. (Med. ii. 7. § 18; Tab. Ptole.) 

Ustica is an island of volcanic origin, about 
10 miles in circumference, and is situated about 
40 miles N. of the Capo di Gallo near Palermo, and 
60 miles W. of Alicudi, the westernmost of the 
Lipari Islands. It is at this day well inhabited, 
and existing remains show that it must have been 
so in the time of the Romans also. (Smyth’s Sicily, 
p. 279.)

O'STIA (Ostiea: Eth. Ostiensis: Ostia), a city of 
Latium, situated at the mouth of the Tiber, from 
which position it derived its name. It was on the 
left bank of the river, at a distance of 16 miles from 
Rome, by the road which derived from it the name 
of Via Ostiensis. (Hist. Ant. p. 301.) All an-
cient writers agree in representing it as founded by 
the Roman king Ancus Marcus; and it seems 
certain that it always retained the position of a 
colony of Rome, and was at no period independent. 
From its position, indeed, it naturally became the 
port of Rome, and was essential to that city, not 
only for the purpose of maintaining that naval 
supremacy which it had established before the close of 
the regal period, but for securing its supplies of 
corn and other imported produce which was carried 
up the Tiber, and even Marcus was at the same time 
established salt-works on the site, which for a long 
time continued to supply both Rome itself and the 
neighbouring country in the interior with that 
necessary article. (Liv. i. 33; Dionys. iii. 14; Cic. 
de Rep. ii. 3, 18; Strab. v. p. 232; Flor. i. 4; 
Eutrop. i. 5; Fest. p. 197.) There can be no doubt 
that the importance of Ostia must have continued to 
increase with the growing prosperity and power of 
Rome; but it is remarkable that we meet with 
no mention of its name in history until the period of 
the Second Punic War. At that time it appears as 
a commercial and naval station of the utmost im-
portance; and was not only the port to which the 
corn from Sicily and Sardinia was brought for the 
supply of Rome itself, as well as of the Roman 
legions in the field, but was the permanent station 
of a Roman fleet, for the protection both of the 
capital, and the neighbouring shores of Italy. 
(Liv. xxii. 11, 37, 57, xxiii. 38, xxv. 20, xxvii. 22.) 
It was at this time still reckoned one of the "co-
loniae mariniae;" but on account of its peculiar im-
portance in relation to Rome, it enjoyed special privi-
leges; so that in n. c. 207, when the other maritime 
colonies endeavoured to establish a claim to ex-
emption from levies for military service, this was 
allowed only in the case of Ostia and Antium; the 
citizens of which were at the same time compelled to 
be constantly present as a garrison within their own 
walls. (Liv. xxvii. 38.) On a subsequent occa-
sion (n. c. 191) they attempted to extend this ex-
emption to the naval service also; but their claim 
was at once disallowed by the senate. (Ed. xxxvi. 
3.) Even after the complete establishment of the 
naval power of the Roman Republic, Ostia seems to 
have continued to be the usual station of a Roman 
fleet; and in n. c. 67 it was there that a squadron, 
which had been assembled for the repression of the 
Cilician pirates, was attacked by the pirates them-
selves, and the ships either destroyed or taken. 
(Cic pro Leg. Manil. 12; Dion Cass. xxxvi. 5.) 
Ostia itself also suffered severely during the 
civil wars of Sulla and Marius, having been taken 
by the latter in B. C. 87, and given up to plunder 
and devastation by his soldiers. (Appian, B. C. i. 
67; Liv. Epit. ixxxi; Oros. v. 19, Flor. iii. 21. 
§ 12.)

But its position at the mouth of the Tiber, as 
the port of Rome, secured it from decay; and so im-

K. S. 3
important was the trade of Ostia become, especially on account of the supplies of corn which it furnished to the capital, that it was made the place of residence of one of the four quaestors of Italy and gave name to one of the "provinciae quaestoriae" into which that country was divided. (Cic. pro Murc. 8, pro Sest. 17; Suet. Claud. 24.) But the increasing commerce of Ostia rendered its natural disadvantages as a port only the more sensible; and there can be little doubt that these disadvantages were themselves continually increasing. It had been originally founded, as we are expressly told, close to the mouth of the Tiber, from which it is now distant above three miles; and the process of alluvial deposition, which has wrought this change, has been undoubtedly going on throughout the intervening period. Hence Strabo describes in strong terms the disadvantages of Ostia in his day, and calls it "a city without a port, on account of the alluvial deposits continually brought down by the Tiber, which compelled the larger class of vessels to ride at anchor in the open roadstead at great risk, while their cargoes were unloaded into boats or barges, by which they were carried up the river to Rome. Other vessels were themselves towed up the Tiber, after they had been lightened by discharging a part of their cargoes." (Strab. v. pp. 231, 232.) Dionysius gives a more favourable view, but which does not substantially differ from the preceding account. (Dionys. liv. 44.) These evils had already attracted the attention of the dictator Caesar, and among the projects ascribed to him, was one for forming an artificial port or basin at Ostia (Plut. Caes. 58); but this was neglected by his successors, until the increasing difficulty of supplying Rome with corn compelled Claudius to undertake the work.

That emperor, instead of attempting to cleanse and restore the original port of Ostia at the mouth of the Tiber, determined on the construction of an entirely new basin, which was excavated in the seashore about two miles to the N. of Ostia, and which was made to communicate with the river by an artificial cut or canal. This port was protected and enlarged by two miles projecting out into the sea, so as to enclose an extensive space, while in the interval between them a breakwater or artificial island was thrown up, crowned by a lighthouse, (Dion Cass. lix. 11; Suet. Claud. 20; Plin. ix. 6, xvi. 40. s. 76; Juv. xii. 75—81.) This great work was called the Portus Augusti, on which account its construction, or at least commencement, is by some writers referred to the emperor Augustus; but there is no authority for this; and Dom Cassius distinctly assigns the commencement as well as completion of it to Claudius. Nero, however, appears to have put the finishing hand to the work, and in consequence struck coins on which he claims it for his own. (Eckhel, vol. vi. p. 276.) After this it was considerably augmented by Trajan, who added an inner basin or dock, of a hexagonal form, surrounded with quays and extensive ranges of buildings for magazines and storehouses. This port was called by him Portus Traiani; and hence we afterwards meet in inscriptions with the "Portus Augusti et Traiani," and sometimes "Portus uraeus" in the same sense. (Juv. l. c., et Schol. ad loc.; Gruter. Insur. p. 308, 10, p. 440, 3.) At the same time he enlarged or repaired the artificial channel of communication with

---

**Note:** The diagram illustrates the plan of Ostia with different labeled parts. The text refers to specific locations and structures mentioned in the diagram, indicating their significance in the historical development of Ostia as a port. The text discusses the increasing disadvantages of the original port, the construction of a new basin by Claudius, and the expansion under Nero and Trajan. It highlights the importance of Ostia as a trade and supply center for Rome and the efforts to improve its port facilities.
OSTIAT.

the Tiber, which now assumed the name of Fossa Traiana, and is undoubtedly the same which still exists under the name of Fiumicino, and forms the right arm of the Tiber, from which it separates about a mile and a half above the site of Ostia.

The new port thus constructed soon gave rise to the growth of a new town around it, which was generally known by the name of Portus Ostiensis, sometimes also Portus Urbis or Portus Romae, but more frequently, at least in later times, simply Portus. It seems to have been designed more particularly for the importation of corn for the supply of the capital, an object of which the importance became felt more and more, as the population of Rome continued to increase, while it became more absolutely dependent upon foreign produce. The adjoining district on the right bank of the Tiber was portioned out among a body of colonists before the time of Trajan (Lib. Colon. p. 222); and a new line of road was constructed along the right bank of the Tiber from Rome to the new port, which obtained the name of Via Portuensis. In the reign of Constantine the city of Portus was erected into an episcopal see (Anastas. Vopisc. 34); and the same emperor surrounded it with strong walls and towers, which are still in considerable part extant.

Meanwhile Ostia itself was far from sinking into decay. Repeated notices of it during the earlier periods of the Roman Empire show it to have been still a flourishing and populous city, and successive emperors concurred in improving it and adorning it with public buildings. It was particularly indebted to the care of Hadrian (Gruter, Inscr. p. 249. 7) and Septimius Severus, numerous inscriptions in honour of whom have been discovered among its ruins. (Nibby, Dintorni, vol. ii. pp. 454, 468.) Aurelian, also, we are told, adorned it with a Forum, which bore his name, and which was decorated by his successor Tacitus with 100 columns of Numidian marble. (Vopisc. Aurel. 45; Tac. 10.) The existing remains confirm the inference which we should draw from these accounts, and show that Ostia must have continued to be a flourishing town till towards the close of the Roman Empire, and far superior in the number and splendour of its public buildings to the neighbouring town of Portus. But the security of the latter place, which was well fortified, while Ostia was wholly unprotected by walls (Procop. B. G. i. 26), must have contributed greatly to the advantage of Portus; and the artificial port seems to have obtained an increasing preference over the natural mouth of the Tiber. Rutillius says that in his time (about A. D. 414) the left arm, or main channel of the river, was so obstructed with sand as to be wholly deserted (Htin. i. 181); but this would appear to be an exaggerated statement, asProcopius more than a century later describes them as both navigable (Procop. I. c.). Ostia was, however, in his day already in a state of great decay, and the road which led from thence to Rome (the Via Ostiensis) was neglected and abandoned, while the Via Portuensis on the other side of the Tiber was still the scene of considerable traffic. The importance of Portus became more developed when Rome itself became exposed to the attacks of hostile barbarians. In A. D. 409 Alaric, king of the Goths, made himself master of the port, and with it of the stores of corn for the supply of the capital, which compelled the senate to capitate on the terms that he chose to dictate (Zosim. vi. 6); and again during the wars of Belisarius and Vitiges (in 537) the Gothic king, by making himself master of Portus, was able to reduce his adversary to severe distress (Procop. B. G. i. 26, &c.). The decline of Ostia continued throughout the earlier part of the middle ages; in 827 it is described as altogether in ruins, and the continued incursions of the Saracens throughout that century seem to have completed its desolation.

But meanwhile the artificial ports of Claudius and Trajan were beginning in their turn to suffer from the deposit of sand which is constantly going on along these shores; and no attempt being made in those ages of confusion and disorder to arrest the progress of the evil, they were both gradually filled up so as to be rendered altogether useless. In the 10th century, the port of Trajan was already reduced to a mere lake or pool, altogether cut off from the sea, and only communicating by a ditch with the Tiber. (Ugbelli, Italia Sacra, vol. i. p. 154.) The consequence was that for a time the trade was again forced to have recourse to the left arm of the river; and the modern Ostia, where a castle or fort had been founded by Pope Gregory IV., a little above the ruins of the ancient city, became again for a period of some centuries the landing-place of travellers and the port of Rome. It was not till 1612 that Pope Paul V. once more caused the canal of Trajan to be restored and cleared out, and continued to the present line of sea-coast, where a small port called Fiumicino was constructed; and from this time the whole traffic carried on by the Tiber with Rome (which is however but inconsiderable) has been confined to this arm of the river. The main channel, on the other hand, having been completely neglected, has become so obstructed with sand near the mouth as to be wholly impracticable.

The modern village of Ostia is a very poor place, with the ruins of an old castle, but retains little more than 50 permanent inhabitants, who are principally employed in the neighbouring salt-works. Its climate in summer is extremely unhealthy. The ruins of the ancient city begin about half a mile below it, and extend along the left bank of the Tiber for a space of near a mile and a half in length, and a mile in breadth. Though extensive, they are for the most part in a very dilapidated and imperfect state, so as to have little or no interest as architectural monuments; but among them may be distinctly traced the remnants of a well-preserved and magnificent portion of the Curia Urbinata, and the forum, with several of its public buildings that surrounded it; and near the Torre Babuaciana, close to the Tiber, are the ruins of buildings that appear to indicate this as the site of the actual port or emporium of Ostia in the imperial period. The great number and beauty of the statues and other works of art, which have been brought to light by the excavations carried on at successive periods on the site of Ostia, are calculated to give a high notion of the opulence and prosperity of the ancient city. The ruins of Portus, which are also very considerable, are of an entirely different character from those of Ostia. They are found on the right bank of the Tiber, about 2 miles from the present line of sea-coast at Fiumicino, and are still known as Porto; while the inner basin of Trajan, the hexagonal form of which may be distinctly traced, though it is in great part filled with sand, is still popularly known by the name of Il Trajano. The quays of solid masonry that surrounded it are still well preserved; while extensive, though shapeless, masses of ruins adjoining it appear to have been those of the magazines and storerooms attached to the port.
remains of the port of Claudius are less distinct; the line of the mole which bounded it may, however, be traced, though they are altogether buried in sand; the lower part of Ostia, which is still visible in the 15th century, when the ruins were visited and described by Pope Pius II., has now entirely disappeared. A considerable part of the ancient walls with which the city was fortified by Constantine is still visible; they were strengthened with towers, and closely resemble in their style of construction the older portions of those of Rome.

Between the site of Ostia and that of Portus is the Isola, formed by the two branches of the Tiber, which is about 3 miles in length by 2 in breadth. It is commonly known as the ISLANDA, an appellation first given to it by Prosopis, who describes it in detail (B. G. i. 26). The origin of the epithet is unknown, but it appears to have been in Christian times regarded as consecrated, having been, according to Anastasius, bestowed by Constantine upon the church. It is described in exaggerated terms by a writer of the 5th century (Aethicus, Cosmogr. p. 716, ed. Gronov.) for its beauty and fertility, whence he says it was termed "Libanus Abnae Veneris;" but in spring it is still covered with fine pastures abounding with beautiful flowers. The formation of this island obviously dates only from the construction of the right arm of the Tiber, now known as the Fiumicino, which, as already shown, is probably wholly artificial. No writer before the time of the Roman Empire alludes to more than one mouth of the river.

The topography of Ostia and Portus, and the vicissitudes and changes which the two ports at the mouth of the Tiber have undergone, are fully traced, and the existing ruins described in detail, by Nibby (Ditutini di Roma, vol. ii. pp. 426-474, 602-660); as well as by Preller, in the Berichte über die deutsche Geschichtsforschung für the year 1849 (pp. 3-38). The preceding plan is copied from one given by the latter writer. [E. H. B.]

OSTIAEI, OSTIDAMNI. Stephanus (s. v. "Taswos") has preserved a notice of a Gallic people whom he describes as "a nation on the western Ocean, whom Arcticodurus names Cassini, and Pytheas names Ostiain," Strabo (p. 63) observes of Pytheas that what he says of the Ostiain and the parts beyond the Rhine as far as Scolymia, is all false. Whether false or true, we learn from Strabo that Pytheas spoke of the Ostiain of Gallia; and we can safely infer that Pytheas placed them on the west coast of Gallia opposite to Britain. A passage of Strabo has been cited under OSIAEI, in which it is stated of the Osiamit that Pytheas named them Titym. Ucrt (Gallia, p. 336) purposes to change "os Titym" in this passage of Strabo into "os Tassaisor." The proposal is reasonable. The text of Strabo is probably corrupt here. These Ostiain of Pytheas can be no other than the Osiamit.

Eratosthenes mentioned a people of Gallia named OSAMHAN on the west coast of Gallia. He also spoke (Strab. p. 64) of the promontory of the Osiamit which is called Gallium. It is clear that both Eratosthenes and Ptolemaeus of Alexandrea. The Osiamit, Ostiamet, Osiamini are evidently the same people. [G. L.]

OSTIPPO, a free city of Hispania Raelia, in the province of Astiga (Plin. i. 1. 8, and on the road from Hispan to Corduba. (Itin. Ant. p. 411.) It has not been satisfactorily identified, but, according to Ucelli (cit. in var. ed. in loc. 1866) it must probably be sought in the neighbourhood of the modern Ercina. [T. H. D.]

OSTRA (Ostrae : Eth. Ostrana), a town of Umbria, in the district once occupied by the Umbrii, who are mentioned both by Pliny and Ptolemy (Plin. iii. 14. s. 19; Itit. iii. 1. § 51), but of very uncertain site. [U. MUR.]

OSTRACINA (Ostracina, Ptol. iv. 5. § 12; Plin. v. 12. s. 14; Ostracina It. Anton. p. 152), was a military station in Lower Aegypt, east of the Delta proper, and situated on the road from Rhinocorura to Pelusium. From the route of Vespasian, on his return from Alexandria to Palestine in A. D. 69, as described by Josephus (B. J. iv. 11. § 5), Ostracina appears to have been one day's march from the temple of Jupiter Cassius in the Arabian hills, and about the same distance from the lake Serbonis. It was destitute of wells, and supplied with water brought by a canal from the Delta. (Comp. Marian. Capella, c. 6. [W. B. D.]

OSTRACIUS, a mountain on the road from Mantinicia to Methydrum. [Mantinica, p. 262, b.]

OSTUDIZUS (also written Ostridues and Ostridius, Itin. Ant. pp. 137, 230, 322; and in Hilar. viii. p. 1346, Usutudizum), a town in Thrace, on the road from Hadriane to Constantinople. [T. H. D.]

OSTUM, a town of Span, not mentioned in any ancient writer, but which appears upon coins. There is still a place called Ostrum near Alcora in Valencia, which has some Roman ruins, and which abounds with acorns,—the figure of which also appears upon the coins. (Fieuex, Med. ii. p. 535, iii. i. 113; Sestini, p. 179; Monnet, i. p. 47, Suppl. i. p. 95, ap. Ucrt, vol. ii. pt. 1. p. 416.) [T. H. D.]

OTADINUS (Strabon, Ptol. ii. 3. § 10), a British tribe on the E. coast of Britannia Barba, in the province of Valentia, lying S. of the Bederia estuary, or Firth of Beth, down to the river Tyne; and therefore inhabiting the counties of Haddington, Berwick, Roxburgh, and the greater part of Northumberland. Their chief cities were Curia and Bremetnium. [T. H. D.]

OTIEXE (Oteyxe, Ptol. v. 13. § 9, where the reading Moray is incorrect), a canton of Armenia, separated from Atopatene by the river Araxes, (Ptol. vi. 16) St. Martin (Mem. sur l'Armenie, vol. i. p. 56) identifies it with the province known to the native geographers by the name of Oudi, or what is now called Karabagh, to the N. of the Araxes. [E. B. F.]

OTIESIA, a town of Cispadane Gaul, known only from the mention of the Osismi by Pliney (iii. 15. s. 20) among the municipal towns of the Eighth Region. But an inscription given by Cluverius makes mention of the "Republica Oesiminorum;" and it is probable that Aesvriria and Otrisia, which are found in Phleger among the towns of the same part of Italy, are only corruptions of the same name. (Phleger, Macrod 1; Cluver. Ital. p. 282.) Its site is wholly uncertain. [E. H. B.]

OTYRYS (Οτυρης), a lofty chain of mountains, which shuts in the plain of Thebassal from the south. It branches off from Mount Tymphres, a summit in the range of Pindus, and runs nearly due east, in the same parallel of latitude, separating the waters which flow into the Peneius from those of the Spercheius. (Strab. ix. pp. 432, 433; comp. Herod. vii. 129; Plin. iv. 8. s. 15.) On its northern side, many offshoots extend into the plain of Pharsalus. It is lofty and covered with wood, and has various springs, the southernmost being in the epithet of "nivalis."
OTIS.

(Virg. Aen. vii. 675) and "nemerosus" (Lucan, vi. 337). It is now usually called Gara, from a large village of this name upon its sides; but its highest summit, which lies to the east of this village, is named Jarasuranni, and is 5659 feet above the level of the sea.

A Vol. CAttacraii, Indian under Dynias mate, the thoth while timetus, for which a well lheue. >tone gilt-scattering town

TOTTOCOrEAS ("Оторокорей", Ptol. vi. 16. §§ 2, 3), the E. termination of the Esmidi Montes. This is an example of a Sasanid word which has been preserved in Ptolemy's geography, as it is merely the Greek form of the Uttarakaui of the "Mahôshhârata," or the highland of the happy Indian Hyperboreans, who lived there sheltered from the cold blasts, about whom, under the name of Attacorei, as Pliny (vi. 20) relates, a certain Amnetus wrote a book. Amnianus (xxiii. 6 § 65), copying Ptolemy, has Otorokoera, and Oroctes (i. 2) Ottorocorras. The sacred race of men living in the desert of whom Ctessias (Ind. 8. ed. Bâbr) speaks, belong to this imaginative geography, which saw in the snow-capped summits of the Hima-laja the chosen habitation of the Gods and of the Blessed. According to Ptolemy (vi. 16. § 5, viii. 24. § 7) there was a people of the Otorocorae, with a town of the same name, to the E. of the Casii Montes, or mountains of Kachgar; as the city is one of Ptolemy's points of recorded astronomical observations, having almost 14 hrs. 45 min. in its longest day, and being 7 hrs. E. of Alexandria, there must have been some real locality bearing this name, which must be assigned to E. Thibet. (Lassen, Ital. Ant. vol. i. pp. 511, 841.) [E. B. J.]

OVIHABA (Wele on the river Traun), a town of Noricum, on the road from Launaeum to Augusta Vindelicium. (Hin. Ant. pp. 235, 258, 277; Tab. Peut., where it is called Oviola.) It is said, according to an inscription, to have been a Roman colony under the name of Aurelia Antoniniana. (Machar, Noricius, i. pp. 217, 238, 266, &c., 285, &c.) [L.S.]

OXIEIA. [Echinades]

OXIA PALUS, a lake which was formed by two very large rivers, the Araxates (Jaxartes) and Dymas (probably the Danus of Ptolemy, vi. 12. § 3), at the foot of the Sagdi Montes. (Amm. Marc. xxiii. 6. §§ 59.) This has been supposed to intimate, though very vaguely, the formation of the Sea of Aral; but there seems to be more reason for identifying it with the lake of Karakol to the SSE. of Bokhara, formed by the Zar-ajshun or "gold-scattering" river of Samarcand, called also the Kohik; or more correctly the river of the Kohik or "hilllock." This river is the Polytimeus, which, according to Aristobulus (ap. Strab. xi. p. 518), traversed Sagdiana, and was lost in the sands; while Q. Curtius (vii. 37) describes it as entering a cavern and continuing its course underground, then emerging again and discharges itself into this lake, which the Uzbeks call Dungzik, the Turkish word for "sea." The Greeks translated the indigenous name Sagdila—the valley of which is one of the four Paradises of the Persian poets—into that of Polytimeus, "the very precious,"—an epithet which it well deserves from the benefits it showers upon this region, the plain of Bokhara, famed for its gigantic melons. Ptolemy (vi. 12. § 3), if a correction be made in his latitudes, which are uniformly put too far forward to the N., gives the Oxiana Palus (Оксиня палус) its true position between Zariastra and Tributa. "On the whole range is a limestone of various and highly inclined strata occasionally mixed with iron ore, amyante and asbeshtos. (Leake, Northern Greece, vol. ii. p. 17, vol. iv. p. 330, seq.; Journal of Geogr. Society, vol. vii. p. 92.)

OTIS, a town on the Euphrates below Babylon, just above the commencement of the Babylonian Marshes. (Plin. v. 26.)

OXIA PALUS.

505

[Image 0x0 to 224x375]
in a direction from SW. to NE., from the Aral to the "umbouchure" of the Obi. The characteristic feature of this depression is an immense number of chains of small lakes, communicating with each other, arranged in a circular form, or like a necklace. These lakes are probably the traces of Strabo's channel. The first distinct statement of the Sea of Aral described as a vast and broad lake, situated to the E. of the river Oxus or Jaxartes, occurs in Menander of Constantinople, who is named the "Protector," who lived in the time of the emperor Maurice. (Menand. Hist.下降. Barbarorum ad Romanos, pp. 300, 301, 619, 625, ed. Bornemann, 1820.) But only with the series of Arab geographers, at the head of whom must be placed El-Istakhry, that any positive information upon the topography of these regions commences. (Humboldt, Asia Centrale, vol. ii. pp. 121—364.)

Oxus. [E. B. J.]

Oxus Montes (Oxus Sep, Pot. vol. 12, §§ 1, 4), a chain of mountains between the rivers Oxus and Jaxartes, in a direction from SW. to NE., and which separated Scythia from Sagdiya. They are identified with the metalliferous group of As-firah and Askhagh — the Botam, Botas, or Botam ("Mount Blanc") of Edrisi (ed. Lambert, vol. iii. pp. 198—200). The Oxus Repes of Strabo (Cívus part. p. 517), which he also calls the hill-fort of Arinazes (Q. Curt. vii. 11), has been identified by Droysen, as quoted by Thirlwall (Hist. of Greece, vol. vi. p. 300). With the pass of Kohkiyu or Dervend, in the Kara-tagh, between Kish and Hisam, it must be looked for on that river, and is probably Kourgham-Tippa on the Ambi. (Wilson, Arion, p. 167; Ritter, Erdkunde, vol. vii. p. 734; Humboldt, Asia Centrale, vol. ii. pp. 18—20.) [E. B. J.]

Oxines (Oxus), a small river on the coast of Bithynia, according to Arrian (Peripl. p. 14) between Buceaica and Paryllium, and according to Marcianus (p. 70) 90 stadia to the north-east of Cape Passidium. (Comp. Anonymous. Peripl. p. 4, where, as in Arrian, its name is Oxines.) It is probably the modern Teusarik.

Oxinside. [Arinix.]

Oxthracae (Oxthracae, Appian, B. Bisp. c. 58), a town of the Lusitani, and according to Appian the largest they had; but it is not mentioned by any other authority. [T. H. D.]

Oxus (q. 25, Poliyb. x. 48; Strabo, i. p. 73, xi. pp. 507, 509, 513, 514, 516—518; Q. Curt. vii. 9, §§ 1, 2, 10, §§ 1, 2, 11, §§ 4—7, 12, §§ 14. 14, §§ 1, 2, 14, 18, § 1; Acaciani. ii. 10; Arrian. Anab. iii. 28, 29, 30, iv. 15, vii. 10, 16; Plut. Alex. 57; Dionys. 747; Pompo. Mela, iii. § 6; Plin. vi. 18; Q. Curt. vii. 4, 5, 10; Anon. Marc. xxx. iii. 6, § 52), a river of Central Asia, on the course of which there appears a considerable discrepancy between the statements of ancient and modern geographers. Besides affirning that the Oxus flowed through Hyrcania to the Caspan or Hyrcanian sea, Strabo (ix. p. 509) adds, upon the authority of Aristobulus, that it was one of the largest rivers of Asia, that it was navigable, and that by it much valuable merchandise was conveyed to the Hyrcanian sea, and thence to Allmania, and by the river Cyrus to the Euxine. Plany (vi. 19) also quotes M. Varro, who says that it was ascertained at the time when Pompeius was carrying on hostilities in the East against Mithradates, that a journey of seven days from the frontier of India brought the traveller to the Icarus, which flowed into the Oxus; the route was described along that river into the Caspan, and across it to the Cyrus, from whence a land journey of no more than five days carried Indian merchandise to Phasis in Ioutus. It would appear (Strab. l. c.) that Patrocles, the admiral of Seleucus and Antiochus, had navigated the Caspan, and that the results of his observations were in perfect accord with these statements. With such definite accounts mistake is almost impossible; yet the country between the Caspan and the Oxus has been crossed in several directions, and not only has the Oxus been unseen, but its course has been ascertained to take a direction to the NW., instead of to the SW.; and this is called the Caspan, but the sea of Aral. Sir A. Burnes (Travels in Bochoma, vol. ii. p. 188) doubts whether the Oxus could indeed have had any other than its present course, for physical obstacles oppose its entrance into the Caspan. S. of the bay of Balkus, and of that this has been the case for nine centuries at least there is the evidence of Ibn Haukii (Istakhry) (Oriental Geography, p. 239, ed. Ouseley, London, 1800). Singularly enough, Pomponius Mela (l. c.) describes very concisely the course of the Oxus almost as it is known at present, "Jaxartes et Oxos per deserta Scythiae ex Sagdiarnorum regionibus in Sythicum sinum exuunt, illo suo fonte granidis, hic incursus alterius grandior; et aliquando ad occasum auri oriente currens, juxta Darum primum inflectitur; curvemque ad Septentrionem converso inter Amardas et Paseicae os aperti."

The course of the Oxus or Jaxartes, as it is termed in the Turkish and Persian works that treat upon its basin, or Amud Derya, as the natives on its banks call it, whether we consider the Balkshian branch or Karda as to be its source, or that river which in the Alpine lake of Sir-i-bol on the snow-covered heights of the Tauric Caracass of Panam has a direction from SE. to NW. The volume of its waters takes the same course from 37° to 40° lat. with great regularity from Khoomdoz to Chevirs. About the parallel of 40° the Oxus turns from SSE. to NW., and its waters, diminished by the numerous channels of irrigation which from the days of Herodotus (ii. 117) have been the only means of fertilising the barren plains of Kheirizan, reaches the Aral at 43° 40'. Munnert (vol. iv. p. 452) and others have seen in the text of Pomponius Mela a convincing proof that in his time the Oxus had no longer communication with the Caspan. But it can hardly be supposed suppose the commerce of India by the Caspan and the Oxus had ceased in the little interval of time which separates Mela from Strabo and M. Varro. Besides, the statement of the Roman geographer remains singularly isolated. Petenyi (l. c.), less than a century after Mela, directs the Caspan again from E. to W. into the Caspan. The lower course of the river, far from following a direction from S. to N., is represented, in the ancient maps, which are traced after Petenyi's position, as flowing from E. to W. But a more convincing proof has been brought forward by M. Jambert (Mem. sur l'Ancien Courbe de l'Oxus, Journ. Asiatique, Dec. 1833, p. 498), who opposes the authority of Hamdallah, a famous geographer of the 14th century, whom he calls the Persian Erasthene, who asserted that while one branch of the Oxus had its debouch into the sea Kheirizan (Aral), there was a branch which pursued a W. course to the Caspan. (Purchas, vol. iii. p. 236; Hakluyt, vol. i. p. 368.) It should be observed that Jenkins who visited the Caspan in 1599, also says that
the Osx formerly fell into the gulf of Balkan. He
is the author of the story that the Tarkomans, in
the hope of preventing the diminution of its waters in the
upper part of its course, dammed up the mouth of the river.
Evidence still remains of the débris thrown into the Caspian of a considerable river
which is now dry, is afforded by observations on the
sea-coast, particularly in the Bay of Balkan. The
earliest of these is the survey of that bay by Captain
Woodroffe, in 1743, by order of Nadir Shah, who lays down the embouchure of a river which
was told was the Oxus. (Hanway, Trac. vol.i. p.
130.) The accuracy of his survey has been con-
formed by the more elaborate investigations of the
Russian surveyors, the results of which are embodied in the Periplus of the Caspas compiled by Eichwald
(Alt. Geogr. d. Casp. Meeres, Berlin, 1838), and
these leave no doubt that a river, which could have
been no other than the Osx, formerly entered the
Caspian at the SE. of the Bay of Balkan by two
branches; in one of these there are still pools of water;
the other is dry. How far they may be traceable inland is yet to be ascertained; but enough has been
determined to justify the belief of the ancient world,
that the Osx was a channel of communication be-
tween India and W. Asia. The ancients describe
Alexander as approaching the river from Bactra,
which was distant from it 400 stadia; their estimate
is correct, and there are no fables about the breadth of the river.
Arrian, who follows Aristobulus, says that it was 6 stadia.
The very topography of the river's bank may almost be traced in Curtius; for there are low and peaked hillocks near that passage of the Osx, while there are none below Kilef. He
adds that the Osx was a muddy river that bore much slime along with it; and Burnes (vol.ii. p. 7)
found that one-tenth of the stream is clay suspended in water.
Polybius (l.c.) states about the im-
petuouc course of the river and of its falls is untrue,
as its channel is remarkably free from rocks, rapids,
and whirlpools. He has a strange story about the manner in which the Assyrians entered Hecata, either
under the vault formed by the fall of the waters
(comp. Strab. p. 50), or over its submerged stream.
It is still a popular belief that the waters of the Aral
pass by a subterraneous channel to the Caspian. At
Kara Goombuz, where the caravans halt, between the
two seas, it is said by some that the water is heard rushing beneath. (Burnes, vol. ii. p. 188.)
The conclusions to which Von Humboldt (Asie Centra-
ale, vol. ii. pp. 162—197) arrived as to the phy-
cological causes which may have interrupted the connec-
tion between the Caspian and the Osx are given in
the article Jaxartes. For all that concerns the modern geography of the basin of the Osx the travels of our countrymen, to whom we owe most of our real knowledge of these countries,
should be consulted—Elphinstone, Burnes, Wood,
and Lord. Professor Wilson (Ariana, pp. 142—
145) has treated this long-veked question with
great ability, and shown that there is every reason for believing the statements of the ancients that
the Osx was once the great highway of nations, and
had an easy access to the great Aral-Caspian basin.
OXYBII (Oξυβίω), "a part of the Ligyes," as
Stephanus says (e. v.), on the authority of Quad-
arus. Strabo (p. 185) terminates his description of the
cost of Gallia Narbonensis, in which he proceeds from west to east, by mentioning the harbour
Oxybii, so called from the Oxybii Ligyes. The
Oxybii were a Ligurian people on the south coast of
Gallia Narbonensis; but it is not easy to fix their
position precisely. They were west of the Far and
not far from it, and they were near to or bordered on the Deciates. The Osx had a town Aegyptum,
but its position is unknown. A brief sketch of the
history of this people is written under DECiATES.
Pliny (iii. c. 4) places the Oxybii east of the Ar-
gentum river (Argentus) and west of the Deciates.
The Oxybii, therefore, occupied the coast east from
Frejus as far as the border of the Deciates, who
had the remainder of the coast to the Far. Antipolis (Antibes) was in the country of the
Deciates. [G. L.]
OXYDRACAEO (Οξυδράχαεο), a great nation of
the Panjihis, who, with the Malli, occupied the banks of the
Hydaspes and Acesines, and strenuously resis-
ted the advance of Alexander through their coun-
try.
It was a common belief of the ancients, that
it was in a battle with these people that Ptolemy
saved the life of Alexander, and hence obtained the
name of Soter. (Steph. B.) Arrian, however,
transfers the story to the siege of the Malli (Mel-
ton), where Alexander was in imminent danger of
his life and was severely wounded (vi. 11). The
name is written in different ways by different
writers. Thus Sirabo writes it Sydracae (xv. p.
701), in which Pliny concurs (xii. 6), who makes
their country the limit of Alexander's advance east-
ward; in Diodorus they appear under the form of
Syraecas (xvii. 98); lastly, in Orosius as Saba-
gracae (iii. 19). The name is clearly of Indian ori-
gin; hence it has been conjectured by Pott, that
the titles commencing in this manner represent the
Hellenized form of the Sanscrit Csattho (king) cor-
responding with the Zend Csatarva. (Pott, Eym.
Forsch. p. lxvii.)
OXYDRACAE (Οξυδράχαιαι), a tribe of an-
cient Sogdiana, appear to have occupied the district to
the N. of the Osx, between that river and the
Jaxartes. (ProL vi. 12, § 4.)
OXYMAGIS (Οξυμαγίς, Arrian, Judic. 4), a
river which flowed into the Gauges, according to
Arrian, in the territory of the Pazaues. The same
people are mentioned by Pliny (vi. 19) and Ptolemy
(vii. 2. § 15) under the name of Pasaule; and may be identified with the Sanscrit Paukaka, and as
dwelling near Canjacubga, in the plain country be-
 tween the Samana and the Gauges. In the im-
mediate neighbourhood is the river Leumaiti, which
has been doubtless Graecized into Oumamigis. The
Sanscrit appellation means "abounding in sugar-
cane," which applies perfectly to the land through
which it flows. (C. B. Ritter, Asia, ii. p. 753;
Schwanbeck, Fragm. Megasthenis, p. 28.) [V.]
OXYNEIA (Οξυνεία), a town of Thessa-
ly, situated on the Ion, a tributary of the Penus, and
perhaps the capital of the Talaars, occupied
probably the valley of Mivita. It is described by
Strabo as distant 120 stadia from Azorins. (Strab.
vi. p. 327; Leake, Northern Greece, vol. iv
p. 279.)
OXYRYNCHUS (Οξυρύνχος, Strab. xvii.
p. 812; Ptol. iv. § 59; Steph. B. s. v.; Amm. Marc.
xviii. 16; Oxyrunchus, II. Anton. p. 157. ed. Par-
they; Eit. Oxyrynchus) was the chief town of
the Nomos Oxyrhynchis, in Lower Egypt. The
appellation of the nome and its capital was derived from a fish of the sturgeon species (Acipener
Sterio, Linnaeus; Athen. vii. p. 312), which was an
object of religious worship, and had a temple dedi-
Digitized by Microsoft®
cated to it. (Aelian, Hist. An. x. 46; Plat. Is. et Osir. c. 7.) The town stood nearly opposite Cynopolis, between the western bank of the Nile and the Joseph-canal, lat. 28° 6' N. At the village of Bekesos, which stands on part of the site of Ozyrhynchus, there are some remains—broken columns and cornices—of the ancient city (Jouannard, Descript. de l'Egypte, vol. ii. ch. 16. p. 53; Champollion, L'Egypte, vol. i. p. 303, seq.); and a single Corinthian column (Dollon, l'Egypte, pl. 31), without leaves or volutes, partly buried in the sand, indicates a structure of a later period, probably of the age of Diocletian. Ozyrhynchus became the site of an episcopal see, and Apollonius dated from thence an epistle to the Council of Seleucia (Epiphanius, Haer. lxxiii.) Roman coins were minted at Ozyrhynchus in the age of Hadrian and Antoninus Pius. (1.) Hadrian, with the reverse of Pallas, holding in her right hand a statuette of Victory, in her left a spear; or, (2.) Scaris in his right hand. (3.) Antoninus, with a reverse, Pallas holding in her right hand an axe, in her left a statuette of Victory. (Eckhel, vol. iv. p. 112.)

[OZENE. (Ozene, Percip. M. Ephedr. c. 48, ed. Miller), the principal emporium of the interior of the district of W. India anciently called Linymrca. There can be no doubt that it is the Sanscrit Uj-jaia, the present Onicam. This place is held by all Indian authors to be one of great antiquity, and a royal capital,—as Ptolemy calls it,—the palace of a king Tistanes (vii. 1 § 63). We know for certain that it was the capital of Vikramaditya, who in n. c. 56 expelled the Sceae or Scythians from his country, and founded the well known Indian aera, which has been called from this circumstance the Sceae aera. (Lassen, de Pentap. p. 57; Böhlen, Alte Ind. i. p. 94; Ritter, v. p. 456.) The author of the Peripius states that great variety of commerce was sent down from Ozene to Barycza (i. c.).

OZOGARDANA, a town in the middle of Mesopotamia, recorded by Aemilius, in his account of the advance of Julianus through that country (xxiv. c. 2). He states that the inhabitants preserve there a throne or seat of judgment which they say belonged to Trajan. The same story is told in almost the same words by Zosimus of a place he calls Zaragadua (ni. 15). The place cannot now with certainty be identified; but Mannert thinks it is in the same place afterwards known as the name of Paweria, from Parsus (v. 2. p. 241); and Reischald holds it to be the same as Ps. or Lianespolis (the present Hill).

P.

PACATIANA. [Pripygia.]

PACHIMACUNIS (Pachamocunis, or Pachamunos, Ptol. iv. 5 § 50; Pachamocunis, Heroeses, p. 724), the principal town of the Seleucides in the Agryeon Delta, lat. 31° 6' N. It stood on the same arm of the lake Butos, and very near the modern village of Handaher. (Champollion, Uegypte, vol. ii. p. 206.)

PACHYNAIS (Pachyon; Cape Pachyon), a celebrated promontory of Scythia, forming the extreme SE. point of the whole island, and one of the three promontories which were supposed to have given to it the name of Trinia. (Ovid, Fast. iv. 479, Met. xii. 725; Dionys. Per. 256; 172; etc.) p. § 135, 142; Strab. vii. p. 281.)

PACTYE.

Pol. i. 42; Strab. vi. pp. 265, 272, &c.; Plin. iii. 8. s. 14; Pol. iii. 4 § 8; Mela. ii. 7 § 15.)

All the ancient geographers correctly describe it as extending out towards the S. and E. so as to be the point of Sicily that was the most nearly opposite to Crete and the Peloponnesus. It is at the same time the southernmost point of the whole island. The headland itself is not lofty, but formed by bold projecting rocks (projecta aera Pachyam, Virg. Aen. iii. 699), and immediately off it lies a small rocky island of considerable elevation, which appears to have been generally regarded as forming the actual promontory. It is the expression of Nonnus, who speaks of "the island rock of the sea-girt Pachyam." (Dionys. xiii. 322.) Lycophron also has a similar phrase. (Alex. 1181.)

We learn from Cicero (Verr. v. 34) that there was a port in the immediate neighbourhood of the promontory to which he gives the name of Portus Pachyam; it was here that the fleet of Verres was stationed under his officer Clemenes, when the news that a squadron of pirates was in the neighbourhood of Portus Ulysses (Portus Odysseae) caused that commander to take to flight with precipitation. The Port of Ulysses is otherwise unknown, but Ptolemy gives the name of Promontory of Ulysses (Odysseia apex, Pol. iii. 4 § 7) to a point on the S. coast of the island, a little to the W. of Cape Pachyam. It is therefore probable that the Portus Pachyam was the one now called Porto di Polo, immediately adjoining the promontory, while the Portus Odysseae may be identified with the small bay or harbour of La Marca about 6 miles distant. There are, however, several rocky coves to which the name of ports may be applied, and the determination must therefore be in great measure conjectural. (Smyth's Sicily, pp. 181, 185, 186.) The existence of this port at the extreme SE. point of the island caused it to be a frequent place of rendezvous and station for fleets approaching Sicily; and on one occasion, during the Second Punic War the Carthaginian commander Bomilcar appears to have taken up his post in the port to the W. of the promontory, while the Roman fleet lay immediately to the N. of it. (Liv. xxiv. 27, xxv. 27, xxxvi. 2)

[1315: B.]

PACTOLUS (Pactolus), a small river of Lydia, which flows down from Mount Tmolus in a northern direction, and, after passing on the west of Sardis, empties itself into the Hermus. (Herod. v. 101; Xenoph. Cyrop. vi. 2. § 1, vii. 3 § 4; Ages. vii. p. 517; Strab. xii. pp. 554, 521, xiii. p. 625, 661; Pol. v. 2 § 6; Plut. v. 30.) In ancient times the Pactolus had carried in its mud, it is said, a great quantity of small particles of gold-dust, which were carefully collected, and were believed to have been the source of the immense wealth possessed by Croesus and his ancestors; but in Strabo's time gold-dust was no longer found in it. The gold of this river, which was hence called Chrysorrhous, is often spoken of by the poets. (Soph. Phil. 392; Dionys. Per. 831; Hom. Hymn. in Daph. 249; Virg. Aen. x. 142; Horat. Eppost xiv. 20; Ov. Met. xi. 83, &c.; Senec. Phoen. 694; Juven. xiv. 298; Silv. i. i. 158.) The little stream, which is only 10 feet in breadth and scarcely 1 foot deep, still carries along with it a quantity of a reddish mud, and is now called Sarobat. (L. S.)

PACTYE. (Pacotype, Herod. vi. 36; Strab. viii. p. 331), a town of the Thracian Chersonese, on the coast of the Propontis, 36 stadia from Callin, whence Aeliusba retired after the Athenians had for the second time deprived him of the command.
PACTYCE.

(Diod. xxii. 74; Nepos, Me. 7; cf. Plin. iv. 18; Syl. p. 290. Perhaps St. George.) [T. H. D.]

PACTYCE (πακτυς), a district of North-Western India, which, there is every reason to suppose, must have been nearly the same as the modern Kashmir, but probably extended westward across the Indus. It is mentioned by Herodotus with that amount of uncertainty which attaches to almost all that he relates of the far East. Thus in the catalogue of the produce of the different satrapies of the Persian empire, Pactyce is reckoned after Bactriana, and is connected with the Armenians, which gives it an extent too far to the W. (iii. 93). Again, in his account of the armies of Xerxes Herodotus mentions the Pactyes in connexion with the Sacarii, and places them under the command of a Persian (vii. 67). And in the subsequent description of the former people, he states that their dress is the same as that of the Pactyes (vii. 85). Evidently, therefore, he here imagines the country and the people to have occupied a district to the N. and N.E. of Persia. Again, Herodotus states (iii. 102) that the bravest of the Indian tribes are those who are in the immediate neighbourhood of the city of Caspatyryus and Pactyce; and he connects the same two places together where he states (iv. c. 44) that the celebrated voyage of Scylax of Caryanda, which was promoted by Dareius, the son of Hystaspes, commenced from the same localities. Now we know that Hecataeus (ep. Steph. B. s. v.) placed Caspatyryus in the country of the Gandarii (Frugm. p. 94, ed. Klauser); hence the strong inference that Pactyce was part of Gandarica, if not, as Larcher has supposed, actually the same.

PACYRIS. [Carcerna.]

PADWEB. [India, p. 50, b.]

PADARGUS (Παδαργος, Arrian, Indica c. 39), a small stream of Persis, which appears to have flowed into the Persian Gulf near the present Abukir. It is not possible to identify this and some other names mentioned by Arrian from the Journals of Nearchus, owing to the physical changes which have taken place in the coast-line.

PADINUM, a town of Gallia Cispadana, known only from Pliny, who mentions the Paritites among the municipia of that region (Plin. iii. 13. s. 20). But he affords us no clue to its position. Clever would identify it with Boudina, between Ferrara and Mirandola, but this is a mere conjecture.

(For op. cit.) [V.]

PADUS (Παυς; Po), the principal river of Northern Italy, and much the largest river in Italy altogether. Hence Virgil calls it "flavorum rex" (Georg. i. 481), and Strabo even erroneously terms it the greatest river in Europe after the Danube. (Strab. iv. p. 204.) It has its sources in the Monte Veo, or Mons Vesulus, one of the highest summits of the Western Alps (Plin. iii. 16. s. 20; Mel. ii. 4. § 4), and from thence to the Adriatic has a course of above 400 miles. Pliny estimates it at 300 Roman miles without including the windings, which add about 88 more. (Plin. iii. 16. s. 20.) Both statements are beneath the truth. According to modern authorities its course, including its windings, is calculated at 380 Italian, or 475 Roman miles. (Rumpholi, Dis. Topogr. d Italia, vol. iii. p. 284.) After a very short course through a mountain valley it descends into the plain a few miles from Saluzzo, and from thence flows without interruption through a plain or broad level valley all the way to the sea. Its course from Saluzzo, as far as Chiasso (through the district of the ancient Vagiaeni and Taurini), is nearly NE.; but after rounding the hills of the Monserrat, it turns south and pursues this course with but little variation the whole way to the Adriatic. The great plain or valley of the Po is in fact one of the most important physical features of Italy. Bounded on the N. by the Alps, and on the S. by the Apennines, both of which ranges have in their course a general direction from W. to E., it forms a gigantic trough-like basin, which receives the whole of the waters that flow from the southern slopes of the Alps and the northern ones of the Apennines, and, as Pliny justly observes, there is hardly any other river which, within the same space, receives so many and such important tributaries. These from the north, on its left bank, are the most considerable, being fed by the perpetual snows of the Alps; and many of these form extensive lakes at the points where they first reach the plain; after quitting which they are deep and navigable rivers, though in some cases still very rapid. Pliny states that the Padus receives in all thirty tributary rivers, but it is difficult to know which he reckons as such; he himself enumerates only seventeen; but this number can be increased almost indefinitely, if we include smaller streams. The principal tributaries will be here enumerated in order, beginning from the source, and proceeding along the left bank. They are: 1. the Clusius (Chisone), not noticed by Pliny, but the name of which is found in the Tabula; 2. the Durnia, commonly called Durnia Minor, or Dora Riparia; 3. the Stura (Stura); 4. the Orgus (Orcio); 5. the Durnia Major, or Bantica (Dora Baltea), one of the greatest of all the tributaries of the Padus; 6. the Sesites (Sesia); 7. the Ticino (Ticino), flowing from the Lacus Verbunus (Lago Maggiore); 8. the Lambrer or Lambros (Lambrico), a much less considerable, and which does not rise in the high Alps; 9. the Ardua (Adda), flowing from the Lacus Larici or Lago di Como; 10. the Ollius (Oglio), which flows from the Lacus Sebinus (Lago d'Isco), and brings with it the tributary waters of the Mela (Mela) and Clusius (Chiuse); 11. the Minchia (Mineo), flowing from the Lago di Garda, or Lacus Benacus. Below this the Po cannot be said to receive any regular tributary; for though it communicates at more than one point with the Tartaro (Taro), and Adige (Adige), and receives the channels of both, and the bulk of the waters of the Adige are carried out to the sea by their own separate channel. [Athen.] On the southern or right bank of the Padus its principal tributaries are: 1. the Tanarius (Tanaro), a large river, which has itself received the important tributary streams of the Stura and Bormida, so that it brings with it almost all the waters of the Maritime Alps and adjoining tract of the Ligurian Apennines; 2. the Scrinia, a considerable stream, but the ancient name of which is unknown; 3. the Tredina (Tredina), flowing by Piacenza; 4. the Taras (Taro); 5. the Nicia (Essa); 6. the Gabellus of Pliny, called also Secia (Secchia); 7. the Scultenna, now called the Panaro; 8. the Reno (Reno), flowing near Bologna. To these may be added several smaller streams, viz. the Idice (Idice), Silarus (Silleru), Vatrenus (Plin., now Santenaro), and Siumus (Siumo), all of which discharge themselves into the southern arm of the Po, now called the Po di Primaro, and anciently known as the Spinetteum Ostantum, below the point
where it separates from the main stream. Several smaller tributaries of the river in the highest part of its course are noticed in the Tabula or by the Geographer of Ravenna, which are not mentioned by any ancient author; but their names are for the most part corrupt and uncertain.

Though flowing for the most part through a great plain, the Padus thus derives the great mass of its waters directly from two great mountain ranges, and the consequence is that it is always a strong, rapid, and turbid stream, and has been in all ages subject to violent inundations. (Virg. Georg. i. 481; Plin. l.c.) The whole soil of the lower valley of the Po is indeed a pure alluvial deposit, and may be considered, like the valley of the Mississippi or the Delta of the Nile, as formed by the gradual accumulation of mud, sand, and gravel, brought down by the river itself and its tributary streams. But this process was for the most part long anterior to the historical period; and there can be no doubt that this portion of Italy had already acquired very much its present character and configuration, most nearly as the time of the first Etruscan settlements. The valley of the Padus, as well as the river itself, are well described by Polybius (the earliest extant author in whom the Roman name of Padus is found), as well as at a later period by Strabo and Pliny. (Pol. ii. 16; Strab. iv. pp. 203, 204, v. p. 212; Plin. iii. 16. s. 20.) Considerable changes have, however, taken place in the lower part of its course, near the Adriatic sea. Here the river forms a kind of great delta, analogous in many respects to that of the Nile; and the phenomenon is complicated, as in that case, by the existence of great lagoons bordering the coast of the Adriatic, which are bounded by narrow strips or bars of sand, separating them from the sea, though leaving open occasional channels of communication, so that the lagoons are always salt and affected by the tides, which are more sensible in this part of the Adriatic than in the Mediterranean. (Strab. v. p. 212.) These lagoons, which are well described by Strabo, extended in his time from Ravenna to Althinum, both of which cities stood in the lagoons or marshes, and were built on piles, in the same manner as the modern Venice. But the whole of these could not be fairly considered as belonging to the Delta of the Padus; the most important formed at the mouths of other rivers, the Athesis, Melacus, &c., which had no direct or natural communication with the great river. They all, however, communicated with the Padus, and with one another, by channels or canals more or less artificial; and as this was already the case in the time of Pliny, that author distinctly reckons the mouths of the Padus to extend from Ravenna to Althinum. (Plin. l.c.) From the earliest period that this tract was occupied by a settled people, the necessity must have been felt of embanking the various arms and channels of the river, for protection against inundation, as well as of constructing artificial cuts and channels, both for carrying off its superfluous waters and for purposes of communication. The earliest works of this kind are ascribed to the Etruscans (Plin. l.c.), and from that time to the present day, they have been carried on with occasional interruptions. But in addition to these artificial changes, the river has from time to time burst its banks and forced for itself new channels, or diverted the mass of its waters into those which were previously unimportant. The most remarkable of these changes which is recorded with certainty, took place in 1152, when the main stream of the Po, which then flowed S. of Ferrara, suddenly changed its course, and has ever since flowed about 3 miles N. of that city. Hence it is probable that all the principal modern mouths of the Po, from the Po di Goro to the Po di Levante, were in ancient times comparatively inconsiderable.

Polybius (ii. 16) describes the Padus as having only two principal mouths, which separated at a place called Trisaboli (the site of which cannot be determined); the one of these is called by him Padus (Padisae), and the other, which was the principal channel, and the one commonly navigated, he calls Oluna or Holuna (Oalana). This last is in all probability the channel still called Po di Volano, which until the great inundation of 1152, above noticed, was still the principal mouth of the Po. The other is probably the southernmost branch of the river, which separates from the preceding at Ferrara, and is carried at the present day by a wholly artificial channel into the sea at Primaro, from whence it derives the name of Po di Primaro. Its present mouth is about 15 miles N. of Ravenna; but it seems that in the days of Pliny, and probably even of Polybius also, it discharged itself into the lagoons which then surrounded Ravenna on all sides. Pliny terms it Padusa, but gives it also the name of Fossa Augusta, from its course having been artificially regulated, and perhaps altered, by that emperor. (Plin. iii. 16. s. 20.) The same author gives us a detailed enumeration of the mouths of the Padus as they existed in his day, but from the causes of change already adverted to, it is very difficult, if not impossible, to identify them with certainty.

They were, according to him: 1. the Padusa, or Fossa Augusta, which (he adds) was previously called Messeneus; this has now wholly ceased to exist. 2. The Portus Vaternus, evidently deriving its name from being the mouth of the river Vaternus, which flowed from Forum Cornelli, just as the Po di Primaro is at the present day called the mouth of the Reno. This was also known as the Spinetsium Ostium, from the once celebrated city of Spina, which was situated on its banks [Spina]. It was probably the same with the modern Po di Primaro. 3. Ostium Caprasiae. 4. Sagis. 5. V. Volano, previously called Oluna; this is evidently the Oluna of Polybius, of which the modern Po di Volano; the two preceding cannot be identical, as there have been openings communicating with the great lagoons of Comacchia. 6. The Carbonaria, perhaps the Po di Goro. 7. The Fossoe Philistinae, which seems to have been an artificial canal, conveying the waters of the Tartarum, still called Tartaro, to the sea. This cannot be identified, the changes of the mouths of the river in this part being too considerable. The whole of the present delta, formed by the actual mouths of the Po (from the Po di Goro to the Po di Levante), must have been formed since the great change of 1152; its progress for some centuries back can be accurately traced; and we know that it has advanced not less than 9 miles in little more than two centuries and a half, and at least 15 miles since the 12th century. Beyond this the delta belongs rather to the Adige, and more northern streams than to the Po; the next mouth being that of the main stream of the Adige itself, and just beyond it the Porto di Brondolo (the Brundusium Portus of Pliny), which at the present day is the mouth of the Brenta.*

* Much curious information concerning the delta of
or Badeneus (Bregerius, Pol. ii. 16; Plin. iii. 16. s. 20), a name said to be derived from its great depth. It is well known that it was early identified by the Greeks with the mythical Eridanus, and was commonly called by them, as well as by the Latin poets, by that name, even at a late period. The origin and history of this name have been already given in the article Eridanus. It may be added, that the poplar trees which figure in the fable of Phaeton (in its later form) evidently refer to the tall and graceful poplars, still commonly known as Lombardy poplars, from their growing in abundance on the banks of the Po.

PADUS. [PADUS.]

PADYANDUS (Pudovó), a town in Cataonia, or the southernmost part of Cappadocia, about 23 miles to the south-east of Faustinopolis, near the pass of Mount Taurus known by the name of the Glician Gates. (Plut. v. 7. § 7.) The town, which was extended by the emperor Valens, is mentioned in the Itineraries, but its name assumes different forms; as, Paduvandus (Tab. Pent.), Poduands (H. Avg. p. 145), Mouni Oposalda (H. Hieros. p. 578), and Bhergyndus (Hieroc, p. 699). The place is described by Basilius (Epist. 7.4) as one of the most wretched holes on earth. It is said to have derived its name from a small stream in the neighbourhood. (Const. Porphyr. Vit. Basil. 36; comp. Cedren. p. 575; Jo. Sylutitz. Hist. pp. 529, 844.) The place is still called Podand. [L. S.]

PAEA'NIA. [ATTICA, p. 332, b.]

PAEA'NIUM (Padárvov), a town in Aetolia, near the Acheions, a little S. of Ithoria, and N. of Oenidae, which was on the other side of the river. It was only 7 stadia in circumference, and was destroyed by Philip of Macedon in 219. (Polyb. iv. 65.) Paeaniurn was perhaps rebuilt, and may be the same town as Phana (Φάνα), which was taken by the Achaenians, and which we learn from the narrative in Pausanias was near the sea. (Paus. x. 18.) Stephanus mentions Phana as a town of Italy; but for Πώλια Ιταλίαι, we ought probably to read Πώλια Αιτωλίας. (Steph. B e. v. Φάνα.)

PAELON'TIUM (PAELON'Tov, Ptol. ii. 6. § 33), a town of the Lungsines in Asturia, variously identified with Aplyon, Pola de Lena, and Concejo de Poldownia. [T. H. D.]

PAEMANI, mentioned in Caesar's Gallic war (vii. 18. § 3) with the Condrusi, Eburones, and Caeresi, and four peoples are included in the name of Germani. D'Anville conjectures that they were near the Condrusi, who probably held the country which is now called Condres. [CONDRES.] The Paemani may have occupied the country called Pagos de Farnomne, of which Durburgo, Larochc on the Ourthe, and Rochefort on the Homme are the chief towns. [G. L.]

PAEON (Páeón, Syl. p. 28), a town of Thrace, mentioned only by Sylaci. [T. H. D.]

PAEON'ES (Παίονες, Hor. ii. 248, xvi. 287, xvii. 348, xxi. 139; Herod. iv. 33, 49, x. 13, 98, vii. 113, 185; Thuc. ii. 96; Strab. i. p. 6, 28, vii. pp. 316, 318, 523, 329, 330, 331; Arrian, Anab. ii. 9. § 2, iii. 12. § 4; Plut. Alex. 39; Polyaen. Strat. iv. 12. § 3; Eustath. ad Hom. ii. xvi. 287; Liv. xiii. 51), a people divided into several tribes, who, before the Argolic colonisation of Emathia, appear to have occupied the entire country afterwards called Macedonia, with the exception of that portion of it which was considered a part of Thrace. As the Macedonian kingdom increased, the district called Paeonia
(Paeonia, Thuc. ii. 99; Polyb. v. 97, xxiv. 8; Strab. vii. pp. 313, 318, 329, 331; Pol. iii. 13, § 28; Liv. xxxii. 19, xxviii. 17, xxix. 54. xl. 3, xlv. 29; Plin. iv. 17, vi. 39) was curtailed of its dimensions, on every side, though the name still continued to be applied in a general sense to the great belt of interior country which covered Upper and Lower Macedonia to the N. and NE., and a portion of which was a monarchy nominally independent of Macedonia until fifty years after the death of Alexander the Great. The banks of the "wide-flowing Axios" seem to have been the centre of the Paeonian power from the time when Pyrrharchies and Asteropaeus led the Paeonians to the assistance of Ptolemy (Hom. II. cx.), down to the latest existence of the monarchy. They appear neither as Macedonians, Thracians, or Illyrians, but professed to be descendants from the Teuri of Troy. When Megabazus crossed the river Strymon, he conquered the Paeonians, of whom two tribes, called the Siropeanies and Parephes, were deported into Asia by express order of Darius, whose enmity had been struck at Sardis by seeing a beautiful pearl and a woman carrying a vessel on her head, leading a horse to water, and spinning flax, all at the same time. (Herod. v. 12—16.) These two tribes were the Paeonians of the lower districts, and their country was afterwards taken possession of by the Illyrians. When the Temenidae had acquired Emathia, Almopia, Crestonia, and Mygdonia, the kings of Paeonia still continued to rule over the country beyond the straits of the Axios, until Philip, son of Amyntas, twice reduced them to terms, when weakened by the recent death of their king Agis; and they were at length subdued by Alexander (Diodor. xix. 2, 4, 22, xvii. 8); after which they were probably submissive to the Macedonian sovereigns. An inscribed marble which has been discovered in the necropolis of Athens records an interchange of good offices between the Athenians and Andolcon, king of Paeonia, in the archonship of Diotimus, b.c. 354, or a few years after the accession of Philip and Andolcon to their respective thrones. The coins of Andolcon, who reigned at that time, and adopted, after the death of Alexander, the common types of that prince and his successors,—the head of Alexander in the character of young Hercules, and on the obverse the figure of Zeus Aetolus,—prove the civilisation of Paeonia under its kings. Afterwards kings of Paeonia are not heard of, so that their importance must have been only transitory; but it is certain that during the troublous times of Macedonia, that is, in the reign of Cassander, the principality of the Paeonians existed, and afterwards disappeared. At the Roman conquest the Paeonians on the W. of the Axios were included in Macedonia Secunda. Paeonia extended to the Denteleiae and Maedi of Thrace, and to the Dardani, Penestae, and Dassaretai of Illyria, comprehending the various tribes who occupied the upper valleys of the Erigen, Axios, Strymon and Augstius as far S. as the fertile plain of Sere. Its principal tribes to the E. were the Ohomanti, Aistraei, and Areias, parts of whose country were known by the names of Parstrynnia and Pareaon, the former containing probably the valleys of the Upper Strymon, and of its great tributary the river of Strymonia, the latter the adjacent mountains. On the W. frontier of Paeonia its subdivisions bordering on the Penestae and Dassarretae were Deuripius and Pelagonia, which with Lyncestes comprehended the entire country watered by the Erigen and its branches. (Leake, Northern Greece, vol. iii. pp. 212, 306, 462, 470) [E. B. J.]

PAEANTANUS SINUS. [Paestum.]

PAESTUM (Ναότεσι, Pol. 1., Paeotis, Strab.: Eth. Παενταβίος, Paestanum: Ruins at Pestilo), a city of Lucania, on the Tyrrenian sea, about 5 miles S. of the mouth of the Silarus. It was originally a Greek colony, named Poseidonia (Poseidonia: Eth. Ποαινδιωταί), and was founded by a colony from Sybaris, on the opposite coast of Lucania. (Strab. v. 251; Sycyn. Ch. 243; Scyl. p. 3, § 12.) The date of its foundation is uncertain, but it may probably be referred to the period of the chief prosperity of Sybaris, when that city ruled over the whole of Lucania, from one sea to the other, or from 650 to 510 B.C. [Sybaris.]. It may be observed, also, that Solinus calls Posidonia a Doric colony; and though his authority is worth little in itself, it is considered by some to prove that Doric forms on coins of the city; hence it seems probable that the Doric settlers from Troezen, who formed part of the original colony of Sybaris, but were subsequently expelled by the Achaeans (Arist. Pol. v. 3), may have mainly contributed to the establishment of the new colony. According to Strabo it was originally founded close to the sea, but was subsequently removed further inland (Strab. Lc.); the change, however, was not considerable, as the still existing ruins of the ancient city are little more than half a mile from the coast.

We know scarcely anything of the early history of Poseidonia. It is incidentally mentioned by Herodotus (i. 167) in a manner that proves it to have been already in existence, and apparently as a considerable town, at the period of the foundation of the neighbouring Veiiia, about n.c. 540. But this is the only notice of Poseidonia until after the fall of its parent city of Sybaris, n.c. 510. It has been supposed by some modern writers that it received a great accession to its population at that period; but Herodotus, who notices the Sybarites as settling on that occasion at Lais and Solinus, does not allude to Poseidonia. (Herod. vi. 24.) There are, indeed, few among the cities of Magna Graecia of which we hear less in history; and the only evidence of the flourishing condition and prosperity of Poseidonia, is to be found in the numbers of its coins and in the splendid architectural remains, so well known as the temples of Paestum. From its northerly position, it must have been one of the first cities that suffered from the advancing power of the Lucanians, as it was certainly one of the first Greek colonies that fell into the hands of that people. (Strab. v. 251.) The date of this event is very uncertain; but it is probable that it must have taken place before b.c. 590, when the city of Lais was besieged by the Lucanians, and had apparently become the bulwark of Magna Graecia on that side. [Magna Graecia.]. We learn from a curious passage of Aristophanes (ep. Athen. xiv. 632) that the Greek inhabitants did not expel, but compelled to submit to the authority of the Lucanians, and receive a barbarian colony within their walls. They still retained many of their customs, and for ages afterwards continued to assemble at a certain festival every year with the express purpose of bewailing their captivity, and reviving the traditions of their prosperity. It would appear
from Livy (viii. 17), though the passage is not quite distinct, that it was recovered by Alexander, king of Epirus, as late as B. C. 330; but if so, it certainly soon fell again into the hands of the barbarians.

Posidonia passed with the rest of Lucania into the hands of the Romans. We find no mention of it on this occasion; but in B. C. 273, immediately after the departure of Pyrrhus from Italy, the Romans established a colony there for the security of their newly acquired territory on this side. (Livy. Epit. xiv.; Vell. Pat. i. 14; Strab. v. p. 251.) It was probably at this period that the name was changed, or corrupted, into Paestum, though the change may have already taken place at the time when the city fell into the hands of the Lucanians. But, from the time that it became a Roman colony, the name of Paestum seems to have exclusively prevailed; and even its coins, which are inscribed with Greek characters, have the legend NAES and NAISTANO. (Eckhel, vol. i. p. 156.) We hear but little of Paestum as a Roman colony; it was one of the Coloniae Latineae, and distinguished itself by its unshaken fidelity throughout the Second Punic War. Thus the Paestani are described as sending golden paterae as a present to the Roman senate just before the battle of Cannae (Livy. xxii. 36). Again in B. C. 210 they furnished ships to the squadron with which D. Quintius repaired to the siege of Tarentum; and the following year they were among the eighteen colonies which still professed their readiness to furnish supplies and recruits to the Roman armies, notwithstanding the long-continued pressure of the war (Livy. xxiv. 39, xxvii. 10.).

Paestum was therefore at this period a flourishing and considerable town, but we hear little more of it during the Roman Republic. It is incidentally mentioned by Cicero in one of his letters (Ep. ad Att. xi. 17); and is noticed by all the geographers as a still subsisting municipal town. Strabo, however, observes that it was rendered unhealthy by the stagnation of a small river which flowed beneath its walls (v. p. 251); and it was probably, therefore, already a declining place. But it was still one of the eight Pae - stan Lucani, and possessed a considerably later period; and inscriptions attest its continued existence throughout the Roman Empire. (Strab. l. c.; Plin. iii. 5. s. 10; Ptol. iii. 1. § 8; Lib. Colon. p. 209; Orell. Inscript. 135, 2492, 5078; Bull. d. Inst. Arch. 1836, p. 152.) In some of these it bears the title of a Colony; but it is uncertain at what period it attained that rank; it certainly cannot refer to the original Latin colony, as that must have been merged in the municipal condition by the effect of the Lex Julia. We learn from ecclesiastical authorities that it became a bishopric at least as early as the fifth century; and it is probable that its final decay and desolation was owing to the ravages of the Saracens in the tenth century. At that time the bishopric seems to have been removed to the neighboring town of Capaccio, in an elevated situation a few miles inland.

Paestum was chiefly celebrated in ancient times for its temples, which possessed the peculiarity of flowering in a curious way and were covered with surpassing all others in fragrances. (Verg. Georg. iv. 118; Ovid. Met. xx. 708; Propert. iv. 5. 59; Martial. iv. 41. 10, vi. 80. 6; Auson. Idyll. 14. 11.) The roses that still grow wild among the ruins are said to retain their ancient property, and flower regularly both in May and November.

The site of Paestum appears to have continued wholly uninhabited from the time when the episcopal see was removed till within a very recent period. It was not till the middle of the last century that attention was drawn to the ruins which are there so celebrated. Though they can hardly be said to have been then first discovered, as they must always have been a conspicuous object from the Bay of Salerno, and could not but have been known in their immediate neighbourhood, they were certainly unknown to the rest of Europe. Even the diligent Chuerius, writing in 1624, notices the fact that there were ruins which bore the name of Paesto, without any allusion to their character and importance. (Oliver. Ital. p. 1255.) They seem to have been first visited by a certain Count Gazzola, in the service of Charles VII., King of Naples, before the middle of the last century, and were described by Antonini, in his work on the topography of Lucania (Naples, 1715), and noticed by Mazzocchi, who has inserted a dissertation on the history of Paestum in his work on the Hernecian Tables (pp. 499—515) published in 1754. Before the end of the century they became the subject of the special works of Magnani and Paoli, and were visited by travellers from all parts of Europe. Among these, Swinburne in 1779, has left a very accurate description of the ruins; and their architectural details are given by Wilkins in his Magna Graecia (vol. Camb. 1807).

The principal ruins consist of the walls, and three temples standing within the space enclosed by them. The whole circuit of the walls can be clearly made out, and they are in many places standing to a considerable height; several of the towers also remain at the angles, and portions of the ancient gates, which were four in number; one of these, on the E. side of the town, is nearly perfect, and surmounted by a regularly constructed arch. The whole circuit of the walls forms an irregular polygon, about 3 miles in circumference. The two principal temples stand not far from the southerngate of the city. The finest and most ancient of these is commonly known as the temple of Neptune; but there is no authority for the name, beyond the fact that Neptune, or Poseidon, was unquestionably the tutelary deity of the city which derived from him its ancient name of Posidonia. The temple was hypaethral, or had its cells open to the sky, and is 195 feet long by 79 wide; it is remarkably perfect; not a single column is wanting, and the entablature and pediments are almost entire. The style of architecture is Doric, but its proportions are heavier, and the style altogether more massive and solid than any other extant edifice of the kind. On this account some of the earlier antiquarians disputed the fact of its Greek origin, and ascribed it to the Phoenicians or Etruscans; but there is not a shadow of foundation for this; we have no trace of any settlement on the spot before the Greek colony; and the architecture is of pure Greek style, though probably one of the most ancient specimens of the Doric order now remaining. About 100 yards from the temple of Neptune, and nearer to the south gate, is the second edifice, which on account of some peculiarities in its plan has been called a Basilica, but is unquestionably also a temple. It is of the kind called pseudo-dipteral; but differs from every other ancient building known in having nine columns at each end, while the interior is divided into two parts by a single range of columns running along the centre of the building. It was probably a temple consecrated to two different divinities, or rather, in
PAESTUM.

fact, two temples united in one. It has 18 columns in each side, and is 180 feet long by 80 in width. The third temple, which is at some distance from the other two, nearer to the N. gate of the town, and is commonly known as the Temple of Ceres or Vesta (though there is no reason for either name), is much smaller than the other two, being only 108 feet in length by 48 in breadth: it presents no remarkable architectural peculiarities, but is, as well as the so-called Basilica, of much later date than the great temple. Mr. Wilkins, indeed, would assign them both to the Roman period; but it is difficult to reconcile this with the history of the city, which never appears to have been of much importance under the Roman rule. (Swinburne's Travels, vol. ii. pp. 131-138; Wilkins's Magna Graecia, pp. 55-67.)

The other remains are of little importance. The vestiges of an amphitheatre exist near the centre of the city; and not far from them are the fallen ruins of a fourth temple, of small size and clearly of Roman date. Excavations have also laid bare the foundations of many houses and other buildings, and the traces of a portico, which appear to indicate the site of the ancient forum. The remains of an aqueduct are also visible outside the walls; and numerous tombs (some of which are said to be of much interest) have been recently brought to light.

PLAN OF PAESTUM.

A. Temple of Neptune.
B. Temple, commonly called Basilica.
C. Smaller temple, of Vesta (?).
D. Amphitheatre.
E. Other ruins of Roman time.
F. Gates of the city.
G. River Salso.

The small river which (as already noticed by Strabo), by stagnating under the walls of Paestum, rendered its situation so unhealthy, is now called the Salso: its ancient name is not mentioned. It forms extensive deposits of a calcareous stone, resembling the Roman travertin, which forms an excellent building material, with which both the walls and edifices of the city have been constructed. The malaria, which caused the site to be wholly abandoned during the middle ages, has already sensibly diminished, since the resort of travellers has again attracted a small population to the spot, and given rise to some cultivation.

About five miles from Paestum, at the mouth of the Silarus or Sele, stood, in ancient times, a celebrated temple of Juno, which, according to the tradition adopted both by Strabo and Pliny, was founded by the Argonauts under Jason (Strab. vi. p. 252; Plin. iii. 5, s. 10). It is probable that the worship of the Argive Hera, or Juno, was brought hither by the Troezenian colonists of Posidonia. Pliny places the temple on the N. bank of the Silarus; Strabo, probably more correctly, on the S.

The extensive gulf which extends from the promontory of Minerva (the Punta della Campanella) to the headland called Posidium (the Punta di Licio), and is now known as the Gulf of Salerno, derived its ancient name from the city of Paestum, being called by the Romans Paestanum Sinus, and by the Greeks the gulf of Posidonia (Ποσιδωνιας κόλπος). (Strab. v. p. 251; Strabo, Fras. Paestanum, Plin. iii. 5. s. 10; Mel. ii. 4. § 9; Cic. ad Att. xvi. 6.)

[EH.B.]

COINS OF PAESTUM.

PAESULA (Παεσολα), a town of the Turdetani in Hispania Baetica. (Ptol. ii. 4. § 13.) It is identified by Uderit with Salteras, but its site is uncertain.

PAEUSUS (Παεος), an ancient town on the coast of Troas, at the entrance of the Propontis, between Lampasus and Parium. (Dem. iv. 328, v. 612; Herod. v. 117.) At one period it received colonists from Miletus; but in Strabo's time (xlii. p. 589) the town was destroyed, and its inhabitants had transferred themselves to Lampasus, which was likewise a Milesian colony. The town derived its name from the small river Paesus, on which it was situated, and now bears the name Beiram-Dere. [L. S.]

PAGAE. [Pagar.]

PAGALA (Παγαλα), Arrian, Indic c. 23, a place on the coast of Gedrosia, to which the fleet of Nearchus came after leaving the river Arabs. It seems probable that it is the same as a place called Segava or Pegaia by Philostratus, and which was also in the country of the Orthae (Vit. Apoll. iii. 34). It cannot be identified with any existing spot.

PAGASAE (Παγασαι): also Paganus, gen. -ae, Plin. iv. 8. s. 15; Mela, ii. 3. § 6; Prop. l. 20. 17: Ecb. Paganaios, Paganaceus), a town of Magnesia in Thessaly, situated at the northern extremity of the bay named after it. (Παγασαιου κόλπος, Scylax, p. 24; Strab. iv. p. 438; Παγασαίων, Dem. Phil. Epit. 159; Paganaceus Sinus, Mela, l. c.; Pagasius, Plin. l. c.) Paganse is celebrated in mythology as the port where Jason built the ship Argo, and from which he sailed upon his adventurous voyage: hence some of the ancients derived its name from the construction of that vessel (from παγός, but others from the numerous and abundant springs which were found at this spot. (Strab. iv. p. 436) Paganse was conquered by Philip after the defeat of Onomarchus. (Dem. Ol. i. pp. 11, 13; Diod. xvi. 31, where Paeon, we ought probably to read Paganes.)
On the foundation of Demetrias in B.C. 290, Pagasse was one of the towns, whose inhabitants were transferred to the new city; but after the Roman conquest Pagasse was restored, and again became an important place. In the time of Strabo it was the port of Pharse, which was the principal city in this part of Thassaly. Pagasse was 90 stadia from Pharse, and 20 from Ilosos. (Strab. l. c.) The ruins of the ancient city are to be seen near Folo, which has given the modern name to this town. Pagasse is occupied by the summit of some rocky heights above Cape Eugistros, and at the foot of the rocks are many copious sources of water, of which Strabo speaks. But as these springs are rather saline to the taste, the city was provided in the Roman times with water from a distance by means of an aqueduct, the ruined piers of which are still a conspicuous object. (Luks, Northern Greece, vol. iv. p. 368, seq.)

PAGASEUS SINUS. [PAGASEE.

PAGRAE (Παγραε), a town of Syria, placed by Ptolemy in the district of Pieira, near the Syrian gates (v. 15, § 12), but more particularly described by Strabo, as adjoining Gindaros, the acropolis or Cyrrhistice. Pagrae lay places in the district of Antiochus, and describes as a strong place near the ascent of the Amanus, on the Syrian side of the pass called AMANDIUS PALAE [Vol. I. p. 113], the Syrian gates of Ptolemy (l. c.). The plain of Antioch adds Strabo, lies under Pagrae, through which flows the Arceuthus, the Onontes, and the Labotas. In this plain is also the dyke of Meleager and the river Oeconomar. Above it is the ridge of Trapeza, so called from its resemblance to a table, on which Ventidius encircled Paraharicines, general of the Parthians. (xvi. p. 751.) The place is easily identified in medieval and modern geography by the aid of Abufoelix and Pococke. P. Bichras, writes the former, has a lofty cipello, with fountains, and valley, and gardens; it is said to be distant 12 miles from Antioch, and as many from Iskanderin. It is situated on a mountain overlooking the valley of Charem, which Charem is distant two stages to the east. Baghraz is distant less than a stage from Darbasa, to the south. (Tabula Syriana, p. 120) Pococke is still more particular in his description. He passed within sight of it between Antioch and Balas. After passing Caroeston, he turned to the west between the hills. "We saw also, about 2 miles to the north, the strong castle of Pagram on the hills; this was the ancient name of it in the Itinerary [Antonini], in which it is placed 16 miles from Alexandria and 25 from Antioch; which latter is a mistake, for the Jerusalem Journey (calling it Pangarious) puts it more justly 16 miles from Antioch. As I have been informed, a river called Souda rises in the mountain to the west, runs under this place, and falls into the lake of Antioch."—also called it Bahre-Asouda, otherwise Bahre-Apoule, "the White Lake," from the colour of its waters. This Souda "seems to be the river Arceuthus mentioned by Strabo, immediately after Pagrae, as running through the plain of Antioch." (Observationes on Syriza, vol. ii. p. 173.) It is numbered 17 on the map of the gulf of Issus. [Vol. I. p. 114.] [G. W.]

PAGUS (Παγος), a hill of Iona, a little to the north of Smyrna, with a chapel of Nemesis and a spring of excellent water. (Pan, v. 12, § 1.) Modern travellers describe the hill as being between 500 and 6000 feet high, and as presenting the form of a cone from which the point is cut off. (Hamilton, Researches, i. p. 53, fol.)

[1. S.]

PAGYRITAE (Παγγυρίται, Ptol. iii. 5, § 22), a people of European Sarmatia, whose position cannot be made out. Schafirick (Strat. Alt. vol. i. p. 211) connects the termination of their name with the word "gura," which the Poles and other Russo-Slavonian stocks use for "gura," "a mountain." [E. B. J.]

PALACIUM (Παλακειον), a fortress in the Tauric Chersonese, built by Scilurim, king of the Taurian Scythians, to resist the attacks of Mithridates and his generals. (Strab. vii. p. 312.) The name, which it seems to have taken from his son Palacus (Strab. pp. 306, 309), still survives in the modern Balaklava, which Dr. Clark (Travels, vol. ii. p. 219) inaccurately supposes to be derived from the Genoese "Bella Chiva," "The Fair Harbour." Its harbour was the SYMEDON PORTUS (Συμεδον Πορτος, Pau. viii. pp. 308, 309, Arrian. Periplus, p. 20), Ptol. iii. 6, § 2; Plin. iv. 26), or the Cembaro or Cembalo of the middle ages, the narrow entrance to which has been described by Strabo (l. c.) with such fidelity to nature. According to him, the harbour, together with that of Otren (Scatostopol), constituted by their approach an isthmus of 40 stadia; this with a wall fenced the Lesser Peninsula, having within it the city of Chersonese. The Sinus PORTUSOECUS (Πορτος Οποκας), from the position he assigns to it between Cymometugon and the next point to the W., can only agree with Balaklava, which is truly κάτω Αβοτης et promontorios duobus includitur. Dubois de Montperneux (Loyage autour du Caouasse, vol. vi. pp. 115, 220), in accordance with his theory of transferring the wanderings of Odysseus to the waters of the Euxine, discovers in Balaklava the harbour of the great Laestrygonies (Odys. x. 80—99); and this opinion has been taken up by more than one writer. It is almost needless to say that the poet's graphic picture of details freshly drawn from the visible world, is as true of other land-locked basins, edged in by cliffs, as when applied to the greyish-blue, or light red Jura rocks, which hem in the entrance to the straits of Balaklava. [E. B. J.]

PALAE, a town of Thrace, according to Laphe near Monaulidn. (Rim. Ant. p. 568.) [T. H. D.]

PALAEA 1 (Παλαια), a place in the Troad on the coast, 130 stadia from Andeira. (Strab. xii. p. 614.)

2. (Παλαια κατομ), in Laconia. [Pleiare.

PALAEBYLOS (Παλαιοβλες, Strab. xv. p. 755; Paioivdoses, Ptol. v. 15, § 21), a town of Phocis, which Strabo places after the CLIMA or promontory called Rau-Watta-Salan, forming the X. extremity of the Bay of Kearsna. The site, which is unknown, was therefore probably between the Climas, in the steep cliffs of which it was necessary to cut steps—whence the name—of the river Lycus, among the hills which closely border the shore, and rise to the height of 1000 feet. Ptolemy (l. c.) calls it a city of the interior, and the Pentinger table places it 7 M. P. from Berytus, but does not give its distance from Byblus. (Kennic, Phocis, p. 12, London, 1853.) [E. B. J.]

PALAEUMYNUS. [Mindcs.]

PALAEOBYES. [PALAEOBYES.

PALAEBALUS, that is either old Phare or Phere or old Pheraeales, according to the difference of the readings in the text of Livy (xxxii. 13).

PALAEOLIS. [NEAPOLIS.]
PALAERUS. (Παλαιορψ : Eth. Παλαιορπης), a town on the W. coast of Acrania, on the Ionian sea, which is placed by Strabo between Lucus and Alyzia. Its exact site is unknown. Leake places it in the valley of Lissus. In the first year of the Peloponnesian War (b.c. 431) Palaeus was in alliance with the Athenians, and when the latter people took the neighbouring town of Solium, which was a Corinthian colony, they gave both it and its territory to the inhabitants of Palaeus. (Thuc. ii. 30; Strab. x. pp. 450, 459.)

PALAESCEPSIS. [Σεφησις.]

PALAESIMUNDUM (Πιμ. vi. 22. s. 24), a great town in the ancient Taphrobe (Cydon), an account of which was given to the Romans by Annias Piscamus, who spent six months there during the reign of the emperor Claudius. According to him, it was situated on a river of the same name, which, flowing from a great inland lake, entered the sea by three mouths. It is probable that it is represented by the present Triinoumbe, in the neighbourhood of which are the remains of enormous ancient works for the regulation of the course of the river—now called the Mahieli-Ganga. (Brooke, Geogr. Journ. vol. iii. p 243.) The name occurs under the form Palaeasimundu in the Periplus Mar. Egypth., and in Manilius, lirip. Maria Extremi as the name of the island itself. Thus the first speaks of βησος λεγομενης Παλαισιμωνθος, but antiquely Taphrobe (c. 61, ed. Muller); and the second states that the island of Taphrobe was formerly called Palaeasimundu, but is now called Saltic (c. 35, ed. Muller). Ptolomy, and Stephanus, who follows him, state that the island Παλαια μεν ἐκατερο Σιμωνθον, νυν ἐστι Σαλικη (vii. 4. § 1). It is very probable, however, that this is in both cases to be considered as an erroneous reading, and that the true name was Palaeasimundum. Lassen considers that it is derived from the Sanskrit words Palii-Simante, the head of the Holy Law. (Dissert. de Insula Taphro- bene. p. 14.)

PALAESTE, a town upon the coast of Chania in Epirus, at the southern foot of the Acrocosanthe peak, where Caeser landed from Brundusium, in order to carry on the war against Pompey in Illyria. (Lucan, Phars. v. 460.) In this vicinity there is a modern village, called Palaea; and there can therefore be little doubt that Lucan has preserved the real name of the place where Caesar landed, and that there is a mistake in the MSS. of Caesar, where the name is written Pharsalin. (Caes. B. C. iii. 6; comp. Leake, Northern Greece, vol. i. p. 5.)

PALAESTINA (Παλαιστινη : Eth. Παλαια- στινος), the most commonly received and classical name for the country, otherwise called the Land of Canaan, Juhnea, the Holy Land, &c. This name has the idea of the prophet in it, shared by the same writers; and was received by the earliest secular historians. Herodotus calls the Hebrews Syrians of Palestine; and states that the sea-border of Syria, inhabited, according to him, by Phoenicians from the Red Sea, was called Palaeastin, as far as Egypt (vii. 89). He elsewhere places Syria Palaeastin between Phoenice and Egypt; Tyre and Sidon in Phoenice; Ascalon, Caedythes, Lerusins in Palaeastin Syria; elsewhere he places Caedyth and Azoth simply in Syria (iv. 39, in. 3. ii. 116. 157. i. 105, iii. 65. 3). The name, as derived from the old inhabitants of the land, originally described only the sea-border south of Mount Carmel, occupied by the Philistines from the very earliest period, and during the time of the Israelite kingdom (Exod. xii. 17); although it would appear that this district was partially occupied by the cognate branches of the Canaanites. (Gen. x. 14, 19.) It afterwards came to be used of the grand sea barrier likewise, and that not only on the west of the Jordan, but also to the east, as far as the limits of the children of Israel; and in this wider acceptance it will be convenient here to adopt it; although it deserves to be noted that even so late as Josephus the name Palaeastin was occasionally used in its more restricted and proper sense, viz. of that part of the coast inhabited of old by the Philistines. (See the passages referred to in Reland, p. 41, who devotes the nine first chapters of his work to the names of Palestine, pp. 1—51.)

I. GENERAL BOUNDARIES, SOIL, CLIMATE.

The general boundaries of Palestine, in this wider acceptance of the name, are clearly defined by the Mediterranean on the west, and the great desert, now called the Howran, on the east. [HAURAN.] The country, however, on the east of Jordan was not originally designed to form part of the land of Israel; which was to have been bounded by the Jordan and its inland lakes. (Numb. xxxiv. 6, 10—12; comp. xlv.) The northern and eastern boundaries are not so clearly defined; but it is probable that a more careful investigation and a more accurate survey of the country than has hitherto been attempted might lead to the recovery of many of the sites mentioned in the sacred books, and of natural divisions which might help to the elucidation of the geography of Palestine. On the south, indeed, recent investigations have led to the discovery of a well-defined mountain barrier, forming a natural wall along the south of Palestine, from the southern bay of the Dead Sea to the Mediterranean, along the line of which, at intervals, may be found traces of the names mentioned in the borders of the books of Moses and Joshua, terminating on the west with the river of Egypt (Wady-el-Arish) at Rhinocorura. (Numb. xxxiv. 3—5; comp. Josh. xv. 1—4; Williams, Holy City, vol. i., appendix l, note i. p. 463—468.) On the northern border the mention of Mount Hor is perplexing; the point on the coast of the Sea of Tiberias being the natural site of the Mount of Amath or Zedad determined. (Numb. xxxiv. 7, 8; comp. Esch. xlviii. 15, 16.) But whatever account may be given of the name Hor in the northern borders of Palestine, the mention of Hermon as the northern extremity of the Israelites' conquests in Deuteronomy (iii. 9, v. 48) would point to that rather than to Lebanon, which Reland conjectures, as the mountain in question; while the fact that Sidon is assigned to the tribe of Asher (Judges, i. 31) shows that the northern boundary must be fixed north of that border town of the Canaanites. (Gen. x. 19; Josh. xix. 28.) The present Hamah, next to Homs (Etaina), is much too far north to fall in with the boundary of Palestine, and it must be conceded that we have not at present sufficient data to enable us to determine its northern limits. (Reland, lib. i. cap. 25, pp. 113—123.) To this it must be added that the limits of Palestine varied at different periods of its history, and according to the views of different writers (ib. cap. 26, pp. 124—127), and that the common error of confounding the limits of the possessions of the Israelites with those assigned to their conquests has still further embarrassed the question. Assuming, however,
those boundaries, as do the sacred writers and Josephus, we may now take a general view of its physical features which have always so much to do with the formation of the character of the inhabitants. It is well described in its principal features, in the book of Deuteronomy, as the land of "all the goodly deserts, and the good hills, and the fertile land, the land of oil, and honey; a land wherein thou shalt eat bread without scarceness, shalst not lack any thing in it; a land whose stones are iron, and out of whose hills thou mayest dig brass." (viii. 7-9; comp. xi. 11, 12). The great variety of its natural productions must be ascribed to the diversified character of its surface and the natural richness of its soil, which was obviously taxed to the utmost by the industry of its numerous inhabitants; for there is no part of the hill country, however at present desolate and depopulated, which does not bear evidences of ancient agricultural labour in its scarped rocks and ruined terrace-walls; while in the vicinity of its modern villages, the rude traditional style of husbandry, unimproved and unvaried for 3000 years, enables the traveller to realise the fertility of this highly favoured land, and the occupations of its inhabitants, as well as the genius of their poetry, all whose images are borrowed from agricultural and pastoral pursuits. As the peculiar characteristic feature in the geography of Greece is the vast proportion of its sea-border to its superficial area, so the peculiarity of the geography of Palestine may be said to be the undue proportion of mountains, or rather hill country, to its extent. In the districts of Tripoli, Akka, and the north of the mountainous tract of soil prevail. In general that of the mountainous parts of Palestine and central Syria is dry and stony, being formed in a great measure from the debris of rocks, of which a large portion of the surface of the districts of Lebanon, the Hauran, and Ledge, with the mountainous countries of Judæa, are composed; it is mixed, however, with the alluvium constantly brought down by the irrigating streams. The second and richest district are the plains of Damascus, Zahalon, Baalbek, part of the Decapolis, and Damascus, as well as the valleys of the Jordan and Orontes, which for the most part consist of a fat loamy soil. Being almost without a pebble, it becomes, when dry, a fine brown earth, like garden mould, which, when saturated by the rains, is almost a quagmire, and in the early part of the summer becomes a marsh; when cultivated, most abundant crops of tobacco, cotton, and grain are obtained. The remainder of the territory chiefly consists of the plains called Jurr by the Arabs, and Mikbar by the Hebrews, both words signifying simply a tract of land left entirely to nature, and being applied to the pasture tracts about almost every town in Syria, as well as to those spots where vegetation almost entirely fails. Such spots prevail in the tracts towards the eastern side of the country, where the soil is mostly an indurated clay, with irregular ridges of limestone hills separating different parts of the surface. The better description of soil is occasionally diversified by hill and dale, and has very much the appearance of some of our downs, but is covered with the liquorice plant, mixed with aromatic shrubs, and occasionally some dwarf trees, such as the tamarisk and acacia. Many of the tracts eastward of the Jordan (Perea) are of this description, particularly those near the Hauran, which, under the name of Roman Arabia, had Bostra for its capital. The inferior tracts are frequently coated with pebbles and black flints, having little, and sometimes no vegetation. Such are the greater portions of the tracts southward of Gaza and Hebron, and that part of the pushahick which borders upon Arabia Deserta, where scarcity of water has produced a wilderness, which at best is only capable of nourishing a limited number of sheep, goats, and camels; its condition is the worst in summer, at which season little or no rain falls throughout the eastern parts of Syria.

Owing to the inequality of its surface, Palestine has a great variety of temperature and climate, which have been distributed as follows.—(1) The cold; (2) warm and humid; (3) warm and dry. The first belongs principally to the Lebanon range and to Mount Hermon, in the extreme north of the country, but is shared in some measure by the mountain districts of Nablas, Jerusalem, and Hebron, where the winters are often very severe, the springs mild, and a refreshing breeze tempers the summer heat. The second embraces the slopes adjoining the coast of the Mediterranean, together with the adjacent plains of Akka, Jaffa, and Gaza; also those in the interior, such as Esdraelon, the valley of the Jordan, and part of Perea. The third prevails in the south-eastern parts of Syria, the contingency of which to the arid deserts of burning sand, exposes them to the furnace-blasts of the sirocco untempered by the humid winds which prevailed to the west of the central highlands, while the depression of the southern part of the Jordan valley and the Dead Sea gives to the plains of Jericho and the districts in the vicinity of that sea an Egyptian climate. (Col. Chesney, Expedition to the Euphrates, ge. vol. i. pp. 533—537.)

II. GEOLOGY, NATURAL DIVISIONS, AND PRODUCTIONS.

The general geographical position of Palestine is well described in the following extract:—"That great mountain chain known to the ancients under the various names of Iovans, Cucumans, and Taurans, which extends due east and west from China to Asia Minor; this chain, at the point where it enters Asia Minor, throws off to the southward a subordinate ridge of hills, which forms the barrier between the Western Sea and the plains of Syria and Assyria. After pursuing a tortuous course for some time, and breaking into the parallel ridges of Libanus and AntiLibans, it runs with many breaks and divergencies through Palestine and the Arabian peninsula to the Indian Ocean. One of the most remarkable of these breaks is the great plain of Esdraelon, the battle-field of the East. From this point... the ridge or mountainous tract extends, without interruption, to the south end of the Dead Sea, or further. This whole tract rises gradually towards the south, forming the hill country of Ephraim and Judah, until, in the vicinity of Hebron, it attains an altitude of 3250 feet above the level of the Mediterranean. At a point exactly opposite to the extreme north of the Dead Sea, i.e. due west from it, where the entire ridge has an elevation of about 2710 feet, and close to the saddle of the ridge, a very remarkable feature of this rocky process, so to call it, occurs. The appearance is as if a single, but vast wave of this sea of rock, rising and swelling gradually from north to south, had been suddenly checked in its advance, and, after a

1. 3. 7.
considerable subsidence below the general level, left standing perfectly isolated from the surrounding mass, both as to its front and sides. Add, that about the middle of this wave there is a slight depression, channelling it from north-west to south-east, and you have before you the natural limestone rock which forms the site of Jerusalem." (Christian Remembrancer, No. lxxvi. N.S., vol. xviii. pp. 425, 426.) A few additions to this graphic sketch of the general geography of Palestine will suffice to complete the description of its main features, and to furnish a nomenclature for the more detailed notices which must follow. This addition will be best supplied by the naturalist Russegger, whose travels have furnished a desideratum in the geography of Palestine. It will, however, be more convenient to consider below his third division of the country, comprehending the river Jordan and the Dead Sea, with its volcanic phenomena, as those articles have been reserved for this place, and the historical importance of them demands a fuller account than is given in his necessarily brief summary. He divides the country as follows:—

1. The fruitful plain extending along the coast from Gaza to Jem, north-east of Beirut.

2. The mountain range separating this plain from the valley of the Jordan, which, commencing with Jebel Khalil, forms the rocky land of Judaea, Samaria, and Galilee, and ends with the knot of mountains which Lebanon and Antilibanus extend towards the north.

3. The valley of the Jordan, with the basins of the lake of Tiberias and the Dead Sea, as far as Wady-el-Ghor, the northern end of Wady-el-Araba.

4. The country on the east of the Jordan, as far as the parallel of Damascus.

(1.) The part of the coast plain extending from the isthmus of Sise between the sea and the mountains of Judaea and Samaria, and bounded by the ridge of Carmel, belongs, in regard to its fertility, to the most beautiful regions of Syria. The vegetation in all its forms is that of the warmer parts of the shores of the Mediterranean; in the southern districts the palm flourishes.

The mountains of Judaea and Samaria, which rise to the height of 2000 feet above the sea, follow the line of the plain until they meet the ridge of Carmel. The coast district belongs partly to the older and newer phases of the marine deposits, and partly to the chalk and Jura formations of the neighbouring mountainous country.

To the north of Carmel the hilly arable land occurs again. Still further north, with the exception of a few strips of land about Acre, Sarr, Scida, Beirut, &c., the coast plain becomes more and more narrowed by the mountains, which extend towards the sea, until there only remains here and there a very small strip of coast.

Several mountain streams, swollen in the rainy season to torrents, flow through deep narrow valleys into the plain, in part fertilising it; in part, where there are no barriers to oppose their force, spreading devastation far and wide. Of these the principal are Nahar-el-Kub, Nahar-el-Damur, the Assi, the Saharam, Nahar-el-Kasnich, Nahar-Makutta, &c.

The mountain sides of Lebanon, from Scida to Beirut, are cultivated in terraces; the principal products of this kind of cultivation are the vine and mulberry; the secondary, figs, oranges, pomegranates, and, in general, the so-called tropical fruits.
The great Hermon (Jebel-es-Sheikh) rises high above the other mountains. The valleys are no longer inhospitable ravines; they become long and broad, and partly form plains of large extent, as Esdraelon. A beautiful pasture land extends to the heights of the mountains. Considerable mountain streams water the valleys. (3.) To the east of this mountain chain lies the valley of the Jordan, the most remarkable of all known depressions of the earth, as well on account of its great length as of its almost incredible depth, [See below, III. and IV.] (4.) On the east of the Dead Sea and the Jordan valley, with the sea of Tiberias, rises like a wall a steep mountain range of Jura limestone. On the top of this lies a broad plateau inhabited by nomadic Arabs and stationary tribes. The southern part of these highlands is known by the name of Jebel Biskia; further north, beyond the Zerka, in the neighborhood of the lofty Ajlun, it meets the highlands of Eez-Zawiit; and still further north begins the well-known plateau El-Huwaran, which, inhabited chiefly by Arabs and Druses, is bounded by Anti-Libanus and the Syrian desert, joins the plateau of Damascus, and there reaches a height of 2304 Paris feet above the sea.

III. THE JORDAN.

The most celebrated river of Judaea, and the only stream of water of considerable size in the country. Its etymology has not been successfully investigated by the ancients, who propose a compound of Jor and Dan, and imagine two fountains bearing these names, from which the river derived its origin and appellation. S. Jerome (Onomast. s. v. Dan) derives it from Jor, which he says is equivalent to θηρασίων, πλατνιος, and Dan the city, where one of its principal fountains was situated. But there are serious objections to both parts of this derivation. For in the first place, Νη is the Hebrew form of the equivalent for flavius, while the proper name is always יְדָעַ, and never יְדָעַ as, the proposed etymology would require; while the name Dan, as applied to the city Laish, is five centuries later than the first mention of the river in the book of Genesis; and the theory of anticipation in the numerous passages of the Pentateuch in which it occurs is scarcely admissible (see Judges, xviii.; Gen. xiii. 10, xxxii. 10; Job, xl. 29), although Dan is certainly so used in at least one passage (Gen. xiv. 14). Besides which, Reland has remarked that the word always written with the second syllable of the river is different from that of the monsoylitic city, יְדָעַ, and not יְדָעָ. He suggests another derivation from the root יִדָע, descendit, habitab, so denoting a river, as this, in common with other rivers which he instances, might be called יִדָעָא, יִדָעָא, and as Josephus gives יִדָעָא, יִדָעָא, יִדָעָא, without any distinctive name (Ant. v. 1. § 22), in describing the borders of Issachar. This is also adopted by Gesenius, Lee, and other moderns. (Lee, Lexicon, s. v.)

The source of this river is a question involved in much obscurity in the ancient records; and there is a perplexing notice of Josephus, which has added considerably to the difficulty. The subject was fully investigated by the writer in 1842, and the results are stated below.

The Jordan has three principal sources: (1) at Banias, the ancient Caesarea Philippi; (2) at Tell-
el-Huleh, "the waters of Merom" of Scripture (Josh. xi. 5, 7), the SEMACHOTIS PALÆS of Josephus (Ant. v. 5 § 1, Bell. Juid. iii. 12, § 7, iv. 1, § 1); but the plain between this lake and Pa·neas is hard to be explored, in consequence of numerous fountains and the rivulets into which the main streams are here divided. (Robinson, l. c. pp. 353, 354; Bibliotheca Sacra, 1843, pp. 12, 13.)

This point was investigated by Dr. Robinson in 1832, and he found that both the Ledasis and the Harsayne make their waters with the stream from Birket al-Ghoz and distance above the lake, to which they run in one stream. (Journal R. Geoq. Soc. vol. xxiv. p. 25. 1855.)

This region, now called Merj-el-Huleh, might well be designated Λόπος or λόφος του Ἰδρόδου, "the marshes of Jordan," by which name, however, the author of the first book of Maccabees (1 Macc. ix. 42) and Josephus (Ant. xiii. 1. § 3) would seem to signify the marshy plain to the south of the Dead Sea. The great fountains here collected into the small lake, and further augmented by the numerous land springs in the Bahr and Arid-el-Huleh, run off towards the south in one current towards the sea of Tiberias (TIBERIANA MAIOE), a distance, according to Josephus, of 120 stadia. They flow off at the southwestern extremity of this lake, and passing through a district well described by Josephus as a great desert (παλαιρ ῶρματα, B. J. iii. 9. § 7), now called by the natives El-Ghor, lose themselves in the Dead Sea.

Attention has been lately called to a peculiar phenomenon exhibited by this river, the problems relating to which have been solved twice within the last few years by the enterprise of English and American sailors. In the spring of the year 1838 a series of barometrical observations by M. Berton gave to the Dead Sea a depression of 1374 feet below the level of the Mediterranean, and to the sea of Tiberias a depression of 753 feet, thus establishing a fall of 621 feet between the two lakes. At the close of the same year the observations were repeated by Russegger, with somewhat different results; the depression of the Dead Sea being given as 1429 feet, the sea of Tiberias 666 feet, and the consequent fall of the Jordan between the two, 763 feet. Herr von Wildenbruch repeated the observations by barometer in 1845, with the following results:—Depression of the Dead Sea 1446 feet, of the sea of Tiberias 845 feet, difference 600 feet. He carried his observations farther north, even to the source at Tell-el-Kadi, with the following results:—At Jacob's bridge, about 2½ miles from the southern extremity of Bahr Huleh, he found the Jordan 99 feet above the Mediterranean; at the Bahr Huleh 100 feet; and at the source at Tell-el-Kadi 537 feet; thus giving a fall of 1983 feet in a direct course of 117 miles;—the most rapid fall being between the bridge of Jacob and the sea of Tiberias, a distance of only 8 miles, in which the river falls 845 feet, or 116 feet per mile. Results so remarkable did not find easy credence, although they were further tested by a trigonometrical survey, conducted by Lieut. Symonds of the Royal Engineers, in 1841, which confirmed the barometrical observations for the Dead Sea, but were remarkably at variance with the statement for the sea of Tiberias, giving to the former a depression of 1312 feet, and to the latter of 328 feet, and a difference of level between the two of 984 feet. The whole subject is ably treated by Mr. Petermann, in a paper read before the Geographical Society, chiefly in answer to the strictures of Dr. Robinson, in a communication made to the same society.—both of which papers were subsequently published in the journal of the society (vol. xviii. part 2, 1848). In consequence of the observations of Dr. Robinson (Bib. Res. vol. ii. p. 595. n. 4, and vol. iii. p. 311, n. 3), the writer in 1842 followed the course of the Jordan from the sea of Tiberias to the sea of Huleh, and found it to be a continuous torrent, rushing down in a narrow valley, through almost precipitous mountains. It is well described by Herr von Wildenbruch, who explored it in 1845, as a "continuous waterfall" (cited by Petermann, l. c. p. 103).

The lower Jordan, between the sea of Tiberias and the Dead Sea, was subsequently explored by Liet. Molyneux in 1847, and by an American expedition under Lieut. Lynch in the following year. The following facts from the very graphic account of Liet. Molyneux, also contained in the number of the Royal Geographical Society's Journal (pp. 104—123) already referred to, will give the best idea of the character of this interesting river, hitherto so little known. Immediately on leaving the sea of Tiberias they found the river upwards of 100 feet broad and 4 or 5 deep; but on reaching the ruins of a bridge, about 2 miles down the stream, they found the passage obstructed by the ruins, and their difficulties commenced; for seven hours they scarcely ever had sufficient water to swim the boat for 100 yards together. In many places the river is split into a number of small streams, and consequently without much water in any of them. Occasionally the boat had to be carried upwards of 100 yards over rocks and through thorny bushes; and in some places they had high, steep, sandy cliffs all along the banks of the river. In other places the boat had to be carried on the backs of the camels, the stream being quite impassable. The Ghour, or narrowest part of the Jordan, is about 8 or 9 miles broad at its upper end; and this space is anything but flat—nothing but a continuation of bare hills, with yellow dried-up weeds, which look when distant like corn stubbles. These hills, however, sink into insignificance when compared to the ranges of the mountains which enclose the Ghour; and it is therefore only by comparison that this part of the Ghour is entitled to be called a valley. Within this broader valley is a smaller one on a lower level, through which the river runs; and its winding course, which is marked by luxuriant vegetation, resembles a gigantic serpent twisting down the valley. So tortuous is its course, that it would be quite impossible to give any account of its various turnings in its way from the lake of Tiberias to the Dead Sea. A little above Beisan the stream is spanned by an old curiously formed bridge of three arches, still in use, and here the Ghour begins to wear a much better and more fertile aspect. It appears to be composed of two different platforms: the upper one on either side projects from the foot of the hills, which form the great valley, and is tolerably level, but barren and uncultivated. It then falls away in the form of rounded sand-hills, or white perpendicular cliffs, varying from 150 to 200 feet in height, to the lower plain, which should more properly be called the valley of the Jordan. The river here and there washes the foot of the cliffs which enclose this smaller valley, but generally it winds in the most
tortuous manner between them. In many places these cliffs are like walls. About this part of the Jordan the lower plain might be perhaps 15 or 2 miles broad, and so full of the most rank and luxuriant vegetation, like a jungle, that in a few spots only can anything approach its banks. Below Beisan the higher terraces on either side begin to close in, and to narrow the fertile space below; the hills become irregular and only partly cultivated; and by degrees the whole Ghor resumes its original form. The zigzag course of the river is still prettily marked by lines of green foliage, and it veers from the cliffs on one side to those on the other. This general character of the river and of the Ghor is continued to the Dead Sea, the mountains on either side of the upper valley approaching or receding, and the river winding in the lower valley between bare cliffs of soft limestone, in some places not less than 300 or 400 feet high, having many shallows and some large falls. The American expedition added little to the information contained in the paper of our enterprising countryman, who only survived his exploit one month. Lient. Lynch's report, however, fully confirms all Lient. Molyneux's observations; and he sums up the results of the survey in the following sentence:— "The great secret of the depression between lake Tiberias and the Dead Sea is solved by the tortuous course of the Jordan. In a space of 60 miles of latitude and 4 or 5 miles of longitude, the Jordan traverses at least 200 miles. We have plunged down twenty-seven thousand feet over bare, scarce, unknown cliffs; and have seen the ruins of many villages, which perhaps were very ancient. It is the greatest secret of the Ghor, and the main character of the basin of the Dead Sea, that a rapid fall of the Jordan would cause a complete change of the Ghor. The Jordan is a great river, and an annual overflow would have been impracticable." Considerably further north, however, not far below Beisan, Lient. Molyneux remarked "a quantity of deposit in the plain of the Jordan, and the marks of water in various places at a distance from the river, from which it was evident that the Jordan widely overflows its banks; and the sheik informed him that in winter it is occasionally half a mile across; which accounts for the luxuriant vegetation in this part of the Ghor" (l. c. p. 117). It would appear from this that the subsidence of the basin of the Dead Sea and the more rapid fall of the Jordan consequent upon it, which has also cut out for it a deeper channel, has prevented the overflow except in those parts where the fall is not so rapid.

Another change may also be accounted for in the same manner. "The fords of the Jordan" were once few and far between, as is evident from the historical notices. (Josh. ii. 7; Judges, iii. 28, vii. 24, xii. 5.) But Lient. Molyneux says of the upper part of its course, "I am within the mark when I say that there are many hundreds of places where we might have walked across, without wetting our feet, on the large rocks and stones." (p. 115)

The thick jungle on the banks of the river was formerly a covert for wild beasts, from which they were dislodged by the periodical overflow of the river; and "the lion coming up from the swelling of Jordan" is a familiar figure in the prophet Jeremiah (xlix. 19, l. 44). It was supposed until very recently that not only the lion but all other wild beasts were extinct in Palestine, or that the wild bear was the sole occupant of the jungle; but the seamen in company with Lient. Molyneux reported having seen "two tigers and a bear" in their passage down the stream (p. 118).

The principal tributaries of the Jordan join it from the east; the most considerable are the Yarmuk [GADARA] and the Zerka [JABNIK].

This river is principally noted in sacred history for the miraculous passage of the children of Israel under Joshua (iii.);—the miracle was repeated twice afterwards in the passage of Elijah and Elisha (2 Kings, ii. 8, 14),—and for the baptism of our Lord (St. Matt. iii. &c.). It is honoured with scanty notice by the classical geographers. Strabo reckons it the largest river of Syria (xvi. p. 755). Pliny is somewhat more communicative. He speaks of Panas as its source, consistently with Josephus. "Jordaniae annis oritur & fonte Paneade, qui nomen dedit Caesareae; annus amorosum, et quatenus locus coruscus situs patitur ambitious, accolletia se praebet, velut invitus. Asphalituden lacum dirum natura petet, a quo postremo ehibitur, aquasque laudatas perdit pestilentiis mistas. Ergo ubi prima convalium fuit occasio in lacum se fundit, quem phares Genesaram vacant, etc." (Hist. Nat. v. 15.)

Tacitus, though he names the river, is still more accurate, as he notices the Bahr Hoth, as well as the sea of Tiberias. "Nec Jordanes pelago accipitur; sed unum atque alium lacum, integer perfectum: tertio retinetur." (Hist. v. 6.)

The ancient name for El-Ghor was Aulon, and the modern native name of the Jordan is Es-Shiriah.

IV. THE DEAD SEA.

Of all the natural phenomena of Palestine, the Dead Sea is that which has most attracted the notice of geographers and naturalists both in ancient and modern times, as exhibiting peculiarities and suggesting questions of great interest in a geological point of view.

Names.—The earliest allusion to this sea, which, according to the prevailing theory, refers to its original formation, is found in the book of Genesis (xix. 3), where it is identified with the vale "of Siddim," and denominated "the Salt Sea" (ἡ ἅλας τῶν ἀλαών, LXX.); comp. Num. xxxiv. 3, 12); which Salt Sea is elsewhere identified with "the sea of the plain" (Deut. iii. 17, iv. 49; Josh. iii. 16, xii. 3), ἅλας ἂραδα, LXX.; called by the geographers Josephus (iii. 20), ξερατήριον (xiv. 8), and Eusebius (xvi. 18). Its common name among the classical authors, first found in Diodorus Siculus (inf. cxt.), and adopted by Josephus, is "Asphalitis Lacus" (Ἀσφαλίτις λίμνη), or simply Ἅσφαλίτις. The name by which it is best known among Europeans has the authority of Justin (xxxvi. 3 § 6) and Pausanias (v. 7, § 4), who call it ἅλας ἡ νεκρά, "Mortuum Mare." Its modern native name is Bahr Lut, "the Sea of Lot,"—therein perpetuating the memorial of the catastrophe to which it may owe its formation, or by which it is certain that its features were considerably altered and modified. The name assigned it by Strabo must be referred to a slip of the author; for it is too much as_arguments to Falconer that the geographer had written Σάφιμης Λίμνη, when all the copies read Σφαλήνις Λ.

So copious are the modern notices of this remarkable inland sea, that it would be vain to attempt even an abridgment of them; and the necessity for doing so is in great measure superseded by the late successful surveying expedition, conducted by Lieut. Lynch of the American navy, whose published narrative has set at rest many questions connected with its physical formation. The principal ancient writers will be quoted in detail and in chronological order, that it may appear how far they have borrowed one from another, or may be regarded as independent witnesses. Their notices will then be sub-titulated or controverted by modern writers. The question relating to the formation of the sea, its volcanic origin, and the other igneous phenomena in the country, will be reserved for another chapter.

The earliest extant writer who has noticed at any length the marvells of the Dead Sea, is Diodorus Siculus (ν. c. 43), who has twice described it; first in his geographical survey of the country (ii. 48), and subsequently in his account of the expedition of Demetrius against the Nabataeans (xix. 98), to which last account a few particulars are added, which were omitted in the earlier book.

"We ought not to pass over the character of this lake (Asphalitico) unmentioned. It is situated in the midst of the satrapy of Idumaea, in length extending about 500 stadia, and in breadth about 60. Its water is very salt, and of an extremely noxious smell, so that neither fish nor any of the other ordinary marine animals can live in it: and although great rivers remarkable for their sweetness flow into it, yet by its smell it counteracts their effect. From the centre of it there rise every year a large mass of solid bitumen, sometimes more than 3 plettra in size, sometimes a little less than one plettra.* For this reason the neighbouring barbarians usually call the greater, bull, and the lesser, calf. The bitumen floating on the surface of the water appears at a distance like an island. The time of the rising of the bitumen is known about twenty days before it takes place; for around the lake to the distance of several stadia the smell of the bitumen spreads with a noxious air, and all the silver, gold, and brass in the neighbourhood loses its proper colour; which, however, returns again as soon as all the bitumen is ejected. The fire which burns beneath the ground and the stench render the inhabitants of the neighbouring country sickly and very short-lived. It is nevertheless well fitted for the cultivation of palms, wherever it is traversed by serviceable rivers or fountains available for the purposes of irrigation. In a neighbouring valley grows the plant which yields an abundant income, as the plant grows in no other part of the world, and it is much used by physicians as a medicine."

"The bitumen which rises to the surface is carried off by the inhabitants of both sides of the lake, who are hostile inclined towards each other. They carry away the bitumen in a singular manner without boats: they construct large rafts of reeds, which they launch into the lake. Upon each of these not more than three can sit, two of whom row with oars attached to the raft, and the third, armed with a bow, drives off those who are sailing up from the opposite side, or who venture to use violence; but when they come near to the bitumen they leap on it with axes in their hands, and, cutting it like soft stone, theylade their raft, and then return. If the raft break and any one fall off, even though he may be unable to swim, he does not sink as in other water, but floats as well as one who could swim; for this water naturally supports any weight capable of expansion, or which contains air, but not solid substances, which have a density like that of gold, silver, and lead, and the like; but even these sink much more slowly in this water than they would if they were thrown into any other lake. This source of wealth the barbarians possess, and they transmit it into Egypt and there sell it for the purposes of embalming the dead; for unless this bitumen is mixed with the other spices, the bodies will not long remain undecayed."

It has been mentioned that Strabo (Cir. A.D. 14) describes it under the name of Sirbonis Lacus, a palpable confusion, as regards the name, with the salt lake on the eastern confines of Egypt [Sirbonis Lacus], as is evident from his statement that it stretched along the sea-coast, as well as from the length which he assigns it, corresponding as it does with the 200 stadia given by Diodorus Siculus as the length of the true Sirbonis Lacus, which that author properly places between Coele-Syria and
Egypy (i. 30). The mistake is the more unac-
ceptable, as he not only describes the Lake in a
manner which shows that he was thoroughly ac-
quainted with its peculiarities, but also cites the
opinions of more ancient authors, who had described
and attempted to explain its phenomena. His
notice is peculiarly interesting from the accounts
which he gives of the formation of the bitumen, and
the other indications which he mentions in the vi-
cinity of the operation of volcanic agency, of which
more will be said in the following chapter. The
native traditions of the region bordering on the
plain, and the still existing monuments of their over-
throw, are facts not mentioned by the earlier historian.

The lake Sirbonis is of great extent: some have
stated its circumference at 1000 stadia; it stretches
along near the sea-coast, in length a little more than
200 stadia, deep, and with exceedingly heavy water,
so that it is not necessary to swim, but one who ad-
ances into it up to his waist is immediately borne up.
It is full of asphalt, which it vomits up at uncertain
seasons from the floor; and, indeed, the asphalt
bubbles like those of boiling water, and the surface,
curving itself, assumes the appearance of a crest.
Together with the asphalt there rises much soot,
smoky, and invisible to the sight, by which brass,
silver, and everything shining, even gold, is tarn-
ished; and by the tarnishing of their vessels the
inhabitants of the neighbourhood know the time
when the asphalt begins to rise, and make prepara-
tions for collecting it by constructing rafts of reeds.
Now the asphalt is the seal of the earth, melted by heat,
and bubbling up, and again changed into a solid mass
by cold water, such as that of the lake, so that it requires to be cut; it then floats on the surface
by reason of the nature of the water, which,
which, as I have said, is such that a person who
goes into it need not swim, and indeed cannot sink,
but is supported by the water. The people then
haul it up the rafts, and cut and carry off as much
as they can of the asphalt: this is what takes place.
But Posidonius states that they being sorcerers use
certain incantations, and that the asphalt is being
bubbling up by pressure, by the whole, and certain
forces, by the heat of the sun; and that the asphalt
is everywhere found in the ground, or at any rate
is found there in a great extent, and that it is
bubbling up over 100 stadia in length. But I do not
think that these are true statements, for when asphalt
is thrown into the sea, raising a heavy cloud of
steam, it is not found in the streets, but it is
immediately dissipated. And in this, as in many
other cases, we must refer to the words of Posidonius,
the writer, and not to the words of the native
authorities.

