TO THE BINDER.

The Map of Ancient Rome to be placed between pages 720 and 721, Vol. II.

The Map of Syracuse to be placed between pages 1054 and 1055, Vol. II.
A DICTIONARY OF GREEK AND ROMAN GEOGRAPHY.

IABADIUS.

IABADIUS (Ἰάβαδιος νήσος, Titol. vii. 2. § 29, viii. 27, § 10), an island off the lower half of the Golden Horn. It is said by Ptolemy to mean the "Island of Barley," to have been very fertile in grain and gold, and to have had a metropolis called Argyle. There can be little doubt that it is the same as the present Java, which also signifies "barley." Humboldt, on the other hand, considers it to be 

Sarmatia (Kritische Untera. l. p. 64); and Mannert, the small island of Banca, on the SE. side of Sarmatia.

JABBOCK (Ἰάβοκκος, Joseph.; Ἰαβόξ, LXX.), a stream on the east of Jordan, mentioned first in the history of Jacob (Gen. xxxii. 22). It formed, according to Josephus, the northern border of the Amorites, whose country he describes as isolated by the Jordan on the west, the Arnon on the north, and the Jabbok on the north. (Ant. iv. 5. § 2.) He further describes it as the division between the dominions of Sion, king of the Amorites, and Og, whom he calls king of Galadene and Golanites (§ 3)—the Bashan of Scripture. In the division of the land among the tribes, the river Jabbok was assigned as the northern limit of Gad and Reuben. (Deut. iii. 16.) To the north of the river, in the country of Bashan, half the tribe of Manasseh had their possession (13,14.) [AMMONITAE; AMORITES.] It is correctly placed by Enaeius (Onomast. s. v.) between Ammon, or Philadelphia, and Gerara (Gerash); to which S. Jerome adds, with equal truth, that it is 4 miles from the latter. It flows into the Jordan. It is now called El-Zerka, and "divides the district of Moerad from the country called El-Belka." (Barechard's Syriac, p. 347.) It was crossed in its upper part by Iby and Munges, an hour and twenty minutes (exactly 4 miles) SW. of Gerash, on their way to Es-Salt. (Travels, p. 319, comp. W.)

JABESII (Ἰάβες, LXX.; Ἰαβας, Ἰαβας, Θας, Joseph.), a city of Gilead, the inhabitants of which were exterminated, during the early times of the Judges (see xx. 28), for not having joined in the national league against the men of Gilbeah (xxxi. 9, &c.). Three centuries later, it was besieged by the Ammonite king, Nahash, when the hard terms offered to the inhabitants by the invadersroused the indignation of Saul, and resulted in the relief of the town and the rout of the Ammonites. (1 Sam. xi.) It was probably in reprint for this deliverance that the inhabitants of Jabsah-Gilead, having heard of the indignity offered to the bodies of Saul and his sons after the battle of Gilbeah, "arose, and went all night, and took the body of Saul, and the bodies of his sons, from the wall of Beth-shan, and came to Jabsah and burnt them there; and they took their bones and buried them under a tree at Jabsah, and fasted seven days." (1 Sam. xxxi. 11—13; 2 Sam. ii. 4—7.) It was situated, according to Esenius, in the hills, 6 miles from Pella, on the road to Gerasa; and its site was marked in his time by a large village (s. v. Αποδεγεμέναι i. Laiu). The writer was unsuccessful in his endeavours to recover its site in 1842, but a tradition of the city is still retained in the name of the valley that runs into the plain of the Jordan, one hour and a quarter south of Wady Mnis, in which Pella is situated. This valley is still called Wady Tuba, and the ruins of the city doubtless exist, and will probably be recovered in the mountains in the vicinity of this valley.

JACCEBIAH. [JAMNIA.]

JACCA (Ἰάκκα, Travels, i. 161; Caes. B. C. i. 60; concerning the reading, see LACETANI; Titol. ii. 6. § 72.) None of these cities were of any consequence. The capital, Jacca (Jaca, in Basago), from which they derived their name, belonged, in the time of Polcmcy, to the Vasones, among whom indeed Pliny appears to include the Jaccetani altogether (iii. 5. § 4). Their other cities, as enumerated by Ptolemy, and identified, though with no great certainty, by Ubert (vol. ii. pt. t. p. 425), are the following:—

ΙΕΡΙΠΟΣ (Ἰεριπός, Ιπαεδα); CERLEUS (Κερδές, S. Columba de Ce-
valo); ANABAS (Ἀναβας, Tarrega); BACASSUS (Βακασις, Manresa), the district round which is still called Bagas; TELEROS (Ταλεδος, Martorel); ASCERES (Ασκηρής, Sagurra); UDOBA (Οδ-
σσα, Cardona); Lissa or Lasa (Lusa, near Man-
resa); SETELERIS (Σετελερις i. 2. Σετελερ, Solsona); CINNA (Κιννα, near Guadern), perhaps the same place as the Scissum of Livy (xx. 60, where the MSS. have Scissis, Stissum, Sis), and the Cissa of

JACETANI.

JACCETANI (Ἰακκηταναί), the most important of the small tribes at the S. foot of the Pyrenees, in Hispania Tarraconensis, E. of the Vasones, and N. of the Ibergetes. Their country, JACETANIA (Ἰακκητανια), lay in the N. of Aragons, below the central portion of the Pyrenean chain, whence it extended towards the Herus as far as the neighbourhough of Hedia and Osca; and it formed a part of the theatre of war in the contests between Seterus and Pompey, and between Julius Caesar and Pompey's legates, Aenarius and Petreius. (Strab. iii. p. 161; Caes. B. C. i. 60; concerning the reading, see LACETANI; Titol. ii. 6. § 72.) None of these cities were of any consequence. The capital, JACCA (Jaca, in Basago), from which they derived their name, belonged, in the time of Polcmcy, to the Vasones, among whom indeed Pliny appears to include the Jaccetani altogether (iii. 5. § 4). Their other cities, as enumerated by Ptolemy, and identified, though with no great certainty, by Ubert (vol. ii. pt. t. p. 425), are the following:—

ΙΕΡΙΠΟΣ (Ἰεριπός, Ιπαεδα); CERLEUS (Κερδές, S. Columba de Ce-
valo); ANABAS (Ἀναβας, Tarrega); BACASSUS (Βακασις, Manresa), the district round which is still called Bagas; TELEROS (Ταλεδος, Martorel); ASCERES (Ασκηρής, Sagurra); UDOBA (Οδ-
σσα, Cardona); Lissa or Lasa (Lusa, near Man-
resa); SETELERIS (Σετελερις i. 2. Σετελερ, Solsona); CINNA (Κιννα, near Guadern), perhaps the same place as the Scissum of Livy (xx. 60, where the MSS. have Scissis, Stissum, Sis), and the Cissa of
IALYUSUS.

Fazello assures us that there was a medieval fortress called Iato on the summit of a lofty mountain, about 15 miles from Palermo, and 12 N. of Enilda, which was destroyed by Frederic II. at the same time with the latter city; and this he supposes, probably enough, to be the site of Iata. He says the mountain was still called Monte di Iato, though more commonly known as Monte di S. Cosmo, from a church on its summit. (Fazello, x. p. 471; Amic. loc. Top. Sic., vol. ii. p. 291.) The spot is not marked on any modern map, and does not appear to have been visited by any recent travellers. The position thus assigned to Iata agrees well with the statements of Diodorus, but is wholly irreconcilable with the admission of Ieras into the text of Tucydides (vii. 2); this reading, however, is a mere conjecture (see Arnold's note), and must probably be discarded as untenable. [E. H. B.]

COIN OF IAETA.

IALYUSUS (Ἰάλυς, I.XX.; Ιάλυς and Ιάλυς, Euseb.), a city of Gilead, assigned to the tribe of Gad by Moses. In Numbers (xxiii. 1), "the land of Jazer" is mentioned as contiguous to "the land of Gilead, and suited to cattle." In Jeremiah (xxvii. 32), "the sea of Jazer" occurs in some versions, as in the English; but Ireland (x. v. p. 823) justly remarks, that this is not certain, as the passage may be painted after the word "sea," and "Jazer," as a vocative, commence the following clause. But as the "land of Jazer" is used for the country south of Gilead, so the Dead Sea may be designated "the sea of Jazer." Eusebius (Onomast. s. v. Ιαλυς) places it 8 miles west of Philadelphia or Ammon; and elsewhere (s. v. Ιαλορ), 10 miles west of Philadelphus, and 15 from Eshon (Ishbon). He adds, that a large river takes its rise there, which runs into the Jordan. In a situation nearly corresponding with this, between Scall and Edessa, Burekharit passed some ruins named Sayr, where a valley named Wady Sayr takes its rise and runs into the Jordan. This is doubtless the modern representative of the ancient Jazer. "In two hours and a half (from Scall) we passed, on our right, the Wady Sayr, which has its source near the road, and falls into the Jordan. Above the source, on the declivity of the valley, are the ruins called Sayr." (Saglia, p. 364.) It is probably identical with the Ιάλυς of Polyclitus which he reckons among the cities of Palestine on the coast of the east of the Jordan (v. 16). [G. W.]

IALYUSUS (Ἱάλυς, Ἱαλυς, or Ἱαλύς; Eth. Ἱαλύσιος), one of the three ancient Doric cities in the island of Rhodes, and one of the six towns constituting the Doric hexapolis. It was situated only six stadia to the south-west of the city of Rhodes, and it would seem that the rise of the latter city was the cause of the decay of Ialysus; for in the time of Strabo (xiv. p. 653) it existed only as a village. Pliny (v. 36) did not consider it as an independent place at all, but imagined that Ialysus was the ancient name of Rhodes. Orychoma, the citadel, was situated above Ialysus, and still existed in the time of Strabo. It is supposed by some that...
IAMISSA.

Orgehoma was the same as the fort Achaia, which is said to have been the first settlement of the Hellidae in the island (Diod. Sic. v. 57; Athen. viii. p. 360); at any rate, Achaia was situated in the territory of Ialius, which bore the name Ialias. (Comp. Hom. Í. ii. 656; Pind. Ól. vii. 106; Herod. ii. 182; Thucyd. viii. 44; Ptol. v. 2, § 94; Steph. B. s. c.; Sclav. Peripj. p. 81; Donya, Perag. 534; Óv. Met. iii. 365; Pomp. Mela, ii. 7.) The site of ancient Ialius is still occupied by a village bearing the name Iálios, about which a few ancient remains are found. (Ross, Reisen auf den Griech. Inseln, vol. iii. p. 98.)

[ L. S. ]

IAMISSA. [Thamesis.]

IAMSIA, IAMÍNO [Baleares, p. 374, b.]

IAMNIA (Ταύρας, LXX.; Ιάμνου, Byz. Ῥωμ. (tr. by)[1]) was a city of the Phœnicians, assigned to the tribe of Judah in the LXX. of Josuas xv. 45 (Pepos); but omitted in the Hebrew, which only mentions it in 2 Chron. xxvi. 6 (Jánneh in the English version), as one of the cities of the Phœnicians taken and destroyed by king Uzziah. It is celebrated by Philo Judæans as the place where the first occasion was given to the Jewish revolt under Caligula, and to his impious attempt to profane the temple at Jerusalem. His account is as follows:—

In the city of Jamnia, one of the most populous of Judæa, a small Gentile population had established itself among the more numerous Jews, to whom they occasioned no little annoyance by the wanton violation of their cherished customs. An unprincipled government officer, named Capito, who had been sent to Palestine to collect the tribute, anxious to pre-occupy the emperor with accusations against the Jews before their well-grounded complaints of his boundless extortion could reach the capital, ordered an altar of mud to be raised in the town for the deification of the emperor. The Jews, as he had anticipated, indignant at the profanation of the Holy Land, assembled in a body, and demolished the altar. On hearing this, the emperor, incensed already at what had lately occurred in Egypt, resolved to resent this insult by the erection of an equestrian statue of himself in the Holy of Holies. (Philos, de Legat. ad Cæs. ii. 8.) With this object, it is assigned by Josephus to that part of the tribe of Judah occupied by the children of Dan (Ant. v. 1. § 22); and he reckons it as an inland city. (Ant. xiv. 4. § 4, B. Je. i. 7. § 7.) Thus, likewise, in the 1st book of Maccabees (x. 69, 71), it is spoken of as situated in the plain country; but the author of the 2nd book speaks of the harbour and fleet of the laniates, which were fired by Judas Mac- cæanus; when the light of the conflagration was seen at Jerusalem, 340 stadia distant. The apparent discrepancy may, however, be reconciled by the notices of the classical geographers, who make frequent mention of this town. Thus Pliny expressly says, "laniæ duæ; altera interna," and places them between Azotus and Joppa (v. 12); and Ptolomy, having mentioned Ἰαμνίτια, "the port of the laniates," as a maritime town between Joppa and Azotus, afterwards enumerates Iamnia among the cities of Judæa. From all which it is evident that Iamnia had its Majumæ, or naval arsenal, as Gaza, Azotus, and Ascalon also had. (Le Quien, Oriens Christ. vol. iii. col. 587, and 622.) The Itinerary of Antoninus places it 36 M. P. from Gaza, and 12 M. P. from Diospolis (or Lylda); and Euseb. (Onom. s. v. Ταύρας) places it between Diospolis and Azotus. Its site is still marked by ruins which retain the ancient name Yebna, situated on a small eminence on the west side of Ῥιβοὶ, an hour distant from the sea. (Irlay and Mangles, Travels, p. 182.) "The ruins of a Roman bridge," which they noticed, spanning the Nahr-al-Khîbin between Yebna and the sea, was doubtless built for the purpose of facilitating traffic between the town and its sea-port. (G. W.)

IAMPOL'HIBA, the capital of the Maedii, in Ma- colonia, which was taken n. c. 211 by Philip, son of Demetrius. (Liv. xxvi. 25.) It is probably repre- sented by Urania or Iorina, in the upper valley of the Móraía. (Leake, Northern Greece, vol. iii. p. 473.)

[Ε. Β. Ι.]

IANGACAU'CA'NI [Mauretania.]

IANGACUI'RIA (Iapenosa Úapa), a promontory on the coast of Cilicia, near Serpolis, between Mallus and Agesias. (Stadiums. §§ 149, 150.) It is now called Karadush.

[ L. S. ]

IAPIS (Iáris), a small stream which formed the boundary between Megaris and the territory of Elen- sia. (Attica, p. 323, a.)

IAPODES, IAPOTIDES (Iáròš, Strab. iii. p. 207, vii. p. 313; Iápótes, Ptol. ii. 16. § 8; Liv. xiii. 5; Virg. Georg. iii. 473; Tibull. iv. 1. 168), an Illyrian people to the N. of Dalmatia, and E. of Liburnia. They occupied Iaprida (Pl. iii. 19), or the present military frontier of Croatia, comprised between the rivers Kulpa and Korana to the N. and E., and the Telebich range to the S.

In the interior, their territory was spread along Môns Albius (Velitca), which forms the extremity of the great Alpine chain, and rises to a great elevation; on the other side of the mountain they reached towards the Danube, and the confines of Pannonia. They followed the customs of the wild Thracian tribes in tattooing themselves, and were armed in the Keltic fashion, living in their poor country (like the Moriacki of the present day) chiefly on sea and millet. (Strab. vii. p. 315.)

In n. c. 129, the consul C. Sempronius Tuditanus carried on war against this people, at first unsuc- cessfully, but afterwards gained a victory over them, chiefly by the military skill of his legate, D. Junius Brutus, who with the aid of his tribunes, celebrated a triumph at Rome (Appian, B. C. i. 19, Ilm. 10; Liv. Epit. i. 26; Fasti Capitol.) They had a "foedus" with Rome (Cic. pro Balb. 14), but were in n. c. 34 finally subdued by Octavianus, after an obstinate defence, in which Metulium, their principal town was taken (Strab. i. c.; Appian, Ilm. l. c.);

METULUM (Meridion), their capital, was situated on the river Colapis (Kulpa) to the N., on the frontier of Pannonia (Appian, l. c.), and has been identified with Mutting or Mettika on the Kulpa. The Antonine Itinerary has the following places on the road from Senia (Zeugy) to Sicia (Sisec):—

AYEÒDÔNE (comp. Peut. Tab.; Abudo, Geog. Rav.; Avèdédâtu, Appian, Ilm. l. c.; Ouèdès, Strab. iv. p. 207, vii. p. 514.); AKITIUM (Appian, Peut. Tab.; Parrupium, Geog. Rav.; Αἰκτίωνι, App. Ilm. 16.), perhaps the same as the Aponia of Ptolomy, i. 16. § 9; now Ottekate. At Bieum, which should be read Bivium (Wesseling, ad loc.), the road divided, taking a direction towards Pannon- nia, which the Itinerary follows, and also towards Delmitia, which is given in the Pentinger Table.

Negebaur (Die Sudlaven, pp. 224—235) has identified from a local antiquity the following sites of the Table:

Epidotium (Eiselle); Accus (Chaute); Au- b 2

IAPYGIA.

Sanclalio (Ipsoch, near Ulixin); Cluminetae (Grachats).

[ E. B. J.]

IAPYGIA (Iapygia), was the name given by the Greeks to the SE. portion of Italy, bordering on the Adriatic Sea, but the term was used with considerable vagueness, being sometimes restricted to the extreme SE. point or peninsula, called also Messaqia, and by the Romans Calabria; at other times extended so as to include the whole of what the Romans termed Apulia. Thus Strabo describes the whole coast from Lucania to the promontory of Driion (Mt. Garganus) as comprised in Iapygia, and even includes under that appellation the cities of Metapontum and Heraclea on the gulf of Tarentum, which are usually assigned to Lucania. Hence he states that their coast-line extended for a space of six days and nights' voyage. (Syll. § 14. p. 5.)

Polybius at a later period used the name in an equally extended sense, so as to include the whole of Apulia (iii. 88), as well as the Messapian peninsula; but he elsewhere appears to use the name Iapygians as equivalent to the Roman term Apulians, and distinguishes them from the Messapians (ii. 24). This is, however, certainly contrary to the usage of earlier Greek writers. Herodotus distinctly applies the term of Iapygia to the peninsula, and calls the Messapians an Iapgyan tribe; though he evidently did not limit it to this portion of Italy, and must have extended it, at all events, to the land of the Pentacians, if not of the Daunians also. (Herod. iv. 99, vii. 170.) Aristotle also clearly identifies the Iapygians with the Messapians (Pol. v. 3), though the limits within which he applies the name of Iapygia (15. vii. 10) cannot be defined. Indeed, the name of the Iapgyan promontory (§ 260), or Iapygia, universally given to the headland which formed the extreme point of the peninsula, sufficiently proves that this was considered to belong to Iapygia. Strabo confines the term of Iapygia to the peninsula, and says that it was called by some Iapygia, by others Messapi or Calabria. (Strab. vi. pp. 281, 282.) Appian and Dionysius Periegetes, on the contrary, follow Polybius in applying the name of Iapygia to the Roman Apulia, and the latter expressly says that the Iapygian tribes extended their dominion on the left side of Mt. Garganus. (Appian, 45; Dionys. Per. 379.)

Publanius, as usual, follows the Roman writers, and adopts the names then in use for the divisions of this part of Italy; hence he ignores altogether the name of Iapygia, which is not found in any Roman writer as a geographical appellation; though the Latin poets, as usual, adopted it from the Greeks. (Verg. Aen. xi. 247; Ovid, Met. xiv. 703.)

We have no clue to the origin or meaning of the name of Iapygians, which was undoubtedly given to the people (Iapyges, Iapugnes) before it was applied to the country which they inhabited. Niebuhr (vol. i. p. 146) considers it as etymologically connected with the Latin Apulus, but this is very doubtful. The name appears to have been a general one, including several tribes or nations, among which were the Messapians, Salentini, and Peucetians. The name of Iapygian figures in Greek mythography, as usual, derived from a hero, Iapx, whom they represented as a son of Lycaon, a descent probably intended to indicate the Pelasgic origin of the Iapygians. (Anton. Liberal. 51; Plin. iii. 11. s. 16.) For a further account of the national affinities of the different tribes in this part of Italy, as well as for a description of its physical geography, see the articles Apulia and Calabria. [ E. B.]

IAPYGUM PROMONTORIUM (Aegae Iapygia: Copo Sta. Maria di Leuca), a headland which forms the extreme SE. point of Italy, as well as the extremity of the long peninsula or promontory that divides the gulf of Tarentum from the Adriatic sea. It is this long projecting strip of land, commonly termed the heel of Italy, and designated by the Romans as Calabria, that was usually termed by the Greeks Iapygia, whence the name of the promontory in question. The latter is well described by Strabo as a rocky point extending far out to sea towards the SE., but inclining a little towards the Lacinian promontory, which rises opposite to it, and together with it encloses the gulf of Tarentum. He states the interval between these two headlands, and consequently the width of the Tarentine gulf, at its entrance, at about 700 stadia (70 G. miles), which slightly exceeds the truth. Pliny calls the same distance 100 M. P. or 800 stadia; but the real distance does not exceed 66 G. miles or 660 stadia. (Strab. vi. pp. 258, 251; Plin. iii. 11. s. 16; Pol. iii. 1. § 13; Polyb. x. 1.)

The same point was also not unfrequently termed the Salentine promontory (Promontorium Salentinum), being regarded as the point of entrance to the Phoebus, or the Sylus stream, that issues from the Fans; and thence to the high road, which issues from the Fans and proceeds to the Cretan coast. (Herod. ii. 15.)

The modern name is derived from the ancient church of Sta. Maria di Leuca, situated close to the headland, and which has preserved the name of the ancient town and port of Leuca; the latter was situated immediately on the W. of the promontory, and afforded tolerable shelter for vessels. [Leuca.] Hence we find the Athenian fleet, in n. c. 415, en its way to Sicily, touching at the Iapygian promontory after crossing from Corcyra (Thuc. vi. 30. 44); and there can be no doubt that this was the customary course in proceeding from Greece to Sicily. [E. B. J.]

IARDANUS (Iaparos), a river on the S. coast of Crete, near the banks of which the Trojans dwelt. (Herod. ii. 292.) It is identified with the rapid stream of the Platani, which rises in the White Mountains, and, after flowing between the Rhitho villages of Thério and Lodi or Lukos, runs through a valley formed by low hills, and filled with lofty plateaus; from which it obtains its name. The river of Platani falls into the sea, nearly opposite the islet of Hyperous Theolokuros, where there is good anchorage. (Pashley, Trav. vol. ii. p. 22; Blaeu, Kret., vol. i. p. 238, 384.) [E. B. J.]

IARDANUS, a river of Klys. [Pheila.]

IARETHIA. [Libya.]

IASSI. [Tassil.]

IASONIUM (Iasteion Pol. vi. 10. § 3), a town in Margiana, at the junction of the Garus (Murghab) and some small streams which flow into it. (Cf. also Ammian. xxiii. 6.)

V.] JASONIUM (ibid Iasteion, Pol. vi. 10. § 4), a mountain in Media, which extended in a NW. direction from the M. Pardeaeotus (M. Farsaud), forming the connecting link between the Taurus and the outlying spurs of the Antitaurus. It is placed by Ptolomy between the Orontes and the Coronus. [V.]

JASONIUM (Iasteion), a promontory on the
coast of Pontus, 130 stadia to the north-east of Ptolemaion; it is the most projecting cape on that coast, and forms the terminating point of the chain of Mount Paryadres. It was believed to have received its name from the fact that Jason had landed there. (Strab. xii. p. 348; Arrian, Peripl. p. 17; Anonym. Peripl. p. 11; Polt. v. 6, § 4; Xenoph. Anab. vi. 2, § 1, who calls it Jason's cove.) It still bears the name Jason, though it is more commonly called Cape Bona or Venta, from a town of the same name. (Hamilton, Researches, vol. i. p. 269.) The Asineia, called a Greek acropolis by Strabo (p. 33), is probably no other than the Jasonian. [L. S.]

IASSUS. [Contestania.]

IASSUS (Iasos), mentioned by Ptolemy as a population of Upper Pannonia (ii. 14, § 2). Pliny's form of the name (iii. 25) is Ias. He places them on the Derce. [R. G. L.]

IASSUS, or IASUS (Iaeros, or Eiaos : Etib. 'Iassosv), a town of Caria, situated on a small island close to the north coast of the Iasian bay, which derives its name from Iassus. The town is said to have been founded at an unknown period by Argive colonists; but as they had sustained severe losses in a war with the native Carians they invited the son of Nebus, who had previously founded Millets, to come to their assistance. The town appears on that occasion to have received additional settlers. (Polb. xvi. 12.) The town, which appears to have occupied the whole of the little island, had only ten stadia in circumference; but it nevertheless acquired great wealth (Thucyd. viii. 28), from its fisheries and trade in fish (Strab. xiv. p. 638). After the Sicilian expedition of the Athenians, during the Pelo- pæan war, Iassus was attacked by the Lacedaemonians and their allies; it was governed at the time by Amorges, a Persian chief, who had revolted from Darius. It was taken by the Lacedaemonians, who captured Amorges, and delivered him up to Tissaphernes. The town itself was destroyed on that occasion; but must have been rebuilt, for we afterwards find it besieged by the last Philip of Macedon, who, however, was compelled by the Romans to restore it to Ptolemy of Egypt. (Polb. xvi. 2; Liv. xxxiii. 35; comp. Polb. v. 2, § 9; Plin. v. 29; Stad. Mor. Magn. §§ 274, 275; Hieroc. p. 689.) The mountains in the neighbourhood of Iassus furnished a beautiful kind of marble, of a blood-red and livid white colour, which was used by the ancients for ornamental purposes. (Paul. Sient. Enphr. S. Soph. ii. 213.) Near the town was a sanctuary of Hestias, with a statue of the goddess, which, though standing in the open air, was believed never to be touched by the rain. (Polb. xvi. 12.) The same story is related, by Strabo, of a temple of Artemis in the same neighbourhood. Iassus, as a celebrated fishing place, is alluded to by Athenaeus (iii. p. 105, xiii. p. 606). The place is still existing, under the name of Askem or Asym Kaleset. Chander (Travels in As. Min. p. 226) relates that the island on which the town was built is now united to the main-land by a small isthmus. Part of the city walls still exist, and are of a regular, solid, and handsome structure. In the side of the rock a theatre with many rows of seats still remains, and several inscriptions and coins have been found there. (Comp. Spie and Wheler, Voyages, vol. i. p. 361.)

A second town of the name of Iassus existed in Capadocia or Armenia Minor (Polt. v. 7, § 6), on the north-east of Zorapassus.

IASTAE. (Iatræ, Polt. vi. 12), a Syrian tribe, whose position must be sought for in the neighbourhood of the river Iastes. [E. B. J.]

IASTUS (laeros), a river, which, according to Ptolemy (vi. 12), was, like the Polytimeus (Kophil), an affluent of the Caspian basin, and should in fact be considered as such in the sense given to a denomi- nation which at that time connoted a vast and com- plicated hydraulic system. [Jaxartes.] Von Humboldt (Anti Centrale, vol. i. p. 263) has identified it with the Kaiser-Deriv, the dry bed of which may be traced on the barren wastes of Kaiser Konus in W. Turkestan. It is no unusual circumstance in the sandy steppes of N. Asia for rivers to change their course, or even entirely to disappear. Thus the Kaiser-Deriv, which was known to geographers till the commencement of this century, no longer exists. (Comp. Lewychkin, Horzes et Sources des Kirghiz Kasaks, p. 456.) [E. B. J.]

IASTUS, a river mentioned by Ptolemy (vi. 14, § 2) as falling into the Caspian between the Jaik and the Oxus. It is only safe to call it one of the numerous rivers of Independent Tartary. [R. G. L.]

IASKUS. [Oxum.]

IATTH (Iattos, Polt. vi. 12, § 4), a people in the northern part of Sagdiana. They are also mentioned by Pliny (H. N. iv. 18); but nothing certain is known of their real position. [V.]

IATINUM (Iatvor), according to Ptolemy (ii. 8, § 15) the city of the Meldi, a people of Gallia Linguemensis. It is supposed to be the same place as the Fixtiumum of the Table [Fixtiumum], and to be represented by the town of Meatus on the Meurus. Waileucerus, who trusts more to the accuracy of the distances in the Table than we wildly can do, says that the place Fixtiumum has not in the Table the usual mark which designates a capital town, and that the measures do not carry the position of Fixtiumum as far as Meatus, but only as far as Montbaut. He conjectures that the word Fix- tiumum may be a corruption of Finus Latinorum, and accordingly must be a place on the boundary of the little community of the Mehi. This conjecture might be good, if the name of the people was Latin, and not Meldi. [G. L.]

JATRIPPA. [Latrippe.]

IATRA or IATRUM (Iarpex), a town in Moesia, situated at the point where the river Iatrus or Iatrus empties itself into the Danube, a few miles to the east of Ad Novas. (Procop. de Aed., IV. 7; Theophylact. vi. 2; Notit. Imp. 29, where it is errone- ously called Latra; Geog. Ravi. iv. 7, where, as in the Pont., it bears the name Latron.) [L. S.]

IATRUS (in the Pont. Tch. Iatres), a river traversing the central part of Moesia. It has its sources in Mount Haemus, and, having in its course to the north received the waters of several tributaries, falls into the Danube close by the town of Iatra. (Plin. iii. 29, where the common reading is Ietrom; Jornand. Get. 18; Geog. Ravi. iv. 7.) It is probably the same as the Athrys (Aepus) mentioned by Herodotus (iv. 49). Its modern name is Alcetra. [L. S.]
JAXARTES.

JAXARTES, JAXARTES (ιαξάρτης), the river of Central Asia which now bears the name of Syr-Daria, or Yellow River (Daria is the generic Tartar name for all rivers, and Syr = "yellow"), and which, watering the barren steppes of the Kirghiz-Cossacks, was known to the civilized world in the most remote ages.

The exploits of Cyrus and Alexander the Great have inscribed its name in history many centuries before our era. If we are to believe the traditional statements about Cyrus, the left bank of this river formed the N. limit of the vast dominion of that conqueror, who built a town, deriving its name from the founder [Cyrèschta], upon its banks; and it was upon the right bank that he lost his life in battle with Tomyris, Queen of the Massagetae. Herodotus (i. 201—216), who is the authority for this statement, was aware of the existence of the Syr-Daria; and although the name Jaxartes, which was a cognomina adopted by the Greeks and followed by the Romans, does not appear in his history, yet the Araxes of Herodotus can be no other than the actual Syr, because there is no other great river in the country of the Massagetae. Much has been written upon the mysterious river called Araxes by Herodotus; M. De Guignes, Fosse, and Gatterer, suppose that it is the same as the Oxus or Amon-Daria; M. de la Nauze sees in it the Araxes of Armenia; while Beyer, St. Croix, and Larcher, conceive that under this name the Volga is to be understood. The true solution of the enigma seems to be that which has been suggested by D'Anville, that the Araxes is an appellative common to the Amon, the Armenian Aras, the Volga, and the Syr. (Comp. Araxes, p. 188; Mem. de l'Acad. des Insér. vol. xxxvi. pp. 69—83; Heeren, Asiat. Nationen, vol. ii. p. 19, trans.) From this it may be concluded, that Herodotus had some vague acquaintance with the Syr, though he did not know it by name, but confounded it with the Araxes; nor was Arnostole more successful, as the Syr, the Volga, and the Don, have been recognised in the description of the Araxes given in his Meteorologies (i. 13. § 15), which, it must be recollected, was written before Alexander's expedition to India. (Comp. Ideler, Meteorologica, vol. Graecarv. et Rom. ad L., Berol, 1832; St. Croix, Examen Critique des Hist. d'Alex. Ptol., liv. ii. 224.)

A century after Herodotus, the physical geography of this river-basin became well known to the Greeks, from the expedition of Alexander to Bactria and Sogdiana. In n. c. 329, Alexander reached the Jaxartes, and, after destroying the seven towns or fortresses upon that river the foundation of which was ascribed to Cyrus, founded a city, bearing his own name, upon its banks, Alexanderiana (αλεξανδριανα). (Q. Curt. vii. 6; Arrian, Anab. iv. 1. § 3.)

After the Macedonian conquest, the Syr is found in all the ancient geographers under the form Jaxartes: while the country to the N. of it bore the general name of Scythia, the tracts between the Syr and Amon were called Transoxiana. The Jaxartes is not properly a Greek word, it was borrowed by the Greeks from the Barbarians, by whom, as Arrian (Anab. viii. 30. § 19) asserts, it was called Oxantes (Οξάντης). Various etymologies of this name have been given (St. Croix, Examen Critique des Hist. d'Alex. § 6), but they are too uncertain to be relied on; but whatever be the derivation of the word, certain it is that the Syr appears in all ancient writers under the name Jaxartes. Some, indeed, confounded the Jaxartes and the Tanais, and that purposefully, as will be seen hereafter. A few have confounded it with the Oxus; while all, without exception, were of opinion that both the Jaxartes and the Oxus discharged their waters into the Caspian, and not into the Sea of Aral. It seems, at first sight, curious, to those who know, the true position of these rivers, that the Greeks, in describing their course where Herodotus has mentioned the distance of their respective "embouchures" should have taken the Sea of Aral for the Caspian, and that their mistake should have been repeated up to very recent times. Von Humboldt (Asie Centrale, vol. ii. pp. 162—297) — to whose extensive inquiry we owe an invaluable digest of the views entertained respecting the geography of the Caspian and Oxus by classical, Arabian, and European writers and travellers, along with the latest investigations of Russian scientific and military men — arrives at these conclusions respecting the ancient junction of the Aral, Oxus, and Caspian:

1st. That, at a period before the historical era, but nearly approaching to those revolutions which preceded it, the great depression of Central Asia — the concavity of Turan — may have been one large interior sea, connected on the one hand with the Euxine, on the other hand, by channels more or less broad, with the Icy Sea, and the Saka—sak and its adjoining lakes.

2nd. That, probably in the time of Herodotus, and even so late as the Macedonian invasion, the Aral was merely a bay or gulf of the Caspian, connected with it by a lateral prolongation, into which the Oxus flowed.

3rd. That, by the preponderance of evaporation over the supply of water by the rivers, or by dilution and determination of the Sea of Aral, Caspian were separated, and a bifurcation of the Oxus developed, —one portion of its waters continuing its course to the Caspian, the other terminating in the Aral.

4th. That the continued preponderance of evaporation has caused the channel communicating with the Caspian to dry up.

At present it must be allowed that, in the absence of more data, the existence of this great Aral-Caspian basin during the "historic period," must be a most point; though the geological appearances prove by the equable distribution of the same peculiar organic remains, that the tract between the Aral and the Caspian was once the bed of an united and continuous sea, and that the Caspian of the present day is the small residue of the once mighty Aralo-Caspian Sea.

Strabo (xi. pp. 507—517) was acquainted with the true position of this river, and has exposed the errors committed by the historians of Alexander (p. 508), who confounded the mountains of the Paropamisus — or Paropamisus, as all the good MSS. of Ptolemy read (Asie Centrale, vol. i. pp. 114—118) — with the Caucasus, and the Jaxartes with the Tanais. All this was imagined with a view of exalting the glory of Alexander, so that the great conqueror might be supposed, after subjugating Asia, to have arrived at the Don and the Caucasus, the scene of the legendary heroines bound the chains of the fire-bringing Titan.

The Jaxartes, according to Strabo (p. 510), took its rise in the mountains of India, and he determines it as the frontier between Sogdiana and the nomad Scy-
JAXARIES.

The principal tribes of which were the Sacae, Dahae, and Massagetae, and adds (p. 518) that its "embouchure" was, according to Ptolemies, 80 parasanges from the mouth of the Oxus. Pliny (iv. 18) says that the Scythians called it "Silis," probably a form of the name *Syr*, which it now bears, and that Alexander and his soldiers thought that it was the Tanais. It has been conjectured that the Alani, in whose language the word *tan* (Tanais, Dan, Don) signifies a river, may have brought this appellative first to the E., and then to the W. of the Aralo-Caspian basin, in their migrations, and thus have contributed to confirm an error so flattering to the vanity of the Macedonian conquerors. (*Asie Centrale*, vol. ii. pp. 254, 291; comp., Schafarik, *Slav. Alt.* vol. i. p. 500.) Pompomnus Mela (iii. 5, § 6) merely states that it watered the vast countries of Scythia and Sagdomia, and discharged itself into that E. portion of the Caspian which was called Scythicus Sinus.

Arrian, in recounting the capture of Cyropelis (Anab. iv. 3. § 4), has mentioned the curious fact, that the Macedonian army entered the town by the dried-up bed of the river; these desiccations are not rare in the sandy steppes of Central Asia,—as for instance, in the sudden drying up of one of the arms of the Jaxartes, known under the name of Tanchai-Daria, the account of which was first brought to Europe in 1820. (*Comp. Journ. Geog. Soc.* vol. xiv. pp. 359—352.)

Ptolemies (vi. 12. § 1) has fixed mathematically the sources, as well as the "embouchure," of the Jaxartes. According to him the river rises in lat. 43° and long. 125°, in the mountain district of the Comedi (*apud* Kuzmin, § 3; *Muz-Taghy), and throws itself into the Caspian in lat. 48° and long. 97°, carrying with it the waters of many affluents, the principal of which are called, the one Bascartes (Bassaritis, § 3), and the other Demeu (*Damos*, § 5). He describes it as watering three countries, that of the "Saca," "Sagdomia," and "Scythia intra Iramum." In the first of these, upon its right bank, were found the Comari (*Koumor*) and Carataeae (*Karpatae*, vi. 13. § 3); in the second, on the left bank, the Arieses (*Arisides*) and Despessani (*Asphoroi*), who extended to the Oxas, the Tachomi (*Tchomoi*), and Iatti (*Tattoi*, vi. 12. § 4); in the upper course of the Jaxartes lived the Jaxartesae (*Jaxartaei*), a numerous people (vi. 14. § 10), and near the "embouchure," the Aracaeae (*Aradeta*, vi. 14. § 13). Ammians Marcellinus (xxii. 6. § 59), describing Central Asia, in the upper course of the Jaxartes which falls into the Caspian, speaks of two rivers, the Araxartes and Dyman (probably the Dumas of Ptolemies), "they being under the Gulf Bactria", precipices in capstrem phentium omnium; Oxianum paludotum, effusus longo latitudine circumstant," This is the first intimiation, though very vague, as to the formation of the Sea of Aral, and requires a more detailed examination. (*Oxia Palae.*)

The obscure Geographer of Eavaena, who lived, as it is believed, about the 7th century A. D., mentions the river Jaxartes in describing Hyrcania. Those who wish to study the accounts given by medieavial and modern travelers, will find much valuable information in the Dissertations of the "River Jaxartes" annexed to Lebechius, *Horred et Steppes des Kirghiz-Kozato*, Paris, 1840. This same writer (pp. 53—70) has described the course of the Syr-Daria, which has its source in the mountains of Jochkar-Durun, a branch of the range called by the Chinese the "Mountains of Heaven," and by the Kirins NW. course through the sandy steppes of Kizil-Komm and Kara-Komm, unites its waters with those of the Sea of Aral, on its E. shores, at the gulf of Kamechlon-Bacli. [*E. B. J.*]

JAXAMATAE (*Taqwudurai, *Taçwudarai, *Taqwed- 
rus III, king of Bospourus, who waged war with Tir-
gatao, their queen. (Polyaeus, viii. 55.) The ancients attribute them to the Sarmatian stock. (*Symm. Fr.* p. 140; *Amon. Peripl. Eux. p. 2.) Pompomnus Mela (i. 19. § 17) states that they were distinguished by the peculiarity of the women being as tried warriors as the men. Ptolemy (v. 9) places them between the Don and Tobga, which agrees well with the po-

tion assigned to them by the authors mentioned above.

In the second century of our era they disappear from history. Schafarik (*Slav. Alt.* vol. i. p. 340), who considers the Sarmatians to belong to the Median stock, connects them with the Median word "mat" = "people," as in the termination Sarmatians; but it is more probable that the Sarmatians were Slavonians. [*E. B. J.*]

JAZYGES, IAZYGES (*Taqyes, *Steph. B. *Iazyx), a people belonging to the Sarmatian stock, whose original settlements were on the Palus Masaeus. (Plin. iii. 5. § 19; Strab. viii. p. 306; Arrian, *Anab.* 1. 3; *Amam. *Mar. *xxix. 8. § 31.) They were among the barbarian tribes armed by Mithridates (Appian, *Mithr.* 69); during the la-

bishment of Ovid they were found on the Danube, and in Bessarabia and Wallachia (*Ep. *en Pont. *i. *2, *79, *iv. *7, *9, *Trist. *ii. *19. *) In a.D. 50, either induced by the rich pastures of Hungary, or forced onwards from other causes, they no longer appear in their ancient seats, but in the plains between the Lower Theiss and the mountains of Trans-
sylvania, from which they had driven out the Dacians. (TAC. *Anm. *xii. 29; *Plin. *iv. 12.)

This migration, probably, did not extend to the whole of the tribe, as is implied in the surname "Mataecanae," henceforward history speaks of the Jazygies *Meta-

tazaeae (*Taqyes of Metataeae*), who were the Sarmatians with whom the Romans so frequently came in collision. (Comp. Gibbon, c. xviii.) In the second century of our era, Ptolemy (iii. 7) assigns the Danube, the Theiss, and the Carpathians as the limits of this warlike tribe, and enumerates the following towns as belonging to them:—*Usceurum* (*Oobrenov*); *Bormanum* of *Gormanum* (*Bomarum, *al. *Taqwum*); *Abietis* or *Abinta* (*Abinta, *al. *Abinta*); *Thessum* (*Traposov*); *Candaneum* (*Kab-
dow*); *Barca* (*Barga*); *Pessum* (*Hesov*); and *Partiscum* (*Partusov*). These towns were, it would seem, constructed by the Jazygies themselves, who lived in tents and wagons, but by the former Slave inhabitants of Hungary; and this sup-

position is confirmed by the fact that the names are partly Celtic and partly Slavish. Mannert and Reichard (Forbiger, *Tact. Hist.* iii. p. 1111) have guessed at the modern representatives of these places, but Schafarik (*Slav. Alt.* vol. i. p. 514) of opinion that no conclusion can be safely drawn except as to the identity of the *Death with Pessum, and of Partisag with Partiscum.*

The Iazygies lived on good terms with their neigh-
bours on the W., the German Quadi (TAC. *Hist.* iii. 5), with whom they united for the purpose of subju-

Digitized by Microsoft®
gating the native Slaves and resisting the power of Rome. A portion of their territory was taken from them by Decembals, which, after Trajan's Dacian conquests, was incorporated with the Roman dominions. (Dion Cass. xlviii. 10, 11.) Pannonia and Moesia were constantly exposed to their irruptions; but, A.D. 171, they were at length driven from their last holds in the province, and pushed across the Danube, by M. Aurelius. In mid-winter they returned in great numbers, and attempted to cross the frozen stream; the Romans encountered them upon the ice, and inflicted a severe defeat. (Dion Cass. lxxv. 8, 16.) A little later when the Roman Empire was reduced to its full, it was constantly exposed to the attacks of these wild hordes, who, beaten one day, appeared the next, plundering and laying waste whatever came in their way. (Amm. Marcell. xii. 12, 13, xxix. 6.) The word “peace” was unknown to them. (Flor. iv. 12.)

They called themselves “Sarmatae Limigantes,” and were divided into two classes of freemen and slave, “Sarmatae Liberi,” “Sarmatae Serui.” Ammianus Marcellinus (xiv. 13, § 1) calls the subject class “Limigantes” (a word which has been falsely explained by “Limitani”), and St. Jerome (Chron.) says that the ruling Sarmatians had the title “Arca- garantes.” By a careful comparison of the accounts given by Dion Cassius, Ammianus, Jerome, and the writer of the Life of Constantine, it may be clearly made out that the Sarmatian Iazyges, besides subjugating the Getae in Dacia and on the Lower Danube, had, by force of arms, enslaved a people distinct from the Getae, and living on the Theiss and at the foot of the Carpathians. Although the nations around them were called, both the ruling and the subject race, Sarmatians, yet the free Sarmatians were entirely distinct from the servile population in language, customs, and mode of life. The Iazyges, wild, bold riders, scorched over the plains of the Danube and Theiss valleys on their unbroken horses, while their only dwellings were the waggons drawn by oxen in which they carried their wives and children. The subject Sarmatians, on the other hand, had wooden houses and villages, such as those enumerated by Ptolemy (L. c.); they fought more on foot than on horseback, and were daring seamen, all of which peculiarities were eminently characteristic of the ancient Slaves. (Schaefarik, vol. i. p. 250.)

The Slaves often rose against their masters, who sought an alliance against them among the Vilkafali and Quadi. (Ammian. L. c.; Euseb. P.I. Constant., iv. 6.) The history of this obscure and remarkable warfare (A. D. 334) is given by Gibbon (c. xviii.; comp. Le Beau, B. A. Empire, vol. i. p. 337; Manso, Leben Constantin., p. 195.). In A. D. 357—329 a new war broke out, in which Constantius made a successful campaign, and received the title “Sar- maticus.” (Gibbon, c. xix.; Le Beau, vol. ii. pp. 242—272.) In A. D. 471 two of their leaders, Benga and Rafaül, were defeated before Singlumunum (Belgrade) by Theodoric the Ostrogoth. (Jornand. de Reb. Gér. 55; comp. Gibbon, c. xxxix.; Le Beau, vol. vii. p. 44.) The hordes of the Illii, Geppidae, and Gothi broke the power of this wild people, whose descendants, however, concealed themselves in the desert districts of the Theiss till the arrival of the Magyars.

Another branch of the Sarmatian Iazyges were scattered behind the Carpathians in Podolacum, and were known in history at the end of the 10th century of our era; it is probable that they were among the northern tribes vanquished by Hermanric in A.D. 312—330, and that they were the same people as those mentioned by Jordanes (de Reb. Got. 5) under the corrupt form of "Ivarani," Vol. i. p. 374.)

There is a monograph on this subject by Hennig (Comment de Rebus Iazyqum S. Iazcgvum, Regiement, 1812); a full and clear account of the fortunes of these peoples will be found in the German translation of the very able work of Schaf- farik, the historian of the Slavish races.

In 1799 a golden dish was found with an inscription in Greek characters, now in the imperial palace at Vienna, which has been referred to the Iazyges. (Von Hammer, Osma- n. Gesch, vol. iii. p. 726.)

IBAN (I6av, Codenus, vol. ii. p. 774), a city which Codenus (L. c.) describes as the metropolis of Veszprém. The name survives in the modern Vén. St. Martin, the historian of Armenia (Mem. sur l'Arménie, vol. i. p. 177), says that, according to native traditions, Vén is a very ancient city, the foundation of which was attributed to Semiramis. Ruined in course of time, it was rebuilt by a king called Van, who lived a short time before the expedition of Alex- ander the Great, and who gave it his name; but, having again fallen into decay, it was restored by Vag-h-Ashag (Valarsases), brother to Arsaces, and first king of Armenia of the race of the Arsacidae. In the middle of the 4th century after Christ it was captured by Sapor II. (Bitter, Erdkunde, vol. ix. pp. 787, 981; London Env. Journal, vol. viii. p. 66.)

IBER. [IBERUS.]

IBERA, a city of Hispania Citerior, mentioned only by Livy, who gives no explicit account of its site, further than that it was near the Iberus (Ebro), whence it took its name; but, from the connection of the narrative, we may safely infer that it was not far from the sea. At the time referred to, namely, in the Second Punic War, it was the wealthiest city in those parts. (Livy, xxii. 28.) The manner in which Livy mentions it seems also to warrant the conclusion that it was still well known under Augustus. Two coins are extant, one with the epigraph MUN. IBERA JULIA on the one side, and IERCAVONIA on the other; and the other with the head of Ti- berius on the reverse, and on the reverse the epigraph M. II. J. IERCAVONIA; whence it appears to have been made a municipium by Julius, or by Augustus in his honour, and to have been situated in the territory of the IERCAOES. The addition DERT. on the latter of these coins led Harduin to identify the place with Dertosa, the site of which, however, on the left bank of the river, does not agree with the probable position of Ibera. Floras supposes the allusion to be to a treaty between Ibera and Dertosa. The ships with spread sails, on both coins, indicate its maritime site, which modern geographers seek on the S. side of the delta of the Ebro, at S. Carlos de la Ruptia, near Amposta. Its decay is easily accounted for by its lying out of the great high road, amidst the malaria of the river-delta, and in a position where its port would be choked by the alluvial deposits of the Ebro. It seems probable that the port is now represented by the Salinas, or lagoon, called Punto de los Aljibes, the port of the Jews. (Plin. iii. 3. 8; 4; Haridun, ad loc.; Marc, Hist. ii. 8; Flor. Med. de Esp. vol. ii. p. 453; Sestini,
IBEIRIA. (q. i 8 Pospia), the extensive tract of country which lies between the Euxine and Caspian seas, to the S. of the ancient chain of皱aucasus, and which, bounded on the W. by Colchis, on the E. by Albania, and the S. by Armenia, is watered by the river Cyrus (Kür). (Strab. xi. p. 499, comp. i. pp. 45, 69; Pomp. Mel. iii. 5. § 6; Plin. vi. 11; Ptol. v. 11.) From these limits, it will be seen that the Iberia of the ancients corresponds very nearly with modern Georgia, or Gravia, as it is called by the Russians. Strabo (p. 500) describes it as being hemmed in by mountains, over which there were only four passes known. One of these crossed the Mochisch Montes, which separated Iberia from Colchis, by the Colchian fortress Saria-Pana (Sokaratpana), and is the modern road from Mingrelia into Georgia over Suram. Another, on the N., rises from the country of the Nomades in a steep ascent of three days' journey (along the valley of the Terek or Tergh); after which the road passes through the basin of the river Aragus, a journey of four days, where the pass is closed at the lower end by an impregnable wall. This, no doubt, is the pass of the celebrated Caucasian Gates [Cascaiae Portae], described by Pline (vi. 12) as a prodigious work of nature, formed by abrupt precipices, and having the interval closed by gates with iron bars. Beneath ran a river which emitted a strong smell ("Salutem medias (favae), annae diri odoris flucente," Pline, L. c.). It is identified with the great central road leading from the W. of Georgia by the pass of Dairigiel, so named from a fortress situated on a rock washed by the river Terek, and called by the Georgians Sheris Karzi, or the Gate of Sievri. The third pass was from Albania, which at its commencement was cut through the rock, but afterwards went through a marsh formed by the river which descended from the Caucasus, and is the same as the strong defile now called Derbend or "narrow pass," from the name of Daghestan, which is at the extremity of the great arm which branches out from the Caucasus, and, by its position on a steep and almost inaccessible ridge, overhauling the Caspian sea, at once commands the coast-road and the Albanian Gates. The fourth pass, by which Pompeius and Cudinius entered Iberia, led up from Armenia, and is referred to the high road from Erzurr, through Kars, to the N. [Argatis.]

The surface of the country is greatly diversified with mountains, hills, plains, and valleys; the best portion of this rich province is the basin of the Kür, with the valleys of the Argaret, Alexan, and other tributary streams. Strabo (p. 499) speaks of the numerous cities of Iberia, with their houses having tiled roofs, as well as some architectural pretensions. Besides this, they had market-places and other public buildings.

The people of the Ierises or Iberi (169per, Steph. B. c. r.) were somewhat more civilised than their neighbours in Colchis. According to Strabo (p. 500), they were divided into four castes:—

1. The royal house, from which the chiefs, both in peace and war, were taken. (2.) The priests, who acted also as arbitrators in their quarrels with the neighbouring tribes. (3.) Soldiers and husbandmen. (4.) The mass of the population, who were slaves in the abstract form of government was patriarchal. The people of the plains were peaceful and cultivated the soil; while their dress was the same as that of the Armenians and Medes. The mountaineers were more warlike, and resembled the Scythians and Sarmatians. As, during the time of Herodotus (ii. 9), Colchis was the N. limit of the Persian empire, the Iberians were probably in name, subjects of that monarchy. Along with the other tribes between the Caspian and the Euxine, they acknowledged the supremacy of Mithridates. The Romans became acquainted with them in the campaigns of Lucullus and Pompeins. In B.C. 65, the latter general commenced his march northwards in pursuit of Mithridates, and had to fight against the Iberians, whom he compelled to sue for peace. (Plut. Pompei. 34.) A.D. 35, when Tiberius set up Tigraces as a claimant to the Parthian throne, he induced the Iberian princes, Mithridates and his brother Pharsamanes, to invade Armenia; which they did, and subdued the country. (Tac. Ann. ii. 33—36; comp. Dict. of Biog. Pharsamanes.) In A.D. 115, when Armenia became a Roman province under Trajan, the king of the Iberians made a form of submitting himself to the emperor. (Eutrop. vii. 37; comp. Dion Cass. Lix. 15; Spartan. Histories. 17.)

Under the reign of Constantine the Iberians were converted by a captive woman to Christianity, which has been preserved there, though mixed with superstition, down to the present times. One of the original sources for this story, which will be found in Xenander (Allgemein Gesch. der Christl. Religion. vol. iii. pp. 294—296; comp. Millan, Hist. of Christianity, vol. ii. p. 450), is Rufinus (s. 10), from whom the Greek church historians (Soccat. i. 20; Sozom. ii. 7; Theod. i. 24; Mos. Chor. ii. 63) have borrowed it. In A.D. 365—378, by the ignominious treaty of Vianian, the Romans renounced the sovereignty and alliance of Armenia and Iberia. Sapor, after subjugating Armenia, marched against Sauromaces, who was king of Iberia by the permission of the emperors, and, after expelling him, reduced Iberia to the state of a Persian province. (Ann. Marc. xxix. 12; Eutrop. c. xiy; Le Bean, Bas Empiire, vol. iii. p. 357.)

During the wars between the Roman emperors and the Sasanian princes, the Iberian Gates had come into the possession of a prince of the Huns, who offered this important pass to Anastasius; but when the emperor built Darus, with the object of keeping the Persians in check, Cædes, or Kabad, seized upon the defiles of the Caucasus, and fortified them, though less as a precaution against the Romans than against the Huns and other northern barbarians. (Procop. B. P. i. 10; Gibbon, c. xi.; Le Beau, vi. vol. pp. 269, 442, vol. vii. p. 338.) For a curious history of this pass, and its identification with the fabled wall of Gog and Magog, see Humboldt, Asie Centrale, vol. ii. pp. 93—104; Eckhvard, Peripl. des Corp. Mercis, vol. i. pp. 128—132. On the decline of the Persian power, the Iberian frontier was the scene of the operations of the emperors Maurice and Heraclius. Iberia is a province of Russia.

The Georgians, who do not belong to the Indo-European family of nations, are the same race as the ancient Iberians. By the Armenian writers they are still called Virk, a name of perhaps the same original as '169per. They call themselves Karthi, and derive their origin, according to their national traditions, from an amorphous ancestor, Karthka. Like the Armenians, with whom, however, they are...
no affinity either in language or descent, they have
an old version of the Bible into their language.
The structure of this language has been studied by
Adelung (Mithridat. vol. ii. pp. 430, foll.) and
other modern philologers, among whom may be men-
tioned Brosset, the author of several learned
memoirs on the Georgian grammar and language:
Kuprat, also, has given a long vocabulary of it, in
his Asia Polyglotta.
Armenian writers have suppiled historical me-
moirs to Georgia, though it has not been entirely
wanting in domestic chronicles. These curious
records, which have much the style and appearance
of the half-legendary monkish histories of other
countries, are supposed to be founded on substantial
truth. One of the most important works on Georgian
history is the memorials of the celebrated Orbelian
family, which have been published by St. Martin,
with a translation. Some account of these, along
with a short sketch of the History of the Georgians
and their literature, will be found in Prichard
(Physical Hist. of Mankind, vol. iv. pp. 261—276). Du-
Bois de Montperéoz (Un voyage autour du Caucase,
vol. ii. pp. 8—169) has given an outline of the
history of Georgia, from native sources; and the
mapes in the magnificent Atlas that accompanies
his work will be found of great service.

IBERIA INDIAE (Iwipg, Peripl. M. E. p. 24, ed. Hudson), a district placed by the author of
the Periplus between Larica and the Scythians. It
was doubtless peopled by some of the Scythian tribes,
who gradually made their descent to the S. and SE.
part of Scinde, and founded the Indo-Scythic empire,
on the overthrow of the Greek kings of Bactria,
about a. d. 130. The name would seem to imply
that the population which occupied this district had
come from the Caucasa. [V.]

IBERICUM MARE. [Hispanum Mare.]

IBERES, IBERI, IBERIA. [Hispania.]

IBERINGAE (I66i6:iy, Pis. vii. 2. § 18), a people
placed by Ptolemy between the Bythynius Mons
(Naruka Mts. §) and the Montes Damassi, in
India extra Gergenii, near the Brahmaputra. [V.]

IBERUS (Ireio, gen. -erou, and i6evorj; in
Mod. Hisp., Kevorj; one of the tribes of
Spain, the basin of which includes the NE. portion
of the peninsula, between the great mountain chains
of the Pyrenees and Ibvuda. [Hispania.] It
rises in the mountains of the Cantabri, not far
from the middle of the chain, near the city of
Juliabriga (the source lies 12 miles W. of Regio-
na), and, flowing with a nearly uniform direction to
the NE., after a course of 450 M. (960 miles), falls
into the Mediterranean, in 40° 42' X. lat., and
0° 50' L. long., forming a considerable delta at
its mouth. It was navigable for 260 M. from
the town of Vara (Vareo, in Burgos). Its chief
tributaries were:-on the left, the Nicore (Sorge)
and the Gallicus (Galigoe), and on the right the
Salio (Xalon). It was long the boundary of the
two Spain [Hispania], whence perhaps arose the
error of Appian (Hist. 6), who makes it divide
the peninsula into two equal parts. There are some
other errors not worthy of notice. The origin of
the name is disputed. Dismissing derivations from
the Phoenician, the question seems to depend very
much on whether the Iberians derived their name from
the river, as was the belief of the ancient writers, or
whether the river took its name from the people, as
W. von Humboldt contends. If the former was the
case, and if Niebuhr's view is correct, that the popu-
lation of NE. Spain was originally Celtic [His-
papia], a natural etymology is at once found in the
Celtic aber, i. e. water. (Polyb. ii. 13, iii. 34, 40,
et alib.; Sylly. p. 11; Strab. iii. pp. 156, et seq.; Steph.
B. s. v.; Mela. ii. 6. § 5; Cass. C. B. i. 60; Liv.
xxi. 5, 19, 22, &c.; Plin. iii. 3. s. 4, iv. 20. a. 34;
Lucan. iv. 23; Cato. Orig. VII. ap. Nonius, s. v.
Piscatius). [V. S.]

IBETTES. [Samots.]

IBES, a town in the SE. of Hispania Citerior,
mentioned by Livy (xxviii. 21, where the MSS. vary
in the reading), is perhaps the modern Ifi, NE. of
Valencia. (Coins, ap. Sestini, p. 156; Laborde,
Ithin. vol. i. p. 293.)

IBIONES, VIBIONES (16dovres, al. Ovibovres,
Pis. iii. § 23), a Slavonian people of Saratian
Europe, whom Schafarik (Slav. Alt. vol. i. p. 213)
looks for in the neighbourhood of a river Ilvov-
Iviza-Iviba, of which there are several in Russia deriving
their name from "iwa" = "Salix Alba," or the common
white willow. [E. B. J.]

IELIODURUM, in Gallia Belgica, is placed by
the Antonine Itin. on the road between Viroinum (Ter-
dum) and Divodurum (Mets). The termination
(durum) implies that it is on a stream. The whole
distance in the Itin. between Virdum and Metz is
23 Roman leagues, or 343 1/4 M., which is less than
even the direct distance between Virdum and Mets.
There is, therefore, an error in the numbers in the
Itin. somewhere between Viroinum and Divodurum,
which D'Anville corrects in his usual way. The
site of Ieliodurum is supposed to be on the Iron,
at a place about two leagues above its junction with
the Oerne, a branch of the Mosel, and on the line of
an old road. [G. L.]

ICARIA. [Attica, p. 328, b.]

ICARIUM MARE. [Icarus; Aegean Mere.]

ICARUS, ICARIA (Iceapos, 'Iceapia; Nikaria),
an island of the Aegean, to the west of Samos,
according to Strabo (x. p. 430, xiv. 639), 80 stadia
from Cape Ampelos, while Pliny (v. 23) makes it
distance 35 miles. The island is in reality a con-
formation of the range of hills traversing Samos from
east to west, whence it is broad and narrow, and ex-
tends from NE. to SW. Its length, according to
Pliny, is 17 miles, and its circumference, according
to Strabo, 300 stadia. The island, which gave its
name to the whole of the surrounding sea (Icarium
Mare or Pelagon), derived its own name, according
to tradition, from Icarus, the son of Daedalus,
who was believed to have fallen into the sea near this
island. (Or. Met. viii. 195, foll.) The cape form-
ing the easternmost point of the island was called
Descaparum or Dromacon (Strab. xiv. p. 637, 639;
Hom. Hygn. xxxiv. 1; Dod. Sic. iii. 66; Plin. iv.
23; Steph. B. s. v. Arpaxor), and near it was a
small town of the same name. Further west, on
the north coast, was the small town of Istri (Clato),
with a tolerably good roadstead; to the south of
this was another little place, called Oenos
(Obwig, Strab. l. c.; Athen. i. p. 30). According
some traditions, Diraxos was born on Cape Dra-
conum (Theoret. Itapl. xxvi. 33), and Artemis had
a temple near Istri, called Tauropolitan. The island
had received its first colonists from Miletus (Strab.
xiv. p. 635), but in the time of Strabo it belonged
to the Samians: it had then but few inhabitants,
and was mainly used by the Samians as pasture land
for their flocks. (Strab. x. pp. 488, xiv. p. 639; Syl-
ly. pp. 22; Acchyl. Pers. 887; Thucyd. iii. 92, viii.

Digitized by Microsoft®
ICARUS.

ICTHYOPHAGI.

COIN OF OENOAE OR OENAE, IN ICARUS.

ICARUS, a river the embouchure of which is on the E. coast of the Exeine, mentioned only by Pline (vi. 5). Icarus answers to the Ukrash river; and the town and river of Hieros is doubtless the Hieros Portus (island Athw) of Arrian (Periplus, p. 19), which has been identified with Sunjuk-bala (Reynell, Compar. Geog. vol. ii. p. 328). [E. B. J.]

ICAUUS or ICAUNA (Tome), in Gallia, a river which is a branch of the Sequana (&c). Antesidianum or Antesidiumun (Auwervo) is on the Tome. The name Icaunus is only known from inscriptions, D'Anville (Notice, &c., s. e. Icauna) states, on the authority of the Abbé le Befr, that there was found on a stone on the modern wall of Auwervo the inscription dear Icauni. He supposes that Icauni ought to be Icauniius, but without any good reason. He also adds that the name Icauna appears in a writing of the fifth century. According to Ubert (Gallien, p. 145), who also cites Le Befr, the inscription is "Docimus Icauni." It is said that in the ninth century Auwervo was named Icauna, Hiianna, Junia. (Millin, Voyage, i. p. 167, cited by Ubert, Gallien, p. 474.) Icauna is likely to be the Roman form of the original Celtic name as Icaunus.

[G. L.]

ICENI, in Britain. Tacitus is the only author who gives us the exact form Iceni. He mentions them twice.

First, they are defeated by the proprietor P. Ostorius, who, after fortiying the valleys of the Autona (Auropa) and Sabrina, reduces the Iceni, and then marces against the Cangi, a population sufficiently distant from Norfolk or Suffolk (the area of the Iceni) to be near the Irish Sea. (Ann. xii. 31, 32.)

The difficulties that attend the geography of the campaign of Ostorius have been indicated in the article CAMULODUNUM. It is not from this passage that we fix the Iceni.

The second notice gives us the account of the great rebellion under Boadicce, wife of Prasutagus. From this we infer that Camulodunum was not far from the Icennian area, and that the Trinobantes were a neighbouring population. Perhaps we are justified in carrying the Iceni as far south as the frontiers of Essex and Herts. (Ann. xiv. 51—57.)

The real reason, however, for fixing the Iceni lies in the assumption that they are the same as the Sineini of Ptolomy, whose town was Venta (Norwich or Caistor); an assumption that is quite reasonable, since the Venta of Ptolomy's Sineini is mentioned in the Itinerary as the Venta Icennorum, and in contradistinction to the Venta Belgarum (Winchester).

[R. G. L.]

ICII (1x), a river of Central Africa, which only occurs in Menander of Byzantium (Hist. Litorum ad Romanos, p. 300), ed. Niebuhr, Bonn, 1829), surnamed the "Protector," and contemporary with the emperor Maurice, in the 6th century after Christ, to whom comparative geography is indebted for much curious information about the basin of the Caspian and the rivers which discharge themselves into it on the E. Niebuhr has recognised, in the passage from Menander to which reference has been made, the first intimation of the knowledge of the existence of the lake of Aral, after the very vague intimations of some among the authors of the classical period. Von Humboldt (Asie Centrale, vol. ii. p. 186) has identified the Icii with the Emba or Ijmen, which rises in the mountain range Ataruk, not far from the sources of the Or, and, after traversing the sandy steppes of Sogdia and Bukhara, falls into the Caspian at its NE. corner. (Camp. Levant., Horsed et Steppes, p. 65.) [E. B. J.]

ICHANA (Ixyana: Eth. Ixywos), a city of Sicily, which, according to Stephanus of Byzantium, held out for a long time against the arms of the Syracusans, whence he derives its name (from the verb Ixyana, a form equivalent to loyana), but gives us no indication of the period to which this statement refers. The Ichenes, however, are mentioned by Pline (iii. 8. s. 14) among the stiendary towns of the interior of Sicily, though, according to Sillig (ad loc.), the true reading is Ipanesen. [Httnasa]. In either case we have no clue to the position of the city, and it is a mere random conjecture of Cluverius to give the name of Iehania to the ruins of a city which still remain at a place called I'indicori, a few miles N. of Cape Pachynum, and which were identified (with still less probability) by Fazello as those of Imachara.

[IMACHARA.] [E. B. B.]

ICHNAE (Ixyne), a city of Bottinia, in Macedonia, which Hierodotus (viii. 123) couples with Pellia. (Leake, Travels in Northern Greece, vol. iv. p. 582.) [E. B. J.]

ICHNÆAE (Ixyne), Isol. Char. p. 5; Stephan. B. s. v., a small fortified town, or castle, in Mesopotamia, situated on the river Bilecha, which itself flowed into the Euphrates. It is said by Iakorns to have owed its origin to the Macedonians. There can be little doubt that it is the same place as is called in Dios Cassius Ixyne (xl. 12), and in Plutarch Tyxnae (Crass. c. 25). According to the former writer, it was the place where Crassus overcame Talyomenus; according to the latter, that to which the younger Crassus was persuaded to fly when wounded. Its exact position cannot be determined; but it is clear that it was not far distant from the important town of Carrhae.

[V.]

ICCIUS PORTUS. [ITUUS.]

ICITHYOPHAGI (Ixynephagai, Dion. iii. 15, seq.; Herod. iii. 19; Pausan. i. 33. § 4; Plin. vi. 30. s. 32), were one of the numerous tribes dwelling on each shore of the Red Sea which derived their appellation from the principal article of their diet. Fish-eaters, however, were not confined to this region; in the present day, savages, whose only means of subsistence is ashore and cooked in the sun, are found on the coasts of New Holland. The Archiophian Ichtihyophagi, who appear to have been the most numerous of these
TRIBES, dwelt to the southward of the Regio Troglo-
dytica. Of these, and other more inland races, con-
cerning whose strange forms and modes of life
curious tales are related by the Greek and Roman
writers, a further account is given under TROG-
LYDITES.

[W. B. D.]

**ICTHYOPHAGORUM**

(W. Steph. and E. Ptol. Plin. 7. viii. 13; has a deeply embayed
portion of the Persian gulf, in lat. 35° N., situated
between the headlands of the Sun and Asabé on the
eastern coast of Arabia. The inhabitants of its bor-
ders were of the same mixed race — Aethiopio-Ara-
bian — with the Icthyophagi of Aethiopia. The
bay was studded with islands, of which the prin-
cipal were Aradus, Tylus, and Tharros.

[***]

**ICTHYIUS**. [Elis, p. 617, b.]

**ICIANI,** in Britain, mentioned as the Itinerary as a
station on the road from London to Carlisle (Lugub-
ballium). As more than one of the stations on each side
(Villa Fanastin, Cambriocum, &c.) are uncertain, the
locality of the Iciani is uncertain also. Chester-
ford, Ichbaur, and Thetford are suggested in the
Monumenta Britannica.

[R. G. L.]

**ICIDMAGUS,** a town of Gallia Lugdinensis, is
placed by the Table on a road between Revesonium
(supposed to be St. Paulian) and Aquae Segates.

[Stephanus, Eustathius.] Icades is probably Isca-
genius or Issinahus, which is SSW. of St. Etienne,
on the west side of the mountains, and in the basin
of the Upper Loire. The resemblance of the name is
the chief reason for fixing on this site.

[G. L.]

**ICONII** (Istvina), an Alpine people of Gallia.
Strabo (p. 185) says: "Above the Cavares are the Vo-
conti, and Triconti, and Iconi, and Peduli;" and
again (p. 209): "Next to the Voconti are the Si-
conii, and Triconti, and after them the Medulli (Me-
duli), who inhabit the highest summits." These
Icouni and Sicouini are evidently the same people,
and the signum in the name Sicouini seems to be merely
a repetition of the final signum of the word ËKOKONUOIS.
The Peduli of the first passage, as some editions have it, is also
manifestly the name Medulli. The ascertained position of the
Cavares on the east side of the Rhone, between the Duraron and In-
are and that of the Voconti, west of the river, were confirmed
with Strabo's remark about the position of the Med-
uli, show that the Triconti and the Icouni are be-
 tween the Voconti and the Medulli, who were on the
High Alps; and this is all that we know.

[G. L.]

**ICOONIUM** (Istvina; Eth. Tricentae; Cogni,
Kunjah, or Konjak), was regarded in the time of
Xenophon (Anab. i. 2, § 19) as the easternmost
town of Thrace, while all later authorities describe
it as the principal city of Lycaonia. (Cic. ad Fam.
iii. 6. 8, xv. 3.) Strabo (xii. p. 568) calls it a ËK
ALYON, where we must infer that it was then
still a small place; but he adds that it was well
peopled, and was situated in a fertile district of
Lycaonia. Pliny (v. 27), however, and the Acts of
the Apostles, describe it as a very populous city, in-
habited by Greeks and Jews. Hence it would ap-
pear that, within a short period, the place had greatly
risen in importance. In Pliny's time the territory
of Iconium formed a tetrarchy comprising 14 towns,
of which Iconium was the capital. On coins belonging
to the reign of the emperor Galienus, the town is
called a Roman colony, which was, probably, only
an assumed title, as no author speaks of it as a colony.
Under the Byzantine emperors it was the metropolis
of Lycaonia, and is frequently mentioned (Hieroc.
p. 675); but it was wrested from them first by the

Saracens, and afterwards by the Turks, who made it
the capital of an empire, the sovereigns of which
took the title of Sultans of Iconium. Under the
Turkish dominion, and during the period of the Crus-
sades, Iconium acquired its greatest celebrity. It is
still a large and populous town, and the residence of a
pasha. The place contains some architectural
remains and inscriptions, but they appear almost all
to belong to the Byzantine period. (Comp. Ann. Marc.
vir. 2; Steph. B. v.; Post. v. 6, § 16; Leake, Asia Minor, p. 48; Hamilton, Researches,
vol. ii. p. 205, &c.; Eckel, vol. iii. p. 31; Sestini, Geo. Num. p. 48.) The name Iconium led the an-
cients to derive it from Íxo4, which gave rise to the
fable that the city derived its name from an image
of Medusa, brought thither by Persians (Eustath. ad
Dion. Per. 856); hence Stephanus B. maintains
that the name ought to be spelt Íxo4, a form
actually adopted by Eustathius and the Byzantine
writers, and also found on some coins.

[***]

**ICORIGIUM.** [Egorium.]

**ICOS.** [Icıs.]

**ICOSIATNI.** [Icıs.]

**ICOSIUM** (Istvna; Algier), a city on the coast of
Mauretania Caesariensis, E. of Caesarea, a colony
under the Roman empire, and presented by Vespasian
with the territory. (Cic. ad Fam. iv. 35.) It is sit-
ed at the head of a small bay, and was studded with
Aradus, Ichthyophaeus, and Nicessus, which is to
the west of St. Etienne, and to the north of the
Upper Loire. The name Iconium was evidently a
name Sicouini and Icouni are evidently the same people, and
the signum in the name Sicouini seems to be merely a
repetition of the final signum of the word ΟCOKONUOIS. The Peduli of the first passage, as some editions have it, is also manifestly the name Medulli. The ascertained position of the Cavares on the east side of the Rhone, between the Duraron and Inare, and that of the Voconti, west of the river, were confirmed with Strabo's remark about the position of the Medulli, show that the Triconti and the Icouni are between the Voconti and the Medulli, who were on the High Alps; and this is all that we know.

[G. L.]

**ICTIMULI** or **VICTIMULI** (Istvqimwqonoi, Strab.), a people of Cisalpine Gaul, situated at the foot of the Alps, in the territory of Vercellae. They are mentioned by Strabo (v. p. 218), who speaks of a village of the Ictimuli, where there were gold mines, which he seems to place in the neighbourhood of Vercellae; but the passage is so confused that it is difficult to understand. (Comp. IoL.)

[***]

**ICTIS,** in Britain, mentioned by Diodorus Siculus
(vii. 22) as an island lying off the coast of the tin
districts, and, at low tides, becoming a peninsula, whither the tin was conveyed in waggons. St.
Michael's Mount is the suggested locality for ICTIS.
Probably, however, there is a confusion between the Isle of Wight, the Isle of Portland, the Scilly Isles, and the isle just mentioned; since the name is suspiciously like Icetis, the physical conditions being different. This view is confirmed by the text of Pülny (xv. 30), where "Tunus hisitha a Britania introrsus sex dieum navigatione abesse dicit insulam Miction in qua canabu tam plumbum proveniant; ad eam Britannos vitulibus navigatis circino consime naviare." [R. G. L.]

ICTODURUM, in Gallia. The Antonine Itin. places Caturiges (Chorges) on the road between Eburobrum (Embrun) and Vapnicum (Gap); and the Table adds Ictodurum between Caturiges, which is also Chorges, and Vapnicum. We may infer from the name that Ictodurum is some stream between Chorges and Gap; and the Table places it half-way. The road distance is more than the direct line. By following the road from either of these places towards the other till we come to the stream, we shall ascertain its position. D'Anville names the small stream the Vence; and Waldeck names the site of Ictodurum Bastide Vieille. [G. L.]

ICULISMA, a place in Gallia, mentioned by Au- sonius (Ep. xv. 32) as a retired and lonely spot where his friend Tetradius, to whom he addresses this poetical epistle, was at one time engaged in teaching:—

"Quandam decendi munere adstricturn gravi
Iuliaeam cum ab Ascendeter."

It is assumed to be the place called Civitas Eolicimenea in the Notitia Prov. Gall., which is Argon- olina, in the French department of Charente, on the river Charente. [G. L.]

ICUS (Τιες; Eth. 'Iekos), one of the group of islands off the coast of Magnesia in Thessaly, lay near Peripatereus, and was colonised at the same time by the Chassians of Crete. (Scurm. Chius, 582; Strab. ix. p. 436; Apian, B. C. x. 7.) The fleet of Attalins and the Rhodians sailed past Scyrus to Icus. (Liv. xxxi. 45.) Phoenodemos wrote an account of this insignificant island. (Steph. B. s. v.) It is now called Sarakino. (Leake, Northern Greece, vol. iii. p. 312.)

IDA, IDAEUS MONS (Ἱδα, Ἰδα: Ida), a range of mountains of Pyrgia, belonging to the system of Mount Taurus. It traverses western Lydia in many branches, whence it was compared by the ancients to the scopsodura or milleped (Strab. xiii. p. 583), its main branch extending from the south-east to the north-west; it is of considerable height, the highest point, called Gargarus or Gargaron, rising about 4650 feet above the level of the sea. The greater part is covered with wood, and contains the sources of innumerable streams and many rivers, whence Homer (H. i. 47) called the mountain Tauρινἠ. In the Homeric poems it is also described as rich in wild beasts. (Comp. Strab. xiii. pp. 602, 604; Hom. H. ii. 824, vi. 283, viii. 170, vi. 153, 196; Athen. xv. 8; Hor. Od. iii. 20, 15; Theoc. ii. 4; Plut. v. 2, § 13; Plin. v. 32.) The highlands about Zelaia formed the northern extremity of Mount Ida, while Lectum formed its extreme point in the south-west. Two other subordinate ranges, parting from the principal summit, the one at Cape Rhoe- torn, the other at Sigamn, may be said to enclose the territory of Troy in a crescent; while another central ridge between the two, separating the valley of the Scamander from that of Sinis, gave to the whole the form of the Greek letter θ. (Democr. ap. Strab. xiii. p. 597.) The principal rivers of which the sources are in Mount Ida, are the Simois, Scamander, Granicus, Aesarus, Rhodius, Caresius, and Idae others. (Herod. H. xii. 20, similar. The highest peak, Gargarus, also called an extensive valley over the Hellespont, Propontis, and the whole surrounding country. Besides Gargarus, three other high peaks of Ida are mentioned: viz. Cotylus, about 3500 feet high, and about 150 stadia above Scopses; Pytna; and Dictae. (Strab. xiii. p. 472.) Timotheus (ap. Steph. B. s. v. Αλαξανδρία) and Strabo (xiii. p. 606) mention a mountain belonging to the range of Ida, near Antaurus, which bore the name of Antandria, where Paris (Alexander) was believed to have pronounced his judgment as to the beauty of the three goddesses. (Comp. Clarke's Travels, ii. p. 134; Hunt's Journal in Walpole's Turkey, i. p. 120; Cramer's Asia Minor, i. 120.) [L. S.]

IDA (Ιδά, Πολιος iii. 17, § 9; Pomp. Mela, ii. 7. § 12; Plin. iv. 12, xvi. 33; Virg. Aen. iii. 160; Solin. ii. Ar. 676; Pline, 538.), the central and loftiest point of the mountain range which extends from the island of Crete throughout the whole length from W. to E. In the middle of the island, where it is broadest (Strab. x. pp. 472, 475, 478), Mt. Ida lifts its head covered with snow. (Theophrast. H. P. iv. 1.) The lofty summits terminate in three peaks, and, like the main chain of which it is the nucleus, the offshoots to the N. slope gradually towards the sea, enclosing fertile plains and valleys, and form by their projections the numerous bays and gulfs with which the coast is indentured. Mt. Ida, now called Psiloritis, sinks down rapidly towards the SE. into the extensive plain watered by the Lethaeus. This side of the mountain, which looks down upon the plain of Mesara, is covered with cypress trees (comp. Theophrast. de Vent. p. 403; Dian. Perige, 563; Eustath. ad loc.), pines, and junipers. Mt. Ida was the locality assigned for the legends connected with the history of Zeus, and there was a cavern in its slopes sacred to that deity. (Procl. Siv. v. 70.)

The Cretan Ida, like its Trojan namesake, was connected with the working of iron, and the Idaeum Dactyls, the legendary discoverers of metalurgy, are assigned sometimes to the one and sometimes to the other. Wool was essential to the operations of smelting and forging; and the word Ida, an appellative for any wool-covered mound, was used perhaps, like the German berg, at once for a mountain and a mining work. (Kenrick, Aegypt of Hecatalus, p. 278; Heck, Kretes, vol. i. p. 4.) [E. B. J.]

IDACUS (Ἰδακος), a town of the Turcian Chersonese, mentioned by Thucydides (viii. 104) in his account of the manoeuvres before the battle of Cynossema, and not far from Archia. Although nothing is known of this place, yet, as the Athenians were sailing in the direction of the Propontis from the Aegaean, it would appear that Idaeus was nearest the Aegaean, and Archia further up the Hellespont, towards Sestus and the Propontis. (Arnold, ad loc.) [E. B. J.]

IDALIA, IDALIUM (Ἰδαλίως; Eth. 'Idaiōeis, Steph. B.; Plin. v. 31), a town in Cyprus, adjoining to which was a forest sacred to Aphrodite; the poets who connected the place with her worship, give no indications of the precise locality. (Theol. s. x. 106; Virg. Aen. i. 681, 692, x. 51; Catull. Ptol. et Theb. 96; Proterb. ii. 13; Lucian, viii. 17.) Engel (Kyprios, vol. i. p. 153) identifies it with Dalin, de-
sired by Maritt (Viaggio, vol. i. p. 204), situated to the south of Lecceia, at the foot of Mount Olympus. [E. B. J.]}

IDIMIUM, a town in Lower Pamonia, on the east of Sirmium, according to the Peut. Tab.; in the Ravennian Geographer (iv. 19) it is called Idimium. Its site must be looked for in the neighbourhood of Mavrica. [L. S.]}

IDIMUS, a town of uncertain site in Upper Macedonia, probably on the Morawa in Serbia. (It. Ant. 134; Tab. Peut.) [L. S.]

IDISTAVISUS CAMPUS, the famous battle-field where Germanicus, in a. d. 16, defeated Arminius. The name is mentioned only by Tacitus (Ann. ii. 16), who describes it as a "campus medius inter Visurgim et colles," and further states, that "ut ripae fluminis edunt aut prominentia montium resisting, inaequaliter situatur. Dune turgem insurget silva, editis in altum ranis et pura humo inter arborum transeus." This plain between the river Weser and the hills has been the subject of much discussion among the modern historians of Germany, and various places have been at different times pointed out as answering the description of Tacitus' Idistavians. It was formerly believed that it was the plain near Vogezenek, below Bremen; more recent writers are pretty unanimous in believing that Germanicus went up the river Weser to a point beyond the modern town of Minden, and crossed it in the neighbourhood of Hausberge, whence the battle probably took place between Hausberge and Rinteln, not far from the Porta Vestfaelica. (Leodub, Land u. Volk der Bructer, p. 288.) As to the name of the place, it used to be believed that it had arisen out of a Roman asking a German what was the place was, and the German answering, "It is a wise" (it is a meadow); but Grimm (Deutsche Mythol. p. 372. 2nd edit.) has shown that the plain was probably called Idistaviaris, that is, "the maiden's meadow" (from idis, a maiden). [L. S.]

IDOMENE (Ἰδομην, Ptol. iii. 13. § 39; Idomene, Ptol. Tab.), a town of Macedon which the Tabular Itinerary places at 12 M. P. from Stena, the pass now called Demeritikos, or Iron Gate, on the river Ister. Stace, on his route from Thrace to Macedonia, crossed Mt. Cerice, leaving the Panones on his right, and the Sinti and Medii on his left, and descended upon the Axios at Idomene. (Tucn. ii. 98.) It probably stood upon the right bank of the Axios, as it is included by Pudemy (L. c.) in Emathia, and was near Doberus, next to which it is named by Hierocles among the towns of Consular Macedonia, under the Byzantine empire. (Leake, North Greece, vol. iii. p. 444.) [E. B. J.]

IDOMENE. [Aucrus Amphilochius.]

IDRAE (Ἰδρα, Ptol. iii. 5. § 23), a people of Sarmatia Europaea, whose position cannot be made out from the indications given by Pudemy. (Schafer, Sarm. Alt. vol. i. p. 213.) [E. B. J.]

IDRIAS (Ἰδριας), according to Stephanus B. (c. v.), a town in Caria which had formerly borne the name of Chrysa-tes. Herodotus (c. 118) describes the river Mar-yas as flowing from a district called Idrias; and it is conjectured that the Euphrates, founded by Antiochus Soter, was built on the site of the ancient town of Idrias. (Comp. Leake, Asia Minor, p. 235 ; see Laodicta.) [L. S.]

IDUBEDA (Ἰδούβεδα, misspelt by Agatheneus Iδούβεδα, ii. 9: Sierra de Oca and Sierra de Lorenzo), a great mountain chain of Hispamana, running in a SE. direction from the Cantabri to the Mediterranean, almost parallel to the Ebro, the basin of which it borders on the W. Strabo makes it also parallel to the Pyrenees, in conformity with his view of the direction of that chain from N. to S. (Strab. iii. p. 161; Ptol. ii. 6. § 21.) Its chief offsets were:—

M. Caunus, near Bibulis (Martial, i. 49, iv. 55), the Saltus Mantianus (Liv. xi. 39: probably the Sierra Molina), and, above all, M. Orospada, which strikes off from it to the S. long before it reaches the sea, and which ought perhaps rather to be regarded as its principal prolongation than as a mere branch. [P. S.]

IDUMAEA (Ἰδούμαια), the name of the country inhabited by the descendants of Edom (or Esan), being, in fact, only the classical form of that ancient Semitic name. (Joseph. Ant. i. 1. § 1.) It is otherwise called Mount Seir. (Gen. xxiii. 3, xxxvi. 8; Deut. ii. 5; Joshua, xxiv. 4.) It lay between Mount Horab and the southern border of Canaan (Deut. i. 2), extending apparently as far south as the Gulf of Akaba (Deut. ii. 2—8), as indeed its ports, Ezion-geber, and Elath, are expressly assigned to the "land of Edom." (2 Chron. viii. 17.) This country was inhabited in still more ancient times by the Horims (Deut. i. 2, 22), and derived its more ancient name from their patriarch Seir (Gen. xxxvi. 10—20); comp. xiv. 6), as is properly maintained by Reland, against the fanciful conjectures of Josephus and others. (Ptolemy, p. 65, 69.) The Jewish historian extends the name Idumaea so far to the north as to comprehend under it great part of the south of Judaea; as when he says that the tribe of Simeon received as their inheritance that part of Idumaea which borders on Egypt and Arabia. (Ant. v. i. § 22) He elsewhere calls Hebron the first city of Idumaea, i.e. reckoning from the north. (B. J. iv. 9. § 7.) From his time the name Idumaea disappears from geographical descriptions, except as an historical appellation of the country that was then called Gebalene, or the southern desert (ἡ κατὰ μεσοποταμίαν ἐγερμένη, Euseb. Onom. s. v. Ailàda), or Arabia. The historical records of the Idumaeans, properly so called, are very scanty. Saul made war upon them; David subdued the whole country; and Solomon made Ezion-geber a naval station. (1 Sam. xiv. 47, 2 Sam. x. 8, 11.) The land of the Idumaeans, however, recovered their national independence under Joram, king of Judah (2 Kings, xiv. 7), and avenged themselves on the Jews in the cruelties which they practised at the capture of Jerusalem by Nebuchadnezzar. (Psalms, xxxvii. 7.) It was probably during the Babylonian captivity that they extended themselves as far north as Hebron, where they were attacked and subdued by Judas Maccabaeus. (1 Macc. x. 63—68; Joseph. Ant. xii. 8. § 6.) It was on this account that the whole of the south of Palestine, about Hebron, Gaza, and Eleutheropolis (Beit Jibrin), came to be designated Idumaea. (Joseph. B. J. iv. 9. § 7, c. Apion. ii. 9; S. Jerom. Comment. in Obad. ver. 1.) Meanwhile, the ancient seats of the children of Edom had been invaded and occupied by another tribe, the Nabathaeans, the descendants of the line of Idram (the Idumaeans proper), under which name the country and its capital (Petra) became famous among Greek and Roman geographers and historians, on which account their description of the district is more appropriately given under that head. St. Jerome's brief but accurate notice of its general features may here suffice:—

"Omnis australis regio Idumaeorum de Eleutheropolis..."
IDUNUM.

IDUM, a town in the extreme south of Pan- nomia (Ptol. ii. 14. § 3), which, from inscriptions found on the spot, is identified with the modern Judean.

JEBUS, JEBUSITES. [Jerusalem].

JERUSALEM.

JERUSALEM.

JERUSALEM.

JERUSAL. [Aphrippa].

JERICHO (Ιεριχών, Ιεριχών, Strab.), a strongly fortified city of the Canaanites, miraculously taken by Joshua, who utterly destroyed it, and prohibited it from being rebuilt under pain of an anathema (Josh. ii. 6.), which was revoked and incurred by Hiel of Bethel, five centuries afterwards, in the reign of Ahab, king of Israel. (1 Kings, xvi. 34.) It then became a school of the prophets. (2 Kings, ii. 4, 5.) It lay in the boundary of Benjamin, to which tribe it was assigned (Josh. xviii. 12, 21), but was not far from the southern borders of Ephraim (xvi. 1). It is mentioned in the New Testament in connection with the wealthy revenue-farmer Zacchaeus, who resided there, and probably farmed the government dues of its rich and well cultivated plain. Josephus describes it as well situated, and fruitful in palms and balsam. (Ant. iv. 8. § 1, B. J. i. 6, § 6.) He places the city 60 stadia from the Jordan, 150 from Jerusalem (B. J. iv. 8. § 3), the intervening country being a rocky desert. He accounts for the narrow limits of the tribe of Benjamin by the fact that Jericho was included in that tribe, the fertility of which far surpasses the richest soil in other parts of Palestine (§§ 21, 22). Its plain was 70 stadia long by 20 wide, irrigated by the waters of the fountain of Elitha, which possessed almost miraculous properties. (Ant. iv. 8. §§ 2, 3.) It was one of the eleven toparchies of Judaea. (B. J. iii. 2.) Its palm grove was granted by Antony to Cleopatra (i. 18. § 5), and the subsequent possession of this envied district by Herod the Great, who first farmed the revenues for Cleopatra, and then redeemed them (Ant. xiv. 4. §§ 1, 2), probably gave rise to the proverbial use of his name in Horace (Ep. ii. 2. 184):—

"cessare et indure et ungi,
Praefate Herolis palmetes pinguius."

It is mentioned by Strabo (xvi. p. 763) and Pliny (v. 14) in connection with its palm-trees and fountains. The former also alludes to the palace and its garden of balsam, the cultivation and collecting of which is more fully described by Pliny (xii. 25).

The palace was built by Herod the Great, as his own residence, and there it was that he died; having first confined in the hippodrome the most illustrious men of the country, with the intention that they should be massacred after his death, that there might be a general mourning throughout the country on that occurrence. (B. J. i. 33. § 6.)

Josephus further mentions that Jericho was visited by Vespasian shortly before he quitted the country, where he left the tenth legion (B. J. iv. 8. §§ 1, 9, § 1); but he does not mention its destruction by Titus on account of the perfidy of its inhabitants; a fact which is supplied by Eusebius and St. Jerome. They add that a third city had been built in its stead; but that the ruins of both the former were still to be seen. (Onomast. s. v.) The existing ruins can only be referred to this latest city, which is frequently mentioned in the mediaeval pilgrimages. They stand on the skirts of the mountain country that shuts in the valley of the Jordan on the west, about three hours distant from the river. They are very extensive, but present nothing of interest. The waters of the fountain of Elitha, now 'Ain-ε-Sultan, well answer to the glowing description of Josephus, and still fertilise the soil in its immediate neighbourhood. But the palms, balsam, sugar-canes, and roses, for which this Paradise was formerly celebrated, have all disappeared, and the modern Riba consists only of the tents of a Bedouin encampment. [G. W.]

IERNÉ, a better form for the ancient name of Ireland than HIBERNIA, IBERNA, IVERNA, etc., both as being nearer the present Gaelic name EIR, and as being the oldest form which occurs. It is the form found in Aristotle. It is also the form found in the poem attributed to Orpheus on the Argonautic expedition, which, spurious as it is, may nevertheless be as old as the time of Onomacritus (i. e. the reign of the first Darius):—

—νησαμεινα ἴπρωναν ἄψων ἰκώμι.

(Orpheus, 1164, ed. Leipzig, 1764.)

Aristotle (de Mundo, c. 3) writes, that in the ocean beyond the Pillars of Hercules "are two islands, called Britannia, very large, Albion and Ierone, beyond the Celtae." In Diodorus Siculus (v. 32) the form is Iris; the island Iris being occupied by Britons, who were cannibals. Strabo (ii. p. 107) makes Ierone the farthest voyage northwards from Celtica. It was too cold to be other than barely habitable, the parts beyond it being absolutely uninhabited. The reported distance from Celtica is 500 stadia. The same writer attributes cannibalism to the Irish; adding, however, that his authority, which was probably the same as that of Diodorus, was insufficient. The form in Pomponius Mela is IERMA. In Ierma the luxuriance of the herbage is so great as to cause the cattle who feed on it to burst, unless occasionally taken off. Pliny's form is Hibernia (iv. 30). So-linus, whose form is Hibernia, repeats the statement of Mela as to the pasture, and adds that no snakes are found there. Wariike beyond the rest of her sex, the Hibernian mother, on the birth of a male child, places the first morsel of food in his mouth with the point of a sword (c. 22). Avienus, probably from the similarity of the name to ιερα, writes:—

"Ast in deabus in Sacram, sic insulam
Divere preci, solius curias rata est.
Hace inter undas multis coepit jact.
Eamque latu gens Hibernorum colit."

(Ors. Mart. 109. 113.)

Avienus's authorities were Carthaginian. More im-
I. NAMES.

The name by which this ancient capital is most commonly known was not its original appellation, but apparently compounded of two earlier names.

The Irish tribes mentioned by Ptolemy do not meet any separate substantive notice, a notice of their playing any part in history, or a notice of their having come in contact with any other nation. They appear only as details in the list of the populations of Ierne.

Neither do the Ierni appear collectively in history. They lay beyond the pale of the classical (Roman or Greek) nations. It may be that the tribes of Northern Germany and Scandinavia, and we know them only in their geography, not in their history.

But they may have been tribes unmentioned by Ptolemy, which do appear in history; or the names of Ptolemy may have been changed. Ptolemy says nothing about any Scoti; but Claudian does. He also connects them with Ireland:

"moderanum Saxone fusce Orcales; incultae Pictorum sanguine Thule Scoetorum cunnitos fictit glacialis Ierne." (De Terr. Consul. Hiberni,

It is not easy to say to what purpose these names and notices, and, indeed, more important than all the notices of Ireland put together, is the text of Ptolemy. In this author the details for Ireland (Iepovia) are fuller, rather than scantier, than those for Great Britain. Yet, as Ireland was never reduced, or even explored by the Romans, his authors have been other than Latin. Among such facts must be taken another, viz., that of the earliest notice of Ireland (Iepovia) being full as early as the earliest of Britain; earlier, if we attribute the Argonautic poem to Omonacritus; earlier, too, if we suppose that Hanno was the authority of Avienus.

If not Roman, the authorities for Ierne must have been Greek, or Phoenician.—Greek from Marseille, Phoenician from either the mother-country or Carthage. The probabilities are in favour of the latter. On the other hand, early as we may make the first voyage from Carthage (via Spain) to Ireland, we find no traces of any permanent occupancy, or of any intermixture of blood. The name Ierne was native; though it need not necessarily have been taken from the Iermians themselves. It may have been Heritian (Spanish) as well. Some of the names in Ptolemy—a large proportion—are still current, e.g. Leba, Senus, Obooa, Birgus, Ilebar, Naganaste, &c., = Lifly, Shannon, Avoca, Barrow, Dublin, Connaught, &c. Ptolemy gives us chiefly the names of the Irish rivers and promontories, which, although along a sea-board so deeply indented as that of Ireland not always susceptible of accurate identification, are still remarkably true in the general outline. What is of more importance, inasmuch as it shows that his authorities had gone inland, is the fact of several forms being mentioned:—The inland towns are these, Rhigia, Rhaeba, Laverns, Macolinum, Dunnum, another Rhigia, Turnis."

The populations are the Vennicii and Rhobiloi, in Ulster; the Nagnerae, in Connaught; the Erudini and Erspoldani, between the Nagnerae and Ven- nicii; the Uerni and Volcae, in Munster; and the Anci, Gaumari, the Velhorae (or Eliebii), between the Uerni and Nagnerae. This leaves Leinster for the Brigantes, Barriodlan, Merapar, Cociun, Clanoll, Volumen, and Durnai, the latter of whom may have been in Ulster. Besides the inland towns, there was a Menapia (t6xas) and an Ethana (t6xas) on the coast.

Tacitus merely states that Agricola mediated the conquest of Ireland, and that the Irish were not very different from the Britons;—"Ingenia, cultusque hominum humum modum molitum a Britannia different." (Agric. 24.)

It is remarkable that on the eastern coast one British and two German names occur,—Brigantes, Cuaci, and Munapi. It is more remarkable that two of these names are more or less associated on the continent. The Chnec lie north of the Munapi in Germany, though not directly. The inference from this is by no means easy. Accident is the last resource to the ethnographical philologist; so that more than one writer has assumed a colonisation. Such a fact is by no means improbable. It is not much more difficult for Germans to have been in Wexford in the second century than it was for Northmen to have been so in the eighth, ninth, and tenth. On the other hand, the root m-n-p seems to have been Celtic, and to have been a common, rather than a proper, name; since Pning gives us the island Monapia—Anglesea. No opinion is given as to the nature of these coincidences.

Of none of the Irish tribes mentioned by Ptolemy
attached, perhaps, to two neighbouring sites afterwards incorporated into one. The sacred narrative, by implication, and Josephus, explicitly, recognise from the first a distinction between the Upper and the Lower city, the memorial of which, it is supposed to be retained in the dual form of the Hebrew name יְרוּשָׁלָם. The learned are divided in opinion as to whether the Salem of Melchizedek is identical with Jerusalem. St. Jerome, who cites Josephus and a host of Christian authorities in favour of their identity, himself maintaining the opposite conclusion, says that extensive ruins of the palace of Melchizedek were shown in his day in the neighbourhood of Scythopolis, and makes the Salem of that patriarch identical with "Salem, a city of Shechem" (Gen. xxxii. 18); the same, no doubt, with the Salem near to Accon (St. John, iii. 29), where a village of the same name still exists in the mountains east of Nobles. Certain, however, it is that Jerusalem is intended by this name in Psalm lxvii. 2, and the almost universal agreement of Jews and Christians in its identity with the city of Melchizedek is still further confirmed by the religious character which seems to have attached to its governor at the time of the coming in of the children of Israel, when we first find the name of Adonikrim, the representative of Adoni-krim, to Melchizedek ("righteous Lord"). Regarding, then, the latter half of the name as representing the ancient Salem, we have to inquire into the origin of the former half, concerning which there is considerable diversity of opinion. Josephus has been understood to derive it from the Greek word ἵππος, prefixed to Salem. In the obscure passage (Ant. vii. 3. § 2) he is so understood by St. Jerome; but Isaac Vossius defends him from this imputation, which certainly would have raised his character as an etymologist. Lightfoot, after the Rabbis, and followed by Whiston, regards the former half of the name as an abbreviation of the latter part of the title Jehovah-jirch, which this place seems to have received on occasion of Abraham offering up his son on one of the mountains of "the land of Moriah." (Gen. xxii. 8, 14.) Reland, followed by Rammer, adopts the root יְרוּ ה and יְרוּ, and supposes the name to be compounded of יְרוּ ה and יְרוּ, which would give a very good sense, "hereditas," or "possessio hereditaria pacis." Lastly, Dr. Wells, followed by Dr. Lee, regards the former part of the compound name as the pronunciation of the name Jehu, יְרוּה, one of the earlier names of the city, from which its Canaanitish inhabitants were designated Jehusites. Dr. Wells imagines that the יְרוּ was changed to יְרוּ, for the sake of euphony; Dr. Lee, for euphony, as Jerusalem would mean "the trampling down of peace"—a name of ill omen. Of these various interpretations, it may be said that Lightfoot's appears to have the highest authority; but that Reland's is otherwise the most satisfactory. Its other Scripture name, Sion, is merely an extension of the name of one particular quarter of the city to the whole. There is a further question among critics as to whether by the city Cydysis, mentioned in Herodotus, Jerusalem is intended. It is twice alluded to by the historian: once as a city of the SIrians of Palæstine, not much smaller than Sardis (iii. 5); again, as having been taken by the Phœnicians. Necho, king of Egypt, after his victory in Magdolum (ii. 159). The main objections urged against the identity of Cydysis and Jerusalem in these passages, are, that in the former passage Herodotus is apparently confusing his survey to the sea-border of Palæstine, and that the fact narrated in the second is not alluded to in the sacred narrative. But, on the other hand, there is no mention in sacred or profane history of any other city, maritime or inland, that could at all answer to the description of Cydysis in respect to its size; and the capture of Jerusalem by Necho after the battle of Megiddo,—which is evidently corrupted by Herodotus into Magdolum, the name of a city on the frontier of Egypt towards Palæstine, with which he was more familiar,—though not expressly mentioned, is implied in Holy Scripture; for the deposition and deportation of Jehohaskat, and the subjugation and subjection of Jehokam, could not have been effected, unless Necho had held possession of the capital. (2 Kings, xxv. 29—35; comp. 2 Chron. xxxvi. 3.) It may, then, safely be concluded that Cydysis is Jerusalem; and it is remarkable that this earliest form of its classical name is nearly equivalent to the modern name by which alone it is now known to its native inhabitants. El-Khams signifies "the Holy (city);" and this title appears to have been attached to it as early as the period of Isaiah (xlvi. 2. ki. 1), and is of frequent recurrence after the Captivity. (Nehem. xi. 1, 18; St. Matt. iv. 5, xxvii. 53.) Its pagan name Colonia Aelia Capitolina, like those imposed on many other ancient cities in Palæstine, never took any hold on the native population of the country, nor, indeed, on the classical historians or ecclesiastical writers. It probably existed only in state papers, and coins, many of which are preserved to this day. (See the end of the article.)

II. GENERAL SITE. Jerusalem was situated in the heart of the mountain district which commences at the south of the great plain of Esdraelon and is continued throughout the whole of Samaria and Judaea quite to the southern extremity of the Promised Land. It is almost equidistant from the Mediterranean and from the river Jordan, being about thirty miles each from, and situated at an elevation of 2000 feet above the level of the Mediterranean. Its site is well defined by its circumjacent valleys.

Valleys. (1) In the north-west quarter of the city is a shallow depression, occupied by an ancient pool. This is the head of the Valley of Hinnom, which from this point takes a southern course, confining the city on the west side, until it makes a sharp angle to the east, and forms the southern boundary of the city to its south-east quarter, where it is met by another considerable valley from the north, which must next be described. (2) At the distance of somewhat less than 1500 yards from the "upper pool" at the head of the Valley of Hinnom, are the "Temples of the Kings," situated at the head of the Valley of Jehoshaphat, which runs at first in an eastern course at some distance north of the modern city, until, turning sharply to the south, it skirts the eastern side of the town, and meets the Valley of Hinnom at the south-east angle, as already described, from whence they run off together in a southerly direction to the Dead Sea. Through this valley the brook Kedron is supposed once to have run; and, although no water has been known to flow through the valley within the last few centuries, it is unquestionably entitled to the appellation of "the Valley of the Kedron." The space between the basin at the head of the Valley of Hinnom and the head of the Valley of
JERUSALEM.

Jehoshaphat is occupied by a high rocky swell of land, which attains its highest elevation a little without the north-west angle of the present town. The city, then, occupied the termination of this broad swell of land, being isolated, except for a limited road on the north, by two great valleys, as described, towards which the ground declined rapidly from all parts of the city. This rocky promontory is, however, broken by one or two subordinate valleys, and the declivity is not uniform.

(1) There is, for example, another valley, very inferior in magnitude to those which encircle the city, but of great importance in a topographical view, as being the main geographical feature mentioned by Josephus in his description of the city. This valley of the Tyropoeon (cheese-makers) meets the Valley of Hinnom at the Pool of Siloam, very near its junction with the Valley of Jehoshaphat, and can be distinctly traced through the city, along the west side of the Temple enclosure, to the Damascene gate, where it opens into a small plain. The level of this valley, running as it does through the midst of a city that has undergone much vicissitudes and such repeated destruction, has of course been largely raised by the desolations of so many generations, but is so marked a feature in modern as in former times, that it is singular it was not at once recognised in the attempt to re-distribute the ancient Jerusalem from the descriptions of Josephus. It would be out of place to enter into the arguments for this and other identifications in the topography of ancient Jerusalem; the conclusions only can be stated, and the various hypotheses must be sought in the works referred to at the end of the article.

Hills.—Ancient Jerusalem, according to Josephus, occupied "two eminences, which fronted each other, and were divided by an intervening ravine, at the brink of which the closely-built houses terminated." This ravine is the Tyropoeon, already referred to, and this division of the city, which the historian observes from the earliest period, is of the utmost importance in the topography of Jerusalem. The two hills and the intermediate valley are more minutely described as follows:—

(1) The Upper City:— Of these eminences, that which had upon it the Upper City was by much the loftier, and in its length the straiter. This eminence, then, for its strength, used to be called the stronghold by king David, but by us it was called the Upper Agora.

(2) The Lower City:— The other eminence, which was called Acræ, and which supported the Lower City, was in shape gibbous (κώνοεστρώτος).

(3) The Temple Mount:— Opposite to this latter was a third eminence, which was naturally lower than Acræ, and was once separated from it by another broad ravine: but afterwards, in the times when the Asmonaeans reigned, they filled up the ravine, wishing to join the city to the Temple; and having levelled the summit of Acræ, they made it lower, so that in this quarter also the Temple might be seen rising above other objects.

"But the ravine called the Tyropoeon (cheese-makers), which we mentioned as dividing the eminences of the Upper City and the Lower, reaches to Siloam; for so we call the spring, both sweet and abundant. But on their outer sides the two eminences of the city were hemmed in within deep ravines, and, by reason of the precipices on either side, there was no approach to them from any quarter." (B. J. Lev. iv. 4, 5.)

JERUSALEM.

This, then, was the disposition of the ancient city, on which a few remarks must be made before we proceed to the new city. The two-fold division, which, as has been said, is recognised by Josephus from the time of Jehoshaphat, was not, however, not only in the account of its capture by the Israelites, and subsequently by David, but in all such passages as mention the city of David or Mount Zion as distinct from Salem and Jerusalem. (Comp. Josh. xv. 63; Judges i. 8, 21; 2 Sam. v. 6—9; Psalms, lxxxvi. 2, &c.) The account given by Josephus of the taking of the city is this:—" that the Israelitish army, having besieged it, after a time took the Lower City, but the Upper City was hard to be taken by reason of the strength of its walls, and the nature of its position" (Ant. v. 2 § 2); and, subsequently, that "David laid siege to Jerusalem, and took the Lower City by assault, while the citadel still held out" (vii. 3 § 1). Having at length got possession of the Upper City also," he enclosed the two within one wall, so as to form one body" (§ 2). This could only be effected by taking in the intervening valley, which is apparently the part called Millo.

(4) But when in process of time the city overflowed its old boundaries, the hill Bezetha, or New City, was added to the ancient hills, as is thus described by Josephus:—" The city, being over-abundant in population, began gradually to creep beyond its old walls, and the people joining to the city the region which lay to the north of the temple and close to the hill (of Acræ), advanced considerably, so that even a fourth eminence was surrounded with habitations, viz. that which is called Bezetha, situated opposite to the Antonia, and divided from it by a deep ditch; for the ground had been cut through on purpose, that the foundations of the Antonia might not, by joining the eminence, be easy of approach, and of inferior height." The Antonia, it is necessary here to add, in anticipation of a more detailed description, was a castle situated at the north-western angle of the outer enclosure of the Temple, occupying a precipitous rock 50 cubits high.

It is an interesting fact, and a convenient one to facilitate a description of the city, that the several parts of the ancient city are precisely coincident with the distinct quarters of modern Jerusalem: for that, 1st, the Armenian and Jewish quarters, with the remainder of Mount Zion, now excluded from the walls, composed the Upper City; 2dly, the Maccabean quarter corresponds exactly with the Lower City; 3dly, that the Haram-es-Sherif, or Noble Sanctuary, of the Moslems, occupies the Temple Mount; and 4thly, that the Haret (quarter) Bab-el-Hittah is the declivity of the hill Bezetha, which attains its greatest elevation to the north of the modern city wall, but was entirely included within the wall of Agrippa, together with a considerable space to the north and west of the Lower City, including all the Christian quarter.

The several parts of the ancient city were enclosed by distinct walls, of which Josephus gives a minute description, which must be noticed in detail, as furnishing the fullest account we have of the city as it existed during the Roman period; a description which, as far as it relates to the Old city, will serve for the elucidation of the anti-Babylonish capital,—as it is clear, from the account of the rebuilding of the walls by Nehemiah (iii. vi.), that the new fortifications followed the course of the ancient encircling.
III. W Alle.

1. Upper City and Old Wall. — "Of the three walls, the old one was difficult to be taken, both on account of the ravines, and of the eminence above them on which it was situated. But, in addition to the advantage of the position, it was also strongly built, as David and Solomon, and the kings after them, were very zealous about the work. Beginning towards the north, from the tower called Hippicus, and passing through the place called Nystus, then joining the council chamber, it was united to the western cloister of the Temple. In the other direction, towards the west, commencing from the same place, and extending through a place called Bethos to the gate of the Essenes, and then turning towards the south above the fountain Siloam, thence again bending towards the east to the Pool of Solomon, and running through a place which they called Ophla, it was joined to the eastern cloister of the Temple."

To understand this description, it is only necessary to remark, that the walls are described, not by the direction in which they run, but by the quarter which they face; i.e. the wall "turning towards the south" is the south wall, and so with the others; so that the Hippic Tower evidently lay at the NW. angle of the Upper City; and, as the position of this tower is of the first importance in the description of the city walls, it is a fortunate circumstance that we are able to fix its exact site.

(1) The Hippic Tower is mentioned in connection with two neighbouring towers on the same north wall, all built by Herod the Great, and connected with his splendid palace that occupied the north-west angle of the Upper City. "These towers," says the historian, "surpassed all in the world in extent, beauty, and strength, and were dedicated to the memory of his brother, his friend, and his best loved wife."

"The Hippicus," named from his friend, was a square of 25 cubits, and thirty high, entirely solid. Above the part which was solid, and constructed with massive stones, was a reservoir for the rain-water, 20 cubits in depth; and above this a house of two stories, 25 cubits high, divided into different apartments; above which were battlements of 2 cubits, on a parapet of 3 cubits, making the whole height 80 cubits.

(2) The Tower Phanæclus, which was named from his brother, was 40 cubits square, and solid to the height of 40 cubits; but above it was erected a cloister 10 cubits high, fortified with breastworks and ramparts; in the middle of the cloister was carried up another tower, divided into costly chambers and a hall-room, so that the tower was in nothing inferior to a palace. Its summit was adorned with parapets and battlements, more than the preceding. It was in all 90 cubits high, and resembled the tower of Pharus near Alexandria, but was of much larger circumference.

(3) The Tower Mariamne was solid to the height of 30 cubits, and 20 cubits square, having above a richer and more exquisitely ornamented dwelling, its entire height was 55 cubits. "Such in size were the three towers; but they looked much larger through the site which they occupied; for both the old wall itself, in the range of which they stood, was built upon a lofty eminence, and likewise a kind of crest of this eminence reared itself to the height of 30 cubits, on which the towers being situated received much additional elevation.

The towers were constructed of white marble, in blocks of 20 cubits long, 10 wide, and 5 deep, so exactly joined together that each tower appeared to be one mass of rock."

Now, the modern citadel of Jerusalem occupies the NW. angle of Mount Zion, and its northern wall rises from a deep fosse, having towers at either angle, the bases of which are protected on the outside by massive masonry sloping upward from the fosse. The NW. tower, divided only by the trench from the Jaffa gate, is a square of 43 feet. The NE. commonly known as the Tower of David, is 70 feet, 3 inches long, by 56 feet 4 inches broad. The sloping bulwark is 40 feet high from the bottom of the trench; but this is much chocked up with rubbish. To the tower part there is no known or visible entrance, either from above or below, and no one knows of any room or space in it. The lower part of this platform is, indeed, the solid rock merely cut into shape, and faced with massive masonry, which rock rises to the height of 42 feet. This rock is doubtless the crest of the hill described by Josephus as 30 cubits or 45 feet high. Now, if the dimensions of Hippicus and Phæclus, as already given, are compared with those of the modern towers on the north side of the citadel, we find that the dimensions of that at the NW. angle—three of whose sides are determined by the scarped rock on which it is the same—as nearly agree with those of Hippicus, and the width of the NE. tower—also determined by the cut rock—so nearly with the square of Phæclus, that there can be no difficulty in deciding upon their identity of position. Mariamne has entirely disappeared.

"To these towers, situated on the north, was joined within."

(4) The Royal Palace, surpassing all powers of description, was entirely surrounded by a wall 30 cubits high, with decorated towers at equal intervals, and contained enormous banquetting halls, besides numerous chambers richly adored. There were also many porticoes encircling one another, with different columns to each, surrounding green courts, planted with a variety of trees, having long avenues through them; and deep channels and reservoirs everywhere around, filled with bronze statuettes, through which the water flowed, and many towers of tame pigeons about the fountains."

This magnificent palace, unless the description is exaggerated beyond all measure, must have occupied a larger space than the present fortress, and most probably its gardens extended along the western edge of Mount Zion as far as the present garden of the Armenian Convent; and the decorated towers of this part of the wall, which was spared by the Romans when they levelled the remainder of the city, seem to have transmitted their name to modern times, as the west front of the city wall at this part is called Abroth Gnæsan, i.e. The Towers of Gana.

(5) As the Xystus is mentioned next to the Hippicus by Josephus, in his description of the north wall of the Upper City, it may be well to proceed at once to that; deferring the consideration of the Gate Geunach, which obviously occurred between the two, until we come to the Second Wall. The Xystus is properly a covered portico attached to the Greek Gymnasium, which commonly had uncovered walks connected with it. (Dict. Ant. p. 589.) As the Jerusalem Xystus was a place where public meetings were occasionally convened (Bell. Jud. ii. 6. § 8), it must be understood to be a wide public
promenade, though not necessarily connected with a gate, but rather with another palace which occupied "this extremity of the Upper City," for the name was given also to a terraced walk with colonnades attached to Roman villas. (Vitr. v. 11.)

(6) The House of the Asmonaeans was above the Xystus, and was apparently occupied as a palace by the Younger Agrippa; for, when he addressed the multitude assembled in the Xystus, he placed his sister Berenice in the house of the Asmonaeans, that she might be visible to them. (B. J. L. 6.)

(7) The Causeway. At the Xystus we are told a causeway (γέφυρα) joined the Temple to the Upper City, and one of the Temple gates opened on to this causeway. That the γέφυρα was a causeway and not a bridge, is evident from the expression of Josephus in another passage, where he says that the valley was interrupted or filled up, for the passage (τής φαραγγίας εἰς ἑαυτὸν ἀπώκλησαμένην, Λαυ. xvi. 11. § 5.). As the Tyropeon divided the Upper City from the Lower City, and the Temple Mount was attached to the Lower, it is obvious that the Tyropeon is the valley here mentioned. This earth-wall or embankment, was the work of Solomon, and is the only monument of that great king in Jerusalem that can be certainly said to have escaped the ravages of time; for it exists to the present day, serving the same purpose to the Mahometans as formerly to the Jews: the approach to the Mosk enclosure from the Bazzars passes over this causeway, which is therefore the most frequented thoroughfare in the city. (Williams, Holy City, vol. ii. pp. 392 397, and notes, pp. 601.—607.)

It is highly probable that the Xystus was nothing else than the wide promenade over this mound, adorned with a covered cloister between the trees, with which the Rabbinical traditions assure us that Solomon's causeway was shaded. It is clear that the north wall of the Upper City must have crossed the valley by this causeway to the Gate Shallecheth, which is explained to mean the Gate of the Embankment. (1 Chron. xxvi. 16.)

(8) The Council-Chamber (Βουλή, ἐπισυλλεγμένη) is the next place mentioned on the northern line of wall, as the point where it joined the western portico of the Temple. And it is remarkable that the building office in the middle of the present enclosure occupies the same site: the Mehekhem, or Council-Chamber of the Judicial Divan, being now found immediately outside the Gate of the Chain, at the end of the causeway, corresponding in position to the Shallecheth of the Scriptures.

We have now to trace the wall of the Upper City in the opposite direction from the same point, viz. the Hippe Tower at the SW. angle. The points noticed are consecutively the Mehekhem, the valley to the northward (i.e. with a western aspect), through a place called Bethos, to the Gate of the Essenes; then, turning E., it ran (with a southern aspect) above the fountain of Siloam; thence it bent northward, and ran (with an eastern aspect) to the Pool of Solomon, and extending as far as a place called Ophla, was joined to the eastern cloister of the Temple."

On the West Front neither of the names which occur are found again in the notices of the city; but Bethos may safely be assigned to the site of the garden of the Armenian Convent, and the Gate of the Essenes may be fixed to a spot not very far from the SW. corner of the modern city, a little to the W. of the Tomb of David, near which a re-
2. The Second Wall, and the Lower City.—The account of the second wall in Josephus, is very meagre. He merely says that it began at the Gate Gennath, a place in the old wall; and, after encompassing the Lower City, had its termination at the Fortress Antonia."

There is here no clue to the position of the Gate Gennath. It is, however, quite certain that it was between the Hippic Tower and the Xystus; and the north-west angle of the Upper City was occupied by the extensive palace of Herod the Great, and its imposing towers stood on the north front of this old wall, where a rocky crest rose to the height of 30 cubits, which would of course preclude the possibility of an exit from the city for some distance to the east of the tower. Other incidental notices make it clear that there was a considerable space between the third and the second wall at their southern quarter, comparatively free from buildings, and, consequently, a considerable part of the north wall of the Upper City unprotected by the second wall:—e. g. Cestius, having taken the outer wall, encamped within the New City, in front of the Royal Palace (B. J. ii. 19. § 5); Titus attacked the outer wall in its southern part, both because it was lower than elsewhere, insomuch as this part of the New City was thinly inhabited, and afforded an easy passage to the third (or immost) wall, through which Titus had hoped to take the Upper City" (v. 6. § 2). Accordingly, when the legionaries had carried the outer and the second wall, a bank was raised against the northern wall of Sion at a pool called Amygdalon, and another about thirty cubits from it, at the high-priest's monument. The Almond Pool is no doubt identical with the tank that still exists at no great distance from the modern fortress, and the monument must, therefore, have been some 50 feet to the east of this, also in the angle formed by the north wall of the Upper City and the southern part of the second wall.

There is the head of an old archway still existing above a heap of ruins, at a point about half way between the Hippic Tower and the north-west angle of the Upper City. But whether or not that hill brings it nearly to a level with the declivity to the north. This would afford a good starting-point for the second wall, traces of which may still be discovered in a line north of this, quite to the Damascus gate where are two chambers of ancient and very massive masonry, which appear to have flanked an old gate of the second wall at its weakest part, where it crossed the valley of the Tyropoeon. From this gate, the second wall probably followed the line of the present city wall to a point near the Gate of Herod, now blocked up; whence it was carried along the brow of the hill to the north-est angle of the fortress Antonia, which occupied a considerable space on the north-west of the Temple area, in connection with which it will be described below.

3. The Third Wall, and the New City.—The third wall, which enclosed a very considerable space to the north of the old city, was the work of Herod Agrippa the Elder, and was only commenced about thirty years before the destruction of Jerusalem, and never completed according to the original design, in consequence of the jealousy of the Roman government. The following is Josephus's account:—"This third wall Agrippa drew round the super-added city, which was all exposed. It commenced at the Tower Hippicus, from whence it extended to the northern quarter, as far as the Tower Psephinus; then, passing opposite to the Monuments of Helena, and being produced through the Royal Caves, it bent, at the angular tower, by the monument called the Fuller's, and, joining the old wall, terminated at the valley of the Kidron." It was commenced with stones 20 cubits long and 10 wide, and was raised by the Jews to the height of 25 cubits, with the battlements.

(1) As the site of the Hippic Tower has been already fixed, the first point to be noticed in this third wall is the Psephine Tower, which, Josephus informs us, was the most wonderful part of this great work, situated at its north-west corner, over against Hippicus, octagonal in form, 70 cubits in height, commanding a view of Arabia towards the east, of the Mediterranean towards the west, and of the utmost limits of the Hebrew possessions. The site of this tower is still marked, by its massive foundations, at the spot indicated in the plan; and considerable remains of the wall that connected it with the Hippic Tower are to be traced along the brow of the ridge that slants in the upper part of the valley of Hinnom, and almost in a line with the modern wall. At the highest point of that ridge the octagonal ground-plan of the tower may be seen, and a large cistern in the midst of the ruins further confirms their identity, as we are informed that the towers were furnished with reservoirs for the rain water.

(2) The next point mentioned is the Monuments of Helena, which, we are elsewhere told, were three pyramids, situated at a distance of 3 stadia from the city. (Ant. xx. 3. § 3.) About a century later (A. D. 174) Pausanias speaks of the tomb of Helena, in the city of Solyma, as having a door so constructed as to open by mechanical contrivance, at a certain hour, one day in the year. Being thus opened, it closed again of itself after a short interval; and, should you attempt to open it at another time, you would break the door before you could succeed. (Paus. viii. 16.) The pyramids are next mentioned by Eusebius (Hist. Eccles. ii. 12), as remarkable monumental pillars still shown in the suburbs of Jerusalem. St. Jerome, a century later, testified that they still stood. (Epist. ad Emesichum, Op. tom. iv. pars ii. p. 673.) The latest notice is that of an Armenian writer in the 5th century, who describes the tomb as a remarkable monument before the gates of Jerusalem. (Hist. Armen. lib. ii. cap. 32.) Notwithstanding these repeated notices of the sepulchral monuments of the queen of Adiabene, it is not now possible to fix their position with any degree of certainty; some archæologists assigning them to the Tombs of the Kings (Bohaimon, Bib. Rer. vol. i. pp. 465, 533—538), others to the Tombs of the Martyrs, about ¼ of a mile to the west of the former. (Schnitz, Jerusalem, pp. 63—67; De Saulcy, tom. ii. pp. 326, 327.) A point halfway between these two monuments would seem to answer better to the incidental notices of the monuments, and they may with great probability be fixed to a rocky outcrop on the right of the road to Nebi-Sammad, where there are several excavated tombs. Opposite the Monuments of Helena was the Gate of the Women in the third wall, which is mentioned more than once, and must have been between the Nablus road and the Psephin Tower.

(3) The Royal Caves is the next point mentioned on the third wall. They are, doubtless, identical with the remarkable and extensive excavations still called the Tombs of the Kings, most probably...
the same which are elsewhere called the Monument of Herod, and, from the character of their decorations, may very well be ascribed to the Herodian period. M. de Suosey has lately added to our previous information concerning them, and, by a kind of exhumating process, he endeavours to prove that they could have been no other than the tombs of David and the early kings of Judah, which have always hitherto been placed on Mount Zion, where the traditional site is still guarded by the Moslems. (Voyage en Syrie, tom. 5, pp. 199-281.)

(4) The Fuller's monument is the last-mentioned point on the new wall, and, as an angular tower occupied this site, the monument must have been at the north-east angle of the New City; probably one of the many rock graves cut in the perpendicular face of the Valley of Jehoshaphat, near one of which Dr. Schultze has described the foundations of a tower. (Jerusalem, pp. 58, 64.) The Monument of the Fuller probably gave its name to the Fuller's field, which is mentioned by the prophet Isaiah as the spot near which the Assyrian army under Ruchelah encamped (xxxi. 2. vii. 3); and the traditional site of the camp of the Assyrians, which we shall find mentioned by Josephus, in his account of the siege, was certainly situated in this quarter. From this north-east angle the third wall followed the line of the Valley of Jehoshaphat until it reached the wall of the Outer Temple at its north-east angle.

Having thus completed the circuit of the walls, as described by Josephus, and endeavoured to fix the various points mentioned in his description (which furnishes the most numerous topographical notices now extant of ancient Jerusalem), we shall be in a condition to understand the most important historical facts of its interesting and chequered history, when we have further taken a brief survey of the Temple. But, first, a singular and perplexing discrepancy must be noticed between the general and the detailed statements of the historian, as to the extent of the ancient city; for, while he states the circuit of the entire city to be no more than 33 stadia, or 4 Roman miles plus 1 stadium, the specification of the measure of the wall of Acripa alone gives, on the lowest computation, an excess of 12 stadia, or 1 1/2 miles, that of the entire city; for it had 90 towers, 20 cubits wide, at intervals of 200 cubits. No satisfactory solution of this difficulty has yet been discovered.

IV. THE TEMPLE MOUNT.

The Temple Mount, called in Scripture the Mountain of the Lord's House, and Moriah (2 Chron. iii. 1), is situated at the south-east of the city, and is easily identified with the site of the Dome of the Rock in modern Jerusalem. It was originally a third hill of the Old City, over against Aenon, but separated from it by a broad ravine, which, however, was filled up by the Assizonian princes, so that these two hills became one, and are generally so reckoned by the historian (B. J. v. 4).

1. The Outer Court.—The Temple, in the widest signification of the word (τόπος), consisted of two courts, one higher than the other, which is sometimes subdivided, and distributed into four other courts. The area of the Outer Court was in great part artificial, for the natural level space on the summit of the mountain being too confined for the Temple, with its surrounding chambers, courts, and cloisters, was gradually increased by mechanical expedients. This extensive was commenced by Solomon, who raised from the depth of the eastern valley a wall of enormous stones, bound together with lead, within which he raised a bank of earth to a level with the native rock. On this was erected a cloister, which, with its successors, always retained the name of "Solomon's Porch." (2 Chron. viii. 3, 19; St. John, x. 23; Acts, iii. 11, v. 12.) This process of enlarging the court by artificial embankments was continued by successive kings; but particularly by Herod the Great, who, when he reconstructed the Temple Proper (25 B.C.), enlarged the Outer Court to double its former size, and adorned it with stately cloisters. (Ant. xv. 11. § 5.) Of these, the Royal Porch, on the south, was the most remarkable of all his magnificent works. It consisted of four rows of Corinthian columns, distributed into a central nave and lateral aisles; the aisles being 30 feet in width and 50 in height, and the nave half as wide again as the aisles, and double their height, rising into a clerestory of unusually large proportions. The other cloisters were double, and their total width only 30 cubits. To this Outer Court there were four gates on the west, towards the city, and one on each of the other sides; of which that on the east is still remaining, commonly called the Golden Gate.

2. The Inner Court.—The Inner Temple (ἱερός) was probably divided by a stone wall (θῆκος) into an Inner Temple (θυάτηρ, see Ephes. iii. 14) 3 cubits in height, on which stood pillars at equal distances, with inscriptions, in Greek and Latin, prohibiting aliens from access. To this court there was an ascent of fourteen steps, then a level space of 10 cubits, and then a further ascent of five steps to the gates, of which there were four on the north and south sides, and two on the east, but none on the west, where stood the Sanctuary (ναός).

The place of the Altar, in front of the ναός, is determined with the utmost precision by the existence in the Sacred Rock of the Moslems, under their venerated dome, of the very cesspool and drain of the Jewish altar, which furnishes a key to the restoration of the whole Temple, the dimensions of which, in all its parts, are given in minute detail in the treatise called Midrithoth (i.e. measures), one of the vestiges of which is contained in the Mishna. The drain communicating with this cesspool, through which the blood ran off into the Kidron, was at the south-west angle of the Altar; and there was a trap connected with this cave, 1 cubit square (commonly closed with a marble slab), through which a man occasionally descended to cleanse it and to clear obstructions. Both the drain and the trap are to be seen in the rock at this day.

The Altar was 32 cubits square at its base, but gradually contracted, so that its heighth was only 24 cubits square. It was 15 cubits high, and had an ascent by an inclined plane on the south side, 32 cubits long and 16 wide. Between the Altar and the porch of the Temple was a space of 22 cubits, rising in a gentle ascent by steps to the vestibule, the door of which was 40 cubits high and 20 wide. The total length of the Holy of Holies was 100 cubits, and this was subdivided into three parts: the Poulum 11, the sanctuary 40, the Holy of Holies 20, allowing 29 cubits for the partition walls and a small chamber behind (i.e. west of) the Most Holy place. The total width of the building was 70 cubits; of which the Sanctuary only occupied 20, the remainder being distributed into the chambers, in three stories, as-
sioned to various uses. The Promas was, however, 30 cubits wider, 15 on the north, and 15 on the south, giving a total length of 100 cubits, which, with a width of only 11 cubits, must have presented the proportions of a Narthex in a Byzantine church. Its interior height was 90 cubits, and, while the chambers on the sides of the Temple rose only to the height of 60 cubits, there was an additional story of 40 cubits above the Sanctuary, also occupied by chambers, rising into a clerestory of the same elevation as the vestibule.

The front of the Temple was plated with gold, and reflected back the beams of the rising sun with dazzling effect; and, where it was not encrusted with gold, it was exceedingly white. Some of the stones of which it was constructed were 45 cubits long, 5 deep, and 6 wide.

East of the Altar was the Court of the Priests, 135 cubits long and 11 wide; and, east of that again, was the Court of Israel, of the same dimensions. East of this was the Court of the Women, 135 cubits square, considerably below the level of the former, to which there was an ascent of 15 semicircular steps to the magnificent gates of Corinthian brass, 50 cubits in height, with doors of 40 cubits, so ponderous that they could with difficulty be shut by 20 men, the spontaneous opening of which was one of the portsents of the approaching destruction of the Temple, mentioned by Josephus (Bull. Jud. vi. 5. § 9), and repeated by Tacitus (Hist. v. 19).

Thus much must suffice for this most venerated seat of the Hebrew worship from the age of Solomon until the final destruction of the Jewish polity. But, in order to complete the survey, it will be necessary to notice the Acropolis, which occupied the north-west angle of the Temple enclosure, and which was, says the historian, the fortress of the Temple, as the Temple was of the city. Its original name was Haris, until Herod the Great, having greatly enlarged and beautified it, changed its name to Antonia, in honour of his friend Mark Antony. It combined the strength of a castle with the magnificence of a palace, and was like a city in extent,—comprehending within its walls not only spacious apartments, but courts and camping ground for soldiers. It was situated on an elevated rock, which was faced with slabs of stone, above which went a breakwater of 3 cubits high, within which was the building, rising to a height of 40 cubits. It had turrets at its four corners, three of them 50 cubits high, but that at the south-east angle was 70 cubits, and commanded a view of the whole Temple. It communicated with the northern and western cloisters of the Temple at the angle of the area, by flights of steps for the convenience of the garrison which usually occupied this commanding position; and it is a remarkable and interesting coincidence, that the site of the official residence of the Roman procurator and his guard is now occupied by the Seraiyah, or official residence of the Turkish Pasha and his guard: for there can be no question of the identity of the site, since the native rock here, as at Hippicus, still remains, to attest the fidelity of the Jewish historian. The rock is here "cut perpendicularly to an extent of 20 feet in some parts; it may also, in the direction of the Mosk, a considerable portion of the rock has been cut away" to the general level of the enclosure (Bartlett, Walks about Jerusalem, pp. 156, 174, 175); so that the Seraiyah, or government house, actually rests upon a precipice of rock which formerly swept down abruptly, and has obviously been cut away to form the level below, which also bears marks of having been scarped."

The fortress was protected towards BABYLON by an artificial fosse, so as to prevent its foundations from being assailed from that quarter. This fosse has only lately been filled in.

It is certain, from several passages, that the fortress Antonia did not cover the whole of the northern front of the Temple area: and, as the second wall, that encircled the Lower City, ended at the fortress, it is clear that this wall could not have coincided with the modern wall at the north-east quarter of the modern city. It is demonstrable, from several allusions and historical notices, that there must have been a considerable space between the second and third wall on the northern front of the Temple area. (Williams, Holy City, vol. ii. pp. 348—353.)

V. HISTORY.

The ancient history of Jerusalem may be conveniently divided into four periods. 1. The Canaanitish, or Amorite. 2. The Hebrew, or Ante-Babylonian. 3. The Jewish, or Post-Babylonian. 4. The Roman, or classical.

1. Of these, the first may claim the fullest notice here, as the sources of information concerning it are much less generally known or read than those of the later periods, and anything that relates to the remote history of that venerable city cannot but be full of interest to the antiquarian, no less than to the Christian student.

It has been said that the learned are divided in opinion as to the identity of thealem of Melchizedek with the Jerusalem of Sacred History. The writer of a very learned and interesting Review of the Second Edition of the Holy City, which appeared in the Christian Remembrancer (vol. xviii. October, 1849), may be said to have demonstrated that identity by a close critical analysis of all the passages in which the circumstances are alluded to; and has further shown it to be highly probable that this patriarch was identical, not with Shem, as has been sometimes supposed, but with Heber, the son of Peleg, from whom the land of Canaan had obtained the name of the "land of the Hebrews" or Hederites, as early as the days of Joseph's deportation to Egypt. (Gen. xlvi. 20.)

But the elucidation which the early history of Jerusalem receives from the monuments of Egypt is extremely important and valuable, as relating to a period which is passed over in silence by the sacred historian; and these notices are well collected and arranged in the review referred to, being borrowed from Mr. Osborne's very interesting work entitled Egypt, her Testimony to the Truth. After citing some monuments of Sethos, and Sesostris his son, relating to the Jebusites, the writer proceeds:—

"What glances, then, do we obtain, if any, of the existence of such a city as Jerusalem during the recorded period? Under that name, of course, we must not expect to find it; since even in the days of Joshua and the Judges it is so called by anticipation. (Holy City, vol. i. p. 3, note.) But there is a city which stands forth with a very marked and peculiar prominence within the walls of the kings of Egypt with the Jebusites, Amorites, and neighbouring nations. We meet with it first as a fortress of the Amorites. Sethos II. is engaged in besieging it. It is situated on a hill, and strengthened with two tiers of ramparts. The inscription sets forth that it is in the
land of Amor, or the Amorite; and that the conqueror had made bare his right arm to overcome the chiefs of many walled cities. This implies that the fort in question, the name of which is inscribed upon it, was the chief stronghold of the nation. That name, when translated from the hieroglyphics into Coptic, and thence into Hebrew, is Chadash. The next notice of Chadash belongs to the reign of Solomon, and connects it with the Jebusite nation. The Ammonites had laid siege to the city, and a joint embassy of the Jebusites and Hittites, who were then tributary to Sesostris, entreat him to come to their aid. The Egyptians having accordingly sailed over the Dead Sea, met with another embassy, from the Zuzims, which gave further particulars of the siege. The enemy had seized on the fortified camps erected by the Egyptians to secure their hold over the country, and spread terror to the very walls of Chadash. A great battle is fought on a mountain to the south of the city of Chadash. The inscription further describes Chadash as being in the land of Heth. What, then, do we gather from these combined notices? Plainly this, that Chadash was a city of the first importance, both in a military and civil point of view; the centre of interest to three or four of the most powerful of the Canaanitish nations; in a word, their metropolis. We find it moreover placed, by one inscription, in the territory of the Amorites, by another in that of the Hittites, while it is obviously inhabited, at the same time, by the Jebusites. Now, omitting for the present the consideration of the Hittites, this is the exact character and condition in which Jerusalem appears in Scripture at the time of Joshua's invasion. Its metropolean character is evinced by the lead which Adoni-zedek, its king, takes in the confederacy of the Five Kings; its strength as a fortress, by the fact that it was not then even attempted by Joshua, nor ever taken for 400 years after. And while, as the royal city of Adoni-zedek, it is reckoned among the Amorite possessions, it is no less distinctly called Jebus (Josh. xv. 8. xviii. 28.; Judg. i. 21. xix. 10) down to the days of David: the truth being, apparently, that the Amorite power having been extinguisht in the person of Adoni-zedek, the Jebusite thenceforth obtained the ascendency in the city which the two nations inhabited in common. Nor is there any record that the Jebusites, but being, from all they have share assigned by the monuments to the Hittites in the possession of the city; for, as Mr. Osburn has observed, the tribes of the Amorites and Hittites appear, from Scripture, to have bordered upon each other. The city was probably, therefore, situated at a point where the possessions of the three tribes met. Can we, then, hesitate to identify the Chadash of the hieroglyphics with the Khebba of Herodotus, the Kadash of the Amorites, the Kadis of the Syrians, the 'Holy City'? The only shadow of an objection that appears to lie against it is, that, strictly speaking, the name should be not Chadash, but Kadash. But when it is considered that the name is a translation out of Canaanitish into hieroglyphics, thence into Coptic, and thence again into Hebrew, and that the difference between "and" is, after all, but small, it is not too much to suppose that Kadash is what is improperly intended by the hieroglyphics. That Jerusalem should be known to the Canaanites by such a name as this, denoting it the 'Holy,' will not seem unreasonable, if we bear in mind what has been noticed above with reference to the title Adoni-zedek; and the fact forms an interesting link, connecting the Arabian and Syrian name for the city with its earlier nomenclature, and confirming the identity of Herodotus's Cadysis with Jerusalem. Mr. Osburn has only very doubtfully propounded (p. 66, note) the view we have undertaken to defend. He inclines to identify Chadash with the Hadassah, or Addassa, enumerated among the southernmost cities towards the border of Edom, given to Judah (Josh. xv. 21) from among the Amorites' possessions. But it seems incredible that we should never hear again, in the history of Joshua's conquest, of so important a city as Chadash evidently was; besides, Hadassah seems to lie too far south. We presume Mr. Osburn will not be otherwise than pleased to find the more interesting view supported by any arguments which had not occurred to him. And we have reserved one which we think Aristotle himself would allow to be of the nature of a theoretical or 'euchologizing argument.' It is a geographical one. The paintings represent Chadash as surrounded by a river or brook on three sides; and this river or brook runs into the Dead Sea, toward the northern part of it. Surely, nothing could more accurately describe the very remarkable conformation of Jerusalem; its environment on the east, south, and west, by the waters of the valleys of Jehoshaphat and Himmon, and their united course, after their junction, through the Wady En-Nar into the north-west part of the Dead Sea. And there are some difficulties or peculiarities in the Scripture narrative respecting Jerusalem, which the monuments, thus interpreted, will be found to explain or illustrate. We have already alluded to its being in one place spoken of as an Amorite city, in another as the chief seat of the Jebusites. The LXX. were so pressed with this difficulty, that they adopted the rendering 'Jebusite' for 'Amorite' in the passage which makes Adoni-zedek an Amorite king. (Josh. x. 5.) The hieroglyphics clear up the difficulty, and render the change of reading unnecessary. Again, there is a well-known ambiguity as to whether Jerusalem was situated in the tribe of Judah or Benjamin; and the view commonly received in is, that, being in the borders of the two tribes, it was considered common to both. Perhaps the right of possession, or the apportionment, was never fully settled; though the Rabbis draw you the exact line through the very territory, and mention, that by some question was asked, came such an element of confusion to be introduced into the original distribution of the Holy Land among the tribes? The answer seems to be, that territory was, for convenience's sake, assigned, in some measure, according to existing divisions; thus, the Amorite and Hittite possessions, as a whole, fell to Judah; the Jebusite to Benjamin; and then all the uncertainty resulting from that joint occupancy, was settled by the final conquest, and when the Jebusites were testified to by the monuments, was necessarily introduced into the rival claims of the two tribes. (Christian Remembrancer, vol. xviii. pp. 457—459.) The importance of the powerful Jebusite tribe, who are represented as having "more than one city or stronghold near the Dead Sea, and are engaged in a succession of wars with the kings of Egypt in the neighbourhood of its shores," whose rich garments, of the most sumptuous, and accustomed to the hieroglyphics,—and musical instruments, and warlike accomplishments, testify to a higher degree of culture and civilisation than was found among the neighbouring tribes, with many of whom they were on terms of offensive and defensive alliance;—all this

24 JERUSALEM.
accounts for the firm hold with which they maintained their possession of their stronghold, the capital of their tribe, for upwards of five centuries after the coming in of the children of Israel under Joshua (cii. n. c. 1585); during which period, according to Josephus, they held uninterrupted and exclusive possession of the Upper City, while the Israelites (whether of the tribe of Judah or of Benjamin is uncertain) seem only to have occupied the Lower City for a time, and then to have been expelled by the garrison of the Upper City. (Joseph. Ant. v. 2. §§5, 7; comp. Judges, i. 8, 21, xix. 10—12.)

2. It was not until after David, having reigned seven years in Hebron, came into undisputed possession of the kingdom of Israel, that Jerusalem was finally subjugated (cir. n. c. 1049) and the Jebusite garrison expelled. It was then promoted to the dignity of the capital of his kingdom, and the Upper and Lower City were united and encircled by one wall. (1 Chron. xi. 8; comp. Joseph. Ant. vii. 3. §2.)

Under his son Solomon it became also the ecclesiastical head of the nation, and the Ark of the Covenant, and the Tabernacle of the Congregation, after moving through the ordinary process of the sacred pilgrimage, was transferred to its resting-place on the threshing-floor of Araunah the Jebusite, on Mount Moriah. (1 Chron. xxv. 15; 2 Chron. iii. 1.) Besides erecting the Temple, king Solomon further adorned the city with palaces and public buildings. (1 Kings, vi. viii. 1—8.) The notices of the city from this period are very scanty. Threatened by Shishak, king of Egypt (n. c. 972), and again by the Arabians under Zerah (cir. 950), it was sacked by the combined Philistines and Arabs during the disastrous reign of Jehoram (848), and subsequently by the Israelites, after their victory over Amaziah at Bethhemesh (cir. n. c. 805). In the invasion of the confederate armies of Pekah of Israel and Rezin of Syria, during the reign of Ahaz, the capital barely escaped (cir. 730; comp. Isaiah, vii. 1—9, and 2 Kings, xv. 5, with 2 Chron. xxvii. 3); as it did in a still more remarkable manner in the following reign, when invested for three years by the generals of Sennacherib, king of Assyria (cir. n. c. 713). The deportation of Manasseh to Babylon would seem to indicate that the city was captured by the Chaldeans as early as 650; but the fact is not recorded expressly in the sacred narrative. (2 Chron. xxxvi. 15.) From this period its disasters thickened space. After the battle of Megiddo it was taken by Pharaoh Necho, king of Egypt (n. c. 609), who held it only about two years, when it passed, together with the whole country under the sway of the Chaldeans, and Jehoahazim and some of the princes of the blood royal were carried to Babylon, with part of the sacred vessels of the Temple. A futile attempt on the part of Jehoiakim to regain his independence after his restoration, resulted in his death; and his son had only been seated on his father's throne three months when Nebuchadnezzar again besieged and took the city (598), and the king, with the royal family and principal officers of state, were carried to Babylon. Zedekiah having been appointed by the conqueror to the nominal dignity of king. Having held it nearly ten years, he revolted, when the city was a third time besieged by Nebuchadnez-zar (n. c. 587). The Temple and all the buildings of Jerusalem were destroyed by fire, and its walls completely demolished.

3. As the entire desolation of the city does not appear to have continued more than fifty years, the „seventy years“ must date from the first deportation; and its restoration was a gradual work, as the desolation had been. The first commission issued in favour of the Jews in the first year of Cyrus (n. c. 538) contemplated only the restoration of the Temple; which was not completed, in consequence of numerous vexations interposed, for 120 years,—i.e., until the eighth year of Darius Nothus (n. c. 418). According to the most probable chronology it was his successor, Artaxerxes Mmemon, who issued the second commission to Ezra, in the seventh year of his reign, and a third to Nehemiah in his twentieth year (n. c. 385). It was only in virtue of the edict with which he was intrusted, backed by the authority with which he was armed as the civil governor of Persia, that the restoration of the city was completed; and it has been before remarked that the account of the rebuilding of the walls clearly intimates that the limits of the restored city were identical with that of the preceding period; but the topographical notices are not sufficiently clear to enable us to determine with any degree of accuracy or certainty the exact line of the walls, the edifices of the city, the gates, the city-gates, the positions of the walls, and the various buildings of the city; thus the figures of the plan of Jerusalem have been necessarily the work of the author of the Revolutions, who has endeavoured to illustrate his representation (Eccles. l. 1, 2). But his successor, Ptolemy Philadelphus, far outdid him in liberality; and the embassy of his favourite minister Aristes, in conjunction with Andreas, the chief of his body-guard, to the chief priest Eleazar, furnishes us with an apparently authentic, and certainly genuine, account of the city in the middle of the third century before the Christian era, of which an outline may be here given. It was situated in the midst of mountains, on a lofty hill, whose crest was crowned with the magnificent Temple, girt with three walls, seventy cubits high, of proportionate thickness and length corresponding to the extent of the building. The Temple had an eastern aspect: its spacious courts, paved throughout with marble, covered immense reservoirs containing large supplies of water, which gushed out by mechanical contrivance to wash away the blood of the numerous sacrifices offered there on the festivals. The foreigners viewed the Temple from a strong fortress on its north side, and describe the appearance which the city presented. It was of moderate extent, being about forty furlongs in circuit. The disposition of its towers resembled the arrangement of a theatre: some of the streets ran along the brow of the hill; others, lower down, but parallel to these, followed the course of the valley, and they were connected by cross streets. The city was built
on the sloping side of a hill, and the streets were furnished with raised pavements, along which some of the passengers walked on tiptoe, while others kept the lower path,—a precaution adopted to secure those, who were paralysed from the pollution which contact with anything uncleane could have occasioned. . . . . The place, too, was well adapted for mercantile pursuits, and abundant in artificers of various crafts. Its market was supplied with spicery, gold, and precious stones, by the Arabs, in whose neighbouring mountains there had formerly been mines of copper and iron, but the works had been abandoned during the Persian domination, in consequence of a representation to the government that they must prove ruinously expensive to the country. It was also richly furnished with all such articles as are imported by sea, since it had commodious harbours—as Ascalon, Joppa, Gaza, and Ptolemais, from none of which it was far distant.” (Aristot. op. Gallandii Bibloth. Vet. Pat. tom. ii. pp. 805, 806.)

The Solonians of Asia were not behind the Ptolemies in their favours to the Jews; and the peace and prosperity of the city suffered no material diminution, while it was handed about as a marriage dowry, or by the chances of war, between the rivals, until internal factions subjected it to the dominion of Antiochus Epiphanes, whose tyranny crushed for a time the civil and ecclesiastical polity of the nation (cir. n. c. 175). The Temple was stripped of its costly sacred vessels, the palaces burned, the city walls demolished, and an idol-altar raised on the very altar of the Temple, on which daily sacrifices of swine were offered. This tyranny resulted in a vigorous national revolution, which secured to the Jews a greater amount of independence than they had enjoyed subsequently to the captivity. This continued, under the Asmonean princes, until the conquest of the country by the Romans: from which time, though nominally subject to a native prince, it was virtually a more dependency, and held their own as the rival of the Roman power. Once again before this the city was recaptured by Antiochus Sidetes, during the reign of John Hyrcanus (cir. 135), when the city walls, which had been restored by Judas, were again levelled with the ground.

4. The capture of the city by Pompey is recorded by Strabo, and was the first considerable event that fixed the attention of the classical writers on the city (n. c. 63). He ascribes the invention of Pompey to the disputes of the brothers Hyrcanus and Aristobulus, the sons of Alexander Jannaeus, who first assumed regal power. He states that the conqueror levelled the fortifications when he had taken the city, which he did by filling up an enormous fosse which defended the Temple on the north side. The particulars of the siege are more fully given by Josephus, who states that Pompey entered the Holy of Holies. He then attacked the towers of the Temple, which were plundered by Cressus on his way to Parthia (n. c. 54). The struggle for power between Antigonus, the son of Aristobulus, and Herod, the son of Antipater, led to the sacking of the city by the Parthians, whose aid had been sought by the former (n. c. 40). Herod, having been appointed king by the senate, only obtained possession of his capital after a long siege, in which he was assisted by Sossius, Antony’s lieutenant, and the Roman legionaries. Mention has been already made of the palace in the Upper City and the fortress Antonia, erected, or enlarged and beautified, by Herod. He also undertook to restore the Temple to a state of magnificence that should rival the glory of Solomon’s; and a particular description is given of this work by the Jewish historian (Ant. xx. 11.) The erection of a theatre and circuses, and the institution of quoiqueum games in honour of the emperor, went far to conform his city to a pagan capital. On the death of Herod and the banishment of his son Archelaus, Judaea was reduced to a Roman province, within the prefecture of Syria, and subjected to a subordinate governor, to whom was intrusted the power of life and death. His ordinary residence at Jerusalem was the fortress Antonia; but Caesarea now shared with Jerusalem the dignity of a metropolis. Cononius was the first procurator (A. D. 7), under the prefect Cyrenius. The only permanent monument left by the procurators is the aqueduct of Pontius Pilate (A. D. 26—36), constructed with the sacred Corban, which he seized for that purpose. This aqueduct still exists, and conveys the water from the Pools of Solomon to the Mount of Olives at Jerusalem (Holy City, vol. ii. pp. 498—501). The Temple of Titus was a siege by details, as narrated by Josephus, can only be briefly alluded to. It occupied nearly 100,000 men little short of five months, having been commenced on the 14th of Xanthicus (April), and terminated with the capture and Cleansing of the Upper City on the 8th of Gorgippus (September). This is to be accounted for by the fact that, not only did each of the three walls, but also the fortress and Temple, require to be taken in detail, so that the operations involved five distinct sieges. The general’s camp was established close to the Paphlagon Tower, with a legion, the twelfth; the tenth was encamped near the summit of Mount Olives; the fifth opposite to the Hippic Tower, two stadia distant from it. The first assault was made apparently between the towers Hippicus and Paphlagon, and the outer wall was carried on the fifteenth day of the month. The seat of the city, Jerusalem, was immediately demolished, and Titus entered it on the 8th of Gorgippus (September). The New City, on the traditional camping-ground of the Assyrians. Five days later, the second wall was carried at its northern quarter, but the Romans were repulsed, and only recaptured it after a stout resistance of three days. Four banks were then raised,—two against Antonia, and two against the northern wall of the Upper City. After seventeen days of incessant toil the Romans discovered that their banks had been undermined, and their engines were destroyed by fire. It was then resolved to surround the city with a wall, so as to form a complete blockafl. The line of circumvalation, 39 furlongs in circuit, with thirteen redoubts equal to an additional 10 furlongs, was completed in three days. Four fresh banks were raised in twenty-one days, and the Antonia was carried two months after the occupation of the sacred. At this time the Temple was desecrated before they could succeed in gaining the Inner Sanctuary, when the Temple was accidentally fired by the Roman soldiers. The Upper City still held out. Two banks were next raised against its eastern wall over against the Temple. This occupied eighteen days; and the Upper City was at length carried, a month after the Inner Sanctuary.
This memorable siege has been thought worthy of special mention by Tacitus, and his lively abridgment, as it would appear, of Josephus's detailed narrative, must have served to raise his countrymen's ideas, both of the military prowess and of the powers of endurance of the Jews.

The city was wholly demolished except the three towers Hippicus, Phasaelus, and Maranthon, and so much of the western wall as would serve to protect the legion left there to garrison the place, and prevent any fresh insurrectionary movements among the Jews, who soon returned and occupied the ruins. The palace of Herod on Mount Sion was probably converted into a barracks for their accommodation, as it had been before used for the same purpose. (Bell. Jud. vii. 1 § 1 ii. 15 § 5, 17 §§ 8 9.)

Sixty years after its destruction, Jerusalem was visited by the emperor Hadrian, who then conceived the idea of rebuilding the city, and left his friend and kinsman Aquila there to superintend the work, A. D. 135. (Epiphanius, de Pond. et Mens. §§ 14 15.) He had intended to colonise it with Roman veterans, but his project was defeated or suspended by the outbreak of the revolt headed by Barcocheba, his son Rufus, and his grandson Romulus. The emperor refused to rebuild the city, and attempted to rebuild the Temple: they were speedily dissolved, and then held out in Bethar for nearly three years. [BETHAR.] On the suppression of the revolt, the building of the city was proceeded with, and luxurious palaces, a theatre, and temples, with other public buildings, fitted it for a Roman population. The Chronicon Alexandrinum mentions θώο δύνιμα καὶ τὸ Ἐμπρον καὶ τὸ πατέραμον καὶ τὸ πατεράμον καὶ τὸ δαχτήριον καὶ τὸ θυσίαμον τὸ πτων ὠνυμαζόμενον ἀναθήκαν καὶ τὴν κοιμήν. A temple of Jupiter Capitolinus, from whom the city derived its new name, occupied the site of the Temple, and a tetrastyle temple of Venus was raised over the site of the Holy Sepulchre. The ruined Temple and city furnished materials for these buildings.

The city was divided into seven quarters (ἐμφώνων), each of which had its own warden (ἐμφώναρχος). Park of Montfaucon was chosen from the city, as at present, and was "ploughed as a field." (Micheau, ii. 12; St. Jerome, Comment. in loc.; Itinerarium Hierosol. p. 592, ed. Weesensch.)

The history of Aelia Capitolina has been made the subject of distinct treatises by C. E. Dayley, "Aelia Capitolitinae Origines et Historia" (appended to his father's Observationes Sacrae, vol. v. p. 453, &c.), and by Dr. Münster, late Bishop of Copenhagen (translated by W. Wadden Turner, and published in Dr. Edelmann's Bibliotheca Sacra, p. 393, &c.), who have collected all the scattered notices of it as a pagan city. Its coins also belong to this period, and extend from the reign of Hadrian to Severus.

One of the former emperor (imp. caes. trajan, hadrianus, avg.), which exhibits Jupiter in a tetrastyle temple, with the legend col. ael. cap., confirms the account of Dion Cassius (xix. 12), that a temple to Jupiter was erected on the site of God's temple (Eckhel, Doct. Num. Vet. pars i. tem. iii. p. 443); while one of Antoninus (antoninis avg. p. f. p. f. p. col. iii., representing Venus in a similar temple, with the legend c. a. c. or col. ael. cap.) no less distinctly confirms the Christian tradition that a shrine of Venus was erected over the Sepulchre of our Lord. (Vaillant, Nundinaria Acrea Impert. in Col. pt. i. p. 279; Eckhel, l. e. p. 442.)

Under the emperor Constantine, Jerusalem, which had already become a favourite place of pilgrimage to the Christians, was furnished with new attractions by that emperor and his mother, and the erection of the Martyrdom of the Resurrection inaugurated a new era of the Holy City, which now recovered its ancient name, after it had apparently fallen into complete oblivion among the government officers in Palestine itself. (Euseb. de Mort. Palæst. cap. ii.) The erection of this church was commenced the year after the Council of Nicea, and occupied ten years. It was dedicated on the tricennalia of the emperor, A. D. 336. (Euseb. Vita Constantini, iii. 30—40, iv. 40—47.) Under the emperor Julian, the city again became an object of interest to the pagans, and the account of the defeat of Julian's attempt to rebuild the Temple is preserved by Ammianus Marcellinus, an exceptional writer (xxiii 1: all the historical notices are collected by Bishop Warburton, in his work on the subject, entitled Julian. In 451, the see of Jerusalem was erected into a patriarchate; and its subsequent history is chiefly occupied with the conflicting opinions of its incumbents on the subject of the heresies which troubled the church at that period. In the following century (cir. 532) the emperor Justinian emulated the zeal of his predecessor Constantine by the erection of churches and hospitals at Jerusalem, a complete account of which has been left by Procopius. (De Aedificis Justin. oii. v. 6.) In A. D. 614, the city with all its sacred places was desolated by the Persians under Chosroes II., when, according to the contemporary records, 90,000 Christians, of both sexes and of all ages, fell victims to the relentless fury of the Jews, who, to the number of 26,000, had followed the Persians from Galilee to Jerusalem to gratify the hereditary malice by the massacre of the Christians. The churches were immediately restored by Modestus; and the city was visited by Heracleus (A. D. 629) after his defeat of the Persians. Five years later (A. D. 634) it was invested by the Saracens, and, after a defence of four months, capitulated to the kheli Omar in person; since which time it has followed the vicissitudes of the various dynasties that have swayed the destinies of Western Asia.

It remains to add a few words concerning the modern city and its environs.

V. THE MODERN CITY.

El-Kuds, the modern representative of its ancient name Kadesnah, or Cadysis, "is surrounded by a high and strong cut-stone wall, built on the solid rock, loop-holed throughout, varying from 25 to 60 feet in height, having no ditch." It was built by the sultan Sinan (A. D. 1542), as is declared by many inscriptions on the wall and gates. It is in circuit about 23 miles, and has four gates facing the four cardinal points. 1. The Jaffa Gate, on the west, called by the natives Bab-el-Halili, i. e. the Hebron Gate. 2. The Damascus Gate, on the north, Babel-Amud, the Gate of the Column. 3. The St. Stephen's Gate, on the east, Bab-Sitti-Miriam, St. Mary's Gate. 4. The Sion Gate, on the south, Bab-en-Nebi Daud, the Gate of the Prophet David. A fifth gate, on the south, near the mouth of the Tyropoeon, is sometimes opened to facilitate the introduction of the water from a neighboring well. A line drawn from the Jaffa Gate to the Mask, along the course of the old wall, and another, cutting it at right angles, drawn from the Sion to the Damascus Gate, could divide the
city into the four quarters by which it is usually distinguished.

These four quarters are:—(1) The Armenian Quarter at the SW.; (2) the Jew's Quarter at the SE.—both these being on Mount Zion; (3) the Christian Quarter at the NW.; (4) the Mahometan Quarter, occupying the remainder of the city on the west and north of the great Haram-es-Sharif, the noble Sanctuary, which represents the ancient Temple area. The Mosque, which occupies the grandest and once most venerated spot in the world, is, in its architectural design and proportions, as it was formerly in its details, worthy of its site. It was built for Abd-el Melik Ibn-Marwan, of the house of Omssiyah, the tenth Khalif. It was commenced in A.D. 688, and completed in three years, and when the victory of Heraclius secured to the Byzantine Emperor an equivalent victory over the Sarracens, which was ratified by the Amurathus, the Moslem Sultan, a large and splendid Sahn or Court was added, and the whole was crowned, in the year 946, by a great dome, 300 ft. in diameter, and 70 ft. in height. The building, which was repaired and reconstructed by the Turks, is one of the noblest works of Moslem art known to the world, and it has inspired the Moslem planner with the idea of constructing a large and imposing dome over the Church of the Holy Sepulchre, which the Moslems believe to be the tomb of Christ. The Moslem Dome, 183 ft. in diameter and 60 ft. in height, is octagonal, and is crowned by a light dome, 145 ft. high, which is covered with mosaic ornaments. It is quite as magnificent as the Dome of the Rock in Jerusalem. The compound contains five domes, each 100 ft. in diameter, and the whole area is swathed in a network of pillars, four in number, with the two smaller ones at the north and south, and the larger pair at the east and west. The entire structure is supported by 4500 columns of granite, marble, and porphyry. There are 8000 columns in the Mosque, and 3000 in the Court.

In the bed of the Valley of Jehoshaphat, immediately beneath the centre summit of Mount Olivet, where the dry bed of the brook Kedron is spanned by a bridge, is the Garden of Gethsemane, and one of the three olive-trees protected by a stone wall; and close by is a subterranean church, in which is shown the reputed tomb of the Virgin, who, however, according to an ancient tradition, is said to have been interred in this church, of which a few vestiges were discovered by a German architect, and which was consecrated to the Virgin and to Zechariah, by Josephus in his account of the Wall of Circumvallation (B. J. v. 12), which he supposes to be a translation of the Latin Columbarium. (See Dict. Ant. art. Fums. p. 561, b.)

To the south of this hill, in the bed of the valley, are two remarkable monolithic sepulchral monuments belonging to the Romans and Zechariah, exhibiting in their sculptured ornaments a mixture of Doric, Ionic, and perhaps Egyptian architecture, which may possibly indicate a change in the original design in conformity with later taste. Connected with these are two series of sepulchral chambers, one immediately behind the Pillar of Absalom, called by the name of Jehoshaphat; the other between the two monoliths, named the Cave of St. James, which last is a pure specimen of the Doric order. (See A General View in Holy City, vol. ii. p. 449, and detailed plans, &c. in pp. 157, 158, with Professor Willia's description.)

VI. ENVIRONS.

A few sites of historical interest remain to be noticed in the environs of Jerusalem: as the valleys which environ the city have been sufficiently described at the commencement of the article, the mountains may here demand a few vestiges. Most of the European nations are there represented by a casual.

circle concentric with a circular funnel-shaped hall 24 feet in diameter, with which it is connected by three passages. They are popularly called "the Tombs of the Prophets," but no satisfactory account has been given of these extensive excavations. (Plans are given by Schlütz, Krafft, and Tobler, in the works referred to below.) Dr. Schlütz was induced to identify this with the rock sepulchre, mentioned by Josephus in his account of the Wall of Circumvallation (B. J. v. 12), which he supposes to be a translation of the Latin Columbarium. (See Dict. Ant. art. Fums. p. 561, b.)

In the bed of the Valley of Jehoshaphat, immediately beneath the centre summit of Mount Olivet, where the dry bed of the brook Kedron is spanned by a bridge, is the Garden of Gethsemane, and one of the three olive-trees protected by a stone wall; and close by is a subterranean church, in which is shown the reputed tomb of the Virgin, who, however, according to an ancient tradition, is said to have been interred in this church, of which a few vestiges were discovered by a German architect, and which was consecrated to the Virgin and to Zechariah, by Josephus in his account of the Wall of Circumvallation (B. J. v. 12), which he supposes to be a translation of the Latin Columbarium. (See Dict. Ant. art. Fums. p. 561, b.)

To the south of this hill, in the bed of the valley, are two remarkable monolithic sepulchral monuments belonging to the Romans and Zechariah, exhibiting in their sculptured ornaments a mixture of Doric, Ionic, and perhaps Egyptian architecture, which may possibly indicate a change in the original design in conformity with later taste. Connected with these are two series of sepulchral chambers, one immediately behind the Pillar of Absalom, called by the name of Jehoshaphat; the other between the two monoliths, named the Cave of St. James, which last is a pure specimen of the Doric order. (See A General View in Holy City, vol. ii. p. 449, and detailed plans, &c. in pp. 157, 158, with Professor Willia's description.)

To the south of Mount Olivet is another rocky eminence, to which tradition has assigned the name of the Mount of Olives. It is the hill before Jerusalem where king Solomon erected altars for idolatrous worship (1 Kings, vii. 7.). In the rocky base of this holy place, in the midst of the olive groves of the Kedron, is the rock-hewn village of Siloam, chiefly composed of sepulchral excavations, much resembling a Columbarium, and most probably the rock Peristerium of Josephus. Immediately below this village, on the opposite side of the valley, is the intermitting Fountain of the Virgin, at a considerable depth below the bed of the valley, with a descent of many steps. In this spring of water is very scanty, and what is not drawn off here runs through the rocky ridge of Ophel, by an irregular passage, to the Pool of Siloam in the mouth of the Tyropeaon. This pool, which is mentioned in the New Testament (St. John, ix. 7, &c.), is now filled with earth and cultivated as a garden, a small tank with columns built into its side serves the purpose of a pool, and represents the "quaquadricum" of the Herculane Pilgrim (A. D. 333), who also mentions "Alia piscina grandis foras." This was probably identical with Hezekiah's Pool "between the two walls" (Is. xxv. 11), as it certainly is with the "Pool of Siloam by the king's garden" in Nehemiah (iii. 15, 11; 14; comp. 2 Kings, xxiv. 4. The arguments are fully stated in the Holy City, vol. ii. pp. 474—480. M. de Sauly accepts the identification.) The king's gardens are still represented in a verdant spot, where the confluence of the three valleys, Hinnom, Jehoshaphat, and Tyropoeon
forms a small plain, which is cultivated by the villagers of Siloam.

In the mouth of the southern valley which forms the continuation of these three valleys towards the Dead Sea, is a deep well, variously called the Well of Nehemiah, of Job, or Joab; supposed to be identical with Enogad, "the well of the spies," mentioned in the borders of Judah and Benjamin, and elsewhere (Gough, xvi. 7, xviii. 16; 2 Sam. xvii. 17; 1 Kings, i. 9).

On the opposite side of the valley, over against the Mount of Offence, is another high rocky hill, facing Mount Sion, called the Hill of Evil Counsel, from a tradition that the house of Annas the high-priest, father-in-law to Caiaphas (St. John, xviii. 13, 24), once occupied this site. There is a curious coincidence with this in a notice of Josephus, who, in his account of the wall of circumvallation, mentions the monument of Ananus in this part (v. 12 § 2); a monument which lately has been identified with an ancient rock-grave of a higher class,—the Aechdama of ecclesiastical tradition,—a little below the ruins on this hill; which is again attested to be "the Potter's Field," by a stratum of white clay, which is still worked. (Schultz, Jerusalem, p. 39.);

This is a series of sepulchres excavated in the lower part of this hill; amongst which are several bearing Greek inscriptions, of which all that is clearly intelligible are the words THC. AFIAC. CIWNI., indicating that they belonged to inhabitants or communities in Jerusalem. (See the Inscriptions in Krafft, and the comments on his decipherments in the Holy City, Memoir, pp. 56 — 60).

Higher up the Valley of Hinnom is a large and very ancient pool, now called the Sultan's (Birket-el-Sultan), from the fact that it was repaired, and adorned with a handsome fountain, by Sultan Suliman Ibn Selim, 1520—1566, the builder of the present city-wall.

It is, however, not only mentioned in the mediæval notices of the city, but is connected by Nehemiah with another antiquity in the vicinity, called En-nebi Daud. On Mount Sion, immediately above, and to the eastwards of this pool, is a large and irregular mass of building, supposed by Christians, Jews, and Moslems, to contain the Tomb of David, and of his successors the kings of Judah. It has been said that M. de Sankey has attempted an elaborate proof of the identity of the Tombs of the Kings, at the head of the Valley of Jehoshaphat, with the Tomb of David. His theory is inadmissible; for it is clear, from the notices of Nehemiah, that the Sepulchres of David were not far distant from the Pool of "Sihon," close to "the pool that was made," and, consequently, on that part of Mount Sion where they are now shown. (Nehem. iii. 16—19.) The memory of David's tomb was still preserved until the destruction of Jerusalem (Josephus, Ant. xii. 8 § 4, xvi. 7 § 1; Acts, ii. 29), and is noticed occasionally in the middle ages. (See Holy City, vol. ii. pp. 505—513.) In the same pile of buildings, now occupied by the Moslems, is shown the Caesareum where our Lord is said to have instituted the Last Supper. Ephiphanius mentions that this church was standing when Hadrian visited Jerusalem (Pond. et Mens. cap. xiv.), and there St. Cyril delivered some of his catechetical lectures (Catech. xvi. 4). It was in this part of the Upper City that Titus spared the houses and city wall to form barracks for the soldiers of the garrison. (Vide sup.)

Above the Pool of the Sultan, the Aguedad of Pantus Pilate, already mentioned, crosses the Valley of Hinnom on nine low arches; and, being carried along the side of Mount Sion, crosses the Tyropeon by the causeway into the Haram. The water is conveyed from Etham, or the Pools of Solomon, about two miles south of Bethlehem. (Josephus, B. J. ii. 9 § 4.)

The mention of this aqueduct recalls a notice of Strabo, which has been perpetually illustrated in the history of the city; viz., that it was ἀπὸ τῶν μετὰ εὐθύρων ἐκτὸς ὁ παρευρημένος διόνυσος, ἀπὸ μὲν εὐθύρων, τῶν δὲ πολύων χρῶν ἀπὸ λατυρών καὶ θάνατων. (xvi. p. 723.) Whence this abundant supply was derived it is extremely difficult to imagine, as, of course, the aqueduct just mentioned would be immediately cut off in case of siege; and, without this, the inhabitants of the modern city are almost entirely dependent on rain-water. But the accounts of the various sieges, and the other historical notices, as well as existing remains, all testify to the fact that there was a copious source of living water introduced into the city from without, by extensive subterranean aqueducts. The subject requires, and would repay, a more accurate and careful investigation. (See Holy City, vol. ii. p. 453—505.)

Besides the other authorities cited or referred to in the course of this article, the principal modern sources for the topography of Jerusalem are the following:—Dr. Robinson's Biblical Researches, vols. i. and ii.; Williams's Holy City; Dr. Wilson's Lands of the Bible; Dr. E. G. Schultz, Jerusalem; W. Krafft, Die Topographie Jerusalem; Carl Eitner, Die Erdkunde von Asien, &c., Palastina, Berlin, 1852, pp. 297—508; Dr. Titus Tobler, Golgota, 1851; Die Siloamquelle und die Oelberg, 1852; Deutschbäder aus Jerusalem, 1853; F. de Sankey, Voyage autour de la Mer Morte, tom. 2. (G. W.)

COINS OF AELIA CAPITOLINA (JERUSALEM).

IESPUS. [JACETANI.]

JEZEBEL. [ESDEAEFA.]

IGIULUM (IGILGIL), a sea-port of Mauretania Caesariensis, on the Sants Numidicae, made a Roman colony by Augustus. It stands on a headland, on the E. side of which a natural roadstead is formed by a reef of rocks running parallel to the shore; and it was probably in ancient times the emporium of the surrounding country. (Itin. Ant. p. 18; Plin. v. 2. s. 1; Ptol. iv. 2. § 11; Ammian. Marc. xxix. 5; Tab. Ptole.; Shaw, Travels, p. 45; Barth, Wunderreisen, &c., p. 66.) (F. S.)

IGIULUM (Giglio), an island off the coast of
IGLETS, directly opposite to the Mons Aureus, and the port of Cosae. It is, next to Hya, the most considerable of the islands near the coast of Etruria, being 6 miles long by about 3 in breadth, and consists of a group of mountains of considerable elevation. Hence Livius speaks of its "silvosa continent," "fita titularis." From this description it appears probable that, when Rome was taken by Alaric (A.D. 410), a number of fugitives from the city took refuge in Ilgilium, the insular position of which afforded them complete security. Caesar also mentions it, during the Civil War, in conjunction with the neighboring port of Cosae, as furnishing a few vessels to Domitius, with which that general sailed for Massalia. (Caes. B. C. i. 54; Liv. ii. 6; s. 12; Metr., ii. 7, § 19.) It is evident, therefore, that it was inhabited in ancient as well as modern times. [E. H. B.] IGLETES, IGLETES [HISMAIUE].

IGULLIOINES, in European Sarmatia, mentioned by Ptolemy as lying between the Stavae and Coscodobri, and to the east of the Venedi (p. 5, § 21). Now the Stavae lay south of the Galluinc and Sudina, populations of which the locality is known to be that of the Galluinc and Sudovatie of the middle ages, i.e., the parts about the Syridacium; and the Prussia. This place would the Iguilliones in the southern part of Lithuanian, or in parts of Groden, Podolia, and Volhynia, in the country of the Jazzingi of the thirteenth century,—there or thereabouts. Zeuss has allowed himself to consider some such form as Travgias as the true rendering; and so doing, identifies the name, as well as the localities, of the two populations (Itravgiæ, Jazzingi)—the varieties of which being very numerous. The Itravgiæ were Lithuaniiæ—Lithuanians as opposed to Saxonicæ; and in this lies their ethnological importance, inasmuch as the southwestern extension of that branch of the Sarmatian stock is undetermined. (See Zeuss, s. v. Jazzingi.) [R. G. L.]

IGUVIUM [Itgiov: Eich. Ignivium: Gubbio], an ancient and important town of Umbria, situated on the W. slope of the Apennines, but not far from their central ridge, and on the main road from the Via Flaminia to Rome. Its situation as an ancient Umbrian city is sufficiently attested by its coins, as well as by a remarkable monument presently to be noticed; but we find no mention of it in history previous to the period of its subjection to Rome, and we only learn incidentally from Cicero that it enjoyed the privileged condition of a "federata civitas," and that the terms of its treaty were of a highly favourable character. (Cic. pro Balb. 20, where the reading of the older editions, "Polignatum," is certainly erroneous; see Orelli, ad loc.) The first mention of its name occurs in Livy (xiv. 43, where there is no doubt we should read Iguvium for "Littarium") as the place selected by the Roman senate for the confinement of the Illyric king Gentius and his sons, when the people of Spoleium refused to receive them. Its natural strength of position, which was evidently the cause of its selection on this occasion, led also to its bearing a considerable part in the beginning of the civil war between Caesar and Pompey, when it was occupied by the praetor Mucius Thermus with five cohorts; but on the approach of Curio with three cohorts, Thermus, who was apprehensive of a revolt of the citizens, abandoned the town without resistance. (Caes. B. G. i. 12; Cic. de Att. vii. 13, b.) Under the Roman domination Iguvium seems to have lapsed into the condition of an ordinary municipal town; we find it notice in an inscription as one of the "v. xii. quart. Umbriae" (Iu. Inv. Inscrip. 98), as well as by Pamy and Ptolemy (Pinn. iii. 14, s. 19; Ptol. ii. 1, § 53), and it is probable that in Strabo also we should read "Iugovium" for the corrupt name "Tropea of the MSS. and earlier editions. (Strab. v. p. 227; Cluver. Ital. p. 626.) But its secluded position, and the distance of some miles from the line of the Via Flaminia, was probably unfavourable to its prosperity, and it does not seem to have been a place of much importance. Silias Halianus speaks of it as a very subject to fogs (viii. 459). It early became the see of a bishop, and retained its episcopal rank throughout the middle ages, when it rose to be a place of considerably more importance than it had enjoyed under the Roman empire.

The modern city of Gubbio contains no ruins of ancient date; but about 8 miles to the E. of it, at a place now called La Scheggia, on the line of the ancient Flaminian Way, and just at the highest point of the pass by which it crosses the main ridge of the Apennines, some vestiges of an ancient temple are still visible, which are supposed with good reason to be those of the temple of Jupiter Apenninus. This is represented on the map of Freytag as existing at the highest point of the pass (Pergauiiæ), and is noticed also by Claudian in describing the progress of Honorius along the Flaminian Way. (Claud. de VI. Cons. Hon. 504; Tobi. Pent.) The oracle consulted by the emperor Claudius "in Apennino" (Trav. Poh. Claud. 10) may perhaps have reference to the same spot. Many bronze bridle and other small objects of antiquity have been found near the ruins in question; but a far more important discovery, made on the same site in 1444, was that of the celebrated tables of bronze, commonly known as the Tabulae Eugubinae, which are still preserved in the city of Gubbio. These tables, which are seven in number, contain long inscriptions, four of which are in Etruscan characters, two in Latin, and one partially in Etruscan and partially in Latin characters; but the language is in all cases apparently the same, and no distinct from that of the genuine Etruscan monuments on the Sabine and Tuscan hills, as well as from Latin on the other, though exhibiting strong traces of affinity with the older Latin forms, as well as with the existing remains of the Ocean dialects. There can be no doubt that the language which we here find is that of the Umbrians themselves, who are represented by all ancient writers as nationally distinct both from the Etruscans and the Sabellian races. The ethnological and linguistic inferences from these important monuments will be more fully considered under the article Umbria. It is only of late years that they have been investigated with care; early antiquaries having formed the most extravagant theories as to their meaning; Lanzii had the merit of first pointing out that they evidently related only to certain sacrificial and other religious rites to be celebrated at the temple of Jupiter by the Umbrians themselves and some neighboring communities. The interpretation has since been carried out, as far as our imperfect knowledge will permit, by Lepsius, Grotefend, and still more recently in the elaborate work of Aufrecht and Kirchhoff. (Lanzii, Siglo di Lingua Etrusca, vol. iii. pp. 657—768; Lepsius, de Tabulis Eugubinis, 1833; Inscriptiones Umbriacae et Oscae, Lips. 1841; Grotefend, Relationes Linguar Umbriac, Hanno. 1835—1839; Aufrecht u. Kirchhoff, Die Umbriacae Sprach, 4vo. Berlin, 1847.) In the still-im
perfect state of our knowledge of the inscriptions in question, it is somewhat hazardous to draw from them positive conclusions as to proper names; but it seems that we may fairly infer the mention of several such sub-tribes. At present we are in the dark as to the
neighbourhood of Iguvium. These were, however, in all
probability not independent communities, but petty
villages dependent upon Iguvium itself. Of this
description were: Akenenia or Acerenia (probably
answering to the Latin Aquilonia), Clavenna (in Lat.
Clavena), Curia or Cursia, Cassium, Juvicium, 
Museia, Pierian (?), Tarasca, and Treba or Treplia.
The last of these evidently corresponds to the Latin
name Treba or Treplia, and may refer to the Umbrian
town of that name; the Curtiati of the inscription
are evidently the same with the Curtiati of Pliny,
mentioned by him among the extinct communities of Umbria (Plin. iii. 14. s. 19); while the names of Museia and Cassium are said to be still
retained by two villages called Museia and Casilo in
the immediate neighbourhood of Gubbio. Chiaserna,
another neighbouring village, is perhaps the Clavenna
of Pliny.

The coins of Iguvium, which are of bronze, and of
large size (so that they must be anterior to the re-
duction of the Italian Aes), have the legend ikvinii,
which is probably the original form of the name, and
is found in the Tables, though we here meet also
with the softened and probably later form "Iovinna," or
"Iovina." [E. H. B.]

IL A, in Scotland, mentioned by Ptolemy (ii. 3. § 5) as the first river south of the Beraurium Pro-
monterium = Birth of Dornoch. [E. G. L.]

ILBAUGATAE. [HISPANIA; IBERGETES.]

ILARCURIS. [CARPETANI.]

ILARGUS, a river of Ilascia Scenula, flowing from
west to east, and emptying itself into the Danube. (Peda Albineus. Eleg. ad Liv. 356, where the
common reading is Itargus; others read Isargus, and
regard it as the same as the river Atagus ("Areagvs)
mentioned by Strabo, iv. p. 207, with Grskard's note, vol. i. p. 356.) It would, however,
appear that Ilargus and Isargus were two different
rivers, since in later writers we find, with a slight
change, a river Ilara (Vita S. Magni, 18), answer-
ing to the modern Ilero, and another, Ysurche (Act.
S. Cassium, ap. Resch. Annal. Sabion. iv. 7), the modern Elasch, which flows in a southern direction,
and empties itself into the Atlantic.

[1. S.]

ILATTIA (Tarra?ia, Polyb. xvii. 28. s. e.),
a town of Crete, which is probably the same as the
ELATUS of Phyll (iv. 12). Some scenes read
Clatus, incorrectly classed by him among the inland

ILDUM. [EDETANAE.]

ILEI. [HERMONAE.]

ILEOSCA. [OSCA.]

ILECAONES (IAPXOCOC, Ptol. ii. 6. §§ 16, 64); Hercamnes, Liv. xxii. 21; Illargavoneses, Cae.
B. C. i. 60; in this, as in so many other Spanish names, the c and g are interchangeable), a
people of Hispania Tarraconensis, occupying that
portion of the sea-coast of Edetania which lay be-
 tween the rivers Urbasa and Iberus. Their exact
boundaries appear to have been a little to the
N. of each of these rivers. They possessed the
town of Dortosa (Tortosa), on the left bank of the Iberus,
and their chief city, I DERTOSA. Their other
towns, according to Ptolemy, were: — Anib ("Anib:
Amposta"?), TAMARRIA (TAMARIA),
Teari Juliones, ap. Plin. iii. 3. s. 4; Tovangara),

ILERGETES (Bisgaria; Bisargatani civ. Rom.,
Pis. B. B. Tarra, Signara (Sigara; Segara,
Marcia, Hisp. ii. 8.) CARTHAGO VETUS (Carthagin
vulgar. = Carta Veiga, Marcia, Ibid.,) and THEAVAYA
(Ovania). Urbas also assigns a town, on the N. of the
Iberus, TRAJA CAPITAT, OLEASTER, TARUMA,
and other places, which seem clearly to have belonged
to the COSTETANI. The name of their country,
ILERCAVONIA, occurs on the coins of their city
HERA.

[P. S.]

ILEEDA (TAOPA, and rarely TALPHA; Hidera,
Amon. Epist. xxv. 59; Edkt. TALPHA, Herdenses;
Levita), the chief city of the ILERGETES, in His-
pania Tarraconensis, is a place of considerable im-
portance, historically as well as geographically. It
stood on an eminence, on the right (W.) bank of the
river Sicoris (Sogre), the principal tributary of the
Ebro, and some distance above its confluence with the
CINGA (Cinca); thus commanding the country
between those rivers, as well as the great
road from Tarraco to the NW. of Spain, which here
crossed the Sicoris. (Itin. Ant. pp. 391, 432.)

Its situation (propter quas favit opportunatem,
Cas. B. C. i. 38) induced the legates of Pompey in
Spain to make it the key of their defense against
Caesar, in the first year of the Civil War (n. c. 49).
Afranius and Petreius threw themselves into the
place with five legions; and their siege by Caesar himself,
as narrated in his own words, forms one of the
most interesting passages of military history.

The resources exhibited by the great general, in a
contest where the formation of the district and the
every elements of nature seemed in league with his
enemies, have been compared to those displayed by
the great Duke before Badojus; but no epitome can
do justice to the campaign. It ended by the capitula-
tion of Afranius and Petreius, who were conquered
as much by Caesar's generosity as by his strategy.
(Caes. B. C. i. 58, et seq.; Flor. iv. 12; Appian,
B. C. ii. 42; Vell. Pat. ii. 42; Suet. Cæs. 34;
Lycam, Phaelid. iv. 11, 144.) Under the empire,
Hirada was a very flourishing city, and a muni-
cipium. It had a fine stone bridge over the Sicoris,
on the foundations of which the existing bridge is
built. In the time of Ausonius the city had fallen into decay; but it rose again into importance in
the middle ages, (Strabo. iii. p. 161; Horat.
Epist. i. 20. 13; coins, ap. Florus, Med. ii. pp. 451,
646, iii. p. 73; Manuet, vol. i. p. 44, Suppl. vol. i.
p. 89; Festini, pp. 161, 166; Eckel, vol. i. p.
51.)

ILICI.

Edetani and Celtiberi on the S., the Vascones on the W., on the N. and NE. the small peoples at the foot of the Pyrenees, as the Jacktani, Castellani, Acetani, and Ceretani, and on the Se. the Cosetani. Besides Ilerda, their chief citadel, were the colony of Celisa (Villota, near Xelos); Osca (Huesca), famous in the story of Sertorius; and Athanagiala, which Livy (xxi. 61) makes their capital, but which no other writer names. On the great road from Italy into the N. of Spain, reckoning from Tarraco, stood Ilerda, 62 M. P.; Tolous, 32 M. P., in the conventus of Caesar-augusta, and with the civitas Roman (Plin.); Perusa, 18 M. P. (Pertosa, on the Alexandre); Osca, 19 M. P., whence it was 46 M. P. to Caesar-augusta (Itin. Ant. p. 391).

On a loop of the same road, starting from Caesar-augusta, were:—Gallium, 15 M. P., on the river Gallus (Zarua, on the Gallego); Bortiniae, 18 M. P. (Burgos, Ptol.: Tortosa); Osca, 12 M. P.; Cauis, 29 M. P.; Mendi- culea, 19 M. P. (probably Monzon); Ilerda, 22 M. P. (Itiu. Ant. pp. 451, 452). On the road from Caesar-augusta, up the valley of the Gallus, to Benevento (Orthon) in Gallus, were: Turnalia, 30 M. P. (Gorova), and Ebellium, 22 M. P. (Beihon), whence it was 24 M. P. to the summit of the pass over the Pyrenees (Itiu. Ant. p. 452).