Another confusion must be remarked at the close
of this passage, where Strabo evidently places Tar-
chiae on the Dead Sea, whereas it is situated on the
shores of the sea of Tiberias.

The next writer is the Jewish historian, who adds
indeed little to the accurate information conveyed
by his predecessors; but his account is evidently
independent of the former, and states a few facts
which will be of service in the sequel. Josephus
wrote about A. D. 71.

"It is worth while to describe the character of the
lake Asphaltites, which is salt and unproductive, as I
mentioned, and of such buoyancy that it sustains even
the heaviest substances thrown into it, and that even
one who endeavours to sink in it cannot easily do so.
For Vespasian, having come to examine it, ordered
some persons who could not swim to be bound with
their hands behind their backs, and to be cast into
the deep; and it happened that all of them floated
on the surface as if they were borne up by the force
of a blast. The changes of its colour also are
remarkable; for thrice every day it changes its ap-
pearance, and reflects different colours from the rays
of the sun. It also emits in many places black
masses of bitumen, which float on the surface, some-
what resembling headless balls in appearance and
size. The workmen who live by the lake row out,
and, laying hold of the solid masses, drag them into
their boats; but when they have filled them they
do not find it easy to cut the bitumen, for, by reason
of its tenacity, the boat adheres to the mass until it is
detached by means of the menstruous blood of women
or urine, to which alone it yields. It is used not only
for shipbuilding but also for medicinal purposes: it
is mixed with several drugs. The length of this
lake is 580 stadia, as it extends as far as Zoura of
Arabia; its breadth is 150 stadia. On the borders
of the lake lies the territory of Sodom, formerly a
flourishing country, both on account of the abun-
dance of its produce and the number of its cities;
now it is all an arid waste. It is said that it was
destroyed by lightning, on account of the wickedness
of its inhabitants. The traces of the heavenly fire
and the ruins of five cities may still be seen; and
ashes are found even in the fruits, which are of an
appearance resembling the edible kinds, but which,
when pinched, turn into smoke and ashes. Such
confirmation do the legends concerning the land of
Sodom receive from actual observation." (Josephus,
B. J. iv. 8. § 4.)

The Dead Sea and its marvellous was a subject
suited to the inquiring spirit of the naturalists; and
Pliny's account, though brief, is remarkably clear
and accurate, except that, in common with all
writers, he greatly overstates its size. He wrote
probably too soon (A. D. 74) after Josephus to avail
himself of his account, and may, therefore, be re-
garded as an independent authority.

"This lake produces nothing but bitumen, from
which circumstances its name is derived. It receives no animal body; bulls and camels find it in; and this is the origin of the report that nothing sinks in it. In length it exceeds 100 miles; its greatest breadth is 25 miles, its least 6. On the east of it lies Arabia Nomadum, on the south Macherda, formerly the second fortress of Judea after Jerusalem. On the same side there is situated a hot-spring, possessing medicinal properties, named Callirrhoe, indicating by its name the virtues of its waters." (Hist. Nat. lib. v. 16.)

The last author whom we here cited is Tacitus, whose account may be given in the original. He appears in this, as in other passages, to have drawn largely on Josephus, but had certainly consulted other writers. He wrote A.D. 97.

"Lucas immenso subitu, specie mairis, sapore corruptor, gravitate odoris accepus aestiv, neque vento impellitur, neque piscis aut autae aquae volubilis erit. Incertae unde; superecta, ut solidum, ferunt: periti imperitique mundi perinde attolluntur. Certa anni, latumem egerit: cujus legendi usum, ut ceteras artes, experientia docuit. Ater suaepe natura liquor, et sparsis acetos concretos, innatut: hunc mamam captum, quibus ea cura, in summis navis tradunt. Inde, nullo juxvae, influit, oneratque, donec abscindas; nec abscondere aer ferro possis: fugit uerorum vestenique insectam sanctum, quibus feminae per mensae exsolvuntur; sic Veteres muterunt. Sed gnari locorum tradunt, undantes bitumin moles pelli, ma-
naque trabi ad litus: mox, ubi vapore terras, solis insauruserris conspicum, ut trubes aut saza, discinui. Haud proinulde campi, quos ferunt oliem uberes, magisque uribis habitatos, fulminationiatu arisae; et manere vestigia, terramque ipsam specie torridam, viin frugiferam perdessit. Nam cuancta sponte edita, aut mamam, saepe herba tenus aut flore, seu solitum in specim abodehere, atra et inana velut in cineram vanescet. Egg aequil maius quodam vireb ibe coelestia flagrans concessor, its habiut lauces indici terram, corrupit upsimum spiritum, coque factum segetem et autumni patresceere reor, solo coquoe juxta gravi." (Hist. v. 6.)

This sea is subsequently noticed by Galen (A.D. 164) and Pausanias (vii. A.D. 174), but their accounts are evidently borrowed from some of the above cited from Greek, Jewish, and Latin writers; in illustration of whose statements reference will now be made to modern travellers, who have had better opportunities of testing the truth than were presented to them; and it will appear that those statements, even in their most marvellous particulars, are wonderfully trustworthy; and that the hypotheses by which they endeavoured to account for the phenomena of this extraordinary lake are confirmed by the investigations of modern science.

1. General Remarks.--It is deeply to be regretted that the results arrived at by the American exploring expedition, under Lieut. Lynch, have been given to the world only in the loose, un-systematic and thoroughly un-quotiented notes published through the personal narrative published by that officer; and that his official report to his government has not been made available for scientific purposes. The few meagre facts worth chronicling have been extracted in a number of the Bibliotheca Sacra, from which they are here copied. (Vol. v. p. 767, and vol. vi. p. 396.)

The distance in a straight line from the fountain 'Ain-el-Feshkhab, on the west, directly across to the eastern shore, was nearly 8 statute miles. The soundings gave 696 feet as the greatest depth. Another line was run diagonally from the same point to the south-east, to a chasm forming the outfall of the hot-springs of Callirrhoe. The bottom of the northern half of the sea is almost an entire plain. Its meridional lines at a short distance from the shore shore vary in depth. The deepest soundings thus far are 188 fathoms, or 1128 feet. Near the shore the bottom is generally an incrassation of salt; but the intermediate one is soft, with many rectangular crystals, moistened with brine and salt. The southern half of the sea is as shallow as the northern one is deep, and for about one-fourth of its entire length the depth does not exceed 3 fathoms or 18 feet. Its southern bed presented no crystals, but the shores are lined with incrassations of salt. Thus then, the bottom of the Dead Sea forms two submerged plains, an elevated and a depressed one. The first, its southern part, of slimy mud covered by a shallow bay: the last, its northern and largest portion, of mud with incrassated rectangular crystals of salt, at a great depth, with a narrow ravine running through it, corresponding with the bed of the river Jordan at one extremity and the Wady-el-Jebel at the other. The opposite shores of the peninsula and the west coast present evident marks of disruption.

2. Dimensions. -- It will have been seen that the ancient authorities differ widely as to the size of the sea: Diodorus stating it at 500 stadia by 60; Pliny at 100 miles in length, by 25 miles in its widest, and 6 miles in its narrowest part; Josephus at 280 stadia by 150. Strabo's measure evidently belongs to the Sirbonis Lucas, with which he confused the Dead Sea, and is copied from Diodorus's description of that lake. Of these measures the earliest, viz. that of Diodorus, comes nearest to modern measurement. We have seen that a straight line from 'Ain-el-Feshkhab to the east shore measured nearly 8 statute miles; from 'Ain Jilah directly across to the mouth of the Arnon the distance was about 9 statute miles. The length of the sea does not seem to have been measured by the Americans, but the near agreement of their actual measurement of the width with the computation of Dr. Robinson may give credit to his estimate of the length also. His observations resulted in fixing the breadth of the sea at 'Ain Jilah at about 9 geographical miles, and the length about 39. 'Ain Jilah being situated nearly at the middle point of the western coast. (Bib. Rer. vol. i. p. 27.)

3. Saltness and Specific Gravity. -- Its excessive saltiness, noticed by Josephus, is attested by all travellers; and is indicated by the presence of crystals of salt in profusion over the bed of the sea,--"at one time Stellwagen's lead brought up nothing but crystals,"--as well as by the district of rock-salt at the south-west quarter of the sea, where the American officers discovered "a lofty, round pillar, standing detached from the general mass, composed of solid salt, cappd with carbonate of lime, on a pedestal of in front and pyramidal behind, about 40 feet high, resting on a kind of epedestal from 40 to 60 feet above the level of the sea." (Lynch, Expedition, p. 307.) In the southern bay of the sea, where the water encroaches more or less according to the season, it dries off into shallows and small pools, which in the end deposit a salt as fine and as well bleached, in some instances, as that in regular salt-pan. In this part, where the salt water stagnates and evaporates, brine and Mangles "found several persons engaged in
peeling off a solid surface of salt, several inches in thickness; they were collecting it and loading it on asses. (Travers, p. 139.) It has been sometimes asserted that the water is so saturated with salt that salt cannot be dissolved in it. The experiment was tried by Lieut. Lynch with the following result:—"Tried the relative density of the water of this sea and of the Atlantic—distilled water being as 1. The water of the Atlantic was 1.02, that of this sea 1.13; the last dissolved 30% of its weight of salt. The boats were found to draw 1 inch less water when afloat upon this sea than in the river." (Lynch, p. 757.) The experiment tried by Vespasian has been repeated by nearly all travellers, of course with the same result. The density and buoyancy of the waters is such that it is impossible to sink in it. A muscular man floated nearly breast high, without the least exertion. Several analyses of the waters have been made with various results, to be accounted for, as Dr. Robinson supposes, by the various states of the sea at different seasons; for its body of water is increased to the height of 7 feet or more in the rainy season (Lynch, p. 289), or, according to Dr. Robinson, 10 or 15 feet; for he found traces of its high-water mark, at the south end, in the month of May, more than 10 hours south of its limit at that time. The following are the results of the analyses, the standard of comparison for the specific gravity being distilled water at 1000:

(Robinson, Bib. Res. ii. pp. 224, 225.)

Russegger says:—"The excessive saltiness of the Dead Sea is easily accounted for by the washing down of the numerous and extensive salt-beds, which are peculiar to the formation of the basin, in which also are found bituminous rocks in sufficient quantity to enable us, without doing violence to science, to explain some of the chemical and physical peculiarities of this lake-water by the continual contact of these rocks with water strongly impregnated with salt." (Reisen, p. 207.)

4. Evaporation.—The enormous quantity of water brought down by the Jordan, particularly in the rainy season, and by the other streams around the Dead Sea, some of which are very considerable, as e.g. the Arnon was found to be 82 feet wide and 4 feet deep in its mouth, is needed off by evaporation; and, when the small extent of the sea is considered, it is clear that the decomposition of its waters must be very rapid. The ancient writers speak of a noxious smell, of bubbles like those of boiling water, of much soot, and an invisible vapour, tarnishing all metals, and deleterious to the inhabitants; and its change of aspect twice a day may also be ascribed to the same cause. Now it is remarkable that nearly all these phenomena have been noticed by modern explorers, and the single one which is not confirmed is accounted for in a manner which must exempt the ancient geographers from the charge of misrepresentation or exaggeration; and it may well be believed that the enormous chemical processes, perpetually going forward in the depths of the sea, may occasionally produce effects upon the surface which have not been chronicled by any modern traveller. Lieut. Lynch, while encamped near Engedi, remarked, "a strong smell of sulphurised hydrogen," though there are no thermal springs in this vicinity; and again, "a foetid sulphurous odour in the night;"—the north wind, quite fresh, which it induced in a smell of sulphur. Lieut. Molynvex detected the same disagreeable smell the night he spent upon the sea, which he ascribed to the water (Journal of the R. Geog. Soc. vol. xviii. p. 127, 1848.) But Lieut. Lynch states that, "although the water was greasy, acrid, and disagreeable, it was perfectly inodorous." He is therefore inclined to attribute the noxious smell to the foetid springs and marshes along the shores of the sea, increased, perhaps, by exhalations from stagnant pools in the flat plain which bounds it to the north. (Expedition, pp. 292, 294, 296, 300.) The "pale-blue misty appearance over the sea," "the air over the sea, very misty," and "the two extremities of the sea misty, with constant evaporation" (p. 294), are other notes indicating the unnatural state of the atmosphere surcharged with the gases discharged by the process. On a stormy night "the surface of the sea was one wide sheet of phosphorescent foam, so that a dark object could have been discerned at a great distance" (p. 281) comp. Molynvex., l.c. p. 129. A kind of mirage, noticed by many travellers, may be attributed to the same cause. "A thin haze-like vapour over the southern sea;—appearance of an island between the two shores" (p. 288). This phenomenon is more fully noticed by Irby and Mangles: "This evening, at sunset, we were deceived by a dark shade on the sea, which assumed so exactly the appearance of an island that we entertained no doubt regarding it, even after looking through a telescope. It is not the only time that such a phenomenon has presented itself to us; in two instances, looking up the sea from its southern extremity, we saw it apparently closed by a low, dark line, like a bar of sand to the northward; and, on a third occasion, two small islands seemed to present themselves between a long sharp promontory and the western shore. We were unable to account for these appearances, but felt a little doubt that they arose in the manner of Mr. Seetzen into the supposition that he had discovered an island of some extent, which we had had opportunity of ascertaining, beyond all doubt, does not exist. It is not absolutely impossible, however, that he may have seen one of these temporary islands of bitumen, which Pliny describes as being several acres in extent." (Travers, p. 141.)

Two effects of the heavy atmosphere of the sea remain to be noticed: one, the irresistible feeling of drowsiness which it induced in all who navigated it; the other, confirming, in a remarkable manner, the ancient testimonies, above cited, that the water appeared to be destructive to everything it touched, particularly metals, viz. that "everything in the boat was covered with a nasty fliny substance, iron dreadfully corroded, and looked as if covered with coal-tar." (Molynvex., l.c. p. 128.) The "bubbles like those of boiling water," mentioned by Strabo, may be identified with the curious broad strip of foam, lying in a straight line nearly south and north throughout the whole length of the sea, which
seemed to be constantly bubbling and in motion. (Molony, p. 129; Lynch, pp. 288, 289.) And even the marvellous fact mentioned by Josephus, of the sea changing its colour three times a day, may derive some sonantness from testimonies already cited, but more especially from the following notice of Lieut. Lynch: — "At one time, to-day, the sea assumed an aspect peculiarly sombre. . . . The great evaporation enveloped it in a thin, transparent vapour, its purple tinge contrasting strangely with the extraordinary colour of the sea beneath, and, where they blended in the distance, giving it the appearance of smoke from burning sulphur. It seemed a vast caldron of metal, fused but motionless" (p. 324): "in the forenoon it had looked like a sheet of foam." In the afternoon, of the same day, it "verified the resemblance which it has been said to bear to molten lead;" "at night it had the exact hue of asphaltine" (p. 276). The earlier testimony of Prince Nadiravi may also be adduced, who, after citing Josephus, adds, that he had had ocular proof of the fact: "Nam macte hbasbat aquam nigriamern; meridle, sole intenso (sunt enim calores hic maxim) instar panni fit caerulea; ante occasum, ubi vis caloris remittit, tanquam hiatus permixtahun, modice rubet, vel potius flavescit." (Leverolymantana Peregrinatio, p. 96.) A familiarity acquired by three weeks' diligent examination did not remove the feeling of awe inspired by its marvels; "So sudden are the changes of the weather, and so different the aspects it presents, as at times to seem as if we were in a world of enchantments. We are alternately beside and upon the brink and the surface of a huge and sometimes seething caldron." (Lient. Lynch, Bib. Soer. vol. v. p. 763.)

5. Bitumen. — It is to be regretted that the American expedition has thrown so new light on the production of the asphalt for which this sea was once so famous. Aiding almost the whole of the west coast numerous fragments of this substance are found among the pebbles, but there is no record of any considerable masses or fields of it being seen by any European travellers in modern times; unless, as is suggested by Irby and Mangles, the imaginary islands may be so regarded. But it is curious that the traditions of the natives still confirm the notice of Strabo that drops of pitch are distillled from rocks on the eastern shore,—a story repented of various Arab, Arabian, Berchen, Burneham, and Robinson, the last of whom also mentions the fact of their belief that the large masses of bitumen appear only after earthquakes. Thus, after the earthquake of 1834, a large quantity was thrown upon the shore near the south-western part of the sea, of which one tribe brought about 60 kuintars into market (each kuintar = 98 lbs.); and that after the earthquake of Jan. 1st, 1837, a large mass of bitumen (one said like an island, another like a house) was discovered floating on the sea, and was driven across the west side, not far to the north of Ummun. The Arabs swarm off to it, and cut up with axes so as to bring it ashore; as Tacitus tells us was done in his times, though he mentions what he considered the less probable account of its flowing as a black liquid into the ships in a perpetual stream. (Robinson, Bib. Res. vol. ii. pp. 253—254.) That the water of this sea is destructive to all animal life, as all the ancients held, seems sufficiently proved; for although shells have been found on the shore, they have been evidently washed down by the Jordan or other fresh-water streams, and their inmates de-

Palaestina.

something must now be said of the various theories by which it has been attempted to account for the watery phaenomenon above recorded of the depression of the Ghör, or Valley of the Jordan; and of the formation and physical constitution of the Dead Sea. All theories suppose volcanic agency: and it is worthy of observation that, while the earliest historical and poetical records of the country bear witness to a familiarity with such phaenomena, the existing geological monuments confirm the testimony. Independently of the igneous agency by which the cities of the plain were destroyed, much of the descriptive imagery of the psalmists and prophets is borrowed from volcanoes and earthquakes; while there are evidences of an earthquake of very great and probably destructive violence during the reign of Uzziah, king of Judah, which formed a kind of era in the history of the country, being alluded to after an interval of 300 years. (Amos, i. I; Zechariah, xiv. 5.) The existing phaenomena may be briefly mentioned, beginning with one recently discovered by the American explorers, of whom Mr. American reports a volcanic formation on the east shore, and brought specimens of lava." (p. 280.) The mountain known as Jebel Misra, at the north-east of the Dead Sea, composed entirely of black bituminous limestone, which burns like coal, has not been investigated so fully as it deserves: but the hasalitic columns in the vicinity of the sea of Tiberias have been frequently noticed by travellers. The thermal fountains of Cullirhouc, Gadara, and Tiberias complete the chain of evidence, and render it highly probable that the extinct volcano noticed by Dr. Robinson at a short distance north-west of Safed, the Frank Mountain, and others, may have been active during the historical period, and furnished the poets and prophets with the sublime imagery of the Bible. Having then discovered the agent of the geological changes that the country has passed through, it may be interesting to hear the opinion of two eminent and scientific writers on the great problem under consideration.

Eusebius, who has himself carefully examined the phaenomena of the country and tested the observations of preceding travellers, thus sums up the results (Reiser, p. 205):— "From its exit from the lake of Tiberias to its entrance into the Dead Sea the Jordan has a fall of 716 Paris feet and thus lies at the latter place 1341 Paris feet below the level of the Mediterranean sea. At the southern extremity of the Dead Sea lies the marshy lowlands of Wady-el-Ghor, the commencement of Wady-el-Arabah, and apparently very little higher than the Dead Sea itself. These lowlands join Wady-el-Arabah, the bed of which rises gently to the watershed which separates the water-system of the Dead Sea from that of the Red Sea. As the watershed of Wady-el-Arabah is apparently of no considerable height above the level of the sea, the length of this remarkable depression may be reckoned from the northern extremity of the clefts of Hattin (to the mouth of the sea of Tiberias) to this watershed, a distance of full three degrees. All the rock of this region consists of metamorphic formations, amongst which those of the Jura and
chank period prevail. It is in the northern part of this country alone that volcanic formations are found in considerable numbers. Nevertheless, a portion of the land in which volcanic rocks are not found bears evident marks of frequent volcanic action, such as hot-springs; the crater-like depressions, such as the basin of Tiberias, and that of the Dead Sea, with its basaltic rocks; the frequent and visible disturbances of the strata of the normal rocks, the numerous crevices, and especially the frequent and violent earthquakes. The line of earthquakes in Syria includes Helbran, Jerusalem, Wadi, Tiberias, Sefed, Beiteh, Aleppo, from a direction south-west to north-east, follows the direction of the central chain of Syria, runs parallel to that of the valley of the Jordan, and has its termination northward, in the volcanic country on the slope of Taurus (Giatar Dagh), and southward in the mountain land of Arabia Petraea. At several places branches of this great volcanic crevice appear to stretch as far as the sea, and to touch Jaffa, Acre, Beiráz, Antioch, unless indeed, there be a second crevice, parallel to the first, running along the coast, and connecting the above places. I am of opinion that such is the case, and that there exists also a third crevice, coinciding with the direction of the valley of the Jordan, and united to the principal crevice above mentioned at its northern extremity. This supposition will account for the depression of the valley of the Jordan. At the time of the destruction of Sodom and Gomorrah the surface of the crevice opened, and the great depression of the ground from Jebel-es-Sheikh to the watershed in Wady-el-Araba followed. The difference of the resistance arising from local circumstances, the volcanic eruptions connected with this phenomenon, the local form of the land, and the different depths of the chasm then formed, caused a more or less extensive depression, and created along the chasm crater-like hollows, some of extraordinary depth, as the basin of Tiberias and that of the Dead Sea. These hollows, as usual in such cases, become filled with water, and formed a system of lakes. Next the waters from the sides of Jebel-es-Sheikh formed the principal stream of Jordan connecting these lakes, having overflowed them successively. This however was not the case with the Dead Sea. The watershed of Wady-el-Araba is probably much more ancient than the depression; and as the Red Sea, judging by the geognostic nature of Wady-el-Araba, formerly seems to have extended so far inland, this barrier must have existed at the time of the depression, since otherwise the Red Sea would have burst into the hollow formed by the sinking of the land. If, however, there existed before the time of the depression a regular fall throughout the whole valley to the Red Sea, it is natural to suppose that at that time the Jordan flowed into the Red Sea, and that when the depression took place its course was interrupted. However this may have been, after the depression the filling of the basin of the Dead Sea continued until it became so filled with lavas that the evolution of the water was equal to the influx. The appearance of its shores proves that, owing either to a greater influx of water during rainy seasons, or to a less copious evaporation caused by circumstances of temperature, the sea at one time was considerably higher than at present.

Professor Daubeny introduces his theory with other notices of volcanic agency collected from modern books of travel. (Dr. Daubeny. A Description of active and extinct Volcanos, 9v. 2nd ed. pp. 350—353.)

PALAESTINA.

"If we proceed southwards, from the part of Asia Minor we have just been considering, in the direction of Palestine, we shall meet with abundant evidences of igneous action to corroborate the accounts that have been handed down to us by ancient writers, whether he profane or prelate, from both which it might be inferred that volcanoes were in activity even so late as to admit of their being included within the limits of authentic history. (Nahum, i. 3, 6; Micah, i. 3, 4; Isaiah, xiv. 1—3; Jer. ii. 25, 26.)"

The destruction of the five cities on the borders of the lake Asphaltitis or Dead Sea, can be attributed, I conceive, to nothing else than a volcanic eruption, judging both from the description given by Moses of the manner in which it took place (Gen. xix. 24, 25, 28; Deut. xxix. 23), and from the present aspect of the country itself. 

"Volney's description of the present state of this country fully coincides with this view. (Travels in Egypt and Syria, vol. i. pp. 281, 282.)"

"The south of Syria," he remarks, "is the hollow through which the Jordan flows, a country of volcanos; the bituminous and sulphurous sources of the lake Asphaltitis, the lava, the pumice-stones thrown upon its banks, and the hot-baths of Tabari, demonstrate that this valley has been the seat of a subterraneous fire, which is not yet extinguished. Clouds of smoke are often observed to issue from the lake, and new crevices to be formed upon its banks. In conjectures in such cases were not too liable to error we might suspect that the whole valley has been formed only by a violent sinking of a country which formerly poured the Jordan into the Mediterranean. It appears certain, at least, that the catastrophe of five cities destroyed by fire must have been occasioned by the eruption of a volcano then burning."

"The eruptions themselves have ceased long since, but the effects which usually succeed them still continue to be felt at intervals in this country. The coast in general is subject to earthquakes; and history notices several which have changed the face of Antioch, Laodicea, Tripoli, Berytus, Tyre, and Sidon. In our time, in the year 1759, there happened one which caused the greatest ravages. It is said to have destroyed in the valley of Baalbec upwards of 20,000 persons; a loss which has never been repaired. For three months the shock of it terrified the inhabitants of Lebanon so much as to make them abandon their houses and dwell under tents.

"In addition to these remarks of Volney, a recent traveller, Mr. Legh (see his account of Syria, attached to Macrmichael's Journey from Moscow to Constantinople), states that, "on the south-east side of the Dead Sea, on the right of the road that leads to Kerak, red and brown hornstone, porphyry, in the latter of which the felspar is much decomposed, syenite, breccia, and a heavy black amygdaloid, containing white specks, apparently of zoelite, are the prevailing rocks. Not far from Shobec, where there were formerly copper mines, he observed portions of scoriae. Near the fortress of Shobec, on the left, are two volcanic craters; on the right, one. The Roman road on the same side is formed of pieces of lava. Masses of volcanic rock also occur in the valley of Ellinor."

"The western side of the valley of the Jordan, according to Russegger, is composed of Jura limestone, intersected by numerous dykks and streams of basalt,
which, with its deep fissures, the earthquakes to which it is subject, and the saline sulphurous springs, which have a temperature of 46° cent., attest the volcanic origin of this depression.

"The other substances met with in the neighbourhood are no less corroborative of the cause assigned. On the shore of the lake Mr. Mannell found a kind of bituminous stone, which I infer from his description to be analogous to that of Hadras in Sicily.

"It would appear that, even antecedently to the eruption mentioned in Scripture, bitumen-pits abounded in the plain of Siddim. Thus, in the account of the battle between the kings of Sodom and Gomorrah and some of the neighbouring princes (Gen. xiv.), it is said, 'And the vale of Siddim was full of slime-pits,' which a learned friend assures me ought to be translated fountains of bitumen.

"But besides this volcanic eruption, which brought about the destruction of the cities, it would appear that the very plain itself in which they stood was obliterated, and that a lake was formed in its stead. This is collected not only from the apparent non-existence of the valley in which these cities were placed, but likewise from the express words of Scripture, where, in speaking of the wars which took place between the kings of Sodom and Gomorrah and certain adjoining tribes, it is added that the latter assembled in the vale of Siddim, which is that which is now the Dead Sea.

"It is therefore supposed that the lake itself occupied the site of this once fertile valley, and that it was produced by the waters of the Jordan, which, being without an outlet, would fill the hollow until the surface over which they spread themselves proved sufficiently large to cause the less arising from evaporation to be equivalent to the accretions it received from the rains and snows of the mountains in which it took its rise.

"This hypothesis assumes that previously to the existence of the Dead Sea the Jordan must have had an outlet, either into the Mediterranean or into the Red Sea; and accordingly when it was discovered by Burckhardt, that there actually existed a longitudinal valley, parallel to the course which the Jordan took before it reached the Dead Sea, as well as to the larger axis of that expanse of waters, running from north to south, and extending from the southern termination of the Dead Sea to the extremity of the gulf of Akaba, it was immediately concluded that this valley was in fact the former bed of the Jordan, which river, consequently, prior to the catastrophe by which the Dead Sea was produced, had flowed into this arm of the Red Sea.

"Briefly, then, to recapitulate the train of phenomena by which the destruction of the cities might have been brought about, I would suppose that the river Jordan, prior to that event, continued its course tranquilly through the great longitudinal valley called El-Arabah into the gulf of Akaba; that a shower of stones and sand from some neighbouring volcanoes overwhelmed these places; and that its eruption was followed by a depression of the whole of the region, from some point apparently intermediate between the lake of Tiberias and the mountains of Lebanon, to the watershed in the parallel of 30°, which occurs in the valley of El-Arabah above mentioned. I would thence infer that the waters of the Jordan, pent up within the valley by a range of mountains to the east and west, and a barrier of elevated table-land to the south, could find no outlet, and consequently by degrees formed a lake in its most depressed portion; which, however, did not occur at once, and therefore is not recorded by Scripture as a part of the catastrophe (see the passage in Ezekiel, xlviii. 8, indicating, if it be interpreted literally, the gradual manner in which the Dead Sea was formed, and likewise perhaps the existence of a tradition that its waters once had their exit in the Red Sea), though reference is made in another passage, as an effect, of its existence in what was before the valley of Siddim.

"If, as Robinson states, extensive beds of salt occur immediately round its margin, the solution of the contents of these by the waters of the lake would account for their present composition, its saltiness increasing nearly to the point of saturation, owing to the gradual accession of waters from above, which, on evaporating, would leave their salt behind; whilst the bitumen might either have existed there previously as a consequence of antecedent volcanic eruptions, or have been produced by the very one to which reference is here made.

"I do not, however, see what is gained by attributing the destruction of these cities, as some have preferred to do, to the combustion of these beds of bitumen, as the latter could have been inflamed by no natural agent with which we are acquainted except the volcano itself, which therefore must in any case be supposed instrumental, and, being invoked, will alone enable us to explain all the facts recorded.

"It must at the same time be confessed that much remains to be done before this or any other explanation can be received as established; and I am disappointed to find that amongst the crowds of travellers who have resorted to the Holy Land within the last twenty years, so few have paid that attention to the physical structure of the country which alone could place the subject beyond the limits of doubt and controversy.

"The geologist, for instance, would still find it worth his while to search the rocks which bound the Dead Sea, in order to discover if possible whether there be any crater which might have been in a state of eruption at the period alluded to; he should ascertain whether there are any proofs of a sinking of the ground, from the existence of rapids anywhere along the course of the river, and whether south of the lake can be discovered traces of the ancient bed of the Jordan, as well as of a barrier of lava stretching across it, which latter mass, Von Buch's conceive, is still inclined to support; nor should he omit to examine whether vestiges of these devoted cities can be found, as some have stated, submerged beneath the waters, and buried, like Pompeii, under heaps of the ejected materials."

VI. Historical Geography.

1. Earliest Period. — The first notice we have of the inhabitants of Palestine is in the days of Abraham's immigration, when the Canaanite was in the land, from whom it received its earliest appellative, "the land of Canaan." (Gen. xii. 5, 6, xiii. 7, 12, &c.) The limits of their country are plainly defined in the genealogy of Canaan; but its distribution among the various families of that patriarch is nowhere clearly stated. "Canaan begat Sidon his first-born, and Heth, and the Jebusite, and the Amorite, and the Girgasite, and the Hivite, and the Arkite, and the Sinite, and the Arvadite, and the Zemarite, and the Hamathite: and afterwards were the families of the Canaanites spread abroad. And
the border of the Canaanites was from Sidon as thou comest to Gerar, unto Gaza; as thou goest unto Sidom, and Goramorah, and Admah, and Ze-baim, even unto Lasha” (x. 15—19).

As several of these names occur no more in the history of Palestine, we must suppose either that the places reappear under other names, or that these tribes, having originally settled within the limits of the land, afterwards migrated to the north, where we certainly find the Arvadites and Hamathites in later times. Of the eleven families above named, the first six are found in the subsequent history of the country: the descendants of Sidon on the coast to the north; the children of Heth in Hebron, on the south; the Jebusites to the north of these, in the highlands about Jerusalem; the Amorites to the east of the Hittites, on the borders of the Dead Sea; the Gergashites, supposed to be a branch of the Hitites next named, who were situated north of the Jebusites in Shechem and its vicinity. (Gen. xxxiv. 2.)

The coast to the south was wrested from the Canaanites in very early times, if they ever possessed it; for throughout the records of history the Philistines, descendants of Mizraim, not of Canaan, were masters of the great western plain (x. 14). The distribution of the country among these tribes is involved in further obscurity by the introduction of the Perizzites and Amorites, whose names, as distinguished by the name of the land they occupied, the Canaanites as joint occupiers of the country (xiii. 7), and by the fact of the Canaanites appearing as a distinct tribe, where the Hittites, the Amorites, the Gergashites, and the Jebusites, who were all alike Canaanites, are several times enumerated (xiv. 19—21). It would appear also that while the name Canaanites was used in a more restricted sense in the last cited passage, the names of the particular families were sometimes used in a wider acceptance; which may account for the Hittites, whose seats we have already fixed to the south of Jerusalem, being found to the north of that city, in the neighbourhood of Bethel. (Judges, i. 26.) It may be, however, that the seats of the several tribes in those early times were not fixed, but fluctuated with the tide of conquest or with the necessities of a pastoral people; an example of the former may be found in the victories of Chedorlaomer (Gen. xiv.), and of the latter in the many migrations of Abraham with his descendants, and of his descendants, which finally transferred the whole of his posterity into Egypt for a period of four centuries (xii. 6—10, xiii. 1—4, 15, xx. 1, xxvi. 1, &c.).

To attempt to trace these various migrations were a fruitless task with the very scanty notices which we possess; but the number and general disposition of the Canaanitish tribes at the period of the Exodus of the Israelites under Joshua may be approximately ascertained, and aid in the description of the district among the latter. These tribes then in occupation of the land are said to be seven (Deut. vii. 1), and are thus enumerated:—“Canaanites, Hittites, Amorites, Perizites, Hivites, Jebusites,” only six (Exod. iii. 8, 17, xxvi. 3), but in Deuteronomy (L. c.) and Joshua (iii. 10) the Gergashites are added, which completes the number. Of these the Amorites occupied the southern border, or probably shared it with the Amalekites, as it was with the latter that the Israelites were first brought into collision. (Exod. xvii. 8, 9; Num. xiv. 24, 43—45.) This was therefore called “ the Mount of the Amorites” (Deut. i. 19, 20); and their relative position with regard to the other tribes is thus clearly stated:—

“The Amalekites dwell in the land of the south, and the Hittites, and the Jebusites, and the Amorites (Joshua, xii. 3, adds the Perizites), dwell in the mountains: and the Canaanites dwell by the sea, and by the coast of Jordan.” (Num. xiii. 28, 29.)

The limits of the Amorite territory are further defined by the confederacy of the five cities of Jerusalem, Hebron, Jarmuth, Lachish, and Eglon, which were Amorites (Josh. x. 5); while the hill-country immediately to the north and west of Jerusalem, comprising Gibea, Chephirah, Beeroth, and Kirjath-jearim was held by the Hivites (ix. 3, 7, 17, xi. 19), who are also found, at the same period, far to the north, “under Hermon in the land of Mizpeh” (xi. 3; Judges, iii. 3), as two large and powerful kingdoms of the Amorites existed on the east of the Jordan [Amorites], the older inhabitants having being driven out. It is worthy of remark that during the occupation of Palestine by these Canaanites it is already called “ the land of the Hebrews” or Heberites, which can only be accounted for by an actual residence in it of Heber himself and his race, which goes far to prove that the Canaanitish tribes were only intruders in the Land of Promise. (Gen. xi. 15; see Christian Remembrancer, vol. xviii. p. 451.) For fuller details reference may be made to Belzoni (Palæstina, cap. xxvii. pp. 135—141) and Borchard (Phalæ. lib. iv. caps. 34—37).

2. Second period. — We have now to consider the division of Palestine among the twelve tribes of Israel, on the settlement of the land by Joshua the son of Nun; and the Scripture statement compared with Josephus will furnish numerous landmarks, which a more careful survey of the country than has yet been made would probably bring to light at the present day. To begin with the cis-Jordanic tribes:

Judah, Simeon, Dan. — The south border of Judah was bounded by the country of Edom and the wilderness of Zin; the frontier being plainly defined by a chain of hills, of considerable elevation, forming a natural barrier from the southern bay of the Dead Sea on the east to the Mediterranean on the west, in which line the following points are named, viz., the ascent or pass of Acrabbin, Zin, Kadeb-Barnes, Hebron, Ainar, Karka, Azzan, the river of Egypt. The east border extended along the whole length of the Dead Sea to the mouth of the Jordan, from which the north border was drawn to the Mediterranean along an irregular line, in which Jerusalem would be nearly the middle point. The road from Jerusalem to Jericho passes immediately within the line, and ‘Ain-er-Rissal, Wady Kelt, Kulaat-el-Durmanin, and ‘Ain or Koor Hajsh, are easily identified with Ensheshem, the river, Aeshheen, and Beth-hogla. It passed south of Jerusalem, from Enroel up the valley of Hinnom, by Nebpetesh, Mount Epuron, Kirjath-jearim, Bethshemesh, Timnah, Ekron, Shichron, and Jabneh. Their cities were, as stated in the summary, 29 in number, in the south division of the tribe, on the borders of Edom; but the names, as recounted in the English version, are 39. The discrepancy is to be accounted for, as Belzoni remarks, by several of the words, regarded as proper, or separate names, being capable of translation as appellatives or as adjuncts to other names. In the valley, including under that name the declivity of the western plain and the plain itself, there were 14 + 16 + 9 = 39 towns, with their villages, besides the cities of the Philistines.
between Ekron and Gaza, which the Israelites did not occupy; in the mountains 11 + 9 + 10 + 6 + 2 = 35 cities, with their villages; and in the wilderness, i.e. the western side of the Dead Sea, 6 towns and their villages; in all, according to the Hebrew version, no less than 112 towns, exclusive of their future capital, of which the Jebusite still held possession. But the Septuagint version inserts the names of 11 other cities in the mountain district, among which are the important towns Bethel and Tekoa, which would make the total 123 in the tribe of Judah alone, implying an enormous population, even if we admit that these towns were only large villages with clustered hamlets. It must be remarked, however, that the tribe of Simeon was comprehended within the limits above assigned to the tribe of Judah; and that 17 cities in the south of Judah are referred to Simeon, as is expressly stated: "Out of the portion of the children of Judah was the inheritance of the children of Simeon: for the part of the children of Judah was too much for them; therefore the children of Simeon had their inheritance within the inheritance of them" (Josh. xix. 10).

As Simeon possessed the southern part of the territory assigned to Judah, so did the tribe of Dan impinge upon its north-west border; and in the list of its seventeen cities some are before assigned to Judah (Josh. xix. 41—46); a limited extent of territory on the confines of the plain of the Philistines, from which they early sent out a colony to the extreme north of the Holy Land, where their city, synonymous with their tribe, situated at the southern base of Mount Hermon, became proverbial in Israel for the golden calf ( Judges, xviii.)

Benjamin.—The tribe of Benjamin was bounded by Judah on the south, by the Jordan on the east. The northern line was drawn from Jericho westward through the mountains, by Bethel and Ateroth-sharar, to a hill that lay to the south of the lower Beth-horon, from which point the boundary was drawn to Kirjath-jearim of the tribe of Judah. They possessed twenty-six cities, including Jerusalem. (Josh. xviii. 11—28.) It is evident that Benjamin is included in the tribal list by extending in length from Jordan to the sea; for it is clear that the tribe of Dan and the plain of Philistia lay between them and the Mediterranean. His remark that the width of their territory was least of all, is more accurate, though his explanation of the fact may be doubted, when he ascribes it to the truthfulness of the land, which, he adds, comprehended Jericho and Jerusalem.

Ephraim.—The tribe of Ephraim was contemporaneous on the south with the tribe of Benjamin, as far as the western extremity of the latter; from whence it passed by Tappuah and the river Kinnah to the sea. On the east side are named Ataroth-sharar and Beth-horon the upper, and on the north, beginning at the sea and going east, Michmethah, Taanath-shiloh, Janoah, Ataroth, Naarath, Jericho, and the Jordan. The cities of Ephraim are not catalogued; but it is remarked that "the separate cities for the children of Ephraim were among the utmost, and the children of Manasseh, all the cities with their villages" (xvi. 5—9). According to Josephus it extended in width from Bethel even to the great plain of Esdraelon.

Manasseh.—The portion of Manasseh on the west of Jordan was contiguous to that of Ephraim, and appears to have been allotted to the two tribes jointly, as the same boundaries are assigned to both (xvi. 1—4, comp. 5—8 with xvii. 7—10), but in general the southern part was Ephraim, and the north Manasseh, which latter also possessed towns in the borders of Asher and Issachar, as Bethshean and Endor, on the east, in Issachar, and Taanach, Megiddo, and Dor, on the west, in Asher (ver. 11). It will have been seen that these twin tribes did not extend as far as the Jordan eastward, but that their eastern boundary excluded the valley of the Jordan, and formed, with their northern boundary, a curved line from Jericho to the sea, south of Mount Carmel.

Asher.—This tribe covered the whole of the north-east frontier of Manassæus and Ephraim, and so comprehended the valley of the Jordan northward from Jericho to Mount Tabor, and the eastern part of the plain of Esdraelon, in which Tabor is situated, containing sixteen cities, among which were Shunem and Jezreel of Scripture note, the latter for many years the capital of the kingdom of Israel.

Asher.—To the west of Issachar was Asher, occupying the remainder of the valley of Esdraelon, north of Zebulon and Ephraim, and including the coast of the Mediterranean, from Mount Carmel to Sidon. Our ignorance of the modern geography of Upper Galilee does not allow us to assign its limits to the east; but there is little doubt that careful inquiry would still recover the sites at least of some of their twenty-two cities, and so restore the eastern boundary of their territory, which extended along the western borders of Zebulon and Naphtali, which two tribes occupied the highlands of Galilee to the extreme of the Land of Zebulon.

Zebulon.—Of these two, Zebulon was to the south, contiguous to Issachar, having the sea of Tiberias for its eastern boundary, as far perhaps as the mouth of the northern Jordan. None of its twelve cities can now be identified with certainty; but Japhia is probably represented by the modern village of Tapha, in the plain, not far to the south of Nazareth, which was certainly situated within the borders of this tribe; and Bethlehem may, with great probability, be placed at the modern village of Kedesh, near the western boundary of the tribe of Zebulon. ( Josephus. Sepphoris to the north-west.)

Naphtali.—The northernmost of the tribes was Naphtali, bounded by the Upper Jordan on the east, from its source to its mouth, near which was situated the city of Caesarea, expressly declared by St. Matthew to have been in the borders of Zebulon and Naphtali (iv. 13). On the south was Zebulon, on the west Asher, and on the north the roots of Libanus and the valley of Coele Syria, now called the Bekas. Of their nineteen cities Kedesh is the most noted in Scripture history; and its ruins, existing under the same name at this day, attest its ancient importance. Josephus absurdly extends their territory to Damascus, if the reading be not corrupted, as Ireland suspects.

Having completed this survey of the tribes, it may be remarked in anticipation of the following section, that the subsequent divisions of the country followed very much the divisions of the tribes; thus the district of Judah was formed by grouping together the tribes of Judah, Simeon, Dan, and Benjamin; Samaria was coextensive with Ephraim and the half of Manassæus; Issachar and Asher occupied Lower Galilee; Zebulon and Naphtali Upper Galilee.

Trans-Jordanic tribes.—A few words must be
Palaestina. 

Addled concerning the two tribes and a half beyond Jordan, although their general disposition has been anticipated in the account of the nations whom they possessed. [Amorites.]

Reuben, Gad, and half Manasséh.—The southern part of the old Amorite conquests on the east of Jordan was assigned by Moses to the Reubenites, whose possessions seem to have been consequent with the kingdom of Sihon, king of the Amorites, whose capital was at Heshbon. [Hesbon.] There is, however, some apparent confusion in the account, as while Reuben is said to have possessed "from Aroer by the river Arnon...Heshbon...and all the kingdom of Sihon king of the Amorites," Gad is also said to have had "the rest of the kingdom of Sihon;" and while Gad is said to have held "all the cities of Gililand," Manasseh is said to have had "half Gilead." (Josh. xiii. comp. ver. 21 with 27, and 25 with 31;) while from Numbers (xxiii. 39—42) it would appear that Manasseh possessed the whole of Gilead. As the Israelites were not permitted to occupy the country which they found still in possession of the Ammonites, but only so much of it as had been taken from them by Sihon king of the Amorites, the limits of the Israelite possessions towards the Ammonites are not clearly defined [Ammonites; Bashan;] and it may be doubted whether the distribution of the country among the two tribes and a half was not regulated rather by convenience or the accident of conquest than by any distinct territorial limits: certain it is that it would be extremely difficult to draw a line which should include all the cities belonging to any one tribe, and whose sites are fixed with any degree of certainty, and yet exclude all other cities mentioned as belonging to one of the other tribes. Generally it may be said that the possessions of Gad and Reuben lay to the south and west of the trans-Jordanic provinces, while those of Manasseh lay in the mountains to the east of the Jordan valley and the lake of Gennesaret. It is plain only that the Jordan was the border of the two former, and that of these the tribe of Gad held the northern part of the valley, to "the sea of Chinnereth." (Josh. xiii. 23, 27.) When the Gadites are said to have built nine cities, the Reubenites six, it can only be understood to mean that they restored them after they had been dismantled by their old inhabitants, as in the case of Machir the son of Manasseh it is expressly said that he occupied the cities of the dispossessed Amorites. (Num. xxxii. 34—42.) It may, perhaps be concluded from Deut. iii. 1—17 that, while the kingdom of Sihon was divided between the tribes of Gad and Reuben, the whole kingdom of Og was allotted to the half-tribe of Manasseh; as, indeed, it is highly probable that the division of the land on the west of Jordan also followed its ancient distribution among its former inhabitants.

It is remarked by Rehald, that the division of the land by S. Conen has been too commonly overlooked, for, although it had regard only to the possession of the king's table, it is calculated to throw considerable light on sacred geography. The country was divided into twelve districts, under superior officers, several of whom were allied to the king by marriage, each of which districts was made chargeable with victualing the palace during one month in the year. Whether these divisions had any further political significance does not appear, but it is difficult to imagine that any merely temporary exigencies would have suggested such an elaborate arrangement. The divisions agree for the most part with those of the tribes. (1 Kings, iv. 7—19.)

3. Third Period.—We have no distinct account of the civil division of the country on the return of the Jews from the captivity, and during its subsequent history, until it was reduced to a Roman province. Under the Persians, the title of "governor on this side the river," so frequent in the books of Nehe 

miah and Ezra, and the description of the strangers, colonists of Samaria, as "men on this side the river" (Euphrates), probably indicates the only designation by which Palestine was known, as a comparatively small and insignificant part of one of the satrapies of that enormous kingdom. (Ezra, iv. 10, 17, v. 20. vi. 6, &c.; Neh. ii. 7, iii. 8, &c.) Among the Jews, the ancient divisions were still recognised, but gradually the larger territorial divisions superseded the tribal, and the political geography assumed the more convenient form which we find in the New Testament and in the writings of Josephus, illustrated as they are by the classical geographers Pliny and Ptolemy.

The divisions most familiar to the readers of the New Testament are, Judaea, Galilee, Samaria, Decapolis, and Perea. in which is comprehended the whole of Palestine, with the exception of the seaborder, the northern part of which is called "the coasts of Tyre and Sidon" by the evangelists, and comprehended under the name of Phœnicia by Josephus and the classical geographers. The three first named districts are very clearly described by Josephus; and his account is the more valuable as confirming the descriptions contained in the Bible of its extreme fertility and populousness, which will, however, present no difficulty to the traveller who has had the opportunity of observing the natural fertility of the soil in the parts still rudely cultivated, and the numerous traces of the agricultural industry of ancient times.

Galilee, Upper and Lower.—"There are two Galilees, one called Lower, the other Upper, which are surrounded by Phœnicia and Syria. On the side of the setting sun they are bounded by the frontiers of the territory of Potæmiæ, and Carmel, a mountain formerly belonging to the Galileans, but at present to the Tyrians; which is joined by Gaba, called the 'city of knights,' because the knights disembarked by Herod dwell there; and on the south by Samaria and Scythropolis, as far as the river Jordan. On the east it is bounded by Hippene and Galéah, and Gabinitis and the frontiers of Agrippa's kingdom. The northern limit is Tyre and the Tyrian territory. That which is called Lower Galilee extends in length from Tiberias to Chabulon, near which on the sea-coast is situated Potæmiæ. Its greatest breadth is from a village called Xalòth, situated in the great plain, to Berbase; from which place also the breadth of Upper Galilee commences, extending to a village named Baca, which separates the Tyrian territory from Galilee. In length, Upper Galilee reaches to Meroth from Thella, a village near the Jordan.

"Now the two Galilees, being of such extent, and surrounded by foreign nations, have always resisted every hostile invasion; for its inhabitants are trained to arms from their infancy, and are exceedingly numerous; and neither have the men ever been wanting in courage, nor the country suffered from paucity of inhabitants, since it is rich, and favourable for pasture, and planted with every variety of tree; so that by its fertility it invites to those..."
who are least given to the pursuit of agriculture. Every part of it, therefore, has been put under cultivation by the inhabitants, and none of it lies idle; but it possesses numerous cities and multitudes of villages, all densely populated on account of its fertility, so that the smallest of them has more than 15,000 inhabitants.

Peraea.—"On the whole, then, although Galilee is inferior to Peraea in extent, yet it is superior to it in strength. For the former is all under cultivation, and productive in every part; but Peraea, although much more extensive, is for the most part rugged and barren, and too wild for the culture of tender produce. Nevertheless, wherever the soil is soft it is very productive; and the plains are covered with various trees (the greater part is planted with olives, vines, and palms), and watered by mountain torrents, and perennial wells sufficient to supply water whenever the mountain streams are dried up by the heat. Its greatest length is from Machaerus to Bela, and its breadth from Philadelphia to the Jordan. It is bounded on the north by Pella, which we have mentioned; on the west by the Jordan. Its southern boundary is Maabitis, and its eastern is Arabia and Solonitis, and also Philadelphia and Gerasa.

Samaris.—"The country of Samaria lies between Judaea and Galilee; for beginning at the village called Ginaca, situated in the great plain, it ends at the toparchy of Acrabatta: its character is in no respect different from that of Judaea, for both abound in mountains and plains, and are suited for agriculture, and productive, wooded, and full of fruits both wild and cultivated. They are not abundantly watered; but much rain falls there. The springs are of an exceedingly sweet taste; and, on account of the quantity of good grass, the cattle there produce more milk than elsewhere. But the best proof of their richness and fertility is that both are thickly populated.

Judaea.—"On the confines of the two countries stands the village Amathus, otherwise called Bozarea, the boundary of Judaea on the north. The south of it, when measured by length, is bounded by a village, which stands on the confines of Arabia, called by the neighbouring Jews Jordan. In breadth it extends from the Jordan to Joppa, and in the centre of it lies the city Jerusalem; for which cause the city is called by some, not without reason, the navel of the earth. Judaea is not deprived of the advantages of the sea, as it extends along the sea-coast to Ptolemais. It is divided into eleven districts, of which Jerusalem, as the seat of government, rules, taking precedence over the surrounding country as the head over the body. The other districts, after it, are distributed by toparchies. Gophna is second; after that, Acrabatta, then Thamma, Lydda, Amman, Pella, Idumaea, Engaddahe, Herodion, Jericho; then Jannina and Joppa, which take precedence of the neighbouring country.

Besides these districts, there are Gamalailea and Gontanitis, Batanuer, and Trachonitis, parts of the kingdom of Agrippa. Beginning from Mount Libanus and the source of the Jordan, this country reaches in breadth to the lake of Tiberias: its length is, from a village called Arpha to Julius. It is inhabited by Jews and Syrarians mixed.

"Thus we have given an account, as short as was possible, of Judaea and the neighbouring regions." Beside this general description of the country according to its divisions in the first century of the Christian era, Josephus has inserted in his history special descriptions of several towns and districts, with details of great geographical interest and importance. These, however, will be found, for the most part, under their several names, in these volumes. [Aulon; Bashan; Edraeleon Valls; Bellus; Jericho; Jerusalem; Tiberias Mare, &c.]

As the division of Gubinius does not appear to have had a permanent influence, it may be sufficient to notice it, before dismissing Josephus, who is our sole authority for it. He informs us that the Roman general having defeated Alexander the son of Aristobulus, and pacified the country, constituted five councils (ουεναια) in various parts of the country, which he distributed into so many equal divisions (νομοι). These seats of judicature were Jerusalem, Gadara, Amathus, Jericho, and Sepphoris in Galilee. (Ant. xiv. 5. § 4.) In the division of the country among the sons of Herod the Great, Judaea, Idumaea (i.e., in the language of Josephus, the southern part of Severs), with Samaria, was assigned to Archelaus, with the title of ethnarch. Antipas had Galilee and Peraea, with the title of tetrarch, and Philip, with the same title, Trachonitis, Auranitis, Batanuem, and Paeon, mostly without the limits of Palestine [vid. s. v.]. (Ant. xvii. 13. § 4.) On the disgrace and banishment of Archelaus, in the 10th year of his reign, his government was added to the province of Syria, and administered by a procurator subordinate to the prefect of Syria; the same fate attended the tetrarchy of Philip on his death in the twentieth year of Tiberius, until it was committed to Herod Agrippa by Caius Caligula, with the title of king, to which was added the tetrarchy of Lycaonia, and subsequently, on the banishment of Antipas, his tetrarchy also; to which Claudius added besides Judaea and Samaria, so that his kingdom equalled in extent that of his grandfather Herod the Great. On his death, his son, who was but seventeen years old, was thought too young to succeed him, and his dominions reverted to the province of Syria. But on the death of Herod King of Chalcis, that country was committed to the younger Agrippa, which was afterwards exchanged for the tetrarchies of Philip and Lycaonia, to which Nero added the part of Galilee about the sea of Tiberias, and Julius the Decapolis. After his death, in the third year of Trajan, there is no further mention of the tetrarchies (Reland, Palaestina, lib. i. cap. 30, pp. 174, 175.)

The division into toparchies, mentioned by Josephus, is recognised also by Pliny, though their lists do not exactly coincide. Pliny reckons them as follows:—

1. Jericho.
2. Eumanaus.
3. Lydda.
4. Joppa.
5. Acrabata.

Of these 8 and 9 are not reckoned by Josephus; but Reland is probably correct in his conjecture that 8 is identical with his Pella, and 9 with his Idumaea, as this district may well be described as [omega] montanooues. (Plin. Hist. Nat. v. 14.)

The other notices of Pliny are few and fragmentary, but agree in all essential particulars with the synchronous but independent account of Josephus above cited.

Its geography had undergone little variation when Ptolemy wrote in the following century, and the brief notices of that geographer are as accurate as
Palaicus Lacus.

533

PALAETYRUS. usual. He calls it Palaeastia of Syria, otherwise called Judaea, and describes it as bounded by Syria on the north, by Arabia Petraea on the east and south. Independently of the coast of the Mediterranean, he reckons the districts of Galilee, Samaria, Judaea, and Idumea, but describes the Perea, by a periphrasis, as the eastern side of Jordan, which may imply that the name was no longer in vogue. He names also the principal cities of these several divisions (v. 16).

The most valuable contributions to the ancient geography of Palestine are those of Eusebius and his commentator S. Jerome, in the Onomasticon, composed by the former, and translated, with important additions and corrections, by the latter, who has also interspersed in his commentaries and letters numerous geographical notices of extreme value. They are not, however, of such a character as to be available under this general article, but are fully cited under the names of the towns, &c. (See Behrend. Palæst. lib. ii. cap. 12, pp. 479, &c.)

It is only to add a few words concerning the partition of Palestine into First, Second, and Third, which is first found at the commencement of the fifth century of the Christian era, in the Code of Theodosius (A. D. 409); and this division is observed to this day in the ecclesiastical documents of the Eastern Church, by which it was adopted from the first; as it is recognised in the Notitiae, political and ecclesiastical, of the fifth and following centuries. (Quoted fully by Behrend, l. c. capp. 34, 35, pp. 204—234.) In this division Palæastia Prima comprehended the old divisions of Judaea and Samaria; Palæastia Secunda, the two Galilee and the western part of Perea; Palæastia Tertia, otherwise called Salutaris, Idumea and Arabia Petraea; while the greater part of the ancient Perea was comprehended under the name of Arabia.

As the sources of geographical information for Palestine are far too numerous for citation, it may suffice to refer to the copious list of authors appended to Dr. Robinson's invaluable work (Bibl. Res. vol. iii. first appendix A, pp. 1—28), and to the still more copious catalogue of Carl Ritter (Erdekunde, Palæstina. 2nr B. 1te Aht. 1856, pp. 23—91), who in his four large volumes on the peninsula of Mount Sinai, Palestine, and Syria, has with his usual ability systematised and digested the voluminous records of centuries, and completely exhausted a subject which could scarcely be touched within the limits assigned to a general article in such a work as the present.

[Gov.]

PALAETYRUS. [Tyre.]

PALAMNUS (Παλαμνος, Syl. p. 10), a river of Illyricum, which flowed into the sea near Epidamus. This river has been identified with the PANAMUS (Παναμος) of the poet, (Pol. iii. 13. § 3); but this latter corresponds better with the GENNUS (Γεννος or Slumbly); the Palamnus is probably the same as the Darask or Spirivata, to the S. of Numicus.

[EBJ]

PALANDAS (Παλανδας), a small stream mentioned by Ptolemey in the Chersonesus Aurea (vii. 2. § 5). It is supposed by Forbiger that it is the same as that which flows into the gulf of Mar- taban near Tarsus. Ptolemey notices also a town in the same neighbourhood which he calls Palanda (vii. 2. § 25).

[V]

PALAS, a district in the south of Germany, on the borders between the Alemandi and Burgundii; it was also called Capellatium; but as it is men-

tioned only by Ammianus Marcellinus (xvii. 2), it is impossible with any degree of certainty to identify it.

[L.S.]

PALATIUM, a place in the Rhaetian Alps, on the road from Tridentum to Verona, still bears its ancient name in the form of Palazzo. (It. Ant. p. 275.)

PALE (Πάλας: Eeb. Παλατ, Παλής, Thuc.; Palæs; the city itself is usually called Παλαία; also Παλαυτας, Polh. v. 3) is a town on the eastern side of a bay in the north-western part of the island. It is first mentioned in the Persian wars, when two hundred of its citizens fought at the battle of Plataea, alongside of the Lacedaemons and Athenians. (Herod. ix. 28.) It also sent four ships to the assistance of the Corinthians against the Conyctrians just before the commencement of the Peloponnesian War (Thuc. i. 27); from which circumstance, together with its fighting along with the Corinthians, Lacedaemons and Athenians at the battle of Plataea, it has been conjectured that Pale was a Corinthian colony. But whether this was the case or not, it joined the Athenian alliance, together with the other towns of the island, in B.C. 431. (Thuc. ii. 30.) At a later period Pale espoused the side of the Aetolians against the Achaeans, and was accordingly besieged by Philip, who would have taken the city but for the treachery of one of his own officers. (Vol. v. 3, 4.) Polybius describes Pale as surrounded by the sea, and by precipices heights on every side, except in one looking towards Zacynthus. He further states that it possessed a fertile territory, in which a considerable quantity of corn was grown. Pale surrendered to the Romans without resistance in B.C. 189 (Liv. xxxviii. 28); and after the capture of Sane by the Romans in that year, it became the chief town in the island. It was in existence in the time of Hadrian, in whose reign it is called in an inscription ελευθέρα καλ αιρετωμος. (Böckh, Ins. No. 340.) According to Thesiger, Pale was the Homeric Dulichium; this opinion was rejected by Strabo (x. p. 456), but accepted by Pausanius (vi. 15. § 7).

The remains of Pale are seen on a small height, about a mile and a half to the north of the modern Lixouri. Scarce anything is left of the ancient city; but the name is still retained in that of Palea and of Palki, the former being the name of the plain around the ruins of the city, and the latter that of the whole peninsula. (Leake, Northern Greece, vol. iii. p. 64.)

COIN OF PALE.

Palfuria/Na, a town of Hispania Tarraconensis, by Ubker (vol. ii. pt. i. p. 420) and others placed in the territory of the Ibericians; by Forbiger (vol. iii. p. 73) in that of the Caetani. It was on the road from Barcino to Tarquin, and is usually identified with Fumell (Morea, Hist. ii. c. 11. p. 141; Florus, & c. xxiv. 43. [TH.D] Palil (Παλίλ) (ους Παλικαι Μύγαν: Lago di Nafati), a small volcanic lake in the interior of Sicily, near Palagonia, about 15 miles W.

M 3
PALIMBOTHRA.

of Leontini. It is a mere pool, not more than 480 feet in circumference, but early attracted attention from the remarkable phenomena caused by two jets of volcanic gas, which rise under the water, causing a violent ebullition, and sometimes throwing up the water to a considerable height. On this account the spot was, from an early period, considered sacred, and consecrated to the indigeneous deities called the Paloci, who had a temple on the spot. This enjoyed the privileges of an asylum for fugitive slaves, and was much resorted to also for determining controversies by oaths; an oath taken by the holy springs, or craters as they are called, being considered equal to possessing peculiar sanctity, and its violation to be punished on the spot by the death of the offender. The remarkable phenomena of the locality are described in detail by Diodorus, as well as by several other writers, and notwithstanding some slight discrepancies, leave no doubt that the spot was the same now called the Lago di Nafisa, from the naphtha with which, as well as sulphur, the sources are strongly imprecated. It would, however, seem that in ancient times there were two separate craters, sometimes termed fountains (aepivs), and that they did not, at the present day, form one more considerable pool or lake. Hence they are alluded to by Ovid as "Stagna Paliorum," while Virgil notices only the sanctuary or altar, "pinguis et placabilis ara Palici." (Diod. xi. 89; Steph. Byz. s. v. Palici; Pseud.-Arist. Mirab. 58;Macrobr. Sat. v. 19; Strab. vi. p. 275; Ovid, Met. v. 406; Virg. Aen. ix. 555; Sil. Ital. xiv. 219; Nom. Dionys. xiii. 311.) The sacred character of the spot as an asylum for fugitive slaves caused it to be selected for the place where the great servile insurrection of Sicily in B.C. 102 was first discussed and arranged; and for the same reason Salvia, the leader of the insurgents, made splendid offerings at the shrine of the Palici. (Diod. xxxvi. 37.)

There was not in early times any other settlement besides the sanctuary and its appendages, adjoining the lake of the Palici; but in u. c. 453, Duce- tius, the celebrated chief of the Siculi, founded a cityclose to the lake, to which he gave the name of Palica (Palasin), and to which he transferred the inhabitants of Menemnon and other neighbouring towns. This city rose for a short time to considerable prosperity; but was destroyed again shortly after the death of Ducetius, and never afterwards restored. (Diod. xi. 88, 90.) Hence the notices of it in Stephanus of Byzantium and other writers can only refer to this brief period of its existence. (Steph. B. l. c.; Ptolemaeus, ap. Macrobr. l. c.) The modern town of Palagia is thought to retain the traces of the name of Palica, but certainly does not occupy the site of the city of Ducetius, being situated on a lofty hill, at some distance from the Lago di Nafisa. Some remains of the temple and other buildings were still visible in the days of Fazello in the neighbourhood of the lake. The locality is fully described by him, and more recently by the Abate Ferrara. (Fazello. de Reb. Sic. iii. 2; Ferrara, Cen. Civit. Sicil. Inns, pp. 48, 105.) [E.H.P.]

PALIMBOTHRA. (Palimbothría in Plin. v. 73; Steph. B. s. c.), a celebrated city of ancient Ita- lia, situated at the junction of the Ganges and Enamobara (Hirinjyuti), at present known by the name of Putna. Strabo, who states (ii. p. 70) that Megasthenes was sent to Palimbothra as an amb-assador to the king Sandroccottus (Chandragupta), describes it as a vast town, in the form of a parallelogram 80 stadia in length and 15 in breadth, surrounded by a stockade, in which open spaces were cut to shoot through, and by a ditch. He adds that it was in the country of the Pratia (xxv. p. 702). In another passage he places it, on the authority of Megasthenes, at 5000 stadia from the mouths of the Ganges; or on that of Patroclus, who was sent as an ambassador to Allitrochades, the son of San- droccottus (ii. p. 70), at 5000 stadia (xv. p. 689). Pliny approaches most nearly to the computation of the latter traveller, as he makes the distance from Palimbothra to the sea to be 638 M. P., or about 5100 stadia (vi. 17. § 21). Arrian calls it the greatest of the cities of India, and apparently quotes the same description from Megasthenes which Strabo must have had before him. (Indic. c. 10.) Diodorus attributes to Hercules the building of its walls (ii. 39). Where Pliny says "Amnis Iomanes in Gangem per Palibothros decurrurit," he is evidently speaking of the people, and not, as some have supposed, of the town (vi. 19). There seems no reason to doubt that the ancient Sunscrit name of this town was Pataliputra. (Lassen, Indisch. Alterth. l. p. 157.) Franklin, quoting into the present Palibothra, Lond. 1815, who, however, places it wrongly at Bhagalipur.)

PALINDROMUS PROMONTORIUM (Παλινδρομος Ἠκτρα), a promontory of the extreme SW. of the Arabian peninsula, at the Straits of Bab-el- Mandeb, placed by Ptolemy between Oeces Epicrion and Posidion Promontorium, in long. 74° 30', lat. 11° 40' (vi. 7. § 7). It now bears the same name, but as a cape or promontory. (Moorsby, Sailing Directions for the Red Sea, London, 1816.)

PALINURUS or PALINUI'I PROMONTORI- RUM (Παλινουρος Ἠκτρατηρος, Strab.: Capo Palini- uro), a promontory on the coast of Lucania, on the Tyrrhenian sea, between Velia and Buxetum. It had a port of the same name immediately adjoining it, which still bears the name of the Porto di Palinuro. Both headland and port received their name from the well-known tradition, recorded by Virgil, and alluded to by many other Latin writers, that it was here that Palinus, the pilot of Argo, was cast ashore and buried. (Virg. Aen. v. 833—871, vi. 337—381; Dionys. l. 53; Lucan, ix. 42; Mel. ii. 4. § 9; Solin. 2. § 13.) We learn from Servins that heroic honours were paid him by the Lucanians (probably by the citizens of Velia), and that he had a cenotaph and sacred grove not far from that city. (Serv. ad Aen. vi. 278.) It does not appear that there was ever a town adjoining the headland; and the port, which is small, though secure and well sheltered, is mentioned only by Dionysius; but the promontory is noticed by all the geographers except Ptolemy, and is described by Pliny as forming the northern boundary of a great bay which might be considered as extending to the Columna Rhegina, or the headland on the Sicilian straits. It is in fact the most salient point of the projecting mass of mountains which separate the gulf of Posidonia from that of Laitis or Polacastro, and form the chief natural feature of the coast of Lucania. (Plin. iii. 5. § 10; Strab. vi. p. 252; Oros. iv. 9.) Some ruins of ancient buildings are still visible on the summit of the headland, which are popularly known as the tomb of Palinus. The promontory still retains its ancient name, though vulgarly corrupted into that of Polaimundo.

Like most mountain promontories, that of Pali-
PALIO.

PALLANE. 535

Parrus was subject to sudden and violent storms, and because, in consequence, on two occasions the scene of great disasters to the Roman fleets. The first was in B.C. 253, when a fleet under the consuls Servilius Caepio and Sempronius Blaesus, on its return from Africa, was shipwrecked on the coast about Cape Palinius, and 150 vessels lost with all the boaters on board. (Oras. iv. 9.) The second was in B.C. 55, when a considerable part of the fleet of Augustus, on its way to Sicily, having been compelled by a tempest to seek refuge in the bay or roadstead of Velia, was lost on the rocky coast between that town and the adjoining headland of Palinius. ( Dion Cass. xlix. 1; Appian, B. C. v. 98; Vell. Pat. ii. 79.)

PALIO (Publ.), a town of Apulia, mentioned only by Pliny, who enumerates the Palaionenes among the "populi" of the interior of that region. (Plin. iii. 11. s. 16.) Its site is probably indicated by the modern village of Palio, about 5 miles south of Bitonto (Butuntum). [E. H. B.]

PALLIUSCIUS. [Megalopolis, p. 310, a.]

PALLIURUS (Παλλίουρος, Strab. xvii. p. 838; Statius, Sili. 42; Plut. iv. 5. sect. 2; Pallinus, P.), a village of the Marmarake, near which was a temple to Heracles (Strab. l.c.), a deity much worshipped in Cyrenaica. (Comp. Thril. Res. Cyp. p. 291.) Polemy (iv. 4. § 3) adds that there was a marsh here with bile-valve shells (τά ἐκ κηλείδων). It is identified with the Wady Timmicheh (Pacho, Voyage p. 52; Barth, Wanderungen, pp. 506, 548), where there is a brackish marsh, corresponding to that of Polemy (l.c.), and remains of ancient wells and buildings at Mirdabet (Sili.) Hofjar-el-Djemun.

It was off this coast that Cato (Lucan, ix. 42, where the reading is Palurnus, with an allusion to the tale of Aeneas) met the flying vessels which bore Cornelia, together with Sextus, from the scene of her husband, Pompeian's, murder. [E. B. J.]

PALLACOPAS. [Babylonia, p. 362 b.]

PALLAE. [Coresia, p. 691, b.]

PALLANTIA (Παλλαντία, Strab. iii. p. 162; Ptol. ii. 6. § 50), the most important town of the Vacci, in the N. of Hispasia Tarracoensis, and in the jurisdiction of Chirna. (Plin. iii. 3. s. d.) Strabo (l.c.) wrongly assigns it to the Arecae. Now Palencia on the Carvion. (See D'Anville, Geogr. Anc. p. 293; Flacco, Esp. VIII. viii. 4; B. H. II. 55; and Mela, ii.) For its coins, see Monet. (i. p. 48.)

PALLANTIAE (Παλλαντεία, Ptol. ii. 6. § 15), a small river of Hispasia Tarracoensis, between the Iberus and Frutat Herculeum, and near Saguntum; now the Palancia near Murviedro. [T. H. D.]

PALLANTIUM (Παλλαντίουμ, more rarely Παλλαντίον; Eth. Παλλαντατσά), one of the most ancient towns of Arcadia, in the district Melaenia, said to have been founded by the Ionians, was situated W. of Tegaea, in a small plain called the Pallantic plain (Παλλαντικόν πέδανον, Paus. viii. 44. § 5), which was separated from the territory of Tegaea by a choma (χώμα) or dyke [Τεγεά]. It was from this town that Evander was said to have led colonists to the banks of the Tiber, and from it the Pallatian or Palatine Mount at Rome was reputed to have derived its name. (Hes. op. Steph. B. s. e.; Paus. viii. 43. § 2; Liv. i. 5; Plut. iv. 1; Justin, xiii. l.) Pallantium took part in the battle of Magnesia, B. C. 371 (Paus. viii. 37. § 3); but it continued to exist as an inde-
owes an abundance of grain of superior quality, as well as wool, honey, and wax, besides raising silk-worms. (Leake, *Northern Greece*, vol. iii. p. 163.)

A list of the towns in Palmyra is given under Chalchius.

F. B. J.

PALMAE. [Attica, p. 327, a.]

PALMA. [Balkares.]

PALMAM, AD, a station on the coast-road of Syrtes, 12 M. P. from Leptis Magna, and 15 M. P. from Quintannah (Pent. Tab.). This position agrees with that of the ruins found at Shah Bâridj. (Barth, *Wanderungen*, p. 304.)

Livy (xxvi. 34. 10) says Palmyra (Palmira), a small island in the Tyrrhenian sea, the most westerly of the group now known as the *Ponza Island*, or *isle de Ponza*. It is between 3 and 4 miles long, and not more than a quarter of a mile a broad; and was doubtless in ancient, as well as modern times, a dependency of the neighbouring and more considerable island of Ponta (Ponza), from which it is only 3 miles distant. (Plin. iii. 6. 12; Mel. ii. 7. § 18; Vari. *E. B. iii. 5. § 7.* E. B. B.)

Palmyra was the site of a *Piliaea, Pocop, or Pocop (Pallene, Plin. iv. 7. p. 293)*, a town of Mesia Inferior, between Deroram and Marcianopolis (Tab. Pent.), perhaps Kateshke-Kainwarjik. [T. H. D.]

PALMYRA (Πάλμηρα, Plut. v. 15. §§ 19, 24, viii. 20. § 10; Appian, *B. C.* v. 9: Παλμήρα, Joseph. *Ant.* viii. 2; and Pamphila, Plin. vii. 23. a. 21: Εις. Palmyrenus, or Palmiirenus, *Id. l. c.*), a city of Syria, situated in 34° 24' N. lat., and 35° 20' E. long. Its Hebrew name, Tadmor, or Thardmor, denotes, like its Greek one, a city of palms; and this appellation is preserved by the Arabs, who still call it Tadmor. Tadmor was built, or more probably enlarged, by Solomon in the tenth century B.C., and was the first historical notice that we find of it in Appian, who tells us that M. Antony, under pretext of punishing its equivocal conduct, but in reality to enrich his troops with the plunder of a thriving commercial city, directed his march towards it, but was frustrated of his object by the inhabitants removing their goods to the other side of the Euphrates. (B. C. v. c. 9.)

This account shows that it must have been a town of considerable wealth; and indeed its advantageous situation must have long rendered it an entrepôt for the traffic between the east and Damascus and the Phœnéan cities on the Mediterranean. Yet its name is not mentioned either by Strabo or Mele. Under the first Roman emperors it was an independent city; and its situation on the borders of the Roman and Parthian empires gave it a political importance, which it seems to have preserved with a well-judged course of policy, though naturally exposed to much danger in the quarrels of two such formidable neighbours. ("Inter duo imperia summa, et prima in discordia semper utrinque cura," Plin. *l. c.*)

It is called a colonia on the coins of Caracalla, and Ulpiam mentioned it in his first book de Censibus as having the Janus Italium. It appears, from an inscription, to have assisted the emperor Alexander Severus in his wars against the Persians. (Wood, *Inscr. xix.* It is not, however, till the reign of Galienus that we find Palmyra playing any important part in history; and at this period we have notices of it in the works of Zosimus, Vopiscus, and Trebellius Pollio. Odenathus, a noble of Palmyra, and according to Procopius (B. Pers. ii. c. 5) prince of the Saracens who inhabited the banks of the Eufrates, for his great friend and mentor, Odenathus, from Galienus the title of Augustus, and was acknowledged by him as his colleague in the empire. After the assassination of Odenathus by his nephew Maccianus, the celebrated Zenobia, the wife of the former, whose prudence and courage had been of great assistance to Odenathus in his former successes, ascended the vacant throne, and, assuming the magnificent title of Queen of the East, ruled with a manly vigour during a period of five years. Under this caesar, whose talents and accomplishments were equalled by her beauty, and whose love of literature is shown by her patronage of Longinus, Palmyra attained the highest pitch of its prosperity. She claimed to be descended from the Macedonian kings of Egypt, and her achievements would not have disgraced her ancestry; though, according to other accounts, she was a Jewess. (Millman, *Hist. of the Jews*, iii. p. 175.) Besides the sovereignty of Syria and Mesopotamia, she is said to have extended her sway over Egypt (Zosim. i. c. 44); but by some critics this fact has been questioned. Claudius, the successor of Galienus, being engaged in the Gothic War, tacitly acknowledged her authority. But after the termination of the short reign of that emperor, the progress of Zenobia in Asia Minor was regarded by Aurelian with jealousy and alarm. Her arms and intrigues already menaced the security of Bithynia (Ib. c. 50), when Aurelian marched against her, and defeated her in two great battles of the Euphrates and Euxine, at both of which she commanded in person. Zenobia now retreated to Palmyra, and prepared to defend her capital with vigour. The difficulties of the siege are described by Aurelian himself in an original letter preserved by Vopiscus. (Aurel. c. 26.)

After defying for a long time the arms of the Roman emperor, Zenobia, being disappointed of the succour which she expected to receive from the Persians, was ultimately compelled to fly, but was overtaken on the banks of the Euphrates by the light horse of Aurelian, and brought back a prisoner. Shortly after this event her capital surrendered, and was treated with clemency by the conqueror, who, however, satisfied his fame by the cruel execution of Longinus and some of the principal citizens, whom Zenobia had denounced to him. The personal adventures of Zenobia we need not pursue, as they will be found related in the *Dictionary of Biography and Mythology*. No sooner had Aurelian crossed the Hellespont than he was recalled by the intelligence that the Palmyrenians had risen against and massacred the small garrison which he had left in their city. The emperor immediately marched again to Palmyra, which now paid the full penalty of its rebellion. In an original letter Aurelian has himself recorded the unsparing execution, which extended even to old men, women, and children. (Vopisc. *Aur. c. 31.*) To the remnant of the Palmyrenians,
Indeed, he granted a pardon, with permission to repair and inhabit their ruined city, and especially discovered much solicitude for the restoration of the Temple of the Sun. But the effects of the blow were at least partly visible. The temple in this period (A.D. 273) Palmyra gradually dwindled into an insignificant town, and at length became only a place of refuge for a few families of wandering Arabs. It served indeed for some years as a Roman military station; and Diocletian partially restored some of its buildings, as appears from an inscription preserved by Wood. About the year 400 the first Byzantine legion was quartered there (Vol. Imp.); and Procopius tells us that it was fortified by Justinian (de Aed. ii. 2). But this is the last that we hear of Palmyra under the Romans; and the sinking fortunes of their empire probably soon led them to abandon it.

The remains of the buildings of Palmyra are chiefly of the Corinthian order, which was the favourite style of architecture during the two or three centuries which preceded Diocletian; whence we may infer that the splendour which it once exhibited was chiefly owing to wood and ornament. For many centuries even the site of Palmyra remained totally unknown except to the roving Arabs of the desert, whose magnificent accounts of its ruins at length excited the curiosity of the English merchants settled at Aleppo. Under the auspices of the Levant Company, an expedition started in 1678 for the purpose of exploring them; but the persons who composed it were robbed and ill-treated by the Arabs, and compelled to return without having accomplished their object. In 1681 the expedition was renewed with better success, and an account of the discoveries then made was published in the transactions of the Royal Society. (Sellers, Antiquities of Palmyra, Pref.) Subsequently Palmyra was visited in 1751 by Wood and Dawkins, who published the results of their journey in a large folio volume with magnificent engravings. The account in Voilmy (vol. ii.) is chiefly taken from this work. Among the more recent descriptions may be mentioned that of Iby and Mangels (Travels, ch. v.), who visited Palmyra in 1816. According to these travellers the plates of Wood and Dawkins have done more justice to the subject; and although the view of the ruins from a distance, with their line of dazzling white columns extending between one and two miles, and relieved by the contrast of the yellow sand of the desert, is very striking, yet, when examined in detail, they excite but little interest. Taken separately, not a single column or architectural member is worthy of admiration. None of the former exceed 40 feet in height and 4 feet in diameter, and in the boasted avenue they are little more than 30 feet high. The remains of the Temple of the Sun form the most magnificent object, and being of the Ionic order, relieve the monotony of the prevailing Corinthian style. These columns, which are 40 feet high and 4 feet in diameter, are fluted, and formed of only three or four pieces of stone, and in former times were surmounted by brazen Ionic capitals. The façade of the portico consists of 12 columns, like that of the temple of Baalbec, besides which there are other points of resemblance. On the whole, however, the ruins are far inferior to those at Baalbec. At the time of Masson, Iby and Mangels' visited the peristylost court of the Temple of the Sun was occupied by the Arabian village of Tadmor; but with this exception, and the Turkish burial ground, the space was unencumbered, and there was nothing to obstruct the researches of the antiquary. In some places the lines of the streets and the foundations of the houses were distinctly visible. The walls are of masonry and mud; the stone is of a perishable description, and scarcely deserves the name of marble. The sepulchres outside the walls formed perhaps the most interesting part of the remains. These consist of square tombs, from three to five stories high, forming sepulchral chambers, with recesses for the reception of the bodies. In these tombs mummies and mummy cloths are found, prepared very much after the Egyptian manner; but there are no paintings, and on the whole they are far from being so interesting as the Egyptian sepulchres. There was a sculptured tablet in bas-relief, with seven or eight figures standing and clothed in long robes, supposed to represent priests. Several Greek and Palmyrene inscriptions, and two or three in Latin and Hebrew, have been discovered at Palmyra. They will be found in Wood's Ruins of Palmyra, and the following works may also be consulted: Bernard, Inscriptiones Syriacae Palmyrense, at Utrecht, 1698; Giorgi, De Inscriptionibus Palmyrensis quae in Museo Capitolino adseruatur interpretandia Epistola, Rome, 1782; Bartholdy, in Mémo de l'Académie des Inscri. tom. xxiv.; and Swinton, in the Philosophical Transactions, vol. xviii.

With regard to the general history and antiquities of Palmyra, besides the works already cited in this article, the following may be consulted: Seller, Antiquities of Palmyra, London, 1696; Huntington in the Philosophical Transactions, vol. xix. Nos. 217, 218; a Dissertation by Dr. Hally in the same work; Gibbon's Decline and Fall, ch. xi.; St. Mart. Hist. de Palmyre, Paris, 1823; Addison's Damascus and Palmyra; Richter, Walfahrer; Cassian, L'voyage Pittoresque de la Syrie; Laboître, L'voyage en Orient; &c.

PALMYRENE (Πάλμυρηνος, PtoL. v. 15. § 24), a district of Syria, so named after the city of Palmyra, and which extended S. from Chalybotanis into the desert. (Cf. Plin. v. 24. s. 21.)

PALOURM PORUTUS. [MALLUS and MARGASA.]

PALTUS (Παλτός; Eth. Παλτότρος), a town of Syria upon the coast, subject to the island of Arados, which was at no great distance from it. According to some accounts Menmon was buried in the neighbouring Paltus. Pococke places it at Rodo; Shaw at the ruins at the mouth of the Melbeck, 6 miles from Jobilee, the ancient Gabala. (Strab. v. 728, 735; Plut. v. 15. § 3; Cic. ad Fam. xii. 13; Plin. v. 20. s. 18; Mela. 1. 12: Steph. B. s. v.; Pococke, vol. i. p. 199; Shaw, p. 324, Ox. 1738.)

PAMBOTHIS LACUS. [DODONA, p. 784.]

2. A river in Laconia, forming the ancient boundary between Messenia and Laconia. (Strab. viii. p. 361.) Strabo speaks of this river as near Lencum, but it flows into the sea at Paphnutis, about 3 miles S. of Leuctrum. [PAPHNITUS.]

3. A tributary of the Peneus in Thessaly, probably the modern Filouri or Piliouri. (Herod. vi. 129; Plin. iv. 8. s. 15; Leake, Northern Greece, vol. iv. pp. 512, 514.)

PAMPILHIA (Παμπίλη), a village of Aetolia, on the road from Metapha to Thermum, and distant 30
PAMPHYLIA.

The country, consisting of only a narrow strip of coast, forms an arch round the bay, which is called after it the Pamphilus Sinus or the Pamphilus Mare. According to Plyn (v. 26) the country was originally called Mopsopia, from Mopsus, a leader of one of those bands of Greeks who after the Trojan War are said to have settled in Pamphylia, Cilicia, and Syria. (Strab. xiv. p. 668; comp. Paus. vi. 15. 5; Dion. xiv. 650; Steph. Ind. v. 14; Stadi. ii. 14; Strab. xiv. p. 665.) Pamphylia, according to Strabo, extended from Olbia to Ptolemais, a line measuring 640 stadia, or about 18 geographical miles; the breadth of the country, from the coast towards the interior, was nowhere above a few miles. In later times, however, the Romans applied the name Pamphylia in such a manner as to embrace Pisidia on both sides of Mount Taurus, which does not appear as a distinct form of the country in the ancient division under Constantine was made. This accounts for the fact of Polybius (xxii. 27) doubting whether Pamphylia (in the Roman sense) was one of the countries beyond or this side of Mount Taurus; for Pisidia, in its narrower sense, is unquestionably a country beyond Mount Taurus. (Comp. Strab. xii. p. 570, xiv. p. 632, xvi. p. 635.) In this latter sense Pamphylia was separated from Lydia by Mount Climax, and from Cilicia by the river Melas, and accordingly embraced the districts called in modern times Telke and the coast district of Itabill. But these limits were not always strictly observed; for Olbia and Perge are described by some writers as belonging to Lydia (Seivlax, p. 39); while Ptolemais, beyond the Melas, which is generally regarded as belonging to Pamphylia, is assigned by some to Cilicia. The country of Pamphylia is, on the whole, very mountainous; for the ramifications of Mount Taurus rise in some parts on the coast itself, and in other parts a distinct form of the country from the coast. There is only one great promontory on the coast, viz. Leucotheum, or Leucoula. The principal rivers, all of which discharge their waters into the Pamphilian bay, are the Cataerrhaectes, Cestrus, Eurymedon, and Melas, all of which are navigable. The coast district between the Cestrus and Eurymedon contains the lake Capria, which is of considerable extent.

The inhabitants of Pamphylia, Pamphylia, that is, a mixture of various races, consisted of aborigines mixed with Cilicians who had immigrated; to these were added bands of Greeks after the Trojan War, and later Greek colonies. (Strab. i. c.; Eustath. ad Dion. Per. 854; Herod. vii. 91, viii. 84; Paus. vii. 3, § 3; Appian, B. C. ii. 71, iv. 60; Liv. xiv. 14.) The Pamphylites (Pamphilites, Pamphilites, Pamphilites, Pamphilites, according) were in those parts what the Aeolians were in Germany, though the current traditions related that they were all descended from Pamphile, a daughter of Libyca a few months from Strab. (Steph. B. s. v. Pamphil). Others again, though without good reason, derive the name from maos and philaos, because the country was rich in wood. The Pamphilians never acquired any great power or political importance; they shared the fate of all the nations of Asia Minor, and in the war of Xenexes against the Greeks their naval contingent consisted of only 30 ships, while the Lycaians furnished 50, and the Cilicians 100. (Herod. vii. 92.) After the Persian empire was broken to pieces by Alexander, the Pamphilians first became subject to Macedonia, and then to Syria. After the defeat of Antiochus the Great, they were annexed by the Romans to the kingdom of Pergamus (Polyb. xxiii. 27), and remained connected with it, until it was made over to the Romans. The Greek colonies, however, such as Aspendus and Side, remained independent republics even under the Persian dominion (Arrian, Anth. i. 25, foll.), but we have no information at all about their political constitutions. In their manners and social habits, the Pamphilians strongly resembled the Cilicians (Strab. xii. p. 570, xiv. p. 670), and took part with them in their piratical proceedings; their maritime towns were in fact the great masts where the spoils of the Cilician pirates were disposed of. (Strab. xiv. p. 664.) Navigation seems to have been their principal occupation, as is evident from the coins of several of their towns. Their language was probably a mixture of Greek and some barbarous form, which was afterwards so much corrupted as to be hardly recognisable as a dialect of the Greek. (Arrian, Anth. i. 26.) But their coins bear evidence of an intimate acquaintance with the gymnastic and agonistic arts, and with the gods of the Hellenes, among whom Zeus, Artemis, and Dionysus are often represented. The more important towns of Pamphylia were Lyrae or Lynnesius, Teuchus, Olbia, Corycens, Aspendus, Perge, Syllium, Side, Cybira, Ptolemaids, &c. (Comp. Soc. Antiq. Descrip. Num. iv. p. 385, foll.; Erckel. Descr. Num. i. 8, pp. 6, 14, &c.)

PAMPHYLIA MARE. PAMPHYLIIUS SINUS (Παμφύλιον Νέας ή Παμφύλιον κόλπος), a large and deep bay formed by the curved form of the coasts of Lycaia, Pamphylia, and Cilicia, beginning in the west at the Cilidian promontory, and terminating in the east at Cape Anemarion. The distance from the Cilidian cape to Olbia is stated by Strabo to be 367 stadia. (Strab. ii. pp. 121, 125, xiv. p. 666; Athen. i. 9, ii. 14; Stephan. Byz. iv. 9, &c.) The sea is now called the bay of Adalia. (L. S.)

PANACHAIUS MONS. (Αναχαία, pi. 13, a.)
PANACTUM. (Αττικα, p. 329, a.)
PANAEI (Παναιώδης), a people of Thrace, whom Thucydides describes as dwelling beyond the Smyron towards the north (ii. 101). According to Stephanus B. (s. v.) they were a tribe of the Edesie near Ampauropolis.
PANAEODYLION. (Ατελία, p. 63, b.)
PANACKA (Πανάγρα), a town in the interior of Libya, on the lake Lyba, and near the Nigir. (Itol. iv. 6. § 27.)
PANDAE (Pliin. vi. 20. s. 23), a tribe of Indians mentioned by Pliny, who, according to him, were alone in the habit of having female sovereigns, owing to a tradition prevailing among them that they were descended from a daughter of Hercules. They would seem from his account to have been a race of great power and wide dominion, and to have occupied some part of the Balearic Islands. (Steph. Ind. s. v. Pandavus,) tells nearly the same story of a daughter of the Indian Hercules, whom he calls Pandava. There can be no doubt that both are to be referred to the Indian dynasty of the Pandavas, traces of whose names are met in several ancient authors. (Pandova Kt. ΠΑΝΑΓΙΑ (Παναγία; Ψαραία), a
PANDION.

small island in the Tyrrhenian sea, lying off the Gulf of Gaeta, nearly opposite to the mouth of the Vulturemns. (Plin. iii. 6. s. 12; Strab. ii. p. 123; Melo, ii. 7. § 18; Ptol. iii. 1. § 79.) Strabo says it was 250 stadia from the mainland, which is just about the truth (v. p. 250). He calls it a small island, but well peopled. It was not uniformly made use of, as well as the neighbouring Pontia, as a place of confinement for state prisoners or political exiles. Among these may be mentioned Julia, the daughter of Augustus, Agrippina, the widow of Germanicus, and Octavia, the first wife of Nero, of whom the two last were put to death in the island. (Tac. Ann. i. 53, siv. 65; Suet. Tib. 53.) Pandalusia is about midway between Pontia (Ponam) and Aemaria (Isertis); it is of volcanic origin, like the group of the Panza Islands, to which it is sometimes considered as belonging; and does not exceed 3 miles in length. Varro notices it as frequented, like the neigh- borig island of Pontia and Palmaria, by flocks of quails and turtle-doves in their annual migrations. (Varr. R. R. iii. 5. § 7.) [E. H. B.]

PANDION, a headland in the south-west of Caria, opposite the island of Syme. (Pomp. Melo, i. 16.) Pliny (v. 29) mentions on the same spot a small town, Pandion, or according to another reading Parydon. (L. S.)

PANDOSIA (Πανδοσία: Eth. Πανδοσίως). 1. A city of Bruttium, situated near the frontiers of Lucania. Strabo describes it as a little above Consentia, the precise sense of which expression is far from clear (Strab. vi. p. 256); but Livy calls it "immenstem Lucania ac Bruttia finibus." (Livy. viii. 24.) According to Strabo it was originally an Oenotrian town, and was even, at one time, the capital of the Oenotrian Chians (Strab. vi. 18); it seems to have certainly received a Greek colony, as Sclaxon expressly enumerates it among the Greek cities of this part of Italy, and Scymnus Chius, though perhaps less distinctly, asserts the same thing. (Scyl. p. 4. § 12; Scyym. Ch. 326.) It was probably a colony of Crotona; though the statement of Eusebius, who represents it as founded in the same year with Metapontum, would lead us to regard it as an independent and separate colony. (Eust. Ann. Chron. p. 99.) But the date assigned by him of n. c. 774 seems certainly inadmissible. (Metapontum.) But whether originally an independent settlement or not, it must have been a dependency of Crotona during the period of greatness of that city, and hence we never find its name mentioned among the cities of Magna Graecia. Its only historical celebrity arises from its being the place near which Alexander, king of Epirus, was slain in battle with the Bruttians, n. c. 326. That monarch had been warned by an oracle to avoid Pandosia, but he understood this as referring to the town of that name in Thesprotia, on the banks of the Acheron, and was ignorant of the existence of both a town and river of the same names in Italy. (Strab. vi. p. 256; Liv. viii. 24; Justin, xii. 2; Ptol. iii. 11. s. 15.) The name of Pandosia is again mentioned by Livy (xxix. 38) in the Second Punic War, among the Bruttian towns taken by the consul P. Sempronius, in n. c. 204; and it is there noticed, together with Consentia, as opposed to the "ignobles alien civitates." It was therefore at this time still a place of some consequence; and Strabo seems to imply that it still existed in his time (Strab. l. c.), but we find no subsequent trace of it. There is great difficulty in determining its position. It is described as a strong fortress, situated on a hill, which had three peaks, whence it was called in the oracle Πανδοσία τρικάλων (Strab. l. c.) In addition to the vague statements of Strabo and Livy above cited, it is enumerated by Scymnus Chius between Crotona and Thurii. But it was clearly an inland town, and must probably have stood in the mountains between Consentia and Thurii, though its exact site cannot be determined, and those assigned by local topographers are purely conjectural. The proximity of the river Acheron affords us no assistance, as this was evidently an inconsiderable stream, the name of which is not mentioned on any other occasion, and which, therefore, cannot be identified.

Much confusion has arisen between the Bruttian Pandosia and a town of the same name in Lucania (No. 2); and some writers have even considered this last as the place where Alexander perished. (Romaneli, vol. i. pp. 261—263.) It is true that Theopompos (ap. Plin. iii. 11. s. 15), in speaking of that event, described Pandosia as a city of the Lucanians, but this is a very natural error, as it was, in fact, near the boundaries of the two nations (Livy. viii. 24), and the passages of Livy (xxix. 38) and Strabo can leave no doubt that it was really situated in the land of the Bruttians.

2. A town of Lucania, situated near Heraclea. It has often been confounded with the preceding; but the distinct existence of a Lucanian town of the name is clearly established by two authorities. Pindarch describes Pyrrhus as encamping in the plain between Pandosia and Heraclea, with the river Siris in front of him (Pint. Pyrrh. 16); and the celebrated Tabularia Heracleenses repeatedly refer to the existence of a town of the name in the immediate neighbourhood of Heraclea. (Mazocchi, Tih. He- racle. p. 104.) From these notices we may infer that it was situated at a very short distance from Heraclea, but apparently further inland; and its site has been fixed with some probability at a spot called Sta Maria d'Anglona, about 7 miles from the sea, and 4 from Heraclea. Anglona was an episcopal see down to a late period of the middle ages, but is now wholly deserted. (Mazocchi, l. c. pp. 104, 105; Romaneli, vol. i. p. 263.)

PANDOSIA (Πανδοσία: Eth. Πανδοσίως), an ancient colony of Elis (Dem. Halanenes, p. 84, Kei-ke), and a town of the Cassopaei in the district of The- protia in Epirus, situated upon the river Acheron. It is probably represented by the rocky height of Kastri, on the summit of which are the walls of an acropolis, while those of the city descend the slopes on either side. (Strab. vii. p. 324; Liv. viii. 24; Justin, xii. 2; Pint. iv. 1; Steph. B. s. e.; Leake, Northern Greece, vol. iv. p. 56.)

COIN OF PANDOSIA.

PANDOVI REGIO (Πανδοβίος χώρα, Ptol. viii. 1. § 11), a district at the southern extremity of the Peninsula of Hisponton. The name is in some editions Πανδοβίος, but there is every probability that the above (which was suggested by Erasmus) is the true reading. There is another district of the same name which is placed by Ptolemy in the Pan-
jib on the Bidaspea (Vipasa) (viit. 1. § 46). It is clear from a comparison of the two names that they refer to the same original Indian dynasty, who were known by the name of the Bidaspea, and who appear to have been extended very widely over India. At the time of the invasion of Alexander, the district in the Panjib belonged to king Porus. (Strab. xvi. p. 686; Lassen, Ind. Alterth. Geschichte der Pana-
daros, p. 562.) [V.]

PANAEAS, PANAIS, or PANEIAS (Paoeis, Panair, Paeides, Hierod. p. 716). More usually called either CAESAREA PANAEAS (Karavaea Pan-
eis of Paeis, Joseph, Ant. xviii. 2, § 3, B. J. iii. 15, s. 12; Suid. v. 21; on coins, K. υπον Panaros and πος Panai-
theo; in Steph. B. inc. strictly πος τγς Panarados) or CAESAREA PHILIPPI (K. η Φιλιππου, Matt. xvi. 13; Mark. viii. 27; Joseph, Ant. xx. 8. § 4. B. J. ii. s. § 7, 2. § 1; Euseb. H. E. vii. 17), a city in the north of Palestine, called by Ptolemy and Hier-
dokes (Il. cc.) a city of Phoenicia, situated upon one of the sources of the Jordan, at the foot of Mt. Panium, one of the branches of Lebanon. Mt. Panium was sacred to Pan when it bore its original name. (Philostorg. v. 7.) At this spot Herod erected a temple in honour of Augustus. (Joseph. Ant. xv. 10. § 3. B. J. i. 21. § 83.) Panes was supposed by many to have been the town of Laish, afterwards called Dan; but Eusebius and Jerome state that they were separate cities, distant 4 miles from each other (Ireland, Palestine, p. 918, seq.) Panes was rebuilt by Philip the Tetrarch, who called it Caesarea in honour of the Roman emperor, and gave it the surname of Philippa, to distinguish it from the other Caesarea in Pales-
tine. (Joseph, Ant. xviii. 2. § 3. B. J. ii. 9. § 1.) It was subsequently called Neronias by Herod Artima in honour of the emperor Nero. (Joseph, Ant. xx. 8. § 4; Coins.) According to ecclesial

tradition it was the residence of the women diseased with an issue of blood. (Matt. ix. 20; Euseb. H. E. vii. 18; Suid. v. 21; Theoph. Chronogr. 41 ; Phot. cod. 271.) Under the Christian Pan became a bishopric. It is still called Ρανίδα, and contains now only 150 houses. On the NE. side of the village the river, supposed to be the principal source of the Jordan, issues from a spacious cavern under a wall of rock. Around this source are many hewn stones. In the face of the perpendicular rock, directly over the cavern and in other parts, several niches have been cut, apparently to receive statues. Each of these niches had once an inscription; and one of them, copied by Bureck, appears to have been a dedication by a priest of Pan. There can be no doubt that this cavern is the cave of Pan mentioned above; and the hewn stones around the spring may have belonged perhaps to the temple of Augustus. This spring was con-

sidered by Josephus to be the outlet of a small lake called Plaka, situated 120 stadia from Panes towards Fraconitia or the NE. Respecting this lake see Vol. ii. p. 519, b.

(Reid, Palestine, p. 918, seq.; Echkehl, vol. iii. passim; Bureckhardt, Syria, p. 57, seq.; Reck-
ken, Bibl. Res. vol. iii. p. 347, seq.)

PANEPHYLIS (Paeoios, Ptol. iv. 5. § 52), a town of Egypt, mentioned by recent writers only, with the single exception of Ptolemy (Paeoios, Coni Ephes. p. 478; Paeoios, Cassius. Collat. xi. 35). It probably therefore have another appellation in more ancient times. Maunert (vol. x. pt. 2. p. 580) believes it to have been the city of Panopolis in the Delta; and he agrees with Campa-

pilus (Egypte, vol. ii. p. 190) in identifying it with the modern Menzaleh. It stood between the Tanitic and Mendesian arms of the Nile, a little SE. of the Ostium Mendesium. Ptolemy (l. c.) says that it was the capital of a nome, which he alone mentions and denominates Νιος. Panephistis may have been either the surviving suburb of a de-
cayed Deltaic town, or one of the handlets which sprang up among the ruins of a more ancient city. [W. B. D.]

PANGAEUM, PANGAEUS (Παγαεις, Παγαεως, Παγαεως, Herod. v. 15. s. 12; Suid. x. 113; Theod. ii. 99; Asch. Pers. 434; Pind. Pyth. iv. 3290; Eniph. Rhes. 922, 972; Dion Cass. xivii. 35; Appian, B. C. iv. 87, 106; Plin. iv. 18; Virg. Georg. iv. 462; Licona, i. 679), the great mountain of Macedonia, which, under the modern name of Pirméa, stretching to the E. from the left bank of the Styx to the pass of Amphipolis, bounds all the eastern portion of the great Strymonic basin on the S., and near Fraeissits meets the ridges of the Elanitic range under which it hewn gold as well as silver (Herod. vii. 112; Appian, B. C. iv. 106); and its slopes were covered in summer with the Rosa centifolia. (Plin. xxi. 10; Theoph. H. P. vi. 6; Athen. xv. p. 682.) The mines were chiefly in the hands of the Thas-
sians; the other peoples who, according to Herodotus (L. C.), worked Pangaeum, were the Piers and Olimani, but particularly the Sattrae, who bercided on the mountain. None of their money has reached us; but to the Pangarac silver mines may be traced a large coin of Geta, king of the Edonese. (Edonese.) (Leake, Northern Greece, vol. ii. pp. 176, 190, 212.) [E. B. J.]

PANHellenes. [Graecia, Vol. i. p. 1010.]

PANIONIUM (Paxionion), a place on the west-
ern slope of Mount Mycale, in the territory of Priene, containing the common national sanctuary of Po-
seidon, at which the Ionians held their regular meetings, from which circumstance the place de-

rived its name. It was situated on a cliff, 3 stadia from the sea-coast. (Strab. xiv. p. 659; Herod. i. 141, foll.; Mela, i. 17; Plin. vi. 31; Paus. vili. 5. § 1.) The Panionium was properly speaking only a grove, with such buildings as were necessary to accommodate strangers. Stephanus B. is the only writer who calls it a town, and even mentions the Ethnic designation of its citizens. The preparations for the meeting and the management of the games devolved upon the inhabitants of Priene. The earlier travelers and geographers looked for the site of the Panionium in some place near the modern vil-
lage of Tashangli; but Col. Loke (Asia Minor, p. 260) observes: "The uninhabitable aspect of the rocks and forests of Mycale, from Cape Tregillum to the modern Tashangli, is such as to make it im-

possible to fix upon any spot, either on the face or at the foot of that mountain, at which Panionium can well be supposed to have stood. Tashangli, on the other hand, situated in a delightful and well watered situation, is admirably suited to the Panionian festival; and here Sir William Gell found, in a church on the sea-shore, an inscription in which he distinguished the name of Panionium twice. I conceive, therefore, that there can be little doubt of Tashangli being on the site of Panionium." [L. S.]

PANISSA, a river on the E. coast of Thrace. (Plin. iv. 11. s. 18.) [T. H. D.]
PANNONIA (Πανόνια, Hierol. p. 632; Const. Porph. de Them. ii. 1. p. 47; Suidas, s. r.), a town on the coast of Thrace, near Heraclea; perhaps the modern Banasos.

[T. H. D.]

PANNONIA (Πανόνια), a town in the interior of Crete, S. of Cnossum, retaining the name of Pannonia.

(Ptol. iii. 17. § 10.)

PANNO'NIA (Πανόνια), Ptol. ii. 1. § 12; or Πανονια, Zosim. ii. 43), one of the most important provinces of the Roman empire, on the south and west of the Danube, which forms its boundary in the north and east, and south it bordered on Illyricum and Moesia, while in the west it was separated from Noricum by Mount Cetius, and from Italy by the Julian Alps. The country extended along the Danube from Vindobona (Viena) to Singidunum, and accordingly comprised the eastern portions of Austria, Carnitnia, Carnia, the part of Hungary between the Danube and Sava, Slavonia, and portions of Croatia and Bosnia. After its subjugation by the Romans, it was divided into Pannonia Superior (ἡ ἐπιτοιχια Pannonia) and Pannonia Inferior (ἡ στενή Pannonia), by a straight line running from Aronbona in the north to Servitium in the south, so that the part west of this line constituted Upper Pannonia, and that on the east Lower Pannonia.

(Ptol. ii. 15. § 16.) In consequence of this division the whole country is sometimes called by the plural name Pannonicæ (Πανονικαι, Ptol. ii. 16. § 1; Zosim. ii. 43; Plin. xxvii. 11. s. 2). In the fourth century, the emperor Galerius separated the district of Lower Pannonia between the Danube, Drave, and Danube, and constituted it as a separate province under the name of Valeria, in honour of his wife who bore the same name. (Anr. Vict. de Caes. 40; Amm. Marc. xvi. 10, xxvii. 3.) But as Lower Pannonia seemed by this measure to be too much reduced, Constantine the Great added to it a part of Upper Pannonia, viz., the districts about the Upper Drave and Sava; and Upper Pannonia was henceforth called Pannonia Prima, and Lower Pannonia, Pannonia Secunda. (Amm. Marc. xxv. 3, xxvii. 12.) All these three provinces belonged to the diocese of Illyricum. It should be observed, however, that Pannonia Secunda is sometimes also called Interamnia, Savia, or Ripensis. (Sext. Ruf. Epist. 11; Notit. Imp.) The three provinces into which Pannonia was thus divided were governed by three different officers, a praeses residing at Subaria, a consular residing at Sirmium, and a praefect who had his seat at Scupi. The part bordering upon Germany, which stood most in need of protection, had always the strongest garrisons, though all Pannonia in general was protected by numerous armies, which were gradually increased to seven legions. Besides these troops the fleet stationed at Vindobona was the strongest of the three fleets maintained on the Danube.

Dion Cassius (xliv. 36) mentions an unfortunate etymology of the name of Pannonia from "pannos," "a rag or piece of cloth," referring to a peculiar article of dress of the inhabitants, though he also states at the same time that the natives called themselves Pannonians, whence it follows that the name can have nothing to do with the Latin pannus. As to the identity of the name with that of the Panones we shall have occasion to speak presently.

In its physical configuration, Pannonia forms a vast plain enclosed only in the west and south by mountains of any considerable height, and traversed only by hills of a moderate size, which form the terminations of the Alpine chains in the west and south, and are for this reason called by Tacitus (Hist. ii. 28) and Thallus (iv. 1. 109) the Pannonian Alps. The separate parts of these ramifications of the Alps are mentioned under the names of Mount Carvancas, Cetius, Alois Montes, Claudius, and Alma or Almus. The mountains on the western and southern frontiers contain the sources of some important rivers, such as the Drau and Savus, which flow almost parallel and empty themselves into the Danube. Only one northern tributary of the Drava is mentioned, viz., the Murus, while the Savus receives from the south the Naupetors, Carcoros, Carolis, Opanes, Upanus, Valdasus, and Dinesus. The only other important river in the north-west is the Arzabó. The northern part of Pannonia contained a great lake called the Pelso or Perio (the Plattenze), besides which we may notice some smaller lakes, the Ucari Laces, between the Sava and the Drave, near their mouth. The climate and fertility of Pannonia are described by the ancients in a manner which little corresponds with what is now known of those countries. It is said to have been a rough, cold, rugged, and not very productive country (Strab. vii. p. 317; Dion Cass. xlix. 37; Herodian, i. 6), though later writers acknowledge the fertility of the plains. (Sohn. 21; comp. with Vell. Pat. ii. 110.) Both statements, however, may be reconciled, if we recollect how much the emperors Probus and Galerius did to promote the productivity of the country by rooting out the large forests, and reclaiming the districts occupied by them for agriculture. (Plin. iii. 28; Appian, Illyr. 22; Hygin. de Limit. Const. p. 206; Aurel. de Caes. 40.) As the forests in those times were probably much more extensive than at present, timber was one of the principal articles of export from Pannonia, and great quantities of it were imported into Italy. (Sohn. 22.) Agriculture was not carried on to any great extent, and was for the most part confined to the rearing of barley and oats, from which the Pannonians brewed a kind of beer, called Salasia (Dion Cass. lxxv. 36; Amm. Marc. xxvii. 8), and which formed the chief articles of food for the natives. Olives and vines do not appear, at least in early times, to have grown at all in Pannonia, until the emperor Probus introduced the cultivation of the vine in the neighbourhood of Sirmium. (Vopisc. Prob. 1, 18; Eutr. ix. 17; Aurel. Vict. de Caes. 37.) Among the valuable productions of the vegetable kingdom, the fragrant salvia is mentioned (Plin. xxi. 20), and among the animals dogs excellent for the chase are spoken of by Nemesianus (Cyneget. 126), the catca by Martial (xiii. 69), and the charax or black-cock by Athenaeus (ix. p. 398). The rivers must have provided the inhabitants with abundance of fish. The ancients do not speak of any metals found in Pannonia, either because the mines were not worked, or because the metals imported from Pannonia were vaguely said to come from Noricum, where mining was carried on to a great extent.

The inhabitants of Pannonia (Pannonii, Πανονιωται, Πανονίωται, or Πανονίοι) were a very numerous race, which, in the war against the Romans, could send 100,000 armed men into the field. (Appian, Illyr. 22.) Appian (l. c. 14) states that the Romans regarded them as belonging to Illyricum. Some have inferred from this that the great body of the people were Illyrians; and some tribes, such as the Pyrrustae, Mazani, and Dusitae, are actually described by some as Illyrian and by others as Pan-
nian tribes. The fact that most Greek writers called them Paeonians, and that Tacitus ( Germ. 43) speaks of the Pannonian language as different from that of the German tribes, seems to favour the supposition that they were a branch of the Thracian Paeonians, who had gradually spread to the banks of the Danube and the confines of Italy. It must however be observed that Dion Cassius (xlix. 36), who knew the people well, denies that the Pannonians belonged to a separate tribe. There can, however, be no doubt that Celtic tribes also existed in the country, and in the early part of the Roman empire Roman civilisation and the Latin language had made considerable progress. They are described as a brave and warlike people, which, at the time when the Romans became acquainted with them, lived in a very low state of civilisation, and were notorious for cruelty and love of bloodshed (Dion Cass. L. c.; Appian, Illyr. 14; Strab. vii. p. 318; Stat. Silv. iii. 13), as well as for extendedness and cunning (Itiball. iv. 1, 8). But since their subjugation by the Romans, the civilisation of the conquerors produced considerable changes (Veil. Pat. ii. 110); and even the religion of the Pannonians (some of their gods, such as Latobins, Laburus, Chartus, are mentioned in inscriptions) gave way to that of the Romans, and Pannonian divinities were identified with Roman ones (Spart. Sever. 15; Lamprid. Alex. 7). The Romanisation of the country was promoted and completed by the establishments of Roman colonies, so that at the time of the migration of nations, the country was completely Romanised.

The following are the principal tribes noticed by the ancients in Pannonia; some of them, it must be observed, are decidedly Celtic. In Upper Pannonia we meet with the Azali, Cynxi, Bori, Colitanii, Oseriates, Serretes, Serapallii, Sandresetes, Latobici, and Vardianii, and perhaps also the Iapodes or Iapfjdes, the Colapiani and Scordisci, though some of these latter may have extended into Illyricum. In Lower Pannonia, we have the Abarisci, Hercuniatae, Andiantes, Lashi, Beureii, Amantii (Amantes), and Cornucates. Besides these, Pliny (iii. 26) mentions the Arivates, Belgites, and Catari, of whom it is not known what districts they inhabited. Towns and villages existed in the country in great numbers even before its conquest by the Romans (Dion Cass. iv. 29; Jornand. Get. 50); and Appian's statement (Illyr. 22), that the Pannonians lived in small villages and isolated farms, probably applies only to some remote and more rugged parts of the country. The most important towns were Vindobona, Carantum, Scarabantia, Sabaria, Arrabao, Partovis, Siscia, Armona, Nacpotes; and in Lower Pannonia, Bregetio, Aquincum, Murisia, Chalae, Aquincum, Taurnecum, and Scirium.

The history of Pannonia previous to its conquest by the Romans, is little known. We learn from Justin (xxiii. 4, xxxii. 3, 12) that the monuments of the hosts of Brennus, settled in the country. Most of the tribes seem to have been governed by their own chiefs or kings. (Veil. Pat. ii. 114; Sext. Ruf. Rev. 7; Jornand. de Reg. Sue. 50.) The obscurity which hangs over its history begins to be somewhat removed in the time of the triumvirate at Rome, B.C. 35, when Octavianus, for no other purpose but that of giving his troops occupation and maintaining them at the expense of others, attacked the Pannonians, and by conquering the town of Sceria broke the strength of the nation. (Dion Cass. xlix. 36; Appian, Illyr. 13, 22, foll.) His general Vibius afterwards completed the conquest of the country. But not many years after this, when a war between Maroboduus, king of the Marcomanni, and the Romans was on the point of breaking out, the Pannonians, together with the Dalmatians and other Illyrian tribes, rose in a great insurrection against their oppressors, and it was not till a bloody war of several years' duration that Tiberius succeeded in reducing them, and changing the country into a Roman province, A.D. 8. (Dion Cass. lv. 24, 28, 29; Suet. Tib. 15, 20; Vell. Pat. ii. 110, foll.) Henceforth a considerable army was kept in Pannonia to secure the submission of the people. When the soldiers received the news of the death of Augustus, they broke out in open rebellion, but were reduced by Drusus. (Tac. Ann. i. 15, foll. 30; Dion Cass. l. viii. 4.) During the first centur-y of the empire, the Pannonians, under the administration of a lieutenant of the emperor. Respecting its division in the second century, we have already spoken. Until the time of the migration of nations, Pannonia remained a part of the Roman empire; many colonies and municipia were established in the country, and fortresses were built for its protection; military roads also were constructed, especially one along the Danube, and a second through the central part of the country from Vindobona to Scirium. The Romans did not make war on the Pannonians, but they at the same time derived great benefits from them; the military value of the natives was of great service to them, and formed always a considerable portion of the Roman legions. About the middle of the fifth century Pannonia was lost to the Romans in consequence of the conquests made by the Huns, to whom the emperor Theodosius I. was obliged formally to cede Pannonia. (Pline. Hist. d. Leg. p. 57, ed. Paris.) On the dissolution of the empire of the Huns by the death of Atila, the country fell into the hands of the Ostrogoths (Jornand. Get. 50), from whom it passed, about A.D. 500, into those of the Longobardi, who in their turn had to give it up to the Avari in A.D. 568.

The ancient authorities for the geography of Pannonia are Ptolemy (i. 15 and 16), Pliny (ii. 28), Strabo (iv. p. 206, foll., v. p. 213, foll., vi. p. 313, foll.), Dion Cassius (xliii. 34—38, iv. 23, 24), Velleius Paternarius (ii. 110, foll.), Tacitus (Ann. i. 16), and Diodorus (iv. 34). Among modern writers the following deserve to be consulted: SchulenfeB, Carnica antiqua et nova, and Annaleri Cornicad antiquae et novae, Labucus, 1681, fol.; Katanischen, Comment, in C. Plutii Secundi Pannonium, Buda, 1829; Robuhur, Lect. on Ancient Hist. vol. iv. p. 164, fol. [1. 8]}

PANOPHEUS or PHANOTEUS (Paoeœeis, Hom. Strab. Paus., Hauvœeis, Hes. ap. Strab. iv. p. 424; Soph. B. s. r.; Or. Méd. iii. 19; Stat. Thib. viii. 344, Ptolemais said by Strab. iv. p. 423, to be its name in his time, but the form also occurs in Thuc. iv. 89; faroœisoi, Steph. B. s. r.; Plutarch, Liv. xxxii. 18; Eth. Hauœœis, Paoeœeis), an ancient town of Phocis, near the frontier of Boeotia, and on the road from Daulis to Chaeroneia. Pausanias says that Panopheus was 20 stadia from Chaeroneia, and from 7 from Daulis (ix. 4, § 8, 1, 7); but the latter number is obviously a mistake. The ruins of the village of Aio Vlai (€^vcoBt B3'oc) are clearly those of Panopheus, are distant about 20 stadia from Ká—

 PANOPOLIS. 543

but among as many as 27 stadia from Delcaris (Daulis). Panopos was a very ancient town, originally inhabited by the Phlegyaeans. Schedius, the king of Panopos, and his brother, were the leaders of the Phoenicians in the Trojan War. (Paus. x. 4. § 1.) Panopos was also celebrated for the grave of Tityus, who was slain by Apollo at this place, because he attempted to offer violence to Leto on her way to Delphi. (Hom. Od. x. 576 and x. 4. § 5.) Panopos was destroyed by Xerxes (Herod. viii. 34), and again by Philip at the close of the Sacred War. (Paus. x. 3. § 1.) It was taken by the Romans in B.C. 198, on the first attack (Liv. xxxii. 18; Polyb. v. 96); and was attacked for the third time in the campaign between Sulla and Archelaus, the general of Mitridates. (Plut. Sull. 16.) Panasians says that the ancient city was 7 stadia in circuit; but in his time the place consisted of only a few huts, situated on the side of a torrent. There are still considerable remains of the ancient walls upon the rocky heights above Aio Yias. The municipality is of different periods, as one might have expected from the twofold destruction of the city. There are no longer any remains of the tomb of Tityus, which, according to Panasians, was the third of a stadium in circumference, and stood on the side of the torrent. Panasians also mentions on the side of the Sacred Way a building of unworked blocks, containing a statue of Pentelic marble, which was supposed to be intended either for Aesclepius or Prometheus. It was believed by some that Prometheus made the human race out of the sandy-colored rocks in the neighborhood, and that they still smelt like human flesh. (Dodwell, Classical Tour, vol. i. p. 207; Leake, Northern Greece, vol. ii. p. 109; Ulrichs, Reisen, &c. p. 151.)

PANOPOLIS (Πανόπολις), Diodor. i. 18; Polyb. iv. 5. § 72; Paus. πάλακα, Strab. xvii. p. 813; Πανόπος παλακός, Steph. B. s. c.; sometimes simply Πανόπος, Hieroc. p. 731; It. Anton. p. 166: Ebd. Πανωσολίτης, the Greek equivalent of the Aegyptian appellative Chemmis or Chemmis (Herod. ii. 91, 145, seq.; Diodor. l. c.), was a very ancient city of the Thebaid, lat. 26° 40' N. [CHEMMIS.] Panopolis was dedicated to Chem or Pan, one of the first Oktad of the Aegyptian deities, or, according to a later theory, to Pan (and Satyr) generally. (Diod. x. 38; Plut. Λευκ. B. 25; Plut. Αργ. Pol. 14.) Stephans of Byzantinius describes the Chem or Pan of this city as an Ityphallic god, the same whose representation occurs so frequently among the sculptures of Thebes. His face was human, like that of Ammon; his head-dress, like that of Ammon, consisted of long straight feathers, and over the fingers of his right hand, which is lifted up, is suspended a seer's robe; the body, like that of Ammon also, including the left arm, is swathed in bandages. An inscription on the Kosseio road is the ground for supposing that Chem and Pan were the same deity; and that Chemmis and Panopolis were respectively the Aegyptian and Greek names for the same city is inferred from Diodorus (l. c.). Panopolis stood on the right bank of the Nile, and was the capital of the Nomos Panapolis. According to Strabo (l. c.) it was inhabited principally by stonemasons and linen-weavers; and Agathias (iv. p. 130) says that it was the birthplace of the poet Nonnus A. d. 410. Although a principal site of Panic worship, Panopolis was celebrated for its temple of Persers. From Herodotus (vi. 53) we know that the Euboean chieftains deduced their origin from Persers through Aegypt. It is difficult to say which of the native Aegyptian gods was represented by Persers. From the root of the word—Πεθανω, to burn—it is probable, however, that he is the same with the fire-god Hephaistos or Pitah. The Panopolite temple of Persers was rectangular, and surrounded by a wall around which was a plantation of palm-trees. At the entrance of the enclosure was a long gateway of stone, and upon these were placed colossal statuettes in human form. Within the admittum was a statue of Persers, and there was also laid up his sandals, two cubits long. The priests of Panopolis asserted that Persers occasionally visited his temple, and that his epiphanes were always the omens of an abundant harvest to Aegypt. The sandal of Persers are described by Hesiod (Scot. Hec. 220), and their deposition in the shrine implied that, having left his abode for a season, he was traversing the land to bless it with especial fertility. The modern name of Panopolis is Akhmin, an evident corruption of Chemmis. The ruins, in respect of its ancient splendour, are incon siderable. It is probable, indeed, that Panopolis, like Abydos and other of the older cities of Upper Aegypt, declined in prosperity as Thebes rose to metropolitan importance. (Champollion, Αίγυπτος, vol. i. p. 267; Pococke, Travels, p. 115; Minnotto, p. 245.)

PANORRUS (Πανορρόος: Ebd. Πανορρύγη, Panornitans: Palermo), one of the most important cities of Sicily, situated on the N. coast of the island, about 50 miles from its NW. extremity, on an extensive bay, which is now known as the Gulf of Palermo. The name is evidently Greek, and derived from the excellence of its port, or, more strictly speaking, of the anchorage in its spacious bay. (Diod. xxii. 10.) But Panormus was not a Greek colony; it was undoubtedly of Phoenician origin, and appears to have been one of the earliest settlements of that people in Sicily. Hence, when the increasing power of the Greek colonies in the island compelled the Phoenicians to concentrate themselves in its more westerly portion, Panormus, together with Motya and Solus, became one of the chief seats of their power. (Thuc. vi. 2.) We find no mention of the Phoenician name of Panormus, though it may fairly be presumed that this Greek appellation was not that used by the colonists in their original settlement. It would be natural enough to suppose that the Greek name was only a translation of the Phoenician one; but the Punic form of the name, which is found on coins, is read "Machanath," which signifies "a camp," like the Roman Castra, and has no reference to the port. (Gesenius, Monum. Phoen. p. 288; Mover's Phoenizier, vol. iii. p. 355.)

We have no account of the early history of any of these Phoenician colonies in Sicily, or of the process by which they were detached from the dependence of the mother country and became dependencies of Carthage; though it is probable that the change took place when Phoenicia itself became subject to the Persian monarchy. But it is certain that Carthage already held this kind of supremacy over the Sicilian colonies when we first meet with the name of Panormus in history. This is not till m. c. 480, when the great Carthaginian armament under Hannibal landed there and made it their head-quarters before advancing against Himera. (Diod. xxxv. 20.) From this time it bore an important part in the wars of the Carthaginians in Sicily, and seems to have gradually become the acknowledged capital of their
PANORMUS.

PANORMUS.

dominion in the island. (Polyb. i. 38.) Thus it is mentioned in the war of n. c. 406 as one of their principal naval stations (Diod. xiii. 88); and again in n. c. 397 it was one of the few cities which remained faithful to the Carthaginians at the time of the siege of Motya. (Id. xiv. 48.) In n. c. 393 it is again noticed as the head-quarters of the Carthaginians in the island (Id. xv. 17); and it is certain that it was never taken, either by Dionysius or by the still more powerful Agathocles. But in n. c. 276, Pyrrhus, after having subdued all the other cities in Sicily held by the Carthaginians, except Lilybaenus and Panormus, attacked and made himself master of the latter city also. (Id. xxii. 10. p. 498.) It, however, soon fell again into the hands of the Carthaginians, who held it at the outbreak of the First Punic War, n. c. 264. It was at this time the most important city of their dominions in the island, and generally made the head-quarters both of their armies and fleets; but was nevertheless taken with but little difficulty by the Roman consul Attilius Catulus and Cn. Cornelius Scipio in n. c. 254. (Polyb. i. 21, 24, 38; Zonar. viii. 14; Diod. xxii. 18 p. 505.) After this it became one of the principal naval stations of the Romans throughout the remainder of the war, and for the same reason became a point of the utmost importance for their strategic operations. (Diod. xxiii. 19, 21, xxiv. 1; Polyb. i. 39, 55, &c.) It was immediately under the walls of Panormus that the Carthaginians under Hasdrubal were defeated by L. Caecilius Metellus in n. c. 250, in one of the most decisive battles of the whole war. (Polyb. i. 40; Zonar. viii. 14; Oros. iv. 9.) It was here also that the Romans had to maintain a longcontinued struggle with Hamilcar Barca, who had seized on the remarkable isolated mountain called Ercta, forming a kind of natural fortress only about a mile and a half from Panormus [Ercta], and succeeded in maintaining himself there for the space of three years, notwithstanding all the efforts of the Romans to dislodge him. They were in consequence compelled to maintain an intrenched camp in front of Panormus, at a distance of only five stadia from the foot of the mountain, throughout this protracted contest. (Polyb. i. 55, 57.)

After the Roman conquest of Sicily, Panormus became a municipal town, but enjoyed a privileged condition, retaining its nominal freedom, and immunity from the ordinary burdens imposed on other towns of the province. (Cic. Verr. iii. 6.) It was in consequence a flourishing and populous town, and the place where the courts of law were held for the whole surrounding district. (Id. ib. ii. 26, v. 7.) Cicero notices it at this time as one of the principal maritime and commercial cities of the island. (Id. v. 27.) In the settlement of the affairs of Sicily which seems to have followed the war with Sextus Pompeius, Panormus lost its liberty, but received a Roman colony (Strab. vi. p. 272), whereby we find it bearing inscriptions the title of "Colonia Augusta Panormitanorum." It would seem from Dion Cassius that it received this colony in n. c. 20; and coins, as well as the testimony of Strabo, prove incontestably that it became a colony under Augustus. It is strange, therefore, that Pliny, who notices all the other colonies founded by that emperor in Sicily, has omitted all mention of Panormus as such, and ranks it merely as an ordinary municipal town. (Plin. iii. 8. s. 14; Dion Cass. liv. 7; Eckel, vol. i. p. 232; Orell. Inscr. 948, 3760.) It subsequently received an accession of military colonists under Vespasian, and again under Hadrian. (Lib. Colon. p. 211; Zumpt, de Colon. p. 410.) Numerous inscriptions prove that it continued to be a flourishing provincial town throughout the period of the Roman empire; and its name is repeatedly mentioned in the Itineraries (Itin. Ant. pp. 91, 97; Tab. Peut.; Castell. Inscr. Sicil. pp. 26, 27, &c.); but it is certain that it did not attain in ancient times to the predominant position which it now enjoys. It fell into the hands of the Goths, together with the rest of Sicily, and was the last city of the island that was wrested from them by Belisarius in a. D. 553. (Procop. B. G. i. 5, 8.) After this it continued subject to the Byzantine empire till 835, when it was taken by the Saracens, who selected it as the capital of their dominions in the island. It retained this position under the Norman kings, and is still the capital of Sicily, and by far the most populous city in the island, containing above 160,000 inhabitants.

The situation of Palermo almost vies in beauty with that of Naples. Its beautiful bay affords an excellent roadstead, from whence it doubtless derived its name; and the inner or proper harbour, though not large, is well sheltered and secure. The ancient city probably occupied the site immediately around the port, but there are no means of tracing its topography, as the ground is perfectly level, without any natural features, and all ancient remains have disappeared, or are covered by modern buildings. We learn that it consisted of an outer and inner city; the former, as might be supposed, being the more recent of the two, and hence called the New City (h παλαιόν). Each had its separate enclosure of walls, so that when the outer city was taken by the Romans, the inner was still able for some time to withstand their efforts. (Polyb. i. 88; Diod. xxii. 18.) The only ancient remains now visible at Palermo are some slight vestiges of an amphitheatre near the Royal Palace; but numerous inscriptions, as well as fragments of sculpture and other objects of antiquity, have been discovered on the site, and are preserved in the museum at Palermo.

The coins of Panormus are numerous; the more ancient ones have Greek inscriptions, and belong to the period when the city was subject to the Carthaginians, but the beauty of their workmanship shows the unequivocal influence of Greek art. The later ones (struck after the Roman conquest, but while the city still enjoyed nominal freedom) have the legend in Greek letters PANOPMITAN. Still later are those of the Roman colony, with Latin legends. On these, as well as in inscriptions, the name is frequently written Panormitanorum; and this orthography, which is found also in the best MSS. of Cicero, seems to have been the usual one in Roman times. (Eckel, vol. i. p. 232; Zumpt, ad Cic. Verr. ii. 26.)
PANTANILAOI (Pantanaloi, Herod. i. 125), one of the tribes of ancient Persis mentioned by Herodotus. Nothing is known of them beyond what he states, that they pursued husbandry as their occupation. [V.]

PANTHUSIUS (Panthousius, Ptolemy, v. 7, 20, 21), a town on the NE. side of the island of Cephalon. It is probably that which leads up to Tvnoiaocrates. The name in some editions is written Palti. [V.]

PANTICAPAEMUS. (Panticapaeus, Pappus, v. 6, 20; Strabo, iii. 4, 30; Ptolemy, vi. 6, § 4; Ehr. Pant. cap., Pant. cap., 5; Steph. B. s. v. For the Latter we should probably read Pantikapaios, as Panticapaeus occurs on coins, Eckhel, vol. ii. p. 3; also Pantikapaios, as if from a form Pantikapaios, Steph. B.; Panticapenses, Plin. vi. 7; Kertch), an important Greek city, situated in the Tauric Chersonese on the western side of the Cimmerian Bosporus, and not far from the entrance to the Iasus (Strab. vii. p. 309; Appian, Mithr. v. 107; Pliny, iv. 2, 69, 70; Huds.) that Panticapea was the 30 stadia from the mouth of the river, which, too short a distance; but Arrian (Peripl. § 29, p. 20, Huds.) more correctly makes the distance 60 stadia from Panticapaeum to the mouth of the river of this name, which, however, does not stand upon any river. Ammianus also erroneously places it on the Hypanis. According to a tradition preserved by Steph. (s. v.) it was founded by a son of Aeëtes, who received the district as a present from the Scythian king Agastes; but we know from history that it was a Milesian colony, and apparently one of the earliest on this coast. (Strab. vii. p. 309; Plin. iv. 2, s. 26.) Ammianus (l. c.) calls it the mother of all the Milesian towns on the Bosporus; but the date of its foundation cannot be determined. Böckh (Inscr. vol. ii. p. 91) places it about Ol. 59. 4 (b. c. 541), and it must certainly have been earlier than Ol. 75. 1 (n. c. 480), which is the date assigned to it by Niebuhr. (Kleine Schrift. vol. i. p. 373.) The Greeks connected the name Panticapeum with the god Pan, whose figure, or that of a Satyr, frequently appears on the coins of the city; but this name, as well as that of the river Panticapeum, probably belonged to the Scythian language, and was, as in similar cases, adopted by the Greeks with an Hellenic termination.

Panticapeum was the capital of the kings of Bosporus (Strab. xi. p. 495; Dion. xxi. 24), of whom a brief account is given elsewhere. [Vol. L p. 422.] Accordingly Panticapeum was frequently called Bosporus, though the latter name was also given to the whole kingdom. Hence, when Dorotheus states that the Bosporus was reckoned by many as good a harbour as Bosporus, he evidently means by the latter the capital and not the kingdom (ib. Lept. p. 467); and accordingly Pliny expressly states (iv. 12. s. 24) that Panticapeum was called Bosporus by some. Eutropius (vii. 9) erroneously makes Panticapeum and Bosporus two different cities. Under the Byzantines Bosporus became the ordinary name of the city (Procop. de Aedif. iii. 7, B. Pers. i. 12. B. Goth. iv. 5); and among the inhabitants of the city

PANTICAPAEMUS. (Panticapaeum, Pappus, v. 6, § 4; Ehr. Pant. cap., Pant. cap., 5; Steph. B. s. v. For the Latter we should probably read Pantikapaios, as Panticapaeus occurs on coins, Eckhel, vol. ii. p. 3; also Pantikapaios, as if from a form Pantikapaios, Steph. PANTALIA. (Untaalia.)

Vol. II.
PANTICAPAEM.

The site of Panticapaeum is well described by Strabo. "Panticapaeum," he says, "is a hill, 20 stadia in circumference, covered with buildings on every side; towards the east it has a harbour and docks for 30 ships; it has also a citadel" (vii. p. 330). The hill is now called the Arm-chair of Mithridates. The modern town of Kertch stands at the foot of the hill, a great part of it upon alluvial soil, the site of which was probably covered by the sea in ancient times. Hence the bay on the northern side of the city appears to have advanced originally much further into the land; and there was probably at one point a second port on the southern side, of which there now remains only a small lake, separated from the sea by a bar of sand. Foundations of ancient buildings and heaps of brick and pottery are still scattered over the hill of Mithridates; but the most remarkable ancient remains are the numerous tumuli round Kertch, in which many valuable works of art have been discovered, and of which a full account is given in the works mentioned below. The most extraordinary of these tumuli are those of the kings situated at the mountain called Altn-Obo, or the golden mountain, by the Tartars. One of the tumuli is in the form of a cone, 100 feet high and 450 feet in diameter, and was excavated, with large blocks of stone, cubes of 3 or 4 feet, placed without cement or mortar. This remarkable monument has been at all times the subject of mysterious legends, and the entrance to it was not discovered till 1832. This entrance led to a gallery, constructed of layers of worked stone without cement, 60 feet long and 10 feet high, at the end of which was a vaulted chamber, 35 feet high and 20 feet in diameter, the floor of which was 10 feet below the floor of the entrance. This chamber, however, was empty, though on the ground was a large square stone, on which a sarcophagus might have rested. This tumulus stands at a spot where two branches of a bay ram part meet, which extends to the Sea of Azof, and NE. to the Bosporus just above Nymphaeum. It was probably the ancient boundary of the territory of Panticapaeum and of the kingdom of the Bosporus, before the conquest of Nymphaeum and Thracia. Within the rampart, 150 paces to the E., there is another monument of the same kind, but unfinished. It consists of a circular esplanade, 500 paces round and 166 in diameter, with an exterior covering of Cyclopean masonry, built of worked stones 2 feet long and high, of which there are only five layers. The greater part of this structure has been at the hill, called by the Tartars Kolt-Obo, or the hill of cinders, which is situated outside of the ancient rampart, and 4 miles from Kertch. Here is a tumulus 155 feet in diameter; and as some soldiers were carrying away from it in 1830 the stones with which it was covered, they accidentally opened a passage into the interior. A vestibule, 6 feet square, led into a tomb 15 feet long and 14 bread, which contained bones of a king and queen, golden and silver vases, and other ornaments. Below this tomb was another, still richer; and from the two no less than 120 pounds' weight of gold ornaments are said to have been extracted. From the forms of the letters found here, as well as from other circumstances, it is supposed that the tomb was erected not later than the fourth century B.C. (Dubois, Voyage du cour de Camesco, vol. v. p. 113, seq.; Seymour, Russia on the Black Sea, p. 235, seq.; Neumann, Die Hellenen in Skythenlande, vol. i. p. 478, seq.)

COIN OF PANTICAPAEM.

PANTICAPES (Παντικάπαι), a river of European Sarmatia, between the Borysthenes and the Tanais, rises in a lake, according to Herodotus, in the N., separates the agricultural and nomad Scythians, flows through the district Hyaea, and falls into the Borysthenes. (Herod. iv. 18, 19, 47, 54; comp. Plin. iv. 12. s. 26; Mela, ii. 1. § 5.) Dimyusus Per. (314) says that it rises in the Bifan- paean mountains, and that it passes through the Sc, narus and is now known to be identified with certainty with any modern river. For the various opinions held on the subject, see Bahr, ad Herod. iv. 54; Ubert, vol. iii. pt. ii. p. 191. Stephanus B. erroneously states that the town of Panticapaeum stood upon a river Panticapae. [PANTICAPAEM.]

PANTICCHUM (Παντιξω), a small coast-town of Bithynia, to the south-east of Chalcedon, on the coast of the Propontis. (It. Ant. p. 140; Herod. p. 571; Tab. Peut.) The place still bears the name of Paevithe or Paevitheki. [L. S.]

PANTOMATHIUM (Παντομαθεῖον; Eth. Παντομαθήων; Steph. B. s. vi.) a town on the N. coast of Crete, placed by Ptolemy (iii. 17. § 7) between Bithynia and the promontory of Diom, but by Pliny (iv. 20. s. 20) more to the W., between Aper- tum and Amyphantia; probably on the modern C. Retino. (Hick, Creta, i. pp. 18, 394.) [T. D. H.]

PANYSUS. [PALAMMUS.]

PANYSUS (Πανυσο), vol. iii. 10. § 8; Plin. iv. 11. s. 18), a river, larger in the interior, flowing into the Euxine at Athens (Ταυρος). [T. D. H.]

PAPHLAGONIA (Παφλαγωνία; Eth. Παφλαγωνία), a country in the north of Asia Minor, bordering in the west on Bithynia, in the east on Pontus, and in the south on Galatia, while the north is washed by the Euxine. The river Parchonis in the west divided it from Bithynia, the Halys in the east from Pontus, and Mount Olygaxe in the south from Galatia. (Hecat. Fragm. 140; Scylas, p. 34; Strab. xii. pp. 544, 563; Agathem, ii. 6.) But in the case of the smaller countries of Asia Minor, the boundaries are somewhat fluctuating. Strabo, for example, when saying that Paphlagonia also bordered on Phrygia in the south, was most probably thinking of those earlier times when the Galatians had not yet established themselves in Phrygia. Pliny (vi. 2) again includes Amius beyond the Halys in Paphlagonia, while Mela (i. 19) regards Sinope, on the west of the Halys, as a city of Pon- tus. It is probable, however, that in early times the Paphlagonians occupied, besides Paphlagonia proper, a considerable tract of country on the east of the Halys, perhaps as far as Taurinusa or even Cape Jasonium (Nepheph, Aub. 6. § 1; Strab. xii.
PAPHLAGONIA.

p. 548), and that the Halys did not become the permanent boundary until the consolidation of the kingdom of Pontus. The whole length of the country from west to east amounted to about 40 geographical miles, and its extent from north to south about 20. Paphlagonia was on the whole a somewhat rough and mountainous country, Mount Olgaseus sending forth its ramifications to the north, sometimes even as far as the coast of the Euxine; but the northern parts, nevertheless, contain extensive and fertile plains. (Xenoph. Anab. v. 6. § 6, foll.; comp. Strab. xii. p. 536; Pococke, Travels, iii. p. 138.) The Olgaseus is the chief mountain of Paphlagonia. Its numerous branches are not distinguished by any special names, except the Scorobas and Cytorus. Its most remarkable promontories are Carambis and Sylvia; its rivers, with the exception of the Halys, are but small and have short courses, as the Sasanus, Octosannes, Evachus, Zaleucus, and Amnias. The fertility was not the same in all parts of the country, for the northern plains were not inferior in this respect to other parts of Asia Minor; and were even rich in olive plantations (Strab. xii. p. 546), but the southern, or more mountainous parts, were rough and unproductive, though distinguished for their large forests. Paphlagonian horses were celebrated in the earliest times (Hom. II. ii. 281, foll.); the mules and antelopes (boeocetes) were likewise highly prized. In some parts sheep-breeding was carried on to a considerable extent, while the chase was one of the favourite pursuits of all the Paphlagonians. (Strab. xii. p. 547; Liv. xxviii. 18.) Stories are related by the ancients according to which fish were dug out of the earth in Paphlagonia. (Strab. xii. p. 562; Athen. viii. p. 331.) The forests in the south furnished abundance of timber, and the hoses of Mount Cotyurus was celebrated. (Theoph. H. P. iii. 15; Plin. xvi. 16; Catoth. iv. 13; Val. Plac. v. 16.) Of mineral products we hear little except that a kind of red chalk was found in abundance.

The name Paphlagonia is derived in the legends from Paphlagon, a son of Phineus. (Enestath. ad Hom. ll. ii. 851, ad Dion. Per. 787; Steph. B. s.n.; Const. Porph. de Them. i. 7.) Some modern antiquaries have had recourse to the Semitic languages to find the etymology and meaning of the name; but no certain results can be obtained. An ancient name of the country is said to have been Pylaemenia (Theophr. xvi. 281; Justin, xxxvii. 31), because the Paphlagonians pretended to be descendants of Pylaemenes, the leader of the Paphlagonian Heleni (Hom. ll. ii. 851) in the Trojan War, after whom they also called themselves Pylaemenes.

The Paphlagonians, who are spoken of even in the Homeric poems (H. ii. 831, v. 577, xiii. 656, 661), appear, like the Leucosiyo on that coast, to have been of Syrtan origin, and therefore to have belonged to the same stock as the Cappadocians. (Herod. i. 72; ii. 104; Plut. Lucullus 21; Eustath. ad Dion. Per. 72.) They widely differed in their language and manners from their Thracian and Celtic neighbours. Their language, of which Strabo (xii. p. 552) enumerates some proper names, had, to a certain extent, been adopted by the inhabitants of the eastern bank of the Halys. Their armour consisted of a peculiar kind of helmet made of wickerwork, small shields, long spears, javelins, and daggers. (H. ii. 831; Xenoph. Anab. v. 2. § 284, § 158.) Their cavalry was very rarely mounted on account of their excellent horses. (Xenoph. Anab. v. 6. § 8.)

The Paphlagonians are described by the ancients as a superstitious, silly, and coarse people, though this seems to apply to the inhabitants of the interior more than to those of the coast. (Xenoph. Anab. v. 9. § 6; Aristoph. Eg. 2, 65, 102, 110; Lucian, Alex. 9. foll.) Besides the Paphlagonians proper and the Greek colonists on the coast, we hear of the Heneti and Macrones, concerning whose nationality nothing is known: they may accordingly have been subdivisions of the Paphlagonians themselves, or they may have been foreign invaders.

Until the time of Croesus, the country was governed by native independent princes, but that king made Paphlagonia a part of his empire. (Herod. i. 28.) On the conquest of Lydia by Cyrus, the Paphlagonians were incorporated with the Persian empire, in which they formed a part of the third satrapy. (Herod. iii. 90.) But at that great distance from the seat of the government, the satraps found it easy to assert their independence; and independent Paphlagonian kings are accordingly mentioned as early as the time of Xenophon (Anab. v. 6. § 3, 9, § 2). In the time of Alexander the Great, whose expedition did not touch those northern parts, kings of Cappadocia and Paphlagonia are still mentioned. (Arrian, Anab. ii. 4. § 1; iii. 8. § 5; Diod. Sic. xvii. 16.) But this independence, though it may have been merely nominal, ceased soon after, and Paphlagonia and Cappadocia fell to the share of Eumenes. (Diod. Sic. xviii. 3; Justin, xiii. 4, 16.) After Eumenes' death, it was again governed by native princes, until in the end it was incorporated with the kingdom of Pontus by Mithridates. (Arrian, op. Phot. p. 72, ed. Bekker; Diod. Ecdy. xxxi. 3; Justin, xxxvii. 1; Strab. xii. p. 540; Appian, Mithrid. 11, 12.) Mithridates, however, soon afterwards divided Paphlagonia with his neighbour Nicomedes, who made his son, under the name of Palaemenes, king of Paphlagonia. (Justin, xxxvii. 3, 4.) After the conquest of Mithridates, the Romans united the coast districts of Paphlagonia with Bithynia, but the interior was again governed by native princes (Strab. l. c.; Appian, B. C. ii. 71; Plut. Pomp. 73); and when their race became extinct, the Romans incorporated the whole with their empire, and thenceforth Paphlagonia formed a part of the province of Galatia. (Strab. vi. p. 288, xii. pp. 541, 562.) In the new division of the empire in the fourth century, Paphlagonia became a separate province, only the easternmost part being cut off and added to Pontus. (Hieroc. pp. 695, 701.) The principal coast towns were Amasthas, Erythini, Cerosna, Cytorus, Acgallus, Abonchichos, Cimolus, Stephanos, Pontami, Arcme, Sinope, and Carusa. The whole of the interior of the country was divided, according to Strabo, into nine districts, viz. Blaene, Domanius, Pampilous, Cimianete, Timothia, Gantorigius, Marmolis, Sinamese, and Potamia. The interior contained only few towns, as Pompsopolis, Gangra, and some mountain forresses. [L. S. J.]

PAPHUS (Ptol. viii. 20. § 3, &c.: Ethl. and Adj. Paqos, Paphius, and Paphiacus), the name of two towns seated on the SW. extremity of the coast of Cyprus, viz., Old Paphos (Paqos t&y, Ptol. v. 14. § 1; or, in one word, Paqgosaros, Strab. xiv. p. 683; Palaepaphos, Plin. vi. 31. s. 35) and New Paphos (T&kos Noes Plin. l. c.; Nca Paphos, Plin. l. c.). The name of Paphos is also used by poets and by writers of prose to

PAPIUS.

PAPREMS.

denote both Old and New Paphos, but with this di-
tinction, that in prose writers it commonly means
New Paphos, whilst in the poets, on the contrary,—
for whom the name of Palaeopaphos would have been
unwieldy,—it generally signifies Old Paphos, the
more peculiar seat of the worship of Aphrodite. In
inscriptions, also, both towns are called Paphos.
This indeterminate use is sometimes productive of
ambiguity, especially in the Latin prose authors.

Old Paphos, now Kubla or Kounaklia (Engel,
Kypres, vol. i. p. 125), was said to have been
founded by Cinyrada, the father of Adonis (Apollod.
iii. 14); though according to another legend pres-
served by Strabo (vi. p. 505),—whose text, however,
varies,—it was founded by the Amazons. It had
been seated on an eminence ("cela Paphos," Virg. Aen.
51), at the distance of about 10 stadia, or 11 mile,
from the sea, on which, however, it had a roadstead.
It was not far distant from the promontory of Ze-
phyrium (Strab. xiv. p. 683) and the mouth of the
little river Boecus. (Herod. b. 2. r. Eupanias.) The
fable ran that Venus had landed there when she rose
from out the sea. (Tac. Hist. ii. 3; Mela. ii. 7;
Lucan, viii. 456.) According to Pausanias (i. 14),
hers worship was introduced at Paphos from A-syria;
but it is much more probable that it was of Phoe-
nician origin. (Paus. xxvii.) It had been very
anciently established, and before the time of Homer,
as the grove and altar of Aphrodite at Paphos are
mentioned in the Odyssey (viii. 362). Here the
worship of the goddess centred, not for Cyprus alone,
but for the whole earth. The Cinyradians, or de-
sendants of Cinyrada,—Greek by name, but of Phoe-
nician origin,—were the chief priests. Their power
and authority were very great; but it may be inferred
drawn from certain inscriptions that they were controlled
by a senate and an assembly of the people. There was
also an oracle here. (Engel, i. p. 483.) Few cities have
ever been so much sung and glorified by the poets.
(Cf. Aesch. Suppl. 525; Virg. Aen. i. 415; Hor.
Od. i. 19, 30, in 26; Stat. Silv. i. 2. 101, Aristoph.
Lysia. 833, &c. &c.) The remains of the vast tem-
ples of Aphrodite are still discernible, its circum-
ference being marked by huge foundation walls. After
its overthrow by an earthquake, it was rebuilt by
Vespasian, on whose coins it is represented, as well
as on earlier and later coins, and especially in the
more discriminate style on those of Septimius Severus.
(Engel, vol. i. p. 130.) From these representations,
and from the existing remains, Hetche, an architect of
Copenhagen, has attempted to restore the building.
(Mühle's Arcades. § 239, p. 261; Eckhel, vol. iii.
p. 86.)

New Paphos, now Bafia, was seated on the sea,
not far from the western extremity of the island, and
posessed a good harbour. It lay about 60 stadia, or
between 7 and 9 miles, NW. of the old town. (Strab.
xiv. p. 683.) It was said to have been founded by
Agapenor, chief of the Arcadians at the siege of Troy
(Hom. II. ii. 609), who, after the capture of that town, was
driven by the storm, which separated the Greec fleet, on the east
of Cyprus. (Paus. viii. 5. 3.) We find Agapenor
mentioned as king of the Paphians in a Greek dis-
tich preserved in the Aristoclis (p. 181, Brunn);
and Herodotus (vii. 90) alludes to an Arcadian
colony in Cyprus, under its ancient mannerly name,
New Paphos, was also distinguished for the worship of
Venus, and contained several magnificent temples
dedicated to that goddess. Yet in this respect the
old city seems to have always retained the pre-
eminence; and Strabo tells us, in the passage in-
fore cited, that the road leading to it from New
Paphos was annually crowded with male and female
votaries resorting to the more ancient shrine, and
coming not only from the latter place itself, but
also from the other towns of Cyprus. When Seneca
says (N. C. vi. 26, Ep. 91) that Paphos was
nearly destroyed by an earthquake, it is difficult to
say to which of the towns he refers. Dion Cassius
(liv. 23) relates that it was restored by Augustus,
and called Augusta in his honour; but though
this name has been preserved in inscriptions, it
never supplanted the ancient one in popular use.
Paphos is mentioned in the Acts of the Apostles
(xiii. 6) as having been visited by St. Paul, when
it appears to have been the residence of the Roman
governor. Tacitus (Hist. ii. 2, 3) records a visit
of the youthful Titus to Paphos before he acceded to
the empire, who inquired with much curiosity into
its history and antiquities. (Engel, Kypres, 2 vols.
Berlin, 1841.)

PAPIRA or PAPYRA. a town in the west of
Galatia, on the road between Anasyra and Pessinus.
(Ist. Ant. p. 201.)

PAPILSICA. a town of the Liburni (Geog. Rav.
iv. 16), which has been identified with Jabulante
on the mainland facing the S. of the island of Arba.
(Neugebauer, Die Sud-Slavonc, p. 225.)

PAPPA (Πάππα), a town in the northern part of
Ptolemais. (Ptol. v. 4. 12; Hieroc. p. 672; Conicl.
Nic. pp. 358, 575.)

PAPPA MONS (Παππαμος, Procop. B. V. ii.
4, 7), the inaccessible mountain country in the interior
of Xumidia, where the conquest of Africa was com-
pleted by Belisarius, in the spring of A. D. 534, and
where Gelimer, the last of the Vandal kings, was
taken (Le Beau, Bas Empire, vol. i. p. 248, Gibbon,
vol. i. p. 150.)

PAPREMS (Παρπρος, Herod. ii. 59, 71), is
mentioned by Herodotus alone, and appears to have
been seated in the western parts of Lower Aegypt.
Mannert (p. xii. p. 517—519), without very good
grounds for his supposition, believes it to have been
another name for Xons. (Comp. Champollion L'Egypte.
vol. ii. p. 213.) Paprems was the capital of a
nome called Paprentes (Herod. iv. 165), one of the
four districts of the Tmopticybian division of the
Aegyptian army. A deity corresponding in his
attributes to the Greek Ares was worshipped in this
town; and the river-horse was sacred to him. His
festivals were of a singularly character, in which
opposite parties of priests contended with staves,
and inflicted on one another sometimes death, and
usually serious wounds. Now the river-horse was an
among the emblems of Typhon, the destroying prince;
and the festivals of the Paprentes deity savoured
of violence and destruction. He may accordingly
have been one of the forms of New Paphos, whose
worship was widely spread over the Delta. There is
indeed an Aegyptian god named Ramp (Wilkinson,
M. of C. pl. 69, 70), whose attributes answer to those of
PARACANDA.

PARAPOTAMI.

Ares, and who may, accordingly, have been the object of Pappremitc worship. In the Pappremitc nome a battle was fought between the Persians and Aegyptans, in which the satrap Achaeomenes was defeated by Ines, king of Lower Aegypt, n. c. 401. (Herod. i. 322, Thucn. i. 104, 109.) It is useless to speculate which of the various mounds of ruins in the Delta cover the site of a town whose exact situation cannot be discovered. [W. B. D.]

PARACANDA. [Maracanda.]

PARACHELOUTIS. [Atolia, p. 63, s. a.]

PARACHOOITAS (6 Παραχαηθας, Ptol. vi. 2, § 3, 4. § 1), the great south-eastern chain of the Taurus, which under various names extended from the Caspian Sea to the province of Persia. The portion so called appears to have been the central part between the mountains of Media Atropatene on the N. and those of Persia on the S. Of this portion M. Orontes (now Eleusen) was the most considerable. Ancient geographers are not clear as to the extent to which the local names prevailed. Thus Strabo evidently places the Parchooitas far to the N., and seems to have considered it a prolongation of the Anti-Taurus in the direction of Media and Hyrcania (xi. pp. 511, 514, 522). Ptolemy seems to have considered it a continuation towards the S. of the portion of the Anti-Taurus which was called M. Jasoninus. [V.]

PARADA, a town in Africa Propria, on the road from Thapsus to Utica. (Hirt. B. Afr. 87.) It may perhaps be identical with the town of Φάρα, mentioned by Strabo (xvii. p. 831). Munier (s. 2. p. 374) places it on Mount Zeuson. [T. H. D.]

PARAEBASION. [Megapolites, p. 310, b.]

PARAEPHAPHIS (Παραεφαφης), a district of ancient Carmania Deoerta (now Kierman) mentioned by Ptolemy (vi. 8. § 12). [V.]

PARAETACE'NE (Παραητακενῆ), a district of ancient Persia which extended along the whole of its N. frontier in the direction of Media Magna, to which, indeed, it in part belonged. The name is first mentioned by Herodotus, who calls one of the tribes of the Medians Paraetaceni (i. 101). The same district comprehended what are now called the Balshyari mountains and tribes. The whole country was rugged and mountainous (Strab. ii. p. 80, xi. p. 522, xv. p. 723; Pini. vi. 27. s. 31), and appears to have been inhabited, like the adjacent province of Cossaea, by wild and robber tribes (xvi. p. 744). The inhabitants were called Paraetaceni (Herod. i. c.; Strab. i. c. xv. p. 732) or Paraetacae (Strab. xv. p. 736; Arrian, iii. 19). There has been considerable discussion with regard to the origin of this name. The best determination seems to be that it is derived from a Persian word, Paruta, signifying mountain; and this again from the Sanscrit Paramasa. It will be observed that while Herodotus gives the Paraetaceni a Median origin (i. c.), and Stephens B. calls Paraetaca a Median town, Strabo gives one portion of the district so named to the Assyrian province of Apulhidasia or Sittacae (xvi. p. 736). There were, however, other places of the same name at considerable distances from the Median or Persian provinces. Thus, one is mentioned between Bactriana and Sogdiana, between the Oxus and Jaxartes (Arrian, iv. 21; Curt. viii. 14. 17), and another between Drangiana and Arachosia. (Isid. Chor. p. 8.) In India, too, we find the Parayeti Montes, one of the outlying spurs of the still greater chain of the Parapoamius (or Hindi Kish). (Las-

PARAE'NOM (Παραενομ, Scyl. p. 44; Strab. xvii. p. 799; Pompon. Mela. i. 8. § 2; Plin. v. 5; Ptol. iv. § 4; Steph. B.; Itin. Anton. Hieropo). a town of Marmarica, which was also called Ammonia. (Αμμονία, Strab. l. c.) Its celebrity was owing to its spacious harbour, extending to 40 stadia (Strabo l. c.; comp. Dio. i. 31), but which appears to have been difficult to make. (Lucian, Quomodo historia sit conscribenda, 62.) Paraetonium was 1300 stadia (Strabo l. c.; 1550 stadia, Studium, § 19) from Alexandria. From this point Alexander, n. c. 332, set out to visit the oracle of Ammon. (Arrian. Anab. iv. 2.) When the "world's debate" was decided at Actium, Antonius stopped at Paraeatonium, where some Roman troops were stationed under Pinarus for the defence of Aegypt. (Plint. Auton. 70; Flor. iv. 11.) The name occurs in Latin poetry. (Ovid, Met. ix. 772, Amares, ii. 13. 7; Lucan. iii. 295.) Justinian fortified it as a frontier fortress to protect Aegypt from attacks on the W. (Procop. de Aed. vi. 2.) An imperial coin of the elder Faustina has been assigned to this place, but in the ancient ground. (Ekkehl, vol. iv. p. 116.) When the Alexiad Army was sovereigns over this district, the site, where there were ancient remains, retained the name of Barcetoun; but after their expulsion by the pasha of Aegypt, it was called Berek Marsab. (Pacho, Voyage dans la Marmarique, p. 28.) [E. B. J.]

PARAGON SINUS (Παράγον κόνως, Ptol. vi. 8. § 7; Marcian, c. 28. ed. Miller), a gulf on the shore of Gedrosia, a little way beyond the Prom. Carpella (now Cape Bombareek), according to Ptolemy. Marcian states that it was of considerable size, and extended as far as the promontory called Alabaster (now Ras Guadal) and the island of Lita or Ziba. It appears to have been in part that district of Gedrosia which was inhabited by the Iththophycti, it is not, however, noticed in Xerchous's voyage. [V.]

PARALAT (Παραλάτ), a town of Lycaonia, and, as its name seems to indicate, situated near a lake. (Ptol. v. 6. § 5.) There are coins bearing the inscription "Jul. Aug. Col. Pariatis." (Hustin, ii. p. 33, foll.), from which it appears that the place was made a Roman colony. But as the town and its elevation to the rank of a colony is not mentioned elsewhere, it has been supposed that the coins are either forged or have been incorrectly read [L.S.]

PARALL, or PARALUS. [Att. p. 322.]

PARALL. PARAI-XIA [Chalcedice, Vol. I. p. 598, s. a.]

PAREMBOLE (Parmenole, Itib. Hieros, p. 568; Parembole, Acta S. Alex. Weasel, p. 568), a town of Thrace, on the river Herbus, still called Parembole, according to Palma. [T. H. D.]

PARIPOITAE (Παραποιταί), an Indian tribe mentioned by Ptolemy (vii. i. § 65), and placed by him on the slopes of the Vindius M. (Vindhyas M.) among the banks of the Namadus (Nerbudda), Lassen, in his Map of Ancient India, places them along the upper sources of the same river. [V.]

PAREPOTAMI (Παραποταμι, Strab. ii. Parembole, a town of Phocis on the left bank of the Cephissus (whence its name), and near the frontier of Boeotia. Its position is described in a passage of Theopompus, preserved by Strabo, who says that it stood at a distance of 40 stadia from Chaeronia, in the entrance from Boeotia to Phocis, on a height of

N N 3
moderate elevation, situated between Parassas and Mount Hedylias; he adds that these two mountains were separated from each other by an interval of 5 stadia, through which the Cephiusian flowed. (Strab. ix. p. 424.) Parapatamii was destroyed by Xerxes (Herod. viii. 33), and again a second time by Philip at the conclusion of the Sacred War. (Paus. x. 3. § 1.) It was never rebuilt. Plutarch in his life of Sulla (c. 16) speaks of the acropolis of the deserted city, which he describes as a stony height surrounded with a precipice and separated from Mt. Hedylias only by the river Asopus. (Leake, *Northern Greece*, vol. ii. pp. 97, 195.)

**PARASOPIS.** (Πάρασοπια), a town of Thessaly in the district of Oeta. (Strab. vi. p. 434.)

**PARAVAEI** (Παραβαία), an Epirot tribe, whose territories, contiguous with those of the Orestae, were situated on the banks of the Aoos (Βίος), from which they took their name. In the third year of the Peloponnesian War, a body of them, under their chief Orosodos, joined (Mom., r. c.) the Lacedaemonian commander. Arrian (Anab. i. 7), describing the route of Alexander from Euphrates to the Indus (Greek and Ukrainian), remarks that Alexander passed by the highlands of Paravaei.—Lisaci and Smólika, with the adjacent mountains.

The seat of this tribe must be confined to the valleys of the main or E. branch of the Aoos, and the mountains in which that river originates, extending from the Acta Stena or Kilaisa, as far S., as the borders of Tympaica and the Molossi, and including the central and fertile district of Koina, with the N. part of Zogoro. (Leake, *Northern Greece*, vol. iv. pp. 115–120, 195.) [E. B. J.]

**PAREMBOLE** (Παραμβόλη), Milet. Brev. p. 188; Parambole, It. Ant. p. 161; It. Hieros, p. 568) was a part or castle (Castra, Plin. v. 9. s. 10) on the borders of Egypt and Aethiopia, and alternately attached to either kingdom. Parambole was situated between Syene and Taphos, on the left bank of the Nile, lat. 23° 40' S. In Roman times it was one of the principal fortresses of the southern extremity of the empire, and was usually occupied by a legion. On the recession of the Roman boundary in DIOCLETIAN's reign, Parembole was handed over to the Nubae, and was frequently assailed by the Oscynae from the opposite bank of the river. (Paus. B. Pers. i. 19.) The ruins of its temples are still seen at the village of Debub or Deboi.

From the square enclosure of brick found there it would seem to have been a penal settlement for criminals as well as a regular station for soldiers. (Kossoin, *Mon. del Colfo*, p. 189.) [W. B. D.]

**PARENTIUM** (Παράντιον: Parantion), a city of estria, on the W. coast of the peninsula, about 30 miles N. of Pola. (Plin. iii. 19. s. 23; Ptol. iii. 1. § 37; Itin. Ant. p. 271; Tab. Peut.; Anon. Rav. iv. 31.) From the mention of the name by STEPHEN of Byzantium (s. c.) it is probable that it existed as an E.-strian town previous to the Roman settlement there. Pliny calls it an "oppidum civium Romanorum," and it would seem that it was already one of the most considerable towns in the province, though it did not then enjoy the rank of a colony. But we learn from inscriptions that it subsequently attained this rank under Trajan, and bore the titles of Colonia Ulpa Parentium (Orell. Inscr. 72, 3729; Lamp. de Colon. p. 402.) In common with the other cities of estria, its most flourishing period belongs to the close of the Western Empire. The modern city of Parentium is a small place, but retains its episcopal see, which dates from a very early period. [E. H. B.]

**PARGEYETAE** (Παργευταί), a tribe who, according to Ptolemy (vi. 18. § 3), occupied part of the chain of the Parigamia (Hindi Kish.). There can be little doubt that they lived along what are now called the Solfu'm Koh, a great chain of mountains which extends nearly SW. from Cabori parallel with the Panjih. There is some doubt as to the correct orthography of their name; and it seems most probable that the real form is Parayetae or Paryetae, which is also given by Ptolemy as the name of another portion of the chain of the Parigamis. Both probably derive their name from the Sanscrit Parova, which means mountains. [V.]

**PARIDION.** [Pandion.]

**PIRIENNA** (Παριέννα), a town of Germany, in the country of the Quadi, was probably situated on the river of Wiona, on the site of the modern Baris or Barum. (Ptol. ii. 11. § 29.)

**PARI** (Paris, Isidor. Man. Ptol. c. 17, ed. Müller), a town mentioned by Isidors of Charax in Dragania, or, as he calls it, Zaragamia. It has been conjectured by Foriger that it is represented by the Modern Parù; Müller, however, thinks it is the same as Bocosa. [V.]

**PARIS!** (Parirn, Ptol. iii. 3. § 17), a British tribe dwelling on the NE. coast of Britannia Romana, and on the left bank of the Abus (Humber), consequently in the *East Riding of Yorkshire*. Their chief town was Petunia (Πετυνια, Ptol. l. c.), which is thought to be the same with the Praetorium of the Itinerary (pp. 464, 466), and whence there was a road through Eboracum (York) to the Roman Wall. Respecting the site of Petunia there have been many conjectures, and it has been variously identified with Beverley, Brough, Adelby, &c. [T. H. D.]

**PARISIL.** [Lutetia.]

**PARIUM** (Παρίον: Eth. Parárdos), a coast-town of Myssia, on the Hellespont, on the west of Priapus, in the district called Adrasteia, from an ancient town which once existed in it (Strab. xiii. p. 588). Pliny, (v. 40) is mistaken in stating that Homer applied the name of Adrasteia to Parium, and the only truth that seems to lie at the bottom of his assertion is that a town Adrasteia did at one time exist between Priapus and Parium, and that on the destruction of Adrasteia all the building materials were transferred to Parium. According to Strabo, Parium was a colony of Milesians, Erythraiens, and Parium; while Pausanias (ix. 27. § 1) calls it simply a colony of Erythrai. According to the common traditions, it had received its name from Parius, a son of Jason. (Eustath. ad Hom. Od. v. 125, ad Dion. Per. 317; Steph. B. N. i. 11. § 9.)

The harbour of Parium was larger and better than that of the neighbouring Priapus; whence the latter place decayed, while the prosperity of the former increased. In the time of Augustus, Parium became a Roman colony, as is attested by coins and inscriptions. It contained an altar constructed of the stones of an oracular temple at Adrasteia which had been removed to Parium; and this altar, the work of Hermogenes, is described as very remarkable on account of its size and beauty. Strabo and Pliny (vii.,
COIN OF PARLUM.

PARMA (Παρμα; Etb. Parmenies; Parmae), a city of Gallia Cispadana, situated on the Via Aemilia, at the distance of 19 M. P. from Regium Lepidum, and 40 from Placentia. (Inin. Ant. p. 286.) It was about 15 miles distant from the Padus, on the banks of a small stream called the Parma, from which it probably derived its name, and about one mile from the more considerable Taurus or Toro. We find no mention of the name before the establishment of the Roman colony, though it is very probable that there already existed a Gaulish town or village on the spot: but in B. C. 183, after the complete subjugation of the Boii, and the construction of the Via Aemilia, the Romans proceeded to strengthen their footing in this part of Gaul by founding the colonies of Mutina and Parma, along the line of the newly opened highway, which, in connection with the two previously existing colonies of Bononia and Placentia, formed a continuous chain of Roman towns, from one end to the other of the Via Aemilia. Parma was a "colonia civium," its settlers retaining their privileges as Roman citizens; it received in the first instance 2000 colonists, each of whom obtained 8 jugera of land for his allotment. (Liv. xxxix. 55.) We hear little of Parma for some time after this: it is mentioned incidentally in B. C. 176, as the head-quarters of the proconsul C. Caius (Id. xii. 17); but appears to have suffered little from the wars with the Gauls and Ligurians; and hence rose with rapidity to be a flourishing and prosperous town. But its name is scarcely mentioned in history till the period of the Civil Wars, when it sustained a severe blow, having in B. C. 43 taken a prominent part in favor of the senatorial party against M. Antony, in consequence of which it was taken by that general, and plundered in the most unexampled manner by his troops. (Cic. de Fam. x. 33, xii. 13, a, xii. 5, Phil. xiv. 3, 4.) Cicero still calls it on this occasion a Colony, and there can be no doubt that it still retained that rank; but under Augustus it received a fresh colony, from which it derived the title of Colony Julia Augusta, which we find it bearing in inscriptions. (Gruter, Inscr. p. 492. 5; Jumpl. de Colon. p. 354.) Pliny also styles it a Colony, and there seems no doubt that it continued under the Roman Empire to be, as it was in the time of Strabo, one of the principal towns of this populous and flourishing part of Italy. (Plin. iii. 15. s. 20; Strab. v. p. 216; Ptol. iii. i. § 46; Ptolemais, Macrob. 1.) But its name is scarcely mentioned in history: a proof perhaps of the tranquillity that it enjoyed. Its territory was celebrated for the excellence of its wool, which according to Martial was inferior only to that of Apulia. (Mart. xiv. 153; Colum. vii. 2. § 3.) In A. D. 377, a colony of Goths was settled by order of Gratian in the territory of Parma, as well as the adjoining one of the Taurus. (Ammian. xxiv. 9. § 4) — a proof that they were already suffering from a decay of the population; and it is probable that it did not escape the general devastation of the province of Aemilia by Attila. But it survived these calamities: it still bears a part as an important town during the wars of Narses with the Goths and their allies, and is noticed by P. DIOCLETIANUS, as one of the wealthy cities of Aemilia after the Lombard conquest. (Agath. B. G. i. 14 - 17; P. Dian. Hist. Lang. r. 18.) It retained this position throughout the succeeding ages, and is still a populous and flourishing place with above 30,000 inhabitants, but has no remains of antiquity, except a few inscriptions.

The Roman poet Cassius Parnassius would appear from his name to have been a native of Parma, but there is no distinct testimony to this effect.

The itinerary (p. 284) mentions a line of crossroad which proceeded from Parma across the Apennines to Luca: this must have ascended the valley of the Parmo, or the adjoining one of the Taurus, as far as the main ridge, and thence descended the valley of the Macra to Luna. This passage, though little mentioned in modern times, is one of the main lines of natural communication across this part of the Apennines, and is in all probability that followed by Hannibal on his advance into Etruria. (E. H. B.)

PARMAECAIPHI (Παρμαώιατος), a tribe of Southern Germany, on the east of Mount Albaha and the Danube; they probably occupied the district about the town of Chem in Bavaria. (Ptol. vii. 11. § 24.)

PARNAISSUS (Παρναύσιος) a town in the northern part of Cappadocia, on the right bank of the Halys, and on or near a hill, to which it owed its name, on the road between Anyra and Archelais, about 63 miles west of the latter town. (Polyb. xxv. 4; H. Ant. pp. 144, 206; It. Hieros. p. 576; Geogr. Sacr. p. 253.)

PARNAISSUS MONIS. [DELPHI.]

PARNES, or Attica. p. 321, seq.

PARON. [LACONIA, p. 109.]

PAROECOPOLIS (Παρωεκοπόλεις, Ptol. iii. 13. § 30), a town of Sintice, in Macedonia, on the right of the river Stymphon. Nigrita, on the road from Saloniki to Seres, was either TRISTOLOS (Πτεροκως, Ptol. l. c.) or Paroecopolis, for these are the only two towns besides Heracleia which Trolkeny assigns to Sintice. If Nigrita be assigned to Tristolos, Paroecopolis will be represented by Staphylica, which lies to the N. of the former town. (V. H. B.)

PAROLISSUM. (Παρολίσιος, or Παρολίσιος, Ptol. iii. 8. § 6; PAROLISSO, Tab. Peut.; cf. Orelli, Inscr. No. 3433), a municipal town of Dacia, seated at the termination of the Roman road towards the N. According to Marsilii (ii. p. 85), Ilia; according to Mammert (iv. p. 216), on the Marosch;
above Weissenburg; according to Reinhard, Nyug-
Banja. [T. II. D.]

PAROPAMISDAE [Pαροπαμίσδας or Παρο-
pαμίσδαι, Strab. xvi. p. 691, &c.; Ptol. xvi. 82; Arrian, Anab. v. 3; Ptol. vi. 18; Paropamisus. Meis, l. 2. § 5), the collective name of a number of small tribes who lived along the slopes of the great chain of the Paropamisus (Hindu Kush), and chiefly along its southern and eastern sides. The dis-

The altitudes of these mountains, though not so great as that of the Himalaya, varies from 15,000 to 20,000 feet, it is difficult to determine where the Greeks obtained the name whereby they have recorded these mountains, and which is the best orthography to adopt. Yet it seems not unlikely that Ptolomy is the most correct, and that the Greek Paropamisus we have some traces of the Sans-

extreme end of Taurus, which extended to the Eastern Sea (xv. p. 689). Arrian appears to have thought that Taurus ought to have been the true name of these, as he considers this great chain to extend across the whole of Asia from M. Mycale, which is opposite to Samos. (Anab. v. 5.) But he adds, that it was named Caucasus by the Mac-
donian soldiers to gratify Alexander, as though, in passing into Sogdiana through Bactriana, he had crossed the Caucasus. Under the double name of Taurus and Caucasus, he states his belief that this chain is the watershed of all the great rivers of Asia. (I. c.) Again, in another place, he coincides with the description in Strabo, and asserts that the Indian names of Paropamisus, Emodus, &c., are local titles of the extended chain of the Tauris. (Ind. 2.) Other ancient authors agree more or less with these determinations: thus Meis gives the whole central chain from E to W, the name of Taurus (i. 15, iii. 7); Curtius calls it Caucasus (vii. 3. § 19, viii. 9. § 3); Pline, enumerating the several groups from E to W, gives the name of Caucasus to that portion W, of the Hindū Kush which connects the chain with the Caucasus and Taurus of Western Asia (vii. 17. s. 21); Ptolomy appears to have considered the Paropamisus part of the Caucasus (vii. 18. § 1); lastly, Ptolemy, speaking of the Oxus, states that it enters its waters from the Caucasus (x. 46, xi. 92). It has been suggested that the present name of Hindū Kush is derived from Indicus Caucasus. [V.]

PAROS (Πάρος: Eth. Paropius), a town of Sicily mentioned by Polybius (i. 24) during the First Punic War, in a manner that seems to indi-
cate its site between Panormus and Thermae (Ter-
mint). It is not noticed by any of the geographers except Pline, who mentions it in his list of the stipendious towns of Sicily (Plin. iii. 8. s. 14); and in another passage (Th. § 98) speaks of this island of Utica as lying "contra Paropinos." This is all the clue we have to its position, and its exact site cannot therefore be determined. [E. H. B.]

PAROENAATAE. [ELIS, p. 818, a.]

PAROHEIA. [MEGALOPOLEIS, p. 309, b.]

PAROHEIA (Παροχεία), a city of Thrace on the borders of Macedonia (Liv. xxxvi. 27, xxi. 51.) is called by Stephanus B. (s. c.) a city of Macedonia. Its inhabitants are mentioned by Pline (iv. 10. s. 17) under the name of Params, which is the name of the place here mentioned.

PARORIOS. [PHRYGIA.]

PAKOS or PARUS (Πακός: Eth. Pákos: Paro), an island in the Aegean sea, and one of the largest of the Cyclades, lies west of Naxos, from which it is separated by a channel about 6 miles wide. It was said to have been originally inhabited by Cretans and Arcadians, and to have received its name from Parus, a son of the Arcadian Parnassus. (Callimach. op. Steph. B. b. c.) It was also reported to the names of Praxia, Deme-
trias, Zacynthus, Hyleicta, Minos, and Cabarhis. (Nicanor, op. Steph. B. b. c.) It was colonised by the Ionians, and became at an early period so pros-
perous as to send colonies to Thasus (Thuc. iv. 104: Strab. x. p. 457), to Parium on the Propontis (Strab. l. c.), and to Pharus on the Illyrian coast. (Strab. vii. p. 315.) After the battle of Marathon, Miltiades in vain endeavoured to subjugate the island. (Herod. vi. 133, seq.; Ephorus, op. Steph. B. b. c.) The Persians did not take part in the battle of Salamis, but kept aloof at Cythus, watching the course of events. (Herod. viii. 67.) They es-
PARRHASIA.

PARRHASIA. [Arcadia, p. 192 b.]

PARISICCI MONTES, a small chain of mountains in the western part of Geosia, beyond the river Arbes, Forbiger has conjectured that they are the same as the present Buskurd Mts. Connected doubtless with these mountains, and in the same district was the Paris of Potomé (vi. 21. § 5), which he calls a metropolis, an opinion in which Marrian assents (c. 24, ed. Müller), and another tribe whom Potomé calls the Parsarae or Paraside (vi. 21. § 4). It seems not unlikely that these are the same people whom Arrian calls Parsa (nd. c. 26) and Phryg Passive (vi. 23. s. 26). [V.]

PARTHALIS (Plin. vi. 18. s. 22), the name given by Pliny to the palace of the rulers of the Caligæ, who lived at the months of the Ganges. The last edition of Pliny by Sillig reads Protalis for the older form, Parthalis. [V.]

PARTHANUM, a town in Rhaeta, on the road from Laurocum to Volcadina, where, according to the Notitia Imperii (in which it is called Parro-

dunum), the first Rhetician cohort was stationed. [Rim. Ant. pp. 257, 275.] Its site is generally identified with the modern Parthenkirchen. [L. S.]

PARTHE'NII-PARRH'NII (Rhoëbeus, Parthênus, Strab. vii. p. 326; Appian, Illyr. 1; Dion Cass. xii. 49; Cic. in Plin. 40; Pomp. M. 1, ii. 3, § 11; Plin. iii. 26), a people of Grecian Illyricum, who may be placed to the N. in the neighbourhood of Epidamnus, and consequently, next to the Taulinti. They are often mentioned in the course of the war with Illyricum, n. c. 229, but as friends rather than foes of the Romans, having submitted at an early period to their arms. (Polyb. ii. 11; Liv. viii. 23. 12.) After the death of the king of Macedon, they appear to have been added to the dominions of Pleuratus, an Illyrian prince allied to the Romans. (Polyb. xviii. 30; Liv. xxx. 34, xiv. 30.) Their principal town was PARTHE'NI (Pârbeâs, Steph. B. s. v.), which was taken by Caesar in the course of his campaign with Pompeius. (Cas. B. c. iii. 41.) In Leake's map the site is marked at Archeuteas (?) The double-hilled Dimallum, the strongest among the Illyrian places, with its two citadels on two heights, connected by a wall (Polyb. iii. 18, vii. 9), was within their territory. There is no indication, however, of its precise situation, which was probably between Liussus and Epidamnus. Of Eugenium and Bargeleum, two other fortresses noticed by Livy (xxix. 12), nothing further is known. [E. B. J.]

PARTHE'NIAS. [Hafrena.]

PARTHE'NIUM (Φάρθηνων βορα), a mountain on the frontiers of Arcadia and Argolis, across which there was an important pass leading from Argos to Tegea. [See Vol. i. pp. 201, 202.] (Paus. viii. 5, § 4; Strab. viii. pp. 376, 389; Polyb. iv. 23; Liv. xxxv. 26; Plin. iv. 6. s. 10.) It was sacred to Pan; and it was upon this mountain that the courier Phileippides said that he had had an interview with Pan on returning from Sparta, whither he had gone to ask assistance for the Athenians shortly before the battle of Marathon. (Herod. vi. 105; Paus. i. 28. § 4; vii. 54. § 6.) The pass is still called Partheni, but the whole mountain bears the name of Ikéno. It is 3993 feet in height. (Leake, Morea, vol. ii. p. 329, seq.; Peloponnesica, p. 203.)

PARTHE'NIUM (Φάρθηνων), a town in Mysia, in the south of Pergamum, (Xenoph. Abyb. vii. 8, §§ 15, 21; Plin. v. 33.) Its exact site has not been ascertained. [L. S.]

PARTHE'NIUM MARE (Φάρθηνων πέλαγος, Greg. Naz. Or. xix.), the eastern part of the Mare Internum, between Egypt and Cyprus. (Arnim, Marc. xiv. 8. § 10; from which writer it also appears that it was sometimes called the Issiac Sea — "a vespera (Aegyptus) Issiaco disjungitur mari, quod quidam nominavere Turthennium," xxii. 15. § 2.)

PARTHE'NIUM (Φάρθηνων), the most important river in the west of Phaphigonia. It owes its Greek name probably to a similarity in the sound of its native appellation, which is still Iovtcan-Swa or Esar- tine; though Greek authors failed to it derived its name from the fact that Artenius loved to bathe in its waters (Scymn. 226, foll.) or to hunt on its banks, or from the purity of its waters. The river has its sources on mount Oljassys, and in its north-western course formed the boundary between Phaphigonia and Bithynia. It empties itself into the Euxine about 90 stadia west of Ammarius. (Heau.}
PARTHIANOPE.

II. ii. 854; Hes. Thagh. 344; Herod. ii. 104; Xenoph. Anab. vi. 6; § 9, vi. 2; § 1; Strab. xii. p. 543; Prot. vi. 1; § 7; Arrian, Perip. ii. 1; Liv. 258. a. n., who erroneously states that the river flowed through the middle of the town of Amatia; Or. Ex Pont. iv. 10. 49; Ann. Marc. xxiii. 9.) [L. 8.]

PARTHIE NOPE. [NEAPOLIS.]

PARTHIA (ΝΕΑΠΟΛΙΣ, Strab. xi. pp. 514, 515, &c.; ΝΕΑΠΟΛΙΣ, Polyb. x. 28; Steph. B. s. n.; Curt. v. 12; Polyb. Prot. vi. 3; § 1; Parthis, Plin. vi. 15 s. 16), originally a small district of Western Asia, shut off in all sides by either mountains or deserts. It was bounded by Media, Moeastem, Parochothrass, and Persia. It comprehended, therefore, the southern part of Khwvistan, almost all Kohistan, and some portion of the great Salt Desert. It was for the most part a mountainous and rugged district. The principal mountains were the Labus or Labatas (probably part of the great range now known by the name of the Elburz Mts.), the Parochothrass (or Parochothass), and the Arzait (or Arzait), which it possessed were little more than mountain streams, liable to violent and sudden floods on the melting of the snow, but nearly dry during the summer: the only names which have been recorded of these streams are, the Zhidheris or Stibocetes, the Rindagus, and the Chastres. The principal divisions of the land were into Cambesia, on the north; Parthyene, to the SW. of Camisene, extending along the edge of the Caspian Sea, as far as the Caspian Gates, a district which some have supposed to have been the original seat of the population, and that from which the whole country derived its name; Choarene, the western portion of the land, and for the most part a fruitful valley along the frontiers of Media; Apvaracetene, to the S.; and Tabiene, along the borders of Cambesia. There were no great towns in Parthia, properly so called, but history has preserved the names of a few which played an important part at different periods: of these, the best known were Hecatopolis, the chief town of the Parthyene, and the principal residence of the dynasty of the Arsacides, and Apamia Khzghana.

Little is known of Parthian history at an early period; and it is probable that it was subject to the great empire of Persia, and subsequently to the first successors of Alexander, till the first Araxes threw off the Syro-Macedonian rule, and established a native dynasty on the throne of Parthia in n. c. 256. From this period it grew rapidly more powerful, till, on the final decay of the house of the Seleucidae, the Arsacidian dynasty possessed the rule of the greater part of Western Asia. Their long wars with the Romans are well known; no Eastern race was able to make so effectual a resistance to the advance of the Roman arms, or vindicated with more constancy and determination their natural freedom. The overthrow of Crassus, n. c. 53, showed what even the undisciplined Parthian troops could do when fighting for freedom. (Dion Cass. xi. 21.)

Subsequent to this, the Romans were occasionally subjected. This, in a.d. 24, V Tennessee was sent as a hostage to Barbar (Parthia, ii. 155, 15); shortly after the greater part of the country was subdued, successively, by the arms of Trajan, by Antoninus, and Caracalla, till, at length, the rise of the new Sassanians, or native dynasty of Persia, under the command of Artaxerxes I. put an end to the history of Araxes (a.d. 226). Subsequent to this period there is a constant confusion in ancient authors between Persians and Parthians. The history of the Parthian kings is given at length in the Dict. of Rom. Vol. i. p. 355, seq.

The inhabitants of Parthia were called Parthsezi (Παρθεσαι, Polyb. x. 31; Strab. xi. p. 509; Arrian, Anat. iii. 21; Prot. iii. 13; § 41) or Partii (Πάρθοι, Herod. iii. 93; Strab. xi. p. 524; Plin. vi. 23, § 28; Ann. Marc. xxiii. 6), and were, in all probability, one of the many branches of the great Indo-Germanic family of nations. Their own tradition (if, indeed, faithfully reported) was that they came out of Syria, and the names of some of their kings were placed by Herodotus, who, indeed, classes them with the people of Chosannis and Scordiana (iii. 39, vii. 66); and Strabo admits that their manners resembled those of the Scythians (xi. p. 515). In modern research, however, modern research has demonstrated their direct connection with the Iranian tribes; their name is found in the Zend to be Parthav, in the Sanscrit, Puravada. (Bentley, Review of Warden's Ariens, Berl. Jahrh. 1844, No. 107, p. 125.)

In the reign of his authority, the Parthians were governed by a double council, composed of the nobles or relatives of the king (according as the reading εὐγενῶν or συγ-γενῶν be adopted), and of the Magians (xi. p. 515). As a nation, they were famous for their skill in the management of the horse and for their use of the bow (Dion Cass. xi. 15, 22; Dionys. 1043; Plut. Crass. c. 24), and for the peculiar art which they practised in shooting with the bow from horseback when retreating. This peculiarity is repeatedly noticed by the Roman poet. (Vig. Georg iii. 31, Horat. Carm. i. 19. 11, i. 13. 17; Ovid, Art. Am. i. 209.) In their treatment of their kings and nobles they were considered to carry out their adulation even beyond the usual Oriental excess. (Vig. Georg. iv. 211; Martial, Epigr. x. 72, 1—5.) [V.]

PARTHINI. [PARTHINI.]

PARTHICUM (Πάρθων or Παρθών, Appian, Pan. viii. 39), a town in the jurisdiction of Carthage, in the neighbourhood of Zama. (Carth. v. 41.)

PARTHUM (Παρθινία, [PARTHINI.]

PARUS [PAROK.]

PARUTAE (Παρωταί, Prot. vi. 17. § 3), a tribe placed by Ptolemy on the outskirts of the Paropamisus in Ariana. It is probable that these people derive their name from the Sanscrit Puravata, meaning mountain tribes. [V.]

PARYADES (Παραδές, Παραδής, or Παραδής), a range of lofty and rugged mountains in the north of Pontus, which is connected with Mount Taurum and Mount Causanus (Strab. x. p. 497, xi. p. 548; Plin. vi. 27, vii. 9. 11). It commences at the western extremity of the Montes Moschici, proceeds in a south-western direction round Pontus, and there forms the frontier between Armenia and Cappadocia. A more southern branch of the same mountain is the Sosculites. Ptolemy (v. 13. §§ 3, 9) describes this mountain as containing the sources of the Euphrates and Araxes, and accordingly includes within its range Mount Amanus, from which others make those rivers flow. The Paryades contains the sources of many of the rivers of which the largest is the Araxes. The mountain was in ancient times thickly covered with wood, and the population upon and about it consisted of robbers (Strab. xii. p. 548). Many parts of the mountain are extremely rugged, and almost inaccessible, whence Mithridates of Pontus built many of his treasure-houses there, and
when pursued by Pompey, concealed himself in its fastnesses. In a climatic point of view the mountain divides Persis into two distinct regions; for while the north side is stern and cold, its southern side is delightfully mild. The ancients called the point of transition in a pass between Trapezaus and Satale, the Frigidarium. The modern name of the mountain is generally Kuttug, but it is also called Kara Bel. (Tourcoetz, Voyage i. lettre 18. p. 107.)

[PARYETAE. PARGYETAE.] PARSAGADEAE (Parsagādā), according to Herodotus, one of the three chief tribes of the ancient Persians (i. 125); according to Strabo, a people of the adjoining province of Carmania (Ptol. vi. 8. § 12; Dionys. v. 1069). The probability is, that they were the inhabitants of Pasargadai in Persis.

[PARSAGADEAE (Parsagādā), Strab. xv. 730), a great city of the early Persians, situated, according to the best authorities, on the small river Cyrus (now Kīr), in a plain on all sides surrounded by mountains. It contained, according to Strabo, a palace, the treasures, and other memorials of the Persian people. Above, however, not so magnificent as Persepolis, was highly esteemed by that people for its antiquity (xv. 728). In another place the same geographer states that the most ancient palace was at Pasargadai; and in its immediate neighbourhood the tomb of Cyrus, who had a regard for the spot, as that on which he finally overthrew Astyages the Mede (xv. 730). It is by the notice of the tomb of Cyrus in Strabo (l. c), and more fully in Arrian (vii. 29), that we are now enabled to identify the site of the ancient Pasargadai with the modern Murghab. At Murghab a building has been noticed by many modern travellers, and especially by Morier and Ker Porter, which corresponds so well with the description in ancient authors that they have not hesitated to pronounce it the tomb of Cyrus; and the whole adjoining plain is strewn with relics of the once great capital. Among other monuments still remaining is a great moon-stone, on which is a bas-relief, and above the relief, in cuneiform characters, the words "I am Cyrus, the king, the Achaemenian." The same inscription is found repeated on other stones. (Morier, Travels, i. p. 50, pl. 29; Ker Porter, i. p. 500; Lassen, Zeitschrift, vi. p. 152; Burnouf, Memoire, p. 169; Ouseley, Travels, ii. pl. 49.) The name of the place is found in different authors differently written. Thus Pliny writes "Passargadae" (vi. 26. s. 29), Ptolemy "Pasargadae" (vi. 4. § 7). Sir W. Ouseley (l. c.) thinks that the original name was Passargada, the inhabitants of the Persians, on the analogy Dakob-gerd, Fīrūz-gerd, &c.

[PARSAGADEAE (Parsagādā), Strab. l. c.; Lycoph. 920; Horat. Carm. ii. 4, 64; Stat. Theb. 1696; Ox. Met. i. 515; Virg. Aen. iv. 143; Pomp. Mela, i. 15.) Herodotus (i. 182) says that the oracle of Apollo was delivered by a priestess only during a certain period of the year; and from Servius (ad Aen. l. c) we learn that this period was the six winter months. It has been supposed that the town was of Phoenician or Semitic origin; but whatever may be thought on this point, it seems certain that at a later period it received Doric settlers from Crete; and the worship of Apollo was certainly Dorian. Strabo informs us that Ptolemy Philadelphus of Egypt, who enlarged the city, gave it the name of Arsinoe; but that it nevertheless continued to be called by its ancient name, Patara. The place is often noticed by ancient writers as one of the principal cities of Lycia, as by Livy, xxxii. 41, xxvii. 15—17, xxxvii. 39; Ptol. xxi. 26; Cic. p. Flor. 52: Appian, B. C. iv. 59, 81, Mithr. 27; Plut. ii. 112, v. 28; Ptol. v. 3. § 3, viii. 17. § 22; Dionys. Per. 129, 507. Patara is mentioned among the Lydian bishoprics in the Acts of Councils (Hieroc. p. 684), and the name Patara is still attached to its numerous ruins. These, according to the survey of Capt. Beaufort, are situated on the sea-shore, a little to

PATARA. 555

Pasir. The inhabitants were called Pasiarne or Pasirens. Pliny places the Pasirne along the river Tomeron or Tumeres (vi. 25. s. 57). Near Patara, however, makes the Tomeres flow at a distance of 900 stadia from Patara. It is probable that the Rhagirana of Ptolemy refers to Bagisaura or Pasiria (vi. 21. § 2).

[PARSAGADEAE.] PASSALAE (Pasaralā), Prot. vii. 2. § 15), a tribe in India extra Gangem, placed by Ptolemy between the Imaus and the M. Bperyurus. They must therefore have occupied some of the mountain-valleys on the eastern side of Tibet. Pliny mentions them also (viii. 9. § 22).

PASSARON (Pasarow), the ancient capital of the Moissai in Epeirus. The kings and assembled people were accustomed to take mutual oaths, the one to govern according to the laws, the other to defend the kingdom. (Plut. Pyrrh. 5.)

The town was taken by the Roman praetor L. Anicius Gallus in b. c. 167. (Liv. xiv. 26. 33, 34.) Its site is uncertain, but it was apparently on the sea-coast, as Anna Comnena mentions (vi. 3. p. 284, ed. Beul.). The spot, accordingly, was occupied as a harbour, called Passaron on the coast of Epeirus. If this place is the same as the older Passaron, the ruins at Drahmatias, which lie inland in a SW. direction from Ioannina, cannot be those of the ancient capital of the Moissai. Those ruins are very considerable, and contain among other things a theatre in a very fine state of preservation. (Leuke, Northern Greece, vol. iv. p. 81.)

PATARA (Pātra: Etb. Pātraiōs, Pataramen or Pataranaus). A small town in Carphadai or Armannia Minor. (Tab. Pont.)

2. A flourishing maritime and commercial city on the south-west coast of Lycia. The place was large, possessed a good harbour, and was said to have been founded by Patarus, a son of Apollo. (Strab. xiv. p. 666; Steph. B. s. v.) It was situated at a distance of 60 stadia to the south-east of the mouth of the river Xanthus. (Suidas. Mar. Mag. § 219.) Patara was most celebrated in antiquity for its temple and oracle of Apollo; of Apollo a temple, called Passaron, at a distance of one, and nearer only to that of Delphi; and the god is often mentioned with the surname Patarus (Pataros, Strab. l. c.; Lycoph. 920; Horat. Carm. iii. 4, 64; Stat. Theb. 1696; Ox. Met. i. 515; Virg. Aen. iv. 143; Pomp. Mela, i. 15.) Herodotus (i. 182) says that the oracle of Apollo was delivered by a priestess only during a certain period of the year; and from Servius (ad Aen. l. c) we learn that this period was the six winter months. It has been supposed that the town was of Phoenician or Semitic origin; but whatever may be thought on this point, it seems certain that at a later period it received Doric settlers from Crete; and the worship of Apollo was certainly Dorian. Strabo informs us that Ptolemy Philadelphus of Egypt, who enlarged the city, gave it the name of Arsinoe, but that it nevertheless continued to be called by its ancient name, Patara. The place is often noticed by ancient writers as one of the principal cities of Lycia, as by Livy, xxxii. 41, xxvii. 15—17, xxxvii. 39; Ptol. xxi. 26; Cic. p. Flor. 52: Appian, B. C. iv. 59, 81, Mithr. 27; Plut. ii. 112, v. 28; Ptol. v. 3. § 3, viii. 17. § 22; Dionys. Per. 129, 507. Patara is mentioned among the Lydian bishoprics in the Acts of Councils (Hieroc. p. 684), and the name Patara is still attached to its numerous ruins. These, according to the survey of Capt. Beaufort, are situated on the sea-shore, a little to
the eastward of the river Xanthus, and consist of a theatre excavated in the northern side of a small hill, a ruined temple on the side of the same hill, and a deep circular pit, of singular appearance, which may have been the seat of the oracle. The town walls surrounded an area of considerable extent; they may easily be traced, as well as the situation of a castle which commanded the harbour, and of several towers which flanked the walls. On the outside of the walls there is a multitude of stone sarcophagi, most of them bearing inscriptions, but all, open and empty; and within the walls, temples, altars, pedestals, and fragments of sculpture appear in profusion, but ruined and mutilated. The situation of the harbour is still apparent, but at present it is a swamp, choked up with sand and bushes." (Beaufort, "Karaeunia," pp. 2, 6.) The theatre, of which a plan is given in Leake's Asia Minor (p. 320), was built in the reign of Antoninus Pius; its diameter is 265 feet, and has about 30 rows of seats. There is no trace of the theatre, which, according to an inscription upon them, were built by Vespasian. (Comp. Sir C. Fellows, "Tour in Asia Min." p. 222, fol.; "Discor. in Lycea," p. 179, fol.; Texier, "Descript. de l'Asie Min.," which contains numerous representations of the ancient remains of Patara; Spratt and Forbes, "Travels in Lycea," i. p. 31, fol.)

PATAVISSA. (Παταβίσσα, Proct. iii. 8. § 7, wrongly), a small town of Eucia, endowed by the emperor Severus with the jurisdiction of a town (Dig. i. 8. 9, where it is called Patavismium vicus, Varro). It is only a small town by tradition to Strabo, situated on the river Medusus (Brenta), about 30 miles from its mouth. According to a tradition recorded by Virgil, and universally received in antiquity, it was founded by Antenor, who escaped the defeat of the city, and was the first town that the emperor chose for his native city, confirms this tradition, though he does not mention the name of Patavium, but describes the whole nation of the Veneti as having migrated to this part of Italy under the guidance of Antenor. It is identified with the Veneti, who were mentioned by Homer as a Phalagian tribe. (Liv. i. 1; Virg. "Aen." i. 247; Strab. v. p. 212; Mel. ii. 4. § 2; Solin. ii. 10.) The national affinities of the Veneti are considered elsewhere [VENETI]. The story of Antenor may safely be received as mythical, but we may infer from the general accordance of ancient writers that Patavium itself was a Venetian city, and apparently from an early period the capital or chief place of the nation. We have very little information as to its history, before it became subject to Rome, and we know only the general fact that it was at an early period an opulent and flourishing city; Strabo even tells us that it could send into the field an army of 120,000 men; but this is evidently an exaggeration, and probably refers to the whole nation of the Veneti, of which it was the capital. (Strab. v. p. 213.) Whatever was the origin of the Veneti, there seems no doubt they were a people far more advanced in civilisation than the neighbouring Gauls, with whom they were on terms of almost continual hostility. The vigilance rendered necessary by the incursions of the Gauls stood them in stead on occasion of the unexpected attack of Celonus the Lacedaemonian, who in n. c. 301 landed at the mouth of the Medusus, but was attacked by the Patavians, and the greater part of his forces cut off. (Liv. x. 2.)

It was doubtless their continual hostility with the Gauls that led the Venetians to become the allies of Rome, as soon as that power began to extend its arms into Chalapine Gaul. (Pol. ii. 23.) No special mention of Patavium occurs during the wars that followed; and we are left to infer from analogy the steps by which this independent city passed gradually under the dependence and protection of Rome, till it ultimately became an ordinary municipal town. In n. c. 174 it is clear that it still retained at least a semblance of independence, as we hear that it was distracted with domestic dissensions, which the citizens appealed to Rome to pacify, and the consul M. Aemilius was selected as deputy for the purpose. (Liv. xii. 27.) But the prosperity of Patavium continued unbroken: for this city was at once the most important centre of its province, and the manufacturing industry of its inhabitants as to the natural fertility of its territory. The neighbouring hills furnished abundance of wool of excellent quality; and this supplied the material for extensive woollen manufactures, which seem to have been the staple article of the trade of Patavium, that city supplying Rome in the time of Augustus with all the finer and more costly kinds of carpets, hangings, &c. Besides these, however, it carried on many other branches of trade, and the salt which was the wealth arising from these sources that, according to Strabo, Patavium was the only city of Italy, except Rome, that could return to the census not less than 500 persons of fortunes entitled them to equestrian rank. (Strab. iii. p. 169, v. pp. 213, 218.) We cannot wonder, therefore, that both he and Mela speak of it as unquestionably the first city in this part of Italy. (Id. v. p. 213; Mela. ii. 4. § 2.)

The Patavians had been fortunate in escaping the ravages of war. During the Civil Wars their name is scarce mentioned, except when their arms were called to the aid of the Antones. (Liv. x. 12.) But in n. c. 43 they took part with the senate against M. Antonius, and refused to receive his emissaries. (Cic. "Phil." xii. 4.) It was probably in consequence of this, that at a later period they were severely oppressed by the exactions of Asinius Pollio. (Macrobr. "Sat." i. 11. § 22.) And in this period 69 Patavium was occupied without opposition by the generals of Vespasian, Primus, and Varus, during their advances into Italy. (Tac. "Hist." iii. 6.) From its good fortune in this respect there can be no doubt that Patavium continued down to a late period of the Empire to be a flourishing and wealthy city, though it seems to have been gradually eclipsed by the increasing prosperity of Aquileia and Mediolanum. Hence Ausonius, writing in the fourth century, does not even assign it a place in his Ordo Nobilium Urbium. But its long period of prosperity was abruptly brought to a close. In A. D. 452 it fell the full fury of Attila, who, after the capture of Aquileia, which had long resisted his arms, had waited almost without opposition the remaining cities of Venetia. He is said to have utterly destroyed and razed to the ground Patavium, as well as Concordia and Altinum (P. "Diac. Hist. Miscell. xiv. p. 549); and, according to a tradition, which, though not supported by contemporary evidence, is probably well founded, it was on this occasion that a large number of fugitives from the former city took refuge in the islands of the lagunes, and there founded the
PATAVIUM.

celebrated city of Venice. (Gibbon, ch. 35, note 55.) But Patavium did not cease to exist, and must have partially at least recovered from this calamity, as it is mentioned as one of the chief towns of Venetia when that province was overrun by the Lombards under Alboin, in A.D. 568. (P. Diac. Hist. Lang, i. 14.) It did not fall into the hands of that people till near 40 years afterwards, when it was taken by Agilulf, king of the Lombards, and burnt to the ground. (Id. iv. 24.) But it again possesses the island, and in the middle ages again became, as it has continued ever since, one of the most considerable cities in this part of Italy, though no longer enjoying its ancient pre-eminence.

It is probably owing to the calamities thus suffered by Patavium, as well as to the earthquakes by which it has been repeatedly visited, that it has now scarcely any relics of its ancient splendour, except a few inscriptions; and even these are much less numerous than might have been expected. But there is preserved with great care in the town-hall as containing the name of T. Livius, which has been supposed to refer to the great historian of the name, who, as is well known, was a native of Patavium. But this is clearly a mistake; the inscription in question refers only to an obscure freedman; nor is there the slightest foundation for regarding the sarcophagus preserved with it as the tomb of the celebrated historian. (Blaug. Diet. Vol. II. p. 790.) But at least the supposed inscription was more plausible than that which assigns another ancient sarcophagus (discovered in 1274, and still preserved in the church of S. Lorenzo) as the sepulchre of Antenor. Besides these sarcophagi and inscriptions, the foundations of ancient buildings have been discovered in various parts of the modern city, but nothing now remains above ground.

Patavium was the birthplace also of Thrasea Patakas, who was put to death by Nero in A.D. 66. One of the causes of offence which he had given was by assisting as a tragedian in certain games; some of which were celebrated at Patavium every 30 years in honour of Antenor, a custom said to be derived from the Trojan founders of the city. (Tac. Ann. xvi. 21; Dion Cass. livii. 26.) We learn also from Livy that in his time the memory of the defeat of the Spartan Cleonymus was preserved by an annual mock fight on the river which flowed through the midst of the town. (Liv. x. 2.) [E. II. B.]

PATAVIUM (Parravio), a town of Biturigia on the south of Lake Aesculapium, between the Sinus Antaeum and the Sinus Cianus. (Pol. v. i. § 13.) [L. S.]

PATERNUM, a town on the E. coast of the Bruttian peninsula, mentioned only in the Itinerary of Antoninus (p. 114); from which we learn that it was situated 27 miles from Rosciannum (Rosano), probably in the neighbourhood of the Capo dell'Acie, the ancient Cape Crimissa; but the supposition that it was the same place with the more ancient city of Crimissa is a mere conjecture; as is also its identification with the modern town of Cireò.

The name of Paternum again occurs in early ecclesiastical records as the see of a bishop, but afterwards wholly disappears. (Holsten. Not. ad Cluc. p. 207; Romanelli, vol. i. p. 213.) [E. II. B.]

PATHESIS. [Tithes.]

PATIGRAN (Ammian, xxiii. 6), one of the three principal towns mentioned by Ammianus Marcellinus in Media. This place is nowhere else noticed; but it is not impossible that the name is barbarous corruption of the Tigrans of Polony (vi. 2. § 9). [V.]

PATMOS (Pataros: Patnoe), one of the Sporades Insulae, in the south-east of the Aegean, to the west of Lepsa and south of Samos, is said to have been 30 Roman miles in circumference. (Pliny, iv. 23; Strab. x. p. 488; Timæyd. iii. 23; Estabh. ad Dion. Per. 530.) On the north-eastern side of the island there was a town with a harbour of the same name (Liv. ii. 34. 5; Paus. v. 20. 5; P�XXX. 2.) and the promontory Amazonium (Stobæus, Mem. Mont. p. 488, ed. Hoffmann). This little island is celebrated as the place to which St. John was banished towards the close of the reign of Domitian, and where he is said to have composed the Apocalypse (Rev. i. 9). A cave is still shown in Patmos where the apostle is believed to have received his revelations. (Comp. Iren. ii. 22; Euseb. Hist. Eccl. iii. 18; Dion Cass. viii. 1.) The island contains several churches and convents, and a few remains of the ancient town and its castle. (Walpole, Turkey, tom. ii. p. 43; Ross, Reisen auf den Griech. Inseln, vol. ii. p. 128, foll.)

PATRAE (Patria); in Herod. i. 145, Pátrías, properly the name of the inhabitants: Eth. Pátrías, Thuc.; Pátrawwós, Pol. iv. 6; Patrenias: Patrasos, Patroos, Patrae), a town of Achaia, and one of the twelve Achaean cities, was situated on the coast, W. of the promontory Rhium, near the opening of the Corinthian gulf. (Herod. i. 145; Pol. ii. 41; Strab. viii. p. 386.) It stood on one of the outlying spurs of Mount Panachaicus (Voïdhió), which rises immediately behind it to the height of 6322 feet. It is said to have been formed by an union of three small places, named Aroé (Aroũ), Antílea (Antílea), and Mesatis (Mesárí), which had been founded by the Ionians, when they were in the occupation of the country. After the expiration of the Ionians, the Achaean hero Patraeus withdrew the inhabitants from Antílea and Mesatis to Aroé, which he enlarged and called Patrae after himself. The acropolis of the city probably continued to bear the name of Aroé, which was often used as synonymous with Patrae. Strabo says that Patrae was formed by a confluence of seven demai; but this statement perhaps refers to the restoration of the town mentioned below. (Pans. vii. 18. § 2, seq.; Strab. viii. p. 337.) In the Peloponnesian War Patrae was the only one of the Achaean cities which espoused the Athenian cause; and in B.C. 419, the inhabitants were persuaded by Alcibíades to connect their city by means of long walls with its port. (Thuc. v. 52; Plat. Ale. 15.) After the death of Alexander the city fell into the hands of Cassander, but his troops were driven out of it by Aristodemus, the general of Antigonus, B.C. 314. (Diod. xiv. 66.) In B.C. 280 Patrae and Dyne were the first two Achaean cities which expelled the Macedonians, and their example being shortly afterwards followed by Tritana and Pharea, the Achaean League was renewed by these four towns. [See Vol. i. p. 15.] In the following year (B.C. 279) Patrae was the only one of the Achaean cities which sent assistance to the Aetolians, when their country was invaded by the Gauls. In the Social War Patrae is frequently mentioned as the port at which Philip landed in his expedition into Peloponnesus. In the war between the Achaeans and the Romans Patrae suffered so severely, that the greater part of the inhabitants abandoned the city and took up their abodes in the surrounding villages of Mesatis, Au-
theia, Bolina, Aryga, and Arba. (Pol. v. 2, 3, 28, &c.; Paus. vii. 18. § 6; Vol. xi. 3.) Of these places we know only the position of Bolina and Aryga. Bolina was a little S. of the promontory Drepanum, and gave its name to the river Bolinae. (Paus. vii. 24. § 4.) Aryga was a little S. of the promontory Rhinum. (Paus. vii. 23. § 1.) Patrae continued an insignificant town down to the time of Augustus, although it is frequently mentioned as the place at which persons landed going from Italy to Greece. (Cic. ad Paus. vii. 28. xvi. 1. 5, 6. ad Att. v. 9, vii. 2.) After the battle of Pharsaia (n.c. 48) Patrae was taken possession of by Cato, but shortly afterwards surrendered to Calenus, Caesar's lieutenant. It was here also that Antony passed the winter (32—31) when preparing for the war against Augustus; and it was taken by Agrippa shortly before the battle of Actium. (Dio Cass. xiii. 13. 14. 1. 9. 13.) It owed its restoration to Augustus, who resolved after the battle of Actium to establish two Roman colonies on the western coast of Greece, and for this purpose made choice of Nicopolis and Patrae. Augustus colonized at Patrae a considerable body of his soldiers, again collected its inhabitants from the surrounding villages, and added to them those of Rhypes. (Paus. vii. 18. § 7; Plin. iv. 5.) He not only gave Patrae dominion over the neighbouring towns, such as Philapae (Paus. vii. 22. § 4). Dyrr. (Paus. vii. 17. § 5). Tritaea (Paus. vii. 23. § 6), but even over Locria. (Paus. x. 38. § 9.) On coins it appears as a Roman colony with the name of Colonia Augusta Arua Patraeana. Strabo describes it in its time as a populous place with a good anchorage, and Pausanias has devoted four chapters to an account of its public buildings. (Strab. viii. p. 387; Paus. vii. 18—21.) Of these the most important appear to have been a temple of Artemis Laphroa, in the apodyterion, with an ancient statue of this goddess, removed from Calydus to Patrae by order of Augustus, and in whose honour an annual festival was celebrated; the Odeum, which was the most magnificent building of the kind in Greece, after the Odeum of Herodes at Athens; the theatre; and on the seaside a temple of Demeter, which was remarkable on account of a well in front of it, which was supposed to foretell the fate of sick persons; a mirror was suspended over the water, and on this mirror there were certain appearances indicating whether the person would live or die. In the time of Pausanias Patrae was noted for its manufacture of byssus or flax, which was grown in Elis, and was woven at Patrae into head-dresses (κεφαλεία) and garments. Women were employed in this manufacture, and so large was their number that the female population was double that of the male; and as a natural consequence there was great immorality in the town. (Paus. vii. 21. § 14.) Patrae has continued down to the present day to be one of the most important towns in the Morea, being admirably situated for communication with Italy and the Adriatic, and with eastern Greece by means of the gulf of Corinth. It is frequently mentioned in the Byzantine writers. (In A.D. 347 there was an archbishop of Patrae at the council of Sardica. In the sixth century it was destroyed by an earthquake. (Ioseq. Goth. iv. 25.) It is subsequently mentioned as a dukedom of the Byzantine empire; it was sold to the Venetians in 1408; was taken by the Turks in 1416; was recovered by the Venetians in 1533; but was shortly afterwards taken again by the Turks, and remained in their hands till the Greek revolution.

The country around Patras is a fine and fertile plain, and produces at present a large quantity of cresses, which form an article of export. The modern town occupies the same site as the ancient city. It stands upon a ridge about a mile long, the summit of which formed the acropolis, and is now occupied by the ruins of the Turkish citadel. From the town there is a beautiful sea-view. "‘...the outline of the land on the opposite side of the gulf, extends from the snowy tops of Parnassus in the east, to the more distant mountains of Acrania in the same direction, while full in front, in the centre of the prospect, are the colossal pyramids of Kukiskela (the ancient Tablissodus) and Varisoara (the ancient Chalcis), rising in huge perpendicular masses from the brink of the water." (More, Tour in Greece, vol. ii. p. 300.) There are very few remains of antiquity at Patras. The modern citadel contains some pieces of the walls of the ancient acropolis, and there are ruins of the Roman aqueduct of brick. The well mentioned by Pausanias is still to be seen about three quarters of a mile from the town under a vault belonging to the remains of a church of St. Andrew, the patron saint of Patras. Before the Greek revolution, in which Patras suffered greatly, its population was about 10,000; but its present population is probably somewhat less. (Leake, Morea, vol. ii. p. 123, seq.)

**PATTALA.**

**PATROCLI INSULA.** (Πατρόκλου νήσος, Paus. i. § 1, i. 35. § 1; Steph. B. s. v.; Πατρόκλου χώρος, Strab. ix. p. 398), a small island off the southern coast of Attica, west of the promontory Sounion, so called from Patroclus, one of the generals of Troilus and Philadelpbus, who was sent by this king to assist the Athenians against the Macedonians, and who built a fortress on the island. It is now called Gattiharonnisi. (Leake, Demi of Attica, p. 62, 2nd ed.)

**PATTALA** (Παττάλα, Arrian, v. 4. vi. 17; η Παττάλα, Ptol. vii. i. § 59), a town in Western India, situated at the point of land where the western arm of the Indus is divided off into two chief branches, which, flowing to the south, enclose what has been popularly called the delta of that river. There can be no doubt that this place is represented by the present Tatta. Arrian states that it derives its name from an Indian word, which signifies delta (v. 4: Ind. c. 2) Alexander the Great appears to have spent some time there, and to have built a castle and docks; and it was from this place that he made his first unfortunate but ultimately successful expedition in ships to the mouth of the Indus (Arrian, vi. 18). The real Indian name of Pattala appears to be the West, in opposition to

**COIN OF PATRÆAE.**
PATALENE.

the East, or land of the Ganges; or, mythologically, the Lower Regions (Ritter, v. p. 476). [V.]

PATALENE (Παταληνή, Strab. xvi. pp. 691, 701; Patalene, Παταληνή, Ptol. vii. 1. § 55; Patale, Plin. vi. 20, 21, 23), the delta-shaped district comprised between the arms of the Indus, and extending from its capital Patalla (now Tatta) to the Indian Ocean. It was a very fertile, flat, marshy country, liable to be constantly overflowed by the waters of the Indus. The ancient writers, on the whole, a tolerably accurate estimate of the size of this delta, Aristobulus stating that it was 1000 stadia from one arm of the river to another, and Nearcatus considering the distance to be 800 stadia; they, however, greatly exaggerated the width of the river, at its point of separation, Onesicritus deeming this to have been as much as 200 stadia (Strab. xv. p. 701). We may presume this measure to have been made during a time of flood. By Marcian, Patalene is comprehended in Gedrosia; but there seems reason to suspect that the present text of Marcian has been tampered with (c. 34, ed. Müller, 1855). Arrian does not distinguish between the town and the district of which it was the capital, but calls them both indiscriminately Patale (Anab. v. 3). The district probably extended along the coast from the present Korioca on the W. to Cutch on the E.

PATUMUS (Πατομος, Herod. ii. 159), a town of Arcadia, on the borders of Egypt, near which Necho constructed a canal from the Nile to the Arabian Gulf. It is probably the Pithom of Scripture (Exod. i. 11), not far from Bubastis, and near the site of the present Belley. [T. H. D.]

PAULUS (Pafione), a river of Liguria, rising in the Maritime Alps, and flowing into the sea under the walls of Nicea (Nice). (Plin. iii. 3. s. 7; Mel. ii. 4. § 9.) It is now called the Pafione, and is a considerable mountain torrent in winter and spring. [E. H. B.]

PAUS. [CLETOR] PAUSILYPS MONS. [NEAPOLIS, p. 410.]

PAUSCLAES (Feth. Pausilumius, a town of Pis- cenum, mentioned only by Pliny (iii. 18. a. 18). It is placed by Holstenius at Monte dell' Olivo, about 5 miles S. of Macerata, on the right bank of the river Chienti, the ancient Flusor. (Holsten. Not. ad Clar. p. 137.) [E. H. B.]

PATAULIA (Παταύλη αΠ. Παταύλη, Ptol. iii. 11. § 12, Punt. Toll), a town in the district of Deultaikos. Its position in the Table accords with that of the modern Djestendil or Ghistendil; and the situation of this town at the sources of the Strymon agrees remarkably with the figure of a river-god, accompanied by the "legend" Σρυμόνωρ, on some of the autonomous coins of Pataulia, as well as with the letters ΕΝ, ΠΑΙΛ, which, on other coins, show that the Pataulitae considered themselves to be Paenitae, like the other inhabitants of the banks of that river. On another coin of Pat- aulia, the productions of its territory are described, namely, gold, silver, wine, and corn (Eckhel, vol. ii. p. 38), which accords with Ghistendil. In the reign of Hadrian, the people both of Pataulia and Serdica added Ulpia to the name of their town, probably in consequence of some benefit received from that emperor. This title, in the case of Pataulia, would seem at first sight to warrant the supposition that it was the same place as Ulpiana, which, according to Procopius (de Aed. iv. 1), was rebuilt by Justinian, with the name of Justinianae Scenitana; and the modern name lends an appearance of confirmation to this hypothesis by its re-embrace to Justiniana. But the fact that Procopius and Hierocles notice Ulpiana and Pataulia as distinct places, is an insurmountable objection to this hypothesis (Ulpia- nana.) Stephanus of Byzantium has a district called Pataellia (Παταληνία), which he assigns to Thrace, probably a false reading. (Leake, Northern Greece, vol. iii. p. 425.)

PAX JULIA (Πάξ Ιουλία, Ptol. ii. 1. § 5; cited in the Geogr. Rov. iv. 43, Tesser Julia), a town of the Turdetani, in the S. of Lusitania, and on the road from Eauria to Elbur (Hist. Ant. pp. 426, 427). But on the subject of this route see Lusitania, Vol. ii. p. 220. It was a Roman colony, and the seat of a Conventus juridicus (Plin. iv. 35); probably the same town as that called Pax Augusta by Strabo (iii. p. 151),—as many towns bore double names in this manner,—notwithstanding that it is placed by him among the Celtici. (Ubert, vol. ii. pt. i. p. 388, and the authorities there cited.) It lay on a hill N. of Julia Myrtillus, and is commonly identified with Beja. [T. H. D.]

PAXI (Πάξι), the name of two small islands, now called Panzo and Antipaxo, situated between Corcyra and Leucas. (Polub. ii. 10; Plin. iv. 12. s. 19; Dion Cass. i. 12.)

PEDAEUM or PEDALUS (Πεδαίος), a place mentioned by Homer (II. xiii. 172), which is said by Eustachius to have been a town in Iona; but it is otherwise entirely unknown. [L. S.]

PEDALIE, a place on the coast of Cilicia, between Pinara and Ale, is mentioned only by Pliny (v. 22), and its exact site is unknown. [L. S.]

PEDALUM (Πεδάλωμ), a promontory in the south-east of Caria, forming the southernmost point of the western coast of the Sinus Glanicus. (Comp. Mela. i. 16; Plin. v. 29; Stradum. Mar. Magn. §§ 228, 233, 234.) Strabo (xiv. p. 651) gives to the same promontory the name of Artemisiana, from a temple of Artemis, which stood upon it; its modern name is Bokosmadhi. (Leake, Asia Minor, p. 223, foll.)

PEDASA (Πεδασά: Edh. Πεδασάεις), also called PEDASUM (Plin. v. 29), an ancient city of Caria, in which the Persians suffered a defeat during the revolt of the Ionians. (Herod. v. 121, vi. 20.) It was once the chief seat of the Leleges. Alexander the Great deprived the place of its independence by giving it over to the Halicarnassians, together with five other neighbouring towns. (Plin. i. c.) In the time of Strabo (xiii. p. 611) the town had ceased to exist, and the name of the district, Pedasia (Πεδασία), was the only remaining memorial of the place. (Comp. Polub. xviii. 27; Steph. B. s. v.) As Herodotus assigns to Pedasa a portion of the territory of Miletus, it is clear that the town must have been situated between Miletus, Halicarnassus, and Stratonicea; but its exact site is still only matter of conjecture, some place at the modern Melasos, and others at Arpik Hiatem, neither of which suggestions is free from inconsistencies. [L. S.]

PEDASUS (Πεδασός), a small town of Mysia, on the river Satnieis, which is mentioned by Homer (Il. vi. 33, xx. 92, xxi. 87), but was deserted in the time of Strabo (xiii. p. 605), who (p. 584) mentions it among the towns of the Leleges, which were destroyed by Achilles. (Comp. Steph. B. s. v. Πεδασά.) Pliny (v. 32) imagines that Pedasus was the same place as that which subsequently bore the name of Aulamyttium; but as Homer distinctly places it on
the river Satiowos, the supposition is impossible.

PEDASUS. [Metthone.]

PEDAEUS (Πέδαιος), the largest river of Cyprus, rising from the eastern side of Olympus, and flowing near Salamis into the sea. (Ptol. v. 14: § 3; Engel, Kaipros, vol. i. p. 37.)

PEDIEIS (Πέδιες), the inhabitants of one of the Phocian towns destroyed by Xenexes. (Herod. viii. 39.) From the order in which it stands in the enumeration of Herodotus, it appears to have stood near the Cephissus, in some part of the plain between Tithorea and Theateis, and is perhaps represented by the ruins at Paled Fipa. (Leake, *Northern Greece*, vol. ii. p. 89.)

PEDENIIUS (Πέδηνιως), a town in the interior of Pisidia, near the Eurymedon, above Aspendus (Strab. xii. p. 570; xiv. p. 667; Steph. B. s. c.; Ptol. v. § 5) Hierocles (p. 631), giving a greater extension to Pamphylia, assigns the town to this province. The town formed a small state by itself, but was always involved in war with the neighbouring Selege. (Polyb. v. 72, &c.) It is also mentioned in the ecclesiastical annals and on coins. (Sestini, p. 96.) Fellows (Asia Minor, p. 196, &c.) is inclined to identify the extensive ruins near the village of Bolecasouse with the ancient Pedeniius; these ruins, however, according to the description by this scarcely known author of Greek origin, but belong to the Roman period. [L. S.]

PEDONIA (Πεδόνια), a town on the coast of Marmarica, before which lay an island of the same name. (Ptol. iv. 5, §§ 32, 75.) This island is also mentioned by Strabo, but in some editions under the name of Sabonia (xvi. p. 799). We may, however, conclude from Polyene that Pedonia is the correct rendering. (See Grockurd’s Strabo, vol ii. p. 357.)

PEDIUM (Πέδιον, Steph. B. Ἐθ. Πεδιόν, Pedania Gallicano), an ancient city of Latium, which appears to have been at one period of considerable importance. It is mentioned by Dionysius as one of the cities which composed the league against Rome in b. c. 493; and there is no doubt that it was, in fact, one of the thirty cities of the Latin League. (Dionys. v. 61; Niebuhr, vol. ii. p. 17.) It is next mentioned among the cities which are said to have been taken by Coriolanus in the campaign of b. c. 488, where its name is associated with those of Labicum and Corium. (Liv. ii. 39; Dionys. viii. 19; Pict. Coriand.) Dionysius terms it at this time a small city (Ib. 36); and it is remarkable that its name does not again occur during the wars of the Romans with the Aquiians, notwithstanding its proximity to the frontier of the two nations. It is next mentioned in b. c. 338, when the Gauls, who had invaded Latium, encamped in its neighbourhood, where they sustained a severe defeat from the dictator C. Sulpinius. (Liv. vii. 12.) During the last great struggle of the Latins with Rome, the Pedes had considerable part. Their name, however, is not mentioned at the first outbreak of the war, though there can be no doubt of their having taken part in it; but, in b. c. 339, Pedum became for a time the centre of hostilities, being besieged by the Roman consul Aemilius, and defended by the allied forces assembled from Tibur, Praeneste, Velvia, Luturnum, and Antium. Aemilius on this occasion abandoned the enterprise; but the next year Camillus again advanced to Pedum, and, and the forces of the Latin league now divided, the Tiburtines and Praenestines alone arrived for its protection. They

were defeated in a great battle by Camillus, and the city of Pedum taken by assault immediately afterwards. (Liv. viii. 12, 13; Fast. Capit.) In the general pacification that followed the Pedani obtained the Roman franchise, but on the same terms as the Lamuvians, that is to say, without the right of the suffrage. (15. 14.) From this time not only do the name of the people disappear from history, but, though we find no mention of the town of Pedum, which appears to have rapidly fallen into decay. The "Pedans aeger," or "regio Pedana," is alluded to both by Cicero and Horace; but in Pliny’s time even the "populus" had become utterly extinct, and we find no subsequent trace of the name. (Cic. ad Att. ix. 15; Hor. Ep. i. 4. 2; Plin. iii. 5. s. 9.) Hence the only clue to its position is derived from the passages already cited, and from the statement of the old scholar on Horace (Schol. Crug. ad l.c.) that it was situated between Tibur and Praeneste. Its proximity to those cities is distinctly attested by Livy (viii. 15), and there seems no reason to reject the opinion first advanced by Cluverius, and adopted by Gell, Nibby, and Abeken, which would place Pedum on the site of Gallicano, though we have certainly no conclusive evidence in its favour. The modern village of Gallicano, the name of which first occurs in the tenth century, in all probability occupies an ancient site; it stands on a narrow tongue of land projecting between two ravines, or ravines with lofty and precipitous banks; but, from the peculiar nature of the country, this position almost exactly resembles that of Zagarolo and other neighbouring places. No ruins exist at Gallicano; and from the early decay of Pedum we can hardly expect to meet with inscriptions, the only evidence that can really set the question at rest. Gallicano is 4 miles from Palestrina (Prasente), and about the same distance from La Colonna (Labicum); it is about a mile on the left of the Via Prasentina, and 10 miles from Rome. (Cluver, *Ital. p. 965; Gell, *Top. of Rome*, p. 340; Nibby, *Dintorni*, vol. ii. p. 552; Abeken, *Mittel Italia*, p. 77.)

PEGAE, or PAGAE (Παγαί, Dor. Παγαί: Ἐθ. Παγαίον), a town of Megaritis, on the Akovian or Corinthian gulf. It was the harbour of Megaritis on the western coast, and was the most important place in the country next to the capital. According to Strabo (viii. p. 334) it was situated on the narrower part of the Megaritie isthmus, the distance from Pagae to the site of the city being 120 Roman miles; but, when the Megarians joined Athens in b. c. 455, the Athenians garrisoned Pegae, and its harbour was of service to them in sending out an expedition against the northern coast of Peloponnesus. (Thuc. i. 103, 111.)

The Athenians retained possession of Pegae a short time after Megara revolted from them in b. c. 434; but, by the thirty years’ truce made in the same year, they surrendered the place to the Megarians. (Thuc. i. 114, 115.) At one period of the Peloponnesian War (b. c. 424) Pegae was held by the aristocratical exiles from Megara. (Thuc. iv. 66.) Pegae continued to exist till a late period, and under the Roman emperors was a place of sufficient importance to coin its own money. Strabo (viii. p. 380) calls it τὸ τῶν Μεγαρίων φρούριον. Pausanias saw there a temple of the hero Aegaeus, who fell at Gisas in the second expedition of the Argives against Thebes, but who was buried at this place. He also saw near the road to Pegae, a rock covered with marks of arrows, which were supposed to have been made by a body of the Persian cavalry.
of Macedonius, who in the night had dischargeh their arrows at the rock under the impulse of Artarius, mistaking it for the enemy. In commemoration of this event, there was a brazen statue of Artarius Soteria at Pegasa. (Paus. i. 44. § 4.) Pegasa is also mentioned in the following passages:—Strab. ii. pp. 400, 409; Paus. i. 41. § 8; Steph. B. s. v. Melia. iii. 3. § 10; Plin. iv. 7. s. 11; Hieroc. p. 645; Tob. Post. iv. 7. where it is called Pachus. Its site is now occupied by the port of Psathos, not far from the shore of which are found the remains of an ancient fortress. (Leake, Northern Greece, vol. ii. p. 407.)

PEGASEUM STAGNUM, a small lake in the Cystrian plain near Epheusis, from which issues the little river Phrynites, a tributary of the Cystras. (Plin. v. 31.) The district surrounding the lake is at present an extensive morass. (Comp. Arundell, Seren Churches, p. 23, &c.)

PEIBOS. [ACHAIA, p. 13, b.]

PEISOS. [PELEON.]

PELEON (Πέλαιον), a fortress of the Tolistoboli, in Galatia, where Dictosthen kept his treasures. (Strab. vii. p. 567.)

PELAGONIA (Παλαγωνια, Strab. vii. pp. 326, 327; Πελαγωνια, Steph. B.), a district of Macedonia, bordering on Illyricum, occupied by the PELAGONII (Παλαγωνια, Strab. vii. pp. 327, 331, Fr. 38—40, 434; Ptol. iii. 13. § 34; Plin. iv. 17). Although Livy employs the name of Pelagonia, corresponding with the fertile plains of Bittila, in his narrative of the campaigns of Sulpicia, as that of a large district containing Strymbarus, it is evident, from his account, of the division of Macedonia after the Roman conquest, that Pelagonia became the appellation of the chief town of the Pelagones, and the capital of the Fourth Macedonia, which included all the primitive or Upper Macedonia E. of the range of Fimnus and Scardus. (Liv. xlv 29.) It was perhaps not specifically employed as the name of a town until the other two cities of Pelagonia were ruined; for that Pelagonia, or a portion of it, once contained three masters of ceremonies (Strab. vii. 327), and was, according to the traces of its having been the capital of the Fourth Macedonia, must have been of some importance, existed till a late period, as it is noticed in the Synedecmum of Hierocles, and by the Byzantine historian, Malchus of Philadelphia, who speaks of the strength of its citadel (ap. Const. Porphy. Excerpt. de Legat. p. 81). From its advantages it was occupied by Manuel Comnenus, in the war with Helen II. and the Hungarians. (Nicet. pp. 67; Le Bean, Bas Empire, vol. xvi. p. 141.) The name of Pelagonia still exists as the designation of the Greek metropolitan bishopric of Bittila or Mounstiri, now the chief place of the surrounding country, and the ordinary residence of the governor of Kamilia. At or near the town are many vestiges of ancient buildings of Roman times. The district was exposed to invasions from the Dardani, who bordered on the N., for which reason the communication (Strabo, p. 564) was carefully guarded by the kings of Macedonia, being of great importance, as one of the direct en-trances from Illyricum into Macedonia by the course of the river Drilon. Between the NE. extremity, Mt. Iliadotria, and the Kaisara of D Ard, there are in the mighty and continuous chain of Scardus (above 7000 feet high) only two passes fit for an army to cross, one near the N. extremity of the chain from Kaimari, through the passes of the Pelagonia, a very high "col," not less than 5000 feet above the sea-level; the other considerably to the S., and lower as well as easier, nearly in the latitude of Akokehia. Leake (Northern Greece, vol. iii. pp. 318—322) is of opinion that the passes of Pelagonia, in which Persus was stationed by his father Philip, were this latter depression in the chain over which the modern road from Soabra or Semari runs, and the Via Egnatia travelled formerly. The Illyrian Autaritae and Dardani, at the N. of Pelagonia, were threatened Macedonia from the former pass, to the NE. of the mountain-chain of Scardus. (Comp. Grote, Greece, c. xxv. and the references there to Porqueville, Boné, Grisebach, and Müller.) Symbara or Symbar or Sitabra, was situated apparently on the Erigon, as also were most of the Pelagonian towns. Polybius (v. 108) speaks of a Pelagonian town named Pissaeum (Πισσαεον). Plozenny (l. c.) assigns to the Pelagones the two towns of Andrachtus or Breakitolog (Post. Tab. the orthography is not quite certain), and Strongia. [E. B. J.]

Pelasgi (Παλαισγονια), an ancient race, widely spread over Greece and the coasts and islands of the Aegean sea in prehistoric times. We also find traces of them in Asia Minor and Italy.

I. The Pelagians in Greece.—The earliest mention of the Pelasgi, as Homer (II. ii. 651), who enumerates several Thessalian tribes as furnishing a contingent under the command of Achilles, and among them "those who dwelt in Pelagian Argos." Homer also speaks of Erythrae as a chief place of the Pelasgi; for Achilles addresses Zeus as Δαυστονε, Παλαισγονια. (Il. xvi. 233.) And this agrees with Hesiod's description of Dodona as the "seat of the Pelasgi." ( fragm. xviii.) So in the Supplices of Aeschylus, the king declares himself to be ruler of the country through which the Algaus and the Strymon flow, and also of the whole of the land of the Perrhaebi, near the Paezom, and the Dodonean mountains, as far as the sea. (Suppl. 250, seq.) Herodotus tells how he was found traces of the Pelagian Argus, which extends from the coast between the outlet of the Peneus and Thessaphonea as far as the mountain range of Fimnus, because the Pelasgians were masters of that regimen. *

We also hear of the Pelasgi in Boeotia, where they dwelt for a time, after having, in conjunction with the Thracians, driven out the Acaces, Tenuines, Leviges and Hyantes. Afterwards they were, in their turn, driven out by the former inhabitants, and took refuge at Athens under M. Hymettus, part of

* Argos probably means a plain, see Kruse's Hellas (vol. i. p. 404).
the city being called after their name. (Strab. i. p. 401.) And Attic historians speak of their residence there, and say that on account of their migratory disposition they were called πελασγοί (-τεκτοι) by the Attic people. (Strab. v. p. 221.) This is the character generally given to the Pelasgi, and it is curious to find Herodotus (i. 56) contrasting the stationary habits of the Pelasgians, with the love of wandering exhibited by the Hellenic Dorians. For even his own account of the Pelasgi disproves his general statement; since they could not have existed in so many different quarters as he assigns to them without several migrations, of which he nowhere asserts any universal extent over Greece and its dependencies. It is true that he says (ii. 56) that Hellas was formerly called Pelasgia, and Thucydides speaks (i. 3) of the name Hellenas being of comparatively recent date, and of the Pelasgic name being the most prevalent among the tribes of Greece; but this does not account for the Pelasgi being found in Asia (Herod. i. 429), and for their having introduced Egyptian rites into Greece. (Herod. ii. 51.) Their sojourn in Attica is related by Herodotus, whose authority is, however, to be doubted: he says they lived upon Mt. Hyamus assigned them as a reward for their services in building the wall of the Acropolis at Athens. From this Herodatus said they were driven out by the Athenians from envy, because their land was the best cultivated. The Athenians, however, says Herodotus, ascribe their expulsion to their licentious conduct. Thucydides also (i. 17) mentions the Pelasgetic settlement beneath the Acropolis, and the oracle relating to it.

In the passages above quoted Herodotus speaks of the Pelasgi as of foreign extraction. In another passage (vii. 44) he tells us that the Athenians were formerly Pelasgians, and were so called, with the surname of Crana. They were called successively Cercopidae, Erechtheidae and Iones.

Strabo (viii. 621) mentions a legend that the inhabitants of Mt. Phricon near Thermopylae made a descent upon the place where Cyme afterwards stood, and found it in the possession of Pelasgians, who had suffered from the Trojan War, and were removed from Locris, which was about 70 stades from Cyme.

We find traces of the Pelasgi in several parts of the Peloponnesus. Herodotus (i. 146) speaks of Arcadian Pelasgians, and (vii. 94) tells us that the Ionians in Achaea were formerly called Pelasgian Aegeadans (or Pelasgians of the coast). After DAMANS and XUTHUS came to Peloponnesus, they were called Ionians, from Ἰος, son of Xuthus.

In the passage of Aeschylus before referred to (Suppl. 230) Argo is called Pelasgian; the king of Argo is also called ἱππαρχος Πελασγῶν (v. 327), and throughout the play the words Argive and Pelasgian are used indiscriminately. So, too, in the Prometheus Vinctus (v. 860), Argolis is called "the Pelasgian land." In a fragment of Sophocles (Iphicrates) the king is addressed as lord of Argos and of the Tyrrehen Pelagi.

Strabo (vii. p. 321) speaks of Pelasgians taking possession of part of the Peloponnesus, along with other barbarous tribes, and (v. p. 221) says that Ephors, on Herod's authority, traces the origin of the Pelasgi to Lycon, son of Pelasgus, and that he declares his own opinion to be that they were originally Arcadians, who chose a military life, and, by inducing many others to join them, spread the name far and wide, both among the Greeks and wherever they happened to come. "The Arcadian divine or heroic pedigree," says Mr. Grote (Hist. Greece, vol. i. ch. ix.), "begins with Pelasgus, whom both Herod and Asins considered as an indigenous man, through Arceans the Argive represented him as brother of Argos and son of Zeus by Nibe, daughter of Phoroneus: this logographer wished to establish a community of origin between the Argives and the Arcadians." For the legend concerning Lycoenus, son of Pelasgus, and his fifty sons, see Grote's Greece, vol. i. p. 239, note.

According to Dionysius, Lycoenus, son of Pelasgus, lived in an earlier generation before the Trojan War (iii. i. 30, ii. 66), and the migration of the Pelasgians under Oenotrus, son of Lycoenus, in the next generation, is, in the words of Pausanias (viii. 3, quoted by Niebuhr), "the earliest colony, whether of Greeks or barbarians, whereof a recollection has been preserved."

Pausanias (viii. 2) gives the popular legend current among the Arcadians, that Pelasgus was the first man born there; on which he observes nayly: "But it is likely that other men were also born with the Pelasgian name. For Pelasgus is the name of ground or race; and the Pelasgians, if they be men of ground or race, might have subjects."