Besides these places, Polyemy mentions Bergesia (Bergision: Balaguer), on the Sicoris; Bergismia (Bergismo: Broja); Ergia (Erga); Succosa (Suezasta); Gallica Flavia (Falaco Flasa: Fregos); and Oenula (Ochina, prob. Orejana), a name also found on coins (Strat. Hist. ed. p. 99), while the same coins bear the name of Aesones, and inscriptions found near the Sicoris have Aesonesia and Jessonesia (Muratori, Not. Thes. p. 1021, Nos. 2, 3; Spon, Misc. Erud. Ant. p. 188), with which the Gessonesises of Polyemy may perhaps have some connection. Berisia is mentioned on coins (Sestini, p. 107), and Octogesa (prob. La Granja, at the confluence of the Segre and the Ebro) by Caesar (B. C. ii. 61; Eckert, vol. ii. pt. 1, pp. 450-453).

ILIESIUM. [Ebillus.]

[ILICI or ILICII (Itiu. Ant. p. 401; Taulcia: Taulcis, Ptol. ii. 6. § 62; Elecho), an inland city of the Contesti, but near the coast, on which it had a port (Vandecopous Avis, Ptol. l. c. § 14), lying just in the middle of the bay formed by the Pr. Saturni and Daniaum, which was called Illicitanus Sinus. The city itself stood at the distance of 52 M. P. from Carthago Nova, on the great road to Tarraco (Itiu. Ant. p. 401), and was a Colonia immunis, with the jus Italicum (Plin. iii. 3. s. 4; Paulus, Dig. vii. de Cens.). Its coins are extant of the period of the empire (Florez, Merc. de Esp. vol. ii. p. 458; Sestini, p. 166; Munset, vol. i. p. 14, Suppl. vol. i. p. 90; Eckert, vol. i. p. 51). Polyemy adds to his mention of the place: in com contributur Icossitani. (Eckert, vol. ii. pt. 1, pp. 402, 403.)

ILIENSIUS (Lauz: Pauu), a people of the interior of Sardinia, who appeared to have been one of the most considerable of the mountain tribes in that island. Mela calls them "antiquissimi in ea populi-orum," and Polyemy also mentions them among the "cibuserrimi populorum" of Sardinia. (Mel. ii. 7. § 10; Plin. iii. 7. s. 15.) Pausanias who terms them "tauri," distinctively ascribes to them a Trojan origin, and derives them from a portion of the conquistors of Aeneas, who settled in the island, and remained there in quiet until they were compelled by the Africans, who subsequently occupied the coasts of Sardinia, to take refuge in the more rugged and inaccessible mountain districts of the interior. (Paus. x. 17. § 7.) This tale has evidently originated in the resemblance of the name of licenses, in the form which the Romans gave it, to that of the Trojans; and the latter part of the story was invented to account for the apparent anomaly of a people that had come by sea dwelling in the interior of the island. What the native name of the Licenses was, we know not, and we are wholly in the dark as to their real origin or ethnical affinities: but their existence as one of the most considerable tribes of the interior at the period of the Roman conquest, is well ascertained; and they are repeatedly mentioned by Livy as contending against the supremacy of Rome. Their first insurrection, in B.C. 181, was repressed, rather than put down, by the praetor M. P. inarius; and in B.C. 178, the Licenses and Balari, in conjunction, laid waste all the more fertile and settled parts of the island; and were even able to meet the consul T. Sempronius Gracchus in a pitched battle, in which, however, they were defeated with heavy loss. In the course of the following year they appear to have been reduced to complete submissio; and their name is not again mentioned in history. (Liv. xi. 19, 34, xii. 6, 12, 17.)

The situation and limits of the territory occupied by the Licenses, cannot be determined; but we find them associated with the Balari and Corsi, as inhabiting the central and mountainous districts of the island. Their name is not found in Polyemy, though he gives a long list of the tribes of the interior. Many writers have identified the Licenses with the Ljoanes or Lojai, who are also placed in the interior of Sardinia; and it is not improbable that they were really the same people, but ancient authors certainly make a distinction between the two. [E. H. B.]

IIIPA. [Heliae.]

IIIPA. I. (Taur, Strab. iii. pp. 141, seq.; De Agric. & Aed. 2 parvus legat. Ptol. ii. 4. § 13; IIipa cognovisse Illa, Plin. iii. i. s. 3, according to the corrupt reading which Stilius's last edition retains for want of a better: some give the epithet in the form Ilpa : Hardin reads Illa, on the authority of an inscription, which is almost certainly spurious, op. Gurer, pp. 351, 350, and Muratori, p. 1002), a city of the Turdus, in Hispania Baetica, belonging to the conventus of Hispalis. It stood upon the right bank of the Baetic (Gualdelquivir), 700 stadia from its mouth, at the point up to which the river was navigable for vessels of small burden, and where the tides were no longer discernible. [Baetic.] On this and other grounds it has been identified with the Roman ruins near Peñafiel. There were great silver mines in its neighbourhood. (Strab. l. c., and pp. 174, 175; Plin. l. c.; Rinn. Ant. p. 411; Liv. xxxv. i; Forez, Exp. 8. vol. vii.)

COIN OF IIIPA.
Ilium.

2. [P. Strab. and Ukert, P. Jlentelle, for, between Coins and the first after vol. Hispania Eckbei. Hisp. ancient city fact f. date period, Egyptian 817; 222, 22. the I'LIUM, IILI.SUS. 54.) Osir. 222, Bubastis, mouth among Alpiajarras. 25° existence. and mentioned 4. of Alpis. F. and 42 study from the coast of [P. Strab.]. MONS and the city of Scylax, 363.) Amosis as that was situated in Asia art. 113, 288, 153, 384, 386, vii. 452, viii. 519. These are the only points of the topography of Ilium derivable from the Homeric poems. The city was destroyed, according to the common received, as tradition, already remarked, about b. c. 1164; but afterwards we hear of a new Ilhum, though we are not informed when and on what site it was built. Herodotus (vii. 42) relates that, before invading Greece, offered sacrifices to Athena at Pergamus, the ancient acropolis of Priam; but this does not quite justify the inference that the new town of Ilium was then already in existence, and all that we can conclude from this passage is, that the people at that time entertained no doubt as to the sites of the ancient city and its acropolis. Strabo (xiii. p. 601) states that Ilium was restored during the last dynasty of the Lydian kings, that is, between the subjection of Western Asia by the Persians; and both Xenophon (Hellen. i. 1. § 4) and Sclav. (p. 35) seem to speak of Ilium as a town actually existing in their days.
ILIUM.

It is also certain that in the time of Alexander New Ilium did exist, and was inhabited by Aeolians. (Doxoh. c. Aristoc, p. 671; Arrian, Anat. 11. § 5.; Strab. xiii. p. 593, foll.) This new town, which is distinguished by Strabo from the famous ancient city, was not more than 12 stadia, or less than two English miles, distant from the sea, and was built upon the spur of a projecting edge of Ilissos, separating the basins of the Scamander and Simeus. It was at first a place of not much importance (Strab. xiii. pp. 593, 601), but increased in the course of time, and was successively extended and embellished by Alexander, Lysimachus, and Julius Caesar. During the Mithridatic War New Ilium was taken by Eumenes. in n. c. 85, on which occasion it suffered greatly. (Strab. xiii. p. 594; Appian, Mithrid. 53; Liv. Epit. lxxxiii.) It is said to have been once destroyed before that time, by one Charidemus (Plut. Sect. 1.; Polyena, iii. 14): but we neither know when this happened, nor who this Charidemus was. Sulla, however, favoured the town extremely, in consequence of which it rose, under the Roman dominion, to considerable prosperity, and enjoyed exemption from all taxes. (Plin. v. 32.) These were the advantages which the place owed to the tradition that it occupied the identical site of the ancient and holy city of Troy: for, it may here be observed, that no ancient author of Greece or Rome ever doubted the identity of the site of Old and New Ilium until the time of Demetrius of Scepsis, and Strabo, who adopted his views; and that, even afterwards, the popular belief among the people of Ilium itself, as well as throughout the world generally, remains as firmly established as if the criticism of Demetrius and Strabo had never been heard of. These critics were led to look for Old Ilium farther inland, because they considered the space between New Ilium and the coast far too small to have been the scene of all the great exploits described in the Iliad: and, although they are obliged to own that not a vestige of Old Ilium was to be seen anywhere, yet they assumed that it must have been situated about 42 stadia from the sea-coast. They accordingly fixed upon a spot which at the time bore the name of Ταύρος κόρης. This view, with its assumption of Old and New Ilium as two distinct places, does not in any way remove the difficulties which it is intended to remove: for the Ilium war will still be found far narrower, not to mention that it demands of the poet what can be demanded only of a geographer or an historian. On these grounds we, in common with the general belief of all antiquity, which has also found able advocates among modern critics, assume that Old and New Ilium occupied the same site. The statements in the Iliad which appear irreconcilable with this view will disappear if we bear in mind that we have to do with an entirely legendary story, which is little concerned about geographical accuracy.

The site of New Ilium (according to our view, identical with that of Old Ilium) is acknowledged by all modern inquirers and travellers to be the spot covered with ruins now called Κισσαρικ, between the villages of Κουν-κου, Κάλλη-φατλι, and Τσαλκεδώ, and a little to the west of the last-mentioned place, and not far from the point where the Simeus once joined the Scamander. Those who maintain that Old Ilium was situated in a different locality cannot, of course, be expected to agree in their opinions as to its actual site, it being impossible to fix upon any one spot agreeing in every particular with the poet's description. Respecting the nationality of the inhabitants of Ilium we shall have to speak in the article TEOS.

COIN OF ILIUM.

ILLIBERIS (Ἰλιβήρης, Ptol. ii. 4. § 11), or ILLIBERI ILLIBERIN (Ptol. iii. 1. s. 3), one of the chief cities of the Tarduli, in Hispana Baetica, between the Baetis and the coast, is identified by inscriptions with Granada. It is probably the Indique (Ἰνδική), of Stephanus Byzantinus. (Inscr. ap. Gruter, p. 277, No. 3; Floro, Exp. S. vol. v. p. 4, vol. xii. p. 81; Montelle, Geogr. Comp. Exp. Mod. p. 163; Coins ap. Flori., Med. vol. iii. p. 75; Monnet, vol. i. p. 15, Suppl. vol. i. p. 28; Eckhel, vol. i. p. 22.)

COIN OF ILLIBERIS (IN SPAIN).

ILLIBERIS or I. LIBERIS (Ἰλιβήρης), a town in the country of the Sardones, or Sartones, or Sordi, in Galicia Aquitania. The first place that Hannibal came to after passing through the Eastern Pyrenees was Illiberis. (Liv. xxi. 24.) He must have passed by Belgearde. Illiberis was near a small river Ilibiris, which is south of another small stream, the Ruscino, which had also on it a town named Ruscino. (Strab. p. 182.) Mela (iv. 5) and Pliny (iii. 4) speak of Illiberis as having once been a great place, but in their time being decayed. The road in the Antonine Itin. from Arelate (Arles) through the Pyrenees to Juncaria passes from Ruscino (Castell-Numilium) to Ad Centuriones, and omits Illiberis; but the Table places Illiberis between Ruscino and Ad Centuriones, which is the same place as the Ad Centuriones of the Itin. [CENTURIONES, AD.] Illiberis is Ebro, on the river Téch. Illibiris or Illiberis is an Iberian name. There is another place, Cebirin, on the Gallic side of the Pyrenees, which has the same termination. [AUSC.] It is said that perri, in the Basque, means "a town." The site of Illiberis is fixed at Ebro by the Itins.; and we find an explanation of
The name * Ehve in the fact that either the name of Iliberis was changed to Helen or Helena, or Helena was a camp or station near it. Constans was murdered by Magnentius "not far from the Hispanic, in a castrum named Helena." (Eutrop. x. 9.) Victor's Epiphane (c. 41) describes Helena as a town very near to Iliberis, and Zenobius has the same (ii. 42; and Orosins, vii. 29). It is said by some writers that Helena was so named after the place was restored by Constantine's mother Helena, or by Constantine, or by some of his children; but the evidence of this is not given. The river of Iliberis is the Tichus of Mela, and Tegum of Phiny, now the Tech. In the text of Ptolemy (ii. 10) the name of the river is written Illier. Some geographers have supposed Iliberis to be Collinore, near Fort Vendre, which is a plain mistake.

ILLICI. [Iliici.]
ILLIPULA. [Ilipla.]
ILLITURGUS, ILITURGUS, or ILITURIGI (probably the *Iolouyis of Ptol. ii. 4. § 9, as well as the *Iolouyia of Polybius, ep. Steph. B. s. c., and the *Iolouyiia of Appian, Isp. 92: Eth. Ilirigianum), a considerable city of Hispania Baetica, situated on a steep rock on the N. side of the Baetis, on the road from Corduba to Castulo, 20 M. P. from the latter, and five days' march from Cartago Nova. In the Second Punic War it went over to the Romans, like its neighbours, Castulo and Mentena, and endured two sieges by the Carthaginians, both of which were raised; but, upon the overthrow of the two Scipios, the people of Illiturgus and Castulo revolted to the Carthaginians, the former adding to their treason the crime of betraying and putting to death the Romans who had fled to them for refuge. At least such is the Roman version of their offence, for which a truly Roman vengeance was taken by Publius Scipio, c. 206. After a defence, such as might be expected when despair of mercy was added to national fortitude, the city was stormed and burnt on the slaughtered corpses of all its inhabitants, children and women as well as men. (Liv. xxiii. 49, 441, 47, 41, 418, 19, 20.) Ten years later it had recovered sufficiently to be again besieged by the Romans, and taken with the slaughter of all its adult male population. (Liv. xxxiv. 10.) Under the Roman empire it was a considerable city, with the surname of Forum Juli. Its site is believed to have been in the neighbourhood of Ambujer, where the church of St. Petronella now stands. (Itin. Ant. p. 403; Plin. iii. 1. s. 3; Priscian. vi. p. 652, ed. Putsch; Morales, Antig. p. 56, b; Menteile, Esp. Med. p. 183; Laborde, Itin. vol. ii. p. 113; Florez, Esp. S. vol. xii. p. 369; Coins, ap. Florez, Med. vol. iii. p. 51; Monnet, vol. i. p. 16; Sestini, p. 56; Eckhel, vol. i. p. 23; Uberti, vol. ii. pt. 1. p. 335.)

ILLURCO or ILURCO, a town in the eastern part of Hispania Baetica, near Pinos, on the river Cu-bilosa. (Inscr. ap. Gruter, pp. 233, 406; Muratori, p. 1051, Nos. 2, 3; Florez, Esp. S. vol. xii. p. 98; Coins, ap. Florez, Med. de Esp. vol. ii. p. 472; Monnet, vol. i. p. 17; Sestini, Med. Esp. p. 57; Eckhel, vol. i. p. 23.)

ILLURGAVONESSES. [Ilercoavoneses.]
ILLURIA. [Ileria.]
ILLURICUM (or *Iolouyis or Eth. and Adj. *Iolouyios, Iliberus, Iliricus, Illiricus), the eastern coast of the Adriatic sea.

1. The Name. — The Greek name is *Illiberus (Iliberus, Itecat. Fr. 65; Polyb. iii. 16; Strab. ii. pp. 108, 123, 129, vii. p. 317; Dionys. Per. 96; Herodian, vii. 7; Apollod. ii. 1. § 3; Ptol. viii. 7, § 1), but the more ancient writers usually employ the name of the people, *Iolouyia (en tiw *Iolouyia, Herod. i. 186, iv. 49; Scyl. pp. 7, 10). The name *Iliberus (Iliberus) rarely occurs. (Steph. B. s. c.; Prop. i. 8. 2.) By the Latin writers it generally went under the name of "Illyricum." (Caes. B. G. ii. 33, iii. 7; Var. R. R. ii. 10. § 7; Cic. ad Att. x. 6; Liv. xiv. 18, 26; Ovid, Trist. iii. 1. 121; Mela, iii. 3. § 13; Tac. Ann. i. 5, 46, ii. 44, 53, Hist. i. 2, 9, 76; Flor. i. 18, iv. 2; Just. vii. 2; Suet. Tib. 16; Vell. Pat. ii. 109), and the general assent of geographers has given currency to this form.

2. Extent and Limits. — The Roman Illyricum was of very different extent from the Illyria or of *Iolouyia of the Greeks, and was itself not the same at all times, but must be considered simply as an artificial and geographical expression for the borders who occupied the E. coast of the Adriatic, from the junction of that gulf with the Ionian sea, to the estuaries of the river Po. The earliest writer who has left a record of the Roman Illyricum describes this coast as Scylax according to whom (c. 19—27) the Illyrians, properly so called (for the Liburnians and Istrians beyond them are excluded), occupy the sea-coast from Liburnia to the Chioani of Epirus. The Balini were the northernmost of these tribes, and the Amanitani the southernmost. Herodotus (i. 196) includes under the name, the Heneti or Veneti, who lived at the head of the gulf; in another passage (iv. 49) he places the Illyrians on the tributary streams of the Murara in Sciria.

It is evident that the Gallic invasions, of which there are several traditions, threw the whole of these districts and their tribes into such confusion, that it is impossible to harmonise the statements of the Peripus of Scylax, or the far later Symmachus of Chios, with the descriptions in Strabo and the Roman historians.

In consequence of this immigration of the Gauls, Appian has confounded together Gauls, Thracians, Paeonians, and Illyrians. A legend which he records (Illyr. 1) makes Celtaus, Illyrics, and Gala, to have been three brothers, the sons of the Cyclops Polyphemus, and is grounded probably on the intermixture of Celtic tribes (the Boi, the Scordisci, and the Taurisci) among the Illyrians: the Iapodes, a tribe on the borders of Istria, are described by Strabo (iv. p. 143) as half Celts, half Illyrians. On a rough estimate, it may be said that, in the earliest times, Illyricum was the coast between the Naro (Neretva) and the Drilo (Driva), bounded on the E. by the Triballii. At a later period it comprised all the various tribes from the Celtic Taurisci to the Epirots and Macedonians, and eastward as far as Mesoia, including the Veneti, Pannonians, Dalmatians, Dardani, Aulitrae, and many others. This is Illyricum in its most extended meaning in the ancient writers till the 2nd century of the Christian era: as, for instance, in Strabo (vii. pp. 313—319), during the reign of Augustus, and in Tacitus (Hist. i. 2, 9, 76, ii. 86; comp. Joseph. B. J. ii. 16), in his account of the civil wars which preceded the fall of Jerusalem. When the boundary of Rome reached to the Danube, the "Illyrican Line," (as it is designated in the "Scriptores Historiae Augustae,"), or "Illyrian frontier," comprised the following provinces: — Noricum, Pannonia Superior, Pannonia

[Note: The text continues with further details about the Illyricum and its historical significance.]

ILLYRICUM.

Inferior, Moesia Superior, Moesia Inferior, Dacia, and Thrace. This division continued till the time of Constantine, who severed from it Lower Moesia and Thrace, but added it to Macedonia, Thessaly, Achaea, Old and New Epirus, Praevalitana, and Crete. At this period it was one of the four great divisions of the Roman empire under a "Prefecturus praetorio," and it is in this signification that it is used by the later writers, such as Sextus Rufus, the "Auctor Notitiae Dionysii Imperii," Zosimus, Jornandes, and others. At the final division of the Roman empire, the so-called "Illyricum Orientale," containing the provinces of Macedonia, Thessaly, Epirus, Helias, New Epirus, Crete, and Praevalitana, was incorporated with the Lower Empire; while "Illyricum Occidentale" was united with Rome, and embraced Noricum, Pannonia, Dalmatia, Savia, and Valeria Epirus.

A. ILLYRICA BARBARA OF ROMA, was separated from Istria by the small river Arbor (Arsca), and bounded S. and E. by the Drilo, and on the N. by the Savus; consequently it is represented now by part of Croatia, all Dalmatia, the Herzegovina, Monte-Negro, nearly all Bosnia, and part of Albania. The province of Istria was divided into three districts, the northern of which was LAVODA, extending S. as far as the Tedanius (Zernaguna); the strip of land extending from the Aris to the Titius (La Kerka) was called LIBERNA, or the whole of the north of what was once Venetian Dalmatia; the territory of the Dalmatiae was at first comprehended between the Naro and the Ilirus or Nestus; it then extended to the Titius. A list of the towns will be found under the several heads of LAVODA, LIBERNA, and DALMATIA.

B. ILLYRICA GRAECA, which was called in later times EPIRUS NOVA, extended from the river Drilo to the SE., up to the Ceramian mountains, which separated it from Epirus Proper. On the N. it was bounded by the Roman Illyricum and Mount Scodrus, on the W. by the Ionian sea, on the S. by Epirus, and on the E. by Macedonia; comprehending therefore nearly the whole of modern Albania. Next to the frontier of Chasia is the small town of Amastris, and the people of the Amastrians and Bulliones. They are followed by the Taulantii, who occupied the country N. of the Aoos—the great river of S. Macedonia, which rises in Mount Laurus, and discharges itself into the Adriatic—as far as Epidauros. The chief towns of this country were Apollonia, and Epidamnus or Dyrrhachium.

In the interior, near the Macedonian frontier, there is a considerable lake, Lacus Lychitis, from which the Drilo issues. Ever since the middle ages there has existed in this part the town of Acharia, which has been supposed to be ancient Lycinius, and was the capital of the Bulgarian empire, when it extended from the Exnile as far as the interior of Aetolo, and comprised N. Illyricum, Epirus, Aetoliana, Arcadia, and a part of Thessaly. During the Roman period the Dassaretiae dwelt there; the neighbouring country was occupied by the Aetolians, who are said to have been driven from their country in the time of Cassander, when they removed as fugitives with their women and children into Macedonia. The Arhidai and Parthina dwelt N. of the Aetolians, and not at the same time, but only during the Roman period, Scodrus (Scutari), in later times the capital of Praevalitana, was unknown during the flourishing period of Gothic invasion, and more properly belonged to Roman Illyricum; as Lissus, which was situated at the mouth of the Drilo, was fixed upon by the Romans as the border town of the Illyrians in the S., beyond which they were not allowed to sail with their privateers. Internal communication in this Illyricum was kept up by the Via Candavia or EoNTIA, the great line which connected Italy and the East—Rome, Constantinople, and Jerusalem. A road of such importance, as Colonel Leake remarks (North. Greece, vol. iii. p. 311), and on which the distance had been marked with milestones soon after the Roman conquest of Macedonia, we may believe to have been kept in the best order as long as Rome was the centre of a vigorous authority; but it probably shared the fate of many other great establishments in the decline of the empire, and especially when it became as much the concern of the Byzantine as of the Roman govern

ILLYRICUM.

This fact accounts for the discrepancies in the Itineraries; for though Lychnida, Heracleia, and Edessa, still continued, as on the Candavian Way described by Polybius (ap. Strab. vii. pp. 352, 323), to be the three principal points between Dyrrhachium and Thessoneum (in fact, having strongly drawn that line in the valley of the Genesis), there appears to have been a choice of routes over the ridges which contained the boundaries of Illyricum and Macedonia. By comparing the Antonine Itinerary, the Peutingerian Table, and the Jerusalem Itinerary, the following account of stations in Illyricum is obtained:

Dyrrhachium or Apollonia.

Clossium -------------- Scambri.

Scampae --------------- Elbashan.

Trajectus Genusii ------- Scamabri river.

Ad Diaman -------------- "

Candavia --------------- "

Tres Tabernae ----------- "

Pons Servili et Claudianum — The Drin at Struga.

Bucichia --------------- "

Sciratiana --------------- "

Carstra ----------------- "

Nicaea ----------------- "

Heracleia --------------- "

3. Physical Geography. — The Illyrian range of mountains, which traverses Dalmatia under the name of Mount Prolog, and partly under other names (Mons Albus, Belina), branches off in Carniola from the Julian Alps, and then, at a considerable distance from the sea, stretches towards Venetia, approaches the sea beyond Aquileia near Trieste, and forms Istria. After passing through Istria as a lofty mountain, though not reaching the snow line, and traversing Dalmatia, which it separates from Bosnia, it extends into Albania. It is a limestone range, and, like most mountains belonging to that formation, much broken up; hence the bold and picturesque coast runs out into many promontories, and is flanked by numerous islands.

These islands appear to have originated on the breaking up of the lower grounds by some violent action, leaving their limestone summits above water. From the salient position of the promontory terminating in Punta della Planca, they are divided into two distinct groups, which the Greek geographers called Amyntius and Lymbeniades. They trend N. W. and S., greatly longer than broad, and form various fine channels, called " canals," and named from the nearest adjacent island; these being bold,
ILLYRICUM with scarcely a hidden danger, give ships a secure passage between them. Cherae, Oeno, Lasinn, Sungetm (Absyrtides), abound with fossil bones. The bone-breccia of these islands appears to be the same concomitator with those of Gibraltar, Cerigo, and other places in the Mediterranean. The Lithuanian giving (Lithuanus, vira, Strab. ii. p. 124), many of them are of great beauty, pp. 313, 317; "Lithuanicus Insulae," Plin. iii. 30), Lissa (Grosso), Brattia (Bracza), Issa (Lessen), Melita (Melodia), Coryciva Nigra (Coreoile), Pharias (Leonia) and Olxmyta (Soltta), have good ports, but are badly supplied with drinkable water, and are not fertile. The mountainous tract, though industriously cultivated towards the shore, is for the most part, as in the days of Strabo (i.e.), wild, rugged, and barren. The want of water and the arid soil make Dalmatia unfit for agriculture; and therefore of old, this circumstance, coupled with the excellency and number of the harbours, made the natives more known for piracy than for commercial enterprise. A principal feature of the whole range is that called Monte-Negro (Carnegoraca), consisting chiefly of the cretaceous or Mediterranean limestone, so extensively developed from the Alps to the Archipelago, and remarkable for its craggy character. The general height is about 3000 feet, with a few higher summits, and the slopes are gentle in the direction of the inclination of the "strata," with precipices at the overtoppings, which give a fine variety to the scenery.

There is no sign of volcanic action in Dalmatia; and the Nymphæum near Apollonia, celebrated for the flames that rose continually from it, has, probably, no reference to anything of a volcanic nature, but is connected with the beds of asphaltum, or mineral pitch, which occur in great abundance in the nummulitic limestone of Albania. The coast of what is now called Middle Albania, or the Ilyrian territory, N. of Epirus, is, especially in its N. portion, of moderate height, and in some places even low and unwholesome, as far as Acion (Achona or Aclono), where it suddenly becomes rugged and mountainous, with precipitous cliffs descending rapidly towards the sea. This is the Kimara range, upwards of 4000 feet high, dreaded by ancient mariners as the Aero-Cerneian promontory. The interior of this territory was much superior to N. Illyricum in productivity; though mountainous, it has more valleys and open plains for cultivation. The seaports of Epidamnus and Apollonia introduced the luxuries of wine and oil to the barbarians; whose chiefs learnt also to value the woven fabrics, the polished and carved metallic work, the tempered weapons, and the pottery which was furnished them by Greek artisans. Salt fish, and, what was of more importance to the inland residents on lakes like that of Lychnidas, salt itself, was imported. In return they supplied the Greeks with those precious commodities, of which they needed. Silver mines were also worked at Damastum. Wax and honey were probably articles of export; and it is a proof that the natural products of Illyria were carefully sought out. when we find a species of iris peculiar to the country collected and sent to Corinth, where its root was employed to give the special flavour to a celebrated kind of aromatic unguent. Greek commerce and intercourse not only tended to civilise the S. Illyrians beyond their northern brethren, who shared with the Thracian tribes the custom of tattooing their bodies and of offering human sacrifices; but through the introduction of Grecian exiles, made them acquainted with Hellenic ideas and legends, as may be seen by the tale of Cadmus and Harmonia, from whom the chiefs of the Illyrian Eaceleus professed to trace their descent. (Comp. Grote, Hist. of Greece, vol. iv. pp. 1—10, and the authorities quoted there; to which may be added, Wilkinson, Dalmatia and Montenegro, vol. i. pp. 38—42; J. F. Nevebar, Die Sudslaven, Leipzig, 1851; Niebuhr, Lect. on Ethnogr. and Geog. vol. i. pp. 297—314; Smyth, The Mediterranean, pp. 40—45; Hahn, Albanische Studien, Wien, 1854.)

4. Race and National Character.—Sufficient is not known either of the language or customs of the Illyrians, by which their race may be ascertained. The most ancient accounts and oriant writers have always distinguished them as a separate nation, or group of nations, from both the Thracians and Epirots.

The ancient Illyrians are unquestionably the ancestors of the people generally known in Europe by the name Albanians, but who are called by the Turks "Arnouts," and by themselves "Skiptares," which means in their language "mountaineers," or "dwellers on mountains," and inhabit the greater part of ancient Illyricum and Epirus. They are a remarkable people, which constitute a particular race, which is very distinct from the Slavonian inhabitants who border on them towards the N. The ancient, as has been observed, distinguished the Illyrians from the Epirots, and have given no intimations that they were in any way connected. But the Albanians, who inhabit both Illyricum and Epirus, are one people, whose language is only varied by slight modifications of dialect. The Illyrians appear to have been pressed southwards by Slavonian hordes, who settled in Dalmatia. Driven out from their old territories, they extended themselves towards the S., where they now inhabit many districts which never belonged to them in former times, and have swallowed up the Epirots, and extinguished their language. According to Schaafirik (Stae. Alt. vol. i. p. 31) the modern Albanian population is 1,200,000.

Ptolemy is the earliest writer in whose works the name of the Albanians has been distinctly recognised. He mentions (iii. 13. § 23) a tribe called Albani (Alesani) and a town Albanopolis (Albanopolis), in the region lying to the E. of the Ionian sea; and from the names of places with which Albania is connected, it appears clearly to have been in the S. part of the Illyrian territory, and in modern Albania. There are no means of forming a conjecture how the name of this obscure tribe came to be extended to so considerable a nation. The latest work upon the Albanian language is that of F. Ritter von Xylander (Die Sprache der Albonesen oder Skiketaren, 1835), who has elucidated this subject, and established the principal facts upon a firm basis. His account of the positions at which Xylander arrived will be found in Prichard (The Physical History of Mankind, vol. iii. pp. 477—482).

As the Dalmatian Slaves have adopted the name Illyrians, the Slavonian language spoken in Dalmatia, especially at Ragusa, is also called Illyrian; and this designation has acquired general currency; but it must always be remembered that the ancient Illyrians were in no way connected with the Slave races. In the practice of tattooing their bodies, and offering human sacrifices, the Illyrians resembled the Thracians (Strab. vii. p. 315; Herod. vi. 6.): the
custom of one of their tribes, the Dalmatians, to have a new division of their lands every eighth year (Strab. l.c.), resembled the well-known practice of the Germans, only advanced somewhat further towards the east. Stobaeus, ascribed to Scylax (l.c.) speaks of the great influence enjoyed by their women, whose lives, in consequence, he describes as highly licentious. The Illyrians, like the modern Albanians, Skiptar, was always ready to fight for hire; and rushed to battle, obeying only the instigation of his own love of fighting, or vengeance, or love of blood, or craving for booty. But as soon as the feeling was satisfied, or came by fear, his rapid and impetuous rush was succeeded by an equally rapid retreat or flight. (Comp. Grote. Hist. of Greece, vol. vi. p. 609.) They did not fight in the phalanx, nor were they merely Σώλοι; they rather formed an intermediate class between them and the phalanx. Their arms were short spears and light javelins and shields ("pel-tatae"); the chief weapon, however, was the Milaxian sword. When knifed, as Arnold has remarked (Hist. of Rome, vol. I. p. 495), "the eastern coast of the Adriatic is one of those ill-fated portions of the earth which, though placed in immediate contact with civilisation, have remained perpetually barbarian." But Scymnus of Chios (comp. Arnold, vol. iii. p. 477), writing of the Illyrians about a century before the Christian era, calls them "a religious people, just and kind to strangers, loving to be liberal, and desirous to live orderly and soberly." After the Roman conquest, and during its dominion, they were as civilised as most other peoples reclaimed from barbarism. The emperor Diocletian and St. Jerome were both Illyrians. And the palace at Spalato is the earliest existing specimen of the legitimate combination of the round arch and the column; and the modern history of the eastern shores of the Adriatic begins with the relations established by Heracleus with the Serbs or W. Slaves, who mowed down from the Carpathians into the provinces between the Adriatic and the Danube. The states which they constituted were of considerable weight in the history of Europe, and kingdoms, or dominions, of Croatia, Servia, Bosnia, Raecia, and Dalmatia, occupied for some centuries a political position very like that now held by the secondary monarchial states of the present day. The Slaves, who had no government, or system of government, once disrupted the sway of the Illyrian with the Venetians; Ragusa, which sent her Argosies (Argosées) to every coast, never once succumbed to the winged Lion of St. Mark; and for some time it seemed probable that the Serian colonies established by Heracleus were likely to take a prominent part in advancing the progress of European civilisation. (Comp. Finlay, Georgia under the Romans, p. 499.)

5. History. —The Illyrians do not appear in history before the Peloponnesian War, when Brasidas and Perdiccas retreated before them, and the Illyrians, for the first time, probably, had to encounter Greek troops. (Thuc. iv. 124—128.) Nothing is heard of these barbarians afterwards, till the time of Philip of Macedon, by whose vigour and energy their incursions were first checked, and their country partially conquered. Their collision with the Macedonians appears to have risen under the following circumstances. During the 4th century before Christ a large immigration of Gallic tribes from the westward was taking place, invading the territory of the more northerly Illyrians, and driving them further to the south. Under Bardylis the Illyrians, who had formed themselves into a kingdom, the origin of which cannot be traced, had extended themselves over the towns, villages, and plains of W. Macedonia (Diod. xvi. 4; Thuc. comp. Fr. 35, ed. Didot.; Cic. de Off. ii. 11; Phot. Bibl. p. 530, ed. Bekker; Liban. Orat. xxviii. p. 652). As soon as the young Philip of Macedon came to the throne, he attacked these hereditary enemies n. c. 360, and pushed his successes so vigorously, as to reduce to subjection all the tribes to the E. of Lychnidus. (Comp. Grote, Hist. of Greece, vol. ii. p. 502-514.) A state was formed the capital of which was probably near Ragusa, but the real Illyrian pirates with whom the Romans came in collision, must have occupied the N. of Dalmatia. Rhodes was still a maritime power; but by n. c. 233 the Illyrians had become formidable in the Adriatic, ravaging the coasts, and disturbing the navigation of the allies of the Romans. Envoys were sent to Tenta, the queen of the Illyrians, that they might demand peace; but she replied, to the habit of her people, and finally had the envoys murdered. (Polyb. i. 8; Appian, Illyr. 7; Zonar. viii. 19; comp. Pline. xxxiv. 11.) A Roman army for the first time crossed the Ionian gulf, and concluded a peace with the Illyrians upon honourable terms, while the Greek states of Coreya, Apollonia, and Epidamnus, received their liberty as a gift from Rome.

On the death of Tenta, the traitor Demetrians of Phares made himself guardian of Pineus, son of Agon, and usurped the chief authority in Illyricum; thinking that the Romans were too much engaged in the Gallic wars, he ventured on several piratical acts. This led to the Second Illyrian War, n. c. 219, which resulted in the submission of the whole of Illyricum. Demetrios fled to Macedonia, and Pineus was restored to his kingdom. (Polyb. iii. 16, 18; Liv. xxxii. 33; App. Illyr. 7, 8; Flor. i. 5; Dion Cass. xxxiv. 46, 151; Zonar. viii. 20.) Pineus was succeeded by his uncle Scedriadaus, and Scedriadaus by his son Pleuratus, who, for his fidelity to the Roman cause during the Macedonian War, was rewarded at the peace of 196 by the addi- tion to his territories of Lychnidus and the Parthian, which had before belonged to Macedonia (Polyb. xviii. 30, xxx. 9, xxxi. 4. Liv. xxx. 28, xxxii. 34.) In the reign of Emperor Constantius, the king of Illyricum, the Dalmatae revolted, n. c. 180; and the pretor L. Anicius, entering Illyricum, finished the war within thirty days, by taking the capital Scodra (Scodra), into which Gentius had thrown himself, n. c. 168. (Polyb. xxx. 13; Liv. xlv. 30—32, xlv. 43; Appian, Illyr. 9; Estrop. iv. 6.) Illyricum, which was divided into three parts, became annexed to the province of Dalmatia (Liv. xiv. 26). The history of the Roman wars with Dalmatia, Ilyridis, and Liburnia, is given under those heads.

In n. c. 27 Illyricum was under the rule of a provincial appointed by the senate (Dion Cass. lxxii. 12): but the frequent attempts of the people to recover their liberty showed the necessity of maintaining a strong force in the country; and in n. c. 11 (Dion Cass. lxxiv. 34) it was made an imperial province, with P. Cornutus Dolabella for "legatus" ("leg. pro. pr.""). Orelli, Inser. no. 2365, comp. no. 3123; Tac. Hist. ii. 86; Marquardt, in Becker's Rom. Alt. vol. iii. pt. i. pp. 110—115.) A large region, extending far inland towards the valley of the Sava and the Danube, contained bodies of savoury,
ILIYRICUM

who were stationed in the strong links of the chain of military posts which was scattered along the frontier of the Danube. Inscriptions are extant on which the records of its occupation by the 7th and 11th legions can still be read. (Orelli, nos. 6432, 5333, 4995, 3996; comp. Joseph, B. J. ii. 16; Tac. ii. 11; Suet. Claud. 29 ed.); at that time no seat of government or capital; but the province was divided into regions called "conventus"; each region, of which there were three, named from the towns of Scardona, Salona, and Narona, was subdivided into numerous "decuriae." Thus the "conventus" of Salona had 382 "decuriae." (Plin. iii. 26.) Iadera, Salona, Narona, and Epidaurens, were Roman "colonies;" Apollonia and Corcula, "civitates liberae." (Appian, Il. 8: Polyb. ii. 11.) The jurisdiction of the "praeprestor," or "legatus," does not appear to have extended throughout the whole of Illyricum, but merely over the maritime portion. The inland district either had its own governor, or was under the prefect of Pannonia. Salona in later times became the capital of the province (Procop. B. G. 6:15; Hierocles) and the praeses was styled "praeses." (Orelli, nos. 1098, 3599.) The most notable of these were Dion Cassius the historian, and his father Cassius Aponianus.

The warlike youth of Pannonia and Dalmatia afforded an inexhaustible supply of recruits to the legions stationed on the banks of the Danube; and the peasants of Illyricum, who had already given Claudius, Aurelian, and Probus to the sinking empire, achieved the work of rescuing it by the elevation of Diocletian and Maximian to the imperial purple. (Comp. Gibbon, c. xiii.)

After the final division of the empire, Marcellinus, "Patrician of the West," occupied the maritime portion of W. Illyricum, and built a fleet which claimed the dominion of the Adriatic. (Dalmas-\]I. E. Illyricum appears to have suffered so much from the hostilities of the Goths and the oppressions of Alaric, who was declared, A.D. 395, its master-general (comp. Claudian, in Entropii. ii. 216, de Bell. Get. 535), that there is a law of Theodosius II. which exempts the cities of Illyricum from contributing towards the expenses of the public spectacles at Constantinople. (Theod. cod. x. tit. 8. s. 7.) But though suffering from these invasions, casual encounters often showed that the people were not destitute of courage and martial spirit. Attila, himself, the terror of both Goths and Romans, was defeated before the town of Azinum, a frontier fortress of Illyricum. (Pirisci, p. 143, ed. Bonn: comp. Gibbon, c. xxxiv.; Finlay, Greece under the Romans, p. 203.) The coasts of Illyricum were considered of great importance to the court of Con-\]stantinople. The rich produce transported by the caravans which reached the N. shores of the Black Sea, was the principal commerce of Constantinople; it was transported through W. Europe. Under these circumstances, it was of the utmost consequence to defend the two points of Thessalonica and Dyrrhachium, the two cities which commanded the extremities of the usual road between Constantinople and the Adriatic. (Tafel, de Theodidouka, p. 221; Hul-\]man, Gesch. des Byzantinischen Handels, p. 76.)

The open country was abandoned to the Avars and the E. Slaves, who made permanent settlements even to the S. of the Via Egnatia; but none of these settlements were allowed to interfere with the lines of communication, without which the trade of the West would have been lost to the Greeks. Heraclius, in his plan for circumscribing the ravages of the northern enemies of the empire, occupied the whole interior of the country, from the borders of Istria to the territory of Dyrrhachium, with colonies of the Serbs and W. Slaves. From the settlement of the Serviae Slavonians within the bounds of the empire we may therefore date, as has been said above, the earliest encroachments of the Illyrian or Albanian race on the Hellenic population of the South. The singular events which occurred in the reign of Heraclius are not among the least of the elements which have gone to make up the condition of the modern Greek nation. [E. B. J.]

ILIUS [El)lric.]

ILUCIA [U)cretani.]

ILURATUM (Josephovit, Ptol. iii. 6: 6) a town in the interior of the Tauric Chersonese, probably somewhat to the N. of Kafja. [E. B. J.]

ILURCA'ONES. [Ilcrcagones.]

ILURGUS. [Gilacurris.]

ILURGIES. [Aldcgries.]

ILU/RETAL. [Ulegetes.]

ILUBO [U)bo.]

ILUZA (L)aco), a town in Pyrgia Facarni, which is mentioned only in very late writers, and is probably the same as Aludha in the Table of Pentingi; in which case it was situated between Sebaste and Acmonia, 25 Roman miles to the east of the latter town. It was the see of a Christian bishop. (Hieroc. p. 667; Concil. Constant. iii. p. 534.) [L. S.]

ILVA (L)aoa, Ptol. Elber), called by the Greeks Aethallia (Aethallia, Diss.; Aethalia, P. Arel. Philist. ap. Steph. B.), an island in the Tyrrenian Sea, lying off the coast of Etruria, opposite to the headland and city of Populonium. It is much the most important of the islands in this sea, situated between Corsica and the mainland, being about 18 miles in length, and 12 in its greatest breadth. Its outline is extremely irregular, the mountains which compose it, and which rise in some parts to a height of above 2000 feet, being indented by deep gulls and inlets, so that its breadth in some places does not exceed 3 miles. Its circuit is greatly overstated by Piny at 100 Roman miles; the same author gives its distance from Populon-ium at 10 miles, which is just about correct; but the width of the strait which separates it from the nearest point of the mainland (near Piombino) does not much exceed 6, though estimated by Dionysius as 100 stadia (122 miles), and by Strabo through an enormous error, at not less than 300 stadia. (Strab. v. p. 223; Diss. v. 13; Plin. iii. 6. s. 12; Mel. ii. 7. 19; Scelv. p. 2. 6; Aplol. Ind.)
ILVATVS.

IV. 634.) Ilva was celebrated in ancient times, as it still is at the present day, for its iron mines: these were probably worked from a very early period by the Tyrrhenians of the opposite coast, and were already noticed by Heracleaus, who called the island **Aithos**; indeed, its Greek name was generally regarded as derived from the smoke (**aiθανα)** of the numerous furnaces employed in smelting the iron. (Diod. v. 13; Steph. B. s. e.) In the time of Strabo, however, the iron ore was no longer smelted in the island itself, the want of fuel compelling the inhabitants (as it does at the present day) to transport the ore to the opposite mainland, where it was smoked and wrought so as to be fitted for commercial purposes. The unfailing abundance of the ore (alluded to by Virgil in the line

"Imula inexactibus Chalybiam genus metallis")

led to the notion that it grew again as fast as it was extracted from the mines. It had also the advantage of being extracted with great facility, for it is not sunk deep beneath the earth, but forms a hill or mountain mass of solid ore. (Strab. I. c.; Diod. l. c.; Virg. Aen. x. 174; Plin. iii. 6. 12, xxxiv. 14. s. 41; Pseun. Arist. de Miraed. 95; Entil. Htin. i. 351—356; Sil. Ital. viii. 616.) The mines, which are still extensively worked, are situated at a place called **Rö**, near the E. coast of the island; they exhibit in many cases unequivocal evidence of the ancient workings.

The only mention of Ilva that occurs in history is in n. c. 453, when we learn from Diiodorus that it was ravaged by a Syracusean fleet under Phylillus, in revenge for the piratical expeditions of the Tyrrhenians. Phylillus having effected but little, a second fleet was sent under Apelles, who is said to have made himself master of the island; but it certainly did not remain subject to Syracuse. (Diod. xi. 88.) The name is again incidentally mentioned by Livy (xxx. 39) during the expedition of the consul Tib. Claudius to Corsica and Sardinia.

Ilva has the advantage of several excellent ports, of which that on the N. side of the island, now called **Porto Ferrario**, was known in ancient times as the **Portus Aegypti** ("Agýpht Ægyp"); from the circumstance that the Argonauts were believed to have touched there on their return voyage while sailing in quest of Circe. (Strab. v. p. 224; Diod. iv. 56; Apollon. Rhod. iv. 6. 57.) Considerable ruins of buildings of Roman date are visible at a place called **Le Grotto**, near **Porto Ferrario**, and others are found near **Capo Castello**, at the NE. extremity of the island. The quarries of granite near S. Piero, in the SW. part of Ribo, appears also to have been extensively worked by the Romans, though no notice of them is found in any ancient writer; but numerous columns, basins for fountains, and other architectural ornaments, still remain, either wholly or in part hewn out of the adjacent quarry. (Iliaro, Chass. Tour. vol. i. pp. 23—29.)

II. VATES, a Ligurian tribe, whose name is found only in Livy. He mentions them first as taking up arms in n. c. 200, in concert with the Gaetulian tribes of the Insubres and Comasii, to des- troy the Roman colonies of Placentia and Communa. They are again noticed three years later as being still in arms, after the submission of their Transpian- dan allies; but in the course of that year's campaign (n. c. 197) they were reduced by the consul Q. Minucius, and their name does not again appear in history. (Liv. xxx. 10, xxxi. 29, 30.)

IMIAUS.

the circumstances here related, it is clear that they dwelt on the N. slopes of the Alpes Maritimes, towards the plain of the Padus, and apparently not very far from Clastidium (Costeggio); but we cannot de- termine with certainty either the position or extent of their territory. Their name, like those of most of the Ligurian tribes mentioned by Livy, had disappeared in the Angustan age, and is not found in any of the geographers. [LIGURIA.] Walckenaer, however, supposes the **Eleaetes** over whom the consul M. Fulvius Nobilior celebrated a triumph in n. d. 29 (Fast. Capit. ap. Gruter, p. 297), and who are in all probability the same people with the Eileates of Pliny [Vener.], to be identical also with the Il- vates of Livy; but this cannot be assumed without further proof. (Walckenaer, Géogr. des Gaules, vol. i. p. 154.)

[E. H. B.]

IMACHARIA (Iñachara or Iñachara, Pltol. Etab. Imacharesis, Cie.; Imacaresis, Plin.), a city of Sicily, the name of which does not appear in history, but which is repeatedly mentioned by Cicero among the municipal towns of the island. There is great discrepancy in regard to the form of the name, which is written in many MSS. "Macarensis" or "Macae- rensis," and the same uncertainty is found in those of Pliny, who also notices the town among those of the interior of Sicily. (Cic. Ferr. iii. 18, 42, v. 7; Zumpt. ad loc.; Plin. iii. 8. s. 14; Sillig. ad loc.) From the manner in which it is spoken by Cicero, it would seem to have been a town of some con- sideration, with a territory fertile in corn. That writer associates it with Herbita, Assorus, Agyrium, and other towns of the interior, in a manner that would lead us to suppose it situated in the same region of Sicily; and this inference is confirmed by Prolegmeny, who places Hemichara or Hinichara (evi- dently the same place) in the NE. of Sicily, between Capitium and Centurpia. (Pltol. iii. 4. § 12.) Hence Cluverius conjectures that it may have occupied the site of Trinina, but this is wholly uncertain. Fazello and other Sicilian writers have supposed the ruins of an ancient city, which are still visible on the coast about 9 miles N. of Cape Pachynum, near the Porto Vindicari, to be those of Imacharia; but though the name of Macarisen, still borne by an adjoining head- land, gives some colour to this opinion, it is wholly opposed to the data furnished us by our authorities, who all agree in placing Imachara in the interior of the island. The ruins in question, which indicate the site of a considerable town, are regarded by Clu- verius (but equally without authority) as those of Ichana. (Cluer. Sicil. p. 356; Fazell. de Reb. Sic. iv. 2. p. 217; Aniceto, Not. ad Fazell. pp. 417, 447; Iliaro's Classical Tour, vol. ii. p. 301.) [E. H. B.]

IMUS, the great mountain chain, which, accord- ing to the ancients, divided Northern Asia into "Sytchya intra Imaum" and "Sytchya extra Imaum." This word ("Imaus Ųos), Strab. xv. p. 689; Pltol. vi. 13. § 1; τον Ἰμαος ῆος, Strab. ii. p. 129; ὁ Ἰμαος, Azathem. ii. 9; although all the MSS. of Strabo (xi. p. 516) have Imaus (Imaeas) in the passage describing the expedition of the Graeco-Bactrian king Menander, yet there is no doubt that 

*'Ioua" was the proper name, and the words Imaus should be subordinated, con- nected with the Sanscrit "hima-gr" "nowy" (comp. Pltn. vi. 17; Bohlen, das Alto Indian, vol. i. p. 11; Lassen, Ind. Alt. vol. i. p. 17), is one of those many significative expressions which have been used for mountain masses upon every zone of the earth's sur- face (for instance, Mont Blanc, in Savoy, Sierra

Digitized by Microsoft®
IMAUS.

Nerada, in Granada and California), and survives in the modern Himalaya.

From very early times the Greeks were aware of a great line of mountains running throughout Central Asia, nearly E. and W., between the 36th and 37th degrees of latitude, and which was known by the names of the ridge of Dacianus, or the parallel of Rhodes.

The Macedonian expeditions of Alexander and Seleucus Nicator opened up Asia as far as the sources of the Ganges, but not further. But the knowledge which the Greeks thus obtained of Asia was much enlarged by intercourse with other Eastern nations. The indications given by Strabo and Ptolemy (L. e.), when compared with the orographic configuration of the Asiatic continent, comprise in a very remarkable manner the principal features of the mountain chain of Central Asia, which extends from the Chinese province of Hon-pé, S. of the gulf of Pecheli, along the line of the Kuen-lin (as, has generally been supposed, the Himalaya, continuing from the Hindis-Kish along the S. shores of the Caspian through Mucurderia, and rising in the Taurus and Anadurat, through the pass of Elbure and Ghilan, until it terminates in the Taurus in the SW. corner of Asia Minor. It is true that there is a break between Taurus and the W. continuation of the Hindis-Kish, but the cold "plateaux" of Azerbijan and Kordistan, and the isolated summit of Ararat, might easily give rise to the supposed continuity both of Taurus and Anti-Taurus from Karmania and Araxas up to the high chain of Elbure, which separates the damp, wooded, and unhealthy plains of Mucurderia from the arid "plateaux" of Irak and Khurasan.

The name of Imaus was, as has been seen, in the first instance, applied by the Greek geographers to the Hindis-Kish and to the chain parallel to the equator to which the name of Himalaya is usually given in the present day. Gradually the name was transferred to the colossal intersection running N. and S., the meridian axis of Central Asia, or the Bolor range. The division of Asia into "intra et extra Imaum" was unknown to Strabo and Pliny, though the latter describes the knot of mountains formed by the intersections of the Himalaya, the Hindis-Kish, and Bolor, by the expression "quorum (Montes Emodi) praesertim Imaum vocatur" (vi. 17).

The Bolor chain has been for ages, with one or two exceptions, the boundary between the empires of China and Turkestan; but the ethnographic distinction between "Sytthia intra et extra Imaum" was probably suggested by the division of India into "intra et extra Ganges," and of the whole continent into "intra et extra Taurus." In Ptolemy, or rather in the maps appended to all the editions, and attributed to Agathodaemon, the meridian chain of Imaus is prolonged up to the most northerly plains of the steppe and Ural. The positive notions of the ancients upon the route of commerce from the Enphrates to the Seres, forbid the opinion, that the idea of an Imaus running from N. to S., and N. of the Himalaya, dividing Upper Asia into two equal parts, was a mere geographic dream. That the expressions of Ptolemy are so precise, that there can be little doubt but that he was aware of the existence of the Bolor range. In the special description of Central Asia, he speaks twice of Imaus running from S. to N., and, indeed, clearly calls it a meridian chain (κατά μεσαίον ῥέων τῶν γερακών, Ptol. vi. 14: § 1: comp. vi. 13: § 1), and places at the foot of Imaus the Blytæa (Blytæa, vi. 13: § 3), in the country of Little Thibet, which still bears the indigenous name of Baltistan. At the sources of the Imaus are the Daraldræa (vili. 1: § 42), the Dardara or Derders mentioned in the poem of the Mahabharata and in the fragments of Megasthenes, through which the Greeks received their first knowledge of the region of deserted sand, and who occupied the S. slopes of the Indian Caucasus, a little to the W. of Kaschauir. It is to be remarked that Ptolemy does not attach Imaus to the Comedorum Montes (Kouandôu), but places the Imaus too far to the E., 8° further than the meridian of the principal source of the Ganges (Gungôtri). The cause of this mistake, in placing Imaus so far further towards the E. than the Bolor range, might arise from the data upon which Ptolemy came to his conclusion being selected from two different sources. The Greeks first became acquainted with the Comedorum Montes when they passed the Indian Caucasus between Cabol and Balkh, and advanced over the "plateau" of Bamban along the W. slopes of Bolor, where Alexander found, in the tribe of the Silace, the "chain of high mountains" (Strabo, xvi. p. 683), just as Marco Polo and Burnes (Travels in Bukhara, vol. ii. p. 214) met with people that boasted that they had sprung from the Macedonian conquerors.

The N. of Bolor was known from the route of the traffic of the Seres, as described by Marinus of Tyre and Ptolemy (i. 12). The combination of notions obtained from such different sources was imperfectly made, and hence the error in longitude, which results from these obscure orographical relations, have been illustrated by Humboldt upon the most logical principles, and the result of many apparently contradictory accounts is so presented as to form one connected whole. (Asie Centrale, vol. i. pp. 100—164, vol. ii. pp. 365—410.)

The Bolor range is one link of a long series of elevated ranges running as it were, from S. to N., which, with axes parallel to each other, but alternating in their localities, extend from Cape Coronel to the Icy Sea, between the 64th and 79th degrees of longitude, keeping a mean direction of SNE. and NNS. Lassen (Indische Alterthumskunde) coincides with the results obtained by Humboldt. (E. B. J.)

PMBRASUS (Pmbraos), one of the three small rivers flowing down from Mount Ampalus in the island of Samos. (Strab. xiv. p. 637; Plin. v. 37.) According to a fragment from Callimachus (215; comp. Schol. ad Apollon. Rhod. i. 187; ii. 865), this river, once called Parthenius, flowed in front of the ancient sanctuary of Hera, outside the town of Samos, and the goddess derived from it the surname of Imbrisus. (L. S.)

IMBRINUM. [SANMUNIUM.]

IMBROS (Imbr̄os: Eth. Imb̄ros), an island in the Argaean sea, off the S. coast of the Thracean Chersonesus, and near the islands of Samothrace and Lemnos. According to Pliny (iv. 12. s. 23), Imbros is 62 miles in circumference; but this is nearly double its real size. It is mountainous and well wooded, and its highest summit is 1845 feet above the level of the sea. It contains, however, several fertile valleys, and a river named Ilius in antiquity. (Plin. l. c.) Its town on the northern side was called by the same name, and there are still some ruins of it remaining. Imbros was inhabited in early times by the Pelasgians, and was, like the neighbouring island of Samothrace, celebrated for its
worship of the Cabeiri and Hermes, whom the Ca- 
rians called Imbrasus. (Steph. H. s. v. 'Iμβρας.) 
Both the island and the city of Imbrasus are men- 
tioned by Hesiod, who gives to the former the epithet of 
παπαλοιασόν. (II. xiii. 33, xiv. 281, xxiv. 78, Hymn. 
in Apoll. 36.) The island was annexed to the Per- 
sian empire by Otto, a general of Dareius, at 
which time it was still inhabited by Pelasgians. (Herd. v. 26.) It was afterwards colonized by the Athenians, and was no doubt taken by Miltiades 
along with Lemnos. It was always regarded in 
later times as an ancient Athenian possession; thus 
the peace of Antalatida, which declared the inde- 
pendence of all the Greek states, nevertheless 
allowed the Athenians to retain possession of Lemnos, 
Imbras, and Scyros (Xen. Hell. iv. 8 § 15, v. 1 § 31); and at the end of the war with Philip the Ro- 
mans restored to the same people the islands of 
Lemnos, Imbras, Delos, and Scyros. (Xiv. xxxii. 
30.) The coins of Imbras have the common Athe- 
nian emblem, the head of Pallas. Imbras seems to 
have afforded good anchorage. The fleet of An- 
thecius first sailed to Imbras, and from thence 
crossed over to Scyros. (Liv. xxxv. 43.) The 
ship which carried Ovid into exile also anchored 
the harbour of Imbras, which the poet calls "Imbría 

corinum imbras."

Or. Trist. i. 10, 18.) The island is still 
called by its ancient name, Euboea or Imbris. 

IMBRUS MONS, is the name given in the Tabula 
Pentimergianum to the mountain pass which leads 
from the basin of the lake Fucinus to that of the 
Pelagia, and was traversed by the Via Valeria on 
the way from Alba to Cernusium. This pass, now 
called the Forca Carra, must in all ages have 
been an important line of communication, being 
a natural saddle-like depression in the ridge which 
boinds the lake Fucinus on the E., so that the 
heart from the pass (a distance of 5 miles) presents 
with little difficulty. The latter is the highest point 
reached by the line of the Valeria Way in traversing 
the whole breadth of Italy from one sea to the other, 
but is elevated only a few hundred feet above the 
lake Fucinus. The Roman road across this pass 
was first rendered practicable for carriages by the 
emperor Claudius, who continued the Via Valeria 
from Cernusium to the mouth of the Atreus. [Cer- 
p. 154; Kramer, Forca Carra Occ. p. 460.) [E. H. R.] 

DIMADISUS or DIAPIADA, is a position on the 
sea-coast of Gallia Narbonensis between Tello (Talbon) 
and Massilia. The distances along the coast were 
doubtless accurately measured, but we cannot be cer- 
tain that they are accurately given in the MSS.; and it 
seems that the routes, especially in the parts near 
the coast, have been sometimes confounded. Imnadrus, 
the next station east of Marseille, is placed by 
D'Auville, and others who follow him, at the Isle 
de Maure; but the numbers will not agree. The 
real distance is much less than xii. M. P., which is 
the distance in the Itin. and D'Auville, applying his 
usual remedy, alters it to vii. But Walckenaer well 
objects to fixing on a little island or rock as the po- 

tion of Imnadrus, and then charging the Itinerary 
with being wrong. He finds the distance from a 
little bay west of Cap Morgiou to Marseille to 
agree with the Itin. measure of 12 M. P. [G. L.] 

IMMUNDUS SINUS (ἀναπλοτισμὸς κόλπος, Strab. 
iv. 770), (Pol. iii. 39; Plut. iv. 5, § 7; Plin. 
vi. 29, 33), the modern Fond Bay, in lat. 22° N., 
derived its appellation from the badness of its an- 
chorage, and the difficulty of navigating vessels 
among its numerous reefs and breakers. In its 

farthest western recess lay the city of Berenice, 
which, founded, or rather enlarged, by Ptolemy Philadelpus, 
and so named by him in honour of his mother, the 
wife of Ptolemy Soter; and opposite it was 
the island Ophiodes, famous alike for the reptiles 
which infested it, and its quarries of opal. The 
 latter was much employed by Egyptian artisans 
for ornamenting rings, scarabees, &c. [BERE- 
nice.] [W. B. D.]

IMUS PYRNEAEUS, a station in Aquitania, at 
the northern base of the Pyrenees, on the road from 
Argae Tarbellicae (Dax) to Pompeian (Pamplona) 
in Spain. Imus Pyreneus is between Carasa (Garica) 
and the Summus Pyreneus. The Summus 
Pyreneus is the Summet de Coste-Pucon; and the 
Imus Pyreneus is St. Jean-Pied-de-Port, "at the 
foot of the pass." The distance in the Itin. between 
Summus Pyreneus and Imus Pyreneus is v., 
which D'Auville would alter to x, to fit the real 
distance. Walckenaer takes the measure to be Gallic 
leagues, and therefore the v. will be equivalent to 
7½ M. P. [G. L.]

INCA (Inca, Pol. Eth. Iasia), a town of Sicily, 
the position of which is wholly unknown, except that 
Ptolemy reckons it among the inland towns in the 
south of the island. (Pol. iii. 4. § 15.) That author 
is the only one of the geographers that mentions it, 
and the name has been thought corrupt; but it is 
supported by the best MSS. of Ptolemy, and the 
reading "Inasia" is equally well supported in 
Cicero, 49; (Ful. iv. 45), where the old editions had 
"Inasia, an impant, ad loc." The orator appears to 
rank them among the minor communities of the 
island which had been utterly ruined by the exactions 
of Verres. [E. H. B.]

INACHORUM (Inchaoroum, Pol. iii. 17. § 2), 
a city of Crete, which, from the similarity of sound, 
Mr. Ashby (Trav., vol. ii. p. 78) is inclined to be- 
lieve was situated in the modern district of Enne- 
kiardos, on the N. coast of Crete. (Hick, Kreta, 
vol. i. p. 379.) [E. B. J.]

[Argos, p. 200, b.] 2. A river in the territory of Argos Amphiboli- 
com. [Argos Amphiblo, p. 208, b.]

INARIÉ. [AENARIA.]

INATUS (Iatiros, Pol. iii. 17. § 2), a city of 
Crete, the same, no doubt, as Elaiatus (Eiatros, 
Steph. B.; Heych. Epyn. Magn. v. c.), situated on 
a mountain near a river of the same name. The Peu- 
tinger Table puts a place called Itata on a river 24 
These distances agree well with the three or four 
hamlets known by the name Kasteliai, derived from the 
Venetian fortress. Castle Belvedere, situated 

on a hill a little to the N. of the villages. The
goddess Eileithyia is said to have been worshipped here, and to have obtained one of her epithets from it. (Callim., Fr. 168; Pausan., Trav. vol. i. p. 289; Hicck. Krato, vol. i. p. 412.) [E. B. J.]

INDIA.

INCARN.

and boundary; the distance is 12 M. P. The place is Carry, which retains its name. The distance of the Itin. was probably estimated by a boat rowing along the coast; and a good map is necessary to show how far it is correct. [G. L.]

INCRIBONES ('Τηριαλοι), a tribe of the Sigambri, mentioned only by Ptolemy (ii. 11. § 9). They apparently occupied the southernmost part of the territory inhabited by the Sigambri. Some believe them to be the same as the Ithobones of Tacitus (Ann. xiii. 57), in whose territory an extensive configuration of the soil occurred in A. D. 59. Some place them near the mouth of the river Lahn and the little town of Engera; while others, with less probability, regard Ingerstheim, on the Neckar, as the place once inhabited by the Incriones. [L. S.]

INDAPIRATHAE (Ἰνδοπάραθαι, Pol. viii. 2. § 18, and a name given to two peoples with the Sanskrit name Indo-pvrosao), a people occupying nearly the same position as the Medes. [V.]

INDIA (μΙdΙa, Polyæn. iv. 3. § 30; Plin. vi. 17. s. 20; των ίδίων γη, Arrian, Anab. v. 4; των ίδιων, Strab. xl. p. 514; Ἐλίκ. Ἱδίοις), a country of great extent in the southern part of Asia, bounded on the north by the great chain of the Himalaya mountains, which extend, under variously modified names, from the Brahmaputra river on the E. to the Indus on the W., and which were known in ancient times under the names Emodus and Ianaus. [Emodi Montes.] These mountains separated the plain country of India to the S. of them from the steppes of Tátyara on the N., and formed the water-shed of most of the great rivers with which India is so plentifully supplied. On the E. the Brahmaputra, which separates it from Arass and Barmoh, is its principal boundary; though, if the definition of India be adopted which was in vogue among the later classical geographers, those countries as far as the commencement of the Chinese empire on the S. must be comprehended within the limits of India. On the S. it is bounded by the Bay of Bengal and the Indian Ocean, and on the W. by the Indus, which separates it from Gedrosia, Arachosia, and the land of the Parapamisade. Some writers, indeed (as Lassen, Pentop. Indic. Bonn. 1827), have considered the districts along the southern spurs of the Parapamisus (or Hindu-Kush) as part of India; but the passage of Pliny on which Lassen relies would make India comprehend the whole of Afghanistan to Beluchistan on the Indian Ocean; a position which can hardly be maintained as the deliberate opinion of any ancient author.

It is, indeed, doubtless that the Indians themselves ever laid down any accurate boundary of their country westward (Laws of Manu, ii. 22, quoted by Lassen, Pentop. Indic. Bonn. p. 8); though the Soraunati (Hymnates) surveyed their sacred land from Western India. Generally, however, the Indians was held to be their western boundary, as is clear from Strabo's words (xv. p. 689), and may be inferred from Pliny's description (vi. 20. s. 23).

It is necessary here we proceed to give the principal divisions, mountain ranges, rivers, and cities of India, to trace very briefly, through the remains of classical literature, the gradual progress of the know-

ledge which the ancient world possessed of this country; a land which, from first to last, seems to have been to them a constant source of wonder and admiration, and therefore not unnaturally the theme of many strange and fabulous relations, which even their most critical writers have not succeeded in discounting.

Though the Greeks were not acquainted with India in the heroic ages, and though the name itself does not occur in their earliest writers, it seems not unlikely that they had some faint idea of a distant land in the far East which was very populous and fruitful. The occurrence of the names of objects of Indian merchandise, such as κασιντέρους, ἑλάφης, and others, would seem to show this. The same thing would seem to be obscurely hinted at in the two Aethiopias mentioned by Homer, the one towards the setting, and the other in the direction of the rising sun (Od. i. 33, 24); and a similar inference may probably be drawn from some of the early notices of these Aethiopians, whose separate histories are perpetually confounded together, many things being predicated of the African nation which could be only true of an Indian people, and vice versa. That there were there people who spoke the same language, called Aethiopes in the neighbourhood of, if not within the actual boundaries of India, is clear from Herodotus (vii. 70), who states in another place that all the Indians (except the Daradas) resembled the Aethiopians in the dark colour of their skins (iii. 101); while abundant instances may be observed of the intercourse of the accounts of the African and Indian Aethiopians, as, for example, in Ctesias (Indic. 7, ed. Bähr. p. 554), Pliny (viii. 30, 3), who quotes Ctesis, Scylax, in his description of India (op. Philostro. Vit. Apoll. iii. 14), Tzetzes (Chil. vii. 144), Aelian (Hist. vii. xvi. 31), Agatharchides (de Rubro Mari, p. 44, ed. Huds.), Polyb. (Onoasast. v. 5), and many other writers.

Just in the same way a confusion may be noticed in the accounts of Libya, as in Herodotus (iv. 168—199; cf. Ctesias, Indic. 13), where he intermixes Indian and African tales. Even so late as Alexander's invasion, we know that the same confusion prevailed, Alexander himself believing that he would find the sources of the Nile in India. (Strab. xv. p. 696; Arrian, Exped. Alex. vi. 1.)

It is not remarkable that the Greeks should have had but little knowledge of India or its inhabitants till a comparatively late period of their history, and that neither Homer nor Pindar, nor the great Greek dramatists Sophocles and Euripides, should mention by its name either India or any of its people. It is probably that, at this early period, neither commerce nor any other cause had led the Greeks beyond the shores of Syria eastward, and that it was not till the Persian wars that the existence of vast and populous regions to the E. of Persia itself became distinctly known to them. Some individual names may have reached the ears of those who inquired; perhaps some individual travellers may have heard of these far distant realms; such, for instance, as the physician Democedes, when residing at the court of Dareius, the son of Hystaspes (Herod. iii. 127), and Democritus of Abdera (n. c. 460—400), who is said by several authors to have travelled to Egypt, Persia, Aethiopia, and India (Dios. Laüt. ix. 72; Strab. xvi. p. 703; Clem. Strom. i. p. 304; Suidas, s. v.). Yet little was probably known beyond a few names.

The first historian who speaks clearly on the subject is Hecataeus of Miletus (n. c. 549—486). In the few fragments which remain of his writings, and which have been carefully collected by Klausen (Beri,
The notices preserved in Herodotus and the remains of Ctesias are somewhat fuller, both having had opportunities, the one as a great traveller, the other as a resident for many years at the court of Artaxerxes, which no previous writers had had. The knowledge of Herodotus (n.e. 484-408) is, however, limited to the account of the satrapies of Dareius; the twentieth of which, he states, comprehended that part of India which was tributary to the Persians (iii. 94), the country of the most Eastern people with whom he was acquainted (iii. 93-102). To the S. of them, along the Indian Ocean, were, according to his view, the Asiatie Arabians (iii. 94); beyond them, the Hindoo, who adds that the Indians were the greatest and wealthiest people known; he speaks of the Indus (on whose banks, as well as on those of the Nile, crocodiles were to be seen) as flowing through their land (iv. 44), and mentions by name Caspatyrus (a town of Pauctyce), the nomadic Indus (iii. 99), and the Calatine (iii. 38) or Calatian (iii. 97). He places also in the seventh satrapy the Gandari (91) [GANDHARA], a race whose, under the name of Gandharas, are known as a genuine Sanscrit-speaking tribe, and who may therefore be considered as connected with India, though their principal seat seems to have been on the W. side of the Indus, probably in the neighbourhood of the present Candober.

Cesass (about n.e. 490) wrote twenty-three books of Persica, and one of Indica, with other works on Asiatic subjects. These are all lost, except some fragments preserved by Photius. In his Persica he mentions places in Bactria (Fragm. 5, ed. Bahr) and Cyrtza, on the Erythraean sea (Fragm. 40); and in his Indica he gives an account of the Indus, of the manners and customs of the natives of India, and of its productions, some of which bear the stamp of a too credulous mind, but are of other amusing or valuable.

On the advance of Alexander through Bactria to the banks of the Indus, a new light was thrown on the geography of India; and the Greeks, for the first time, acquired with tolerable accuracy some knowledge of the chief features of this remarkable country. A number of writers—some of them officers of Alexander's army—devoted themselves to a description of different parts of his route, or to an account of the events which took place during his progress from Babylon to the Hyphasis; and in the separate narratives of Borton and Diogenes, Nearcuss, Onesicritus, Aristobulus, and Callisthenes, condensed and extracted by Strabo, Plyn, and Arrian, we owe most of our knowledge of India as it appeared to the ancients. None of the original works of these writers have been preserved, but the voyage of Nearcuss (the most important of them, though the places in India he names are few in number) has been apparently given by Arrian (in his Indica) with considerable minuteness. Nearcuss seems to have kept a day-book, in which he entered the distances between each place. He notices Patala, on the Indus (from which he started), and Coreas (perhaps the present Kurichm); Plyn, who calls this voyage that of Nearcuss and Onesicritus, adds some few places, not noticed by Arrian (vi. 26). Onesicritus himself considered the land of the Indians to be one-third of the whole inhabited world (Strab. xv. p. 691), and was the first writer who noticed Taprobane (Ceylon). (Hist. p. 691.) Both writers appear from Strabo, to have left interesting memorials of the manners and customs of the natives (Strab. xii. p. 517, xv. p. 726) and of the natural history of the country. (Strab. xv. pp. 693, 705, 716, 717; Adian. Hist. iii. 160; vii. p. 301, 302, 24, vii. 2, 2; Tzet. Chil. iii. 13.) Aristobulus is so frequently quoted by Arrian and Strabo, that it is not improbable that he may have written a distinct work on India: he is mentioned as noticing the swelling and floods of the rivers of the Parjub, owing to the melting of the snow and the rain (Strab. xvi. p. 691), the mouths of the Indus (p. 701), the Brahmanas at Taxia (p. 714), the trees of Hycania and India (xi. p. 509), the rice and the mode of its cultivation (xv. p. 692), and the fish of the Nile and India, respectively (xv. p. 707, xvii. p. 804).

Subsequently to these writers,—probably all in the earlier part of the third century B.C.—were some others, as Megasthenes, Dainachus, Patrocles and Timotheus, who contributed considerably to the increasing stock of knowledge relative to India. Of these, the most valuable additions were those received from Megasthenes of Alexandria and Dainachus, who were respectively ambassador from Seleucus II. to the Court of the King of the Droutonians (Chandragunta) and his successor Aliatroches (Strab. ii. p. 70, xv. p. 702; Plin. vi. 17, s. 21), or, as it probably ought to be written, Antatroches. Megasthenes wrote a work often quoted by subsequent writers, which he called τα ινδικα (Athen. iv. p. 133; Clem. Alex. Strom. i. p. 172; Joseph. c. Apion. ii. 20, Antig. x. 11, § 1), in which he probably embodied the results of his observations. From the fragments which remain, and which have been carefully collected by Schwanzbeck (Mogasthenes Indicus, Bonn, 1846), it appears that he was the first to give a tolerably accurate account of the breadth of India,—making it about 16,000 stadia (Arran, ii. 7, 8; Strab. i. p. 68. xv. p. 693).—to mention the Ganges by name, and to state that it was larger than the Indus (Arrian, v. 6, 10, Indic. 4, 13), and to give, besides this, some notice of no less than fifteen tributaries of the Indus, and some notice of no less than fifteen tributaries of the Indus. He remarked that India contained 118 nations, and so many cities that they could not be numbered (Arrian, Indic. 7, 10); and observed (the first among the Greeks) the existence of caste among the people (Strab. xv. p. 703; Arrian, Ind. 11, 12; Diod. ii. 40, 41; Solin. c. 92), with some peculiarities of the Indian religion system, and of the Brahmanes (or Brah-
The establishment of the mathematical schools at Alexandria, founded by Ptolemy, and continued through the ages by later mathematicians and astronomers, led to the development of the spherical geometry and trigonometry used by Eratosthenes. He was able to delineate the shape of the earth from the parallel of Meroe, but not so far N. as Hipparchus thought (Strab. p. 71). In addition, he correctly measured the size of the earth, estimating it to be about 24,000 miles in circumference. His work was greatly influenced by the geographical knowledge of the Greeks, who had been exploring the Mediterranean and the Black Sea for centuries. 

Eratosthenes was a member of the famous Library of Alexandria, where he worked alongside other great scholars such as Archimedes and Euclid. He was also a prolific writer, producing works on a wide range of subjects, including geography, astronomy, and mathematics. His most famous work, "Geography," is a comprehensive guide to the known world, with detailed descriptions of the lands, peoples, and cultures of the ancient world. 

Despite the limitations of the technology of his time, Eratosthenes was able to make significant contributions to the understanding of the world. His work laid the foundation for future explorers and mapmakers, and his methods of measuring distances and estimating the size of the earth were still in use long after his death. 

Our knowledge of the world has continued to grow and evolve since the time of Eratosthenes, but his work remains a testament to the power of human curiosity and the human desire to understand the world around us.
majority of subsequent geographers, from Ptolemy Subsequent to this date, there are few works which tall within the range of classical geography, or which have added any information of real value on the subject of India; while most of them have borrowed from Ptolemy, whose comprehensive work was so much in the hands of the later authors. From Agathemerus (at the end of the second century) and Dionysius Periegetes (towards the end of the third century) some few particulars may be gleaned:

— as for instance, from the latter, the establishment of the Indo-Scythi along the banks of the Indus, in Scinde and Gujarat; and, from a work known by the name of Periplus Maria Erythraei (the date of which, though late, is not certainly determined), some fragmentary notices of the shores of the Indian Ocean. Festus Avienus, whose paraphrase of Dionysius Periegetes supplies some lacunae in other parts of his work, adds nothing of interest to his metrical account of Indian Geography.

Such may serve as a concise outline of the progress of knowledge in ancient times relative to India. Before, however, we proceed to describe the country itself under the various heads of mountains, rivers, provinces, and cities, it will be well to say a few words on the origin of the name India, with some notice of the subdivisions which were in use among the earlier geographers, but which we have not thought it convenient in this place to perpetuate.

The names INDUS, INDIA, are no doubt derived from the Sanscrit appellation of the river, Sindhu, which, in the plural form, means also the people who dwell along its banks. The adjoining countries have adopted this name, with slight modifications: thus, Hindus is the form in the Zend or old Persian, Hindou in the Hebrew (Esther, i. 1, viii. 9). The Greek language softened down the word by omitting the h, hence Λίνους, Ινδίσια; though in some instances the native name was preserved almost unchanged, as in the Σίνδος of the Peripius Maria Erythraei. Pliny bears testimony to the native form, when he says, "Indus indea Sindus appellatur" (vi. 20. s. 23).

The great divisions of India which have been usually adopted are those of Ptolemy (vii. 1. § 1), into,— (1) India intra Ganges, a vast district, which was bounded, according to that geographer, on the W. by the Paropamisades, Arachosia, and Gedrosia; on the N. by the Imaus, in the direction of the Sogdian and Scaena; on the E. by the Ganges, and on the S. by a part of the Indian Ocean; and (2) India extra Ganges (Ptol. vii. 2. § 1), which was bounded on the W. by the Ganges; on the N. by Scythia and Serica; on the E. by the Sinae, and by a line extended from their country to the Μεγάλος κόσμος (Gulf of Siam); and on the S. by the Indian Ocean, and a line drawn from the island of Menuthias (Ptol. vii. 2. § 1), whence it appears that Ptolemy considered that the Ganges flowed nearly due N. and S. We have considered that this division is too arbitrary to be adopted here; we merely state it as the one proposed by Ptolemy and long current among geographers.

The later ecclesiastical writers made use of other terms, as η ἐκ θρήσκους 'Deba, in which they included even Arabia (Socrat. H. E. i. 19; Theol. i. 23; Theoph. i. 35), and η ἐκαρχή Ινδία (Socinian, ii. 23).

The principal mountains of India (considered as a whole) were—the eastern terminating the Paropamisades (or Harman Kuch), the Imaus (Himalaya), and the Eumesos (now known by the generic name of the Himalaya.) To the extreme E. were the Montes Semamaddi, the boundary of the land of the Sinæ, the Mauras Damanis, and the Beryrhus M. (probably the present Naraka M.). An extension of the M. Damanis is the Macandrus M. (now Meen-Maro). In India intra Ganges Ptolemy mentions many mountains, the names of which can with difficulty be supplied correctly, from the uncertain manuscripts. The Orulini M., in the S. extremity of the land between the Tyndis and the Chabernas; the Uxentus M., to the N. of them; the Adisathrns M.; the Bittigo M. (probably the range now known as the Ghats), and the M. Vindius (unquestionably the present Pindus), which extend NE. and SW. along the N. bank of the Nerbudda; M. Sardonicus (probably the present Sattipura); and M. Aposea (perhaps the present Arravali).

The principal promontories in India are,—in the extreme E., Promontorium Magnun, the western side of the Sinus Magnus; Malaei Colon, on the S. coast of the golden peninsula; Promontorium Aureum Chersonesii, the southern termination of the Sinus Subaracus, on the western side of the Chersonesus; Cory or Callicium, between the S. Araricus and the Semyllus, near the SW. end of the peninsula of Hindostan; Corvina (now C. Corvina), the most southern point of Hindostan; Cake Carinae (or Callicaria), between the towns Amangara and Mutziris; Simyella (or Semmilla, the southern end of the S. Barygazenus, perhaps the present C. St. John), and Maleum.

In the same direction from E. to W. are the following gulfs and bays:—the Sinus Magnus (now Gulf of Siam); S. Perimilicus, and Subaracus, on the E. and W. side of the Chersonesus Aurea; S. Gangeticus (Bay of Bengal), S. Araricus, opposite the N. end of Taprobane (probably Palks Bay); S. Colchicus (Bay of Maoras); S. Barygazenus (Gulf of Cambay), and S. Canthi (most likely the Gulf of Cutch).

The rivers of India are very numerous, and many of them of great size. The most important (from E. to W.) are the Dorias (Salwars?), and Dnanes (the Obor) draining the Chrysophas and the Tocozana (probably the present Arrakun), and the Cutabela (now Coromandel); the Ganges, with many tributaries, themselves large rivers. [Ganges.] Along the W. side of the Bay of Bengal are the Adamas (Brahmminy), Deosaran (Mahabadi), Macoelus (Godavar), Tyndis (Kistna), and the Chaberes or Chabersas (the Cawrei). Along the shores of the Indian Ocean are the Nasagamas (Tary), the Namadus (Namadura or Verhudo), and lastly the Indus, with its several tributaries. [INDUS.]

The towns in India known to the ancients were very numerous; yet it is remarkable that but few details have been given concerning them in the different authors of whose works fragments still remain. Generally, these writers seem to have been content with a simple list of the names, adding, in some instances, that such a place was an important mart for commerce. The probability is, that, even so late as Ptolemy, few cities had reached sufficient importance to command the productions of an extensive surrounding country; and that, in fact, with one or two exceptions, the towns which he and others enumerated were little more than the head places of small districts, and in no sense capitals of great empires, such as Ghazna, Delhi, and Cænacra have become in later periods of Indian history. Beginning from the extreme E., the principal states and towns mentioned in the ancient writers are: Perimilica
Triphylon, and the pattana, are Indraprastae, Northward rdfija, coast; the thalis Gange Argara of extremity and (Peripl. peninsula of Somewhat (most Following the 1. earliest Ozene and (Saurashtran)^ Again, no §§ the swamp-land called extremity of India. Its Barygaza near Ahmed-nagar), capital of Goa) the states of Pandava capital Cashmir of places Herodotus, of the range of the districts, and especially to the northward, near the head waters of the three western of the Five Rivers. A great change had no doubt taken place by the successful invasion of a great body of Scythians towards the close of the second century B.C., as they are known to have overthrown the Greek kingdom of Bactriana, at the same time effacing many of the names of the tribes whom Alexander had met with two centuries before, such as the Aspasi, Ava- ceni, Massiani, Hippasi; with the towns of Aca- dera, Daedala, Massaga, and Emboljma, which are preserved in Arrian, and others of Alexander's historians.

Further N., along the bases of the Parapamis, Imas, and Emnodus, in the direction from W. to E., we find mention of the Sampatae, the district Susante (now Sewand), and Gouries, with the towns Gourya and Dusyopola, or Nagara (now Nagar); and further E., between the Susatus and the Indus, the Gandarae (one, doubtless, of the original seats of the Gaudhiras). Following the mountain range to the E., we come to Casapia (now Cashmir, in earlier times known, as we have seen, to Herodotus, under the name of Caspatryus). Southward of Cashmir was the territory of Varsa, with its capital Taxila, a place of importance so early as the time of Alexander (Arrian, v. 8), and probably indicated now by the extensive remains of Manikyala (Burnes, Travels, vol. i. p. 65), if, indeed, these are not too much to the eastward. A little further S. was the land of Pandana (Pandanos cycopa, doubtless the representative of one of the Pandava dynasties of early Hindii history); during the time of Alexander the territory of the king Porus. Further eastward were the states that stand along the sources of the Sutlej, Jumna, and Ganges; and the Ganadz, whose territory extended into the highest range of the Himalaya.

Many small states and towns are mentioned in the historians of Alexander's campaigns along the upper Panjib, which we cannot here do more than glance at, as Pencelautis (Puskakkarekat), Nicaea, Bucephalia, the Glauconites, and the Sibas or Sibi. Following next the course of the Ganges, we meet with the Dariea, the Nanichea, Prasica; and the Mandalae, with its celebrated capital Palibothra (beyond all doubt the present Patilapatra, or Patua), situated at the junction of the Indus, Pattalene (Lower Scinde, and the neighbourhood of Kurachi), with its capital Pattala (Potala.)

It is much more difficult to determine the exact site of the various tribes and nations mentioned in ancient authors as existing in the interior of the country, than it is to ascertain the corresponding modern localities of those which occupied the sea-coast. Some, however, of them can be made out with sufficient certainty, by comparison of their classical names with the Sanscrit records, and in some instances with the modern native appellations. Following, then, the course of the Indus northwards, we find, at least in the times of Toleomy and of the Periplos, a wide-spread race of Scythian origin, occupying both banks of the river, in a district called, from them, INDO-SCYThIA. The exact limits of their country cannot now be traced; but it is probable that they extended from Pattalene on the S. as far as the lower ranges of the Hindu-Kush,—in fact, that their empire swayed over the whole of modern Scinde and the Panjib; a view which is borne out by the extensive remains of their Toges and coinages in this district, and especially in the districts, and especially to the northward, near the head waters of the three western of the Five Rivers. A great change had no doubt taken place by the successful invasion of a great body of Scythians towards the close of the second century B.C., as they are known to have overthrown the Greek kingdom of Bactriana, at the same time effacing many of the names of the tribes whom Alexander had met with two centuries before, such as the Aspasi, Ava-ceni, Massiani, Hippasi; with the towns of Aca- dera, Daedala, Massaga, and Emboljma, which are preserved in Arrian, and others of Alexander's historians.

Further N., along the bases of the Parapamis, Imas, and Emnus, in the direction from W. to E., we find mention of the Sampatae, the district Susante (now Sewand), and Gouries, with the towns Gourya and Dusyopola, or Nagara (now Nagar); and further E., between the Susatus and the Indus, the Gandarae (one, doubtless, of the original seats of the Gaudhiras). Following the mountain range to the E., we come to Casapia (now Cashmir, in earlier times known, as we have seen, to Herodotus, under the name of Caspatryus). Southward of Cashmir was the territory of Varsa, with its capital Taxila, a place of importance so early as the time of Alexander (Arrian, v. 8), and probably indicated now by the extensive remains of Manikyala (Burnes, Travels, vol. i. p. 65), if, indeed, these are not too much to the eastward. A little further S. was the land of Pandana (Pandanos cycopa, doubtless the representative of one of the Pandava dynasties of early Hindii history); during the time of Alexander the territory of the king Porus. Further eastward were the states that stand along the sources of the Sutlej, Jumna, and Ganges; and the Ganadz, whose territory extended into the highest range of the Himalaya.

Many small states and towns are mentioned in the historians of Alexander's campaigns along the upper Panjib, which we cannot here do more than glance at, as Pencelautis (Puskakkarekat), Nicaea, Bucephalia, the Glauconites, and the Sibas or Sibi. Following next the course of the Ganges, we meet with the Dariea, the Nanichea, Prasica; and the Mandalae, with its celebrated capital Palibothra (beyond all doubt the present Patilapatra, or Patua), situated at the junction of the Indus, Pattalene (Lower Scinde, and the neighbourhood of Kurachi), with its capital Pattala (Potala.)
the Emamolens (Hirunjiraka) and the Ganges with some smaller states, as the Sura-sena, and the towns Methora and Clisobra, which were subject to the Prasii. Southward from Pulibothra, in the interior of the plain country, dwelt the Cocomaag, on the banks of the Adana, the Saharae, the Salaceni, the Drilophylitae, the Adeschatiri, with their capital Sagda (probably the present Sehnpur), situated on the northern spurs of the Vindhyah, at no great distance from the sources of the Sanc. Between the Sonus and the Ganges were the Bolidae. In a NW. direction, beyond the Sonus and the Vindhyah, we find a territory called Sandrabhati, and the Gymnosophitae, who appear to have occupied the country now called Sirhind, as far as the river Surdaga. The Casperaii (at least in the time of Ptolemy; see Prov. vii. 1, § 47) seem to have extended over a considerable breadth of country, as their sacred town Medura (Melopus 7 7.2. Strow) was situated, apparently, at no great distance from the Nerobuda, though its exact position has not been identified. The difficulty of identification is much, indeed, increased by the error of reckoning which prevails throughout Ptolemy, who held that the coast of India towards the Indian Ocean was in a straight line E. and W. from Taprobane and the Indus, thereby placing Xanagana and the Namadus in the same cardinal points. Besides the southern spurs of the Vindhyah, between the Namadus and Xanagana, on the edge of the Deccan, were the Phyllitae and Gondali; and to the E. of them, between the Bittig M. and the river Chaberus (Cowtr.), the nomad Sarac (Zaptri yua détey), with a chief town Sora, at the eastern end of M. Bittico. To the southward of these, on the Chaberus and Solen, were several smaller tribes, the Brahsmajj Magi, the Ambazare, Bittici or Bitti, and the Tabasti.

All the above-mentioned districts and towns of any importance are more fully described under their respective names.

The ancients appear to have known but little of the islands which are now considered to form part of the East Indies, with the exception of Taprobane or Ceylon, of which Pliny and Ptolemy have left some considerable notices. The best period of such information was during the time of Pliny, and the later part of the world's history that the Indian Archipelago was fully opened out by its commercial resources to scientific inquiry. Besides Ceylon, however, Ptolemy mentions, in its neighbourhood, a remarkable cluster of small islands, doubtless (as we have remarked before) those now known as the Laccadives and Maldives; the island of Tablas (Jora), before the Chersonesus Aurica, and the Natobrasion Inoche, on the same parallel with the S. end of this Chersonesus, which may perhaps answer to the Amsudha or Natana islands.

Of the government of India, considered as a whole, comparatively little was known to the Greek writers; indeed, with the exception of occasional names of kings, it may be asserted that they knew nothing of E. of Pulibothra. Nor is this strange; direct connection with the interior of the country ceased with the fall of the Greek-Bactrian empire; from that period almost all the information about India which found its way to the nations of the West was derived from the merchants and others, who made voyages to the different out-ports of the country. It may be worth while to state briefly here some of the principal rulers mentioned by the Greek and Roman writers; premising that, previous to the advance of Alexander, history is on these subjects silent. Previous, indeed, to Alexander, we have nothing on which we can rely. There is no evidence that Darius himself invaded any part of India, though a portion of the NW. provinces of Bactria may have paid him tribute, as stated by Herodotus. The expeditions of Dionysus and Hercules, and the wars of Sesostris and Semiramis in India, can be considered as nothing more than fables too credulously recorded by Ctesias. At the time of the invasion of Alexander the Arrian, there can be no doubt that Indus was a settled monarchy in the western part of India, and his dealings with it are very clearly to be made out. In the north of the Punjab was the town or district Taxila (probably Manikya, or very near it), which was ruled by a king named Taxiles; it being a frequent Indian custom to name the king from the place he ruled over. His name in Diodorus is Mophis (xvii. 80), and in Curtius, Ompsis (viii. 12), which was probably the real one, and is itself of Indian origin. It appears that Alexander left his country as he found it. (Strab. xiv. pp. 698, 699, 716.) The name of Taxiles is not mentioned in any Indian author. The next ruler Alexander met with was Porus (probably Porwarru Sancsa; a change which Strabo indicates in that of Πανοκτων into Πανοκτων, with whom Taxiles had been at war. (Arrian. vi. 41.) Alexander appears to have succeeded in reconquering them, and to have increased the empire of Porus, so as to make his rule comprehend the whole country between the Hydaspes and Acesines. (Arrian, v. 20, 21, 29.) His country is not named in any Indian writer. Shortly afterwards, Alexander received an embassy and presents from Abisares (no doubt Abhisiras), whose territory, as has been shown by Prof. Wilson from the Annals of Chaldae, must have been in the mountains in the southern part of that province. (Asiat. Res. vol. xv. p. 116.) There had been previously a war between this ruler and the Malii, Oxymenes, and the people of the Lower Punjab, which had ended in nothing. Alexander confirmed Abisares in the possession of his own territory, made Philip satrap of the Malii and Oxymenes, and Pytho of the land between the confluence of the Indus and Acesines and the Punjab (Arr. vi. 13), who had been in the mountains of Oxymenes, or the Paropamisades. (Arr. vi. 15.) It may be observed that, in the time of Ptolemy, the Cashmirians appear to have held the whole of the Panjab, so far as the Vindhyah mountains, a portion of the southern country being, however, in the hands of the Malii and Cathoci.