According to this legend Pelasgus is a regular mythic hero, surpassing all his contemporaries in stature and wisdom, and teaching them what to choose for food and what to abstain from. The use of beech-mast, which the Pythian oracle (Herod. i. 66) ascribed to the Arcadians, was taught them by Pelasgus. His descendants became numerous after three generations, and gave their names to various districts and many towns in Greece. Pausanias also speaks of Pelasgians coming from Iolcos to Pylos, and driving out the eponymic founder (v. 36. § 1).

Dionysius adopts the Achaean legend, viz. that the first abode of the Pelagi was Achaic Argos. There they were autochthons, and took their name from Pelasgus. Six generations afterwards they left Peloponnesus, and migrated to Haemonia, the leaders of the colony being Achaean, and Pithius, and Pelasgus, sons of Larissa and Poseidon. These three gave names to three districts, Achaean, Pithiotic, and Pelasgian. Here they bequeathed their names and in the sixth they were driven out of Thebess by the Curetes and Leleges, who are now called Locrians and Aetolians, with whom were joined many other of the inhabitants of the district of Mt. Par-nassus, led by Deucalion (i. 17. p. 46). They dispersed in different directions; some settled in Ithactaeotis, between Olympus and Ossa; others in Boeotia, Thessis, and Euboea; the main body, however, took refuge with their kinsmen in Epares, in the neighbourhood of Dodona (i. 18).

We now come to

II. The Pelasgians in the Islands of the Aegean.

— Homer (Od. xix. 175—177) mentions the Pelagi (called δόνα), as one of the five tribes in Crete, the remaining four being the Achaeans, Eteocretes, Cyclones, and Dorians (called τραγῳδεῖς). See Strabo's comment on this passage (v. p. 221), and x. pp. 473, 476, where two different explanations of the epithet τραγῳδεῖς are given.

Herodotus (i. 51) speaks of Pelagi living in Samothrace, where they performed the mysteries called Samothracian or Śiva.
PELLASGI

(vi. 2. § 2) says the Pelasgians drove out the Mi-
nyns and Lacedaemonians from Lemnos. The per-
petrators of the Lemnian massacre were Pelasgians,
(Herod. vi. 138—140; compare Pind. Pyth. Od. iv. 448 [252, Bkhs.]; Orph. Arg. v. 470; Stanley,
Comm. in Asch. Choroph. 631.)

Herodotus also records the inhabitants of seven-
teen islands on the coast of Asia that belonged to the
Pelasgian race (vii. 95). According to Strabo (xiii.
p. 621) Menestres declared the whole coast of Ionia,
beginning at Mycale, to be peopled by Pelasgi, and
the neighbouring islands likewise: “and the Lasians
say they were under the command of Pylaean, who was
called by the poet the leader of the Pelasgi, and from whom their mountain was called Peilusom. And the Chians say their founders were Pelasgi from Thessaly.”

Dioysius (i. 18) says that the first Pelasgian colonists
were led by Mesar to Lesbos, after the Pelasgi
had been driven out of Thessaly.

Diodorus Siculus (v. 51) gives a different account
of this colony. He says that Xanthus, the son of
Triopis, chief of the Pelasgi from Argos, settled
first in Lycia, and afterwards crossed over with his
followers to Lesbos, which he found unoccupied,
and divided among them. This was seven genera-
tions before the flood of Deneclum. When this oc-
curred Lesbos was desolated, and Macarens, grandson
of Zeus (according to Herod.), occupied it a second
time, and the island received its name from his son
in-law. Symm. of Chios (quoted by Kruse, Hellenas),
speaks of Pelasgians being in Scitathos and Sycros.

We next come to

III. The Pelasgi in Asia. — On this point we have
Herodotus's authority that there were Pelasgians
among the Trojan allies, ranked with Leleges, Can-
corcs, and Lycians, and called §yna. (II. x. 429.)
One of these was killed by Ajax, in the battle over
the body of Patroclus,—Hippocottos, son of Leuths.
(III. xvi. 288.)

Herodotus speaks (vii. 42) of Antandros as a
Pelasgian city, and afterwards (vii. 95) says that
the Aeolians were formerly called Pelasgians by the
Hellenes, and that when they fought against the Greeks
they were called Hellenic armour.

Strabo (v. p. 221) quotes Homer's statement that the
neighbours of the Cilicians in the Troas were Pelasgians,
and that they dwelt about Larissa. (II. ii. 32.)
In another passage (i. 23) he says, with the same
probability that the name probably signifies a fortress
built on a precipice or overhanging rock, and is an
indication, wherever it occurs, of the presence of
Pelasgians. There were several places of the same
name in Greece and two or three in Asia Minor,
which are enumerated by Strabo (ix. p. 440, xiii.
p. 620). According to this geographer most of the
Carians were Leleges and Pelasgi. They first occu-
pied the islands, then the sea-coast. He argues,
from Homer's expression the "tribes of Pelasgians"
(II. x. 840), that their number was considerable.

Dioysius (i. 18) says that the Pelasgi, on being
driven out of Thessaly, crossed over into Asia and
acquired many cities on the sea-coast.

Two cities were in existence in the time of Her-
odotus, namely, Scylace and Placie, on the Prop-
opis, which he believed to be Pelasgian cities, and
which, he says (i. 57), spoke similar dialects, but
unlike their neighbours. That dialect was, on
Herodotus's testimony, not Greek, but resembling
the dialect of the Cretomatai, or rather Creto-
amians, a tribe among the Edones in Thrace.

Bishop Thirlwall, comparing this passage with
another, in which Herodotus is enumerating the
dialects that prevailed among the Ionian Greeks,
and uses the same terms, infers from the comparison
that "the Pelasgian language which Herodotus
heard on the Hellespont and elsewhere sounded to
him a strange jargon; as did the dialect of Ephesos
to a Milesean, and as the Babylonian does to a
Persian." Mr. Grote differs from

Bishop Thirlwall in his estimate of these expressions
of Herodotus, who, he thinks, must have known
better than any one whether a language which he
heard was Greek or not, and concludes that "He-
rodotus pronounces the Pelasgians of his day to
speak a substantive language differing from Greek;
but whether differing from it in a greater or less
degree (e. g. in the degree of Latin or of Phoenician),
we have no means of deciding" (vol. i. pp. 351—
353).

Heeren (Ancient Greece, p. 38, note) has some
remarks on Herodotus's opinion respecting the lan-
guage spoken by the Pelasgians in his day, in which
he seems to raise an imaginary difficulty that he
may have the pleasure of overthrusting it.

Before quitting the coasts of the Aegean, it is
necessary to quote Thucydides's observation (iv.
109), that "the Pelasgian race is said to be the
most widely prevalent in the Chalcidic peninsula
and in the islands next to Lesbos," and the legend
preserved by Athenaeus (xiv. p. 639), "that Thessaly
was, in the time of Pelasgus, suddenly converted by
an earthquake from a vast lake into a fertile plain,
irrigated by the Peneius, the waters of which be-
fore had been shut in by mountains."

The latter is a poetical version of a geological
truth, which, though not falling within the province
of history, recommends itself at once to the notice of
the geographer.

We now come to

IV. The Pelasgians in Italy.— Legendary history
has connected the Pelasgic race with more than one
portion of the Italian peninsula. The name Oenoria,
by which the southern part of Italy was formerly
known (see Aristotle, Pol. vii. 10) suggests an
affinity between the early inhabitants of that country
and the Arcadian Pelasgians. The name Tyrreni
or Tyrrheni, which we have seen is used identically
with that of Pelagi, suggests another link in the
numerous legends which furnished logographers
with the subject-matter of their discourse, connected
the Umbrians, the Pelasgians, and other tribes in
the north of Italy and on the coast of the Adriatic
with the Pelasgians from Epirus and Thessaly.
Some of these are given by Strabo. He quotes
Anticlines to the effect that some of the Lemnian
Pelasgians crossed over into Italy with Tyrreni,
son of Atya (v. p. 221). Again, he quotes Heron-
ymus's assertion, that the Thessalian Pelasgians
were driven out from the neighbourhood of Larissa
by the Lapithae, and took refuge in Italy (ix.
p. 443).

Pausanias's account of the Pelasgian colony led
by Oenotrus has already been given. Diosysius
(i. 11. p. 30) confirms it, saying "Oenotrus son
of Lycaon led a colony into Italy seventeen
generations before the Trojan War." According to

Diosysius, a colony of Pelasgians came over from
Thessaly and settled among the Aborigines, with
whom they waged war against the Sicels (i. 17. p.
43).

Another body came from the neighbourhood of
Dolona, whence, finding the territory unable to sup-

Digitized by Microsoft ©
port them, they crossed over in ships to Italy, called Saturnia, in obedience to the oracle. The winds bore them to Nautes, on one of the months of the 4th, where they established themselves, and by the help of their fleet acquired great power. They were, however, eventually driven out by an insurrection of the neighbouring barbarians, who were in turn overpowered by the Romans (i. 18). The Pelasgians thence migrated inland, crossed the Apenines, and entered the country of the Umbrians, who bordered on the Aborigines, and extended over a great part of Italy, being a numerous and powerful people. Here they established themselves for some time, and took some small towns from the Umbrians; but, being overpowered by them, they removed into the country of the Aborigines. When they came to Cotyle, they recognised the spot where the oracle had told them they were to offer up a sacrifice to Jupiter, Pluto, and Phoebus. On this they invited the Aborigines, who came to attack them, to join alliance with them; which invitation they, being hard pressed by the Siculi, accepted, and gave the Pelasgi Velia to dwell in. The latter then helped the Aborigines to conquer Crotona in Umbria, and to drive the Sicii out of their hand. Together they founded several cities, others, Siculi, Patrae, Saturna, and others, which were taken by the Tyrrhenians. Dionysius says that Phliasian and Fessanian retained in his time certain faint traces of the old Pelasgin population, especially in the weapons of war—viz. Argolic spears and shields—and the institution of feticas, and other religious rites. There was a temple of Hera at Fuleria, exactly like that at Argos, where were similar sacrifices, and similar priestesses, canephori, and choruses of maidens. The Pelasgians occupied parts of Campania, driving out the Aurnani, and founded Larissa and other cities. Some of these remained, after undergoing many changes of inhabitants, in Dionysius's time. Of Larissa there was no memorial save the name, and this was not commonly known; but its site was not far from Forum Populi. (Plin. iii. 15.) They took many cities from the Sicii, too, and established their power along the coast and inland. The Pelasgi, having driven out the Sicii increased in power and extent of territory. Eventually, however, they fell away from the Greeks, and suffered various penalties at their hands. On consulting the oracle, they were told that they had neglected to perform their oaths, in not sacrificing their first-born as well as the fruits of the field. Myrsilus tells this story, adding that the Pelasgi were soon dispersed in different directions, some returning to Greece, and others remaining in Italy by the friendly intervention of the Aborigines. They were a warlike race, and acquired great skill in naval matters from their residence by the Tyrrhenian Sea. Of the Pelasges who were often invited by other nations to serve as auxiliaries, and were called by the names Tyrrheni and Pelasgi indiscriminately (i. 18—23).

Respecting the former name he says that it was given them on account of the forts, tajoanes, which they built. Hellmanns of Lesbes says that the Tyrrheni, formerly called Pelasgi, received the name which they bear after their arrival in Italy. For the counter-argument of Myrsilus see Dion. ii. p. 203. The names of the towns which held the Tyrrheni and the Pelasgi to be the same. He thinks no argument can be drawn from the feet of their names being used indiscriminately, as that was very common, e.g., in the case of the Tusci and Pelasgians. Moreover, the Greeks called all Latins—Latinis, Umbrians, Aemones, &c.—Tyrrhenians. Even Rome was believed by many to be a Tyrrhenian city. Dionysius quotes Herodotus (i. 57) in support of his opinion that the Aborigines and Tyrrhenians are not of the same origin. It would be a wonderful thing, he says, if the Crotoniates spoke the same dialect as the Phociens on the Hellepont, both being Pelasgians, but should not speak the same dialect as the Tyrrhenians, if they were also Pelasgi. For the contrary of the proposition—if δυσχαλωσθη, then δυσχαλωσθη—holds good: i.e. if ἄλλογαλωσθη, then ἄλλα δεινητη. If the case were reversed, there might be a show of reason for believing them of the same origin; for it might be said that distance had obliterated early traces; of resemblance; but when the cities are so near each other as the Crotoniates and Tyrheni this supposition is untenable (i. 29).

Hence Dionysius believes the Pelasgians and Tyrrhenians to be distinct. He sums up all by saying that those Pelasgians who survived the final dispersion and ruin of the race existed among the Aborigines, and their descendants helped them and other tribes to build Rome (i. 30).

It is unnecessary to remark the difference between Crotoniates and Tyrhenians, or Crotoniates in Thrace, which Dionysius unsuspecting passes over. The above somewhat lengthy extracts have been made from his Roman Antiquities, because they give us a very fair specimen of the way in which scattered traditions were dressed up in a quasi-historical garb, and decked out with any stray evidence which local names or language might supply.

The common native tradition of the Latins only testifies to an immigration of so called Aborigines, not to the mixture of Pelasgi with them. On the other hand, another, which has received the testimony of Varro, and which agrees in other respects with the narration of Dionysius, speaks of an immigration of Pelasgians, but says nothing of Aborigines mixed with or allied with them. Certain Roman historians have combined these two traditions in a different way to that of Dionysius, making the Aborigines, namely, declare themselves to be one and the same people with the Pelasgians. This, for instance, is, without any doubt, the meaning of Catu's assertion that the Pelasgians came over into Italy many generations before the Trojan War, out of Aetolia; for so he named the old Pelasgic Greece by the common appellation of his time. (Schwegler, Romische Gesch. iii. 2.) We find the same tradition of a Pelasgic immigration into Latium confirmed by many other testimonies. Phily declares that writing was brought into Latium by the Pelasgi. It is a question, however, whether these Pelasgi he means those who came out of Thessaly and Dodona, or the Arcadian Pelasgians. (Schwegler. p. 22.)

Other traditions assert the name of Rome to be Pelasgian, and derive the Saturnalia from a feast originally instituted by the Pelasgians who settled on the Saturnian hill. In "other parts of Italy we stumble repeatedly," says Schwegler, "on the same wide-extended name. Thus, it is said that the Hernici were descended from the Pelasgi. Picenum also is said to have been occupied by the Pelasgii. Report also says that the towns of Nucerium, Herculaneum, and Pompeii were founded by them, or that they dwelt there for a certain time. Other instances have been already given of towns and districts with which legendary history has associated the name of the Pelasgi."

In short, the whole of Italy was, if we are to believe the authorities adduced, inhabited in ancient times by the Pelasgians. In later times they appear as vassals of the Italiots; the common fate of original races that have been subjugated.

Upon these and similar traditions Niebuhr has grounded a hypothesis, which at present is generally received, and against which conclusive objections can only be raised from the side of comparative philology. According to Niebuhr, the Pelasgians were the original population, not only of Greece, but also of Italy. There was a time, he said, when the Pelasgians, formerly perhaps the most widely-spread people in Europe, inhabited all the countries from the Arno and Pedus to the Bosporus; not as wandering tribes, as the writers of history represent it, but as firmly-rooted, powerful, honourable people. This time lies, for the most part, before the beginning of our Greco-Roman history. However, at the time that the genealogists and Hellanicians wrote, there were only insulated, dispersed, and scattered fragments of this immense nation,—as of the Celtic race in Spain,—as mountain summits, which stand out like islands when the waves of the sea have changed by floods into a lake. These sporadic Pelasgic tribes did not seem to these logographers to be fragments and relics, but colonies that had been sent out and had migrated, like the equally scattered colonies of the Hellenes. Hence the numerous traditions about the expeditions and wanderings of the Pelasgi. All these traditions are without the slightest historical value. They are nothing but a hypothesis of the logographers, framed out of the supposition that those scattered colonies of the Pelasgi had arisen and were produced by a series of migrations. There is nothing historical about them, except, indeed, the fact which lies at the bottom of the hypothesis, namely, the existence in later times of scattered Pelasgic tribes,—a fact which, however, implies much more the original greatness and extension of the Pelasgic nation. If the Pelasgians vanish gradually as historical times begin, the cause of this is, that they were transformed into other nations. Thus, in Greece they became gradually Hellenised, as a nation which, in spite of all distinction, was equally related to the Hellenes, and even in Italy they form a considerable portion of the later tribes of the peninsula which owed their origin in the main to the mixture of races.

The half-Greek element which the Latin language contains, is, according to this view of Niebuhr's, Pelasgic, and owes its origin to the Pelasgian portion of the Latin nation, which Niebuhr and K. O. Müller (Etrusker) agree in finding in the Sicilians.

This hypothesis of Niebuhr's, generally received as it is, wants, nevertheless, a sound historical foundation. It has received at the hands of Schwegler (Rom. Geach.) a careful examination, and is condemned on the following grounds:

1. The absence of any indigenous name for the Pelasgians in Italy.
2. The evident traces of Roman writers on the subject having obtained their information from the Greek logographers.
3. The contradictory accounts given by different writers of the migrations of the Pelasgians, according as they follow Hellanicus and Phercedy or Mysilus.
4. The absence of any historical monument of the Pelasgi in Italy, whether literary or of another kind.

It only remains to make a few general observations on the evidence for the existence of the Pelasgi, and on the views taken by modern writers on the subject.

1. The modern authorities on the Pelasgi in Greece are: Larcher, Chronol. d'Hérodote, ch. viii. pp. 215—217; K. O. Müller Etrusker, vol. i. Einleitung, ch. ii. pp. 75—100; Kruse, Helias, vol. i. p. 398—425; Mannert, Geographie, part viii. introduction, p. 4: Thrillwall, History of Greece, ch. ii.; Grose, vol. i. ch. ix., vol. ii. ch. ii. sub finem. The latter historian treats of the Pelasgi as belonging not to historical, but legendary Greece. He says, "Whatever has examined the Pelasgic systems respecting the Pelasgi,—from the literal belief of Clavier, Larcher, and Fossoli-Rochette, to the interpretative and half-incredulous processes applied by abler men, such as Niebuhr, or O. Müller, or Dr. Thrillwall,—will not be displeased with my resolution to decline so insoluble a problem. No attested facts are now present to us,—none were present to Herodotus or Thucydides even in their age,—on which to build trustworthy affirmations respecting the ante-Hellenic Pelasgians; and, when such is the case, we may without impropriety apply the remark of Herodotus respecting one of the theories which he had heard for explaining the inundation of the Nile by a supposed connection with the ocean,—that the man who carries up his story into the invisible world, passes out of the range of criticism." (Vol. ii. p. 345.)

These who think Mr. Grote's way of disposing of the question too summary, will find it treated with great patience and a fair spirit of criticism by Bishop Thrillwall. The point on which he and Mr. Grote differ,—namely, the question whether the language of the Pelasgi was a rough dialect of the Hellenic, or non-Hellenic—has been already referred to. As we possess no positive data for determining it, it is needless to do more than refer the reader to the passages quoted. Respecting the architectural remains of the Pelasgi in Greece, a very few words will suffice. The Gate of the Lions at Mycenae, mentioned by Pausanias (v. 15—16), is the only monument of the plastic art of Greece in prehistoric times. The walls of Tiryns, of polygonal masonry, appear to be of equal antiquity, and are ascribed to the Cyclopes. [MYCENAE.]

These bear a strong resemblance to the Tyrrenho-Pelasgic remains in Italy, specimens of which are given in Dempster's Etruria Regalia, v. g. the walls of Cosa, Segnis (Segni) and Faesulae (Fiesole). And a small amount of evidence is thereby afforded in favour of Niebuhr's theory of an original Pelasgic population existing in the peninsula of Greece and Italy. But this is much diminished by the fact, that similar remains are found in parts of Asia Minor where no traces exist of any Pelasgic traditions. And we are obliged therefore to fail back upon the view first adopted by A. W. Schlegel, that the peninsula of Greece and Italy were successively peopled by branches of one original nation, dwelling once upon a time in the central part of Western Asia, and speaking one language, out of which, by successive modifications, sprang the different Greek and Italian dialects.

2. The authorities on the Pelasgi in Italy are Niebuhr (H. R. vol. i. p. 23, Tr.); Müller, Etrusker (quoted above); Lanzi, Saggio di Lingua Etrusca, q.c., Flor. 1824; Lepsius, über die Tyrrhen. Pelasgi in Etrurien, Leipz. 1842; Steuben, über die PELASGI. 565
PELAGIOTIS.

Urbrewohurh Edition, cfc, 1843; Mommsen, Un-

aturalnienhe Biederer, 1850; Prichard, Natural

Hislory 1 Mac avelus, 4; Herodotzche der

Latein Sprache, p 11; G. C. Lewis, Credibility of

early Roman History, vol. i. p 252; and Schwe-

gler, as quoted above.

The last-mentioned historian, after a careful re-

view of all that ancient and modern authorities

have said on the subject, agrees with Mr. Grote in

concluding that there is no historical foundation for

the commonly received traditions about the Pelasgi.

He says: "The traditional image of the Pelasgic

race is everywhere the same, nowhere settling

or abiding, only its terminus is left free for good,

of the race which is everywhere and nowhere,

always reappearing, and vanishing again without

leaving any trace,—the image of this

pagan race is to me so strange, that we must

entertain doubts as to its historic existence."

After they became a powerful nation in Italy, the

tradition, which Dionysius follows, tells us that they

suddenly dispersed. This is in itself strange; but,

were any other conclusion of the Pelasgian migra-

tion warranted, we should have to point out Pelas-

gians in Italy, which is impossible. Nothing re-

mains of them but a few names of places, which are

manifestly Greek. Lepsius thought an inscription

found at Agylia was Pelasgic, but Mommese (Un-

trit. Dial. p 17) says it is nothing but old Etruscan.

It is not difficult to account for the prevalence of

traditions relating to Pelasgi in Italy. Schwegler has

ably analysed the causes of this, and disproved on

historical and linguistic grounds the views of

Niebuhr and O. Miiller, which they set up in oppo-

sition to the Roman grammarians.

There is considerable doubt, as he remarks, in

what light we are to regard the name Pelasgi,—

whether in that of an ethnographic distinction, or in

that of an epithet = autocathones or aborigines.

We have both in Greek and Latin words resembling

it sufficiently in form to warrant this supposition,—

v. g. Παλαγίς, Παλαγίας, and Friscen. The change

from A to r is so common as to need no illustration,

and that the Pelasgic, as applied to the Sudras, and

not to the Arabian, is near the same as Sarmat.

These remarks, though they apply with con-

siderable force to the indiscriminate use of the word

Pelasgic as applied to Italian races, need not affect

the statement of Herodotus concerning the townships

of Scylace, Placie, and Creton, which were accounted

in his time Pelasgic, and spoke a different language

on their neighbours.

That the name Pelasgi once indicated an existing

race we may fairly allow; but we cannot form any

historical conception of a people whom Herodotus

calls stationary and others migratory, and whose ear-

liest abode was between the mountains of Ossa and

Olympus, and also in Arcadia and Argolis. On the

whole we can partly appreciate Niebuhr's feelings

when he wrote of the Pelasgi,—"The name of this

people is irksome to the historian, hating as he does

that spurious philology which raises pretensions to

knowledge concerning races so completely buried in

silence." (Rom. Hist. i. p. 26, Trans.)

If the Pelasgi have any claims on our attention

above other extinct races, it is not because they have

left more trustworthy memorials of their existence,

but because they occupy so considerable a space in

the mythic records of Greece and Italy. [G. B.]

PELAGIOTIS. [Thessaly.]

PELE (Πέλη; Eth. Πέλαιον), a small island,
founding one of a cluster, off the coast of Ionia, oppo-

site to Ciaconaeae. (Thuc. viii. 31; Plin. v. 31

s. 38, xxxii. 2. s. 9; Steph. B. s. c.; see Vol. i.
p. 632.)

PELECAS (Πέλεκας), a mountain in Mysia,

which lay between the Apian plain and the river

Megistus. (Polyb. v. 77.) It is probably the con-

tinuation of Mt. Telnos, separating the valley of

the Aesepus from that of the Megistus. It has been

remarked by Forbiger that there is a striking simi-

larity between this name and that of the woody

mountain Πέλας mentioned by Homer, at whose

foot These is said to have stood, but the position of

which is not at all sufficiently known. (Hom. B. ii.

397, vii. 396 425, xxi. 479; Strab. xiii. p. 614.)

PELECES. [Attica. p. 326, a.]

PELENDONES (Πελενδόνες, Potli. ii. 6. § 54),
a Celtiberian people in Hispania Tarraconensis,

between the sources of the Durius and Iberus, and

situated to the E. of the Arvecae. Under the Ro-

mans they were in the jurisdiction of Clunia. They

consisted of four tribes, and one of their towns was

Numantia. We find also among their cities, Visio-

tum, Olibia, Varia, &c. (Plin. iii. p. 230; Ptole.

a. 34.)

PELETHRIONUM (Πελεθρίωνος), a part of

Mt. Pelion, whence Virgil gives the Lapithae the

epithet of Pelethronii. (Strab. vii. p. 299; Steph. B.

s. v.; Virg. Georg. iii. 115.)

PELIGNI (Πελιγνος) a people of Central Italy,

occupying an inland district in the heart of the

Apennines. They bordered on the Marsi towards the

W., on the Sammites to the S., the Frontiani to the

E., and the Vestini to the N. Their territory was of

very small extent, being confined to the valley of

the Gizio, a tributary of the Aternus, of which the

ancient name is nowhere recorded, and a small

part of the valley of the Aternus itself along its

right bank. The valley of the Gizio is one of three

upland valleys at a considerable elevation above

the sea, running parallel with the course of the Ape-

nines, which form so remarkable a feature in the

configuration of the central chain of those moun-

tains. [APENNINES.] It is separated from the Marsi

and Frontiani by the high lands of the Paligno, and

by the mountain river of the Gizio, which is so

broader and strongly marked mountain ridge of no

great elevation; while towards the S. it terminates

in the lofty mountain group which connects the central

ranges of the Apennines with the great mass of

the Majella. This last group, one of the most elevat-

ed in the whole of the Apennines, attaining a height

of 1900 feet above the sea, rises on the S.E. frontier

of the Peligni; while the Monte Morrone, a long ridge

of scarcely inferior height, runs out from the point

of its junction with the Mont'e della, in a NW. direction,

forming a gigantic barrier, which completely shuts

in the Peligni on the NE., separating them from the

Frontiani and Marrucini. This mountain ridge is

almost continuous with that which descends from the

N. Sasso towards the S.E. through the country of

the Vestini, but the great mountain barrier thus

formed is interrupted by a deep gorge, through

which the Aternius forces its way to the sea, having

turned abruptly to the N.E., immediately after re-

ceiving the river Gizio. [APENNINES.] The secluded

district of the Peligni is thus shut in on all sides

by natural barriers, except towards the N., where

they met the Vestini in the valley of the Aternus.

A tradition recorded by Festus (s. v. Peligni, p. 222),

but on what authority we know not, repre-

sented the Peligni as of Illyrian origin; but this

statement is far outweighed by the express testimony
of Ovid, that they were of Sabine descent. (Ovid, Fast. iii. 95.) The authority of the poet, himself a native of the district, is strongly confirmed by the internal probabilities of the case, there being little doubt that all these upland valleys of the Central Apennines were peopled by the Sabines, who, radiating from Amicenum as a centre, spread themselves towards the S. and E. in the same manner as they descended towards the valley of the Tiber on the W. and SW. Hence the Peligni were of kindred race with their neighbours, the Vestini, Marsi, and Marsienses, and under the circumstances, connected with their geographical proximity, sufficiently explains the close union which we find subsisting in historical times between the two nations. It is probable, indeed, that these four tribes formed a kind of league or confederacy among themselves (Liv. viii. 29), though their bonds must have been somewhat lax, as we find them occasionally engaging in war or concluding peace singly, though more frequently all four would adopt the same policy.

The first mention of the Peligni in Roman history occurs in n. c. 343, when we are told that the Latins, who had been threatening war with Rome, turned their arms against the Peligni (Liv. vii. 38); but we have no account of the causes or result of the war. Soon after we find the Peligni, as well as their neighbours, the Marsi, on friendly terms with the Romans, so that they afforded a free passage to the Roman army which was proceeding through Samnium into Campania (Liv. viii. 6); and even when their neighbours the Vestini, being themselves in favour of the Samnites, they seem to have refused to follow the example. (Id. viii. 29.) In n. c. 308, however, they joined the Marsi in their defection from Rome, and shared in their defeat by Fabius (Id. ix. 41); but a few years afterwards (n. c. 304) they were induced to sue for peace, and obtained a treaty, apparently on favourable terms. (Ib. 43; Diod. xx. 101.) From this period they became the faithful and steadfast allies of Rome, and gave a striking proof of their zeal in n. c. 295, by accompany ing the Roman army on its retreat from the great battle of Sentinum, and cutting to pieces 1000 of the fugitives. (Id. x. 30.) After the subjection of Italy by the Romans, the Peligni are seldom mentioned in history; but it is certain that they continued to furnish regularly their contingents to the Roman armies, and, notwithstanding their small numbers, occupied a distinguished position among the auxiliary troops, the Pelignian cohorts being on several occasions mentioned with distinction. (Dionys. xx. Fr. Didot; Ennius, Ann. viii. Fr. 6; Liv. xxv. 14. xiv. 40.) Their name is omitted by Polybius in his catalogue of the forces of the Italian allies in n. c. 225 (Pol. ii. 24), but this is probably by mere accident. During the second Punic War they maintained unshaken their fidelity to Rome, though their territory was repeatedly ravaged by Hannibal; and besides furnishing their usual quota to the Roman armies, they were still able in n. c. 205 to raise volunteers for the armament of Scipio. (Liv. xxii. 9. xxxi. 11. xxviii. 45.) At the outbreak of the Social War, the Peligni, in conjunction with their neighbours and confederates the Marsi, were among the first to declare themselves against Rome; and the choice of their chief city, Corfinium, to be the capital of the confederates, and therefore the destined capital of Italy, had their plans proved successful, at once assigned them a prominent place among the nations arrayed against Rome. (Appian, B. C. i. 39; Liv. Epit. lxxii.; Osee. v. 18; Vell. Pat. ii. 18; Diod. xxxvii. 2.) The choice of Corfinium was probably determined by its strength as a fortress, as well as by its central position in regard to the northern confederates; at a later period of the war it was abandoned by the allies, who transferred their senate and capital to Asculum. (Diod. l. c.) The name of the Peligni is not often mentioned during the war, though it is certain that they continued to take an active part in it throughout, and it is probable that they were the Greek colony most intimately connected with the Marsi. But in n. c. 90 we are told that the Peligni obtained a severe defeat by the Scipios Galba (Liv. Epit. lxxiii.); and before the close of the following year they were received to submission, together with the Marrucini and Vestini, by Cam. Pompeius Strabo, n. c. 88. (Liv. Epit. lxxvi.) It is certain that the Peligni, as well as their neighbours, were at this time, or very soon after, admitted to the Roman franchise, for the sake of which they had originally engaged in the war; they were enrolled in the Roman tribe, together with the Catanii and Umbri. (Cic. in Vatia. 15; Schol. Beb. ad loc.) The Peligni again figure in the history of the Civil War between Caesar and Pompey, n. c. 49, when their chief town, Corfinium, was occupied by Domitius Ahenobarbus with twenty cohorts, which he had raised for the most part among the Marsi and Peligni, and which he at first attacked the advance of Caesar; but the rapid spread of disaffection among his own troops quickly compelled him to surrender (Cic. B. C. i. 15; 23.) Sulmona, which had been also garrisoned by Domitius, yielded without resistance to Caesar. (Ib. 17.) The Peligni, in common with the other mountain tribes, seem to have retained to a considerable extent their national character and feeling, long after they had become merged in the condition of Roman citizens, and as late as the civil war between Vespasian and Vitellius (A. D. 69) they are mentioned as declaring themselves, as a people, in favour of the former. (Tac. Hist. iii. 55.) This is the last notice of them in our history, which overleaves us with the names of all the geographers as a distinct people retaining their separate nationality. (Strab. v. p. 241; Plin. iii. 12. 17; Ptol. iii. 1. § 64.) For administrative purposes they were included in the Fourth Region of Augustus (Plin. l. c.); and in the later division of this part of Italy, their territory was comprised, together with that of the Marsi, in the province called Valeria. (Liv. Colon. p. 228.) It now forms a part of the province of Abruzzo Ulteriore.

The position of the Peligni, surrounded on all sides by the loftiest ranges of the Apennines, while the valley of the Gizio itself is at a considerable elevation above the sea, naturally rendered the climate one of the coldest in Italy. Horace uses the expression "Peligna frigera," as one almost proverbial for extreme cold; and Ovid, who was a native of Sulmo, repeatedly alludes to the cold and wintry climate of his native district. (Hor. Carm. iii. 19. 64; Ovid. Fast. iv. 81, 683, Trist. iv. 9.) On the other hand, it derived from the same cause the advantage of being watered by numerous and permanent streams, fed by the snows of the neighbouring mountains, where they are said to linger throughout the summer. (Ovid, Amor. ii. 16, Fast. iv. 685.) The broad valley of the Gizio was, however, sufficiently fertile; it produced considerable quantities of corn, and wine in abundance, though not of superior quality, and a few sheltered spots would even admit...
to Aecriania and Venedram. At the distance of 7 miles from Sulmo that itinerary places a station called "Jovis Laren", evidently the site of a temple, on the highest part of the pass. The spot is still called Campo di Giove, and it is probable that the true reading is "Jovis Peleni", the adjoining mountain being still called Monte di Palena, and a village or small town at the foot of it bearing the same name. (Chiver, Ital. p. 759; Holsten. Not. ad Chiver. p. 143; Romanelli, vol. iii. p. 165.) It thus appears that the ancient road followed a more circuitous but easier line than the modern highway, and thus avoided the passage of the Passo di Cinque Miglia, an upland valley at the highest part of the pass, much dreaded in winter and spring and devoid of the terror of storms of wind and snow to which it is subject. (Craven's Abruzi, vol. ii. pp. 45—50.)

[Chios.]

PELICNAEUS. (Chios.)

PELINNA, more commonly PELINNAEUM (Πελίννα, Steph. B. s. r. ; Plin. iv. 8. s. 15; Pe- linnaus, Sync. p. 25; Pind. Pyth. s. 4; Strab. ix. p. 437; Arrian, Anab. i. b. 7; Liv. xxxvi. 10; Pelinnaus on coins, Eckhel, vol. ii. p. 146; Esh. Pelinnaos), a town of Thessaly, in the district of Histamenia, the seat of the Thessalians and of the Peneus. (Strab. l.c.) It seems to have been a place of some importance even in the time of Pindar (l. c.). Alexander the Great passed through the town in his rapid march from Illyria to Boeotia. (Arrian, l. c.) It did not revolt from the Macedonians together with the other Thessalians after the death of Alexander the Great. (Diol. viii. 11.) In the war between Antiochus and the Romans, b. c. 191, Pelinnaeum was occupied by the Atha- manians; a second time it was occupied by the Romans. (Liv. xxxvi. 10. 14.) There are considerable remains of Pelinnaeum at Old Kardhiki or Gardhiki. "The city occupied the face of a rocky height, together with a large quadrangular space at the foot of it on the south. The southern wall is more than half a mile in length, and the whole circumference near three miles." (Leake, Northern Greece, vol. iv. p. 288.)

PELION (Πέλιον, Arrian, Anab. i. 5. 1; Pe- linnaus, Quadratus, op. Steph. B. s. r.; Liv. xxxvi. 40), a town of Phthi, on the Macedonian frontier, and commanding the pass which led into that country. From its situation it was a place of considerable importance, and was attacked by Alex- ander on his return from the expedition against the Getae, in the war against the two Illyrian kings Cleitus and Glauceas. On the defeat of the Illyrian Cleitus set the town on fire. According to Arrian (l. c.), Pelion was situated at the foot of a wooden mountain, and close to a narrow defile through which the Macedonians flowed, leaving in one part space only for four shields abreast, a description which corresponds so exactly with the pass of Tou- ggan, or Kaisara of Decol, both as to the river, and breadth of one part of the pass, that the identity can hardly be questioned. Pelion will then be either Platisa or Porjani, but the former has the preference by its name, which seems to be a vulgar sounding of Plaisaasa. (Leake, Northern Greece, vol. viii. p. 929.) The town Sulpicius, in his first campaign, nearest Philip, (Liv. i. 40.); crossed from the Koniae, or Sarigihello, which he had ravaged over part of the plain of Grevena, and through Asselitana to Kastoria, whence he diverged to Pelion, which he occupied, leaving a strong garrison in it, as it

The Peligni had only three principal towns, Con- finium, Sulmo, and Superbium, of which the two first only are known historically, and were doubtless much the most important places. But Pliny notices all three in his list of towns; and the same names are found also in the Liber Coloniarum. (Plin. l.c.; Lib. Colon. pp. 228, 229.) Hence these are obviously the three alluded to by Ovid, when he calls his native town of Sulmo "Peligri pars terrae ruris" (Amor. ii. 16); and it thus appears there were no other places in the district which enjoyed municipal rank and had a territory of their own. Ceculta, mentioned only by Strabo (v. p. 241) as situated to the right of the Via Volteria, is evidently the Ceculta and must have been in the territory of the Peligni, but was probably an insignificant place. Statulae, known only from the Tabula as a station on the Via Volteria, 7 miles from Confinium, on the E. of the Mons Imperium, must have been situated at or near the village of Goriano.

The territory of the Peligni must always have been an important part in regard to the communica- tions of the different nations of Central Italy. On the one side a natural pass, now known as the Forclaus, called the "Poggi" in the Tabula, the Mons Imperium, connected the basin of the Gizio and lower valley of the Aternum with the land of the Marsi and basin of the lake Fusineus; on the other the remarkable pass or gorge through which the Aternum forces its way just below Popoli, afforded a natural outlet, through which these upland valleys had a direct communication with the sea. These two passes, in conjunction with that which led from the basin of the Fusineus to Corese, formed a natural line of defense from Rome and the Tyrrhenian sea to the Adriatic, which was undoubtedly frequented long before the Romans subdued the several nations through which it passed, and ages before the Via Volteria was laid down as an artificial road. That highway, indeed, was not continued through the land of the Peligni, and thence to the sea, until the reign of the emperor Claudius (Cerfinnus). In the other direction also the valley of the Gizio, opening into that of the Aternum, afforded direct means of communication with Rome, Interamna, and others. From the Tabula its southern extreme a practicable pass led through the heart of the Apenines into the valley of the Salaria, and thus opened a direct line of communication with the interior of Samnium. The importance of this line of route, as well as the early period at which it was frequented, is shown by the circumstance that it was followed by the Roman armies in B. C. 340, when the Samnites, as well as the Marsi and Peligni, were friendly, and the revolt of the Latins cut off their natural line of march into Campania. (Liv. viii. 6.)

This line of road, as given in the Tabula, led from Confinium by Sulmo to Aurina, and thence

568

PELIGNI.

the growth of olives. (Ovid, Amor. iv. 16. 6. 7; Martialis, i. 27. 5. xiii. 121.) Of the character of the Peligni, we know only that they were esteemed as rivaling their neighbours the Marsi (Plin. iii. 12. s. 17; Cc. in Vatin. 15; Sil. Ital. viii. 510), and that they always retained the primitive simplicity of their habits. From an expression of Horace it would appear also that they shared with the Marsi the reputation of skill in magical incantations. (Hor. Epod. 17. 60.)
PELIUM (Πελιον), a lofty mountain in Thessaly, extending along the coast of Magnesia, rises to the south of Ossa, and the last falls of the two mountains are connected by a low ridge. (Herod. vii. 129.) It forms a chain of some extent, stretching from Mt. Ossa to the extremity of Magnesia, where it terminates in the promontories of Sepias and Aeantion. It attains its greatest height above Jolcos. According to Ovid it is lower than Ossa (Fast. iii. 441), which Dodwell describes as about 5000 feet high. In form it has a broad and extended outline, and is well contrasted with the steeply central shape of Ossa. On its eastern side Mt. Pelium rises almost precipitously from the sea; and its rocky and inhospitable shore (έκτα αλβίους Πελιόν, Enr. Ael. 595) proved fatal to the fleet of Xerxes. (Leake, Northern Greece, vol. iv. p. 384.) Mt. Pelium is still covered with venerable forests, to which frequent allusion is made in the ancient poets. Homer constantly gives it the epithet of εθνωπόλος (II. ii. 744, &c.). Its northern summit is clothed with oaks, and its eastern side abounds with lichens. In particular fruits are found there are forests of beeches, elms, and pines. (Dienarchus, Descrip. Mont. Pel. in Geogr. Graec. Min. p. 106, ed. Paris, 1855; Or. Fast. v. 381; Valer. Flacc. ii. 6.)

Mt. Pelium is celebrated in mythology. It plays an important part in the war of the giants and the gods; since the giants are said to have piled Ossa upon Pelium, in order to scale Olympus. It has been observed that this part of the table is well explained by the respective forms of Ossa and Pelium. As Pelium is viewed from the south, two summits are seen at a considerable distance from each other,—a concavity between them, but so slight as almost to give the effect of a table-mountain, upon which fiction might readily suppose that another hill of the conical form of Ossa should recline. (Holland, Travels, vol. ii. p. 96.) Mt. Pelium was said to be the residence of the Centaurs, and more especially of Cheiron, the instructor of Achilles, a legend to which the number of medicines given for the mountain is due. (Dienarchus. L. c.; Hom. II. ii. 743, xvi. 143; Pind. Pyth. ii. 83, iii. 7; Virg. Georg. iii. 92.)

According to Dienarchus (L. c.), the cave of Cheiron and a temple of Zene Actaeon occupied the summit of the mountain. The same writer relates that it was the custom of the sons of the principal citizens of Demetrias, selected by the priest, to ascend every year to this temple, clothed with thick skins, on account of the cold. Between the two summits of Mt. Pelium, there is a fine cavern, now commonly known by the name of the cave of Achilles, and which accorded with the position of the cave of Cheiron, mentioned by Dienarchus. The same writer likewise speaks of two rivers of Mt. Pelium, called Crammodin and Brychen. One of them is now named Zevrokhila, and falls into the Gulf between Neokhori and St. George. (Leake, Northern Greece, vol. iv. p. 384, seq.) Lastly, Pelium was connected with the tale of the Argonauts, since the timber of which it supplied was cut down in the forests of this mountain. The north-western summit of Mt. Pelium is now named Plessithi; but the mountain is frequently called Zegora, from the town of this name immediately below the summit on the eastern side. (Leake, L. c.; Mézières, Memoire sur le Pelion et l'Ossa, Paris, 1853.)

PELLA (Πελάνι, Herod. vii. 123; Thuc. ii. 99, 100; Strab. vi. p. 320, 323, 330; Fr. 22, 23; Plut. iii. 13; S. v. 29, s.v. 12, § 8; Philostr. Anton.; Itin. Hierosol.; Ptol. Tab.; Πολλαφι, Hierochoi), the capital of Macedonia. At the time when Xerxes passed through Macedon, Pella, which Herodotus (L. c.) calls a πολίτηριον, was in the hands of the Bottiaeans. Philip was the first to make Pella, which Amyntas had been obliged to evacuate (Xen. Hellen. v. 2; § 13; comp. Diodor. xiv. 92, xv. 19), a place of importance (Dem. de Cor. p. 247), and fixed the royal residence there; there was a navigation from the sea by the Lydias, though the marshes, which was 120 stadia in length, exclusive of the Lydias. (Socyl. p. 26.) These marshes were called BOREBES (Βόρεβες), as appears from an epigram (Theocrit. Chins, op. Plot. de Exil. vol. vii. p. 380, ed. Reiske), in which Aristotel is reproached for preferring a residence near to that of the Academy. Archaestor (op. Athen. vii. p. 328, a.) related that the lake produced a fish called "chronis," of great size, and that it was particularly fit for the making of oils; there are forests of beeches, elms, and pines. (Dienarchus, Descrip. Mont. Pel. in Geogr. Graec. Min. p. 106, ed. Paris, 1855; Or. Fast. v. 381; Valer. Flacc. ii. 6.)

Mézières, Memoire sur le Pelion et l'Ossa, Paris, 1853.)
called by the Bulgarians Pel, and by the Greeks ΠΕΛΛΗ. Below the fountain, are some remains of buildings, said to have been baths, and still called τὸ Αὐτόπτειο. These baths are alluded to by the comic poet Machon (ap. Athen. viii. p. 548, c.) as producing biliary complaints. Although 15th century remains of Pella, a clear idea may be formed of its extent and general plan by means of the description in Pausanias, compared with the existing traces, consisting mainly of a "tumuli." The circumference of the ancient city has been estimated at about 3 miles. The sources of the fountain, of which there are two, were probably about the centre of the site; and the modern road may possibly be in the exact line of a main street which traverses it from E. to W. The temple of Minerva Alcimedus is the only public building mentioned in history (Liv. xiii. 31), but of its situation nothing at present is known. Felix Beaujard, who was consul-general at Salonika (Tableau du Commerce de la Grèce, vol. i. p. 87), asserted that he saw the remains of a port, and of a canal communicating with the sea. Leake (Northern Grèce, vol. iii. pp. 261—266), who carefully went over the ground, could find no traces of a port, of which indeed there is no mention in ancient history; remains of a canal could be seen, as he was told, in summer.

An autograph coin of Pella has the type of an ox feeding, which explains what Steph. B. (s. r.; comp. Usan. ad. Dem. de Fide. Leg.) reports, that it was formerly called Βοῦωνας. (Eckhel, vol. ii. p. 73; Schult, Mon. Pet. p. 37.)

PELLENE. 1. (ΠΕΛΛΕΝΗ, Dor. ΠΕΛΛΑΝΗ, ΠΕΛΛΗΝΗ, Steph. B. s. r.; Eth. Πελληνος, Pellenensis, Liv. xxxiv. 29; Pellenaeus, Plin. iv. 6; Zatccri, Mr. Zugaq), a town of Achaea, and the most easterly of the twelve Achæan cities, whose territory bordered upon that of Sicyon on the E. and upon that of Aegira on the W. Pellenae was situated 60 stadia from the sea, upon a strongly fortifìed hill, the summit of which rose into an inaccessible peak, dividing the valley into two parts. It was supplied with a town wall by the inhabitants themselves from the giant Pallas, and by the Argives from the Argive Pellen, a son of Phorbas. (Herod. i. 145; Pol. ii. 41; Strab. viii. p. 386; Paus. vii. 26. §§ 12—14; Apoll. Rhod. i. 176.) Pellenae was a city of great antiquity. It is mentioned in the Homeric catalogue; and according to a tradition, preserved by ThucyDides, the inhabitants of Scione in the peninsula of Pellenae in Macedonia professed to be descended from the Achaean Pellenaeans, who were driven from the Macedonian coast, on their return from Troy. (Hom. H. ii. 574; Thuc. iv. 120.) At the commencement of the Peloponnesian War, Pellenae was the only one of the Achæan towns which espoused the Spartan cause, though the other states afterwards followed their example. (Thuc. ii. 9.) In the time of Alexander the Great, Pellenae fell under the dominion of one of its citizens of the name of Charon, a distinguished athlete, who raised himself to the tyranny by Alexander's assistance. (Paus. vii. 27. §§ 7.) In the wars which followed the re-establishment of the Achaean League, Pellenae was several times taken and re-taken by the contending parties. (Pol. ii. 52. iv. 8, 13; Plut. Cleom 17, Arat. 31, 52.) The buildings of Pellenae are de-
scribed by Pansianus (vii. 27). Of these, the most important were a temple of Athena, with a statue of the goddess, said to have been one of the carver works of Pheidias; a temple of Dionysus Lampter, in whose honour a festival. Lambertia, was celebrated; a temple of Apollo Theoeunios, to whom a festival, Theoeunia, was celebrated; a gymnasion, &c. Sixty stadia from the city was the Mysaeum (Μύσαιον), a temple of the Mysian Demeater; and near it a temple of Asclepius, called Cyrus (Κύρος): at both of these places there were copious springs. The ruins of Pellene are situated at Ζαγρά, and are now called Ζερεύρωτα. The two temples of Mysaeum and Cyrus are placed by Leake at Τρίκλανδα, NE. of the ancient city. (Leake, Morea, vol. iii. p. 215. Peloponnesiacae, p. 391.)

Between Aegea and Pellene, there was a village also called Pellene, celebrated for the manufacture of a particular kind of cloaks, which were given as prizes in the agonistic contests in the city. (Strab. viii. p. 386; Pind. Ol. ix. 146, with Schol.; Aristoph. Αἰτείαι 1241, with Schol.; Hesych. e. Παλαμάριος χαίςάω.) K. O. Miller (Dor. vol. ii. p. 430), however, questions this second Pellene: he supposes that Strabo is describing Pellene as both citadel and village, and he corrects the text, κείεται ουτε διά Αίγισον καὶ Κυλλήνης, instead of Πελήνης; but the context renders this conjecture improbable.

The harbour of Pellene was called Aristonautae (Ἀριστοναυταί), and was distant 60 stadia from Pellene, and 120 from Aegea. It is said to have been so called from the Argonauts having landed in that district. (Paus. vii. § 14, ii. 12. § 2.) It was probably on the site of the modern Καμάτηρι. (Leake, Morea, vol. iii. p. 384.) A little to the E., near the coast, was the fortress Ολυμπος (Ολυμπος), dependent upon Pellene; Leake places it at Υψιοκόστρο. It would thus have stood at the entrance of the gulf leading from the maritime plain into the territory of Pellene, and would have been a position of great importance to the safety of that district. (Xen. Hell. vii. 14. §§ 17, 18; Pind. iv. 6; Mel. iii. 5; Steph. Byz. e. Leake, vol. iii. p. 294.) Near Aristonautae was Ογυνσσα or Γογυνσσα (Υγυνσσα), to which Homer gives the epithet of lofty (αιφονή). According to Pansianus its proper name was Ωδωνσσα (Ωδωνσσα), which was changed by Paisistratus into Γογυνσσα, when he collected the poems of Homer. Pansianus says that it was a fortress belonging to the Sic- onians, and lay between Aegea and Pellene; but from its position we may infer that it was at one time dependent upon Pellene. Leake places it at Κουργί, the lofty mountain, at the foot of which is Κουμπί, the ancient Aristonautae. (Horn. Η. ii. 573; Paus. vii. 26. § 13; Leake, vol. iii. p. 385.)

2. A town in Lacacia. (Πελοποννήσος.)

COIN OF PELATHE.

PELOIDES PORTUS. [Βυθιοτόμου.]

PELOPIS ΤΠΝΣΛΑΕ, nine small islands lying off Methana, on the Argolic coast. (Paus. ii. 34. § 3.) They must be the islands lying between Epidaurus and Aegina, of which Pitonymnesus (Αν-

gh Activate the largest. (Plin. iv. 12. 20; Leake, Μορέα, vol. ii. p. 435.)

PELOPONNESUS. [Γραφικά.]

PELOUS, PELOIS, or PELOIΘΗΣ (Πελοίθης δικαιο, Πολ.; Πελοίς, Θυκ., Dion. Per.; Πελόσις, Pol. Strab.; Copo di Faro), a celebrated promontory of Sicily, forming the NE. extremity of the whole island, and one of the three promontories which were considered to be given to it the triangular form from which it derived the name of Trinaccia. (Pol. i. 42; Strab. vi. pp. 265, 266; Dion. v. 2; Plin. iii. 8 s. 14; Dion. Per. 467—472; Ovid. Met. xiii. 757.) It was at the same time the point which projected furthest toward the opposite coast of the Sicilian straits that was the narrowest part of the Sicilian straits was that which lay between Cape Pelorus and the coast adjoining the headland of Caenys (Ποντός τοῦ Πελώρου) on the coast of Bruttium. (Caenys.) A strange story is told by some Roman writers that it derived its name from the pilot of Hannibal, who was put to death by that general from a suspicion of treachery; thus overlooking the fact that it was known by that name to the Greeks for centuries before the time of Hannibal. (Mel. ii. 7. § 17; Strab. 7; Val. Max. i. x. § 8; Sallust, op. Serv. ad Aen. iii. 411.) The actual headland of Pelorus, now called the Copo di Faro, is a low, sandy point; but about 2 miles from its extremity there begins a ridge of hills which quickly rises into a range of mountains, of no great elevation, but steep and strongly marked. These continue in an unbroken range at the back of Messina, near which they attain a height of about 3000 feet, and flank the east coast of the island as far as the neighbourhood of Tauronimé, where they turn abruptly to the W. and stretch across in that direction without any real interruption, till they join the more lofty group of the Monte Madonina. It is to this range of mountains that the name of Mons Neptunis is applied by Solinus (5. § 12), and which that author describes as separating the Tyrrhenian and Adriatic (i. e. Sicilian) seas. But there is no real geographical line of separation between these mountains and these further W., which were known to the ancients as the Mons Nautae.

The headland of Pelorus may thus be looked upon as the extremity of a great mountain promontory, formed by the range of the Mons Neptunus, and extending from the neighbourhood of Messina to that of Milazzo (Μίλαζον), or, in a still wider sense, from Tauroiméneum on the E. coast to Týndarís on the N. Diolóbar calls it 100 stadia from the promontory to Messana, and the distance is still commonly reckoned 12 miles, though it does not really exceed 8. (Diod. xiv. 56.)

From its proximity to Messana and its position commanding the passage of the straits, Pelorus was an important naval station, and as such its name is frequently mentioned in history. Thus, in n.c. 425, when the Athenian fleet under Laches was established at Eleugas, the Syracusans and their allies took post with their fleet at Pelorus, where they were supported also by a land force. (Thuc. iv. 25.) In n. c. 396 the Carthaginian general Himilco took post at Pelorus with his fleet and army, and when the Messanians sallied out to attack him, by taking advantage of a north wind, sent his fleet down suddenly to Messana, which was surprised and taken before the troops could return to its defence. (Diod. xiv. 56, 57.) Again, during the siege of Messana by the Carthaginians at the commencement of the First Punic War, it was at Pelorus that their fleet was
PELORUS.

stationed, with the view both of threatening the city and preventing the Romans from crossing the straits. (Vol. i. 11.) And at a later period, during the contest between Octavian and Sextus Pompey in the neighbourhood of Messana, the headland of Pelorus once more became an important post, being one of the points sedulously guarded by Pompey in order to prevent his adversary from effecting a landing. (Cass. Dio. R. C. v. 106.)

The actual promontory of Pelorus, as already mentioned, is a low spit or point of sand, about 2 miles in length, which has evidently been thrown up by the currents, which flow with great rapidity through the straits. (Synth. Sicily, p. 109.) A tradition, reported by Diodorus, but as ancient as the time of Hierocles, represented it as an artificial work constructed by the giant Orion. (Diod. iv. 85.) Within this sandy point, between the beach and the hills, are enclosed two small lakes or pools which are famous for gr. during the best eels and eelskins in Sicily (Synth., l. c. p. 106).—a reputation they already enjoyed in ancient times, as the "eccles of Pelorus" are repeatedly noticed by Athenaeus; and Solinus, who mentions the lakes in question, speaks of them as abounding in fish. There appear to have been three of them in his day, but the marbles which he relates of one of them are purely fabulous. (Athen. i. p. 4. c., iii. p. 92. f.; Solin. 5. §§ 2—4.) A temple of Neptune stood in ancient times upon the promontory, as well as a lighthouse or Pharos, the memory of which is retained in the modern name of PUNTA del Faro, by which the cape is still known. This appellation seems to have indeed come into use before the close of the Roman Empire, as Servius, in describing the width of the Sicilian strait, measures it "a Columna usque ad Pharon." (Serv. ad Aen. iii. 411.) But no remains of either building are now visible. [E. H. B.]

PELORUS (Πολύρος), a small river of Illyria, in Asia, probably a tributary of the Cyrus. (Dion. Cass. xxxvi. 2; comp. Gesskru's Strabo. vol. ii. p. 375.)

PELSO (Aur. Vict. de Caes. 40) or PELOSO (Plin. iii. 27), a considerable lake in the north of Pannonia. A large portion of it was drained by the emperor Galerius, who conducted its waters into the Danube, and thus reclaimed large tracts of land, which formed an important addition to the province. (Aur. Vict. l. c.) The modern name of the lake, during rainy seasons, still overflows its banks far and wide, and forms extensive marshes, which are probably the very districts that were drained by Galerius. Lake Peso is mentioned under different modifications of this name, such as Lacus Pelsolis (Jerome. Get. 52. 53) and Pelsois (Geogr. Rav. iv. 19), while in the middle ages it was called Pelsada. Muchar (Novic. i. p. 3, &c.) regards Pelso and Peso as two lakes, placing the former, with Pline, near the Desert Bohorum, and identifying it with the Nysaidorhoe, while he admits the Peso to be the Pelso. This hypothesis, however, can hardly be sustained, as it is quite certain that the Nysaidodion did not exist in the times of the Romans, but was formed at a later period. (Comp. Schonwiser, Antiquitates et Historia Sabariac. p. 17, &c.; Liechtenberg, Geogr. des Oester. Kaiserstaate. vol. iii. p. 1245, &c.)

PELTAE (Πελταί; Efh. Πελταύ'ς, Peltem), a considerable town of Phrygia, was situated, according to Xenophon (Anab. i. 2. § 10), at a distance of 10 parasangs from Celaenea, at the head of the river Maeander. Xenophon describes it as a populous city, and states that the army of Cyrus remained there three days, during which games and sacrifices were performed. The Peuting, Table, where the name is erroneously written Pelta, places it, quite in accordance with Xenophon, 26 miles from Apamea Cibetes, to the conventus of which Pelta was subjected. (Plin. v. 29; comp. Plut. v. § 25; Steph. B. s. v.) Strabo (xii. p. 576) mentions Peltae among the smaller towns of Phrygia, and the Notitia name it among the episcopal cities of Phrygia Pacatiana. The district in which the town was situated derived its name from the Peltsean plain (Πελτηνόν or Πελτυνὸν πεδιόν, Strab. xiii. p. 629). Kiepert (ap. Franz. Finf. Inschriften, p. 36) fixes the site of Peltae at the place where Mr. Hamilton found ruins of an ancient city, about 2 miles south of Summel (Journal of the Roy. Geogr. Society, viii. p. 114); while Hamilton himself (Researches, ii. p. 203) thinks that it must have been situated more to the south-west, near the modern Ishkeli. But this latter hypothesis seems to place it too far west.

PELUITIUM (Eth. Peluianae, —sitia: Ansedonia), a considerable town of the Vestini, and one of the four ascribed to that people by Pliny (iii. 12. s. 17). Its name is not found in Polybey or the Itineraries, but its municipal importance is attested by various inscriptions which confirm the fact mentioned by Pliny, that the Ausfines were closely connected with, or dependent on, Peluitium, apparently the more important place of the two. We learn from the Liber Coloniarum (p. 229) that it attained the rank of a colony, probably under Augustus; but at a later period, as we learn from an inscription of the date of A. D. 242, it was reduced to the condition of a Fræactus, though it seems to have been still a flourishing town. (Orelli, Inschr. no. 4036; Summel, 1. c. p. 359, &c.) Its site was unknown to Cluverius, but can be fixed with certainty at a spot called Ansedoria, between the villages of Castel Nuovo and Prato, about 14 miles SE. of Apulia, on the road from thence to Popoli. The ancient name is retained by a neighbouring church, called in ecclesiastical documents S. Paolo a Peluitiuno. A considerable part of the circuit of the ancient walls is still visible, with remains of various public buildings, and the ruins of an amphitheatre, now reticulating work. (Prenestino, Arret., p. 118; Romanelli, vol. iii. pp. 264—268; Orelli, Inschr. 106, 3961, 3981).

[Е. Я.Б.]

PELVIA, a town of Dalmatia, which the Antonine Itinerary places on the road from Sirmium to Salona. Schafarik (Statt. Alt. vol. i. pp. 60, 247) identifies it with Pleva, a place in Bosnia, with a river of the same name, of which Pelvia is the Latinised form. [Ф. Б.]

PELUSIUM (Πελούσιον, Plut. iv. 5. §§ 11, 15. § 11; Steph. B. s. v.; Strab. xvii. p. 802, seq.; Eth. Peltusium) was a city of Lower Egypt, situated upon the easternmost bank of the Nile, the Ostium Pelusiacum, to which it gave its name. It was the Sin of the Hebrew Scriptures (Ezek. xxx. 15); and this word, as well as its Egyptian appellation, Peremoun or Peroni, and its Greek (πελώς) import the city of the oze or mud (κυκτί, Copto, mud), Pelusium lying between the seashore and the Delta marshes, about two and a half miles from the sea. The Ostium Pelusiacum was choosed by sand as early as the first century B.C.,
and the coast-line has now advanced far beyond its ancient limits. The city, even in the third century A.D., was at least four miles from the Mediterranean. The principal produce of the neighbouring lands was flax, and the linum Pelusiacum (Plin. xix. 1. s. 3) was both abundant and of a very fine quality. It was, however, as a border-fortress on the frontier, as the key of Aegypt as regarded Syria and the sea, and as a place of great strength, that Pelusium was most remarkable. From its position it was directly exposed to attack by the invaders of Aegypt; several important battles were fought under its walls, and it was often besieged and taken. The following are the most memorable events in the history of Pelusium:

1. Sennacherib, king of Assyria, u. c. 720—715, in the reign of Sethos the Aethiopian (25th dynasty) advanced from Palestine by the way of Libna and Lachish upon Pelusium, but retired without fighting from before its walls (Ivanisch, xxxii. 8; Herod. ii. 141; Strab. xiii. p. 604). His retreat was ascribed to the favour of Hephaestos towards Sethos, his guest. In the night the Aethiopians slept, a host of field-mice gnawed the bow-strings and shield-straps of the Assyrians, who fled, and many of them were slain in their flight by the Aegyptians. Herodotus saw in the temple of Hephaestos at Memphis, a record of this victory of the Aegyptians, viz. a statue of Sethos holding a mouse in his hand. The story probably rests on the fact that in the symbolism of Aegypt the mouse implied destruction. (Comp. Heroppil. Hieroglyph. 1. 50; Aelian, H. An. vi. 41.)

2. The decisive battle which transferred the throne of the Pharaohs to Cambyses, king of the Medo-Persians, was fought near Pelusium in b. c. 525. The fields around were strewed with the bones of the combatants when Herodotus visited Lower Aegypt; and the skulls of the Aegyptians were distinguishable from those of the Persians by their superior hardness, a fact confirmed by the mummies, and which the historian ascribes to the Aegyptians slaying their horses from infancy, and to the Persians covering them up with folds of cloth or linens. (Herod. ii. 10, seq.) As Cambyses advanced at once to Memphis, Pelusium probably surrendered itself immediately after the battle. (Polyaen, Strateg. vii. 9.)

3. In b. c. 373, Pharamazus, satrap of Phrygia, and iphicles, the commander of the Athenian armament, appeared before Pelusium, but retired without attacking it. Nectanebus, king of Aegypt, having added to its former defences by laying the neighbouring lands under water, and blocking up the navigable channels of the Nile by embankments. (Diog. x. 42; Nepos, Iph. c. 5.)

4. Pelusium was attacked and taken by the Persians, b. c. 309. The city contained at the time a garrison of 5000 Greek mercenaries under the command of Philophon. At first, owing to the rashness of the Thebans in the Persian service, the defenders had the advantage. But the Aegyptian king Nectanebus hastily venturing on a pitched battle, his troops were cut to pieces, and Pelusium surrendered to the Thebans, who were on honourable conditions. (Diog. xvi. 43.)

5. In b. c. 333, Pelusium opened its gates to Alexander the Great, who placed a garrison in it under the command of one of those officers entitled "Companions of the King." (Arris, Exp. Alex. iii. 1. seq.; Quint. Curt. iv. 33.)

6. In b. c. 173, Antiochus Epiphanes utterly defeated the troops of Ptolemy Philometor under the walls of Pelusium which he had besieged and retained after he had retired from the rest of Aegypt. (Polyb. Legpt. § 82; Hieronym. in Daniel, x.) On the fall of the Syrian kingdom, however, if not earlier, Pelusium had been restored to its rightful owners, since

7. In b. c. 55, it belonged to Aegypt, and Marcus Antonius, as general of the horse to the Roman proconsul Gabinius, defeated the Aegyptian army, and made himself master of the city. Ptolemy Anietes, in whose behalf the Romans invaded Aegypt at this time, wished to put the Pelusians to the sword; but his intention was thwarted by Antonius. (Plut. Anton. c. 3; Val. Max. ix. 1.)

8. In b. c. 31, immediately after his victory at Actium, Augustus appeared before Pelusium, and was admitted by its governor Seleucus within its walls.

Of the six military roads formed or adopted by the Romans in Aegypt, the following are mentioned in the Itinerarium of Antoninus as connected with Pelusium:

1. From Memphis to Pelusium. This road joined the great road from Pseleis in Nubia at Babylon, nearly opposite Memphis, and coincided with it as far as Scenae Veteranorum. The two roads, viz. that from Pseleis to Scenae Veteranorum, which turned off to the east at Helopolis, and that from Memphis to Pelusium, connected the latter city with the capital of Lower Aegypt, Trajan's canal, and Arsame, or Sacra, on the Sinus Hesperopolitae.

2. From Aeca to Alexandria, ran along the Mediterranean sea from Raphia to Pelusium.

Pelusium suffered greatly from the Persian invasion of Aegypt in A. D. 501 (Eutychii, Annal.), but it offered a protracted, though, in the end, an ineffectual resistance to the arms of Auren, the son of Asi, in A. D. 618. As on former occasions, the surrender of the key of the Delta, was nearly equivalent to the subjugation of Aegypt itself. The khaliis, however, neglected the harbours of their new conquest generally, and from this epoch Pelusium, which had been long on the border of Aegypt and Aethiopia; but Sillig, instead of "Cysten, Penuma, Gadagalen," reads "Cysten, Macadagalen."

PENEIUS. 1. The chief river of Thessaly. (Thessal.)

2. The chief river of Elis. (Elis.)

PENESTAE, in Thessaly. See Dict. Antiq. s. v.

PENESTAK, a people of Illyricum, who appear
to have possessed a large tract of mountainous country to the N. of the Dassaretse, and extending to the E. as far as the frontier of Macedonia, while on the W. and NW. it almost reached to the Liberates and the dominions of Gentius. (Liv. xiii. pp. 20, 21, 22, 23, 25, xiv. 11.) The principal city of the Thessalian tribe was *Uxantus*. Besides which they had the two fortresses of *Draudumum* and *Oxenum*.

[**E. B. J.**]

**PENIEL** or **PENUEL** (i.e. "Face of God"), *Eifos Theo*, LXX.), a place beyond Jordan, where Jacob wrestled with the angel (Gen. xxxii. 30), and where a town was afterwards founded by the tribe of Gad. (Judges, viii. 8.)

**PENIUS**, a small river of Colchis, falling into the Euxine, on which stood a town of the same name. (Plin. iv. 4; Or. Pont. iv. 10. 475.)

**PENNELOCUS**, in the Antonine Itinerary, and **PENNOLICOS** in the Peutinger Table, is a place in Galatia in the country of the Xantutes, between Visiscus (Terey) and Tarnaja (*St. Maurice*). In the Itinerary the distance of Pennelocus from Visiscus is marked viii.; but it is uncertain whether they are Roman miles or Gallic leagues. It is generally assumed that Villeneuve at the eastern end of the Lake of Geneva is the site of Pennelocus, but the distance from Verey does not agree. *D'Anville* found in several old mops a place called *Pena* on the direction of the road, but the position of *Pena* does not agree with the distances in the Itinerary. Pennelocus was in the Vallis Penniniae or the Telais. [**[G. L.**]

**PENNYXAE ALPES.** [**Alpes**, p. 108, a.]

**PENNOCRUChum**, a town in the territory of the Coraci, in Britannia Romana, sometimes identified with *Penbridge* in Staffordshire, but more probably *Stretton*. (Ibn. Ant. p. 470; Camden, p. 636.)

[**[T. H. D.**]

**PENTADEMUTAE** (Πενταδεμοια), a tribe of Thessalian, in *Mysea*, which is mentioned only by Plutene (v. 2, § 15).

[**[L. S.**]

**PENTAPOLIS.** [**Cyrenaica.**]

**PENTACTYLOS** (Phyl. vi. 23, s. 34; *Πένταξαλτων* ὄρος, Ptol. iv. § 25), a mountain in Egypt, on the Arabian Gulf, S. of Berenice.

**PENTELIC.** [**Attica**, p. 327, a.]

**PENTELICUM** (Πεντελαια), a fortress near Pheneus, in the north of Arcadia, situated upon a mountain of the same name. For details see *Phe- neus*.

**PENTHELIES MONS.** [**Attica**, pp. 322, a., 323, b.]

**PENTRI** (Πεντρια), a tribe of the Sammites, and apparently one of the most important of the subdivisions of that nation. Their capital city was *Romiacum* (Liv. ix. 31), in the very heart of the Samnite territory, and it is therefore probable that they occupied the whole of that rugged and mountainous district which extends from the frontiers of Latium, in the valley of the Liris, to those of the Frenatani, towards the Adriatic. But it is impossible to determine their exact limits, or to separate their history from that of the remaining Sammites. It is probable, indeed, that, throughout the long wars of the Romans with the Sammites, the Pentri were the leading tribe of the latter people, and always took part in the war, whether specified or not. The only occasion when we hear of their separating themselves from the rest of their countrymen, is during the Second Punic War, when it is told that all the other Sammites, except the Pentri, declared in favour of Hannibal after the battle of Cannae, B. C. 216.
PERAEA.

Hist. Eclt. iv. 8, where it is called Petsea; Aristaeas.
Comm. in Comm. 8, where its name is Pessana.)

Kiepert (op. Franz. Fünf, Inschriften, p. 33) believes
that its site may possibly be marked by the ruins
found by Arundell (Discoveries in As. Min. i.
p. 101, 127) near Dush-Shehr and Kulubesi, in
the south of Uzbek.

[1. S.]

PERAEA (Перпая), the name of several districts
lying beyond (πέρα) a river or on the other side
of a sea.

The district of Palestine lying beyond the Jordan,
and more particularly the country between the
Jordan on the W., the city of Pella on the N.,
the city of Philadelphia and Arabia Petrea on the
E., and the land of the Moabites on the S. [Pa-
laestina, p. 532.]

2. (Ἑ τῶν Ρωθίων περπαία, Strab. xiv. pp. 651, 652; Polyb. xvii. 2, 6, 8, xxxi. 25; Liv. xxxi. 33, xxxii. 18; χώρα τῶν Ρωθίων ἢ ἐν τῇ ἡπείρῳ,
Sculax, p. 38), a portion of the S. coast of Caria,
opposite to Rhodes, and subject to it. It commenced
at Mt. Phoenix, and extended as far as the frontiers
of Libya. (Strab. l. c.) The peninsula containing
Mt. Phoenix was called the Rhodian Chersonesus.
(Strin. p. 2, 20; Diod. v. 60, 62.) For a de-
scription of this district, which is very beautiful and
fertile, see Vol. 1. pp. 519., b, 520, a.

3. (Περσαία Θεσείων, Strab. xiii. p. 536), a small
district on the coast of Myia, opposite to Tenedos,
and extending from the promontory Sigeum
to Alexander Trench.

PERAEA. [Corinthus, p. 685, b.]

PERAEThEIS. [Megapolis, p. 310, a.]

PERCEIANA (Πέρσειαν, p. 432), a town of
Hispania Baetica, lying S. of Merida. For its coins
see Sestini, p. 107.

[1. H. D.]

PERCOTE (Περκότης: Eth. Περκώτως), an an-
cient town of Myia, on the Hellespont, between Aby-
dos and Lampropolis, and probably on the little river
Perotes. (Hom. II. ii. 835, xi. 229; Xenop. Hellen.
v. i. § 23.) Percote continued to exist long after
the Trojan War, as it is spoken of by Herodotus
(v. 117), Scylax (p. 35), Apollonius Rhodius (i.
932), Arrian (Arab. i. 13), Pliny (v. 32), and
Stephanus Byz. (s. v.). Some writers mention it
among the towns assigned to Themiostocles by
the king of Persia. (Plut. Them. 30; Athen. i. p. 29.)
According to Strabo (xiii. p. 590) its ancient name
had been Percope. Modern travellers are unanimous
in identifying its site with Bergaz or Bergam, a small
Greek town on the left bank of a small river,
situated on a sloping hill in a charming dis-
 trict. (Sibthorp's Journal, in Walpole's Turkey,
i. p. 91; Richter, Weltlands., p. 434.)

PERCOTES (Περκότης), a small river of Myia,
flowing from Mount Ida into the Hellespont. (Hom.
II. ii. 835.) It is easily identified as the stream
flowing in the valley of the modern town of Bergaz.
[Comp. Percote.]

PERDICLES, a town in Mauretania Caesariensis,
25 M. F. from Silius, perhaps Ritus or Eduat. (It.
Ant. pp. 29, 36; Coll. Epic. c. 121.)

PERGA. [Пегра]

PERGAMUM. [Περγαμόν.]

PERGAMUM (Περγάμων: Eth. Περγαμών,
Pergamōn), sometimes also called PERGAMUS
(Ptol. v. 2. § 14, viii. 17. § 10; Steph. B. s. v.), an
ancient city, in a most beautiful district of Teu-
thria in Myia, on the north of the river Caicus.
Near the point where Pergamum was situated, two
other rivers, the Selinus and Cetius, emptied them-
selves into the Caicus; the Selinus flowed through
the city itself, while the Cetius washed its walls.
(Strab. xiii. p. 619; Plin. v. 33; Paus. vi. 16. § 2;
Liv. xxxvii. 15.) Its distance from the sea was
120 stadia, but communication with the sea was
effected by the navigable river Caicus. Pergamum,
which is first mentioned by Xenophon (Anab. viii. 8.
§ 8), was originally a fortress of considerable natural
strength, being situated on the summit of a conical
hill, round the foot of which there were at that time
no houses. Soon after, however, a city arose at the
foot of the hill, and the latter then became the
acreopolis. We have no information as to the founda-
tion of the original town on the hill, but the Per-
gamanians believed themselves to be the descendants
of Arcadians, who had migrated to Asia under the
leadership of the Heracleid Telephus (Paus. i. 4.
§ 5); they derived the name of their town from
Pergamus, a son of Pyrrhus, who was believed to
have arrived there with his mother Andromache,
and, after a successful combat with Arius, the ruler
of Teuthravia, to have established himself there.
(Paus. i. 11. § 2.) Another tradition stated that
Asaclepus, with a colony from Epidaurus, proceeded
to Pergamum; but at all events, the place seems to have
been inhabited by many Greeks at the time when
Xenophon visited it. Still, however, Pergamum
remained a place of not much importance until the
time of Lysimachus, one of the generals of Alexander
the Great. This Lysimachus chose Pergamum as a
place of security for the reception and preserva-
tion of his treasures, which amounted to 900 talents.
The care and superintendence of this trea-
ure was intrusted to Philietaeus of Tium, an enunci-
ate from his infancy, and a person in whom Lysimachus
placed the greatest confidence. For a time he
lile-
taeus answered the expectations of Lysimachus, but
having been ill-treated by Arsinóë, the wife of his
master, he withdrew his allegiance and declared
himself independent, c. c. 283. As Lysimachus
was prevented by domestic calamities from punishing
the offender, Philietaeus remained in undisturbed
possession of the town and treasures for twenty years,
contriving by dexterous management to maintain
peace with his neighbours. He transmitted his
principalcy to a nephew of the name of Eumenes,
who increased the territory he had inherited, and
ev en gained a victory over Antiochus, the son of
Seleucus, in the neighbourhood of Sardes. After a
reign of twenty-two years, from c. c. 263 to 241, he
was succeeded by his cousin Attalus, who, after a
great victory over the Galatians, assumed the title
of king, and distinguished himself by his talents and
sound policy. (Strab. xiii. pp. 623, 624; Polyb.
xxiv. 24; Liv. xxxiii. 21.) He espoused the in-
terests of Rome against Philip of Macedonia, and in
conjunction with the Rhodian fleet rendered im-
portant services to the Romans. It was mainly this
Attalus that amassed the wealth for which his name
became proverbial. He died at an advanced age, in
b. c. 197, and was succeeded by his son Eumenes II.,
from b. c. 197 to 159. He continued his friend-
ship with the Romans, and assisted them against
Antiochus the Great and Perseus of Macedonia; after
the defeat of Antiochus, the Romans rewarded his
services by giving to him all the countries in Asia
Minor west of Mount Taurus. Pergamum, the ter-
ritory of which had hitherto not extended beyond
the gulfs of Elaeu and Aedramyttium, now became
a large and powerful kingdom. (Strab. l. c.; Liv.
xxxvii. 39.) Eumenes III. was nearly killed at
Dolphi by assassins said to have been hired by Perseus; yet at a later period he favoured the cause of the Macedonian king, and thereby incurred the ill-will of the Romans. Pergamus was mainly indebted to Eumenes II. for its embellishment and extension. He was a liberal patron of the arts and sciences; he decorated the temple of Zeus Nichephorus, which had been built by Attalus outside the city, with walks and plantations, and erected himself many other public buildings; but the greatest monument of his liberality was the great library which he founded, and which yielded only to that of Alexandria in extent and value. (Strab. l. c.; Athen. i. p. 3.) He was succeeded by his son Attalus II., but the government was carried on by the late king's brother Attalus, surnamed Philometor, from B.C. 139 to 133. During this period the Pergamens again assisted the Romans against the Pseudo-Philip. Attalus also defeated Berylus, king of the Thracian Caeni, and overthrew Prusias of Bithynia. On his death, his ward and nephew, Attalus III., surnamed Philometor, undertook the ruins of government, from B.C. 138 to 133, and on his death bequeathed his kingdom to the Romans. Soon after, Aristonicus, a natural son of Eumenes II., revolted and claimed the kingdom of Pergamus for himself, but in B.C. 130 he was vanquished and taken prisoner, and the kingdom of Pergamus became a Roman province under the name of Asia. (Strab. l. c., xiv. p. 646.) The city of Pergamus, however, continued to flourish and prosper under the Roman dominion, so that Piny (l. c.) could still call it "longe clarissimum Asiae Pergamum:" it remained the centre of jurisdiction for the district, and of commerce, as all the main-roads of Western Asia converged there. Pergamus was one of the Seven Churches mentioned in the book of Revelations. Under the Byzantine emperors the greatness and prosperity of the city declined; but it still exists under the name of Bergama, and presents to the visitor numerous ruins and extensive remains of its ancient magnificence. A wall facing the south-east of the acropolis, of hewn granite, is at least 100 feet deep, and engraved into the rock; above it a course of large substructions forms a spacious area, upon which once rose a temple univailed in sublimity of situation, being visible from the ruins of the plain and the Bandusian hills. The ruins of this temple show that it was built in the noblest style. Besides this there are ruins of an ancient temple of Aesculapius, which, like the Nicephorion, was outside the city (Tac. Ann. iii. 63; Paus. v. 13. § 2); of a royal palace, which was surrounded by a wall, and connected with the Calecis by an aqueduct; of a pyramus, a theatre, a gymnasion, a stadium, an amphitheatre, and other public buildings. All these remains attest the unusual splendour of the ancient city, and all travellers speak with admiration of their stupendous greatness. The numerous coins which we possess of Pergamus attest that Olympia were celebrated there; a vase found there represents a torch-bearer on horseback; and Phiny (x. 25) relates that public cock-fights took place there every year. Pergamus was celebrated for its manufacture of ointments (Athen. xv. p. 689), pottery (Plin. xxx. 46), and parchment, which derives its name (charta Pergama) from the city. The library of Pergamus, which is said to have contained 20,000 volumes, was given by Antony to Cleopatra. (Comp. Spen and Wheler, Top. i. p. 260, &c.; Choiseul-Goullier, Voyage d'Asie et de Turquie, ii. p. 23, &c.)

PERGE.

[PL.]

COIN OF PERGAMUS IN MYSIA.

PERGAMUS (Πηγαμαος, Herod. vii. 112), a fortress in the Pierian hollow, by which Xerxes passed in his march, leaving Mt. Pangaeum on his right. It is identified with Pravista, where the lower maritime ridge forms a junction with Pangaeum, and separates the Pierie valley from the plain of Philipii. (Leake, Northern Greece, vol. iii. p. 178.) [E. B. J.] PERGAMUS (Πηγαμος), a town of Crete, to which a mythical origin was ascribed. According to Virgil it was founded by Aeacids (Aen. iii. 130), according to Veilens Paterculus (l. 1) by Agamemnon, and according to Servius by the Trojan prisoners belonging to the fleet of Agamemnon (ad Virg. Aen. l. c.). Lycurgus, the Spartan legislator, was said to have died at this place, and his tomb was shown there in the time of Aristroenus. (Plut. Lyce. 32.) It is said by Servius (l. c.) to have been near Cydonia, and is mentioned by Phiny (iv. 12. s. 20) in connection with Cydonia. Consequently it must have been situated in the western part of the island, and is placed by Ashley at Piatonidae. (Travels in Crete, vol. ii. p. 23.) Scylax says (p. 18, Bkivs.), that the Dictynnæum stood in the territory of Pergamus.

PERGANTHUM (Πηγανθέων; Edh. Pyganioti, Steph. B. s. v.), a city of the Ligures. It is the small island named Pergamon, on the south coast of France. It is separated by a narrow channel from a point on the mainland which is turned towards Mers, one of the Stoechades or Isles d'Ilîeres. [G. L.]

PERGE or PELIA (Πηγας; Edh. Penumos), an ancient and important city of Pamphylia, between the rivers Carpathus and Cestrus, at a distance of 60 stadia from the mouth of the latter. (Strab. xiv. p. 667; Plin. v. 26; Pomp. Mol. i. 14; Ptol. v. 5. § 7.) It was renowned for the worship of Artemis, whose temple stood on a hill outside the town, and in whose honour annual festivals were celebrated. (Strab. l. c.; Callim. Hymn. in Dian. 187; Scylax, p. 39; Dionys. Per. 854.) The coins of Perge represent both the goddess and her temple. Alexander the Great occupied Perge with a part of his army after quitting Phaselis, between which two towns the road is described as long and difficult (Arrian, Anab. i. 26; comp. Polyb. v. 72, xxii. 25;
PERIMULA.

Liv. xxxviii. 37.) We learn from the Acts of the Apostles (xiv. 24, 25) that Paul and Barnabas preached the gospel at Perge. (Comp. Acts, xiii. 13.) In the ecclesiastical notices and in Hierocles (p. 679) Perge appears as the metropolis of Pamphylia. (Comp. Steph. B. s. v.; Eckhel, Doctr. Num. i. 3, p. 12.) There are considerable ruins of Perge about 16 miles to the north-east of Adalia, at a place now called Eski-Kalei. (Comp. Lecce, Asia Minor, p. 132; Texier, Descript. de l'Asie Mine, where the names are figured in 15 plates; Fellows, Asia Minor, p. 190, &c.)

PERIMULA (Περίμουλα, Pol. vii. 2, § 5), the name of a town of some commercial importance on the W. side of the Sinus Magnus (or Gulf of Sium), on a tongue of land anciently called the Aurora Chersonesus, and now known by the name of Macarea. Lassen places it in lat. 7° N. In its immediate neighbourhood was a small bay or indentation of the coast, which was called the Sinus Perimulentis (Περίμουλικός λόφος). [V.]

PERIMULICUS SINUS. [PERIMULA.]

PERINTHUS (Περίνθος, Pol. iii. 11, § 6, viii. 11, § 7; Xenoph. Anab. vii. 2, § 8: Euh. Περίνθως), a great and flourishing town of Thrace, situated on the Propontis. It lay 22 miles W. of Selymbria, on a small peninsula (Ptol. iv. 18) of the bay which bears its name, and was built like an amphitheatre, on the declivity of a hill (Diod. xvi. 76.) It was originally a Samian colony (Marcian, p. 29; Plut. Qu. Gr. 50), and, according to Syncellus (p. 238), was founded about n. c. 599. Panorkia, however (p. 22), makes it contemporary with Samothrace, that is about n. c. 1000. It was particularly renowned for its obstinate defence against Philip of Macedon (Diod. xvi. 74-77; Plut. Phoc. 14). At that time it appears to have been a more important and flourishing town even than Byzantium; and being both a harbour and a point at which several main roads met, it was the seat of an extensive commerce (Procop. de Aed. iv. 9). This circumstance explains the reason why so many of its coins are still extant; from which we learn that large and celebrated festivals were held here (Moisson, i. p. 399—415; Eckhel, Doctr. Num., vol. iv. p. 443; Morell, Spec. Reç Num., tab. xiii. 145). According to Tzetzes (Chil. iii. 812), it bore at an early period the name of Mygdonia; and at a later one, but not before the fourth century of our era, it assumed the name of Heracleia; which we find sometimes used alone, and sometimes with the additions H. Thrasciae and H. Perintus. (Procop. l. c. and B. Vandal. i. 12; Zosim. i. 62; Justin, xvi. 3; Evouph. ix. 15; Amm. Marc. xxi. 2; Itin. Ant. pp. 175, 176, 323; Jorn. de Regn. Soc. p. 51, &c. On the variations in its name, see Tischewche, ad Melanum, ii. 2, vol. iii. p. 102, &c.) Justinian restored the old imperial palace, and the aqueducts of the city. (Procop. l. c.) It is now called Eski Ergeli, and still contains some ancient ruins and inscriptions. (See Clarke's Travels, viii. p. 122, seqq.) [T. H. D.]

PERISADYES (Περισάδεις, Περισάδης), an Illyrian people, near the silver mines of Dasmastium, whose name seems to be corrupt. (Strab. viii. p. 326; Kramer and Groskurd, ad loc.)

PERITUR, a place in Lower Pannonia (Itin. Hieros. p. 562), probably the same as the one mentioned in the Peutinger Table, under the name of Piretis, and in the Antonine Itinerary (p. 266) under that of Pyrr or Pyrgum, and situated on the road from Petovio to Siscia. (See Wesseling, ad It. Hieros. l. c.) [L. S.]

PERIZITES. [Palaestina, p. 529.]

PERMESSUS. [Borozia, p. 413.]

PERNE (Περνή), a small island off the coast of Ionia, which, during an earthquake, became united with the territory of Miletus. (Plin. ii. 91.) There was also a town in Thrace of this name, which is mentioned only by Steph. B. (v. e. v.) [L. S.]

PERNICACUM, or PERNACUM in the Table, in North Gallia, is placed on a road from Bagacum (Barcel) to Aduatuca (Tongern). The road passed from Bagacum to Geminiacum (Gemblo). From here (Geminiacum) to Aduatuca is xii. in the Anton. Itin., and xiii. in the Table; and from Perniacum to Aduatuca is xiv. in the Itin. and xvi. in the Table. The road is generally straight, but there is no place which we can identify as the site of Perniacum; and the geographers do not agree on any position. [G. L.]

PERORSI (Περόρσης, Περόρσης, Pol. iv. 6, §§ 16, 17; Polyb. ap. v. i. 3, vi. 35), a people of Libya, subdued by Suetonius Paulinus, who inhabited a few fertile spots spread over the long extent of maritime country between Sinus Mapharius, which dveled opposite to the Fortunate Islands, and the Pharasis, who occupied the banks of the Senegal. (Leake, London Geog. Journ. vol. ii. p. 17.) [E. B. J.]

PERPERENA (Περπερένη), a place in Mybia, on the south-east of Adramyttium, in the neighbourhood of which there were copper mines and good vineyards. It was said by some to be the place in which Thucydides had died. (Strab. xiii. p. 607; Plut. v. 32; Steph. B. s. v. Pernicacum; from whom we learn that some called the place Perene; while Ptol. v. 2, § 16, calls it Perpero or Pernere; Galen, Περπέρενη, p. 338; comp. Sestini, p. 75.) Some, without sufficient reason, regard Perperena as identical with Theodosiopolis, mentioned by Hierocles (p. 661). [L. S.]

PERRANTHES. [Ameracia.]

PERREHAEI, PERRHAEBAI. [Thessalia.]

PERSEHIDAE. [Attica, p. 330, a.]

PERSABODI (Περσαβοδί), Zosim. iii. 17), a very strong place in Mesopotamia, on the W. bank of the Euphrates, to which the emperor Julian came in his march across that country. Zosimus, who gives a detailed account of its siege, states that it was in size and importance second only to Ctesiphon. Ammianus, speaking of the same war, calls the place Pirisabora (xxiv. c. 2); and Libanius Soph. mentions a city of the same name as the then ruling king of Persia, evidently supposing that it derived its name from the Perses (or Shalshir). (Orat. Fam. p. 315.) Forbiger has conjectured that it is represented by the present Anbar, and that it was situated near the part of the river Euphrates whence the canal Nahra-sares flows, and no great distance from the Siphara of Polieny (v. 18, § 7). [V. j]

PERS. A. B.
PERSEPOLIS.

PERSEPOLIS (Περσεπόλις, Dial. xvii. 70; Ptol. vi. 4. § 4; Curt. v. 4. 6; Περσαπόλις, Strab. xv. 729; Ἐθ. Περσεπόλιτη), the capital of Persia at the time of the invasion of Alexander, and the seat of the chief palaces of the kings of Persia. It was situated at the opening of an extensive plain (now called Mardukht), and near the junction of two streams, the Arazes (Bendamir) and the Medes (Paltäin). The ruins, which are still very extensive, bear the local name of the Chel Minar, or Forty Columns. According to Diodorus the city was built on a terrace divided by a triple wall of great strength and beauty (xvii. 71). Strabo states that it was, after Susa, the richest city of the Persians, and that it contained a palace of great beauty (xv. p. 729), and adds that Alexander burnt this building to avenge the Greeks for the similar injuries which had been inflicted on them by the Persians (xv. p. 730). Arran simply states that Alexander burnt the royal palace, contrary to the entreaty of Parmenio, who wished him to spare this magnificent building, but does not mention the name of Persepolis. (Aenod. xvi. 18.) Curtius, who probably drew his account from the many extant notices of Alexander's expedition by different officers who had accompanied him, has fully described the disgraceful burning of the city and palace at Persepolis by the Greek monarch and his drunken companions. He adds that, as it was chiefly built of cedar, the fire spread rapidly far and wide.

Great light has been thrown upon the monuments which still remain at Persepolis by the researches of Niebuhr and Ker Porter, and still more so by the interpretation of the cuneiform inscriptions by Colonel Rawlinson and Prof. Lassen. From the result of their inquiries, it seems doubtful whether any portion of the present ruins ascend to so high a period as that of the founder of the Persian monarchy, Cyrus. The principal buildings are doubtless due to Darius the son of Hystaspes, and to Xerxes. The palace and city of Cyrus was at Pasargada, while that of the later monarchs was at Persepolis. (Rawlinson, Journ. of Arch. As. Soc. vol. xx. Lassen, in Croeh and Graber's Encycl. s. r.; Ferguson, Palaces of Nineveh and Persepolis Restored, Lond. 1851.) It has been a matter of some doubt how far Persepolis itself ever was the ancient site of the capital; and many writers have supposed that it was only the high place of the Persian monarchy where the great palaces and temples were grouped together. On the whole, it seems most probable that the rock on which the ruins are now seen was the place where the palaces and temples were placed, and that the city was extended at its feet along the circumjacent plain. Subsequent to the time of Alexander, Persepolis is not mentioned in history except in the second book of the Maccabees, where it is stated that Antiochus Epiphanes made a fruitless attempt to plunder the temples. (2 Maccab. ix. 1.) In the later times of the Muhammadan rule, the fortress of Istakhr, which was about 4 miles from the ruins, seems to have occupied the place of Persepolis; hence the opinion of some writers, that Istakhr itself was part of the ancient city. (Niebuhr, ii. p. 121; Chardin, Parthia, viii. p. 245; Ker Porter, vol. i. p. 576; Ouseley, Travels, ii. p. 222.)

PERSESIUS SINUS (ὁ Περσεσιος κόλπος, Strab. ii. p. 78, xv. p. 727; Ptol. vi. 3. § 1. 4. § 1, κυμός, Ptol. vi. 19. § 1; ἡ κατὰ Περσηκίδα Δέλτασσα, Strab. xvi. p. 763; ἡ Περσηκίδα Δέλτασσα, Agathem. i. 3; PERSIS.)

Mare Persicum, Flin. vi. 13. s. 16), the great gulf which, extending in a direction nearly NW. and SE., separated the provinces of Susiana and Persis, and the western portion of Carmania from the opposite shores of Arabia Felix. There are great differences and great errors in the accounts which the ancients have left of this gulf; nor indeed are the statements of the same author always consistent the one with the other. Thus some writers gave to it the shape of the human head, of which the narrow opening towards the SE. formed the neck (Mela, iii. 8; Ptol. vi. 24. 26.; Claudian, who in one place states at the entrance, it was only a day's sail across (xv. p. 727), and in another (xvi. p. 765) that from Harmuz the opposite Arabian shore of Mace was visible, in which Ammianus (xxiii. 6) agrees with him. He appears to have thought that the Persian Gulf was little inferior in size to the Exuine sea (L.C.), and reckons that it was about 20,000 stadia in length. (Cf. Agathem. i. 3.) He placed it also, according to a certain system of parallelism, due S. of the Caspian (ii. p. 121, cf. also xi. 319). The earliest mention of the Persian Gulf would appear to be that of Hecataeus (Steph. B. s. r. Kým); but a doubt has been thrown upon this passage, as some MSS. read πέντε of the knómovs.

PERSIS (ἡ Περσίς, Aschyl. Pers. 60; Herod. iii. 19; Ptol. vi. 23. s. 25; Amm. Marc. xxi. 6, &c.; ἡ Περσηγεία, Herod. iv. 39; Eth. Περσηγή, Persa), the province of Persis, which must be considered as the centre of the ancient realm of Persia, and the district from which the arms of the Persians spread over all the neighboring nations, was bounded on the N. by Media and part of the chain of the Paracatothas M.; on the W. by Susiana, which is separated from Persis by the small stream Arsis or Oratias; on the S. by the Persian Gulf, and on the E. by the desert waste of Carmania. In the earlier periods of history this province was altogether unknown, and it was not till the wars of Alexander and of his successors that the Greeks formed any real conception of the position and character of the land, from which their ancestors had been driven by the formidable enemies that took their name. The whole province was a very mountainous mass, with few extended plains; it possessed, however, several valleys of great beauty and fertility, as those for instance in the neighbourhood of Perseopolis (Strab. xv. p. 727; Arrian, Ind. c. 40; Amm. Marc. xxi. 6; Chardin, Voy. iii. p. 255); the coast-line appears to have been, as it is now, sandy and hot, and uninhabitable, owing to the poison-bearing winds. (Flin. xii. 20.) The principal mountain chains bore the names of Paracatothas (Eleuva) and Ochos (perhaps Nokhida); and were, in fact, prolongations to the sea of the still higher ranges of Media. It was watered by no great river, but a number of smaller streams are mentioned, some of them doubling little more than mountain torrents. The chief of these were the Araxes (Bend-amir), the Medus (Polwaris), and the Cyrus (Kör), in the more inland part of the country; and along the coast, the Bagrada, Padargus, Heratemia, Bhongus, Oratois, &c. (Flin. vi. 23. s. 26; Arrian, Ind. c. 39; Amm. Marc. xxi. 6; Strab. xvi. p. 727, &c.) The principal cities of Persis were, PARSAGADA, its earliest capital, and the site of the tomb of its first monarch, Cyrus; PERSEPOLIS, the far-famed seat of the palace and temples of Darius the son of Hystaspes, and his successors; GABAE, one of the residences of the Persian kings; TAKCÉ, and ASPADANA.

The Perses were properly the native inhabitants...
of this small district; though in later times the name was applied generally to the subjects of the great king, whose empire extended, under Dareius the son of Hystaspes, from India to the Mediterranean. In the earliest times of the Old Testament they are not mentioned by name as a distinct people, and when, in the later days of the captivity, their name occurs, they must be taken as the inhabitants of the great empire above noticed (Ezek. xxxviii, 5; Esth. i. 3—18; Ezra, iv. 5; 1 Macrob. i. 1, &c.), and not simply of the limited district of Persis. According to Herodotus, the ancient people were divided into three leading classes, warriors, husbandmen, and nomades. In the first class, the Pasargadæ, Marpâli, and Maspâi, were the most important sub-divisions. The Achaemenidae, from whom their well-known line of kings descended, was one of the families of the Pasargadæ. The tribes of husbandmen bore the names of Panthialæi, Dareiusiæ, and Germaniæ; those of the nomades were called, Dai, Mardi, Dropæi, and Sagartii. (Herod. i. 125.) It is clear from this account that Herodotus is describing what was the state of the Persæa but a little while before his own times, and that his view embraces a territory far more extensive than that of the small province of Persia which Herodotus has described. The Persians were part of the nomad tribes, that he extended the Persian race over a considerable portion of what is now called Khorâsim; indeed, over much of the country which at the present day forms the realm of Persia. In still later times, other tribes or sub-divisions are met with, as the Parsatæni, Messabatae, Stabæi, Susæiæ, Hippoplagi, &c. &c. Herodotus states further that the most ancient name of the people was Artæiæ (Herod. vii. 61), a form which modern philology has shown to be an etymological contraction of the Aria, the earliest title of their immediate neighbours, the Medæ. Both alike are derived from the old Zend and Sanscrit Arya, signifying a people of noble descent; a name still preserved in the modern Irak (Ariaka). (Muller, Journ. Asiat. iii. p. 299; Lassen, Ind. Alterth. ii. p. 7.) There can be no doubt that the name Persæa is itself of Indian origin, the earliest form in which it is found is the cuneiform inscriptions being Parasa. (Lassen, Alt.-Pers. Keil-Inscr. p. 60.)

The Persian people seem to have been in all times noted for the pride and haughtiness of their language (Aeschyl. Pers. 793; Amm. Marc. xxiii. 6); but, in spite of this habit of boasting, in their earlier history, under Cyrus and his immediate successors, they appear to have made excellent soldiers. Herodotus describes fully the arms and accoutrements of the foot-soldiers, archers, and lancers of the army of Xerxes (vii. 61), on which description the well-known sculptures at Persepolis afford a still living commentary. (Cf. also Strab. xv. p. 724; Xen. Cyrop. vi. 3. § 31.) Their cavalry also was celebrated (Herod. l. c. ix. 79, 81; Xen. Cyrop. vi. 4. § 1). Strabo, who for the most part confines the name of Persæa to the inhabitants of Persis, has fully described some of the manners and customs of the people. On the subject of their religious worship Herodotus and Strabo are not at one, and each writer gives separate and unconnected details. The general conclusion to be drawn is that, in the remotest ages, the Persians were fire-worshippers, and that by degrees they adopted what became in later times a characteristic of their religious system, the Dualistic arrangement of two separate principles of good and evil, Horumud and Ahriman. (Strab. xv. p. 727—736; Herod. i. 33, 133; Xen. Cyrop. i. 22.) Many of their ancient religious customs have continued to the present day; the fire-worshippers of India still contending that they are the lineal descendants of the ancient Persians. The language of the ancient people was strictly Indo-Germanic, and was nearly connected with the classical Sanscrit: the earliest specimens of it are the cuneiform inscriptions at Marûghuš,—the site of Pasargada, and the place where Cyrus was buried,—and those of Dareius and Xerxes at Perseopolis and Behistun, which have been deciphered by Colonel Rawlinson and Professor Lassen. (Rawlinson, Journ. As. Soc. vol. i.; Lassen, Zeitschrift f. Morgenl. vi. 1; Hitaig, Grubhchrift d. Darius, Zürich, 1847; Beney, Persia, cit. Insterburg, Leipzig, 1848.)

The government of Persia was a rigid monarchy. Their kings lived apart from their subjects in well secured palaces (Esth. iv. 2, 6), and rejoiced in great parks (παραδείσου), well stocked with game and animals for the chase (Cyrop. i. 3. § 14, viii. 1. § 38, Anab. i. 2. § 7; Curt. vii. 1. § 11), and passed (in later times, when their empire was most widely extended) their summer at Ecbatana, their spring at Susa, and their winter at Babylon. (Nehem. i. 1; Dan. viii. 5; Esth. vi. 14, § 15; Cyrop. vii. 6. § 52.) Like other eastern monarchs, the Persian kings possessed a well appointed harem, many curious details of which we gather from the history of Esther (cf. also Curt. iii. § 3; Athen. xiii. p. 557; Plut. Artax. c. 43), and they were accustomed to receive from their subjects direct adoration (προσκυνησις), as the presumed descendants or representatives of Hormuzd. (Plut. Themist. c. 7; Curt. vi. 6. § 5, viii. 5. § 6.) Their local government was a pure despotism; but, in some extraneous circumstances, the capital was called of the seven chief princes, who stood around the royal throne, like the Amshaspandar round the throne of Hormuzd. (Herod. viii. 8, viii. 67; Esth. i. 14, 19, vii. 14.) Whatever document had once passed the king and had been sealed by the royal signet was deemed irrevocable. (Esth. i. 19, viii. 8; Dan. vi. 9, 16; cf. also Chardin, Voy. ii. 418.) Over the individual provinces—which in the time of Dareius were said to have been twenty in number (Her. vii. 50), but were subsequently much more numerous (Esth. i. 1), probably from the subdivision of the larger ones—were placed satraps, whose business it was to superintend them, to collect the revenues, and to attend to the progress of agriculture. (Her. iii. 89, 97; Joseph. Ant. xi. 3, &c.) Between the satraps and the kings was a well-organised system of couriers, who were called ἄγγελοι or λεσθεῖς (Plut. Fort. Alexi. vii. p. 294, ed. Reiske), who conveyed their despatches from station to station on horses, and had the power, when necessary, to press horses, boats, and men into their service. As this service was very irksome and oppressive, the word ἄγγελος came to mean commission or detention under other circumstances. (Joseph. Ant. xiii. 2. § 3; Esth. iii. 13, 15, viii. 10, 14; Bentley’s Memusend, p. 56.)

The history of the Persian empire need not be repeated here, as it is given under the names of the respective kings in the Dict. of Biogr. [V.]

PERUSIA. (Peroesia; Eth. Persians: Perugia), one of the most important and powerful cities of
Etruria, situated nearly on the eastern frontier of that country, on a lofty hill on the right bank of the Tiber, and overlooking the lake of Trasimene with Perusia, derives its name from the name of *Lago di Perugia.* It closely adjoins the confines of Umbria, and hence the tradition reported by Servius, that it was originally an Umbrian city, inhabited by the tribe called Sarsinates, is at least a very probable one. (Serv. *ad Aen.* x. 201.) The same author has, however, preserved to us another tradition, which ascribes the foundation of Perusia to a hero named Anuletus, the brother of Ocean, the reputed founder of Mantua. (Id. x. 198.) Justin’s assertion that it itself, which Augustus of origin can be safely rejected as a mere fable; but whatever historical value may be attached to the statements of Servius, it seems probable that Perusia, in common with the other chief places in the same part of Etruria, was in the first instance an Umbrian city, and subsequently passed into the hands of the Etruscan, under whom it rose to be a powerful and important city, and one of the chief members of the Etruscan confederacy. It is not till n. c. 510, when the Romans had carried their arms beyond the Nervii, that the name of Perusia is heard of in history; but we are told that at that period it was one of the most powerful cities of Etruria. (Liv. ix. 37.)

The three neighbouring cities of Perusia, Cortona, and Arezzo, on that occasion united in concluding a peace with Rome for thirty years. (Liv. l. c.; *Ibid.* xx. 53); but they seem to have broken it the very next year, and shared in the great defeat of the Etruscan in general at the Vulshine lake. This was followed by another defeat under the walls of Perusia, which compelled the Etruscans to one for peace; but the statement that it surrendered at discretion, and was occupied with a Roman garrison, is one of these obvious perverted truths. The fact seems to occur so frequently in the Roman annals. (Liv. ix. 40.)

When we next meet with the name of Perusia, it is still as an independent and powerful state, which in n. c. 295, in conjunction with Clusium, was able to renew the war with Rome; and though their combined forces were defeated by Ca. Fulvia, the latter triumph did not come forward with sufficient to furnish supplies to the fleet of Scipio. Its contribution consisted of corn, and timber for shipbuilding. (Id. xxviii. 45.) With this exception, we meet with no other mention of Perusia as an independent state; and we have no explanation of the circumstances or terms under which it ultimately became a dependency of Rome. But during the Second Punic War it figures among the allied cities which then formed so important a part of the Roman power; its cohorts were serving in her arms (Liv. xxviii. 17), and towards the end of the contest it was one of the *populi* of Etruria which claimed the chief city, and was shortly after furnished supplies by the fleet of Scipio. Its contribution consisted of corn, and timber for shipbuilding. (Id. xxviii. 45.)

Perusia, in B. C. 41, as to give to that contest the name of Bellum Perusinum. (Suet. *Aug.* 9; *Tac.* Ann. v. 1; *Oros.* vi. 18.) It was shortly after the outbreak of hostilities on that occasion that L. Antonius, finding himself pressed on all sides by three armies under Agrippa, Salvinius, and Octavian himself, threw himself into Perusia, trusting in the great natural strength of the city to enable him to hold out till the arrival of his generals, Ventidius and Asinius Pollio, to his relief. But whether from dissatisfaction or incapacity, these officers failed in coming to his support, and Octavian surrounded the whole hill on which the city stands. The walls of the city were almost broken down by the weight of men and machines, and almost cut off from all supplies, especially on the side of the Tiber, on which Antony had mainly relied. Faunus soon made itself felt in the city; the siege was protracted through the winter, and Ventidius was failed in an attempt to compel Octavian to raise it, and drew off his forces without success. L. Antonius now made a desperate attempt to break through the enemy’s lines, but was repulsed with great slaughter, and found himself at length compelled to capitulate. His name was reserved for the Roman nobles who had accompanied him; but the chief citizens of Perusia itself were put to death, the city given up to plunder, and an accidental conflagration having been spread by the wind, ended by consuming the whole city. (Appian, *B. C.* v. 49; *Dion Cass.* xlviii. 14; *Vell. Pat.* ii. 74; *Flor.* iv. 5; *Suet. Aug.* 14, 96.)

A story told by several writers of Octavian having sacrificed 300 of the prisoners at an altar consecrated to the memory of Caesar, is as improbable a fiction, or at least an exaggeration, as that told by one to a *necromancer.* (Dion Cass. l. c.; *Suet. Aug.* 58; *Saxe. de Clem.* i. 11; *Merivale’s Roman Empire,* vol. iii. p. 227.)

Perusia was raised from its ashes again by Augustus, who settled a fresh body of citizens there, and the city assumed in consequence the surname of Augustus Perusia, which we find it bearing in inscriptions; but it did not obtain the rank or title of a colony, and its territory was confined to the district within a mile of the walls. (Dion Cass. xlvii. 14; *Cass.* xliii. 21.) The name of Perusia, however, under this restriction, it appears to have speedily risen again into a flourishing municipal town. It is noticed by Strabo as one of the chief towns in the interior of Etruria, and its municipal consideration is attested by numerous inscriptions. (Strab. v. p. 226; *Phin.* iii. 3. 8; *Isthm.* vi. 48; *Tab. Pict.*; *Orell. Inscr.* 2531; 3739; 4038.) From one of these we learn that it acquired under the Roman Empire the title of Colonia Viboria; but the origin of this is unknown, though it is probable that it was derived from the emperor Trebonianus Gallus, who appears to have bestowed some conspicuous benefits on the place. (Vermiglio’s, *Iscric. Perug.* pp. 379—400; Zumpt, *de Colon.* p. 436.)

The name of Perusia is not again mentioned in history till after the fall of the Roman Empire, but its natural strength of position rendered it a place of importance in the troubled times that followed; and it figures conspicuously in the Gothic wars, when it is called by Procopius a strong fortress in the chief city of Etruria. It was taken by Belisarius in A. D. 537, and occupied with a strong garrison; in 547 it was besieged by Totila, but held out against his arms for nearly two years, and did not surrender till after Belisarius had invaded Italy. It was again recovered by Narses in 552. (*Procop.* B. G. i. 16, 17, iii. 6, 25, 35, iv. 33.)
It is still mentioned by Paulus Diaconus (Hist. Lang. ii. 16) as one of the chief cities of Tuscia under the Lombards, and in the middle ages became an independent republic. Persugia still continues a considerable city, with 15,000 inhabitants, and is the capital of one of the provinces of the Roman states.

The modern city of Persugia retains considerable vestiges of its ancient grandeur. The most important of these are the remains of the walls, which agree in character with those of Chiusi and Toth, being composed of long rectangular blocks of travertine, of very regular masonry, wholly different from the smaller and more massive walls of Coriæna and Volterra. It is a subject of much doubt whether these walls belong to the Etruscan city, or are of later and Roman times. The ancient gates, two of which still exist, must in all probability be referred to the latter period. The most striking of these is that now known as the Arco d'Augusto, from the inscription "Augusta Persusia" over the arch; this probably dates from the restoration of the city under Augustus, though some writers would assign it to a much more remote period. Another gate, known as the Porta Marzia, also retains its ancient arch; while several others, though more or less modernised, are certainly of ancient construction as high as the impost.

It is thus certain that the ancient city was not more extensive than the modern one; but, like that, it occupied only the summit of the hill, which is of very considerable elevation, and sends down its roots and underfalls on the one side towards the Tiber, on the other towards the lake of Trasimene. Hence the lines of circulation drawn around the foot of the hill byOctavian enclosed a space of 56 stadia, or 7 Roman miles (Appian, B. C. v. 33), though the circuit of the city itself did not exceed 2 miles.

The chief remains of the ancient Etruscan city are the sepulchres without the walls, many of which have been explored, and one—the family tomb of the Volumnii—has been preserved in precisely the same state as when first discovered. From the inscriptions, some of which are bilingual, we learn that the tomb, much more recently discovered in Etruscan "Volumnii," which is rendered in Latin by Volumnii. Other sepulchres appear to have belonged to the families whose names assumed the Latin forms, Asia, Caesia, Petronia, Vettia, and Vibia. Another of these tombs is remarkable for the careful construction and regular masonry of its arched vault, on which is engraved an Etruscan inscription of consi-deerable length. But a far more important monument of that people is an inscription now preserved in the museum at Persugia, which extends to forty-six lines in length, and is the only considerable fragment of the language which has been preserved to us. [ETRURIA, p. 858.] Numerous sarcophagi, urns, vases, and other relics from the various tombs, are preserved in the same museum, as well as many inscriptions of the Roman period. (Verniglioni, Inscrizioni Etrusche, 2 vols. 4to., Perugia, 1854; Id. Il Sepolcro dei Volumnii, 4to., Perugia, 1854; Dennis's Etruria, vol. ii. pp. 458-459.)

We learn from ancient authors that Juno was regarded as the tutelary deity of Persia till after the burning of the city in n. c. 40, when the temple of Venus being the only edifice that escaped the conflagration, that deity was adopted by the surviving citizens as their peculiar patron. ( Dion Cass. xlviii. 14; Appian, B. C. v. 49.)

PESLA or PESCLA (Not. Imp. c. 28, vol. 1, p. 75, ed. Böcking), is probably the border-fortress in the N. of the Tiberias, which Ptolemy (iv. 5, § 71) calls Pracaeca or Pracaecox. Posa stood on the right bank of the Nile, and was the quarters of a German company (torrnna) of cavalry (D'Anville, Mem. sur l'Egypte, p. 190). [W. B. D.]

PESINUS, PESINUS (Πεσινοῦ, Πεσίνου: Eth. Πεσινώτατοι), the principal town of the Tolistobii, in the west of Galatia, situated on the southern slope of Mount Diadymus or Agdistis, near the left bank of the river Sangarius, from whose sources it was about 15 miles distant. (Paus. i. 4. § 5; Strab. xiii. 567.) It was probably a city of Germa, on the road from Ancyra to Amorium. (It. Ant. pp. 201, 262.) It was the greatest commercial town in those parts, and was believed to have derived its name from the image of its great patron divinity, which was said to have fallen (severa) from heaven. (Herodian, i. 11; Amm. Marc. xxiii. 9.) Pesinus owes its greatest celebrity to the goddess Bheia or Cybele, whom the native called Agdistis, and to whom an immenely rich temple was dedicated. The priests were the chief officers of the place; but in later times their honours and powers were greatly reduced. (Strab. i. c. x. p. 469; Diood. Sic. iii. 58, &c.) Her temple contained her image, which, according to some, was of stone (Liv. xxix. 10, 11), or, according to others, of wood, and was believed to have fallen from heaven. (Apollod. iii. 11; Amm. Marc. i. c.) The fame of the goddess appears to have extended all over the ancient world; and in n. c. 204, in accordance with the conduct of the command of her priests, the Romans sent a special embassy to Pesinus to fetch her statue; it being believed that the safety of Rome depended on its removal to Italy. (Liv. i. c.; Strab. xii. p. 567.) The statue was set up in the temple of Victory, on the Palatine. The goddess, however, continued nevertheless to be worshipped at Pesinus; and the Galli, her priests, sent a deputation to Manlius when he was encamped on the banks of the Sangarius. (Liv. xxxviii. 18; Polyb. xx. 4.) At a still later period, the emperor Julian worshipped the goddess in her ancient place, and assigned to her priests the lands of Pergamum adorned the sanctuary with a magnificent temple, and porticoes of white marble, and surrounded it with a beautiful grove. Under the Roman dominion the town of Pesinus began to decay, although in the new division of the empire under Constantine it was made the capital of the province Galatia Salutaris. (Hieroc. p. 697.) After the sixth century the town is no longer mentioned in history. Considerable ruins of Pesinus, especially a well-preserved theatre, exist at a distance of 9 or 10 miles to the south-east of Serri Hissar, where they were first discovered by Texier. (Descrip. de l'Asie Mineure.) They extend over three hills, separated by valleys or ravines. The marble seats of the theatre are nearly entire, but the scena is entirely destroyed; the whole district is covered with blocks of marble, slabs of columns, and other fragments, showing that the place must have been one of annual magnificence. (Hamiton, Researches, i. p. 458, foll.; Leake, Asia Minor, ii. 82, foll., who seems to be mistaken in looking for Pesinus on the right bank of the Sangarius. [L. S.]

PETALIAE, incorrectly called Petalia (Πεταλία) by Strabo (x. p. 444), small islands off the coast of Euboa, at the entrance of the Euphrus, now Petalia. (Plin. iv. 12. s. 23; Leake, Northern Greece, vol. ii. p. 423.)
PETAVIUM.

PETAVIUM (Πεταβιόν), Ptol. ii. 6 § 35), a town of the Supernil in Hispania Tarraconensis, SE. of Asturica. (Itin. Ant. p. 423) [T.H.D.]

PETELIA or PETELIA (Πετελία; Eth. Πετελλίων); Petelius: (Strongoli), an ancient city of Bruttium, situated about 12 miles N. of Crotona, and 3 miles from the E. coast of the peninsula. According to the Greek traditions it was a very ancient city, founded by Philoctetes after the Trojan War. (Strab. vi. p. 254; Virg. Aen. iii. 401; Serv. ad loc.) This legend probably indicates that it was really founded by the Clyans, an inoffensive tribe; as the foundation of Chone, in the same neighbourhood, was also ascribed to Philoctetes. It was only a small place (Virg. l. c.), but in a strong situation. We have no account of its receiving a Greek colony, nor is its name ever mentioned among the Greek cities of this part of Italy; but, like so many of the Æolian towns, became to a great extent Hellenised or imbibed with Greek culture and manners.

It was undoubtedly for a long time subject to Crotona, and was connected with it by the road of that city; and probably for this reason, its name is never mentioned during the early history of Magna Graecia. But after the irruption of the Lucanians, it fell into the hands of that people, by whom it was strongly fortified, and became one of their most important strongholds. (Strab. l. c.) It is apparently on this account, that Strabo calls it "the metropolis of the Lucanians," though it certainly was not included in Lucania as the term was understood in his day. Petelia first became conspicuous in history during the Second Punic War, when its citizens remained faithful to the Roman alliance, notwithstanding the general defection of the Bruttians around them, u. c. 216. They were in consequence besieged by the Bruttians as well as by a Carthaginian force under Himilco; but though abandoned to their fate by the Roman senate, to whom they had in vain sued for assistance, they made a desperate resistance; and it was not till after a siege of several months, in which they had to defend themselves with the utmost difficulties, and their defences so weakened by the constant refreshing of their provision that they were at length compelled to surrender. (Liv. xxii. 20, 30; Polyb. vii. 1; Appian, Annib. 29; Frontin. Strat. iv. 5 § 18; Val. Max. vi. 6, ext. § 2; Sil. Ital. xii. 431.) The few inhabitants who escaped, were after the close of the war restored by the Romans to their native town (Appian, l. c.), and were doubtless treated with especial favour; so that Petelia rose again to a prosperous condition, and in the days of Strabo was one of the few cities of Bruttium that was still tolerably flourishing and populous. (Strab. vi. p. 254.) We learn from inscriptions that it still continued to be a flourishing municipal town under the Roman Empire (Orell. Inschr. 137, 3678, 3839; Mommsen, Inschr. R. N. pp. 5, 6); it is mentioned by all the geographers and its name is still found in the Tabula, which places it on the road from Thurii to Crotona. (Mel. ii. 3 § 8; Plin. iii. 10. s. 15; Ptol. iii. 1 § 75; Tab. Ptol.) But we are unable to trace its history further: its identification with Strongoli is, however, satisfactorily made out by the inscriptions which have been found in the latter city, Strongoli is an episcopal see, with about 7000 inhabitants; its situation on a lofty and rugged hill, commanding the plain of the Nito (Neactus), corresponds with the accounts of Petelia, which is represented as occupying a position of great natural strength. There are no ruins of the ancient city, but numerous minor objects of antiquity have been found on the spot, besides the inscriptions above referred to.

The existence of a second town of the name of Petelia in Lucania, which has been admitted by several writers, rests mainly on the passage of Strabo where he calls Petelia the metropolis of Lucania; but he is certainly there speaking of the well-known city of the name, which was undoubtedly in Bruttium. The inscriptions published by Antonini, to prove that there was a town of this name in the mountains near Velia, are in all probability spurious (Mommsen, L. R. N. ii. 28), though they have been adopted, and his authority followed by Romanelli and Cramer. (Romanelli, vol. i. p. 348; Cramer's Italy, vol. ii. p. 367.)

The PETELINIAN MONTES (τὰ Πετελινία ἱλία), mentioned by Plutarch (Crass. 11), to which Spartacus retired after his defeat by Crassus, are evidently the rugged group of the Apennines S. of the Crathis, between Petelia and Consentia. [E. B. H.]

PETEON (Πέτεων; Eth. Πετεωσως), a town of the Thessalian district of Aetolia, (Strab. i. p. 410.) Strabo contradicts himself in the course of the same page (l. c.), in one passage placing Peteon in the Thespias, and in another in the Haliartia. (Comp. Plut. Narr. Am. 4: Plin. iv. 7. s. 12; Steph. B. s. n.) The position of Peteon is uncertain. Leake supposes it may be represented by some ancient remains at the southern extremity of the lake Paralitium. (Northern Greece, vol. ii. p. 320.)

PETINESCA, in the country of the Helveti, is placed in the Ibins, between Aventicum (Avanches) and Salodurum (Solothurn); at the distance of xii. in the Anton. itin. from Aventicum and xiii. in the Table; and at the distance of x. from Salodurum in both the Itineraries. Some geographers have placed Petinesca at a place named Buren; but the distance does not agree with that given by the Itin. between Petinesca and Salodurum, as D'Anville observes, who also says that the position of Bienne (Biel) corresponds with the extent of the city, and indicates Gallic leagues. Cluver also placed Petinesca at Biel. [G. L.]

PETITARUS. [Acheilous.]

PETOVIO (Πετώβιον, or Πατώβιον), Ptol. ii. 15 § 4: Petuvio, also called Poetuio (Itin. Ant. p. 262) and in inscriptions op. Orelli, n. 3592), Patavio, and Petovia, was an important town in Upper Pannonia, on the river Dravus and the frontier of Noricum. In inscriptions it is called a Roman colony, and bears the surname of Ulpius; whence it may be inferred that it received Roman colonists from other Roman colonies, which probably also extended the place. Its importance is sufficiently attested by the fact that it was the station of the legion XI. Gemina, and that an imperial palace existed outside its walls. (Tac. Hist. iii. 1; Amm. Marc. xiv. 37; It. Hieros. p. 561; Geogr. Rav. iv. 19.) The modern town of Petton is situated on the left bank of the Drave; and as coins, inscriptions, and other ancient remains are found only on the opposite side, it is probable that the ancient Petovio was situated on the right bank opposite to the modern Petton. (Comp. K. Meyer, Versuch über Steyermärkische Alterthümer, Größ, 1782, 4to.; Mucher, Noricum. l. p. 364.) [L. S.]

PETRA (Πέτρα), "rock," the name of several towns. 1. In Europe. 1. Petra Pertusa, in Umbria. [Intersection.]

Digitized by Microsoft
PETRA.

2. (Πέτρα: Elish, Πετρούσα, Petronas: Petraíon, a city of Sicily, mentioned both by Pliny and Ptolemy among the inland towns of the island. Cicero also notices the Petrini among the communities that suffered from the exactions of Verres (Cic. Verr. iii. 39; Plin. iii. 8. 14; Ptol. iii. 4. § 14); and their name is mentioned at an earlier period by Diodorus as submitting to the Romans during the First Punic War. (Diod. xxiii. 18; Exe. ii. p. 505.) The name is written Petraea by Silius Italicus (xvi. 248), and the Petrinai of the Antonine Itinerary is in all probability the same place. (Itin. Ant. p. 96.) Though so often mentioned by ancient authors, they afford very little clue to its position; but it is probable that the name is retained by the modern Petrolla, a small town about 8 miles W. of Gangi, supposed to represent the ancient Engyunum. [ENGYUM.] Ptolemy indeed places these two towns near one another, though he erroneously transfers them both to the neighbourhood of Syracuse, which is wholly at variance with the mention of Petra in Diodorus among the towns subject by the Egyptians as late as n. c. 254. (Cluver. Sicil. p. 367.) [E. H. B.]

3. A fortress of Macedonia, among the mountains beyond Libethra, the possession of which was disputed by the Thessalian Perrhaebi and the Macedonian kings. (Liv. xxxix. 26, xliv. 32.) It commanded a pass which led to Pythium in Thessaly, by the back of Olympus. By this road L. Aemilius Paullus was enabled to throw a detachment on the rear of the Macedonian army which was encamped on the Empeius, after the forces of Perseus had been overthrown at the pass of Petra by P. Scipio Nasica, who had been sent against it with the consul's eldest son Q. Fabius Maximus. (Liv. xliv. 41.) Petra was situated on a great insulated rock naturally separated from the adjoining mountain at the pass which leads from Elasina or Séria into the maritime plains of Macedonia. Here, which is at once the least difficult and most direct of the routes across the Olympene barrier, or the frontier between Macedonia and Thessaly, exactly on the Zygias, are the ruins of Petra. (Leake. Northern Greece, vol. iii. pp. 337, 430.) [E. B. J.]

4. A fortress of the Maedi, in Thrace. (Liv. xl. 22.)

5. A town in Illyricum, situated upon a hill upon the coast, which had only a moderately good harbour. (Cass. B. C. lii. 42.)

6. A place in the Corinthia. [Vol. i. p. 685, a.]

7. A place in the immediate neighbourhood of Elaia. [Vol. i. p. 821, a.]

PETRA. II. In Asia. 1. (Πέτρα: Ptol. v. 17. § 5, viii. 20. § 19; Πέτρα or Πετρα, Suid. s. c. ἔρειθος; the Selä of the Old Testament, 2 Kings xxiv. 7; Isiah, xvi. 1: respecting its various names see Robinson, Biblical Researches, vol. ii. Notes and Ill. p. 653), the chief town of Arabia Petraea, once the capital of the Idumaeans and subsequently of the Nabatean, now Wady Musa. [NABATEAN.]

Petra was situated in the eastern part of Arabia Petraea, in the district called under the Christian emperors of Rome Palæstina Tertia (Vet. Rom. Itin. p. 271, Wessel; Mahala. Chronogr. xvi. p. 400, ed. Bonn.). According to the division of the ancient geographers, it lay in the northern district, Gebelene; whilst the modern one places it in the southern portion, Keb-Sherah, the Seir, or mountain-land, of the Old Testament (Genes. xxxvi. 8).

It was seated between the Dead Sea and the Elanitic gulf; being, according to Diodorus Siculus (xix. 58), 300 stadia S. of the former, whilst the Tab. Peut. places it 98 Roman miles N. of the latter. Its site is a wilderness overtopped by Mount Hor, and diversified by cliffs, ravines, plateaus, and Wady, or watered valleys, for the most part but ill cultivated. Strabo (xvi. p. 779) describes it as seated in a plain surrounded with rocks, hemmed in with barren and streamless deserts, though the plain itself is well watered. Pliny's description (vi. 92), which states the extent of the plain at rather more than 5 miles, agrees very nearly with that of Strabo, and both are confirmed by the reports of modern travellers. "It is an area in the bosom of a mountain, swelling into mounds, and intersected with gullies." (Irby and Mangles, ch. viii.) It must not, however, be understood to be completely hemmed in with rocks. Towards the N. and S. the view is open; and from the eastern part of the valley the summit of Mount Hor is seen over the western cliffs. (Robinson, ii. p. 528.) According to the older view (E. C.) Petra was a place of great resort for travellers.

Petra was subdued by A. Cornelius Palma, a lieutenant of Trajan's (Dion Cass. lxviii. 14), and remained under the Roman dominion a considerable time, as we hear of the province of Arabia being enlarged by Septimius Severus A. D. 195 (id. lxxv. 1, 2; Eutrop. viii. 18). It must have been during this period that those temples and mausoleums were made, the remains of which still arrest the attention of the traveller; for though the predominant style of the architecture is Egyptian, it is mixed with florid and over-leaded Roman-Greek specimens, which clearly indicate their origin. (Robinson, ii. p. 532.)

The valley of Wady Musa, which leads to the town, is about 150 feet broad at its entrance, and is encircled with cliffs of red sandstone, which gradually increase from a height of 40 or 50 feet to 200 or 250 feet. Their height has been greatly exaggerated, having been estimated by some travellers at 700 and even 1000 feet (Irby and Mangles, ch. viii.; Stephens, ii. 170; see Robinson, ii. p. 517 and note). The valley gradually contracts, till at one spot it becomes only about 12 feet broad, and is so overlapped by the cliffs that the light of day is almost excluded. The ravine or Sik of Wady Musa extends, with many windings, for a good English mile. It forms the principal, and was ancienly the only avenue to Petra, the entrance being broken through the wall. (Diod. Sic. ii. 48, xix. 97; Robinson, ii. p. 516; Labord. p. 55.) This valley contains a wonderful necropolis hewn in the rocks. The tombs, which adjacent or surmount one another, exhibit now a front with six Ionic columns, now with four slender pyramids, and by their mixture of Greek, Roman, and Oriental architecture remind the spectator of the remains which are found in the valley of Jehovahapat in and other parts of Palestine. The further side of the ravine is spanned by a bold arch, perhaps a triumphal one, with finely-sculptured niches evidently intended for statues. This, like the other remains of this extraordinary spot, is ascribed by the natives either to the Pharaohs or to the Jain or 2500 B.C.

Along the bottom of the valley, in which it almost vanishes, winds the stream mentioned by Strabo and Pliny, the small but charming Wady Musa. In ancient times its bed seems to have been paved, as many traces still show. Its stream was spanned by frequent bridges, its sides strengthened with stone walls or quays, and numerous small canals derived
from it supplied the inhabitants with water. But now its banks are overspread with hyacinth, oleanders, and other flowers and shrubs, and overshadowed by lofty trees.

Opposite to where the Sik terminates, in a second ravine-like but broader valley, another monument, the finest one at Petra, and perhaps in all Syria, strikes the eye of the traveller. This is the Khazneh—well preserved, considering its age and site, and still exhibiting its delicate chiselled work and all the freshness and beauty of its colouring. It has two rows of six columns over one another, with statues between, with capitals and sculptured pediments, the upper one of which is divided by a little round temple crowned with an urn. The Arabs imagine that the urn contains a treasure.—El Khazneh, whence the name,—which they ascribe to Pharaoh (Robinson, ii. p. 519). The interior does not correspond with the magnificence of the façade, being a plain lofty hall, with a chamber adjoining each of its three sides. It was either a mausoleum, or, more probably, a temple.

From this spot the cliffs on both sides the Wady are pierced with numerous excavations, the chambers of which are usually small, though the façades are occasionally of some size and magnificence; all, however, so various that scarce two are exactly alike. After a gentle curve the Wady expands, and then trends to the left side, lays the theatre, entirely hewn out of the rock. Its diameter at the bottom is 120 feet (Irby and Mangles, p. 428), and it has thirty-three, or, according to another account, thirty-eight, rows of seats, capable of accommodating at least 3000 spectators. Strangely enough, it is entirely surrounded with tombs. One of these is inscribed with the name of P. Praefectus Florentinus (Laboule, p. 59), probably the governor of Arabia Petraea under Hadrian or Antoninus Pius. Another has a Greek inscription not yet deciphered. A striking effect is produced by the bright and lively tints of the variegated stone, out of which springs the wild fig and tamarish, while creeping plants overspread the walls, and thorns and brambles cover the pedestals and cornices (Isaiah, xxxiv. 13). Travellers are agreed that these excavations were mostly tombs, though some think they originally have served as dwellings. A few were, doubtless, temples for the worship of Baal, but subsequently converted into Christian churches.

Proceeding down the stream, at about 150 paces from the theatre, the cliffs begin to expand, and soon vanish altogether, to give place to a small plain, about a mile square, surrounded with gentle eminences. The brook, which now turns to the W., traverses the middle of this plain till it reaches a ledge of sandstone cliffs, at a distance of rather more than a mile. This was the site of Petra, and is still covered with heaps of hewn stones, traces of paved streets, and foundations of houses. There are remains of several larger and smaller temples, of a bridge, or a triumphal arch of degenerate architecture, and of the walls of a great public building—Kasr Furun, or the palace of Pharaoh.

On an eminence south of this is a single column (Zub Furun, i. e. haste virilia Pharaonis), connected with the foundation-walls of a temple whose pillars lie scattered around in broken fragments. Laboule (p. 59) thinks that the Acropolis occupied an isolated hill on the W. At the NW. extremity of the cliffs is the Deir, or cloister, hewn in the rock. A ravine, like the Sèke, with many windings, leads to it, and the approach is partly by a path 5 or 6 feet broad, with steps cut in the rock with inexpressible labour. Its façade is larger than that of the Khazneh; but, as in that building, the interior does not answer to it, consisting of a large square chamber, with a recess resembling the niche for the altar in Greek ecclesiastical architecture, and bearing evident signs of having been converted from a heathen into a Christian temple. The destruction of Petra, so frequently prophesied in Scripture, was at length wrought by the Mabometans. From that time it remained unvisited, except by some crusading kings of Jerusalem; and perhaps by the single European traveller, Thetmar, at the beginning of the 13th century. It was discovered by Burckhardt, whose account of it still continues to be the best. (Robinson, ii. p. 527.) Laborde's work is chiefly valuable for the engravings. See also Irby and Mangles, Travels, ch. viii.; Robinson, Biblical Researches, vol. ii. p. 512, seq.

[T. H. D.]

2. A town in the land of the Lazi in Cilicia, founded by Jeannas Tribus, a general of Justinian, in order to keep the Lazi in subjection. It was situated upon a rock near the coast, and was very strongly fortified. (Procop. B. Pers. ii. 15, 17.) It was taken by Chosroes in A.D. 541, and its subsequent siege by the Romans is described by Gibbon as one of the most remarkable actions of the age. The first sally was relieved; but it was finally attacked by the Romans, and was at length taken by assault after a long protracted resistance, A.D. 551. It was then destroyed by the Romans, and from that time disappears from history. Its ruins, which are now called Onphebas, are described by Dubois. (Procop. B. Pers. ii. 17, 20, 30, B. Goth. iv. 11, 12; Gibbon, c. xiii. vol. v. p. 201, ed. Smith; Dubois, Voyage autour du Caucase, iii. p. 86, seq.)

3. A very strong fortress in Sogdiana, held by Arimazes when Alexander attacked it. (Curt. viii. 11; comp. Arrian, iv. 19; Strab. xi. p. 517.) It is probably the modern KohiThin, near the pass of Kobja or Darbend. [See Dict. of Biogr. Vol. i. p. 286.]

PETRAS MAJOR (Πέτρας ὁ μέγας, Syl. iv. 43; Ptol. iv. 5. § 3; Stadiasmus, § 33), a harbour of Marmarica, a day's sail from Plynius Portus, and the same as the large harbour which Strabo (xiv. p. 898) places near Ardanis Prom, and describes as lying opposite Chersonesus of Colchis at a distance of 3000 stadia. It agrees in position with Port Bardhich, where there are springs to the W. of Marsa Soliman. [E. B. J.]

PETRAS MINOR (Πέτρας ὁ μικρός, Syl. l.c.; Ptol. iv. 5. § 2; Stadiasmus, § 39), a harbour of Marmarica, half a day's sail from Antipyrus. It has been identified with Maghara-el-Ilchebes, where there are a great number of catacombs remarkable for their Graeco-Aegyptian style. These curious excavations, of which plans are given in Pacho (L'ouvre dans la Marmarique, Planches, pl. v.), are to be identified, according to that traveller (p. 49), with the sinuous caverns of Bombara (Βομβάρα), resembling the Aegyptian "hypogaeas," which the Greeks called "Syringes," mentioned by Synesius (Ep. 104); but Barth (Wanderungen, p. 512) has shown that the description of the bishop of Ptolemiuse cannot be applied to these catacombs and their locality. A coin with the epigraph PE-PA, which Pellerin referred to this part in Marmarica is by Eckhel (iv. 116) assigned to a Cretan mint. [T. B. J.]
PETRINIA, a fortress in the N. of Britannia, Romana, between the Wall and the river Iterting, where the Alia Petrinia was quartered. Camden (p. 1022) identifies it with Old Peith; but Hor- lby (Hist. Rom., p. 107) and others fix it, with more probability, at Cambeck Fort or Castle-steads. (Not. Imp.) It is called Banna by the Geogr. Rev. (Hors- ley, p. 498.)

T. H. D.

PETRINA. [Petra, No. 2.]

PETRROCAI (Петррокад, Petkosa, ii. 7 § 12), a Gallic people, whom Ptolemy places in Aquitania. He names the chief city Vessaum, which is Perigord. Caesar mentions them (vii. 75) as sending a contingent of 5000 men to aid in raising the siege of Alesia; this is all that he says about them. The passage in Pliny (iv. 19. s. 33) in which he describes the position of the Petrorci is doubtful: "Cadurci, Nitiobriges (a correction, see Nitiobriges), Tamneque annu discreti a Tolosanis Petrorci." This passage makes the Tarnis (Tarn) the boundary between the territory of Tolosa (Toulouse) and the Petrorci, which is not true, for the Cadurci were between the Petrorci and the territory of Toulouse. Scaliger proposed to write the passage thus: "Cadurci, Nitiobriges, Tamne annu discreti a Tolosanis; Petrorci." But this is not true, for the Nitiobriges did not extend to the Tarn. Strabo (iv. pp. 190, 191) mentions the Petrorci among the people between the Garonne and the Loire, and as near the Nitiobriges, Cadurci, Lemovices, and Arverni. He says that there are iron mines in the country. The Petrorci occupied the diocese of Periguese and Sarlot (D'Avril). Besides, Vessaum, their territory contained Cortarest, Torcaut, Distindum, and some other small places.

G. L.

PETROMAN'TALUM, in Gallia, is placed by the Antiochenus Itinerary on a road which runs from Caro- cotum through Rotomagus (Rouen) to Lutetia (Paris). It also appears on a road from Caesaronomus (Boueaux) to Briva lauare or Pontiste, on the Oise, a branch of the Seine. In the Table the name is written Petrumvica. The site is uncertain. The name bears some resemblance to that of Magni; but the site of Magni does not accurately correspond to the distances in the Itineraries.

G. L.

PETRONII VIVIS, in Gallia Narbonensis. Honor. Bouche gives an inscription found at Petrusia, on the right bank of the Ducrtenia (Durance), about 4 leagues north of Aquae Sextiae (Aix), in which inscription the place is called "vicus C. Petroni ad ripam Ducrteniae." (D'Avril, Notice, etc.) (G. L.

PETROSACA. [Mantinella, p. 262, b.]

PETUARIA. [Parsul.]

PEUCE (Πεύκεα), Petkosa, ii. 10, § 2; Strab. vii. p. 305), an island of Moesia Inferior, formed by the two southernmost mouths of the Danube. It derived its name from the abundance of pine-trees which grew upon it. (Eratosth. in Schol. Apollon. iv. 310.) It was of a triangular shape (Apollon. l. c.), and as large as Rhodes. By Martial (vii. 84. 3) it is called a Geic island; by Valerius Flaccus (vii. 217) a Sarmatic one. It has been identified with the modern island of Psilich or St. George, between Badabag and Issakali; but we must recall that these parts were but little known to the ancients, and that in the lapse of time the mouths of the Danube have undergone great alterations. (Plin. iv. 12. s. 24; Mela, ii. 7; Avien. Desc. Orb. 440; Dom. Perieg. 401; Claud. IV Cons. Honor. 302, &c.) (T. H. D.)

PEUCELAOTIS (Πευκελαώτης, Ariot, Anath.

iv. 22, Indic. 4; Πευκελάωτας, Strab. xv. p. 692; Plin. vi. 17. s. 21: Ech. Peninsulae, Plin.; Πευ- κελάωτης, Dionys. Per. 1142), a district of India on the NW. frontier, along the Cophen or Caupd river, in the direction of the Paeonia. The actual name of the town, which was probably Penecola, is nowhere found, but the form of the word leaves no doubt that it is, like the majority of the names which have been preserved by Arrian, of genuine Sasanic or Indian origin. Strabo and Pliny both call the city itself Penecola. Arrian in one place gives the name to a district (iv. 22), without mentioning that of the capital or chief town; in another he calls the capital Peneolaxis, or, according to the Florence MS., Peneola. (Indic. c. 1.) There can be little doubt that this is the same place or district mentioned in Ptolemy under the form of Prochis (vii. 1 § 44), and in the Periplus Mar. Erythr. (c. 47). Both are connected with the Gandarans,—the Sasanic Gandarar,—and both are alike placed in NW. India. Prof. Wilson has shown that the Greek name is derived from the Sasanic Pus/a/kara or Pus/khala, from the Pus/fakes of the Hindus, which was placed by them in the country of the Ganderas, the Gandaritis of Strabo, and which is still represented by the modern Peshahar. (Wilson, Ariana, pp. 183, 184.)

PEUCETHI (Πευκοτσεηοι), a people of Southern Italy, inhabiting the southern part of Apulia. This name was that by which they were known to the Greeks, but the Romans called them Poebuci, which, according to Strabo, was the national appellation employed also by themselves. (Strab. vi. pp. 277, 282.) Their national affinities and origin, as well as the geographical details of the country occupied by them, will be found in the article APULLA. [E. H. B.]

PEUCINI (Πευκοτσινοι, Petkosa, ii. 5, § 19, 10, § 9; Strab. vii. p. 305, seq.; Plin. iv. 14. s. 28), a branch of the Bastarnae, inhabiting the island of Peuce. Tacitus (Germ. 46) and Jornandes (Gotth. 16) write the name Penuci, which also appears in several MSS. of Strabo; whilst Ammianus Marcellinus (xxii. 8, § 43) calls them Teuci, and Zosimus (i. 42) Πευκαί.

T. H. D.

PHABIRANUM (Φαβιρασιον), a place in the country of the Chanci Minores, that is, the district between the Albus and Visurgis (Ptol. ii. 11 § 27), is generally identified with the modern city of Bre- men; though some, with more probability, look for its site at Bremerörde. (Willson, Germanien, p. 163.)

L. S.

PHΛACIUM (Φαλακίον), Ech. Φαλακίον, a town of theessaly, in the district Pelagisiotis, placed by Leake a little below the right bank of the Peuce at Alxiska, but by Kiepert upon the left bank. Bradasias marched through Phacium in b. c. 424. (Thuc. iv. 78.) The town was laid waste by Philip, b. c. 195 (Liv. xxxii. 19), and was occupied by the Roman praetor Baebius in the war with Antiochus, b. c. 191. (Liv. xxxii. 19.) Phecius is probably the same place as Phakes, which Polybius (xxx. 25) calls a town of Macedonia. (Comp. Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 493.)

PHACUSSA (Παχουσία; Φάους οιον, pl., Steph. B. s. v., an island in the Aegean sea, one of the Sporades, now Focussa.)

PHAEACES. [Corcyra.]

PHAEDEIDAE. [Delphi, p. 764.]

PHAEIDRIAS. [Megalonpolis, p. 309, b.]

PHAEHIANA (Φαεϊανα), a town in Euboea.
of Vindelpolis, on the southern bank of the Danube is mentioned only by Ptolemy (ii. 12. § 4). [L. S.]

PHAENO (φανεόν, sc. Ευσέβ. Οικονομ. s. v. Φανεόν; Φαναόν, Hieroc. p. 723), formerly a city of Idumaea, and afterwards a village of Arabia Petraea, between Petra and Zoar, containing copper mines, where condemned criminals worked. It was identified with Pomon, one of the stations of the Israelites in their wanderings. (Numb. xxxvii. 42; see Roland, Palaeest. p. 951; Wessex, ad Hieroc. l. c.)

PHAESTUS. I. (Φαεστός; Eth. Φαεστός), a town in the S. of Crete, distant 60 stadia from Gortyna, and 20 from the sea. (Strab. x. p. 479; Plin. iv. 12. s. 20.) It was said to have derived its name from an eponymous hero Phaestus, a son of Hercules, who migrated from Sicyon to Crete. (Paus. ii. 6. § 7; Steph. B. s. v.; Eustath. ad Hom. l. c.) According to others it was founded by Minos, (Diod. v. 78; Strab. l. c.) It is mentioned by Homer (H. ii. 648), and was evidently one of the most ancient places in the island. It was destroyed by the Cretans, who took possession of its territory. (Strab. l. c.) Its port was Matalum, from which it was distant 40 stadia, though it was only 20 from the coast. (Strab. l. c.) We also learn from Strabo that Epimenides was a native of Phaestus. The inhabitants were celebrated for their sharp and witty sayings. (Athen. vi. p. 261, c.) Phaestus is mentioned also by Selyx, p. 18; Polyb. iv. 53.

Stephanus B. (s. v. Φαστός) mentions in the territory of Phaestus a place called Lisses, which he identifies with a rock in the Odyssey (iii. 293), where in our editions it is not used as a proper name, but as an adjective, —αστήρ, "smooth." Strabo (l. c.) mentions a place Olysses or Olysse in the territory of Phaestus (Ολύσσης τής Φαστίως); but this name is evidently corrupt; and instead of it we ought probably to read Lisses. This place must not be confounded with Lissus, which was situated much more to the W. (Kramer, ad Strab. l. c.)

COIN OF PHAESTUS. 2. A town of Thessaly in the district Pelagiotis, a little to the right of the Peneus. It was taken by the Roman praetor Baebius in B. c. 191. (Liv. xxxvi. 13.)

3. A town of the Locri Ozalid in the interior, with a port called the port of Apollo Phaestus. (Plin. iv. 3. s. 4.) Leake places Phaestus at Pilbara, where are the ruins of a fortress of no great extent, and the port of Apollo near C. Authronumiki. (Leake, Northern Greece, vol. ii. p. 621.)

4. The later name of Phryia in Triphylia in Elis. [Phrygas.]

PHAEGES (Φαιγές, Hecat. ap. Steph. B. s. v.; Herod. vii. 112; Thuc. ii. 99; Selyl. p. 27; Strab. vii. p. 331, Fr. 33.), a fortress in the Pieric hollow, and the first place after the passage of the Strymon. It is identified with the port station of Orchis, on the great road from Greece to Constantinople, where Greek coins have been often found, and, among other small productions of Hellenic art, oval sling bullets of lead, or the "glaives" of which Lucan (vii. 512) speaks in his description of the battle of Pharsalia. These are generally inscribed with Greek names in characters of the best times, or with some emblem, such as a thunderbolt. (Leake, Northern Greece, vol. iii. p. 176; Clarke, Travels, vol. viii. p. 58.) [E. B. J.]

PHAIA (φαῖα, Stadium. § 43; Φαία, Ptol. iv. 5, § 2), a harbour of Marmaria, the name of which Olshausen (Pharmaco-Orthosumum, in Rhod. Mus. 1852, p. 324) connects with a Phoenician original. Barth (Reise, p. 505) has identified it with a small bay upon the coast, a little to the N. of Wady Temmeneh.

PHALEGUTHIA (φαλαγκθία), a town of Thessaly in the district Thessalitioi. (Ptol. iii. 13, § 43.)

PHALACRA (φαλάκρα), a promontory of Mount Ida, in Mysia, of which the exact position is unknown. (Eustath. ad Hom. l. viii. 47; Schol. ad Nicand. Alciph. 40; Tezot, ad Lycopeh. 40, 1170.) Stephanus Byz., who mentions it under the name Phalaecra, states that all barren and sterile mountains were called Phalacra. [L. S.]

PHALACRINE. [Falachrum.]

PHALACRIUM. [Corycia, p. 669, b.]

PHALAE SAEAE (φαλασαι: Eth. Φαλασαύετ), a town of Arcadia, in the district Maleasik on the road from Megapolis to Sparta, 20 stadia from the Hermansia towards Belbina. Leake originally placed it near Garrhidi, but subsequently a little to the eastward of Bura, where Gell remarked some Helenic remains among the ruins of the Euripike Kalyvia. (Paus. viii. 33. § 3; Steph. B. s. v.; Leake, Morea, vol. ii. p. 298; Polionnesius, p. 237.)

PHALANNA (φαλάννα: Eth. Φαλαννως), a town of the Perrhaebi in Thessaly, situated on the left bank of the Peneus, NW. of Gannus. Strabo says (ix. p. 440) that the Homeric Orthhe became the acropolis of Phalanna; but in the lists of Pliny (iv. 9, s. 16) Orthhe and Phallanna occur as two distinct towns. Phallanna was said to have derived its name from a daughter of Tyro. (Steph. B. s. v.) It was written Phalannus in Ephorus, and was called Hippia by Hecataeus. (Steph. B.) Phallanna is mentioned in the war between the Romans and Persians, b. c. 171. (Liv. xxi. 54, 65.) Phallanna probably stood at Karnejoli, where are the remains of an ancient city upon a hill above the village. (Leake, Northern Greece, vol. iii. p. 379, vol. iv. p. 340.)

PHALANTHUM (φαλανθόμ: Eth. Φαλανθών), a town and mountain of Arcadia, in the district Orcholeia, near Metheidrymun. (Paus. viii. 33. § 9; Steph. B. s. v.; Leake, Peloponnesias, p. 240.)

PHALARA. [Lania.]

PHALARUS. [Bokotia, p. 412, b.]

PHALASARNA (φαλάσαρνα: Eth. Φαλα-σαρνά), a town of Crete, situated on the N.W. side of the island, a little S. of the promontory Cirilus or Corycus, described by Dicaearchus as having a closed-up port and a temple of Artemis called Die-tyna. Strabo says that Phalasarna was 60 stadia from Polyrhenia, of which it was the port-town; and Scylax observes that it is a day's sail across from Lascoeaion to the promontory of Creta, on which is Phalasarna, being the first city to the west of the island. (Strab. x. pp. 474, 479; Scylax, pp. 17, 18; Dicaearch. Descrip. Grec. 119; Steph. B. s. v.; Plin. iv. 12. s. 20.) The Cyclomans had at
one time taken possession of Phalanarwa, but were compelled by the Romans to give it up. (Polyb. xxiii. 15.)

There are considerable remains of the walls of Phalanarwa. The chief of these is a larger or less degree of greatness, from its northern side, where it seems to have reached the sea, to its south-western point, cutting off the acropolis and the city along with it as a small promontory. There are other remains, the most curious of which is an enormous chair on the SW. side of the city, cut out of the solid rock; the height of the arms above the seat is 2 feet 11 inches, and its other dimensions are in proportion. It was no doubt dedicated to some deity, probably to Artemis. Near this chair there are a number of tombs, hewn in the solid rock, nearly 30 in number. (Pashley, Travels in Crete, vol. ii. p. 62, seq.)

PHALERUM. [Attica, pp. 304, 305.]

PHALORIA (Liv.; Φαλορία, Phaloria; Steph. B.s. e.v.; Eth. Φαλορίος, Φαλορίηττα), a town of His- tiaea in Thessaly, apparently between Trieca and the Macedonian frontier. Leake places it in one of the valleys which intersect the mountains to the northward of Trikkala, either in Thessaly (Liv. xxxvi. 14, vi. 13, xxxix. 25; Leake, Northern Greece, vol. iv. pp. 528, 529.)

PHALYCUM (Φαλύκου), a town of Megaris mentioned by Theophrastus (Hist. Pl. ii. 8), is clearly the same place as the Alycum (Αλυκος) of Plutarch, who relates that it derived its name from a sea of Sciron, who was buried there. (Thea. 52.) It perhaps stood at the entrance of the Scironian pass, where Dodwell (vol. ii. p. 179) noticed some ancient vestiges, which have a remarkably supposed to be those of Tripoljeicus. [Τριπολίεικες.]

PHAKA, a town in Aetolia. [Φάκα.] PHANAE. [Χιθό, p. 609.]

PHANAGORIA (Φαναγορία, Strab. xi. p. 494; Polt. v. 9 § 6; Διαφαναγορία, Δίαφαναγορία, Hecat. ap. Steph. B.s. e.v.; Eth. Φαναγορία, Φαναγορίηττα), a town of Histiaea in Thessaly, as appears from the name give by the Roman conquerors. (Strab. xxxvi. 14, vi. 13, xxxix. 25; Leake, Northern Greece, vol. iv. pp. 528, 529.)

PHALYCRUM (Παλυκρόου), a town of Magnesia

PHANAGORIA (Φαναγορία, Strab. xi. p. 494; Polt. v. 9 § 6; Διαφαναγορία, Δίαφαναγορία, Hecat. ap. Steph. B.s. e.v.; Eth. Φαναγορία, Φαναγορίηττα), a town of Histiaea in Thessaly, as appears from the name give by the Roman conquerors. (Strab. xxxvi. 14, vi. 13, xxxix. 25; Leake, Northern Greece, vol. iv. pp. 528, 529.)

PHANAROEA (Φαναρόεα), a broad and extensive valley in Pontus, watered by the rivers Iris, Lynnas, and Scylax, and enclosed between the chain of Paryades to the east, and Monta Lithus and Opisthius to the west. The soil there was the best in Pontus, and yielded excellent wine and oil and other produce in abundance. (Strab. vi. 73, xii. pp. 547, 556, 559; Plin. vi. 4; Polt. v. 6 § 3, where it is erroneously called Phanagoria.) Phanaroea contained the towns of Eupatoria, Cabrera, Polemonium, and others. [ΠΟΝΤΟΣ.] [L. S.]

PHANOETUS. [Πανοιτεύς.]

PHARAEE (Φάραη). 1. Sometimes ΠΗΡΑ (Φάρη, Strab. viii. p. 388; Pheres, Polt. iv. 6; Φαρης, Herod. i. 145), probably the name of the people; Eth. Φαρος, Strab. l.c.; Φαρης, Polt. iv. 6; Steph. B.s. e.v. the territory Φαραη, Strab. l.c.; Polt. iv. 59), a town of Achaia, and one of the twelve Achaean cities, was situated on the river Pheras or Peiras, 70 stadia from the sea, and 150 stadia from Patrae. It was one of the four cities which took the lead in restoring the Achaean League in B.C. 280. In the Social War (B. c. 220, seq.)
suffered from the attacks of the Actolians and Eleans. Its territory was annexed by Augustus to Patrae, when the latter city was made a Roman colony after the battle of Actium. Phærae contained a large agora, with a curious statute of Hermes. The remains of the city have been found on the left bank of the Kamaeita, near Preza (Herod. i. 143; Strab. viii. pp. 356, 358; Pol. ii. 41, iv. 59, 69, v. 94; Pans. vii. 22, § 1, seq.; Plin. iv. 6; Leake, Morea, vol. ii. p. 158.)

Phærae, Strab. Paus. 99, Hom. ii. v. 543; Φαραί, Η. ii. 151; Φεραί, Xen. Hell. iv. 8. § 7; Eph. Φαράη, Strab. viii. p. 388; Φαραΐδης, Paus. iv. 30. § 3; Καλαμαίται, an ancient town of Messenia, situated upon a hill rising from the left bank of the river Neda, and at a distance of a mile from the Messenian gulf. Strabo describes it as situated 5 statute miles from the sea (viii. p. 361), and Pausanias 6 (iv. 31, § 3); but it is probable that the earth deposited at the mouth of the river Neda has, in the course of centuries, encroached upon the sea. Phærae occupied the site of Kalamata, the modern capital of Messenia; and in antiquity also it seems to have been the chief town in the southern Messenian plain. It was said to have been founded by Pharis, the son of Hermes. (Paus. iv. 30, § 2.) In the Iliad it is mentioned as the well-built city of the wealthy Dorches, a vassal of the Achaeans.

Phærae was annexed to Laconia by Augustus (Paus. iv. 30, § 2), but it was restored to Messenia by Tiberius. [MESSENA, p. 343.] Pausanias found at Phærae temples of Fortune, and of Nemeaean and Gorgonian, grandsons of Asclepius. Outside the city there was a grove of Apollo Carneius, and in it a fountain of water. (Paus. iv. 30. § 3, seq.; iv. 31, § 1.) Strabo correctly describes Phærae as having an anchorage, but only for summer (viii. p. 361); and at present, after the month of September ships retire for safety to Argo, so called from a river strongly impregnated with salt water flowing into the sea at this place: it is the ἠδρα ἄλαγος, mentioned by Pausanias (iv. 30. § 2) as on the road from Abia to Pherae.

There are no ancient remains at Kalamata, which is not surprising, as the place has always been well occupied and inhabited. The height above the town is crowned by a ruined castle of the middle ages. It was the residence of several of the Latin chieftains of the Morea. William Villehardouin II. was born here. In 1685 it was conquered and enlarged by the Venetians. It was the headquarters of the简便ion of 1770; and again of the revolution of 1821, which spread from thence over the whole peninsula. (Leake, Morea, vol. i. p. 342, seq.; Boblaye, Recherches, etc. p. 104; Curtius, Belopom-mos, vol. ii. p. 158.)

3. The later name of the Homerian Phaira or Pharis in Laconia. [PHAIRAE.]

Phaira or Phaios, the name of a desert S. of Palestine, between this country and Asyry. (Gen. xxx. 21: Gen. x. 18.) It is usually identified with the Wady Feirun, a beautiful and well watered valley, surrounding it by mountains, NW. of Sami, and near the western arm of the Red Sea (Niebuhr, Reisebeschreibung, vol. i. p. 240, Arabia, p. 402;) but though Feirun may have preserved the ancient name of the desert, it appears from Numbers (x. 12, 33, xii. 26) that the latter was situated in the desert of Kadesh, which was upon the borders of the country of the Edomites, and which the Israelites reached after their departure from Mt. Sinai, on their way towards the land of Edom. (Burchkardt, Syria, p. 618.)

In the Wady Feirun are the remains of an ancient church, assigned to the fifth century, and which was the seat of a bishopric as early as A.D. 400. (Robinson, Biblical Researches, vol. i. p. 186.) This city is described under the name of Feirun by the Arabi Edrisi, about A.D. 1150, and by Makrizi about A.D. 1400. (Burchkardt, Syria, p. 617.) It is apparently the same as Phara (Phaera), described by Stephanus B. (x. v.) as a city between Aegypt and Arabia, and by Polyemy (v. 17. §§ 1, 3) as a city of Arabia Petraea near the western arm of the Red Sea. A species of asphodel found in this valley had the name of Pharanitis. (Plin. xxxvii. 9. s. 49.) The valley of Pharae mentioned by Josephus (B. J. iv. 9. § 4) is obviously a different place from the Wady Feirun, somewhere in the vicinity of the Dead Sea, and is perhaps connected with the desert of Paran, spoken of above. (Robinson, Biblical Researches, vol. i. p. 55.)

PHARETHUS (Φαραέθος, Pol. iv. 5. § 52; Steph. B. s. v.: Eith. Φαραίθις, Herod. ii. 165; Φαραϊττις, Strab. xvii. p. 802), the capital of the Pharethite Nome in Lower Aegypt. (Plin. v. 9. s. 9.) It stood W. of the Pelusian arm of the Nile, 16 miles S. of Tanis. The name was a Praefecture under the Roman emperors; and under the Pharaeans was one of the districts assigned to the Calisarian division of the Egyptian army. Pharethius is nowHorbey, where the French Commission found some remains of Aegyptian statuary. (Champollion, Egypte, vol. ii. p. 99.) [W.B.D.]

PHAIRACDON (Φαϊρακδων, Φαιράκδων: Eith. Φαιράκδων), a city of Histiaeotis in Thessaly, situated to the left of the Peneus, between Pelinnaeum and Atrax. It is probably represented by the ruins situated upon the slope of the rocky height above Graciano. (Strab. iv. p. 438; Steph. B. s. v.; Leake, Northern Greece, vol. i. p. 316, seq.)

PHAR or PHAIRES, afterwards called Phaрай (Φαραί, Φαϊρες, Φαραί), a town of Laconia in the Spartan plain, situated upon the road from Amyclae to the sea. (Paus. iii. 20. § 3.) It was mentioned in the Iliad (ii. 582), and was one of the ancient Achaean towns. It maintained its independence till the reign of Telesch, king of Sparta; and, after its conquest, continued to be a Lacedaemonian town under the name of Pharia. (Paus. iii. 2. § 6.) It was said to have been plundered by Aristomenes in the second Messenian War. (Paus. iv. 16. § 8.) It is also mentioned in a corrupt passage of Strabo (viii. p. 364), and by other ancient writers. (Lycophr. 552; Stat. Theb. iv. 226; Steph. B. s. v. Φάραες.) Pharia has been rightly placed at the deserted village of Epan, which lies south of the site of Amyclae, and contains an ancient "Tresury," like those of Mycenae and Orchomenus, which is in accordance with Pharis having been one of the Achaean cities before the Dorian conquest. It is surprising that the French Commission have given no description or drawing of
PHAECUSIA. PHAROS.

This remarkable monument. The only account we possess of it, is by Mure, who observes that "It is, like that of Scylaeus, with an through vault, entered by a door on one side, the access to which was pierced horizontally through the slope of the hill. Its situation, on the summit of a knoll, itself of rather conical form, while it increases the apparent size of the tumulus, adds much to its general loftiness and grandeur of effect. The roof of the vault, with the greater part of its material, is now gone, its shape being represented by a round cavity or crater on the summit of the tumulus. The doorway still remains, 12 feet wide at its upper and narrower part. The stone lintel is 15 feet in length. The vault itself was probably between 30 and 40 feet in diameter." Mure adds; "Menelaus is said to have been buried at Amyclae. This may, therefore, have been the royal vault of the Spartan branch, as the Mycenaean monument was of the Argive branch of the Atrid family." But even if we suppose the monument to have been a sepulchre, and not a treasury, it stood at the distance of 4 or 5 miles from Amyclae, if this town is placed at Aphidna Kyriski, and more than 2 miles, if it was placed according to the French Commission, at Sikakokkoi. [AMYCAE.] In addition to this, Menealus, according to other accounts, was buried at Therape. (Mure, "Tour in Greece," vol. ii. p. 246; Leake, "Morea," vol. iii. p. 3, Peloponnesius, p. 354; Curtius, "Peloponnesos," vol. ii. p. 248.)

PHAROSIA (Pharaceia), a small island before the entrance of the bay of Iassus, not far from Cape Possidion; its distance from Miletus is stated at 120 stadia. In this island Atalus was killed, and near it Julius Caesar was once captured by pirates. (Stadiasmus Mar. Mag. p. 282; Steph. B. s. v.; Suec. Cosm. 4: P lat. Cosm. 1.) It still bears its ancient name Farmaco. [L. S.]

PHARMACIA (Pharacia, Eth. Pharacianus), an important city on the coast of Pontus Polumeneicus, was by sea 150 stadia distant from cape Zephyrium (Arrian, "Peripl. Pont. Exu." p. 17; Anonym. "Peripl. P. E. p. 12."), but by land 24 miles. According to Pline (vi. 4) it was 80 (180?) miles east of Amasia, and 95 or 100 miles west of Trapaecas. (Comp. Tab. Peda, where it is called Carmassus for Cerasus, this latter city being confounded with Pharmacia.) It was evidently founded by one Pharmaces, probably the grandfather of Mithridates the Great; and the latter during his war with the Romans kept his harem at Pharmacia. Its inhabitants were taken from the neighbouring Cotyura, and the town was strongly fortified. (Strab. xi. p. 548; Plut. "Lucull." 18.) The place acquired great prosperity through its commerce and communication, and the iron-works of the Chalybes in its vicinity. (Strab. xi. pp. 549, 551.) According to Sclafus (p. 33) the site of this town had previously been occupied by a Greek colony called Choreades, of which, however, nothing is known. But that he actually conceived Choreades to have occupied the site of Pharmacia, is clear from the mention of the island of Aras (Arapas Ëfroös) in connection with it, for that island is known to have been situated off Pharmacia. (Arrian and Anonym. "Peripl. P. E."") Arrian is the only one who affirms that Pharmacia occupied the site of Cerasus; and although he is copied in this instance by the anonymous geographer, yet that writer afterwards correctly places Cerasus 150 stadia further east (p. 13). The error probably arose from a confusion of the names Choreades and Cerasus; but in consequence of this error, the name of Cernus was in the middle ages transferred to Pharmacia, which hence still bears the name of Keramost or Keramonde. (Comp. Hamilton, Researches, i. pp. 250, 261, fol.; Cramer, "Asia Minor," i. p. 261.) Pharmacia is also mentioned by Stephanus Byz. (s. v.), several times by Strabo (i. p. 526, xi. p. 499, xii. pp. 547, 549, 560, 561, 562, and by Ptolemy (v. 6, § 5). Respecting its coins, see Eckhel ("Doctr. Num.," vol. iii. p. 357). Another town of the same name in Phrygia is mentioned by Stephanus Byz. (s. v.).

PHARODIN. [VARINI.]

PHAROS (Phлось, Ephorus, op. Steph. B., Fr. 151; Scyll. p. 8; Scymn. p. 427; Diodor, xvi. 13; Strab. vii. p. 915), an island off the coast of Illyricum, which was colonized by Greek settlers from Paros, who, in the first instance, gave it the name of their own island, which was afterwards changed to Pharos. In this settlement, which took place b. c. 385, they were assisted by the elder Dionysius. When the Romans declared war against the Illyrians b. c. 229, Demetrias, a Greek of Paros, betrayed his mistress, Queen Teuta, for which he was rewarded with the greater part of her dominions. (Polyb. ii. 11.) The traitor, relying on his connection with the court of Macedon, set the Romans at defiance; he soon brought the vengeance of the republic upon himself and his native island, which was taken by L. Actius in b. c. 219. (Polyb. iii. 16; Zonar. viii. 20.) Plyn. (ii. 30) and Ptolemy (ii. 17. § 14) speak of the island and city under the same name, PHARIA (Φαρια), and Polybius (l. c.) says the latter was strongly fortified. The city, the ancient capital, stood at Stari Grad or Città Vecchia, to the N. of the island, where remains of walls have been found, and coins with the legend ΦΑΡΙΝΩΝ. After the fall of the Roman Empire the island continued for a long time in the hands of the Narentine pirates. Its Slavonic name is Hvar, a corruption of Pharos; and in Italian it is called Lussina o Lussiana. For coins of Pharos see Eckhel, vol. ii. p. 160; Seutini, "Monet. Vet." p. 42; Mioniut, vol. ii. p. 46. (Wilkinson, "Deltantia," vol. i. pp. 243—251; Neugebauer, "Die Süd-Straten," pp. 107—111.)

PHAROS (Φάρος, Strab. xvi. p. 791, seq.; Steph. B. s. v.; Eth. Ephrazos), a long narrow strip of rock lying off the northern coast of Aegypt, having the New Port of Alexandria E. and the Old Harbour SW. [ALEXANDRIA, vol. i. p. 97.] Its name is said to have been derived from a certain pilot of Mereleus, who, on his return from the Trojan War, died there from a serpent's bite. Pharos is mentioned in the Odyssey (iv. 335), and is described as one day's sail from Aegypt. This account has caused considerable perplexity, since Pharos is actually rather less than a mile from the seaboard of the Delta; and it is not probable that the land, in the course of centuries, has advanced or the sea receded materially. It is perfectly intelligible, however, if we suppose the author of the Odyssey to mean by Aegyptos, not the country itself but its river, since the Pharos is even now nearly a day's sail from the Coptic arm of the Nile. Any other theory is untenable; for this portion of the coast of the Delta consists of rocky bar and
shelves, which remain unchanged, and, though its surface has been heightened, its superficial area has not been materially enlarged since the country was peopled. Pharos was inhabited by fishermen under the Ptolemys of Aegypt; but it first became a place of importance under the Macedonian kings. During his survey of the coast, n. c. 332, Alexander the Great perceived that the island would form, with the help of art, an excellent breakwater to the harbour of his projected capital. He accordingly caused its southern extremity to be connected with the mainland by a stone mole seven stadia, or about an English mile, in length, which from this circumstance was called the Heptastadium or Seven-furlong Bridge. At either end the mole was left open for the passage of ships, and the apertures were covered by suspension bridges. In later times a street of houses, erected on the mole itself, converted the island of Pharos into a suburb of Alexandria, and a considerable portion of the modern city stands on the foundations of the old Heptastadium.

Yet, long after its junction with the Delta, Pharos was spoken of as an island (ἡ παλαι νήσος, Aelian, II. An. ix. 21; τοπρατῶν νήσος, Zonar. iv. 10). The southern portion of this rocky ledge (χωρᾶς) was the more densely populated; but the celebrated lighthouse, on the lower of the Pharos, stood at the NE. point, directly in a line with point Pharillon, on the eastern horn of the New Port. The lighthouse was erected, at a cost of 800 talents, in the reign of Ptolemy I., but was not completed until that of his successor Philadelphus. Its architect was Sostratus of Cnidus, who, according to Piny (xxxvi. 12. s. 18), was permitted by his royal patron to inscribe his own name upon its base. There is indeed another story, in which it is related that Sostratus, being forbidden to engrave his name on his work, secretly cut it in deep letters on a stone of the building, which he then artfully covered with some sooty and perishable material, on which were inscribed the style and titles of Ptolemy. Thus a few generations would read the name of the king, but posterity would behold the authentic impress of the architect. (Strab. xvii. p. 791; Suidas, s. e. Φάραος; Steph. B. s. e.; Lucian, de Conscrib. Hist. c. 62.) Pharos was the seat of several temples, the most conspicuous of which was one dedicated to Hephaestus, standing near the northern extremity of the Heptastadium.

That Pharos, in common with many of the Deltaic cities, contained a considerable population of Jews, is rendered probable by the fact that here the translators of the Hebrew Scriptures resided during the progress of their work. (Joseph. Antiq. xii. 2. § 13.) Julius Caesar established a colony at Pharos, less perhaps to recruit a declining population than with a view to garrison a post so important as regarded the turbulent Alexandrians. (Caesar, B. Civ. iii. 112.) Subsequently the island seems to have been comparatively deserted, and inhabited by fishermen alone. (Montfaucon, Sur le Phare d'Alexandrie, Mémoire de l'Acad. des Inscriptions, t. p. 285.)

PHILAR. [Δαμασκ.]

PHILARAS. [Phys.] PHILASCHUS (Φίλασχος; Phil. Φίλασχος: the territory is Φίλασχος, Strab. ix. 430), one of the most important cities of Thessaly, situated in the district Thessaliotis near the confines of Phthiotis, upon the left bank of the Enipeus, and at the foot of Mt. Xarxiacum. The town is first mentioned after the Persian wars; but it is probable that it existed much earlier, since there is no other locality in this part of Thessaly to be compared to it for a combination of strength, resources, and convenience. Hence it has been supposed that the city was probably named Philastra at a remote period, and was the capital of Phthiotis. (See Leake, Northern Greece, vol. iv. p. 484.) Among its ruins there are some remains of the ancient city being apparently to the most ancient times. On one side of the northern gateway of the acropolis are the remains of Cyclopean walls; and in the middle of the acropolis is a subterraneous construction, built in the same manner as the treasury of Atrens at Mycenae. Leake observes that Pharsalus "is one of the most important military positions in Greece, as standing at the entrance of the most direct and central of the passages which lead from the plains of Thessaly to the vale of the Spercheius and Thermopylae. With a view to ancient warfare, the place had all the best attributes of a Hellenic polis or fortified town: a hill rising gradually to the height of 600 or 700 feet above the adjacent plain, defended on three sides by precipices, crowned with a small level for an acropolis, watered in every part of the declivity by subterraneous springs, and still more abundantly at the foot by sources so copious as to form a perennial stream. With these local advantages, and one of the most fertile plains in Greece for its territory, Pharsalus inevitably attained to the highest rank among the states of Thessaly, and became one of the largest cities of Greece, as its ruined walls still attest." The city was nearly 4 miles in circuit, and of the form of an irregular triangle. The acropolis consisted of two rocky tubular summits, united by a lower ridge. It was about 500 yards long, and from 100 to 50 broad, but still narrower in the connecting ridge. Livy speaks of Pith Pendrasus (xlv. 1), and Strabo distinguishes between Old and New Pharsalus. (Strab. ix. p. 431.) It is probable that at the time of these writers the acropolis and the upper part of the town were known by the name of Palapharsalus, and that it was only the lower part of the town which was then inhabited.

Pharsalus is mentioned by Sicylos (p. 25) among the towns of Thessaly. In n. c. 436 it was besieged by the Athenian commander Myronides, after his victory in Boeotia, and one mile to the south of Philastra (Thuc. i. 111.) At the commencement of the Peloponnesian War, Pharsalus was one of the Thessalian towns that sent succour to the Athenians. (Thuc. ii. 22.) Medins, tyrant of Larisa, took Pharsalus by force, about n. c. 395. (Diol. xiv. 82.) Pharsalus, under the conduct of Polydamas, resisted Jason for a time, but subsequently formed an alliance with him. (Xen. Hell. vi. 1. § 2, seq.) In the war between Antiochus and the Romans, Pharsalus was a prize in the possession of the Syrian monarch; but on the retreat of the latter, it surrendered to the consul Acilius Glabrio, n. c. 191. (Liv. xxxvi. 14.)

Pharsalus, however, is chiefly celebrated for the memorable battle fought in its neighbourhood between Caesar and Pompey, n. c. 48. It is a curious fact that Caesar has not mentioned the place where he gained his great victory; and we are indebted for the name to other authorities. The exact site of the battle has been a matter of dispute between Leake with his usual clearness of style (Northern Greece, vol. iv. p. 475, seq.) and Mercivale, in his narrative of the battle (History of the Romans under the Empire, vol. ii. p. 286, seq.), who has raised some difficulties in the in-
PHARUSIL.

Preparation of Caesar's description, which have been commented upon by Leake in an essay printed in the Transactions of the Royal Society of Literature (vol. iv. p. 68, seq., 2nd Series), from which the following account is taken.

A few days previous to the battle Caesar had taken possession of Metropolis, a city westward of Pharsalus, and had encamped in the plain between these two cities. Meantime Pompey arrived at Larissa, and from thence advanced southwards towards Pharsalus, and on the 19th of July encamped at the foot of the heights, which are adjacent to the modern Ferra Kefalas on the east. Caesar's camp, or rather his last position before the battle, was in the plain between Pharsalus and the Enipeus, at the distance of about 3 miles from the still extant north-western angle of the walls of Pharsalus. There was a distance of 30 stadia, or about 4 Roman miles, from the two camps. (Appian, B. C. ii. 62.) Appian adds that the army of Pompey, when drawn up for battle, extended from the city of Pharsalus to the Enipeus, and that Caesar drew up his forces opposite to him. (B. C. ii. 75.) The battle was fought in the plain immediately below the city of Pharsalus to the north. There is a level of about 2½ miles in breadth between the Enipeus and the elevation or bank upon which stood the northern walls of Pharsalus. Merivale is mistaken in saying that "the plain of Pharsalus, 5 or 6 miles in breadth, extends along the left bank of the Enipeus." It is true that 5 or 6 miles is about the breadth of the plain, but this breadth is equally divided between the two sides of the river; nor is there anything to support Merivale's conjecture that the course of the river may have changed since the time of the battle. Leake observes that the plain of 2½ miles in breadth was ample sufficient for 45,000 men drawn up in the usual manner of three orders, each ten in depth, and that there would be still space enough for the 10,000 cavalry, upon which Pompey founded chiefly his hopes of victory; for the breadth of the plain being too great for Caesar's numbers, he thought himself sure of being able, by his commanding force of cavalry, to turn the enemy's right.

At first Pompey drew up his forces at the foot of the hills; but when Caesar refused to fight in this position, and began to move towards Scutussa, Pompey descended into the plain, and arranged his army in the position already described. His right wing being protected by the Enipeus, which has precipitous banks, he placed his cavalry, as well as all his archers and slingers, on the left. Caesar's left wing was in like manner protected by the Enipeus; and in the rear of his right wing, behind his small body of horse, he stationed six cohorts, in order to sustain the anticipated attack of the enemy's cavalry. Pompey resolved to await the charge. Caesar's line advanced running, hailed midway to recover their breath, and then charged the enemy. While the two lines were thus occupied, Pompey's cavalry on the left began to execute the movement upon which he placed his hopes of victory; but after driving back Caesar's small body of horse, they were unexpectedly assailed by the six cohorts and put to flight. These cohorts now advanced against the rear of Pompey's left; while Caesar at the same time brought up to his front the third line, which had been kept in reserve. Pompey's troops now gave way in every direction. Caesar then advanced and attack the formed camp of the enemy, which was defended for some time by the cohorts left in charge of it; but at length they fled to the mountains at the back of the camp. Pompey proceeded straightforward to Larissa, and from thence by night to the sea-coast. The hill where the Pompeians had taken refuge being without water, they soon quitted it and took the road towards Larissa. Caesar followed them with four legions, and, by taking a shorter road, came up with them at the distance of 6 miles. The fugitives now retired into another mountain, at the foot of which there was a river; but Caesar having cut off their approach to the water before nightfall, they descended from their position in the morning and laid down their arms. Caesar proceeded on the same day to Larissa. Leake observes that the mountain towards Larissa to which the Pompeians retired was probably near Scutussa, since in that direction alone is any mountain to be found with a river at the foot of it.

In the time of Pliny, Pharsalus was a free state (iv. 8. s. 15). It is also mentioned by Hierocles (p. 642) in the sixth century. It is now named Ferra Kefalas (τὰ Φερά φελάς), and the modern town lies at the foot of the ancient Acropolis.

COIN OF PHARSALUS.

PHARUSIL (Φαρούσιλος, Strab. ii. p. 131, xvi. pp. 826, 828; Plut. iv. 6, § 17; Polyb. ap. Plin. v. l. s. 8, vi. 33), a people on the W. coast of N. Africa, about the situation of whom Strabo, Pliny, and Ptolemy are in perfect agreement with one another, if the thirty journeys of Strabo (p. 826) between them and Lixus (Li-Arais), on the W. coast of Morocco, to the S. of Cape Sportel, be set aside as an error either of his information or of the text; which latter is not improbable, as numbers in MSS. are so often corrupt. Nor is this mere conjecture, because Strabo contradicts himself by asserting in another place (p. 829) that the Pharsii had a great desert between them and Mauretania, which they crossed, like natives of the present day, with bags of water hung from the bellies of their horses. (Leake, London GeoP. Journ. vol. ii. p. 16.) This locality, extending from beyond Cape Egojador to the banks of the Senegal, was the seat of the many towns of the Tyrians, amounting, according to some (Strab. p. 826), to as many as 300, which were destroyed by the Pharsii and Nigritae. (Comp. Humboldt, Cosmos, vol. ii. p. 129, note 123, trans.) Strabo reckons this number of 300 commercial settlements, from which this part of the coast of the Atlantic received the name of Sinus Emporicus, as an exaggeration. He appears in this to have followed the criticism of Artemidorus upon Erotosthenes, whom Strabo depreciates. The number 300 may be an exaggeration, or one not intended to be literally taken; but it is incredible that Erotosthenes should represent a coast as covered with Phoenician factories where none existed.

When Ezekiel prophesies the fall of Tyre, it is said (xxvii. 10): "The men of Phæres (the common version reads Persia), and Lud, and Phut were in thine armies." These Phæres thus joined with the Phut or Mauretanians, and the Ludim, who were
nomads of Africa (the Septuagint and the Vulgate understood the Lydians), may be reasonably as-
posed to belong to the same region. Without the vowel names, the name will represent the powerful
and warlike tribe whom the Greeks called Pharsauri.

The similarity of the names seems to have given rise
to the strange story which Sallust (B. J. 18) copied
from Plutarch, who made the Pharsauri believe that Hermes had led an army of Persians into Africa. (Pharsauri quondam
Persae?*), Plin. v. 8; comp. Pomp. Mela, iii. 10. § 3.)
The fierce tribes of Africa thus furnished the Pho-
icians with inexhaustible supplies of mercenary
troops, as they afterwards did to Carthage. (Ken-
rick. Phoenicia, pp. 133. 277.)

PHARYNGAE. [TARPRE.

PHARYNGYUM (Φαρυγγυμ), a promontory of
Phæaeus, with a station for shipping, lying E. of
Anticyra, between Marathus and Myus, now called
Agia. (Strab. ix. p. 423; Leake, Northern Greece,
vol. ii. p. 549.)

PHASAEUS (Φασαίος, Joseph., Steph. B.,
π. v.; Φασαίος, Ptol. v. 16. § 7; Phæaeus, Ptol. iii.
4. s. 19, xvii. 5. s. 11: Eth. Phasaiyn), a town of
Palestine built by Herod the Great in the Anton or
Ghor, N. of Jericho, by which means a tract for-
merly desert was rendered fertile and productive.
Joseph. xvi. 5. § 2, xvii. 11. § 5, xvii. 2. § 2,
B. J. i. 21. § 9*.) The name seems still to have
existed in the middle ages, for Brocardus, quoted by
Robinson, speaks of a village named Phasellium,
situated a league N. of Dâk, and corresponding to
the position of El Aqîdâ, where there are ruins.

PHASELII (Φασελίς, Eth. Φασελίτη), a ma-
ritime town of Lycia, on the Pamphylia gulf,
whence some say it was a town of Pamphylia
(Plin. v. 36; Steph. B. s. v.; Dionys. Per. 855;
667) distinctly informs us that Phaselis belonged
to Lycia, and that Olbia was the first Pamphylia
town on the coast. The town was a Dorian
colony (Herod. ii. 178), situated on a headland,
and conspicuous to those sailing from Cilicia to
Rhodes. (Livy. xxxvi. 23; Cic. in Verri. ii. 4.)

Behind it rose a mountain of the same name, pro-
bably the same which is elsewhere called ηα δαφνίων
(Nestius. Mav. Mag. § 204; Strab. xiv. p. 666),
and in its vicinity there was a lake and a mountain-
pass leading between Mount Cymax and the sea-
coast into Pamphylia. Phaselis had three harbours,
and rose to a high degree of prosperity, though it
did not belong to the political confederacy of the
other Lycian towns, but formed an independent state
by itself. It is mentioned by Thucydides (i. 69,
comp. viii. 88, 89; Polyb. xxx. 9) as a place of
some importance to the commerce of the Athenians
with the Lycian and Cilician towns. At a later period, having
become the haunt of the pirates, it was attacked
and taken by Servilius Isauricius. (Cic. in Verri.
iv. 10; Enop. vi. 3; Flor. iii. 6.) Although it was
restored after this disaster, yet it never recov-
ered its ancient prosperity; and Lucan (viii. 249.
55) describes it as newly deserted when visited by
Pompey in his flight from Pharsalus. According
to Athenaeus (xiv. p. 688) the town was cele-
brated for its reddish stone, and Musander
(see Athen. p. 683) praised its roses. It was the
common opinion among the ancients that the pha-
seli (φάσσελε), a kind of light sailing boats, were
invented at Phaselis. whence all the coins of the
town show the image of such a boat. Pomusianus

PHASIS. (iii. 3. § 6) reports that the spear of Achilles
was exhibited in the temple of Athena at Pha-
selis. In Hierocles (p. 683) the name of the place
is corrupted into Phaydes; and the Acts of Coun-
cils show it to have been the see of a bishop. It
may also be remarked that Phaselis was the birth-
place of Theodeuctes, a tragic poet and rhetorician
of some note. (Steph. B. s. v.; comp. Sylvac. p. 39;
Ptol. v. 3. § 3. § 2; Eckehl. Doctr. Aem. iii.
p. 6.) There are still considerable remains of the
ancient Phaselis. The lake in its vicinity, says
Beaufort (Karamanii, p. 56), is now a mere swamp,
occupying the middle of the isthmus, and was pro-
bably the source of those baneful exhalations which,
according to Livy and Cicero, rendered Phaselis so
unhealthy. The principal port was formed by a
stone pier, at the western side of the isthmus; it
projected about 200 yards into the sea, by which
it has been entirely overthrown. The theatre is
scoured out of the hill, and fronting it are the re-
mains of several large buildings. There are also
numerous sarcophagi, some of them of the whitest
marble, and of very neat workmanship. The
modern name of Phaselis is Tekroa. (Comp. Fellows,
Asia Minor, p. 211, foll.; Leake, Asia Minor,
p. 190.)

[ L. S. ]

COIN OF PHASELIS.

PHASIANI (Φασιανοί), a tribe in the eastern
part of Pontus, on the river Phasis, from which both
they and the district called Φασιανο ἄγα ειδίν derived
their names. (Xenoph. Anab. iv. 6. § 5, viii. 8.
§ 25; Diodor. xiv. 29; Eustath. ad Dionys. Per.
689.)

PHASIS (Φασίς), a navigable river in Colchis,
on the east of the Exine, which was regarded in ancient
times as forming the boundary between Asia, Europe,
and Asia, and as the remotest point in the east to
which a sailor on the Exine could proceed. (Strab.
x. i. 497; Eustath. ad Dionys. Per. 687; Arrian,
Bell. Goth. iv. 2. 6.) Subsequently it came to be looked
upon as forming the boundary line between Asia
Minor and Colchis. Its sources are in the southern-
most part of the Montes Moschici (Plin. vi. 4; Solin.
20); and as these mountains were sometimes re-
garded as a part of Mount Caucasus, Aristotle and
others place its sources in the Caucasus. (Strab.
x. i. 492, xii. p. 548; Aristot. Met. i. 13; Procop.
L. c.; Geogr. Rav. iv. 20.) Strabo (xi. p. 497; comp.
Dionys. Per. 694; Schol. ad Apollon. Rhod.
i. 401) makes the Phasis in a general way flow from
the mountains of Armenia, and Apollonius specifies
its sources as existing in the country of the Ama-
rants, in Colchis. For the first part of its course
westward it bore the name Boas (Procop. Bell. Per.
ii. 29), and after receiving the waters of its tribu-
taries Rhion, Glaucus, and Hippus, it discharges
itself as a navigable river into the Exine, near the
town of Phasis. (Strab. xi. pp. 498, 500; Plin.
L. c.) Some of the most ancient writers believed
PHIASSIS. that the Phasis was connected with the Northern Ocean. (Schol. ad Apollon. Rhod. iv. 259; Find. Dyth. iv. 376, Isthm. ii. 61.) The length of its course was also erroneously estimated by some at 800 Roman miles (Jul. Honor. p. 677, ed. Gronov.), but Aëtius (Cosmogr. p. 719) states it more correctly to be only 305 miles. The fact is that its course is by no means very long, and rapid, and of such a nature as to form almost a semi-circle; whereas Agathemerus (ii. 10) states that its mouth was not far from its sources. (Comp. Strab. xii. p. 509; Apollon. Rhod. ii. 401; Or. Met. vii. 6; Amm. Marc. xxxii. 8; Prisc. 673.) The water of the Phasis is described as very cold, and so light that it swam like oil on the Euxine. (Arrian, Peripl. Pont. Eux. p. 7, etc.;Procop. Bell. Pers. ii. 30; comp. Hesiod. Theog. 340; Hecat. Fragm. 187; Herod. iv. 57, 45, 86; Sclavus, p. 25; Polyb. iv. 56, v. 55; Ptol. v. 10, §§ 1, 2.) The different statements of the ancients respecting the sources and the course of this river probably arise from the fact that different rivers were understood by the name Phasis; but the one which in later times was commonly designated by it, is undoubtedly the modern Komai or Kion, which is sometimes also mentioned under the name Pachos, a corruption of Phasis. It has been conjectured with great probability that the river called Phasis by Aeschylus (ap. Arrian, l. c.) is the Hypnis; and that the Phasis of Xenophon (Anob. iv. 6, § 4) is no other than the Arazes, which is actually mentioned by Constantin Porphyrius, (de Arabia, Imp. 45) under the two names Erax and Phasis. [L. S.] PHIASIS (Φίασις), the easternmost town on the coast of the Euxine, on the southern bank, and near the mouth of the river Phasis, which is said to have received this name from the town having previously been called Arcturnus. (Plint. de Ill. x. 180.) Ku- starth, ad Dion. Per. 689.) It was situated in a plain between the river, the sea, and a lake, and had been founded by the Milesians as a commercial es- tablishment. (Strab. xii. p. 498; Steph. B. s. v.) The country around it was very fertile, and rich in timber, and carried on a considerable export commerce. In the time of Ammianus Marcellinus (xxiii. 8), the place still existed as a fort, with a garrison of 400 picked men. It contained a temple of Cybele, the great goddess of the Phasianni. (Comp. Arrian, Peripl. Pont. Eux. p. 9; Sclavus. p. 32; Strab. ii. pp. 497, 500; Ptol. v. 10, § 2, vili. 19, § 4; Pomp. Mela. i. 19; Plin. vi. 4; Zosim. ii. 35.) Some geographers regard Phasis and Schatopolis as two names belonging to the same place [Serastro- polis]. The name of the town and river Phasis still survives in the languages of Europe in the wood pleasant (Ληστήσιαν αερές), these birds being said to have been introduced from Europe into these regions as early as the time of the Argonauts. (Aristoph. Acharn. 726; Plin. ii. 39, 44, x. 67; Martialis, iii. 17. 16; Stat. VI. 12.; Petrum. [L. S.] PHIASIS (Φίασις), a river of Taprobane, a colony of Ceylon. It is clear from the statement of Ptolemy that it was on the N. side of the island; but like other rivers and places in that island, it is hardly possible now to identify it with any modern stream. Forbiger has conjectured that it is the same as the Asveir. Lassen has supposed it to be the Abdel, in that portion of the island which was called Noppoidegena. If this be so, it flowed into the sea a little to the N. of the now large lake of ricks which connects Ceylon with the mainland of Hindostan. Forbiger further

VOL. II.
PHELLOE. [Argolis.]

PHELLUS. [AntiPhelus.]

PHENEUS (Φήνεος, Hom. II. ii. 605; Φήνιος, Steph. B. s. c.; Φήνιος, Paus.; Ἡ Φήνιας, Alciph. iii. 43; Ἡ Φήνια, Polib.), a town in the NE. of Arcadia, whose territory was bounded on the N. by that of the Achaean towns of Aegaeon and Pellene, E. by the Symphalae, W. by the Cleitoria, and S. by the Caphyntias and the Erymanthian mountain. This territory was shut in on every side by lofty mountains, outliers of Mt. Cyllene and the Arcadian chain; and it is about 7 miles in length and the same in breadth. Two streams descend from the northern mountains, and unite their waters about the middle of the valley; the united river is now called Fontikika, and bore in ancient times the name of Obibus and Auneus. (Paus. viii. 14. § 3.) There is no opening through the mountains on the S. but the waters of the united river are watered off by katothдра, the ancient channels in the limestone rocks, and, after flowing underground, reappear as the sources of the river Ladan. In order to convey the waters of this river in a single channel to the katothдра, the inhabitants at an early period constructed a canal, 50 stadia in length and 30 feet in breadth. (Paus. l. c.; comp. Catull. lviii. 109.) This great work, which was attributed to Hercules, had become useless in the time of Pausanias, and the river had resumed its ancient and irregular course; but traces of the canal of Hercules are still visible, and one bank of it was a conspicuous object in the valley when it was visited by Leake in the year 1806. The canal of Hercules, however, could not protect the valley from the danger to which it was exposed, in consequence of the katothдра becoming obstructed, and the river finding no outlet for its waters. The Pheneans related that their city was once destroyed by such an inundation, and in proof of it they pointed out upon the mountains the marks of the height to which the water had risen, or subsided. (Paus. viii. 14. § 1.) Pausanias evidently refers to the yellow islet which is still visible upon the mountains and formed the plain; but in consequence of the great height of this line upon the rocks, it is difficult to believe it to be the mark of the ancient depth of water in the plain, and it is more probably caused by evaporation, as Leake has suggested; the lower parts of the rock being constantly moistened, while the upper are in a state of comparative dryness, thus producing a difference of colour in process of time. It is, however, certain that the Phenean plain has been more exposed than once to such inundations. Pinn says that the calamity had occurred five times (xxxi. 5. s. 30); and Eratosthenes relates a memorable instance of such an inundation through the obstruction of the katothдра, when, after they were again opened, the water rushing into the Ladan and the Alpheus overflowed the banks of those rivers at Olympia. (Strab. viii. p. 383.)

The account of Eratosthenes has been confirmed by a similar occurrence in modern times. In 1821 the katothдра became obstructed, and the water continued to rise in the plain till it had destroyed 7 or 8 square miles of cultivated country. Such was its condition till 1832, when the subterraneous channels again opened, the Ladan and Alpheus overflowed, and the plain of Olympia was inundated. Other ancient writers allude to the katothдра and subterraneous course of the river of Pheneus. (Theophr. Hist. Plut. iii. 1; Bod. xiv. 49.)

PHENEUS. Pheneus is mentioned by Homer (II. ii. 605), and was more celebrated in mythical than in historical times. Virgil (Aen. viii. 165) represents it as the residence of Evander; and its celebrity in mythical times is indicated by its connection with Heracles. Pausanias found the city in a state of complete decay. The acropolis contained a ruined temple of Athena Tritonia, with a brazen statue of Pseidon Hippius. On the descent from the acropolis was the town of Pelile in a memorable hill, the sepulchre of Iphicles, the brother of Heracles. There was also a temple of Hermes, who was the principal deity of the city. (Paus. viii. 14. § 4, seq.)

The lower slope of the mountain, upon which the remains of Pheneus stand, is occupied by a village now called Fontikia. There is, however, some difficulty in the description of Pausanias compared with the existing site. Pausanias says that the acropolis was precipitous on every side, and that only a small part of it was artificially fortified; but the summit of the insulated hill, upon which the remains of Pelile and are found, is too small apparently for the acropolis of such an important city, and moreover it has a regular slope, though a very rugged surface. Hence Leake supposes that the whole of this hill formed the acropolis of Pheneus, and that the lower town was in a part of the subjacent plain; but the entire hill is not of that precipitous kind which the description of Pausanias would lead one to suppose, and it is not impossible that the acropolis may have been on some other neighbouring hill, and that the hill on which the ancient remains are found may have been part of the lower city.

There were several roads from Pheneus to the surrounding towns. Of these the northern road to Achaea ran through the Phenetic plain. Upon this road, at the distance of 15 stadia from the city, was a temple of Apollo Pythius, which was in ruins in the time of Pausanias. A little above the temple the road divided, the one to the left leading across Mt. Crathis to Aegaeon, and the other to the right running to Pellene; the boundaries of Aegaeon and Pheneus were marked by a temple of Artemis Pyonia, and those of Pellene and Pheneus by that which is called Porins (δ ρωηινης πορίνης), supposed by Leake to be a river, but by Curtius a rock. (Paus. viii. 15. §§ 5—9.)

On the left of the Phenetic plain is a great mountain, now called Turtovna, but which is not mentioned by Pausanias. He describes, however, the two roads which led re-fward from Pheneus around this mountain,—that to the right or NW. leading to Nonacris and the river Styx, and that to the left to Cleitor. (Paus. viii. 17. § 6.) Nonacris was in the territory of Pheneus. [NONACER.] The road to Cleitor ran at first along the canal of Hercules, and then crossed the mountain, which formed the natural boundary between the Phenetic and Cleitoria, close to the village of Lycuria, which still bears its ancient name. On the other side of the mountain the road passed by the sources of the river Ladan. (Paus. viii. 19. § 4, 20. § 1.) This mountain, from which the Ladan springs, was called Penteleia (Πεντελεία, Hesych. and Phot. s. v.). The fortress, named Penteleium (Πεντελείου), which Pintarch says was near Pheneus, must have been situated upon this mountain. (Plut. Arat. 39, Clem. 17.)

The southern road from Pheneus led to Orche- menus, and was the way by which Pausanias came to the former city. The road passed from the Or-
PHIGALIA.

595

sively held the supreme power, till at length in n. c. 362 Lycophron was deposed by Philip, king of Macedon, and Phigalia, with the rest of Thessaly, became virtually subject to Macedonia. (For details and authorities see the Dict. of Biogr. under the respective names above mentioned.)

In n. c. 191 Phigalia surrendered to Antiochus, king of Syria, but shortly afterwards fell into the hands of the Roman consul Acilus. (Liv. xxxvi. 9. 14.) Situated at the end of the Pelagian plain, Phigalia possessed a fertile territory. The city was surrounded with plantations, gardens, and walled enclosures. (Polyb. xviii. 3.) Stephens B. (s. v.) speaks of an old and new Phigala distant 8 stadia from each other.

In the middle of Phigalia was a celebrated fountain called Hypeiron (Ὑπηρείον, Strab. ix. p. 439; Pind. Pyth. iv. 221; Steph. op. schol. ad Pind. loc.; Plin. iv. 8. 15.) The fountain Messeis was also probably in Phigalia. (Strab. ix. p. 432; Hom. II. vi. 457; Val. Flacc. iv. 374; Plin. l. c.) The remains of Phigalia are situated at Velestino, where the ancient walls may be traced on every side except towards the plain. On the northern side are two tabular summits, below the easternmost of which on the southern side is the fountain Hypeira, which rushes from several openings in the rock, and immediately forms a stream. Apollonius says (i. 49; comp. Schol. ad loc.) that Phigala was situated at the foot of Mt. Chalcedonion (Χαλκηδονιον), which is perhaps the southern and highest summit of Mt. Karadagh. (Leake, Northern Greece, vol. iv. p. 439, seq.)

2. In Messenia. [See PHARAE, No. 2.]

PHERINUM, a fortress in Thessaly, of uncertain site. (Liv. xxxii. 14.)

PHEUGARUM (Ψευγαρον), a town in the northern part of Germany, probably in the territory of the Dalburni. (Ptol. ii. 11. § 27.) Its site is commonly assigned to the vicinity of Paderborn in Westphalia (Wilhelm, Germanien, p. 134); but nothing certain can be said about it. [L. S.]

PHIALA. [Παλαιντία, p. 519, b.]

PHIALIA. [Φιγαλία.]

PHIGALIA or PHIALIA (Φιγαλία, Paus.; Φιγάλια, Polyb. iv. 3; Φιγαλία, Paus.; Rhianus, op. Stephan. B. s. v.; Φιγαλία, Paus.; Φιγαλία, Polyb.; Εἰθ. Φιγαλία, Φιγαλία, Φιγαλίτης), an ancient town of Arcadia, situated in the south-western corner, close to the frontier of Messenia, and upon the mouth of the Neda, about halfway between the sources and the mouth of this river. The name Phigalia was more ancient than that of Phiala, but the original name had again come into use in the time of Pausanias (viii. 39. § 2). The city was said to have derived its more ancient name from Phigalus, a son of Lycaon, its original founder, and its later name from Phialus, a son of Lycaon, its second founder. (Pans. l. c.; Steph. B.) In n. c. 659 the inhabitants of Phigalia were obliged to surrender their city to the Lacedaemonians, but they recovered possession of it again by the help of a chosen body of Oresthienses, who, according to an oracle, perished fighting against the Lacedaemonians.

COIN OF PHIGALAE.

PHIGALAE (Φίγαλαι; Eth. Φίγαλαι, Phigala). 1. One of the most ancient cities of Thessaly, was situated in the SE. corner of Pelasgiotis, W. of the lake Boeotis, and 90 stadia from Paganisa, which served as its harbour. (Strab. i. 436.) It was celebrated in mythology as the residence of Admetus and his son Eumelus, the latter of whom led from Phigala and the neighbouring towns eleven ships to the Trojan War. (Hom. H. ii. 711—715.) Phigala was one of the Thessalian towns which assisted the Athenians at the commencement of the Peloponnesian War. (Thuc. ii. 22.) At this time it was under the government of an autocracy; but towards the end of the war Lycophron established a tyranny at Phigala, and aimed at the dominion of all Thessaly. His designs were carried into effect by his son Jason, who was elected Tagus or generalesimo of Thessaly about n. c. 374, and exercised an important influence in the affairs of Greece. He had so firmly established his power, that, after his assassination in n. c. 370, he was succeeded in the office of Tagus by his two brothers Polyphron and Lycophron. The failure of these was shortly afterwards assassinated by the latter; and Polyphron was murdered in his turn by Alexander, who was either his nephew or his brother. Alexander governed his native city and Thessaly with great cruelty till n. c. 367, when he likewise was put to death by his wife Thebe and her brothers. Two of these brothers, Tisiphon and Lycophron, success-
Phigalia

(Paus. viii. 39. §§ 4, 5.) In B.C. 375 Phigalia was rent asunder by hostile factions; and the supporters of the Lacedaemonian party, being expelled from the city, took possession of a fortress in the neighbourhood named Henosa, from which they made excursions against Phigalia. (Diod. xvi. 40.) In the wars between the Aetolians and Achaeans, Phigalia became for some time the head-quarters of the Aetolian troops, which, from thence plundered Messenia, till they were at length driven out by Philip of Macedon. (Polyb. iv. 3, seq., 73, seq.) The Phigaleans possessed several peculiar curiosities, respecting which Harmodius of Leuctra wrote a special work. This author relates that they were given to excess both in eating and drinking, to which their cold and unequal climate may perhaps have contributed. (Athen. iv. p. 149, x. p. 442.)

Phigalia was still a place of importance when visited by Pausanias. He describes it as situated upon a lofty and precipitous hill, the greater part of the walls being built upon the rocks. There are still considerable remains of the ancient walls above the modern village of Pidilica. The city was upwards of two miles in circumference. The rock, upon which it stood, slopes down towards the Neda; on the western side it is bounded by a ravine and on the eastern by the torrent Lynax, which flows into the Neda. The walls are of the usual thickness, faced with masonry of the second order, and filled in the middle with rubble. On the summit of the acropolis within the walls are the remains of a detached citadel, 80 yards in length, containing a round tower at the extremity, measuring 18 feet in the interior diameter. In ancient times a temple of Artemis Atea stood on the summit of the acropolis. On the slope of the mountain lay the gymnasium and the temple of Dounysas Acratophoros; and on the ground below, where the village of upper Pidilica stands, was the agora, adorned with a statue of the paneyastic Arrachion, who lost his life in the Olympic games; and with the sepulchre of the Oresthians, who perished to restore the Phigaleans to their native city. (Paus. viii. 39. §§ 5, 6, 40. § 1.) Upon a rock, difficult of access, near the union of the Lynax and the Neda, was a temple of Eurynome, supposed to be a surname of Artemis, which was opened only once a year. In the same neighbourhood, and at the distance of 12 stadia from the city, were some warm baths, traces of which, according to the French Commission, are visible at the village of Trogoli; but the waters have long ceased to flow. (Paus. viii. 41. § 4, seq.)

Phigalia was surrounded by mountains, of which Pausanias mentions two by name, Cotilium (τὸ Κότιλιον) and Elaeum (τὸ Ελαίον), the former to the left of the city, at the distance of 30 stadia, and the latter to the right at the distance of 30 stadia. As Cotilium lies to the NE. of Phigalia, and Pausanias in this description seems to have looked towards the east, Mt. Elaeum should probably be placed on the opposite side of Phigalia, and consequently to the south of the Neda, in which case it would correspond to the lofty mountain of Kárcel. Mt. Elaeum contained a cavern sacred to Demeter the Black, situated in a grove of oaks. Of the position of Mt. Cotilium there is no doubt. On it was situated the temple of Apollo Epiphanus, which was built in the Peloponnesian War by Icetius, the architect of the Parthenum at Athens. It was erected by the Phigaleans in consequence of the relief afforded by Apollo during the plague in the Peloponnesian War, whence he received the surname of Epiphanus. The temple stood in a place called Bassae, and according to Pausanias excelled all the temples of Peloponnesus, except that of Athena Alea at Tegea, in the beauty of the stone and the accuracy of its masonry. He particularly mentions that the roof was of stone as well as the rest of the building. (Paus. viii. 41. §§ 2, 6.) This temple still remains almost entire, and is next to the Theseum at Athens the best preserved of the temples of Greece. It stands in a glen (whence the name Basoa, Dor. for Βασά, Βάσσα) near the summit of Mt. Cotilium, in the midst of a wilderness of rocks, studded with old knotty oaks. An eye-witness remarks that "there is certainly no remnant of the architectural splendour of Greece more calculated to fascinate the imagination than this temple; whether by its own size and beauty, by the contrast it offers to the wild desolation of the surrounding scenery, or the extent and variety of the prospect from its site." (Mure, Tour in Greece, vol. ii. p. 270.) A spring rises about 10 minutes SW. of the temple, and soon afterwards loses itself in the ground, as Pausanias has described. North of the temple was the highest summit of the mountain, which one reaches in 10 minutes' time by a broad road constructed by the Greeks. This summit was called Cotilium (Κότιλιον), whereas the whole mountain derived the name of Cotilium; here was a sanctuary of Aphrodite, of which there are still some traces. The grandeur of the mns of the temple have given to the whole of the surrounding district the name of the Columns (στῶν στῶνων ου κολάσνων). The temple is at least two hours and a half from the ruins of the city, and consequently more than the 40 stadia, which Pausanias mentions as the distance from Phigalia to Cotilium, but this distance perhaps applies to the nearest part of the mountain from the city.

In modern times the temple remained long unknown, except to the shepherds of the country. Chandler, in

PHILAE

PHILAE

PHILAE

PHILAE
Plut. In. et Saur. p. 359; Diod. i. 22.) It was reported too that neither birds flew over it nor fish approached its shores. (Sesec. Quast. Nat. iv. 2.) These indeed were the traditions of a remote period; since in the time of the Macedonian kings of Aegypt, Philae was so much resorted to, partly by pilgrims to the tomb of Osiris, partly by persons on secular errands, that the priests petitioned Ptolemy Phcycon (n. c. 170—117) to prohibit public functionaries at least from coming thither and living at their expense. The obelisk on which this petition was engraved was brought into England by Mr. Banks, and its hieroglyphics, compared with those of the Rosetta stone, threw great light upon the Egyptian phonic alphabet. The islands of Philae were not, however, merely servical abodes; they were the centres of commerce also between Merœ and Memphis. For the rapidity of the cataracts were at most seasons impracticable, and the commodities exchanged between Aegypt and Asiathia were reciprocally landed and re-embarked at Syene and Philae. The neighbouring granite-quarries attracted hither also a numerous population of miners and stonemasons; and, for the convenience of this traffic, a gallery or tomb of this traffic, a gallery or tomb was formed in the rocks along the E. bank of the Nile, portions of which are still extant. Philae is also remarkable for the singular effects of light and shade resulting from its position near the tropic of Cancer. As the sun approaches its southern limit the shadows from the projecting cornices and moldings of the temples sink lower and lower down the plain surfaces of the walls, until, the sun having reached its highest altitude, the vertical walls are overspread with dark shadows, forming a contrast with the columns which receive the fierce light which embalms all surrounding objects. (Ritter, Erdkunde, vol. i. p. 680, sequel.)

The hieroglyphic name of the smaller island is Philab, or boundary. As their southern frontier, the Pharaohs of Aegypt kept there a strong garrison, and, for the same reason, it was a barracks also for Macedonian and Roman soldiers.

The most conspicuous feature of both islands is their architectural wealth. Monuments of every variety, extending from the Pharaohs to the Caesars, occupy nearly their whole area. The principal structures, however, lie at the S. end of the smaller island. The most ancient, at present discovered, are the remains of a temple of Atheta (Aphrodite), built in the reign of Nectanebus. The other ruins are for the most part coeval with the Romanic times, more especially with the reigns of Philippicus, Epiphaneus, and Philobotor (n. c. 282—145), with many traces of Roman work as recent as Claudius I. (A. D. 41—54). The chief temple in Philae, dedicated to Ammon-Osiris, was approached from the river through a double colonnade. In front of the propyla were two colossal lions in granite, behind which stood a pair of obelisks, each 44 feet high. The propyla were pyramidal in form and colossal in dimensions. One stood between the dromos and propylæ, another between the propylæ and the portico, while a smaller one led into the sekos or adyton. At each corner of the adytum stood a statuesque granite sphinx, with the head of a hawk. Of these shrines, one is now in the Louvre, the other in the Museum at Florence. Eight and left of the entrance into the principal court are two small temples or rather chapels, one of which, dedicated to Atheta, is covered with sculptures representing the birth of Ptolemy Philobotor, under the figure of the god Horus. The story of Osiris is everywhere represented on the walls of this temple, and two of its inner chambers are particularly rich in symbolical imagery. Upon the two great propyla are Greek inscriptions intersected and partially destroyed by Egyptian figures cut across them. The inscriptions belong to the Macedonian era, and are of earlier date than the sculptures, which were probably inserted during that interval of remissence for the native religion which followed the extinction of the Greek dynasty in Aegypt. (n. c. 30.) The monuments in both islands indeed attest, beyond any others in the Nile-Valley, the survival of pure Aegyptian art centuries after the last of the Pharaohs had beased to reign. Great pains have been taken to mutilate the sculptures of this temple. The work of demolition is attributable, in the first instance, to the zeal of the early Christians, and afterwards to the policy of the Iconoclasts, who carried favour for themselves with the Byzantine court by the destruction of heathen as well as Christian images. The soul of Philae was carefully preserved for the reception of its buildings,—being levelled where it was uneven, and supported by masonry where it was crumbling or intersected. For example, the western wall of the Great Temple, and the corresponding wall of the dromos, are supported by very strong foundations, built below the level of the water, and resting on the granite which in this region forms the bed of the Nile. Here and there steps are hewn out from the wall to facilitate the communication between the temple and the river.

At the S. extremity of the dromos of the Great Temple is a smaller temple, apparently dedicated to Isis; and the two are connected by a colonnade in which remains of it are surrounded with the head of that goddess. Its portico consists of twelve columns, four in front and three deep. Their capitals represent various forms and combinations of the palm-branch, the dhoum-leaf, and the lotus-flower. These, as well as the sculptures on the columns, the ceilings, and the walls, were painted with the most vivid colours, which, owing to the dryness of the climate, have lost little of their original beauty. Philae was a seat of the Christian religion as well as of the ancient Egyptian faith. Ruins of a Christian church are still visible, and more than one adytum bears traces of having been made to serve at different eras the purposes of a chapel of Osiris and of Christ. For a more particular account of the architectural remains of Philae we must refer the reader to the works of Dénon, Gau, Rosellini, Inssberger, and Hamilton (Aegypten). The latter has minutely described this island—the Loreto of ancient Aegypt. The Greek inscriptions found there are transcribed and elucidated by Letronne.

A little W. of Philae lies a larger island, anciently called Suen or Scnmut, but now by the Arabs Belkhe. It is very precipitous, and from its most elevated peak affords a fine view of the Nile, from its smooth surface S. of the islands to its plunge over the shelves of rock that form the First Cataract. Philae, Belkhe, and another lesser island, divide the river into four principal streams, and N. of them it takes a rapid turn to the W. and then to the N., where the cataract begins. Belkhe, like Philae, was a holy island; its rocks are inscribed with the names and titles of Amunoph III., Rameses the Great, Psaemuticus, Apries, and Amasis, together with memorials of the Macedonian and Roman rulers of Aegypt. Its principal ruins consist of the propylon and two
columns of a temple, which was apparently of small dimensions, but of elegant proportions. Near them are the fragments of two colossal granite statues, and also an excellent piece of masonry of much later date, having the aspect of an arch belonging to some Greek church or Saracen mosque. [W. B. D.]

PHILAE (Φίλαια), a fort on the coast of Cili-
edia, is mentioned only in the Stadiasmus Maris
Magni (§§ 167, 168).

PHILENII and PHILÆNORUM ARAE
(Φιλαίαι or Φιλαινοί Αραι, Syll. p. 47; Polyb. iii.
39, § 2 x. 40, § 7; Strab. iii. p. 171, xvi. p. 836; Nielsen iv. § 3, iv. 4, § 3; Stadiasmus: § 84; Pomp. Mela, i. 7, § 6; Plin. v. 4), the E. frontier of Carthage towards Cyrene, in the middle of the Greater Syria. About the middle of the fourth cen-
tury B.C., according to a wild story which may be
read in Sallust (B. J. 79; comp. Val. Max. v. 6, § 4), these monuments commemorated the pa-
sacrifice of the two Philæni, Carthaginian envoys. These pillars, which no longer existed in the time of Strabo (p. 171), continued to give a name to the spot from which they had disappeared. The locality is assigned to Rîs Elouny, a headland a little to the W. of Mahilar, the border line between Sôr and Barta. The Pentinger Table has a station of this name 25 M. P. from Ambrâsias; and, at the same distance from the latter, the Antioue Itinerary has a station Benadaradari, probably a Punic name for Philenian Altars, as they were named by the Greeks of Cyrene. (Beechey, Expedition to the Coast of Africa, p. 215; Barth, Wanderungen, pp. 344, 360, 371.) [E. B. J.]

PHILAIÁE. [Attica, p. 392, b.
PILOXANTHON. [Herod. 1. 1058, a.]

PHILAE (Mela, ii. 2 § 5), or PHILIAS (Toh. Pent.; Geogr. iv. 6, v. 12; Philæas, Syll. v. 722; STEPH. B. 698, who, however, has also the forms PHILA and PHI Adams. Anon. B. Per. P. E., who also says that it was called FADIA, with which name it is likewise found in ARRAR, PER. F. E., p. 25; comp. Zosim. i. 34), a town on the coast of Thrace, built by the Byzantines, on a promontory of the same name. It still exists under the slightly altered appellation of Vlichitis. [T.H.D.]

PHILÆROS. [MYODONIA.]

PHILIA (Φιλία ἕρημα), in Ptol. iii. 11, § 4), a promontory on the coast of Thrace, 310 stadia SE. of Salinodessus (Kara Birma?), with a town of the same name. [T. H. D.]

PHILIPPI (Φιλιππος; Eth. Φιλιππης, Φιλιππης)
2 a city of Macedonia, which took its name from its founder, Philip, the father of Alexander. Original-
ly, it had been called CRENEIDES (Krounides, Strab.
vii. p. 351; Appian, B. C. iv. 105, 107; Steph. B. s. r. Φιλιππος), or the "Place of Fountains," from the
numerous streams in which the Gangites takes its source. Near Crenides were the principal mines of gold in a hill called according to Appian (L. c.) DIONYSI COLLIS (Λόφος Διονύσου), probably the same mountain as that where the Sartae possessed an oracle of Dionysus interpreted by the Bessi. (Herod. vii. 111.) Crenides does not appear to have belonged to the Thasians in early times, although their dominion in the 16th Olympiad (B.C. 360). When Philip of Macedon got possession of the mines, he worked them with so much success, that they yielded 1000 talents a year, although previously they had not been very productive. (Diodor. xvi. 4—8.) The old city was enlarged by Philip, after the capture of An-

PHILIPPI. 599

philipolis, Pydna, and Potidaæ, and fortified to pro-
defend his frontier against the Thracian mountaineers. On the plain of Philippi, between Haemus and Pangæus, the last battle was lost by the republicans of Rome. Appian (L. c.) has given a clear descrip-
tion of Philippus and Neapolis, who distanced Cassius and Brutus encamped. The town was situated on a steep hill, bordered to the N. by the forests through which the Cassian army advanced, — in the S. by a marsh, beyond which was the sea, to the E. by the passes of the Sapaæ and Corpilii, and to the W. by the great plains of Myrcinus, Drachenhus, and the Strymon, which were 350 stadia in length. Not far from Philippus, was the hill of Dionysus, containing the gold mines called Aysula: and 18 stadia from the town, were two other heights, 8 stadia asunder; on the one to the N. Brutus pitched his camp, and Cassius on that to the S. Brutus was protected on his right by rocky hills, and the left of Cassius by a marsh. The river Gangas or Gangites flowed along the front, and the sea was in the rear. The camps of the two leaders, although separate, were enclosed within a common entrenchment, and midway between them was the pass, which led like a gate from Europe to Asia. The galleys were driven ashore near Neapolis, 70 stadia distant, and the commissariat in Thasos, distant 100 stadia. Dion Cassius (xlvii. 35) adds, that Philipus was near Pangæus and Symbolon, and that Symbolon, which was between Philippus and Neapolis, was so called because it connected Pangæus with another mountain stretching inland; which indentifies it with the ridge which stretches from Prôkistra to Kavêia, separating the bay of Kavêia from the plain of Philippi. The Pylos, therefore, could be no other than the pass over that ridge and Kavêia. M. Antonius took up his position on the right, opposite to that of Cassius, at a distance of 8 stadia from the enemy. Octavius Caesar was opposed to Brutus on the "left hand of the even field." Here, in the autumn of B.C. 42, in the first engagement, Brutus was successful against Octavian, while Antonius had the advantage over Cassius. Brutus, incompetent to maintain the discipline of his troops, was forced to fight again; and in an engagement which took place on the same ground, twenty days afterwards, the Republic perished. Regarding the battle a curious mistake was re-
peated by the Roman writers (Manil. i. 908: Ovid, Met. xiv. 824; Flor. iv. 42; Lucan, i. 680, vii. 854, ix. 271; Juv. viii. 242), who represented it as fought on the same ground as Pharsala,—a mistake which may have arisen from the ambiguity in the lines of Virgil (Georg. i. 490), and favoured by the fact of the double engagement at Philippus. (Melis-
vaile, Hist. of Roman Empire, vol. iii. p. 214.) Augustus afterwards presented it with the privileges of "a colonia," with the name "Col. Jul. Aug. Philip." (Orelli, Itiner. 512, 3658, 3746, 4064, and on coins; Rascbe, vol. iii. pt. 2, p. 1130), and conferred upon it the "Jus Italicum." (Dion Cass. li. 4.) It was here, in his second missionary journey, that St. Paul, accompanied by Silas, came into con-
tact with the Itinerant traders in popular superstitions (Acts xvi. 12—15); and the city was again visited by the Apostle on his departure from Thessalonica (Acts, xx. 6.) The Gospel obtained a house in Europe here, for the first time; and in the autumn of A. D. 62, its great teacher, from his prison, under the walls of Nero's palace, sent a letter of grateful acknow-
ledgment to his Macedonian converts. Philipus was
PHILIPPUS PROM. (Φήλιππος Ὑπατος, Stadiumum. § 85.), a headland on the coast of the Great Syrtis, identical with the Hippus Prom. of Ptolemy (iv. 3. § 14), and with the remarkable projection of high cliff into the sea, on which are traces of a strong fortress, at Rās Beqredū. Beechey (Expedition to the N. Coast of Africa, p. 188) identifies this cliff, which he calls Benguriala, with Ephraïmatas; but this is a mistake, as is shown by Bard (Wanderungen, p. 367), who refers the station Αδέρρημ (Pet. Tab.) to this headland. \[E. J. B.\]

PHILIPPOLEIS. 1. (Φιλιππολίς, Πτολ. iii. 11. § 12; Polyb. v. 100; Steph. B. s. v.) a town of Thrace, founded by Philip of Macedon, on the site of a previously existing town, called Europs or Potaraepolis. (Anm. Marc. xxvi. 10. § 4; Plin. iv. 11. s. 18.) From its situation on a hill with three peaks or summits, it was also called Trinomium. (Plin. l. c.; Ptol. l. c.) It lay on the SE. side of the Hellen. The Thracians, however, regained possession of it (Polyb. l. c.; Liv. xxxix. 53), and it remained in their hands till they were subdued by the Romans. Its size may be inferred from the fact of the Goths having slaughtered 100,000 persons in it (Ann. Marc. xxxii. 5. § 17), though doubtless many persons from the environs had taken refuge there. The assumption that it likewise bore the name of Hadrianopolis, rests only on an interpolation in Ptolemy. It is still called Φιλιπποπολις, and continues to be one of the most considerable towns of Thrace. (Fac. Ann. iii. 32; Itin. Ant. p. 136; Hieroc. p. 653.) \[T. H. D.\]

2. A city of Arabia, near Bestra, founded by the Roman emperor Philippus, who reigned a. d. 244—249, and who was a native of Bestra. (Ἀντ. Βεσταίας, C. c. 28; Celereans, p. 237, ed. Paris, vol. i. p. 431, ed. Bonn; Zonar. vii. 19.) Some writers suppose that Philippopolis was only a later name of Bestra, and it must be admitted that the words of Celereans and Zonar. are ambiguous; but they are mentioned as two different places in the Councils. (Labeili, Concil. vol. vii. pp. 644, 675; Wesseling, ad Hieroc. p. 722.)

PHILISTINI. [PALAESTINA.]

PHILOBODEUTUS (Φιλοβοδετός), a fertile

woody hill in the plain of Flateia in Phocis, at the foot of which there was water. (Plut. Sull. 16.) This description, according to Leake, agrees with the remarkable insalubrious conical height between Bassikēnē and the Cephissus. (Northern Greece, vol. ii. p. 194.)

PHILOCALEIA (Φιλοκαλεία), a town on the coast of Pontus Cappadocia, 90 stadia to the east of Argyra, and 100 to the west of Corallai. (Arrian, Periplus. Estiu. p. 17, Anonym. Periplus. p. 13; Ptol. vi. 4.) Cramer (Asia Minor, l. p. 253) is inclined to identify it with the modern Helsen, about half-way between Kerezousa and Trebizond, while Hamilton (Researches, i. p. 254) seeks its site near the promontory of Kara Bouroum, where a large river falls into the sea, which is more in accordance with Piny's words. \[L. S.\]

PHILOMELIUM, PHILOMELUS (Φίλομελός, Eud. Φιλομέλιος, Philomelius), a town in the south-eastern part of Phrygia, which perhaps derived its name from the number of nightingales found in the district. It was situated in a plain not far from the borders of Lycaonia, on the great road from Synnada to Iconium. (Cic. ad Fam. iii. 8. xv. 4; Strab. xiv. p. 663, comp. with xii. p. 577; Pol. v. 2. § 25; Steph. B. s. v.) Philomelion belonged to the conventus of Synnada (Plin. v. 25.), and is mentioned in later times as belonging to Pithita (Hieroc. p. 672; Ptol. l. c.), the Phrygians in their pronunciation changing its name into Philomele or Philomene. (Procop. Hist. Arc. 18.) The town is often alluded to by the Byzantine historians in the wars of the Greek emperors with the sultans of Iconium. (Anna Cond. p. 473; Procop. l. c.; Nicet. Ann. p. 264.) Col. Leake (Asia Minor, p. 59) believes that the place was situated near the modern Iğun; but it is more probable that we have to look for its site at Akbehur, where ruins and inscriptions attest the existence of an ancient town. (Hamilton, Researches, i. p. 472, ii. p. 184; Arndell, Discoveries, i. p. 282, &c.)

PHILOTERA. 1. (Φιλωτέρα, Strab. xvi. p. 769; Steph. B. s. v.; Plin. vi. 29. 33; Φιλωτέρα λιμήν, Ptol. iv. 5. § 14; Φιλωτέρας, Apollod. op. Steph. B. s. v.; Euth. Φιλωτερηγή), a town in Upper Aisya in the country of the Tragodytai, on the Arabian Gulf, near Myros-Hormus. It was named after a sister of Ptolemy Philadelphus, and was founded by Sarus, who was sent by Ptolemy to explore the country of the Tragodytai. (Strab. l. c. see Mel- heke, ad Steph. B. l. c.)

2. (Euth. Φιλωτέρας), a city in Coche-Syria on the lake of Tiberias. (Steph. B. s. v.; Polyb. v. 70.) Stephanus says that in consequence of the Ethnic Φιλωτέρας some called the city Φιλωτερηγή; and in Polybium it is written Φιλωτερηγή.

PHILOTEKHA. [PHILOTEKHA, No. 2.]

PHILYRETE (Φιλύρητα), an island off the coast of Pontus, in the Euxine. It must have been situated near Cape Zephyrium, opposite the district inhabited by the Phyllytes, from which, in all probability, it derived its name. (Apolon. Brev. 1231; comp. Ann. Marc. xxii. 8; Dionys. Per. 766; Steph. B. s. v. Φιλύρητας.) Hamilton (Researches, i. p. 261) identifies it with the small rocky island 2 miles west of Cape Zephyr, and between it and the island of Keramikos Ada. \[L. S.\]

PHIHNII (Φίννι.)

PHINOPOLIS (Φίνοπολις, Ptol. iii. 11. § 4; Strab. vii. p. 319), a maritime town of Thrace, not far from the junction of the Bosporus with the
Phintias.

Philius.

Philea, and close to the town of Philea. It has been variously identified with Inniskeal, Monroemoto, and Derkosa. (Mela, ii. 2; Plin. iv. 11. s. 18, v. 52. 43.) [T.H.B.] Phintias (φιντίας; Eth. Phintiānas; Alīcata), a city on the S. coast of Sicily, situated at the mouth of the river Himera, about midway between Agrigentum and Gela. It was not an ancient city, but was founded about 280 B.C. by Phintias, tyrant of Agrigentum, who bestowed on it his own name, and laid it out on a great scale, with its walls, temples, and agora. He then peopled it with the inhabitants of Gela, which he utterly destroyed, compelling the latter to migrate to his newly founded city. (Diod. xxii. 2, p. 495.) Phintias, however, never rose to a degree of importance at all to be compared to that of Gela; it is mentioned in the First Punic War (B.C. 249) as affording shelter to a Roman fleet, which was, however, attacked in the roadstead by that of the Carthaginians, and many of the ships sunk. (Diod. xxiv. 1, p. 508.) Cicero also alludes to it as a seaward, carrying on a considerable export trade in corn. (Cic. Lew. iii. 83.) But in Strabo's time it seems to have fallen into the same state of decay with the other cities on the S. coast of Sicily, as he does not mention it among the few exceptions. (Strab. vi. p. 273.) Pliny, indeed, notices the Phintienses (or Phintienses as the name is written in some MSS.) among the stipendiary towns of Sicily; and its name is found also in Ptolemy (who writes it Φιντιας); but it is strange that both these writers reckon it among the inland towns of Sicily, though its maritime position is clearly attested both by Diodorus and Cicero. The Antonine Itinerary also gives a place called "Phintia," doubtless a corruption of Phintias, which it places on the road from Agrigentum along the coast towards Syracuse, at the distance of 23 miles from the former city. (Itin. Ant. p. 93.) This distance agrees tolerably well with that from Gerypale to Alicata, though somewhat below the truth; and it seems probable that the whole city, which is placed about 8 stadia, though its harbor is a mere roadstead, occupies the site of the ancient Phintias. There is indeed no doubt, from existing remains on the hill immediately above Alicata, that the site was occupied in ancient times; and, though these have been regarded by local antiquaries as the ruins of Gela, there is little doubt of the correctness of the opinion advanced by Oliverius, that the city is to be placed on the site of Terranora, and the vestiges which remain at Alicata are those of Phintias. (Oliver, Sicil. pp. 200, 214. See also the article Gela.) The remains themselves are of little interest. [E. H. B.] Phintos or Phintoxins Insula (Φιντοξ φίντοξος, PtoL.), a small island in the strait between Sardinia and Corsica, mentioned both by Pliny and Ptolemy. It is probably the one now called the Isola della Maddalena, the most considerable of the group so situated. (Plin. iii. 6. s. 13; PtoL. iii. 3, § 8.) Phila (Φίλα), an island in the lake Tritonis in the interior of Libya (Herod. iv. 178), which Stephanus B, copying from Herodotus, calls an island in Aegypt, confounding it with the island of Philea in the Nile. [E. H. B.] Philegra. [Fallene.] Philegarei Campi. [Campania, p. 491, s.] Philius (Φίλιος; Eth. Φίλιος, the territory Φίλια), an independent city in the north-eastern part of Peloponnesus, whose territory was bounded on the N. by Siconya, and on the W. by Arcadia, on the E. by Cleonea, and on the S. by Argolis. This territory is a small one, bounded by hills. The level of the sea, surrounded by mountains, from which streams flow down on every side, joining the river Asopus in the middle of the plain. The mountain in the southern part of the plain, from which the principal source of the Asopus springs, was called Carnates (Kαρνατής) in antiquity, now Polyfengeu. (Strab. viii. p. 382.) The territory of Philius was celebrated in antiquity for its wine. (Athen. i. p. 27, d.) According to Strabo (v. 1. 382), the ancient capital of the country was Aethrynea (Αθρηνία), on Mt. Celosse, which city is mentioned by Homer (II. ii. 571); but the inhabitants subsequently deserted it and built Philius at the distance of 30 stadia. Pausanias (ii. 12. §§ 4, 5), however, does not speak of any migration, but says that the ancient capital was named Arantia (Αραντία), from its founder Aras, an autochthon, that it was afterwards called Aethrynea from a daughter of Aras, and that it finally received the name of Philius, from Philius, a son of Ceisus and grandson of Temenus. The name of Arantia was retained in the time of Pausanias in the hill Arantius, on which the city stood. Hence the statement of grammarians that both Arantia and Aethrynea were ancient names of Philius. (Steph. B. s. v. Φιλίος, Αραντία; Schol. ad Apost. Rhod. i. 115.) According to Stephannus B. (s. v. Φίλιος) Philius derived its name from Dy- nysus and Chthonophile. Philius was subsequently conquered by Dorians under Rhegnidas, who came from Sicyon. Some of the inhabitants migrated to Samos, others to Clazomenae; among the settlers at Samos was Hippasus, from whom Pythagoras derived his descent. (Paus. ii. 13. § 1, seq.) Like most of the other Doric states, Philius was governed by an aristocracy, though it was for a time subject to a tyrant Leant, a contemporary of Pythagoras. (Diog. Laert. i. 12, viii. 8; Cic. Tusc. v. 3.) Philius sent 200 soldiers to Thermopylae (Heron. vii. 202), and 1000 to Plataea (ix. 28). During the whole of the Peloponnesian War it remained faithful to Sparta and hostile to Argos. (Theoc. v. 57, seq., vi. 105.) But before B.C. 393 a change seems to have taken place in the government, for in that year we find some of the citizens in exile who professed to be the friends of the Lacedaemonians. The Philians, however, still continued faithful to Sparta, and received a severe defeat from Iphicrates in the year already mentioned. So much were they weakened by this blow that they were obliged to admit a Lacedaemonian garrison within their walls, which they had been unwilling to do before, lest their allies should restore the exiles. But the Lacedaemonians did not betray the confidence placed in them, and quit the city without making any change in the government. (Xen. Hell. iv. 4. § 15, seq.) Ten years afterwards (n. c. 383) the exiles induced the Spartan government to expel their cause; and with the fate of Mantinea before their eyes, the Philians thought it more prudent to comply with the request of the Spartans, and received the exiles. (Xen. Hell. v. 2. § 8, seq.) But disputes arising between the returned exiles and those who were in possession of the government, the former again appealed to Sparta, and Agesilas was sent with an army in B.C. 380 to reduce the city. At this period Philius contained 5000 citizens. Agesilas laid siege to the city, which held out for a year and eight months.
It was at length obliged to surrender through the influence of provisions in n. c. 379; and Aeschylus appointed a council of 100 members (half from the exiles and half from the besieged), with powers of life and death over the citizens, and authorised to frame a new constitution. (Xen. Hell. vi. 3. § 10, seq.; Plat. Ages. 24; Dial. xx. 20.) From this time the Phliasians remained faithful to Sparta throughout the whole of the Theban War, though they had to suffer much from the devastation of their territory by the hostile neighbours. The Argives occupied and fortified Tricarannum above Phlius, and the Sicyonians Thyamia on the Sicyonian frontier. (Xen. Hell. vii. 2. § 1.) In n. c. 358 the city was nearly taken by the exiles, who no doubt belonged to the democratical party, and had been driven into exile after the capture of the city by Aeschylus. In this year a body of Arcadians and Eleians, who were marching through Nemea to join Epaminondas at the Isthmus, were persuaded by the Phlian exiles to the troops was capturing the city; during the night the exiles stole to the foot of the Acropolis; and in the morning when the scouts stationed by the citizens on the hill Tricarannum announced that the enemy were in sight, the exiles seized the opportunity to scale the Acropolis, of which they obtained possession. They were, however, repulsed in their attempt to force their way into the town, and were eventually obliged to abandon the citadel also. The Arcadians and Argives were at the same time repulsed from the walls. (Xen. Hell. vii. 2. §§ 5—9.) In the following year Phlius was exposed to a still more formidable attack from the Theban commander at Sicyon, assisted by Epaminondas, tyrant of that city. The main body of the army descended from Tricarannum to the Heraeum which stood at the foot of the mountain, in order to ravage the Phlian plain. At the same time a detachment of Sicyonians and Polieanians were posted NE. of the Acropolis before the Corinthian gate, to hinder the Phlians from attacking them in their rear. But the main body of the troops was repulsed and being unable to join the detachment of Sicyonians and Polieanians in consequence of a ravine (σανδέξη), the Phlian attacked and defeated them with loss. (Xen. Hell. vii. 2. § 11, seq.)

After the death of Alexander, Phlius, like many of the other Peloponnesian cities, became subject to tyrants; but upon the organisation of the Achaean League by Aratus, Cleonymus, who was then tyrant of Phlius, voluntarily resigned his power, and the city joined the league. (Polyb. ii. 44.)

Phlius is celebrated in the history of literature as the birthplace of Pratinas, the inventor of the Satyric drama, and who contended with Aeschylus for the prize at Athens. In the agora of Phlius was the tomb of Aristias, the son of Pratinas. (Paus. ii. 13. § 6.)

PHILYA. [A ETICA, p. 332, b.]
PHOCIS. 632

PHOCIS (Φωκίς), a city of Phocis, of unknown site, destroyed at the end of the Phocian War. (Paus. x. 3, § 2; Steph. B. s. v.) Pliny calls it Phrygale, and erroneously represents it as a city of Boeotia (iv. 7, s. 12).

PHOCAEA (Φοικαία; Eth. Φωκαίας or Φω-καείς), the most northern of the Ionian cities in Asia Minor, was situated on a peninsula, between the Sinus Cumaenus and the Sinus Hermaeus, and at a distance of 200 stadia from Smyrna. (Strab. xiv. p. 632; Plin. v. 31; Pomp. Mela, i. 17.) It was said to have been colonized from Phocis, under the guidance of two Athenian chiefs, Philegenes and Damon. (Strab. l. c. p. 633; Paus. vii. 3, § 5.) The first settlers did not conquer the territory, but received it as a gift from the Cumaeans. The town, however, did not become a member of the Ionian confederacy until it placed princes of the line of Codrus at the head of the government. It had two excellent harbours, Nausathmus and Lampert, and before the entrance into them was situated the little island of Bosphorus, and about it, a number of temples and splendid buildings (Liv. xxxviii. 22); and owing to this favourable position, and the enterprising spirit of its inhabitants, the town soon rose to great eminence among the maritime cities of the ancient world. Herodotus (i. 163, &c.) states that the Phocaeans were the first Greeks who undertook distant voyages, and made themselves acquainted with the coasts of the Adriatic, and the Tyrrhenian and Etruscan seas; and that they were the first to visit Tartessus, Argonautica, and all the parts of the Tarentines, became so attached to them as to try to prevail upon them to quit Ionis and settle in his own dominions; but on their declining this, he gave them a large sum of money to fortify their own city against the Persians. The Phocaeans accordingly surrounded their city by a wall of several stadia in circumference, and of a very solid construction. In the war of Cyrus, Phocis was one of the first towns that was besieged by the army of Cyrus, under the command of Harpagus. When called upon to surrender, the Phocaeans, conscious of being unable to resist the enemy much longer, asked and obtained a truce of one day, pretending that they would consider his proposal. But in the interval they embarked with their wives and children and their most valuable effects, and sailed to Chios. There they endeavoured by purchase to obtain possession of the group of islands called Oeumsea, and belonging to the Chians; but their request being refused, they resolved to sail to Caria, where twenty years before these occurrences they had planted the colony of Aludia. Before setting out they landed at Phocaea and put the Persian garrison to the sword. They then bound themselves by a solemn oath to abandon their native country; nevertheless, however, one half of their number, unable to overcome their feelings, remained behind. The rest proceeded to Caris, where they were kindly received by their colonists. Soon they became formidable to the neighbouring nations by their piracy and depredations, so that the Tyrrhenians and Carthaginians united to destroy their power. The Phocaeans succeeded indeed in defeating their enemies, but their loss was so great that they despaired of being able to continue the contest, and proceeded to Rhegium, in the south of Italy. Not long after their arrival there, they were induced to settle at Elaea or Velia, in Lucania, which, in the course of time, became a flourishing town. Among the numerous colonies of the Phocaeans the most important was Massilia or Marseilles, in the south of France, and the most western Marsala, in Hispania Baetica. After the emigration of half the population, Phocis continued to exist under the Persian dominion; but was greatly reduced in its commerce and prosperity, as we may infer from the fact that it furnished only three ships to the fleet of the revolted Ionians at the battle of Lade; but their commander was nevertheless the ablest man among the Ionians. (Herod. vii. 11—17.) After these events Phocis was little mentioned. (Strab. i. 13, viii. 91; Hom. Hymn. i. 35; Steph. B. s. p. 37); but some centuries later, in the war of the Romans against Antiochus, when Phocis was besieged by a Roman fleet, Livy (xxxvii. 31) describes the place as follows:—"The town is situated in the midst of a recess of a bay; its shape is oblong, and its walls enclose a space of 2500 paces; they afterwards unite so as to form a narrower wedge: this they themselves call Lampert, and it is about 1200 paces in breadth. A tongue of land running out into the sea a distance of 1000 paces, divides the bay nearly into two equal parts, and forms on each side of the narrow isthmus a very safe port. The one towards the south was called Nausathmus, from its being able to contain a great number of ships, the other was situated close to the Lampert." On that occasion the town was taken by the Romans, after a desperate resistance, and given up to plunder by the praetor Aeumius, though the inhabitants had voluntarily opened their gates. The town with its territory, however, was restored to the inhabitants by Aeumius. (Liv. l. c. 32; Polyb. xxii. 27, comp. v. 77, xxii. 4; Liv. xxxvii. 39.) At a still later period the Phocaeans armed the Romans by supporting the cause of Aristonicus, the claimant of the throne of Pergamus; and they would have been severely punished had not the inhabitants of Massilia interceded in their behalf. (Justin, xxxvii. 1, xiii. 3; Strab. p. 646.) The existence of Phocis can be traced throughout the imperial period from coins, which extend down to the time of the Philaces, and even through the period of the Lower Empire. (Herod. p. 661.) From Michael Ducaus (Ann. p. 89) we learn that a new town was built not far from the ancient city by some Genoese, in A.D. 1421. This latter, situated on the isthmus mentioned by Livy, not far from the ruins of the ancient city, is the place now called Foggia Nova: the ruins bear the name of Palme Foggia. (Chandler, Travels, p. 96; Arundell, Seven Churches, p. 294; Hamilton, Researches, ii. p. 44; Eckel, Doctr. Num. ii. p. 55, &c.; Rasche, Lex. Rei Num. iii. 2. p. 1225, &c.; Sestini, p. 83; Thisquet, Phocaeis, Bonn, 1842, 8vo.)