The same state of things prevailed for some time after the death of Alexander, as appears by a decree of Perdiccas, mentioned in Diodorus (xviii. 3), and with little material change under Antipater. (Diod. xviii. 39.) Indeed, the provinces remained true to the Macedonians till the commencement of the rule of the Prasii, when Sandrocottus took up arms against the Macedonian governors. (Justin. xiv. 4.) The origin of this rebellion is clearly traceable. Porus was slain by En-damus about B.C. 317 (Diod. xix. 14); hence Sandrocottus must have been on the throne about the time that Seleucus took Babylon, B.C. 312. The attempt of the Indians to recover their freedom was probably aided by the fact that Porus had been slain by a Greek. Sandrocottus, as king of the Prasii (Sancsa. Prachya) and of the nations on the Ganges, made war with Seleucus Nicator, who penetrated far into India. Plutarch says he ruled over all India, but this is not likely. (Plut. Alex. 62.) It appears
that he crossed the Indus, and obtained by marriage Arachosia, Gedrosia, and the Parthian province, from Seleucus. (Strab. xvi. p. 294; Apian, Syr. 55.) It was to his court that Megasthenes (as we have before stated) was sent. Samroocottus was succeeded by Amritrochates (Sane. Amritrochatos), which is almost certainly the true form of the name, though Strabo calls him Allirochatres. He was the contemporary of Antiochus Soter. (Ath. xiv. 67.) It is clear, from Athenaeus (l. c.), that the same friendship was maintained between the two monarchs, and the letters and gifts between the two fathers. Daimarchus was sent as ambassador to Palibothra. (Strab. ii. p. 70.) Then came the wars between the Parthians and Bactrians, and the more complete establishment of the Graeco-Bactrian kingdom, under Menander, Apollodotus, Eucratides, and their successors, to which we cannot here do more than allude. The effect, however, of these wars was to interrupt communication between the East and the West; hence the meagre nature of the historical records of the period. The expedition of Antiochus the Great to India brought to light the name of another king, Sophasagares (Polyb. xi. 32), who was, in all probability, king of the Prasis. The Scythians finally put an end to the Bactrian empire about B.C. 136. (De Guignes, Mém. de l'Acad. d. Insir. xxv. p. 17.)

This event is noticed in the Peripius (p. 22), where, however, Parthi must be taken to mean Scythi. (Cf. De Guignes, Peripl. vi. 1087—1085.) Eustathius adds, in his commentary on Dionysius: — Oi ki 'Ipeodouhara svntivdias legumh-roi. Ninnagara was their chief town, a name, as appears from Isid. Char. (p. 9), which was partly Scythian and partly Sanscrit. (Cf. also De Guignes, l. c.)

The Scythians were in their turn driven out of India by Vercarnas, about B.C. 56 (Colebrooke, Ind. Alg. p. 43, 1817, p. 43), who established his seat of empire at Ogein (Ugjaini). At the time when the Peripius was compiled, the capital had been again changed, as we there read, 'Oqphr, en u y kal ta Basileia tetrarof y. It is remarkable that no allusions has been found in any of the early literature of the Hindus to Alexander the Great; but the effect of the later expeditions of the Bactrians is more than parochially to be seen under the name of the Yavana. In the astronomical works, the Yavana are barbarians who understood astronomy, whence it has been conjectured by Colebrooke that the Alexandrians are referred to. (Ind. Alg. p. 80.) Generally, there can be no doubt that the Parava mean nations to the W. of India. Thus, in the Mahabharata, they make war on the Indians, in conjunction with the Parthi (i.e. Parthi), and the Kos or Scythians. (Lassen, Pentap. p. 60.) In the Drama of the Madra-Raxa, which refers to the war between Chandragupta and another Indian king, it is stated that Cannabisapura (i.e. Palibothra) was surrounded by the Cirmata, Tavani, Cambogi, Perane, Bactrians, and the other forces of Chandragupta, and the king of the Mountain Regions. Lassen thinks, with much reason, that this refers to Seleucus, who, in his war with Chandragupta, reached, as we know, Palibothra. (Plin. vi. 17.)

With regard to the commerce of ancient India, which we have every reason to suppose was very extensive, it is impossible in this place to do more than to indicate a few of the principal facts. Indeed, the commerce of India, including the northern and the southern districts, may be considered as an epitome of the commerce of the world, there being few pro-

ductions of any other country which may not be found somewhere within its vast area.

The principal directions in which the commerce of ancient India flowed were, between Western India and Africa, between the interior of the Decan and the outports of the southern and western coast of the Indian Ocean, between Ceylon and the ports of the Coromandel coast, between the Coromandel coast and the Anura Chersonesos, and, in the N., along the Ganges and into Tartary and the territory of the Nandis. There appears also to have been a remarkable trade with the opposite coast of Africa, along the district now called Zanguebar, in sesame, rice, cotton goods, cane-honey (sugar), which was regularly sent from the interior of Arian (Concan) to Barygaza (Boroach), and thence westward. (Perip. p. 8.) Arab sailors are mentioned who lived at Musa (Mocha), and who traded with Barygaza. (Perip. p. 12.) Banians of India had established themselves on the N. side of Soocota, called the island of Dioscorides (Perip. p. 17); while, even so early as Agatharchides, there was evidently an active commerce between Western India and Yemen. (Agatharch. p. 66, ed. Hudson.) Again, the rapidity with which Alexander got his fleet together seems to show that there must have been a considerable commerce by boats upon the Indus. At the time of the Peripius there was a chain of ports along the western coast, — Barygaza (Boroach), Muziris in Lymryca (Mangalore), Nelkynda (Nelccesara), Pattala (once supposed to be Tatta, but much more probably Hydrosbod), and Calliene, now Gallion (Perip. p. 30); while there were three principal emporia for merchandise, — Ozene (Ogyina), the chief mart of foreign commerce, (vide an interesting account of its ruins, 'Arotd. R. v. p. 36), and for the transshipment of the goods to Barygaza; Tagara, in the interior of the Decoan (almost certainly Deoghir or Deconagari near Ellora), whence the goods were conveyed over difficult roads to Barygaza and Pithibana or Pithiana, a place the exact position of which cannot now be determined, but, from the character of the products of the place, must have been somewhere in the Ghatis.

Along the Ripa Parathwa to the S., and on the Coromandel coast, were several ports of consequence; and extensive pearl fisheries in the kingdom of Pandion, near Colchi, and near the island of Epiondoros, where the parvrid (a silky thread spun from the Pinnu-fish) was procured. (Perip. p. 33.) Further to the N. were, — Masalia (Mountpatala), famous for its cotton goods (Perip. p. 35); and Ganga, a great mart for muslin, bheel, pearis, &c., somewhere near the mouth of the Ganges, its exact locality, however, not being now determinable. (Perip. p. 36.) The commerce of Ceylon (Solathith, i.e. Sinhala-sihega) was in pearls of the best class, and precious stones of all kinds, especially the ruby and the emerald. The notices in Ptolemy and Pliny show that its shores were well furnished with commercial towns (Ptol. vii. 4, §§ 3, 4, 5), while we know from the mariner's chart of Cosmas Indicopleus and the topographical work of Montfaucon, Col. Nova Bibl. Petr. v. ii.) that it was, in the sixth century A.D., the centre of Hindu commerce. Besides these places, we learn that there was an emporium upon the Coromandel coast, whence the merchant ships crossed over to Chryse (in all probability Malaccas), in the Anura Chersonesos; the name of if, however, is not specified.

It is probable, however, that the greatest line of commerce was from the N. and W. along the
INDIA.

The term "India" is derived from the ancient Greek word "India," which was used to describe the lands to the east of Greece. The term appears in Greek sources as early as the 5th century BC, and it is believed that the Greeks were the first to use it to refer to the region.

The Greeks were the first Europeans to explore and describe the lands of India. They were interested in the region for its wealth and its exotic commodities, such as spices, which were highly valued in the ancient world.

The Greeks were also interested in the languages and cultures of the Indians. They recorded the names of many Indian cities and towns, and they wrote about the customs and traditions of the Indian people.

Some of the most important Greek sources on India are the works of Herodotus, who wrote about India in his Histories, and of Strabo, who wrote about India in his Geographica.

Herodotus' account of India is based on information that he had gathered from Greek traders and sailors who had visited the region. He describes the countries of India as being ruled by kings and emperors, and he notes that the Indians were skilled at agriculture and trade.

Strabo's account of India is based on information that he had gathered from Greek and Roman sources, as well as from his own travels. He describes the lands of India as being divided into several regions, each of which had its own rulers and customs.

Both Herodotus and Strabo were interested in the languages and cultures of the Indians. They recorded the names of many Indian cities and towns, and they wrote about the customs and traditions of the Indian people.

The Greek sources on India are valuable for historians, as they provide a window into the minds of the ancient Greeks, who were fascinated by the strange and exotic cultures of the East.

In conclusion, the term "India" is derived from the ancient Greek word "India," and it was first used to describe the lands to the east of Greece. The Greeks were the first Europeans to explore and describe the lands of India, and they wrote about the region in their works of history and geography. Their accounts provide valuable insights into the languages and cultures of the Indians, and they are an important source for historians who study the history of India.
INDIA.

7. The Royal Counselors, who presided over the administration of justice (Strab. l.c.), and kept the archives of the realm.

It was not permitted for intermarriages to take place between any of the other classes, nor for any one to perform the office allotted to another, except in the case of the first caste (called also that of the Brahmanes), to which classes a man might be raised from any of the others.

Strab. l.c.; Arrian, Ind. c. 12; Diod. ii. 41; Plin. vi. 19. s. 22.

We may remark that the modern writers on India recognise only four castes, called respectively Brahmanes, Kshatriyas, Vaishyas, and Sudras,—a division which Heren has suggested (we think without sufficient evidence) to indicate the remains of distinct races. (Asiat. Nat. vol. ii. p. 230.)

The lowest of the people (Pariahs), as belonging to none of the above castes, are nowhere distinctly mentioned by ancient writers (but cf. Strab. xv. p. 709; Diod. ii. 29; Arrian, Ind. c. 10).

The general description of the Indians, drawn from Megasthenes and others who had lived with them, is very pleasant. Theft is said to have been unknown, so that houses could be left unfastened. (Strab. xv. p. 709.)

No Indian was known to speak falsehood. (Strab. xv. p. 709.) Arrian speaks of the Indians as extremely temperate, abstaining wholly from wine (Strab. l.c.),—their hatred of drunkenness being so great that any girl of the harem, who should see the king drunk, was at liberty to kill him. (Strab. xv. p. 710.)

No cast eat meat (Herod. iii. 100), their chief sustenance being rice, which afforded them also a strong drink, i.e. arrack. (Strab. xv. p. 694.) Hence the special freedom from diseases, and long lives; though maturity was early developed, especially in the female sex, girls of seven years old being deemed marriageable.

Strab. xv. pp. 701—706; Arrian, Ind. 9.

The women are said to have been remarkable for their chastity, it being impossible to tempt them with any smaller gifts than that of an elephant (Arrian, Ind. c. 17), which was not considered credible by their countrymen; and the usual custom of marriage was for the father to take his daughters and to give them in marriage to the youths who had distinguished themselves most in gymnastic exercises. (Arrian, l.c.; Strab. xv. p. 717.)

To strangers they ever showed the utmost hospitality. (Diod. ii. 42.) As warriors they were formidable (Arrian, Ind. c. 9; Expel. Alex. v. 4; Plut. Alex. c. 59, 63); the weapons of the foot-soldiers being bows and arrows, and a great two-handed sword; and of the cavalry, a javelin, a shield, and round shield (Arrian, Ind. c. 16; Strab. xv. p. 717; Curt. viii. 9.) In the Karyb, it is said that the Macedonians encountered poisoned arrows. (Diod. xvii. 103.)

Manly exercises of all kinds were in vogue among them. The chase was the peculiar privilege of royalty (Strab. xv. pp. 709—712; Ctes., Ind. 14; Curt. viii. 9, seq.), gymnastics, music, and dancing, of the rest of the people (Strab. xv. p. 709; Arrian, Expel. Alex. vi. 9); and juggling and slight of hand were then, as now, among their amusements. (Aelian, vii. 7; Jurcan. vi. 582.)

Their usual dress befitted their hot climate, and was of white linen (Philost. Vit. Apoll. ii. 9) or of cotton-stuff (Strab. xv. p. 719; Arrian, Ind. c. 16); their heads and shoulders partially covered (Arrian, l.c.; Curt. vii. 9, 15) or shaded from the sun by umbrellas (Arrian, l.c.); with shoes of white leather, very thick and many-coloured soles. (Arrian, l.c.)

Gold and ivory rings and ear-rings were in common use; and they were wont to dye their beards, not only black and white, but also red and green.

(Arrian, l.c.) In general form of body, they were thin and elegantly made, with great liteness (Arrian, Ind. c. 17; Strab. ii. p. 103, xv. p. 695), but were larger than other Asiatics. (Arrian, Expel. Alex. v. 4; Plin. vii. 2.)

Some peculiar customs they had, which have lasted to the present day, such as self-immolation by water or fire, and throwing themselves from precipices (Strab. xv. pp. 716, 718; Curt. viii. 9; Arrian, Expel. Alex. vii. 5; Lucan. iii. 42; Plin. vi. 19. s. 20), and the burning of the widow (suttee); not, indeed, accordingly to any fixed law, but rather according to custom. (Strab. xv. pp. 699—714; Diod. xvii. 91, xix. 33; Cix. Tusc.Disp. v. 27.)

For writing materials they used the reed-pen (Strab. xv. p. 717; Curt. ix. 15), probably much as the modern Cinghalens use the leaf of the palm. Their houses were generally built of wood or of the bamboo-cane; but in the cold mountain districts, of clay. (Arrian, Ind. c. 10.)

It is a remarkable proof of the extent to which civilisation had been carried in ancient India, that there were, throughout, generally part of the country, high roads, with stones set up (answers to our ordinary milestones) which were inscribed with the name of the place and the distance to the next station. (Strab. xv. pp. 698—708; Arrian, Ind. c. 3.)

INDICUS OCEANUS (ο Ἰνδικος Θαλασσος, Agath. ii. 13; θαλασσον η Πολυδοτος, Ptol. vii. i. § 5.)

The Indian Ocean of the ancients may be considered generally as that great sea which washed the whole of the southern portion of India, extending from the parallel of longitude of the mouths of the Indus to the shores of the Chersonesus Aurea. It seems, indeed, to have been held by them as part, however, of a yet greater extent of water, the limits of which were undefined, at least to the southwards, and to which they gave the generic name of the Southern Sea. Thus Herodotus speaks of ἡ νωτί δαναος in this sense (iv. 37), as does also Strabo (ii. p. 121); Diodorus calls it ἡ κατι μεγαθαιμιαν θαλασσα (ii. 38), while the Erythraean sea, taken in its most extended meaning, doubtless conveyed the same sense. (Herod. ii. 102, iv. 37; compared with Strab. i. p. 33.)

Ptolemy gives the distances across this sea as stated by seafaring men; at the same time he guards against their over-statements, by recording his opinion in favour of no more than one-third of their measurements: this space he calls 8870 stadia (i. 13 § 7). The distance along its shores, following the innumerable of the coast-line, he estimates, on the same authority, at 19,000 stadia. It is evident, however, that Ptolemy himself had no clear idea of the real form of the Indian Ocean, and that he inclined to the opinion of Hipparchus, Polybius, and Marinus of Tyre, that it was a vast inland sea, the southern portion of it being bounded by the shores of an unknown land which he supposed to connect Cattigara in the Chersonesus Aurea with the promontory of Prasian (now Cape Dolbado) in Africa (comp. iv. 9, §§ 1, 3, vii. 3. §§ 1, 3, 6.). The origin of this error it is not easy now to ascertain, but it seems to have been connected with one which is found in the historians of Alexander's expedition, according to which there was a connection between the Indus and the Nile, so that the sources of the Acseine (Chenub) were confounded with those of the Nile. (Arrian, vi. 1.)

Strabo, indeed, appears to have had some leaning to a similar view, in that he connected the Erythraean with the Atlantic sea (ii. p. 130); which was also
the opinion of Eratosthenes (Strab. i. p. 64). The Indian Ocean contains at its eastern end three principal gulfs, which are noticed in ancient authors,—the Sinus Perimelicus (Ptol. vii. 2 § 5), in the Chersonesus Aurea (probably now the Straits of Malacca); the Sinus Nararacae (Ptol. vii. 2 § 4), now the Gulf of Martaban; and the Sinus Gangeticus, or Bay of Bengal. 

[Strab. i. p. 160, iv. p. 178.]

INDIGETES, INDIGETAE, (Ibys/epr, Strab.; Ebypric, Ptol.), a people in Ionia.

INDIUS (ΣΤΕΠ), one of the principal rivers of Asia, and the boundary westward of India. It is mentioned first in ancient authors by Herodotus (Herod. 144. ed. Klauses), and subsequently by Herodotus (iv. 44), who, however, only notices it in connection with various tribes who, he states, lived upon its banks. As in the case of India itself, so in that of the Indus, the first real description which the ancients obtained of this river was from the historians of Alexander the Great's marches. It was stated by several of the Greek authors that its sources were in the lower spurs of the Paropamisades, or Indian Caucasus (Hindu-Kush); wherein he agrees with Mela (i. 7. § 6). Strabo (xv. p. 690), Curtius (viii. 9. § 3), and other writers. It was, in Arrian's opinion, a vast stream, even from its first sources, the largest river in the world except the Ganges, and the recipient of many tributaries, themselves larger than any other known stream. It has been conjectured, from the descriptions of the Indus which Arrian has preserved, that the writers from whom he has condensed his narrative must have seen it at the time when its waters were at their highest, in August and September. Quoting from Ctesias (v. 4.11), and with the authority of the other writers (v. 20), Arrian gives 40 stadia for the mean breadth of the river, and 15 stadia where it was most contracted; below the confluence of the principal tributaries he considers its breadth only to be 100 stadia on the level even more than this when much flooded (vi. 14). Pliny, on the other hand, considers that it is nowhere more than 50 stadia broad (vi. 20. s. 23), which is clearly the same opinion as that of Strabo, who states, that though those who had not measured the breadth put it down at 100 stadia, those, on the other hand, who had measured it, asserted that 50 stadia was its greatest and 100 stadia its mean breadth (xv. p. 700). Its depth, according to Pliny (l. c.), was nowhere less than 15 fathoms. According to Diodorus, it was the greatest river in the world after the Nile (ii. 35). Curtius states that its waters were cold, and of the colour of the sea (viii. 9. § 4). Its current is held by some to have been slow (as by Mela, iii. 7. § 6); by others, rapid (as by Estrab. in Dionys. Perieig. v. 1088). Its course towards the sea, after leaving the mountains, is nearly north and west, and it is the same in its way it received, according to Strabo (xv. p. 700) and Arrian (v, 6), 15, according to Pliny, 19 other tributary rivers (l. c.). About 2000 stadia from the Indian Ocean, it was divided into two principal arms (Strab. xv. p. 701), forming thereby a Delta, like that of the Nile, though not so large, called Pattaleia, from its chief town Pattala (which Arrian asserts meant, in the Indian tongue, Delta (v. 4); though this statement may be questioned), (Cf. also Arrian, Ind. 3; Dionys. Perieig. v. 1088.) The flat land at the mouths of rivers which flow from high mountain-ranges with a rapid stream, is ever changing: hence, probably, the different accounts which we receive of the mouths of the Indus from those who recorded the history of Alexander, and from the works of later geographers. The former (as Horae, and other writers) state that the Indus only two principal outlets into the Indian Ocean,— at a distance, the one from the other, according to Aristobulus (ap. Strab. xv. p. 690), of 1090 stadia, but, according to Nearchus (l. c.), of 1800 stadia. The latter mention more than two mouths; Mela (iii. 7. § 6), speaking of "Phra esteia," and Ptolemy giving the names of seven (vii. 1. § 28), in which he is confirmed by the author of the Periplus Maris Erythraei (p. 22). The names
of these mouths, in a direction from W. to E., are:—
1. *Σάγιαντα στέμα* (the *Pitti* or *Lochari*), not improbably in the arm of the stream by which Alexander's fleet gained the Indian Ocean; 2. *Σάνδουρα στέμα* (the *Ritala*); 3. *Χρυσάντω στέμα* (the *Pogamarti* or *Kokanvari*), whereby merchandise and goods ascended to Tutta; 4. Χάφωνα στέμα (the *Mala*?); 5. *Σά-παρα*; 6. *Σάδελα* or *Σαδάλα* (the *Pingari* or *Sir*); 7. *Λαντέρ* (probably *Lorinari*, the *Purana*, *Dorje* or *Kori*). For the conjectural identifications of these mouths, most of which are now closed, ex- cept in high floods, see *Lassen's Map of Ancient India*. The principal streams which flowed into the Indus arc:—on the right or western bank of the river, the Chouspas, called by Arrian the Gurnees, and by Ptolemy the *Sanstus* (the *Attock*); and the Cophen (*Cabin* river), with its own smaller tributary the *Choos* (the *Kou*); and, on the left or eastern bank, the greater rivers,—which give its name to the *Pan- jab* (or the country of the Five Rivers),—the *Acesines* (*Ungul*), the *Hal/icon* or *Bilaspes* (*Jelum*), the *Hansras* (*Ravi*), and the *Hyphasis or Hyparxis* (the *Sutlej*). [See these rivers under their re- spective names.] As in the case of the Ganges, so in that of the Indus, it has been left to modern researches to determine accurately the real sources of the river: it is now well known that the Indus rises at a considerable distance on the NE. side of the *Himadryas*, in what was considered by the Hindus their most sacred land, and in the district in which, on opposite sides of the mountains, the *Brakmaputra*, the *Ganges*, and the *Jumna*, have their several sources. From its source, the Indus flows NW. to *Iskaru* and thence W. and SW., till it bursts through the mountain barriers, and descends into the plain of the *Panjib*, passing along the western edge of *Cashmire*. (Kitter, *Erdkunde*, vol. iv. p. 216; Moorcroft, *Journ. Ld. Inst. and Cashmer*, 1841.) The native name *Sindu* has been preserved with remarkable accuracy, both in the Greek writers and in modern times. Thus, in the Peri- plus, we find *Σινδήσ* (p. 23); in *Ptolem., Σινδησ* (vii. 1. § 2), from which, by the softening of the Ionic pronunciation, the Greeks obtained their form *Indos*. (Cf. *Ptole. vi. 20; Cosmas, *Indic. p. 357*.) The present name is *Sind* or *Sindhu*. (Kitter, vol. iv. p. 299.)

**INDUS**, a river of the south-east of Caria, near the town of Cibyra. On its banks was situated, ac- cording to *Livy* (xxxvii. 14), the fort of Thalassoc. *Pline* (v. 29) states that sixty other rivers, and up- wards of a hundred mountain torrents, emptied them- selves into it. This river, which is said to have received its name from some Indian who had been thrown into it from an elephant, is probably no other than the river *Callis* (*Kallis*, *Strab. xiv. p. 561; *Ptol. v. 2, § 11; *Pomp. Mela. i. 16*), at present called *Quigiy*, or *Taros*, which has its sources on Mount Cadmus, above Cibyra, and passing through Caria empties itself into the sea near Canusos, oppo- site to the island of Rhodes. [L. S.]

**INDUSTRIA**, a town of Liguria, situated on the right bank of the Padus, about 20 miles below Turin. It is mentioned only by Pline, who tells us that its ancient name was BODONICOMAGUS, which he connects with Bodinica, the native name of the Padus (*Padus*), and adds that it was at this point that river first attained a considerable depth. (*Pline* iii. 16. s. 20.) Its site (which was erroneously fixed by earlier writers at *Casale*) has been established beyond question at a place called *Monte di Po*, a few miles below Chiesa, but on the right bank of the river, where excava tions have brought to light numerous coins and objects of ancient art, some of them of great beauty, as well as several inscriptions, which leave no doubt that the remains thus dis- covered are those of Industria. They also prove that it enjoyed municipal rank under the Roman empire. (Ricolfi e Rivantella, *Il sito dell'antica città d'Industria*, *Gc. Torino*, 1745, 4to; Millin, *Igy. en Ploum*, vol. i. pp. 308—311.) [E. h. B.]

**INESSA. [ACTA.]**

**INTERIUM MARE. [TYRRENEUM MARE.]**

**INGAEVONES. [GERMANIA et HELLEVO- NES.]**

**INGAUNI** (*Tygamma*), a Ligurian tribe, who inhabited the sea-coast and adjoining mountains, at the foot of the Maritime Alps, on the W. side of the Gulf of Genoa. Their position is clearly identi- fied by that of their capital or chief town, Albian *Ingannu*, still called *Albenga*. They appear to have been in early times one of the most powerful and warlike of the Ligurian tribes, and bear a pro- minent part in the long-continued wars of the Ro- mans with that people. Their name is first men- tioned in B. c. 205, on occasion of the landing of Mago, the brother of Hannibal, in Liguria. They were at that time engaged in hostilities with the Epi- teri, a neighboring tribe who appear to have dwelt further inland; the *Carthaginian general con- cluded an alliance with the *Ingauni* and supported them against the mountaineers of the interior; he subse- quently returned to their capital after his defeat by the Romans in *Cisalpine Gaul*, and it was from thence that he took his final departure for Africa, B. c. 203. (Liv. xxviii. 46, xxx. 19.) After the close of the Second Punic War, B. c. 201, a treaty was concluded with the *Ingauni* by the Roman consul, Cn. *L. Claudius* (*Id. xxxiv. 2*); but sixteen years later (in B. c. 185) we find them at war with the Romans, when their territory was invaded by the consul Appius Claudius, who defeated them in sev- eral battles, and took six of their towns. (*Id. xxxix. 32.* But four years afterwards, B. c. 181, they were still in arms, and were attacked for the second time by the proconsul *Aemilius Paullus*. This general was at first involved in great perils, the *Ingauni* being surprised and killed in his camp; but he ultimately obtained a great and decisive victory, in which 15,000 of the enemy were killed and 2500 taken prisoners. This victory pro- cured to *Aemilius* the honour of a triumph, and was followed by the submission of the whole people of the *Ingauni* (*Lirgurum Ingannorum omnem nomen*), while all the other Ligurians sent to Rome to sue for peace. (*Liv. xl. 25—28, 34.* From this time we hear nothing more of the *Ingauni* in history, probably on account of the loss of the later books of *Livy*; for that they did not long remain at peace with Rome, and that hostilities were repeatedly re- newed before they were finally reduced to submis- sion and settled down into the condition of Roman subjects, is clearly proved by the fact stated by *Pline*, that their territory was assigned to them, and that it became the boundaries fixed or altered, no less than thirty times. ("Lirgurium Ingannius agro tricius dato," *Plin.* iii. 5. s. 6.) They appear to have been much addicted, in common with other maritime Ligurian tribes, to habits of piracy, a tendency which they retained down to a late period. (*Liv. xl. 28, 41; *Vopisc. Procoul. 12.* We find them still existing and recognized as a separate tribe in the days of...
INTELENE.

Steabe and Pllny; but we have no means of fixing the extent or limits of their territory, which evidently comprised a considerable portion of the coast on each side of their capital city, and probably extended on the W. till it met that of the Internae. It must have included several minor towns, but their capital, of which the name is variously written Albionus, Albium, and Albicincum, i is the only town expressly assigned to them by ancient writers.

[ALBION INGALUM.] (Strab. iv. p. 262; Plini. vii. 3. 6. 6.)

E. H. B.

INSEGA. [Arringater]

INSA NI MONTES (vra Malpavera Bon, Ptol. vii. 3. § 7), a range of mountains in Sardehia, mentioned by Livy (xxii. 39) in a manner which seems to point out the coast where in the 5th century he came to the island; and this is confirmed by Claudian, who speaks of them as rendering the northern part of Sardehia rugged and savage, and the adjoining seas stormy and dangerous to navigators. (Claudian, B. Gild. 513.) Hence, it is evident that the name was applied to the lofty and rugged range of mountains in the N. and NE. part of the island: and was, doubtless, given to them by Roman navigators, on account of the sudden and frequent storms to which they gave rise. (Litt. L.c.) Ptolomy also places the Malpavera Bon—a name which is obviously translated from the Latin one—in the interior of the island, and though he would seem to consider them as nearer the W. than the E. coast, the position which he assigns them may still be referred to the same range or mass of mountains, which extends from the neighbourhood of Olbia (Terras Novas) on the E. coast, to that of Cornus on the W. [SARDEHIA.] (E. H. B.)

INSUBRIBES, a people both in Gallia Transalpina and Gallia Cisalpina. D'Aveniis, on the authority of Livy (x. 34), places the Insubres of Gallia Transalpina in that part of the territory of the Aedu in which there was a town Mediomatrum, between Forum Secundum (Forum Secundum) and Langdunum (Lyon). This is the only point on which there is any agreement for supposing that there existed a people or a race in Gallia Transalpina named Insubres. Of the Insubres in Gallia Cisalpina, an account is given elsewhere (Vol. i. p. 936.).

[G. L.]

INSCLA, or INSCLA ALBOBROGLI, in Gallia Narbonensis. Livy (xiii. 31), after describing Hannibal's passage of the Rhone, says that he directed his march on the east side towards the inland parts of Gallia. At his junction with the Rhone, he says, he approached the Insubres, "where the rivers Arat and the Rhodanus, flowing down from the Alps by two different directions, comprize between them some tract of country, and then unite: it is the level country between them which is called the Insubra. The Allobroges dwell near." One might easily see that there must be some error in the word Arat; for Hannibal could not have reached the Mensa Lengsdonum (Lyons) in four days, from the place where he crossed the Rhone; and this is certain, though we do not know the exact place where he did cross the Rhone. Nor, if he had not to the junction of the Arat and Rhodanus, could Livy say that he reached a place near which the Allobroges dwell; for, if he had marched from the Isara (Ieia) to the junction of the Salone and Rhone, he would have passed through the country of the Allobroges. [ALLEROBROGES.] Nor does the Arat (Savio) flow from the Alps, though the Isara does. Besides this, if Hannibal had gone so far north as the part between the Sanno and the Rhone, he would have gone much further north than was necessary for his purpose, as Livy describes it. It is therefore certain, if we look to the context only, that we must read "Isara" for "Arar," and there is a reading of one MS. cited by Gronovius, which shows that Isara may have once been in the text, and that it has been corrupted. (Walckenaer, Grcc., &c. vol. i. p. 155.). Livy in this passage copied Polybius, in whose MSS. (iii. 49) the name of the river is Scorax or Scaras, a name which the ought to have kept, instead of changing it into Isara (Isar), as Bekker and others before him have done, though the Isara or Isere is certainly the river. In the latest editions of Ptolomy (ii. 19. § 6) the Isara appears in the form Isar (Tisar); but this is a name of the river, and not a name of the parts. Walckenaer (vol. i. p. 134) says that the edition of Ulm of 1412 has Scorax, and that there is "Sicaros" in the Strassburg editions of 1513, 1520, 1522. The editio princeps of 1475 has "Cisar"; and others have "Tisar" and "Tisara." The probable conclusion is, that "Isar" is one of the forms of the name, which is as genuine a Celtic form as "Isar" or "Isara," the form in Caesar (de B. G. vii. 15, 8, &c.). "Isara" may be compared with the British forms "Isca" (the Exe), Isca, and Iscalis; and Isara with the names of the Italian rivers Asar and Asis. Polybius compares the country in the angle between the Rhone and the Isara (Isere) to the Delta of Egypt in extent and form, except that in the Delta the sea unites the one side and the channel of the streams which form the other two sides; but here mountains almost inaccessible form the third side this Isula. He describes it as populous, and a corn country. The junction of the Isar, as Strabo calls the river (p. 155), and the Rhone, was, according to him, opposite the place where the Cevennes approach near to the banks of the Rhone. The Isere, one of the chief branches of the Rhone, rises in thearie Alps; flows through the valleys of the Alpin region by a very winding course past St. Maurice, Montiers, Confians, Montemilion, where it begins to be navigable, Grenoble, the Roman Julano or Gratianopolis, and joins the Rhone a few miles north of Valence (Valence). Its whole course is estimated at about 160 miles. Haunibul, after staying a short time in the country about the junction of the Rhone and the Isere, commenced his march over the Alps, and flowed through the Alps, and, not aegid, decided whether his whole army crossed over into the Insula or not, or whether he did himself, though the words of Polybius imply that he did. It is certain that he marched up the valley of the Isere towards the Alps; and the way to find out where he crossed the Alps is by following the valley of the Isere. [G. L.]

INSURA. [Mylæae]

INTELENE. (l'YtErne), one of the five provinces of W. of the Tigris, celebrated, in a. D. 297, by Narsete to Galerius and the Romans. (Petr. Petr. Fr. 14, Fragment, Hist. Græc. ed. Müller; Gibbon, c. xiii.) St. Martin, in his note to Le Beau (Ius Empire, vol. i. p. 380), would read for Intelene,
INTERAMNA.

INTERAMNA (Ityrian), a maritime people of Liguria, situated to the W. of the Ingæuni, at the foot of the Maritime Alps. They are but little known in history, being only once mentioned by Livy, in conjunction with their neighbours, the Ingæuni, as addicted to pastoral habits, to repress which their coast was visited by a Roman squadron in B.C. 180. (Livy, xl. 41.) Strabo speaks of them as a still existing tribe (Strab. v. p. 227); and their capital, called Albium Intermelium or Allium simplex, now corrupted into Vintaniaglia, was in his time a considerable city. [ALBIO INTERMELIUM.]

We have no means of determining the extent or limits of their territory; but it seems to have bordered on that of the Ingæuni on the E., and the Vediantii on the W.; at least, these are the only tribes mentioned as existing in this part of Liguria by writers of the Roman Empire. It probably comprised also the whole valley of the Rutuba or Roga, one of the most considerable of the rivers, or rather mountain torrents, of Liguria, which rises at the foot of the Col di Tenda, and falls into the sea at Vintaniaglia. [E. H. B.]

INTERAMNA (Ityriana: Eth. Interamnas, -àtis), was the name of several cities in different parts of Italy. Its obvious etymology, already pointed out by Varr. and Festus, indicates their position at the confluence of two streams ("inter amnes," Varr. L. L. v. 28, Fest. n. Amm., p. 17. Müll.;) which is, however, but partially borne out by their actual situation. The form INTERAMNIA (Ityriánon), and the ethnic form, Interamnus, are also found, but more rarely.

1. A Roman colony on the banks of the Liris, thence called, for distinction's sake, INTERAMNA LIRRINAS. It was situated on the left or northern bank of the Liris, near the junction of the little river which flows by Aquinum (confounded by Strabo with the Melpis, a much more considerable stream), and was distant 6 miles from the latter city, and 7 from Casinum. Its territory, which was included in Latinum, according to the more extended use of that name, must have originally belonged to the Volscians, but we have no mention of Interamna as a Volscian city, and indeed any evidence of its existence previous to the establishment of the Roman colony there, in B.C. 312. This took place at the same time with that at the neighbouring town of Casinum, the object of both being obviously to secure the fertile valley of the Liris from the attacks of the Samnites. (Liv. ix. 28; Dion. xix. 165; Vell. Pat. i. 14.) Hence we find, in B.C. 294, the territory of Interamna ravaged by the Summites, who did not, however, venture to attack the city itself; and, at the opening of the following campaign, it was from Interamna that the consul Sp. Carvilius commenced his operations against Samnium. (Liv. x. 36, 39.) Its territory was at a later period laid waste by Hannibal during his march by the Via Latina from Capua upon Rome, in B.C. 212 (Liv. xxvi. 9): and shortly afterwards the name of Interamna appears among the twelve refractory colonies which declared themselves unable to furnish any further supplies, and were subsequently (B.C. 204) loaded with heavier burdens in consequence (Id. xxvit. 9, xxix. 15). After the Social War it passed, in common with the other Latin colonies, into the state of a municipium; and we find repeated mention of it as a municipal town, apparently of some consequence. (Cic. Phil. ii. 41, pro Mil. 17; Strab. v. p. 237; Plin. iii. 5. 15.) It received a colonia from Augustus, and under the Second Triumvirate, but does not appear to have enjoyed colonial rank, several inscriptions of imperial times giving it only the title of a municipium. (Lith. Col. p. 324; Orell. Inscr. 3257, 3282.) Its position at some distance from the line of the Via Latina was probably unfavourable to its prosperity in later times; from the same cause its name is not found in the Itinerary; and we have no means of tracing its existence after the fall of the Roman Empire. The period at which it was ruined or deserted is unknown; but mention is found in documents of the middle ages of a "Castrum Tarne," and the site of the ancient city, though now entirely uninhabited, is still called Terme. It presents extensive remains of ancient buildings, with vestiges of the walls, streets, and aqueducts; and numerous inscriptions and other objects of antiquity have been discovered there, which are now preserved in the neighbouring villages. (Romannelli, vol. iii. p. 384; Claver, Itali. p. 1039. The inscriptions are given by Mommsen, Inscr. Regn. Neap. pp. 221, 222.)

Pliny calls the citizens of this Interamna "Interamnates Succasini, qui et Lirinates vocantur." The former appellation was evidently bestowed from its situation in the neighbourhood of Casinum, but is not adopted by any other author. They are called in inscriptions "Interamnates Lirinates," and sometimes "Lirinates" alone; hence it is probable that we should read "Lirinatum" for "Laratinum" in Florus, iii, 492), where he is enumerating Volcania cities, and hence the mention of Larinum would be wholly out of place.

2. (Terme), a city of Umbria, situated on the river Nar, a little below its confluence with the Velinus, and about 8 miles E. from Narnia. It was surrounded by a branch of the river, so as to be in fact situated on an island, whence it derived its name. The inhabitants are termed by Pliny "Interamnates cognomine Nartes," to distinguish them from those of the other towns of the name; and we find them designated in inscriptions as Interamnates Nartes and Nahartes; but we do not find this epithet applied to the city itself. No mention is found of Interamnus in history previous to its passing under the Roman yoke; but there is no doubt that it was an ancient Umbrian city, and an inscription of the time of Tib.

see page 56.

INTERBICISA.

course of the Nar, so that it should no longer flow into the Tiber. (Tae. Ann. i. 79.) In the civil war between Vitellius and Vespasian it was occupied by the troops of the former while their head-quarters were at Narnia, but was taken with little resistance by Arrus Varus. (Id. Hist. iii. 61, 63.) The inscriptions sufficiently attest the continued municipal importance of Interamna under the Roman empire; and, though its position was some miles to the right of the great Flaminian highway, which proceeded from Narnia direct to Mevania (Strab. v. p. 227; Tac. Hist. ii. 64), a branch line of road was carried from Narnia by Interamna and Spoleto to Forum Flaminii, where it rejoined the main highway. This line, which followed the ancient road from Rome to Perugia, appears to have laterly become the more important of the two, and is given in the Antonine and Jerusalem Itineraries to the exclusion of the true Via Flaminia. (Itin. Ant. p. 125; Itin. Hier. p. 615; Tab. Peut.)

The great richness of the meadows belonging to Interamna on the banks of the Nar is celebrated by Pliny, who tells us that they were cut for hay no less than 10 times in the year (Plin. xvii. 78, 67); and Tacitus also represents the same district as among the most fertile in Italy (Tac. Ann. i. 79). That great historian himself is generally considered as a native of Interamna, but without any distinct authority: it appears, however, to have been subsequently the patrimonial residence, and probably the birthplace, of his descendants, the two emperors Tacitus and Florianus. (Vopisc. Florianus.) In A.D. 193, it was at Interamna that a deputation from the senate met the emperor Septimus Severus, when on his march to the capital (Spartan. Sesc. 6); and at a later period (A.D. 253) it was there that the two emperors, Trebonianus Gallus and his son Volusianus, who were on their march to oppose Aurelianus in Moesia, were put to death by their own soldiers. (Itanp. ix. 5; Vict. Cesar. 31, Epist. 31.)

Interamna became the see of a bishop in very early times, and has subsisted without interruption through the middle ages on its present site; the name being gradually corrupted into its modern form of Terni. It is still a flourishing city, and retains various relics of its ancient importance, including the remains of an amphitheatre, of two temples supposed to have been dedicated to the sun and to Hercules, and some portions of the ancient Thermes. None of these ruins are, however, of much importance or interest. Many inscriptions have also been discovered on the site, and are preserved in the Palazzo Publico.

About 3 miles above Terni is the celebrated cascade of the Velinus, which owes its origin to the Roman M. Curius; it is more fully noticed under the article Velinus.

3. (Terni), a city of Picenum, in the territory of the Praetutti, and probably the chief place in the district in the yoke. The name is omitted by Pliny, but is found in Ptolemy, who distinctly assigns it to the Praetutti; and it is mentioned also in the Liber Cenomannum among the "Civitatis Piceni." It bears the epithet of "Palestina" (or, as the name is elsewhere written, "Paletina;" the origin and meaning of which are wholly unknown. (Itin. iii. 1. § 58; Lib. Col. pp. 229, 259.) In the genuine fragments of Eutropius, (of the other hand, the citizens are correctly designated as "Interamnates Praetutti." (Frontin. p. 18, ed. Lachm.) Being situated in the interior of the country, at a distance from the highroads, the name is not found in the Itineraries, but we know that it was an episcopal see and a place of some importance under the Roman empire. The name is already corrupted in our MSS. of the Liber Colonarum into Teranum, whence its modern form of Terni. But in the middle ages the name has come to have derived from the name of Apentia, supposed to be a corruption of Pratutium, or rather of the name of the people Praetutti, applied (as was so often the case in Gaul) to their chief city. Thus we find the name of Abruzzi among the cities of Picenum enumerated by the Geographer of Ravenna (iv. 31); and under the Lombards we find mention of a "comes Apurtit." The name has been retained in that of Abruzzo, now given to the two northernmost provinces of the kingdom of Naples, of one of which, called Abruzzo Ulteriore, the city of Terano is still the capital. Vestiges of the ancient theatre, of baths and other buildings of Roman date, as well as statues, altars, and other ancient remains, have been discovered on the site; numerous inscriptions have been also found, in one of which the citizens are designated as "Interamnates Praetutti." (See M. Aubert, Itin. Terni, pp. 297—301; Mommsen, I. R. N. pp. 329—331.)

There is no foundation for the existence of a fourth city of the name of Interamna among the Ferentani, as assumed by Romanelli, and, from him, by Cramer, on the authority of a very apocryphal inscription. (Ferentani.) (E. H. B.)

INTERAMNESIA (Phegon. de Longear. 1; Eth. Interamnensis, Plin. iv. 21, s. 32), a stipendary town of Lucania, named in the inscription of Alcantara, and supposed by Ubert to have been situated between the Coa and Tortore, near Castel Rodrigo and Almeida. (Ubert, vol. ii. pt. 1. p. 398.) (P. S.)

INTERAMNIUM. (Astures.)

INTERCATA. (Vaccari.)

INTERCISA or AD INTERCISA, is the name given in the Itineraries to a station on the Via Flaminia, which evidently derives this name from its being situated at the remarkable tunnel or gallery hewn through the rock, now known as the Passo del Foro. (Itin. Hier. p. 614; Tab. Peut.) This passage, which is still traversed by the modern highway from Rome to Fano, is a work of the emperor Vespasian, as an inscription cut in the rock informs us, and was constructed in the seventh year of his reign, A.D. 75. (Inscr. op. Oliver, Jut. p. 619.) It is also noticed among the public works of that emperor by Aurelius Victor, who calls it Petra Fortuis; and the same name (Petra scoposa) is given to it by Procopius, who has left us a detailed and accurate description of the locality. (Vit. Ces. 9, Epit. 9; Procop. B. G. ii. 11.)

The valley of the Cantiano, a tributary of the Metaurus, which is here followed by the Flaminian Way, is at this point so narrow that it is only by cutting the road out of the solid rock that it can be carried along the face of the precipice, and, in addition to this, the rock itself is in one place pierced by an arched gallery or tunnel, which gave rise to the name of Petra Fortuis. The actual tunnel is only 126 feet long, but the whole width of the pass is about half a mile. Claudian alludes to this remarkable work in terms which prove the admiration that it excited. (Claud. de Vi. Cons. Hem. 562.) At a later period the pass was guarded by a fort, which, from its completely commanding the Flaminian Way, became a military post of importance, and is repeatedly mentioned during the wars of the Gauls.
with the generals of Justinian. (Procop. B. G. ii. 11, iii. 6. iv. 28. 34.) The Jerusalem Itinerary places the station of Intercisa 9 M. P. from Calles (Cyno), and the same distance from Forum Semiponti (Fossabrunette), both of which distances are just about correct. (D'Anville, Analyses de l'Italie, p. 153.)

E. H. B.

INTERNUM MARIE, the great inland or Mediterranean Sea, which washes the coasts of Southern Europe, Northern Africa, and Asia Minor.

1. Name.—In the Hebrew poesies, this sea, on the W. of Palestine, and therefore behind a person facing the E., is called the "Hinder Sea" (Desit. xi. 24; Joel, ii. 20), and also the "Sea of the Philistines" (Eccod. xxi. 81), because that people occupied the largest portion of its shores. Pre-eminent it was the "Great Sea" (Sium. xxxiv. 6, 7; Josh. i. 4, ix. 1, xv. 47; Ezek. xlix. 10, 15, 20), or simply "the Sea" (1 Kings, v. 9; comp. 1 Macc. xiv. 34, xv. 11). In the same way, the Homeric poets, Hesiod, the Cyclos poets, Aschylus, and Fimard, call it emphatically "the Sea." The logographer Hecataeus speaks of it as "the Great Sea" (Fr. 349, ed. Klansen). Nor did the historians and systematic geographers mark it off by any peculiar denomination. The Roman writers call it Mare Internum (Pomp. Mol. i. 1. § 4; Plin. iii. 9) or Intermarium (Sall. Juv. xii. 13; Polyb. iii. 39; η ἐσπερά Σάλα, Strab. ii. p. 121, iii. p. 139; η ἄφραστος Σάλα, Arist. Met. i. 1), or more frequently, Mare Nostrum (Sall. Juv. 17, 18; Cic. B. G. v. 1; Liv. xcvii. 42; Pomp. Mol. i. 5. § 1; η καθ' άγας Σάλα, Strab. ii. p. 121). The epithet "Mediterraneum" is not used in the classical writers, and was first employed for this sea by Ptolemy (c. 182; comp. Isid. Orig. xii. 16). The Greeks of the present day call it the "White Sea" (Ararē δῶρον), to distinguish it from the Black Sea. Throughout Europe it is known as the Mediterranean.

2. Extent, Shape, and Admeasurements.—The Mediterranean Sea extends from 6° W. to 36° E. of Greenwich, while the extreme limits of its latitude are from 30° to 46° N.; and, in round numbers, its breadth, from Gibraltar to its farthest extremity in Syria, is about 2000 miles, with a breadth varying from 800 to 1800 miles, in the E. and S. of the same line, with a line of shore of 4500 leagues. The ancients, who considered this sea to be a very large portion of the globe, though in reality it is only equal to one-seventeenth part of the Pacific, assigned to it a much greater length. As they possessed no means for critically measuring horizontal angles, and were unaided by the compass and chronometer, correctness in great distances was unattainable. On this account, while the E. shores of the Mediterranean approached a tolerable degree of correctness, the relative positions and forms of the W. coasts are erroneous. Strabo, a philosophical rather than a scientific geographer, set himself to rectify the errors of Eratosthenes (ii. pp. 105, 106), but made more mistakes: though he drew a much better "contour" of the Mediterranean, yet he distorted the W. parts, by placing Massilia 13° to the S. of Byzantium, instead of 25° to the N.W. of it, and also reduced, among many other errors, such as the flattening-in of the N. coast of Africa, to the amount of 43° to the S., in the latitude of Carthage, while Byzantium was placed 2° to the N. of its true position; thus increasing the breadth in the very part where the greatest accuracy might be expected. Nor was this all; for the extreme length of the Internal Sea was carried to upwards of 20° beyond its true limits. The maps of Acazadoemon which accompany the Geography of Ptolemy, though indifferently drawn, preserve a much better outline of this sea than is expressed in the Theodosian or Peutingerian Table, where the Mediterranean is so reduced in breadth as to resemble a canal, and the site, form, and dimensions of its islands are displaced and disfigured.

The latitudes were estimated by the ancient observers in stadia reckoned from the equator, and are not so discordant as might be expected from such a method. The length between the equinoctial line and Syracuse, or rather the place which they called the "Strait of Sicily," is given as follows:—

<table>
<thead>
<tr>
<th>Place</th>
<th>Stadia</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eratosthenes</td>
<td>25,450</td>
</tr>
<tr>
<td>Hipparchus</td>
<td>25,600</td>
</tr>
<tr>
<td>Strabo</td>
<td>25,400</td>
</tr>
<tr>
<td>Marinus</td>
<td>26,075</td>
</tr>
<tr>
<td>Ptolemy</td>
<td>26,633</td>
</tr>
</tbody>
</table>

Their longitudes run rather wild, and are reckoned from the "Sacrum Pronomontarium" (Cape St. Vincent), and the numbers given are as the arc from thence to Syracuse:—

<table>
<thead>
<tr>
<th>Place</th>
<th>Stadia</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eratosthenes</td>
<td>11,800</td>
</tr>
<tr>

</tr>
<tr>
<td>Marinus</td>
<td>18,583</td>
</tr>
<tr>
<td>Ptolemy</td>
<td>29,000</td>
</tr>
</tbody>
</table>

In Admiral Smyth's work (The Mediterranean, p. 375) will be found a tabular view of the above-mentioned admeasurements of the elder geographers, along with the determination resulting from his own observations; assuming, for a reduction of the numbers, 700 stadia a degree of latitude, for a plane projection in the 36° parallel, and 553 for the corresponding degree of longitude. (Comp. Gosselin, Geographie des Grecs, 1 vol. Paris, 1780; Geographie des Anciens, 3 vols. Paris, 1813; Itineraires, 1 vol. Paris, 1813.)

3. Physical Geography.—A more richly-varied and broken outline gives to the N. shores of the Mediterranean an advantage over the S. or Libyan coast, which was remarked by Eratosthenes. (Strab. ii. p. 109.) The three great peninsulas,—the Iberian, the Italian, and the Hellenic,—with their sinuous and deeply indented shores, form, in combination with the neighbouring islands and opposite coasts, many straits and ismmuses. Exclusive of the Euxine (which, however, must be considered as part of it), this sheet of water is naturally divided into two vast basins; the barrier at the entrance of the straits marks the commencement of the W. basin, which descends to an abysmal depth, and extends as far as the central part of the sea, where it flows over another barrier (the subaqueous Adventure Bank, discovered by Admiral Smyth), and again falls into the yet unfathomed Levant basin. Strabo (ii. pp. 122—127) marked off this expanse by three smaller closed basins. The westernmost, or Tyrrenian basin, comprehended the space between the Pillars of Hercules and Sicily, including the Iberian islands and cape Serrata; the easternmost, or the waters of the W. of Italy were also called, in reference to the Adriatic, the "Lower Sea," as that gulf bore the name of the "Upper Sea." The second was the Syritic basin, E. of Sicily, including the Ausonian or Sicilian, the Ionian, and the Libyan seas; on the N. this basin runs up into the Adriatic, on the S. the gulf of Libya penetrates deeply into
the African continent. The E. part of this basin is interrupted by Cyprus alone, and was joined to the Carpathian, Pamphylian, Cilician, and Syran seas.

The third or Aegean portion is bounded to the S. by a curved line, which, commencing at the coast of Caria in Asia Minor, is formed by the islands of Rhodes, Crete, and Cythera, joining the Peloponnesus not far from Cape Malea, with its subdivisions, the Thracean, Myrtosian, Icarian, and Cretan seas.

From the Aegean, the "White Sea" of the Turks, the channel of the Hellespont leads into the Propontis connected by the Tiranian Bosphorus with the Exuine; to the NE. of that sheet of water lies the Parnes Maestis, with the strait of the Cimmerian Bosporus. The configuration of the continents and of the islands (the latter either severed from the main or volcanically elevated in lines, as if over long fissures) led in very early times to cosmological views respecting eruptions, terrestrial revolutions, and overpourings of the swollen higher seas into those which were lower. The Exuine, the Hellespont, the straits of Gades, and the Internal Sea, with its many islands, were well fitted to originate such theories. Not to speak of the floods of Ogyges and Deucalion, or the legendary cleaving of the pillars of Hercules by that hero, the Samothracian traditions recounted that the Exuine, once an inland lake, swollen by the rivers that flowed into it, had broken first through the Bosporus and afterwards the Hellespont. (Diod. v. 47.) A reflex of these Samothracian traditions appears in the "Silice Theory" of Straton of Lamprocas (Strab. i. pp. 49, 50), according to which, the swellings of the waters of the Exuine first opened the passage of the Hellespont, and afterwards caused the outlet through the Pillars of Herakles. This theory of Straton led Eratosthenes of Cyrene to examine the problem of the equality of level of all external seas, or seas surrounding the continents. (Strab. l. c.; comp. ii. p. 104.) Strabo (i. pp. 51, 54) rejected the theory of Straton, as insufficient to account for all the phenomena, and proposed one of his own, the profoundness of which modern geologists are only now beginning to appreciate. "It is not," he says (l. c.), "because the lands covered by seas were originally at different altitudes, that the waters have risen, or subsided, and from some places to others, or from others to some. But the reason is, that the same land is sometimes raised up, and sometimes depressed, so that it either overflows or returns into its own place again. We must therefore ascribe the cause to the ground, either to that ground which is under the sea, or to that which becomes flooded by it; but rather to that which lies beneath the sea, for this is more moveable, and, on account of its wetness, is more subject to greater upheavals." (Lyd. Geog. p. 17; Humboldt, Cosmos, vol. ii. p. 118, trans. Aspects of Nature, vol. ii. pp. 73-83, trans.)

The fluvial system of the Internal Sea, including the rivers that fall into the Exuine, consists, besides many secondary streams, of the Nile, Danube, Borysthenes, Tanais, Po, Rhone, Ebro, and Tynus. The general physics of this sea, and their connection with ancient speculations, do not fall within the scope of this article; it will be sufficient to say that the theory of the tides was first studied on the coast of this, which can only in poetical language he called "a tideless sea." The mariner of old had his charts and sailing directories, was acquainted with the bewildering currents and counter-currents of this sea,—the "Typhon" (τυφών), and the "Prester" (πρήστερ), the destroyer of those at sea, of which Lucertius (vi. 442—445) has given so terrific a description,—and hailed in the hour of danger, as the "Discuri" who played about the mast-head of his vessel (Plin. ii. 457; Sen. Not. Quaest. ii.), the fire of St. Elmo, "sacred to the seaman. Much valuable information upon the winds, climates, and other atmospheric phenomena, as recorded by the ancients, and compared with modern investigations, is to be found in Smyth (Mediiterranean, pp. 310—302). Furtiguer's section upon Physical Geography (vol. i. pp. 576—653) is useful for the references to the Latin and Greek authors. Some papers, which appeared in Fraser's Magazine for the years 1852 and 1853, upon the fish known to the ancients, throw considerable light upon the ichthyology of this sea. Recent inquiry has confirmed the truth of many instructive and interesting facts relating to the fish of the Mediterranean which have been handed down by Aristotle, Pliny, Archestratus, Aelian, Ovid, Oppian, Athenaeus, and Anonius.

4. Historical Geography.—To trace the progress of discovery on the waters and shores of this sea would be to give the history of civilisation,—"nullum sitae nonnisi saxum." Its geographical position has eminently tended towards the intercourse of nations, and the extension of the knowledge of the world. The three peninsulas—the Iberian, Illyric, and Hellenic—are run out to meet that of Asia Minor projecting from the E. coast, while the islands of the Aegean have served as stepping stones for the passage of the peoples from one continent to the other; and the great Indian Ocean advances by the fissure between Arabia, Egypt, and Abyssinia, under the name of the Red Sea, so as only to be divided by a narrow isthmus from the Delta of the Nile valley and the SE. coast of the Mediterranean.

"We," says Plato in the Phaedo (p. 109, b.), "who dwell from the Phasis to the Pillars of Hercules, inhabit only a small portion of the earth in which we have settled round the (Interior) sea, like ants or frogs round a marsh." And yet the margin of this contracted basin has been the site where civilisation was first developed, and the theatre of the greatest events in the world. Religion, intellectual culture, law, arts, and manners—nearly everything that lifts us above the savage, have come from these coasts. The earliest civilisation on these shores was to the S., but the national character of the Egyptians was opposed to intercourse with other nations, and their navigation, such as it was, was mainly confined to the Nile and Arabian gulf. The Phoenician and Carthaginian are the first names to occur; the Hellenic overtook them, in the height of their prosperity; the Roman, as the leader of armies and navies, the successor of the Roman, as the leader of the world, and finally the Mohammedan, as the successor of Rome. The Christian religion, the arts and sciences of Rome, the commerce of the East, the formation of cities, the establishment of laws, the spread of knowledge and learning, the religious and political formation of nations, the rise and fall of empires, are all the work of the Mediterranean world. 

In the Hellenic period the broken configuration of the coast-line invited early navigation and commercial intercourse, and the expeditions of the Samians (Herod. iv. 162) and Phoenicians (Herod.
INTEROCREA.

101. 

IOI., 59

and 13 from Teate (Chiti), or 21 from Peccara, at the month of the Atarunus. (Holstein, Not. ad Clar. p. 143; D'Anville, Analyse de l'Italie, p. 175; Romanelli, vol. iii. p. 117.) An inscription also mentions Interponium under the name of Pugus Interponiumes (Orell. Inscr. 144; Romanelli, l.c.); it is called "Interponium vicius" in the Itinerary of Antoninus (p. 102), and was evidently a mere village, probably a dependency of Teate. [E.H.B.]

INTIBIIL. I. [EDITAII.] 2. A town of Hispania Baetica, near Illurigis, the scene of a battle gained by the Romans over the Carthaginians in the Second Punic War. (Liv. xxii. 49; Front. Stratag. iii. 3.)

INUI CASTRIUM. [CASTRUM INUL.]

INYCCUM or INYCUUS (I'kouk, Steph. B., but η' Ιωνας, Herod. 5. Ιωνας, Ιωνας, a town of Sicily, situated in the SW. of the island, on the river Hypas. It is principally known from its connection with the mythical legends concerning Ainos and Daedalus; the capital of the Sicilian prince Cecrops, who afforded shelter to the fugitive Daedalus against the Cretan monarch, being placed by some writers at Inyccum, and by others at Cambons. (Paus. vii. 4; 6; Cuarom, ap. Steph. B. v. Κωνων.) It is mentioned in historical times by Herodotus as the place of confinement to which Scyllis, the ruler of Zanet, was sent by Hippocrates, who had taken him prisoner. (Herod. vi. 23, 24.) Aelian, who copies the narrative of Herodotus, represents Scyllis as a native of Inyccum; but this is probably a mistake. (Ael. v. H. vii. 17.) Plato speaks of Inyccum as still in existence in his time, but quite a small place (χωρίον πάνω εμπρός); notwithstanding which he makes the sophist Hippas boast that he had derived it from a son of 20 minutes. (Plut. HIPP. M. p. 282, c.) It is evident that it always continued to be an insignificant place, and was probably a mere dependency of Selinus. Hence we never again meet with its name, though Stephanius tells us that this was still preserved on account of the excellence of its wine. (Steph. B. s. v. Ιωνας; Hesych. s. v.) Vibius Sequester is the only author that affords any clue to its position, by telling us that the river Hypas (the modern Belici) flowed by it. (Vib. Sequest. p. 12, according to Cunfer's edition); but farther than this its site cannot be determined. [E.H.B.]

IOBACCHI. [MARRACICA.]

102. Afterwards CAESAREA (Ταλα Κασάραι, Ptol. ii. 4; § 5; Κασάραι, Strab., &c.), originally an obscure Phoenician settlement on the N. coast of Africa, became afterwards famous as the capital of Bocchas and of Juba II. [MAURETANIA.] The latter king enlarged and adorned the city, and gave it the name of Caesarea, in honour of his patron Augustus. Under the Emperors it gave its name to the province of Mauretania Caesariensis, of which it was the capital. It was made a colony by the emperor Claudius. Under Valens it was burnt by the Moors; but it was again restored; and in the 6th century it was a populous and flourishing city. It occupied a favourable position midway between Carthage and the Straits, and was conveniently situated with reference to Spain, the Balearic islands, and Sardinia, and it had a natural harbour, protected by a small island. To the E. of the city stood the royal mausoleum. (Strab. xvii. p. 831; Dio Cass. l. 9; Mela, i. 6; § 1; Plin. v. 2. s. 1; Eutrop. viii. 5; Itin. Ant. pp. 5, 15, 25, 31; Oros. vii. 33; Ammian. xxix. 5; Procop. B. c. l. i. 3.)
Caesarea is now identified, beyond all doubt, with the magnificent ruins at Arsebill on the coast of Alpier, in a little more than 2° E. long. The Arabic name signifies an abbreviation of Casaraca Lol; a fact clear to the intuitive sagacity of Shaw and which, in connection with the statements of the ancients, led that incomparable traveller to the truth. Unfortunately, however, nearly all subsequent writers preferred to follow the thick-headed Mammert, who was misled by an error in the Antonine Itinerary, whereby all the places along this coast, for a considerable distance, are thrown too far to the W; until the researches which followed the French conquest of the country revealed inscriptions which set the question at rest for ever. There exist few stronger examples of that golden rule of criticism:— "Ponderanda sunt testimonia, non nuncvrauda." (Shaw, Travels, vol. i. pt. 1. c. 3; Barth, Wundernngen, p. 56; Pelissier, in the Exploration Scientifique de l'Egypte, vol. vi. p. 349.) [P. 8]

IOLAI or IOLAIÉNÉS (Iolanc, Paus.; Ia. Aedon, Diod.; Iolcos, Strab. vi. p. 222), a people of Sardina, who appear to have been one of the indigenous or native tribes of the island. According to Strabo, they were the same people who were called in his day Diaegabians or Diaegbrians (Δια-γγαβείς or Διαγγεβαίς), a name otherwise unknown: and he adds that they were a Tyrrhenian people, a statement in itself not improbable. The commonly received tradition, however, represented them as a Greek race, emigrants from Athens and Thasii, who had settled in the island under the command of Iolanc, the nephew of Hercules. (Paus. x. 17. § 5; Diod. iv. 30. v. 15.) It is evident that this legend was derived from the resemblance of the name (in the form which it assumed according to the Greek pronunciation) to that of Iolanc; what the native form of the name was, we know not; and it is not mentioned by any Latin author, though both Pausanias and Diodorus affirm that it was still retained by the part of the island which had been inhabited by the Iolai. Hence, modern writers have assumed that the name is in reality the same with that of the Ilienses, which would seem probable enough; but both Pausanias, the only writer who mentions them both, expressly distinguishes the two. That author speaks of Oibis, in the NE. part of the island, as one of their chief towns. Diodorus represents them, on the contrary, as occupying the plains and most fertile portions of the island, while the district adjoining Oibis is one of the most rugged and mountainous in Sardinia. [E. H. B.]

IOLCUS (Ἰολκός, Ep. Ιολκός, ΙΩΛΚΟΣ: Eth. Ιολκός, Ιωλκός, Ιωλκός), an ancient city of Magnesia in Thessaly, situated at the head of the Pagenus gulf and at the foot of Mt. Pelion (Pind. Nem. iv. 88), and celebrated in the Homeric age as the residence of Jason, and the place where the Argonauts assembled. [See Dict. of Biogra. artt. Jason and Argoñautae.] It is mentioned by Homer, who gives it the epithets of δικταυαίος and ψευδόκτορος (H. ii. 712, Od xi. 236). It is said to have been founded by Cretheus (Apollod. i. 9. § 11), and to have been colonised by Mynans from Orchomenos. (Strab. ix. p. 414.) Iolcns is rarely mentioned in historical times. It was given by the Thessalians to Hipias, upon his expulsion from Athens. (Herod. v. 94.) The town afterwards suffered from the dissensions of its inhabitants, but it was finally mined by the foundation of Demetrias in n. c. 250, when the inhabitants of Iolcos and of other adjoining towns were removed to this place. (Strab. ix. p. 476.) It seems to have been no longer in existence at the time of Strabo, since he speaks of the place where Iolcos stood (δ ίς Ιωλκοῦ τόπος, ix. p. 438).

The position of Iolcos is indicated by Strabo, who says that it was on the road from Beebe to Demetri- trias, and at the distance of 7 stadia from the latter (ix. p. 438). In another passage he says that Iolcos was situated above the sea at the distance of 7 stadia from Demetrius (iv. 436). Pindar also says we have already seen places Iolcos at the foot of Mt. Pelion, consequently a little inland. From these descriptions there is little doubt that Leake is right in placing Iolcos on the steep height between the southernmost houses of Iolo and Vlako-mukhali, upon which stands a church called Episkopi. There are at present no ancient remains at this place; but some large squared blocks of stone are said to have formerly existed at the foot of the height, and to have been carried away for the construction of build- ings elsewhere. Moreover, it is the only spot in the neighbourhood which has any appearance of being an ancient site. It might indeed appear, from Livy (xlv. 12, 13.), that Iolens was situated upon the coast; but in this passage, as well as in Strabo (ix. p. 436), the name of Iolcos seems to have been given to this part of the coast as well as to the city itself. (Leake, Northern Greece, vol. iv. p. 679; Melleres, Memoire sur le Pelion et Iolcos, p. 11.)

IOMANES (Pinn. vi. 17. s. 21), the most impor- tant of the affluents of the Ganges, into which it flows near the city of Allahabad (Pratishthana). There can be no doubt that Arrian means the same river when he speaks of Iolcas (Ind. c. 8); and Ptolemy expresses nearly the same sound, when he names the Diamuna (vii. 1. § 29). It is now called the Jamuna or Jumna. The Jumna rises in the highest part of the Hindutaga, at no great distance from the source of the Satlude and Ganges, respectively, in the neighbourhood of Iumavarti (Jamuttri), which is probably the most sacred spot of Hindu worship. It enters the Indian plain country at Fysabad, and on its way to join the Ganges it passes the important cities of Delli (In- drapraastha) and Agra (Crisphamapura), and receives several large tributaries. These affluents, in order from W. to E., are the same as Arrian, with the exception of the Ganges (probably the Curnemuti or Combali), the Betwa (or Vetravi), and the Cainas (Arrian, l.c.; Pinn. vi. 19. s. 21; now Cauaya or Cenam). The last has been already mentioned as one of the tributaries of the Ganges. [V.]

IOMITHNIUM. [Macretania.]

ION (Ἰον), a river of Tymphaea in Thessaly, rising in the Cuminian mountains, and flowing into the Peneus near the ancient city of Krotzura. (Strab. vi. p. 327; Leake, Northern Greece, vol. iv. p. 546.)

ION MONN. [Libya.]

IONES. [Ionia.]

IONIA. [Ionia.]

IONIXA (Ἰώνια), also called Ionia, the country of Asia Minor inhabited by Ionian Greeks, and compris- ing the western coast from Phrcon in the north to Miletus in the south. (Herod. i. 142; Strab. xiv. hist.; Pinn. vi. 51.) Its length from north to south, as well as from west to east, is 740 stadia, while the length of its much indented coast amounted to 3430; and the distance from Ephesus to Smyrna, in a straight line, was only 320 stadia, while along the coast it reached the large number of 2200. (Strab.
Towards the inland, or the east, Ionia extended only a few miles, the towns of Magnesia, Larissa, Traileis, and others, not belonging to it. (v. 2) It assigns much narrower limits to Ionia than his predecessors, for, according to him, it extended only from the Hermus in Lydia to the Maeander in Caria; so that Phocaea and Miletus would not belong to Ionia. According to a generally received tradition, the Ionian colonies on the west coast of Asia were founded after the death of Codrus, the last king of Attica, about B.C. 1044, or, according to others, as early as B.C. 1060, about 60 years after the conquest of Peloponnese by the Dorians. The sons of Codrus, Neleus and Andreaus, it is said, being dissatisfied with the abolition of royalty and the appointment of their eldest brother Medon to the archiship, emigrated, with large numbers of Attic Ionians and bands from other parts of Greece, into Asia Minor. (Strab. xiv. p. 633, foll.; Paus. vii. 2.) Here, in one of the most beautiful and fertile parts of the earth, they founded a number of towns partly expelling and partly subduing the ancient inhabitants, who consisted mainly of Maenitians, Carian, and Pelasgians. (Herod. i. 142; Paus. vii. 2; Plut. evry]. Freym. 26; Dionys. Per. 522, &c.) As a great many of the original inhabitants remained in the country as subjects of the conquerors, and as the latter had gone to Asia as warriors, without women, the new colonies were not pure Greek; but still the subdued nations were not so completely effaced as to render an amalgamation into one nation impossible, or even very difficult. This amalgamation with different tribes also accounts for the fact that four different dialects were spoken by the Ionians. (Herod. l.c.)

The towns founded by the Ionians—which, though independent of one another, yet formed a kind of confederacy for common purposes—amounted to twelve (Δωδεκάδα), a number which may not be regarded as accidental. These towns, of which accounts are given in separate articles, were: Phocaea, Erythrea, Clazomenae, Teos, Lampsaco, Colophon, Ephesus, Priene, Miletus, and Samos and Chios in the neighbourihg islands. (Strab. xiv. p. 633; Asdian, Ι. H. viii. 5.) Subsequently, about B.C. 700, Smyrna, which until then had belonged to Aeolis, became by treachery a member of the confederacy, which now consisted of thirteen cities. (Herod. i. 149; Paus. vii. 5; Strab. l.c.) These Ionian colonies soon rose to a high degree of prosperity, and in many respects outstripped the mother-country; for poets, philosophers, historians, and artists flourished in the Ionian cities long before the mother-country attained to any eminence in these intellectual pursuits. All the cities of Ionia formed independent republics, with democratical constitutions but their internal and other affairs were discussed at regular meetings held at Panionium (Πανιώνιον), the common centre of all the Ionian cities, on the northern slope of Mount Mycale, near Priene, and about three stadia from the coast. (Herod. i. 141, 148; Strab. xiv. p. 639; Meib., i. 17; Plin. v. 29.) These meetings at Panionium appear to have given rise to a permanent town, with a Prytanemum, in which the meetings were held. (Soph. B. 5.) The relationship of the Ionian cities together appears to have been rather loose, and the principal objects of the meetings, at least in later times, were religious worship and the celebration of games. The cities continued to enjoy their increasing prosperity and their independence until the establishment of the Lydian monarchy. The attacks upon the Ionian colonies began even in the reign of Gyges, so that one city after another was conquered, until, in the reign of Croesus, all of them became subject to the Lydians. When Lydia became the prey of the Persian conqueror Cyrus, in B.C. 557, Ionia also was obliged to acknowledge the supremacy of Persia; but the new rulers scarcely interfered with the internal affairs of the cities and their confederacy; all they had to do was to pay tribute, to send their contingents to the Persian armies, and to submit to satraps and tyrants, the latter of whom were Greek and who set themselves up in their native cities, and were backed by the Persian monarchs. But the Ionians, accustomed to liberty, were unable to bear even this gentle yoke for any length of time, and in B.C. 500 a general insurrection broke out against Persia, in which the Athenians and Eretrians also took part. The revolt had been planned and organised by Histiaeus, tyrant of Miletus, and Aristagoras, his son-in-law. The Ionians burned and destroyed Sardis, the residence of the Persian satraps, but were then routed and defeated in a bloody battle near Ephesus. In B.C. 496 all the Ionians were again reduced, and compelled to assist the Persians with men and ships in the war against Greece. In the battle of Mycale, B.C. 479, the Ionians deserted from the ranks of the Persians and joined their kinsmen, and thus took the first step to recover their independence, which ten years later was fully secured by the battle on the Eurymedon. They then entered into a relation with the Athenians, who were to protect them against any further aggression from the Persians; but in consequence of this they became more or less dependent upon their protectors. In the unfortunate peace of Antalikes, the Ionians, with the other Asiatic Greeks, were again made over to Persia, B.C. 387; and when the Lydian monarchy was destroyed by Alexander, they became a part of the Macedonian empire, and finally fell into the hands of the Romans. The highest prosperity of Ionia belongs to the period of the Lydian supremacy; under the rule of Macedonia it somewhat recovered from its previous sufferings. Under the Romans the Ionian cities still retained their importance as commercial places, and as seats of art and literature; but they lost their provincial life, and came down to the division of mere provincial towns. The last traces of their prosperity were destroyed under the barbarous rule of the Turks in the middle ages. During the period of their greatest prosperity and independence, the Ionian cities sent out numerous colonies to the shores of the Black sea and to the western coasts and islands of the Mediterranean. (Comp. Thirlwall, Hist. of Greece, vol. ii. chap. 12, pp. 94, 115, 180, &c.; Grote, Hist. of Greece, vol. ii. pp. 229–253.) [L. 8.]

Ionia Mare (Ιόνιον πελάγος, Plut.), was the name given by geographers to the sea which bathed the western shores of Greece, and separated them from those of Sicily and Southern Italy. The appellation would seem to date from a very early period, when the Ionians still inhabited the shores of the Corinthian gulf, and the part of the Peloponnese subsequently known as Achaea. So we have no evidence of its employment in early times. The legends invented by later writers, which derived it from a hero of the name of Ionius or Ion, or from the wanderings of Io (Aesch. Prom. 840; Tel.] Hist. Lycophr. Alex. 630); Steph. B. s. v.; Estath. ad Dionys.
The name of the island is found in the Homeric poems, and it occurs for the first time in Aeschylus. From the poetic diction of that writer, it is not clear in what precise sense he employs the term πώλος or πώλου (Aesch. l.c.). Heraclitus evidently employs the name Ιόνιος as synonymous with the Adriatic; and Thucydides likewise uses the term in the same sense, as is evident from his expression, that "Epidauros is a city on the right hand as you sail into the Ionian gulf." (I. 24). He also repeatedly uses the term τῆς Λίμνου (with κόσμος understood) in speaking of the passage from Corcyra to the Iapigian promontory (vi. 30. 53, viii. 39); but in all these cases he refers only to the narrow sea, which might be considered as part of the same gulf or inlet with the entrance of the Adriatic. SevLEX also, and even Sussmann Chius, employ the name of the Ionian gulf in the same sense, as synonymous with the Adriatic, or at least with the southern part of it (Syl. §§ 14, 27; Syst. Ch. 133, 361) [ADRIATICUM MARIS]; while the name of the Ionian sea, in the more extended sense given to it by later geographers, as indicated at the commencement of this article, is restricted to the narrow sea, or the strait or straits of Sicily, which is the first extant author who uses the term in this sense, and gives the name of Τῶν ναυών πάρος to the sea which extended from the entrance of the Adriatic along the coast of Italy as far as the promontory of Corcyra, which he considers as its southern limit. (Pol. ii. 14, v. 110.) Even here the peculiar extension of the Ionian strait sufficiently shows that this was a mere extension of the name from the narrow sea or strait at the entrance of the Adriatic to the more open sea to the S. of it. Hence we have no proof that the name was ever one in common use among the Greeks until it came to be established by the geographers; and even Strabo, who on these points often follows earlier authors, gives the name only of the Ionian gulf to the part of the sea near the entrance of the Adriatic, while he extends the appellation of the Sicilian sea (Σικυοτατον παρος) from the eastern shores of Sicily to the Peloponnesus. The Peloponnesus and Sicily were the first parts in which the Ionians made settlements, and the name of Ιωνικὸς or Ιωνίων was given to the inhabitants of them; — the adjective was subsequently applied to the sea between them, and to the people who resided on both sides of it. The Greek writers, however, give the name of Ιονίων to the Ionians from the Peloponnesus, as well as from Sicily; and Polibius and Sussmann Chius, fixes the Adriatican promontory as the limit between the Ionian and the Adriatic seas. (Strab. ii. p. 125, vii. pp. 316. 317.) Pliny uses the name of Ionium Mare very widely, or rather very vaguely, including under that appellation the Mare Siculum and Cetaceum of the Greeks, as well as apparently the lower part of the Adriatic (Plin. iii. 8. s. 14, 26, s. 29, 30, iv. 11, s. 18), and this appears to have been the usage common in his day, and which is followed by the Latin poets. (Verg. Aen. iii. 211, 671; Ovid. Fast. iv. 565, &c.) Mela distinguishes the Ionian sea from the Sicilian, and applies the former name, in the sense now generally adopted by geographers, as that portion of the broad sea between the shores of Greece and those of Sicily, which lay nearest to the former. (Mld. ii. 4. § 1.) But all these names, given merely as synonyms of the Mediterranean which had no local limits, were evidently used very vaguely and indefinitely; and the great extension given at a later period to the name of the Adriatic swallowed up altogether those of the Ionian and Sicilian seas [ADRIATICUM MARIS], or led to the employment of the former name in a vague and general sense, wholly different from that in which it was originally applied. Thus Servius, commenting on the expression of Virgil, "Ionian Poeno in Gallis" when the true Ionian Mare is meant by the poet, says:—"Iovium, Ionium sinum esse immissum, ab Ionia Mare ad Siciliam, et Iunias partes esse Adriaticum, Adriaticam et Epireaticum." (Serv. ad Aen. iii. 211.) On the other hand, the name of the Ionian gulf (τῆς Λίμνος κόσμος) was still given in late times (at least by Herodotus) to that portion of the Adriatic immediately within the strait at its entrance. (Kast. ad Dionys. Per. 92, 389.) Polycyem even applies the name of the Ionian sea (Τῶν ναυών παρος, iii. 1. §§ 14, 15) in the same restricted manner.

From the name of the Ionian sea has been derived that of the Ionian islands, now given to the group of seven principal islands (besides several smaller ones) which constitute an independent republic under the protectorate of Great Britain; but there is no ancient authority for this appellation. (E. II. B.)

JOITA (loj, LXX.; Strab. xvi. p. 759; Phil. toL. 16. § 2.) The form lõi, Steph. B.; Dianys. v. 910; Joseph. Antiq. x. 10. § 2; Solin. 34, better suits the Phoenician original, which signifies "an emanation;" comp. Mover's Phœniciæ, pt. ii. p. 177; Hitzig, Die Philol. ii. 131—134: Eit. Ins. 22, § 19; Pflüger, Hist. of the Hebrew language. (Serv. ad Aen. iii. 211, 671.) The Hebrew name Japho is still preserved in the Arabic Yafira or Jaffo. (Joseph. Antiq. iv.) A seaport town and haven on the coast of Palestine, situated on an eminence. The ancients asserted that it had existed before the Deluge (Pomp. Mela, i. 11. § 3; Phil. v. 14), and according to legend it was on this shore that Andromeda was rescued by Perseus (Strab. l.c.; Phil. l.c.; comp. Hieron. in Jos. i. 1.) from the monster, whose skeleton was exhibited at Rome by M. Aurelius; and it was also by some supposed to be the place where the Israelites invaded Canaan. (Joseph. Antiq. iv.) It is still called Jaffa, or Joppa, and is the birthplace of the Apostle Peter (Acts, x. 38; 2 Chron. vi. 14; Ezra, iii. 7), and Jonah went to Joppa to find a ship going to Tarshish (Jonah, iii. 7), and the Apostle Peter set the shipping on fire, because of the inhabitants having drowned 200 Jews (2 Macc. xii. 3—7). The town was afterwards taken by Jonathan (1 Macc. x. 74—76), but it was not long retained, as it was again captured by Simon (xiv. 39), and was strongly fortified by him (xv. 5, xv. 28). It was annexed by Pompeius to the Roman province of Syria, along with other towns which the Jews had held by grants from the predecessors of Antiochus (Joseph. Antiq. xiv. 4. § 4, comp. xix. 3, § 3), and was afterwards given to Herod by Julius Caesar (xv. 7. § 3), and remained part of the dominions of Archelaus (xviii. 11. § 4).

In the New Testament Joppa is mentioned in connection with the Apostle Peter (Acts, i. 36—43, x. 18, xi. 5). During the Jewish war, this place, which had become a receptacle for pirates (Strab. xvi. p. 759), was taken by Cestius, and 8400 of the inhabitants were put to the sword. (Joseph. B. J. ii. 18. § 10.) The Chaldaeans afterwards utterly demolished the ruins of Joppa, to which great numbers of persons had fled, and taken to piracy for subsistence. (B. J. iii. 9. §§ 2—5.) In the time of Constantine Joppa was the seat of a bishop, as well as when taken by the Arabians under Omar, A. D. 636; the name of a bishop occurs in the council held at Jerusalem A.D. 596. At the period
of the Crusades, Joppa, which had already taken the name of Jaffa (Tâfa, Anna Comm. Alex. xi. p. 328), was probably rebuilt during the restorations and moderns. After its capture by Saladin (Wilken, Die Kreuzz., vol. iv. pp. 537, 539) it fell into the hands of our own Richard (p. 545), was then sacked by Malek-al-Adel (vol. v. p. 25), was rebuilt by Frederick II. (vol. vi. p. 471) and Louis IX. (vol. vii. p. 316), when it was taken by Sultan Bihars (vol. viii. p. 517). As the landing-place for pilgrims to Jerusalem, from the first Crusade to our own day, it occurs in all the Itineraries and books of travels, which describe the locality and natural features of Jaffa for a haven, in terms very similar to those employed by the ancients. For coins of Joppa see Eckhel, vol. iii. p. 433. (Roland, Palaeast. p. 864; Von Kaemer, Palestina, p. 201; Winter, Reiseverzeichn. s. v.; Robinson, Researches, vol. iii. p. 81, Ritter, Erdkunde, vol. xi. pl. i. pp. 574—580, Berlin, 1852.)

JORDANES. [Palaestina.]

IOS (Іос.: Eth. Іосім., Іост.) an island in the Aegean sea, one of the Sorades, and falsely called by Stephans one of the Cyclades, lay north of Thera and south of Paros and Naxos. According to Pliny, it was 25 miles in length, and was distant 18 miles from Naxos and 25 from Thera. (Plin. iv. 12. s. 23.) Both Pliny and Stephanus state that it was originally called Phoenix. It possessed a town of the same name (Plin. iii. 15. § 28), situated upon a height on the western side of the island. It has an excellent harbour, of a circular form, like the Piraeus; its mouth faces the south-west, and is opposite the island of Seinias. The island is now called Nio (ііо) and when Ross visited it, in 1836, it contained 505 families or 2500 souls. The modern town is built upon the site of the ancient one, of which there are still remains.

Ios was celebrated in antiquity as the burial-place of Homer, who is said to have died here on his voyage from Smyrna to Athens. Long afterwards, when the fame of the poet had filled the world, the inhabitants of Ios are reported to have erected the following inscription upon his tomb —

1'Εσθηδε την Ισθη κεφαλη κατα γαλα καλλιτε 
Λαυρον χρυνω καμπανα, δος ουμερι.

Pseudo-HEROD. VIT. HOMER. 34, 36; comp. Sclayr. p. 22; Strab. x. p. 484; Paus. x. 24. § 2; Plin., Steph. B. iv. cc.

It was also stated that Clymenus, the mother of Homer, was a native of Ios, that she was buried in the island (Ians, Steph. B. iv. cc.) and, according to Gallus (iii. 11), Aristotle related that Homer himself was born in Ios. In 1771 a Dutch nobleman, Graf Pasch van Krienen, asserted that he had discovered the tomb of Homer in the northern part of the island; and in 1773 he published an account of his discovery, with some inscriptions relating to Homer which he said he had found upon the tomb. Of this discovery a detailed account is given by Ross, who is disposed to believe the account of Pasch van Krienen; but the original inscriptions have never been produced, and most modern scholars regard them as forgeries. (Ross, Reisen auf den Griech. Inseln, vol. i. pp. 54, 154, seq.; Welcker, in Zeitschrift für die Alterthums¬wissenschaft, 1844, p. 290, seq.)

JOTA Büyük (Іотаык), an island in the Erythraean Sea, not less than 1000 stadia from the city of Aelana, inhabited by Jews who, formerly independent, accepted the yoke of the Empire during the reign of Justinian (Procop. B. P. i. 19). It is now called Tiran, or Djebret Tyran of Burkhardt (Trav. p. 531), the island at the entrance of the Gulf of Akebbeh, (Comp. Journ. of Geog. Soc. vol. vi. pp. 54, 55.) The modern name recalls the "Gens Tyra" of Pliny (vi. 33), placed by him in the interior of the Arabian gulf. (Ritter, Erdkunde, vol. xiii. pp. 223—225, vol. xiv. pp. 19, 242.)

JOTAPATA (Іотаопата: Eth. Іотапопатос, Steph. B. s. v.), a city of Galilee, standing on the summit of a lofty hill, rising abruptly on three sides, from the deep and impassable ravines which surrounded it. Josephus, who manfully defended it against Vespasian, has told the story of its siege and capture; 1200 prisoners were taken, and 40,000 men fell by the sword during its protracted siege: Vespasian gave orders that the city should be made to the ground and all the defences burnt. Thus perished Jotapata on the first day of Panemus (July) (B. J. iii. pp. 6—8; comp. Roland, Palaeast. p. 867; Milman, Hist. of Jews, vol. ii. pp. 287—309). Mr. Bankes (Irby and Mangles, Trav. p. 299) has fixed the site at the singular remains of Kaisat Ibn Ma'am, in the Wady-el-Hasan (comp. Burkhardt, Trav. p. 351; Ritter, Erdkunde, vol. xv. pt. i. p. 327), but Robinson (Researches, vol. iii. pp. 279—362) identifies these ruins with the Arabia of Galilee and its fortified caverns. (E. B. J.)

JOTA'FE (Іотаф), Eth. Іотаіадіі, a small town of Cilicia, in the district called Selentit, not far from Seinias. It is perhaps the same place as Laerte, the native city of Diogenes Laertius. It is identified with the modern fort Lumbardo. (Plot. v. 8. § 2; Pline. v. 22; Constil. Chalced. p. 659; Hieroc. p. 708, where it is called Іотаріі; comp. LAETE.) The coins of Jotafe belong to the emperors Philip and Valerian. (L. S.)

JOVATLA, a town of Lower Pannonia, on the southern bank of the river Dravus. (Itin. Hieros. p. 562.) In the Peut. Tab. it is called Iovallium, while Ptolemy (ii. 16. § 6) calls it Iovololou or Іοβολολον, and the Geog. Rav. (iv. 19), Iubollos. It occupied, in all probability, the site of the modern village of Fulpa. (L. S.)

JOVEM, AD, in Gallia Aquitania, a Mutatio on the road from Burdigala (Bordeaux) to Tolosa (Toulouse); and between Biscornus and Tolosa. This Mutatio was seven leagues from Tolosa. D'Aville conjectures it to be at a place which he names Guecin or Guerin. Walckenaer fixes the Mutatio of Biscornus near the Bois du Boncorne. (G. L.)

JOVIA, a town in Lower Pannonia, south of the river Dravus, on the road from Poetovium to Muris. (Itin. Hieros. p. 561; Itin. Ant. p. 130; Teb. Peut.) The site is generally identified with some ruin marked at Topilia. Another place of the same name is mentioned in Upper Pannonia, on the same road (Itin. Ant. p. 264), and is identified with some ruins found at Lovinex. (L. S.)
JOYALCMUM.

JOYALCM, a town in Noricum, where a "pre- nactus sequaeae Italicum militiae Liburnarum" had his head-quarters; a circumstance suggesting that the town, though situated some distance from the Danube, was yet connected with its navigation. (Itin. Ant. p. 249; Not. Imp.; Tab. Pent.) [L. S.]

JOY VUS MONS (Thi Dios apo, v. 3, § 18; Zosim), a mountain of Africa Propria, between the rivers Bagrada and Trinita, apparently containing the sources of the river Cataleo. [L. S.]

JOY VUS PAGUS, a town in the interior of Mesia, on the eastern bank of the Margus. (Itin. Hieros, p. 563; Tab. Pent.: Geogr. Liv. iv. 7, where it is called simply Paus.) Same identify it with the modern Chlouvere. [L. S.]

JOY VUS PROMONTORIUM (Dios apo, v. 7, p. 4), a promontory mentioned by Ptolemy, at the S. end of the island of Tapnume (Cydon). Its exact position cannot be identified, but it must have been near the neighbourhood of the present Point du Galle, if it be not the same. [V.]

IPASTUSI. [Instruct.]

IPHISTADAE. [Attica, p. 326, b.]

IPENI (Ibros), on the coast of Magnesia, in Thessaly, at the foot of Mount Pelion, where part of the fleet of Xerxes was wrecked, seems to have been the name of some rocks. (Herod. vii. 188; Strab. ix. p. 443.)

IPINUS (Ibros: Ith. Ithi6os), a town of the Lacon Ochla, of uncertain site. (Thuc. iii. 101; Steph. A. E. B. E. E.)

IPUSUS (Ibros or Ibros), a small town of Phrygia, a few miles below Symala. The place itself never was of any particular note, but it is celebrated in history for the great battle fought on its plains, B.C. 301, by the aged Antonius and his son Demetrius against the combined forces of Cassander, Lysimachus, Ptolemy, and Seleucus, in which Antonius lost his conquests and his life. (Philostr. i. App. Sosian. 55.) From Herodotus (p. 677) and the Acts of the Councils (Concil. Nicaeum, ii. p. 161), we learn that in the seventh and eighth centuries it was the see of a Christian bishop. Some moderns identify Ibus with Ipsi6 Ipsi6. [L. S.]

IRA (Ibri). 1. A town of Messenia, mentioned by Homer (II. ix. 150, 292), usually identified with the old Abia on the Messenian gulf. [Att.]

2. Or Einu (Elis), a mountain in Messenia, which the Messenians fortified in the Second Messenian War, and which Aristobulus defended for ten years against the Spartans. It was in the north of Messenia, near the river Neda. Locate places it at the greatest distance from the sea, under the side of the mountain on which now stands Sidha odystica and Miaurou; but there are no ancient remains in this spot. Move to the east, on the left bank of the Neda, near Kolodi, are the remains of an ancient fortress, which was, in all probability, Einu; and the latter mountain above, now called Tiro, was probably the highest summit of Mount Elata. (Paus. iv. 17, § 10, iv. 20, § 15, i. 5; Strab. viii. p. 560; Stephan. B. G. E. B. E. E.; Leake, Morav, vol. i. p. 486; Geoi. Rer. of the March, p. 81; Ross, Reisen im Peloponnese.) [L. S.]

IRENOPLEIS (Eironopolis), a town of the district Locris, in the north-east of Cilicia. It was situated not far from the river Caicydanus, and is said to have once borne the name of Neronias (Nepi- novas). (Theodor. Hist. Eccles. i. 7, ii. 8; Socrat. i. 26; Ptol. v. 8. § 6.) [L. S.]

IRENOPLEIS. [Beroea.]

IRENIAE. [Astericum.]

IRENIA (Irenia), a municipium in Gallacia.

IRENIA (Epina; Ptol.; E. P. Irenia: Ignagara), a considerable town of the interior of Liguria, mentioned both by Pliny and Ptolemy, as well as in the itineraries, which place it 10 miles from Dertona, on the road to Placentia. (Plin. iii. 5. s. 7; Ptol. iii. 1. § 35; Itin. Ant. p. 258; Tab. Pent.) This distance agrees with the site of the modern town of Voghiera, which appears to have been called in the middle ages Vesus Iriniae, a name gradually corrupted into Vescovia Palloncella. It is situated on the little river Staffore, which would seem to have borne in ancient times the same name with the city; it is called Hira or Irria by P. Diamon, who tells us that the emperor Majorian was put to death on its banks. (Hist. Miscell. xvi. p. 534.) Ptolemy includes Irria, as well as Dertona, in the territory of the Taurins; but this would seem to be certainly a mistake: that people could never have extended so far to the eastward. An inscription (of which the reading is, however, a matter of controversy) has "Coloniae Foro Iuli Eriensium," from which it would seem that Irria, as well as the neighbouring Dertona, became a colony after the death of Caesar, and obtained the name of Forma Juli; but this is very doubtful. No other trace is found either of the name or the colony. (Maffei, Misc. v. p. 371.; Muriac, Incert. p. 1108, 4; Orell, Incert. 773.) [E. B. B.]