Another town of the same name in the peninsula of Mount Mycale, in Caria, is mentioned by Stephanoos B. (s. v.).

[ L. S.]

COIN OF PHOCAEA.

PHOCAEA. [LEONTINI, p. 159, b.] PHOCICUM. [PHOCIS.]

PHOCIS (Ποσίς; Eth. Φωκείς, Phocisias), a small country in central Greece, bounded on the N. by Doris, on the NE. and E. by the Locri Epicnemidii and Opuntii, on the SE. by Bocotia, on the W. by the
Preceding the Lucians, and on the S. by the Corinthian gulf. The Phocians at one period of their history possessed a sea-port, Daphnus, on the Euboean sea, intervening between the Locri Epicneumini and Opuntii (Strab. x. pp. 424, 432.) Phoicus is a mountainous country. The greater part of it is occupied by the lofty and rugged range of Parmassus, the lower portion of which, named Cirphis, descends to the Corinthian gulf between Cirrha and Anticyra: below Cirphis was the fertile valley of Crissa, extending to the Corinthian gulf. On the N. E. were the Locrian mountains, lofty and difficult of access on the side of the Epicneumini, but less precipices on the side of the Opuntii. [Locris.] Between Mount Parmassus and the Locrian mountains flowed the river Cephissus, which empties itself into the lake Copais in Boeotia. [BEOBOTA, p. 410, seq.] In the valley of the Cephissus are some narrow but fertile plains. The only other rivers in Phoicus, besides the Cephissus and its tributaries, are the Phocis, flowing by Delphi [DELPHI], and the Hercules, flowing into the Corinthian gulf near Bulis. [BULIS.]

Phoicus is said to have been originally inhabited by several of those tribes who formed the population of Greece before the appearance of the Hellenes. Among the earliest inhabitants we find mention of Leleges (Dicaearch. p. 5), Thracians (Strab. ix. p. 401; Thue. ii. 29; comp. Pans. i. 41. § 8), and Hyantes. (Strab. l. c.) The aboriginal inhabitants were compared by the Phlegyae from Orchomenus. (Pans viii. 4. § 4, x. 4. § 1.) The country around Tithorea and Delphi is said to have been first called Phoicus from Phoicus, a son of Ornytios, and grandson of Susypus of Corinth; and the name is said to have been afterwards extended to the whole country from Phoicus, a son of Aeacus, who arrived there not long afterwards (Pans. ii. 29. § 3, x. 1. § 1.) This statement would seem to show that the Phocians were believed to be a mixed Aeolic and Achaean race, as Susypus was one of the Aeolic heroes, and Aeacus one of the Achaeans. In the Trojan War the inhabitants appear under the name of Phocians, and were led against Troy by Schedius and Epistrophus, the sons of Iphitus. (Hom. Il. ii. 517.) Phoicus owes its chief importance in history to the celebrated oracle at Delphi, which originally belonged to the Phocians. But after the Dionysii had obtained possession of the temple, they disowned their connection with the Phocians; and in historical times a violent antipathy existed between the Phocians and Delphians. [DELPHI, p. 762.]

The Phocians proper dwelt chiefly in small towns situated upon either side of the Cephissus. They formed an ancient confederation, which assembled in a building named Phoicenum, near Danis. (Pans. x. 5. § 1.) They maintained their independence against the Thessaliains, who made several attempts to subdue them before the Persian War, and upon one occasion they inflicted a severe loss upon the Thessaliains near Hyampolis. (Herod. viii. 27; seq.) When Nereus invaded Greece, the Thessaliains were able to break their vengeance upon their ancient enemies. They conducted the Persian army into Phoicus, and twelve of the Phocian cities were destroyed by the invaders. The inhabitants had previously escaped to the summits of Parmassus or across the mountains into the territory of the Locri Ozolian. (Herod. viii. 92, seq.) Some of the Phocians were subsequently compelled to serve in the army of Mardonius, but those who had taken refuge on Mt. Parmassus sallied from their fastnesses and annoyed the Persian army. (Herod. ix. 17, 31; Paus. x. 1. § 11.)

It has been already remarked that the oracle at Delphi originally belonged to the Phocians. The latter, though dispossessed by the Delphians, had never relinquished their claims to it. In b.c. 450 the oracle was again in their possession; the Laconians sent an army to deprive them of it and restore it to the Delphians; but upon the retreat of their forces, the Laconians marched into Phoicus, and handed over the temple to the Phocians. (Thuc. i. 112.) In the Peloponnesian War the Phocians were zealous allies of the Athenians. (Comp. Thuc. iii. 95.) In the treaty of Nicias (b. c. 421), however, it was expressly stipulated that the Delphians should be independent of the Phocians (Thuc. vi. 18); and from this time the temple continued in the undisputed possession of the Delphians till the Sacred War. After the battle of Hellantria (b. c. 371), the Phocians became subject to the Thebans. (Xen. Hell. vi. 5. § 23.) After the death of Epaminondas they deserted the Theban alliance; and the Thebans, in revenge, induced the Amphictyonic Council to sentence the Phocians to pay a heavy fine on the pretext of their having cultivated the Cirrhaean plain, b. c. 357. Upon their refusal to pay this fine, the Amphictyonic Council consecrated the Phoican territory to Apollo, as Cirrha had been treated two centuries before. Thereupon the Phocians prepared for resistance, and were persuaded by Philomelus, one of their chief citizens, to seize the temple at Delphi, and appropriate its treasures to their own defence. Hence arose the celebrated Sacred or Phoican War, which is narrated in all histories of Greece. When the war was at length brought to a conclusion by the aid of Philip, the Amphictyonic Council wreaked its vengeance upon the wretched Phocians. It was decreed that all the towns of Phoicus, twenty-two in number, with the exception of Abae, should be destroyed, and the inhabitants scattered into villages, containing not more than fifty houses each; and that they should replace by yearly instalments of fifty talents the treasures they had taken from the temple. The two votes, which they had had in the Amphictyonic Council, were taken away from them and given to Philip. (DIOD. xvi. 60; Paus. x. 3; DEM. de Fals. Leg. p. 583.) The Phocians subsequently rebuilt several of their cities with the assistance of the Athenians and their old enemies the Thebans, who had joined the Athenians in their opposition to Philip. The Phocians fought on the side of Grecian independence at the battle of Chaeroneia and in the Laucian war; and at a later period they resisted the Gauls, when they attempted to plunder the temple at Delphi. (Paus. x. 3. § 3.)

The chief town in Phoicus, excepting Delphi, was ELATEIA, situated upon the left bank of the Cephissus, on the highroad from Locris to Boeotia, in the natural march of an army from Thermopylae into central Greece. Next in importance was ABEA, also to the left of the Cephissus, upon the Eocean frontier, celebrated for its ancient oracle of Apollo. The other towns of Phoicus may be enumerated in the following order. Left of the Cephissus from N. to S. are DEMPHA, EROCUS, TITHRONION, TITARA, HYAMPOLIS, right of the Cephissus, and between this river and Mount Parmassus, LILAEA, CHARA-OK, ANDROCDA, LDON, NEON, which was supported by TITOKRA [see NEON], PARAPOTAMA.
PHOCUSAE.
Between Parmassus and the Bocotian frontier, Daulis, Panopetes, Trachis. On Mount Parmassus, Lycombasis, Delphi, Crissa, Anemobela, Cytanisia. West of Parmassus, and in the neighbourhood of the Corinthian gulf from N. to S., Cirbha, the port-town of Crissa and Delphi, Chethris, Medoeon, Echidanias, Antihey, Ambrymus, Marathus, Stiris, Philogyon, Bullis with its port Mychus. (Dodwell, Classical Tour, vol. i. p. 155, seq.; Leake, Northern Greece, vol. ii. p. 69, seq.)

COIN OF PHOCTION.

PHOCUSAE, PHUCUSSAE (Φοκουσα), Ptol. iv. 5. § 73; Φοκουσας, Athen. i. p. 30, d.; Hesych. s. v.; Steph. B.); islands lying off Zephyrinum in Phocis (Marso Labbett), which the Coast-describer (Stadiasmus. § 20) calls Delphinis. [E. B. J.]

PHOEBATAE, PHOEBATIS. [Dassaretae.]

PHOEBIA. [Buphia.]

PHOENICE (Φωινικη), a city of Chaonia in Epirus, situated a little inland north of Buttrontum (Strab. vii. p. 824), upon a river, the ancient name of which is not recorded. It is described by Polybios, in n. c. 230, as the strongest, most powerful, and richest of the cities of Epirus. (Polyb. i. 5, 8.) In that year it was attacked by a party of Illyrians, assisted by some Gallic mercenaries; and the Epirots, who had marched to the rescue of the place, were surprised by a sally of the Illyrians from the city, and put to the rout with great slaughter. (Polyb. 4. c.) Phoenice continued to be an important city, and it was here that a treaty of peace was negotiated between Philip and the Romans towards the close of the Second Punic War, B. C. 204. (Liv. xvi. 12; Polyb. xxvi. 27.) Phoenice appears to have escaped the fate of the other Epirotic cities, when they were destroyed by order of the senate, through the influence of Chaoros, one of its citizens. (Polyb. xxxii. 22.) It is mentioned by Ptolemy (iii. 14. § 7) and Hierocles (p. 652), and was restored by Justinian. (Procop. de Aedif. iv. 1.) Procopius says that it was situated in a low spot, surrounded by marshes, and that Justinian built a citadel upon a neighbouring hill. The remains of the ancient city are found upon a hill which still bears the name of Finiki. "The entire hill was surrounded by Hellenic walls. At the south-eastern extremity was the citadel, 200 yards in length, some of the walls of which are still extant, from 12 to 20 feet in height. About the middle of the height is the emplacement of a very large theatre, the only remains of which are a small piece of rough wall, which encircled the back of the upper seats; at the bottom, in the place of the scene, is a small circular foundation, apparently that of a town of a later date. Between it and the north-western end of the citadel are the remains of a Roman construction, built in courses of tiles." (Leake Northern Greece, vol. i. p. 68.)

PHOENICIA, a country on the coast of Syria, bounded on the E. by Mount Lebanon.
that he makes the river Euletherus the N. boundary, and does not mention Aradus, which lay a little to the N. of that stream. There can be no question, however, that Aradus belonged to Phœnicia. So, too, at the southern extremity, the town of Dora was unquestionably Phœnecian, whilst Caesarea, the town S. of the Choræus, belonged to Palestine. Phœnicia, as thus defined, lies between lat. 32° 38' and 34° 52' N., and long. 35°-36° E. It forms a narrow slip of land about 120 miles in length, and seldom more, but frequently less, than 12 miles broad. The range of Libanus, which skirts the greater part of its eastern side, throws out spurs which form promontories on the coast, the most remarkable of which are Theoprosopon (Seyoum-Kerou), between the towns of Trieris and Botrys, and the Promontorium Album between Tyre and Kedippa. Farther to the S. Mount Carmel forms another bold promontory. The whole of Phœnicia presents a succession of hills and valleys, and is traversed by numerous small rivers which descend from the mountains and render it well watered and fruitful. The coast-line trends in a south-westerly direction; so that whilst its northern extremity lies nearly parallel to the coast of S. of Stridon, its southern one is about a mile 33°. Aradus, its most northerly town, lies on an island of the same name, between 2 and 3 miles from the mainland, and nearly opposite to the southern extremity of Mount Barylus. On the coast over against it lay Antaradus. From this point to Tripolis the coast forms an extensive bay, into which several rivers fall, the principal being the Euletherus (Nahr-el-Khelib), which flows through the valley between Mount Barylus and Libanus. To the N. and S. of this are the plains of Zarephath and Marathus; to the S. the principal town before arriving at Tripolis was Orthasia, close to the seashore. Tripolis stands on a promontory about half a mile broad, and running a mile into the sea. It is washed by a little river now called El-Kadiha, "the holy." Tripolis derived its name from being the federal town of the three leading Phœnician cities, Tyre, Sidon, and Aradus, each of which had its separate quarter. To the S. of Tripolis the country rises into chalk hills, which here press so closely on the sea as to leave no room for cultivation, and merely even for a road, and which form the bold promontory already mentioned of Theoprosopon. (Nahr-el-Shelah.) The chief towns of this district are Calamos and Trieris. To the S. of Theoprosopon the hills recede a little from the sea, but at a distance of between 20 and 30 miles form another lofty promontory called Climax (Ross Wilba Sulan), from the circumstance that the steepness of the cliffs rendered it necessary to cut steps in them. About this tract several rivers descend into the sea, the principal of which is the Adonis (Nahr-el-Ibrahim). The chief towns are Botrys, 7 miles S. of Theoprosopon, and Byblos, a little S. of the Adonis. Phalæbyblus lay farther S., but its site is unknown. Aïjada, noted for its licentious worship of Venus, was seated in the interior, at the source of the river Adonis in Libanus. The promontory of Climax formed the N. point of the bay, and called Kernxa, the S. extremity of which, at a distance of about 12 miles, is formed by the headland Ras-el-Nahr-el-Khelib, on which the town of Beytus formerly stood. At about the middle of this bay the river Lyce (Nahr-el-Khelib) discharges itself into the sea through a narrow chasm the nearly perpendicular cliffs of which are 200 feet in height. At the eastern extremity of the valley of the Lyce rises the Gebel-el-Sannin, the highest summit of Libanus. The southern side of this valley is enclosed by steep and almost inaccessible cliffs, some of which are of a very bold and cliff-like nature, visible probably by the Egyptians during their wars in Palestine. A lower and broader road of more gradual ascent was constructed by the emperor M. Aurelius. To the S. of this spot, the plain between Libanus and the sea at Beytus is of greater length than in any other part of Phœnicia. The land, which consists of gentle undulations, is very fertile, and produces oranges and mulberry trees in abundance. This plain extends southwards as far as the river Tamyrus, a distance of about 10 miles. Beytus (Beirout) is washed by the river Magoras. From the headland on which it stands—the most projecting point in Phœnicia—the coast again forms a long curve down to Sidon. On this part of the coast stand the towns of Platamon and Porphyrus. A little to the S. of Platamon is the river Tamyrus (Damor), already mentioned, and between Porphyrus and Sidon the river Bos- tremus (Ammelb). To the S. of the Tamyrus the country again becomes low, and the hills press closely upon the sea. The narrow plain of the Bostremus, however, about 2 miles broad, is of the highest fertility, and produces the finest fruits in Syria. Sidon stands on a small promontory about 2 miles S. of the Bostremus. From Sidon a plain extends to a distance of about 8 miles S., as far as Sarepta, the Zarephath of the Book of Kings (1 Kings, xix., 9), which stands on an eminence near the sea. From Sarepta to Tyre is about 20 miles. This is the ancient Iphthine. On the coast opposite the town of Ornithomropolis is supposed to be marked by a place called Atdon or Adloun. At this place the plain, which had expanded after passing Sarepta, again contracts to about 2 miles, and runs along the coast in gentle undulations to Tyre, where it expands to a width of about 5 miles. The hills which bound it are, however, of no great height, and are cultivated to the summit. At about 5 miles N. of Tyre this plain is crossed by the river Kassimeh, supposed to have been the Kasism of the ancient writers. Tyre, the most considerable of Phœnicia, and the only one which makes its way through the barrier of the mountains. It rises in the valley of Bekaa, between Libanus and Anti-libanus, at a height of 4000 feet above the level of the sea. The upper part of its course, in which it is known by the name of El-Litani, is consequently precipitous and romantic, till it forces its way through the defiles at the southern extremity of Libanus. Sudden and violent gusts of wind frequently rush down its valley, rendering the navigation of this part of the coast very dangerous. From Tyre, the site of which will be found described under its proper head, the coast runs in a westerly direction for a distance of about 8 miles, to the Promontorium Album (Ras-al-Ahian), before mentioned,—a bluff headland consisting of white perpendicular cliffs 300 feet high. The road from Tyre to its summit seems originally to have consisted of a series of steps, whence it was called Climax Tyrius; or, as the ancient writers have subsequently a road was laboriously cut through the rock, it is said, by Alexander the Great. From this promontory the coast proceeds in a straight and almost southerly direction to Ptolemais or Acco (Acre), a distance of between 20 and 30 miles. About midway lay
PHOENICIA.

Eclippa, now Zeb, the Archib of Scripture (Jos. xix. 29), regarded by the Jews after the captivity as the northern boundary of Judaea. Ptolemais stands on the right bank of the river Belus (Nahrman), but at a little distance from it. To the SE. a fertile plain stretches itself out as far as the hills of Galilee. From Ptolemais the coast forms a deep bay, about 8 miles across, the further extremity of which is formed by the promontory of Carmel. It is now called the bay or gulf of Ktousa. The bold and lofty headland of Carmel is only a continuation or spur of the mountain of the same name, a range of no great height, from 1200 to 1500 feet, which runs for 18 miles in a direction from SE. to NW., gradually sinking as it approaches the coast. A current near the cape or promontory is about 582 feet above the sea. On its NE. side flows the Kishon of Scripture, which, when not swollen by rains, is a small stream finding its way through the sand into the sea. Towards the bay the sides of Carmel are steep and rugged, but on the south they slope gently and are more fertile. Carmel was celebrated in Hebrew song for its beauty and fertility; and though its orchards and vineyards no longer exist, the richness of the soil is still marked by the profusion of its shrubs, and the luxuriance of its wild-flowers. From the promontory of Carmel the coast gradually sinks, and at its lowest point stands Dor, a town celebrated in ancient times for the manufacture of the Phoenician purple. Beyond this point we shall not pursue the description of the coast; for although between Dor and Egypt some towns are found which were inhabited by Phoenicians, yet in their geographical distribution they belong more properly to Palestine.

That part of the Mediterranean which washed the coast of Phoenicia was called by the Greeks τῆς Φω-νικῆς Ἴστρατευ (Agathem. ii. 14), or Συμβ. Ἴστρατευ (Dion. Per. v. 117), and by the Latin Mare Phoenicium. (Plin. v. 13, ix. 12, &c.) Its southern portion, as far as Sidon, is affected by the currents which carry the alluvial soil brought down by the Nile to the eastward; so that towns which were once maritime are now become inland, and the famous harbours of Tyre and Sidon are nearly choked with mud.

The climate of Phoenicia is tempered by the vicinity of Lebanon, which is capped with snow during the greater part of the year, and retains it in its ravines even during the heats of summer. (Tac. Hist. v. 6.) Hence the temperature is much lower than might be expected from the latitude. At Beirut, which lies in the centre of Phoenicia, the usual summer heat is about 90° Fahrenheit, whilst the winter temperature is rarely lower than 50°. In the mountains, however, the winter is severe, and heavy falls of snow take place. The rainy season commences towards the end of October, or beginning of November, from which time till March there are considerable falls of rain or snow. From May till October rain is very unusual.

As Phoenicia, though small in extent, is, from its configuration and natural features, subject to a great variety of climate, so its vegetable productions are necessarily very various. The sides of Lebanon are clothed with pines, firs, and cypresses, besides its famous cedars. The lowlands produce corn of all sorts, peaches, pomegranates, grapes, oranges, citrons, figs, dates, and other fruits. It also yields sugar, cotton, tobacco, and silk. The whole country is subject to earthquakes, the effect of volcanic agency; from which cause, as well as from the action of the currents already mentioned, both Tyre and Sidon have suffered changes which render them no longer to be recognised from ancient descriptions. In some places the coast has been depressed by earthquakes, and at the mouth of the river Lyans are traces of submerged quarries. (Borton, Topogr. de Tyr. p. 54.) In like manner, the lake Cemlevia, at the foot of Carmel, in which Cinus (v. 17) describes the river Belus as rising, has now disappeared; though Shaw (Trav. ii. 33) mentions some pools near its source. The geographical structure of Phoenicia is recent, and consists of chalk and sand-stone, the higher mountains being formed of the Jura limestone. The only metal found is iron, which occurs in considerable quantities in the hills above Beirut. In the sandstone of the same district, bituminous wood and brown coal are found, but in small quantities and impregnated with sulphur.

III. ETHNOLOGICAL RELATIONS OF THE PHOENICIANS.

The Phoenicians were called by the Greeks Φω-νικοί (Hom. Od. iv. 84; Herod. i. 1; Thucyd. i. 8, &c.), and by the Romans Phoeacii (Cic. N. D. ii. 41; Mela, i. 12; Plin. p. 183, &c.). They were a branch of the great Semitic or Aramaean race. The Scriptures give no intimation that they were not indigenous; and when the Hebrews settled in Canaan, Sidon and Tyre were already flourishing cities. (Jos. xix. 28, 29.) By classing, however, the Phoenicians, or Canaanites, among the descendants of Ham (Genesis, x. 13), the Scriptures imply an immigration. The reason of this classification, was probably their colour, the darkness of their complexion indicating a southern origin; yet their language, a safer criterion, marks them, as we have said, for a Semitic race. This, though not strictly identical with the Hebrew, was the nearest allied to it of all the Semitic tongues. St. Jerome (Comm. in Jer. xxv. 1) and St. Augustine (Tract. 15 in Evang. Joam.) testify that the Punic language resembled the Hebrew. The same affinity is observable in Punic words preserved in Greek and Roman writers; as in the Psecata of Plautus, especially since the improvement of the text by the collation of Mai. The similarity is also evinced by bilingual inscriptions discovered at Athens, where many Punicophones were settled, as will be related in the sequel. But perhaps one of the most remarkable proofs is the inscription on the Carthaginian tablet discovered at Marseille in 1845, of which 74 words, out of 94, occur in the Old Testament.

Punic writers describe the Phcenicians as immigrants from the borders of the Persian Gulf. Thus Herodotus (i. 1, vii. 89) asserts that they originally dwelt on the Erythraean sea; an appellation which, in his language, as well as in that of other ancient writers, embraces not only the present Red Sea, but also the Persian Gulf and Indian Ocean. To the same purpose is the testimony of Strabo (xvi. p. 766), who adds that there were in the Persian Gulf two islands, Tyros and Aradus, the inhabitants of which had temples resembling those of the Phoenicians, and who pointed out the supposed islands on the coast of the Mediterranean as their colonies. Heeren (Researches, vol. ii. p. 56, Eng. trans.), who admits that traces of Phoenician workmanship and buildings have lately been discovered in these islands, reverses the parentage, and

Digitized by Microsoft®
makes them to be colonies of their more celebrated namesakes, in opposition to the testimony of Strabo, and without producing any counter authority. The isle of Tylus or Tyrus is likewise mentioned by Pliny (v. 32). The account given by Justin is in harmony with these authorities (xvii. 5). He describes the Tyrians as having been swallowed in their native seats by an earthquake, and as migrating thence, first to what he calls the "Assyrian lake," and subsequently to the shores of the Mediterranean. A recent writer (Kenrick, Phoenicia, p. 47) takes this Assyrian lake to have been Gennesaret or the Dead Sea, as there was no other collection of waters in S. Assyr to which the term could be applied. This would have formed a natural resting-place in the journey of the emigrants. It must not, however, be concealed, that the account of these writers has been rejected by several very eminent authors, as Bochart, Hengstenberg, Heeren, Niebuhr, and others, and more recently by Movers, a writer who has paid great attention to Phoenician history, and who has discussed this question at considerable length. (Die Phoinizier, ii. p. i. pp. 23—62.) His principal arguments are, that the Phoenician traditions, which go back to the primitive chaos, represent even the gods, as well as the invention of all the arts of life, by man; that the Tyrians, whose tradition is preferable, both on account of its antiquity, and because it arose out of the bosom of the people themselves, make no mention of any such immigration, though at that time its memory could not have been obliterated had it really occurred, and though it would have served the purpose of the Jews to represent the Canaanites as intruders; and that the name of the people, being derived from the character of the land, as well as the appellations of different tribes, such as the Giblit at Biblus, the Sidonians at Sidon, &c., mark them as indigenous. But it may be observed, that the Phoenician traditions rest on the equivocal authority of the pretended Sacoconitho, and come to us in so questionable a shape that they may evidently be made to serve any purpose. Thus Movers himself quotes a passage from Sacoconitho (Vol. ii. pt. i. p. 25), to the effect that the Tyrians invented ship-building, because it directly contradicts the statement that they were the descendants of a sea-faring people on the shores of the Persian Gulf; although he had previously cited the same passage (vol. i. p. 143) in proof of the Euhemerism of Philo-Sancoconitho, who, it is there said, attributed the invention of navigation to the Cabiri merely because the Phoenician mariners considered themselves as sailing under the protection of their deities. Can such testimony be compared with that of the "loyal-hearted and truthful Herodotus," as Movers characterizes him (vol. i. pt. ii. p. 134), who, he observed, also found his account on the traditions of the Phoenicians (as avnov aeyrou, vii. 89), and who could have had no possible interest in misrepresenting them? Nor could the natural vanity of the Phoenicians have found any gratification in misleading him on this point, since the tradition lapsed, rather than enhanced, the splendour of their origin. The testimony of the Scriptures on the subject is merely negative; nor, were it otherwise, could they be taken as a certain guide in ethnological inquiries. They were not written with that view, and we have already adverted to a discrepancy in their treatment of this subject. The question, however, is too long to be fully discussed in this place. We have merely

Our knowledge of Phoenician history is only fragmentary. Its native records, both literary and monumental, have almost utterly perished; and we are thus reduced to gather from scattered notices in the Old Testament and in the Greek and Roman authors, and sometimes to supply by inference, the annals of a country which stands the second in point of antiquity, which for some thousands of years played a considerable part in the world, and to which Europe owes the germ of her civilization.

If we accept the authority of Herodotus, the Phoenicians must have appeared upon the coasts of the Mediterranean at least twenty-seven or twenty-eight centuries before the birth of Christ. In order to ascertain the age of Hercules, respecting which the Egyptian chronology differed very widely from the Greek, that conscientious historian resolved to inquire for himself, and accordingly sailed to Tyre, where he had heard that there was a famous temple of Heracles. It was, therefore, expressly for the purpose of settling a chronological point that he was at the trouble of making this voyage, and it is natural to suppose that he did not adopt the information which he received from the priests without some examination. From these he learned that the temple had existed 2500 years, and that it was coeval with the foundation of Tyre (i. 43, 44).

Now, as Herodotus flourished about the middle of the fifth century before our era, it follows that Tyre must have been founded about 2750 years B.C. The high antiquity of this date is undoubtedly startling, and on that account has been rejected by several critics and historians. Yet it does not appear why it should be regarded as altogether improbable. The chronology of the Jews is carried back more than 2000 years B.C.; yet the Jewish Scriptures uniformly intimate the much higher, and indeed immemorable, antiquity of the Canaanites. Again, if we look at Egypt, this era would fall under the 14th dynasty of its kings.* If we had had an historical existence, and to whom many conquests are attributed before this period. This dynasty was followed by that of the Hyksos, who were probably Canaanites, and are described by Manetho as skilled in the art of war, and of fortifying camps and cities. (Sync. pp. 113, 114; Schol. in Platon. Tim. vol. vii. p. 285, ed. Tassch.)

* This is the date assigned by Movers; but by some authorities it is placed later.
one side it is alleged that Sidon is styled in Scripture the eldest born of Canaan (Gen. xi. 13), whilst Tyre is not mentioned till the invasion of Palestine by the Israelites. (Josh. xix. 29.) But in the former passage there is nothing to connect the person with the city; and the second argument is at best only negative. It is further urged that the name of Tyre does not once occur in Homer, though the Sidonians are frequently mentioned; and in one passage (Od. xiii. 265) Sidon is used as the general name of Phoenicia. This, however, only shows that, in the time of Homer, Sidonia was the leading city, and does not prove that it was founded before Tyre. The same remark may be applied to the silence of Scripture. That Tyre was in existence, and must have been a flourishing city in the time of Homer, is unquestionable; since, as will be seen further on, she founded the colony of Gadeira, or Codis, not long after the Trojan War; and many years of commercial prosperity must have elapsed before she could have planted so distant a possession. Poets, who are not bound to historical accuracy, will often use one name in preference to another merely because it is more sonorous, or for some similar reason; and Strabo (xvi. p. 756), in commenting upon this very circumstance of Homer's silence, observes that it was only the poets who glorified Sidon, whilst the Phoenician colonists, both in Africa and Spain, gave the preference to Tyre. This passage has been cited in proof of Strabo's own decision in favour of Sidon; and though the ambiguous wording of it, nothing certain can be concluded. Movers (ii. pt. i. p. 118) even construes it in favour of Tyre; but it must be confessed that the opposite view is rather strengthened by another passage (i. p. 40) in which Strabo calls Sidon the metropolis of the Phoenicians (την μητροπολιν αυτων). On the other hand, it may be remarked, that all the most ancient Phoenician traditions relate to Tyre, and not to Sidon; that Tyre is called μεταφημισθας by Melanion the epigrammatist (Anth. Graec. vii. 428. 13), who lived before the time of Strabo; that an inscription to the same effect is found on a coin of Antiochus IV., B. C. 175-164 (Gesen. Mon. Phoen. i. 262); and that the later Roman and Greek writers seem unanimously to have regarded the claim of Tyre to superior antiquity as preferable. Thus the emperor Hadrian settled the ancient dispute in favour of that city (Suidas, s. v. Παλαιος Τυρος), and other testimonies will be found in Orosius (iii. 16), Ulpian (Dig. tit. xxxv.), and Emepius (c. Peperg. p. 7 ed. Wynt.). It may also be remarked that if the Phoenicians came from the Persian Gulf, the name of Tyre shows that it must have been one of their earliest settlements on the Mediterranean. This dispute, however, was not confined to Tyre and Sidon, and Byblus and Berytus also claimed to be regarded as the oldest of the Phoenician cities.

But however this may be, it seems certain that the latest of the Phoenician settlements in Syria, which was, perhaps, Hamath or Epiphania on the Orontes, preceded the conquest of Canaan by the Jews, which event is usually placed in the year 1450 B.C. The expedition of Joshua into Canaan is one of the earliest events known in the history of the Phoenicians. In order to oppose his progress, the king of Hazor organised a confederacy of the Canaanite states. (Josh. ii. 10.) But the allies were overthrown with great slaughter. Hazor was taken and destroyed, and the territory of the con-federate kings, with the exception of a few fortresses, fell into the power of the Israelites. The defeated host was pursued as far as Sidon; but neither that nor any other town of Phoenicia, properly so called, fell into the hands of the Jews, nor on the whole does the expedition of Joshua seem to have had much effect on its political condition. Yet there was a constant succession of hostilities between the Phoenicians and some of the Jewish tribes; and in the book of Judges (x. 12) we find the Sidonians mentioned among the opponents of Israel.

Sidon, then, must have early risen to be a powerful kingdom, as may indeed be inferred from the Homeric poems, in which its trade and manufactures are frequently alluded to. Yet a year before the capture of Troy, the Sidonians were defeated by the king of Assaloon, and they were obliged to take refuge—or at all events a great proportion of them—at Tyre. (Justin, xviii. 3.) We are ignorant how this conquest was effected. The name of Assalone probably represents the Tyrian seat of Palae-Tyrus; and we know that shortly after this event the Philistines were powerful enough to reduce the kingdom of Israel to the condition of a tributary, and to retain it as such till the time of David. Justin, in the passage just cited, speaks of Tyre as founded by the Sidonians (conditionem) on this occasion. This expression, however, by no means implies a first foundation, since in the next chapter he again uses the same word to denote the restoration of Tyre by Alexander the Great. It has been already said, as will appear at greater length in the account of the Phoenician colonies, that Tyre must have been a city of considerable importance before this period. The account of Justin is corroborated by Josephus, who, in allusion no doubt to the same event, places the foundation of Tyre 240 years before that of Solomon's temple. (Ant. viii. 3.) If Justin followed the computation of the Parian marble, the fall of Troy took place in the year 1209 b. c.; and if the disputed date of Solomon's temple be fixed at 969 B. C., the aera adopted by Movers (Phoen. ii. pt. i. p. 149), then 969 + 240 = 1209. Josephus, in the passage cited, uses the word οικος, "a dwelling in," and could no more have meant the original foundation of Tyre than Justin, since that city is mentioned in the Old Testament as in existence two centuries and a half before the building of the temple.

From the period of the Sidonian migration, Tyre must be regarded as the head of the Phoenician nation. During the headship of Sidon, the history of Phoenicia is mythical. Phoenix, who is represented as the father of Cadmus and Europa, is a mere personification of the country; Belus, the first king, is the god Baal; and Agenor, the reputed founder both of Tyre and Sidon, is nothing but a Greek epithet, perhaps of Hercules. The history of Tyre also, before the age of Solomon, is unconnected. Solomon's relations with Hiram, king of Tyre, led Josephus to search the Tyrian histories of Dnn and Menander. Hiram succeeded Abibai; and from this time to the foundation of Carthage there is a regular succession of dates and reigns.

Tyre was in fact a double city, the original town being on the continent, and the new one on an island about half a mile from the shore. When the latter was founded, the original city obtained the name of Palse-Tyrus, or Old Tyre. The island, however, was probably used as a naval station from the very earliest times, and as a place consecrated to the...
woriip of the national deities Astarte, Baal, and particularly Melcarth, or the Tyrian Hercules. According to Justin, indeed, the oldest temple of Hercules was in Pala-Tyrsus (xi. 10, comp. Curt. iv. 2); but this assertion may have been made by the Tyrians in order to evade the request of Alexander, who wished to gain an entrance into their island city under pretence of sacrificing to that deity. Hiram succeeded to the crown of Tyre a little before the building of Solomon's temple (xiv. 969). He added to and improved the walls of the city, and by means of substructions even gained space enough to build a large square or place, the curychorus. He maintained friendly relations with King David, which were confirmed by commerce and by intermarriages. Hiram furnished the Jewish monarch with cedar-wood and workmen to construct his palace, as well as materials for his proposed temple, the building of which, however, was reserved for his son. The Phoenicians, on the other hand, obtained the corn and oil of Judah. Under the reign of Solomon this intercourse was cemented by a formal treaty of commerce, by which that monarch engaged to furnish yearly 20,000 corse of wheat, and the like quantity of oil, for the use of Hiram's household, while Hiram, in return, supplied Solomon with workmen to cut and prepare the wood for his temple, and others skilful in working metal and stone, in engraving, dyeing, and manufacturing fine linen. Solomon also ceased to be a district in Phoenicia, but an independent kingdom. (1 Kings, ix. 13; Joseph. Ant. viii. 5.) In these transactions we perceive the relations of a commercial and an agricultural people; but Hiram was also of great assistance to Solomon in his maritime and commercial enterprises, and his searches after the gold of Ophir, when his victories over the Edomites had given him the command of the Aicanitic, or eastern, gulf of the Red Sea. The pilots and mariners for these voyages were furnished by Hiram. Except, however, in connection with the Israelites, we know little concerning the reign of this monarch. He appears to have undertaken an expedition against Citium in Cyprus, probably a revolted colony of the Phoenicians, and to have established a festival in honour of Melcarth, or Hercules. (Joseph. l. c.) By his great works at Tyre he entailed an enormous expense upon the people; and his splendid reign, which lasted thirty-four years, was followed at no great interval by political troubles. His dynasty was continued for seven years in the person of his son Halezor, or Balbeastus, and nine years in that of his grandson Abulastas. The latter was put to death by the four sons of his nurse, the eldest of whom usurped the supreme power for a space of twelve years. This revolution is connected by Movers (ii. pt. i. p. 342) with the account of the servile insurrection at Tyre given by Justin (xviii. 3), who, however, with his usual neglect of chronology, has placed it a great deal too late. This interregnum, which, according to the account adopted, was a complete reign of terror, was terminated by a counter-revolution. The usurper, whose name is not mentioned, either died or was deposed, and the line of Hiram was restored in the person of Astartus,—the Strato of Justin,—a son of Balbeastas. This prince reigned twelve years, and was succeeded by his brother Astaryns, or Aserusyn, who ruled nine years. The latter was murdered by another brother, Phules, who after reigning a few months was in turn assassinated by Ithobaal, a priest of Astarte. Ithobaal is the Ethbaal of Scripture, father of Jezebel, the wife of Ahab, who endeavoured to restore the worship of Baal and Ashethore in the kingdom of her husband. (1 Kings, xvi. 31.) In the reign of Ithobaal Phoenicia was visited with a remarkable drought, which also prevailed in Judaea in the time of Ahab. (Joseph. Ant. viii. 13. § 2; 1 Kings, c. xvii. 7.) We know nothing further of Ithobaal's reign, except that he founded Betys, on the coast of Sidon, and Anza in Numidia. (Joseph. viii. 7. 13. § 2.) He reigned thirty-two years, and was the founder of a new dynasty. Bdcxor, his son, succeeded to the throne, and after a reign of six years was followed by Matten, or Mutte, who ruled for thirty-two years. The reign of his successor, Pygmalion, brings us into contact with classical history and tradition, through the foundation of Carthage by his sister Elisa, or Dobo, which took place not long after his accession. Probably, however, this was only a second foundation, as in the case of Tyre itself. The whole story, which indicates a struggle between an aristocratical and sacerdotal party and the monarchical power, has been obscured by mythical traditions and the embellishments of poets; but it need not be repeated here, as it will be found in the Dictionary of Biography and Mythology, s. v. Dido.

Pygmalion occupied the throne forty-seven years, and after his reign there is a gap in the history of Tyre. Some traditions among the Jews and Gentiles in the Scriptures, we find them at war with Israel. The prophet Joel, who flourished about the beginning of the eighth century B. c., bitterly complains of the outrages committed by Tyre and Sidon on the coasts of Judaea, and his complaints are repeated by Amos, a contemporary prophet. This was the chief period of the maritime ascendancy of the Phoenicians, and their main offence seems to have been the carrying off of youths and maidens and selling them into slavery. Towards the end of the same century we find Isaiah prophesying the destruction of Tyre. It was about this period that the Assyrians began to grasp at the countries towards the west, and to seek an establishment on the sea-board of the Mediterranean; a policy which was continued by the succeeding empires of the Babylonians, Medes, and Persians. The expedition of Shalmaneser, who, after reducing the kingdom of Israel, turned his arms against Phoenicia, is recorded by Josephus from the history of Menander. (Ant. ix. 14.) After overrunning the whole of Phoenicia, he retired without attempting any permanent conquest. He seems to have been assisted by several Phoenician cities, as Sidon, Ace, and even Pala-Tyrsus, which were oppressed by the domination of Eulcaes, king of Tyre. These cities furnished him with sixty ships for a second attempt upon Tyre; but this fleet was defeated by the Tyrians with only twenty vessels. Shalmaneser blockaded them on the land side for a space of five years, and prevented them from receiving any fresh water except what they could preserve in tanks. How this blockade ended we are not informed, but it was probably fruitless. We have no further accounts of Eulcaes, except that he had reduced to obedience the revolted town of Citium in Cyprus previously to this invasion. After his reign another long gap occurs in the history of Phoenicia, or rather of Tyre, its head. This silence would seem to indicate that it was enjoying the blessings of peace, and consequently increasing in prosperity. The Phoenician alliance was caused...
PHOENICIA.

by the Egyptian monarch, and an extensive commerce appears to have been carried on with the coast of Naxartis. The next wars in which we find the Phoenicians engaged were with the Babylonians; though the account of Berosus, that Nabopolassar, who reigned towards the end of the seventh century B.C., held Phoenicia in subjection, and that his son Nebuchadnezzar reduced it when in a state of revolt, must be regarded as doubtful. At all events, however, it appears to have been in alliance with the Chaldeans at this period; since we find it related that Apries, king of Egypt, was at war with that nation, conquered Cyprus and Phoenicia. (Herod. ii. 161; Diod. i. 68.) When Nebuchadnezzar ascended the throne, we find that, after quelling a revolt of the Jews and reducing Jerusalem (c. c. 587), he marched into Phoenicia, took Sidon apparently by assault, with dreadful carnage, and proceeded to invest Tyre. (Ezekiel, xxvi.) For an account of this siege, one of the most memorable in ancient history, we are again indebted to Josephus (x. 11), who extracted it from Tyrian annals. It is said to have lasted thirteen years. Another Ithobal was at this time king of Tyre. The description of the siege by Ezekiel would seem to apply to False-Tyre, though it is probable that insular Tyre was also attempted. (Grote, Hist. of Greece, iii. p. 355, note.) The result of the siege is by no means clear. Berosus, indeed, affirms (op. Joseph. c. Apion. i. 20) that Nebuchadnezzar subdued all Syria and Phcenicia; but there is no evidence of an assault upon Tyre, and the words of Ezekiel (xxix. 17) seem to imply that the siege was unsuccessful. The same dynasty continued to reign. Ithobal was succeeded by Baul; and the subsequent changes in the government indicate internal revolution, but not subjection to a foreign power. The kings were succeeded by judges or suffetes, and after a few years the royal line appears to have been restored; but whether by the spontaneous act of the Tyrians, or by compulsion of the Babylonians, is a disputed point.

Ezekiel's description of Tyre at the breaking out of the Babylonian war exhibits it as the head of the Phoenician states. Sidon and Aradus are represented as furnishing soldiers and mariners, and the artificers of Byblus as working in its docksyard. (Ezek. xxviii. 8, 9, 11.) But that war was a severe blow to the power of the Tyrians, which never began to decline. Cyprus was wrested from them by Amasis, king of Egypt, though a branch of the royal family of Tyre appears to have retained the sovereignty of Salamis for some generations. (Herod. v. 104; Jusser. Evag. p. 73. 1, 2, 28.) Meribalus was succeeded by his brother Eliram, or Hiram, during whose reign Cyprus conquered Babylon (358 B.C.). When the latter monarch permitted the Jews to rebuild Jerusalem, we find Tyre and Sidon again assisting in the work (Ezra, iii. 7), a proof that their commerce was still in a flourishing state. Xenophon (Cyropaedia, vi. 1. § 24) presents Cyrus as ruling over Phoenicia as well as Cyprus and Egypt; and though this is not confirmed by any collateral proof, they must at all events have very soon submitted to his son Cambyses. (Herod. iii. 19.) The relations with Persia seem, however, to have been those of a voluntary alliance rather than of a forced subjection; since, though the Phoenicians assisted Cambyses against the Egyptians, they refused to serve against their colonists the Carthaginians. Their fleet was of great assistance to the Persians, and enabled Darius to make himself master of the island of the coast of Asia Minor. (Thucyd. i. 16; Plut. Miltiades c. 9.) Phoenicia with Palestine and Cyprus, formed the fifth of the twenty nations into which the empire of Darius was divided. (Herod. iii. 91.) These names were, in fact, satrapies; but it does not appear that they interfered with the constitutions of the several countries in which they were established; at all events native princes continued to reign in Phoenicia. Although Sidon became a royal Persian residence, it still had its native king, and was reduced to subjection by Cyrus. (Herod. vii. 67.) When Darius was meditating his expedition against Greece, Sidon supplied two triremes and a storeship to enable Democles to explore the coasts. (Herod. iii. 136.) Subsequently the Phoenicians provided the Persians with a fleet wherewith to reduce not only the revolted Ionian cities, but even their own former colony of Cyprus. In the last of these enterprises they were defeated by the Ionian fleet (Ib. v. 108, 112); but they were the chief means of reducing the island of Miletus (Ib. vi. 6), by the defeat which they inflicted on the Ionians off Lade. (Ib. c. 14.) After the subjugation of the Asiatic islands, the Phoenician fleet proceeded to the Thracian Chersonese, where they captured Methocoetus, the son of Miltiades (Ib. c. 41), and subsequently appear to have scourged the Aegean and to have ravaged the coasts of Boetia. (Ib. c. 118.) They assisted Xerxes in his expedition against Greece, and along with the Egyptians constructed the bridge of boats across the Hellespont. (Ib. viii. 34.) They helped to make the canal over the isle of Mount Athos, in which, as well as in other engineering works, they displayed a skill much superior to that of the other nations employed. (Ib. c. 25.) In the naval review of Xerxes in the Hellespont they carried off the prize from all competitors by the excellence of their ships and the skill of their mariners; whilst among the Phoenicians themselves the Sidonians were far the most distinguished (Ib. cc. 44, 96), and it was in a vessel belonging to the latter people that Xerxes embarked to conduct the review. (Ib. c. 100.) The Phoenician ships composed nearly half of the fleet which Xerxes had collected; yet at the battle of Artemision they do not appear to have played so distinguished a part as the Egyptians. (Ib. viii. 17.) When routed by the Athenians at Salamis they compelled Xerxes, who sat overlooking the battle on his silver-footed throne, that their ships had been treacherously sunk by the Ionians. Just at this instant, however, extraordinary skill and valour were displayed by a Samothracian vessel, and the Great King, charging the Phoenicians with having falsely accused the Ionians in order to screen their own cowardice and ill-courage, caused many of them to be beheaded. (Ib. c. 90.) At the battle of the Eurymedon (n. c. 466), the Phoenician fleet was totally defeated by the Athenians under Cimon, on which occasion 100 of their vessels were captured (Diod. xii. 62), or according to Thucydides (i. 100) 200, who, however, is probably alluding to the whole number of their fleet. Subsequently the Athenians obtained such naval superiority that we find them carrying on maritime operations on the coast of Phoenicia itself; though in their unfortunate expedition to Egypt fifty of their triremes were almost entirely destroyed by the Phoenicians. (Thucyd. i. 109.) This disgrace was wiped out by the Athenians under Androticos in a great victory gained over...
the Phoenicians off Salamis in Cyprus, B.C. 449, when 100 of their ships were taken, many sunk, and the remnant pursued to their own harbours. (Ib. c. 112.) A cessation of hostilities now ensued between the Greeks and Persians. The Phoenician navy continued to be employed by the latter, but was no longer exposed to the attacks of the Athenians. In B.C. 411 the Phoenicians prepared a fleet of 147 vessels, to assist the Spartans against Athens; but after advancing as far as Asopus in Phocis it was suddenly recalled, either because the demonstration was a mere ruse on the part of Tissaphernes, or that the Phoenicians were obliged to defend their own coast, now threatened by the Egyptians. (Thucyd. v. vii. 87, 108; Diod. xiii. 38, 46.) They next appear as the auxiliaries of the Athenians against the Spartans, who had gained the naval supremacy by the battle of Argostomus, a preponderance which had changed the former policy of Persia. The allied fleet was led by Conon and Phrynichus. After the defeat of the Spartans the Phoenician seamen were employed in rebuilding the walls of Athens. (Diod. xiv. 81; Nep. Con. c. 4.) These events led to a more intimate connection between Phoenicia and Athens; Phoenician traders appear to have settled in that city, where three Phoenician inscriptions have been discovered of the date apparently of about 380 B.C. (Gesell. Mon. Pana. i. 111.) A few years later, a decree was passed by the Athenian senate, establishing a peace between Strato, king of Saloii, and the Athenians; whilst an immunity from the usual burthens imposed on aliens was granted to Sidonians settling at Athens. (Birkh. Corp. Incr. i. 126.) About the same time we find the Phoenicians, as the subjects of Persia, engaged in a disastrous war with Evagoras, prince of Salamis in Cyprus, who ravaged their coasts, and, according to Isocrates (Ereg. p. 201) and Diodorus (xiv. 98, 110, xii. 2), captured even Tyre itself. But in 386 B.C. Evagoras was defeated in a great naval engagement, and subsequently became a tributary of Persia. (Ib. xii. 9.) During all this period Saloii appears to have been the most wealthy and prosperous of the Phoenician cities. (Ib. xiv. 41.) The next important event in the history of the Phoenicians is their revolt from Persia, which ended in a disastrous manner. Sidon had been oppressed by the satraps and generals of Artaxerxes Ochus; and in a general assembly of the Phoenicians at Tripolis, in B.C. 332, it was resolved to throw off the Persian yoke. The royal residence at Saloii was destroyed and the Persians massacred. The Phoenicians then fortified Sidon, and invited Nectanebos, king of Egypt, to assist them. In the following year Ochus made great preparations to quell this revolt, and particularly to punish Sidon; when Teues, king of that city, alarmed at the fate which menaced him, treacherously conveyed to betray it to the Persians. He inveigled 100 of the leading citizens into the enemy's camp, where they were put to death, and then persuaded the Egyptian mercenaries to admit the Persians into the city. The Sidonians, who had burnt their fleet in order to prevent any escape from the common danger, being thus reduced to despair, shut themselves up with their wives and children, and set fire to their houses. Including slain, 40,000 persons are said to have perished on this occasion. Teues, however, suffered the merited reward of his treason, and was either put to death by Ochus or committed suicide. This calamity was a great, but not a fatal, blow to the prosperity of Sidon, which even to a much later period retained a considerable portion of her opulence. (Diod. xvi. 41, sqq.; Mela. i. 12.) The cruelty of the Persians left a lasting remembrance, and was not wholly unrequited. When about twenty years afterwards Alexander entered Phoenicia, Sidon hastened to open her gates to him. The defeat of Darius at Issus, B.C. 333, opened the whole coast of Phoenicia to the Greeks. On his march Alexander was met by Strato, son of Gerostratus, king of Aratus, who surrendered that island to him, as well as some towns on the mainland. As he proceeded southwards he received the submission of Byblus, and entered Sidon at the invitation of the inhabitants. He deposed Strato, their king, a vassal of the Persians; and Abdolaimus, who was related to Strato, but who at that time followed the humble occupation of a gardener in the suburbs of the city, was nominated to the vacant throne by Alexander's general Hephaestion. The reason, by which, by The Tyrants in now serving an embassy, professing submission to the Macedonians, but without any real design of giving up their city. (Arr. ii. 15.) It was impossible, however, for Alexander to proceed on his intended expedition, whilst so important a place lay in his rear, at best a doubtful friend, and, in case of reverses, soon, perhaps, to become a declared enemy. With a dissimilation equal to that of the Tyrians, he sought to gain possession of their town by representing that, whilst their situation was safer in their own city, the Tyrians, the progeny of the royal race of Macedon, as well as the tutelary god of Tyre. But the Tyrians perceiving his design, directed him to another temple of Hercules at Palae-Tyrus, where he might sacrifice in all liberty and with still greater effect, as the fame, they asserted, was more ancient and venerable than that of the new city in the island. Alexander, however, still hankered after the latter, and made preparations for besieging the new town. (Arr. ii. 15, 16; Curt. iv. 7, sqq.) The place, by which he recovered Tyre, will be found described in another place. (Tyrr.) It will suffice here to say, that by means of a caueway, and after a seven months' siege, the city of merchant princes yielded to the arms of Alexander, who was assisted in the enterprise by the ships of Sidon, Byblus, and Aratus. The city was burnt, and most of the inhabitants either killed or sold into slavery. Alexander repeopled it, principally, perhaps, with Carions, who seem to have been intimately connected with the Phoenicians, since we find Caria called Phoenice by Corinna and Isaeysides. (Atenn. iv. p. 174.) After the battle of Arbela, Alexander incorporated Phoenicia, Syria and Cilicia into one province. With the true commercial spirit the Phoenicians availed themselves of his conquests to extend their trade, and their merchants, following the track of the Macedonian army, carried home myrrh and myrtle from the deserts of Gedrosia. (Arr. vi. 22, Indic. 18.) Alexander employed them to man the ships which were to sail down the Hypanis to the Indian Ocean, as well as to build the vessels which were conveyed overland to Thapsacus on the Euphrates, with the view of descending to Babylon. (Ib.) By these means he intended to colonise the islands and coasts of the Persian Gulf; but his schemes were frustrated by his death, B.C. 323. After that event Ptolemy, to whom Egypt had fallen, annexed Phoenicia, together with Syria and Palestine, to his kingdom.
PHOENICIA.

(Diod. xvi. 43.) But in the year 315 n. c. Antigonus, returning victorious from Babylon, easily expelled the garrisons of Ptolemy from all the Phoenician towns except Tyre, where he experienced an obstinate resistance. Eighteen years had sufficed to restore it in a considerable degree to its ancient wealth and power; and although the mole still remained, as an instance of the smallness of the Tyrians, it was not reduced till after a siege of fifteen months. From this period down to near the end of the third century n. c. there was an almost constant succession of struggles for the possession of Phoenicia between the Ptolemaeans on one side and the Seleucidae on the other. Ptolemy Euergetes succeeded in reducing it, and it was held by him and his son Philopator down to the year 215 n. c.; when Antiochus the Great, taking advantage of the indolent and sensual character of the latter, and the consequent disorders of his administration, undertook its recovery. Tyre and Acco were surrendered to him by the treachery of Theodotus, the lieutenant of Philopator, and the Egyptian army and fleet were defeated and driven to take refuge at Sidon. In the following year, however, Philopator defeated Antiochus at Raphia near the frontiers of Egypt, and regained possession of Phoenicia and Syria, which he retained till his death, n. c. 205. The reign of Antiochus, however, was again interrupted by the occupation of Antiochus. He succeeded in reducing Phoenicia, and after repulsing an attempt of the Egyptians to regain it in n. c. 198, firmly established his dominion, and bequeathed it to his sons.

Notwithstanding these struggles, Tyre appears to have still enjoyed a considerable share of commercial prosperity, in which, however, she had now to encounter a formidable rival in Alexandria. At first, indeed, that city did not much interfere with her prosperity, but the foundation of Berenice on the Red Sea by Ptolemy Philadelphus, the making of a road between that place and Coptos, and the reopening of the canal which connected the gulf of Suez with the Pelsifian branch of the Nile (Strab. p. 781) inflicted a severe blow upon her commerce, and converted Alexandria into the chief emporium for the products of the East.

The civil wars of the Seleucidae, and the sufferings which they entailed, induced the Syrarians and Phoenicians to place themselves under the protection of Tigranes, king of Armenia, in the year 83 n. c. (Justin, xi. 1; Appian, Syr. 48.) Ace, or Ptolomeis, was the only city which, at the instigation of Selene, queen of Antigonus, refused to open its gates to Tigranes. That monarch held Phoenicia during fourteen years, when the Seleucidae regained it for a short time in consequence of the victories of Lucullus. Four years later Pompey reduced all Syria to the condition of a Roman province. During the civil wars of Rome, Phoenicia was the scene of many struggles between the Roman generals. Just prior to the battle of Philippi, Cassius divided Syria into several small principalities, which he sold to the highest bidders; and in this way Tyre had again a king called Marion. Antony presented the whole country between Egypt and the river Eleutherus to Cleopatra, but, in spite of her intrigues to the contrary, secured Tyre and Sidon in their ancient freedom. (Joseph. Ant. xxv. 13.) But when Augustus visited the East, n. c. 20, he deprived them of their liberties. (Dion Cass. liv. 7.)

Although the Roman dominion put an end to the political existence of Tyre and Sidon, they retained their manufactures and commerce for a considerable period. Mela, who probably wrote during the reign of Claudius, characterises Sidon as "adhibit opulentia" (i. 12); and Pliny, at about the same period, adverted to the staple trade of Tyre as being still in a flourishing condition ("manc omnis ejus nobilitatis conchylii atque purpuræ constat," v. 17). At the death of the Christian Panormus (Tyre), we have already mentioned, granted to Tyre the title of metropolis. It was the residence of a preconsul, and the chief naval station on the coast of Syria. During the contest of Septimius Severus and Pescennius Niger for imperial power, A. D. 193, Berytus favoured the cause of Niger, Tyre that of Septimius; in consequence of which, it was taken and burnt by the light Mauritanian troops of Niger, who committed great slaughter. (Herodian, iii. 9. § 10.) Severus, after his success, recruited the population of Tyre from the third legion, and, as a reward for its attachment, bestowed on it the Jus Italicum and the title of colony. (Ulpian, Dig. Leg. de Cons. tit. 15; Eckhel, vol. iii. p. 387.) In the time of St. Jerome, towards the end of the fourth century, it was still the first commercial city of the East (Comm. ad Esek. xxvi. 7, xxvii. 3); and after the destruction of Berytus by an earthquake in the reign of Justinian, it monopolised the manufacture of imperial purple, which it had previously shared with that city. Beyond this period it is not necessary to pursue the history of Phoenicia. We shall only add that Tyre continued to flourish under the mild dominion of the caliphs, and that, in spite of all the violence which it suffered from the crusaders, its prosperity was not utterly annihilated till the conquest of Syria by the Ottoman Turks, A. D. 1516; a result, however, to which the discovery of the New World, and of a route to Asia by the Cape of Good Hope, likewise contributed.

V. Political Constitution.

Phoenicia consisted of several small independent kingdoms, or rather cities, which were sometimes united with and sometimes opposed to one another, just as we find Cannan described at the time when it was invaded by the Israelites. (Strab. xvi. p. 754; Josiah, x.) We have but little information respecting the constitution of these kingdoms. The throne was commonly hereditary, but the people seem to have possessed a right of election. (Justin, xviii. 4.) The chief priests exercised great power, and were next in rank to the king. Thus Sicharbas, or Sichanes, chief priest of the temple of Hercules, was the husband of Dido, and consequently the brother-in-law of king Pygmalion. There seems also to have been a powerful aristocracy, but on what it was founded is unknown. Thus a body of nobles, who are called senators, accompanied the emigration of Dido. (Justin, l. c.) During the interregnum at Tyre after the servile insurrection, the government was carried on by elective magistrates, called judges or suffetes. (Joseph. c. Ap. i. 21.) This institution also extended over Idae and Cartage, and probably in all the western colonies of Tyre. (Liv. xxxvii. 37; comp. Movers, ii. pt. i. p. 534.) Kings existed in Phoenicia down to the time of Alexander the Great. (Arrian, i. 24.) The federal constitution of Phoe- nicia resembled a Greek hegemony; either Tyre or Sidon was always at the head, though Aradus and Byblius likewise had kings. During the earliest period of its history, Sidon appears to have been the leading city; but after its capture by the king

Digitized by Microsoft®
PHOENICIA.

of Ascalon, and the emigration of its inhabitants, as already related, Tyre became dominant, and retained the supremacy till the Persian conquest. Confederations among the Phoenician cities for some common object were frequent, and are mentioned by Joshua as early as the time of Moses (xii.). Subsequently the kingdom of the Phoenicians assembled on these occasions at Tripoli (Diod. xvi. 41), where, as we have already said, the three leading towns, Sidon, Tyre, and Aradus, had each its separate quarter, from which circumstance, the town derived its name. Aradus, however, does not appear to have obtained this privilege till a late period of Phoenician history, as in the time of Ezekiel it was subordinate to Tyre (xxvii. 8, seq.); and Byblos, though it had its own king, and is sometimes mentioned as furnishing mariners, seems never to have had a voice in the confederate councils. The population of Phoenicia consisted in great part of slaves. Its military force, as might be supposed from the nature of the country, was chiefly naval; and in order to defend themselves from the attacks of the Assyrians and Persians, the Phoenicians were compelled to employ mercenary troopers, who were perhaps mostly Africans. (Diod. L. c.; Ezekiel, xxvii.)

VI. RELIGION.

The nature of the Phoenician religion can only be gathered from incidental allusions in the Greek and Roman writers, and in the Scriptures. A few coins and idols have been found in Cyprus, but connected only with the local Phoenician religion in that island. The most systematic account will be found in the Prosoparchia Evangelica of Eusebius, where there are extracts from Saneoathus, professed to have been translated into Greek by the sons of Byblos. It would be too long to enter here into his fanciful cosmogony, which was of an atheistic nature, and was characterised chiefly by a personification of the elements. From the wind Kol-pia, and Baan, his wife, were produced Aecon and Protogonus, the first metals. These had three sons, Light, Fire, and Flame, who produced a race of giants from whom the mountains were named, — as Castus, Libanus, Anti-libanus and Breastly, — and who with their descendants disinterred the various arts of life. In later times a human origin was assigned to the gods, that is, they were regarded as deified men; and this new theology was absurdly grafted on the old cosmogony. Elium and his wife Bereth are their progenitors, who dwelt near Byblos. From Elium descends Uranos (Heaven), who weds his sister Ge (Earth), and has by her four sons, Hes (or Cronos), Bateus, Dagon, and Atlas; and three daughters, Astarte, Rhea, and Dione. Cronos, grown to man's estate, devoured his father and puts to death his own son, Solis, and one of his daughters. Uranos, returning from banishment, is treacherously put to death by Cronos, who afterwards travels about the world, establishing Athens in Attica and making Tant king of Egypt. (Keenick, Phoen. p. 295.)

Baal and Ashurban, the two chief divinities of Phoenicia, were the sun and moon. The name of Baal was applied to Phoenician kings, and Belus is the first king of Assyria and Phoenicia. At a later period Baal became a distinct supreme god, and the sun obtained a separate worship (2 Kings, xxviii. 5). As the supreme god, the Greeks and Romans identified him with their Zeus, or Jupiter, and not with Apollo. Bel or Baal was also identified with the planet Saturn. We find his name prefixed to that of other deities, as Baal-Phugor, the god of lightningness, Baal-Zebub, the god of flies, &c.; as well as to that of many places in which he had temples, as Baal-Gad, Baal-Haman, &c. Groves on elevated places were dedicated to his worship, and human victims were sometimes offered to him as well as to Meloch, (Jereous, xix. 4, 5.) He was worshipped with fantastic rites, his votaries crying aloud, and cutting themselves with knives and lances. Asharoth or Astarte, the principal female divinity, was identified by the Greeks and Romans sometimes with Juno, sometimes with Venus, though properly and originally she represented the moon. The principal seat of her worship was Sidon. She was symbolised by a slayer, or a figure with a slayer's head, and horns resembling the crescent moon. The name of Astarte was Phoenician (Ps. Lucian, de Dea Syr. c. 4); but she does not appear with that appellation in the early Greek writers, who regarded Aphrodite, or Venus Urania, as the principal Phoenician goddess. Herodotus (i. 105, 131, iii. 8) says that her worship was transferred from Ascalon, its oldest seat, to Cyprus and Cythera, and identifies her with the Babylonian Myllitha, the character of whose worship was unequivocal. Her original image or symbol, like that of many of the oldest deities, was a conical stone, as in the case of the Paphian Venus (Tac. H. ii. 3; Max. Tyr. Diss. 35), of the Cybele of Pessinus (Liv. xxxix. 11), and others. In Cyprus her worship degenerated into licentiousness, but the Cyprian coins bear the primitive image of the conical stone. In Carthage, on the contrary, she appeared as a virgin, with martial attributes, and was worshipped with severe rites. She must be distinguished from Atargatis, or Derceto, who had also a temple at Byblos, and was identified with Melaco, and half woman, half fish. It is characteristic of the religion of the Phoenicians, that though they adored false gods, they were not so much idolaters as the Egyptians, Greeks, and Romans, since their temples had either no representation of the deity, or only a rude symbol. The worship of Astarte seems to have been first corrupted at Babylon. Adonis, who had been wounded by the bear in Lebanon, was worshipped at Apulca, about 7 miles E. of Byblos, near the source of the stream which bears his name, and which was said to be annually reddened with his blood. (Zosim. i. 58; Ps. Lucian, de Dea Syr. c. 9.) By the Phoenicians Adonis was also regarded as the sun, and his death typified the winter. His rites at Apulca, when abolished by Constantine, were polluted with every species of abomination. (Euseb. V. Const. iii. 55.)

Cronos, or Saturn, is said by the Greek and Latin writers to have been one of the principal Phoenician deities, but it is not easy to identify him. Human victims formed the most striking feature of his worship; but he was an epicure difficult to please, and the most acceptable offering was an only child. (Porphyry de Abst. ii. 56; Euseb. Laud. Const. i. 4.) His image was of bronze (Diod. xx. 14), and, according to the description of Diodorus, resembled that of Meloch or Melcon, the god of the Ammonites; but human sacrifices were offered to several Phoenician deities.

The gods hitherto described were common to all the Phoenicians; Melkarth*, whose name literally

* It is singular that the name of Melcarth read backwards is, with the exception of the second and last letters, identical with Hercules.
PHOENICIA.

denotes "king of the city," was peculiar to the Tyrians. He appears in Greek mythology under the slightly altered appellation of Melicertes. Cicero (N. D. iii. 16) calls the Tyrian Hercules the son of Jupiter and Asteria, that is of Baal and Ashtaroth. There was a festival at Tyre called "The Awakening of Hercules," which seems connected with his character as a sun-god. (Joseph. Ant. viii. 5.) In his temple at Gades there was no image, and his symbol was an ever-burning fire.

Another Phoenician deity was Dagon, who had a fish's tail, and seems to have been identical with the Gannes of Babylonia.

The Phoenician goddess Onca was identified by the Greeks with Athena. One of the gates of Tyre was named after her, and she was also worshipped in Corinth. (Euseb. ap. Steph. Ero. s. v.; Hesych. s. v.; Tacit. ad Lyoph. Cass. 658.) It is even probable that the Athena Polias of Athens was derived from Tyre. The Palladium of Troy was also of Phoenician origin.

As might be expected among a maritime people, the Phoenicians had several marine deities, as Poseidon, Neroes, and Pontus. Poseidon was worshipped at Berytus, and a marine Jupiter at Sidon. The present deities of navigation were, however, the Cabiri, the seat of which was also at Berytus, and whose images, under the name of Pataeci, were placed on the prows of Phoenician ships. (Herod. iii. 37.) They were the sons of Hephaestos, or the Egyptian Ptah, and were represented as ridiculous little piggionic figures. By the Greeks and Romans they were identified with their Anaces, Lares, and Penates. Asenulipus, who was identified with the air, was their brother, and also had a temple at Berytus. (Paus. vii. 23. § 6.)

We know but little of the religious rites and sacred festivities of the Phoenicians. They practised circumcision, which they learned from the Egyptians; but, owing to their intercourse with the Greeks, the rite does not seem to have been very strictly observed. (Herod. ii. 104; Aristoph. A. 304.) We are unable to trace their speculative opinions; but, as far as can be observed, they seem to have been material and atheistic, and, like the other Semitic nations, the Phoenicians had no idea of a future state of existence.

VII. MANNERS, LITERATURE, AND ART.

The commercial habits of the Phoenicians did not impair their warlike spirit, and Chariton (vii. 2) represents the Tyrians as ambitious of military glory. Their reputation for wisdom and enterprise peeps out in the jealons and often ironical bitterness with which they are spoken of by Hebrew writers. Their wealth and power was envied by their neighbours, who made use of their services, and abused them in return. (Ezek. xxviii. 2, 12: Isa. 21, xxiii. 18.) The Greeks expressed their opinion of Phoenician subtlety by the proverb Ζητείται ο πόσις Φοίνικος (Suid.), which may be rendered by our "Set a thief to catch a thief;" and their reputation for versatility was marked by the saying Φοίνιξ Φοίνικος, "a Phoenician lie." (Strab. iii. p. 170.) But a successful commercial nation is always liable to imitations of this description. In common, and sometimes in conjunction, with Syria, Phoenicia was denounced by the Romans for the corruption of its morals, and as the nursery of mountebanks and musicians. (Hor. Sat. i. 2, 1; Juv. iii. 62, viii. 159; Athen. xx. 53.) The mimics of Tyre and Berytus were renowned far and wide. (Ezg. tot. Maml. Hidson, Geogr. Min. iii. p. 6.)

Ancient authority almost unanimously attributes the invention of an alphabet to the Phoenicians. Lucan (Phars. iii. 220) ascribes the use of writing to them before the invention of the papyrus in Egypt. The Phoenician alphabet was, however, far less developed than the Egyptian; and Herodotus says that he saw the Cudmen letters at Tyre. (Herod. v. 58, 59; Plin. vii. 57; Diod. v. 24; Tac. Ann. xi. 14; Mela, i. 12, &c.) The inscriptions found in Thera and Melos exhibit the oldest forms of Greek letters hitherto discovered; and these islands were colonised by Phoenicians. No inscriptions have been found in Phoenicia itself; but from several discovered in Phoenician colonies—one of which, however, are older than the fourth century before Christ—the Phoenician alphabet is seen to consist, like the Hebrew, of twenty-two letters. It was probably only scantly at first, since the Greek alphabet, which was borrowed from it, consisted originally of only sixteen letters (Plin. i. c.); and, according to Irenaeus (ado. Haeres. ii. 41), the old Hebrew alphabet had only fifteen. The use of hieroglyphics in Egypt was, in all probability, older. (Tac. i. c.) The connection of this Phoenetic system with the Phoenician alphabet cannot be traced with any certainty; yet it is probable that the latter is only a more simple and practical adaptation of it. The names of the Phoenician letters denote some natural object, as aleph, an ox, beth, a house, daleth, a door, &c., whose has been conjectured that the figures of these objects were taken to represent the sounds of the respective letters; but the resemblance of the forms is rather fanciful.

Babylonian bricks, inscribed with Phoenician characters, have long been known, and indicate the residence of Phoenicians at Babylon. In the recent discoveries at Nineveh other bricks have been found with inscriptions both in the Phoenician and cuneiform character. Phoenician inscriptions have also been discovered in Egypt, but in an Aramaean dialect. (Gesen. Mon. Phoen. lib. ii. c. 9.) The purest examples of the Phoenician alphabet are found in the inscriptions of Malta, Athens, Cyprus, and Sardinia, and on the coins of Phoenicia and Sicily.

The original literature of the Phoenicians has wholly perished, and even in Greek translations but little has been preserved. Their earliest works seem to have been chiefly of a philosophical and theological nature. Of their two oldest writers, Sanchoniatho and Mochus, or Moschus, of Sidon, accounts will be found in the Dictionary of Biography and Mythology, as well as a discussion of the question respecting the genuineness of the remains attributed to the former; on which subject the reader may also consult Lobeck (Aegyptiaca, ii. p. 1264, sqq.). Orelli (Sanchoniathonis Fragm. p. xii. sqq.), Creuzer (Symbolik, pt. i. p. 110, 3rd edit.), and others (De Phoebiz. i. p. 120, sqq.; and in the Jahr- bucher für Theologie u. christl. Philosophie, 1836, vol. vii. pt. i.,) and Kenrick (Phoenicia, ch. xi.). Later Phoenician writers are known only under Greek names, as Theodetus, Hypsicles, Philostorgius, &c., by the aid of Greek, and the help of their native authorities. We learn from Jospehus (c. Apion. i. 17) that there were at Tyre public records, very carefully kept, and extending through a long series of years, upon which the latter histories seem to have been founded; but unfortunately these have perished. We are deprived of the
PHOENICIA.

annals of one of the oldest and most remarkable people of antiquity; and, by a perverse fate, the inventors of letters have been deprived of that benefit which their discovery has bestowed on other, and often less distinguished, nations which have borrowed it.

The arithmetical system of the Phoenicians resembled that of the Egyptians. The units were marked by simple strokes, whilst 10 was denoted either by a horizontal line or by a semicircle; 20 by the letter ą; and 100 had also a special mark, with strokes for the units denoting additional hundreds. (Gesen. Mon. Phoen. i. 1. c. 6.) Their weights and measures were nearly the same as those of the Jews.

The Phoenicians, and more particularly the Sidonians, excelled in the glyptic and plastic arts. Their drinking vessels, of gold and silver, are frequently mentioned in Homer: as the silver vase which Achilles proposed as the reward of the victor in the funeral games in honour of Patroclus (Iliad. xxnii. 7-43), and the bowl given to Telemachus by Menelaus. (Od. iv. 618; comp. Strab. xvi. p. 757.) The Phoenicians were celebrated also manufactured shell and glass vessels; but the origin of the vases called Phoenician, found in Southern Italy, rests on no certain authority. They particularly excelled in works in bronze. Thus the pillars which they cast for Solomon's temple were 18 cubits in height and 12 in circumference, with capitals 5 cubits high. From the nature of their country their architecture must have consisted more of wood than of stone; but they must have attained to great art in the preparation of the materials, since those designed for the temple of Solomon were required no further labour, but only to be put together, when they arrived at Jerusalem. The internal decorations were carvings in olive-wood, cedar, and gold. The Phoenicians do not appear to have excelled in sculpture. This was probably owing to the nature of their religion. Their ideas were not, like those of Greece and Rome, elaborate representations of the human form, but mere rude and shapeless stones called Buctulii; and frequently their temples were entirely empty. Figures of the Phoenician Venus, but of very rude sculpture, have, however, been found in Cyprus. The Phoenicians brought to great perfection the art of carving and inlaying in ivory, and the manufacture of jewellery and female ornaments, which proved of such irresistible attraction to the Grecian and Jewish women, as may be seen in the story of Eumaeus in Homer (Od. xv. 415), and in the indignant denunciations of Isaiah (xxiii. 19). They likewise excelled in the art of engraving gems. (2 Chron. ii. 14.) Music is said to have been an invention of the Sidonians (Sanchon. p. 32, ed. Orelli), and a peculiar sort of cithara was called Anthaio. (Athen. iv. 183.)

VIII. MANUFACTURES, COMMERCE, AND NAVIGATION.

The staple manufacture of Phoenicia was the celebrated purple dye; but it was not a monopoly. Ezekiel (xxvii. 7) characterizes the purple dye as coming from Greece, and Egypt and Arabia also manufactured it, but of vegetable materials. The peculiarity of the Phoenician article was that it was obtained from fish of the generic buccinum and murex, which were almost peculiar to the Phoenician coast, and which even there were found in perfection only on the rocky part between the Tyrian Climax and the promontory of Carmel. The liquor is communisted in a little vein or canal which follows the spiral line of these mollusces, and yields but a very small drop. The fluid, which is extracted with a pointed instrument, is of a yellowish white, or cream colour, and smells like garlic. If applied to linen, cotton, or wool, and exposed to a strong light, it successively becomes green, blue, red, and deep purple; and when washed in soap and water a bright and permanent crimson is produced. The buccinum, which is so named from its trumpet shape, is found on rocks near the shore, but the murex must be dredged in deep water. The latter, in its general form, resembles the buccinum, but is rougher and more spinous. The Helix aspersa, also found on the Phoenician coast, yields a similar fluid. The superiority of the Tyrian purple was owing to the abundance and quality of the fish, and probably also to some chemical secret. The best accounts of these fish will be found in Aristotle (H. Anim. lib. v.) and Pliny (ix. 61. s. 62.); and especially in a paper of Reumurr in the Mémoires de l'Académie des Sciences, 1711; and of the manufacture of the purple in Amati, De Restitutione Parvulorum, 616 and 743), and also in the same work of the discovery of purple in the same time. The Roman, Iesuex Dei et amoris, perpugile Domus, et Materie Vestrarre presso gii Antichi. The trade seems to have been confined to Tyre, though the poets speak of Sidonian purple. (Ovid, Tr. iv. 2. 27.) Tyre, under the Romans, had the exclusive privilege of manufacturing the imperial purple, and decrees were promulgated prohibiting its use by all except magistrates. (Flav. Vopisc. Aurel. c. 45; Suec. Nero, 32.) The manufacture seems to have flourished till the capture of Carthage by the Vandals. As Tyre was famed for its purple, so Sidon was renowned for its glass, which was made from the fine sand on the coast near Mount Carmel. Pliny (xxxvi. 65) describes its discovery as accidental. Some merchants who had arrived on this coast with a cargo of santon, employed some lumps of it, instead of stones, to prop up their chimney, and the sand being melted by the heat of the fire, produced a stream of glass on the sand. It is probable, however, that the art was derived from Egypt, where it flourished in very ancient times. The Sidonians made furnaces, the blowpipe, the lathe and wheel, and the graver. They also cast glass mirrors, and were probably acquainted with the art of imitating precious stones by means of glass. (Plin. li. c.) The Phoenicians were also famous for the manufacture of cloth, fine linen, and embroidered robes, as we see in the description of those brought from Sidon by Paris (πραγμα παλαιωτως, ημη γυναικειαι Σηδωνων, Herod. vi. 289) and in the Scriptural allusions. (2 Chron. ii. 14, &c.) Phoenicia was likewise celebrated for its perfumes. (Juv. viii. 159; Plin. xi. 3. 2.)

Asia and Egypt, as well as Phoenicia, had reached a high pitch of civilisation, yet the geographical position of the former, and the habits and policy of the latter, prevented them from communicating it. On the Phoenicians, therefore, devolved the beneficent task of civilising mankind by means of commerce, for which their maritime situation so admirably fitted them. Their commercial occupation was that of middle carriers of the produce and manufactures of Assyria and Egypt (Herod. i. 1); but their maritime superiority led them to combine with it the profession of piracy, which in that age was not regarded as disgraceful. (Timaeul. i. 5; Hom. Od. xv. 415, &c.) They were especially noted as slave-dealers. (Herod.
PHOENICIA.

617

ii. 54; Hom. Od. xiv. 383.) The importation of clothes, trinkets, &c., in Phoenician ships, is constantly alluded to in the Homeric poems; but the Phoenicians are as constantly described as a crafty deceitful race, who were ever bent on entrapping the unwary. (Hil. vi. 290, xxiii. 743, &c.) It would be absurd, however, to suppose that they were always fraudulent in their dealings. Ezekiel (xxvii.) draws a glowing picture of their commerce and of the splendour of their vessels. From his description we may gather the following particulars. The trade of the Phoenicians with the Egyptian sea, comprised spices, myrrh, frankincense, precious stones, and gold-sand. The coast of Africa S. of Bah-el-Mandeh produced frankincense and spices superior to those of Arabia. The cotton garments mentioned by the prophet were probably Indian fabrics, and the "bright iron" Indian steel. Ezekiel mentions only linen as forming their trade with Egypt, but we know that they also drew their supplies of corn from thence. (Isaiah, xxiii. 3.) In return for these commodities, the Phoenicians supplied the Egyptians with wine, with asphalt for their embalmments, and probably with incense for their temples. (Herod. iii. 6; Diod. xix. 99.) Their traffic with Syria and Mesopotamia, besides the indigenous products of those countries, probably included Indian articles, which came by that route. Babylon, which is called by Ezekiel (xvii. 4) a city of merchants, must have been a place of great trade, and besides the traffic which it carried on by means of its canal communication with the Tigris, had manufactures of its own, especially embroideries. With Nineveh also, while it flourished, the Phoenicians must have had an extensive commerce. The neighboring Judaea furnished them with wheat, grape-honey, oil, and balm; and from the pastoral nations of Arabia they procured sheep and goats. Proceeding to more northern regions, we find Damascus supplying them with white wool and the precious wine of Helbon. Armenia and the countries bordering on the southern and eastern shores of the Euxine—the modern Georgia and Circassia—furnished horses, mules, and slaves; also copper and the tunny fish. Phoenicia had undoubtedly great commercial intercourse with Greece, as is evident from the fact that the Greek names for the principal objects of oriental commerce, especially spices and perfumes, were derived from the Phoenicians. (Herod. iii. 111.) In the time of Socrates a Phoenician vessel seems regularly to have visited the Peloponnese. (Xenoph. Hell. c. 8.) Tarshish, or Tartessus, the modern Andalusia, was the source whence the Phoenicians derived their silver, iron, tin, and lead. Silver was so abundant in this country that they substituted it for the masses of lead which served as anchors. At a later period they procured their tin from Britain. They appear also to have traded on the NW. coast of Africa as far as Senegal, as well as to the Fortunate Islands, or Canaries. They must have carried on a great trade with their many colonies, which there will be occasion to enumerate in the following section. It is remarkable that Ezekiel always describes the nations as bringing their wares to the Phoenicians, and the latter are not mentioned as going forth to fetch them. The caravan trade must at that time have been in the hands of the nomad Syrian and Arabian tribes by whom the Phoenicians were surrounded, and the business of the latter consisted in distributing by voyages to the various coasts of the Mediterranean the articles, which have thus been brought to them overland. (Herod. i. 1.) At a later period, however, they seem to have themselves engaged in the caravan trade, and we have already mentioned their journeys in the track of Alexander. Their peddlars, or retail dealers, probably traversed Syria and Palestine from the earliest times. (Proverbs, xxxi. 24; Isaiah, xxiii. 8.) In some foreign towns the Phoenicians had factories, or settlements for the purposes of trade. Thus the Tyrians had a fish-market at Jerusalem (Nehemiah, xiii. 16), chiefly perhaps for the salted tunny which they brought from the Euxine. They had also a settlement at Memphis (Herod. ii. 112), and, after the close of the wars between the Greeks and Persians, at Athens, as already related, as well as in other places.

In their original seats on the Persian Gulf the Phoenicians used only rafts (Plin. vii. 57); but on the coasts of the Mediterranean they constructed regular vessels. In their early voyages, which combined piracy with trade, they probably employed the pentecoster, a long and swift vessel of 50 ears. (Comp. Herod. i. 163.) The trireme, or ship of war, and gaulos, or tub-like merchantman adapted for stowage, which took its name from a milk-pail, were later inventions. (Ibid. iii. 156.) The excellent arrangements of a Phoenician vessel are described in a passage of Xenophon before cited. (Occas. 8; cf. Heliker, v. 18; Isaiah, ii. 16.) We have already described the Patrai, or figure-heads of their vessels. The Phoenicians were the first to steer by observation of the stars (Plin. viii. 56; Manil. i. 297, sqq.); and could thus venture out to sea whilst the Greeks and Romans were still creeping along the coast. Astronomy indeed had been previously studied by the Egyptians and Babylonians, but the Phoenicians were the first who applied arithmetic to it, and thus made it practically useful. (Strab. xvi. 757.) Herodotus (iv. 42) relates a story that, at the instance of Necho, king of Egypt, a Phoenician vessel circumnavigated Africa, setting off from the Red Sea and returning by the Mediterranean; and though the father of history doubted the account himself, yet the details which he gives are in themselves so probable, and the assertion of the circumnavigators that they had the sun on their right hand, or to the N. of them, as must really have been the case, is so unlikely to have been invented, that there seems to be no good reason for doubting the achievement. (Comp. Reinell, Geogr. of Herodotus, p. 682, sqq.; Grote, Hist. of Greece, iii. pp. 377, sqq.)

IX. Colonies.

The foundation of colonies forms so marked a feature in Phoenician history, that it is necessary to give a general sketch of the colonial system of the Phoenicians, although an account of each settlement appears under its proper head. Their position made them a commercial and engaged in the commerce, and the nature of their country, which would not admit of a great increase of inhabitants, led them to plant colonies. Before the rise of the maritime power of the Greeks they had the command of the sea for many centuries, and their colonisation thus proceeded without interruption. Their settlements, like those of the Greeks, were of the true nature of colonies, and not, like the Roman system, mere military occupations; that is, a portion of the population migrated to and settled in those distant possessions. Hence they resembled our own colonies in America or
PHOENICIA.

Australia, as distinguished from the great peninsula of Asia. A modern writer has, with the devotion and ingenuity, endeavored to trace the progress of Phoenician colonisation from the third fold cycle of ancient myths respecting the wanderings of Bel or Baal—the Cremos of the Greeks, and patron god of Byblos and Berytus; of Asarte or Is (Venus-Urania), who was especially worshipped at Sidon; and of Melcarth or the Telchines (Phoen., vol. ii. p. 40, ch. 32). With these myths are combined the legends of the rape of Europa, of the wanderings of Cadmus and Harmonia, of Helen, Dido, &c. That some portion of historical truth may lie at the bottom of these myths can hardly be disputed; but a critical discussion of them would require more space than can be here devoted to the subject, and we must therefore content ourselves with giving a short sketch of what seems to be the most probable march of Phoenician colonisation.

Cyprus, which lay within sight of Phoenicia, was probably one of the first places colonised thence. Its name of Chittim, mentioned in Genesis (xiv.), is preserved in that of Cyprus, its chief town. (Cie. Pto. iv. 20) Paphos and Palaeapaphos, at the SW. extremity of the island, and Gozagos, near the SE. point, were the chief seats of the worship of Venus-Urania, the propagation of which marked the progress of Phoenician colonisation. The origin of the colony is likewise shrouded by the legend of the Phoenicians by Heles, king of Sidon (—taut Heles epimnion Vastaat Cypryn, et victor ditione tenetam," Virg. Aen. i. 621, et ib. Serv.,) who was the reputed founder of Citium, Lapatbus, and other Cyprian towns. (Alex. I. Paph. in Stephan. v. Cypriotes.) A great many Phoenician inscriptions have been found in this island. Hence the Phoenicians seem to have proceeded to the coast of Aia Minor, the islands of the Greek Archipelago, and the coast of Greece itself. Phoenician myths and traditions are interwoven with the earliest history of Greece, and long preceded the Trojan War. Such are the legends of Aegeus in Crete, of Cadmus in Thessaly, Boeotia, Euboea and Thera. Rhodes seems to have been early visited by the Phoenicians; and, if it did not actually become their colony, they are at least numerous traces that they were once predominant in the island. It is mentioned in Genesis (x. 4) in connection with Cuthim and Lartusos. (Comp. Epiphanius, de Haeresibus, c. 45, and Mme. de Genouillac, 248, note 127.) Conon, a writer who flourished in the Augustan period, mentions that the Heliodae, the ruling dynasty in Rhodes, were expelled by the Phoenicians (Fbr. 47, ap. Plut. p. 187), and numerous other traditions testify their occupation of the island. Traces of the Phoenicians may also be found in Crete, though they are fainter there than at Rhodes. It is the scene of the myth of Europa, the Solonian Asarte; and the towns of Itanos, which also bear the name of Arabelle (Steph. B. B. e. Arabelle, Hierol. § 11; Acts, xxvi. 12), Lebanon, and Phoen-

necia, were reputed to have been founded by them. We learn from Herodotus (i. 8) that the greater part of the Greeks were expelled by the Phoenicians. There are traces of them in Olbia, Lycia, and Caria. We have already alluded to their intimate connection with the last-named country, and Thucy-}

dides, in the passage just cited, mixes the Carians and Phoenicians together. Cleobulus and Samos are also connected with the Phoenicians by ancient myth; and at Thera, Mycria, we shipped with

the sacrifice of infants, is the Tyrian Melchitha, also called Palamon by the Greeks. (Lycophr. Cass. 229.) There are traces of Phoenician colonies in Bithynia, but not more eastward in the Euxine, though it cannot be doubted that their voyages extended farther. Mythological analogies indicate their presence in Imeros and Lemnos, and there are distinct historical evidences of their settlements in the neighboring island of Thasos. Here they seem to have held themselves the gigantic traces of their mining operations there, in which they appeared to have turned a whole mountain upside-down (vi. 47). The rude ran, that they had come thither in search of Europa. (Id. ii. 44.) They had also settlements for the purposes of mining at Mount Pangaerus, on the opposite coast of Thrace. (Phin. vii. 57; Strabo. xiv. p. 680.) According to Strabo (p. 447), Cadmus and his Arabs once dwelt at Chalbis in Euboea, having crossed over from Boeotia. Of the settlement of the Phoenicians in the latter country, there is historical testimony, to whatever credibility the legend of Cadmus may be entitled. (Herod. v. 57.) The name of Oysa, or Onca, by which Minerva was worshipped at Thebes, and which was also given to one of the city gates, was pure Pho-}

enician. (Euphor. ap Steph. B. R. s. v.; cf. Pausan. ii. 12.) From Thebes the Cadmeans were expelled by the Argives, and retired among the Eleans, an Illyrian people (Herod. v. 46), and Hyllus, son of Cadmus and Harmonia was said to have given name to their country. (Apollod. iii. 5. § 4.) The Papianians, the ancient inhabitants of Cephalonia, were the reputed descendants of Cadmus. (Odyss. xv. 426.)

To colonise Sicily required bolder navigation; but with the instinct of a commercial and maritime people, the Phoenicians seized its promontories and adjacent isles for the purpose of trading with the natives. (Thucyd. ii. 2.) Subsequently, however, they were gradually driven from their possession by the growing power of the Greek colonies in that island, and were ultimately confined to its NW. corner (Ib.), which was the nearest point to Carthage. Dacedalus, an epithe of Ephesos, the father of the Phoenician Cabiri, is represented as flying from Crete to Sicily. (Diod. iv. 77.) The Venus of Mount Eryx was probably of Phoenician origin from the veneration paid to her by the Carthians. (Aelian, H. An. iv. 2; Athen. x. p. 932.) About 578 B.C., a Phoenician writer named Tossus mentions a priestess of Venus-Urania, which was the Phoenician Venus. (Rhein. Mus. vol. iv. p. 91.) There is some difficulty, however, with regard to the temples of this deity, from the attempts which have frequently been made to connect them with the wanderings of the Trojans after the capture of their city. Thus Dionysius of Halicarnassus (Ant. R. i. 20) attributes the temple of Venus at Cythera to Aeneas, whilst by Herodotus (i. 105) it is assigned to the Phoenicians. The migration of the latter to the western side of Sicily must have taken place after the year 736 B.C., the date of the arrival of the Greek colonists. There are no traces of the Phoenicians in Italy, but the islands between Sicily and Africa seem to have been occupied by them. Diodorus (v. 12) mentions Melite, or Malta, as a Phoenician colony. In later times, however, it was occupied by the Carthaginians, so that here, as in the rest of these islands, it is difficult to distinguish whether the antiquities belong to the Phoenicians or to the Carthaginians. Farther westward we may track the
PHOENICIA.

PHOENICUS.

619

latter in Sardinia, where Claudian ("Bii. Gild. 520") mentions Caralis as founded by the Tyrians, in continuation to Sulci, founded by the Carthaginians. And the coins of Achlys ("Ileor") seem to denote the occupation of it by the Phoenicians, since they have emblems of the Cabirian worship.

The very early intercourse between Phoenicia and the south of Spain is attested by the mention of Tarshish, or Tartessus, in the 10th chap. of Genesis. To the same purport is the legend of the expedition of Hercules against Chrysaor, the father of Geryon, which was of course navel, and which sailed from Crete. (Herod. iv. 8; Diod. iv. 17, sqq. v. 17, &c.)

The account of Diodorus leads us to conclude that this was an earlier colony than some of the intermediately situated ones. The Phoenicians had no doubt carried on a commercial intercourse with Tartessus long before the foundation of Gades or Cadiz. The date of the latter event can be ascertained with very remarkable accuracy. Velleius Paterculus (i. 2) informs us that it was founded a few years before Utica; and from Aristote (de Mirrab. Anecdot, c. 146) we learn that Utica was founded 297 years before Carthage. Now as the latter city must have existed, at least 500 years B.C., it follows that Gades must have been built about eleven centuries before our era. The temple of Hercules, or Melcarth, at this place retained, even down to the time of Silius Italicus, the primitive rites of Phoenician worship; the fane had no image, and the only visible symbol of a god was an ever-burning fire; the ministering priests were barefooted and clad in linen, and the entrance of women and swine was prohibited. (Punic. iii. 22, seq.) Long before this period, however, it had ceased to be a Phoenician colony; for the Phœncæans who sailed to Tartessus in the time of Cyrus, about 556 B.C. found it an independent state, governed by its own king Arganthonius. (Herod. i. 163.)

Many other towns were doubtless founded in the S. of Spain by the Phœnicians; but the subsequent occupation of the country by the Carthaginians renders it difficult to determine which were Phœnician and which genuine Phœnician. It is probable, however, that those in which the worship of Hercules, or of the Cabiri, can be traced, as Carteia, Matala, Sexili, &c., were of Tyrian foundation. To this early and long continued connection with Phœnia we may perhaps ascribe that superior civilisation and immemorable use of writing which Strabo (iii. 139) observed among the Taurids and Tartessi.

Farther in the Atlantic, it is possible that the Phœnicians may have had settlements in the Canaries, or tin districts on the coast of Cornwall and the Scilly Islands; and that northwards they may have extended their voyages as far as the Baltic in search of amber. (Britannicae Ins. Vol. i. p. 433, seq.) (Comp. Heeren, Researches, &c. ii. pp. 53, 68.) But these points rest principally on conjecture.

There are more decided traces of Phœnician occupation on the NW. or Atlantic coast of Africa. Abyla, like Calpe, was one of the Pillars of Hercules, and its temple at Linus in Mauretania was said to be older even than that at Gades. (Plin. s. xiv. 8. 22.) Timgad was founded by Antaeus, with whom Hercules is said to have combated (Melia, i. 5; Strab.iii. p. 140); and the Sinus Emporicus (κῆλος Εμπορικὸς, Strab. xvii. 827), on the W. coast of Mauretania, seems to have been so named from the commercial settlements of the Phœnicians. Ceren was the limit of their voyages on this coast; but the situation of Certe is still a subject of discussion. [GRENNE.]

With regard to their colonies on the N. or Mediterranean coast of Africa, Strabo (i. p. 40) tells us that the Phœnicians occupied the middle parts of Africa soon after the Trojan War, and they were probably acquainted with it much sooner. Their earliest recorded settlement was Itaca, or Utica, on the western extremity of what was afterwards called the gulf of Carthage, the date of which has been already mentioned. Pilny (xvi. 79) relates that the cedex beams of the temple of Apollo at Utica had lasted since its foundation, 1176 years before his time; and as Pilny wrote about 78 years after the birth of Christ, this anecdote corroborates the date before assigned to the foundation of Gaetas and Utica. The Phœnicians also founded other towns on this coast, as Hippo, Hadrumetum, Leptis, &c. (Sall. Jug. c. 19), and especially Carthage, on which it is unnecessary to expatiate here. [CARTHAGO.]

The principal modern works on Phoenicia are, Bochart's Geographia Sacra, a performance of unequalled research, but confined learning; but the conclusions of which, from the defective state of critical and ethnographical science at the time when it was written, cannot always be accepted; Gesenius, Monuments Phœniciæ; Movers, article Phœnizien, in Erich and Gruber's Encyclopädie, and especially his work Die Phœnizier, of which two volumes are published, but which is still incomplete; and Mr. Kenrick's Phœnicas, Svo, London, 1855, to which the compiler of this article is much indebted. The reader may also consult the memoirs of Hengstenberg, De Fabbris Tyriœnium, Berlin, 1832, and Beitragz zur Einleitung in das Alte Testament; Heeren, Historical Researches, &c. vol. ii. Oxford, 1833; Grote, History of Greece, vol. iii. ch. 18; Forbiger, Handbuch der alten Geographie, vol. ii. p. 659, seqq.; Rusescher, Reisen; Burenhurt, Syria; Robinson, Biblical Researches, &c. [T. H. D.]

PHOENICE. [PIILA.]

PHOENICUS. [McEnery, No. 3.]

PHOENICIUS SINVS. [Boeotia, p. 412, a.]

PHOENICUS (Φοινικός). 1. A port of Ionia, at the foot of Mount Minas. (Thucyd. vii. 34.) Livy (xxxvi. 45) notices it in his account of the naval operations of the Romans and their allies against Antiochus (comp. Steph. B. Z. s. v.); but its identification is not easy. Leake (Asia Minor, p. 263) regarding it as the same as the modern port of Tokisnes, and Hamilton (Researches, ii. p. 5) as the port of Egri-Longos.

2. A port of Lycia, a little to the east of Patara; it was scarcely 2 miles distant from the latter place, and surrounded on all sides by high cliffs. In the war against Antiochus a Roman fleet took its station there with a view of taking Patara. (Liv. xxxvii. 16.) Beaufort (Kuramanis, p. 7) observes that Livy's description answers accurately to the bay of Kalamaki. As to Mount Phoenicus in Lycia, see OLYMPUS, Vol. ii. p. 480. [L. S.]

PHOENICUS [LIPTON.]

PHOENICUS (Φοινικός Νησί, Strab. xvii. p. 799; Ptol. iv. 5, § 7; Stadiasmus, § 12), a harbour of Marmarica, off which there were the two islands Diuœma, which must not be confounded with those which Ptolemy (iv. 5, § 76) places off the Chersonesus Parva on the coast of Aegypt. Its position must be sought between Pinderes, Pidyres, Digitalized by Microsoft®
PHOLOE. [Elis, p. 817.]

PHORADEIA. [Myconos.]

PHORIS. (Φορίς), a city in Epeirus, mentioned only by later writers, was restored by Justinian. Procopius says that it originally stood in a marshy situation, and that Justinian built a citadel upon a neighbouring height. It is identified by Velth in the ancient Molossia, which now gives title to a bishop, but there are no Hellenic remains at this place. (Procop. iv. 1, Hierol. p. 652, with Wesseling's note; Leake, Northern Greece, vol. iv. p. 96.)

PHIRA (Φιρα), Ishber. Mas. Pithir. c. 16), a town in Aria, mentioned by Isidore in his brief summary of the principal stations between Mesopotamia and Armenia. There can be little doubt that this place corresponds with the Ferrih or Purrah of modern times (Wilson, Aria, p. 153), on the river called the Ferrih-n. Bitter (vii. 120) has supposed that this is the same place which Ptolemy mentions by the name of Pharara, in Drangiana (vi 19, § 3); and Droysen (ii. p. 610) imagines that it is the same as the Phryra of Stephanius B., which was also a city in Drangiana. Both conjectures are probable. [V.]

PHRATAEA (Φραταία, Apiap. Pithir. pp. 80, 99, ed. Sch., Pïa, Æol. Cass. xiii. 23; Steph. B. s. r.; Æolostò, Pli. vi. 2, § 10), a place in ancient Media, which seems to have served as a winter residence for the Parthian kings, and at the same time as a stronghold in the case of need. Its position is doubtful. Further imagines that it is the same as the citadel described by Strabo, under the name of Vera (xii. p. 523); and there seems some ground for supposing that it is really the same place. If the name Phrata be the correct one, it is likely that it derived its name from Phraates. (Plut. Anton. c. 58.) (See Rawlinson On the Atraphatic Revolutions, R. Geog. Journ. vol. x. part 1, 1840.)

PHRAGANDAE. [Maced.]

PHREATOS (Φρεάτος), that is, the Wells, a place in the district of Garsaurus in Cappadocia. (Proc. v. 6, § 14.) The name is an indication of the fact noticed by ancient writers, that the country had a scanty supply of water. (Wesseling, ad Hierol. p. 760.) [LS.]

PHRICHU (Φρίχου), a mountain of Locria, above Thermopylae. (Strab. xiii. pp. 582, 621; Steph. B. s. r.)

PHRICONIS. [Cyme.]

PHRIXUS (Φρίξος, Paus. et alii; Φρύξ, Herod. iv. 148; Eth. Φρύγος), a town of Tripolihia in Elis, situated upon the left bank of the Alpheus, at a distance of 30 stadia from Olympia. (Strab. viii. p. 296; Steph. B. s. r.) It was founded by the latter, the name was derived from Phreas. (Steph. B. s. e. tês B. tês.) Phrixus is rarely mentioned in history; but it shared the fate of the other Tripolihian cities. (Comp. Xen. Hell. iii. 2, § 50; Polyb. iv. 77, 80.) Its position is determined by Pausanias, who says that it was situated upon a pointed hill, opposite the Leucania, a tributary of the Alpheus, and at a ford of the latter river. (Paus. vi. 21, § 6.) This pointed hill is now called Pelepsimara, and is a conspicuous object from both sides of the river, whence the city received the name of Phrixus in later times. (Steph. B. s. e. polys.) The city was in ruins in the time of Pausanias, who mentions there a temple of Athena Cydonia. Upon the summit of the hill there are still remains of Hellenic walls. (Leake, Morea, vol. ii. p. 210; Bobbe, Rercherches gr. p. 136; Ross, Reisen im Peloponnes, p. 105; Curtius, Peloponnesus, vol. ii. p. 30.)

PHRIXUS (Φρίξος), a tributary of the Erasmus, in the Argos. [Argos, p. 201, a.]

PHRUDIS. [Frudis.]

PHROI (Φροι), a Scythian people in Serica, described as cannibals. (Plin. vi. 17, 20; Dionys. Per. 752 and Enestath. ad loc.)

PHRYGIA (Φρυγία; Eth. Φρύγες, Phryges), one of the most important provinces of Asia Minor. Its inhabitants, the Phrygians, are to us among the most obscure in antiquity, at least so far as their origin and nationality are concerned. Still, however, there are many indications which seem calculated to lead us to definite conclusions. Some regard them as a Thracian tribe (Brizes or Bryges), who had migrated into Asia; others consider them to have been Armenians; and others, again, to have been a mixed race. Their Thracian origin is mentioned by Strabo (vii. p. 293, s. p. 471) and Stephanius B. (s. r.); and Herodotus (vii. 73) mentions a Macedonian tradition, according to which the Phrygians, under the name of Bizae, were the neighbours of the Macedonians before they migrated into Asia. This migration, according to Xanthus (ap. Strab. xiv. p. 680), took place after the Trojan War, and according to Conon (ap. Phot. Cod. p. 130, ed. Beck) 90 years before that war, under king Midas. These statements, however, can hardly refer to an original migration of the Phrygians from Europe into Asia, but the migration spoken of by these authors seems to refer rather to the return to Asia of a portion of
PHRYGIA.

the nation settled in Asia; for the Phrygians are not only repeatedly spoken of in the Homeric poems (II. ii. 852, iii. 185, xvi. 717, xxiv. 533), but are generally admitted to be one of the most ancient nations in Asia Minor (see the story in Herod. ii. 2), whence they, or rather a portion of them, must at one time have migrated into Europe; so that in our treatises ancient inhabitants are frequently supposed to have been reversed, as in many other cases. The geographical position of the Phrygians points to the highlands of Armenia as the land of their first abode, and the relationship between the Phrygians and Armenians is attested by some singular coincidences. In the army of Xerxes these two nations appear under one commander and use the same armour; and Herodotus (vii. 73) adds the remark that the Armenians were the descendants of the Phrygians. Enduneus (ap. Steph. B. s. v. Samnia, and Eustath. ad Dion. Per. 694) mentions the same circumstance, and moreover alludes to a similarity in the languages of the two peoples. Both are said to have lived in subterraneous habitations (Vitr. ii. 1; Xenoph. Anab. iv. 3; Strab. iii. 415; Diod. xiv. 28); and the names of both, lastly, are used as synonyms. (Aesch. Grec. Oen. iv. p. 257, ed. Cramer.) Under these circumstances it is impossible not to come to the conclusion that the Phrygians were Armenians; though here, again, the account of their migration has been reversed, the Armenians not being descended from the Phrygians, but the Phrygians from the Armenians. The time when they descended from the Armenian highlands cannot be determined, and unquestionably belongs to the remotest ages, for the Phrygians are described as the most ancient inhabitants of Asia Minor. (Paus. i. 14. § 24; Claudian, in Eutrop. ii. 251, &c.; Appian. Bel. xii. p. 152, ed. Orell.) The Phrygian legends of a great flood, connected with king Annacus or Kamaras, also are very significant. This king resided at Iconium, the most eastern city of Phrygia; and after his death, at the age of 300 years, a great flood overwhelmed the country, as had been foretold by an ancient oracle. (Zosim. vi. 10; Suid. s. v. Naxasor; Steph. B. s. v. Ikonov; comp. Ov. Met. iv. 630, &c.) Phrygia is said to have first risen out of the flood, and the ark that saved Ararat is mentioned in connection with the Phrygian town of Celaeae. After this the Phrygians are said to have been the first to adopt idolatry. (Ov. Sibyll. i. 196, 262, 266, vii. 12—15.) The influence of the Old Testament upon these traditions is unmistakable, but the identity of the Phrygians and Armenians is thereby nevertheless confirmed. Another argument in favour of our supposition may be derived from the architectural remains which have been discovered in modern times, and are scarcely noticed at all by the ancient writers. Vitrivius (ii. 1) remarks, that the Phrygians hollowed out the natural hills of their country, and formed in them passages and rooms for habitations, so far as the nature of the hills permitted. This statement is most fully confirmed by modern travellers, who have found such habitations cut into rocks in almost all parts of the Asiatic peninsula. (Hamilton, Researches, i. p. 250, 289; Texier, Description de la Phrygie Ancienne, i. p. 210, who describes an immense town thus formed out of the natural rock.) A few of these architectural monuments are adorned with inscriptions in Phrygian. (Texier and Sturt, Description of some ancient Monuments with Inscriptions still existing in Lydia and Phrygia, London, 1842.) These inscriptions must be of Phrygian origin, as is attested by such proper names as Midas, Ates, Areages, and others, which occur in them, though some have unsuccessfully attempted to make out that they are Greek. The impression which these stupendous works, and above all the rock-city, make upon the beholder, is that he has before his eyes some of the most ancient monuments of the most remote period, not, as Vitrivius intimates, because there was a want of timber, but because the first robust inhabitants thought it safest and most convenient to construct such habitations for themselves. They do not contain the slightest trace of a resemblance with Greek or Roman structures; while we assert this, it cannot be denied, on the other hand, that they display a striking resemblance to those structures which in Greece we are in the habit of calling Pelasgian or Cyclopian, whence Texier designates the above mentioned rock-city (near Boghaghvetsi, between the Huly and Iris) by the name of a Pelasgian city. (Comp. Hamilton, Researches, i. pp. 48, 490, ii. pp. 226, &c., 209.) Even the lion gate of Myceana reappears in several places. (Ainsworth, Travels and Researches, ii. p. 58; Leake, Asia Minor, p. 28.) These facts throw a surprising light upon the legend about the migration of the Phrygian Pelops into Argolis, and the tombs of the Phrygians in Peloponnesus, mentioned by Athenaeus (xiv. p. 625). But yet much remains to be done by more systematic exploration of the countries in Asia Minor, and by the interpretation of their monuments. One conclusion, however, can even now he arrived at, viz. that there must have been a time when the race of the Phrygians formed, if not the sole population of Asia Minor, at least by far the most important, bordering in the east on their kinsmen, the Armenians, and in the north-east on tribes of the Semitic race. This conclusion is supported by many facts derived from ancient writers. Independently of several Greek and Trojan legends referring to the southern coasts of Asia Minor, the name of the Phrygian mountain Olympus also occurs in Cilicia and Lycia; the north of Bithynia was in earlier times called Bebrycia, and the town of Odrea on the Ascanian lakes reminds us of the Phrygian chief Odrea. (Hom. H. iii. 186.) In the west of Asia Minor, the country about Mount Sipylos was once occupied by Phrygians (Strab. xii. p. 571); the Trojan Tiebe also bore the name Mygdonia, which is synonymous with Phrygia (Strab. xiii. p. 588); Mygdonians are mentioned in the neighbourhood of Miletus (Aelian, v. H. viii. 5); and Polyaenus (Strat. v. 37) relates that the Bebryces, in conjunction with the Phocaeans, carried on war against the neighbouring barbarians.

From all this we infer that Trojans, Myrians, Maeonians, Mygdonians, and Dabians were all branches of the great Phrygian race. In the Iliad the Trojans and Phrygians appear in the closest relation, for Hecuba is a Phrygian princess (xvi. 718). Priam is the ally of the Phrygians against the Amazons (iii. 184, &c.), the name Hector is said to be Phrygian (Hesych. s. v. Δαυςöς), and the names Paris and Scamandrus seem likewise to be Phrygian for the Greek Alexander and Attya- na. It is also well known that both Greek and Roman poets use the names Trojan and Phrygian as synonyms. From the Homeric hymn on Aphrodit (113) it might be inferred that Trojans and Phrygians spoke different languages; but that passage is equally clear, if it is taken as alluding
only to a dialectic difference. Now as the Trojans throughout the Homeric poems appear as a people akin to the Greeks, and are even called Hellenes by Dionysius of Halicarnassus (\textit{Ant. Rom.} i. 61), it follows that the Phrygians also must have been related to the Greeks. This, again, further supported by direct evidence; for, looking apart from the tradition about Pelops, which we have already alluded to, king Midas is said to have been the first of all foreigners to have dedicated, about the middle of the eighth century B.C., a present to the Delphic oracle (Herod. i. 14); and Plato (\textit{Cratyl.} p. 410) mentions several words which were common to the Greek and Phrygian languages. (Comp. Jablonski, \textit{Opera}, vol. iii. p. 64, &c. ed. Te Watten); and, lastly, the Armenian language itself is now proved to be akin to the Greek. (Schröder, \textit{Theosar. Ling. Arm.} p. 51.) The radical identity of the Phrygians, Trojans, and Greeks being thus established, we shall proceed to show that many other Asiatic nations belonged to the same stock. The name of the Myzdians, as already observed, is often used synonymously with that of the Phrygians (Paus. x. 27. § 1), and in Homer (\textit{II.} ill. 186) the leader of the Phrygians is called Myshon. According to Stephanus B. (\textit{v. Myshonem}), lastly, Myshonia was the name of a district in Great Phrygia, as well as of a part of Macedonia. The Doliones, who extended westward as far as the Aesepus, were separated from the Myzdians by the river Rhynchus. (Strab. xiv. p. 681; Schol. \textit{ad Apollon. Rhod.} i. 936, 943, 1115.) At a later time they disappear from history, their name being absorbed by that of the Phrygians. The Myzdians are easily recognizable as a Phrygian people, both from their history and the country they inhabited, called Thracians, and their language is said to have been a mixture of Phrygian and Lydian (Strab. xii. p. 572), and Myzdians and Phrygians were so intermingled that their frontiers could scarcely be distinguished. (Strab. xii. p. 564; Eustath. \textit{ad Hom. II.} ii. 862, \textit{ad Dionys. Per.} 810; Suid. \textit{sv. Ὄδηγος ἱπποκαταλέπτως.}) As to the Macedonians, see \textit{Lydia.} The tribes of Asia Minor, which are usually designated by the name \textit{Pelasgi}, thus unquestionably were branches of the great Phrygian stock, and the whole of the western peninsula was thus inhabited by a variety of tribes all belonging to the same family. But the Phrygians also extended into Europe, where their chief seats were in the central parts of Emathia. (Herod. viii. 138; comp. Strab. xiv. p. 680.) There we meet with Phrygians, or with a modification of their name, Brygians, in all directions. Mardonius, on his expedition against Greece, met Brygians in Thrace. (Herod. vi. 43; Steph. B. s. v. Βρυγα; Plin. iv. 18, where we have probably to read Brygce for Bryuce.) The Phrygian population of Thrace is strongly attested by the fact that many names of places were common to Thrace and Troy. (Strab. xiii. p. 590; comp. Thucyd. ii. 99; Suid. s. v. οἱ λακόνες; Solin 15; \textit{Itzch. Chil.} ill. 812.) Traces of Phrygians also occur in Chalcidice. (Lycoph. 1404; Steph. B. s. v. Καβαρίς.) Further south they appear about Mount Oeta and even in Attica. (Thucyd. ii. 22; Strab. xiii. p. 621; Steph. B. s. v. \textit{Φρυγία} and \textit{Φρυγοί}; Eustath. \textit{ad Dionys.} Per. 810.) Mount Olympus, also, perhaps only a repetition of the Phrygian name. In the west of Ktesias in Macedonia, about lake Lychnidus, we meet with Bryges (Strab. vii. pp. 326, 327; Steph. B. s. v. Βρυγα), and in the same vicinity we have the towns of Brygas, Brygias, and Mutatio Bruciada. (Steph. B. s. v. \textit{Brygas}.) The westernmost traces of Brygias we find about Dyrrhachium. (Strab. i. 36; Appian, \textit{Bell. Civ.} ii. 39; Suidam. 433, 436.) It is difficult to determine how far Phrygian tribes extended northward; but the northern part of Mount Haemus seems to have been occupied at all times by Thracians; but Phrygians extended very far north on both sides of Mount Scandius, for \textit{Pannonia} and \textit{Moesia} seem to be only different forms for \textit{Pannonia} and \textit{Mysia}; and the Bremius or the Savus also betray their origin by their name. It is possible also that the \textit{Dardani} were Phrygians, and descendants of the Teurchi in Thrace; at least they are clearly distinguished from the Illyrians. (Polyb. v. 6.) Strabo, lastly, connects the Illyrian Heretes with those of Asia Minor who are mentioned by Homer (\textit{Il.} ii. 852), and even the Dalmatians are in one passage described as Armenians and Phrygians. (Gnemni, \textit{Anecd. Graec.} Ox. iii. p. 257.) If we sum up the results thus obtained, we find that at one time the Phrygians constituted the main body of the population of the greater part of Thrace, Macedonia, and Illyrion. Allusions to their migrations into these countries are not wanting, for they are frequently mentioned as the invasions of the Teurchi and Myzdians (Herod. v. 13, vii. 20; Strab. \textit{Fragm.} 37; Lycoph. 741, &c.), we have the account of the migration of Midas to the plains of Emathia, which evidently refers to the same great event. (Athen. xv. p. 603; Lycoph. 1397, &c.) The great commotions which took place in Asia and Europe after the Trojan War were most unfortunate for the Phrygians. In Europe the Illyrians pressed southwards, and from the north-east the Scythians forced their way through Thrace, and almost all the country east of the river Axios; Hellenic colonies were established on the coasts, while the rising state of the Macedonians drove the Phrygians from Emathia. (Sicyonwv. pp. 198, 261; Justin, viii. 1.) Under such circumstances, it cannot surprise us to find that the great nation of the Phrygians disappeared from Europe, where the Paeonians and Phrygians were their only remnants. It is probable that at that time many of them migrated back to Asia, an event stated by Xenophon ninety years before the Trojan War. It must have been about the same time that Lesser Mysia and Lesser Phrygia were formed in Asia, which is expressed by Strabo (xii. pp. 565, 571, 572, xiii. p. 586) in his statement that the Phrygians and Myzdians conquered the ruler of the country, and took possession of Thrace and the neighbouring countries. But in Asia Minor, too, misfortunes came upon the Phrygians from all quarters. From the south-east the Scythian tribes advanced furthest and further; Diadumenes (i. 2, &c.) represents Phrygia as subdued even by Ninus; but it is an historical fact that the Syrian Cappadocians forced themselves between the Armenians and Phrygians, and thus separated them. (Herod. i. 72, v. 49, vii. 72.) Strabo also (xii. p. 539) speaks of structures of Semi-rumians in Pontus. The whole of the south coast of Asia Minor, as far as Caria, received a Semitic population at a very early period; and the ancient Phrygian or Pelasgian people that name was imposed upon them by the condition of Helots. (Athen. iv. p. 271.) The latest of these Syro-phoenician immigrants seem to have been the Lydians (\textit{Lydia}), whose struggles with the Myzdians are expressly mentioned. (Strab. xiii. p. 612; Scylax, p. 36.) This victorious progress of the
PHYRGIA.

Semitic races exercised the greatest influence upon the Phrygians; for not only was their political importance weakened, but their national independence was lost, and their language and religion were so deeply affected that it is scarcely possible to separate the foreign elements from what is original and indigenous. In the north also the Phrygians were hard pressed, for the same Thracians who had driven the Scythians out of Europe, although Homer does not distinctly mention Thracians in Asia, yet, in the historical ages, they occupied the whole coast from the Hellespont to Heraclea, under the names of Thyini, Bithyni, and Mariandyni (Comp. Herod. vii. 75). The conflicts between the ancient Phrygians and the Thracians are alluded to in several legends. Thus king Midas killed himself when the Thracians ravaged Asia Minor as far as Paphlagonia and Cilicia (Strab. i. p. 61); the Mariandyni are described as engaged in a war against the Myssians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apol. i. 9. § 23, ii. 5. § 9; Apollon. Rhed. ii. 752, 780, 786, with the Schol.; Teet. Chil. iii. 808, &c.) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, according to others, only five years, and which is assigned to the beginning of the ninth century B.C., is probably connected with that age in which the Phrygians were engaged in personal wars (Diod. vii. 13; Synesd. p. 181); and it may have been about the same time that Phrygians from the Scamander and from Troy migrated to Sicily. (Paus. v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the coast of Asia Minor counteracted the spreading influence of the Semitic race; but still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the peninsula, and Croesus incorporated them with his own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are already distinguished ( Xenoph. Cyrop. i. 5. § 3, vi. 2. § 10, vii. 4. § 16, viii. 6. § 7), the former being governed by a satrap (ii. 1. § 5), and the latter, also called Phrygia on the Hellespont, by a king, (vii. 4. § 8.)

After having thus reached the period of authentic history, we are enabled to turn our attention to the condition of the Phrygians, and to ascertain to what extent they ultimately inhabited. As to the name Phryges, of which Bryges, Briges, Breuci, Bebryces, and Bebrethina are only different forms, we are informed by Hesychius (α. v. Εψητας) that in the language of the kindred Lydians (that is, Macedonians) it signified a "friarman." The nation bearing this name appears throughout of a very peaceable disposition, and unable to resist foreign impressions and influences. None of their many traditions and legends point, for a warlike or heroic period in their history, but all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordius. After the conquest of their country by Persia, the Phrygians are generally mentioned only with contempt, and the Phrygian names Midas and Maenæ were given to slaves. (Cic. p. Fusc. 27; Curt. vi. 11; Strab. vi. p. 504.) But their civilisation increased in consequence of their peaceful condition. Agriculture was their chief occupation; and whoever killed an ox or stole agricultural implements was put to death. (Nicol. Dastas. p. 148, ed. Orelli.) Gordius, their king, is said to have been called from the plough to the throne. (Arrian, Anat. ii. 3. § 1; Justin, xii. 7.) Phryg. (vi. 6) calls the biga an invention of the Phrygians. Great care also was bestowed upon the cultivation of the vine; and commerce flourished among them in the very earliest times, as we must infer from their well-built towns mentioned by Homer (II. iii. 400). The foundation of all their great towns, which are still inhabited, although Homer does not distinctly mention Thracians in Asia, yet, in the historical ages, they occupied the whole coast from the Hellespont to Heraclea, under the names of Thyini, Bithyni, and Mariandyni (Comp. Herod. vii. 75). The conflicts between the ancient Phrygians and the Thracians are alluded to in several legends. Thus king Midas killed himself when the Thracians ravaged Asia Minor as far as Paphlagonia and Cilicia (Strab. i. p. 61); the Mariandyni are described as engaged in a war against the Myssians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apol. i. 9. § 23, ii. 5. § 9; Apollon. Rhed. ii. 752, 780, 786, with the Schol.; Teet. Chil. iii. 808, &c.) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, according to others, only five years, and which is assigned to the beginning of the ninth century B.C., is probably connected with that age in which the Phrygians were engaged in personal wars (Diod. vii. 13; Synesd. p. 181); and it may have been about the same time that Phrygians from the Scamander and from Troy migrated to Sicily. (Paus. v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the coast of Asia Minor counteracted the spreading influence of the Semitic race; but still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the peninsula, and Croesus incorporated them with his own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are already distinguished ( Xenoph. Cyrop. i. 5. § 3, vi. 2. § 10, vii. 4. § 16, viii. 6. § 7), the former being governed by a satrap (ii. 1. § 5), and the latter, also called Phrygia on the Hellespont, by a king, (vii. 4. § 8.)

After having thus reached the period of authentic history, we are enabled to turn our attention to the condition of the Phrygians, and to ascertain to what extent they ultimately inhabited. As to the name Phryges, of which Bryges, Briges, Breuci, Bebryces, and Bebrethina are only different forms, we are informed by Hesychius (α. v. Εψητας) that in the language of the kindred Lydians (that is, Macedonians) it signified a "friarman." The nation bearing this name appears throughout of a very peaceable disposition, and unable to resist foreign impressions and influences. None of their many traditions and legends point, for a warlike or heroic period in their history, but all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordius. After the conquest of their country by Persia, the Phrygians are generally mentioned only with contempt, and the Phrygian names Midas and Maenæ were given to slaves. (Cic. p. Fusc. 27; Curt. vi. 11; Strab. vi. p. 504.) But their civilisation increased in consequence of their peaceful condition. Agriculture was their chief occupation; and whoever killed an ox or stole agricultural implements was put to death. (Nicol. Dastas. p. 148, ed. Orelli.) Gordius, their king, is said to have been called from the plough to the throne. (Arrian, Anat. ii. 3. § 1; Justin, xii. 7.) Phryg. (vi. 6) calls the biga an invention of the Phrygians. Great care also was bestowed upon the cultivation of the vine; and commerce flourished among them in the very earliest times, as we must infer from their well-built towns mentioned by Homer (II. iii. 400). The foundation of all their great towns, which are still inhabited, although Homer does not distinctly mention Thracians in Asia, yet, in the historical ages, they occupied the whole coast from the Hellespont to Heraclea, under the names of Thyini, Bithyni, and Mariandyni (Comp. Herod. vii. 75). The conflicts between the ancient Phrygians and the Thracians are alluded to in several legends. Thus king Midas killed himself when the Thracians ravaged Asia Minor as far as Paphlagonia and Cilicia (Strab. i. p. 61); the Mariandyni are described as engaged in a war against the Myssians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apol. i. 9. § 23, ii. 5. § 9; Apollon. Rhed. ii. 752, 780, 786, with the Schol.; Teet. Chil. iii. 808, &c.) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, according to others, only five years, and which is assigned to the beginning of the ninth century B.C., is probably connected with that age in which the Phrygians were engaged in personal wars (Diod. vii. 13; Synesd. p. 181); and it may have been about the same time that Phrygians from the Scamander and from Troy migrated to Sicily. (Paus. v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the coast of Asia Minor counteracted the spreading influence of the Semitic race; but still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the peninsula, and Croesus incorporated them with his own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are already distinguished ( Xenoph. Cyrop. i. 5. § 3, vi. 2. § 10, vii. 4. § 16, viii. 6. § 7), the former being governed by a satrap (ii. 1. § 5), and the latter, also called Phrygia on the Hellespont, by a king, (vii. 4. § 8.)

After having thus reached the period of authentic history, we are enabled to turn our attention to the condition of the Phrygians, and to ascertain to what extent they ultimately inhabited. As to the name Phryges, of which Bryges, Briges, Breuci, Bebryces, and Bebrethina are only different forms, we are informed by Hesychius (α. v. Εψητας) that in the language of the kindred Lydians (that is, Macedonians) it signified a "friarman." The nation bearing this name appears throughout of a very peaceable disposition, and unable to resist foreign impressions and influences. None of their many traditions and legends point, for a warlike or heroic period in their history, but all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordius. After the conquest of their country by Persia, the Phrygians are generally mentioned only with contempt, and the Phrygian names Midas and Maenæ were given to slaves. (Cic. p. Fusc. 27; Curt. vi. 11; Strab. vi. p. 504.) But their civilisation increased in consequence of their peaceful condition. Agriculture was their chief occupation; and whoever killed an ox or stole agricultural implements was put to death. (Nicol. Dastas. p. 148, ed. Orelli.) Gordius, their king, is
branch of it turning to the north-west, and by the mountains containing the sources of the Maeander, bore the surname Parorioris, it was a table-land, but, to judge from the many towns it contained, it cannot have been as barren as the northern plateau. In the west Phrygia comprised the upper valley of the Maeander, and it is there that we had the most beautiful and most populous parts of Phrygia; but that district was much exposed to earthquakes in consequence of the volcanic nature of the district, which is attested by the hot-springs of Hierapolis, and the Platonium, from which suffocating exhalations were sent forth. (Claudian, in Estrop. ii. 270, &c.; Strab. xii. pp. 578, &c., 629, &c.; Herod. vii. 30; Vitruv. viii. 3.)

Phrygia was a country rich in every kind of produce. Its mountains seem to have furnished gold; for that metal plays an important part in the legends of Midas, and several of the Phrygian rivers are called "auriferi." (Claudian, l. c. 258.) Phrygian marble, especially the species found near Smyrna, was very celebrated. (Strab. xii. p. 579; Paus. i. 18. § 8, &c.; Ov. Fast. v. 529; Stat. Silv. i. 5. 36.) The extensive cultivation of the vine is clear from the worship of Dionysus (Sabaicus), and Homer (II. ii. 184) also gives to the country the attribute ημελειςαρα. The parts most distinguished for its sheep and the fineness of their wool (Strab. xii. p. 578). King Amyntas is said to have kept no less than 300 flocks of sheep on the barren table-land, whence we must infer that sheep-breeding was carried on there on a very large scale. (Comp. Solid. s. r. Φρυγ. ωρας; Aristoph. Aie. 493; Strab. l. c. p. 568.)

When Alexander had overthrown the Persian power in Asia Minor, he assigned Great Phrygia to Antigonus, b. c. 333 (Arrian, Anab. i. 29), and during the first division of Alexander's empire that general retained Phrygia, to which were added Lycia and Pamphylia, while Leonnatus obtained Lesser Phrygia. (Dexipp. ap. Phot. p. 64; Curt. x. 10; Diod. xviii. 3; Justin, xiii. 4.) In the beginning of b. c. 321, Pericles assigned Greater Phrygia, and probably also the Lesser, to Eumenes (Justin, xiii. 6. Corn. Nep. Enum. 3), but in the new division of Thrace and Cappadocia, Eumenes recovered his former provinces, and Ariobarzanes obtained Lesser Phrygia, which, however, was taken from him by Antigonus as early as b. c. 319. (Diod. xviii. 39, xix. 51, 52, 75; Arrian, ap. Phot. p. 72.) After the death of Antigonus, in b. c. 301, Lesser Phrygia fell into the hands of Lysimachus, and Great Phrygia into those of Seleucus (Appian, Syr. 53), who, after conquering Lysimachus, in b. c. 282, united the two Phrygias with the Syrian empire. (Appian, Syr. 62; Justin, xxi. 14, 16; Hærw. Memv. 3.) Soon two other kingdoms, Bithynia and Pergamum, were formed in the vicinity of Phrygia, and the Gauls of Galatæa, the most dangerous enemy of the Asiatics, took permanent possession of the north-eastern part of Phrygia, the valley of the Sangarius. Thus was formed Galatæa, which in our maps separates Greater Phrygia from Paphlagonia and Bithynia; and the ancient towns of Gordion, Ancyra, and Penaeum now became the seats of the Gauls. To the east also Phrygia lost a portion of its territory, for Lycaonia was extended so far westward as to embrace the whole of the above-mentioned barren plateau. (Strab. xiv. p. 663.) It is not impossible that Attalus I. of Pergamum may have taken possession of Lesser Phrygia as early as b. c. 240, when he had gained a decisive victory over the Gauls, seeing that the Trocmi, one of their tribes, had dwelt on the Hellespont (Liv. xxxviii. 16); but his dominion was soon after reduced by the Syrian kings to its original dimensions, that is, the country between the Sinae Elaneus and the lap of Maeander river. However, after the defeat of Antiochus in the battle of Magnesia, in b. c. 191, Eumenes II. of Pergamum obtained from the Romans the greater part of Asia Minor and with it both the Phrygias. (Strab. xiii. p. 624; Liv. xxxvii. 54, &c.) Eumenes on that occasion also acquired another district, which had been in the possession of Prusias, king of Bithynia. Livy (xxviii. 39) calls that district Myasis, but it must have been the same country as the Phrygia Epipetetus of Strabo (xii. pp. 563, 564, 571, 575, 576). But Strabo is certainly mistaken in regarding Phrygia Epipetetus as identical with Lesser Phrygia on the Hellespont,—the former, according to his own showing, nowhere touching the sea (p. 564), but being situated south of the Mount Olympus (p. 575), and being bounded in the north and partly in the west also by Bithynia (p. 563). The same conclusion must be drawn from the situations of the towns of Azani, Mysæum, and Doryaleum, which he himself assigns to Phrygia Epipetetus (p. 576), and which Procopius also mentions as Phrygian towns. These facts clearly show how confused Strabo's ideas about those countries were. The fact of Livy calling the district Myasis is easily accounted for, since the names Phrygia and Myasis are often confounded, and the town of Cadi is sometimes called Myasian, though, according to Strabo, it belonged to Phrygia Epipetetus. It was therefore unquestionably this part of Phrygia about which Eumenes of Pergamum was at war with Prusias, and which by the decision of the Romans was handed over to the Pergamene king, and hence obtained the name of Phrygia Epipetetus, that is, "the acquired in addition to." (Polyb. Excerpt. de Legat. 128, 129, 135, 136; Liv. xxxix. 51; Strab. p. 563.) After the death of Attalus III., b. c. 173, all Phrygia with the rest of the kingdom of Pergamum fell into the hands of the Romans. A few years later, when the kingdom of Pergamum became a Roman province, Phrygia was divided into three districts, Greater Phrygia (Liv. xxxviii. 1; Appian, Bell. Mithr. 57), but after his death in b. c. 120 it was taken from his son and successor, Mithridates VI., and declared free. (Appian, l. c.) This freedom, however, was not calculated to promote the interests of the Phrygians, who gradually lost their importance. The Romans afterwards divided the country into jurisdictions, but without any regard to tribes or natural boundaries. (Strab. xiii. p. 629; Plin. v. 29.) In b. c. 88 the territory of Phrygia was divided into districts of Cœle, Hierapolitis, and Euromis, and Phrygia seems to have been added to the province of Cœle. (Cic. in Verr. i. 17. 37.) But this arrangement was not lasting, for afterwards we find those three districts as a part of the province of Asia, and then again as a part of Cœle, until in b. c. 49 they appear to have become permanently united with Asia. The east and south of Phrygia, however, especially the towns of Apollonia, Antiochæa, and Philomelium, did not belong to the province of Asia. In the new division of the empire made in the 4th century A. d., Phrygia Parorios was added to the province of Phrygia, and a district on the Maeander to Caria.
The remaining part of Phrygia was then divided into Phrygia Salutaris, comprising the eastern part with Syria, and Phrygia Pacatiana (sometimes also called Capatiana), which comprised the western part (a division of the frontiers of Caria). (Voll. Imp. c. 2; Hieroc. pp. 664, 676; Constant. Porph. de Them. i. 1; Ducas, p. 42; see the excellent article Phrygia in Pauly’s Realencyclopädie, by O. Abel; Craner, Asia Minor, ii. p. 1, &c.; Niebuhr, Lect. on Anc. Hist. i. p. 85, &c., ii. p. 382.)

PHRYGIA PISIDICA. [Pisidica.]

PHETHITES NOMOS (Φηθήται οίνος, Liv. v. 5; Plin. v. 9, s. 8), another name for the Nymphae Chlemmites in the Assyrian Delta. (Steph. Byz.)

PHTHIA. [Phthia.]

PHTHIA, PHTHIOTIS. [Thessalia.]

PHTHIRA (Φθήρα, Steph. B. v. e. v.; written Φθήρα in Meineke’s edition of Stephanus), a mountain in Caria, inhabited by the Phthires, is evidently the same as the Φθήρας of Homer (Il. ii. 868), which, according to Hecataeus, was identical with Mt. Latmus, but which others supposed to be the same as Mt. Grus, running parallel to Mt. Latmus. (Strab. viii. 673.)

PHTHIROMPHIS (Φθηρόμοφοι), i. e. “ice-eaters,” a Scythian people, so called from their skill and diet (άιτου τοῦ σκυλου καὶ τοῦ πινοῦ, Strab. vi. p. 449). Some modern writers endeavour to derive their name from φθηρ, the fruit of the pirus or fir-tree, which served as their food (Litter, Vorhalle, p. 549), but there can be no doubt, from the explanation of Strabo, of the sense in which the word was understood in antiquity. This savage people are variously described by different writers. According to Strabo they inhabited the mountains of Caucæus (Strab. vii. pp. 492, 499), and according to other writers different parts of the coast of the Black Sea. (Arrian, Per. P. Eux. p. 18; Mela, i. 18; Plin. vi. 4.) Ptolemy places them in Asiae Sarmatiae beyond the Rh. (v. 9. § 17). According to Piny (vi 4) they were subsequently called Sahac. The Bodini are also said to have ate lice (Φθηρομοφοι, Herod. iv. 109).}

PHTHIROMPHIS (Φθηρομοφοι), Procop. i. 3 § 3; Φθηρύς, Jos. Antiq. i. 8 § 2; Fut, Plin. v. 1), a river of Mauretania, which has been identified with the Wady Tensift. In the ethnographic table of Genesis (x. 6), Phut is reckoned among the sons of Ham. This immediate descent of Phut (a name which is generally admitted to indicate Mauretanians) from Ham indicates, like their Greek name, the depth of colour which distinguished the Mauretanians. In Ezekiel (xxvi. 10) the men of Phut are represented as serving in the Tyrian armies (comp. xxx. 5, xxxvii. 5); as also in Jeremiah (xxvi. 9) they are summoned to the hosts of Assyrg; and in Nahum (iii. 9) they are the helpers of Nineveh. (Winer, Rechwebert, s. v.; Kenrick, Phoenicia, pp. 137, 277.)

PHUNOSU (Φωνοσυσσών), a tribe mentioned by Ptolemy (ii. 11. § 12) as inhabiting the Chersonesus Cimmerica in the north of Germany, and dwelling north of the Cebandii and Chali. Zeuss (Die Deut. seiner, p. 139), without satisfactory reasons, regarded them as the same with the Scelusi mentioned by Caesar (B. G. i. 31, 37, 51). [L. S.]

PHURGOSATIS (Φωργοσατής), a town in the south of Germany, mentioned only by Ptolemy (ii. 11. § 30); it was situated in the country of the Vol. II.
PHYSCUS (Φύκος; Etb. Φυκός), a town of Caria, in the territory of the Rhodii, situated on the coast, with a harbour and a grove sacred to Leto. (Strab. xiv. p. 652; Stadijmm. Mar. Mag. § 245; Ptol. v. 2. § 11, where it is called Φύκα.) It is impossible to suppose that this Physcus was the port-town of Mylasa (Strab. xiv. p. 659); we must rather assume that Pasaia, the part of Mylasa, also bore the name of Physcus. Our Physcus was the ordinary landing-place for vessels sailing from Rhodes to Asia Minor. (Strab. xiv. p. 653; comp. Stephan. B. s. v.) This harbour, now called Harmocina, and a part of it Physco, is one of the finest in the world, and in 1801 Lord Nelson's fleet anchored here, before the battle of the Nile. [L. S.]

PHYSCUS, a tributary of the Tigris. [Tigris.]

PHYTEUM (Φυτεύμ, Pol. v. 7; Φυτεία, Stephan. B. s. v.; Gafla), a town of Aetolia, probably on the northern shore of the lake Trichonis. (Leake, Northern Greece, vol. i. p. 155.)

PHYTIA or PHOETEIAE (Φύττια, Thuc. iii. 106; Φοιτεια, Pol. iv. 63; Φουτια, Stephan. B. s. v.; Eth. Φοιτεύς, Φοιτεύς, Φοίτας, -ςρος: Πορτος), a town in the interior of Acarnania, situated on a height. W. of Stratus, and strongly fortified. It lay on the road from Stratus to Medenum and Limnaea. After the time of Alexander the Great it fell into the hands of the Aetolians, together with the other towns in the W. of Acarnania. It was taken by Philip in his expedition against Aetoli in b.c. 219; but the Aetolians, doubtless, obtained possession of it again, either before or after the conquest of Philip by the Romans. It is mentioned as one of the towns of Acarnania in a Greek inscription found at Punta, the site of Actium, the date of which is probably prior to the time of Augustus. In this inscription the name of Φοιτεύς occurs, which is analogous to Ακραυλαί, Αινίας, Αινοτόκις, Αθέαδι, Αγασία. (Thuc., Pol., ll. cc.; Böckh, Corpus Inscription., No. 1793; Leake, Northern Greece, vol. iii. p. 574, seq.)

PIALA (Πίαλα), a town in the interior of Pontus Galatiae, mentioned only by Polyen. (v. 6. § 9). [L. S.]

PIALA (Πίαλα or Πιάλα), Pol. vi. 16. § 6, a town of Serica, from which the people Pialae (Πιάλαι or Πιαλαί), dwelling as far as the river Orichus, derived their name. (Pol. vi. 16. § 4.) In some MSS. of Pliny (vii. 17. s. 19) the Pialae are mentioned as a people in Scythia intra lacon, but Silig reads Pceosae.

PIALAE. [Piala.]

PIALIA (Πιαλία), a town of Histiaetis in Thessaly, at the foot of Mt. Cerereum, probably represented by the Hellenic remains either at Scetà or Arildom. (Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 529.)

PIANEXNII (Πιανεξνίι, Pol. iii. 10. § 9), a people of Moesia Inferior, adjoining its southern or Thracian boundary. [T. H. D.]

PICABIA (Πικαβία). [Dalmatia.]

PICEN (Πικεν) (Πικένος, 17th. iii. 9. § 2), a tribe seated in the NE. part of Moesia Superior, on the river Thetares. [T. H. D.]

PICENTES. [Picanum.]

PICENTIA. [Picentini.]

PICENTIN (Πικεντίν, Pol.; Pikes, Strab.), a tribe or people of Central Italy, settled in the southern part of Campania, adjoining the frontiers of Lucania. Their name obviously indicates a close connexion with the inhabitants of Picenum on the opposite side of the Italian peninsula; and this is explained by Strabo, who tells us that they were in fact a portion of that people who had been transported by the Romans from their original abodes to the shores of the Tyrrhenian sea. (Strab. v. p. 251.)

The period of this transfer is not mentioned, but it in all probability took place on or shortly after the conquest of Picenum by the Romans, B.C. 268. During the Second Punic War, the Picentini espoused the cause of Hannibal, for which conduct they were severely punished after the close of the war, being, like the Lucanians and Bruttians, prohibited from military service, and employed for the inferior duties of public messengers and couriers. They were at the same time compelled to abandon their chief town, which bore the name of Picentia, and to disperse themselves in the villages and hamlets of the surrounding country. (Strab. l. c.) The more effectually to hold them in check, the Romans in B.C. 194 founded in their territory the colony of Salernum, which, quickly to become a flourishing town, and the chief port of the surrounding districts. (Strab.; Liv. xxxiv. 45; Vell. Pat. l. 15.) Picentia, however, did not cease to exist: Florus indeed appears to date its destruction only from the period of the Social War (Flor. iii. 18); but even long after this it is mentioned as a town both by Mela and Pliny, and its name is still found in the Tabula as late as the 4th century. (Miel. ii. 4. § 9; Plin. iii. 5. s. 9, Tab. Peut.) The name of Picentia is still borne by a hamlet on the road from Salerno to Eboli, and the stream on which it is situated is still called the Piccntino; but it is probable that the ancient city was situated rather more inland. (Romanelli, vol. iii. p. 610; Zanoni, Carta del Regno di Napoli.)

The boundaries of the Picentini are clearly marked both by Mela and Pliny. They occupied the southern slope of the ridge of mountains which separates the gulfs of Posillonia from that of Naples, extending from the promontory of Minerva to the mouth of the Silarus. Poleney alone extends their confines even to the coast of the Sarus, and includes Surrentum among their towns. (Pol. iii. 1. § 7.) But there is little doubt that this is inaccurate.

The name of Picentini is generally confined by geographers to the petty people in question, that ofPicentes being given to the people of Picenum on the Adriatic. But it is doubtful how far this distinction was observed in ancient times. Picentinus is used as an adjectival form for "belonging to Picenum" both by Pompey (ap. Cic. ad Att. viii. 12. 6) and Tacitus (Hist. iv. 63); while Strabo names Picentinos for the people of Picenum, and Picentes for those in Campania. The latter are indeed so seldom mentioned that we can hardly determine what was the general usage in regard to them. [E. H. B.]

PICENTINUM, a place in Pannonia, on the left bank of the Savus, on the road from Siscia to Strium. (H. Ant. p. 260.) It is possible that some ancient remains now called Kula may mark the site of the ancient Picentium. [L. S.]

PICENUM (q. Picerum, Pol., Strab.; Etb. Picentiorum, Strab.; Picenis, Pol., Picentis, Cic. Varr., Plin., &c., but sometimes also Picentini and Picenti), a province or region of Central Italy, extending along the coast of the Adriatic from the mouth of the Aois to that of the Martius, and inland as far as the central ridge of the Apennines. It was thus bounded on the W. by the Umbrians and Sabines, on the S. by the Vestini, and on the N. by
the territory occupied by the Galli Secunes, which was afterwards incorporated into the province of Umbria. The latter district seems to have been at one time regarded as rather belonging to Picenum. Thus Polybius includes the "Gallicus Agrer" in Picenum; and Livy even describes the colony of Ariminum as founded in Picenum. (Pol. ii. 21; Liv. Epit. xv.) But the boundaries were definitely established, as above stated, in the time of Augustus, according to whose division it constituted the Fifth Region of Italy. (Plin. iii. 13. s. 18; Strab. v. p. 240.) The district thus bounded forms a tract of about 80 geographical miles (800 stadia, Strab. v. p. 241) in length, with an average breadth of from 30 to 40 miles. The southern part of the territory thus limited was inhabited by a tribe called the Praetutii, that appear to have been to some extent a different people from the Picentes; hence Pliny gives to this district the name of Regio Praetutiana; and Livy more than once notices the Praetutianus Ager, as if it were distinct from the Picenum Ager. (Plin. l. c.; Liv. xxi. 9, xxvii. 43.) The narrow strip between the rivers Vomana and Matrinus, called the Ager Hadrianius, seems to have also been regarded as in some degree a separate district (Plin. l. c.; Liv. xxi. 9); but both these tracts were generally comprised by geographers as mere subdivisions of Picenum in the more extensive sense.

Very little is known of the history of the Picentes; but ancient writers seem to have generally agreed in assigning them a Sabine origin; tradition reported that they were a colony sent out from the parent country in consequence of a vow, or what was called a sacred spring; and that their name was derived from a Woodpecker (picae), the bird sacred to Mars, which was said to have guided the emigrants on their march. (Strab. v. p. 240; Plin. iii. 13. s. 18; Fest. v. Picena, p. 212.) Silius Italicus, on the other hand, derives it from the name of Picus, the Italian divinity, whom he represents as the founder of Asculum (Sil. Ital. viii. 439—443); but this is in substance only another form of the same legend. That writer represents the region as previously possessed by the Pelasgians; no mention of these is found in any other author, but Pliny speaks of Siculians and Liburnians as having settled especially in the Praetutian district, where Trueutam was said to preserve traces of a Liburnian colony (Plin. l. c.); while the foundation of Numana and Ancona, further to the N., was ascribed to the Siculi. (16.) We have no means of estimating the value of these statements; but it seems not improbable that in the last instance there was a confusion with the colony of Siculiens Greeks which was established at a much later period at Ancona [Ancona.] This Picenum, which was founded about 350 B.C., by a body of Syracusan exiles who had fled from the tyranny of Dionysius (Strab. v. p. 241), was the only Greek colony in this part of Italy; and its foundation is the only fact transmitted to us concerning the history of Picenum previous to the time when it was brought into contact with the power of Rome. The Picentes appear to have stood aloof from the long protracted contests of the Romans with their Samnite neighbours; but their proximity to the Gauls caused the Romans to court their alliance; and a treaty concluded between the two nations in B.C. 299 seems to have been faithfully observed until after the Sennes had ceased to be formidable. (Liv. x. 10.)

The Picentes reaped the advantages of this long peace in the prosperity of their country, which became one of the most populous districts in Italy, so that according to Pliny it contained a population of 360,000 citizens at the time of the Roman conquest. (Plin. l. c.) Nevertheless they seem to have offered but little resistance to the Roman arms, and were reduced by the Scipio Africanus, with the aid of Appius Claudius in a single campaign, B.C. 268. (Flor. i. 19; Liv. Epit. xv; Oros. iv. 4; Eutrop. ii. 16.) The causes which led to the war are unknown; but the fact that the Picentes and Samnites were at this time the only two nations of Italy that remained unsubdued is quite sufficient to explain it.

From this time the Picentes lapsed into the ordinary condition of the subject allies of Rome; and though their territory is repeatedly mentioned as suffering from the ravages of the Second Punic War (Pol. iii. 86; Liv. xxi. 9, xxvii. 43), the name of the people does not again occur in history till the great outbreak of the nations of Italy in the Social War, B.C. 90. In that memorable contest the Picentes bore a prominent part. It was at Asculum, which seems to have been always regarded as their capital, that open hostilities first broke out, the massacre of the procous Q. Servilius and his legate Fonteius in that city having, as it were, given the signal of the general insurrection. (Appian, B. c. l. 38; Liv. Epit. lxxii; Vell. Pat. iii. 15; Dio. lxxxii. 2.) The first attempt of Cn. Pompeius Strabo to reduce Asculum was repulsed with loss; and it was with difficulty that that general could maintain his footing in Picenum while the other Roman armies were occupied in hostilities with the Marsi, Peligni, and other nations nearer Rome. It was not till the second year of the war that, having obtained a decisive victory over the allies, he was able to re- gain the offensive. Even then the Picente general Judaeus and Sallustius continued a long struggle against Pompeius, which was at length terminated by the surrender of Asculum, and this seems to have been followed by the submission of the rest of the Picentes, B.C. 89. (Appian, B. c. l. 47, 48; Liv. Epit. lxxxiv, lxxxvi; Oros. v. 18; Flor. iii. 18.) There can be no doubt that they were at this time admitted, like the rest of the Italian allies, to the Roman franschise.

Picenum was occupied almost without opposition by Caesar at the commencement of the Civil War, B.C. 49 (Caes. B. c. i. 11-15), the inhabitants having universally declared in his favour, and thus compelled the officers of Pompey to withdraw from Auximum and Asculum, which they had occupied with strong garrisons. In the civil war between Vitellius and Vespasian A.D. 69, it was occupied in like manner without resistance by the forces of the latter. (Tac. Ann. i. 42.) Picenum appears to have continued to be a flourishing province of Italy throughout the period of the Roman Empire; and though Pliny speaks of it as having much fallen off in population compared to earlier times ("quandam aberrine multitudinis," Plin. iii. 13. 18), it still contained a large number of towns, and many of these preserved their consideration down to a late period. It is probable that its proximity to Ravena contributed to its prosperity during the latter ages of the Empire, after that city had become the habitual residence of the emperors of the West. Under Augustus, Picenum became the Fifth Region of Italy (Plin. l. c.), but at a later period we find it combined for administrative purposes with the district
PIECEM.

called Flaminia, and the two together constituted a province which comprised all the strip of Umbria along the coast of the Adriatic, as well as the territory of the Salinum, Vести fini, Pechini, and Marsi. Hence we find the Liber Calendarii including the whole of this extensive district under the name of Picenum, and enumerating not only Alia and Nuvia, but even Nomentum, Fidenae, and Tibur, among the "civitates Picenum." (Lib. Colon. p. 252-259.)

But this arrangement did not last long. Flaminia and Valeria were again separated from Picenum, and that province was subdivided into two: the one called "Picenum Suburbicarium," or simply Picenum, which was the original district of that name, corresponding to the Fifth Region of Augustus, while the name of "Picenum Ammonarium" was given to the tract from the Aesis to the Rubicon, which had been originally known as the "Gallicus Acer," and in the days of Augustus was comprised under the name of Umbria. (Lib. Colon. pp. 225-227; Mommsen, Die Lib. Col. pp. 209-214; Notiti. Dignit. ii. pp. 64, 63; Böcking, ad Not. p. 432, 443; P. Disc. ii. 19.)

In the wars between the Goths and the generals of Justinian, Picenum repeatedly became the immediate theatre of hostilities. Auximine in particular, which was at this time the chief city or capital of the province, was regarded as one of the most important fortresses in Italy, and withstand for a long time the arms of Belisarius. (Procop. B. G. ii. 10, 23-27.) After the expulsion of the Goths, Picenum became one of the provinces of the exarchate of Ravenna, and as such continued subject to the Greek emperors until the final downfall of the exarchs. It was the limit that arose the geographical designation of the Pentapolis, for a province which comprised the greater part of Picenum, together with the maritime district of Umbria as far as Ariminum. The province of this name was one of those bestowed on the sea of Rome by king Pepin after the defeat of the Lombard king Astolphus (A.D. 754), and has ever since continued to form part of the States of the Church.

Picenum is a district of great fertility and beauty. Extending in a broad band of nearly uniform width from the central ranges of the Apennines, which form its boundary on the W., and which here attain their greatest elevation in the Monte Corno and Monti della Sibilla, it slopes gradually from thence to the sea; the greater part of this space being occupied by green hills, the underrails of the more lofty Apennines, which in their more elevated sections are clothed with extensive forests, while the lower slopes produce abundance of fruit-trees and olives, as well as good vine and corn. (Strab. v. p. 240; Liv. xii. 9.) The Horace and Juvenal extol the excellence of its apples, and Pliny tells us its olives were among the choicest in Italy. (Hor. Sod. ii. 3, 272, 4, 70; Juv. xi. 72; Plin. xv. 3, 4.) The whole district is furrowed by numerous streams, which, descending with great rapidity from the lofty ranges of the Apennines, partake much of a torrent-like character, but nevertheless serve to irrigate the whole country, which is thus rendered particularly the pleuestant in Italy. These streams pursue nearly parallel courses, the shortest distance from their sources to the sea in no case much exceeding 40 miles. They are, proceeding from S. to N., as follows: (1) The Matrinus, now called La Plombata, a small stream which formed the southern limit of Picenum, separating it from the territory of the Vetti; (2) the Vomans, still called the Pannonum, which separated the district of Adria from that of the Præctuli; (3) the Batinus, now called the Tordino, but sometimes also the Tertinum, which flows by Termino (Lentovia); (4) the Trentum (Trento), the most considerable of all these streams, which flows under the walls of Ascoli (Asculum); (5) the Tinna, still called the Tenna; (6) the Flusum, now the Chienti; (7) the Potentia, still called the Potenza; (8) the Miso or Misium, now known as the Musone. These last names are known only from the Tabular, on the other hand Pliny mentions a stream called Albula, to which are added in some MSS. the names of Sulliani and Manzani, which afterwards were confusedly distributed between the river Trentum and the town of Copra Maritima; but besides the uncertainty of the reading, the whole description of this region in Pliny is so confused that it is very unsafe to rely upon his order of enumeration. The Albula cannot be identified with any certainty, but may perhaps be the stream now called the Salineillo, and the other two names are probably mere corruptions. 9. The Aesis (Estivo), a much more considerable stream, flowing into streams between Ancona and Semo Gallicum, formed the boundary which separated Picenum from Umbria.

The towns of Picenum are numerous, and, from the accounts of the populousness of the country in early times, were probably many of them once considerable, but few have any historical celebrity. Those on the sea-coast (proceeding as before from S. to N.) were: (1) Matrinus, at the mouth of the river of the same name, serving as the port of Adria (Strab. v. p. 241); (2) Castrium Numus, at the mouth of the river called Giulia Nova; (3) Castrium Truentinum of Truentum, at the mouth of the river of the same name; (4) Cupra Maritima, at Le Grotte a Mare, about 3 miles N. of S. Benedetto; (5) Castrium Firmianum, now Porto di Verona, at the mouth of the little river Leto; (6) Potentia (Sta Maria a Potenza), at the mouth of the river of the same name; (7) Numana, still called Umano, at the southern extremity of the maritime part of the district called Monte Ceppon, or Monimius, sometimes called Monte Ancina, at the northern end of the same promontory. This last was by far the most important of the maritime towns of Picenum, and the only one that possessed a port worthy of the name; with this exception all the most important cities of the region were situated inland, on hills of considerable elevation, and thus enjoyed the advantage of strong positions as forresses. The most important of these were Auximum (Osimo), about 12 miles S. of Ancona; Cingulum (Cingoli), in a very lofty situation, between the valleys of the Aesis and Potentia; Firmium (Fermo), on a hill about 6 miles from the sea; Asculum (Ascoli), the ancient capital of Picenum, in a very strong situation on the river Tracentum, about 22 miles from its mouth; Interamna (Teramo), the chief city of the Prœctuli; and Adria (Attri), almost close to the southern frontier of Picenum. The minor towns in the interior were Berceto, which may perhaps be placed at Civitella di Tronto mentioned by Ascoli; Castrium Præctuli; Cupra Magna, probably at Monte di Noire, near Montalto; Faleria (Foligno), in the upper valley of the Tiber; Ursus Salvia (Ursigia) and Tolent-
PICTAVI. [Pictones.]

PICTI. The names of the Picti and Scotti appear only in late writers, by whom they are spoken of as two allied people. The Picti seem to have been identical with the ancient Caledonians ("Caledonii aliorumque Pictonum, silvae et paludum") Ennem. Pan. vi. 7), and dwelt N. of the Firth of Forth (Bela, H. Ecol. l. 1). Ammianus Marcellinus represents the Picti as divided, in the time of the emperor Constanst, into two tribes, the Deidione and Vecturiones, and as combining fearful ravages in conjunction with the Attacoti and Scotti (xxvii. 3. § 4.) Their ethnological relations have been already discussed [Britanniae Insularum, Vol. I. p. 438]. The name of Picti, or painted, is commonly supposed to be derived from their custom of painting their bodies, and would thus be only a translation of the British word *Pritigh*, signifying anything painted, and which, according to Camden (Gum. Descr. p. xxvii.), is the root of the name Briton. Such an etymology favours the notion that the Picts were an insular race; but on this point nothing positive can be affirmed. (Comp. Ann. Marc. xx. 1, xxvi. 4; Beila, H. Ecol. iii. 4. v. 2L) [T.H.D.]

PICTONES (Pictones), and, at a later period, Pictavi, were a Gallic nation, south of the Loire and on the coast of the Atlantic. Ptolemy (ii. 7. § 6) places them in Cihologalia Aquitania, and mentions two of their towns, Limonium or Lemunon (Pobaler) and Raitaitum. "They occupy," he says, "the most northern parts of Aquitania, those on the river (Liger), and on the sea." Strabo (iv. 190, 191) makes the Loire the boundary between the Nannetes and the Pictiotes. South of the Pictavi he places the Santones, who extend to the Garonne.

The Pictones are mentioned by Caesar. He got ships from them for his war against the Veneti ([B. G. iii. 11]. The Pictones joined Verecordingas in b. c. 52, when he was raising all Gaul against Caesar. In b. c. 51 C. Caminius, a legatus of Caesar, marched into the country of the Pictones to relieve Lemunon, which was besieged by Dumnunus ([B. G. viii. 26]. [Lemunon.]"

Lucan (i. 436) says that the Pictones were "immunes," or paid no taxes to the Romans:

"Pictones immunes subjugant sua terram."

His authority is not worth much; and besides that, this verse and the four verses which follow are probably spurious. (Notes in Oedipus's edition of Lucan.)

The territory of the Pictones was bounded on the east by the Turrens and Bituriges Cubi. It corresponded to the *diiocese of Poitiers*. [G. L.]

PICTONIUM PROMONTORIUM, as it is now generally written, but in Ptolemy (ii. 7. § 1) Pectonium (Πεκτόνιον ήκασταρυ) is placed by him on the coast of Gallia Aquitana, between the mouth of the river which he names Canetunns [Carantonis] and the port Secor or Secus. It is impossible to determine what point of land is Pecatonum. Ptolemy supposes it to be *L'Aiguillon* near the mouth of the *Sere Norteuse*; and Gossellin takes it to be *La Pointe de Bousinet*.

[G. L.]

PIDA (Ithca), a town in Pontus Galaticus, on the road leading from Amaia to Nocacaeareia. (Ptol. v. 6. § 9; Tab. Punt., where it is called Pidac.) [L.S.]

PIENGITAE (Πιγγηται, Ptol. iii. 5. § 20), a people in European Sarmatia, supposed by Schnark to be the inhabitants of the river *Pien*, which falls into the *Pythag* near *Pind* (Statische Alter-thümer, vol. i. p. 207).

PIEIA. [Cirium.]

PIERES (Piipers), a Thracian people, occupying the narrow strip of plain land, or low hill, between the mouths of the Peneus and the Halacmon, at the foot of the great woody steeps of Olympus. (Thuc. ii. 99, Strab. vii. p. 331, Fr. 22, ix. p. 410; Liv. xiv. 9.) This district, which, under the name of *Pieria or Pireus* (Πιρέα, Πύρεια), is mentioned in the Homeric poems (H. xiv. 225), was, according to legend, the birthplace of the Muses (Hesiod, Thog. 53) and of Orpheus, the father of song. (Apoll. Argon. i. 23.) When this worship was introduced into Boeotia, the names of the mountains, grots, and springs with which this poetical religion was connected, were transferred from the N. to the S. Afterwards the Pieres were expelled from their original seats, and driven to the N. beyond the Strymon and Mount Pangaeus, where they formed a new settlement. (Herod. vii. 112; Thuc. l. c.) The boundaries which historians and geographers give to this province vary. In the systematic geography of Ptolemy (iii. 13. § 15) the name is given to the extent of coast between the mouths of the Ladias and the Halacmon. *Pieria* was bounded on the W. from the contiguous district of the Thessalian Perihebia by the great chain of Olympus. An effecl from Olympus Alpine ranges along the Pierian plain, in a NW. direction, as far as the ravine of the Halacmon, where the mountains are separated by that chasm in the great eastern ridge of Northern Greece from the portion of it anciently called Bernius. The highest summit of the Pierian range called *Pereus Mons* (Ptol. iv. 15; comp. Pansan. ix. 29. § 3; x. 13. § 5) rises about 8 miles to the N. of *Vla- bhikohvradh*, and is a conspicuous object in all the country to the E. It would seem that there was a city called *Pieria* (Πυρεια; Ekle. Πυρεια, Piers. 8. 3. 3).
PIEKIA. [Steph. B. v. Ktirios], which may be represented by a "tumulus", overgrown with trees upon the extremity of the ridge of Androlooe, where it ends in a point between Dium and Pydna, especially on the chief cities of Pieria. Beyond Pydna was a considerable forest, called "Pieria Siva" (Liv. xiv. 43), which may have furnished the Plian pitch, which had such a high reputation. (Herod. iv. 195; Plin. xiv. 25.) The road from Pella to Larissa in Thessaly passed through Pieria [Macedonia, Vol. ii. p. 257, a.], and was probably the route which the consul Q. Marcus Philippus pursued in the third and fourth years of the Persian War. (Livy. xiv. 1-10; Leake, Northern Greece, vol. iii. pp. 157, 216, 337, 418, 446.) [E. B. J.]

PIERIA (Pierea). 1. A district in Macedonia, [Pierias.]

2. A district in Syria; a name given by the Macedonians to the northern coast of Syria, on the right bank of the Orontes. The principal mountain in this district, and which was a southern branch of the Amatus, was also called Pieren. (Strab. xvi. pp. 749, 751; Pol. v. 15, § 8.) The chief town was Seleucia, which is frequently distinguished from the other towns of the same name by the addition of de Pieren, as for example in coins. (Eckhel, vol. iii. p. 324; C. ad Att. xii. 20.)

PIERIA. [Cireium.]

PIERIUM. [Cireium.]

PIGUNTIA. [Dalmata.]

PILÔTRUS (Pilopos, Herod. vii. 122; Steph. B.), a town of Sthocnia in Macedonia, upon the Sogtic gulf, between Sane and Cape Ampelus, which probably occupied Vourvoüst, or one of the harbours adjacent to it on the N. (Leake, Northern Greece, vol. iii. pp. 630, 706.)

PIMÔLISA (Pimoljera), a fort in the western part of Pounts, on the river Isthus. (Steph. B. s. v.) In Strabo's time (xii. p. 562, where it is called Pimolisen) the fortress was destroyed, but the district on both sides of the river was still called Pimoliscene. [L. S.]

PÎMÎLÎA (Pîmîlja, Strab. ix. p. 410; Apollon. i. 23; Luc. p. 273), a place in Pieria, where Orpheus was said to have been born, and from which the city which bears his name derived its name, Orphaeis, after the Alexandrian poets. (Orph. Fruges, 401; "Pimileus dulcis," Horat. Car. i. 26. 9; Stat. Sil. i. 9. 26.) Leake (Northern Greece, vol. iii. p. 422) identified it with the elevated situation of Litokhoros and its commanding prospect. [E. B. J.]

PÎMPRANIA (Pîmpriana, Arrian, Anat. v. 22), a place which appears to have been the capital of the tribe of Adrianites, a nation mentioned by Arrian as existing about a day's journey from the Hydroline (Irreth.). The name has an Indian form and sound, but has not so far as we know, been identified with any existing place. [V.]

PÎNAÎRA (tà Pînaîra: Eth. Pînaîros). 1. A large city of Lyca, at the foot of Mount Cragus, and not far from the western bank of the river Xanthus, where the Lycaean hero Pandarus was worshipped. (Strab. xiv. 656; Steph. B. s. v.; Arrian, Anat. v. 24; Plin. v. 28; Pol. v. 3, § 5; Herod. p. 624.) This city, though it is not often mentioned by ancient writers, appears, from its vast and beautiful ruins, to have been, as Strabo asserts, one of the largest towns of the country. According to the Lycaean history of Meneclates, quoted by Stephanus Byz. (x. v. Ar'tiurgos), the town was a colony of Xanthus, and originally bore the name of Artyrmuss, afterwards changed into Pinara, which, in the Lycaean language, signified a round hill, the town being situated on such an eminence. Its ruins were discovered by Sir Charles Fellows, near the modern village of Minama. "From amidst the ancient city," he says (Lycia, p. 139), "rises a singular round rocky cliff (the pinara of the Lycians), literally specked all over with tombs." Beneath this cliff lie the ruins of the extensive and splendid city. The theatre is in a very perfect state; all the seats are remaining, with the slanting sides towards the prosenium, as well as several of its doorways. The walls and several of the buildings are of the Cyclopean style, with massive gateways, formed of three immense stones. The tombs are innumerable, and the inscriptions are in the Lycaean characters, but Greek also occurs often on the same tombs. Some of these rock-tombs are adorned with fine and rich sculptures. (See the plate in Fellows facing p. 141.)

2. A town of Cilicia (Plin. v. 22), perhaps the same as the one mentioned by Polyb. (v. 15, § 12) as situated in Pieria, a district of Syria; though it should be observed that Pliny (v. 19) mentions the Pinaratae as a people in Coelesyria. [L. S.]

PINASUS. [Insits.]

PINDASUS, a mountain in the south of Myia, a branch of Mount Taurus, stretching towards the Sinus Eusa, and containing the sources of the river Cetus. (Plin. v. 33.) [L. S.]

PÎNĐENISSIUS (Eth. Pindenissittne), a town of the Eleutheria-Cilices, situated upon a commanding height of Mt. Amarus, which was taken by Cicer, when he was governor of Cilicia, after a siege of fifty-seven days. (Cic. ad Att. v. 29, ad Fam. ii. 10, xv. 4.)

PÎNĐUS (Pindos, Herod. i. 56, vii. 129; Strab. ix. pp. 428, 430, et alli), a long and lofty range of mountains in Northern Greece, running from north to south about midway between the Ionian and Aegean seas, and forming the back-bone of the country, like the Apennines of the Italian peninsula. It is in fact a continuation of the same range which issues from the Balkan Mountains, and it takes the name of Pelagonia. It is called Pindus by the northern boundary of Hellus Proper at the 40th degree of latitude. Pindus forms the boundary between Thessaly and Epirus. In its northern part it is called Lacoon or Lacunus, and here the five principal rivers of Northern Greece rise,—the Haianemont, Peneius, Achelous, Ararthus, and Aeus. (Lacoon.) To that part of the range S. of Lacoon the name of Cerceium was given. (Katakeon, Steph. B. s. v. Lacoon; Kercegoniu, Pol. iii. 13, § 19; Liv. xiv. 14; Plin. iv. 8. s. 15.) Mount Cerceium is probably the main ridge of Khasias; and one of the principal passes from Epirus into Thessaly lay across this mountain. (Leake, Northern Greece, vol. iv. pp. 528, 529.)

Still further south, at the 39th degree of latitude, a point in the range of Pindus is called Tymphrestus (Tymphrostos, Strab. ix. p. 435), now Velokhli, and from it branch off the two chains of Othrys and Oeta, the former running nearly due east, and the latter more towards the south-east. A little S. of Tymphrestus the range of Pindus divides into two branches, and no longer bears the same name. [See Vol. i. p. 1012.]

PÎNDUS (Pindos), one of the towns of the tetrapolis of Doris, situated upon a river of the same
PISA. 631

ame, which flows into the Cephissus near Liliae. [DORNI.] It was also called Acrpias (Ἀκρήπια) as we learn from Strabo and from Theopompus (ap. Steph. B. s. n. Ἀκρήπια). In one passage Strabo says that Piso lay above Erinium, and places it in the district of Ostena; it is, therefore, probable that the town stood in the upper part of the valley, near the sources of the river in the mountain. (Strab. ix. pp. 427, 434; Scyenn. Ch. 591; Schol. ad Pind. Pyth. i. 121; Mel. ii. 3; Plin. iv. 7. s. 13; Leake, Northern Greece, vol. ii. p. 92.)

PINETUS (Πινέτος, Poll. ii. 5. § 39), a town of Lusitania, on the road from Bracara to Asturica (Ann. Ant. p. 422). Ptolemy places it between the Durius and the Minus, and consequently in the territory of the GalLAeoi; but, according to the Itinerary, it must have lain S. of the former river. Variously identified with Pinhel, Pinheira, and Mirandella. [T. H. D.]

PINGUS, a river of Upper Moesia, in the territory of the Dardani. (Plin. iii. 26. s. 29.) It was probably an afflue of the Marus, and is commonly identified with the Tisus. [PIUS.]

PINNA (Πίννα; Eth. Pimnensis; Cistia di Peisino), a city of the Vestini, situated on the eastern slope of the Apennines, about 15 miles from the sea. It is noticed both by Pliney and Ptolemy, as well as by Silius Italicus, among the cities of the Vestini, and seems to have been a municipal town of importance; but the only mention of its name in history is during the Social War, when its inhabitants disdained themselves by their fidelity to Rome, and withstood all the efforts of the Italian allies to shake their constancy. (Diod. xxxvii. Exc. Vales. p. 612, Exc. Vat. p. 120.) The circumstances are evidently misrepresented by Valerius Maximus (v. 4. § 7). Numerous inscriptions attest its local consideration; and it appears to have received a colony, or at least an accession of citizens, under Augustus. (Plin. iii. 12. s. 17; Poll. iii. 1. § 59; Lib. Colon. pp. 227, 257; Scl. Ital. viii. 517; Inser. ap. Romanelli, vol. iii. pp. 252, 253; Mommsen, Inser. R. 1. 1. 38.) Vitruvius speaks of it as having some mineral waters in its neighbourhood, which resembled those at Catinlue (viii. 3. § 5). It early became an episcopal see, a dignity which it still retains; and the modern city undoubtedly occupies the same site with the ancient one. Some remains of ancient buildings are extant, but they are of little importance. The name of Pinna is found in the Tabula, where it is marked as a place of importance; but the distances annexed are confused and erroneous. [E. H. B.]

PIN'TIA (Πίντια, Poll. ii. 6. § 50). 1. A town of the Vaecei in Hispania Tarraconensis, and according to the Itinerary (p. 443), on the road from Asturica to Casarramagna. It is usually identified with Vallodolid (Mariana, x. 7; Nonius, Hist. c. 56; Uberti, vol. ii. p. 1. 432). 2. A town of the Callaeci Lucenses in Hispania Tarraconensis, between Libunca and Caronom. [T. H. D.]

PÜNTIARIA INS. [Fortunaiae Insulae.] PIONE (Πίονε), a hill in the neighbourhood of Ephesus, at the foot of which that city was situated. (Paus. vii. 5. § 5; Plin. v. 31; Strab. xiv. p. 633, where it is called Prion.)

PIONIA (Πιόνια; Eth. Pionia), a town in the interior of Myicia, on the river Sathinos, to the northwest of Antandrus, and to the north-east of Garana. (Strab. xii. p. 610.) Under the Roman dominion it belonged to the jurisdiction of Adriamatium (Plin. v. 32); and in the ecclesiastical notices it appears as a bishopric of the Hellespontine province. (Hiem. p. 603; Sartini, p. 75.) [L. S.]

PIRAEUS or PEIRAEUS. [Athenaei, p. 306.]

PIRAEUM or PEIRAEUM, in Corinthi[a. (p. 685, b.)

PIRAEUS or PEIRAEUS, in Corinthi[a. (p. 685, a.)

PIRAITHON (Περαΐθων, Joseph., LXX.), a town in the land of Ephraim, and in the mount of the Amalekites, to which Abdon, one of the judges of Israel, belonged, and where he was buried. (1 Sam. xii. 13, 15.) It was repaired and fortified by Jarchi; in his campaign against the Jews (1 Macc. ix. 50; Joseph. Ant. xiii. 1. § 3.)

PIRENE or PEIRENE FONX. [Corinthi[a, p. 680, b.)

PIREXIAE. [Asthemius.]

PIRUS or PIerus. [Ach. ap. p. 13, b.)

PIRUSTAE (Πιρουσταί, Poll. ii. 17. § 8; PetruStus, Strab. vii. p. 314), a people of Illyria, whom the Romans declared free of taxes, because they assented to the latter in subduing Gentius. (Liv. xiv. 26.) Strabo (L c.) calls them a Pannonian people. Respecting the position of the Pirusate on the northern frontier of Dacia, see Vol. i. p. 755, b.

PISA (Πίσα; Eth. Πισαίας, Πισαίας), a town in the peloponnesus, was in the most ancient times the capital of an independent district, called Pisa (Πίσα), which subsequently formed part of the territory of Elis. It was celebrated in mythology as the residence of Oeneomus and Pelops, and was the head of a confederation of eight states, of which, besides Pisa, the following names are recorded:—Salmonce, Herculiea, Harpimae, Cycesium, and Dysponium. (Strab. viii. p. 356, seq.) Pisa had originally the presidency of the Olympic festival, but was deprived of this privilege by the Eleians. The Pisatans, however, made many attempts to recover it; and the history of their wars with the Eleians, which were at last terminated by the决定 of Pisa in i.o. 572, is narrated elsewhere. [Ellis, Vol. i. p. 518, b.) Although Pisa ceased to exist as a city from this time, the Pisatans, in conjunction with the Arcadians, celebrated the 104th Olympic festival, i.c. 364. [See Vol. i. p. 819, b.) Pisa was said to have been founded by an eponymous hero, Pius, the son of Pierieres, and grandson of Aeolus (Paus. vi. 22. § 3); but others derived its name from a fountain Pisa. (Strab. viii. p. 356; Estath. ad Dionys. Per. 409.) Modern writers connect its name with Psus, a low marshy ground, or with Pisa, the name of the black fir or pine-tree. So completely was Pisa destroyed by the Eleians, that the fact of its having existed was a disputed point in the time of Strabo (L c.); and Pausanias found its site converted into a vineyard (vi. 22. § 1). Its situation, however, was perfectly well known to Pindar and Herodotus. Pindar frequently identifies it with Olympia (e.g. Ol. ii. 2); and Herodotus refers to Pisa and Olympia as the same point in comparing the distance from the altar of the twelve gods at Athens (ii. 7). Pisa appears from Pausanias to have occupied a position between Harpimae and Olympia, which were only 20 stadia asunder (Lucian, de Mort. Perigr. 35); and the Scholiast on Pindar (Ol. xi. 51) says that Pisa was only 6 stadia from Olympia. It must therefore be...

placed a little east of Olympia, and its acropolis probably occupied a height on the western side of the rivulet of Mina, near its junction with the Alpheus. Strabo (l.c.) says that it lay between the mountains Olympia and Ossa, which can only have heights on different sides of the river. See its position marked in the map in Vol. ii. p. 477. (Leake, Morea, vol. ii. p. 211, Peloponnesia, p. 6. Mure, Tour in Greece, vol. ii. p. 283; Curtius, Peloponnesus, vol. ii. p. 51.)

PISAE. (Pisea, Strab. Pol.; Pisa, Pol.; Pisa. Lycothr.: Euh. Piscamus: Pisa). An important city of Etruria, situated on the N. bank of the river Arno, a few miles south. All scholars agree in representing it as a very ancient city, but the accounts of its early history are very confused and uncertain. The identity of its name with that of the city of Elis naturally led to the supposition that the one was derived from the other; and hence the foundation of the Italian Pisa was ascribed by some authors to Peisops himself (Plin. iii. 5. s. 8), while others assigned it to a body of settlers from the Peloponnesian Pisa who had accompanied Nestor to Troy, and who seem to have returned wandering through Spain and Italy. (Strab. v. p. 222; Serv. ad Aen. x. 179.)

Eutropus, the reputed founder of Metapontum, was, according to some writers, that of Pisa also. (Serv. l. c.) The Elean, or Alpheim, origin of the city is generally adopted by the Roman poets. (Virg. Aen. x. 179: Claudian, B. Gild. 483; Rutil. Itin. i. 556.) Cato, however, followed a different tradition, and represented the city as founded by the Etruscans under Tarchon, though the site was previously possessed by a people called the Tarentans, who spoke a Greek dialect. (Cato, ep. Serv. l. c.) Virgil also calls it distinctly an Etruscan city, though he derives its more remote origin from Elis; and the tradition reported by Cato seems to prove at least that it was one of the cities of which the Etruscans claimed to be the founders, and which must therefore have been at one period a genuine Etruscan city. On the other hand, Dionysius mentions it among the cities founded or occupied by the Pelasgians in conjunction with the Aborigines (Dionys. l. 20); and the Tarchon is remembered even to this day as the founder of one of the early Pelasgic settlements on the coast of Etruria, which fell at a later period under the power of the Etruscans.

We know almost nothing of Pisa as an Etruscan city, nor are there any remains of this period of its history. But Strabo still found vestiges of its past greatness, and the tradition of its foundation by Tarchon seems to point to it as one of the principal cities of Etruria. Its inhabitants were trained to arms by frequent contests with their neighbours the Ligurians, while they appear to have been one of the principal maritime powers among the Etruscans, and, like most of their countrymen, combined the pursuits of commerce and piracy. (Strab. v. p. 223.) We have no account of the period at which it became a dependency of Rome; but the first historical mention of its name is in B.C. 225, when the consul C. Attilius landed there with two legions from Sar- dinia, with which he shortly after attacked and defeated the ancient army near Telamon. (Pol. ii. 27.) It is clear therefore that Pisa was at this time already in alliance with Rome, and probably on the same footing as the other dependent allies of the republic. Its port seems to have been much frequented, and became a favourite point of departure for the Roman fleets and armies whose destination was Gaul, Spain, or Liguria. Thus it was from hence that the consuls P. Scipio sailed to Massilia at the outbreak of the Second Punic War (a. C. 218), and thither also that he returned on finding that Hannibal had already crossed the Alps. (Pol. iii. 43, 56; Liv. xxi. 39.) The long-continued wars of the Romans with the Ligurians added greatly to the importance of Pisa, which became the frontier town of the Roman power, and the customary headquaters of the generals appointed to carry on the war. (Liv. xxxiii. 43. xxiv. 22, xl. 1., &c.) It was not, however, exempt from the evil consequences of such a position. In B.C. 193 it was attacked and taken by a confederacy of Ligurians, who after capturing 40,000 Ligurians, and with difficulty rescued by the arrival of the consul Mucius (Liv. xxxv. 3); and on several other occasions the Ligurians laid waste its territory. Hence in B.C. 180 the Pisans themselves invited the Romans to establish a colony in their territory, which was accordingly carried out, the colonists obtaining Latin rights. (Liv. xl. 43.) From this time we hear but little of Pisa; its colonial condition became merged, like that of the other Roman colonies, in the farthing of the new and much enlarged town of Pisa, which was from the time given to a fresh colony under Augustus, as we find it bearing the colonial title in a celebrated inscription which records the funeral honours paid by the magistrates and senate of Pisa to the deceased grandchildren of Augustus, C. and L. Caesar. (Orell. Inscr. 642, 643.) It is here termed "Colonia Oesquefum Julia Pisana:" Pliny also gives it the title of a colony (Plin. iii. 5. s. 8), and there seems no doubt that it was at this period one of the most flourishing towns of Etruria. Strabo speaks of it as carrying on a considerable trade in timber and marble from the neighbouring mountains, which were sent to Rome to be employed there as building materials. Its territory was also very fertile, and produced the fine kind of wheat called silico, as well as excellent wine. (Strab. v. p. 223; Plin. xiv. 3. 4. xviii. 9. 20.) We have no account of the fortunes of Pisa during the declining period of the Roman empire, but during the Gothic wars of the fifth century it was still more important (Agath. B. G. i. 11), and in the middle ages rose rapidly to be one of the most flourishing commercial cities of Italy.

There is no doubt that the ancient city stood on the same site with the modern Pisa, but natural causes have produced such great changes in the locality, that it would be difficult to recognize the site as described by Strabo, were not the identity of the modern and ancient cities fully established. That author (as well as Rutilius and other writers) describes the ancient city as situated at the confluence of the rivers Arno and Aser (Sercchio), and distant only 20 stadia (2½ miles) from the sea. (Strab. v. p. 222; Plin. iii. 8. 14: Rutil. Itin. i. 563—570.) At the present day it is more than 6 miles from the sea, while the Sercchio does not flow into the Arno at all, but has a separate channel to the sea, the two rivers being separated by a tract of 5 or 6 miles in width, formed partly by the accumulation of alluvial soil from the rivers, partly by the sand heaped up by the sea. There are no remains of the Etruscan city visible; it is probable that all such, if they still exist, are buried to a considerable depth by the alluvial soil. The only vestiges of Roman antiquity which remain are "some mean traces of baths, and two marble columns with
The Maritime Itinerary mentions the Portus Pisauum as distinct from Pisa itself, from which it was no less than 9 miles distant. (Itin. Marit. p. 501.) Rutulius also describes the port of Pisa, which was in his day still much frequented and the scene of an active commerce, as at some distance from the mouth of the Arno, which could ever have been available as a harbor. Rutulius also describes the port (without any mention of the river) as formed only by a natural bank of sea-weed, which afforded shelter to the vessels that rode at anchor within it. Much the most probable view is that advocated by a local writer (Targini Tozzetti), that the ancient Portus Pisauum was situated at a point between the mouth of the Arno and Leghorn, but considerably nearer the latter city, near an old church of St. Stefano. The distance of this spot agrees with that of the Itinerary, and it is certain from medaevial documents that the Porto Pisauro, which in the middle ages served as the port of Pisa, when it was a great and powerful republic, was situated somewhere in this neighborhood. (Targini Tozzetti, Viaggi in Toscana, vol. ii. pp. 225—240, 378—420; Zumpt, ad Hutt. i. 527.) Roman remains have also been found on the spot, and some ruins, which may very well be those of the village called Trituritta, described by Rutulius as adjoining the port, designated in the Tabula as Turrita. (Hutt. Itin. i. 527; Tab. Peut.) There is every probability that the Porto Pisauro of the middle ages occupied the same site with the Roman Portus Pisauum, which is mentioned by P. Diaconus as still in use under the Lombard kings, and again by a Frankish chronicler in the days of Charlemagne (P. Diacon. Hist. Lang. vi. 61; Anon. Res. Francorum vi. 9); that there is no doubt that the medaevial port was quite distinct from Livorno. The latter city, which is now one of the most important trading places in Italy, was in the 13th century an obscure village, and did not rise to consideration till after the destruction of the Porto Pisauro. But it seems probable that it was occasionally used even in ancient times, and is the LUNO noticed by Cicero (ad Q. Fr. ii. 6) as a seaport near Pisa. It has been supposed also to be already mentioned by Zosimus (v. 20) under the name of Liburum; but there is really no authority for this, or for the names of Portus Liburum, and Portus Herculis Liburni employed by modern writers on ancient geography. The Antinone Itinerary, however, gives a station "Ad Hereulem," which, as it is placed 12 miles from Pisa, could not have been far from Luggorn. (Itin. Ant. p. 293.)

Pliny alludes to the existence of warm springs in the territory of Pisa (ii. 105. s. 106). These are evidently the same now called the Bagai di S. Giuliano, situated about 4 miles from the city, at the foot of the detached promontory of Apuanus, which divides the territory of Pisa from that of Lucca. (E.H.B.)

PISANUS FORTUS. [Pisae.]

PISATIS. [Pisa.]

PISAYAE, in Gallia Narbonensis, is placed in the Table at the distance of xvii., from Aque Sextiae (Aire), and on a road leading towards Glannum (St. Remi). The place is supposed to be in the district of Pelissane; and it has accordingly been conjectured that the name in the Table should be Pisane. The supposed identity of the Roman remains have been dug up in the district of Pelissane near the chapel of St. Jean de Bernaise. There are traces of the old Roman road near Aire, and it is said that two Roman milestones are still there. (D'Anville, Notice, &c.; Statistique du Départ. des Bouches du Rhône, quoted by Ubert, Gallien, p. 436.)

PISAURUM (Πισαῦρος; Eth. Pisaurensis; Pe- spar), a considerable town of Umbria, situated on the coast of the Adriatic, between Fanum Fortunae (Fano) and Ariminum (Rimini). It was on the line of the Via Flaminia, 24 miles from Ariminum (Itin. Ant. p. 126), at the mouth of the small river Pisauro, from which it in all probability derived its name. (Plin. iii. 14. s. 19.) This is now called the Foglia. The site of Pisauro, together with all the adjoining country, had been originally included in the territory of the Galli Senones; but we have no account of the existence of a Gallic town of the name, and the first mention of Pisauro in history is that of the foundation of a Roman colony there. This took place in B.C. 184, simultaneously with that of Potentia in Piscenum, so that the same triumvirs were charged with the settlement of both colonies. The settlers received 6 jugera each, and enjoyed the full rights of Roman citizens. (Liv. xxxix. 44.; Vell. Pat. i. 15.; Madvig, de Colon., pp. 253, 286.) A few years later we hear of the construction there of some public works, under the direction of the Roman censors (Liv. xii. 27.); but with this exception, we hear little of the new colony. It seems, however, to have certainly been a prosperous place, and one of the most considerable towns in this part of Italy. Hence, it was one of the places which Caesar hastened to occupy with his advanced cohorts as soon as he had passed the Rubicon, B.C. 49. (Caes. B. G. i. 11, 12; Cic. ad Fam. xvi. 12.) It is also repeatedly alluded to by Cicero as a flourishing town (Cic. pro Sext. 4. Phil. xii. 12); hence it is impossible that the expression of Catullus, who calls it "moribunda sedes Pisauri" (Carm. 81. 3), can refer to the condition of the town itself. It would seem that its climate was reputed unhealthy, though this is not the case at the present day. Pisauro received a fresh body of military colonists, which were settled there by M. Antonius; but suffered severely from an earthquake, which seems to have destroyed a great part of the town, just before the battle of
Actium, B. C. 31. (Plut. Ant. 60.) It appears, however, to have been restored, and peopled with fresh colonists by Augustus, for we find it bearing inscriptions in the titles of "Colonia Julia Felix," and though Pliny does not give it the title of a colony, its possession of that rank under the Empire is abundantly proved by inscriptions. (Plin. ii. 14. s. 19; Orell. Inscr. 81, 3143, 3698, 4069, 4084.) From the same authority we learn that it was a place of some trade, and that vessels were built there, so that he had a "Collegium Fabrorum Nu- valium." (ib. 4084.) The port was unusually formed by the mouth of the river, which still affords a harbour for small vessels. Its position on the great Flaminian Way also doubtless secured to Pisaurum a certain share of prosperity as long as the Roman empire continued; but it was always inferior to the neighbouring Fannum Fortuna. (Mel. ii. 4. § 5; Fed. iii. i. § 22; Itin. Ant. pp. 106, 126; Itin. Hier. p. 615; Tab. Peut.)

During the time that the city was threatened by Vitiges, but partially restored by Belisarius (Procop. B. G. iii. 11), and rose again to prosperity under the exarchate of Ravenna, and became one of the cities of the Pentapolis. (Geogr. Rev. iv. 31; P. Dion. Hiat. Lang. ii. 19.) The modern city of Cesarea is still a flourishing place; but has no remains of antiquity, except numerous inscriptions, which have been collected and published with a learned commentary by the Abate Olivieri. (Monum. Pisauriniis, ed. Pisaur. 1783.) [E. H. B.]

PISCENAE, (πησεναι,) a town of Phrygia, (Procop. B. G. iii. 5-3) among the Oppida Latina of Gallia Nethemis. It is generally assumed to be represented by Piscenae in the district of Agathia (Agde) near the Amanus (Hérault). Pliny (viii. 48. 73) speaks of a wool that was grown about Piscesaen, which was more like hair than wool. [G. L.]

PISGALL. [Necr.]

PISIDA, a municipality and station on the Roman road running along the coast-line of Lydia, 20 M. P. from Pontus Adobaris (Dobryan), and 20 M. P. from Villa Magna (Koklo.) (Hist. Anton. Fed. Tab.) Pteleon has a harbour, Pisidion Portus (Πησίδιον λιμήν, iv. 3. § 12), on the coast, which is represented by the harbour of Barkeia or Bicea. (Bart. Wanderungen, p. 271.) [E. B. J.]

PISIDIA (πησίδια;) Eub. Pherodis, Pisideia), a province in the south of Asia Minor, which was in the earlier times always regarded as a part of Phrygia or Paphlagonia, but was constituted a separate province in the division of the Roman empire made by Constantine the Great. It bordered on the east on Isauria and Cilicia, in the south on Pamphylia, in the west on Lydia, Caria, and Phrygia, and in the north on Phrygia Paroecia; but it is almost impossible to mark the exact boundary lines, especially in the north and north-west, as the northern parts of Pisidia are often treated as parts of Phrygia, to which they originally belonged, and from which they are sometimes called Phrygia Pisidica, or Phrygia πέραν Πισιδίαν; but Augustus separated them from Phrygia and united them with Pisidia. (Strab. xii. p. 570, &c.; Ptol. v. 5. §§ 4, 8; Dionys. Per. s. 58, &c.; Plin. v. 24; Hierosol. pp. 662, &c., 579, &c.) The country, which was rough and mountainous, though it contained several fertile valleys and plains, which admitted of the cultivation of olives (Strab. l.c.), was divided into several districts, with separate names. The south-western district, bordering on Lycaia, was called Mylas, and another adjoining it bore the name of Catabia. The mountains traversing Pisidia consist of ramifications of Mount Taurus, proceeding from Mount Cadmus in Phrygia, in a south-eastern direction, and assuming in the neighbourhood of Termessus the name of Sardesimus (Pomp. Mel. i. 14; Plin. v. 26), and on the borders of Mysia that of Chimaera. (Polyb. v. 72; Strab. xiv. p. 666.) These mountains contain the sources of the rivers Taurus and Cestrus, which flow through Pisidia and Pamphylia into the bay of Lycopolis. The principal products of Pisidia were salt, wool, and wine, from which jars were manufactured, and the wine of Ambilada, which was much recommended by ancient physicians. (Plin. xii. 55, xxi. 39, xxxi. 39; Strab. xii. p. 570.) Pisidia also contained several lakes, some of which are assigned to Phrygia or Lycaea, e. g. Coralia and Trogitos (Strab. xiv. p. 568), the great salt lake Ascenia, and Pusgusa or Fungusa, which is mentioned only by Byzantine writers. (Niceph. Chron. x. 26.)

The inhabitants of Pisidia must in a great measure have belonged to the same stock as the Phrygians, but were greatly mixed with Cilicienses and Isaurians. They are said to have at first been called Selonymi (Steph. B. s. v.); they were warlike and free mountaineers who inhabited those parts from very remote times, and were looked upon by the Greeks as barbarians. They were never subdued by neighbouring nations, but frequently harassed the adjoining countries by predatory inroads. (Niceph. Chron. i. 1. § 11, ii. 1. § 4, &c.; Strab. iv. p. 160, xii. p. 569, xiv. pp. 670, 678; Liv. xxiv. 13.) Even the Romans were scarcely able to subdue these people, protected as they were by their mountains and ravines. After the defeat of Antiochus, Pisidia was, with the rest of Asia, given to Eumenes, but had to be conquered by the Romans themselves, and then formed the beginning of what subsequently came to be the province of Cilicia, to which, about B.C. 88, the three Phrygian districts of Laodiceia, Apameia, and Sinopia were added. (Liv. Epit. 77; Cic. de Terr. i. 17, 38.) Still, however, the Romans never established a garrison or planted a colony in the interior; and even the submission of the towns seems to have consisted mainly in their paying tribute to their rulers. The principal towns of Pisidia were, Antiochela, Sagalassos, Termessos, Seleuceia, Pheneizzleus, Cytherea, Oenoeand, and Burnum. The mountainous parts of Pisidia are now inhabited by the Karamanians, a wild and rapacious people, whence the country is little visited by travellers, and consequently little known; but Pisidia in general corresponds to that portion of Asia Minor comprised within the government of Isbarich. [L. S.]

PISLIS (Πησίλησ), a small town of Caria, between Colinda and Caunus, of uncertain site. (Strab. xiv. p. 653.) [L. S.]

PISIGARA or PINSIGARA (Πησιγάρα or Πησιγάρα), a town of uncertain site in Armenia Minor. (Ptol. v. 7. § 4.)

PISAKUM (Πησακούμ), a town of Pelagonia in Epirus, the exact site of which is unknown. (Polyb. vi. 108; Steph. B. s. v.)

PISSANTIAL. [Dassarticap.]

PISTORIA (Πηστορία; Eub. Pistorias; Pto-
PISTUSUS.

is not noticed by any other writer; but it may possibly be the river Pitanus, spoken of by Ptolemy (iii. 2. § 3), and which seems to derive its name from the town of Pitanus.

[1.8.]

PISTANE. [SPARTA.]

PITHUSAE INSULAE. [AFNARIA.]

PITHON. [PATUMOS.]

PIITIUM (Torre di Pitino), a town of the Vestini, known only from the Tabula Peutingeriana, which places it on a line of road from Interocera (Antrodoco) to Aveia. But the stations on each side of it, Prierenum and Eruli, are both unknown, and the distances probably corrupt. Hence, this itinerary affords us no real clue to its position. But Holsteinius has pointed out that the name is retained by the Torre di Pitino, about 2 miles N. of Aquila, and has also shown that in the middle ages Pitinum still subsisted as a city, and was an episcopal see. (Tab. Peut.; Holsten. Not. ad Clerw. p. 139; Romanelli, vol. iii. p. 280). [E. H. B.]

PIITULUM (Pitulumus: Piloto), a town of Umbria, mentioned only by Pliny (ii. 14. s. 19), who enumerates among the towns of that region the "Pitani, cugwetia, et utraque Pistoriae," These two names are otherwise unknown, but according to Cluverius there is a village called Piloto in the Apennines between Camerino and Matricula, which probably retains the name of one or the other. (Cluver. Ital. p. 614). [E. H. B.]

PIYEIA (Πιτηεία; Eth. Πιτηεός), a town of Mysea, on the coast of the Propontis, between Parium and Priapus. It is mentioned even in the time of Homer. (Il. ii. 929; comp. Apollon. Rhod. i. 933; Strab. xiii. 588; Steph. B. s. v.;) it is said to have derived its name from the city which grew there in abundance, and is generally identified with the modern Skamell. [L. S.]

PITYODES (Πιτυώδης), a small island in the Propontis off the coast of Bithynia, near Cape Hyris, and 110 stadia to the north of Cape Acritas. (Plin. v. 44; Steph. B. s. v. Πιτυώδης, who speaks of several islands of this name, which is the same as Pityodes.) The island is probably the one now called Belyak Ada, where Pococke (vol. iii. p. 1) found remains of an ancient town. [L. S.]

PITYONE'SOS, a small island in the Saronic gulf, lying between Aegina and the coast of Epirus, and distant 6 miles from the latter. (Plin. iv. 12. s. 19.)

PITYUS (Πιτύος: Pitusa), a Greek town in Asiatic Sarmatia, on the north-eastern coast of the Black Sea, N. of Dioscurias, from which it was distant 360 stadia according to Artemidorus, and 320 according to Arrian. The real distance, however, is underrated by these writers; for from C. Iasius (Dioscurias) to Pitsusa is not less than 400 stadia in a straight line. (Artemidor. ap. Strab. xi. p. 496; Arrian, Per. P. Eux. p. 18.) Artemidorus described it as the great Pityus, and Pliny as an "oppidum opulentissimum;" but between the time of Artemidorus and Pliny it was destroyed by the Hemioci (Plin. vi. 5), whence Arrian mentions it only as a place for anchorage, and the name does not occur at all in Ptolemy. The town was afterwards rebuilt by the Romans, and is described by Zosimus (i. 32), in the history of Gallienus, as a fortress surrounded with a very great wall, and having an excellent harbour. (Comp. Procop. B. Goth. iv. p. 473, ed. Bonn; comp. C. Müller, ad Arrian. l. c. ap. Geogr. Græc. Min. vol. i. p. 392.)

PITYUS (Πιτύος or Πιτυώτα) a contrib.
PITYUSAE, literally, "abounding in pine-trees." 1. An island off the promontory of Syllaenum, or Ephesula, in Trezzaean, in Argolis. (Paus. ii. 34. § 8.) Pliny mentions (iv. 12. s. 19) an island Pityusa in the Argolic gulf, but from the order in which it occurs in Pliny, it would seem to be a different island from the present one.

2. One of the Demonesii in the Propontis, according to Hierocles (v. v.). [DEMONESII.]

PITYUSAE (ΠΥΤΥΟΣΑΙ or ΠΥΤΥΟΣΑΙ, Strab. iii. p. 167; Ptol. ii. 6. § 77.) two islands on the S. coast of Sparn, 700 stadia, or nearly 100 miles from Dianium (Plin. iii. 5. s. 11; Liv. xxviii. 57). Their position is thus defined by Diodorus (v. 17): they are three nights' and days' sail from the Columns of Hercules, one day's sail from Berta, and one day and night from Libya; whilst, according to the Itinerary (p. 511), they were 300 stadia from the Balaeres, and 400 from Carthago Sartaria, or Carthagena. The larger of the two islands was called Ebussus (ΕΒΟΟΣΟΣ, Ptol. l. c.), the smaller Ophiussa (ΟΦΙΟΟΣΑ, ib.); and as they are only separated by a narrow strait, and as Ophiussa, from its small size, was unimportant, they are sometimes confounded together as one island by the ancients (Diod. v. 16; Liv. l. c.; Diod. l. c.; &c.). Their name of Pityusa was derived, like that of many other places, from the abundance of pine-trees which grew upon them. They were 46 miles in extent. Diodorus (l. c.) compares Ebussus with Ceyrca for size: and according to Strabo (l. c.) it was 400 stadia in circumference, and of about equal length and breadth. It was hilly in some parts, and not very fruitful, producing but little oil and wine; but its figs were good, and it afforded excellent pasturage. Serpents and noxious animals were not found upon it, whilst, on the contrary, the smaller island abounded in serpents to such a degree that it seems to have taken its name from them (Plin. iii. 14. xiv. 21, xxxv. 59, &c.; Mela, ii. 7; Avien. Descr. Orb. 621, &c.). The chief town, also named Ebussus, which lay on the SE. side of the island, was a civitas foederata, and had a mint. (Kamos, Cat. Num. vet. Grac. et Lat. Mus. Reg. DanUBE, l. p. 13.) It was a well-built city with a good harbour, and was the resort of many barbarians and pirates, who were known as the Phoenicians (Stab. l. c.; &c.). The larger island is now Ibiza, the smaller, Formentara. [T. H. D.]

PLACENTIA (ΠΛΑΚΕΝΤΙΑ; Etr. Placentius: Placentia), a city of Galia Cispadane, situated near the S. bank of the Pabus, just below the point where it receives the waters of the Trebia. It was on the Via Aemilia, of which it originally formed the termination, that road being in the first instance carried from Ariminum to Placentia; and was 40 miles distant from Parma. We have reason to think that the city of Placentia, as the site of the ancient town on the spot previous to the establishment of the Roman colony, which was settled there in n. c. 219, after the great Gaulish war, at the same time with Cremona. (Liv. Epit. xx; Vell. Pat. l. 14; Pol. iii. 49; Ascon. in Plac. p. 3.) It consisted of not less than 6000 colonists, with Latin rights. But the new colony was scarcely founded, and its walls hardly completed, when the news of the approach of Hannibal produced a general rising of the neighbouring Gauls, the Romans and Illyrian, who attacked Placentia, ravaged its territory, and drove many of the colonists to take refuge at Matina; but were unable to effect anything against the city itself, which was still in the hands of the Romans in the following year, and became the head-quarters of the army of Scipio both before and after the battle of the Trebia. (Pol. iii. 40. 66; Liv. xvi. 25, 56, 59, 63; Appian, Hann. 3, 7.) At a later period of the same war, in n. c. 209, Placentia was one of the colonies which proved faithful to Rome at its greatest need, and came forward readily to furnish its quota of supplies for the war, when twelve of the elder colonies failed in doing so. (Liv. xxvii. 10.) Shortly after this it withstood the arms of Hannibal, who was induced to lay siege to it, after he had crossed the Alps and descended into Cisalpine Gaul, and by so doing lost a great deal of valuable time. After a protracted siege he was compelled to abandon the enterprise, and continue his march into Italy, leaving Placentia behind him. (Id. xxvii. 39, 43.) A few years later it was less fortunate, having been taken by surprise by the sudden inscription of the Gauls in n. c. 200, who plundered and burnt the town, and carried off the greater part of the inhabitants into captivity. (Id. xxx. 10.) After the victory of the consul L. Furius, about 2000 of the prisoners taken on this occasion were restored to the colony; and a few years afterwards L. Valerius Flaccus, who wintered at Cremona and Placentia, restored and repaired as far as possible the territory it had suffered during the war. (Id. xxxi. 21, xxvii. 22.) But they were still exposed to the ravages of the Gauls and Ligurians; and in n. c. 193 their territory was laid waste by the latter up to the very gates of the city. (Id. xxvii. 56.) Hence we cannot wonder to find them, in n. c. 190, complaining of a deficiency of settlers, to remedy which the senate decreed that a fresh body of 3000 families should be settled at each of the old colonies of Placentia and Cremona, while new ones should be established in the district of the Boll. (Id. xxxvi. 46, 47.) A few years later the consul M. Aemilius, having completed the subjection of the Ligurians, constructed the celebrated road, which was ever after known by his name, from Ariminum to Placentia (Id. xxxix. 2); and from this time the security and tranquility enjoyed by this part of Italy caused it to rise rapidly to a state of great prosperity. In this there can be no doubt that Placentia fully shared; but we hear little of it during the Roman Republic, though it appears to have been certainly one of the principal towns of Cispadane Gaul. In the civil war of Marius and Sulla, a battle was fought near Placentia, in which the partisans of Carbo were defeated by Lucullus, the general of Sulla, n. c. 82 (Appian, B. C. i. 92); and in that between Caesar and Pompey, n. c. 49, it was at Placentia that a mutiny broke out among the troops of the former, which at one time assumed a very formidable aspect, and even threatened the life of the dictator. (Appian, B. C. ii. 47; Dion Cass. xii. 26.) Placentia, indeed, seems to have been at that period one of the places commonly selected as the head-quarters of Roman troops in this part of Italy. (Cic. ad Att. vi. 9.) It was again the scene of a somewhat similar mutiny of the legions of Augustus during the Persian War, n. c. 41. (Dion Cass. xlvii. 10.)

Cicero notices Placentia towards the close of the republican period as a municipium: its colonial rank must have been merged in the ordinary municipal condition in consequence of the loss Julia, n. c. 90. (Cic. in Pison. 23; Fest. s. v. Municipium.) But under the Empire it reappears as a
PLACIA.

colony, both Pliny and Tacitus giving it that title (Plin. iii. 15. s. 20; Tac. Hist. ii. 19): it had probably received a fresh colony under Augustus. We learn from Tacitus (l. c.) that it was one of the most flourishing and populous cities of the district of Gallia Cisalpina; and though of no natural strength, being situated in an open plain, it was well fortified. For this reason it was occupied in A. D. 69 by S Burnett, one of the generals of Ortho, and successfully defended by him against Cecina, the general of Vitellius, who had crossed the Padus, and had siege to Placentia, but was compelled to abandon it and withdraw to Cremona. (Tac. Hist. ii. 17— 23.) During the assaults of Cecina, the amphitheatre, which is said to have been the largest provincial edifice of the kind in Italy, and was situated without the walls, was accidentally burnt. (Ib. 21.) From this time we meet with no further mention of Placentia in history till the reign of Aurelian, when that emperor sustained a great defeat from the Marcomanni, under its walls. (Vopisc. A.D. 261.) But the city still continued to be one of the most considerable places on the line of the Via Aemilia; and though it is noticed by S. Ambr. aswards of the close of the fourth century, as sharing in the desolation that had then befallen the whole of this once flourishing province (Ambros. Ep. 39), it survived all the ravages of the barbarians; and even after the fall of the Western Empire was still a comparatively flourishing town. It was there that Orestes, the father of the unhappy Augustus, was put to death by Odeaker, in A. D. 476. (P. Dac. Hist. Macell. xi. p. 558.) Propo- cupis also mentions it during the Gothic wars as a strong fortress and the chief city of the province of Aemilia. It was only taken by Tetrica, in A. D. 546, by famine. (Procop. B. G. iii. 13. 17.) Considerably later it is still noticed by P. Diancos among the "opulent cities" of Aemilia (Hist. Long. ii. 18); a position which it preserved throughout the middle ages. At the present day it is still a flourishing and populous place, with about 30,000 inhabitants, though partially eclipsed by the superior importance to which Panna has attained since it became the chief of the reigning dukes. There are no remains of antiquity.

Placentia was undoubtedly indebted for its prosperity and importance in ancient times, as well as in the middle ages, to its advantageous situation for the navigation of the Po. Strabo (v. p. 215) speaks of the navigation from thence to Ravenna, as if the river first began to be navigable from Placentia downwards; but this is not quite correct. The city itself lay at a short distance from the river; but it had an emporium or port on the stream itself, probably at its confluence with the Trebia, which was itself a considerable town. This was taken and plundered by Hannibal in B.C. 218. (Liv. xxi. 57; Tac. Hist. ii. 19.)

It has been already mentioned that the Via Aemilia, as originally constructed, led from Ariminum to Placentia, a distance of 175 miles. It was afterwards continued from the latter city to Bologna, from whence a branch proceeded across the Apennines to Genoa (Strabo, v. p. 17); while another line was carried from Placentia across the Padus direct to Mediolanum, a distance of 40 miles; and thus communicated with the whole of Gallia Trans- padana. (Itin. Ant. pp. 98, 127, 288; Itin. Herc. p. 616; Tab. Peut.)

PLACIA (Πλακια; Eth. Πλακαιάς), an ancient Pelasgian town in My sia Olympena, at the foot of Mount Olympus, and on the east of Cyzicus. The place seems to have decayed or to have been destroyed at an early time, as it is not mentioned by later writers. (Herod. l i. 57; Seylax, p. 35; Dionys. Hal. i. p. 23; Stephan. B. t. r. Πλακα.)

PLACUS (Πλάκος), a woody mountain of My sia, at the foot of which Thebe is said to have been situated in the Iliaid (vi. 397, 425, xxii. 479); but Strabo (xiii. p. 614) was unable to learn anything about such a mountain in that neighbourhood. (See PELECAS.)

[PLACIA.]

[PLACUS.]

[PLACIA.]
not present at Salamis, as they had to leave the fleet in order to remove their families and property from the city, in consequence of the approach of the Persian army. (Herod. viii. 44.) Upon the arrival of the Persians shortly afterwards their city was burnt to the ground. (Herod. viii. 50.) In the following year (n. c. 479) their territory was the scene of the memorable battle, which delivered Greece from the Persian invaders. The history of this battle illustrates so completely the topography of the Plataea territory, that it is necessary to give an account of the different positions taken by the contending forces (See accompanying Map). Mardonius proceeded from Attica into Boeotia across Mount Parnes by the pass of Dodecin, and took up a position on the bank of the Asopus, where he caused a fortified camp to be constructed of 10 stadia square. The situation was well selected, since he had the friendly city of Thebes in his rear, and was thus in no danger of falling short of provisions. (Herod. ix. 15.) The Grecian army crossed over from Attica by Mt. Cithaeron; but as Pausanias did not choose to expose his troops to the attacks of the Persian cavalry on the plain, he stationed them on the slopes of the mountain, near Erythrai, where the ground was rugged and uneven. (See Map, First Position.) This position did not, however, altogether preserve them; but, in an attack made by the Persian cavalry, a body of 300 Athenians repulsed them, and killed their leader Masiutus. This success encouraged Pausanias to descend into the territory of Plataea, more especially as it was better supplied with water than his present position. Marching from Erythrai in a westerly position along the roots of Mt. Cithaeron, and passing by Hyanae, he drew up his army along the right bank of the Asopus, partly upon hills of no great height and partly upon a lofty plain, the right wing being near the fountain Gargarphia, and the left near the chapel of the Platœan hero Androcraτes. (Herod. ix. 25—30.) Mardonius drew up his army opposite to them on the other side of the Asopus. (See Map, Second Position.) The two armies remained in this position for some days, neither party being willing to begin the attack. The Persians assailed the Greeks at a distance with their missiles, and prevented them altogether from watering at the Asopus. Mean time the Persian cavalry intercepted the convey of provisions proceeding to the Grecian camp, and on one occasion drove away the Lacedæmonians, who occupied the right wing from the fountain Gargarphia, and succeeded in choking it up. This fountain had been of late the only watering-place of the Greeks; and as their ground was now untenable, Pausanias resolved to retreat in the night to a place called the Island (Epyros), about 10 stadia in the rear of their present position, and halfway between the latter and the town of Platæa. The spot selected, improperly called an island, was, in fact, a level meadow, comprised between two branches of the river Oeræ, which, rising from distinct sources in Mt. Cithaeron,
and running for some space nearly parallel with one another, at length unite and flow in a westery direction into the gulf of Corinth. (Herod. ix. 51.)

The nature of the ground would thus afford to the Greeks abundance of water, and protection from the enemy's fire. The Persians, however, though for so short a distance, was effected in disorder and confusion.

The Greek centre, chiefly composed of Megarians and Corinthians, probably fearing that the island would not afford them sufficient protection against the enemy's cavalry, did not halt till they reached the temple of Hera, which was in front of the town of Plataea. The Lacedaemonians on the right wing were delayed till the day began to dawn, by the obstinacy of Amphilochus, and then began to march across the hills which separated them from the island. The Athenians on the left wing began their march at the same time, and got round the hills to the plain on the other side on their way to the island. After marching 10 stadia, Pausanias halted on the bank of the Moloss, at a place called Agripiaus, where stood a temple of the Eleusinian Demeter. Here he was joined by Amphilochus, and here he had to sustain the attack of the Persians, who had rushed across the Asopus and on the hill after the retreating foe. As soon as Pausanias was overtaken by the Persians, he sent to the Athenians to entreat them to hasten to his aid; but the coming up of the Boeotians prevented them from doing so. Accordingly the Lacedaemonians and Tegeans had to encounter the Persians alone without any assistance from the other Greeks, and to them alone belongs the glory of the victory. The Persians were defeated with great slaughter, nor did they stop in their flight till they had again crossed the Asopus and reached their fortified camp. The Thebans also were repulsed by the Athenians, but they retreated in good order to Thebes, being covered by their cavalry from the pursuit of the Athenians. The Greek centre, which was nearly 10 stadia distant, had no share in the battle; but hearing that the Lacedaemonians were gaining the victory, they hastened to the scene of action, and, coming up in confusion, 40,000 were cut to pieces by the Theban force. Meantime the Lacedaemonians pursued the Persians to the fortified camp, which, however, were unable to make, until the Athenians, more skilled in that species of warfare, came to their assistance. The barricades were then carried, and a dreadful carnage ensued. With the exception of 40,000 who retreated with Artabazus, only 3000 of the original 300,000 are said to have escaped. (Herod. ix. 50–70.) On the topography of this battle, see Loue, Northern Greece, vol. ii. p. 335, seq.; Grote, History of Greece, vol. v. p. 212, seq.

As this signal victory had been gained on the soil of Plataea, its citizens received especial honour and rewards from the confederate Greeks. Not only was the large sum of 80 talents granted to them, which they employed in erecting a temple to Athena, but they were charged with the duty of rendering every year religious honours to the tombs of the warriors who had fallen in the battle, and of celebrating every five years the festival of the Eleutheria in commemoration of the deliverance of the Greeks from the Persian yoke. The festival was sacred to Zeus Eleutherius, to whom a temple was now erected at Plataea. In return for these services Pausanias and the other Greeks swore to guarantee the independence and inviolability of the city and its territory. (Thuc. II. 71; Plut. Arist. c. 19–21; Strab. i. p. 412; Paus. ix. 2 § 4; for further details see Dict. of Ant. art. Eleutheria.)

Plataea was of course now rebuilt, and its inhabitants continued un molested till the commencement of the Peloponnesian War. In the spring of n. c. 431, before any actual declaration of war, a party of 300 Thebans attempted to surprise Plataea. They were admitted within the walls in the night time by an oligarchical party of the citizens; but the Plataeans soon recovered from their surprise, and put to death 180 of the assailants. (Thuc. ii. 1, seq.) In the third year of the war (n. c. 429) the Peloponnesian army under the command of Archidamus laid siege to Plataea. This siege is one of the most memorable in the annals of Grecian warfare, and has been narrated at great length by Thucydides. The Plataeans had previously deposited at Athens their old men, women, and children; and the garrison of the city consisted of only 400 citizens and 80 Athenians, together with 110 women to manage their household affairs. Yet this small force set at defiance the whole army of the Peloponnesians, who, after many fruitless attempts to take the city by assault, converted the siege into a blockade, and raised a circumvallation round the city, consisting of two parallel walls, 16 feet asunder, with a ditch on either side. In the second year of the blockade, 212 of the besieged during a tempestuous winter's night succeeded in scaling the walls of circumvallation and reaching Athens. In the course of the ensuing summer (n. c. 427) the remainder of the garrison were obliged, through failure of provisions, to surrender to the Peloponnesians. They were all put to death, and all the private buildings were razed to the ground and burned by the Thebans, who with the materials erected a sort of vast barricade round the temple of Hera, both for the accommodation of visitors, and to serve as an abode for those to whom they let out the land. A new temple, of 100 feet in length (νέας εκατομφυτείας), was also built by the Thebans in honour of Hera. (Thuc. ii. 71, seq., iii. 20, seq., 52, seq., 68.)

The surviving Plataeans were kindly received by the Athenians. They would appear even before this time to have enjoyed the right of citizenship at Athens ('Αθηναίων ἐξώμαχοι καὶ πολίται, Thuc. iii. 63). The exact nature of this citizenship is uncertain; but that it was not the full citizenship, possessed by Athenian citizens, appears from a line of Aristophanes, who speaks of certain slaves, who had been engaged in sea-fights, being made Plataeans (καὶ Πλαταῖοι εἰδοὺ εἶναι κατὰ δοῦλον δεσπότας, Ran. 706; comp. Schol. ad Aristoph. Ran. 33; Böckh, Public Econ. of Athens, p. 262, 2nd ed.). Diodorus, in relating their return to Athens at a subsequent time, says (xx. 46) that they received the ἱσπολοχεία; but that some of them at any rate enjoyed nearly the full privileges of Athenian citizens appears from the decree of the people quoted by Demosthenes (c. Neer. p. 1880). On the whole subject, see Hermann, Staatsalterth., § 117.

In n. c. 420 the Athenians gave the Plataeans the town of Scione as a residence. (Thuc. iii. 32; Isocr. Panem. § 109; Dicer. xii. 76.) At the close of the Peloponnesian War, they were allowed to evacuate Scione (Plut. Lycur. 14.), and again found a hospitable welcome at Athens. Here they were allowed to live at the time of the peace of Antalcidas (n. c. 387), which guaranteed the autonomy of the Greek cities; and the Lacedaemonians, who were now anxious to humble the power of Thebes, took ad-
vantage of it to restore the Plataeans to their native city. (Paus. ix. 1. § 4; Isocrit. Plataeis § 13, seq.) But the Plataeans did not long retain possession of their city, for in n. c. 372 it was surprised by the Thebans and again destroyed. The Plataeans were compelled once more to seek refuge at Athens. (Paus. ix. 1. §§ 5—8; Diodor. xvi. 46.) The wrong done to the Plataeans by Thebes are set forth in a speech of Isocrates, entitled Plataicus, which was perhaps actually delivered at this time by a Plataean speaker before the public assembly at Athens. (Grote's Greece, vol. x. p. 220.) After the battle of Chaeroneia (n. c. 338) the Plataeans were once more restored to their city by Philip. (Paus. ix. 1. § 8, iv. 27. § 11.) It was shortly after this time that Plataea was visited by Dicaearchus, who calls the Plataeans 'Αριστοί Βουλετοί, and remarks that they have nothing to say for themselves, except that they are colonists of the Athenians, and that the battle between the Greeks and the Persians took place near their town. (Descript. Grac. p. 11, Hudson.)

After its restoration by Philip, the city continued to be inhabited till the latest times. It was visited by Pausanias, who mentions three temples, one of Hera, another of Athena Arei, and a third of Demeter Eleusinia. Pausanias speaks of only one temple of Hera, which he describes as situated within the city, and worthy of admiration on account of its magnitude and of the offerings with which it was adorned (ix. 2. § 7). This was apparently the temple built by the Thebans after the destruction of Plataea. (Thuc. iii. 68.) It is probable that the old temple of Hera mentioned by Herodotus, and which he describes as outside the city (ix. 52), was no longer repaired after the erection of the new one, and had disappeared before the visit of Pausanias. The temple of Athena Areia was built according to Pausanias (ix. 4. § 1) out of a share of the spoils of Marathon, but according to Pintarch (Arist. 20) with the 80 talents out of the spoils of Plataea, as mentioned above. The temple was adorned with pictures by Polycnotus and Onatas, and with a statue of the goddess by Phidias. Of the temple of Demeter Eleusinia we have no details, but it was probably erected in consequence of the battle having been fought near a temple of Demeter Eleusinia at Argos. (Herod. ix. 57.) The temple of Zeus Eleutherus (Strab. ix. p. 412) seems to have been reduced in the time of Pausanias to an altar and a statue. It was situated outside the city. (Paus. ix. 2. §§ 5—7.)

Plataea is mentioned in the sixth century by Herodotus (p. 645, Wesseling) among the cities of Boeotia; and its walls were restored by Justinian. (Procop. de Aedif. iv. 2.)

The ruins of Plataea are situated near the small village of Kókkhla. The circuit of the walls may still be traced in great part. They are about two miles and a half in circumference; but this was the size of the city restored by Philip, for not only is the earlier city, before its destruction by the Thebans, described by Thucydides (ii. 77) as small, but we find at the southern extremity of the existing remains more ancient masonry than in any other part of the ruins. Hence Leake supposes that the ancient city was confined to this part. He observes that "the masonry in general, both of the Acropolis and of the town, has the appearance of not being so old as the time of the battle. The greatest part is of the fourth order, but mixed with portions of a less regular kind, and with some pieces of polygonal masonry. The Acropolis, if an interior inclosure can be so called, which is not on the highest part of the site, is constructed in part of stones which have evidently been taken from earlier buildings. The towers of this citadel are so formed as to present flanks to the inner as well as to the outer face of the intermediate walls, whereas the town walls have towers, like those of the Turks, open to the interior. Above the southern wall of the city are foundations of a third inclosure; which is evidently more ancient than the rest, and is probably the only part as old as the Persian War, when it may have been the Acropolis of the Plataeans of that age. It surrounds a rocky height, and terminates to the S. in an acute angle, which is only separated by a level of a few yards from the foot of the great rocky slope of Cithaeron. This inclosure is in a situation higher than any other part of the ancient site, and higher than the village of Kókkhla, from which it is 500 yards distant to the E. Its walls are traceable on the eastern side along a torrent, a branch of the Oreus, nearly as far as the south-eastern angle of the main inclosure of the city. In a church within this upper inclosure are some fragments of an inscribed marble." (Northern Greece, vol. ii. p. 325.) (Compare Friederich, Specimen Rerum Plataic. Berol. 1841; Münzener, Dius. de Rebus Plataeis. 1841.)

PLATAMONES. [Messenia. p. 341, b.]

PLATANISTAS. [Speeia.]

PLATANISTUS (Πλατανιστός). 1. A fountain in Messenia, near Corinth. (Paus. iv. 54. § 4.) [Corone.]

2. A river of Arcadia, and a tributary of the Neda, flowing westward of Lycesura, which it was necessary to cross in going to Philaeia. (Paus. v. 39. § 1; Leake, Morea, vol. ii. p. 10.)

PLATANISTUS (Πλατανιστός). 1. The northern promontory of Cythera. (Paus. iii. 23. § 1.)

2. Another name of Macristus or Macistum, a town of Triphila in Elis. [Machistus.]

PLATANUS (Πλατάνος), a river of Boeotia, flowing by Corea into the sea. [Coreia.]

PLATANUS (Πλατάνος), according to the Stadinsimus ( §§ 178, 179), a coast-town of Clelia Aspera, 350 stadia west of Anemourium. This distance is incorrect. Beaufret remarks that "between the plain of Scleinti and the promontory of Anemour, a distance of 30 miles, the ridge of bare rocky hills forming the coast is interrupted but twice by narrow valleys, which conduct the mountain torrents to the sea. The first of these is Kharadra; the second is the narrow valley between that place and Anemour. The latter, therefore, seems the site of Platanus, that is, about 150 stadia from Anemourium. The whole of that rocky district, which was very dangerous to navigators, seems to have derived the name of Platanisitus (Strab. xiv. p. 669) from Platanas. (Leake, Asia Minor, p. 260.) [I. S.]

PLATANUS (Πλατάνος, Polyb. v. 68; Steph. Bas. s. v. Πλατάνος; Joseph. Ant. xvi. 11. § 1: Eth. Πλατανιστός), a town of Phocis, described by Josephus (I. c.) as a village of the Saliosians, and situated upon a pass between Mount Lebanon and
PLEA NE.

1. OLD PLEURON (ἡ παλαίδ Pleuròn, Strab. x. p. 451), was situated in the plain between the Ache- lous and the Evnas, W. of Calydon, at the foot of Mount Curium, from which the Curetes are said to have derived their name. Pleuron and Calydon were the two chief towns of Aetolia in the heroic age, and are said by Strabo (x. p. 450) to have been the ancient ornament (φυλοχώσα) of Greece. Pleuron was originally a town of the Curetes, and its inhabit-

ants were engaged in frequent wars with the Aet- lians of the neighbouring town of Calydon. The Curetes, whose attack upon Calydon is mentioned in an episode of the Iliad (ix. 529), appear to have been the inhabitants of Pleuron. At the time of the Trojan War, however, Pleuron was an Aetolian city, and its inhabitants sailed against Troy under the command of the Aetolian chief Thoas, the son (not the grandson) of Oeneus. (Hom. H. ii. 639, comp. xiii. 217, xiv. 116.) Ephorus related that the Curetes were expelled from Pleuron, which was formerly called Curetis, by Aeolians (ap. Strab. x. p. 465); and this tradition may also be traced in the statement of Thucydides (iii. 102) that the district, called Calydon and Pleuron in the time of the Peloponnesian War, formerly bore the name of Aeolis. Since Pleuron appears as an Aetolian city in the later period of the heroic age, it is represented in some traditions as such from the beginning. Hence it is said to have derived its name from Pleuron, a son of Aetolia; and at the very time that some legends represent it as the capital of the Curetes, and engaged in war with Oeneus, King of Calydon, others suppose it to have been governed by the Aetolian Thesius, the brother of Oeneus. Thes-

ius was also represented as a descendant of Pleuron; and hence Pleuron had an hero or a chapel at Sparta, as being the ancestor of Leda, the daughter of Thesius. But there are all kinds of variations in these traditions. Thus we find in Sophocles Oeneus, and not Thestius, represented as king of Pleuron. (Apollod. i. 7. § 7; Paus. iii. 14. § 8; Soph. Trach. 7.) One of the tragedies of Thry- nychus, the subject of which appears to have been the death of Melancthe, the son of Oeneus, and called Pleuroni or Pleurón, was the "Aeneid of the "Pleuranian Women;" and hence it is not improbable that Thrynichus, as well as Sophocles, represented Oeneus as king of Pleuron. (Paus. x. 31. § 4.) Pleuron is rarely mentioned in the historical period. It was abandoned by its inhabitants, says Strabo, in consequence of the ravages of Demetrius, the Aetolian, a surname probably given to Demetrius II., king of Macedonia (who reigned b. c. 239—229), to distinguish him from Demetrius Poliorcetes. (Strab. x. p. 451.) The inhabitants now built the town of

2. NEW PLEURON (ἡ νεώτερα Pleuròn), which was situated a mile and a half west of the town of Aracnuthus. Shortly before the destruction of Carthage (b. c. 146), we find Pleuron, which was then a member of the Achaean League, petitioning the Romans to be dis- covered from it. (Paus. xii. 11. § 3.) Leake sup- poses, on satisfactory grounds, the site of New Pleuron to be represented by the ruins called το Κάστρον τῆς Εύρωπης, or the Castle of Laima Irene about one hour's ride from Mesolonghi. These ruins occupy the broad summit of one of the steep and rugged heights of Μεσολόγην (the ancient Aracnuthus), which bound the plain of Mesolonghi to the north. Leake says that the site is inferior in situation, but more and Dodwell describe the circuit as nearly two miles. The most remarkable
remains within the ruined walls are a theatre about 100 feet in diameter, and above it a cistern, 100 feet long, 70 broad, and 14 deep, excavated on three sides in the rock, and on the fourth constructed of masonry. In the acropolis Leake discovered some remains of Doric shafts of white marble, which he conjectures to have belonged to the temple of Athena, of which Dicaearchus speaks (l. 55); but the temple mentioned by Dicaearchus must have been at Old Pleuron, since Dicaearchus was a contemporary of Aristotle and Theophrastus, and could not have been alive at the time of the foundation of New Pleuron. Dodwell, who visited the ruins of this city, erroneously maintains that they are those of Orcasus, which were, however, situated among the marshes on the other side of the Achelous. Leake places Old Pleuron further south, at a site called Glyfio-kastro, on the edge of the plain of Mesolonghi, where there are a few Hellenic remains.

PLINTHINE. (Pλινθονίς, Strab. xvii, p. 799; Ptol. iv. 3; § 8; Step. B. c. v.) the frontier town of Aegypt towards Libya. It stood at the head of the Plinthine bay, in latitude 34° 40' N. just within the name, but beyond the limits of the Delta proper. There are no remains enabling us to determine the exact site of this town; but it cannot have been far from Taposiris (Abousir), of which the ruins are still visible about 25 miles W. of Alexandria. An inferior kind of wine was produced in this region of Aegypt; and Hellenicus (Fr. 155) says that the people of Plinthine originally discovered the virtues of the grape.

[ Athen. i. p. 34.]

W. B. D.

PLINTHETICUS SINUS. (Plintheticus κόλπος, Heral. ii. 6.) the westernmost of the Mediterranean harbours of Aegypt. It was indeed little more than a roadstead, and was exposed to the N. and NW. winds. W. of the Sinus Plintheteticus began the Rejo Marmarica.

[ W. B. D.]

PLISTIA (Prestia), a town of the Sammites, mentioned only by Livy (ix. 21, 22) in a manner that affords but little clue to its position. It was besieged by the Sammites in B.C. 315, with the view of drawing off the Romans from the siege of Satica; they failed in this object, but made themselves masters of Plistia. The site is probably indicated by a village still called Preista, about 4 miles from St. Agata dei Guli, at the foot of the Monte Taboris.

[ E. H. B.]

PLISTUS. (Dleph.)

PLITDECUS, a town of Phrygia on the river Alander, which is probably a branch of the Sangarius. (Liv. xxxviii. 13.)

PLITHAN (7a Pflhcr, Arrian. Per. Mar. Errhe. p. 29, Huidi, p. 294, ed. C. Muller, who reads Plihe)ce), an important emporium in the Dacian tribes in India, from which many onyx stones were exported. It is called by Ptolemy (Vii. I. § 82) Basthama (Beutha), the royal residence of Scythoerims. In Pracrit it is also called Pathama, in Satvat Prathitisaha; it is the modern town of Pathan, or Pathamah upon the river Godavari (Voyage of Novachus, vol. ii. p. 412; Lassem, Ind. Alterth. vol. i. p. 177; C. Muller, ad Geoge. Grac. Min. vol. i. p. 294.)

PLITHEA. (Plethe)
POECILISM.

present Pondicherry (written in the Tamil language Puducherry). Ptolemy mentions another place of the same name in the northern part of the island of Taprobane (vii. 4. § 10).

POECILISM, POECILISSUS (Ποικιλίσσος, Ptol. iii. 15. § 3; Ποικιλίσσος, Studium. Magni Mar. p. 299 ed. Hoffman), a town on the S. coast of Crete, placed by Ptolemy L. of Tarraha, between this place and the promontory Hermara; but in the Stadiasmus W. of Tarraha, between this place and Syna, 60 stadia from the former and 50 from the latter. It is probably represented by the ruins near Trypete, situated between the places mentioned in the Stadiasmus. (Pasheley, Crete, vol. ii. p. 264.)

POECILE (Ποικείλη), a rock on the coast of Cilicia, near the mouth of the Calycadnus, and on the east of Cape Sarpedon, across which a flight of steps cut in the rock led from Cape Zephyrium to Seleucia. (Strab. xiv. p. 670; Stadiasmus. Mar. M. § 161.) Its distance of 40 stadia from the Calycadnus will place it about Persaehendi. Instead of any steps in the rock, Beaufort here found extensive ruins of a walled town, with temples, arcades, aqueducts, and tombs, built round a small level, which had some appearance of having once been a harbour with a narrow opening to the sea. An inscription copied by Beaufort from a tablet over the eastern gate of the ruins accounts for the omission of any notice of this town by Strabo and others; for the inscription states it to have been entirely built by Fluranus, archon of the eparchia of Isauria, in the reigns of Valentinian, Valens, and Gratian.

POECILUM (Ποικείλον, Paus. i. 37. § 8), a mountain in Attica, on the Sacred Way. (See Vol. i. p. 328 a.)

POEDICULI. [Percettii.]

POEDICUM (Ποιδίκον), a place mentioned only by Ptolemy (ii. 14. § 3) as situated in the south-east of Noricum; it is commonly identified with the modern Adsalberg, on the river Polig.

POEIESA. [Crous.]

POEMANEUS (Ποιμανανής), a town in the south of Cyzicus, and on the south-west of lake Aphaius, which is mentioned only by very late authors. It belonged to the territory of Cyzicus, was well fortified, and possessed a celebrated temple of Asclepios. (Steph. B. s. v. Ποιμάνης; Nicet. Chor. Chron. p. 296; Concil. Constant. Ill. p. 501; Concil. Nicaea. ii. p. 572; Hieroc. p. 662, where it is called Poemenates.) Its inhabitants are called Poemeniani (Ποιμανανοί, Plin. v. 32). Hamilton (Researches, ii. p. 108. 8c.) identifies it with the modern Menii, near the lake bearing the same name.

POENI. [Cathago.]

POENTIAE ALPES. [Alpes, p. 108. a.]

PETROVIO. [Petrovio.]

POGOX. [Teghen.]

POLA. [Πόλα; Edh. Πούλα; Polo], one of the principal towns of Istria, situated near the S. extremity of that peninsula, on a landlocked bay, forming an excellent port, which was called the Sinus Politicus. (Mel. ii. 3. § 13.) According to a tradition mentioned by several ancient authors, its foundation was ascribed to a band of Colchians, who had come hither in pursuit of Medea, and afterwards settled in the country. (Strab. i. p. 46. v. p. 216; Plin. iii. 19. s. 23; Mel. I. c.; Itzets, ad Lygochr. 1022.) It is impossible to explain the origin of this name, which is already mentioned by Callimachus (op. Strab. l. c.); but it may be received as proving that the city was considered as an ancient one, and certainly existed before the Roman conquest of Istria in B.C. 177, though its name is not mentioned on that occasion. It was undoubtedly the advantages of its excellent port that attracted the attention of the Romans, and led Augustus to establish a colony there, to which he gave the name of Pietas Julia. (Mel. I. c.; Plin. iii. 19. s. 29.) Several of the still existing remains prove that he at the same time adorned it with public edifices; and there is no doubt that under the Roman Empire it became a considerable and flourishing town, and, next to Tergeste (Trieste), the most important city of Istria. (Strab. l. c.; Plin. iii. 1. § 27; Gruter, Inscr. p. 263. 7; p. 360. 1, p. 432. 8.) It is mentioned in history as the place where Crispus, the eldest son of Constantine the Great, was put to death by order of his father; and again, in A.D. 354, the Caesar Gallus underwent the same fate there by order of Constantius. (Ammian. Mar. xiv. 11.) After the fall of the Roman Empire in the West it continued to be a place of importance, and in A.D. 544 it was there that Belisarius assembled the fleet and army with which he was preparing to cross over to Ravenna. (Procop. B. G. iii. 10.) It probably partook of the prosperity which was enjoyed by all Istria during the period that Ravenna became the seat of empire, and which was continued throughout the period of the Exarchate; we learn from the Itineraries that it was connected by a road along the coast with Tergeste, from which it was 77 miles distant, while the direct communication by sea with Halera (Zaro) seems to have been in frequent use, though the passage was 450 stadia, or 56 Roman miles. (Plin. Ap. pp. 271, 496.)

Pola is remarkable for the importance and preservation of its ancient remains. Of these by far the most important is the amphitheatre, one of the most interesting structures of the kind still extant, and remarkable especially for the circumstance that the external circumference, usually the part which has suffered the most, is in this case almost entirely perfect. It is built on the slope of a hill, so that on the E. side it has only one row of steps; on the opposite side, facing the bay, it has a double tier, with an additional story above. It is 436 English feet in length by 346 in breadth, so that it exceeds in size the amphitheatre of Nimes, though considerably smaller than that at Verona. But its position and the preservation of its more architectural portions render it far more striking in aspect than either of them. Considerable remains of a theatre were also preserved down to the 17th century, but were destroyed in 1636, in order to make use of the materials in the construction of the citadel. There still remain two temples; one of which was dedicated to Home and Augustus, and though of small size, is of very elegant design and execution, corresponding to the Augustan age, at which period it was undoubtedly erected. It has thence become a favourite model for study with Italian architects from the time of Palladio downwards. The other, which was consecrated to Diana, is in less complete preservation, and has been converted into a modern habitation. Besides these, the Porta Aurea, a kind of triumphal arch, but erected by a private individual of the name of Sergius, now forms the S. gate of the city. Another gate, and several portions of the ancient walls are also preserved. The whole of these monuments are built of the hard white limestone of the country, closely approaching to marble, which adds
much to their effect. Dante speaks of the environs of Polea, as in his time remarkable for the numerous sarcophagi and ancient tombs with which they were almost wholly occupied. These have now disappeared. (Dante, Inf. ix. 13.)

The antiquities of Polea have been repeatedly described, and illustrated with figures; among others, in the fourth volume of Stuart and Revett's _Athens_, fol. Lond. 1816, and in the _Voyage Pittoresque de l'Istrie et de la Dalmatie_, fol. Paris, 1802; also in Allason's _Antiquités de Polea_, fol. Lond. 1819.

The harbour of Polea is completely landlocked, so as to have the appearance of a small basin-shaped lake, communicating by a narrow channel with the sea. Off its entrance lies a group of small islands called the _Isola Brioni_, which are probably those called by Pliny Cossa and Puffaria. (Pli. iii. 26. s. 50.)

The southermost promontory of Istria, about twelve miles distant from Polea, derived from it the name of Polaënum _Proponentum_. It is now called Capo Promontore.

_Poleonioxium_ (Πολεονίχυς), a town on the coast of Pontus, at the mouth of the small river Sidenus, 10 stadia from Phadnise, and 130 from Cape Jasonium. (Arrian, _Perip. p. 16_; Anonym. _Perip. p. 11_, &c.; Pli. v. 6. § 4; Steph. B. s. v.) Pliny (vi. 4) places the town 120 Roman miles from Antis, which seems to be too great a distance. (Comp. _Ann. mar. xxii. 8_; Hircol. p. 702, where it is erroneously called _Τεονίχυς_; _Tab. Pont._) Neither Strabo nor any writer before him mentions this town, and it is therefore generally believed that it was built on the site of the town of Side, which is not noticed by any writer after Strabo. Its name intimates that it was founded, or at all events was named, after one Poleon, perhaps the one who was made king of that part of Pontus, about b. c. 36, by M. Antonius. It had a harbour, and seems to have in the course of time become a place of considerable importance, as the part of Pontus in which it was situated received from it the name of Pontus Poleoniaeus. The town was situated on the western bank of the Selenus, where its existence is still attested by the ruins of an octagon church, and the remains of a massive wall; but the ancient name of the place is preserved by the village of Podulam, on the opposite side of the river. (Hamilton, _Researches_, vol. i. p. 270.)