IRIGE, an island in the Argolic gulf, supposed by Leake to be Ipsi6. (Plin. iv. 12. s. 19; Leake, Peloponnesia, p. 294.)

IRINUS SINUS. [Cantii Sinus.]

IRRIPPO, a town of Hispania Baetica (Plin. iii. 1. 35), where Ukert supposes to have been situated in the Sierra de Ronda, near Zara or Pinal. (Flo- rez, Esp. v. xii. p. 303; Coins, ap. Flor. Med. vol. ii. p. 474, vol. iii. p. 83; Minuent, vol. i. p. 56, Suppl. vol. i. p. 115; Sestini, Med. Itin., p. 61; Ukert, vol. ii. pt. 1. p. 358.) [P. S.]

IRIS (Ibri: Kalamat), a considerable river of Pountus, which has its sources in the heights of Anti- taurus in the south of Pountus. It flows at first in a northwestern direction, until reaching Comana it takes a western turn; it then passes by the towns of Mesya and Gazina. A little above Ambas it receives the Scylas, and turns eastward, near Pountus in the Lynceus empties itself into it. After this it flows due north, and, traversing the plain of Theissi, it empties itself into the Euxine by four mouths, the westernmost of which is the most important. (Strab. xii. p. 556.) The Iris is smaller than the Halyx (Apoll. Rhod. ii. 363), but still a considerable river, flowing through a vast extent of country, and, according to Xenophon (Anab. v. 6, § 8), was three fathoms in breadth. (Comp. Strab. i. 22. xii. 547; Scurf. v. 12. 28; Ptol. v. 6. § 27; Xenoph. v. 6. § 5; Tac. Hist. ii. 8. § 1; Apollon. Rhod. ii. 965; Diodyos, Per. 783; Plin. vi. 3. 1.) The part near its mouth is
IRIS.

now called Yekki or Yekil Irruak. (Hamilton, Researches, vol. i. p. 540.) [L. S.]

IRIS. [IINEE.]

I.R.R. or I.R.A. ("Iros or Ida"); a town of Malis, of uncertain site. (Steph. B. s. v.; Lycophor. 503.) In "Is. Herod. i. 179," a town of Mesopotamia, eight days' journey N. of Babylon, situated, according to Herodotus, on a stream of the same name, which brought down the bitumen which was used in the construction of the walls of Babylon. There is no reason to doubt that it is represented by the modern Hit. There does not appear to be any river at present at Hit, but a small stream may have been easily blocked up by the sand of ages. There is still bitumen springs in the neighbourhood of this place. It has been conjectured that the Iraspapu- yana of Isidorus (p. 5) refers to the same town. (Ritter, Erdkunde, vol. ii. p. 148; Rennoh, Geogr. of Herod. p. 552.) [V.]

ISA CA, in Britain, a river mentioned by Ptolemy (ii. 3. § 4) as lying west of the outlet of the Ta marus (Tamaris). In the Monumenta Britannica, Isacana ortha are identified with Wye-mouth, and also with Esca, probably the latter, name for name, as well as place for place. In the Geographer of Raveana the form Isca, which is preferable. [ISA.]

ISA DICI (Iasiaeose), a people whom Strabo (xi. p. 506) couples with the Trogbydotes and other tribes of the Caucasus. The name may imply some Hellenic fancy about savage justice and virtue. (Comp. Groskurth, ad loc.) [E. B. J.]

ISAAXNAVATIA, in Britain, mentioned in the 6th Itinerary as lying between Lactodorum and Triontipum. It is a name of some difficulty, since neither of the places on each side of it has been identified. (See viii.) In the Geographer of Raveana we find a Bannovallum, and in the 8th Itinerary a Bannovantia. Probably these two names are identical. At any rate, Bannovantia = Isan navatia, since each is 28 miles from Magiovium. Thus, in the 6th Itinerary, we have:—

Magniovium M. P.

Lactodorum — —

Isan navatia — xvi.

And in the 8th

Bannovanto M. P.

Magniovium — xxviii.

It is only safe to say that Isanavatia was a town in the southern part of Northumbria, probably Dacentry. The Itinerary in which it occurs has only two names beyond doubt, viz. Verulamium and Lindum (St. Albans and Lincoln). Dacentry, however, is Horsley's identification. In more than one map of Roman Britain, Bannovantum is placed in Lincolnshire. This is because it is, in the first place, separated from Bannovantum, and then fixed on the river Bain, a Lincolnshire river. This is the meaning of Horncastle being given as its equivalent. The change, however, and the assumption, are equally gratuitous. [R. G. L.]

ISARA, the river. 1. [ISULA.]

2. The Isara, which was a branch of the Sequana, has its modern name preserved in the Celtic name of a place which was on it, named Briva Isara. [BRIVA ISAURA.] The Celtic element Is has become Ois, the modern name of the river, which is the same as the English Ouse. D'Anville says that the name Isara in the middle ages became Essia or Aesia. Vibius Sequester mentions a river Essia which flows into the Sequana; but D'Anville suspects the passage to be an interpolation, though it is impossible to judge what the interpolation in such a strong book as Vibius Sequester. Oberlin, the editor of Vibius Sequester, maintains the passage to be genuine (p. 110). [G. L.]

3. [LULA.]

ISAICI, a Rhaetian tribe dwelling about the mouth of the river Isara (Plin. iii. 24), from which it appears to have derived its name. [L. S.]

ISAIGUS [I:

ISAIVUS (Isavos; the Isar), a river of the Rhaetian Alps, flowing from an Alpine lake, and in a southern direction until it joins the Athes near Pons Drusi. (Strab. iv. p. 207, where the Isapos (or a) is said to receive the Araxis (Athesis); either a mistake of Strabo himself, or by a transcriber transposing the names. Comp. IARIVS.) [L. S.]

ISAURA (via Isapoa: Eth. Isasop), the capital of Isaura, situated in the south-west of the town, and among the ashes and ruins. The town was rebuilt, but was destroyed a second time by the Roman Servilius Isauricus, and thereupon it remained a heap of ruins. Strabo (xii. p. 568) states that the place was ceded by the Romans to Aymunus of Galatia, who built out of the ruins of the ancient city a new one in the neighbourhood, which he surrounded with a wall; but he did not live to complete the work. In the third century of our era Isaura was the residence of the rival emperor Trebellianus (Trebbell, Poll. XXX. Tyrann. 25) but in the time of Ammianus Marcellinus (xiv. 8) nearly all traces of its former magnificence had vanished. At a later period it is still mentioned, under the name Isauropolis, as a town in the province of Lycaonia. (Hieroc. p. 675; Concil. Chaled. p. 673; comp. Strab. xiv. p. 665; Ptol. v. 4. § 12; Steph. B. s. v.; Plin. v. 27.) Of Old Isaura no ruins appear to be found, though D'Anville and others have identified it with the modern Bei Shepher; they also believe that Seidi Sheker occupies the site of New Isaura, while some travellers regard Serki Serai as the representative of New Isaura; but Hamilton (Researches, vol. ii. pp. 330, foll.) has given good reasons for thinking that certain ruins, among which are the remains of a triumphal arch of the emperor Hadrian and a gateway, on a hill near the village of Old Banor mark the site of the walls of the city can still be traced all around the place. The Isaurians were a people of robbers, and the site of their city was particularly favourable to such a mode of life. [ISAURIA.]

[ISauria.]

ISAURIA (I: Isapia), a district in Asia Minor, bordering in the east on Lycaonia, in the north on Purgia, in the west on Pisidia, and in the south on Cilicia and Pamphylia. Its inhabitants, living in a wild and mountainous country, were little known to the civilised nations of antiquity. The country contained but few towns, which existed especially in the northern part, which was less

[ISauria.]
magnitudes, though the capital, Isauria, was in the south. Strabo, in a somewhat vague passage (xxii, p. 568), seems to distinguish between
Isauria, the northern part, and Isaurica, the southern and less known part, which he regards as belonging to Lycaonia. Later writers, too, designate by the name Isauria only the northern part of the country, and take no notice of the south, which was to them almost a terra incognita. The inhabitants of that secluded mountainous region of Asia, the Isauri or Isauricus gens, appear to have been a kind of off-shoot of the Pisidians. Their principal means of living were derived from plunder and rapine; from their mountain fastnesses they used to descend into the plains, and to ravage and plunder wherever they could overcome the inhabitants of the valleys in Cilicia, Phrygia, and Pisidia. These roaming habits rendered the Isaurians, who also took part in the piracy of the Cilicians, so dangerous to the neighbouring countries that, in v. c. 78, the Romans sent against them an army under P. Servilius, who, after several severe campaigns, succeeded in compelling most of their strongholds and reducing them to submission, in consequence of which he received the surname of Isauricus. (Strab. L.; Diod. Sic. xxi. 22; Zosim. v. 25: Mela, i. 2; Plin. v. 23; Strenth. vi.; Liv. Epit. 93; Dion Cass. xvi. 14; Flor. hist. 6; Polyb. vi. 4, § 12; Oros. v. 29; Ann. Marc. xiv. 2, xxv. 9.) The Isaurians after this were quite distinct from the Lycaonians, for Cicero (ad Att. v. 21; comp. ad Fam. xiv. 2) distinguishes between the Forum Lycaonum and the Isauricum. But notwithstanding the severe measures of Servilius, who had destroyed their strongholds, and even their capital of Isauria, they subsequently continued to infest their neighbours, which induced the tetrarch Amynatas to attempt their extermination; but he did not succeed, and lost his life in the attempt. Although the glorious victory of Pompey over the pirates had put an end to such practices at sea, the Isaurians, who in the midst of the possessions of Rome maintained their independence, continued their predatory excursions, and defied the power of Rome; and the Romans, unable to protect their subjects against the bold mountaineers in any other way, endeavoured to check them by surrounding their country with a ring of fortifications. (Polyb. Poll. XXX. T. 23.) In this, however, they succeeded imperfectly, for the Isaurians frequently broke through the surrounding line of fortifications; and their successes emboldened them so much that, in the third century of our era, they united themselves with their kinsmen, the Cilicians, into one nation. From that time the inhabitants of the highlands of Cilicia also are comprised under the name of Isauri, and the two united undertook expeditions on a very large scale. The strongest and most flourishing cities were attacked and plundered by them, and they preserved the terror of the surrounding nations. In the third century, Trebellianus, a chief of the Cilician Isaurians, even assumed the title and dignity of Roman emperor. The Romans, indeed, conquered and put him to death; but were unable to reduce the Isaurians. The emperor Probus, for a time, succeeded in reducing them to submission; but they again rose against the yoke. (Vopisc. Prov. 16; Zosim. v. 69, 70.) In the Gothic wars they were particularly formidable, for whole armies are said to have been cut to pieces and destroyed by them. (Goth. Hist. i. 12; Zosim. p. 16.)

ILSIA.

Hist. Eccl. xi. 8.) Once the Isaurians even had the honour of giving an emperor to the East in the person of Zeno, who reigned over the Isaurian; but they were subsequently much reduced by the emperor Anastasius, so that in the time of Justinian they had ceased to be formidable. (Comp. Gibbon, Hist. of the Decline, etc., chap. xii.) The Isaurians are described as an ugly race, of low stature, and badly armed; in the open field they were bad soldiers, but as hardened mountaineers they were irresistible in what is called guerrilla warfare. With their country, though for the most part consisting of rugged mountains, was not altogether barren, and the vine was cultivated to a considerable extent. (Annum. Marc. xiv. 8.) Traditions originating in the favourite pursuits of the ancient Isaurians are still current among the present inhabitants of the country, and an interesting specimen is related in Hamilton, Researches, vol. ii. p. 301. (L. S.)

ISCA, the name of two towns in Britain. The etymology of certain difficulties connected with their identification is given under MURIDENUM. Here it is assumed that one is Exeter, the other Catreon-on-Ush. (1.) Isca—Exeter, mentioned by Ptolemy (ii. 3. § 30). In the 12th and 15th Itineraries this appears as Isca Dumnoniorum, 15 miles from Muridenum. The word Dumnonium shows that Devonshire is the county in which it is to be sought. Name for name, Exeter suggests itself. Nevertheless, however, gives Uxcela as the Roman name for Exeter, and placed Isca D. at Chiselbor. After remarking on Isca, that "it is universally supposed to be the river Exe in Devonshire," and that "Isacae ostia must, therefore, be Exemouth," he adds, "Isca Dumnoni- rum has been universally taken for Exeter; I have placed it near Chisel-ror, and South Petherton, near the borders of Somersetshire." (p. 371.) His objections (p. 462) lie in the difficulty of fixing Muridenum (p. r.) ; but, beyond this, he considers himself free to claim Uxcela, (q. v.) as Exeter. For considering Isca Dumnoniurum to be Exeter, he sees no better reason than "general opinion and some seeming affinity of names." Yet the "affinity of names" has been laid great stress on in the case of Iscelex ostia. The Isca of Ptolemy must be about 20 or 30 miles north-east of the mouth of the Exe, on which river Exeter stands. This reaches to the A.

Hence he classifies Exeter as Isca Dumnum; but, as he admits that that town has a claim to be considered Iscalis (q. v.), he also admits that some of the localities about Hamo-don Hill (where there are the remains of a Roman camp), South Petherton (where Roman coins have been found), and Chiselbro (not far from the Axe), have better claims. Hence, in his map, Uxcela = Exeter, and Isca D. = Chiselbro. Assuming that some, if not all, these difficulties are explained under Uxcela and Moridenum, the positive evidence in favour of Exeter is something more than mere opinion and similarity of name.

(1) The form Isca is nearer to Exe than Az, and that Isca—Exe is admitted. The Ux—Isca may better = Az.

(2) There is no doubt as to the other Isca = Catreon-on-Ush. Now, Roger Hoveden, who wrote whilst the Cornish was a spoken language, states that the name of Exeter was the same as that of Catreon-on-Ush. He mentions "something obscure in this name," and adds, "I think this is something more than a mere obscurity of language." (iii. 15.)

(3) The statement of Hoveden, that "he never heard of any military way leading to or from" Exeter, without. In Pevsner (p. 182) we have a
most distinct names of the road from Seaton, and, nine miles from Exeter, the locality called Street way Head: the name street = road (when not through a town or village) being strong evidence of the way being Roman. Tesselated pavements and the foundations of Roman walls have been found at Exeter, as well as other remains, showing that it was not only a Roman town, but a Roman town of importance, as it continued to be in the Saxons times, and as it had probably been in the British times. 2 Isca Legionis = Caerleon-on-Wye, is mentioned in the 12th Itinerary, i.e. in the one where Isca Dumnoniorum occurs. The only town given by Ptolemy to the Silures, the population of the parts to which Isca (sometimes called by later writers Isca Silurum) belongs, is Bollacium. This = Burrium of the Itinerary, 8 Roman miles from Isca (= Uis, about 6 English miles from Caerleon.) Hence, Isca may have been a military station of comparatively recent date. But there is a further complication. It is the Devonshire Isca to which Ptolemy gives the Second Legion (Arsenav dervra 2Bea7y). "This," remarks Horsley (and, perhaps, with truth), on the part of Ptolemy, is, "in my opinion, the only manifest and material error committed by him in this part of England" (p. 462).

Again: several inscriptions from the Wall (per liuros Valli) show that, when that was built, the second Legion was on the Scottish border, taking part in the work; the previous history of the legion being, that it came into Britain under the reign of Claudius, commanded by Vespasian. (Tac. Hist. iii. 44.) On the other hand, an inscription mentioned by Horsley, but now lost (p. 78), indicates their presence at Caerleon in the time of Severus. As the Itinerary places them there also, we must suppose that this was their quarters until the times approaching the evacuation of Britain. When the Notitia was made, they were at Batutania (Richborough): Praefectus legions ii. august. But it is.

The Roman remains found at Caerleon are considerable. A late excavation for the parts about the Castle Mound gave the remains of a Roman villa, along with those of a medieval castle, built to a great extent, out of the materials of the former. In some cases the stiles preserved its colour. There was abundance of pottery,—Samian ware, ornamented with figures of combatant gladiators, keys, bowls, bronze ornaments, and implements. At Pell Esca, near Caerleon, tessellated pavements have been found, along with the following inscription:—DIS MA- NDIVS TADIA YELLAVIS. VIXIT ANNOS SEXA- GINTA QVINGVE. ET TADIVS EXPUSET PFLIVS VIXIT ANNOS TERTIAGN XESETEM. DEFISTVS (sic) EXPEDITIONE GERMANICA VIXIT ANNOS PRAEDIVS POMARA ET PATHI TISPI. SERVS TV- MYLVM PATHI POSYLV. Others, of less length, to the number of twenty, have also been found in the neighbourhood. (See Archaeologia Cambrensis; Journal of British Archæological Association (passim); and Delineations of Roman Antiquities found at Caerleon, J. E. Lec.)

ISCA. river. [Isaca.]

ISCADIA (Eriacadia), a town in the W. of Baes- ton, between the Basset and the Aunis, not far from Tuci. (Arian. Hist. 65.)

ISCHALIS, in Britain, mentioned by Ptolemy (ii. 3. § 28) as one of the towns of the Belgae, Bath and Winchester ("Sura Osopd, or Aquae Salis, and Venta) being the other two; identified, in the Monumenta Britannica, with Hockerton. [Isca Dum- noniorum.] [R. G. L.]

ISCHOTPOLIS (Ircechotus), a small town on the coast of Pentus near Pharmacis, was in ruins even in the time of Strabo (xii. p. 548), but is still noticed by Ptolemy (v. 6. § 5). [L. S.]

ISIACUM FORI (Iiiacavc Aupq), Arrian, Peripl. p. 21. Anon. Peripl. p. 9), a harbour on the Exune sea, 980 stadia from the island at the mouth of the Borysthenes, and 1200 stadia from the Istrion (Sulina) mouth of the Danube. (Arrian, l.c.) It has been identified by Renell (Comp. Geog. vol. ii. p. 360) with Odessa. There is some difficulty in adjusting the discrepancies in detail; but the aggregate distance appears to be clearly enough made out. Thus, from the island to Olessus Arrian allows a distance of 80 stadia, and from Olessus to the port of the Istrians (Isopar) about 250 stadia, and thence to that of the Isiaci 50 stadia. The Odessus (Odespas) of Arrian (for he places Odespos at Yarna) is probably a false reading, and is the same as the Odessus (Odespas) of Ptolemy (iii. 5. § 29) and Piny (v. 12), situated upon the river Aixaces, or the modern Teleps, a large estuarine which receives a river of the same name. As the interval in Arrian between Odessus (Ordesus) and the island is too short, so the next is too large; but the errors balance one another, and the harbour of the Isiaci agrees with that of Odessa within three quarters of a mile; the port of the Istrians may have lain to the N. of the bay of Odessa. [E. B. J.]

ISIDIS OPFIDUM (Plin. v. 10. s. 11). Near the city of Busiris, in the Egyptian Delta, was situated a splendid temple of Isis, surrounded, besides the ordinary dwellings of the priests within the sacred precincts, gradually clustered a large and flourishing village, inhabited by the artisans and husbandmen who supplied the wants or titled the lands of the innates of the temple. These buildings formed probably the hamlet or town of Isis mentioned by Pliny. The modern village of Bubastis, N. of the ancient city of Busiris, is supposed to cover the ruins of the Templum Isidis. (Procokts, Travels in the East, vol. i. p. 34; Minot, p. 304.) [Bu- siriis.]

ISIS, a place in Rhætia Superior, on the ancient road between Augsburg and Salzburg. (Itin. Ant. pp. 236, 251, 257; Tab. Puteat, where it is called Isiniscis.) It is identified by some with Icen, and by others with a place near Heilfendorf. [L. S.]

ISIONDA (Irideda), a town in the south-west of Pisidia, a few miles to the north-west of Termessus. (Polyb. lcc. de Leg. 31; Liv. xxxviii. 13.) Strabo (xii. p. 570), in enumerating the Pisidian towns, mentions one which he calls Sineda, a name which some suppose to be a corruption of Sinis the god of Pisidia; but, as there existed a town of the name of Sinia near Cybra in Pisidian Phrygia, it would be hazardous to decide anything. (See Kramer's note on Strab. l. c.) Sir C. Fellowes (Asia Minor, p. 194) found extensive remains of an ancient town on the top and side of one of the many isolated hills of the district, which he supposes to be the ruins of Isionda, but he does not mention any coins or inscriptions in support of his conjecture. Isis (Iris), a navigable river on the east coast of the Exune between the Acracins and Magnus, from each of which its distance amounted to 90 stadia, while its mouth was 180 stadia south of that of the Phinnus. (Arr. Peripl. p. 7; Plin. vi. 4;
SYILAX. p. 32, where the common reading "Ierat has been corrected by Gill." This river is believed to be the modern Taboros. [L. S.]

I. S. I. M. (Istn. Ant. p. 167; Isii, Nat. Imp.), was a fort situated on the borders of the Thébaid and Hephaestus in Egypt, in lat. 27° 5' N., and on the eastern bank of the Nile. Ismian was about 20 miles SE. from the castle of Hieracon, and nearly 24 miles NE. from that of Mathis. Under the Roman empire a troop of British infantry (aka Britomart) was stationed there. [W. B. D.]

ISMARIS (Tereusis marum), a small lake on the coast of Thrace, a little to the east of Maronea. (Hercod. vii. 68. Steph. B. s. v. *Tereusos.*) On its eastern side rises Mt. Ismarus. [Ismaras] [L. S.]

ISMARUS (Tereusos), a mountain rising on the N. coast of Ismarus, on the coast of Thrace (Virg. Aen. vii. 20. Georpi. ii. 57; Properti. ii. 13. 5. iii. 12. 25 & Lucret. v. 31), where it is called Ismara, as in Virg. Aen. x. 334.) Homer (Od. ix. 40. 198) speaks of Ismarus as a town of the Grecians, and is at or at the foot of the mountain. (Comp. Marcl. Hercud. 28.) The name of the town also appears in the form Ismaron. (Plin. iv. 18.) The district about Ismarus produced wine which was highly esteemed. (Athen. i. p. 30; Ort. Med. ix. 641; Steph. B. s. v.)

ISONUS. [Theb.]

ISONADAE (Trybus. Pld. v. 9. § 23), a people whose position must be sought for in the valley of the river Terek or Kuma, in Legiastia, to the W. of the Caucasian.

ISPITALM. [Carpetana.]

ISSA. (Istn. Ant. ii. 16. § 14; Athachem. i. 5; Darmest. pp. 78. 79; Plinius. vii. 9. 18; Steph. B. a. v. Palaestina; De Part. Tur.; Isai. Geogr. p. 195 Const. Ptol. de Asia. Imp. 36; Eth. et Adad. Toreus. Isaeus. Issaeus. Issaeus. Issaeus: Issa), one of the best well known of the islands in the Adriatic, off the coast of Liburnia. (Strab. vii. p. 315.) It is mentioned by Syilax (p. 8) as a Grecian colony, which, according to Scymnus of Chios (i. 421), was sent from Syracuse. Dio (lxxxiv. 13) relates that in 385 B.C. they invaded the island, in his attempt to come himself the sovereignty of the Adriatic, assisted the Parisans in founding colonies at Issa and Platis. The island was besieged by Agron, king of Thessali, and the inhabitants applied to Rome for protection, when a message was sent by the Romans to Agron, requiring him to desist from molesting the friends of the republic. In the mean time, n. c. 232, Agron died, and his widow Teuta, having succeeded to the throne, resolved on pressing the siege of Issa. The Roman envoys required her to cease from hostilities, when, in defiance of the law of nations, she put one of them to death. This brought on the First Illyrian War, n. c. 229; one of the consequences of which was the liberation of Issa. (Polyb. i. 8. App. Ilyry. 7.) That Issa remained free for a long time is proved by its coins, which also show that the island was famous for its wine (comp. Athen. i. p. 222), bearing, as they do, an amphora on one side, and on the other a vine with leaves. (Eckhel, vol. ii. p. 159.) The inhabitants were expert seamen, and their beaked ships, "Leumbi Isarei," rendered the Romans especial service in the war with Philip of Macedon. (Liv. xxxi. 45, xxxvii. 16. xiii. 48.) They were exempted from the payment of tribute (Liv. xiv. 8), and were reckoned as Roman citizens (Plin. iii. 21). In the time of Caesar the chief town of this island appears to have been very flourishing.

The island now called Lissa rises from the sea, so that it is seen at a considerable distance; it has two parts, the larger one on the NE. side, with a town of the same name: the soil is barren, and wine forms its chief produce. Lissa is memorable in modern times for the victory obtained by Sir W. Howe over the French squadron in 1811. (Sir G. Wilkinson, Dalmatia and Montenegro, vol. i. p. 110; Niegh- hau, Die Suedost, pp. 110—115.) [E. B. J.]

COIN OF ISSA.

ISSEDONES. (IVoschures. Steph. B. s. v.; in the Roman writers the usual form is +"Ies- done," a people living to the E. of the Arpspae, and the most remote of the tribes of Central Asia with whom the Helience colonies on the Euxine had any communication. The name is found as early as the Spartan Alman, n. c. 671 —631, who calls them "Assedones" (Fr. 94, ed. Welecker), and Hecataeus (Fr. 168, ed. Rau- sen). A great movement among the nomadic tribes of the x. had taken place in very remote times, following a direction from NE. to SW. (see Aramis). It had driven out the Isedones from the steppes over which they wandered, and in turn drove out the Sythians, and the Ceythians the Cimmerians. Traces of these migrations were indicated in the poem of Arstes of Procoenmus, a semi- mythical personage, whose pilgrimage to the land of the Isedones was strangely diguished after his death by the fables of the Milesian colonists. (Herod. iv. 13.) The Isedones, according to Herodotus (iv. 26), have a customs, when any one be his father, for the kinsfolk to kill a certain number of sheep, whose flesh they boil together with that of the dead man, and make merry over it. This done, they peel and clean out his skull, which after it has been gilded becomes a kind of idol to which yearly sacrifices are offered. In all other respects they are a righteous people, submitting to the rule of women equally with that of men; in other words, a civilized people.

Herren (Aivist. Nat. vol. ii. p. 15, trans.) upon Dr. Lardén's authority (Aivist. Res. vol. i. p. 262), illustrates this way of carrying out the duties of
filial piety by the practice of the Battas of Sumatra. It may be remarked that a similar story is told of the Indian Padaodi. (Herod. iii. 99.) Pomponius Mela (ii. 1. § 13) simply copies the statement of Herodotus, though he alters it so far as to assert that the Issedones used the skull as a drinking cup. The name occurs more than once in Pliny (iv. 20, vi. 7, 19); and Ptolemy, who has a town Issedon in Sclavenia (Ioseph., vi. 16, § 7, viii. 24. § 5), mentions in another place (viii. 24. § 3) the Scythian Issedon. (Comp. Steph. B. s. v.; Amm. Marc. xxiii. 6 § 66.)

Von Humboldt (Asie Centrale, vol. i. pp. 390—412) has shown that, if the relief of the countries between the Don and the Irissch be compared with the itinerary traced by Herodotus from the Thyssagetae to the Issedones, it will be seen that the Father of History was acquainted with the existence of vast plains separating the Ural and Altai, chains which modern geographers have been in the habit of uniting by an imaginary range passing through the steppes of the Kirghiz. This route (Herod. iv. 23, 24) recognizes the passage of the Ural from W. to E., and indicates another chain more to the E. and more elevated — that of the Altai. These chains, it is true, are not designated by any special names, but Mr. Bockh has pointed out the parallelism of the names of the Alps and Rhiacian mountains; and a comparison of the order in which the peoples are arranged, as well as the relief and description of the country, shows that much definite information had been already attained. Advancing from the Palus Mecotis, which was supposed to be far larger dimensions than it really is, in a central direction towards the NE., the first people found occupying the plains are the Issedones, who, according to the Lanchamien, then the Buddiny, Thyssagetae, the Iurcai (who have been falsely identified with the Turks), and finally, towards the E., a colony of Scythians, who had separated themselves from the "royal Scythians" (perhaps to barter gold and skins). Here the plains end, and the ground becomes broken (kabatham vai tychunei), rising into mountains, at the foot of which are the Argippaei, who have been identified from their broad noses with the Kalmucks or Mongolians by Niebuhr, Bickh., and others, to whom reference is made by Mr. Grote. (Hist. of Greece, vol. iii. p. 320.) This identification has been disputed by Humboldt, (comp. Cosmore, vol. i. p. 333 note, 440, vol. ii. p. 141 note, 202, trans.), who refers these tribes to the Finnish stock, assuming as a certain fact, on evidence which it is difficult to make out, that the Mongolians who lived around Lake Baikal did not move into Central Asia till the thirteenth century. Where the data are so few, for the language (the principle upon which the families of the human race are marked off) may be said to be unknown, ethnographical analogies become very hazardous, and the more so in the case of nomad tribes, the same under such wide differences of time and climate. But if there be considerable difficulty in making out the ancestry of race, the local bearings of these tribes may be laid down with tolerable certainty. The country up to the Argippaei was well known to the traders; a barrier of impassable mountains blocked up the way beyond. (Hyperborei.) The position of the Issedones, according to the indications of the route, must be assigned to the E. of Iechin in the steppe of the central horde of the Kirghiz; and that of the Arimenei on the N. declivity of the Altai. The communication between the two peoples for the purpose of carrying on the gold trade was probably made through the plains at the NW. extremity of the Altai, where the range juts out in the form of a huge promontory. [E. B. J.]

ISSUS. (Issoi and Taissai, Xen. Anab. i. 2. § 24, and i. 4. § 11.), a town of Cilicia, on the Gulf of Issus (Τουρκακος κόλπος). Herodotus calls the Gulf of Issus the Gulf of Myrindus (iv. 38), from the town of Myrindus, which was on it.

The Gulf of Issus is now named the Gulf of Iskenderun or Scanderbom, from the town of Scanderbom, formerly Alexandria ad Issum, on the east side. It is the only large gulf on the southern side of Asia Minor and on the Syrian coast, and it is an important place in the systems of the Greek geographers. This gulf runs in a NE. direction into the land to the distance of 47 miles, measured nearly at right angles to a line drawn from the promontory Megarodas (Capo Karados), on the Cilician coast, to the Rhosic Scalopus (Ris-ELokhizir, or Hrynzy, as it has sometimes been written), on the Syrian coast; for these two capes are respectively the limits of the gulf on the west and east, and 25 miles from one another. The width immediately north of the capes is something less than 25 miles, but it does not diminish much till we approach the northern extremity of the gulf. It seems certain that the ancient outlet of the Pyramus was west of and close to Cape Karados, where Beaufort supposes it to have been; and this is consistent with the old prophecy [Vol. i. p. 620], that the alluvium of the Pyramus would some time reach to the shore of Cyprus; for if the river had entered the gulf where it does now, 23 miles further east, the prophecy would have been that it would fill up the gulf of Issus. For the earth that the river formerly discharged into the sea is now sent into the gulf, where it "has produced a plain of sand along side of the gulf, somewhat similar in shape, and equal in size, to that formed by the Ghiuk Songo [Cyclopecus, Vol. i. p. 483]; but the elbow where the current that sets round the gulf quits it, is ehune and without any shoals, and perhaps the disappearance of the Scalopus of Ptolemy from the coast, may be accounted for by the progressive advance of the shore into the gulf, which has let the ruins of that town some miles inland" (Beaufort, Caramonia, p. 296). Ptolemy's Seropesias (Σηρόπεσιας), which he calls a small place (καμία), is between Millus, which is a little east of Cape Megarodas, and Aegae or Aegae. [νηαρεΐς.] The next city to Aegae on the coast is Issus, and this is the remotest city in this part of Cilicia which Ptolemy mentions. Xenophon also speaks of it as the last city of Cilicia on the road to Syria.

The mountains which bound the gulf of Issus are described in the article AMANUS. The bold Rhosic Scalopus (5400 feet high), where the Syrian Amanus terminates on the coast, may be distinctly seen by the sailor when he is about of Sencina (Seyfelek), at the mouth of the Cyclopecus, a distance of 85 geographical miles (Beaufort). A small stream flows into the head of the gulf of Issus, and a few from the Amanus enter the east side, one of which, the Phnaris, is the Deli Tschai; and the other, the Cursus of Xenophon, is the Merkes. The Amanus which descends to the Rhosicc Scalopus, and the other branch of the Amanus which shuts in the gulf of Issus on the
NSSUS.

NW, and forms Strabo's Amanitis Pylae, made in
the interior, as Strabo says (p. 535); and our mo-
mentary maps represent it so. There is a plain at
the head of the gulf. Strabo gives a greater extent
to the Issus gulf than we do to the gulf of Scander-
boon, for he makes it extend along the Cilician coast
as far as Cilicia Trachea, and certainly to Soli (pp. 534,
664). In another passage (p. 125) he shows what extent
gives he to the gulf of Issus, by placing
Cyprus in the Pamphylian sea and in the gulf of
Issus,—the west part of the island being in the Pam-
phylian, and the east in the Issus gulf. The gulf of
Islandorum was surveyed by L. Murphy in the
Empirico's journey along the coast of Samian.

The ancient geographers did not agree about the
position of the isthmus of the country which we call
Asia Minor; by which isthmus they meant the
shortest distance across the eastern part of the pen-
insula from the Euxine to the Mediterranean. Strabo
(p. 673) makes this shortest distance lie along a
line joining Amisos and Tarsus. If he had said
Amisos and the head of the gulf of Issus, he would
have been quite right. He was nearly correct as to
the longitude of the head of the gulf of Issus, which
he places in the meridian of Amisos and Tarsus (p. 126);
and in another passage he says that the head of the
head of the gulf of Issus is a little more east than
Amisos, or not at all more east (p. 519). Amisos
is, in fact, a little further east than the most eastern
part of the gulf of Issus. The shortest distance of
the inhabited world, according to Strabo's system
(p. 118), from west to east, is measured on a line
drawn through the Syrian (Strabo, p. 673), and the
Cilician strait (Streptos of Mæcina), to Rhodus in
the gulf of Issus, whence it follows the
Taurus, which divides Asia into two parts, and
terminates on the ex-trem-e sea. Those ancient geographers
who made the isthmus of the Asiatic peninsula
extend from Issus to the Euxine, considered the
shortest line across the isthmus to be a meridian
line, and the dispute was whether it ran to Smyrna
or to Arta on the Euxine (Strab. p. 674). The choice of Issus as
the point on the Mediterranean to reckon from, shows
that Issus was the limit, or most eastern point, on
the south coast of the peninsula, and that it was not
on that part of the bay of Issus where the coast runs
south. Consequently Issus was on or near the head
of the gulf. Herodotus (iv. 38) makes the southern
side of this peninsula, or Acte, as he calls it, extend
from the Myriandroo gulf (gulf of Issus) to the
Dionysian promontory, which is quite correct. On
the north side he makes it extend from the mouth
of the Phasis to the promontory Sigmena, which is
correct as to the promontory; but he carries the
seas too far east, when he makes it begin at the
Phasis. This mistake, however, shows that he
lived on nothing of the position of the mouth of
the Phasis, for he intends to make the Acte begin at
that part where the east of the Euxine begins to
be west and east; and though the mouth of the
Phasis is not exactly at this point, it was the best
known river of any near it. In another passage
(i. 72), which, like many others in his history, is
obscurely expressed, he describes the neck (äçiv)
of this Acte as nearly cut through by the river Doryn;
and he makes its width from the sea opposite to
Cyprus to the Euxine to be five days' journey for
an active man,—an estimate very much short of the
truth, even if we allow Greek activity to walk 30
miles a day through a rough country. Notions re-
pout Issus hearsay (vol. i. p. 538), that the bay of
Issus can be seen from the summit of Arcadian
(Atharax), is very improbable.

Xenophon says that Cyrus marched 15 parasages
from the Pyramus (Jaxartes) to Issus, the uttermost
city of Cilicia, on the sea, great and prosperity.
From Issus to the Pyræ of Cilicia and Syria, the
boundary between Syria and Cilicia, was five para-
sages, and here was the river Carus (Xen. Anab.
ii. 4 § 4). The next stage was five parasages to
Myrindrus, a town in Syria on the sea, occupied by
Phoenicians, a trading place (érvroparos), where
many merchant ships were lying. Carsten Niebuhr,
who went through the Pyræ Ciliciæ to Taracus, has
some remarks on the probable site of Issus, but
they lead to no conclusion (vol. i. p. 116), except
that we cannot certainly determine the site of
Issus from Xenophon; and yet he would give us the best
means of determining it, if we knew where he crossed
the Pyramus, and if we were also certain that the
numbers in the Greek text are correct.

The nearest road to Susa from Sarid was through
the Cilician plains. The difficulties were the pass-
age into the gulf by the Cilician Pyræ or pass (Vol. I.
p. 619), and the way out of the plains along the
gulf of Issus into Syria. The great road to Susa
which Herodotus describes (v. 49, 52), went north
of the Taurus to the Euphrates. The land forces
in the expedition of Datis and Artaphernes, B.C.
490, crossed the Syrian Amanus, and went as far as
the Aetian plain in Cilicia; and there they em-
barked. (Herod. vi. 93.) They did not march by
land through the Cilician Pyræ over the Taurus
into the interior of the Cilicia; but Mardonius
(Herod. vi. 43), in the previous expedition had led his
troops into Cilicia, and sent them on by land to the
Hellespontus, while he took ship and sailed to
Ionia. The land force of Mardonius must have passed out
of Cilicia by the difficult pass in the Taurus. [Vol.
I. p. 619.]

Shortly before the battle of Issus (n. c. 333)
Alexander was at Mallos, when he heard that Darius
was at Amanus with the armies of Artaxerxes and
eventually of Datis. This place was distant two marches from
the Asyrian Pyræ. (Arrian, Anab. ii. 6.) "Asyria" and "As-
syrian" here mean "Syria" and "Syrian." Darius
crossed the Euphrates, probably at Thapsacus, and
was encamped in an open country in Syria,
which was well suited for his cavalry. The place
Sochi is unknown; but it may be the place which
Curtius calls Unicaë. (Q. Curt. iv. 1.) Arrian
says that Alexander left Mallos, and on the second
day he passed through the Pyræ and reached My-
riandrus: he does not mention Issus on this march.

Now the shortest distance that Alexander could
march from Mallos to Scanderboon is at least 70
miles, and if Myriandrus was south of Scanderboon,
it was more than 70 miles. This statement of
Arrian as to time is therefore false. Curtius (ii. 8)
says that Alexander only reached Castabalam (Cas-
tabalem) on the second day from Mallos; that he
went through Issus, and there deliberated whether he
should or should not march. Darius crossed the Amanus,
which separates Syria from the bay of Issus, by a
pass called the Amnicene Pyræ (Arrian, ii. 7),
and advancing to Issus, was in the rear of Alexander,
who had passed through the Cilician and Syrian
Pyræ. Darius came to the pass in the Amanus,
says Curtius, on the same night that Alexander
came to the pass (fauces) by which Syria is entered.
The place where Darius crossed the Amanus was
so situated that he came to Issus first, where he shamefully treated the sick of the Macedonians who had been left there. The next day he moved from Issus to pursue Alexander (Arrian; Curtius, iii. 8); that is, he moved towards the Pylae, and he came to the banks of the river Pinarus, where he halted. Issus was, therefore, north of the Pinarus, and some little distance from it. Kiepert's map of Asia Minor marks a pass in the range of the Syrian Amanus, which is north of the pass that leads over the same mountains from the east to Baiae (Bayas), and nearly due east of the head of the gulf of Issus. He calls it Pylæ Amanides, by which he means the Pylæ Amaniacæ of Arrian, not the Amanides of Strabo; and he takes it to be the pass by which Darius crossed the Syrian Amanus and came down upon the gulf. This may have been his route, and it would bring him to Issus at the head of the gulf, which he came to before turning south to the Pinarus (Deli Toshat). It is certain that Darius crossed by some pass which brought him to Issus before he reached the Pinarus. Yet Kiepert has placed Issus south of the Pinarus, or rather between the two branches of this river, which he represents as uniting near the coast. Kiepert also marks a road which passes over the junction of the two branches of the Amanus (Arrian, Vol. I. p. 114) and runs to Mesroth, which may very well be the true one. This is the dotted road marked as running north from the head of the Gulf of Issus in the plan [Vol. I. p. 115]; but even if there be such a road, it was not the road of Darius, which must have been the pass above mentioned, in the latitude of the head of the gulf of Issus; which is not marked in the above plan, but ought to be. This pass is probably the Amanian Pylæ of Ptolemy, which he places 3 further south than Issus, and 10' east of Issus.

Alexander, hearing that the Persians were in his rear, turned back to the Pylæ, which he reached at midnight, and halted till daybreak, when he moved on. (Arrian, Anab. ii. 8.) So long as the road was narrow, he led his army in column, but as the pass widened, he extended his column into line, part towards the mountain and part on the left towards the sea. When he came to the wide part (ἐποχεύπιαν), he arranged his army in order of battle, which was, as Arrian has it, "as far as was possible," as far as the road permitted. Then he turned to the right; he was on the north side of the Pinarus. It is plain, from this description, that Alexander did not march very far from the Pylæ before he reached the wider part of the valley, and the river. As the sea was on his left, and the mountains on his right, the river was a stream which ran down from the Syrian Amanus; and it can be no other than the Délî Toshat, which is about 13 miles north of the Cærus (Merlès), direct distance. Polybius (vol. xii.), who criticizes Callisthenes's description of the battle, states, on his authority, that Darius descended into Cilicia through the Pylæ Amanides, and encamped on the Pinarus, at a place where the distance between the mountains and the sea was not more than 14 stadia; and that the river ran across this place into the sea, and that in its course through the level part "it had abrupt and difficult eminences (ἀγέψεις)." This is explained in the very same expression of the river being steep in many parts on the north side. (Anab. ii. 10.) Callisthenes further said, that when Alexander, after having passed the defile (τὰ στείρα), heard of Darius being in Cilicia, he was 100 stadia from him, and, accordingly, he marched back through the defile. It is not clear, from the extract in Polybius, whether the 100 stadia are to be reckoned to Issus or to the Pinarus. According to Arrian, when Alexander heard of Darius being behind him, he sent some men in a galley back to Issus, to see if it was so; and it is most consistent with the narrative to suppose that the men saw the Persians at Issus before they had advanced to the river; but this is not quite certain. The Persian army was visible being near the coast, as it would be, if it were seen at Issus.

Strabo (p. 676), following the historians of Alexander, adds nothing to what Arrian has got from them. Alexander, he says, led his infantry from Soli along the coast and through the Malbats to Issus and the forces of Darius; an expression which might mislead, if we had no other narrative. He also says, after Mallus in Aegae, a small town with a harbour, then the Amanides Pylæ [Amaneides Pylæ], where there is a harbour; and after Aegae is Issus, a small town with a harbour, and the river Pinarus, where the fight was between Alexander and Darius. Accordingly he places Issus north of, the Pinarus. Cicero, during his proconsulship of Cilicia, led his forces against the mountaineers of the Amanus, and he was saluted as imperator at Issus, "where," he says, "I have often heard from you, Clanculus, told you that Darius was defeated there?" and then nothing to be gained from this. (Ad Fam. ii. 10.) In another passage, he says that he occupied for a few days the same camp that Alexander had occupied at Issus against Darius. (Ad Att. v. 20.) And again (ad Fam. xiv. 20), he says that, "he encamped for four days at the roots of the Amanus, at the Aerae Alexandri." If this is the same fact that he mentions in his letter to Atticus, the Aerae were at Issus, and Issus was near the foot of the Amanus.

The battle between Septimius Severus and Niger was fought (A. D. 194) somewhere about Issus; but nothing can be collected from the description of Herodian (iii. 12), except that the battle was not fought on the same ground as Alexander's, though it was fought on the gulf of Issus. Stephæus (s. v. Tōrós) describes it as "a city between Syria and Cilicia, where Alexander defeated Darius, which was called, for this reason, Nicopolis by him, and there is the bay of Issus; and there is a river named Pinarus." Strabo, after speaking of Issus, mentions, on the Issic gulf, Rhosus, and Myriandrus, and Alexandria, and Nicopolis, and Mopœusta, in which description he proceeds from the Syrian side of the gulf, and terminates with Mopœusætia on the Pyramus. According to this enumeration, Nicopolis would be between Alexandria (Sencadracon) and Mopœusætia; and it may be near Issus, or it may not. Ptolemy (v. 8. § 7. § 12) places Nicopolis exactly one degree north of Alexandria and 50 north of Issus. He places Issus and Rhosus in the same longitude, and Nicopolis, Alexandria, and Myriandrus 10' further east than Issus. The absolute truth of his numbers is immaterial. A map constructed according to Ptolemy would place Issus at the head of the gulf, and Nicopolis inland. Nicopolis is one of the cities which he enumerates among the inland cities of the bank of the river Issus. Then, being at the head of the gulf, and Taras being a fixed point in the march of Cyrus, we may now see how the matter stands with Xenophon's distances. Cyrus marched 10 parasangs from Taras to the river Pinarus (Sarus). Silusam, and crossed at a place where it was 300 feet wide.
From the Sarus the army marched 5 parasangs to the Pyramus, which was crossed where it was 600 Greek feet wide; and the march from the Pyramus to Issus was 13 parasangs. Accordingly, the whole distance from the Tabir to Issus was 30 parasangs. The direct distance from Tarsus to the head of the gulf is about 56 geographical miles; and these two points are very nearly in the same latitude. The modern road from Tarsus, through Adana on the Sarus, and Mopsuestia on the Pyramus, to the head of the gulf, has a general direction from W. to E. The length of Cyrus's march, from Tarsus to the Sarus, exceeds the direct distance on the map very much, if we reckon the parasangs at 3 geographical miles; for 10 parasangs are 30 geographical miles, and the direct distance to Adana is not more than 16 miles. Mr. Ainsworth informs us that the Sarus is not fordable at Adana; and Cyrus probably crossed at some other place. The march from the Sarus to the Pyramus was 5 parasangs, or 15 geographical miles; and this appears to be very nearly the direct distance from Adana to Mopsuestia (βηθινη). But Cyrus may have crossed some distance below Mopsuestia, without lengthening his march from the Sarus to the Pyramus; and he may have done this even if he had to go lower down the Sarus than Adana to find a ford. If he did not go higher up the Pyramus to seek a ford, for the reasons which Mr. Ainsworth mentions, he must have crossed lower down than Mopsuestia. The distance from the point where the supposed old bed begins to turn to the south, to the NE. end of the gulf of Issus, is 40 geographical miles; and, therefore, the distance of 15 parasangs from the passage of the Pyramus to Issus, is more easily reconciled with the real distance than the measurement from Tarsus to the Sarus.

The places not absolutely determined on or near the gulf of Issus are: Myriandrus, Nicopolis, Epiphaneia [Επιφανεία], Arac Alexanderii, and Issus, though we know that Issus must have been at the head of the gulf and on it. The following extract from Colonel Chesney contains the latest information on these sites:—"About 7 miles south-eastward from the borders of Syria are the remains of a considerable city, probably those of Issus or Nicopolis, with the ruins of a temple, a part of the Acopolis, an extensive aqueduct, generally with a double row of arches, running ENE. and WNW. These, in addition to the walls of the city itself, are entirely built of lava, and still exist in considerable perfection. Nearly 14 miles southward from thence, the Delf Chan sprints the foot of the Anamas in two branches, which, after traversing the Issic plain, unite at the foot of the mountain just previously to entering the sea. The principal of these branches makes a deep curve towards the NE., so that a body of troops occupying one side might see behind and outflank those posted on the opposite side, in which, as well as in other respects, the stream appears to answer to the Pinarus of Alexander's historians. A little southward of this river are the castle, khán, làkár, baths, and other ruins of Bârás, once Bâya, with the three villages of Kuret a in the neighbourhood, situated in the midst of groves of orange and palm trees. Again, 5 miles southward, is the pass, above noticed, of Stükil-tünd, and at nearly the same distance southward, the fine bay and anchorage of Iskenedi, with an open, but convenient landing-place on a bold headland; but, in consequence of the accumulation of the sand by which the mouths of the streams descending from this part of the Annamas are choked, a considerable swamp extends from the very edge of the sea almost to the foot of the mountain. In the stream of the rivers there are some trifling ruins, which may possibly be the site of ancient Myriandrus; and within a mile of the shore are the remains of a castle and bridge constructed by Godfrey of Bouillon." (Expedition for the Survey of the Rivers Euphrates and Tigris, vol. i. p. 418.)

There is no direct proof here that these remains are those of Issus. The aqueduct probably belongs to the Roman period. It seems most likely that the remains are those of Nicopolis, and that Issus on the coast has disappeared. Colonel Chesney's description of the bend of one of the branches of the Deli Tshoroi corresponds to Arrian's (ii. 2, § 10), who says, "Darius placed at the foot of the mountain, which was on the Persian left and opposite to Alexander's right, about 20,000 men; and some of them were on the war of Alexander's army. For the mountain where they were posted in one place opened to some depth, and so a part became of the form of a bay on the land. Darius then, by advancing further to the head, brought the men who were posted at the foot of the mountain, in the rear of the right wing of Alexander."

There still seems some doubt about the site of Myriandrus, which Mr. Ainsworth (Travels in the Tennis of the Ten Thousand, iv. p. 60) places about half way between Scanderdors and Bhasian (Arsus); and he has the authority of Strabo, in his enumeration of the places on this coast, and of Trolenyi, who places MyriandruS' 15 north of Adiina and Issus. As to Arsus, he observes, "it is among many ruins, and especially a long aquatic leading from the foot of the mountains." [G. L.]

Iston. [Codynia.]

Istionium. [Celtheina.]

Istria (Isopla) or Hilistria, was the name given by the Greeks and Romans to the country which still bears the same appellation, and forms a peninsula of somewhat triangular form near the head of the Adriatic sea, running out from the coast of Liburnia, between Torpes (Triecto) and the Sinus Flaminianus, or Gulf of Quarnero. It is about 50 G. miles in length, and 35 in breadth, while the isthmus or strip of land between the two gulfs of Trieste and Quarnero, by which it is united to the mainland, is about 27 G. miles across. The name is derived both by Greek and Latin authors from the fabulous notion entertained at a very early period that one branch or arm of the Danube (the Ister of the Greeks) flowed into the Adriatic sea near its head. (Strab. i. p. 57; Plini. iii. 18. s. 22.) The deep inlets and narrow channels with which the coasts of the Adriatic are intersected for a considerable distance below the peninsula of Istria may have contributed to favor this notion so long as those coasts were imperfectly known; and hence we cannot wonder at Sclayk speaking of a river named Is-trus (which he identifies with the Danube) as flowing through the land of the Istrians (Sclayk, p. 6. § 20); but it seems incredible that an author like Melus, writing in the days of Augustus, should not only speak of a river Is-is as flowing into this part of the
Adriatic, but should assert that its waters entered that sea with a turbulence and force similar to those of the Puds. (Mel. ii. 3. § 13, 4. § 4.) In point of fact, there is no river of any magnitude flowing into the upper part of the Adriatic on its eastern shore which could afford even the slightest counter-tenance to such a notion; the rivers in the peninsula of Istria itself are very trifling streams, and the dry, calcareous ridges which hem in the E. shore of the Adriatic, all the way from Trieste to the southern extremity of Dalmatia, do not admit either of the formation or the outlet of any considerable body of water. It is scarcely possible to account for the origin of such a fable; but if the inhabitants of Istria were really called Istru (Istria), and the Roman name, which is at least highly probable, this circumstance may have first led the Greeks to assume their connection with the great river later, and the existence of a considerable amount of traffic upon the valley of the Savus, and from thence by land across the Julian Alps, or Mount Orcia, to the head of the Adriatic (Strab. vii. p. 314), would tend to perpetuate such a notion.

The Istrians are generally considered as a tribe of Illyrian race (Appian, Illyr. 8; Strab. viii. p. 314; Zeuss, Die Deutschen, p. 235), and the fact that they were immediately surrounded by other Illyrian tribes is what makes them favourable as models for the modern view. Symmich Chilius alone calls them a Thracian tribe, but on what authority we know not. (Symmich. Ch. 398.) They first appear in history as taking part with the other Illyrians in their piratical expeditions, and Livy ascribes to them this character as early as B.C. 301 (Livy. x. 2); but the first occasion on which they are distinctly mentioned as joining in these enterprises is just before the Second Punic War. They were, however, severely punished; the Roman consuls M. Minucius Rufus and P. Cornelius were sent against them, and they were reduced to complete submission. (Eutrop. iii. 7; Oros. iv. 13; Zonar. viii. 20; Appian. Illyr. 8.) The next mention of them occurs in B.C. 183, when the consul M. Claudius Marcellus, after a successful campaign against the Gauls, asked and obtained permission to lead his legions into Istru. (Livy. xxxix. 53.) It is clear, however, that this invasion produced no considerable result; but their piratical expeditions, together with the opposition offered by them to the foundation of the Roman colony of Aquileia, soon became the pretext of a fresh attack. (Id. xi. 18. 26, xii. 1.) In B.C. 178 the consul A. Manlius invaded Istru with two legions; and though he at first sustained a disaster, and narrowly escaped the capture of his camp, he recovered his position before the arrival of his colleague, M. Julius, who had been sent to his support. The two consuls now attacked and defeated the Istrians; and their successor, C. Claudius, following up this advantage, took in succession the towns of Nesactium, Mutila, and Faveria, and reduced the whole people to submission. For this success he was rewarded with a triumph, B.C. 177. (Livy. xii. 1—5, 8—13; Flor. ii. 10.) The subject of the Istrians on this occasion seems strong; and it is possible, though a few years after we find them joining the Carini and Iapyges in complaining of the excations of C. Cassius (Livy. xili. 5), we hear of no subsequent revolts, and the district appears to have continued tranquil under the Roman yoke, until it was incorporated by Augustus, together with Venetia and the land of the Carni, as a portion of Italy. (Strab. vi. p. 215; Plin. iii. 19, a. 93.) It continued thenceforth to be always included under that name, though geographically connected much more closely with Dalmatia and Illyricum. Hence we find, in the Notitia Dignitatum, the "Consularis Venetiae et Histriana" placed under the jurisdiction of the Viciarii Italicae. (Not. Dign. ii. pp. 5, 63.)

The natural limits of Istria are clearly marked by those of the peninsula of which it consists, or by a line drawn across from the Gulf of Trieste to that of Quarnaro, near Fiume; but the political boundary was fixed by Augustus, when he included Istria in Italy, at the river Arisa or Area, which falls into the Gulf of Quarnaro about 15 miles from the southern extremity of the peninsula. This river has its sources in the group of mountains of which the Monte Maggiore forms the highest point, and which constitutes the heart or nucleus of the peninsula, from which there radiate ranges of great calcareous hills, gradually declining as they approach the western coast, so that the shore of Istria along the Adriatic, though hilly and rocky, is not of any considerable elevation, or picturesque in character. But the calcareous rocks of which it is composed are indented by deep inlets, forming excellent harbours; of these, the beautiful land-locked haven of Pola is particularly remarkable, and was noted in ancient times. The modern name of Istria was fixed by Augustus at the river Forino, a small stream falling into the Gulf of Trieste between that city and Cypo d'Istria. Pliny expressly excludes Tergeste from Istria; but Polenia extends the limits of that province so as to include both the river Forino and Tergeste (Ptol. iii. 1. § 27); and Strabo also appears to consider the Timavus as constituting the boundary of Istria (Strab. vi. p. 215), though he elsewhere calls Tergeste "a village of the Carni" (vii. p. 314). Pliny, however, repeatedly alludes to the Forino as having constituted the boundary of Italy before that name was officially extended so as to include Istria also, and there can be no doubt of the correctness of his statement. Istria is not a country of any great natural fertility; but its calcareous rocky soil was well adapted for the growth of olives, and its oil was reckoned by Pliny inferior only to that of Cynarum (Plin. xvi. 2, s. 3.) In the later ages of the Roman empire, when the seat of government was fixed at Ravenna, Istria became of increased importance, from its facility of communication by sea with that capital, and furnished considerable quantities of corn, as well as wine and oil. (Cassiod. Farr. xiii. 23, 24.) This was probably the most flourishing period of its history. It was subsequently ravaged in succession by the Lombards, Avars, and Sarabi (P. Darr. iv. 23, 42), but appears to have continued permanently subject to the Lombard kingdom of Italy, until its destruction in A. D. 774.

The towns in Istria mentioned by ancient writers are not numerous. Much the most important was Pola, near the extreme southern promontory of the peninsula, which became a Roman colony under Augustus. Proceeding along the coast from Terge- ste to Pula were Arisa (Caput d'Istria); trieste, a few years after we find them joining the Carni and Iapyges in complaining of the excations of C. Cassius (Livy. xili. 5), we hear of no subsequent revolts, and the district appears to have continued tranquil under the Roman yoke, until it was incorporated by Augustus, together with Venetia and the land of the Carni, as a portion of Italy. (Strab. vi.
Istria also mentions three towns, which he places in the interior of the country, and names Pucumum, Piamentum (Theodoseous), and Alumus or Alon (Carriere). These towns may be probably identified with Flavignata, a considerable place in the heart of the mountain district of the interior; and Alum with Altum (called Alonca in the Tabula), which is, however, E. of the Area, and therefore not strictly within the Roman province of Istria. In like manner the Pucumum of Ptolemy is evidently the same place with the "castellum, mobile vinum, Puquium" of Pliny (vii. 18. s. 22), which is the latter place in the territory of the Carini, between the Trinaves and Tergetes, and was perhaps the same with the modern Daino.

Innum., a place mentioned in the Antonine Itinerary (p. 271) between Tergete and Parentium, cannot be determined with any certainty. The Tabula also gives two names in the NW. part of the peninsula, Quarti and Silico (Silvum), both of which are wholly unknown. The same authority marks three small islands off the coast of Istria, to which it gives the names of Seposoma, (3) Unitaria, and Quiiaria; the last is mentioned also by Pliny (ii. 26. s. 30), and is probably the rocky island, or rather group of islets, off the harbour of Pola, now known as Li Brioni. The other two cannot be identified, any more than the Gessa of Pliny (c.); the Cesaris and the same author are the larger islands in the Gulf of Quarnero, which belong rather to Liburnia than to Istria. [Annali.]

The extreme southern promontory of Istria, now called Punta di Promontore, seems to have been known in ancient times as the Promontorium Polatium (Ap. & Karriouo par忍受ad, Steph. B. s. p. 456). Immediately adjoining it is a deep bay or harbour, now known as the Golfo di Meduno, which must be the Portus Fanaticus (probably a corruption of Fanaticus) of the Tabula.

The Geographer of Ravenna, writing in the seventh century, but from earlier authorities, mentions the names of many towns in Istria mentioned by earlier geographers, but which may probably have grown up under the Roman empire. Among these are Humago, still called Usaga, Neapolis (Citta Nuova), Ravigno (Rocigio), and Pirano (Pirano), all of them situated on the W. coast, with good ports, and which would naturally become places of trade during the flourishing period of Istria above alluded to.

(Anon. Rav. iv. 30, 31.) [E. H. B.]

Istriaionum portiis. [Isiaecorum Portis.]

Istreanus (Istreaio, Poth. iii. 6. § 3), a river of the Tereon Chorisia, which has been identified with the Kedh Tep. (Foulston, vol. iii. pp. 1117, 1121.) [E. B. J.]

Istriopolis, Istriopolis, (Istriopolis, Lip. terram, or simply Isterpn: Isteron), a town of Lower Moenia, at the southern extremity of lake Halyartis, on the coast of the Euxine. It was a city of Miletus, and, at least in Strabo's time, a small town. (Strab. vii. p. 319; Plut. iv. 18. 21; Mom. ii. 2; Eutrop. vi. 8; Herod. iii. 32. Artian. Perio. Luc. 24; Geozi. Rav. iv. 6; Lyons, 74; Vol. iii. 10. § 8; Svet. Prom. 22; Steph. B. s. p. Ann. Mar. xxviii. 8; Herod. p. 637.) But L. C. of V. (to the value of which two emperors from Rome have allowed their names) was a commercial town of some importance; of its history, however, nothing is known. Some modern writers have identified it with Krinia or Kostolje, the ancient Constantinian,

which, however, was, in all probability situated near the mouth of Istropolis. [L. S.]

Istria (Istria), a Creton town which Arstesidianus also called Istrona. (Steph. B. s. c.) The latter form of the name is found in an inscription (op. Chishall, Antiq. Asia. p. 110). The site is placed near Minua: "Among the ruined edifices and columns of this ancient city are two immense marble blocks, half buried in the earth, and measuring 54 by 15 feet." (Carmeius, Crete Sacrum, vol. i. 11; op. Mus. Class. Antiq., vol. ii. p. 275; comp. Baed., York, vol. i. p. 17, 421.) [L. B. J.]

Coin of Istrona.

Isturgi (Ambijtis ex Vietia), a city of Hispания Baetica, in the neighbourhood of Illiturgis. (Inscr. ap. Flores, Esp. S. vol. vii. p. 137.) The Istrurgii Triumphale of Pliny (ii. 1. s. 3) is probably the same place. (Uberti, vol. ii. pt. 1. pp. 380, 381.)

Istrugianum. [Iserium.]

Istrurgium, in Britain, first mentioned by Ptolemy (ii. 3. § 16) as a town of the Brigantes. It then occurs in two of the Itineraries, the 1st and 2nd. In each, it lies between Cataractonium and Eboracum (Catterick Bridge and York). Istrugianum, in the 5th Itinerary, does the same.

In the time of the Saxons Iseriun had already taken the name of Eildburg (Old Town), out of which has come the present name Aldborough, near Boroughbridge, with which it is undoubtedly identified.

Roman remains, both within and without the walls, are abundant and considerable at Aldborough; the Stedhall (or Stadsforth), the Red Hill, and the Borough Hill, being the chief localities. Tesselated pavements, the foundations of large and spacious buildings, ornaments, implements, Samian wares, and coins with the names of nearly all the emperors from Vespasian to Constantine, have given to Iseriun an importance equal to that of York, Cirencester, and other towns of Roman importance. [R. G. L.]

Iusig (Jewes), a spot in Boecia, near Andover, with vestiges of a city, which some commentators identified with the Hebraic Nesia. (Strab. ix. p. 495; Hom. Il. ii. 308.) There was apparently also a town Innis in Jeggaria; but the passage in Strabo in which the name occurs is corrupt. (Strab. l. c.)

Itilia (Italia), was the name given in ancient as well as in modern times to the country still called Italy; and was applied, from the time of Augustus, both by Greek and Latin writers, in almost exactly the same sense as at the present day. It was, however, at first merely a geographical term; the countries comprised under the name, though strongly defined by natural limits, and common natural features, being, from the earliest epochs, under different races, which were never politically united, till they all fell under the Roman yoke, and were gradually unified, by the pervading influence of Roman institutions and the Latin language, into one common nationality. [R. G. L.]

ITALIA.

I. NAME.

The name of Italy was very far from being originally applied in the same extensive signification which it afterwards obtained. It was confined, in the first instance, to the extreme southern point of the Italian peninsula, not including even the whole of the modern Calabria, but only the southern peninsular portion of that country, bounded on the N. by the narrow isthmus which separates the Tyrrenian and Scylleltian gulfs. Such was the distinct statement of Antiochus of Syracuse (ap. Strab. vi. p. 253); nor have we any reason to reject his testimony upon this point, though it is certain that this usage must have ceased long before the time of that historian, and is not found in any extant ancient author. At a subsequent period, but still in very early times, the appellation was extended to the whole tract along the shores of the Tarentine gulf, as far as Metapontum, and from thence across to the gulf of Posidonia on the western sea; though, according to other statements, the river Laus was its northern limit on this side. (Strab. v. p. 209, vi. p. 254; Antiochus, ap. Dionys. i. 73.) This appears to have been the established usage among the Greeks in the fifth century B.C. Antiochus expressly excluded the Iapygian peninsula from Italy, and Thucydides clearly adopts the same distinction (vi. 35). The countries on the shores of the Tyrrenian sea, north of the Posidonian gulf, were then known only by the names of Opicia and Thuriænia; thus Thucydides calls Cumæ a city in Opicia, and Aristotle spoke of Latium as a district of Opica. Even Theopompus preserves the distinction, and speaks of the pine-trees of Italy, where those of the Bruttian mountains only can be meant, as opposed to those of Latium. (Thuc. vi. 4; Arist. ap. Dionys. i. 72; Theopomp. II. P. v. 8.)

The name of Italy, as thus applied, seems to have been synonymous with that of Oenotria; for Antiochus, in the same passage where he assigned the narrowest limits to the former appellation, confined that of Oenotria within the same boundaries, and spoke of the Oenotri and Itali as the same people (ap. Strab. vi. p. 254; ap. Dionys. i. 12). This is in perfect accordance with the statements which represent the same name, or at least a name assimilated to it, as the name of Italians (Itali) from a chief of the name of Ilians (Dionys. i. 12, 35; Virg. Aen. i. 533; Arist. Pol. vii. 10), as well as with the etymological genealogy, according to which Italius and Oenotrus were brothers. (Sest. ad Aen. l. c.) Thucydides, who represents Italy as coming from Arcadia (vi. 2), probably adopted this last tradition, for the Oenotrian were generally represented as of Arcadian origin. Whether the two names were originally applied to the same people, or (as is perhaps more probable) the Itali were merely a particular tribe of the Oenotrians, whose name gradually prevailed till it was extended to the whole people, we have no means of determining. But in this case, as in most others, it is clear that the name of the people was antecedent to that of the country, and that Italy, in its original signification, meant merely the land of the Itali; though at a later period, by its being separated from Italy altogether, it lost this national meaning. It is impossible for us to trace with accuracy the successive steps of this extension, nor do we know at what time the Romans first adopted the name of Italy as that of the whole peninsula. It would be still more interesting to know whether they received this usage from the Greeks, or found it already prevalent among the nations of Italy; but it is difficult to believe that tribes of different race, origin, and language, as the Etruscans, Umbrians, Sabellians, and Oceanians, would have concurred in calling the country they inhabited by one general appellation. If the Greek account already given, according to which the name was first given to the Oenotrian part of the peninsula, is worthy of confidence, it must have been a word of Pelasgic origin, and subsequently adopted by the Sabellian and Ocean races, as well as by the Romans themselves.

The etymology of the name is wholly uncertain. The current tradition among the Greeks and Romans, as already noticed, derived it from an Oenotrian or Pelasgic chief, Italius; but this is evidently a mere fiction, like that of so many other eponymous heroes. A more learned, but scarcely more trustworthy, etymology derived the name from Italus or Italos, which, in Tyrrenian or old Greek, is said to have signified an ox; so that Italy would have meant "the land of cattle." (Timaeus, ap. Gell. xi. 1; Var. R. R. ii. 1. § 9.)

The ancient form here cited is evidently connected with the Latin "vitulus"; and it is probable that the name of the people was originally Vitalia, or Italus, in its Pelasgic form; we find the same form retained by the Italics in the first century B.C., when the Samnite demarz (struck during the Social War, n. c. 90—88) have the inscription "Vitela" for Italia.

It is probable that the rapid extension of the Roman power, and the successive subjugation of the different nations of Central and Southern Italy by its victorious arms, tended also to promote the extension of the one common name to the whole; and there seems little doubt that as early as the time of Pyrrhus, this was already applied in nearly the same sense as afterwards continued to be the usage,—as comprising the whole Italian peninsula to the frontiers of Cisalpine Gaul, but excluding the latter country, as well as Liguria. This continued to be the customary and official meaning of the name of Italy from this time till the close of the Republic; and hence, even after the First Triumvirate, Gallia Cisalpina, as Tuscany, and the Cisalpine Gaul, was allotted to Caesar as his province, a term which was never applied but to countries out of Italy, but long before the close of this period, the name of Italy would seem to have been often employed in its more extensive, and what may be termed its geographical, meaning, as including the whole land from the feet of the Alps to the Sicilian straits. Polybius certainly uses the term in this sense, for he speaks of the Romans as having subdued all Italy, except the land of the Gauls (Gallia Cisalpina), and repeatedly describes Hannibal as crossing the Alps into Italy, and designates the plains on the banks of the Padus as in Italy. (Pol. l. 6, ii. 14, iii. 39, 54.)

The natural limits of Italy are indeed so clearly marked and so obvious, that as soon as the name came to be once received as the designation of the country in general, it was almost inevitable that it should acquire this extensive; hence, though the etymology of the name of Italy is difficult, the extension of this term to include the Cisalpine Gaul was retained by the Romans to the very end of the Republic, it is clear that the mere extended use of the name was already familiar in common usage. Thus, already in n. c. 76, Pompeius employs the expression "in cœrvicebus Italicae," of the passes of the Alps into Cisalpine Gaul (Sall. Hist. iii. 11); and Decimus Brutus...
us, in n. c. 43, distinctly uses the term of *italia*; when he crosses the Alps. (Caes. B. G. vi. 1.) Seneca also has *Cisalpin* and *Cisalpine*; in his *Philippics*, repeatedly use the name of Italy in the wider and more general sense, through the whole of that distinguished peninsula of Gaul, which borders on Italy, and the Alps, the latter frequent-ly to observe the proper distinction. (Caes. B. G. v. 1, vi. 44, vii. 1; Cic. Phil. iv. 4. v. 12.)

But, indeed, had not this use of the name been already common, before it came to be officially adopted, the circumstance alone would scarcely have rendered it so familiar as we find it in the Latin writers of the Augustan age. Virgil, for instance, in celebrating the praises of Italy, never thought of excluding from that alliteration the plains of Cisalpine Gaul, or the heights at the foot of the Alps. From the time, indeed, when the rights of Roman citizens were extended to all the Cisalpine Gauls, no real distinction any longer subsisted between the different parts of Italy; but Cisalpine Gaul still formed a separate province under D. Bruttus in n. c. 43 (Cic. Phil. iv. 5. iv. 9, &c.), and it is probable, that the meaning of that term is to be understood by the word Gaul. Dom Cassius speaks of it, in n. c. 41, as an already established arrangement. (Dio Cass. lviii. 12; Savigny, Verr. Schr. iii. p. 318.)

From the time of Augustus onwards, the name of Italy continued to be applied in the same sense throughout the period of the Roman empire, though, with some slight modifications of its frontiers on the side of the Alps; but during the last ages of the Western empire, a singular change took place, by which the name of Italy came to be specially applied (in official language at least) to the northern part of what we now call Italy, comprising the five provinces of Aemilia, Flaminia, Liguria, Venetia, and Istria, together with the Cottian and Helvetic Alps, and thus excluding nearly the whole of what had been included under the name in the days of Cicero. This usage probably arose from the division of the whole of Italy for administrative purposes into two great districts, the one of which was placed under an officer called the “Vicarius Urbis Iovae,” while the other, or northern portion, was subject to the “Vicarius Italicae.”

(The practice was confirmed for a time by the circumstance that this part of Italy became the seat of the Lombard monarchy, which assumed the title of the king of Italy (“Regnum Italicae”); but the ancient significance is still preserved, and the name of Italy was applied throughout the middle ages, as it still is at the present day, within the boundaries established by Augustus.

The other names applied by ancient writers, especially by the Latin and later Greek poets, to the Italian peninsula, may be very briefly disposed of. Dionysius tells us that in very remote ages Italy was called by the Greeks *Illyria,* or *Ammon,* and by the natives *Samarina.* (Hist. i. 25.) Of these three names, *Hispania* (*Espagnia,* or “the Land of the West,” was evidently a mere vague appellation, employed in the infancy of geographical discovery, and which was sometimes limited to Italy, sometimes used in a much wider sense as comprising the whole West of Europe, including Spain. (Hist. i.)

But there is no evidence of its having been employed in the more limited sense, at a very early period. The necessity of distinguishing between *Hispania* and *Hispanorum* is confirmed by the name of *Hispanus,* or “the man of the West.” But, according to the later poets, *Hispanorum* represented *Aemus* as departing from the *Hesperia,* where in all probability Italy is meant; though it is very uncertain whether the poet conducted *Aemus* to *Lutanius.* (Schweizer, Rhod. Greek, vol. i. p. 298.) But even in the days of *Neuclorinus* the appellation probably occurred to the poets and logographers. At a later period we can trace it as used by the Alexandrian poets, from whom in all probability it passed to the Romans, and was adopted, as we know, by Ennius, as well as by Virgil and the writers of the Augustan age. (Agathyllus, ap. Dionys. i. 49; Apollon. Rhod. iii. 311; Ennius, Ann. Fr. p. 12; Verg. Aen. i. 530, iii. 185, &c.)

The name of *Aquania,* on the contrary, was one derived originally from one of the races which inhabited the Italian peninsula, the Aurancei of the Romans, who were known to the Greeks as the *Auros.* These Aurosins were a tribe of Ophiac or Ocean race, and it is probable that the name of *Aquania* was at first applied much as that of *Ocean* or *Opaeus* was by Thucydides and other writers of the fifth century n. c. But, as applied to the whole of the peninsula of Italy, the name is, so far as the evidence goes, purely poetical; nor can it be traced farther back than the Alexandrian writers Lycephon and Apollinarius Rhodian, who employed it familiarly (as did the Latin poets in imitation of them) as a poetical equivalent for Italy. (Aurosins.)

As for the name of *Saturnia,* though it is found in a pretended Greek oracles cited by Dionysius (Astr. i. 19), it may well be doubted whether it was ever an ancient appellation at all. Its obvious derivation was probably from the name of the Latin god *Saturnus* proves it to have been of native Italian, and not of Greek, invention, and probably this was the only authority that Dionysius had for saying it was the native name of Italy. But all the traditions of the Roman mythology connect Saturnus so closely with Latium, that it seems almost certain the name of *Saturnia* (if it was ever more than a poetical fabrication) originally belonged to Latium only, and was thence gradually extended by the Romans to the rest of Italy. Ennius seems to have used the phrase of “Saturnia terrae” only in reference to Latium; while Virgil applies it to the whole of Italy. (Ennius, op. iav. L. L. v. 42; Verg. Georg. i. 175.) It is never used in either sense by Latin prose writers, though several authors state, as Dionysius does, that it was the ancient name of Italy, (Festus, v. Saturnus, p. 322; Justin. xiii. 1.)

II. BOUNDARIES AND PHYSICAL GEOGRAPHY.

There are few countries of which the boundaries are more clearly marked out by nature than those of Italy. It is well described by one of its modern poets as the land

"Chi Apennina parte e ll mar circonda e l Alpe;"

and this single line at once enumerates all the principal physical features that impart to the country its peculiar physiognomy. Italy consists of a great peninsula, projecting in a SE. direction into the Mediterranean sea, and bounded on the W. by the portions of that sea commonly known as the Tyrrhe-nian and Sicilian seas, but comprised by the Romans under the name of *Mare Infernum,* or the Lower Sea; on the E. by the Adriatic, or the liper Sea (Mare Superum), as it was commonly termed by the Romans; while to the S. it extends into a broad expanse, forming, as it were, the base or root by which it adheres to the continent of Europe, and
around which sweeps the great chain of the Alps, forming a continuous barrier from the shores of the Mediterranean near Massilia to the head of the Adriatic at Trieste (Tergeste). From the western extremity of this vast mountain chain, where the ranges of the Maritime Alps abut immediately on the sea-shore, branches off the inferior, but still very considerable, chain of the Apennines, which, after sweeping round the Ligurian gulf, stretches in an unbroken line directly across to the shores of the Adriatic, and then, turning abruptly to the SE., divides the whole peninsula throughout its entire length, until it ends in the promontory of Leone- petra, on the Sicilian sea. [Apenninus.]

The precise limits of Italy can thus only be doubtful on its northern frontier, where the vast ranges of the Alps, though presenting, when viewed on the large scale, a vast natural barrier, are in fact indicated and penetrated by deep and irregular valleys, which render it often difficult to determine the natural boundary; nor has this been always adopted as the political one. Along the coast of Liguria, between Massilia and Genua, the Maritime Alps send down successive ranges to the sea, forming great headlands, of which the most striking are: that between Nolf and Fenale, commonly regarded by modern geographers as the termination of the Maritime Alps; and the promontory immediately W. of Monaco, which still bears the remains of the Tropae Augusti, and the passage of which presents the greatest natural difficulties to the construction of a road along this coast. This mountain headland would probably be the best point to fix as the natural limit of Italy on this side, and appears to have been commonly regarded in ancient times as such; but when Augustus first extended the political limits of Italy to the foot of the Alps, he found it convenient to carry them somewhat further W., and fixed on the river Varus as the boundary; thus including Nicea, which was a colony of Massilia, and had previously been considered as belonging to Gaul. (Strab. iv. pp. 178, 184. v. p. 209; Plin. iii. 4. s. 5, 8. a. 6, 7; Mela, ii. 4. § 9; Pol. iii. 1 § 1; Iulian. i. 404.)

Though this demarcation does not appear to have been always followed; for in the Itinerary of Antoninus Pius we find the Alpis Maritimae (meaning the mountain headland above described) fixed as the boundary between Italy and Gaul; it was generally adopted, and has continued without alteration to the present day.

The extreme N.E. limit of Italy, at the head of the Adriatic Gulf, is equally susceptible of various determination, and here also Augustus certainly transgressed the natural limits by including Istria within the confines of Italy. (Plin. iii. 18. s. 22; Strab. v. p. 209, vii. p. 514.) But here, also, the reasons of political convenience, which first gave rise to this extension, have led to its subsequent adoption, and Istria is still commonly reckoned a part of Italy. The little river Fornio, which flows into the Adriatic between Trieste and Capo d'Istria, was previously established as the boundary of Italy on this side; but the range of the Julian Alps, which, after sweeping round the coast of Istria, penetrates suddenly approaches close to the Adriatic, near the sources of the Istravia, and presents a continuous mountain barrier from thence to Trieste, would seem to constitute the true natural limit.

Even between these two extremities, the chain of the Alps does not always form so simple and clearly-marked a frontier as might at first be expected. It would not, indeed, be difficult to trace geographically such a line of boundary, by following the water-shed or line of highest ridge, throughout: but the imperfect knowledge of the Alps possessed by the ancients was scarcely sufficient for such a purpose; and this line was not, in ancient, any more than in modern times, the actual limit of different nationalities. Thus, the Rhaetians, who in the days of Strabo and Tlany were not comprised in Italy, inhabited the valleys and lower ridges of the Alps on the S. side of the main chain, down to the borders of the plains, as well as the northern declivities of the same mountains. Hence, a part of the Southern Tiroli, including the valley of the Adige above Trent, and apparently the whole of the Val- teline, though situated on the southern side of the Alps, were at that time excluded from Italy: while, at a later period, on the contrary, the two provinces of Rhaetia Prima and Rhaetia Secunda were both incorporated with Italy, and the boundary, in consequence, carried far to the N. of the central line of geographical limit. In like manner the Cottian Alps, which formed a separate district, under a tributary chiefdom, in the days of Augustus, and were only incorporated with Italy by Nero, comprised the valleys on both sides of the main chain; and the boundaries established in the latter periods of the Empire under the names of the Alpes Cottiniae and Alpes Maritimae, appear to have been constituted with equally little reference to this natural boundary. (Walckenaer, Géog. des Gaules, vol. ii. pp. 21—36, 361. 395.)

While Italy is bounded on the N. by the great natural barrier of the Alps, it is to the chain of the Apennines, by which it is traversed in its entire length, that the country is peculiarly indebted. This great mountain chain may be considered as the back-bone or vertebral column of the Italian peninsula, which sends down offsets or lateral ridges on both sides to the sea, while it forms, throughout its long course, the water-shed or dividing ridge, from which the rivers of the peninsula take their rise. A detailed description of the Apennines has already been given under the article Apenninus: they are here noticed only as far as they are connected with the general features of the physical geography of Italy.

1. NORTHEAST ITALY.—The first part of the chain of the Apennines, which extends from the point of their junction with the Maritime Alps along the N. shore of the Gulf of Genoa, and from thence across the whole breadth of Italy to the Adriatic near Ariminum, constitutes the southern boundary of a great valley or plain, which extends, without interruption, from the foot of the Apennines to that of the Alps. This broad expanse of perfectly level country, consisting throughout of alluvial soil, is watered by the great river Padus, or Po, and its numerous tributaries, which bring down the waters from the flanks both of the Alps and Apennines, and render this extensive plain one of the most fertile tracts in Europe. It extends through a space of above 200 geo. miles in length, but does not exceed 50 miles in breadth, and, similarly to the Adriatic, where the Alps beyond Fiorina trend away rapidly to the northward, sweeping in a semicircle round the plains of the Friuli (which are a mere continuation of the great plain of the Po), until they again approach the Adriatic near Trieste. At the same time the Apennines also, as they approach towards the Adriatic, gradually recede from the
banks of the Po. So that Ariminum (Ariminum), which has the lowest slopes first descending to the seashore, is distant nearly 60 zyg. miles from the mouth of that river, and it is almost as much more from thence to the foot of the Alps. It is this vast plain, together with the hill-country on each side of it, formed by the lower slopes of the mountains, that constituted the country of the Casoline Gauls, to which the Romans gave the name of Gallia Cisalpina.

The westernmost part of the same tract, including the upper basin of the Po, and the extensive hilly district, now called the Monferrato, which stretches from the foot of the Apennines to the south bank of the Po, was inhabited from the earliest periods by Ligurian tribes, and was included in Liguria, according to the Roman use of the name. At the opposite extremity, the portion of the great plain E. and N. of the Adige (Athesis), as well as the district now called the Frenet, was the land of the Veneti, and constituted the Roman province of Venetia. The Romans, however, appear to have occasionally used the name of Gallia Cisalpina, in a more lax and general sense, for the whole of Northern Italy, or everything that was not comprised within the limits of Italy as that name was understood prior to the time of Augustus. At the present day the name of Lombardy is frequently applied to the whole basin of the Po, including both the proper Gallia Cisalpina, and the adjacent parts of Liguria and Venetia.

The name of Northern Italy may be conveniently adopted as a geographical designation for the same tract of country; but it is commonly understood to comprise the whole of Liguria, including the sea-coast; though this, of course, lies on the S. side of the dividing ridge of the Apennines. In this sense, therefore, it comprises the provinces of Liguria, Gallia Cisalpina, Venetia and Etruria, and is limited towards the N. by the Maena (Mogra) on the W. coast, and by the Rubicon on that of the Adriatic. In like manner, the name of Central Italy is frequently applied to the middle portion, comprising the northern half of the peninsula, and extending along the W. coast from the mouth of the Maena to that of the Siburus, and on the E. from the Rubicon to the Rubra; while that of Southern Italy is given to the remaining portion of the peninsula, i.e. the S. of Latium, Etruria, Lucania and Bruttium. But it must be borne in mind that these names are merely geographical distinctions, for the convenience of description and reference, and do not correspond to any real divisions of the country, either natural or political.

2. Central Italy. — The country to which this name is applied differs essentially from that which lies to the N. of the Apennines. While the latter presents a broad level basin, bounded on both sides by mountains, and into which the streams and rivers converge from all sides, the centre of the Italian peninsula is almost wholly filled up by the broad mass of the Apennines, the offsets and lateral branches of which, in some parts, descend quite to the sea, in others leave a considerable intervening space of plain or low country; but even the largest of these level tracts is insignificant as compared with theлагут of the plains of Fontainebleau or the plains of the Moselle, which, from the middle of the Rhine to the sea, are considerably larger, as compared with the interior of Italy.

The great valleys of the Po and the Tiber, the two principal rivers of Central Italy, which have their sources very near one another, but flow to the W. the other to the S., may be considered as the key to the geography of this part of the peninsula. Between them lies the hilly tract of Etruria, which, notwithstanding the elevation attained by some isolated summits, has nowhere the appearance of a mountainous country, and a large part of which, as well as the portions of Umbria bordering on the valley of the Tiber, may be deservingly reckoned among the most fertile districts in Italy. South of the Tiber, again, the great volcanic plains of Latium expand between the Apennines and the sea, and though these are interrupted by the isolated group of the Alban hills, and still more by the rugged mountains of the Volscians, which lie between Terracina and Gaule, descend quite to the sea shore, as soon as these are passed, the mountains again reappear from the sea-coast, and leave a considerable interval which is filled up by the luxuriant plain of Campania.

Nothing can be more striking than the contrast presented by different parts of the countries thus comprised under the name of Central Italy. The snow still lingers in the upland pastures of Samnium and Lucania, while the corn is nearly ripe in the plains of the Roman Campagna. The elevated districts of the Pelasgi, the Vestini, and the Marsi, were always noted for their cold and cheerful climate, and were better adapted for pasture than the south of corn. Even at Cassii, only 40 miles
Italy.

Distant from the Tyrrhenian sea, the olive would no longer flourish (Ovid, Fast. iv. 683); though it grows with the utmost luxuriance at Tiber, at a distance of little more than 15 miles, but on the southern slope of the Apennines. The richness and fertility of the Campanian plains, and the beautiful shores of the Bay of Naples, were proverbial; while the Sannite valleys, hardly removed more than a day's journey towards the interior, had all the characteristics of highland scenery. Nor was this contrast confined to the physical characters of the regions in question: the rude and simple mountaineers of the Saline or Masic valleys were not less different from the luxurious inhabitants of Etruria and Campania, and their frugal and homely habits of life are constantly alluded to by the Roman poets of the empire, when nothing but the memory remained of those warlike virtues for which they had been so distinguished at an earlier period.

Central Italy, as the term is here used, comprised the countries known to the Romans as Etruria, Umbria (including the district adjoining the Adriatic previously occupied by the Galli Senones), Samnium, the land of the Samnites, Lucania, Marsi, Peligni, Marrucini, and Frentani, all Samnium, together with Latium (in the widest sense of the name) and Campania. A more detailed account of the physical geography of these several regions, as well as of the people that inhabited them, will be found in the respective articles.

3. Southern Italy, according to the distinction above established, comprises the southern part of the peninsula, from the river Silarus on the W., and the Frento on the E., to the Eypagian promontory on the Ionian, and that of Leucopetra towards the Sicilian, sea. It thus includes the four provinces or districts of Apulia, Calabria (in the Roman sense of the name), Lucania, and Bruttium. The physical geography of this region is in great part determined by the chain of the Apennines, which, from the frontiers of Samnium, is continued through the heart of Lucania in a broad mass of mountains, which is somewhat narrowed as it enters the Bruttian peninsula, but soon spreads out again sufficiently to fill up almost the whole of that district from shore to shore. The extreme southern mass of the Apennines forms, indeed, a detached mountain range, which in its physical characters and direction is more closely connected with the mountains in the NE. of Sicily than with the proper chain of the Apennines [Apennines]; so that the notion entertained by many ancient writers that Sicily had formerly been joined to the mainland at Rhegium, though wholly false with reference to historical times, is undoubtedly true in a geological sense. The name of the Apennines is, however, universally given by geographers to the whole range which terminates in the bold promontory of Leucopetra (Capo dell'euf). East of the Apennines, and S. of the Frento, there extends a broad plain from the foot of the mountains to the sea, forming the greater part of Apulia, or the tract now known as Puglia plana; while, S. of this, an extensive tract of hilly country (not, however, rising to any considerable elevation) branches from the Apennines near Venusius, and extends along the frontiers of Apulia and Lucania, till it approaches the sea between Egnatia and Brundisium. The remainder of the peninsula of Calabria or Messapia, though it may be considered in some degree as a continuation of the same tract, presents nothing that can be called a range of hills, much less of mountains, as it is erroneously represented on many maps. [Calabria.] Between the central mass of the Apennines (which occupies the heart of Lucania) and the gulf of Tarentum, is an elevated and hilly tract, gradually descending as it approaches the shores of the gulf, which are bordered by a strip of alluvial plain, varying in breadth, but nowhere of great extent.

The Apennines do not attain to so great an elevation in the southern part of the Italian peninsula as in its more central regions; and, though particular summits rise to a considerable height, we do not here meet with the same broad mountain tracts or upland valleys as further northward. The centre of Lucania is, indeed, a rugged and mountainous country, and the lofty groups of the Monti della Maddalena, S. of Poteza, the Mt. Pollux, on the frontiers of Bruttium, and the Sila, in the heart of the latter district, were evidently, in ancient as well as modern times, wild and seceded districts, almost inaccessible to civilization. But the coasts both of Lucania and Bruttium were regions of great beauty and fertility; and the tract extending along the shores of the Tarentine gulf, though now wild and desolate, is cited in ancient times as an almost proverbial instance of a beautiful and desirable country. (Archil. ap. Athen. xii. p. 523.)

The peninsula of Calabria or Messapia, as already remarked by Strabo, notwithstanding the absence of streams and the apparent aridity of the soil, is in reality a district of great fertility, as also the tract which extends along the coast of the Adriatic from Etna to the mouth of the Anibus; and, though the plains in the interior of Apulia are dry and dusty in summer, they produce excellent corn, and are described by Strabo as "bringing forth all things in great abundance." (Strab. vi. p. 284.)

The general form and configuration of Italy was well known to the ancient geographers. Polybius, indeed, seems to have had a very imperfect notion of it, or was singularly unhappy in his illustration; for he describes it as of a triangular form, having the Alps for its base, and its two sides bounded by the sea, the Ionian and Adriatic on the one side, the Tyrrhenian and Sicilian on the other. (Pol. ii. 14.) Strabo justly objects to this description, that Italy cannot be called a triangle, without allowing a degree of curvature and irregularity in the sides, which would destroy all resemblance to that figure; and that it is, in fact, wholly impossible to compare it to any geometrical figure. (Strab. v. p. 210.)

There is somewhat more truth in the resemblance suggested by Pliney,—and which seems to have been commonly adopted, as it is referred also by Rutilius (Plin. iii. 5. s. 6; Rutil. Itin. ii. 17)—to the leaf of an oak-tree, though this would imply that the projecting portions or promontories on each side were regarded as more considerable than they really are. With the exception of the two great peninsulas or promontories of Calabria (Mesapia) and Bruttium, which are attached to its lower extremity, the remainder of Italy, from the Padas and the Maera southwards, has a general oblong form; and Strabo truly enough describes it, when thus considered, as much about the same shape and size with the Adriatic Sea. (Strab. v. p. 211.)

Its dimensions are very variously stated by ancient writers. Strabo, on the compilation just cited, calls it little less than 6000 stadii (600 geo. miles) long, and about 1300 stadii in its greatest breadth;
of these the latter measurement is almost exactly correct, but the former much overstated, as he speaking there of Italy exclusive of Chalpine Gaul. The total length of Italy (in the wider sense of the word), from the foot of the Alps near Aosta (Augusta Praetoria) to the lapygian promontory, is about 620 geog. miles, as measured in a direct line on a map; but from the same point to the promontory of Luponoptra, which is the extreme southern point of Italy, is above 660 geog. miles. Pliny states the distance from the same starting-point to Rhegium at 1020 M. P., or 816 geog. miles, which is greatly overstated, unless we suppose him to follow the windings of the road instead of measuring the distance geographically. (Plin. iii. 5. s. 6.) He also states the greatest breadth of Italy, from the Varus to the Arisa, at 410 M. P., which is very nearly correct; the actual distance from the Varus to the head of the Adriatic, measured in a straight line, being 300 geog. miles (375 M. P.), while from thence to the Arisa is about 50 geog. miles. Pliny adds, that the breadth of the peninsula, from the mouth of the Tiber to those of the Aternum, is 136 M. P., which considerably exceeds the truth for that particular point; but the widest part of the peninsula, from Ancona across to the Monte Arventaro, is 130 geog., or 162 Roman, miles.

III. CLIMATE AND NATURAL PRODUCTIONS.

Italy was not less renowned in ancient than in modern times for its beauty and fertility. For this it was indebted in great part to its climate, combined with the advantages of its physical formation. Extending from the parallel of 30° N. lat. to 46° 30′, its southern extremity enjoyed the same climate with Greece, while its northern portions were on a par with the N. of France. The large range of Apennines extending throughout its whole length, and the seas which bathe its shores on both sides, contributed at once to temper and vary its climate, so as to adapt it for the productions alike of the temperate and the warmest parts of Europe. Hence the variety as well as abundance of its natural produce, which excited the admiration of so many ancient writers. The fine bust of enthusiasm with which Virgil sings the praises of the climate of Italy has been known to require notice (Virg. Georg. ii. 136—176); but even the prose Dionysius and Strabo are kindled into almost equal admiration by the same theme. The former writer remarks, that of all countries with which he was acquainted Italy united the most natural advantages; for that it did not, like Egypt or Babylonia, possess a soil adapted for agriculture only; while the Cappadocian plains rivalled, if they did not surpass, in fertility all other arable lands. The valleys of Messapik, Puglia, and the Sabine, were not excelled by any others; and the vineyards of Etruria, the Faenician and the Alban hills, produced wines of the finest excellent quality, and in the greatest abundance. Nor was it less favourable to the rearing of flocks, whether of sheep or goats; while its pastures were of the richest description, and supported innumerable herds both of horses and cattle. Its mountain sides were clothed with forest, affording abundance of timber for ship-building and all other purposes, which could be transported to the coast with facility by its numerous navigable rivers. Abundance of warm springs in different parts of the country supplied not only the means of luxurious baths, but valuable medicinal remedies. Its seas abounded in fish, and its mountains contained mines of all kinds of metals; but that which was the greatest advantage of all was the excellent temperature of its climate, free alike from the extremes of heat and cold, and adapted for all kinds of plants and animals. (Dionys. i. 36. 37.) Strabo dwells not only on these natural resources, but on its political advantages. As a seat of empire it lay on two sides by the sea, on the third by almost impassable mountains; possessing excellent ports on both seas, yet not affording too great facilities of access; and situated in such a position, with regard to the great nations of Western Europe, on the one side, and to Greece and Asia, on the other, as seemed to destined it for universal dominion. (Strab. vi. p. 285.) Pliny, as might be expected, is not less enthusiastic in favour of his native country, and Varro adds that of all countries it was that in which the greatest advantage was derived from its natural fertility by careful cultivation. (Plin. iii. 5. s. 6, xxxvii. 13. s. 77; Varr. R. R. i. 2.)

It is probable that the climate of Italy did not differ materially in ancient times from what it is at the present day. The praises bestowed on it for its freedom from excessive heat in summer may surprise those who compare it in this respect with more northern climates; but it is to be remembered that ancient writers spoke with reference to the countries around the Mediterranean; and were more familiar with the climate of Africa, Syria, and Egypt, than with those of Gaul or Germany. On the other hand, there are passages in the Roman writers that seem to indicate a degree of cold exceeding what is found in the present day, especially in the neighbourhood of Rome. Horace speaks of Soracte as white with snow, and the Alban hills as covered with ice on the first approach of winter (Hor. Car. i. 9. Ep. i. 7. 10); and Juvenal even alludes to the Tiber being covered with ice, as if it were an ordinary occurrence (v. 522). Some allowance may be made for poetical exaggeration; but still it is probable that the climate of Italy was somewhat colder, or rather that the winters were more severe than they now are, through this remark must be confined within narrow limits; and it is probable that the change which has taken place coincides with the greater knowledge which has been gained of meteorology. Great stress has also been laid by many modern writers upon the fact that populous cities then existed, and a thriving agricultural population was found, on sites and in districts now desolated by malaria; and hence it is inferred that the climate has become much more unhealthy in modern times. But population and cultivation have in themselves a strong tendency to repress the causes of malaria. The fertile districts on the coasts of Southern Italy once occupied by the flourishing Greek colonies are now pestilential wastes; but they became almost desolate from other causes before they grew so unhealthy. In the case of Paestum, a marked diminution in the effects of malaria has been perceived, even from the slight amount of population that has been attracted thither since the site has become the frequent resort of travellers, and the partial cultivation that has resulted from it. Nor can it be asserted that Italy, even in its most flourishing days, was ever free from this scourge, though particular localities were undoubtedly more healthy than at present. Thus, the Maremma of Tuscany was noted, even in the time of Pliny, for its insalubrity (Plin. Ep. v. 6); the neighbourhood of Arezzo was almost uninhabited from the same cause, at a still earlier
The volcanic district of Rome, as we may term the more northern of the two, is about 60 miles in breadth, by 60 to 35 in length; while that of Campania is about 60 miles long, with an average, though very irregular, breadth of 20. North of the former lie the detached summits of Mt. Amaioata and rudico fati, both of them composed of volcanic rocks; while at a distance of 60 miles E. of the Campanian basin, and separated from it by the intervening mass of the Apenines, is situated the isolated volcanic peak of Mt. Vultur (Volto), a mountain whose regular conical form, and the great crater-shaped basin on its northern flank, at once prove its volcanic character; though this also, as well as the volcanoes of Latium and Eturia, has displayed no signs of activity within the historical era. (Dauben, On Volcanoes, ch. xi.)

It is scarcely necessary to enumerate in detail the natural productions of Italy, of which a summary view has already been given in the passages cited from ancient authors, and the details will be found under the heads of the several provinces. But it is worth while to observe how large a portion of those productions, which are at the present day among the chief objects of Italian cultivation, and even import to its scenery some of its most peculiar characters, are of quite modern introduction, and were wholly unknown when the Greek and Roman writers were extolling its varied resources and inexhaustible fertility. To this class belong the maize and rice so extensively cultivated in the plains of Lombardy, the oranges of the Ligurian coast and the neighbourhood of Naples, the ashes and cactuses which clothe the rocks on the sea-shore in the southern provinces; while the mulberry tree, though well known in ancient times, never became an important object of culture until after the introduction of the silk-worm in the 15th century. Of the different kinds of fruits known to the ancient Romans, many were undoubtedly of exotic origin, and of some the period of their introduction was recorded; but almost all of them throw wide in Italy, and the gardens and orchards of the wealthy Romans surpassed all others then known in the variety and excellence of their produce. At the same time, cultivation of the more ordinary descriptions of fruit was so extensive, that Varro remarks: "A Arboretum cum omnibus est, ut tota potens victor, videtur." (R. R., i. 2. 6.)

Almost all ancient writers concur in praising the metallic wealth of Italy; and Pliny even asserts that it was, in this respect also, superior to all other lands; but it was generally believed that the government intentionally discouraged the full exploration of these mineral resources. (Plin. iii. 20. s. 24, xxxviii. 13. s. 77; Strab. vi. p. 286; Dionys. i. 57; Virg. Georg. ii. 163.)

It is doubtful whether this policy was really designed to husband their wealth or to conceal their poverty; but it is certain that Italy was far from being really so rich in metallic treasures as was supposed, and could bear no comparison in this respect with Spain. Gold was unquestionably found in some of the streams which flowed from the Alps, and in some cases (as among the Istyuni and Salassius) was extracted from them in considerable quantities. The mines, however, are supposed to have been exhausted, and the gold-works on the fronts of Noricum, celebrated for their richness by Polyb., had ceased to exist in the days of Strabo. (Strab. iv. p. 208.) Silver is enumerated, also, among the metallic treasures of
ITALIA.

Italy: but we have no specific account of its production, and the fact that silver money was unknown to the ancient nations of Italy sufficiently shows that it was not found in any great quantity. The early coinage of Italy was of copper, or rather bronze; and this metal appears to have been largely exported, and applied to a variety of purposes by the Etruscans, from a very early period. The same people were the first to explore the iron mines of Ilva, which continued to be assiduously worked by the Romans; though the metal produced was thought inferior to that of Noricum. Of other minerals, cinnabar (minimum) and calamine (cadinium) are noticed by Pliny. The white marble of Luna, also, was extensively quarried by the Romans, and seems to have been recognized as a superior material for sculpture to any of those derived from Greece.

IV. RIVERS, LAKES, AND MOUNTAINS.

The configuration of Italy is unfavourable to the formation of great rivers. The Padus is the only stream which deserves to rank among the principal rivers of Europe; even the Arno and the Tiber, celebrated as are their names in history, being inferior in magnitude to many of the secondary streams, which are mere tributaries of the Rhine, the Rhone, or the Danube. In the north of Italy, indeed, the rivers which flow from the perpetual snows of the Alps are furnished with a copious and constant supply of water; but the greater part of these which have their sources in the Apennines, though large and formidable streams when swollen by heavy rains or the sources of water, dwindle into insignificance at other times, and present but scanty streams of water winding through broad beds covered with stones and shingle. It is only by comparison with Greece that Italy (with the exception of Cisalpine Gaul) could be praised for its abundance of navigable rivers.

The Padus, or Po, is by far the most important river of Italy, flowing from W. to E. through the very midst of the great basin or trench of Northern Italy and receiving in consequence, from both sides, almost all the waters from the southern declivities of the Alps, as well as from the northern slopes of the Apennines. Hence, though its course does not exceed 380250 miles in length, and the direct distance from its sources in the Mons Vesubius (Mt. Vesuvius) to its mouth in the Adriatic is only 230 miles, the body of water which it brings down to the sea is very large. Its principal tributaries are as follows, beginning with those on the N. bank, and proceeding from W. to E. — (1) the Dura Minor (Durin Riparia), which joins the Po near Turin: Augustus Augustanorum; (2) the Stura (Stura); (3) the Orco (Oreno), (4) the Dura Major, or Dora Baltea; (5) the Sesia (Sesia); (6) the Ticino (Ticinum); (7) the Lambro (Lambro); (8) the Adda (Adda); (9) the Ticus (Tigo); (10) the Mincch (Mincus), Equally numerous, though less important in volume and magnitude, are its tributaries from the S. side, the chief of which are: — (1) the Tamara (Tumara), flowing from the Maritime Alps, and much the most considerable of the southern rivers of the Po; (2) the Trebbia (Trebbia); (3) the Taro (Taro); (4) the Ticino (Enza); (5) the Gaibon (Sceviva); (6) the Scalchi (Scalchius); (7) the Reno (Reno); (8) the Vatre (Vatren). (Plin. iii. 16. s. 20.)

The first river which, descending from the Alps, does not join the Po, is the Adige or Adige, which in the lower part of its course flows nearly parallel with the greater river for a distance of above 50 miles. E. of this, and flowing from the Alps direct to the Adriatic, come in succession, the Measus or Brenta, the Plaisus or Piave, the Tumacchus (Tumacchus), and the Sontanius (Sontanius), which besides many smaller streams, which will be noticed under the article VENETIA.

Liguria, S. of the Apennines, has very few streams worthy of notice, the mountains here approaching so close to the coast as to leave but a short course for their waters. The most considerable are, the Varus (Varus), which forms the western limit of the province; the Rutuba (Rutuba), flowing through the land of the Entemelii, and the Macra (Magra), which divides Liguria from Etruria.

The rivers of Central Italy, as already mentioned, all take their rise in the Apennines, or the mountain groups dependent upon them. The two most important of these are the Arno (Arno) and Tiberis (Tiberis). The Arsus (Surchis), which now pursues an independent course to the sea a few miles N. of the Arno, was formerly a confluent of that river. Of the smaller streams of Etruria, which have their sources of hills that separate the basin of the Arno from that of the Tiber, the most considerable are the Cecina (Cecina), the Umbro (Umbro), and the Arminia (Arminia). The great valley of the Tiber, which has a general southerly direction, from its sources in the Apennines on the confines of Etruria and Umbria to its mouth at Ostia, a distance in a direct line of 140 gees., miles, is the most important physical feature of Central Italy. That river receives in its course many tributary streams, but the only ones which are important in a geographical point of view are the CLANIS, the Nar and the Anio. Of these the Nar brings with it the waters of the Velinus, a stream at least as considerable as its own.

South of the Tiber are the Liris (Garigliano or Liris), which has its sources in the central Apennines near the lake Faucium; and the Vulturnus (Voluturnus), which brings with it the collected waters of almost the whole southern peninsula, receiving near Beneventum the tributary streams of the Calore (Calore), the Sabatus (Sabato), and the Tanarus (Tunaro). Both of these rivers flow through the plain of Campania to the sea: south of that province, and separating it from Lucania, is the Silarus (Silarus), which, with its tributaries the Calore and Tanger (Tanger), drains the western valleys of the Lucanian Apennines. This is the last river of any magnitude that flows to the western coast of Italy; further to the S. the Apennines approach so near to the shore that the streams which descend from them to the sea are mere mountain torrents of trifling length and size. One of the most considerable of them is the Lais (Laius), which forms the limit between Lucania and Bruttium. The other minor streams of those two provinces are enumerated under their respective articles.

Returning now to the eastern or Adriatic coast of Italy, we find, as already noticed, a large number of streams, descending from the Apennines to the sea, but few of them of any great magnitude, though those which have their sources in the highest parts of the range are formidable torrents at particular seasons of the year. Beginning from the frontiers of Cisalpine Gaul, and proceeding from N. to S., the most important of these rivers are: — (1) the Ariminus (Marcellus); (2) the Crastinum (Crastinum); (3) the Piscarius (Pisaurus); (4) the Metaurus (Metaurus);
ITALIA.

(5) the Aesis (Esino); (6) the Potentia (Potenza); (7) the Fluor (Chienti); (8) the Truentus (Tronto); (9) the Varanous (Frimeno); (10) the Aternus (Aterno or Pacevec); (11) the Sagrus (Seyno); (12) the Truentus (Biferno); (13) the Frente (Ferretors); (15) the Ceralbus (Cerano); (16) the Anibus (Offiato), which has much the longest course of all the rivers falling into the Adriatic.

Beyond this, not a single stream worthy of notice flows to the Adriatic; those which have their sources in the central Apenines of Lucania all descending toward the Tarentine gulf; these are, the Braduus (Bracchios), the Cassinus (Casalino), the Arius (Apris), and the Siris (Sinuo). The only rivers of Bruttium worthy of mention are the Crathis (Crati) and the Neachthus (Neto).

(The minor streams and those noticed in history, but of no geographical importance, are enumerated in the descriptions of the several provinces.)

The Italian lakes may be considered as readily arranging themselves into three groups:--1. The lakes of Northern Italy, which are on a far smaller scale than any of the others, are basins formed by the rivers which descend from the high Alps, and the waters of which are arrested just at their exit from the mountains. Hence they are, as it were, valleys filled with water, and are of elongated form and considerable depth; while their superfluous waters are carried off in deep and copious streams, which become some of the principal feeders of the Po. Such are the Lacs Verbanus (Lago Maggiore), formed by the Ticinas; the Lacs Labrun (Lago di Como), by the Addus; the Lacs Sebium (Lago d'Isco), by the Ollius; and the Lacs Bencus (Lago di Garda), by the Mincus. To these Piny adds the Lacs Eupilis, from which flows the Lamber or Lambro, a very trilling sheet of water (Plin. iii. 19. s. 23); while neither he, nor any other ancient writer, mentions the Lago di Lugano, situated between the Lake of Como and Lago Maggiore, though it is intersected in longitude only to the three great lakes. It is first mentioned by Gregory of Tours in the 6th century, under the name of Cerius Lacus, an appellation probably ancient, though not now found in any earlier author. 2. The lakes of Central Italy are, with few exceptions, of volcanic origin, and occupy the craters of long extinct volcanoes. Hence they are mostly of circular or oval form, of no great extent, and, not being fed by perennial streams, either require no natural outlet, or have their surplus waters carried off by very inconsiderable streams. The largest of these volcanic lakes is the Lucus Vulcisue, or Lago di Bolsena, in Southern Etruria, a basin of about 30 miles in circumference. Of similar character and origin are, the Lacs Sabatins (Lago di Bracciano) and Lacs Cinium (Lago di Vico), in the same district; the Lacs Albanus (Lago d'Albano) and Lacus Nemorensis (Lago di Nemi), in Latium; and the Lake Avernus in Campania. 3. Wholly differing from the preceding are the two most considerable lakes in this portion of Italy, the Lacs Trasimenuis (Lago di Perugia) and Lacs Fucinus (Lago Fucino or Lago di Cetano); both of which are basins surrounded by hills or mountains, leaving no natural outlet for their waters, but wholly unconnected with volcanic agency. The northern of these belongs almost exclusively either to the great chain of the Alps, which bounds it on the N., or to that of the Apenines. The principal summits of the latter range have been already noticed under the article Appenninus. The few outlying or detached summits, which do not properly belong to the Apenines are:--(1) the Monte Apiati or Monte di Santa Fiora, in the heart of Etruria, which rises to the height of 794 feet; (2) the Mons CININUS, a volcanic group of very inferior elevation; (3) the Mons ALABANUS, rising to above 3000 feet; (4) the Mons VESUVIUS, in Campania, attaining between 3000 and 4000 feet; (5) the Mons VULTECH, on the opposite side of the Apenines, which measures 4434 feet; and (6) the Mons GARGANUS, an isolated mass, but geologically connected with the Apenines, while all the preceding are of volcanic origin, and therefore geologically, as well as geographically, distinct from the neighbouring Apenines.

To these may be added the two isolated mountain promontories of the Mons Argentarius (Monte Argentario) on the coast of Etruria, and Mons Circulus (Monte Circello) on that of Latium,--both of them rising like rocky islands, joined to the mainland only by low strips of alluvial soil.

IV. ETHNOGRAPHY OF ANCIENT ITALY.

The inquiry into the origin and affinities of the different races which peopled the Italian peninsula before it fell altogether under the dominion of Rome, and the national relations of the different tribes with which the rising republie came successively into contact, is a problem which has more or less attracted the attention of scholars ever since the revival of letters. But it is especially of late years that the impulse given to comparative philology, combined with the spirit of historical criticism, has directed their researches to this subject. Yet, after all that has been written on it, from the time of Niebuhr to the present day, it must be admitted that it is still enveloped in great obscurity. The scantiness of the monuments that remain to us of the languages of these different nations; the various and contradictory statements of ancient authors concerning them; and the uncertainty, even with regard to the most apparently authentic of these statements, on what authority they were really founded; combine to embarrass our inquiries, and lead us to mistrust our conclusions. It will be impossible, within the limits of an article like the present, to enter fully into the discussion of these topics, or examine the arguments that have been brought forward by different writers upon the subject. All that can be attempted is to give such a summary view of the most probable results, as will assist the student in forming a connected idea of the whole subject, and enable him to follow with advantage the researches of other writers. Many of the particular points here briefly referred to will be more fully investigated in the several articles of the different regions and races to which they relate.

Leaving out of view for the present the inhabitants of Northern Italy, the Gauls, Ligurians, and Veneti, the different nations of the peninsula may be grouped under five heads:--(1) the Pelasgians; (2) the Greeks; (3) the Sabellians; (4) the Umbrians; (5) the Etruscans.

1. PELASGIANS.—All ancient writers concur in ascribing a Pelasgic origin to many of the most ancient tribes of Italy, and there seems no reason to doubt that a large part of the population of the peninsula was originally of Pelasgic race, at least so far as that it belonged to the same great nation or family
ITALIA.

which formed the original population of Greece, as well as of Epirus and Macedonia, and of a part of least of Thrace and Asia Minor. The statement of arguments upon which this inference is based are more fully discussed under the article PELASGI. It may here suffice to say that the general fact is put forward prominently by Dionysius and Strabo, and has been generally adopted by modern writers from Niebuhr downwards. The Pelasgian population of Italy appears in historical times principally, and in its unmixed form solely, in the southern part of the peninsula. It is not impossible that it had, as was reported by traditions still current in the days of the earliest historians, once extended much more widely, and that Pelasgian tribes had been gradually pressed towards the south by the successively advancing races of population, which appear under the name of the Boeotians or Athenians, and the Sabellians. At the time when the first Greek colonies were established in Southern Italy, the whole of the country was generally known as Lucania and Bruttium, or the land of a people whom the Greeks called OCHTOLANS (OCEOTOLANS), and who are generally represented as a Pelasgian race. Indeed we learn that the colonists themselves continued to call this people, whom they had reduced to a state of servitude, Pelasgi. (Steph. B. s. v. CUR.) We find, however, traces of the tradition that this part of Italy was at one time peopled by a tribe called Siculi, who are represented as passing over from thence into the island to which they gave the name of Sicily, and where alone they are found in historical times. (SICULIA.) The name of these Siculi is found also in connection with the earliest population of Latium (LATIUM): both there and in Oenotria they are represented by some authorities as a branch of the Pelasgic race, while others regard them as a distinct people. In the latter case we have no clue whatever to their original national affinities.

Next to the Oenotrians come the Messapians or Iapetians, who are represented by the Greek legends and traditions as of Pelasgic or Greek descent; and there seem reasonable grounds for assuming that the conclusion was correct, though no value can be attached to the mythical legends connected with it by the early Greek historians, as well as by the earlier early Greek historians. Greeks abundantly to whom a Pelasgic origin is thus assigned, are the Messapians and Salentine, in the Iapygian peninsula, and the Etruscans and Umbrians, in the country called by the Romans Apulia. A strong continuation of the inference derived in this case from other authorities is found in the traces still remaining of the Messapiot dialect, which appears to have borne a close affinity to Greek, and to have differed from it in much the same degree as the Macedonian and other eastern dialects. (MüLLER, 
ITINERARIO MACEDONICO, pp. 41—98.)

It is far more difficult to trace with any security the Pelasgic population of Central Italy, where it appears to have been very early blended with other national elements, and did not anywhere subsist in an unmixed form within the period of historical records. But various as have been the theories and conclusions with regard to the population of Latium, there seems to be good ground for assuming that the Oenotrians, not element, both of the people and language, was Pelasgic, and that this element was predominant in the southern part of Etruria, while it had been comparatively effaced in the northern districts. (ETRURIA.)

very name of Tyrrhenians, universally given by the Greeks to the inhabitants of Latium, appears indis- distinctively connected with that of Pelasgians; and the evidence of language affords some curious and interesting facts in corroboration of the same view. (DION. H. HIST. 2: 176—177; LUCAN., TITAN., PELASG., pp. 40—43.)

If the Pelasgic element was thus prevalent in Southern Etruria, it might naturally be expected that its existence would be traceable in Latium also; and accordingly we find abundant evidence that one of the component elements in the population of Latium was of Pelasgic extraction, though this did not subsist within the historical period in a separate form, but was already indissolubly blended with the other elements of the Latin nationality. (LATIUM.) The evidence of the Latin language, as pointed out by Niebuhr, in itself indicates the combination of a Greek or Pelasgic race with one of a different origin, and closely akin to the other nations which we find predominant in Central Italy, the Umbrians, Oscans, and Sabines.

There seems to be also sufficient proof that a Pelasgic or Tyrrhenian population was at an early period settled along the coasts of Campania, and was probably at one time contiguous and connected with that of Lucania, or Oenotria; but the notices of these Tyrrhenian settlements are rendered obscure and confused by the circumstance that the Greeks applied the same name of Tyrrhenians to the Etruscans, who subsequently made themselves masters for some time of the whole of this country. (CAMPANIA.)

The notices of any Pelasgic population in the interior of Central Italy are so few and vague as to be scarcely worthy of investigation; but the traditions collected by Dionysius from the early Greek historians distinctly represent them as having been at one time settled in Northern Italy, and especially to Spina on the Adriatic as a Pelasgic city. (DIONYSII, i. 17—21; STRAB., v. p. 214.) Nevertheless it hardly appears probable that this Pelasgic race formed a permanent part of the population of these regions. The traditions in question are more fully investigated under the article PELASGII. There is some evidence also, though very vague and indefinite, of a Pelasgic or Pelasgic population on the coast of the Adriatic, especially near Piraeus, and in Thesprotia. (These notices are collected by Niebuhr, vol. i, pp. 49, 50, and are discussed under PICTUR.)

2. OSCANS.—At a very early period, and certainly before the commencement of historical record, a considerable portion of Central Italy appears to have been in the possession of a people who were called by the Greeks Opicians, and by the Latins Oscans, and whom we are led to identify also with the Aeneans (APONEUS) of the Greeks, and the Aurunci of Roman writers. From them was derived the name of Opicia or Opicia, which appears to have been the usual appellation, in the days both of Thucydides and Aristotle, for the central portion of the peninsula, or the country north of what was then called Italy. (TRENTIUS, vi. 4; ARIST. POL. viii. 10.) All the earliest authorities concur in representing the Opicians as the permanent inhabitants of Campania, and they were still in possession of that fertile district when the Greek colonies were planted there. (STRAB., v. p. 242.) We find also statements, which have every character of authenticity, that this same people then occupied the mountainous region alter-
wards called Samnium, until they were expelled, or rather subdued, by the Sabine colonists, who assumed the name of Sammites. (Id. v. p. 250.) Samnium.] Whether they were more widely extended we have no positive evidence; but there seems a strong presumption that they had already spread themselves through the neighbouring districts of Italy. Thus the Hirpini, who are represented as a Samnite or Sabellian colony, in all probability founded an Oscan population established in that country, as did the Sammites proper in the more northern province. There are also strong arguments for regarding the Volscians as of Oscan race, as well as their neighbours and inseparable allies the Aeclanians. (Niebuhr, vol. i. pp. 70—73; Donadson, Varro-Franienses, pp. 4, 5.) It was probably also an Oscan tribe that was settled in the highlands of the Apenines about Beate, and which from thence descended into the plains of Latium, and constituted one important element of the Latin nation. (Latium.) It is certain that, if that people was, as already mentioned, in part of Pelasgic origin, it contained also a very strong admixture of a non-Pelasgic race; and the analogy of language leads us to derive this latter element from the Oscan. (Donadson, l.c.) Indeed the extant monuments of the Oscan language are sufficient to prove that it bore a very close relation to the oldest form of the Latin; and Niebuhr justly remarks, that, had a single book in the Oscan language been preserved, we should have had little difficulty in deciphering it. (Niebuhr, vol. i. p. 68.)

It is difficult to determine the precise relation which this primitive Oscan race bore to the Sabines or Samnites. The latter are represented as conquerors, making themselves masters of the countries previously occupied by the Oscans; but, both in Samnium and Campania, we know that the language spoken in historical times, and even long after the Roman conquest, was still called Oscan; and we even find the Sammites carrying the same language with them, as they gradually extended their conquests, into the furthest recesses of Bruttium. (Fest. s. v. Bilingue Brateata, p. 35.) There seems little doubt that the Samnite conquerors were a comparatively small body of warriors, who readily adopted the language of the people whom they subdued, like the Normans in France, and the Lombards in Northern Italy. (Niebuhr, vol. i. p. 67.) But, at the same time, there are strong reasons for supposing that the language of the Sabines themselves, and therefore that of the conquering Samnian race, was not radically distinct from that of the Oscans, but that they were in fact cognate dialects, and that the two nations were members of the same family or race. The questions concerning the Oscan language, so far as it is known to us from existing monuments, are more fully adverted to in the article Oscra; but it must be borne in mind that all such monuments are of a comparatively late period, and represent only the Sabellio-Oscan, or the language spoken by the combined people, long after the two races had been blended into one; and that we are almost wholly without the means of distinguishing what portion was derived from the one source or the other.

3. The Sabellians.—This name, which is sometimes used by ancient writers as synonymous with that of the Sabines, sometimes to designate the Sammites in particular (Plin. iii. 12. s. 17; Virgil, Georg. ii. 167; Hor. Sat. i. 9. 29, ii. 1. 36; Heindorf, ad loc.), is commonly adopted by modern historians as a general appellation, including the Sabines and all those races or tribes which, according to the distinct tradition of antiquity, derived their origin from them. These traditions are of a very different character from most of those transmitted to us, and have apparently every claim to be received as historical. And though we have no means of fixing the date of the migrations to which they refer, it seems certain that these cannot be carried back to a very remote age; but that the Sabellian races had not very long been established in the extensive regions of Central Italy, where we find them in the historical period. Their extension still further to the S. belongs distinctly to the historical age, and did not take place till long after the establishment of the Greek colonies in Southern Italy.

The Sabines, properly so called, had their original abodes, according to Cato (ap. Dionys. ii. 49), in the lofty ranges of the central Apennines and the upland valleys about Amaterrum. It was from thence that, descending towards the western sea, they first began to press upon the Aborigines, an other tribe, by whom they expelled from the valleys about Beate, and thus gradually extended themselves into the country which they inhabited under the Romans, and which still preserves its ancient name of La Sabina. But, while the nation itself had thus shifted its quarters nearer to the Tyrrhenian Sea, it had sent out at different periods colonies or bodies of emigrants, which had established themselves to the E. and S. of their original abodes. Of these, the most powerful and celebrated were the Sammites (Sammarci), a people who are universally represented by ancient historians as descended from the Sabines (Strab. v. p. 250; Fest. v. Samnites; Varr. L. L. vii. § 29); and this tradition, in itself sufficiently trustworthy, derives the strongest confirmation from the fact already noticed, that the Romans applied the name of Sabellii (obviously only another form of Sabini) to both nations indiscriminately. It is, further, that the Sammites called themselves Sabini, or Savini, that the Oscan name "Sabini" is found on coins struck during the Social War, which in all probability belong to the Sabines, and certainly not to the Sabines proper. Equally distinct and uniform are the testimonies to the Sabine origin of the Piceni or Picentes (Plin. iii. 13. s. 18; Strab. v. p. 240), who are found in historical times occupying the fertile district of Picenum, extending from the central chain of the Apennines to the Adriatic. The Peligni also, as we learn from the evidence of their native poet (Ovid, Fast. iii. 95), claimed to be of Sabine descent; and the same may fairly be assumed with regard to the Vestini, a tribe whom we find in historical times occupying the very valleys which are represented as the original abodes of the Sabines. We know nothing historically of the origin of this people, any more than of their neighbours the Marrucini; but we find them both frequently with the Peligni and the Marsi, that it is probable the four constituted a common league or confederation, and this in itself raises a presumption that they were kindred races. Cato already remarked, and without doubt correctly, that the name of the Marrucini was directly derived from that of...
ITALIA.

The Marsi (Cato, _op. Priscian. ix. 9); and there can be no doubt that the same relation subsisted between the two nations: but we are wholly in the dark as to the origin of the Marsi themselves. Several circumstances, however, combined to render it probable that they were closely connected with the Sabines, but whether as a distinct of set from that people, or that the two proceeded from one common stock, we have no means of determining. [Marsli.]

The Frentani, on the other hand, are generally represented as a Samnite race; indeed, both they and the Hirpini were so closely connected with the Samnites, that they are often considered as forming only a part of that people, though at other times they figure as independent and separate nations. But the traditions with regard to the establishment of the Hirpini and the origin of their name [Hirpini], seem to indicate that they were the result of a separate migration, subsequent to that of the body of the Samnites. South of the Hirpini, again, the Lucanians are universally described as a Samnite colony, or rather a branch of the Samnites, who extended their conquering arms over the greater part of the country, called by the Greeks Oenotria, and thus came into direct collision with the Greek colonies on the southern coasts of Italy. [Magna Graecia.]

At the height of their power the Lucanians even made themselves masters of the Bruttian peninsula; and the subsequent revolt of the Bruttii did not clear that country of these Sabellian invaders, the Bruttian people being apparently a mixed population, made up of the Lucanian conquerors and their Venetic serfs. [Bruttii.]

While the Samnites and their Lucanian progeny were thus extending their power on the S. to the Sicilian strait, they did not omit to make themselves masters of the fertile plains of Campania, which, together with the flourishing cities of Capua and Cumae, fell into their hands between 440 and 420 B.C. [Campania.]

The dominion of the Sabellian race was thus established from the neighbourhood of Ancus to the southern extremity of Bruttium; but it must not be supposed that throughout this wide extent the population was become essentially, or even mainly, Sabellian. That people appears rather to have been a race of conquering warriors; but the rapidity with which they became blended with the Oecus populations that they found previously established in some parts of the countries they subdued, seems to point to the conclusion that there was no very wide difference between the two. Even in Samnium itself (which probably formed their stronghold, and where they were doubtless more numerous in proportion) we know that they adopted the Ocean language; and that, while the Romans speak of the people and their territory as Sabellian, they designate their speech as Ocean. (Liv. viii. 1, x. 19, 20.) In like manner, we know that the Lucanian invaders carried with them the same language into the wilts of Bruttium; where the double origin of the people was shown at a late period by their continuing to speak both Greek and Ocean. (Fest. p. 55.) The relations between these Sabellian conquerors and the Ocean inhabitants of Central Italy render it, on the whole probable, that the two nations were only branches from one common stock (Niebuhr, vol. i. p. 104), related to one another very much like the Normans, Danes, and Saxons. Of the language of the Sabines themselves we have unfortunately no analogy; but there are some words quoted by ancient authors as being at once Sabine and Ocean; and Varro (himself a native of Rento) bears distinct testimony to a connection between the two. (Varr. L. L. vii. 5, 29, ed. Millier.) On the other hand, there are evidences that the Sabine language had considerable affinity with the Umbrian (Donaldson, _Varren. p. 8); and this was probably the reason why Zenodotus of Troezen ( _op. Dionys. ii. 49) derived the Sabines from an Umbrian stock. But, in fact, the Umbrian and Ocean languages were themselves by no means so distinct as to exclude the supposition that the Sabine dialect may have been intermediate between the two, and have partaken Lugubri and Bruttian characteristics.

4. _UMBRIANS._—The general tradition of antiquity appears to have fixed upon the Umbrians as the most ancient of all the races inhabiting the Italian peninsula. (Plin. iii. 14. s. 19; Flor. i. 17; Dionys. i. 19.) We are expressly told that at the earliest period of which any memory was preserved, they occupied not only the district where we find them in historical times, but the greater part of Etruria. Moreover, according to the authors, they held the fertile plains (subsequently wrested from them by the Etruscans and the Gauls) from the neighbourhood of Ravena to that of Ancona, and apparently a large part of Picenum also. Thus, at this time, the Umbrians extended from the Adriatic to the Tyrrhenian sea, and from the mouths of the Po to those of the Tiber. Of their origin or national affinities we learn but little from ancient authors; a notion appears to have arisen among the Romans at a late period, though not alluded to by any writer of authority, that they were a Celtic or Gaulish race ( _Solin. 2, 2, 11; Serv. ad Aen. xii. 753; Isidor. Orig. i. 2), and this view has been adopted by many modern authors. (Walckenaer, _Geogr. des Gaulois, vol. i. p. 10; Thierry, _Hist. des Gaulois, vol. i.) But, in this instance, we have a much safer guide in the still extant remains of the Umbrian language, preserved to us in the celebrated Tabulæ Engallane ( _lacviva. ); and the researches of modern philologists, who have been of late years especially directed to that interesting monument, have sufficiently proved that it has no such close affinity with the Celtic as to lead us to derive the Umbrians from a Gaulish stock. On the other hand, these inquiries have fully established the existence of a general resemblance between the Umbrian, Ocean, and oldest Latin languages; a resemblance not confined to particular words, but extending to the grammatical forms, and the whole structure of the language. Hence we are fairly warranted in concluding that the Umbrians, Oceanics, and Latins (one important element of the nation at least), as well as the Sabines and their descendants, were only branches of one race, belonging not merely to the same great family of the Indo-European nations, but to the same subdivision of that family. The Umbrian may very probably have been, as is believed by the Romans, the most ancient branch of these kindred tribes; and its language would thus bear much the same relation to Latin and the later Ocean dialects that Muus-Gothic does to the several Teutonic tongues. (Donaldson, _Varren. pp. 78, 104, 105; Schweger, _Romische Geschichte, vol. i. p. 176.)

5. _ETRUSCANS._—While there is good reason to suppose a general and even close affinity between the nations of Central Italy which have just been reviewed, there are equally strong grounds for regarding the Etruscans as a people of widely dif-
fertent race and origin from those by which they were surrounded. This strongly marked distinctness from the other Italian races appears to have been recognised both by Roman and Greek writers. Dionysius even affirms that the Etruscans did not resemble, either in language or manners, any other people whatsoever (Dionys. i. 30); and, however we may question the generality of this assertion, the fact in regard to their language seems to be borne out by the still existing remains of it. The various theories that have been proposed concerning their origin, and the views of modern philologists in regard to their language, are more fully discussed under the article ETRURIA. It may suffice here to state that two points may be considered as fairly established:—

1. That a considerable part of the population of Etruria, and especially of the more southern portions of that country, was (as already mentioned) of Pelasgic extraction, and continued to speak a dialect closely akin to the Greek. 2. That, besides this, there existed in Etruria a people (probably a conquering race) of wholly different origin, who were the proper Etruscans or Tuscanhs, but who called themselves Rasena; and that this race was wholly distinct from the other nations of Central Italy. As to the ethnical affinities of this pure Etruscan race, we are almost as much in the dark as was Diodorus; and recent philological inquiries appear to have established the fact that it may be referred to the same great family of the Indo-European nations, though widely separated from all other branches of that family which we find settled in Italy. There are not wanting, indeed, evidences of many points of contact and similarity, with the Umbrians on one hand and the Pelasgians on the other; but it is probable that these are no more than would naturally result from their close juxtaposition, and that mixture of the different races which had certainly taken place to a large extent before the period from which all our extant monuments are derived. It may, indeed, reasonably be assumed, that the Umbrians, who appear to have been at one time in possession of the greater part, if not the whole, of Etruria, would never be altogether expelled, and that there must always have remained, even after the extinction of N. and E., a subject population of Umbrian race, as there was in the more southern districts of Pelasgian.

The statement of Livy, which represents the Etruscans as of the same race with the Etruscans (v. 33), even if its accuracy be admitted, throws but little light on the national affinities of the latter; for we know, in fact, nothing of the Etruscans, either as to their language or origin.

It only remains to advert briefly to the several branches of the population of Northern Italy. Of these, by far the most numerous and important were the Gauls, who gave to the whole basin of the Po the name of Gallia Cisalpina. They were universally admitted to be of the same race with the Gauls who inhabited the countries beyond the Alps, and their migration and settlement in Italy were referred by the Roman historians to a comparatively recent period. The others of these are fully given under Gallia Cisalpina. Adjoining the Gauls on the SW., both slopes of the Apennines, as well as the Maritime Alps and a part of the plain of the Po, were occupied by the Ligurians, a people as to whose national affinities we are almost wholly in the dark. [Liguria.] It is certain, however, from the positive testimony of ancient writers, that they were a distinct race from the Gauls (Strab. ii. p. 128), and there seems no doubt that they were established in Northern Italy long before the Gallic invasion. Nor were they by any means confined to the part of Italy which ultimately retained their name. At a very early period we learn that they occupied the whole coast of the Mediterranean, from the foot of the Pyrenees to the frontiers of Etruria, and the Greek writers uniformly speak of the people who occupied the neighbourhood of Massilia, or the modern Provence, as Ligurians, and not Gauls. (Strab. iv. p. 203.) At the same period, it is probable that they were more widely spread also in the basin of the Po than we find them when they appear in Roman history. At that time the Taurini, at the foot of the Cottian Alps, were the most northern of the Ligurian tribes; while S. of the Padus they extended probably as far as the Tiber. Along the shores of the Mediterranean they possessed in the time of Polibius the whole country as far as Aisa and the mouths of the Arno, while they held the fastnesses of the Apenines as far to the E. as the frontiers of the Arretine territory. (Pol. ii. 16.) It was not till a later period that the Maecenas became the established boundary between the Roman province of Liguria and that of Etruria.

Bordering on the Gauls on the E., and separated from them by the river Atheos (Adeige), were the Veneti, a people of whom we are distinctly told that their language was different from that of the Gauls (Pol. ii. 17), but of whom, as of the Ligurians, we know nothing except that they were not, than what they were. The most probable hypothesis is, that they were an Ilyrian race (Zeuxis, Die Deutschen, p. 251), and there is good reason for referring their neighbours the Istrians to the same stock. On the other hand, the Carni, a mountain tribe in the extreme NE. of Italy, who immediately bordered both on the Venetians and Istrians, were more probably a Celtic race (Carni).

Another name which we meet with in this part of Italy is that of the Euganei, a people who had dwindled into insignificance in historical times, but whom Livy describes as once great and powerful, and occupying the whole tract between the Po and the Alps (v. 33). Of their national affinities we know nothing. It is possible that where Livy speaks of other Alpine races besides the Rhodians, as being of common origin with the Etruscan (v. 33), that he had the Euganeans in view; but this is mere conjecture. He certainly seems to have regarded them as distinct both from the Venetians and Gauls, and as a more ancient people in Italy than either of those races.

V. HISTORY.

The history of ancient Italy is for the most part inseparably connected with that of Rome, and cannot be considered apart from it. It is impossible here to attempt to give even an outline of that history; but it may be useful to the student to present at one view a brief sketch of the progress of the Roman arms, and the period at which the several nations of Italy successively fell under their yoke, as well as the measures by which they were gradually consolidated into one homogeneous whole, in the form that Italy assumed under the rule of Augustus. The few facts known to us concerning the history of the several nations, before their conquest by the Romans, will be found in their respective articles; that of the Greek colonies in Southern Italy, and
ITALIA.

1. Conquest of Italy by the Romans, n. c. 509—
293.—The earliest wars of the Romans with their immediate neighbours scarcely come here under our consideration. Placed on the very frontier of three powerful nations, the infant city was from the very first engaged in perpetual hostilities with the Latins, the Sabines, and the Etruscans. And, however little dependence can be placed upon the details of these wars, as related to us, there seems no doubt that, even under the kings, Rome had risen to a superiority over most of her neighbours, and had extended her actual dominion over a considerable part of Latium.

The earliest period of the Republic, on the other hand (from the expulsion of the Tarquins to the Gaulish invasion, b. c. 509—390), when stripped of the romantic garb in which it has been cloathed by Roman writers, presents the spectacle of a difficult and often dubious struggle, with the Etruscans on the one hand, and the Volscians on the other.

The capture of Veii, in b. c. 396, and the permanent annexation of its territory to that of Rome, was the first decisive advantage acquired by the rising republic, and may be looked upon as the first step to its domination of Italy. Even the great calamity sustained by the Romans, when their city was taken and in part destroyed by the Gauls, b. c. 390, was as far from permanently checking their progress, as it would rather seem to have been the means of opening out to them a career of conquest. It is probable that that event, or rather the series of predatory invasions by the Gauls of which it formed a part, gave a serious shock to the nations of Central Italy, and produced among them much disorganisation and consequent weakness. The attention of the Etruscans was naturally drawn off towards the N., and the Romans were able to establish colonies at Sutrium and Nepete; while the power of the Volscians appears to have been greatly enfeebled, and the series of triumphs over them recorded in the Fasti now marks real progress. That of M. Valerius Corvinus, after the destruction of Sutrium in b. c. 346 (Liv. vii. 27; Fast. Capit.), seems to indicate the total subjugation of the Volscian people, who never again appear in history as an independent power. Shortly before this, in b. c. 345, the Romans for the first time came into collision with the Samnites. That people were then undoubtedly at the height of their power; they and their kindred Sabellian tribes had recently extended their conquests over almost the whole southern portion of the peninsula (see above, p. 561); and it cannot be doubted, that when the Romans and Samnites first found themselves opposed in arms, the contest between them was for the supremacy of Italy. Meanwhile, a still more formidable danger, though of much braver duration, threatened the rising power of Rome. The revolt of the Latins, who had hitherto been among the main instruments and supporters of that power, threatened to shake it to its foundation; and the victory of the Romans at the foot of Mt. Vesuvius, under T. Manlius and P. Decius (b. c. 340), was perhaps the most important in their whole history. Three years sufficed to terminate this formidable war (b. c. 340—338). The Latins were now reduced from the condition of dependent allies to that of subjects, whether under the name of Roman citizens or on less favourable terms [Latinum]; and the greater part of Campania was placed in the same condition.

At this time, therefore, only seventy years before the First Punic War, the Roman dominion still comprised only Latium, in the more limited sense of the name (for the Aequians and Hernici were still independent), together with the southern part of Etruria, the territory of the Volscians, and a part of Campania. During the next fifty years, which was the period of the great extension of the Roman arms and influence, the contest between Rome and Samnium was the main point of interest; but almost all the surrounding nations of Italy were gradually drawn in to take part in the struggle. Thus, in the Second Samnite War (n. c. 326—304), the names of the Lucanians and Apulians — nations with which (as Livy observes, viii. 25) the Roman people had, up to that period, had nothing to do — appear as taking an active part in the contest. In another part of Italy, the Marsi, Vestini, and Peligni, all of them, as we have seen, probably kindred races with the Samnites, took up arms at one time or another in support of that people, and were thus for the first time brought into collision with Rome. It was not till n. c. 311 that the Etruscans on their side joined in the contest; but the Etruscan War at once assumed a character and dimensions scarcely less formidable than that with the Samnites. It was now that the Romans for the first time carried their arms beyond the Ciminius Hills; and the northern cities of Etruria, Perusia, Cortona, and Arezzo, now first appear as taking part in the war. [ETRURIA.] Before the close of the contest, the Umbrians also took up arms for the first time against the Romans. The peace which put an end to the Second Samnite War (n. c. 304) added nothing to the territorial extent of the Roman power; but nearly contemporary with it, was the revolt of the Hernicans, which ended in the complete subjugation of that people (b. c. 306); and a few years later the Aequians, who followed their example, shared the same fate, n. c. 302. About the same time (n. c. 304) a treaty was concluded with the Marsi, Marrucini, Peligni, and Frentani, by which those nations appear to have passed into the condition of dependent allies of Rome, in which we always subsequently find them. A similar treaty was granted to the Vestini in n. c. 301.

In b. c. 298, the contest between Rome and Samnium was renewed, but in this Third Samnite War the people of that name was only one member of a powerful confederacy, consisting of the Samnites, Etruscans, Umbrians, and Gauls; nevertheless, their united forces were defeated by the Romans, who, after several successful campaigns, compelled both Etruscans and Samnites to sue for peace (n. c. 290). The same year in which this was concluded witnessed also the subjugation of the Sabines, who had been so long the faithful allies of Rome, and now, for the first time after a long interval, in arms; they were admitted to the Roman franchise. (Liv. Epit. xi.; Vel. Pat. i. 14.) The short interval which elapsed before hostilities were generally renewed, afforded an opportunity for the subjugation of the Gallic Senones, whose territory was wasted with fire and sword by the consul Dolabella, in 283; and the Roman colony of Sena (Sena Gallica) established at the same time. Rome was now the permanent antagonist. Already in b. c. 222, the war was renewed both with the Etruscans and the Samnites; but this Fourth Samnite War, as it is often called, was soon merged in one of a more extensive character. The Samnites were at first assisted by the Lucanians
and Bruttians, the latter of whom now occur for the first time in Roman history (Liv. Epit. sii.); but circumstances soon arose which led the Romans to declare war against the Tarentines; and these called in the assistance of Pyrrhus, King of Epirus. The war with that monarch (the first in which the Romans were engaged) opened, 272, and was destined to be a decisive event in the fate of the Italian peninsula. It was, indeed, the last struggle of the nations of Southern Italy against the power of Rome: on the side of Pyrrhus were ranged, besides the Tarentines and their mercenaries, the Samnites, Lucanians, and Bruttians; while the Latins, Campanians, Sabines, Umbrians, Volscians, Marrucini, Peligni, and Frentani, are enumerated among the troops which swelled the ranks of the Romans, (Thuryrs. xx. Fr. Didot.) Hence, the final defeat of Pyrrhus near Beneventum (n. c. 275) was speedily followed by the complete subjugation of Italy. Tarentum fell into the hands of the Romans in n. c. 272, and, in the same year, the consuls Sp. Carvilius and Papirius Cursor celebrated the last of the many Roman triumphs over the Samnites, as well as the Lucanians and Bruttians. Few particulars have been transmitted to us of the petty wars which followed, and which raged over the peninsula. The Picentes, who were throughout the Samnite wars on friendly terms with Rome, now appear for the first time as enemies; but they were defeated and reduced to submission in n. c. 268. The subjection of the Sulleniones followed, n. c. 266, and the same year records the conquest of the Sannites, probably including the other mountain tribes of the Umbrians. A revolt of the Volscians, in the following year (n. c. 265), apparently arising out of civil discontents, gave occasion to the last of these petty wars, and earned for that people the credit of being the last of the Italians that submitted to the Roman power. (Florus, i. 21.)

It was not till long after that the nations of Northern Italy shared the same fate. Cisalpine Gaul and Liguria were still regarded as foreign provinces; and, with the exception of the Sabines, whose rights were considered as a legacy from the Gauls, the Gaulish nations had been assailed in their own abodes. In n. c. 232 the distribution of the "Gallicus ater" (the territory of the Sannites) became the occasion of a great and formidable war, which, however, ultimately ended in the victory of the Romans, who immediately proceeded to plant the two colonies of Placentia and Cremona in the territory of the Gauls, n. c. 218. The history of this war, as well as of those which followed, is fully related under Gallia Cisalpina. It may here suffice to mention, that the final conquest of the Boii, in n. c. 191, completed the subjection of Gaul, south of the Padus; and that of the Transpadane Gauls appears to have been accomplished soon after, though there is some uncertainty as to the exact period. The Venetiens had generally been the allies of the Romans during these contests with the Gauls, and appear to have passed gradually and quietly from the condition of independent allies to that of dependents, and ultimately of subjects. The Istrians, on the contrary, were reduced by force of arms, and submitted in n. c. 177. The last people of Italy that fell under the yoke of Rome were the Ligurians. This hardy race of mountaineers was not subdued till after a long series of campaigns; and, while the Roman arms were overflowing the Macedonian and Syrian empires in the East, they were still constantly engaged in an inglorious, but arduous, struggle with the Ligurians, on their own immediate frontiers. Strabo observes, that it cost them eighty years of war to secure the coast of Liguria for the space of 12 stadii in width (iv. p. 203); a statement nearly correct, for the first triumph over the Ligurians was celebrated in n. c. 236, and the last in n. c. 158. Even after this last period it appears to have been a long time before the people were finally reduced to a state of tranquility, and lapsed into the condition of ordinary Roman subjects.

2. Italy under the Romans.—It would be a great mistake to suppose that the several nations of Italy, from the periods at which they successively yielded to the Roman arms and acknowledged the supremacy of the Republic, became her subjects, in the strict sense of the word, or were reduced under any uniform system of administration. The relations of every people, and often even of every city, with the supreme head, were regulated by special agreements or decrees, arising out of the circumstances of their conquest or submission. How various and different these relations were, is sufficiently seen by the instances of the Latins, the Campanians, and the Herniaces, as given in detail by Livy (vii. 11—14, ix. 43). From the loss of the second decade of that author, we are unfortunately deprived of all similar details in regard to the other nations of Italy; and hence our information as to the relations established between them and Rome in the third century n. c., and which continued, with little alteration, till the outbreak of the Social War, n. c. 90, is unfortunately very imperfect. We may, however, clearly distinguish two principal classes in which the Italians were then divided; those who possessed the rights of Roman citizens, and were thus incorporated into the Roman state, and those who still retained their separate national existence as dependent allies, rather than subjects properly so called. The first class comprised all those communities which had received, whether as nations or separate cities, the gift of the Roman franchise; a right sometimes conferred as a mark of distinction, and sometimes imposed as a penalty, with a view to break up more effectually the national spirit and organisation, and bring the people into closer dependence upon the supreme authority. In these cases the citizenship was conferred without the right of suffrage; but in most, and perhaps in all such instances, the latter privilege was ultimately conceded. Thus we find the Sabines, who in n. c. 290 obtained only the "civitas sine suffragio," admitted in n. c. 268 to the full enjoyment of the franchise (vii. 14); the same was the case also, though at a much longer interval, with Forumiae, Fundi, and Arpinum, which did not receive the right of suffrage till n. c. 188 (Liv. viii. 41, x. 1, xxxviii. 36), though they had borne the title of Roman citizens for more than a century. To the same class belonged those of the Roman colonies which were called "coloniae civium Romanorum," and which, though less numerous and powerful than the Latin colonies, were scattered through all parts of Italy, and included some wealthy and important towns. (A list of them is given by Mavrig, de Colonis, pp. 295—303, and by Marquart, Handb. der Römischen Alterthümer, vol. iii. pt. i. p. 18.)

To the second class, the "Socii" or "Civitates Foederatae," which, down to the period of the Social War, included by far the largest part of the Italian
people, belonged all those nations that had submitted to Rome upon any other terms than those of citizenship; and the treaties (foedera), which determined their relations to the central power, included almost every variety, from a condition of nominal equality and independence (aequum foedus), to one of the most complete subjection. Thus we find Heraclea in Lucania, Neapolis in Campania, and the Camerates in Umbria, noticed as possessing particularly favourable treaties (Cic. pro Balb. 8, 20, 22); and even some of the cities of Latium itself, which had not received the Roman civitas, continued to maintain this nominal independence long after they had become virtually subject to the power of Rome. Thus, even in the days of Polybius, a Roman citizen might retire into exile at Tibur or Praeneste (Pol. vi. 14; Liv. xiii. 2), and the poor and decayed town of Laurentum went through the form of annually renewing its treaty with Rome down to the close of the Republic. (Liv. viii. 11.) Nor was this independence merely nominal: though politically dependent upon Rome, and compelled to follow her lead in their external relations, and to furnish their contingent of troops for the wars, of which the dominant republic alone reaped the benefit, many of the cities of Italy continued to enjoy the absolute control of their own affairs and internal regulations; the troops which they were bound by their treaty to furnish were not exactly those of the legions, but fought under their own standards as auxiliaries; they retained their own laws as well as courts of judicature, and, even when the Lex Julia conferred upon all the Italian allies the privileges of the Roman citizens, it was necessary that each city should adopt it by an act of its own. (Cic. pro Balb. 8.) Nearly in the same position with the dependent allies, however different in their origin, were the so-called "Coloniae Latine," that is, Roman colonies which did not enjoy the rights of Roman citizenship, but stood in the same relation to the Roman state that the cities of the Latin League had formerly done. The name was, doubtless, derived from a period when these colonies were actually sent out in common by the Romans and Latins; but settlements on similar terms continued to be founded by the Romans alone, long after the extinction of the Latin League; and, before the Social War, the Latin colonies included many of the most flourishing and important towns of Italy. (For a list of them, with the dates of their foundation, see Madvig, de Colonii, l. e.; Mommsen, Römische Mun.-Wean, pp. 230—234; and Marquardt, l. c. p. 33.) These colonies are justly regarded by Livy as one of the main supports of the Republic during the Second Punic War (Liv. xxvii. 9, 10), and, doubtless, proved one of the most eventual means of consolidating the Roman dominion in Italy. After the dissolution of the Latin League, v. c. 338, these Latin colonies (with the few cities of Latium that, like Tibur and Praeneste, still retained their separate organisation) formed the "moneta Latum," or body of the Latins. The close connection of these with the allies explains the frequent recurrence of the phrase "soei et moneta Latinum" throughout the later books of Livy, and in other authors in reference to the same period.

A great and general change in the relations previously existing between the different states and Rome was introduced by the Social War (v. c. 90—89), and the settlement which took place in consequence of it. Great were the dangers with which Rome was threatened by the formidable coalition of those who had long been her bravest defenders, they would have been still more alarming had the whole Italian people taken part in it. But the allies who then rose in arms against Rome were almost exclusively the Sabellians and their kindred races. The Etruscans and Umbrians stood aloof, while the Sabines, Latins, Volscians, and other tribes who had already received the Roman franchise, supported the Republic, and furnished the materials of her armies. But the senate hastened to secure those who were wavering, as well as to disarm a portion at least of the openly dissatisfied, by the gift of the Roman franchise, including the full privileges of citizens: and this was subsequently extended to every one of the allies in succession as they submitted. There is some uncertainty as to the precise steps by which this was effected, but the Lex Julia, passed in the year 80 B.C., appears to have conferred the franchise upon the Latins (the "moneta Latinum," as above defined) and all the allies who were willing to accept the boon. The Lex Flavia Papias, passed the following year, v. c. 89, completed the arrangement thus begun. (Cic. pro Balb. 8, pro Arch. 4; A. Gall. iv. 4; Appian, B. C. i. 49; Veil. Pat. ii. 16.)

By the change thus effected the distinction between the Latins and the allies, as well as between those two classes and the Roman citizens, was entirely done away with; and the Latin colonies lapsed into the condition of ordinary municipia. At the same time that all the free inhabitants of Italy, as the term was then understood (i.e. Italy S. of the Maera and Rubicon), thus received the full rights of Roman citizens, the same boon was granted to the inhabitants of Gallia Cisalpina, while the Transpadani appear to have been at the same time raised to the condition and privileges of Latins, that is to say, were placed on the same footing as if all their towns had been Latin colonies. (Ascon. to Punicus, p. 3, ed. Orelli; Savigny, Verniheh Schriften, vol. iii. pp. 290—308; Marquardt, Handb. vol. iii. pt. i. p. 48.) This peculiar arrangement, by which the Jus Latii was revived at the very time that it became naturally extinct in the rest of Italy, is more fully explained under Gallia Cisalpina. In v. c. 49, after the outbreak of the Civil War, Caesar bestowed the full franchise upon the Trans-padani also (Dion Cass. xili. 56); and from this time all the free inhabitants of Italy were united under one common class as citizens of Rome.

The Italians thus admitted to the franchise were all ultimately enrolled in the thirty-five Roman tribes. The principle on which this was done we know not; but we learn that each municipium, and sometimes even a larger district, was assigned to a particular tribe: so that every citizen of Arpinum, for instance, would belong to the Cornelian tribe, of Rescuintum to the Stellatine, of Brixia to the Fa-elian, of Trinum to the Papian, and so on.* But in so doing, all regard to that geographical distribution of the tribes which was undoubtedly kept in view in their first institution was necessarily lost; and we have not sufficient materials for attempting to determine how the distribution was made. A knowledge of it must, however, have been of essential importance so long as the Republic continued; and

* This did not, however, interfere with the personal right, where this previously existed, so that a Roman citizen already belonging to another tribe, who settled himself in any municipium, retained his own tribe.
ITALIA.

In this sense we find Cicero alluding to "Italia tributam descripturn" as a matter of interest to the candidates for public offices. (Cic. de Petit. Cos. 8.)

3. Italy under the Roman Empire.—No material change was introduced into the political condition of Italy by the establishment of the imperial authority at Rome; the constitution and regulations that existed before the end of the Republic continued, with only a few modifications, in full force. The most important of these was the system of municipal organisation, which pervaded every part of the country, and which was directly derived from the days of Italian freedom, when every town had really possessed an independent government. Italy, as it existed under the Romans, may be still regarded as an aggregate of individual communities, though these had lost all pretensions to national independence, and retained only their separate municipal existence. Every municipium had its own internal organisation, presenting very nearly a miniature copy of that of the Roman Republic. It had its senate or council, the members of which were called Decuriones, and the council itself Ordo Decurionum, or often simply Ordo; its popular assemblies, which, however, soon fell into disuse under the Empire; and its local magistrates, of whom the principal were the Duumvirs, or sometimes Quaestori, answering to the Roman consuls and praetors; the Quiroqueumales, with functions analogous to those of the censors; the Aediles and Quaestors, whose duties nearly corresponded with those of the same magistrates at Rome.

These different magistrates were annually elected, at first by the popular assembly, subsequently by the Senate or Decurions; the members of the latter body held their offices for life. Hence this municipium was under the same government confined to the town in which it was resident; every such Municipium possessed a territory or Ager, of which it was as it were the capital, and over which it exercised the same municipal jurisdiction as within its own walls. This district of course varied much in extent, but in many instances comprised a very considerable territory, including many smaller towns and villages, all of which were dependent, for municipal purposes, upon the central and chief town. Thus we are told by Pliny, that many of the tribes that inhabited the Alpine valleys bordering on the plains of Gallia Cisalpina, were by the Lex Pompeia assigned to certain neighbouring municipia (Lex Pompeia attributi municipia, Plin. iii. 20. s. 24), that is to say, they were included in their territory, and subjected to their jurisdiction. Again, we know that the territories of Cremnus and Mantua adjoined one another, though the cities were at a considerable distance.

In like manner, the territory of Beneventum comprised a large part of the land of the Hirpini. It is this point which gives a great importance to the distinction between municipal towns and those which were not so; that the former were not only themselves more important places, but were, in fact, the capitals of districts, into which the whole country was divided. The villages and minor towns included within these districts were distinguished by the names of Turra, culciabula, vici, castella, and were dependent upon the chief town, though sometimes possessing a subordinate and imperfect local organisation of their own. In some cases it even hapened that, from local circumstances, one of these subordinate places would rise to a condition of wealth and prosperity far surpassing those of the municipium, on which it nevertheless continued dependent. Thus, the opulent watering-place of Bala was always remained, in a municipal sense, a mere dependency of Cumae.

The distinction between colonies and municipia, which had been of great importance under the Roman republic, lost its real significance, when the citizens of both alike possessed the Roman franchise. But the title of a colony was still retained by some towns which had received fresh colonies towards the close of the Republic under Caesar or the Triumvirates, as well as under the Empire. It appears to have been regarded as an honorary distinction, and as giving a special claim upon the favour and protection of the founder and his descendants; though it conferred no real political superiority. (Cell. xvi. 13.) On the other hand, the Praefectures—a name also derived from the early republic period—were distinguished from the colonies and municipia by the circumstance that the judicial functions were there exercised by a Praefectus, an officer sent direct from Rome, instead of by the Duumvirs or Quaestori (whose legal title was Iovi or Huiiovi Juri dicingo) elected by the municipality. But as these distinctions were comparatively unimportant, the name of "municipia" is not unfrequently applied in a generic sense, so as to include all towns which had a local self-government. "Oppida" is sometimes employed with the same meaning. Pliny, however, generally uses "oppida" as equivalent to "municipia," but exclusive of colonies: thus, in describing the eighth region, he says, "Coloniae Bononia, Brixantium, Mutina, etc. . . . Oppida Caesarea, Catena, Forum Çolui, etc." (iii. 13. s. 20, et passim.) It is important to observe that, in all such passages, the list of "oppida" is certainly meant to include only municipal towns; and the lists thus given by Pliny, though disfigured by corruption and carelessness, were probably in the first instance derived from official sources. Hence the marked agreement which may be traced between them and the lists given in the Liber Coloniarum, which, notwithstanding the corruptions it has suffered, is unquestionably based upon good materials. (Concerning the municipal institutions of Italy, see Savigny, Verbisches Schrifttum, vol. iii. pp. 279—412, and Gesch. des Röm. Rechts, vol. i.; Marquart, Handb. d. Röm. Alterthümer, vol. iii. 34 i. pp. 44—55; Hoeck, Röm. Geschichte, book 5, chap. 3; and the article GALLIA CISALPINA.)

The municipal organisation of Italy, and the territorial distribution connected with it, lasted throughout the Roman empire, though there was always a strong tendency on the part of the central authority and its officers to enroach upon the municipal powers; and in one important point, that of their legal jurisdiction, those powers were materially circumscribed. But the municipal constitution itself naturally acquired increased importance as the central power became feeble and disorganised; it survived the fall of the Western Empire, and continued to subsist under the Gothic and Lombard conquerors, until the cities of Italy gradually assumed a position of independence, and the municipal constitutions which had existed under the Roman empire, became the foundation of the free republics of the middle ages. (Savigny, Gesch. der Königischen Rechts im Mittel Alter, vol. i.)

The ecclesiastical arrangements introduced after the establishment of Christianity in the Roman empire, appear to have been, in close connection with the municipal limits. Almost every town which was then a flourishing municipium became the see of
bishop, and the limits of the diocese in general coincided with those of the municipal territory.* But in the period of decay and confusion that followed, the episcopal see often remained after the city had been ruined or fallen into complete decay; hence the ecclesiastical records of the early ages of Christianity are often of material assistance in enabling us to trace the existence of ancient cities, and identify ancient localities.

4. Political and Administrative Division under the Roman Empire.— It is not till the reign of Augustus that any division of Italy for administrative purposes occurs, and the reason is obvious. So long as the different nations of Italy preserved the semblance of independence, which they maintained till the period of the Social War, no uniform system of administration was possible. Even after that period, when they were all merged in the condition of Roman citizens, the municipal institutions, which were still in full force, appear to have been regarded as sufficient for all purposes of internal management; and the general objects of the State were confined to the ordinary Roman magistracies, or to extraordinary officers appointed for particular purposes.

The first division of Italy into eleven regions by Augustus, appears to have been designed in the first instance merely to facilitate the arrangements of the census; but, as the taking of this was closely coupled with the levying of taxes, the same divisions were soon adopted for financial and other administrative purposes, and continued to be the basis of all subsequent arrangements. The divisions established by Augustus, and which have fortunately been preserved to us by Pliny (the only author who mentions their institution), were as follows:—

I. The First Region comprised Latium (in the more extended sense of that name, including the land of the Hernicans and Velzus), together with Campania, and the district of the Picentini. It thus extended from the mouth of the Tiber to that of the Silarus; and the Anio formed its boundary on the N.

II. The Second Region, which adjourned the preceding on the Se., included Apulia, Calabria, and the land of the Hirpini, which was thus separated from the first region.

III. The Third Region contained Lucania and Bœotium; it was bounded by the Silarus on the NW., and by the Brahmun on the NE.

IV. The Fourth Region contained all Samnium, except the Hirpini, together with the Frentani, Marrucini, Marsi, Peligni, Aquiutuli, Vestini, and Sabini. It thus extended from the Anio to the frontier of Picentini, and from the boundary of Umbria on the N. to Apulia on the S. It was separated from the latter district by the river Tiberius, and from Picentini by the Aternus.

V. The Fifth Region was composed solely of the ancient Picentini (including under that name the territory of Hadria and of the Prætutii), and extended along the Adriatic from the mouth of the Aternus to that of the Aesus.

* A chance at the list of bishopries existing in any of the provinces of Central Italy (Etruria, for instance, or Umbria), as compared with the names of the towns enumerated by Pliny in the same district, will at once show the connection between the two. (Bingham's Ecclesiastical Antiquities, book ix. chap. v.)

VI. The Sixth Region contained Umbria, together with the land N. of the Apennines, once occupied by the Semnion Gauls, and which extended along the coast of the Adriatic from the Aesus to the Ariminus. On the W. it was separated from Etruria by the Tiber, along the left bank of which it extended as far as Orculum.

VII. The Seventh Region consisted of the ancient Etruria, and preserved the ancient limits of that country viz. the Tiber on the E., the Apennines on the N., and the Tyrrhenian sea on the W., from the mouth of the Tiber to that of the Maera.

VIII. The Eighth Region, or Gallia Cisalpina, extended from the frontiers of Liguria near Placentia, to Ariminum on the Adriatic, and was bounded by the Apennines on the S., and by the Padus on the N.

IX. The Ninth Region comprised Liguria, extending along the sea-coast from the Maera to the Varus, and inland as far as the Padus, which formed its northern boundary from the confluence of the Tiber to its sources in Mt. Vesuvius.

X. The Tenth Region was composed of Venetia, including the land of the Carni, with the addition of Istria, and a part of Gallia Cisalpina, previously occupied by the Cenomani, extending as far W. as the Aquila.

XI. The Eleventh Region comprised the remainder of Gallia Transalpina, or the whole tract between the Alps and the Padus, from the sources of the latter river to its confluence with the Adda.

It is probable, both from the silence of Pliny, and from the limited scope with which these divisions were first instituted, that the regions had originally no distinctive names applied to them; but these would be gradually adopted, as the division acquired increased political importance. No difficulty could arise, where the limits of the Region coincided (or nearly so) with those of a previously existing people, as in the cases of Etruria, Liguria, Picenum, &c. In other instances the name of a part was given to the whole; thus, the first region came to be called Regio Campanie; and hence, in the Liber Colonarum, the " Civitates Campaniae" include all Latium also. [CAMPANIA.] The name of Regio Sallini or Samnium was in like manner given to the second region, though perhaps not till after the northern part of it had been separated from the rest under the name of Valeria.

The division introduced by Augustus continued with little alteration till the time of Constantine. The changes introduced by Hadrian and M. Aurelius regarded only the administration of justice in Italy generally (Spartian, Hadr. 22; Capit. M. Aul. 11); but in this, as well as in various other regulations, there was a marked approach to the assimilating the government of Italy to that of the provinces; and the term " Consularis," applied to the judicial officers appointed by Hadrian merely to denote their dignity, soon came to be used as an official designation for the governor of a district, as we find it in the Notitia. But the distinction between Italy and the provinces is still strongly marked by Ulpian, and it was not till the fourth century that the term " Provincia" began to be applied to the regions or districts of Italy (Minutius, ad Lib. Col. pp. 193, 194.)

The changes introduced into the divisions of Augustus, either before the time of Constantine or under that emperor, were the following:— 1. The fourth region was divided into two, the southern
portion containing Samnium (to which the land of the Hirpini, included by Augustus in the second region, was reunited), together with the Frentani and Fellegi; while the land of the Sabines, the Marsi, and the Vestini, constituted a separate district, which bore the name of Valeria, from the great highway, the Via Valeria, by which it was traversed. 2. The portion of the sixth region which lay between the Apennines and the Adriatic (originally inhabited by the Gauls) was separated from Umbria properly so called, and distinguished by the name of Picenum Annonarium, while the true Picenum was called, for the sake of distinction, Picenum Suburbanicum.

3. The eighth region, or Gallia Cispadana, was divided into two, of which the westernmost portion assumed the name of Aemilia, from the highroad of that name; an appellation which seems to have come into common use as early as the time of Martial (iii. 4. vi. 83); while the eastern portion, much the smaller of the two, received that of Flaminia, though the highroad of that name only extended to Ariminum, on the very frontier of this district. This new division seems to have been generally united with Picenum Annonarium, though retaining its separate name. 4. The Alpes Cottiae, a mountain district which in the time of Augustus had still retained its nominal independence, though incorporated with the Roman empire by Nero, seems to have continued to form a separate district till the time of Constantine, who united it with the ninth region, the whole of which now came to be known as the Alpes Cottiae; while, still more strangely, the name of Liguria was transferred from this region, to which it properly belonged, to the eleventh region, or Gallia Transpadana; so that late writers speak of Mediolanum as the capital of Liguria. [Liguria.] 5. The only other change that requires notice was the division of Etruria into two portions, called Tuscia Aemiliaria and Tuscia Urbicarum. This, as well as the similar distinction between the two Picenums, had its origin in the administrative arrangements introduced by Maximian, who, when he established the imperial residence at Milan, imposed upon the northern and adjoining provinces the task of finding supplies (annonae) for the imperial court and followers, while the other portions of Italy were charged with similar burdens for the supply of the army (Monmsen, ad Lib. Col. pp. 195—200.) Hence Trebellius Pollio, writing in the reign of Diocletian, after enumerating the districts of Southern and Central Italy, comprises all that lay N. of Flaminia and Etruria under the general appellation of "omnis annis municipiorum.

(Tres Poll. Tryb. Tyr. 24.)

In addition to these changes, Constantine, in the general reorganisation of his empire, united to Italy the two provinces of Illyricum (including Vindelicia), as well as the three great islands of Sicily, Sardinia, and Corsica. These last, together with all the central and southern provinces of Italy, were placed under the jurisdiction of the Vicarius Urbis Romae, while all the northern provinces were subject to the Vicarius Italicae. The minor arrangements seem to have frequently varied in detail, but the seventeen provinces into which the "Diocesis Italica" is now divided, are thus enumerated in the Notitia Dignitatum (ii. pp. 9, 10):

1. Venetia.
2. Aemilia.
3. Liguria (i.e. Gallia Transpadana).
4. Flaminia et Picenum Annonarium.

5. Tuscia et Umbria.
6. Picenum Suburbanicum.
7. Campania.
8. Sicilia.
10. Lucania et Bruttii.
11. Alpes Cottiae (Liguria).
12. Raetia Prima.
13. Raetia Secunda.
15. Valeria.
17. Corsica.

This list substantially agrees with that in the Libellus Provinciarum (published by Gronovius, Lgd. Bat. 1759), a document of the time of Theodosius I, as well as with that given by Paulus Diaconus in his geographical description of Italy (Hist. Lang. ii. 14—22), though he has added an eighteenth province, to which he gives the name of "Alpes Apennini," which can be no other than the northern part of Etruria, or Tuscia Annonaria. Of the seventeen provinces enumerated in the Notitia eight were placed under governors who bore the title of Consulares, seven under Praefides, and the two southernmost under Correctores, a title which appears to have been at one time common to them all. (For further details on the administrative divisions of Italy during the latter period of the Roman empire, see the Notitia Dignitatum in Partibus Occidentis, Bonn, 1840, with Böcking's valuable commentary; Monmsen, über die Lib. Colon. in the Schriften der Römischen Feldmesser, vol. ii. Berlin, 1852; Marquardt, Handb. der Röm. Alterthümer, vol. iii. pt. i. pp. 55—71.) The divisions thus established before the close of the Western Empire, were continued after its fall under the Gothic monarchy, and we find them frequently alluded to as subsisting under their old names in Cassiodorus and Procopius. It was not till the establishment of the Lombards in Italy that this division gave place to one wholly different, which became the foundation of that which subsisted in the middle ages. The Lombards divided the part of Italy in which they established their power, including all the N., or what is now called Lombardy, together with a part of Tuscany and Umbria, into a number of military fiefs or governments, under the name of Duchies (Ducatus): the Duchy of Friuli, Duchy of Verona, Duchy of Parma, &c. Besides those immediately subject to the Lombard kings, two of these were established further to the S.,—the Duchy of Spoleto and Duchy of Benevento, which enjoyed a semi-independent position: and the list of these was extended by successive conquests from the Greek Empire, till it comprised almost the whole of the S. of Italy, or the modern kingdom of Naples. The Greek emperors, however, still retained possession of the Exarchate of Ravenna, together with the district called the Pentapolis, comprising a considerable part of Picenum, and what was called the Duchy of Rome, including a part of Etruria and Umbria, as well as Latium. In the S. also they always kept possession of some of the maritime places of Campania, Naples, Gaeta, and Salerno, as well as of a part of Calabria, and the cities of Otranto and Gallipoli. After the fall of the Lombard kingdom, in A.D. 774, though they had now lost their possessions in the N., the Exarchate and the Pentapolis, the Byzantine emperors...
for a long time extended their dominion as a small and independent part of the S., and wrested from the dominion of Benevento the districts to which they gave the names of the Cappadocia and the Basilicata (a part of the ancient Apulia and Lucania), and which they retained possession till the 11th century. It was then that a new enemy first appeared on the scene, and the Romans, under Robert Guiscard, completed the final expulsion of the Greek emperors from Italy. The capture of Bari in 1071, and of Salerno in 1077, destroyed the last vestiges of the dominion that had been founded by the generals of Justinian.

(D'Auriol, 'Italie formée en Europe après la Chute de l'Empire Romain, 4t. Paris, 1771.)

VI. POPULATION OF ITALY UNDER THE ROMANS.

The statements transmitted to us from antiquity concerning the amount of the population in different cities and countries are for the most part of so vague a character and such uncertain authority as to be little worthy of consideration; but we have two facts recorded in connection with that of Italy, which may lead us to form at least an approximate estimate of its numbers. The first of these data is the statement given by Polybius, as well as by several Roman writers on the authority of Fabius, and which there is every reason to believe based on authentic documents, of the total amount of the forces which the Romans and their allies were able to oppose to the threatened invasion of the Gauls in B.c. 225. According to the detailed enumeration given by Polybius, the total number of men capable of bearing arms which appeared on the registers of the Romans and their allies, amounted to above 700,000 foot and 70,000 horsemen. Pliny gives them at 700,000 foot and 50,000 horse; while Entropius and Orosius state the whole amount in round numbers at 800,000. (Pol. ii. 24; Plin. iii. 20 s. 24; Entrop. iii. 5; Oros. iv. 13.)

It is evident, from the precise statements of Polybius, that this was the total amount of the free population of military age (τοῦ σεβαμέαν παλαιῶν των δυνάμεων ἴλα Βασαϊάων), and not that which could be actually brought into the field. If we estimate the proportion of these to the total free population as 1 to 4, which appears to have been the ratio currently adopted in ancient times, we should obtain a total of 3,200,000 for the free population of the Italian peninsula, exclusive of the greater part of Cisalpine Gaul, and the whole of Liguria. If we do not include the whole of the Apennines, or more commonly received in modern times, as is so little, we should give a total of only 4,000,000, an amount by no means very large, as the population of the same part of Italy at the present day considerably exceeds 9,000,000. (Serristori, Statistiche d'Italia.)

Of the amount of the servile population we have no means of forming an estimate; but it was probably not large at this period of the Roman history, and its subsequent rapid increase was contemporaneous with the diminution of the free population. The complaints of the extent to which this had

[The Cenomani and Veneti were among the allies who sent assistance to the Romans on this occasion, but their actual contingent of 20,000 men is all that is included in the estimate of Polybius. They did not, like the Italian allies, and doubtless could not, send registers of their total available resources.]

But this specimen of the Italian population, as far as it can be inferred from the data obtained from our authorities, conveys a notion of wealth and opulence which it seems hard to combine with that of a declining population. But it must be remembered that these great works were in many, probably in most instances, erected by the munificence either of the emperors or of private individuals; and the vast wealth of a few nobles was so far from being the sign of general prosperity, that it was looked upon as one of the main causes of decay. Many of the towns and cities of Italy were, however, no doubt very flourishing and populous; but numerous testimonies of ancient writers seem to prove that this was far from being the case with the country at large; and it is certain that no ancient author lends any countenance to the notion entertained by some modern writers, of "the incredible multitudes of people with which Italy abounded during the reigns of the Roman emperors."
ITALIA.

(See this question fully discussed and investigated by Zumpt, über den Stand der Beschreibung im Alterthum, 4to, Berlin, 1841.)

Gallia Cisalpina, including Venetia and the part of Liguria N. of the Apenines, seems to have been by far the most flourishing and populous part of Italy under the Roman empire. Its extraordinary natural resources had been brought into cultivation at a comparatively late period, and were still unexhausted; nor had it suffered so much from the civil wars which had given a fatal blow to the prosperity of the rest of Italy. It would appear also to have been comparatively free from the system of cultivation by slave labour which had proved so ruinous to the more southern regions. The younger Pliny, indeed, mentions that his estate near Como, and all those in its neighbourhood, were cultivated wholly by free labourers. (Plin. Ep. iii. 19.) In the latter ages of the Empire, also, the establishment of the imperial court at Mediolanum (which continued from the time of Maximian to that of Honorius) must have given a fresh stimulus to the prosperity of this favoured region. But when the Empire was no longer able to guard the barrier of the Alps against the irruptions of barbarians, it was on Northern Italy that the first brunt of their devastations fell. The numerous and opulent cities in the plains of the Padus were plundered in succession by the Goths, the Huns, and the Lombards.

VII. Authorities.

Considering the celebrity of Italy, and the importance which it enjoyed, not only under the Romans but during the middle ages, and the facility of access which has rendered it so favourite a resort of travellers in modern times, it seems strange that our knowledge of its ancient geography should be still very imperfect. Yet it cannot be denied that this is the case. The first disadvantage under which we labour is, that our ancient authorities themselves are far from being as copious or satisfactory as might be expected. The account given by Strabo, though marked by much of his usual good sense and judgment, is by no means sufficiently ample or detailed to meet all our requirements. He had also comparatively little interest in, and was probably himself but imperfectly acquainted with, the early history of Rome, and therefore did not care to notice, or inquire after, places which had figured in that history, but were in his time sunk into decay or oblivion. Mela dismisses the geography of Italy very hastily, as being too well known to require a detailed description (ii. 4, § 1); while Pliny, on the contrary, apologises for passing but lightly over so important and interesting a subject, on account of the impossibility of doing it justice (iii. 5, § 6). His enumeration of the different regions and the towns they contained is nevertheless of the greatest value, and in all probability based upon authentic materials. But he almost wholly neglects the physical geography, and enumerates the inland towns of each district in alphabetical order, so that his method is not easy to consult in determining their position. Prolemy's lists of names are far less authentic and trustworthy than those of Pliny; and the positions which he professes to give are often but little to be depended on. The Itineraries afford valuable assistance, and perhaps there is no country for which they are more useful and trustworthy guides; but they fail as exactly where we are the most in want of assistance—in the more remote and unfrequented parts of Italy, or those districts which in the latter ages of the Empire had fallen into a state of decay and desolation. One of the most important aids to the determination of ancient localities is unquestionably the preservation of the ancient names, which have often been transmitted almost without change to the present day; and even where the name is now altered, we are often enabled by ecclesiastical records to trace the ancient appellation down to the middle ages, and prove both the fact and the origin of its alteration. In numerous instances (such as Aletium, Sipontum, &c.) an ancient church alone records the existence and preserves the name of the decayed city. But two circumstances must guard us against too hasty an inference from the mere evidence of names: the one, that it not infrequently happened, during the disturbed periods of the middle ages, that the inhabitants of an ancient town would migrate to another site, whether for security or other reasons, and transfer their old name to their new abode. Instances of this will be found in the cases of Aequilumni, Apudina, &c., and the most remarkable of all in that of Capua. Another source of occasional error is that the present appellations of localities are sometimes derived from erroneous imitations of the middle ages, or even from the misapplication of ancient names by local writers on the first revival of learning.

One of the most important and trustworthy auxiliaries in the determination of ancient names and localities, that of inscriptions, unfortunately requires, in the case of Italy, to be received with much care and caution. The perverted ingenuity or misguided patriotism of many of the earlier Italian antiquaries frequently led them either to fabricate or interpolate such documents, and this with so much skill and show of learning, that many such fictitious or apocryphal inscriptions have found their way into the collections of Grotii, Moratori, and Orelli, and have been cited in succession by numerous modern writers. Mommsen has conferred a great service upon the student of Italian antiquities by subjecting all the recorded inscriptions belonging to the kingdom of Naples to a searching critical examination and classifying from his valuable collection (Inscriptiones Regni Neapolitanis Latinae, fol. Lips. 1852) all those of dubious authenticity. It is much to be desired that the same task may be undertaken for those of the rest of Italy.

The comparative geography of ancient and modern Italy had more or less engaged the attention of scholars from the first revival of learning. But of the general works on the subject, those before the time of Cluverius may be regarded more as objects of curiosity than as of much real use to the student. Biondo Flavio (Blondus Flavinus) is the earliest writer who has left us a complete and connected view of Italian topography, in his Italia Illustrata (first published in 1474, afterwards with his other works at Basle, in 1531 and 1559): after him came Leonaro Alberti, whose Descrizione di tutta Italia (Venetia, 1531) contains some valuable notices. But the great work of Cluverius (Italia Antiqua, 2 vols. fol. Legd. Bat. 1624) altogether superseded those which had preceded him, and became the foundation of all subsequent inquiries. Cluverius has not only brought together, with the most praiseworthy diligence, all the passages of
ITALIA.

ancient authors bearing upon his subject, but he had himself travelled over a great part of Italy, noting the different remains and observings of ancient towns. It is to be regretted that he has not left as more detailed accounts of these remains of antiquity, which have in many cases since disappeared, or have not been visited by any more recent traveller. Lucas Holstenius, the contemporary and friend of Cluver, who had also visited in person many of the more unfrequented districts of Italy, has left us, in his notes on Cluverius (Abhauten des Cluverii Italicum Antiquum, vol. I. Rome, 1666), a valuable supplement to the larger work, as well as many important corrections on particular points.

It is singular how little we owe to the researches of modern travellers in Italy. Not a single book of travels has ever appeared on that country which can be compared with those of Leake or Dodwell in Greece. Swinhurne's Travels in the Two Sicilies is one of the best, and greatly superior to the more recent works of Keppel Craven on the same part of Italy (See through the Southern Provinces of the Kingdom of Naples, 4to. Lond. 1821; Excursions in the Abruzzi and Northern Provinces of Naples, 2 vols. 8vo. Lond. 1838). Eustace's well-known book (Classical Tour through Italy in 1802) is almost wholly worthless in an antiquarian point of view. Sir E. Hoare's Classical Tour, intended as a sort of supplement to the preceding, contains some valuable notes from personal observation. Dennis's recent work on Etruria (Cities and Cemeteries of the Etruscans, 2 vols. 8vo. Lond. 1848) contains a far more complete account of the antiquities and topography of that interesting district than we possess concerning any other part of Italy. Sir W. Gell's Topography of Rome and its Vicinity (2 vols. 8vo. Lond. 1834; 2nd edit. 1 vol. 1846), taken in conjunction with the more elaborate work of Nichly on the same district (Analisi della Carta dei Dottori di Roma, 3 vols. 8vo. Rome, 1849), supplies much valuable information, especially what is derived from the personal researches of the author, but is far from fulfilling all that we require. The work of Westphal on the same subject (Die Römische Karte, 4to. Berlin, 1829) is still more imperfect, though valuable for the care which the author bestowed on tracing out the direction and remains of the ancient districts. The book, however, is in great measure directed to the student of the ancient geography, and contains very little of the rare inscriptions, which are now in great demand.

In the light of the recent discoveries of the tomb of the Rockes, the Mitoj Italica (8vo. Stuttgart, 1842) contains a good sketch of the physical geography of Central Italy, and much information concerning the antiquities of the different regions that inhabited it; but enters very little into the topography of the regions he describes. The publications of the In-titulo Archeologico at Rome (first commenced in 1829, and continued down to the present time), though directed more to archaeological than topographical researches, still contain many valuable memoirs in illustration of the topography of certain districts, as well as the still existing remains in ancient localities.

The local works and histories of particular districts and cities in Italy are innumerable. But very few of them will be found to be of any real service to the student of ancient geography. The earlier works of this description are with few exceptions of little value, unprofitable scholarship, an almost total want of criticism, and a blind crea-

ITALIA.

It may be that some severe, but well merited, strictures on this work are contained in Niebuhr’s Lectures on Roman History (vol. iii. p. 194, edit.).
ITALICA.

Its coins, all of the imperial age, bear military emblems which attest the story of its origin, and on some of them is the title JULIA AUGUSTA. The city flourished under the Goths, and, for some time, under the Moors, who preserved the old name, in the form Talitca or Toleca; but, in consequence of a change in the bed of the river, its inhabitants abandoned it, and migrated to Seville. Hence, in contradiction to the city which (although far more ancient, see Hispalis) became thus its virtual successor, Hulica received the name of Old Seville (Sevilla la Vieja), under which name its ruins still exist near the wretched village of Santo Ponce, while the surrounding country retains the ancient name, los campos de Toleca. The chief object in the ruins is the amphitheatre, which was in good preservation till 1774, "when it was used by the corporation of Seville for river dikes, and for making the road to Badajoz." (Ford.) Mr. Ford also states, that "on Dec. 12, 1799, a fine mosaic pavement was discovered, which a poor monk, named Jose Moscosco, to his honour, enclosed with a wall, in order to save it from the usual fate in Spain. Ibidet, in 1802, published for Laborde a splendid folio, with engravings and description. . . . Now, this work is all the remains, for the remains of the amphitheatre were destroyed, the end cover the amphitheatre into a great-pen." The only portion of the ruins of Hulica to be seen above-ground consists of some vaulted brick tanks, called La Casa de los Baños, which were the reservoirs of the aqueduct brought by Adrian from Tejada, 7 leagues distant. (Cass. B. C. ii. 20; Bell. Alex. 53; Gell. Nott. Att. x. 13; Oros. v. 23; Geog. Rav.; Flores, Esp. & Vol. xii. pp. 227, fol.; Coins, ap. Flores, Med. de Esp. Vol. ii. p. 477; Bloisnet, vol. i. p. 17; Suppl. vol. i. p. 31; Scotini, p. 64; Eckhel, vol. ii. p. 28; Ubert, vol. ii. p. 1. 372.) Ford, Handbook of Spain, pp. 63, 64.)

ITALICA. [Corinium.]

ITHANUS PE. [ITANUS.]

ITANUS ('Ithanos, Poit. iii. 17, § 4; Steph. B.: Eih. Itanos), a town on the E. coast of Crete, near the promontory which bore the name of Itanos, (Pliu. iv. 12.) In Coroselli's map there is a place called Itanos, with a Palaestronkasten in the neighbourhood, which is probably the site of Itanos, and in consideration of which the town would correspond with the Oinosia and Iuchae of Piny (L.; comp. Mus. Class. Antiq. vol. ii. p. 303). According to Herodotus (iv. 151), the Theraeans, when founding Cyrene, were indebted for their knowledge of the Libyan coast to Coroselli, a seller of purple at Itanos. Some of the coins of this city present the type of a woman terminating in a tail of a fish. (Eckhel. vol. ii. p. 314.) This type, recalling the figure of the Syrian goddess, coupled with the trade in purple, suggests a Phoenician origin.

E. R. J.

COIN OF ITANUS.

ITHACA ('Ith unicorn Eih. Υιηαιδας and Ιθακας: Ithacensis and Ithacens; Ιθακη, Ιθαενς, vulgarly; but this is merely an alteration, by a simple metathesis of the twi first letters, from 'Ithak, which is known to be the correct orthography by the Ithacens themselves, and is the name used by all educated Greeks. Leake, Northern Greece, chap. xxi.) This island, so celebrated as the scene of a large portion of the Homeric poems, lies off the coast of Arcania, and is separated from Cephallenia by a channel about 3 or 4 miles wide. Its name is said by Eustathius (Od. II. ii. 632) to have been derived from the eponymous hero Ithaka, mentioned in Od. xviii. 207. Strabo (x. 2) reckons the circumference of Ithaca only So Sq. Miles. Measurement is very short of the truth; its extreme length from north to south being about 17 miles, its greatest breadth about 4 miles, and its area nearly 45 sq. miles. The island may be described as a ridge of limestone rock, divided by the deep and wide Gulf of Molo into two nearly equal parts, connected by a narrow isthmus not more than half-a-mile across, and on which stands the Palaestronkasten of Ithaca (Carp.), traditionally known as the "Castle of Ithaca." Ithaca everywhere rises into rugged hills, of which the chief is the Mount of Ithaca (d'Arers: Itanus; Eth. Eth. Itanut, vol. 1. xvi. 632) in the northern division, which is identified with the Xematos of Virgil (Aen. iii. 271) and the Xematos iexiipitfellon of Homer (Od. ix. 21). Its forests have now disappeared; and this is, doubtless, the reason why rain and dew are not so common here in the present as in Homer's age, and why the island no longer abounds in hogs fattened on acorns like those guarded by Eumaeus. In all other points, the poet's description (Od. iv. 603, seq. xiii. 242, seq. iv. 27, seq.) exhibits a perfect picture of the island as it now appears, the general aspect being one of ruggedness and sterility, rendered striking by the bold and broken outline of the mountains and cliffs, indented by numerous harbours and creeks (Aedwv παρομοιοι, Od. III. 193). The climate is healthy (άρειια κουμερήφως, Od. ix. 27). It may here be observed, that the expressions applied to Ithaca, in Od. iv. 25, 26, have puzzled all the commentators ancient and modern:——

... αυτή δε χειμώνα πανυπαπάτην ειναί φλογός ζώοι, αι δε άνθρωποι προς τον Αειατον τε.

(Cf. Nitzsch, ad loc; also Od. x. 196.) Strabo (x. 2) gives perhaps the most satisfactory explanation: he supposes that by the epithet χειμώνα the poet intended to express how Ithaca lies under, as it were, the neighbouring mountains of Arcania, while by that of πανυπαπάτην he meant to denote its position at the extremity of the group of islands formed by Zacynthus, Cephallenia, and the Echinides. For another explanation, see Worlandworth, Greece, Pictorial, &c., pp. 355, seq.