_Policina_ (Πολικίνα). 1. A town of Laconia, mentioned only by Polybius (iv. 36), is placed by Leake in the interior of the country on the eastern slope of Mt. Parnon at _Rionada_ (γα _Ριονάδα_), where, among the ruins of a fortified town of the lower empire, are some remains of Hellenic walls. (Leake, _Perigonia_., p. 364.)

2. The NW. of Messenia on the road from Antamia to Dorium and Cyparissia. (Paus. iv. 33. § 6.)

3. A town of _M〔e〕nina, mentioned only in a line of Homer, quoted by Strabo, for which the Athenians substituted another to prove that Salamis at the time of the Trojan War was a dependency of Athens. (Strab. ix. p. 394.)

4. (Eth._Pologi[CES]V.), a town of Crete, whose territory bordered upon the town of Cysterna. (Thuc. ii. 83.) In b. c. 429 the Athenians assisted the inhabitants of Polemon in making war upon the Cretans, and killed the two sons of Hierocraes. (Thuc. i. 1.) Hierocraes also mentions the Polemites, and says, that this people and the Praisii were the only Greeks in Crete who did not join the other Greeks in submitting to the Athenians or the Persians, and accordingly were permitted by them to remain in their own country. Camicius in Sicily in order to revenge the death of Minos (vii. 170; Steph. B. s. v.). Cramer (Ancient Greece, vol. iii. p. 380) supposes the ruins at Polis S. of Armouro to be those of Polichnia, which Pausanias, however, regards as those of Lampsa or Lampa. (Cramer, _Sp. Gr.._)

_Polichine_ (Πολιχίνη), a small town in the upper valley of the Arseus in Troas. (Strab. xiii. p. 645; Pli. v. 32; Steph. B. s. v.; Hircol. p. 662.) Respecting a place bearing the same name near Clazomenae, see _Clazomenae._

_Polimartius_ (Βομαρζοχ), a town of Etruria, not far from the right bank of the Tiber, and about 12 miles E. of _Viterbo_. The name is not found in any writer earlier than Paulinus Diaconus (Hist. Lang. iv. 8), and there is therefore no evidence of its antiquity; but it is certain that there existed an ancient Etruscan city about 2 miles N. of the present village of Bomarzo. Some ruins and other slight vestiges of ancient buildings still remain, and numerous sepulchres have been discovered, some of which have yielded various objects of interest. One of them is adorned with paintings in the Etruscan style, but apparently not of early date. (Dennis's Etruria, vol. i. p. 214—226.)

_Polis_ (Πολις), a village of the Hycna in Locris Ozolis, which Leake supposes occupied the site of _Karîtes_, where he found an inscription. (Thuc. iii. 101; Leake, _Northern Greece_, vol. ii. p. 620.)

_Polismis_ (Πολίσμις), a small place on the river _Simios_ in Troas, was originally called Poleis, but it was situated in an unsuitable locality, and soon decayed. (Strab. xiii. p. 601.)

_Politium_ (Πολιτίῳς; Eth._Pologi[CES]V._, Steph. B.), an ancient city of Latium, destroyed at a very early period of the Roman history. The account of its capture and destruction by Ancus Marcius comprises indeed all we know concerning it; for the statement cited from Cato (Serv. ad _Aen._ v. 564), which ascribed its foundation to Polies, the son of Priam, is evidently a mere etymological fiction. According to Livy and Dionysius, it was a city of the Frici Latini, and was the first which was attacked by the Roman king, who made himself master of it with little difficulty, and transported the inhabitants to Rome, where he settled them upon the _Aventine_. But the Latins having soon after reoccupied the deserted city, Ancus attacked it again, and having taken it a second time, entirely destroyed it, that it might not for the future afford a shelter to his enemies. (Liv. i. 33; Dionys. ii. 37. 38. 43.)

The destruction appears to have been complete, for the name of Politium never again occurs, except in Pliny's list of the cities of Latium that were utterly extinct. (Pli. iii. 5. s. 5.) Its site is consequently involved in obscurity; the only clue we have is the circumstance that it appears in the above narrative associated with Tellusae, which is equally uncertain, and with _Ficata_, the position of which _at Draguncello_, on the Via Ostiata, may be considered as well established. (Ficata.)

_Nibó_ would place Politium at a spot called _La Torretta_ near _Decima_, on the Via Laurentina; while Gell considers the remains of an ancient city that have been discovered at a place called _La Giostra_, on the right of the Via Appia, about a mile and a half from _Fiorano_ and 10 miles from Rome, as those of Politium. There can be no doubt that the ruins at _La Giostra_—consisting of considerable fragments of walls, built in a very ancient and rudimentary style, and enclosing a long and
but row space, bordered by precipitous banks—are those of an ancient Latin city; but whether they mark the site of Pollentia, as supposed by Gell, or of Tellenses, as suggested by Nibby and adopted by Abeken, we are wholly without the means of determining. (Gell, Top. of Rome, p. 280; Nibby, Dist., vol. ii. p. 571; vol. iii. p. 14—152; Abeken, Journ. Italian, p. 63.) The ruins of Lice Giotra are more often noticed under the article Tellenses. [E. H. B.]

POLLENTIA. 1. (Πολλεντία; Eth. Pollentius. Polenzo), a city of Liguria, situated in the interior of that province, at the northern foot of the Apennines, near the confluence of the Stura and Tamara. It was about 7 miles W. of Alba Pompeia. It was probably a Ligurian town before the Roman conquest, and included in the territory of the Statii; but we do not meet with its name in history until near the close of the Roman republic, when it appears as a town of importance. In A.D. 43, M. Antonius, after his defeat at Mutina, withdrew to Vada Sabata, intending to proceed to Transalpine Gaul; but this being opposed by his troops, he was compelled to recross the Apennines, with the view of seizing on Pollentia; in which he was, however, anticipated by Decimus Brutus, who had occupied the city with five cohorts. (Cic. ad Fam. xi. 13.) Under the Roman Empire, Pollentia is mentioned by Pliny among the “nobilissima oppida” which adorned the tract of Liguria between the Apennines and the Alps. (Plin. iii. 5. 77.) It had considerable manufactures of pottery, and the wool produced in its territory enjoyed great reputation, having a natural dark colour. (Plin. viii. 48. s. 73. xxxv. 12. s. 46; Sil. Ital. vii. 597; Martial, xiv. 157.) It is incidentally mentioned as a municipal town under the reign of Tiberius, having been severely punished by that emperor for a tumult that occurred in its forum. (Suet. Tib. 37.) But its name is chiefly noted in history as the scene of a great battle fought between Stilicho and the Goths under Alaric, in A.D. 403. The circumstances of this battle are very imperfectly known, and even its event is variously related; for while Claudian celebrates it as a glorious triumph, Orosius describes it as a dubious success, and Cassiodorus and Jordanes boldly claim the victory for the Goths. (Claudian, B. Get. 580—647; Prudent. in Symmach. ii. 696—749; Oros. viii. 37; Prosper. Chron. p. 190; Cassiod. Chron. p. 450; Jordan. Get. 30.) But it seems certain that it was attended with great slaughter on both sides, and that it led to a temporary retreat of the Gothic king. No subsequent mention is found of it, and we have no account of the circumstances of its decay or destruction; but the name does not disappear in the middle ages, and the modern Pollenza is a poor village. Considerable remains of the ancient city may still be traced, though in a very decayed condition; they include the traces of a theatre, an amphitheatre, a temple, and other buildings; and various inscriptions have also been discovered on the spot, thus confirming the evidence of its ancient prosperity and importance. (Milin, Voyage en Piémont, c. iii. vol. i. p. 55.) The ruins are situated two miles from the modern town of Cherasco, but on the left bank of the Tanaro. Mentioned only by Pliny, who among the “populi” of that region, enumerates the Pollentini, whom he unites with the Urbs Salvia in a manner that seems to prove the two communities to have been united into one. (Urbisavilia Pollentini, Plin. iii. 14. s. 18.) The Urbs Salvia, now Urbisaglia, is well known; and the site of Pollentia must be sought in its immediate neighbourhood. Holstenius places it at Monte Melone, on a hill on the left bank of the Chienti between Mercatara and Tolentino, about 3 miles from Urbisaglia on the south side of the valley. (Holsten. Nat. ad Cliff, p. 138.) [E. H. B.]

POLLENTIA. [Baleares.]

POLIUSCA or POLUSCA (Πολυσκά, Eth. Poluoskovs, Poluscusim; Casal della Mandria), a city of Latium, which appears in the early history of Rome inseparably connected with Longula and Corinii. Thus, in n.c. 493, we find the three places enumerated in succession as reduced by the arms of Postumus Cominus; and again in n.c. 488 all three were recovered by the Volscians under the command of Corinianus. (Liv. ii. 33. 39; Dionys. vi. 91, viii. 36.) No subsequent mention of Poliusca occurs, except that its name is found in Pliny, among the cities of Latium of which all trace had disappeared. (Plin. iii. 5. 9.) As its name is there given among the places which had once shared in the sacrifices on the Alban Mount, it is probable that it was originally a Latin city, and had fallen into the hands of the Volscians; whence it is called, when first noticed in history, a Volscian city. Livy, indeed, appears to regard Longula and Poliusca as belonging to the Volsci Antiates, and therefore at that time mere dependencies of Antium. The position of Poliusca, as well as that of Longula, must be in great measure matter of conjecture, but the site suggested by Nibby, on a hill adjoining the Osteria di Civita, about 32 miles from Rome, on the road to Porto d’Anzo, has at least a plausible claim to that distinction. The hill in question which is included in the farm of the Casal della Mandria, stands just at the bifurcation of the two roads that lead to Porto d’Anzo and to Conca; it was noticed by Sir W. Gell as the probable site of an ancient town, and suggested as one of those which might be selected for Corinianus; it was the place the latter city at Monte Groce, the site more generally adopted, Poliusca may very well have been at the Osteria di Civita; but the point is one which can never be determined with certainty. (Gell, Top of Rome, p. 183; Nibby, Dist., vol. i. p. 402; Abeken, Mittel Italien p. 72.) [E. H. B.]

POLYOEBRIA. [Aenius.]

POLYEAGUS (Πολειαγας), a desert island in the Aegean sea, near Melos. (Itol. iii. 15. § 28; Plin. iv. 12. s. 25; Meta, ii. 7.) It is either Polybos, or perhaps Antimilos with its wild goats. (Ross, Reisen auf den Griech. Inseln, vol. iii. p. 26.)

POLYANTHES. [Amantia.]

POLYANUS (Πολυανος) a mountain in Epirus, mentioned by Strabo (vii. p. 327) along with Temarius.

POLYBOTUS (Πολυβωτος), a place in the west of Phrygia Major, a little to the south-east of Smyrna, is mentioned only by Hierocles (p. 677) and a few Byzantine writers (Procop. Hist. Arc. 18; Anna Comnen. p. 324; Concil. Nicaen. ii. p. 358). Who, however, do not give the name correctly, but call it Polybotes or Polygotus. Col. Leake (Asia Min. p. 55) identifies it with Polybotus with the modern Bobludan, which he regards as only a modern corruption of the ancient name. [L. S.]

POLYCHIUM, a place on the south coast of Gallia, mentioned in the Ora Moritum of Avieni (v. 611):
POLYTHEISM.

"Terminus censu civilis Polygynum est, Tuun Manha vicus oppidumque Naustala." There is nothing to say about a place for whose site there is no sufficient evidence. Menard supposed it to be 'Boutique' on the Etang du Tom. The name seems to be Greek, and the place may be one of the Mussauli settlements on or near this [NAUSTALO].

POLYTHEISM (Πολυθεία, Strab. xii. pp. 606, 616; Polyby, Flin. v. 30. s. 32), a small place in Myconia, between the promontory Lecumum and Assus, and at the distance of 40 stadia from the former.

POLYTHYRIA (Πολυθείρια, Plut. iii. 17. § 10; Πολυθείριον; Πολυθείριον, Steph. B. s. r., corrected by Meinecke into Πολυθείρια; Πολυθειρίου, Sclayx, p. 18, corrected by Gall; Πολυθερίου, Xenob. Proc. v. 50; Polyby, Flin. iv. 12. 20; Πολυθθυρία, Polyby. iv. 55, 55; Strab. x. p. 479), a town in the NW. of Crete, whose territory occupied the whole western extremity of the island, extending from N. to S. (Sclayx, p. 18.) Strabo describes it as being N. of Cypria, at the distance of 30 stadia from the sea, and 60 from Phalasarna, and as containing a temple of Dictymna. He adds that the Polythynii (Formerly dwelt in villages, and that they were collected into one place by the Achaeans and Lacedaemonians, who built a strong city looking towards the south. (Strab. x. p. 479.) In the civil wars in Crete in the time of the Achaean League, B.C. 219, the Polythynii, who had been subject allies of Athens, deserted the latter, and assisted the Lycians against that city. They also sent auxiliary troops to the assistance of the Achaeans, because the Grecians had supported the Aetolians. (Polyb. iv. 53, 55.) The rains of Polythynia, called Pelasagkastro, near Ksarno-Kasteli, exhibit the remains of the ancient walls, from 10 to 18 feet high. (Ashley, Cret., vol. ii. p. 46, seq.)

POLYTHEIST. [OXIA PALAI.] POMELIA. [SUSSA POMEITA.]

POMPTIEI (Πομπα της, Strab.; Πομπηίες, Dion Cass.: Ποιμηίαντος, Pompeianus; Pompeii), an ancient city of Campania, situated on the coast of the beautiful gulf called the Crater or Bay of Naples, at the mouth of the river Sarnus (Sarnum), and immediately at the foot of Mount Vesuvius. It was intermediate between Herceulanum and Stabiae. (Strab. v. p. 247; Pliny, iii. 5. 9; Meila. ii. 4. § 9.) All accounts agree in representing it as a very ancient city: a tradition recorded by Solinus (2. § 5) ascribed its foundation to Hercules; but Diausius, who expressly notices him as the founder of Herceulanum, says nothing of Pompeii (Bionys. l. 44.) Strabo says it was first occupied by the Oscans, subsequently by the Tyrrhenians (Etruscans) and Romans, and afterwards by the Samnites (Strab. l. c.) It continued in the hands of these last, that is, of the branch of the nation who had assumed the name of Campanians [CAMPAUNIA], till it passed under the government of Rome. It is probable that it became from an early period a flourishing town, owing to its advantageous situation at the mouth of the Sarnus, which renders it the port of Nola, Nuceria, and all the rich plain watered by that river. (Strab. l. c.) But we meet with no mention of its name in history previous to the Roman conquest of Campania. In it, however, it is mentioned for the first time, when a Roman fleet under P. Cornelius.Namespace missed, was returned there, and the troops on board proceeded from thence to ravage the territory of Nuceria, and to spread the most startling and sequent notice of it occurs till the outbreak of the Social War (N. c. 91), in which it appears to have taken a prominent part, as the Pompeiani are mentioned by Appian apart from the other Campanians, in enumerating the nations that joined in the insurrection. (Appian, B. C. i. 39.) In the second year of the war, B.C. 90, they now joined the Pompeian bands of the insurgents, and it was not till after repeated engagement that L. Sulla, having defeated the Samnite forces under L. Cluentius, and forced them to take refuge within the walls of Nola, was able to form the siege of Pompeii. (Appian, ib. 50; Oros. v. 18; Vell. Pat. ii. 16.) This result of the siege is nowhere mentioned. It is certain that the town ultimately fell into the hands of Sulla; but whether by force or a capitulation we are not informed; the latter is, however, the most probable, as it escaped the fate of Stabiae, and its inhabitants were admitted to the Roman franchise, though they lost a part of their territory, in which a military colony was established by the dictator, under the guidance and patronage of his relation, P. Sulla. (Cic. pro Sull. 21; Zumpt, de Colon. pp. 254, 468.) Before the close of the Republic, Pompeii became, in common with so many other maritime towns of Campania, a favourite resort of the Roman nobles, many of whom had villas in its immediate neighbourhood. Among others, Cicero had a villa there, which he frequently mentions under the name of "Pompeianum," and which appears to have been a considerable establishment, and one of his favourite residences. (Cic, Acad. ii. 3, ad Att. v. 20, ad Fam. viii. 3, xiv. 20.) Under the Empire it continued to be resorted to for the same purposes. Scaeva praises the pleasantness of its situation, and we learn both from him and Tacitus that it was a populous and flourishing town ("celebre oppidum," Tac. Ann. xxv. 22; Sen. Nat. Qu. vi. 1). In addition to the colony which it received (as already mentioned) under Sulla, and which is alluded to in an inscription as "Colonia Veneria Cornelia" (Mommsen, Insacr. R. N. 2201), it seems to have received a colony at some later period, probably under Augustus (though it is not termed a colony by Pliny), as it bears that title in several inscriptions (Mommsen, i. 2230—2232). In the reign of Nero (A. D. 59) a tumult took place in the amphitheatre of Pompeii, arising out of a dispute between the citizens and the newly-settled colonists of Nuceria, which ended in a conflict in which many persons were killed and wounded. The Pompeians were punished for this outbreak by the prohibition of all gladiatorial and theatrical exhibitions for ten years. (Tac. Ann. xiv. 17.) Only four years after, the city suffered severely from an earthquake, which took place on the 5th of February, A. D. 63. The expressions both of Seneca and Tacitus, as well as several inscriptions (Mommsen, i. 2238—2239) lead us to infer that it was in great part utterly destroyed; and we learn from existing evidence that the damage done was unquestionably very great, the public buildings especially having suffered most severely. (Sen. Nat. Qu. vi. 1; Tac. Ann. xv. 22.) The city had hardly recovered from this calamity, when it met with one far greater: being totally overwhelmed by the famous eruption of Vesuvius in A. D. 79, which buried Pompeii, as well as Herceulanum, under a dense bed of ashes and cinders. The best of life in the former city was the greater, because the inhabitants were assembled in the theatre at the time of the catastrophe took place. (Dion Cass. 56. 23.) In the description of the catastrophe of Pompeii or Her-
culaneum; but his attention is directed principally to the circumstances of his uncle's death and the phenomena which he had himself witnessed.

From this time the name of Pompeii disappears from history. It is not noticed by Ptolemy; and it is certain that the city was never rebuilt. But the name is again found in the Tabula; and it thus appears that a small place must have again arisen on the site, or, more probably, in the neighborhood, of the buried city. But all trace of Pompeii was subsequently lost; and in the middle ages its very site was entirely forgotten, so that even the learned and diligent Oliverrus was unable to fix it with certainty, and was led to place it at Scafati on the Sarno, about 2 miles E. of its true position. This difficulty arose, in great measure, from the great physical changes produced by the catastrophe of A. D. 79, which diverted the course of the Sarno, so that it now flows at some distance from Pompeii,—and at the same time pushed forward the line of the coast, so that the city is now above a mile distant from the sea, which in ancient times undoubtedly bathed its walls.

There is no reason to suppose that Pompeii in ancient times ever rose above the rank of a second-rate provincial town; but the re-discovery of its buried remains in the last century has given a celebrity to its name exceeding that of the greatest cities. The circumstances of its destruction were peculiarly favorable to the preservation of its remains. It was not overthrown by a torrent of lava, but simply buried by a vast accumulation of volcanic sand, ashes, and cinders (called by the Italians lapilli), which forms a mass of a very light, dry, and porous character. At the same time, it is almost certain that the present accumulation of this volcanic deposit (which is in most places 15 feet in depth) did not take place at once, but was formed by successive eruptions; and there is little doubt that the ruins were searched and the most valuable objects removed soon after the catastrophe took place. This seems to be proved by the small number of objects of intrinsic value (such as gold and silver plate) that have been discovered, as well as by the fact that comparatively few skeletons have been found, though it appears certain, from the expressions of Dion Cassius, that great numbers of the inhabitants perished; nor have any of these been found in the theatre, where it is probable that the greatest loss of life occurred.

It was not till 1748 that an accidental discovery drew attention to the remains of Pompeii; and in 1765 regular excavations on the site were first commenced by the Neapolitan government, which have been carried on ever since, though with frequent intervals and interruptions. It is impossible for us here even to attempt to give any account of the results of these excavations and the endless variety of interesting remains that have been brought to light. We shall confine ourselves to those points which bear more immediately on the topography and character of the town of Pompeii, rather than on the general habits, life, and manners of ancient times. More detailed accounts of the remains, and the numerous objects which have been discovered in the course of the excavations, especially the works of art, will be found in the great work of Mazois (Les Ruines de Pompeii, continued by Gau, 4 vols. fol., Paris, 1812—1838), and in the two works of Sir W. Gell (Pompeiana, 1st series, 2 vols. 8vo. Lond. 1824; 2nd series, 2 vols. 8vo. 1850); also in the little work published by the Society of Useful Knowledge (Pompeii, 2 vols. 12mo. 1831). A recent French publication by Breton (Pompeia, 8vo. Paris, 1853) also gives a good account of the whole progress and results of the discoveries (including the most recent excavations) in a moderate compass and inexpensive form. The still more recent work of Overbeck (Svo. Leipzig, 1858), of which the first part only has yet appeared, contains an excellent compendium of the whole sub-

**GENERAL PLAN OF POMPEII**

1. Gate of Herculanum.
2. Gate of Vesuvius.
3. Gate of Capua.
4. Gate of Nola.
5. Gate of the Sarnus.
6. Gate of Stabiae.
7. Gate of the Theatres.
8. Modern entrance to the city.
10. Theatres.
11. Amphitheatre.
12. Street to the Temple.
ject, with especial attention to the works of art discovered.

The area occupied by the ancient city was an irregular oval, about 2 miles in circumference. It was surrounded by a wall, which is still preserved round the whole of the city, except on the side towards the sea, where no traces of it have been found, and it seems certain that it had been pulled down in ancient times to allow for the extension of houses and other buildings down to the water's edge. The wall itself is in many places much ruined, as well as the towers that flank it, and though this may be in part owing to the earthquake of 63, as well as the eruption of 79, it is probable that the defences of the town had before that time been allowed to fall into decay, and perhaps even intentionally dismantled after the Social War. There were seven gates, the most considerable and ornamental of which was that which formed the entrance to the city by the high road from Herculaneum: the others have been called respectively the gate of Vesuvius, the gate of Capua, the gate of Nola, the gate of the Sarnus, the gate of Stabiae, and the gate of the Theatres. The entrances to the town from the side of the sea had ceased to be gates, there being no longer any walls on that side. All these names are of course modern, but are convenient in assisting us to describe the city. The walls were strengthened with an agger or rampart, faced with masonry, and having a parapet or outer

PLAN OF PART OF POMPEII.

1. Villa of Arrius Diomedes.
2. Gate of Herculaneum.
3. Public Baths.
5. Temple of Jupiter.
6. Temple of Augustus or Pantheon.
7. Senaculum.
8. Palaces of Eumachia.
10. Temple of Venus.
11. Ancient Gate.
13. Square called the Soldiers' Quarters.
15. Temple of Isis.
17. Street leading to Gate of Nola.
18. Gate leading to Vesuvius.
20. b.b.b. Ancient line of coast.
POMPEII.

wall on its external front: they were further for-
tified at intervals with square towers, which in some
parts occur regularly at about 100 yards from each
other, in other parts are added much more spar-
ingly. These towers seem to have been subsequent additions to the original walls, being of a different and less solid style of construction. The walls themselves are very solidly built of large blocks of travertine, in horizontal courses, but presenting consi-
siderable irregularities of construction: the upper
part is more regularly finished, and consists of pe-
perios. But both walls and towers are in many
places patched with coarser masonry and reticulated
work; thus showing that they had been frequently
repaired, and at distant intervals of time.

The general plan of the city is very regular, and
the greater part of the streets run in straight lines:
but the principal line of street, which runs from the
gate of Herculaneum to the Forum, is an exception,
being irregular and crooked as well as very narrow.
Though it must undoubtedly have been one of the
chief thoroughfares of the city, and the line followed
by the high road from Capua, Neapolis, and Rome
itself, it does not exceed 12 or 14 feet in width,
including the raised trottoirs or footpaths on each
side, so that the carriageway could only have ad-
mitted the passage of one vehicle at a time. Some
of the other streets are broader; but few of them exceed 20 feet in width, and the widest yet found
is only about 30. They are uniformly paved with
large polygonal blocks of hard lava or basalt, in
the same manner as were the streets of ancient
Rome, and the Via Appia, and other great highways
in this part of Italy. The principal street, already
noticed, was crossed, a little before it reached the
Forum, by a long straight line of street which,
passing by the temple of Fortune, led direct to the
gate of Nola. In the angle formed by the two
stood the public baths or Thermes, and between
these and the temple of Fortune a short broad street
led direct to the Forum, of which it seems to have
formed the principal entrance. From the Forum
two other parallel streets struck off in an easterly
direction, which have been followed till they cross
another main line of street that leads to the gate of
Vesuvius, runs directly across the city to the gate
adjoining the theatres. This last line crosses the
street already noticed, leading from the gate of Nola
westward, and the two divide the whole city into
four quarters, though of irregular size. Great part
of the city (especially the SE. quarter) has not yet
been explored, but recent excavations, by following
the line of these main streets, have clearly shown
its general plan, and the regularity with which the
minor streets branched off at intervals in parallel
lines. There is also little doubt that the part of the
city already excavated is the most important, and
includes the Forum, with all its public buildings ad-
joining to it, the theatres, amphitheatre, &c.

The Forum was situated in the SW. quarter of
the city, and was distant about 400 yards from the
gate of Herculaneum. As was commonly the case
in ancient times, it was surrounded by the principal
public buildings, and was evidently the centre of
the life and movement of the city. The extent
of it was not, however, great; the actual open space
(exclusive of the porticos which surrounded it) did
not exceed 160 yards in length by 35 in breadth,
and a part of this space was occupied by the temple
of Jupiter. It was surrounded on three sides by a
Green-Doric portico or colonnade, which appears
to have been surmounted by a gallery or upper
story, though no part of this is now preserved. It
would seem that this portico had replaced an older
arcade on the eastern side of the Forum, a portion
of which still remains, so that this alteration was
not yet completed when the catastrophe took place.
At the north end of the Forum, and projecting out
into the open area, are the remains of an edifice
which must have been much the most magnificent
of any in the city. It is commonly known, with
at least a plausible foundation, as the temple of
Jupiter; others dispute its being a temple at all,
and have called it the Senaculum, or place of meet-
ing of the local senate. It was raised on a podium
or base of considerable elevation, and had a portico
of six Corinthian columns in front, which, according
to Sir W. Gell, are nearly as large as those in the
portico of St. Paul's. From the state in which it
was found it seems certain that this edifice (in
common with most of the public buildings at Pomp-
peii) had been overthrown by the earthquake of 63,
or, at least, so much damaged that it was necessary
to restore, and in great part rebuild it, and that this
process was still incomplete at the time of its final
destruction. At the NE. angle of the Forum, ad-
joining the temple of Jupiter, stood an arch which
appears to have been of a triumphal character,
though now deprived of all its ornaments: it was
the principal entrance to the Forum, and the only
one by which it was accessible to carriages of any
description. On the E. side of the Forum were
four edifices, all unquestionably of a public cha-
acter, though we are much in doubt as to their
objects and destination. The first (towards the N.)
is generally known as the Pantheon, from its having
contained an altar in the centre, with twelve pe-
destals placed in a circle round it, which are sup-
posed to have supported statues of the twelve chief
gods. But no traces have been found of these, and
the general plan and arrangement of the building
are wholly unlike those of an ordinary temple. A
more plausible conjecture is, that it was consecrated
to Augustus, and contained a small temple or
podium in honour of that emperor, while the court
and surrounding buildings were appropriated to the
service of his priests, the Augustales, who are men-
mion in many inscriptions as existing at Pompei.
Next to this building is one which is commonly
regarded as the Curia or Senaculum; it had a
portico of fluted columns of white marble, which
ranged with those of the general portico that sur-
rounded the Forum. South of this again is a build-
ing which was certainly a temple, though it is
impossible now to say to what divinity it was
consecrated; it is commonly called the Temple of
Mercury, and is of small size and irregular form.
Between the forum and the street known as the
Street of the Silversmiths, which issued from the
Forum near its SE. angle, was a large building
which, as we learn from an inscription still existing,
was erected by a female priestess named Eumachia.
It consists of a large and spacious area (about 130
feet by 65) surrounded by a colonnade, and having
a raised platform at the end with a semicircular
recess similar to that usually found in a Basilica.
But though in this case the founder of the edifice
is known, its purpose is still completely obscure.
It is commonly called the Chalcidicum, and prob-
able that the term (which is found in the in-
scription above noticed) designates only a part of
the edifice, not the whole building.
A. Temple of Jupiter.
B. Temple of Venus.
C. Temple of Mercury.
D. Basilica.
E. Temple of Eumachia.
F. Thermae.
G. Pantheon or Temple of Augustus.
H. Tribunals or Courts of Justice.
I. Street of the Silversmiths.
J. Street leading to the Temple of Fortune.
K. Part not yet excavated.
L. Street of the Dried Fruits.
M. Street of the Dioscuri.
N. Curia or Semicolumn.
O. Portico or Temple of Vesta.
P. Triumphant Arch.
Q. Portico or Temple of Agrippa.
R. Portico of the Temple of Asgard.
S. Street of the Temple of Vesta.
T. Street of the Temple of Saturn.
U. Street of the Temple of Jupiter.
V. Street of the Temple of Neptune.
W. Street of the Temple of Fortuna.
X. Street of the Temple of Jupiter.
Y. Street of the Temple of Neptune.
Z. Street of the Temple of Saturn.

The S. end of the Forum was occupied by three buildings of very similar character, standing side by side, each consisting of a single hall with an apse or semicircular recess at each extremity. The most probable opinion is that they served the purpose of justice, in which the tribunals held their sittings.

The western side of the Forum was principally occupied by a Basilica, and a large temple, which is commonly called (though without any authority) the Temple of Vesta. The former is the largest
POMPEII.

Building in Pompeii; it is of an oblong form, 220 feet in length by 80 in breadth, and abutted endwise on the Forum, from which it was entered by a vestibule with five doorways. The roof was supported by a peristyle of 28 Ionic columns of large size, but built of brick, coated with stucco. There is a raised tribunal at the further end, but noapse, which is usually found in buildings of this class. Numerous inscriptions were found scratched on the walls of this edifice, one of which is interesting, as it gives the date of the consulate of A. Lepidus and Q. Catulus (B.C. 78), and thus proves the building to have been erected before that time. Between this edifice and the temple is a street of greater width than usual, which extends from the Forum in a westerly direction, and probably communicated with the port. The Temple of Venus, on the N. side of this street, was an extensive building consisting of a peripteral temple with a small cella, elevated on a podium or basement, surrounded by a much more extensive portico, and the whole again enclosed by a wall, forming the peribolus or sacred enclosure. All parts of the building are profusely decorated with paintings. The temple itself is Corinthian, but the columns of the portico seem to have been originally Doric, though afterwards clumsily transformed into Corinthian, or rather an awkward imitation of Corinthian. This is only one among many in stances found at Pompeii of very detective architecture, as well as of the frequent changes which the buildings of the city had undergone, and which were still in progress when the city itself was destroyed. The buildings at the NW. corner of the Forum are devoid of architectural character, and seem to have served as the public granaries and prisons.

TEMPLE OF VENUS. (The Forum and Temple of Jupiter in the background.)

The open area of the Forum was paved, like that of Rome, with broad slabs of a kind of marble, thus showing that it was never designed for the traffic of any kind of vehicles. It is moreover probable that the whole space, including the porticoes which surrounded it, could be closed at night, or whenever it was required, by iron gates at the several entrances. It was adorned with numerous statues, the pedestals of which still remain: they are all of white marble, but the statues themselves have uniformly disappeared. It is probable either that they had not been re-erected during the process of restoration which the Forum was undergoing, or that they had been searched for and carried off by excavations soon after the destruction of the city.

The remaining public buildings of the city may be more briefly described. Besides the temples which surrounded the Forum, the remains of four others have been discovered; three of which are situated in the immediate vicinity of the theatres, a quarter which appears to have had more of architectural ornament than any other part of the city, except the Forum. Of these the most interesting is one which stood a little to the SW. of the great theatre, near the wall of the city, and which is evidently much more ancient than any of the other temples at Pompeii: it is of the Doric order and of pure Greek style, but of very ancient character, much resembling that of Neptune at Paestum and the oldest temples at Selinus. Unfortunately only the basement and a few capitals and other architectural fragments remain. It is commonly called the Temple of Hercules, but it is obvious that such a name is purely conjectural. It stood in an open area of considerable extent, and of a triangular form, surrounded on two sides by porticoes; but this area, which is commonly called a Forum, has been evidently constructed at a much later period, and with no reference to the temple, which is placed very awkwardly in relation to it. Another temple in the same quarter of the town, immediately adjoining the great theatre, is interesting because we learn with certainty from an inscription that it was consecrated to Isis, and had been rebuilt by N. Popidius Celsius "from the foundations" after its overthrow in the great earthquake of A.D. 63. It is of a good style of architecture, but built chiefly of brick covered with stucco (only the capitals and shafts of the columns being of a soft stone), and is of small size. Like most of the temples at Pompeii, it consists of a cella, raised on an elevated podium, and surrounded externally by a more extensive portico. Adjoining this temple was another, the smallest yet found at Pompeii, and in no way remarkable. It has been variously called the temple of Asclepius, and that of Jupiter and Juno.

The only temple which remains to be noticed is one situated about 60 yards N. of the Forum at the angle formed by the long main street leading to the gate of Nola, with a short broad street which led from it direct to the Forum. This was the Temple of Fortune, as we learn from an inscription,
and was erected by a certain M. Tullius, a citizen and magistrate of Pompeii, who has been supposed to be of the family of Cicero; but the absence of the cognomen renders this highly improbable. The epigraph of Fortuna Augusta, which seems to mark the temple and its inscription are not earlier than the time of Augustus. It is much in ruins, having probably suffered severely from the earthquake of 63; and has little architectural effect.

Pompeii possessed two Theatres and an Amphitheatre. The former were situated, as seems to have been usual in Greek towns, close together; the larger one being intended and adapted for theatrical performances properly so called; the smaller one serving as an Odeum, or theatre for music. Both are unquestionably of Roman date: the larger one was erected (as we learn from an inscription found in it) by two members of the same family, M. Holconius Rufus and M. Holconius Celer, both of whom appear to have held high civil offices in the municipal government of Pompeii. The period of its construction may probably be referred to the reign of Augustus. The smaller theatre seems to be of earlier date, and was erected at the public expense under the direction of the Dunmivri or chief magistrates of the city. The large Theatre is to a considerable extent excavated out of the side of a hill, on the slope of which it was situated, thus saving a considerable amount of the expense of construction. But the exterior was still surrounded by a wall, a part of which always rose above the surface of the soil, so that it is singular it should not have long before led to the discovery of the buried city. Its internal disposition and arrangements, without exactly coinciding with the rules laid down by Vitruvius, approach sufficiently near to them to show that it was constructed on the Roman, and not the Greek model. Its architect (as we learn from an inscription) was a freedman of the name of M. Ar-|torius Primus. It seems to have been almost wholly cased or lined with marble, but the greater part of this, as well as other decorations of the building, has been removed away by former excavations, probably made soon after the catastrophe. The interior diameter of the building is 223 feet: it had 29 rows of seats, divided into three stories by galleries or preceintiones, and was capable of containing about 5000 spectators. The smaller Theatre, which communicated with the larger by a covered portico on the level of the orchestra, was not above a fourth of the size of the other, being adapted to receive only about 1500 spectators. We learn from an inscription that it was covered or permanently roofed in, a rare thing with ancient theatres, and doubtless owing to its small size. Its chief architectural peculiarity is that the seats are cut off by the walls at the two sides, so that it is only the lower seats of the cavea, of which the semi-circum is complete.

Adjoining the two theatres, and arranged so as to have a direct communication with both, is a large quadrangular court or area (183 feet long by 148 wide), surrounded on all sides by a Doric portico. Its destination is very uncertain, it has been called a provision market (Forum Non-|dinarium); but is more generally regarded as having served for the barracks or quarters of the soldiers. Perhaps a more plausible conjecture is that it was a barracks, not of soldiers but of gladiators. On the W. of this, as well as of the great theatre, was the triangular area or forum already noticed, in which the Greek temple was situated. The remains of this on the N., where it communicated with the street, was ornamented by a portico or Propylaeum composed of eight Ionic columns of very elegant style, but consisting of the common volcanic tufo, casued with stucco.

There is a temple situated at the distance of above 500 yards from the Theatres, at the extreme SE. angle of the city. It offers no very remarkable differences from other edifices of the same kind: its dimensions (430 feet by 335) are not such as to place it in the first rank even of provincial structures of the class; and from being in great part excavated out of the soil, it has not the imposing architectural character of the amphitheatres of Verona, Neman-|sus, or Pola. It had 24 rows of seats, and about 20,000 feet of sitting-room, so that it was adapted to receive at least 10,000 spectators. From one of the inscriptions found in it, it appears that it was built, or at least commenced, by two local magis-|trates, named C. Quinctius Valgus and M. Porcius, after the establishment of the colony under Augustus, and probably in the reign of that emperor.

The only public building which remains to be noticed is that of the Thermes or Baths, which were situated in the neighbourhood of the Forum, adjoining the short street which led into it from the Temple of Fortune. They have no pretence to vie with the magnificent suite of buildings which bore the name of Thermae at Rome, and in some other great cities; but are interesting as containing a complete suite of all apartments really required for bathing, and from their good preservation throw much light upon all similar remains. The details of their construction and arrangement are fully given in the Dictionary of Antiquities [art. Balneaes], as well as in the works specially devoted to Pompeii.

It is impossible here to enter into any details concerning the results of the excavations in regard to the private dwellings at Pompeii, though these are, in many respects, the most interesting, from the light they have thrown upon the domestic life of the ancient inhabitants, their manners and usages, as well as from the artistic beauty and variety of the objects discovered. A few words on the general character of the houses and other private buildings of Pompeii are all that our space will admit of. As these are almost the only remains of a similar kind that have been preserved to us, it must be borne in mind that they can hardly be regarded as representing in their purity the arrangements either of the Greek or Roman mode of building. On the one hand Pompeii, though strongly tintured with Greek civilization, was not a Greek city; on the other hand, though there is no doubt that the houses at Pompei present much more the Roman plan and arrangement than that of the Greeks, we must not conclude that they represent them in all respects. We know, at least, that Rome itself was built in many respects in a very different manner. Cicero, in a well-known passage, contrasts the narrow streets, the lofty houses, and irregular construction of the capital with the broad streets and regular arrange-|ment of Capua, resulting from its position in a level plain; and it is clear that, in some respects, Pompeii more resembled the capital of Campania than the city of the Caesars. (as already stated) were narrow, but with few exceptions straight and regular, and the houses were certainly low, seldom exceeding two stories in height; and those of these the upper stories seem to have consisted
only of inferior rooms, a kind of garrets, probably serving for the sleeping-rooms of slaves, and in some cases of the females of the family. From the mode of destruction of the city the upper stories have indeed been almost uniformly totally destroyed; but this circumstance itself, as well as the few traces which occasionally remain, seems to prove that they were built wholly of wood, and could never have formed an important part of the houses. It is only on the W. side of the city, where the ground slopes steeply towards the sea, that houses are found which consisted of three stories or more. Externally the houses had little or nothing of an ornamental character; not a single instance has been found of a portico before a private house; and towards the street they presented either dead walls, with here and there a few small and scanty openings as windows, or ranges of shops, for the most part low and mean in character, even when they occupied (as was often the case) the front of dwellings of a superior description. The interior of the houses of the more wealthy class was arranged apparently on the same model as those at Rome; its disposition is given in detail in the Dictionary of Antiquities under the article Domus where a plan is given of the House of Pansa, one of the most extensive and complete of those found at Pompeii. In this case the single house with its garden and apartments, including as usual several shops, occupied the whole of an insula or the space bounded by four streets or alleys; but this was unusual; in most cases each insula comprised several houses even where they were of a better description, and must have been the residence of persons of some wealth. Among the most remarkable of these may be mentioned the dwellings known as the House of Sallust, that of the Tragic Poet, of Castor and Pollux, of the Labyrinth, &c. The work of Dr. Overbeck (above cited) gives a very interesting series of these houses, selected so as to afford examples of every description of house, from the humblest dwelling, consisting of only two rooms, to the richly decorated and spacious mansions of Sallust and Pansa.

The style of decoration of these houses presents a very general uniformity of character. The walls are almost invariably ornamented with painting, the atrium and peristyle being decorated with columns; but these are composed only of a soft and coarse stone (volcanic tufa) covered with stucco. The prodigal use of marble, both for columns and slabs to encurst the walls, which had become so general at Rome under the first emperors, apparently not having yet found its way to Pompeii. The floors are generally enriched with mosaics, some of which possess a very high degree of merit as works of art. The most beautiful yet discovered adorned the house known as the House of the Faum, from a bronze statue of a dancing Faun which was also found in it. The illustrations to Gell's Pompeiana (2nd series, Lond. 1833) will convey to the reader a sufficient idea of the number and variety of the artistic decorations of the private houses at Pompeii; though several of the most richly ornamented have been discovered since the date of its publication.

Outside the gate leading to Herculanenum, in a kind of suburb, stands a house of a different description, being a suburban villa of considerable extent, and adapted to have been the abode of a person of considerable wealth. From the greater space at command this villa comprises much that is not found in the houses within the town; among others a large court or garden (Xystus), a complete suite of private baths, &c. The remains of this villa are of much value and interest for comparison with the numerous ruins which occur elsewhere of similar buildings, often on a much more extensive scale, but in a far less perfect state of preservation; as well as for assisting us to understand the descriptions given by Pliny and Vitruvius of similar structures, with their numerous appartences. (For the details of their arrangements the reader is referred to the article Villa, in the Dictionary of Antiquities, and to the work on Pompeii, Lond. 1832, vol. ii. ch. 11.) Between this villa and the gate of the city are the remains of another villa, said to be on a larger scale and more richly decorated than the one just described; but its ruins, which were excavated in 1764, were filled up again, and are not now visible. It has been called, though without the slightest authority, the Villa of Cicero. The one still extant is commonly known as the Villa of Arrius Diomedes, but for no other reason than that
POMPEII

POMPEII PRAESIDIUM.

a sepulchre bearing that name was discovered near its entrance; a very slight argument, where almost the whole street is bordered with tombs. In fact, the approach to the gate of Herculaneum is bounded on both sides by rows of tombs or sepulchral monuments, extending with only occasional interruptions for above 400 yards. Many of them are on a very considerable scale, both of size and architectural character; and though they cannot vie with the enormous mausolea which border in a similar manner the line of the Via Appia near Rome, they derive additional interest from the perfect state of preservation in which they remain: and the Street of the Tombs, as it is commonly called, is perhaps one of the most interesting scenes at Pompeii. The monuments are for the most part those of persons who had held magistracies, or other offices, in the city of Pompeii, and in many cases the site was assigned them by public authority. It is therefore probable that this place of sepulture, immediately outside the gate and on one of the principal approaches to the city, was regarded as peculiarly honourable.

Besides the tombs and the two villas already noticed, there have been found the remains of shops and small houses outside the gate of Herculaneum, and there would appear to have been on this side of the city a considerable suburb. This is supposed to be the case from the sepulchral inscriptions of M. Aenius Dionnes as the "Pagus Augustas Felix Suburbanus." We have as yet no evidence of the existence of any suburbs outside the other gates. It is evident that any estimate of the population of Pompeii must be very vague and uncertain; but still from our accurate knowledge of the space it occupied, as well as the character of the houses, we may arrive at something like an approximation, and it seems certain that the population of the town itself could not have exceeded about 20,000 persons. This is in accordance with the statements of ancient writers, none of whom would lead us to regard Pompeii as having been more than a second or third rate provincial town.

The inscriptions found at Pompeii, which are often incorrectly given in the ordinary works on the subject, are carefully edited by Mommsen, in his Inscriptiones Regni Neapolitani (pp. 112-122). These do not, however, include a class of much interest, and peculiar to Pompeii, the inscriptions of a temporary kind which were rudely painted on the walls, or scratched on the plaster of the houses and public buildings. It is remarkable that several of these are in the Oscan dialect, and seem to prove that the use of that ancient language must have continued down to a much later period than is commonly supposed. [Oscil]. But the public or official use of the Oscan seems to have ceased after the Social War, and the numerous inscriptions of a public character which belong to the age of Augustus and his successors are uniformly in the Latin language.

POMPEII PRAESIDIUM (Tab. Pent.; Pompeii, Itin. Ant. p. 134; I Pompeii, Itin. Hieros. p. 566), a place in Mucia Superior, between Horrea Marci and Naissus, identified either with Kazechna (Richard) or Boudouris (Lagune).

POMPEIOPOLIS (Πομπειόπολις), a town of Paphlagonia, on the southern bank of the river Annias, a tributary of the Halyis. (Strab. xii. p. 562; Steph. B. s. n.). Its name seems to indicate that it was founded by Pompey the Great. In the Itineraries it is marked as 27 miles from Susee; accord-

ing to which its site may be looked for in the valley of the Annias, about the modern Task Kupri, where Captain Kinnaman (p. 285) found some ancient remains.

In the vicinity of the place was a great mine of the mineral called Sarandach. (Strab. L c.) Pompeipolis is often referred to by late writers as an epithet of Herculaneum (Socrat. ii. 39, &c.; Hieroc. p. 695; Constant. Porph. de Them. i. 7; Justinian, Novell. xxi. 1; Tab. Peuting). The name Pompeipolis was borne temporarily by several towns, such as Soli in Cilicia, Amyntio and Eupatoria in Cappadocia, as well as by Pompeion in Tarraconensian Spain.

POMEILO (Πομείλος, Potol. ii. 6 § 67; Strab. iii. p. 161, who makes the name equivalent to Πόμπειονοικος), the chief town of the Bosporan Compania Tarraconensis, on the road from Asturica to Burdigalia (Itin. Ant. p. 455), and a civitas stipendaria in the jurisdiction of Caesaraugusta. (Plin. iii. 3. 4.) Now Pomplona. [T. H. D.]

POMPONIANA. Pliny (iii. 5) says that Pomponiana is the same as Mese, the middle island of the Stoechades or Iscles d'Hiéres [Stoichades], which lie close to the French coast east of Toubon. D'Anville, following the Maritime Itinerary, which places Pomponiana between Telos (Toubon) and Heraclea Cacabaria [Heraclea], thinks that Pomponiana is the same as the island of Crote, which is opposite the western point of Prote (Porquerolles), the most western of the Stoechades. He remarks that the part of Gien which is on the land side is almost covered by a lagoon, from which there are channels to the sea on both sides, so that the peninsula may be considered as an island. [G. L.]

POMPONIANAIS PORTUS. [Portes Pomponianis.]

POMPITINAE PALADES (τα Πομπηίνα πάλαδες; Pudæi Pontiæ) was the name given to the extensive tract of marshy ground in the S. of Latium at the foot of the Velican mountains, extending from the neighbourhood of Cetera to the sea at Terracina. They occupy a space of about 30 miles in length by 7 or 8 in breadth; and are separated from the sea on the W. by a broad tract of sandy plain, covered with forest, which is also perfectly level, and intermixed with marshy spots, and pools or lagoons of stagnant water, so that it is almost as unhealthy as the regular marsh, and the whole tract is often comprised under the name of the Pontina Marches. The extremely low level of this whole tract, affording scarcely any natural outfall for the waters which descend into it from the Velican mountains, together with the accumulation of mud along the seashore from Asturica to the Cirenaean promontory, readily accounts for the formation of these extensive marshes; and there can be no doubt that the whole of this low alluvial tract is of very recent origin compared with the rest of the adjoining mainland. Still there is the strongest reason from physical considerations to reject the notion very generally entertained by the Romans, and adopted by Pliny, that the whole of this accumulation had taken place within the period of historical record. This idea seems indeed to have arisen in the first instance from the assumption that the Mons Circeaus was the island of Circe mentioned by Homer, and was therefore in the time of that poet really an island in the midst of the open sea. [Ciricus Mons.] But it is far more strange that Pliny should assert, on the authority of Theophrastus, that the accumulation had taken place in great part since the
time of that writer; though Theophrastus himself tells us distinctly that the island was in his days united to the mainland by the accumulated deposits of certain rivers. (Theophr. H. P. v. 8, § 3; Plin. iii. 28.) An ancient tradition preserved to us also by Pliny (L. c.), but wholly at variance with the last, asserted that the tract then covered by marshes, and rendered uninhabitable by them, had formerly been occupied by no less than 24 (or, according to some MSS., 33) cities. But no trace of this fact, which he cites from Mucianus, an author contemporary with himself, is to be found in any earlier writer; and not even the name of one of these supposed cities has been preserved; there can therefore be little doubt that the whole story has arisen from some misconception.

The Pontine Marshes are generally represented as deriving their name from the city of Suessa Pometia, which appears to have been situated somewhere on their borders, though we have no clue to its precise position. [Suessa Pometia.] The "Pontinus ager," which is repeatedly mentioned by Livy, and which was cultivated with corn, and part of it portioned out in lots to Roman colonists (Livy. ii. 34. iv. 25, vi. 5, 21) was probably rather the district bordering on the marshes than the actual swampy tract, which does not appear to have been ever effectually reclaimed; though a very moderate amount of industry must at any time have sufficed to bring into cultivation considerable portions of the adjoining plain. As early, however, as the year 312 B.C. the Appian Way appears to have been carried through the midst of the marshes (Livy. ix. 29; Diod. xx. 36), and a canal conducted along with it from Forum Appii to Terracina, which became also much resorted to as a mode of traffic. [Via Appia.] The institution of the Pontine tribe in B.C. 358, and of the Ufente tribe in B.C. 318 (Livy. vii. 13, ix. 20), would seem also to point to the existence of a considerable population in the neighbourhood at least of the Pontine Marshes; but still we have no unequivocal testimony of the continued existence of the marshes themselves in all periods of antiquity. (Sil. Ital. viii. 380; Strab. v. p. 233, &c.)

The very circumstance that the plain is bordered throughout by a chain of considerable and populous towns situated on the mountain front, while not one is recorded as existing in the plain itself, is a sufficient proof that the latter was in great part uninhabitable.

The actual marshes are formed principally by the stagnation of the waters of two streams, the Amasenus and the Ufens, both rising in the Volscian mountains. (Strab. v. p. 233.) Of these the latter was the most considerable, and appears to have been regarded as the principal stream, of which the Amasenus was only a tributary. The Ufens is described as a slow and sluggish stream; and Silius Italicus, amplifying the hints of Virgil, draws a dreary picture of its waters, black with mud, winding their slow way through the pestiferous Pontine plains. (Virg. Aen. vii. 801; Sil. Ital. viii. 579—582; Claudian. Prob. et Ol. Cons. 257.) But both have several minor streams either flowing down from the Volscian mountains, or rising immediately at their foot in copious springs of clear water, as is commonly the case with all limestone mountains. The nymphads, which rises at the foot of the hill at Norba, is the most remarkable instance of this. Thus the whole mass of waters, the stagnation of which gives rise to these marshes, is very considerable: and it is only by carrying off these in artificial channels to the sea that any real progress can be made in the drainage of the district.

Various attempts were made in ancient times to drain the Pontine Marshes. The first of these was in B.C. 160, by the consul Cornelius Cæcognus, which, according to the brief notice transmitted to us, would seem to have been for a time successful (Liv. Epit. xivii.); but it is probable that the result attained was in reality but a partial one; and we find them relapsing into their former state before the close of the Republic, so that the drainage of the Pontine Marshes is noticed among the great public works projected by the dictator Caesar, which he did not live to execute. (Suet. Caes. 44; Plat. Caes. 58; Dion Cass. xlv. 5.) It would appear that on this occasion also some progress was made with the works, so that a considerable extent of land was reclaimed for cultivation, which M. Antonius proposed to divide among the poorer Roman citizens. (Dion Cass. xlv. 9.) Horace alludes to a similar work as having been accomplished by Augustus (Hor. Art. Poët. 65; Schol. Crug. ad loc.); but we find no mention of this elsewhere, and may therefore probably conclude that no great success attended his efforts. Juvénal alludes to the Pontine Marshes as in his time a favourite resort of robbers and highwaymen (Juv. 367); a sufficient proof that the district was one thinly inhabited. The enterprise seems to have been resumed by Trajan in connection with his restoration of the Appian Way through the same district (Dion Cass. Iviii. 15); but we have no particular account of his works, though inscriptions confirm the account given by Dion Cassius of his renovation of the highroad. The next serious attempt we hear of to drain this marshy tract was that under Theoderic, which is recorded both by Cassiodorus and by an inscription still extant at Terracina. (Cassiod. Var. ii. 32, 33; Gruter, lacer. p. 132. 8.) But in the period that followed the works naturally fell into decay, and the whole tract relapsed into an uninhabitable state, which continued till the close of the middle ages. Nor was it till quite modern times that any important works were undertaken with a view to reclaim it. Pope Pius Vi. was the first to reopen the line of the Appian Way, which had been abandoned for centuries, and restore at the same time the canal by its side, extending from Treponti to Terracina. This canal takes the place of that which existed in the time of Horace and Strabo, and formed the customary mode of transit for travellers proceeding from Forum Appii to Terracina. (Hor. Sat. i. 5. 10—24; Strab. v. p. 233; Lucan, iii. 85.) It is evidently the same which is called by Procopius (B. G. i. 11) the Decennovium, a name which could only be applied to an artificial cut or canal, though that author terms it a river. The "nineteen miles" indicated by the name commenced from Trepontium (Treponti), from whence the canal was carried in a straight line to within 3 miles of Terracina. It was this portion of the road which, as we learn from an inscription, was restored by Trajan; and the general doubted whether it had been restored at the same time. Hence Cassiodorus applies the name of "Decennovii paludes" to the whole tract of the Pontine Marshes. (Cassiod. Var. ii. 32, 33.)

The Saturnae Palus, mentioned both by Virgil and Silius Italicus in connection with the river
UFENS (VIRG. AJN. VII. 801; SII. ITAL. VIII. 380), must have been situated in the district of the Pontine Marshes, and was probably merely the name of some portion of the swamps included under that more general designation.

The line of the Appian Way was carried in a perfectly straight line through the Pontine Marshes from the station Sub Lannuvio, at the foot of the Alban Hills, to within a short distance of Tarracina. The stations along its course and the distances are differently given in the Itineraries; but they may all be readily determined with the assistance of inscriptions and Roman milestones still existing. At the beginning of the marshes, or rather in the level tract immediately adjoining them, was the station of TRES TABERNÆ, distant 17 miles from Aricia, at point where a branch road from Antium fell into the Appian Way. The site of this was fixed by the Abbé Chaupy and other writers at a place called Le Castello, 2 miles on the Roman side of Cisternæ; but there seems no reason to reject the distances given in the Antonine Itinerary, which would place it 5 miles further from Rome, or 3 miles beyond Cisternæ, where some ruins still remain, referred by Chaupy to the station Ad Sponsas of the Jerusalem Itinerary, but which would suit equally well for those of Tres Tabernae. [TRES TABERNÆ.] Six miles from this spot, and just 39 miles from Rome (as shown by a milestone still remaining there), is a place still called Torre di Treponti, marking the site of TREPONTIUM, the spot from whence the canal of the Decennarium commenced, and from which therefore the 19 miles from which it derived its name were measured. Four miles farther on considerable remains mark the site of FORUM APPII, which in the Augustan age was a busy and thriving town; but in the fourth century had sunk to a mere Mutatio or post station. The Antonine Itinerary gives the distance from Rome to Forum Appii as 43 miles, which is exactly correct; from thence to Tarracina it reckons 18 miles; the Jerusalem Itinerary makes the distance 19 miles, and gives an intermediate station called Ad Medias (Paludes), which was 9 miles from Forum Appii and 10 from Tarracina. The site of this is still marked by a spot called Torre di Mesta, where a striking Roman monument still remains; but the real distance from Forum Appii is only 8 miles, which coincides with the Antonine Itinerary. [Itin. Ant. p. 107; Itin. Hier. p. 611.] The whole of this part of the road has been carefully examined and described by the Abbé Chaupy (Découvertes de la Maison d'Horce, vol. iii. pp. 382—432); and the distances discussed and corrected by Westphal, (Röm. KAMPAGNE, pp. 67—70). [E. H. B.]

PONS AEXI, or, as it is called in the Peutinger Table, Ad Aeniam, was a frontier fort in Vindelicia on the river Aenus, and was garrisoned by a detachment of cavalry. ([It. Ant. pp. 236, 257; NOT. IMP.]) It is commonly believed that its site is now marked by the village of Fydzan, which in the middle ages bore the name of Pontana; but Mucular (Norician, i. p. 285) identifies it with Lusk at near Fydzan.

PONS AERARIUS, in Gallia Narbonensis, is placed in the Jerusalem Itin. on the road from NEMANUS (Nîmes) to ARELATE (Arles), at the distance of xii. from Nemausus and vi. from Arlate. The Antonine Itin. marks xii. from Nemausus to Arlate in one distance. The road must therefore have been straight between these last towns. [D'Aunville.] fixes the Pons at Bellegarde, where there is a bridge over a canal which comes from the Rhone at Ugeron (Beaucaire) and extends to the Rhone at Morteil. This canal separates the old dioceses of Nîmes and Arles, and probably divided the territories of Nemausus and Areliate. D'Aunville conjectures that the name Aurelius may be owing to the fact that a toll was paid at the bridge, which was a common practice in the Roman period. (Dig. 19. tit. 2. s. 60. § 8: "Redemptor ejus pontis portorium ab eo exigebat.")

PONS ALUTI, a town in Dacia on the road from Ecuta to Apulia, near Roberti, below Strasburg. (TAC. Hist. i. 38.)

PONS ARGENTIUS. [ARGENTIUS.]

PONS AUFIDI. [AUFIDE.] PONS AUGUSTI (Tab. Peut.), a town in Dacia, on the road from Tissivicum to Sarmatians (usually called Zarniseghada), identified by Mannert with the Zeusga (Zeiviga, Potol. iii. § 10) of Ponteum, and placed near Bonnicar at the passage over the river Bistra; by others near Jerorgia. (Ubert, vol. iii. pt. ii. p. 616.)

PONS AUREOLI (Pontirolo), a place on the highroad from Mediolanum to Bergomum, where that road crossed the river Adda (Adula) by a bridge. It is mentioned as a station by the Jerusalem Itinerary, which places it 20 M. P. from Mediolanum and 13 from Bergomum. (Itin. Hier. p. 538.) It derived its name from the circumstance that it was here that the usurper Aureolus was defeated in a pitched battle by the emperor Galerius, and compelled to take refuge within the walls of Milan, a. d. 268. (VICT. CAES. 33. EPIST. 33.) After the death of Aureolus, who was put to death by the soldiers of Claudius, he was buried by order of that emperor close to the bridge, which ever after retained the name of Aureolus. (Treb. POII. TRAJ. TUR. 10.)

PONS CAMPANUS, a bridge on the Via Appia, by which that celebrated road crossed the little river Sarno, a short distance from its mouth. It was 3 miles distant from Sinussa (erroneously given as 9 in the Jerusalem Itinerary), and evidently derived its name from its being the frontier between Campania and Latium, in the more extended sense of the latter name. It is mentioned by Pline (xv. 6. s. 8.), as well as the Itineraries (Tab. Peut.; Itin. Hier. p. 611); and Horace tells us that Maecenas and his companions halted for the night in a villa adjoining it, on their journey from Rome to Brundisium. (Hor. SAT. I. 5. 45.)

PONS DUBIS, in Gallia, a bridge over the Dubis (Doubs), is marked in the Table on the road from Caesillonum (Chalon) to Vesontio (Besançon), and from Caesillonum. D'Aunville supposes that the site may be a place called Pontovæ, where it is said that when the water in the Doubs is low, the remains of an old bridge are visible at which several roads met. (Ubert, Galliën, p. 501.)

PONS MANSUETINA or PONS SOCORUM, a place in Pinnaia, on the road leading from Sophane to Jovis, but no further particulars are known. (CIT. PEUT. I. 63, 267.)

PONS MILVIUS, or MULVIUS (Ponte Molle), a bridge on the Via Flaminia, by which that road crossed the Tiber just about 2 miles from the gate of Rome called the Porta Flaminia. It is probable that a bridge existed on the spot at an early period, and there must certainly have been one from the time when the Via Flaminia was constructed. The first,
mention of the name in history occurs in the Second Punic War, when Livy tells us that the Roman people poured out in a continuous stream as far as the Milvian Bridge to meet the messengers who brought the tidings of the defeat of Hasdrubal, n. c. 207. (Liv. xxvii. 51.) Hence, when Aurelius Victor refers to it among the routes constructed by Scarrus in his censorship (n. c. 110), it is evident that this can refer only to its rebuilding or restoration. (Vict. de Vir. Illustre. 72.) It is very possible that there was no stone bridge before that time. At the time of the conspiracy of Catiline, the Milvian Bridge was selected as the place where the ambassadors of the Allebores were arrested by the orders of Cicero. (Sall. Cat. 45: Cic. in Cat. iii. 5.) It is probable that under the Empire, if not earlier, a suburb extended along the Via Flaminia as far as the Milvian Bridge. Hence we are told that it was the point from which Caesar (among his other gigantic schemes) proposed to divert the course of the Tiber, so as to carry it further from the city (Cic. ad Att. xiii. 33): and again, the emperor Gallienus is said to have proposed to extend the Flaminian portico as far as the Milvian Bridge. (Trebl. Poll. Gell. 18.) In the reign of Nero the neighbourhood of the bridge was occupied by low taverns, which were much resorted to for purposes of delanchery. (Tac. Ann. xiii. 47.) Its proximity to Rome, to which it was the principal approach from the N., rendered the Milvian Bridge a point of great importance during civil wars. Hence it is repeatedly mentioned by Tacitus during those which followed the death of Nero (Tac. Hist. i. 87, ii. 89, iii. 82): and again, in A. D. 193, it was there that Dildus Julianus was defeated by Severus (Epit. viii. 17; Vict. Cæs. 19). At a later period, also, it witnessed the defeat of Maxentius by Constantine (A.D. 312), when the usurper himself perished in the Tiber. (Vict. Cæs. 40; Epit. x. 4; Zoëm, ii. 16.) Its military importance was recognised also in the Gothic Wars, when it was occupied by Vitiges during the siege of Rome, in A. D. 557; and again, in 547, when Totila destroyed all the other bridges in the neighbourhood of Rome, he spared the Milvian alone. (Procop. B. G. i. 19, ii. 24.) The present bridge is in great part of modern construction, but the foundations and principal piers are ancient. [E. H. B.]

PONS MOSAE, in northern Gallia, is mentioned by Tacitus (Hist. iv. 66), but there is nothing said to show where this bridge was. A Roman road ran from Alantuka (Tangern) across the Mosco (Mons) past Julianum (Juliers) to Colinus (Cologne). It is very probable that the Pons Mosae was on this route, and that it was at Mannsrecht. The termination triac is a corruption of the Roman word Traiectum. [Trajectum.] [G. L.]

PONS NARTIAE. [Gallaecia, p. 934, b.]
PONS NEBRIAE. [Gallaecia, p. 934, b.]
PONS NOMENTANUS. [Nomentum.]
PONS SALABRUS (Ponte Salaro), a bridge on the Via Salaria where that highroad crossed the Anio (Terenova) about 2 miles from Rome. From its position this is certainly the bridge meant by Livy under the name of Pons Aneniis, on which the single combat of Manlius Torquatus with the Gaul is described as taking place. (Liv. vii. 9.) The name is not again mentioned in history, but we learn from an inscription still remaining that the present bridge was constructed by Nursus, in the room of the more ancient one which had been destroyed by Totila in A. D. 547, when he broke up the siege of Rome and withdrew to Tibur. (Procop. B. G. iii. 24; Nibby, Diutomori, vol. ii. p. 594.) [E. H. B.]

PONS SARAVI, a bridge over the Saravis (Sarre) in Gallia on the road from Divodurum (Meot.) to Argentoratum (Strasburgus). The Table of Decem-pagi (Dienze) to Tabernae (Sarrense). Though the distances are not quite correct, it is clear that Sarrebruck on the Sarre must be the Pons Saravi; and it cannot be Sarrebrück on the Saar, for Sarrebrück is more than 30 miles north of Sarrebruck, and quite out of the way. This is an instance in which a hasty conclusion has been derived solely from the sameness of name. [G. L.]
PONS SCALDIS, or bridge over the Schelde in North Gallia, is placed both by the Table and the Antonine Itin. on the road from Turnacum (Tournai) to Bagacum (Béreux). There is a place on the Schelde named Excoust pont between Valessines and Conie which may represent the Pons. [G. L.]
PONS SERVILL. [Italicious, Vol. ii. p. 36, b.]
PONS TILURI, a station on the road from Sirimum to Salona, in the interior of Dalmatia. (Itin. Anton.; Tilurium. Petut. Tab.; Graec. Ravi. iv. 16.) It may be identified with the passage of the river Caettina or Taettina (Tilurum), at Trigl, with the opposite height of Gurdun, where there are vestiges of a Roman town, which was probably the colony of Acquetum (Augusta voia... Ptol. ii. 16 (17), § 11; Itin. Anton.; Petut. Tab.; Orelli, Itiner. 502), where an inscription has been found commemorating the restoration of the bridge under the name of Pons Hiptt., a Graecized form of the Latin name of the town, which was sometimes spelt as Equum. (Wilkinson, Dalmatia, vol. i. p. 238; Neugebur, Die Sud-Slaven, p. 178.) [E. B. J.]
PONS ZITHA, a station on the Roman road running along the coast-line of Syria, and a municipium. (Itin. Anton.; Geogr. Ravi.) In the Pentigence Table it is wrongly called Liburna. (Wanderungen, p. 263) has fixed its site at the promontory opposite to Meninx, where he found remains of a stone bridge or mole connecting the mainland with the island of the Lobotphi. [E. B. J.]
PONTEM, AD, a town of Britain, on the road from Londinium to Lindum (Itin. Ant. p. 477), identified by Camden (p. 560) with Painton on the Wilow, in Lincolnshire, where a great many Roman coins and antiquities have been discovered. Others take it to have been Farndon, near Southwell, in Nottinghamshire. [T. H. D.]
PONTES, in North Gallia, is placed in the Ant. Itin. on a road from Samarobriva (Aniens) to Gesoriacum (Boulogne); it is 36 M. P. from Samaro- briva to Pontes, and 39 M. P. from Pontes to Gesoriacum. The Table, which marks a road between Samarobriva and Gesoriacum, does not place Pontes on it, but it has another place, named Durecorum, supposed to be Donker on the Authie. D'Anville concludes that Pontes is Ponches on the Authie, at which place we arrive by following the traces of the old road which still exists under the name of Chemillé de Beauchant. [G. L.]
PONTES, a Roman station in the territory of the Atrebates, seated on the Thames, on the road from Calleva (Silchester) to Londinium (Itin. Ant. p. 478). It was at or near Old Windsor. [T. H. D.]
PONTES TESSELLI (Diesson), a place in...
PONTUS.

Pontica, or the land from Amber to Parthianus.

Pontus was inhabited by a considerable number of different tribes, whose ethnological relations are either entirely unknown or extremely obscure. The most important among them, if we proceed from west to east, are: the Leucosyri, Tharibëni, Chalitès, Misonoctès, Hettactomai, Deihaë, Bechires, Byzeres, Colochi, Macaces, Mains, Taochi, and Phanaiâi. Some of these tribes were wild and savage to the last degree, especially those of the interior; but on the coast Greek colonies continued to be established ever since the middle of the 7th century B.c., and rose to great power and prosperity, spreading Greek culture and civilization around them.

As to the history of the country, tradition stated that it had been conquered by Niæus, the founder of the Assyrian empire (Diod. ii. 2); after the time of Cyrus the Great certainly was, at least nominally,
under the dominion of Persia (Herod. iii. 94, vii. 77, &c.), and was governed by hereditary satraps belonging to the royal family of Persia. In the time of Xenophon, the tribes of Pontus governed by native chiefs seem to have still enjoyed a high degree of independence. But in n. c. 365, in the reign of Artaxerxes II., Ariobarzanes subdued several of the Pontian tribes, and thereby had the foundation of an independent kingdom in those parts. (Diod. xv. 96.) He was succeeded in n. c. 337 by Mithridates II., who reigned till n. c. 302, and who, by skilfully availing himself of the circumstances of the times during the struggles among the successors of Alexander, considerably enlarged his kingdom. After him the throne was occupied by Mithridates III., from n. c. 302 to 266; Ariobarzanes III., from n. c. 266 probably till 240. The chronology of this and the following kings, Mithridates IV., Ptolemy, and Mithridates V., is very uncertain. Under Mithridates VI., from n. c. 120 to 65, the kingdom of Pontus attained the height of its extent and power, but his wars with the Romans led to its subjugation and dismemberment. Pompey, the conqueror of Mithridates, in n. c. 65 annexed the western part of Pontus as far as Ischiopolis and the frontiers of Cappadocia to Bithynia (Dion Cass. xiii. 45; Strab. xii. pp. 541, 543; Vell. Pat. ii. 38; Liv. Epit. 1023), and gave away the remaining parts to some of the chiefs or princes in the adjoining countries. A portion of the country between the Iris and Halys was given to the Galatian Deiotaros, which was henceforth called Pontus Galaticus (Strab. xii. p. 547; Dion Cass. xii. 63, xili. 45; Poly. v. 6, §§ 3, 9). The Colchians and other tribes in the south-east of the Euusine received a king of their own in the person of Aristaeus. (Appian, Mithrid. 114; Eutrop. vi. 14.) Pharnaces II., the treacherous son of Mithridates, received the Crimea and some adjoining districts as an independent kingdom under the name of Bosporus (Appian, Mithrid. 110, &c.); and the central part, from the Iris to Pharsalia, was subsequently given by M. Antonius to Polemon, the son of Pharnaces, and was henceforth designated by the name of Pontus Polemoniacus (Strab. xii. p. 547; Dion Cass. xili. 63, xili. 45; Poly. v. 6, §§ 4, 10; Eutrop. vii. 9; Aurel. Vict. de Caes. 15), which it retained afterwards, even when it had become incorporated with the Roman empire. The eastern part, which had likewise been ceded to Polemon, was transferred by his widow Philodoria to king Archelaus of Cappadocia, who married her, and was henceforth called Pontus Cappadocius. In Pontus Polemoniacus, Philodoria was succeeded by her son Polemon II., who resigned his kingdom into the hands of the emperor Nero (Soet. Vet. 18.; Eutrop. vii. 18.). Pontus was then made a Roman province, and the name Pontus Polemoniacus, the administration of which was sometimes combined with that of Galatia. In the new arrangements under Constantine, the province was again divided into two parts; the south-western one, which had borne the name of Pontus Galaticus, was called Helenopontus, in honour of the emperor's mother Helena; and the eastern portion, to which Pontus Cappadocia was added, retained the name of Pontus Polemoniacus. (Aurell. xxvii. 1; Heroclit. p. 703.) Besides these provincial divisions, there also exist a number of names of smaller scope, such as Gazelia, Shazar, Sarazen, Themiscura, Sidene; and in the inner Phaeacnia, Pimilisene, Diamon, Chilione, Daximontis, Zeleis, Xidene, and MEGALOPOLOITIS. These, as well as the most important towns, Ameses, Polemoniacus, Cotyora, Pharmacia, Ceranes, Trapezus, Apparasus, Cadira, Gazelia, Zela, Comana Pontica, Neo-Cabarela, Sebastian, Themiscura, Pharzemon, &c., are described in separate articles. [L. S.]

PONTUS EUXINUS. [Euxinus Pontus.]

POPULI OR POPULONIA (Ποπολίδας: Eth. Popoloniäes; Populonia), an ancient city of Etruria, situated on the sea-coast, nearly opposite the island of Ilva (Elba), and about 5 miles N. of the modern city of Plombino. It stood on a lofty hill, rising abruptly from the sea, and forming the northern extremity of the detached and almost insular promontory, the southern end of which is occupied by the modern town of Plombino. This promontory (the Πομπόνιον βολβον of Polemy) is separated from the hills in the interior by a strip of flat marshy ground, about 5 miles in width, which in ancient times was occupied in great measure by lagoons or palduli; so that its position is merely a new and very small Mont Argentario. The Maritime Itinerary places it 30 miles S. of the Vada Volturnana, which is just about the truth (Itin. Marit. p. 501). Strabo says it was the only one of the ancient Etruscan cities which was situated on the sea-shore (Strab. v. p. 223), and the remark is repeated by Pline, thus apparently excluding Cosa as well as Pyrgi and other smaller places from that designation. It is probable at least that Populonia was the most considerable of the maritime cities of Etruria; but there are no grounds for regarding it as one of the Twelve Cities of the League, or as ever rivalling in importance the great cities of the interior. Virgil indeed represents it as one of the Etruscan cities which sent forces to the assistance of Aeneas (Aen. x. 172), a statement that proves the belief in its antiquity; but other accounts report it as a colony of the Etruscans; and thence it appears to have been a place of considerable recent date. Servius tells us that it was first founded by the Corsicans, from whom it was afterwards wrested by the Volturnans; and distinctly represents it as of later date than the twelve chief cities of Etruria. (Serv. ad Aen. l. c.) It probably derived its chief prosperity from its connection with the neighbouring island of Ilva, the iron produced in the latter being all conveyed to Populonia to be smelted, and thence exported to other regions. (Strab. l. c.; Pseudep. Arist. de Mirab. 95; Vari. ap. Serv. ad Aen. x. 174.) Hence, in n. c. 205, with Scipio was fitting out his fleet for Africa, and the Etruscan cities came forward with their voluntary contributions, the Populonians undertook to supply him with iron. (Liv. xxviii. 45.) This is the first occasion on which the name is mentioned in history, a few years later (n. c. 292) we are told that the consul Claudius Nero, on his voyage to Sardinia, took refuge with his fleet in the port of Populonia from the violence of a storm. (Id. xxx. 39.) No further mention of it occurs in history; but we learn from Strabo that it sustained a siege from the forces of Sulla at the same time with Volturna, and it appears to have never recovered the blow it then received; for in the time of that geographer the city itself was already desolate, only the temples and a few houses remaining. The part, however, was still...
frequented, and a town had grown up around it at the foot of the hill. (Strab. v. p. 233.) Its name is still mentioned as an existing town by all the other geographers, and Ptolemy especially notices the city as well as promontory of Populonium (Mel. ii. 4. § 9.; Plin. iii. 5. s. 8.; Ptol. iii. 1. § 4.); but this is the last evidence of its existence; and before the close of the Western Empire it had fallen into complete decay. It is described by Rutilius at the beginning of the fifth century as entirely desolate, nothing remaining but fragments of its massive walls and the fallen ruins of other edifices. Gregory the Great also describes it towards the close of the sixth century as in a state of complete decay, though retaining an episcopal see; but at a later period of the middle ages a feudal castle was erected on the site, which, with the few adjacent houses, still bears the name of Populonia, and is a conspicuous object from a distance. (Rut. Hist. l. 401—414; Gregor. Ep. ap. C. Cen. H. vii. p. 514.)

The only Etruscan remains now existing at Populonium (with the exception of a few tombs of no interest) are those of the ancient walls, which may be traced in fragments all round the brow of the hill, throughout the entire circuit of the city. This did not exceed a mile and a half in circumference; it was of an irregular form, adapted to the requirements of the ground. The walls are constructed of rude masses of stone, arranged, like those of Volterra, in horizontal layers, but with little regularity; they are not, however, nearly so gigantic in character as those of Volterra, Fiesole, or Corcona. Within the circuit of the walls are to be seen some vaulted chambers, six in a row (which have been erroneously called an amphitheatre) a mosaic pavement, and some reservoirs of water, all unquestionably of Roman date. (Dennis’s Etruria, vol. ii. p. 236—238.)

On the highest point of the hill, in the days of Rutilius, stood a lonely watch-tower, serving at the same time as a beacon for ships. (Rut. Hist. l. 407.) It is from this point that proceeding to Strabo, the view comprised not only Corsica (which is visible from many points of the mainland), but Sardinia also. (Strab. b. c.) But this last assertion, though it has been repeated by many writers, is certainly erroneous, as, even if the distance were not too great, the nearer mountains of Elba would effectually conceal those of Sardinia from the view. (Dennis, vol. ii. p. 239.)

We learn from the Tabula that there were hot springs in the territory of Populonium, which had given rise to a bathing-place called the AQUAE POPULONIAE (Tab. Ptol.). These were evidently the same now known as Le Candine, at the foot of Campiglia, about 6 miles from Populonium, which have been identified by some writers with the “aqua calidae ad Vetulonia” mentioned by Pliny (ii. 10. s. 106.); but there is no authority for placing Vetulonia in this neighbourhood. (Dennis, vol. ii. p. 225.) [Vetulonia.]

Populonium was the only city of Etruria which had a silver coinage of its own, of a very peculiar style, the reverse being generally quite plain, without type or legend, and not inscribed or indented, as on the other Etruscan coins. The primary type is a Gargon’s head or mask, similar to that on many Etruscan monuments. The copper coins give the Etruscan name of the city “Puphna” at full—PUPHYNA. It is not improbable (as suggested by Millingen) that the Populonians derived the art of coinage from the Phoeceans of Cosica; but there is certainly no ground for admitting the existence of a Phocean colony at Populonium itself. (Millingen, Numism. de l’Anc. Itali. p. 161; Eckhel, Num. Vet. Anecd. pp. 10—18.)

COIN OF POPULONIUM

PORCIFERA (Polecerca), a river of Liguria, flowing into the sea about 2 miles W. of Genoa. The name is written Porcastera by Pliny (iii. 5. s. 7.), the only one of the geographers who mentions it; but in a curious inscription found near Genoa, it is variously written PORCIBERA and PORCEBERA. (Genoa.)

POROSELENE (Poroselene; Eth. Popo-sel-a'tyrs), the chief of the Hecatonnes, a group of some small islands lying between Lesbos and the coast of Asia. It contained a town of the same name (Seylax, p. 36, Hudson; Strab. xiii. p. 618; Steph. B. s. v.). Strabo says (l. c.) that some, in order to avoid the allusion presented by this name, called it Poroselene (Poroselai'tyrs), which is the form employed by Ptolemy (v. 2. § 5.), Pliny (v. 31. s. 38.), and Aelian (N. An. ii. 6.). At a still later time the name was changed into Procole, under which form the town appears as a bishop’s see. (Hieroc. p. 626; Concil. Chalc. p. 530.)

COIN OF POROSELENE

PORINAS. [Pheneus.]

POROELENE. [Poroselene.]

PORPHYREON (Porophyron; Eth. Porophy Reon, Popophytwvyn), a city of Phocis, mentioned by Seylax (p. 42, Hudson) between Berythus and Siden, and marked in the Jerusalem Itinerary (where it is written Parphinion, p. 583, Wesseling) as 8 Roman miles N. of Berythus. Procosus calls it a village upon the coast. (Hist. Arc. c. 30, p. 164, Bonn.) It is mentioned by Polybious (v. 68.), from whose narrative we learn that it was in the neighbourhood of Plataea. (Plataias.) Hence it seems to be correctly placed at the Khán Nég Khán, where Procosue relates (vol. ii. p. 432) that he saw some broken pillars, a Corinthian capital, and ruins on each side of a mountain torrent. In the side of the mountain, at the back of the Khán, there are extensive excavated tombs, evidently once belonging to an ancient city. The Crusaders regarded Itajia as the ancient Porphyreon; but there is no authority that a city of this name ever stood in the bay of Akkn. Justiman built a church of the Virgin at Porphyreon (Procop. de Aedif. v. 3, p. 328); and it was a place of sufficient importance to be made a bishopric under the metropolitan of Tyre. (Robinson, Biblical Researcher, vol. iii. p. 432.)

PORPHYRION. [Porheian.]
PORPHYRITES MONS.

PORPHYRITES MONS (Porphyrioteces, Plin. iv. 5. § 27), a long but not very lofty range of mountains which ran along the western shore of the Arabian Sea, nearly from lat. 26° to 27° N. Towards the sea its sides were abrupt, although occasionally scooped into serviceable harbours, e.g. the Portus Albus and Philetæra. On the land side it sloped more gradually, breaking, however, the eastern desert with numerous bluffs and ridges, and sending forth its spurs as far as Tentyra and Antaeopolis N. and N. respectively. [W. B. D.]

PORTILA, another name for Maximumopolis. [Maximumopolis.]

PORTA AUGUSTA (Piieta Aegypti, Plin. ii. 6. § 50), a town of the Vaccaei, in Hispania Tarraconensis; perhaps Turcmeutra. [T. H. D.]

PORTHMUS (Porphiios), a harbour in Euboea, belonging to Eretria, described by Demostenes as opposite to Attica, in the modern Portus Bojadino, immediately opposite to Rhamus, in the narrowest part of the Euboean channel, where the breadth is only two miles. It was destroyed by Phillip, after expelling the Eretrians; but its position close to the coast of Attica gave it importance for many centuries afterwards. (Dem. Phil. iii. pp. 119, 125, iv. p. 133, de Cor. p. 248; Plin. iv. 12. a. 21; Hieroc. p. 645; Harkoprat. Phot. Suid. s. r. Porphys: Leake, Northern Greece, vol. ii. p. 435.)

PORTUS ABUCINI, is mentioned in the Notitia of the Gallic provinces as a place in "Provincia Maxima Secundanorum." It appears to be Portus Sarusine. The district about Portus was once called Pagus Portisorum, whence the modern name Le Portos.

PORTUS ACHAEOERUM, a harbour in European Samnium, upon the coast of the Euxine, and upon the strip of land called the Dromos Achilleos. (Plin. iv. 12. a. 26.) [See Vol. I. p. 20, a.]

PORTUS AEMINES, on the south coast of Gallia, is mentioned in the Maritime Itin. It is supposed to be near the small island Embess. (Uekt, Galleren, p. 428.) [G. L.]

PORTUS APATIACI, is mentioned in the Notitia Imperii as being in Belgica Secunda; "Tribunus militum Nervionorum portus Apatiaeci." It is uncertain what place is meant. D'Anville (Notices, &c.) has an article on it. [G. L.]

PORTUS AGANUS. [Garganus.]

PORTUS ALBURNUS. [Alburnus Mons.]

PORTUS ARGOUS. [Ily.]  

PORTUS ARTHABRORUM. [Arhabrorum.

PORTUS AUGUSTI. [Ostia.]

PORTUS COSANUS. [Cosa.]

PORTUS DELPHINI (Plin. iii. 5. s. 7; Delphinus, Itin. Ant. p. 293), a small port on the coast of Liguria, still called Porto Fino, situated at the SE. extremity of a great mountain promontory, which projects into the sea between Genoa and Sceti, and forms one of the most striking natural features of this part of the Ligurian coast. [E. H. B.]

PORTUS ERIACI. [Luna.]

PORTUS GARNAE. [Garganus.]

PORTUS HANNIBALIS, a town on the S. coast of Lustienia, not far from Lacobriga (Mela, iii. 1; Isid. Or. xv. 9), near Albior, where there are traces of ancient min. (Florez, Esp. S. xiv. p. 211.) [T. H. D.]

PORTUS HERCULIS. [Cosa.]

PORTUS HERCULIS LIBURNI. [Ipsae.]

PORTUS HERCULIS MONOEIC. [Monocrates.]

PORTUS ITIUS. [Itius.]

PORTUS JULIUS. [Luchinus Lacus.]

PORTUS LUNAE. [Luna.]

PORTUS MAGNUS. [Magnus Portus.]

PORTUS MAURITIUS. [Liguria, p. 187.]

PORTUS OLIVULI. [Nicaea.]

PORTUS PISANUS. [Ipsæ.]

PORTUS POMPAonianus, of the Maritime Itim., seems to be one of the bays formed by the Pomponiana Peninsula, and either that on the east side or that on the west side of the peninsula of Genua. The name Pomponianus Portus seems to confirm D'Anville's opinion about Pomponiana [Pomponiana].

PORTUS SYMBOlon. [Symbo lon Portus.]

PORTUS TELEMONIS. [Telamo.]

PORTUS TRAJANI. [Ostia.]

PORTUS VENERIS (Port Vendre), on the south coast of France near the borders of Spain. The passage about Portus Veneris in Mela (ii. 5) is thus (ed. Is. Vossius): "Tum inter Pyrenæum Post Veneris litora insula f'amis." The words "insignis f'amis" are a correction of Vossius without any authority, which he has substituted for the words of the best MS., "in sinu suas." Port Vendre is in France, near Collioure, a few miles south of the month of the Tech.

Portency (ii. 10. § 2) fixes the boundary of Narbonensis at the promontory on which stood the Aphrodisium or temple of Venus. Pliny (iii. 3) in his description of Hispania Citerior, after mentioning Emporiae (Amypursis), says: "Frumen Tichis. Ab eo Pyreneae Venus in latero promontoriæ altero xi. M." This river Tichis is the river which is near the site of Emporiae (Amypursis) in Spain. D'Anville concludes that the promontorium of Pliny is the Promontorium Pyreneum of the Table, the modern Cap Creux, which projects into the Mediterraneum. This would be a fit place for the temple, for it was an ancient practice to build temples on bold headlands. But Pliny says "on the other," that is on the Gallic side of the promontorium; and the distance of xl. M. from the river of Amypursis brings us to the position of Port Vendre. Accordingly D'Anville concludes that the temple of Venus was near one of the ports of Venus; and this would seem likely enough. This temple is apparently mentioned by Stephanus (o. r. "Aphrodias") and certainly by Strabo (iv. p. 178), who makes the coast of the Narbonensis extend from the Var to the temple of the Pyrenean Venus, the boundary between Narbonensis and Iberia; but others, he adds, make the Tropea Pompeii the boundary of Iberia and Celtica. The Tropea Pompeii were in a pass of the Pyrenees not far from the coast. In this passage Strabo simply says that the temple of the Pyrenean Venus was fixed as the boundary of Gallia and Hispania by some geographers, but this passage does not tell us where the temple is; and the distances which he gives in the same place (iv. p. 178) will not settle the question. But in another passage (iv. p. 181) he makes the Galatic Sinus extend from a point 100 stadia from Massilia "to the Aphrodisium, the promontory of Pyrene." It is plain that his promontory of Pyrene is Cap Creux, for this is a marked natural limit of the Gallic bay on the west; and he also places the temple there. Cap Creux is a natural boundary between Gallia and Hispania, and we may conclude that it was the ancient coast boundary. We know that Carvaxis, which is south of Portus Veneris and
POSEIDONIUM.

north of Cap Creus, is in Gália [CENVARIA]. It appears that there is no authority for placing this temple of Venus at Portus Veneris except the passage of Pliny, which leads to this conclusion, if the distance of its right. The passage of Melas has been corrupted by Vossius. It is even doubtful if "inter Pyrenaei promontoria" is the true reading. Some editions have "in Pyrenaei promontorio," but if that reading is right, the promontorium of Melas is not Cap Creus.

[Note: The text is a transcription of a page from a Greek text, discussing various geographical locations and historical references.]

POTENTIA.

his copyist, erroneously says that it lies within the Aeolian recess. (See the notes of Grskur and Kramer.)

7. A promontory in Arabia, E. of the Straits of the Red Sea (Raih-el-Mandib, Prot. vi. 7. § 8), which must not be confounded with No. 6, as some modern writers have done.

8. A town on the coast of Syria, in the district Caesariot, lying S. of Mt. Casians. There are still remains of this town at Posada. (Strab. xxvi. pp. 751, 753; Prot. v. 15. § 3; Plin. v. 20. s. 18.)

POSEIDONIA, POSSIDONIATES SINUS. [PAKSTU.]

POSTUMIA or POSTUMIANA CAstra, a fortress in Hispania Baetica, seated on a hill near the river Nébana (Hist. B. Hisp. 8); probably the modern Seheda, between Oenotia and Antiochus. (Maximi, ii. 2; Flores, Esp. S. x. p. 150, xii. p.)

T. [T.]

POTAMUS, or POTAMIA. [ATTICA, p. 351, b.]

POTANA (Pótrpau), a fort on the northeasterm part of the coast of Paphlagonia, with a harbour for small craft. According to Arrian (Peripl. P. E. p. 15) it was 150 stadia to the NE. of Stephan, but according to others only 120. (Marciar, p. 72; Anonym. Peripl. P. E. p. 7, who places it 100 stadia to the SW. of Cape Syria.) [L.]

POTAMIA (Pótrpauia), a district in the SW. of Paphlagonia mentioned by Strabo (xii. p. 562), but without defining its extent or limits. [L.]

POTAMUS, or POTAMIA. [ATTICA, p. 351, b.]

POTANTANA (Pótrpau), Agatharch. de Mar. Euryth., § 104, ed Paris, 1855), a place mentioned by Agatharchides, which Alexander the Great founded at the mouth of the Indus. Diosorus calls it Pótrpau (46). It has been suspected, with some reason, that the name to both of these authors is an error for Pattala (the present Tatta), which is spoken in of similar terms by Arrian (Amb. v. 4, vi. 17, Indic. c. 2) and by Pliny (ii. 75). On the other hand, the name may readily be conceived as a Graecoism for Potan, a common Italian word for a town or city.

POTENTIA. 1. (Pótrpavía: Etb. Potentias: Sth Maria a Potenza), a town of Pescum, situated on the coast of the Adriatic, at the mouth of the river of the same name, still called the Potenza, and 18 miles S. of Ancona. We have no means of determining whether or not there was an ancient town on the spot previous to the Roman conquest of Pescum; but in n. c. 184 a Roman colony was settled there, at the same time with that at Tarsus in Umbria. (Liv. xxi. 44; Vell. Pat. i. 15. The older editions of Liv have Pollentia, but there seems no doubt that the true reading is Potentia.) It was, as well as the latter, a "colonia civium," but does not seem to have ever risen to a position of importance; and with the exception of an incidental notice in Cicero of an earthquake that occurred in its territory (Cic. de Harusp. Resp. 28), no mention of its name is found in history. It is, however, mentioned by all the geographers as one of the towns of Pescum, and at a later period its name is still found in the Itineraries. (Strab. v. p. 241; Mel. iv. 4. § 6; Plin. iii. 15. § 5; M.8, e. 9; Itin. Ant. ap. 164, 315; Tab. Peut.) From the Liber Coloniarum we learn that it had received a fresh body of colonists, though it is uncertain at what period (Lib. Colon. pp. 226, 257); but there is no evidence of its having retained the rank of a colony under the Roman Empire. (Cornut. de Curi. p. 336). It became an
POTHEREUS.

episcopal see in the early ages of Christianity; and the time of its decay or destruction seems to be unknown; but the site is now wholly deserted. Considerable remains of the ancient city were still visible in the time of Holstenius in the plain on the right bank of the Potenza, near its mouth; and the name is still retained by an ancient church and abbey called S. Mariae a Ponte, about a mile from the Porto di Recanati. (Holsten. Not. ad Chur. v. 134.)

2. (Potestia, Ptol. Eth. Potestianus: Potenza), a city of the interior of Lucania, situated in the valley of the Casuentus and Basiento, not far from its source, and above 60 miles from the Gulf of Tarantum. No mention of it occurs in history, and though it is noticed by Pline, Poleney, and the Liber Coloniarum, among the municipal towns of Lucania, we have no indication of its superior importance. But from the numerous inscriptions discovered there, it is evident that it was, under the Roman empire, a flourishing municipal town, and must at that period have been one of the most considerable in Lucania, the towns of that province having for the most part fallen into great decay. The Itineraries give us two roads of passing through Potentia, the one from Venusia southwards towards Grumantum and Nerulum, the other from Salernum and the valley of the Silarus, which appears to have been continued in the direction of Tarantum. (Plin. iii. 11. s. 15; Ptol. iii. 1. § 76; Eth. Col. v. 209; Itin. Ant. p. 104; Teob. Pont.; Mommsen l. R. N. pp. 23, 24.)

The modern city of Potenza is the capital of the Basilicate, a province which comprises the greater part of the ancient Lucania: it does not occupy precisely the site of the ancient town, the remains of which are visible at a place called La Marata, in the valley below the modern city. (Romanelli, vol. i. p. 435.) [E. H. B.]

POTHEREUS, a river of Crete mentioned by Vitruvius (i. 4), is identified by some with the Catastines of Poleni. [Catastines.]

POTIDAEA. [CASSANDERIA.] 

Praenestis (Potidaea), a town in Attolia Epictetus, on the borders of Locris, and one day's march from Oeneon. (Thuc. iii. 96; Liv. xxviii. 1; Steph. B. s. v.)

POTNIAE (Potnia: Eth. Potnia's, fem. Portus), a village of Boeotia, on the road from Thebes to Plataea, distant 10 stadia from the former city. It was in ruins in the time of Pausanias, and contained a grove sacred to Demeter and Cora (Fraserine). Potniae is celebrated in mythology as the residence of Glauca, who was born to pieces by his inflamed mares. (Xen. Hell. v. 4. § 51; Paus. ix. 8. § 3; 3; Steph. B. s. v.; Plin. xxx. 8. § 53; Virg. Georg. iii. 268; Ov. Ibid. 557; Dict. of Biog. art. GLAUCUS.) According to Strabo (p. 412) some authorities regarded Potniae as the Hypethelae of Homer (ii. 506). Gell places Potniae in the neighbourhood of the modern village of Taki. (Gell, Itinerary, p. 110; comp. Leake, Northern Greece, vol. ii. p. 323.)

PRAASPA. [PHLAGATA.]

PRAEUTUS (Praeutus), a small river in the north of Troas, flowing from Mount Ida, and discharging itself into the Hallespont a little below Perces. (Sam. ii. ii. 835; Strab. xiii. p. 590.) Arrian, Anab. i. 12. § 6.) Some identify it with the modern Boragas, and others with the Muskaloko-Sa. [L. S.]

PRAENESTE. (Praenestus, Strab. Appan; Praeneste, Dion. Cass.: Eth. Praenestis, or Praenestivs, Praenestinus: Polestrium), one of the most ancient, as well as in early times one of the most powerful and important, of the cities of Latium. It was situated on a projecting point or spur of the Apennines, directly opposite to the Alban Hills, and nearly due E. of Rome, from which it was only 8 miles. (Strab. v. p. 238; Itin. Ant. p. 302; Westphal, Romische Kampaigne, p. 106.) Various mythological tales were current in ancient times as to its founder and origin. Of these, that adopted by Virgil ascribed its foundation to Cacus, a reputed son of Vulcan (Virg. Aen. vii. 678); and this, we learn from Solinus, was the tradition preserved by the Praenestines themselves (Solin. 2. § 9). Another tradition, obviously of Greek origin, derived its name and foundation from Praenestus, a son of Latmus, the offspring of Ulysses and Circe (Steph. B. s. v.; Solin. l. c.). Strabo also calls it a Greek city, and tells us that it was previously called Polystephas (Strab. v. p. 238). Another form of the same name is given by Pline (iii. 5. s. 9), who tells us its original name was Stephane. And finally, as if to complete the series of contradictions, its name is found in the lists of the reputed colonies of Alba, the foundation of which is ascribed to Latmus Silvius (Vict. Orig. Gent. Rom. 17; Dion. vii. ap. Euseb. Arm. p. 185). But there seems no doubt that the earlier traditions were those which assigned it a more ancient and independent origin. The first mention of its name in history is in the list of the cities of the Latin League, as given by Dionysius, and there can be no doubt of its having formed an important member of that confederacy. (Dionys. v. 61.) But as early as B. C. 499, according to Livy, it quitted the cause of the confederates and joined the Romans, an event which that historian places just before the battle of Regillus. (Liv. ii. 19.) Whether its separation from the rest of the Latins was permanent or not, we have no information; but on the next occasion when the name of Praeneste occurs it was still in all but name subject and snubbed in consequence from the ravages of the Aequeans and Volscians, B. C. 462 (Liv. iii. 8).

The capture of Rome by the Gauls seems, however, to have introduced a change in the relations of the two cities. Shortly after that event (B. C. 383) the Praenestines are mentioned as making hostile incursions into the territories of the Gabians and Libabians; the Romans at first treated this breach of faith with neglect, apparently from unwillingness to provoke so powerful an enemy; but the next year, the Praenestines having sent an army to the support of the revolted colonies of Velitrae, war was formally declared against them. The Praenestines now joined their former enemies the Volscians, and, in conjunction with them, took by storm the Roman colony of Satricum. (Liv. vi. 21, 22.) The next year the Volscians were defeated in a great battle by Camillus, but no mention is made of the Praenestines as taking part in it. The following season, however (B. C. 380), they levied a large army, and taking advantage of the domestic dissensions at Rome, which impeded the kingey of troops, they advanced to the very gates of the city. From thence they withdrew to the banks of the Alban where they were attacked and defeated by T. Quintius Cincinnatus, who had been named in all haste dictator. So complete was their rout that they not only fled in confusion to the very gates of Praeneste, but...
Crescimus, following up his advantage, reduced eight towns which were subject to Praeneste by force of arms, and compelled the city itself to submission (Liv. vi. 26—29). There can be little doubt that the statement of Livy which represents this as an unqualified surrender (delictio) is one of the exaggerations so common in the early Roman history, but the inscription noticed by him, which was placed by Crescimus under the statue of Jupiter Capitolinus, certainly seems to have claimed the capture of Praeneste itself as well as its dependent towns. (Carver, L. vi. 25—26; Tac. Germ. p. 363.)

Yet the very next year the Praenestines were again in arms, and stimulated the other Latin cities against Rome. (Liv. vi. 30.) With this exception we hear no more of them for some time; but a notice which occurs in Diodorus that they concluded a truce with Rome in B.C. 351, shows that they were still acting an independent part, and kept aloof from the other Latins. (Diod. xvi. 45.) It is, however, certain that they took a prominent part in the great Latin War of B.C. 340. In the second year of that war they sent forces to the assistance of the Pedes, and, though defeated by Appius Claudius, they continued the contest the next year together with the Tiburtines; and it was the final defeat of their combined forces by Camillus at Pedum (B.C. 338) that eventually terminated the struggle. (Liv. viii. 12—14.) In the peace which ensued, the Praenestines, as well as their neighbours of Tibur, were punished by the loss of a part of their territory, but in other respects their position remained unchanged: they did not, like the other cities of Latium, receive the Roman franchise, but continued to subsist as a nominally independent state, in alliance with the powerful republic. They furnished, like the other "socii" their quota of troops on their own separate account, and the Praenestine auxiliaries are mentioned in several instances as forming a separate body. Even in the time of Polybius it was one of the places which retained the Jus Exilii, and could afford shelter to persons banished from Rome. (Pol. vi. 14.)

On the arrival of Pyrrhus in Italy the fidelity of the Praenestines seems to have been suspected, and the Romans compelled them to deliver hostages. (Zonar. viii. 3.) Shortly afterwards Praeneste was the point from whence that monarch turned his march on his advance to Rome. There is no probability that he took the town. Entropis says merely that he advanced to Praeneste; and the expression of Florus that he looked down upon Rome from the citadel of Praeneste is probably only a rhetorical flourish of that inaccurate writer. (Flor. ii. 18; Entrop. ii. 12.) In the Second Punic War a body of Praenestine troops distinguished themselves by their gallant defence of Cassilium against Hannibal, and though ultimately compelled to surrender, they were rewarded for their valour and fidelity by the Roman senate, while the highest honours were paid them in their native city. (Liv. xvi. 19, 20.) It is remarkable that they refused to accept the offer of the Roman franchise; and the Praenestines in general retained their independent position till the period of the Social War, when they received the Roman franchise together with the other allies. (Appian, B. C. i. 65.)

In the civil wars of Marius and Sulla, Praeneste bore an important part. It was occupied by Cinna when he was driven from Rome in B.C. 87 (Appian, B. C. i. 65), and appears to have continued in the hands of the Marian party till B.C. 82, when it afforded a shelter to the younger Marius with the remains of his army, after his defeat by Sulla at Sacriportus. The natural strength of the city had been greatly increased by new fortifications, so that Sulla abandoned all idea of reducing it by force of arms, and was content to draw lines of circumvallation round it, and trust to the slower process of a blockade, the command of which he entrusted to Luceritus Oenlla, while he himself carried on operations in the field against the other leaders of the Marian party. Repeated attempts were made by these generals to relieve Praeneste, but without effect; and at length, after the great battle at the Colline Gate and the defeat of the Samnite general Pontius Teleinus, the inhabitants opened their gates to Oenlla. Marius, desiring of safety, after a vain attempt to escape by a subterraneous passage, put an end to his own life. (Appian, B. C. i. 87—94; Plut. Mar. 46, Sull. 28, 29, 32; Vell. Pat. ii. 26, 27; Liv. Epit. lxxxi. 26, lxxxvii.) The city itself was severely punished; all the citizens without distinction were put to the sword, and the town was given up to plunder: its fortifications were dismantled, and a military colony settled by Sulla in possession of its territory. (Appian, l.c.; Lucan, i. 16; Strab. v. p. 239; Flor. iii. 21.) The town seems to have been at this time transferred from the hill to the plain beneath, and the temple of Fortune with its appurtenances so extended and enlarged as to occupy a great part of the site of the ancient city. (Nobby, Dictorum, vol. ii. p. 481; but see Bornmann, Alt. Lat. Choregr. p. 207, note 428.)

But the citadel still remained, and the natural strength of the position rendered Praeneste always a place of importance as a stronghold. Hence, we find it mentioned as one of the points which Catiline was desirous to occupy, but which had been studiously guarded by Cicero (Cic. in Cat. i. 3); and at a later period L. Antonius retired thither in B.C. 41, on the first outbreak of his dispute with Octavian, and from thence endeavoured to dictate terms to his rival at Rome. Fulvia, the wife of M. Antonius took refuge there at the same time. (Appian, B. C. v. 21, 23, 29.) From this time we hear but little of Praeneste in history; it is probable from the references in which it is spoken of by Suetonius and Appian, that it never recovered the blow inflicted on its prosperity by Sulla (Strab. l.c.; Appian, B. C. i. 94); but the new colony established at that time rose again into a flourishing and considerable town. Its proximity to Rome and its elevated and healthy situation made it a favourite resort of the Romans during the summer, and the poets of the first century of the Empire abounded in allusions to it as a cool and pleasant place of suburban retirement. (Juv. iii. 190, xiv. 88; Martial, x. 30. 7; Stat. Silv. iv. 2. 15; Plin. Ep. v. 6. § 46; Flor. i. 11.) Among others it was much frequented by Augustus himself, and was a favourite place of retirement of Horace. (Suet. Aug. 72; Hor. Carm. iii. 4. 23, Ep. i. 2. 1.) Tiberius also recovered there from a dangerous attack of illness (Gell. N. A. xvi. 13); and Hadrian built a villa there, which, though not comparable to his celebrated villa at Tibur, was apparently on an extensive scale. It was there that the emperor M. Aurelius was residing when he lost his son Annus Verus, a child of seven years old. (Jul. Capit. M. Ant. 21.)

Praeneste appears to have always retained its
praeneste

colonial rank and condition. Cicero mentions it by the title of a colonia (Cic. in Cat. i. 3); and though neither Pliny nor the Liber Coloniarum give it that appellation, its colonial dignity under the Empire is abundantly attested by numerous inscriptions. (Zumpt, de Colon. p. 254; Lib. Colon. p. 256; Orell. Inscr. vol. ii. p. 254.) The only story that the Praenestines applied to Tiberius as a favour to be changed from a colony into a Municipium; but if their request was really granted, as he asserts, the change could have lasted for but a short time. (Gell. N. A. xvi. 13; Zumpt, l. c.)

We find scarcely any mention of Praeneste towards the decline of the Western Empire, nor does its name figure in the Gothic wars which followed: but it appears again under the Lombard kings, and bears a conspicuous part in the middle ages. At this period it was commonly known as the Civitas Praenestina, and it is this form of the name—which is already found in an inscription of A. D. 408 (Orell. Inscr. 150)—that has been gradually corrupted into its modern appellation of Palestrina.

The modern city is built almost entirely upon the site and gigantic substructions of the temple of Fortune, which, after its restoration and enlargement by Sulla, occupied the whole of the lower slope of the hill, the summit of which was crowned by the ancient citadel. This hill, which is of very considerable elevation (being not less than 2400 feet above the sea, and more than 1200 above its immediate base), projects like a great buttress or bastion from the angle of the Apennines towards the Alban Hills, so that it looks down upon and seems to command the whole of the Campagna around Rome. It is this position, combined with the great strength of the citadel arising from the elevation and steepness of the hill on which it stands, that rendered Praeneste a position of such importance. The site of the ancient citadel, on the summit of the hill, is now occupied by a castle of the middle ages called Castel S. Pietro: but a considerable part of the ancient walls still remains, connected with a very massive style of polygonal blocks of limestone; and two irregular lines of wall of similar construction descend from thence to the lower town, which they evidently served to connect with the citadel above. The lower, or modern town, rises in a somewhat pyramidal manner on successive terraces, supported by walls or facings of polygonal masonry, nearly resembling that of the walls of the city. There can be no doubt that these successive stages or terraces at one time belonged to the temple of Fortune; but it is probable that they are of much older date than the time of Sulla, and previously formed part of the ancient city, the streets of which may have occupied these lines of terraces in the same manner as those of the modern town do at the present day. There are in all five successive terraces, the highest of which was crowned by the temple of Fortune properly so called,—a circular building with a vaulted roof, the ruins of which remained till the end of the 13th century, when they were destroyed by Pope Boniface VIII. Below this was a hexamycle, or semicircular building, with a portico, the plan of which may be still traced by the ruin. Other terraces were still remains a mosaic, celebrated as one of the most perfect and interesting in existence. Various attempts have been made to restore the plan and elevation of the temple, an edifice wholly unlike any other of its kind; but they are all to a great extent conjectural. A detailed account of the existing remains, and of all that can be traced of the plan and arrangement, will be found in Nibby. (Die- torni, vol. ii. p. 494—510.)

The celebrity of the shrine or sanctuary of Fortune at Praeneste is attested by many ancient writers. (Ov. Fast. vi. 61; Suet. Aug. i. 28; Lucan, iv. 194; Strab. v. p. 238,) and there is no doubt that it derived its origin from an early period. Cicero, who speaks of the temple in his time as one of great antiquity as well as splendour, gives us a legend derived from the records of the Praenestines concerning its foundation, and the institution of the oracle known as the Sortes Praenestinae, which was closely associated with the worship of Fortune. (Cic. de Div. ii. 41.) So celebrated was this mode of divination that not only Romans of distinction, but even foreign potentates, are mentioned as consulting them (Val. Max. i. 3, § 1; Liv. xlv. 44; Propert. iii. 24, 3); and though Cicero treats them with contempt, as in his day obtaining credit only with the vulgar, we are told by Suetonius that Tiberius was deterred by religious scruples from interfering with them, and Domitian consulted them every year. Alexander Severus also appears, on one occasion at least, to have done the same. (Suet. Tib. 63, Domit. 15; Lamp. Alex. Sve. 4.) Numerous inscriptions also prove that they continued to be frequently consulted till a late period of the Empire, and it was not till after the establishment of Christianity that the custom fell altogether into disuse. (Inscr. ap. Bornmann, pp. 212, 213; Orelli, Inscr. 1756—1759.) The Praenestine goddess seems to have been specially known by the name of Fortuna Primigenia, and her worship was closely associated with that of the infant Jupiter. (Cic. de Div. l. c.; Inscr. ut sup.) Another title under which Jupiter was specially worshipped at Praeneste was that of Jupiter Imperator, and the statue of the deity at Rome which bore that appellation was considered to have been brought from Praeneste (Liv. vi. 29).

The other ancient remains which have been discovered at Palestrina belong to the later city or the colony of Sulla, and are situated in the plain at some distance from the foot of the hill. Among these are the extensive ruins of the villa or palace of the emperors, which appears to have been built by Hadrian about A. D. 134. They resemble much in their general style those of his villa at Tivoli, but are much inferior in preservation as well as in extent. Near them is an old church still called Sta. Maria della Villa. It was not far from this spot that were discovered in 1773 the fragments of a Roman calendar, supposed to be the same which was arranged by the grammarian Verrius Flaccus, and set up by him in the forum of Praeneste. (Suet. Gram. 17.) They are commonly called the Fasti Praenestini, and have been repeatedly published, first by Foggiini (fol. Romae, 1779), with an elaborate commentary; and again as an appendix to the edition of Suetonius by Wolf (4 vols. 8vo. Lips. 1802); also in Orelli (Inscr. vol. ii. p. 379, &c.). Notwithstanding this evidence, it is improbable that the forum of Praeneste was so far from the foot of the hill, and its site is more probably indicated by the discovery of a number of pedestals with honorary inscriptions, at a spot near the SW. angle of the modern city. These inscriptions range over a period from the reign of Tiberius to the fifth century, thus
rending to prove the continued importance of Prænestis throughout the period of the Roman Empire. (Nebbyh vol. ii. pp. 513 - 515, Foggini, L.c. pp. v. - viii.) Other inscriptions mention the existence of a theatre and amphitheatre, a portico and curia, and a spalbarium; but no remains of any of these edifices can be traced. (Gruter, Inscr. p. 132; Orelli, Inscr. 2352; Bornmann, note 434.)

The celebrated grammarians Verrius Flaccus, already mentioned, was probably a native of Prænestis, as he was also the well-known author Athenius, who, though he wrote in Greek, was a Roman citizen by birth. (Suid. s. v. Αθηνάιος.) The family of the Anicii also, so illustrious under the Empire, seems to have derived its origin from Prænestis, as a Q. Anicius is mentioned by Pliny as a magistrate of that city as early as B.C. 304. (Plin. xxxvii. 1. 6.)

It is probable also that in Livy (xxiii. 19) we should read M. Anicius for Manicius. It is remarkable that the Prænestines appear to have had certain dialectic peculiarities which distinguished them from the other Latins; these are more than once alluded to by Plautus, as well as by later grammarians. (Plaut. Trinum. iii. 1. 8; Truc. iii. 2. 23; Quintil. Inst. i. 5. § 56; Fest. s. v. Nephrena, id. s. d. Tongere.)

The territory of Prænestis was noted for the excellence of its nuts, which are noticed by Cato (R. R. 8. 143; Plin. xxxvii. 15. s. 21; Naevius, op. Macrob. Sat. iii. 18). Hence the Prænestines themselves seem to have been nicknamed Nuculæ; though another explanation of the term is given by Festus, who derives it from the walnuts (nuces) with which the Prænestine garrison of Casilius is said to have fed. (Cic. de Or. ii. 62; Fest. s. v. Nuculæ.) Pliny also mentions the roses of Prænestis as among the most celebrated in Italy; and its wine is noticed by Athenaeus, though it was apparently not one of the choicest kinds. (Plin. xxxii. 4. s. 10; Athen. i. p. 26, f.)

It is evident from the narrative of Livy (vi. 29) that Prænestis in the days of its independence, like Tibur, had a considerable territory, with at least eight smaller towns as its dependencies, but the names of none of these are preserved to us, and we are wholly unable to fix the limits of its territory.

The name of Via Prænestina was given to the road which, proceeding from Rome through Gabii direct to Prænestis, from thence rejoined the Via Latina at the station near Anagnia. It will be considered in detail in the article Via Prænestina.

PRÆNETUS (Praēnetos), a town on the coast of Bithynia, on the north side of Mount Argonautus, and at the southern entrance of the Sinus Aeretius. It was situated 28 Roman miles to the northwest of Nicæa; and Stephanus B., who calls it Πραινήτος, states that it was founded by the Phoenicians. If this be true, it would be a very ancient place, which can scarcely be conceived, as it is mentioned only by very late writers. (Pallad.的地. Chrys. p. 75; Sueton. vi. 16; Hieroc. p. 691, where it is called Prænetus; Tab. Peuting., where it is written Prænetos.) According to Cohronus (p. 457), it was destroyed by an earthquake. Its site seems to answer to that of Debrene. [L. S.]

PRÆSIDIUM, the name of several fortified places established by the Romans.

1. In Lucania, on the Douro. (Hist. Ant. p. 428.)

2. In Baetica, on the road from the mouth of the Anas to Emerita (IB. 431.); thought by some to be S. Lucar de Guadiana.

3. In Gallaecia, not far from the Douro. (Ib. 432.)

4. In Britannia Romana, in the territory of the Cornavii (Not. Imp.), supposed to be Harwick. (Camen. p. 602.)

[ T. H. B.]

PRÆSIDIUM, a military post on the Greater Syrtis, between Tagaule or Taugale (Kaar-el-Alteh) and Advai Yuan. (Pest. Tab.) The result of Barth's (Wanderungen, pp. 372 - 377) laborious researches upon the ancient topography of the Great Syrtis, is to place this station at Jebhod, where there are remains of antiquity. [E. B. J.]

PRÆSIDIUM. [TARICHIAC.]

PRÆSIDIUM POMPEII. [Pompeii Praesidium.]

PRÆSII. [PRAZLACI.]

PRÆSTI (Curt. ix. 8. § 11), a people of the Paugii, who were conquered by Alexander the Great. Their king is stated by Curtius to have been named Oxycaucus. He would seem to have been the same ruler who is called by Strabo Por-ticamus (xxv. p. 701). His name, however, occurs in Arrian. (Anab. vi. 16.) As Curtius calls the Praesi a purely Indian nation, it is not unlikely, from the resemblance of the names, that they formed the western portion of the great empire of the Præstii. [PRAZLAZ.]

PRÆSUS, or PRÆSUS (Πραινός; in the MSS. of Strabo Πραινός, but in inscriptions Πραινός, Böckh, Inscr. vol. ii. p. 1102; Euh. Priæns, more rarely Πραινέως, Steph. B. s. v.), a town in Crete, belonging to the Eteocretæ, and containing the temple of the Dictæan Zeus, for Mt. Dictæus was in the territory of Præsus. (Strab. x. pp. 475, 478.) There is a difficulty in the passage of Strabo, describing the position of this town. He first says (p. 478) that Præsus bordered upon the territory of Lebyn, and was distant 70 stadia from the sea, and 90 from Gortyn and he next-speaks of Præsus as lying between the promontories Samuinium and Chersonesus, at the distance of 60 stadia from the sea. It is evident that these are two different places, as a town, whose territory was contiguous to that of Lebyn, must have been situated in the southern part of the island; while the other town, between the promontories of Samuinium and Chersonesus, must have been at the eastern end. The latter is the town of the Eteocretæ, possessing the temple of the Dictæan Zeus, and the Præsus usually known in history; the former is supposed by Mr. Pasley (Crete, vol. i. p. 289 seq.) to be a false reading for Præmus, a town mentioned in coins and inscriptions, which he accordingly places on the southern coast between Bienna and Lebyn. In this he is followed by Kiepert. But Böckh thinks (Inscr. vol. ii. p. 405) that Πραινός, or Πραινός was the primitive form of the name, from which Πραισος, or Πραισος (a form in Steph. B. s. v.), and subsequently Πραισος, were derived, just as in the Aegic dialect παίσαν became παίσα, and in the Attic dialect παίσα. Kramer (ad Strab. l. c.) adopts the opinion of Böckh. Upon the whole we must leave uncertain what town was intended by Strabo in the former of the above-mentioned passages.

The territory of Præsus extended across the island to either sea. (Sylvius, p. 18. Huda.) It is said to have been the only place in Crete, with the exception of Tekroa, that did not take part in the
PRAETORIA AUGUSTA.

expedition against Camena in Sicily, in order to avenge the death of Minos (Herod. vii. 170). It was destroyed by the inhabitants of Hierapytna. (Strab. x. p. 479.) Agathodes, the Babylonian, related that the Praesi were accustomed to sacrifice swine before marriage. (Athen. ix. p. 376.) The ruins of Praeis are still called Praensis. (Pashley, Crete, vol. i. p. 290, seq.; Hack, Crete, vol. i. p. 419, seq.)

PRAETORIUM. There were places of this name in Gallia, Hispania, and in other countries which the Romans occupied. A Praetorium is the residence of a prætor and the seat of the supreme court. The word was also used to signify a magnificent palatial building. The Table marks a Praetorium in Gallia, on a road from Augustoritum (Lit. agges). At the Praetorium the road divides, one branch going to Augustometum (Clermont Ferrand in the Auvergne) and the other to Avaracum (Bourges). It is not possible to fix the site of this Praetorium.

1. A town in the territory of the Lacetani, in the NE. of Hispania Tarraconensis, and on the road from Tarraco, in Gaul, to Barcino. (Itin. Ant. p. 398.) Usually identified with Lu Roça, where there are still considerable Roman remains. (Marex, Hist. ii. 20.)