Ithaca is now divided into four districts (Bath, 'Aecos, 'Anfeg, E'Exeg, i. e. Deep Bay, Eagle's Cliff, Highland, Outland); and, as natural causes are likely to produce in all ages similar effects, Leake (i. c.) thinks it probable, from the peculiar configuration of the island, that the four divisions of the present day nearly correspond with those noticed by Herodotus, an author cited by Stephanus B. (s. v. Κροκόκβσον). The name of the chief of these districts is lost by a defect in the text; the others were named Neum, Creuxleum, and Aegireus. The Aegilips of Homer (II. ii. 633) is probably the same with Aegireus, and is placed by Leake at the modern village of Anoge.
-HTIIACA.

while he believed the modern capital town of Bathý to occupy the site of Croyelía. (II. l. c.) It is truly that Strabo (pp. 574, 453) places Aegilips and Croyelía in Leucus; but this appears inconsistent with Homer and other ancient authorities. (See Leake, l. c.)

Plutarch (Quaest. Graec. 43) and Stephana B. (C. X. 1) state that the proper name of the ancient capital of Ithaca was Alacoemen or Alakoemen, and that Ulysses bestowed this appellation upon it from having been born himself born near Alakoemen in Beozia. But this name is not found in Homer; and a passage in Strabo tends to identify it with the ruins on the isthmus of Adōs, where the fortress and royal residence of the Ithacan chieftains probably stood, on account of the advantages of a position so easily accessible to the sea both on the eastern and western sides. It is argued by Leake (l. c.) that the Homerian capital city was at Polis, a little harbour on the NW. coast of the island, where some hellenic remains may still be traced. For the poet (Od. iv. 844, seq.) represents the savants as lying in wait for Telemachus on his return from Peloponnese at Astera, "a small island in the channel between Ithaca and Samos (Cephalonitis)," where the only island is that now called Αδανάκιος, situated exactly opposite the entrance to Port Polis. The traditional name of Polis is alone a strong argument that the town, of which the remains are still visible there, was that which Sisyphus (in Arcas, Ἀρκας), and still more especially Ptolemy (iii. 14), mentions as having borne the same name as the island. It seems highly probable that Ἑλιος, or the city, was among the Ithacans the most common designation of their chief town. And if the Homerian capital was at Polis, it will follow that Mt. Neimus, under which it stood (Ἰθαυκας Ταινιοί, Od. iii. 81), was the mountain of Ἑχος (Ἰθαγός), at the northern extremity of the island, and that one of its summits was the Hermean hill (Κορέανας Λόφος, Od. xvi. 471) from which Emmons saw the ship of Telemachus entering the harbour. It becomes probable, also, that the harbour Rhithrum (Ῥίθρων), which was "under Neimus" but "apart from the city" (νεκριτος Παρκός, Od. i. 185), may be identified with either of the neighbouring bays of Ἀθάκα or Φρίκης. Near the village of Ἑχος may be observed the substructions of an ancient building, probably a temple, with several steps and a base in the rock. These remains are now called by the neighbouring peasants "the School of Homer." The Homerian "Fountain of Arethusa" is identified with a copious spring which rises at the foot of a cliff fronting the sea, near the SE. extremity of Ithaca. This cliff is still called Κοράς (Κόρας), and is, doubtless, that alluded to at Od. xiii. 407, seq., xiv. 5, seq., xiv. 398. (See, especially on this point, Leake, l. c., and Mure, Tour in Greece, vol. i. pp. 67, seq.)

The most remarkable natural feature of Ithaca is the Gulf of Molo, that inlet of the sea which nearly divides the island into two portions; and the most remarkable relic of antiquity is the so-called "Castle of Ulysses," placed, as has been already intimated, on the sides and summit of the steep hill of Adōs, on the connecting isthmus. Here may be traced several lines of inclosure, testifying the highest antiquity in the rude structure of massive stones which compose them. The position of several gates is distinctly marked; there are also traces of a tower and of two large subterranean cisterns. There can be little doubt that this is the spot to which Cicero (de Orat. i. 44) alludes in praising the patriotism of Ulysses—"at Ithaca illam in a-perennis saevis tanquam midulam affixam sapient-simius vir immortalitati anteponeret." The name of Adōs, moreover, recalls the striking scene in Od. ii. 116, seq. At the base of this hill there have been discovered several ancient tombs, sepulchral inscriptions, vases, rings, medals, &c. The coins of Ithaca usually bear the head of Ulysses, with the pîleus, or conical cap, and the legend Τικνανας, the reverse exhibiting a cock, an emblem of the hero's vigilance. Athena, his tutelar deity, or other devices of like import. (See Eckhel.)

The Homerian port of Phorcys (Od. xiii. 345) is supposed to be represented by a small creek now called Dervis (probably because it is on the right of the entrance to the harbour of Bathý), or by another creek now called Schinoi; both on the southern side of the Gulf of Molo. (Leake, l. c.) At a cave on the side of Mount Stephanos or Merouorgi, above this gulf, and at some short distance from the sea, is placed the "Grotto of the Nymphs," in which the sleeping Ulysses was deposited by the Phoceans who brought him from Scheria. (Od. xiii. 116, seq.) Leake (l. c.) considers this to be "the only point in the island exactly corresponding to the poet's description." The modern capital of Ithaca extends in a narrow strip of white houses round the southern extremity of the horse-shoe port, or "deep" (Βαθῦ), from which it derives its name, and which is itself an inlet of the Gulf of Molo, often mentioned already. After passing through similar vicissitudes to those of its neighbours, Ithaca is now one of the seven Ionian islands under the protectorate of Great Britain, and contains a population exceeding 10,000 souls,—an industrious and prosperous community. It has been truly observed that there is, perhaps, no spot in the world where the influence of classical associations is more lively or more pure; for Ithaca is indebted for no part of its interest to the rival distinctions of modern annals,—so much as its name scarcely occurring in the page of any writer of historical ages, unless with reference to its poetical celebrity. Indeed, in A.D. 1504, it was nearly, if not quite, uninhabited, having been depopulated by the incursions of Corsairs; and record is still extant of the privileges accorded by the Venetian government to the settlers (probably from the neighbouring islands and from the mainland of Greece) by whom it was re-peopled. (Leake, l. c.; Bowen, Ithaca in 1850, p. 1.)

It has been assumed throughout this article that the island still called Ithaca is identical with the Homerian Ithaca. Of that fact there is ample testimony in its geographical position, as well as in its internal features, when compared with the Odyssey. To every sceptic we may say, in the words of Athena to Ulysses (Od. xiii. 344),—

ΔΑΣΒ' ΣΤΩΝ ΔΙΩΣ ΠΑΡΑΙΣΚΗΣ ΕΝΟΣ ΔΡΑΠΑ ΠΕΤΡΟΥΛΗΣ.

(The arguments on the sceptical side of the question have been collected by Völcker, Homer, Geogr. 46.)
ITHACAEIAE INSULAE.

-74. but they have been successfully cast by Rihcke von Liliencron, *Ueber das homerische Ithaca*

ITHACAEIAE INSULAE, the name given by Pliny (iii. 7. s. 13) to some small islets opposite to Vibo on the W. coast of Bruttium. These can be no other than some mere rocks (too small to be marked on ordinary maps) which lie just opposite to the remains of *Birona*, in the Gulf of *Sta. Eufemia*, and on which some traces of ancient buildings (probably connected with that part) were still visible in the days of Barrio. (Barrius, *De Situ Calab.,* ii. 13; Romanelli, vol. i. p. 57.) [E. H. B.]

ITHOME (*??????????*), Eth. *??????????*, *??????????*.

1. A town of Histriots in Tis syllas, described by Homer as the *rocky Ithome?* (*??????????, *??????????,*, H. ii. 720, 721) is Strabo, within a triangle formed by the four cities, Tricca, Metropolis, Pelinnæum, and Geapphi. (Strab. ix. p. 437.) It probably oocupied the site of the castle which stands on the summit above the village of *Famirì*. Leake observed, near the north-western face of the castle, some remains of a very ancient Hellenic wall, consisting of a few large masses of stone, roughly heaped on theoutside, but accurately joined to one another without cement. (Leake, *Northern Greece*, vol. iv. p. 510.)

It was a mountain fortress in Messenia, where the Messenians long maintained themselves against the Spartans in the First Messenian War. It was afterwards the citadel of Messene, when this city was founded by Epaminondas. For details, see Messene.

IHTORIA (*??????????*), a town in Aetolia, near the Achelous, and a short distance south of Cynope. It was situated at the entrance of a pass, and was strongly fortified both by nature and by art. It was taken by Phocion and levelled to the ground, b.c. 219. (Pol. iv. 64.)

IITU PROMONTO'EIIUM, is placed by Poleney (i. 9. § 1) in Caltogalinia Belgica. After the mouths of the *Seine*, he mentions the outlet of the river *Pirun-* dis [Trudés], Icium (*??????????*), and then Georaiacum (*??????????*), which is Boulogne. One of the old Latin versions of Poleney has *Itium* Promontorium, and others may have it too. He places Georaiacum and *Itium* in the same latitude, and *Itium* due west of Georaiacum. This is a great mistake, for, *Itium* being Cap Grizeuz, the relative position of the two places is north and south, instead of east and west. There is no promontory on this part of the French coast north or south of Boulogne except *Grizeuz*, at which point the coast changes its direction from south to north, and runs in a general ENE. direction to Calais, Gravelines, and Dunkerque. It is therefore certain that there is a great mistake in Poleney, both in the direction of the coast and the relative position of Georaiacum and *Itium*. Cap Grizeuz is a chalk cliff, the termination on the coast of the chalk hills which cross the department of Pas de Calais. The chalk cliffs extend a few miles on each side of Cap Grizeuz, and are clearly seen from the English coast on a fine day. This cape is the nearest point of the French coast to the opposite coast of Kent. [G. L.]

ITUS PORTUS (*??????????*, Strab. p. 199).

When Caesar was preparing for his second British ex-

pedition (n. c. 54), he says (B. G. v. 2) that he ordered his forces to meet at "Portus Iltus, from which port he had found that there was the most convenient passage to Britannia,—about 30,000 passus." In his first expedition, c. v. 55, he says that he marched, with all his forces, into the country of the Morini, because the passage from that coast to Brit-
nania was the shortest (B. G. iv. 21); but he does not name the port from which he sailed in his first expedition; and this is an omission which a man can easily supply who has a correct copy of the *Antiquitates* of the Commentaries. It seems a plain conclusion, from Caesar's words (v. 2) that he sailed from the Iltus on his first expedition; for he marched into the country of the Morini, in order to make the shortest passage (iv. 21); and he made a good pas-
sage (iv. 23). In the fifth book he gives the distance from the Iltus to the British coast, but not in the fourth book; and we conclude that he ascertained this distance in his first voyage. Drumann (Ge-

richts Römer, vol. ii. p. 297) thinks that the passage in the fifth book rather proves that Caesar did not sail from Iltus on his first voyage. We must ac-

cordingly suppose that, having had a good passage on his first voyage to Britannia, and back to the place from which he had sailed, he chose to try a different passage the second time, which passage he had learned (cognoverta) to be the most convenient (commodis-suum). Yet he landed at the same place in Britannia in both his voyages (v. 6); and he had ascertained (cognoverat) in the first voyage, as he says, that this was the best landing-place. So Drum-

mann, in his way, may prove, if he likes, that Caesar did not land at the same place in both voyages.

The name *Iltus* gives some reason for supposing that Portus Iltus was near the Promontorium *Itium*; and the opinion now generally accepted is, that Portus Iltus is *Wissant or Westand*, a few miles east of Cap Grizeuz. The critics have fixed Portus Iltus at various places; but not one of these guesses, and they are all guesses, is worth notice, except the guess that *Itius* in *Gelasim*, vol. ii. p. 179. But the name *Gerasicum* is not Iltus, which is one objection to the supposition. The only argument in favour of Boulogne is, that it was the usual place from which the Romans sailed for Britannia after the time of Claudius, and that it is in the country of the Mo-

rini. Gerasicum was the best spot that the Romans could choose for a regular place of embarkation, for it is adapted to be the site of a town and a fortified place, and has a small river. Accordingly it became the chief Roman position on this part of the French coast, *Gerasicum*.

The distance of Portus Iltus from the nearest port of Britannia, 30 M. P., is too much. It seems to be a just conclusion, that Caesar estimated the distance from his own experience, and therefore that he esti-
mated it either to the cliffs about the South Foreland, where he anchored, or to the place seven or eight miles (for the MSS. of Caesar vary here) further along the coast, where he landed. It is certain that he first approached the British coast under the high cliffs between Folkestone and Wallace. It is a disputed point whether he went from his anchorage under the cliffs northwards to Deal, or southwards to Sandgate or Hythe. This matter does not affect the position of Iltus, and it is not discussed here; but the writer maintains that Caesar landed on the beach at Deal. There are difficulties in this question, which the reader may examine by referring to the authori-

ties mentioned at the end of this article. The pas-

[Page 99]
sage in the fifth book (v. 8), in which Caesar describes his second voyage, shows very clearly where he landed. He sailed from Portus Itius, on his second expedition, at sunset, with a wind about SW, by W; about midnight the wind failed him, he could not keep his course, and, being carried far too by the tide, at daybreak, when he looked about him, he saw Britannia on his left hand behind him. Taking advantage of the change of the tide, he used his oars to reach "that part of the island where he had found in the previous summer that there was the best landing." He had been carried a few miles past the Cantium Portitorum, or North Foreland, but not out of sight, and he could easily find his way to the beach at Deal. There are many arguments to show that Deal was Caesar's landing-place, as it was for the Romans under the empire, who built near it the strong place of Rutupiae (Richborough), on the Stour, near Sandwich.

D'Anville makes out Caesar's distance of 30 M.P. thus. He reckons 22 or 24 M.P., at most, from Portus Itius to the English cliffs, and 8 miles from his anchorage under the cliffs to his landing-place, making up 30. Perhaps Caesar means to estimate the whole distance that he sailed to his landing-place; and if this is so, his estimate of "about 30 Roman miles" is not far from the truth, and quite as near as we can expect.

Strabo (p. 199) makes the distance 320 stadia, or 300, according to a note of Eustathius on Donysius Perigeves (v. 566), who either found 300 in his copy of Strabo, or made a mistake about the number; for he derived his information about Caesar's passage only from Strabo. It may be observed here that Strabo mentions two expeditions of Caesar, and only one port of embarkation, the Itius. He understood Caesar in the same way as all people who do who can draw a conclusion from premises. But even 300 stadia is too great a distance from Wissant to the British coast, if we reckon 8 stadia to the Roman mile; but there is good reason, as D'Anville says, for making 10 stadia to the mile here. Pliny gives the distance from Boulogne to Britannia, that is, we must assume, to the usual landing place, Rutupiae, at 30 M.P., which is also calculated; but it seems to be some evidence that he could not suppose Boulogne to be Caesar's place of embarkation.

Caesar mentions another port near Itius. He calls it the Ulterior Portus (iv. 22, 23, 24), or Superior, and it was 8 M.P. from Itius. We might assume from the term Ulterior, which has reference to Itius, that this port was further to the north and east than Itius; and this is proved by what he says of the wind. For the wind which carried him to Britannia on his first expedition, his direct course mentions nearly north, prevented the ships at the Ulterior Portus from coming to the place where Caesar embarked (iv. 23).

The Ulterior, or Superior, Portus is between Wissant and Calais, and may be Sangatte. Calais is too far off. When Caesar was returning from his first expedition (iv. 36, 37) two transport ships could not make the same ports—the Itius and the Ulterior or Superior—that the rest of the ships did, but were carried a little lower down (paeno infra), that is, further south, which we know to be Caesar's msway of going by comparing this with another passage (iv. 28). Caesar does not say that these two ships landed at a "portus," as Ubert suppose (Galiena, p. 554), who makes a port unknown to Caesar, and gives it the name "Inferior." Du Cange, Camden, and others, correctly took Portus Itius to be Wissant. Besides the resemblance of name, Du Cange and Gibson have shown that of two middle age Latin writers who mention the passage of Alfred, brother of St. Edward, into England, one calls Wissant Portus lecius, and the other Portus Wisanti. D'Anville conjectures that Wissant means "white sand," and accordingly the monitory Itius would be the White, a very good name for it. But the word "white," and its various forms, is Teutonic, and not a Celtic word, so far as the writer knows; and the word "Itius" added in Caesar's time on the coast of the Meria, a Celtic people, where we do not expect to see a Teutonic name.

Wissant was known to the Romans, for there are traces of a road from it to Tarumena (Thursoane). It is no port now, and never was a port in the modern sense, but it was very well suited for Caesar to draw his ships up on the beach, as he did when he landed in England; for Wissant is a wide, sheltered, sandy bay. Froissart speaks of Wissant as a large town in 1346.

A great deal has been written about Caesar's voyages. The first and the best attempt to explain it, though it is not free from some mistakes, is Dr. Haly's, of which an exposition is given in the Classical Museum, No. xiii., by G. Long. D'Anville, with his usual judgment, saw that Itius must be Wissant, but he supposed that Caesar landed at Hythe, south of Dover. Wainewright (Geog. des Gaules, vol. 1, pp. 448, 452) has some remarks on Itius, which he takes to be Wissant; and there are remarks on Portus Itius in the Tichborne's Magazine for September, 1846, by H. L. Long, Esq. Perhaps the latest examination of the matter is in G. Long's edition of Caesar, Note on Caesar's British Expeditions, pp. 248—257. What the later German geographers and critics, Ubert and others, have said of these voyages is of no value at all.

[G. L.]
ITOR or ITOUS ("Itrw, Hen."; "Itrwos, Strab.") was a town of Phcenicians in Thessaly, called by Homer "mother of flocks" (Il. ii. 696). It was situated 60 stadia from Alius, upon the river Cuarius or Corulins, and above the Croeian plain. (Strab. ix. p. 435.) Leake supposes the Kkols to be the Cuarius, and places Itues near the spot where the river issues from the mountains; and, as in that case, Ion possessed a portion of the pastoral highlands of Obrus, the epithet "mother of flocks" appears to have been well adapted to it. (Leake. *Northern Greece*, vol. iv. pp. 356, 357.) Leain had a celebrated temple of Artemis at his home, under the patronage of the> Iturrain Athenians, was carried by the Boeotians, when they were expelled from Thessaly, into the country named after them. (Strab. l.c.; Steph. B. s. c.; Apollod. ii. 7. § 7; Appollon. i. 531, with Schol.; Callim. *Hymn. in Cer. 74, * Paus. i. § 2, iii. § 13, ix. § 34, § 1, x. § 10; Plut. *Pyrrh. 26*.)

ITONE ("Itrwm"). a town in Lydia of unknown site. (Dionys. Per. 465; Steph. B. s. c.; [L. S.])

ITUCI (Fin. iii. i. § 3), or ITUCI (Coins; *Itrwm, Apian, Hesp. 66, 68), a city in the region of *Helaiomenes*. Under the Romans it was a *colonia imperialis*, with the surname *Victus Julii*, and it belonged to the conventus of Hispailis. Its probable site, in the opinion of Ubert, was between *Martos* and *Espaylo*, near Valenzuela. (Ubert, vol. ii. pt. 1. p. 369;Coins, ap. *Flores, Med. de Esp. * vol. ii. p. 487; Mintnet, vol. i. p. 18, Suppl. vol. i. p. 32; Sestini, p. 63; Eckhel. vol. i. p. 24.) [P. S.]

ITUNA, in Britain, mentioned by Ptolemy (ii. 3. § 2) as an estuary immediately to the north of the *Mortes* and *Epsijop*, near *Valenzuela*. (Ubert, vol. ii. pt. 1. p. 369; Coins, ap. *Flores, Med. de Esp. * vol. ii. p. 487; Mintnet, vol. i. p. 18, Suppl. vol. i. p. 32; Sestini, p. 63; Eckhel. vol. i. p. 24.) [P. S.]

ITURAEA ("Itrospia"); a district in the NE. of Palestine (Strab. xvi. p. 755; Fin. v. 19), with which Trachonitis, belonged to the tetrarchy of Philip. (St. Luke, iii. 1; comp. Joseph. *Ant. * xv. 10. § 1.)

The name is so loosely applied by the ancient writers that it is difficult to fix its boundaries with precision, but it may be said roughly to be traversed by a line drawn from the Lake of Tiberias to Damascus. It was a mountainous district, and fallow, and in ancient times (Strab. l.c.) the inhabitants, a wild race (Cic. *Phil.ii. 24*), favoured by the natural features of the country, were in the habit of robbing the traders from Damascus (Strab. xvi. p. 756), and were famed as archers. (Virg. *Geo. * ii. 418; Lucan. vii. 230, 514.)

At an early period it was occupied by the tribe of *Jetur* (*Chron. v. 19; *Tropasian, LXX.), whose name is connected with that of *Jetur*, a son of Ishmael. (*Chron. i. 31*.) The Ituraeans—either the descendants of the original possessors, or, as is more probable, of new comers, who had occupied this district after the exile, and assumed the original name—were eventually subdued by king Ariscobolus, n.c. 100, who compelled them to be circumcised, and incorporated them in his dominions. (Joseph. *Ant. xiii. 11. § 3*) The mountain district was in the hands of *Potolaemaen*, tetrarch of Chalcis (Strab. xvi. p. 753); but when Pompeius came into Syria, Iturea was ceded to the Romans (Appian. *Mithr. 106*), though probably it retained a certain amount of independence under native vassal princes: M. Antonius imposed a heavy tribute upon it. (Appian. *B. C. v. 7*.) Finally, under *Claudius*, it became part of the province of Syria. (Tac. *Ann. * xii. 23; Dion Cass. ix. 12.) The district *El-Djedar*, to the E. of *Hermon* (*Djebel-esl-Sheikh*), and lying W. of the *Hadj* road, which according to *Burckhardt* (Trav. p. 386) now contains only twenty inhabited villages, comprehended the whole or the greater part of ancient Iturea. (Münter, *De Reb. Iturearum. * Havn. 1824: comp. Winer, *Realcooerterbuch*, s. c.; Ettger, *Erdkunde*, vol. xv. pt. ii. pp. 354—357, 899.)

ITURISSA. [Teresa.]

ITYCA. [Itucii.]

ITYS, in Britain, mentioned by Ptolemy (ii. 3. § 1) as a river lying north of the Epipol promontory ("Mall of Cantyre"), with the river Langs between. This latter—*Loch Linhele*, the *Ity* probably is the *Sound of Sleat*, between the *Ile of Sleige*, and the mainland. In the Monumenta Britainica we have *Loch Torridon*, *Loch Duich*, *Loch Ewe.*

JUDEA. [Palaestina.]

JUDAH. [Palaestina.]

IVERNIA. [Ierne.]

IVERNIS ("Ivoriis", mentioned by Ptolemy (ii. 2. § 10) as one of the inland towns of Ireland, the others being *Bigna*, *Bhacna*, *Lubara*, *Macleigum*, another *Bhacna*, *Daum*. Of these *Duman* has been identified with *Decum*, and *Macleigum* with *Moalloon*, on the strength of the names. *Lubara*, on similar but less satisfactory ground, = *Kil-loir* in *West Meath*. Iverns is identified by O'Connor with *Don-keren*, on the *Kemore* river; but the grounds on which this has been done are unsted. [R. G. L.]

IVIA or JUVIA. [Gallaecia.]

JULIUS CONSTANTIUS. [Osset.]

JULIA JOZA ("Joza"; "Joza"; "Ioza", a city on the coast of Hispailis. Barea, between Gades and Bohen, colonized by a population of Romans mixed with the remnant inhabitants of the town of Zells, near Tingis, on the Libyan shore of the Straits. Thus far Strabo (iii. p. 140); later writers speak of a place named JULIA TRANSDUCA, or simply TRANSDUCA ("Iotus* Transduca", *Ptol. * iv. 8. § 6; *Maricam, Hears. * p. 39; *Geog. Rav., * E. of Meliania; and coins are extant with the epigraph *JULIA TRANDUCA* (*Flores, Med. de Esp. * vol. ii. p. 356, *Esp. * vol. x. p. 50; *Monet. * vol. i. p. 26, 34; *Sestini, * vol. i. p. 40, 45; *Sestini, Med. * p. 90; *Num. Gall.*; Eckhel. *vol. i. pp. 29—31*). Mela does not mention the place by either of these names; but, after speaking of Carteia, he adds the following remarkable words: et quam transverui ex Africa Phoenicius habitant, atque unde nos sumus, Tangerendor. (Mela, ii. 6.) It can hardly be doubted that all these statements refer to the same place; nor, the very names are identical, *Transseuta* being only the Latin translation of the word *Joza* (from *Sjew*; *grecresca cut* used by the Phoenician inhabitants to describe the origin of the city. Its site must have been at or near Turign, in the middle of the European shore of the Straits, and on the S.-most point of the promisula. (Mêm. de l'Acad. des Insér. * p. 103; *Philos. Trans. *xxx. p. 919; *Mentelle, Geoq. Comp. Exp. Anc. * p. 229; Ubert. *i. p. 344.* [P. S.]

JULIA LIBYCA. [Cerretani.]

JULIA MYRTILIS. [Myrtilis.]

JULIA ROMULA. [Hispalis.]

JULIA TRANSDUCA. [Julia Joza.]

JULIA VICTRIX. [Tarraco.]

JULICUM, a town in Gallia Belgica. In the Antonine Itin., a road runs from Castellum (Cascol) through *Tomerica* to Julianum, and thence to *Colonia* (Cologne). Julicum is 18 leagues from Colonia. Another road runs from Colonia Trajana to
JULIANOPOLIS.

Juliaca, and from Juliaca through Tiberiacum to Cologne. On this road also Juliaca is placed 18 leagues from Cologne. Juliaca is Julia, or Julex, as the Germans call it, on the River Beer, on the carriage road from Cologne to Aix-la-Chapelle.

The name of the road seems to be the Roman name Juliaca, which is rendered more probable by finding between Juliaca and Colonia a place Tiberiacum (Bereois or Berguin). Acum is a common ending of the names of towns in North Gallia.

JULIOPOLIS (Ἰοὐλιοπόλις), a town in Lydia which is not mentioned until the time of Herodotus (p. 670), according to whom it is situated close to Maceon, and must be looked for in the southern parts of Mount Emolus, between Philadelphia and Trolls. (Comp. Plin. v. 29.) [L. S.]

JULIAS. [Βερθισάμα.]

JULIOBONA (Ἰοὐλίοβόνα), a town in Gallia Belgica, is the city of the Caleti, or Caletanae as Ptolemy writes the name (ii. 8. § 5), who occupied the Puys de Coeus. [Caleti.] The place is Lillibona, on the little river Bolce, near the north bank of the Seine, between Barre and Candebre, in the present department of Seine-Inférieure. The name shows several traces from Julibona; one to Rotomagus (Romano), through Brevisolurum; and another through Brevisolurum to Noviomagus (Liitisus), on the south side of the Seine. The road from Julibona to the west terminated at Caractocarm. [Caroctocinum.] The place has the name Julibona in the Latin middle age writings. It was a favourite residence of the dukes of Normandie, and William, the Conqueror, had a castle here, where he often resided.

The name Julibona is one of many examples of a word formed by the name of a town, and a Celtic termination (bona), like Augibona, Julimagus. The word Divona or Bibona [Divona] has the same termination. It appears from a middle age Latin writer cited by D'Anville (Notice, &c., Julibona), that the place was then called Hebona, from which the modern name Lillibona has come by prefixing the article; as the river Otis in the south of France has become L'lit, and Lot.

The name Julibona, the traces of the old roads, and the remains discovered on the site of Lillibona, prove that it has been a Roman town. A Roman theatre, tombs, medals, and antiquities, have been discovered.

JULIOBRIGA (Ἰουλιοβρίγα), the chief city of the Cantabri, in Hispanic Tarraconensis, belonging to the conventus of Chiana, stood near the sources of the Ebro, on the eminence of Retortillo, S. of Regierno. Five stones still mark the bounds which divided its territory from that of LEGIO IV. It had its port, named Portus Victorae Juliae Brigensium, at Santander (Bert. p. s. 4, v. 7. 49; Ptol. ii. 6. § 51; Inscr. ap. Grat. p. 345; Morales, Autol. p. 68; Florence, Esp. S. vol. vi. p. 417; Cantab. p. 64; Ubert, vol. ii. pt. 1. p. 443.) [P. S.]

JULIAMAGUS (Ἰουλιαμάγος), a town of the Andecavi, in Gallia Lugdunensis, and their capital. (Ptol. ii. 8. § 8.) It is named Juliamagus in the Table, and marked as a capital. It is now Angers.

[Andecavi.] [G. L.]

JULIOPOLIS. [Γορδιούμην και Ταρσίνας.]

JULIOPOLIS IN AEGYPTI. Flavi v. 23. p. 26). Along these ancient geographers mention this place among the towns of Lower Egypt. From the silence of his predecessors, and from the name itself, we may reasonably infer its recent origin. According to Pliny, Juliopolis stood about 20 miles distant from Alexandria, upon the banks of the canal which connected that city with the Canopic arm of the Nile. Some geographers suppose Juliiopolis to have been no other than Nicopolis, or the City of Victory, founded by Augustus Caesar in B. C. 29, partly to commemorate his reduction of Aegypt to a Roman province, and partly to punish the Alexandrians for their adherence to Cleopatra and M. Antonius. Mannert, on the contrary (x. i. p. 626), believes Juliopolis to have been merely that suburb of Alexandria which Strabo (xvii. p. 755) calls Eleisium. At this place the Nile-boats, proceeding up the river, took in the cargo of passengers. [W. B. D.]

JULIA. [Διος.] JULIUM CARNICUM (Ἰούλιον Κάρνικον, Ptol; Zuglio), a town of the Carni, situated at the foot of the Julian Alps, which, from its name, would seem to have been a Roman colony founded either by Julius Caesar, or in his honour by Augustus. If Paulus Diaconus is correct in ascribing the foundation of Forum Juli to the dictator himself (P. Diacon. Hist. Lang. ii. 14), there is little doubt that Julium Carnicum dates from the same period: but we have no account of the place, nor is there one place distinctly described as it in Neronian (viii. 7. § 4), in another more correctly as situated on the frontiers of Noricum and Italy (μεραινη της Τρακίας και Ναυκάρου. ii. 13. § 4). But Pliny expressly includes it in the territory of the Carni and the tenth region of Italy ("Julianens Carnorum," iii. 19. s. 23), and its position on the S. side of the Alps clearly entitles it to be considered in Italy. Its position is correctly indicated by the Itinerary of Antoninus (p. 219), which places it 60 M. from the Iunianus, and therefore one place distinctly described, in a side valley opening into that of the Tagliamento, about 4 miles above Tolmezzo. The pass from thence over the Monte di Sta. Croce into the valley of the Gail, now practicable only for mules, follows the line of the ancient Roman road, given in the Itinerary, and therefore the usual route of the inhabitants of the Carni to the north. There are several traces of the old Roman road, now only a footpath and occasionally frequented pass under the Romans (Alpes, p. 110, No. 7): but the inscription on the rock of which the construction of this road has been ascribed to Julius Caesar is a palpable forgery. (Claver. Ital. p. 200.) [E. H. B.]

JUNCARIA, JUNCARIUS CAMPUS. [In- dige.)

JUNONIA INSULA. [Fortunatae ins.]

JURA. [Helveti; Gallia, p. 951.]

JURCAE (Ἰοὐρκαί), mentioned by Herodotus (iv. 229), is one of the fragments which the northward and westward tribes of the Uralians, who lay beyond the Balinei, who lay beyond the Soramenti of the Palus Macedes and Lower Tanais. Their country was well-wooded. They were hunters, and had horses. This points to some portion of the lower Uralian range. They were probably tribes of the Urgian stock, akin to the present Mordvas, Tehermis, Tokhuvashes, of which they were the most southern portion. The reason for this lies in the probability of the name being a derivative from the root -br- (as in Ukraine and Carina-thin) = border, or boundary, some form of which gave the Slavonic population their equivalent to the Germanic name Marcomannus = Marchmen.

[RE. L.]

Mishpat (Gen. xiv. 7, xvi. 14), where the Israelites cumbered with the intention of entering the Promised Land (Num. xxxii. 8), and the point from which the spies were sent. (Num. xiii. xiv. 40—45, xxi. 1—3; Deut. i. 41—44; comp. Judg. i. 17.)

The supposition that the Kadesh-Barnae, to which the Israelites first came, is different from the Kadesh-Meriah, which formed their later encampment, where the wants of the people were miraculously supplied from the smitten rock (Num. xx. 14), reconciles some difficulties. On the hypothesis that there were two places of this name, the first Kadesh and its localities agrees very well with the spring of 'Ain Kedem or Kedem, lying to the E. of the highest part of Dykel Habol, towards its N. extremity, about 12 miles from Motloth Habadig, (Beer-lahai-roi, Gen. xvi. 14), and something like due S. from Khadusan (Chezil, Josh. xv. 30), which has been identified by Mr. Ewols (Williams, Holy City, vol. i. App. pp. 466—468) with the rock struck by Moses.

The second Kadesh, to which the Israelites came with a view of passing through the land of Edom, coincides better with the more easterly position of 'Ain-el-Weibeh which Dr. Robinson (Bib. Res. vol. ii. pp. 582, 610, 622) has assigned to it (comp. Kitto, Scripture Lands, p. 82). Ritter (Erkundige, vol. xiv. pp. 1057—1059), who refers to the latest discoveries in this district, does not determine whether one Kadesh would sufficiently answer all the conditions required.

KADMONITES (Raphboea, LXX.), a nation of Canaan at the time that Abraham sojourned in the land (Gen. xv. 19). The name Bene- Kedem, 'children of the East' (Judg. vi. 3; comp. Isa. xi. 14), was probably not distinct of, but collectively applied to various peoples, like the Saracens in the middle ages, and the Beduins in later times. (Ritter, Erkundige, vol. xv. pt. i. p. 138.)

KAMON (Kauar, LXX.), a town in Gilead, belonging to the tribe of Manasseh, where Jair died. (Judges, x. 5; comp. Joseph. Antiq. v. 7, § 6.) It is situated on a high point of the N. of Legio (Onomast. s. v.), and must have been another place of the same name; but the city which Polybius (v. 70) calls Cannus (Kauaros), and which was taken, with other places in Perea, by Antiochus, is identical with the town in Gilead. (Belon, Palestin. 649; Winer, s. v.; Von Raumer, Palest. p.242; Ritter, Erkundige, vol. xiv. p.1026.)

KANAH (Karav, LXX.). 1. A town in the N. district of Asher. (Josh. xix. 28.) Dr. Robinson recognises it in the large village of Kama, on the brow of the Wadyl'Asbar, near Tyre.

2. A river which divided the district of Manasseh from that of Ephraim (Josh. xvi. 8, xvii. 9, 10), probably the river which discharges itself into the sea between Caesarea and Apollonia (Arundelii; comp. Schnitzers, Ida Salats. pp. 191, 193), now the Nahar Abu-Zubaira.

KAFHARABIS (Kapharaabis), a fortified place, in Idumea, taken, with Kaphlethia, by Celsarius, A.D. 69. (Joseph. B. J. iv. 9 § 9.)

KEDESHIOTH (Bacalshaz, LXX.), a city in the tribe of Reuben (Josh. xiii. 18), which gave its name to the wilderness of Kodemoth, on the borders of the river Arnon, from whence Moses sent messengers of peace to Sihon king of Heshbon (Deut. ii. 26). Its site has not been made out. (Ritter, Erdkunde, vol. xv. pt. i. pp. 574, 1208; Winer, s. n.)

KADISHI (Kadit, LXX), or KADESH-BARNEA, a site on the SE. of Palestine with a fountain En-
KEDESHI (Kēdēṣī, LXX.). 1. A town of Naphtali, 20 M. P. from Tyre. (Euseb. Onomast. s. v. Cedes.) It was Canaanitic Chittim was slain at the conquest of Canaan (Josh. xii. 22); afterwards it belonged to the Levites, and was one of the cities of refuge. (Josh. xxvii. 31; 1 Chron. vii. 63—73), and was the birthplace of Tobias (Kōdē ṭīs Τηλαφαείας, Tobit, i. 2). In Josephus, Kōsēa (Antiq. xii. 11, § 1) or Kēsōra (Antiq. xii. 11, § 1) is given as the town where Tyre and Sarepta, during the war it appears to have been hostile to Galilee (B. J. ii. 18, § 1). The strongly fortified place in this district, called Kōśōsē or Kōsēa by the same writer (B. J. iv. 3, § 3), is probably the same as Kedes. A village on the hills opposite the marshes of Hāde-līt-Bnai, still called Kēdēs, is identified by Dr. Robinson with the ancient city. (Bibl. Rev. vol. iii. p. 355.) Kedes was visited in 1844 by the Rev. E. Smith, who has a full account of it in MS. (Biblioth. Smith. vol. ii. pp. 203.)

2. A town in the S. district of the tribe of Judah. (Josh. xv. 23.)

3. A town of Issachar, belonging to the Levites. (1 Chron. vi. 72; Reldan, Palæst. p. 668; Winer, Biblisch, Recksort. s. v.; Van Rammer, Palæst. p. 129; Ritter, Erdkunde, xv. pp. 246—252.) [E. B. J.]

KEDRON, KEDRON. [JERUSALEM.]

KEILAH (Kēlā, LXX.); Kīlā, Joseph. Antiq. xiii. 1; § 1; Kāvū, Euseb.; a city in the tribe of Judah. (Josh. xv. 44), 8 M. P. from Eleutheronitis. (Komm. Onomast. s. v.) When the city was besieged by the Philistines, David relieved it, but the thankless inhabitants would have delivered him into the hands of Saul. (1 Som. xxiii. 13—15.) It assisted in the building of the walls of Jerusalem (Neh. iii. 17—18); and, according to tradition, the prophet Hahalkak was buried here. (Sozomen, B. E. vii. 29; Nieph. B. E. xii. 48; Reinh., Palæst. p. 698; Winer, Biblisch, Recksort. s. v.; Van Rammer, Palæst. p. 207.) [E. B. J.]

KETOTTIS (Kēōttis, LXX.), a semi-barbarous tribe of Midianites, dwelling among the Amalekites. (Gen. xviii. 19; Num. xxiv. 21; 1 Som. xv. 6.) Holub (Jethro), the father-in-law of Moses, and Heber, the husband of Jael, who slew Sisera (Judg. i. 16, iv. 11), belonged to this race. The Rechabites are mentioned, with other families, as belonging to the Kenites. (1 Chron. ii. 55; Jer. xxxvii. 2; Winer, s. v.; Ritter, Erdkunde, xv. pp. 135—136; Ewald, Gesch. des Volkes Israel. vol. i. p. 357, vol. ii. p. 33.) [E. B. J.]

KENZITITES (Kēnzūtīte, LXX.), a Canaanitic tribe. (Gen. xvii. 19.) Caleb, the son of Jephunneh, is called a Kenzite (Num. xxxii. 12; Josh. xiv. 6), and Othniel, his younger brother, is also called a son of Kenaz. (Judg. i. 13, iii. 9; comp. Josh. xiv. 17; 1 Chron. iv. 13.) Another branch of this race are referred to the Edomites. (Gen. xxxvi. i; 11; Winer, s. v.; Ritter, Erdkunde, xv. p. 138; Ewald, Gesch. des Volkes Israel. vol. i. p. 358.) [E. B. J.]

KEHOTHI (Kēhōtī, LXX.). 1. A town of the tribe of Judah. (Josh. xv. 25.) It was probably the birthplace of the traitor Judas, who owed his surname (Iṣāʾamōtēr) to this place. (Comp. Winer, s. v. Judas.) Dr. Robinson (Bibl. Res. vol. ii. p. 472) has suggested that it may be represented by Ed-Keratoyn, situated at the foot of the mountain

KIKJATH. [Kikjath-Jearim.]

3. KIKJATH-BaAL [Kikjath-Jearim.]

4. KIKJATH-Huzoth, or "city of streets," a town of Moab. (Num. xxxii. 39.)

5. KIKJATH-JEREM, or "city of forests," one of the four towns of the Gibeonites (Josh. ix. 17), and not far distant from Beerthoth (fl. Birch). (Ezra, ii. 25.) At a later period the ark was brought here from Beth-Shenehes (1 Sam. vii. 2, 1), and remained there till it was removed to Jerusalem (1 Chron. xiii. 8). The place was rebuilt at the exile (Ezra, i.e.; Neh. vii. 29). Josephus (Ant. i. vi. § 4) says that it was near to Beth-Shenehes, and Eusebius and Jerome (Onomast. s. v. Beul. Carthumin.) speak of it, in their day, as a village 9 or 10 M. P. from Jerusalem, on the way to Diospolis (Lybilde). Dr. Robinson (Bibl. Rev. vol. ii. pp. 334—337) has identified it with the present Kurgel-El-Mab, on the road to Ramleh. The monks have found the Anathoth of Jeremiah (3:1; comp. Laron in loc.; Onomast. s. v.; Joseph. Ant. vii. 7, § 3), which is now represented by the modern 'Anitta at Kurgel-El-Mab, but the ecclesiastical tradition is evidently incorrect. There was formerly here a convent of the Minorites, with a Latin church. The latter remains entirely deserted, but not in ruins; and is one of the largest and most solidly constructed churches in Palestine. (Ritter, Erdkunde, xv. pp. 105—110.)

6. KIKJATH-NURER, or "city of the book." (Josh. xv. 15; Ant. ii. 11), also called Kikjath-Sannah, "city of pain," (Josh. xv. 49.) Afterwards it took the name of Debir, (Dāʾēp, LXX.), a word or "oracle." Debir was captured by Joshua (x. 38), but being afterwards retained by the Canaanites, Caleb gave his daughter Achsa to Othniel, for his
bravery in carrying it by storm (Josh. xv. 16—20). It belonged afterwards to the priests (Josh. xxi. 15; i Chron. vi. 58.) Debir is afterwards lost sight of; but from the indications already given, it appears to have been near Hebron,—but the site has not been made out. There was a second Debir in the tribe of Gad (Josh. xiii. 26.) (Von Rammer, Palest. p. 182; Winer, s. c.)

occupied by the village of La Colonna; a height a little in advance of the Tuscanian hills, and commanding the adjoining portion of the plain. It is about three miles from the 15th milestone on the Roman road, where, as we have seen, the suburb Ad Quintanae afterwards grew up, and is certainly that point which accords with Strabo's description. No ruins are visible; but the site is one well calculated for an ancient city, of small magnitude, and the discovery of the inscriptions already noticed in its immediate neighbourhood may be considered conclusive of the point. The modern village of La Colonna dates from the 11th century. (Hilgenst., Nov. ant. Christ, p. 194; Fabric. de Aquaeduct. vol. 182; Nibby, Dizionario di Roma, vol. ii. pp. 157-164.) Fioroni, in his elaborate work (Memorie della Prima e Seconda Città di Labico. 4to. Roma, 1745), has laboured to prove, but certainly without success, that Labicum was situated on the Colle dei Quadri, near Lugnano, about 5 miles beyond La Colonna. The remains there discovered and described by him render it probable that Lugnano was another ancient site, probably that of Bola [Botla]; but the distance from Rome excludes the supposition that it was that of Labicum.

The Via Labicana, which issued from the porta Esquilina at Rome together with the via Praenestina, but separated from the latter immediately afterwards, held a course nearly parallel with it as far as the station Ad Quintanae; from whence it turned round the foot of the Alban hills, and fell into the via Latina at the station Ad Pictas, where the latter road had just descended from Mt. Algilibs. (Strab. v. p. 257; ATI. Ant. pp. 304, 305.) It is strongly to be feared that the itinerary gives the name of Labicana to the continuation of the road after their junction, though the via Latina was so much the more important of the two. The course of the ancient via Labicana may be readily traced from the gates of Rome by the torre Fignaturata, Centro Celte, torre Novo, and the ostiaria di Fiumicino to the Ostiaria della Colonna, at the foot of the hill of that name. This Ostiaria is 16 miles from Rome and a mile beyond the ancient station Ad Quintanae. From this point proceeded to Solar Cerario, and soon after, quitting the line of the modern road to Valmontone, struck off direct to join the via Latina; but the exact site of the station Ad Pictas has not been determined. (Westphal, Rom. Kompagnie, pp. 78-80; Gell's Topogr. of Rome, p. 279.)

On the left of the via Labicana, about thirteen miles and a half from Rome, is a small crater-formed lake, which has often been considered as the ancient lacus Hecules: but the similar basin of the Lago di Cornelle, near Tusculum, appears to have a better claim to that celebrated name. [Regillus Lacus.

The course of the via Labicana in the immediate neighborhood of Rome was bordered, like the other highways that issued from the city, with numerous sepulchres, many of them on a large scale, and of massive construction. Of these, the one now known as the torre Fignaturata, about three miles from the Porta Maggiore, is represented by a very ancient tradition, but with no other authority, as the mausoleum of Helena, the mother of Constantine the Great. (Nibby, vol. iii. p. 243.) We learn also, that the family tomb of the emperor Diocletianus was situated on the same road, at the distance of five miles from Rome. (Spartian. Dil. Jul. 8.)

LABICUM. [LAVISCO.]

LABICUM. [LAVISCO.]

LABOTAS (Adëöras), a small river of the plain of Antioch. (Strab. xiv. p. 275.) It runs from the north, parallel to the Archelhus, and, mixing with its waters and those of the Oenopas coming from the east, in a small lake, they flow off in one stream and join the Orontes a little above Antioch. It is the western of the two rivers shown in map, vol. i. p. 115, and Pagras (Brgras) is situated on its western bank near its mouth. [G. W.]

LABRANZA (zë Adëoraz or Adëporzwa), a village in the west of Caria, about 60 stadia from the town of Mylasa, to which the village belonged, and with which it was connected by a road called the sacred. Labranda was situated in the mountains, and was celebrated for its sanctuary of Zena Stratus, to which processions went along the sacred road from Mylasa. Herodotus describes (p. 119) the sanctuary as an extensive grove of plane trees, within which a body of Carians, in their war against the Persians, retreated for safety. Strabo (xiv. p. 659) speaks of it as a temple of Zeus, which was probably the temple of Zeus Stratus, which was also annexed to Labranda, or "Labrundus." Aelian (Hist. Nat. xii. 30), who states that the temple of Labranda was 70 stadia from Mylasa, relates that a spring of clear water, within the sanctuary, contained fishes, with golden necklaces and rings. Chandler (Antiq. of Ionia, p. 4. c. 4, and Asia Minor, c. 58) was the first who stated his belief, that the ruins at Inkli, south of Kizeljih, consisting of a theatre and a ruined temple of the Ionia order, of which 16 columns, with the entablature, were then still standing, were those of ancient Labranda and of the temple of Zeus Stratus. But Chasseil Goufier, Barbé de Bocage, and Lekoe (Asia Minor, p. 232), agree in thinking that those ruins belong to Eronus rather than Labranda. Their view is supported by the fact that the ruins of the temple have nothing very ancient about them, but rather show that they belong to a structure of the Roman period. The remains of Labranda must be looked for in the hills to the north-east of Mylasa. Sir C. Fellows (Journal ii. p. 261), apparently not knowing what had been done by his predecessors, unhesitatingly speaks of the ruins at Inkli as those of Labranda, and gives an engraving of the remains of the temple under the name of the "Temple of Labranda." [L. S.]

LABRONIS PORTUS. [LITTINUM.]

LABUS or LABUTAS (Adëos or Lâbôtos), a mountain range in the N. of Parthia, mentioned by Polybius (x. 29). It seems to have a part of the greater range of M. Caurus, and is probably represented now by the Sabadh Koh, a part of the Elburz mountains. [V.]

LACANUTIS (Lakarnës), the name of a district in Cicilia Proper, above Tarsus, between the rivers Cydnus and Sarus, and containing the town of Ieropolis. (Ptol. v. 8. § 6.) [L. S.]

LACCURIS. [Oortamè.]

LACÉ. [Lustanëa.]

LACÉDAÉMON (Lakandëmin), Steph. B. s. r.; Eustath. ad. II. ii. 592), a town in the interior of Cyparis. (Engel. Kyrk. i. vol. i. p. 158.) [E. B. J.]

LACÉDAÉMON. LACÉDAÉMONI. [Lakonëa.]

LACÉBEIA. [Dottus Campus.]

LACÉTA'NI (Lakerëna), one of the small peoples of Hispantia Tarraconensis, who occupied the valleys at the S. foot of the Pyrenees. (Lace-
Liv. Dion. G. E. but the it L. and but that without a name, but simply as having been taken by M. Cato. (Plut. Cat. Maj. 11; Liv. xxi. 23, 26, 60, et seq., xxviii. 24, 26, et seq., xxviii. 34, xxxiv. 20; Dion Cass. xiv. 10; Martial, i. 49. 22.)

LACHISH (Aqehis, L.XX.; Adarion, Adesia, Joseph), a city to the south of the tribe of Judah (Josh. xv. 39), the capital of one of the petty kings or sheikhs of the Canaanites (x. 3). It was taken and destroyed by Josiah (2 Chron. iii. 13), and is joined by Adoram and Azekah (2 Chron. xi. 9) as one of the cities built, or rather fortified, by Hezekiah. It was besieged by Sennacherib in his invasion of Judaea, b.c. 713. (2 Kings, xviii. 14, 17, xix. 8.) It is placed by Eusebius and St. Jerome (Onomast. s. c.) seven miles south of Eleutheropolis, in Darana or the valley, (Josh. xv. 39.) But for this it might have been identified with Um Libis, on the left of the road between Gaza and Hebron, about five miles from the former, which is an ancient site:

"now covered with heaps of small round stones, among which are seen two or three fragments of marble columns." (Robinson, Bibl. Res. vol. ii. p. 388.) The objections to the identification are not, perhaps, so great as is represented; the title Ums, equivalent to metropolis, would seem to mark it as a place of importance; and there is no other vestige of a town in those parts that can be referred to Lachish. It is certainly south of west from Beit Jibrin (Eleutheropolis), which is near enough to satisfy the description of Eleutheropolis. It is remarkable for precise accuracy in his bearings, nor, indeed, in his distances, except in the parts with which he was familiar, and on the more frequented thoroughfares. No argument can be drawn from its juxtaposition with Adoram and Azekah, in 2 Chron. xi. 9, as it might be near enough to group with them in a list of names which, it is evident, does not pretend to geographical precision. [G. W.]

LACIACA or LACIAGUM (in the first Table it is called Laciaci), a town in the north-west of Noricam (It. Ant. pp. 235, 258). The name seems to be connected with "lacus," and thus to point to the lake district in upper Austria; hence some have identified the place with Seewalchen, or St. Georgen auf the Attersee. But Muechler (Noricum, p. 267) is probably right in identifying it with Frankenstein-markt. [L. S.]

LACIBI (Plin. iii. 1. s. 3; Ancellis, Ptol. iv. 4 § 11), a tributary town of Hispania Baetica, which Ptolemy assigns to the conventus of Gades, while Polybius places it among the cities of the Tartabli, in the north-east of Hispania. [P. S.]

LACBURGUM (Antequerapor), a German town on the south coast of the Baltic, between the rivers Chulsus, and Scuves or Suevus. It is mentioned only by Ptolemy (ii. 11. § 27), and it is certain that its site must be looked for to the west of Parnemundum, but the precise spot cannot be ascertained, whence some have identified it with Husmor, others with Rutéléum, and others again with Lausenburg. [L. S.]

LACIDAE. [Attica; p. 326, s.]

LAC'TIA. [Iaputia,]

LAC'PINUM (ro Alexivon aspov; Capo delle Colonne), a promontory on the E. coast of the Bruttian peninsula, about 6 miles S. of Crotone. It formed the southern limit of the gulf of Taranto, as the hypanian promontory did the northern one: the distance between the two is stated by Strabo, on the authority of Polybius, at 700 stadia, while Pline apparently (for the passage in its present state is obviously corrupt) reckons it at 75 Roman miles, or 600 stadia; both of which estimates are a fair approximation to the truth, the real interval being 65 geog. miles, or 650 stadia. (Strab. vi. p. 261; Plin. iii. 11. s. 15; Mel. ii. 4. § 8.) The Lachian promontory is a bold and rocky headland, forming the termination of one of the off-shoals or branches of the great range of the Aponines (Lucan, ii. 434; Plin. iii. 5. s. 6): it was crowned in antiquity, and was the promontory its modern appellation of Capo delle Colonne. It is also known by that of Capo Nova, a name evidently derived from the Greek Naös, a temple; and which seems to date from an early period, as the promontory is already designated in the Maritime Itinerary (p. 490) by the name of Naos. That itinerary reckons it 100 stadia from the cape to Crotone, and gives the same distance as 150 stadia; but both are greatly overrated. Livy correctly says that the temple (which stood at the extreme point of the promontory) was only about 6 miles from the city. (Liv. xxiv. 3.) For the history and description of this famous temple, see CROTONE.

Pliny tells us (iii. 10. s. 15) that opposite to the Lachian promontory, at a distance of 10 miles from the land, was an island called Dioscoreon (the island of the Dioscuri), and another called the island of Calypso, supposed to be the abode of Homer. Scolay also mentions the island of Calypso immediately after the Lachian promontory (§ 13, p. 5). But there is at the present day no island at all that will answer to either of those mentioned by Pliny: there is, in fact, no islet, however small, off the Lachian cape, and hence modern writers have been reduced to seek for the abode of Calypso in a small and barren rock, close to the shore, near Capo Riccio, about 12 miles S. of Lacinium. Swinburne, who visited it, remarks how little it corresponded with the idea of the Homeric Ogygia; but it is difficult to believe that so trifling a rock (which is not even marked on Zannoni's elaborate map) could have been that meant by Scolay and Pliny.* The statement of the latter concerning the island which he calls Dioscoreon is still more precise, and still more difficult to account for. On the other hand, he adds the names of three others, Tiria, Ernassa, and Melossa, which he introduces somewhat vaguely, as if he were himself not clear of their position. Their names were probably taken from some poet now lost to us. [E. H. R.]

LACIPÆA. [Lusitania.]

LACIT'PO (Aecicus, Ptol. iv. 4. § 11; Lacito, coin ap. Sestini, Med. Isp. p. 57; Minomet, Suppl.]

* The different positions that have been assigned to the island of Calypso, and the degree of probability of their claims, will be discussed under the article Ogygia.
LACONIA.

vol. i. p. 34), a tributary town of the Turkish in Hispania Baetica, near the shore of the Mediterranean, where its ruins are still seen at Abegge, near Caracafr, Pedoney placed it too far inland. (Mel. ii. 6. § 7; Pint. iii. 1. s. 3; Carter, Tours, p. 128; Ueott, vol. ii. pt. 1. p. 349.) [P. S.]

LACOMON (Ἀκαγῶν, Herod. Fr. 70; Herod. ix. 92; Steph. B. s. c.) or LACOMUS (Ἀκαγὼν, Strab. vi. p. 271, vii. p. 316), the highest summit of Mount Pindus, the Ζυγίς or ridge of Μίκρα, This is geographically the most remarkable mountain in Greece; situated in the heart of Pindus as to its breadth, and centrally also in the longitudinal chain which pervades the continent from N. to S.; it gives rise to five principal rivers, in fact to all the great streams of Northern Greece except the Spercheius; north-eastward to the Haliacmon; south-eastward to the Peneus, southward to the Achelous, south-westward to the Arachthos, and north-westward to the Aonis. (Leake, Northern Greece, vol. i. pp. 294, 411—413, vol. iv. pp. 240, 261, 276.)

LACOBIGA. [1. LUSITANIA; 2. VACCÆA.] LACONIA, LACONICA, or LACEDAEMON, the south-easterly district of Peloponnesus.

I. NAME.

Its most ancient name was Lacedaemon (Λακε- δαήμων), which is the only form found in Homer, who applies this name as well to the country, as to its capital. (II. ii. 581, iii. 239, 244, &c.) The usual name in the Greek writers was Lacoquina (Λάκωκων, sc. 79), though the form Lacedaemon still continued to be used. (Herod. vi. 58.) The Romans called the country Lacounia (Plin. xxxvi. 8. s. 53; Lacoquina, Mel. ii. 3) or Lacoquia (Plin. vii. 34. s. 39, xvi. 18. s. 30), the latter of which is the form usually employed by modern writers. Mela (L. c.) also uses Lacoquina, which is borrowed from the Greek (ἡ Λακώκως γαῖα, Hom. Hymn. in Apoll. 410.) The Ethnic names are Λαχανος, Λακεδαήμων, Lat. Lacon or Laco, Λακαῖα, Λακεδαήμων; Ion. Ἀκαγών, Λακεδαήμων, Lat. Lacon or Laco, Λαχανοι, Δαήμων; Ionia, Lacedaemon: so Ion. Λαχανός, Λακεδαήμων. The names are applied to the whole free population of Laconia, both to the Spartan citizens, and to the Peri-Cretan, spoken of below (for authorities, see Clinton, F. H. vol. ii. pp. 405, 406). They are usually derived from a mythical hero, Lacon or Lacedaemon; but some modern writers think that the root ΛΑΣ is connected with Ἀκαγὼς, Ἀδαίς, Λαχανος, etc., and was given originally to the central district from its being deeply sunk between mountains. (Currius, Peloponnesia, vol. ii. p. 309.)

II. GENERAL DESCRIPTION OF THE COUNTRY.

The natural features of Laconia are strongly marked, and exercised a powerful influence upon the habits of the people. It is a long valley, surrounded on three sides by mountains, and open only on the fourth to the sea. On the north it is bounded by the southern barrier of the Arcadian mountains, from which run in a parallel direction towards the south, the two lofty mountain ranges of Taygetus and Parnon,—the former dividing Laconia and Messenia, and terminating in the promontory of Taenarum, now C. Matapan, the southermost extremity of Greece and of Europe, the latter stretching along the eastern coast, and terminating in the promontory of Mani. The river Eurotas flows through the entire length of the valley between these mountain masses, and falls into the sea, which was called the Laconian gulf. Laconia is well described by Strabo as a country “hollow, surrounded by mountains, rugged, and difficult of access to an enemy” (ap. Strab. viii. p. 366); and the difficulty of invading it made even Kyprikanidas hesitate to enter it with his army, (Xen. Hell. v. 5. § 10.) On the northern side there are only two natural passes by which the plain of Sparta can be invaded. (See below.) On the western side the lofty masses of Taygetus form an almost insurmountable barrier; and the pass across them, which leads into the interior of Sparta, is so difficult and easy to be practicable for an army. On the eastern side the rocky character of the coast protects it from invasion by sea.

III. MOUNTAINS, RIVERS, AND PLAINS.

MOUNT TAYGETUS (Ταγετος, τὸ Ταγέτων ἱματος, the common forms; Tαγετος, Lucian, Iaravm. 19: τὸ Ταγέτηγα, Polyagen. vii. 49; Taygeta, Virg. Georg. ii. 487: the first half of this word is said by Hevelius to signify great). This mountain is the loftiest in Peloponnesus, and extends in an almost straight line for the space of 70 miles from Leonardi in Arcadia to C. Matapan. Its vast height, unbroken length, and majestic form, have been celebrated by both ancient and modern writers. Homer gives it the epithet of περιπίπτων (Od. vi. 103), and a modern traveller remarks that, “whether from its real height, from the grandeur of its outline, or the abruptness of its rise from the plain, it created in his mind a stronger impression of stupendous bulk and loftiness than any mountain he had seen in Greece, or perhaps in any other part of Europe.” (Mure, Tour in Greece, vol. ii. p. 221.) Taygetus rises to its greatest height immediately above Sparta. Its principal summit was called Ταλατής (Ταλατήν) in antiquity; it was sacred to the Sun, and horses and other victims were here sacrificed to this god. (Paus. iii. 20, § 4.) It is now called S. Elias, to whose chapel on the summit an annual pilgrimage is made in the middle of the summer. Its height has been ascertained by the French Commission to be 2409 metres, or 7902 English feet. Another summit near Taygetus was called Erotas (Ερώτας, Belvedere, Paus. l. c.), which Leake identifies with Mt. Puxinadilli, the highest summit next to S. Elias, from which it is distant 5½ geographical miles. The ancient names of none of the other heights are mentioned.

By the Byzantine writers Taygetus was called ΠΕΝΤΕΚΤΑΥΜΕ (τὸ Πεντεκταύμε), or the “Five Fingers,” on account of its various summits above the Spartan plain. (Con-tant. Porphyry. de Ath. Itagacia 39.) In the 13th century it bore the name of Μελίνια (ἡ Μελίνια τοῦ Μελίνιος, see Leake, Peloponnesiaca, p. 138). At the base of Taygetus, immediately above the Spartan plain, there is a lower ridge running parallel to the higher summits. This lower ridge consists of huge projecting masses of precipitous rocks, some of which are more than 2000 feet high, though they appear insignificant when compared with the lofty barrier of Taygetus behind them. After attaining its greatest elevation, Mt. Taygetus sinks gradually down towards the south, and sends forth a long and lofty counter-ridge towards the Eurotas, now called Lykobolitho (Λυκοβόλθος, Wolf's mountain), which bounds the Spartan plain on the south. If there contracts again, and runs down, as the backbone of a small peninsula, to the southernmost ex-
LACONIA.

The tremony of Greece. This mountainous district between the Lacanian and Messenian gulfs is now called Meani, and is inhabited by the Maniates, who always maintained their independence, while the rest of Greece was subject to the Turks; the southern part of the peninsula, as well as the promontory, have the name of Taenarium in antiquity. [Tac. Ann. 16.] Although there is no trace of any volcanic action in Mt. Taygetus, many of its chasms and the rent forms of its rocks have been produced by the numerous and violent earthquakes to which the district has been subjected. Hence Laconia is called by Homer "full of hollows" (κυψεύοντα, II. ii. 581, Od. iv. 1), and Strabo describes it as a country easily shaken by earthquakes (Strab. viii. p. 367).

In the fearful earthquake, which laid Sparta in ruins in B.C. 464, and killed more than 20,000 Lacedaemonians, huge masses of rocks were rolled down from the highest peaks of Taygetus. (Plut. Cim. 16.)

On the sides of Mt. Taygetus are forests of deep green pine, which abounded in ancient times with game and wild animals, among which Pausanias mentions wild goats, wild boars, stags, and bears. The district between the summits of Taygetus and Evoraas was called Theras (Oijias), or the hunting ground. (Paus. iii. 29, §§ 4, 5.) Here, Taygetus was one of the favourite hunting spots of the Olympian Artemis (Od. vi. 103), and the excellence of the Laconian dogs was proverbial in antiquity. (Aristot. Hist. An. vi. 20; Xen. de Ven. 10, § 1; Virg. Georg. iii. 405; Hor. Epod. vi. 5.) Modern travellers tell us that the dogs of the country still support their ancient character for ferocity and courage. (Mure, vol. ii. p. 231.)

The southern part of Mount Taygetus is rich in marble and iron. Near Croeoe there were quarries of green porphyry, which was extensively employed by the Romans. [Cic. Econ. i. 21.] There was also another kind of marble obtained from quarries more to the south, called by the Romans Taenarian marble. The whetstones of Mount Taygetus were likewise in much request. (Strab. viii. p. 367; "Τανειαρινός λίθις," Plin. xxxvi. 22. s. 43; "κότης Λακονικας εκ Ταγητο μοντε," Plin. xxxvi. 22. s. 47.) The iron found in the mountain was considered very good, and was much used in the manufacture of warlike weapons and agricultural instruments. (Athen. ii. 394; Paus. xxxvii. 1. x. 10; Plut. Anaxag. vii. Xen. Hell. iii. 3, § 37; Plin. vii. 57; Eustath. ad II. p. 298, ed. Rom.)

Mount Parnon (ο Παρνάς, Paus. ii. 38. § 7) is of an entirely different character from the opposite range of Taygetus. It does not form one uninterrupted line of mountains, but is broken up into various detached masses of less elevation, which form a striking contrast to the unbroken and majestic barrier of Taygetus. The mass to which the name of Parnon was especially applied was the range of mountains, now called Malme, forming the natural boundary between Arcadia, Laconia, and Argolis. It is 6355 feet high, and its summit is nearly equidistant from the Eurotas and the eastern coast. This mountain is continued in a general south-easterly direction, but how far southwards it continued to bear the name of Parnon is unknown. Its eastern declivities, which extend as far as the coast at a considerable elevation, contain the district now called Tarentum, a corruption of the word ἀρκετός, consisting of the inhabitants of which speak a dialect closely resembling the ancient Greek; of this an account has been given elsewhere. (Vol. I. p. 728.) On its western side Mt. Parnon sinks down more rapidly, and divides itself into separate hills, which bear the names of Barrosthenes, Olympus, Ossea, Thorax, and Melanerium; the two last are opposite Sparta, and a modern observer describes Melanerium as a rampart of the height or variety of outline, but rising gradually in a succession of gentle ridges. (Mure, vol. ii. p. 225.)

In its southern continuation, Mt. Parnon still continues of moderate height till near the commencement of the peninsula between the Myrtosan and Laconian gulfs, where it rises under the name of Mount ZaraX (Ζώραξ) to a height of 3500 feet, and runs along the eastern coast at a considerable elevation, till it reaches the promontory of Misen.

The Eukrotas (Ευκρότας) flows, as already observed, throughout the entire length of the valley between the ranges of Taygetus and Parnon. Its more ancient names were Bomykas (Βομύκας, Eum. M. z. c.) and Himeraus (Ηιμεραν, Plut. de Flum. 17): it is now called Iris and Niris in its upper and middle course, and Basilia-plotymo from the time it leaves the Spartan plain till it reaches the sea. In its course three districts may be distinguished,—the vale of the upper Eukrotas; the vale of the middle Eukrotas, or the plain of Sparta; and the lower Eukrotas, or the plain of the Spartan plain. 1. The Vale of the Upper Eukrotas. The river Eukrotas rises in the mountains which form the southern boundary of the Arcadian plains of Asca and Megalopolis. It was believed by both Pausanias and Strabo that the Alpheus and the Eukrotas had a common origin, and that, after flowing together for a short distance, they sank under ground; the Alpheus reappearing at Pegae, in the territory of Megalopolis in Arcadia, and the Eukrotas in the Blemminia in Lacoon; but for a fuller account of their statements upon this subject the reader is referred to the article ALPHEUS. All that we know for certain is that the Eukrotas is formed by the union of several copious springs rising on the southern side of the mountain above mentioned, and that it flows from a narrow glen, which gradually opens towards the SSW. On the eastern side it keeps close to the mountains, while on the western side there is a little level ground and some mountain slopes between the river and the heights of Taygetus. At the distance of little more than a mile from Sparta, the Eukrotas receives the Ooes (Οος), Polyb. ii. 65, 66; Athen. i. p. 31; Liv. xxxiv. 28), now called Kelaina, which rises in the watershed of Mt. Parnon, and flows in a general south-westerly direction: the principal tributary of the Ocean was the Gorgylus (Γοργύλος, Polyb. ii. 66), probably the river of Treron. (Leake, Peloponnesius, p. 547.) Nearly opposite the mouth of the Ocean and the Eukrotas, the mountains of Tylis press close upon the river, but again almost immediately withdraw to a greater distance than before, and the river emerges into the Spartan plain.

2. The Vale of the Middle Eukrotas. Sparta is situated at the commencement of this vale on the S. bank of the Eukrotas. Between the river and Mt. Taygetus the plain is of considerable extent. Its soil is particularly adapted for the growth of olives, which are in the present day preferred to those of Athens; and the soil of the plain is superior to the soil of every other district of Greece. (Mure, vol. ii. p. 224.)

The Soil, however, cannot be compared with that of the rich Messenian
plain, and hence Euripides, in contrasting the two
countries, describes Laconia as a poor land, in which
there is a large tract of arable, but of laborious
tilage (ap. Strab. viii. p. 366). This is in ac-
cordance with the account of Leake, who says that
the soil of the plain is in general a poor mixture of
white clay and stones, difficult to plough, and better
suited to olives than corn. (Morea, vol. i. p. 148.)
The Vale of the Eurotas possesses a general climate, being
sheltered on every side by mountains, and the
scenery is of the most beautiful description. Hence
Lacedaemon has been aptly characterised by Homer
as "a hollow pleasant valley" (κοιλή ἀπόφρησθιν, ii.
ii. 581, iii. 443, Od. iv. 1). The climate is favourable
to beauty; and the women of the Spartan plain are
at present tuller and more robust than the other
Greeks, have more colour in general, and look
healthier; which agrees also with Homer's Αργα-
τιδομον καλλιγράφων (Leake, Morea, vol. iii. p.
149). The security of the Spartan plain against
hostile attacks has been briefly alluded to. There
were only two roads practicable for an invading
army; one by the upper Eurotas, from southern
Arcadia and Sterea Euboia; the other by the
long and narrow valley of the Oenus, in which the
roads from Tegea and Argos united near Sellasia.
3. Vale of the Lower Eurotas. At the southern
extremity of the Spartan plain, the mountains again
approach so close, as to leave scarcely space for the
passage of the Eurotas. The mountains along the
western side are the long and lofty counterfork of
Mt. Taygetus, called Ληγοβίαν, which has been
already mentioned. This gorge, through which the
Eurotas issues from the vale of Sparta into the
maritime plain, is mentioned by Strabo (δ Ἑυρωτάς
—διείσθαι ἀνάλωσ τινα μακρόν, viii. p. 343). It is
about 12 miles in length. The maritime plain, which
is sometimes called the plain of Helos, from the
town of this name upon the coast, is fertile and
of some extent. In the lower part of it the Eurotas
flows through marshes and sandbanks into the La-
conian gulf.
The banks of the Eurotas and the dry parts of
its bed are overgrown with a profusion of reeds.
Hence the epithets of δομοκοτοπός and δομοκεῖς
are frequently given to it by the poets. (Theogn.
785; Eurip. Ἱππίη in Asth. 179, Helen. 207.)
The only tributary of the Eurotas, which pos-
sesses an independent valley, is the Oenus already
mentioned. The other tributaries are mere moun-
tain torrents, of which the two following names
have been preserved, both descending from Mt. Tay-
getus through the Spartan plain: Τίνα (Tina,
Tina, Paus. iii. 18. § 6; Athen. iv. p. 139), placed
by Pausanias on the road from Amyclae to Sparta,
and hence identified by Leake with the Πανδώρια
νερόχαλα (Φέλων, iii. 20. § 3), the river between
Amyclae and Phars. The Κόγκισσα (Κοκκίσσα),
mentioned in one of the ordinances of Lycurgus,
was identified by later writers with the Oenus. (Plut.
Λιπτός, 16.)
The streams Μεντσα and Στυλιας, flowing into the
sea on the western side of the Laconian gulf,
are spoken of below. [See p. 114, l.]
Before leaving the rivers of Laconia, a few words
must be said respecting an ancient Laconian bridge
still existing, which has been assigned to the re-
mote antiquity. This is the bridge of Νεροκάμπος,
built over a tributary of the Eurotas, about three
hours' ride to the south of Sparta, just where the
stream issues from one of the deepest and darkest

---

IV. History.

The political history of the country forms a
prominent part of Grecian history, and cannot be
marrered in this place at sufficient length to be of
value to the student. But as the boundaries of
Laconia differed considerably at various periods,
it is necessary to mention briefly those facts in the
history of the country which produced those changes.
It will be seen from the preceding description of
the physical features of Laconia, that the plain of
Sparta forms the very kernel and heart of the
country. Accordingly, it was at all times the seat
of the ruling class; and from it the whole country
received its appellation. This place is said to have
been originally inhabited by the Leleges, the most
ancient inhabitants of the country. According to
tradition, Lelex, the first king, was succeeded by his
son Myles, and the latter by his son Eugetas, who
collected into a channel the waters which were
spread over the plain, and gave his own name to the
river which he had thus formed. He died without
male offspring, and was succeeded by Lacedaemon,
the son of Zeus and Taygeta, who married Sparta,
the daughter of his predecessor. Lacedaemon gave to the people and the country his own name, and to the city which he founded the name of his wife. Amyca, the son of Lacedaemon, founded the city called after him Amyca. (Paus. iii. 1.) Subse-
sequently Lacedaemon was ruled by Achaean princes, and Sparta was the residence of Menelaus, the brother of Acracoonon. Menelaus was succeeded by Orestes, who married his daughter Hermione, and Orestes by his son Tisamenus, who was reign-
ing when the Dorians invaded the country under the guidance of the Heracelides. In the threefold di-
vision of Peloponnesus among the descendants of Her-
cules, Lacedaemon fell to the share of Eurythymes and Procles, the twin sons of Aristocles. Accord-
ing to the common legend, the Dorians conquered the Peloponnesus at once; but there is sufficient
evidence that they only slowly became masters of the countries in which we afterwards find them settled; and in Laconia it was some time before they obtained possession even of all the places in the plain of Sparta. According to a statement in Ephorus, the Doric conquerors divided Laconia into six districts; Sparta they kept for themselves; Amyca, conquered the towns of Amyca; Eurythymes, who betrayed the country to them; while Las,
Pharis, Aegys, and a sixth town the name of which is lost, were governed by viceroys, and were allowed to receive new citizens. (Ephor. ep. Strab. viii. p. 364; on this corrupt passage, which has been hap-
pily restored, see Miller, Dorians, vol. i. p. 110, transl.; Niebuhr, Ethnograph. vol. i. p. 56, transl.; Kramer, ad Strab. l. e.) It is probable that this division of Laconia into six provinces was not ac-
tually made till a much later period; but we have such a corrupt passage to show that after the Dorian conquest, the Dorians possessed only a small portion of Laconia. Of this the most striking proof is that the Achaeian city of Amyca, distant only 2½ miles from Sparta, maintained its independ-
ence for nearly three centuries after the Dorian conquest, for it was only subdued shortly before the First Messenian War by the Spartan king Teleclus.
The same king took Pharis and Gerontiarche, both Achaeian cities; and his son and successor, Alex-
meconon, united the towns of the Helots upon the coast near the mouth of the Eurotas. (Paus. iii. 2 §§ 6, 7.) Of the subjugation of the other Achaeian towns we have no accounts; but there can be little doubt that they were mainly owing to the military organi-
sation and martial spirit which the Spartans had acquired by the institutions of Lycurgy.
By the middle of the eighth century the Dorians of Sparta had become undistinguished masters of the whole of Laconia. They now began to extend their dominions at the expense of their neighbours. Or-
iginally Argos was the chief Dorian power in the Peloponnesus, and Sparta only the second. In ancient times the Argives possessed the whole eastern coast of Laconia down to Cape Malea, and also the island of Cythera (Herod. i. 82); and although we have no record of the time at which this part of Laconia was conquered by the Spartans, we may safely conclude that it was before the Messenian wars. The Dorians in Messenia possessed a much more fertile territory than the Spartans in Laconia, and the latter now began to cast longing eyes upon the richer fields of their neighbours. A pretext for war soon arose; and, by two long protracted and obstinate contests, usually called the First and Second Messenian wars (the first from b. c. 743 to

LAONIA.

724, and the second from b. c. 685 to 668), the Spartans conquered the whole of Messenia, expelled or reduced to the condition of Helots the inhabit-
ants, and annexed their country to Laconia. The name of Messenia now disappears from history; and, for a period of three centuries, from the close of the Second Messenian War to the restoration of the independence of Messenia by Epaminondas, the whole of the southern part of Peloponnesus, from the western to the eastern sea, bore the appellation of Lonia.

The upper parts of the valleys of the Eurotas and the Oenus, the districts of Sciritis, Delemitis, Maleaitis, and Caryatis, originally belonged to the Arcadians, but they were all conquered by the
Spartans and annexed to their territory before b. c. 600. (Grote, Hist. of Greece, vol. ii. p. 588.) They thus extended their territories on the north to what may be regarded as the natural boundaries of Laco-
nia, the mountains forming the watershed between the Eurotas and the Alpheius; but when they crossed these limits, and attempted to obtain pos-
session of the plain of Tegra, they met with the most determined opposition, and were at last obliged to be content with the recognition of their supremacy by the Tegretans, and to leave the latter in the independent enjoyment of their territory.
The history of the early struggles between the Spartans and Argives is unknown. The district on the coast between the territories of the two states, and of which the plain of Thyreatis was the most important part, inhabited by the Cynrians, a Pe-
lagian people, was a frequent object of contention be-
 tween them, and was in possession, sometimes of one, and sometimes of the other. At length, in b. c. 547, the Spartans took and possessed permanent possession of it by the celebrated battle fought by the 300 champions from either nation. [Cy-

NURIA.] The dominions of the Spartans now extended on the other side of Mount Paros, as far as the pass of Anigraen.

The population of Sparta was divided into the three classes of Spartans, Perioeci, and Helots. Of the condition of these classes a more particular account is given in the Dictionary of Antiqui-
ties; and it is only necessary to remark that the Spartans lived in Sparta itself, and were the ruling Dorian class; that the Perioeci lived in the different townships in Laconia, and, though freemen, had no share in the government, but received all their orders from the ruling class at Sparta; and that the Helots were serfs bound to the soil, who cultivated it for the benefit of the Spartan proprie-
tors, and perhaps of the Perioeci also. After the extension of the Spartan dominions by the conquest of Messenia and Cynuria, Lacedaemon was said to possess 100 townships (Strab. viii. p. 362), among which we find mentioned Anthana in the Cynrian Thyreatis, and Aulon in Messenia, near the frontiers of Elia. (Steph. B. s. rr. 'A'c'v/nv, A'k/a'nv.) According to the common story, Lycurgus divided the territory of Laconia into a number of equal lots, of which 9000 were assigned to the Spartans, and 30,000 to the Perioeci. (Plut. Lyco. 8.) Some ancient critics, however, while believing that Lycur-
gus made an equal division of the Laconian lands, supposed that the above numbers referred to the distribution of the Lacedaemonian territory after the incorporation of Messenia. And even with respect to the latter opinion, there were two different state-
mements; some maintained that 6000 lots had been
given by Lycurgus, and that 3000 were added by king Polydorus at the end of the First Messenian War; others supposed that the original number of 4500 was doubled by Polydorus. (Plut. l.c.) From these numbers attempts have been made by modern writers to calculate the population of Laconia, and the relative numbers of the Spartans and the Perioeci; but Mr. Grote has brought forward strong reasons for believing that no such division of the landed property of Laconia was ever made by Lycurgus, and that the belief of his having done so arose in the third century before the Christian era, when Actis attempted to make a fresh division of the land of Laconia. (Grote, Hist. of Greece, vol. ii. p. 521.) In any case, it is impossible to determine, as some writers have attempted, the lands which belonged respectively to the Spartans and the Perioeci. All that we know is, that, in the law proposed by Agis, the land bound by the four limits of Pellene, Sullasia, Malea, and Taygetus, was divided into 4500 lots, one for each Spartan; and that the remainder of Laconia was divided into 13,000 lots, one for each Perioecus (Plut. Agis. 8.)

With respect to the population of Laconia, we have a few isolated statements in the ancient writers. Of these the most important is that of Herodotus, who says that the citizens of Laconia in the time of the Perioeci wars was about 8000 (vii. 254). The number of the Perioeci is nowhere stated; but we know from Herodotus that there were 10,000 of them present at the battle of Plataea, 5000 heavy-armed, and 5000 light-armed (ix. 11, 29); and, as there were 5000 Spartans at this battle, that is five-eighths of the whole number of citizens, we may venture to assume as an approximate number, that the Perioeci at the battle may have been also five-eighths of their whole number, which would give 16,000 for the males of full age. After the time of the Persian wars the number of the Spartan citizens gradually but steadily declined; and Clinton is probably right in his supposition that at the time of the invasion of Laconia, in b.c. 369, the total number of Spartans did not exceed 2000; and that Isocrates, in describing the original Dorian conquerors of Laconia as only 2000, has probably adapted to the description the number of Spartans in his own time. (Isocr. Panath. p. 286, c.) About 50 years after that event, when the Spartans of Aristotle, the most important of them, was 4000 (Aristot. Pol. ii. 6; § 11), and eighteen years still later, in the reign of Agis, b.c. 244, their number was reduced to only 700 (Plut. Agis. 5.). The number of Helots was very large. At the battle of Platea there were 33,000 light-armed Helots, that is seven for every single Spartan (Herod. ix. 28.) On the population of Laconia, see Clinton, P. H. vol. ii. p. 407, seq.

From b.c. 457 to b.c. 571, the boundaries of Laconia continued to be as the same have been mentioned above. But after the seventh of her supe- smart victory by the Battle of Leuctra, the Spartans were successively stripped of the dominions they had acquired at the expense of the Messenians, Arcadian, and Argives. Epaminondas, by establishing the independent state of Messenia, confined the Spartans to the country east of Mount Taygetus; and the Arcadian city of Megalopolis, which was founded by the same statesman, encroached upon the Spartan territory in the upper vale of the Eurotas. While the Thebans were engaged in the Sacred War, the Spartans endeavored to recover some of their territory which they had thus lost; but it was still further circumscribed by Philip, the father of Alexander the Great, who deprived the Spartans of several districts, which he assigned to the Argives, Arcadians, and Messenians. (Polyb. ix. 28; Paus. iv. 28, § 2.) After the establishment of the Achaean League their influence in the Peloponnesus sank lower and lower. For a short time they showed unwonted vigour, under their king Cleomenes, whose resolution had given new life to the state. They defeated the Achaeans in several battles, and seemed to be regaining a portion at least of their former power, when they were checked in their progress by Antigonus Doson, whom the Achaeanas called in to their assistance, and were at length completely humbled by the fatal battle of Sellasia, b.c. 221. (Dict. of Biogr. art. Cleomenes.) Soon afterwards Sparta fell into the hands of a succession of usurpers; and of these Nabis, one of the most sanguinary, was compassed by T. Quinctius Flamininus, to surrender Gly- thium and the other maritime towns, which had sided with the Romans, and were now seized from the Spartan dominion and placed under the protection of the Achaean League, b.c. 195. (Strab. viii. p. 966; Thrillwall, Hist. of Greece, vol. viii. p. 926.) The town of Sellasia was confined to a small valley in which their Dorian ancestors had first settled, and, like them, were surrounded by a number of hostile places. Seven years afterwards, n.c. 188, Sparta itself was taken by Philopoemen, and annexed to the Achaean League (Plut. Phil. 16; Liv. xxxviii. 32—34); but this step was displeasing to the Romans, who viewed with apprehension the further increase of the Achaean League, and accordingly encouraged the party at Sparta opposed to the interests of the Achaeanas. But the Roman conquest of Greece, which was not brought to a close till 146, was ended in these disputes, and placed Laconia, together with the rest of Greece, under the immediate government of Rome. Whether the Lacedaemonian towns to which Flamininus had granted independence were placed again under the dominion of Sparta, is not recorded; but we know that Augustus guaranteed to them their independence, and they are henceforth mentioned under the name of Eleuthero-Lacones. Pausanias says there were originally 24 towns of the Eleuthero-Lacones, and in those 24 there were still 18, of which the names were Gythium, Teuthraion, Las, Pyrrhus, Caenepolis, Oxytus, Leuctra, Thalapnea, Alagona, Gerania, Asopus, Areia, Boea, Eijaburus Limera, Brasia, Gerontae, Marios. (Paus. iii. 21. § 7.) Augustus showed favour to the Spartans as well as to the Lacedaemonians in general: he gave to Sparta the Messenian town of Cardamyle (Paus. iii. 26. § 7); he also annexed to Laconia the Messenian town of Phanae (Paus. iv. 30. § 2), and gave to the Lacedaemonians the island of Cythera. (Dio. lx. 7.) At the end of the fourth century of the Christian era, Laconia was devastated by the Goths under Alaric, who took Sparta (Zosim. v. 6). Subsequently Slavonians settled in the country, and retained possession of it for a long time; but towards the end of the eighth century, in the reign of the empress Irene, the Byzantine court made an effort to recover their dominions in Peloponnesus, and finally succeeded in reducing to subject the Slavonians in the plains, while those in Laconia who would not submit were obliged to take refuge in the fastnesses of Mt. Taygetus. When the Franks became masters of Laconia in the 13th century, they found upon
LAONIA. 113

the site of ancient Sparta a town still called Lacedaemonia; but in A.D. 1248, William Villehardouin built a fortress on one of the rocky hills at the foot of Mt. Taygetus, about three miles from the city of Lacedaemonia. Here he took up his residence; and on this rock, called Mutilha, usually pronounced Mytili, a new town arose, which became the capital of Lacedaemon, and continued to be so till the present day; it has been somewhat restored on its ancient site by order of the present Greek government. (Finlay, "Medieval Greece," p. 230; Curtius, "Peloponnesus," vol. ii. p. 214.)

V. TOWNS.

1. In the Spartan Plain.—The three chief towns were Sparta, Amyclae, and Pharis, all situated near one another, and upon the slopes of the lower heights close to the Eurotas. Their proximity would seem to show that they did not arise at the same time. Amyclae lay only 2 miles south of Sparta, and appears to have been the chief place in the country before the Doric invasion. South of Amyclae, and on the road from this town to the sea, was Pharis, also an Achaean town in existence before the Doric conquest. Therapne may be regarded as almost a part of Sparta. [Sparta.] On the slopes of Mt. Taygetus, above the plain, there were several places. They were visited by Pausanias (iii. 20. §§ 3—7), but it is difficult to determine the road which he took. After crossing the river Phellis, beyond Amyclae, he turned to the right towards the mountain. In the plain was a sanctuary of Zeus Messapes, belonging, as we learn from Stephanus, to a village called Messapeae (Marcusturn), and beyond it, at the entrance into the mountains, the Homeric city of Breviaceae. In the mountains was a sanctuary of Demeter Eleusinias, and 15 stadia from the latter Laithakiaum, near which was Demirith, where was a fountain called Anoous. Twenty stadia from Demirith was Harpleia, which borders upon the plain. Pausanias gives no information of the direction in which he proceeded from the Eleusiniasm to Harpleia. Leake supposes that he turned to the south, and accordingly places Harpleia in the extreme south of the plain by the bridge of Xerokampa; while Curtius, on the contrary, imagines that he turned to the north, and came into the plain at Mistrati, which he therefore identifies with Harpleia. It is impossible to determine which of these views is the more correct. The antiquities and inscriptions discovered at Mistrati prove that it was the site of an ancient town, and Leake conjectures that it represents the Homeric Messene.

2. In the Vale of the Upper Eurotas.—The road from Sparta to Megalopolis follows the vale of the Eurotas. On this road Pausanias mentions first several monuments, the position of one of which, the tomb of Ladas, may still be identified. This tomb is described as distant 50 stadia from Sparta, and as situated above the road, which here passes very near to the river Eurotas. At about this distance from Sparta, Leake perceived a cavern in the rocks, with two openings, one of which appeared to have been fashioned by art, and a little beyond a semi-circular sepulchral niche: the place is called by the peasants stoico Phoironas. (Leake, "Morea," vol. iii. p. 13.) Further on was the Characoma (Napsocewa), a fortification, probably, in the narrow part of the valley; above it the town Pellana, the frontier-fortress of Sparta in the vale of the Eurotas; and 100 stadia from Pellana, Belemina. (Paus. iii. 20. §§ 8—21. § 3.) In the neighbourhood of Belemina was Argos, originally an Arcadian town, which was conquered at an early period by the Spartans, and its territory annexed to Laonia. In the upper vale of the Eurotas was the Lacedaemonian Tripolis. (Livy. xxv. 27.) Pellana was one of the three cities (Polyb. iv. 81); Belemina was unfortified another; and the third was either Argos or Carystus.

The road to Tegae and Argos ran along the vale of the Oenus. (Paus. iii. 10. §§ 6—8.) After crossing the bridge over the Eurotas, the traveller saw on his right hand Mount Thronas, upon which stood a colossal statue of Apollo Pythaeus, guarding the city of Sparta, which lay at his feet. (Comp. Herod. i. 69; Xen. Hell. vi. 5. § 27.) A little farther on in the vale of the Oenus, was Pellana, which was the bulwark of Sparta in the vale of the Oenus, as Pellana was in that of the Eurotas. Above Sallasia was a small plain, the only one in the vale of the Oenus, bounded on the east by Mt. Olympus and on the west by Mt. Evax: a small stream, called Vergylus, flowed through the western side of the plain into the Oenus. This was the site of the celebrated battle in which Cleomenes was defeated by Antigonus. [Sallasia.] In this plain the road divided into two, one leading to Argos and the other to Tegae. The road to Argos followed the Oenus; and to the west of the road, about an hour distant from the modern Arviboea, lay Carystus. From this place to the confines of the Thrysetis in Argolis, was a forest of oaks, called Scrotisae (Zocrotis), which derived its name from a temple of Zeus Scrotus, about 10 stadia west of the road. (Paus. iii. 10. § 4; Polyb. xvi. 57.) On the ridge of Mt. Paron, the boundary of Argolis and Laonia were marked by Hermae, of which, three heaps of stones, called of phvavion (the slain), may perhaps be the remains. (Boeß, "Reisen im Peloponnes," p. 173.) There was also a town Oenus, from which the river derived its name.

The road to Tegae, which is the same as the present road from Sparta to Tripolich, after leaving the plain of Pelasgos, passed by a high and mountainous district, called Scrotisae in antiquity. The territory of Laonia extended beyond the highest ridge of the mountain; and the chief source of the Alpheus, called Sarontpotamus, formed the boundary between Laonia and the Tegetis. Before reaching the Arcadian frontier, the road went through a narrow and rugged pass, now called Alithena. The two towns in Scrotis were Scrotus and Oenus, called Into by Xenophon.

3. In the southern part of Laonia.—On the road from Sparta to Gythium, the chief port of the country, Pausanias (iii. 21. § 4) first mentions Crokae, distant about 135 stadia from Sparta, and celebrated for its quarries. Gythium was 30 stadia beyond Croeae. Above Gythium, in the interior, was Argiae, to which a road also led from Croeae. Opposite Gythium was the island Cnaxar. After giving an account of Gythium, Pausanias divides the rest of Laonia, for the purposes of his description, into what lies left and what lies right of Gythium (ἐν ἐπιστήμω Γεύθουν, ii. 22. § 3—τὰ ἐν δὲ Γεύθου, iii. 24. § 6).

Following the course of Pausanias, we will first mention the towns to the left or east of Gythium. Thirty stadia above Gythium was Trinoctis, situated upon a promontory, which formed the NE. extremity of the peninsula terminating in Cape

Digitized by Microsoft®
Laconia.

Eighty stadia beyond Trinacius was Helos, also upon the coast. The road from Sparta to Helos followed the Euroutas the greater part of the way; and Leake noticed in several parts of the rock runs of chariot wheels, evidently the vestiges of the ancient carriage-road. (Leake, Morea, vol. i. p. 194.) Thirty stadia south of Helos on the coast was Arcadia; and sixty stadia south of Arcadia, Asopus, the later name of Cyparissia. Between Arcadia and Asopus, Ptolomy mentions a town, Ilianima (Bauca, iii. 16. § 9), the name of which occurs in an inscription in the form of Baucilopu (Bauca, iii. 16. § 9). The former of the Boeotians, and the latter of the Dorians; the former on the Boeotian Sinus, and the other on the eastern sea north of Cape Malea. Between Boeotia and Malea was Nymphaeum, a fountain near the sea, in which was a fountain of sweet water. (Pausanias, iii. 23. § 2) Hence was named Petrus, and the fountain of Nymphaeum was noticed by Pausanias as a monitor of the ancient civilization. (Strab. viii. p. 368.) Still further south was Malea, the southernmost point in Greece with the exception of Taenarum, was much dreaded by the ancient sailors on account of the winds and waves of the two seas, which here meet together. Hence arose the proverb, "after doubling Malea, forget your country." (Strab. viii. p. 378.)

And the epithet of Statius, "inboediatum Malea empirium. (Steph. B. s. r. Aciloeus.)" The name of this river runs, Aesopus, Atebenos, etc. (Paus. iii. 12. § 8.) South of Malea was the island Cythera. Following the eastern coast we first come to Side, already mentioned; then to Epidaurus, 100 stadia from Malea; next to Epidauros Limera, and successively to Zarkas, Cyphanta, and Prasiae or Brasiae, of which the latter is the nearest to the confines of Argolis. The numbers in Panasania, giving the distances of these places from one another, are corrupt; see Cyphanta. In the interior, between the Euros and the south-western slopes of Parion, Panasania mentions Gerontha, situated 120 stadia north of Arcadia; Makri, 100 stadia east of Gerontha; Gylipia, also called Gylopia, north of Marcus; and Selinus, 20 stadia from Gerontha. Returning now to Gythium, we proceed to enumerate the towns to the right, that is, west and south of the promontory; thus according to Panasania (vi. 24. § 6, seq.); in other words, the towns in the peninsula through which Mount Taygetus runs. Forty stadia south of Gythium was Las upon the coast, which some writers call Astron. Thirty stadia from a hill near Las was Herpet in the interior; and a little below Las was the river Smessus (Smessus), rising in Mt. Taygetus, which Panasania praises for the excellence of its water, now the river of Passare. Immediately south of this river was the temple of Artemis Dictyona, on a promontory now called Agydurus; and in the same neighbourhood was a village called by Panasania Armeus or Armeu, where Las, the founder of the city of Las, was said to have been buried. South of the promontory of Agydurus is a stream, now called the river of Dikkore, the Scyllas (Scyllas) of Panasania (vi. 25. § 1), beyond which are an altar and temple of Zeus: there are still some ancient remains on the right side of the river near its mouth. Further south is the peninsula of Sketar, inclosing a spot of the same name, which is conjectured to be the Sinus Aegeolci of Pliny (iv. 5. s. 8); if so, we must place here Aeolia, which is mentioned incidentally by Panasania (iv. 17. § 1) as a town of Laconia. Inland 40 stadia from this river Scyllas lay Pyrrhichus. North of Pyrrhichus on the coast was Tethithrone. Between Tenithrone and the Taenarum peninsula no town is mentioned, but at a place on the coast called Kikoria there are considerable remains of two temples. The Taenarum peninsula is connected with that of Taygetus by an isthmus half a mile across, and contains two harbours, named Phlmathus and Achilleus Portus. This isthmus is C. Matopion. (Steph. B. s. r. Aciloeus.)}

Laconia.

(On the geography of Laconia, see Leake, Morea and Peloponnesia; Boblave, Researches, etc.; Ross, Reisen im Peloponnes und Wanderungen in Griechland; Curtius, Peloponnes.)

LACONICUS SICURS. [Laconia.]

Laconia. [Lacchini.]

LACINGLI, mentioned by Capitolineus (M. Antonia, c. 22), by Dion Cassius (lxxxii. 12), and by Petrus Patriicus (Excerpt. Legat. p. 124, ed. Beza), along with the Aestrig and Bern. They were either Dacian or on the Dacian frontier, and
are known only from having, in the Marcomannic war, opposed a body of invading Astings, and, having so done, contracted an alliance with Rome. [R. G. L.]

LACTARIUS MONS (Фαλάκτος ορας: Monte S. Angelo), was the name given by the Romans to a mountain in the neighbourhood of Stabiae in Campania. It was derived from the circumstance that the mountain abounded in excellent pastures, which were famous for the quality of the milk they produced; on which account the mountain was resorted to by invalids, especially in cases of consumption, for which a milk diet was considered particularly beneficial. (Cassiod. Ep. xi. 10; Galen, de Meth. Med. v. 12.) It was at the foot of this mountain that Narses obtained a great victory over the Goti under Tezio in A. D. 553, in which the Gothic king was slain. (Procop. B. G. iv. 53, 36.) The description of the Mons Lactarius, and its position with regard to Stabiae, leave no doubt that it was a part of the mountain range which branches off from the Apennines near Notera (Nuceria), and separates the Bay of Naples from that of Paestum. The highest point of this range, the Monte S. Angelo, attains a height of above 5000 feet; the whole range is a beautiful and presentable one, and is as abundant as a pastoral region. The name of Lacteria, still borne by a town on the slope of the mountain side, a little above Stabiae, is evidently a relic of the ancient name. [E. H. B.]

LACTORA, in Gallia Aquitania, is placed by the Antonine Itin. on the road between Agunum (Agien) and Climberium (Auch), and 15 Gallic leagues from each. The distance and name correspond to the position and name of Lactorae. Several Roman inscriptions have been discovered with the name Lactorae, and Civitas Lactoriensis; but the place is not mentioned by any extant writer. [G. L.]

Lacus Felicius, a place in Noricum, on the south of the Danube, 25 miles west of Arelape, and 20 miles east of Lanacrum (It. Ant. pp. 246, 248). According to the No. Imper., where it is called Laucelificus, it was the head-quarters of Norican horse archers. It is now generally identified with the town of Neudinnerauf, on the Danube. [L. S.]

LACYDON, [Massilia.]

LADE (Λάδη), the largest of a group of small islands in the Sinus Laticicus, close by Miletus, and opposite the mouth of the Maeander. It was a protection to the harbours of Miletus, but in Strabo's time it was one of the haunts and strongholds of pirates. Lade is celebrated in history for the naval defeat sustained there by the Ionians against the Persians in B. C. 494. (Heracl. vi. 8; Thucyd. viii. 17, 24; Strab. xiv. p. 635; Paus. i. 33, § 6; Steph. B. s. r.; Plin. v. 37.) That the island was not quite uninhabited, is clear from Strabo, and from the fact of Stephanus B. mentioning the ethnic form of the name, Λαδιος. [L. S.]

Ladicus, a mountain of Galliceria, the name of which occurs in ancient inscriptions, and is still preserved in that of the Codro de Ladicus, near Monte Curolo on the Sth. (Florez, Esp. S. vol. xv. p. 63; Uberti, voi. ii. pt. 1. p. 275.) [P. S.]

Ladoceia (τα Λαδοκεία), a place in Arcadia, in the district Menaelia, and, after the building of Megalopolis, a suburb of that city, was situated upon the road from the latter to Pallantium and Tegea. Here a battle was fought between the Boeotian forces and the Arcadians, B. C. 425, and between the Achaeans and Cretans, B. C. 226. Thucydides calls it Lacedaemon (Λαδεδαμός) in Orestias. (Paus. viii. 44.

LADEERATA. 115

§ 1; Thuc. iv. 134; Pol. ii. 54, 55.) [Orestas-

LADON (Λάδων). 1. A river of Elis, flowing into the Peneus. [Elis, p. 817, a.]

2. A river of Arcadia, flowing into the Alpheus. [Alpheius.

LAEBAE (Λαεβάς), a Paeonian tribe in Macedo-

nia, included within the dominion of Sitalces, probably situate to the E. of the Strymon. (Thuc. ii. 96.) [E. B. J.]

LAETAETI'N or LEET'ANI (Λαετατίνος, Pol. ii. 6. §§ 18, 74; Λετατίνος, Strab. iii. p. 159), a people on the N. part of the E. coast of Hispania Tarraconensis, above the Roscian. Strabo merely speaks vaguely of the sea-coast between the Ebro and the Pyrenées as belonging to "the Leziani and the Lartaliones, and other such tribes" (Σαι τοιyards και Δεσταλαντών και άλλων τωνάτων), as far as Emporium, while Polieny points them about Barcino (Barcelona) and the river Rubrice-

utus (Llobregat); whereas it appears, that they extended from below the Rubriceatus on the SW., up to the borders of the Indigetes, upon the bay of Emporiae, on the NE. They are undoubtedly the same people as the LAETANI of Pliney (ii. s. 4; comp. Inschr. ap. Ptolemy cd. xxxiv. 56; iv. xxi. p. 31; Marca, Hisp. ii. 15, p. 159), with a small river of the same name (Besoia; Mela, ii. 6.); ILERU or Eluro, a city of the convents of Tarres, with the civitas Romana (Mela, ii. 6.); Pol. iii. s. 4; Άλεωρορος, Pol. ii. 6. § 19, where the vulgar reading is Άλεωρος; prob. Motorea, Marca, Hisp. ii. 15, p. 159; Florez, Esp. S. vol. xxix. p. 34; BLANDA (Bárba), Pol. l. c.; (Banes), on a height, to the NE. of the mouth of the little river Lartum (Tordera: Pol. iii. 3. s. 4); between Baetulo and Huru Polieny places them the Lunarium riv. (Λουσα-

νουρα ρούπορο; probably the headland marked by the Torre de Mongat). (2.) On the high road from Tarrae to Narbo Martius in Gaul (Itin. Ant. p. 398); FINES, 20 M. P. W. of Barcino (near Martorell, on the right bank of the Llobregat), marking doubtless the borders of the Leziani and the Costetan; then BARCINO; next PRATORIUM, 17 M. P. (near Hostalrich or La Roca, where are great ruins; Marca, Hisp. ii. 20); Seyes or SECEDRAME, 15 M. P. (prov. S. Pere de Serdani or Son Solani); AQUAE VOCONIAR, 15 M. P. (Calbas de Malavella). (3.) Other inland towns; RUHMI-

CATA (Ptoł.); EGARA, a municipium, whose site is unknown (Inscr. ep. Muratori, p. 1106, no 7, p. 1107, no 1); AQUAE CALDAE, a civitas ati-

LAEDERATA (Λαεδέρατα or Λαετεράτα, Procop. de Aed. iv. 6), a town in the north of Moesia, on the Danube, and a few miles east of Viminacium. In the Notitia its name is Laedemata; it must have been near the modern Rama. [L. S.]

LAGUSA.

LAEILIA. (Aesopus, Poll. ii. 4, § 19 : Arion, or El Hierro, an inland city of the Tartessi, in the W. of Hispania Baetica, not far from Itaca, one of the Spanish cities of which we have several coins, belonging to the period of its independence, as well as to the early Roman empire. Their types are, an armed horseman, at full speed, with ears of corn, boughs, and palm-trees. (Florez, Exp. S. vol. xii. pp. 256—235 ; Med. tol. ii. p. 489, vol. iii. p. 92 ; Minonnet, vol. i. p. 19, Suppl. vol. i. p. 35 ; Sosini, Med. pp. 20, 65; Num. Goth, Eckhel, vol. i. p. 25 ; Uberti, vol. ii. p. 1. 373.)

LAELPA (Lepe, near Agramonte), a city of the Tartessi, on the coast of Cartica, a little E. of the mouth of the Anas (Ginabalcinicus) : Mela, iii. 1 ; comp. Plin. iii. 1. 3, where, however, the reading is doubtful ; Bell. Anti. 57, where Leppom should probably be substituted for the MS. readings of Leptin or Leptum ; Flores, Exp. S. vol. x. p. 45, xii. pp. 36, 57 ; Uberti, vol. ii. pt. 1. p. 339. This place must not be confounded with Ptolemy's Laapia, which is only a various reading for Iliupa.

LAERON FL. [Gallaecia.]

LAESTRYGONES (Nestorvvyter), a fabulous people of giants, who are mentioned by Homer in the Odyssey (x. 80—132), and described as governed by a king named Lamus. They were a pastoral people, but had a city (Akra) which Homer calls Aestrygonia, with a port, and a fountain named Artacia. It may well be doubted whether Homer meant to assign any definite locality to this people, any more than to the Cyclopes ; but later Greek writers did not fail to fix the place of their abode, though opinions were much divided on the subject. The general tradition, as we learn from Thucydides (vi. 2), placed them in Sicily, though that historian wisely declares his total ignorance of everything concerning them. Other writers were less cautious ; some fixed their abodes in the W. or NW. part of the island, in the country subsequently occupied by the Elyni (Lycurg. Alex. 956) ; but the more prevalent opinion, at least in later times, seems to have been that they dwelt in the neighbourhood of Lentini, whence the name of Laestrygoni Capri was given to the fertile plain in the neighbourhood of that city. (Strab. 1. p. 20 ; Plin. iii. s. 14 ; Tezze, and Ann. Anti. 956, 967.) Sicili. vol. i. 956, 967. A wholly different tradition, with the origin of which we are acquainted, but which is very generally adopted by Roman writers, represented Formiae on the coast of Italy as the abode of the Laestrygones, and the city of their king Lamus. The noble family of the Lamii, in the days of Augustus, even pretended to derive their descent from the mythical king of that city. (Cic. ad Att. ii. 13; Hor. Carm. iii. 1. 90 ; Plin. iii. 5. 9 ; Sil. Ital. vii. 410.) [E.H.B.]

LAEVI or LAI (Asus), a tribe of Casilpine Gauls, which dwelt near the sources of the river Padus. This is the statement of Polybius (ii. 17), who associates them with the Liberi (Aecleken), and says that the two tribes occupied the part of the plains of Casilpine Gaul nearest to the sources of the Pads, and next to them came the Isurians. He distinctly reckons them among the Gaulish tribes who had crossed the Alps and settled in the plains of Northern Italy : on the other hand, both Livy and Pliny call them Ligerians. (Livy v. 35 ; Plin. iii. 17. s. 21.)

The reading in the passage of Livy is, indeed, very uncertain; but he would appear to agree with Pliny in placing them in the neighbourhood of Ticinum.

PLiny even ascribes the foundation of that city to the Laevi, in conjunction with the Marici, a name otherwise wholly unknown, but apparently also a Ligurian tribe. There can be no doubt that in this part of Italy tribes of Gaulish and Ligurian origin were much intermixed, and probably the latter were in many cases confused with the Gauls. [Liguria.]

LAGANIA (Aegavia), a village of the Tectosaguni Gauls, 24 miles to the east of Julissippus. It is not mentioned by any of the classical writers, but it must afterwards have increased in importance, for during the Christian period, it was the see of a bishop, and took the name of Anastasiosiopolis (Concil. Chak. p. 662, and p. 95, where the name is misspelt Aegavia ; Itin. Ant. p. 142, where the name is Laganosia ; B. Hieros. p. 574, where we read Aganapia). There is little doubt that the Lagania in Ptolemy (v. 1. § 14) and the Rhegynopolis of Hierothes (p. 697) are the same as Lagania (consp. Theod. Soc. c. 92.) Kiepert, in his map of Asia Minor, identifies it with Beg Esmar. [L. S.]

LAGANIA (Aegavia : Eih. Aegavae, Laganias), a small town of Lucania, situated between Thurii and the river Sylvia; which, according to the commonly received legend, was founded by a colony of Phocians under the command of Epeius, the architect of the wooden horse. (Strab. v. p. 263 ; Ios. Ant. 955, 957 ; Dчитыва, ad loc.) Strabo, the only geographical writer who mentions it, calls it only a fortress (φωτεινη), and it was probably never a place of any importance, though deriving some celebrity in after times from the excellence of its wine, which was esteemed one of the best in Italy. (Strab. L. c. ; Plin. xiv. 6. s. 8.) The statement of Strabo, above quoted, is the only clue to its position, which cannot therefore be determined with any certainty. Chiricus placed it at Nocera, about 10 miles from the sea, and this conjecture (for it is nothing more) has been adopted by Romanielli. The wines of this neighbourhood are said still to preserve their ancient reputation. (Ocliier. Ital. p. 1272 ; Romanielli, vol. i. p. 248.) [E. H. B.]

LAGECUM. [Legicium.]

LAGINA (라 아테아), a place in the territory of Stratonicia, in Caria, contained a most splendid temple of Hecate, at which every year great festivals were celebrated. (Cic. Att. 956.) It was 66 miles from the town of Tacitus (Ann. iii. 62), when speaking of the worship of Trivia among the Stratonicians, evidently means Hecate. The name of Lagina is still preserved in the village of Lakena, not far from the sources of the Arachova. Laginia, mentioned by Steph. B. as a φωτεινη Καπλας, seems to be the same as the Lagyna of Strabo. [L. S.]

LAGNI (Λαγνη), a town of the Arvenes, in Hispaina Tarraconensis, mentioned only by Deissius Siculus. (Itin. Ant. vol. ii. p. 596.) [P. S.]

LAGOS, a town in Phrygia, on the north-east of Mardopoli. (Liv. xxxviii. 15.) The town is mentioned only by Livy in his account of the progress of the Roman consul Cn. Manlius in Asia Minor, when Lages was found deserted by its inhabitants, but well provided with stores of every description, where we may infer that it was a town of some consequence. [L. S.]

LAGUS'A (Λαγοσ'α, Λαγωσ'α), an island in the Aegean sea, the name of which occurs in Strabo between those of Sicinus and Phloeogaurus. Hence it is probably the same as Kardiotissa, a rocky islet between the two latter islands. But Kiepert,
in his map, identifies it with Polysegus. (Strab. x. p. 484; Steph. B. s. v.; Eusath. ad P. ii. 625, P. 306.)

LAGUSA (.Acquayosa), one of a group of small islands in the bay of Telmessus in Lyca, 3 stadia from Telmessus, and 80 from Cissaeas. (Plin. v. 33; Steph. B. s. v.; Stadiasmus Mar. Mag. § 226, fdl.) This island is generally considered to be the same as the modern Panagia di Cordialisa. [L.S.]

LAGUSSAE, a group of small islands off the coast of Troy, to the north of Tenedos (Plin. v. 38; comp. Eusath. ad Hom. II. ii. p. 306). Their modern name is Iosschos. [L.S.]

LAISIS, the modern name of Dan. [D.A.]

LALASIS (Isaeis, Ptol. v. 8. § 6, where some MSS. have Delaisor), a district in Cilicia, extending along Mount Taurus, above the district called Seluitis. Pliny (v. 23) also mentions a town Lalas in Issarion, and this town according to some has been the capital of the district Lalasis, which may have extended to the north of Mount Taurus. It is probable, moreover, that the Issarian town of La-

LAMBER or LAMBRUS, a river of Northern Italy, in Gallia Transpadana, noticed by Pline among the affluents of the Padus which join that river on its left or northern bank. (Plin. iii. 19. s. 23.) It is still called the Lambro, and rises in a small lake called the Lake of Pliense (the Vulcis Locus of Pline), from whence it flows within 3 miles of Milan, and enters the Po about midway between the Ticino and the Adda. Saloonius Apollinaris con-

LAMBESE (Lim. Ant. pp. 32, 33, 34, 40; Tab. Peut.; Addasia, Ptol. iv. 3. § 29; Lamadi, Inscri.; Lambeis, Augustin. ad. Donat. vi. 13; Lambeisiana Colonia, Cyprian. Epist. 53; Lemb or Tazza, large Ra.), one of the most important cities in the kingdom of Numidia, between the Massyli and the Amissyli. It lay near the confines of Mauretania, at the W. foot of M. Aurisius (Jetel Aures), 102 M. P. from Styfii, 118 from Theveste, and 84 from Cheta. It was the station of an entire legion, the Legio III. Augusta. (Aegeois tripi sectati, Ptol. I. c. & Inscri.). Its importance is attested by its magnificent ruins, among which are seen the re-

LAMBERTIACA or LAMBRICA, a town of the Calaisi Lecyezi in Galli Lecyezi, on the coast of the rivers Leperon and Ulla, not far from El-

LAMETINI (Aeountoi), a city of Bruttrim, mentioned only by Stephanes of Byzantium (s. v.), on the authority of Hecataeus, who added that there was a river also of the name of Lemetus (Aeountoi). We find this again alluded to by Lycophron. (Ahet. 1085.) There can be no doubt that this is the stream still called Lamato, which flows into the Gulf of Sta. Enfemia: and this is confirmed by the authority of Aristotle, who gives to that gulf, other-

LAMIA (Aeomia; Eth. Aeомosa; Zitoni), a town of the Malianse, though afterwards separated from them, situated in the district Pithiotis in Thessaly. Strabo describes Lania as situated above the plain which lies at the foot of the Maliaus, at the distance of 30 stadia from the Spercheus, and 50 stadia from the sea (ix. pp. 433, 435). Livy says that it was placed on a height distant seven miles from Heracleum, of which it commanded the prospect (xxxvi. 25), and on the route which led from Thermopylae through the passes of Pithiotis to Thamaici (xxxii. 4). Strabo further relates that it was subject to earthquakes (p. 60). Lania is celebrated in history on account of the war which the Athenians and the confederate Greeks carried on against Antipater in B.C. 323. Antipater was at first unsuccessful, and took refuge in Lania where he was besieged for some time by the allies. From this circumstance this contest is usually called
CLOTICUS, a district on the eastern coast of Cilicia Aspara, between the rivers Calycadnus and Lampus. Its capital bore the name of Lampsacus, from which that of the district was derived. (Ptol. v. 8. § 6; comp. LAMPSACUS.) [L. S.]

LAMPSACUS. [LAMPSACUS (Lampsakos), a district on the eastern coast of Cilicia Aspara, between the rivers Calycadnus and Lampus. Its capital bore the name of Lampsacus, from which that of the district was derived. (Ptol. v. 8. § 6; comp. LAMPSACUS.) [L. S.]

LAMPAS (Λαμπάς), a harbour on the E. coast of the Tauric Chersonese, 800 stadi a from Theodosia, and 220 stadi a from Cria-Metopon. (Arr. Perip. p. 20; Anon. Perip. p. 6.) Arrian uses the two names Lampas and Halmitus as if they belonged to the same place, but the anonymous Coast-describer speaks of Lampos acoe. Halmitus probably took its name from being a place for salting fish. The name is preserved in the places now called Blouk-Lambet and Koutchouk-Lambat, Tartar villages at the end of a bay defended by the promontory of Plaka, near which ancient ruins have been found. (Dulcis de Montperoux, L'egue au tour de Cocagne, vol. v. p. 713; vol. vi. p. 460; Remelli, Compl. GeoL, vol. ii. p. 340.) [E. B. J.]

LAMPATAE or LAMPAGAE (Λαμπαταί or Λαμπαγαί), Ptol. vii. i. § 42), a small tribe who lived among the offshoots of the Imas, in the NW. part of Inda, about the sources of the Choes (now Kameh), which is itself a tributary of the Kibdi river. [V.]

LAMPE (Λάμπη), a town in Crete, also called Lampa. [LAMPA.] Besides this town Stephanus B. (s. r.) mentions two other towns of this name, otherwise unknown, one in Arcadia and the other in Asia Minor.

LAMPHELIA. [ERYMANTHIUS.]

LAMPEIA. [CLAMPETIA.]

LAMPONEIA or LAMPONIUM (Λαμπόνεια, Λαμπόνιον), an Aeolian town in the south-west of modern Halmitis, which is mentioned only by the earlier writers. (Hier. v. 26; Strab. xiii. p. 610; Steph. B. s. r.) [L. S.]

LAMPSARA. [ATTICA. p. 351. a.]

LAMPSACUS (Λαμψακος: Eth. Λαμψακρός), sometimes also called Lampsacum (Cic. in Terr. i. 24; Pomp. Mela, i. 19), was one of the most celebrated Greek settlements in Mysia on the Hellespont. It was known to have existed under the name of Pithecus in early times before it received its colonists from the Ionian cities of Phocaea and Miletus. (Strab. xiii. p. 589; Steph. B. s. r.; Plin. v. 40; Histo. ii. 829; Plut. de Virt. Mul. 18.) It was situated, opposite to Callipolis, in the Thracian Chersonese, and possessed an excellent harbour. Herodotus (vi. 37) relates that the elder Miltiades, who was settled in the Thracian Chersonese, made war upon the Lampsaceni, but that they took him by surprise, and made him their prisoner. Being threatened, however, by Ctesias, who supported Miltiades, they set him free. During the Ionian revolt, the town fell into the hands of the Persians. (Hier. v. 117.)

The territory about Lampsacus produced excellent wine, whence the king of Persia bestowed upon Themistocles, that he might thence provide himself with wine. (Thucyd. i. 135; Athen. i. p. 29; Diod. xi. 57; Plut. Them. 29; Nepos, Them. 10; Arnal, Mare, xxi. 8.) But even after the destruction of the supremacy of Persia, it continued to be governed by a native prince or tyrant, of the name of Hippocrates. His son Aeantides married Archelaus, a daughter of Phisistratus, whose tomb, commemorative of her virtues, was seen there in the time of Thurydides (vi. 59). The attempt of

COIN OF LAMIA.

LAMIA (Lamia), a town in Thessaly, between Mount Pelion and Mount Olympus, a town of the Carpathians (according to Plutarch, though some suppose it to have belonged rather to the Oscan), in Hispania Tarraconensis. It was a stipendary town of the conventus of New Caesarea, and stood on the artillery road from Emerita to Caesar Augusta. The river Asas (Gaulana) rose in the lands of Lamia, 7 M. P. E. of the town. (Plin. xxxii. i. 2, 3, 5, 4; Imit. Ant. pp. 445, 446; Ptol. ii. 6. § 57; Inscr. ap. Plin. Epi. i. 38; vol. vii. p. 32, 122, vol. viii. p. 140; Ukert, vol. ii. p. 1, 41; in Plin. xxxvi. 21, s. 47, where Pliny speaks of the whetstones found in the Hither Spain as Cotes Flamianitae, Ukert supposes we ought to read Cotes Flamianitae.) [P.S.]
ENAGUS, to seize the citadel, and thereby to make himself tyrant, seems to belong to the same period. (Ath. v. 308.) After the battle of Cynoscephalae in 147 B.C., Lampacus joined Athens, but revolted after the failure of the great Athenian expedition to Sicily; being, however, unfortified, it was easily re-conquered by a fleet under Stremichides. (Thuc. vii. 62.) After the time of Alexander the Great, the Lampacesi had to defend their city against the attacks of Antiochus of Syria; they voted a crown of gold to the Romans, and were received by them as allies. (Liv. xxxii. 38, xxxiv. 42, viii. 6; Polyb. xxi. 10.) In the time of Strabo, Lampacus was still a flourishing city. It was the birthplace of many distinguished authors and philosophers, such as Charon the historian, Anaximenes the orator, and Metrodorus the disciple of Epicurus, who himself resided there for many years, and reckoned some of its citizens among his intimate friends. (Strab. l. c.; Diog. Laërt. x. 11.) Lampacus possessed a fine estate by Lyssippus, representing a prostrate lion, but it was removed by Agrippa to Rome to adorn the Campus Martius. (Strab. l. c.) Lampacus, as is well known, was the chief seat of the obscure worship of Priapus, who was believed to have been born there of Aphrodite. (Athens. p. 50; Paus. i. 31, § 2; Apollon. Rhod. ii. 985; Ov. Fast. vi. 345; Virg. Georg. iv. 110.) From this circumstance the whole district was believed to have derived the name of Abarnis or Aparnis (Ἀβαρνίς), because Aphrodite denied that she had given birth to him. (Theophr. Hist. Plant. i. 6, 13.) The ancient name of the district had been Bebrycia, probably from the Thracian Bebryces, who had settled there. (Comp. Hecat. Fragment. 207; Charon, Fragment. 115, 119; Xenoph. Anab. vii. 8, § 1; Polyb. v. 77; Plin. iv. 18, v. 40; Pol. v. 2, § 2; Steph. B. s. v.) The name of Lampaei is still attached to a small town, near which Lampacus probably stood, as Lampaei itself contains no remains of antiquity. There are gold and silver coins of Lampaei in different collections; the imperial coins have been traced from Augustus to Gallienus. (Sextini, Mon. Vet. p. 73.)

LAMPSUS, a town of Histiaiotis in Thessaly, on the borders of Aetolia. (Liv. xxxii. 14.)

LAMPTRA. [Attica, p. 331, a.]

LAMUS (Λάμος), a village of Cilicia, at the mouth of the river Lamus, from which the whole district derived the name of Lamus. The river is mentioned by Stephanus B. (from Alexander Polyhistor), and both the river and the village by Strabo (xiv. p. 671) and Ptolemy (v. 8, §§ 4, 6). The river, which is otherwise of no importance, formed the boundary between Cilicia Aspera and Cilicia Propria, and still bears the name of Lamus or Lamone. About the village of Lamus no particulars are known. (Comp. Nonnus, Dionys. xxiv. 50; Hieroc. p. 709.)

LAMPTRA, a town of Histiaiotis in Thessaly, on the borders of Aetolia. (Liv. xxxii. 14.)

LAMUS (Λάμος), a village of Cilicia, at the mouth of the river Lamus, from which the whole district derived the name of Lamus. The river is mentioned by Stephanus B. (from Alexander Polyhistor), and both the river and the village by Strabo (xiv. p. 671) and Ptolemy (v. 8, §§ 4, 6). The river, which is otherwise of no importance, formed the boundary between Cilicia Aspera and Cilicia Propria, and still bears the name of Lamus or Lamone. About the village of Lamus no particulars are known. (Comp. Nonnus, Dionys. xxiv. 50; Hieroc. p. 709.)

[Lat.]

LAMPSUS. [See note.]

LAMPSUS, or Lampion, a great harbour near Cape Heracleum, on the coast of Pontus, not far from Themiscyra. (Anonymous. Peripl. Pont. Eux. p. 10.)

LANCIE (Hist. Ant. p. 395), or LANCIE (Ἄλατσια, Dion. Cass. liii. 23, 29; Flor. iv. 12; Oros. vi. 21), or LANCIEATUM (Ἄλατσιατος, Ptol. ii. 6, § 29), the chief city of the LANCIEATI (Ἄλατσιατος, Ptol. l. c.) or LANCIEENS (Plin. iii. 3, s. 4), a tribe of the Astures, in Hispania Tarraconensis. It was strongly fortified, and was the most important city of that region, even more so than LEGIO VII. GERM. at least before the settlement of the latter by the Romans, by whom Lancia was destroyed, though it was again restored. It lay on the high road from Casarantua to Legio VII. (Leom.), only 9 M. P. from the latter, where its name is still to be traced in that of Solancio or Sullancia. (Flores, Esp. S. vol. xvi. p. 16; Uberti, vol. ii. pt. 1, p. 441.) [Lat.]

LANCIA, LANCIAI, LANCIEATUM. [See note.]

LANCIA OFFIDANA. [Vetones.]

LANCIEENS [Lance.]

LANCIEIENS OCELENSI or TRANSCULI.

[Occulm.]

LANGOBARDI, LONGOBAERDI (Ἄργοβορδι, Άργοβαρδή, also Άργοβαρδά and Άργοβαρδή), a tribe of Germans whom we first meet with in the plain, south of the lower Elbe, and who belonged to the Saevi (Strab. vii. 290, where Kramer reads Άργοβαρδή; Ptol. ii. 11, §§ 9, 17). According to Paulus Diaconus, himself a Langobard, or Lombard (Hist. Longob. i. 3, 8; comp. Isidor. Orig. ix. 2; Eutyn. M. s. v. Άργοβαρδή), the tribe derived its name from the long beards, by which they distinguished themselves from the other Germans, who generally shaved their beards. But it seems to be more probable that they derived the name from the country they inhabit on the banks of the Elbe, where Börde or Bore (Bördel) still signifies "a fertile plain by the side of a river;" and a district near Megdeburg is still called the lange Börde (Wilhelm, Germanien, p. 286). According to this, Langobardi would signify "inhabitants of the long bend of the river." The district in which we first meet with them, is the left bank of the Elbe, from the point where the Salz empties itself into it, to the frontier of the Chuvic or Chuvica, so that the banks were bounded in the north by the Elbe, in the east by the Semonne, in the south by the Chermes, and in the west by the Fosi and Angvrirai. Traces of the name of the Langobardi still occur in that country in such names as Bardengau, Bardewieck. The earliest writer who mentions the Langobardi as inhabiting those parts, is Velleius Paterculus (iii. 106). But notwithstanding the unanimous testimony of the ancients that they were a branch of the Saevi, their own historian (Paul. Dac. l. c.; comp. Euseb. Chron. ad an. 380) states that the Langobardi originally did not inhabit any part of Germany, but had migrated south from Scandinavia, where they had borne the name of Vinilii, and that they assumed the name Langobardi after their arrival in Germany. It is impossible to say what value is to be attributed to this statement, which has found as many advocates as it has had opponents. (Bruyn. Strabo [l. c.]) It is clear that they occupied the northern bank of the Elbe, and it is possible that they were among those Germans whom the Romans called together in the reign of Augustus drove across the Elbe (Suet. Aug. 21). In their new country they were soon reduced to submission by Marobodus, but
afterwards they shook off the yoke, and, in conjunction with the Sueves, joined the confederacy of the Cheruscan against the Marcomanni. (Tac. Ann. ii. 45.) When, in consequence of the murder of Arminius, the power of the Cheruscan was decaying more and more, the Langobardi not only supported and restored Italia, the king of the Cheruscan who had been expelled by his people to have established their own territory in the south, so as to occupy the country between the Halle, Magyeburg, and Leipzig. (Tac. Ann. xi. 17.) They were not a numerous tribe, but their want of numbers was made up for by their natural bravery (Tac. Germ. 40), and Velegius describes them as a " gens etiam Germana feraciter feceris." Shortly after these events the Langobardi disappear from history, until they are mentioned again by Ptolomy (L.c.), who places them in the extensive territory between the Rhine and Wisar, and even beyond the latter river almost as far as the Elbe. They thus occupied the country which had formerly been inhabited by the tribes forming the Cheruscan confederacy. This great extension of their territory shows that their power must have been increasing ever since their liberation from the yoke of Marcomanni. After this time we again hear nothing of the Langobardi for a considerable period. They are indeed mentioned, in an excerpt from the history of Petrus Patricius (Exc. de Legat. p. 124), as allies of the Obii on the frontiers of Pannonia; but otherwise history is silent about them, until, in the second half of the 5th century, they appear on the north of the Danube in Upper Hungary as tributary to the Hervii (Procop. de Bell. Gotth. ii. 15, who describes them as Christians). Whether these Langobardi, however, were the same people whom we last met with between the Rhine and the Elbe, or whether they were only a band of emigrants who had in the course of time become so numerous as to form a distinct tribe, is a question which cannot be answered with certainty, although the latter seems to be the more probable supposition. Their natural love of freedom could not bear to submit to the rule of the Hervii, and after having defeated the king of the latter expelled, but not until they subdued their neighbouring Quadi, likewise a Suvian tribe, and henceforth they were for a long time the terror of their neighbours and the Roman province of Pannonia. (Paul. Diaec. i. 22.) For, being the most powerful nation in these parts, they extended their dominion down the Danube, and occupied the extensive plains in the north of Dacia on the river Theiss, which they first came in conflict with the Gepidai, and entered Pannonia. (Paul. Diaec. i. 29.) The emperor Justinian, wanting their support against the Gepidai, gave them lands and supplied them with money (Procop. Bell. Goth. iii. 33), and under their king Audoind they gained a great victory over the Gepidai. (Paul. Diaec. i. 25; Procop. Bell. Goth. iii. 34, iv. 18, 25.) Alboin, Audoind's successor, after having, in conjunction with the Avari, completely overthrow the empire of the Gepidai, led the Langobardi, in a. D. 568, into Italy, where they permanently established themselves, and founded the kingdom from which down to this day the north-east of Italy bears the name of Lombardy. (Exc. de Legat. pp. 303, 304; Marius Episc. Chron. R_BC. ii. 412.) The occasion of their invading Italy is related as follows. When Alboin had concluded his alliance with the Avari, and had ceded to their own dominions, Narse, to take revenge upon Justinian, invited them to quit their poor country and take possession of the fertile plains of Italy. Alboin accordingly crossed the Alps, and as the north of Italy was badly defended, he succeeded in a short time in establishing his kingdom, which continued to flourish until it was overpowered and destroyed by Charlemagne. (Paul. Diaec. ii. 5; Eginhard, Hist. Carol. M. 6.) The history of this singular people, whose name still survives, has been written in Latin by the Emperor Justinian, by Paul the Diaconus, and by another Lombard of the 9th century, whose name is unknown. (Comp. Wilhelm, Germanien, p. 251, foll.; Zeus, Die Deutschen und die Nachbarstaemme, p. 109, foll.; F. Duffi, Questions de Antiquissima Longobardorum Historia, Berlin, 1830, 8vo.; Koch-Sternfeld, Das Reich der Longobarden in ihren, Munich, 1859; Lutatius, Tac. Germ. p. 139, and Epigys, p. ixxxiv.) [L.N.] LANGOBVRIGA [LUSTANIA.] LANGUVIUM (AGRAVIIUM, Strab.; Aauodvias, Potl.: Lib. Aavovios, Lanuvivus: Civitas Lavinia), an ancient and important city of Latium, situated on a lofty hill forming a projecting spur or promontory of the Alban Hills towards the S. It was distant about 20 miles from Rome, on the right of the Appian Way, rather more than a mile from the road. The name is often written in inscriptions, even of a good time, without the sigma. It has arisen in all our MSS, of ancient authors between it and Lavinium: the two names are so frequently interchanged as to leave constant doubt which of the two is really meant, and in the middle ages they appear to have been actually regarded as the same place; whence the name of "Civitas Lavinia" by which Lanuvium is still known, and which can be traced as far back as the fourteenth century. The foundation of Lanuvium was described by a tradition recorded by Appian (B. C. ii. 20) to Dion, a legend probably arising from some fancied connection with the worship of Juno at Argos. A tradition that has a more historical aspect, though perhaps little more historical worth, represented it as one of the colonies of Alba. (Diod. vii. ap. Euseb. Arm. p. 185.) The statement of Cato (ap. Friscian. iv. 4 § 21) that it was one of the cities which "when the city of Lanuvium (not described) in the region of Aricia, was the first fact concerning it that can be looked upon as historical, and shows that Lanuvium was already a city of considerable power. Its name appears also in the list given by Dionysius of the cities that formed the league against Rome in B.C. 496, and there is no doubt that it was in fact one of the thirty cities of the Latin League. (Dionys. v. 61; Niebuhr, vol. ii. p. 17.) But from this time we hear little of it, except that it was the faithful ally of Rome during her long wars with the Volscians and Aequians (Liv. vi. 21): the position of Lanuvium would indeed cause it to be one of the cities most immediately interested in opposing the progress of the Velscians, and render it as it was the natural rival of Antium. We have no explanation of the causes which, in B.C. 390, led the Lanuvians suddenly to change their policy, and take up arms, together with some other Latin cities, in favour of the Volscians (Liv. vi. 21). They must have shared in the defeat of their allies near Satricum; but apparently were admitted to submission on favourable terms, and we hear no more of them till the great Latin War in B.C. 340, in which they took an active and important part. At first, indeed, they seem to have hesitated and delayed to take the field; but in the two last campaigns their forces are
partially mentioned, both among those that fought at Placentia in B.C. 329, and the next year at Astura (Liv. vii. 12, 13). * In the general settlement of affairs at the close of the war Lanuvium obtained the Roman civitas, but apparently in the first instance without the right of suffrage; for Festus, in a well-known passage, enumerates the Lanuvini among the communities who at one time enjoyed all the other privileges of Roman citizens except the suffrage and the use of municipal arms (Liv. viii. 14; Festus, e. Vicipa). a statement which can only refer to this period. We know from Cicero that they subsequently obtained the full franchise and right of suffrage, but the time when they were admitted to these privileges is unknown. (Cic. pro Balb. 13.)

From this time Lanuvium layed into the condition of an ordinary municipal town, and is mentioned chiefly in relation to its celebrated temple of Juno Sobinta. It did not, however, fall into decay, like so many of the early Latin cities, and is mentioned by Cicero among the more populous and flourishing municipa of Latium, in the same class with Aricia and Tusculum, which he contrasts with such poor and decayed places as Labiciun and Colatia (Cic. de Leg. Agr. ii. 35). Its chief magistrature retained the ancient Latin title of Dictator, which was borne in her capital, Annius Milo, the celebrated adversary of Clodius, in the days of Cicero. (Cic. pro Mil. 10; Orell. Inscrip. 3786.) Previous to this period Lanuvium had suffered severely in the civil wars of Marius and Sulla, having been taken by the former at the same time with Antium and Aricia, just before the capture of Rome itself, B.C. 87. (Appian, B. L. iii. 69; Liv. Epit. 80.) Nor did it escape in the later civil wars: the treasures of its temple were seized by Octavian, and a part at least of its territory was divided among a colony of veterans by the dictator Caesar. (Appian, B. C. v. 24; Lib. Colon. p. 235.) It subsequently received another colony, and a part of its territory was at one time allotted to the vestal virgins at Rome. (Ibid.) Lanuvium, however, never bore the title of a colony, but continued only to rank as a municipium, though it seems to have been a flourishing place throughout the period of the republic. It must owe its excellence to thefwor of the emperor Antoninus Pius, who in consequence frequently made it his residence, as did also his successors, M. Aurelius and Commodus: the last of these three is mentioned as having frequently displayed his skill as a gladiator in the amphitheatre at Lanuvium, the construction of which may probably be referred to this epoch. Inscriptions attest its continued prosperity under the reigns of Alexander Severus and Philipicus. (Suet. Aug. 72; Tac. Ann. iii. 48; Capit. Ant. Pius, 1; Lamp. Piso. Commodus, i. 8; Vict. de Caes. 15; Orell. Inscrip. 884, 3740, &c.)

Lanuvium was the place from which several illustrious Roman families derived their origin. Among these were the Anna, to which Milo, the adversary

Lanuvium, belonged by adoption, as well as the Papia, from which he was originally descended; the Rosein, and the Thoria (Cic. pro Mil. 10; Ascon. Ad Milon. pp. 32, 53; Cic. de Diein. i. 36, ii. 31, de Fin. ii. 20), to which may probably be added, on the authority of coins, the Procilia and Miotia. (Eckehl, vol. v. pp. 253, 267, 289, 293.) We learn from Cicero that not only did the Roscia gens derive its origin from Lanuvium, but the celebrated actor Roseus was himself born in the territory of that city. (Cic. de Div. i. 36.)

But the chief celebrity of Lanuvium was derived from its temple of Juno Sobinta, which enjoyed a peculiar sanctity, so that after the Latin War in B.C. 338 it was stipulated that the Romans should enjoy free participation with the Lanuvians themselves in their worship and sacred rites (Liv. viii. 14): and although at a later period a temple was erected at Rome itself to the goddess under the same denomination, the consuls still continued to repair annually to Lanuvium for the purpose of offering solemn sacrifices. (Liv. xxxii. 30, xxxiv. 53; Cic. pro Marc. 41.) The peculiar garb and attributes of the Lanuvian Juno are described by Cicero (de Nat. Deor. i. 29), and attested by the evidence of numerous Roman coins; she was always represented with a goat's skin, drawn over her head like a helmet, with her hand and arm adorning the left temple, and wore peculiar shoes with the points turned up (calceolli repandit). On coins we find her also constantly associated with a serpent; and we learn from Propertius and Aelian that there was a kind of oracle in the sacred grove attached to her temple, where a serpent was fed with fruits and cakes by virgins, whose chastity was considered to be thus put to the test. (Propert. iv. 8; Aelian, H. A. xi. 16, where the true reading is undoubtedly Anaweq, and not Anaweq; Eckehl, vol. v. p. 294.)

The frequent notices in Livy and elsewhere of proclamies occurring in the temple and sacred grove of Juno at Lanuvium, as well as the allusions to its worship at that place scattered through the Roman poets, sufficiently show how important a part the latter had assumed in the Roman religion. (Liv. xxi. 10, xxi. 14, xxxi. 12, xi. 19; Cic. de Divin. i. 44, ii. 27; Ov. Fast. vi. 60; Sili. Ital. xiii. 364.) We learn from Appian that a large treasure had gradually accumulated in her temple, as was the case with most celebrated sanctuaries; and Pliny mentions that it was adorned with very ancient, but excellent, paintings of Helen and Atlas, which the emperor Caligula in vain attempted to remove. (Plin. xxx. 3. s. 6.) It appears from a passage in Cicero (de Fin. ii. 20) that Juno was far from being the only deity especially worshipped at Lanuvium, but that the city was as abundant in ancient temples and religious rites, and was probably one of the chief seats of the old Latin religion. A temple of Jupiter adjoining the forum is the only one of which we find any special mention. (Liv. xxxii. 9.)

Though there is no doubt that Civita Latania occupies the original site of Lanuvium, the position of which is ascertained by Strabo and a small shield of the Italians (Strab. v. p. 299; Sili. Ital. viii. 506), and we know from inscriptions that the ancient city continued in a flourishing condition down to a late period of the Roman empire, it is curious that scarcely any ruins now remain. A few shapeless masses of masonry, principally subsanations and foundations, of those that crown the summit of the city. (In the Fasti Capitolini (3d ann. edw.; Gruter, p. 297) the consul C. Marcius is represented as celebrating a triumph over the Latians, together with the Antites and Veliterni, where it appears certain from Livy's narrative that the Latians are the people really meant: a remarkable instance at how early a period the confusion between the two names had arisen.
of the hill may possibly have belonged to the temples of Juno Sospita; and a small portion of a theatre, brought to light by excavations in 1832, are all that are now visible. The inscriptions discovered on the spot belong principally to the time of the Antonines, and excavations in the last century brought to light many statues of the same period. (Nibby, _Biblior. di Roma_, vol. ii. pp. 175—187; Abel, _Mitt. Italien_, p. 215.)

Lanuvium, as already observed, was situated at a short distance from the Appian Way, on the right of that road; the station "Sab Lanuvium," marked in the Tabula Peutingeriana between Arcica and Tres Tabernae, was evidently situated on the high road, probably at the eighteenth milestone from Rome, from which a branch road led directly to the ancient city. (Westphal, _Rom. Kamp._, p. 28; Nibby, l. c.)

The remains of two other ancient roads may be traced, leading from the W. and S. of the city in the direction of Antium and Astura. The existence of this line of communication in ancient times is incidentally referred to by Cicero (ad Att. xii. 41, 43, 46). The tract of country extending S. of Lanuvium in the direction of Antium and the Pontine marshes, was even in the time of Strabo very unhealthy (Strab. v. p. 291), and is now almost wholly deserted.

LAODICEIA COMBUSTA (Λαόδικεια κατακαίνεται οτι κακαίνεται), one of the five cities built by Seleucus I., and named after his mother Seleucia. Its surname (Lat. Combusta) is derived by Strabo (xii. pp. 576, 579, xiii. pp. 626, 628, 637) from the volcanic nature of the surrounding country, but Hamilton (Researches, i. p. 194) asserts that there is "not a particle of volcanic or igneous rock in the neighbourhood," and it may be added that if such were the case, the town would rather have been called Λάοδίκεια κατακαίνεται. The most probable solution undoubtfully is, that the town was at one time destroyed by fire, and that on being rebuilt it received the distinguishing surname. It was situated on the north-west of Iconium, on the high road leading from the west coast to Miletene on the Euphrates. Some describe it as situated in Lycocoria (Steph. B. s. e.); Strab. xiv. p. 660), and others as a town of Pisidia (secund. Héél. Evol. vi. 18; Hieroc. p. 679), and Ptolemy (v. 4. § 10) places it in Galatia; but this discrepancy is easily explained by recollecting that the territories just mentioned were often extended or reduced in extent, sothat at one time the town belonged to Lycaonia, while at another it formed part of Pisidia. Its foundation is not mentioned by any ancient writer.

Both Leake (Asia Minor, p. 44) and Hamilton identify Laodikeia with the modern Ladiik; and the former of these geographers states that at Ladiik he saw more numerous fragments of ancient architecture and sculpture than at any other place on his route through that country. Inscribed marbles, altars, columns, capitals, friezes, cornices, were discovered throughout the streets, and among the houses and burying grounds.

From this it would appear that Laodikeia must once have been a very considerable town. There are a few imperial coins of Laodikeia, belonging to the reigns of Titus and Domitian. (Sestini, _Mon. Ant._, p. 95; e. n. Phylystr. _Gesch. der Hellen_, i. p. 663, foll.)

LAODICEIA AD LUCUM (Λαόδικεια πόλις τοῦ Νεαστην Ευάστρου, Eski Hisar), a city in the south-west of Phrygia, about a mile from the rapid river Lucus, is situated on the long spur of a hill between the narrow valleys of the small rivers Asopus and Cupaps, which discharge their waters into the Lycus. The town was, originally called Diopolis, and afterwards Eobos (Plin. v. 29), and Laodikeia, the building of which is ascribed to Antiochus Thoes, in honour of his wife Laodice, was probably founded on the site of the older town. It was about far west from Colossae, and only six miles to the west of Hierapolis. (I. Ant. p. 337; Tab. Peut.; Strab. xiii. p. 629.) At first Laodikeia was not a place of much importance, but it soon acquired a high degree of prosperity. It suffered greatly during the Mithridatic War (Appian, Bell. Mithr. 20; Strab. xii. p. 575), but quickly recovered under the dominion of Rome; and towards the end of the Republic and under the first emperors, Laodikeia became one of the most important and flourishing commercial cities of Asia Minor, in which large money transactions and an extensive trade in wood were carried on. (Cic. ad Fam. ii. 17, iii. 5; Strab. xiii. p. 577; comp. Vitruv. viii. 3.) The place often suffered from earthquakes, especially from the great shock in the reign of Tiberius, in which it was completely destroyed. But the inhabitants restored it from their own means. (Thuc. ii. 37.) The wealth of its inhabitants enabled them among other things for the arts of the Greeks, as is manifest from its ruins; and that it did not remain behind-hand in science and literature is attested by the names of the septs of Antiochus and Theiodoros, the successors of Aenesidemus (Dios. Laert. ix. 11, § 106, 12, § 116), and by the existence of a great medical school. (Strab. xii. p. 580.) During the Roman period Laodikeia was the chief city of a Roman conventus. (Cic. ad Fam. iii. 7, iv. 25, xiii. 54, 67, xv. 4, ad Att. v. 15, 16, 20, 21, vi. 1, 2, 3, 7, in terr. i. 30.) Many of its inhabitants were Jews, and it was probably owing to this circumstance, that at a very early period it became one of the chief seats of Christianity, and the seat of a bishop. (St. Paul, Ep. ad Corinth. ii. 1, iv. 15; Apoc. iii. 14; fol.; Joseph. Ant. Jud. xiv. 10, 20; Hieroc. p. 655.) The Byzantine writers often mention it, especially in the time of the Caesars; and it was fortified by the emperor Manuel. (Niceph. Chron. Ann. pp. 9, 81.) During the invasion of the Turks and Mongols the city was much exposed to ravages, and fell into decay, but the existing remains still attest its former greatness. The ruins near Demieli are fully described in Pococke's, Chandler's, Cockerell's, Arundel's and Leake's works.

"Nothing," says Hamilton (Researches, vol. i. p. 251), "can exceed the desolation and melancholy appearance of the site of Laodiceia; no picturesque features in the nature of the ground on which it stands relieve the dull uniformity of its undulating and barren hills; and with few exceptions, its grey and widely scattered ruins possess no architectural merit to attract the attention of the traveller. Yet it is impossible to view them without interest, when we consider what Laodikeia once was, and how it is connected with the early history of Christianity. Its stoa, gymnasium, and the two one of which is in a state of great preservation, with its
LAODICEA. 

There are some ancient ruins, broken down by rain and snow; and the remains of a gateway; there is also a street within and without the town, flanked by the ruins of a colonnade and numerous pedestals, leading to a confused heap of fallen ruins on the brow of the hill, about 200 yards outside the walls. North of the town, towards the Lycus, are some sarcophagi, with their covers lying near them, partly embedded in the ground, and all having a distinctly circular form.

Amongst other interesting objects are the remains of an aqueduct, commencing near the summit of a low hill to the south, whence it is carried on arches of small square stones to the edge of the hill. The water must have been much charged with calcareous matter, as several of the arches are covered with a thick incrustation. From this hill the aqueduct crossed a valley before it reached the town, but instead of being carried over it on lofty arches, as was the usual practice of the Romans, the water was conveyed down the hill in stone barrel-pipes; some of these also are much incrusted, and some completely checked up. It traversed the plain in pipes of the same kind; and I was enabled to trace them the whole way, quite up to its former level in the town. . . . The aqueduct appears to have been overthrown by an earthquake, as the remaining arches lean bodily on one side, without being much broken.

The stadium, which is in a good state of preservation, is near the southern extremity of the city. The seats, almost perfect, are arranged along two sides of a narrow valley, which appears to have been taken advantage of for this purpose, and to have been closed up at both ends. Towards the west are considerable remains of a subterranean passage, by which chariots and horses were admitted into the arena, with a long inscription over the entrance, . . . The whole area of the ancient city is covered with ruined buildings, and I could distinguish the sites of several temples, with the bases of the columns still in situ . . . The ruins bear the stamp of Roman extravagance and luxury, rather than of the stern and massive solidity of the Greeks. Strabo attributes the celebrity of the place to the fertility of the soil and the wealth of some of its inhabitants: amongst whom Herod, having adorned the city with many beautiful buildings, bequeathed to it more than 2000 talents at his death." (Comp. Fellows, Journal written in Asia Minor, p. 280, foll.; Leake, Asia Minor, p. 251, foll.) [L. S.]

LAODICEA AD LIPANUM (Λαοδικεία ἡ πόλις Λάρινθος), mentioned by Strabo (xvi. p. 755) as the commencement of the Marisvies Campus, which extended along the west side of the Orontes, near its source. [MARSYS CAMPA.] It is called Cabisia Laodicea by Ptolemy (II. 15, 2), and gives its name to a district (Λαοδική), in which he places two other towns, Paradisus (Παραδίσιος) and Jabruda (Ἱδρυβοδα), Pliny (v. 23), among other people of Syria, reckons "ad orientem Laodicenses, qui ad Libanum cognominantur." [G. W.]

LAODICEA AD MARE, a city of Syria, south of Hieraclea [Vol. I, p. 1500], described by Strabo (xiv. p. 751, 752) as situated on a plain, with an excellent harbor, surrounded by a rich country, specially fruitful in vines, the wine of which furnished its chief supply to Alexandria. The vineyards were planted on the sides of gently-sloping hills, which were cultivated almost to their summits, and extended far to the east, nearly to Apameia. Strabo mentions that Diodorus, when he fled to this city before Caesar, distrusted it greatly, and that, being besieged there until his death, he destroyed many parts of the city with him, A. D. 43. [Dict. of Byz., Vol. I, p. 1059.] It was built by Seleucus Nicator, and named after his mother. It was furnished with an aqueduct by Herod the Great (Joseph. B. J. i. 21, § 11), a large fragment of which is still to be seen. (Shaw, Travels, p. 262.) The modern city is named Ladikiyeh, and still exhibits faint traces of its former importance, notwithstanding the frequent earthquakes with which it has been visited. Irity and Mangles noticed that "the Marina is built upon foundations of ancient columns," and "there are in the town, an old gateway and other antiquities," as also sarcophagi and sepulchral caves in the neighbourhood. (Travels, p. 223.) This gateway has been more fully described by Shaw (I. e.) and Pococke, as a remarkable triumphal arch, at the S. corner of the town, almost entire; it is built with four entrances, like the Forum Jami at Rome. It is conjectured that this arch was built in honour of Lucius Verus, or of Septimius Severus." (Description of the East, vol. ii. p. 197.) Shaw noticed several fragments of Greek and Latin inscriptions, dispersed all over the ruins, but entirely defaced. Pococke states that it was a very incomconsiderable place till within fifty years of his visit, when it opened a tobacco trade with Damietta, and it now has an enormous traffic in that article, for which it is far more celebrated than ever it was for its wine. The port is half an hour distant from the town, very small, but better sheltered than any on the coast. Shaw noticed, a furlong to the west of the town, "the ruins of a beautiful column, in figure like an amphitheatre, and capacious enough to receive the whole British navy. The mouth of it opens to the westward, and is about 40 feet wide." [G. W.]

![COIN OF LAODICEA AD MARE.](Image)

LAODICEA (Λαοδικεία). 1. A town in Media, founded by Seleucus Nicator, along with the other Hellenic cities of Apameia and Heracleia. (Strab. xi. p. 524; Stephan. B. s. v.) Pliny (vi. 29) describes it as being in the extreme limits of Media, and founded by Antiochus. The site has not yet been identified. (Ritter, Erdkunde, vol. vii. p. 395.) 2. A town which Pliny (vi. 30) places along with Seleucia and Artemia in Mesopotamia. [E. B. J.]

LAPATHUS, a fortress near Mount Olympus. [Ascribit.

LAPATHUS, LAPETHUS (Λάπαθος, Strab. xiv. p. 622; Λαπέθος, Ptol. v. 14, § 4; Flinn. v. 31; Ἀπάθης, Sev. p. 41; Δάρβαθος, Hierol.: Eth. Δαρβάθου, Δαρβάθου; Λαπιθός, Λαπώς), a town of Cyprus, the foundation of which was assigned to the Phoenicians (Stephan. B. s. v.), and which, according to Nonnus
LAPATHUS.

(Dionys. xiii. 447), owed its name to the legendary Lapathus, a follower of Dionysus. Strabo (l. c.) says that it received a Spartan colony, headed by Praxander. He adds, that it was situated opposite to the town of Nauculbus, in Cilicia, and possessed a harbour and docks. It was situated in the N. of the island, on a river of the same name, with a district called Lapethia (Ἀλπηθια, Hist. v. 14, § 5). In the war between Polyaenus and Antigonus, Lapathus, with its king Praxianax, sided with the latter. (Diod. xix. 59.) The name of this place is synonymous with stupidity. (Suid. s. v. Λαπεθια.) Pococke (Trav. in the East, vol. ii. p. 1. p. 223) saw at Lapithe several walls that were cut out of the rock, and one entire room, over the sea; there were also remains of some towers and walls. (Mariti, Viaggi. vol. i. p. 125; Engel, Kypros, vol. i. pp. 57, 78, 174, 224, 364, 567.)

LAPATHUS, a fortress in the north of Thessaly, near Tempe, which Leake identifies with the ancient castle near Ἀλπανεια. (Lyc. xxiv. 2, 6; Leake, Northern Greece, vol. iii. pp. 397, 418.)

LAPHYSTHUM. [Boeotia, p. 412, b.]

LAPIDEI CAMP / LAPIDEUS CAMPUS

(πέδιον λαβέθε, λαπαχέον πεδίον), in Gallia Narbo- nensis. Strabo (p. 182) says: “Between Massalia and the mouths of the Rhone there is a plain, about 100 stadia from the sea, and as much in diameter of a circular form; and it is called the Stopy, from its character: for it is full of stones, of the size of a man’s fist, which have grass growing among them, which furnishes abundant food for animals; and in the middle there is standing water, and salt springs, and salt. Now all the country that lies above is windy, but on this plain especially the Melamborian (La Bée) comes down in squalls,—a violent and chilling wind: accordingly, they say that some of the stones are moved and rolled about, and that men are thrown down from vehicles, and stripped both of arms and clothing by the blast.” This is the plain called La Cea, near the east side of the east branch of the delta of the Rhone, and near the Estang de Berre. It is described by Arthur Young (Travels, 2nd ed.), who visited and saw part of the plain. He supposed that there might be about 156,780 English acres. “It is composed entirely of pebbles, so uniform a mass of sand and stones, some to the size of a man’s head, but of all sizes less, that the newly thrown up shingle of a seashore is hardly less free from soil. Beneath these surface-stones is not so much a sand as a kind of cemented rubble, a small mixture of loam with fragments of stone. Vegetation is rare and miserable.” The only use that the uncultivated part is turned to, he says, is to feed, in winter, an immense number of sheep, which in summer feed in the Alps towards Barcelonette and Piedmont. When he saw the place, in August, it was very bare. The number of sheep said to be fed there is evidently an exaggeration. Some large tracts of the Crea had been broken up when he was there, and planted with vines, olives, and mulberries, and converted into corn and meadow. Corn had not succeeded; but the meadows, covered richly with clover, clover, rib-grass, and orona elater, which, contrary to the soil in its natural state. The name Crea probably is a Celtic word. In the Statistique du Départ. des Bouches du Rhone (tom. ii. p. 100, quoted in Uckert’s Gallien. 425) it is supposed that Crea, as it is there written, is a Ligurian word; which may be true, or it may not. What is added is more valuable information: “There is in Provence a number of places which have this name; and one may even say that there is not a village which has not in its terri- tory a Crea.”

Aristotle (Strabo, p. 182) supposed that earthquakes, of the kind named Brastae threw up these stones to the earth’s surface, and that they rolled down together to the hollow places in these parts. Posidonius, who, having travelled in Galia, had probably seen the Crea, supposed that the place was once a lake. Here the text in Strabo is obscure, and perhaps corrupt; but he seems to mean that the action of water rounded the stones, for he adds, after certain words not easy to explain, that (owing to this motion of the water?) “it was divided into many stones, like the pebbles in rivers and the shingle on the sea-shore. Strabo (whose text is here again somewhat corrupted) considers both explanations so far true, that stones of this kind could not have been so made of themselves, but must have come from great rocks being repeatedly broken. Another hypo- thesis, not worth mentioning, is recorded in the notes of Eustathius (ad Dionys. Perig. v. 76). It is a proof of the early communication between the Phoccean colony of Massalia and other parts of Greece, that Aeschylus, whose geography is neither extensive nor exact, was acquainted with the existence of this stone plain; for in the Prometieus Unbound (quoted by Strabo) he makes Prometheus tell Hercules that he comes into the country of the Ligyes, Zeus will send him a shower of round stones, to de- feat the Ligurian army in this place. This stony plain was a good ground for mythological figments. (The following passages of ancient authors refer to this plain: Mela, ii. 5; Plin. iii. 4, xxi. 10; Gallius, ii. 22, and Seneca, Nat. Quaest. v. 17, who speak of the violent wind in this part of Gallia; and Dionys. Halicarn. i. 41, who quotes part of the passage from the Prometieus Unbound.)

This plain of stones probably owes its origin to the floods of the Rhone and the Danure, at some remote epoch when the lower part of the delta of the Rhone was covered by the sea.

[GL, L.]

LAPITIAE (Ἀραβίται), a mythical race in Iass- saly. See Dict. of Biogr. and Myth. Vol. ii. p. 721. LAPITIAEUM. [Laconia, p. 113, a.]

LAPITIAS. [Euboea, p. 115, b.]

LAPPA, LAMPA (Λάππα, Πτολ. iii. 17, § 10); Λάππα, Λαμπα, Hieroc. ; Λαπμα, Stephan. B. Eph. Λάππας, Λαμπας, an inland town of Crete, with a district extending from sea to sea (Seylax, p. 18), and possessing the port Phoenix. (Strab. x. p. 475.)

Although the two forms of this city’s name occur in ancient authors, yet on coins and in inscriptions the word Lappa is alone found. Stephanus of Byzantium shows plainly that the two names denote the same place, when he says that Xenos, in his Cretica, wrote the word Lappa, and not Lampa. The same author (Suid. s. v. Λαμπα) says that it was founded by Azammon, and was called after one Lampas, a Tarraean; the interpretation of which seems to be that it was a colony of Tarra.

When Lyctus had been destroyed by the Cnossians, its citizens found refuge with the people of Lappa (Polyb. ii. 11). After the submersion of Crete, Cnossus, Lyctus, and Cletherium, to the arms of Me- tellus, the Romans advanced against Lappa, which was taken by storm, and appears to have been almost entirely destroyed. (Dion Cass. xxxvi. 1.) Augustus, in consideration of the aid rendered to him by the Lappaeans in his struggle with M. Antonius,
LAPURDUM.

Supplem. Eth. but Lareuda others (E. Ptol. vol. i. p. 83) found considerable remains of a massive brick edifice, with buttresses 15 feet wide and of 9 feet projection; a circular building, 60 feet diameter, with niches round it 11 feet wide; a cistern, 75 feet by 20 ft.; a Roman brick building, and several tombs cut in the rock. (Comp. Mus. Class. Antiq. vol. ii. p. 293.) One of the inscriptions relating to this city mentions a certain Marcus Aurelius Clesippus, in whose honour the Lapusenses erected a statute. (Gruter, p. 1091; Chishall, Antiq. Asiatt. p. 122; Mahillon, Mus. Ital. p. 33; Böckh, Corp. Inscr. Gr. vol. ii. p. 428.)

The head of its benefactor Augustus is exhibited on the coins of Lapus; one has the epigraph, Ὅ.Σ. ΚΑΙΣΑΡ ΣΕΒΑΣΤΟΣ; others of Domitian and Commodus are found. (Hardouin, Num. Antiq. pp. 90, 93; Minnaut, vol. ii. p. 286; Supplink, vol. iv. p. 298; Racine, vol. ii. p. 1498.) On the inscriptions of Lapus, from which Spanheim supposed the city to have possessed the right of asylum, like the Grecian cities enumerated in Tacitus, see Eckhel, vol. ii. p. 315. The maritime symbols on the coins of Lapus are accounted for by the extension of its territory to both shores, and the possession of the port of Phoenix. [E. B. J.]

LAPURDUM, in Gaulia. This place is only mentioned in the Notitia of the empire, which fixes it in Novempopulana; but there is neither any historical notice nor any itinerary measurement to determine its position. D'Anville, who assumes it to be represented by Bayonne, on the river Adour, says that the name of Bayonne succeeded to that of Lapurdum, and the country contained between the Adour and the Bidassoa has retained the name of Lobeard. It is said that the bishopric of Bayonne is not mentioned before the tenth century; this, however, is not Rasser's, and means "port." It seems probable that Lapurdum may have been on the site of Bayonne; but it is not certain. [G. L.]

LAR.

LARSEUS. [CANTIS FLUMEN.]

LARANDA (τὰ Λάρανδα; Etr. Λαράνδες, O. Λαράνδες; Larennda or Karanana), one of the most important towns of Lycania, 400 stadia to the south-east of Iconium. Strabo (xii. p. 569) states that the town belonged to Augustus fit 120 B.C., which shows that for a time it was governed by native princes. Respecting its history in antiquity scarcely anything is known beyond the fact that it was taken by storm, and destroyed by Perdiccas (Diod. xiii. 22); that it was afterwards rebuilt, and on account of the fertility of its neighbourhood became one of the chief seats of the Iasian pirates. (Amm. Marc. xiv. 2; comp. Steph. B. s. v.; Ptol. vi. 6, § 17; Hecato p. 675; Eustach. Hist. Eccl. vi. 19; Suidas (s. v.) says that Laranda was the birthplace of Nestor, an epic poet, and father of Pisander, a poet of still greater celebrity; but when he calls the former Λαράνδες εἰς Ακαίας, he probably mistook Lycia for Lycania. Leake (As. Mis. p. 100) states that he found no Greek remains at Laranda nor are there any coins belonging to the place. The ancient name Laranda is still in common use among the Christians, and is even retained in the firmmans of the Porte; but its more general name, Karanana, is derived from a Turkish chief of the same name; for it was at one time the capital of a Turkish kingdom, which lasted from the time of the partition of the dominion of the Seljukian monarchs of Iconium until 1486, when it was conquered by the emperor Barbara. At present the town is but a poor place, with some manufactures of coarse cotton and woollen stuffs. Respecting a town in Cappadocia, called by some Laranda, see the article LEANDUS. [L. S.]

LARES (Sall. Jug. 90, where Larris is the acc. pl.; Λάρπως, Ptol. iv. 3, § 28: the abl. form LARIUS is given, not only, as is so usual, in the Itin. Ant. p. 26, and the Top. Pent., but also by Augustine, edd. Donat. vi. 20; and that this ablative was used for the nominative, as is common in the Romance languages, is shown by the Greek form Λάρθως, Procop. B. II. ii. 23, whence it came at once the modern name, Larbassus or Lurbus). An important city of Numidia, mentioned in the Jugurthine War as the place chosen by Marius for his stores and military chest. (Sall. Jug. l.c.) Under the Romans it became a colony, and belonged to the province of Africa and the district of Byzacena. Ptolemy places it much too far west. It lay to the E. of the Bayardas, on the road from Carthage to Thysdrus. 63 M. P. from the latter. In the later period of the Empire it had decayed. (Pellissier, Exploration Scientifique de l'Algérie, vol. vi. p. 375.) [P. S.]

LARGA, in Gallia, is placed by the Anton. Itin. between the two known positions of Empampodorum (Mauvacs) and Mons Brisiacus (Fieno Brisch). The distance from Empampodorum to Larga is 24 M. P. in the Itin., and in the Table 16 Gallic leagues, which is the same thing. Larga is Lorgites, or near the Larqes, in the French department of Haut Rhin and in the neighbourhood of Altkirch. [EMPAMPODORUM.]

LARICA (Λαρίκα, Ptol. vii. l. §§ 4, 62), a rich commercial district on the extreme of India, described by Ptolemy as being between Syrastrene and Arica, and having for its chief town Barygaza. Ptolemy places it "a port in the land of the Syrians of the Barygazae. It must, therefore, have comprised considerable part of Gicarat, and some of the main land of India, between the gulf of Barygaza and the Narmanus or Nerothd. Ptolemy considered Larica to have been part of Indo-Sythia (vii. 1. § 62), the Scythian tribes having in his day reached the sea coast in that part of India. [EMPAMPODORUM.]

LARINUM (Λάρινως; Ptol.; Λάρινως, Steph. B.; Etr. Λαρίνως, Stephan. B.; but Larinurus, Ptol.; Larinias, -ῖνας; Λοιίνος Τεκχίος), a considerable city in the northern part of Apulia, situated about 14 miles from the sea, a little to the S. of the river Tifernus. There is much discrepancy among ancient authorities, as to whether Larinum with its territory, extending from the river Tento to the Tifernus, belonged properly to Apulia or to the land of the Frenthani. Ptolemy distinctly assigns it to the latter people; and Pliny also, in one passage, speaks of the "Larinates cognominis Frenthani:" but at the same time he distinctly places Larinum in Apulia, and not in the "regio Frenthani," which, according to him, begins only from the Tifernus. Mela takes the same view, while Strabo, strangely enough, units all
mention of Larium. (Ptol. iii. 1. § 65; Plin. iii. 11. s. 16; Mel. ii. 4, § 6.) Caesar, on the other
hand, distinguishes the territory of Larium both
from that of the Frontani and from Apulia ('cetera
Municipiorum, juxta latus, Lariniuin, in
Apulia pervenit,' B. C. i. 23). Livy uses almost
exactly the same expressions (xxvii. 43); and this
appears to be the real solution, or rather the origin
of the difficulty, that the Larinates long formed an
independent community, possessing a territory of
considerable extent, which was afterwards regarded
by the geographers as connected with that of their
northern or southern neighbours, according to their
ever-changing judgment. It was included by Agrippa
in the Second Region of Italy, of which he made the
Tifernus the boundary, and thus came to be natu-
rially considered as an appanage of Apulia: but
the boundary would seem to have been subsequently
changed, for the Liber Coloniariurn includes Larium
among the "Civitates regionis Samunii," to which the
Frontani also were attached. (Lib. Colon. p. 260.)

Of the early history of Larium we have scarcely
any information. Its name is not even once men-
tioned during the long continued wars of the Romans
and Samnites, in which the neighbouring Luceria
figures so conspicuously. Hence we may probably
infer that it was at this period on friendly terms
with Rome, and was one of those Italian states
that passed gradually and almost imperceptibly from
the condition of allies into that of dependants,
and ultimately subjects of Rome. During the
Second Punic War, on the other hand, the territory
of Larium became repeatedly the scene of operations
of the Roman and Carthaginian armies. Thus in
B.C. 217 it was at Gerunium, in the immediate
neighbourhood of Larium, that Hannibal took up
his winter-quarters, while Fabius established his
camp at Celaia to watch him; and it was here that
the engagement took place in which the rashness
of Munitus had so nearly involved the Roman army
in defeat. (Pol. iii. 101; Liv. xxii. 18, 24, &c.)
Again, in B.C. 207, it was on the borders of the
same territory that Hannibal's army was attacked
on its march by the praetor Hostilius, and suffered
severe loss (Liv. xxvii. 40); and shortly after it
is again mentioned as being traversed by the consul
Claudius on his memorable march to the Me-
taurus. (Ibid. 433; Sil. Ital. xv. 565.) In the
Social War it appears that the Larinates must have
joined with the Frontani in taking up arms against
Rome, as their territory was ravaged in B.C. 89 by
the praetor C. Cosceunus, after his victory over Tre-
battis near Capuana. (Appian, B. C. i. 52.)

During the civil wars of Caesar and Pompey, the
territory of Larium was traversed by the former
general on his advance to Brundisium (Caes. B. C.
i. 23). Pompey seems to have at one time made it
his head-quarters in Apulia, but abandoned it on
learning the disaster of Dominitius at Corfinium.
(Cic. de Att. vii. 12, 13, b.)

From the repeated mention during these military
operations of the territory of Larium, while none
occurs of the city itself, it would appear that the
latter could not have been situated on the high road,
which probably passed through the plain below it.
But it is evident from the oration of Cicero in de-
fence of A. Cluentius, who was a native of Larium,
that it was in his day a flourishing and considerable
municipal town, with its local magistrates, senate,
public archives, forum, and all the other apparte-
nances of municipal government. (Cic. pro Cluent.
LARISSA.

5, 8, 13, 15, &c.) We learn from the Liber Co-
loniarum that it received a colony under Caesar
(Lege Julia, Lib. Colon. p. 260); but it appears
from inscriptions that it continued to retain its mu-
nicipal rank under the Roman Empire. (Orell. Inscri.
142; Mommsen, Inscri. Rerum. Nepot. pp. 272,
273.) The existing remains sufficiently prove that
it must have been a large and populous town;
but no mention of it is found in history after the
close of the Roman Republic. Its name is found in
the Itineraries in the fourth century (Itin. Ant.
p. 314, where it is corruptly written Arenos; Tab.
Post.;) and there is no reason to suppose that it
ever ceased to exist, as we find it already noticed
as an episcopal see in the seventh century. In
A.D. 842 it was ravaged by the Saracens, and it
was in consequence of this calamity that the in-
habitants appear to have abandoned the ancient
site, and founded the modern city of Larino, a little
less than a mile to the W. of the ancient one. The
ruins of the latter, now called Larino Vecchio, oc-
cupy a considerable space on the summit of a hill
called Monterone, about three miles S. of the Bi-
ferno (Tifernus): there remain some portions of the
ancient walls, as well as of one of the gates; the
ruins of an amphitheatre of considerable extent, and
those of a building, commonly called H Palazzo,
which appears to have stood in the centre of the
town, adjoining the ancient forum, and may probably
have been the Curia or senate-house. (Trian, Mem-
orie di Larino, i. 10.)

The territory of Larium seems to have originally
extended from the river Tifernus to the Frento
(Fortore), and to have included the whole tract
between those rivers to the sea. The town of Cli-
ternia, which was situated within these limits, is
expressly called by Pliny a dependency of Larium
(\"Larinarum Cilerniaria,\" Plin. iii. 11. s. 16); and
Teunnum, which is placed by him to the N. of the
Frento, was certainly situated on its right bank.
Hence it is probable that the municipal territory of
Larium under the Roman government still com-
prised the whole tract between the two rivers. The
Tabula places Larinum eighteen miles from Teunnum
in Apulia, and this distance is confirmed by an ex-
press statement of Cicero. (Tab. Post.; Cic. pro
Client. 9.)

There exist numerous coins of Larium, with the
inscription LARIASS in Roman letters. From this
last circumstance they cannot be referred to a very
carely period, and are certainly not older than the
Roman conquest. (Eckhel, vol. i. p. 107; Mommsen,
Rom. Munimenta, p. 353.)

[TE. II. B.]

COIN OF LARIUM.

LARISSA (Λαρίσσα, but on coins and inscr Ad-
βιτα or Δάρβητα: Εθν. Απορρασίαν, Λαρρασίον), a
name common to many Pelasgic towns, and probably
a Pelasgic word signifying city. (Comp. Strob. xiii.
p. 620; Dionys. i. 21; Niebuhr, Hist. of Rome, vol. i.
note 60.) Hence in mythology Larissa is repre-
sented as the daughter of Pelagus (Paus. ii. 24.
LARISA.

§ 1. or of Taurus, a Persian prince. (Strab. xiv. p. 621.)

1. An important town of Thessaly, the capital of the district Peliaceos, was situated in a fertile plain upon a gently rising ground, on the right or south bank of the Peneus. It had a strong fortified citadel. (Diod. xvi. 61.) Larissa is not mentioned by Homer. Some commentators, however, suppose it to be the same as the Pelasgic Argos of Homer (II. ii. 681), but the latter was the name of a district rather than of a town. Others, with more probability, identify it with the Argissa of the poet. (II. ii. 738.) [See Vol. i. p. 209.] Its foundation was ascribed to Acrisius. (Steph. B. s. v.) The plain of Larissa was formerly inhabited by the Pherabaei, who were partly expelled by the Larissaeans, and partly reduced to subjection. They continued subject to Larissa, till Philip made himself master of Thessaly. (Strab. ix. p. 440.)

The constitution of Larissa was democratic (Aristot. Pol. v. 6), and this was probably one reason why the Larissaeans were allies of the Athenians during the Peloponnesian War. (Tactn. ii. 22.) During the Roman wars in Greece, Larissa is frequently mentioned as a place of importance. It was here that Philip, the son of Demetrius, kept all his royal papers during his campaign against Flaminius in Greece; but after the battle of Cyzicus, in n. c. 197, he was obliged to abandon Larissa to the Romans, having previously destroyed these documents. (Poylyb. xviii. 16.) It was still in the hands of the Romans when Antiochus crossed over into Greece, n. c. 191, and this king made an ineffectual attempt upon the town. (Liv. xxxvi. 10.) In the time of Strabo Larissa continued to be a flourishing town (ix. p. 430).

It is mentioned by Herodotus in the sixth century as the first town in Thessaly (p. 642, ed. Wenzel.). It is still a considerable place, the residence of an archbishop and a patriarch, and containing 30,000 inhabitants. It continues to bear its ancient name, though the Turks call it Yemisheher, which is its official appellation. Its circumference is less than three miles. Like other towns in Greece, which have been continually inhabited, it presents few remains of Hellenic times. They are chiefly found in the Turkish cemeteries, consisting of plain quadrangular stones, fragments of columns, mostly fluted, and a great number of ancient cippi and sepulchral steles, which now serve for Turkish tombstones. (Leake, Northern Greece, vol. i. p. 439, seq.)

COIN OF LARISSA.

2. Larissa Creemaste (Cas Cremastra Larissa), a town of Thessaly of less importance than the preceding one, was situated in the district of Phatiichtos, at the distance of 20 stadia from the Maline gulf; upon a height advancing in front of Mount Othrys. (Strab. ix. p. 435.) It occupied the side of the hill, and was hence surmounted Creemaste, as hanging on the side of Mt. Othrys, to distinguish it from the more celebrated Larissa, situated in a plain. Strabo also describes it as well watered and producing vines (ix. p. 440). The same writer adds that it was surmised Pelasgia as well as Creemaste (L. c.). From its being situated in the dominions of Achilles, some writers suppose that the Roman poets give this hero the surname of Larissaeus, but this epitaph is perhaps used generally for Thessalian. Larissa Creemaste was occupied by Demetrius Poliorcetes in n. c. 302, when he was at war with Cassander. (Diod. xx. 110.) It was taken by Apotheuns in the first war between the Romans and Philip, n. c. 200 (Liv. xxxi. 46), and again fell into the hands of the Romans in the war with Perseus, n. c. 171. (Liv. xlii. 56, 57.) The ruins of the ancient city are situated on a steep hill, in the valley of Garabilit, at a direct distance of five or six miles from Khindako. The walls are very conspicuous on the western side of the hill, where several courses of masonry remain. Gell says that there are the fragments of a Doric temple upon the acropolis, but of these Leake makes no mention. (Gell, Itinerary of Greece, p. 252;

3. The citadel of Argos. [Vol. i. p. 202.]

LARISSA (Larissa). 1. A town in the territory of Ephesus, on the north bank of the Caystrus, which there flows through a most fertile district, producing an excellent kind of wine. It was situated at a distance of 180 stadia from Ephesus, and 30 from Tralleis. (Strab. ix. p. 440, xili. p. 620.) In Strabo's time it had sunk to the rank of a village, but it was said once to have been a polis, with a temple of Apollo. Craene (As. Min. i. p. 558) conjectures that its site may correspond to the modern Tarsus.

2. A place on the coast of Treas, about 70 stadia south of Alexandria Troas, and north of Hamaxiitns. It was supposed that this Larissa was the one mentioned by Homer (Ili. ii. 841), but Strabo (xiii. p. 620) controverts this opinion, because it is not far enough from Troy. (Comp. Steph. B. s. v.) The town is mentioned as still existing by Thucydides (viii. 101) and Xenophon (Hellen. iii. 1. § 13; comp. Scylax, p. 56; Strab. ix. p. 440, xili. p. 604). Athenaeus (ii. p. 42) mentions some hot springs near Larissa in Treas, which are still known to exist a little above the site of Alexandria Troas. (Voyage Pittoresque, vol. ii. p. 438.)

3. Larissa, surmised Phthica, a Pelasgic town in Aetolias, but subsequently taken possession of by the Aeolians, who constituted it one of the towns of their confederacy. It was situated near the coast, about 70 stadia to the south-east of Cyane (a πόλη την Κύανον, Strab. xili. p. 621; Herod. i. 149). Strabo, apparently for good reasons, considers this to be the Larissa mentioned in the Iliad (ii. 840). Xenophon (Hellen. iii. 1. § 7, comp. Cyrop. vii. 1. § 45) distinguishes this town from others of the same name by the epithet of "the Egyptian," because the elder Cyrus had established there a colony of Egyptian soldiers. From the same historian we must infer that Larissa was a place of considerable strength, as it was besieged in vain by Themistocles; but in Strabo's time the place was deserted. (Comp. Plin. v. 32; Veit. Pat. ii. 4; Vit. Hom. c. 11; Steph. B. s. r.; Ptol. v. 2, § 5.)

LARISSA (Larissa). Xen. Anab. iii. 4. § 7, a town of Assyria, at no great distance from the left bank of the Tigris, observed by Xenophon on the
LARISSA.

retreat of the Ten Thousand Greeks. It appears to have been situated a little to the north of the junction of the Lyces (Zol) and the Tigris. Xenophon describes it as a deserted city, formerly built by the Medes, with a wall 25 feet broad, and 100 high, and extending in circumference two parasangs. The wall itself was constructed of bricks, but had a foundation of stone, 20 feet in height (probably a ca-ning in stone over the lower portion of the bricks). He adds, that when the Persians conquered the Medes, they were not at first able to take this city, but at last captured it, during a dense fog. Adjoining the town was a pyramid of stone, one plethron broad, and two plethra in height. It has been conjectured that this was the site of the city of Resen, mentioned in Genesis (x. 12); and there can be little doubt, that these ruins represent those of Nimrod, now so well known by the excavations which Mr. Layard has conducted.

[Vol.]

LARISSA (Ἀλαίσσα), a city of Syria, placed by Ptolemy in the district of Cassitiae, in which Antichus was situated (v. 15. § 16), but probably identical with the place of the same name which, according to Strabo, was reckoned to Apania (xvi. p. 572), and which is placed in the Itinerary of Antoninus 16 M. P. from Apamia, on the road to Eumes. D'Anville identifies it with the modern Kalat Silgyor, on the left bank of the Orontes, between Hamah and Kalat el-Medjik or Apamia. [G.W.]

LARISSUS or LARISUS, a river of Achaia. [Vol. I. p. 14. a.]

LARIUS LACUS (ἡ Ἀλοίος λίμνη; Lago di Como), one of the largest of the great lakes of Northern Italy, situated at the foot of the Alps, and formed by the river Adda. (Strab. iv. p. 192; Plin. iii. 19, s. 23.) It is of a peculiar form, long and narrow, but divided in its southern portion into two great arms or branches, forming a kind of fork. The SW. of these, at the extremity of which is situated the city of Como, has no natural outlet; the Adda, which carries off the superfluous waters of the lake, flowing from its SE. extremity, where stands the modern town of Lecco, Virgil, where he is speaking of the great lakes of Northern Italy, gives the epithet of maximum to these (Georg. ii. 159) and Servius, in his note on the passage, tells us that, according to Cato, it was 60 miles long. This estimate, though greatly overrated, seems to have acquired a sort of traditio- nary authority; it is repeated by Cassiodorus (Var. Ep. xi. 14), and even in the Itinerary of Antoninus (p. 278), and is at the present day still a prevalent notion among the boatmen on the lake. The real distance from Como to the head of the lake does not exceed 27 Roman miles, or 34 Roman miles, to which five or six more may be added for the distance by water to Riva, the Lago di Riva being often regarded as only a portion of the larger lake. Strabo, therefore, is not far from the truth in estimating the Larius as 300 stadia (37 Roman miles) in length, and 300 in breadth. (Strab. iv. p. 209.) But it is only in a few places that it attains this width; and, owing to its inferior breadth, it is really much more resemble than resembles the Bassa (Lago di Garda) or Verbanas (Lago Maggiore). Its waters are of great depth, and surrounded on all sides by high mountains, rising in many places very abruptly from the shore; notwithstanding which their lower slopes were clothed in ancient times, as they still are at the present day, with rich groves of olives, and afforded space for numerous villas. Among these the most celebrated are those of the younger Pliny, who was himself a native of Comum, and whose paternal estate was situated on the banks of the lake, of which last he always speaks with affection as "Larius noster." (Ep. ii. 8, vi. 24, vii. 11.) But, besides this, he had two villas of a more ornamental character, of which he gives some account in his letters (Ep. ix. 7); the one situated on a rocky promontory projecting out into the waters of the lake, over which it commanded a very extensive prospect, the other close to the water's edge. The description of the former would suit well with the site of the modern Villa Sorbelloni near Bellagio; but there are not sufficient grounds upon which to identify it. The name of Villa Pliniana is given at the present day to a villa about a mile beyond the village of Torno (on the right side of the lake going from Como), where there is a remarkable intermit- ting spring, which is also described by Pliny (Ep. iv. 30); but there is no reason to suppose that this was the site of either of his villas. Claudian briefly characterises the scenery of the Larius Lacus in a few lines (B. Get. 319—322); and Cassiodorus gives an elaborate, but very accurate, description of its beauties. The immediate banks of the lake were adorned with villas or palaces (praetoria), above which stood, on the right and left, canals through which rose again were vineyards, climbing up the sides of the mountains, the bare and rocky summits of which rose above the thick chestnut-woods that encircled them. Streams of water fell into the lake on all sides, in cascades of snowy whiteness. (Cas- siod. Var. xi. 14.) It would be difficult to describe more correctly the present aspect of the Lake of Como, the beautiful scenery of which is the theme of admiration of all modern travellers. Cassiodorus repeats the tale told by the elder Pliny, that the course of the Addua could be traced throughout the length of the lake, with which it did not mix its waters. (Plin. ii. 10. s. 106; Cassiod. L. c.) The same fable is told of the Lacus Leman- nus, or Lake of Geneva, and of many other lakes formed in a similar manner by the stagnation of a large river, which enters them at one end and flows from them at the other. It is remarkable that we have no trace of the ancient town situated on the site of the modern Lecco, where the Adda issues from the lake. We learn, from the Itinerary of Antoninus (p. 278), that the usual course in proceeding from Curia over the Raetian Alps to Mediolanum, was to take boat at the head of the lake and proceed by water to Comum. This was the route by which Stilicho is represented by Claudian as proceeding across the Alps (B. Get. l. c.); and Cassiodorus speaks of Comum as a place of great traffic of travel- lers (l. c.) In the latter ages of the Roman empire, a fleet was maintained upon the lake, the head-quarters of which were at Comum. (Frey. Dign. ii. p. 118.)

The name of Lacus Larius seems to have been early superseded in common usage by that of Lacus CO MANUS, which is already found in the Itinerary, as well as in Paulus Diaconus, although the latter author places the name on the borders of the Po (I. iv. Ant. l. c.; P. Diacon. Hist. v. 38, 39.) [E.H.B.]

LARIX or LARICE, a tree on the southern frontier of Noricum, at the foot of the Julian Alps, and on the road from Aquileia to Lauriacum. The town seems to have owed its name to the forests of larch trees which abound in that district, and its site
The circuit of the walls is less than a mile. The annexed plan of the remains is taken from Leake.

**PLAN OF LARYMNA.**

1. A small port, anciently closed in the manner here described.
2. The town wall, traceable all around.
3. Another wall along the sea, likewise traceable.
4. A mole, in the sea.
5. Various ancient foundations in the tower and acropolis.
6. A Sorus.
7. Glyfancerò, or Salt Source.
8. An oblong foundation of an ancient building.

Leake adds, that the walls, which in one place are extant to nearly half their height, are of a red soft stone, very much corroded by the sea air, and in some places are constructed of rough masses. The sorus is high, with comparison to its length and breadth, and stands in its original place upon the rocks: there was an inscription upon it, and some ornaments of sculpture, which are now quite defaced. The Glyfancerò is a small deep pool of water, impregnated with salt, and is considered by the peasants as sacred water, because it is cathartic.

The sea in the bay south of the ruins is very deep; and hence we ought probably to read in Pausanias (ix. 23, § 7), *αἰγύπτιον θαλάσση* instead of *Αίγυπτιον*, since there is no land-lande at this place. The ruins of Upper Larymna lie at Bazaaraki, on the right bank of the Cephissus, at the place where it issues from its subterranean channel.

**LAS.**

**LARSSIA.**

**[PYTHIUM.]**

Las (Lads, Ham; Ara, Syi, Paus., Strab., L., Steph. B. s. v.; Eth. Atlas), one of the most ancient towns of Lacoia, situated upon the western coast of the Laconian gulf. It is the only town on the coast mentioned by Hyginus (p. 17) between Taurus and Gythium. Phylax speaks of its port; but, according to Pausanias, the town itself was distant 10 stadia from the sea, and 40 stadia from Gythium. (Paus. iii. 24, § 6.) In the time of Pausanias the town lay in a hollow between the three mountains, Asia, Ilissus, and Cnacadium; but the old town stood on the summit of Mt. Asia. The name of Las signified the rock on which it originally stood. It is mentioned by Homer (Il. i. 1219).
LASHA.

385), and is said to have been destroyed by the Diocesari, who hence derived the surname of Laperesi. (Strab. viii. p. 364; Steph. B. s. v. Ant.) There was also a Maenadion in Laconia called Laperei. (Steph. B. s. v. Aape.) In the later period it was a place of no importance. Livy speaks of it as a "vivus maritimus" (xxxviii. 30), and Pausanias mentions the ruins of the city on Mt. Asia. Before the walls he saw a statue of Hercules, and a trophy erected over the Macedonians who were a part of Philip's army when he invaded Laconia; and among the ruins he noticed a statue of Athena Asia. The modern town was near a fountain called Galus (Taапae), from the milky colour of its water, and near it was a gymnasion, in which stood an ancient statue of Hermes. Besides the ruins of the old town on Mt. Asia, there were also buildings on the two other mountains mentioned above: on Mt. Binnan a temple of Dionysus, and on the summit a temple of Asclepius; and on Mt. Cascanium a temple of Apollo Carneus.

Las is spoken of by Polybius (v. 19) and Strabo (viii. p. 363) under the name of Asiæ; and hence it has been supposed that some of the fugitives from Asiæ in Argolis may have settled at Las, and given their name to the town. But, notwithstanding the statement of Polybius, from whom Strabo probably copied, we have given reasons elsewhere for believing that there was no Lacedaemon town called Asiæ: and that the mistake probably arose from confusing "Asiæ" with "Asia," on which Las originally stood.

[Asiae, No. 3.]

Las stood upon the hill of Passari, which is now crowned by the ruins of a fortress of the middle ages, among which, however, Leake noticed, at the southern end of the eastern wall, a piece of Heleneic wall, about 50 paces in length, and two-thirds of the height of the modern wall. It is formed of polygonal blocks of stone, some four feet long and three broad. The fountain Gaexo is the stream Turbiergen, which rises between the hill of Passari and the village of Kirvela, the latter being one mile and a half west of Passari. (Leake, Morea, vol. i. p. 254, seq.; Peleponnesia, p. 150; F-layre, Recerches, &c. p. 87; Curtius, Peloponnesum, vol. ii. p. 273, seq.)

LASHA (Aasoci), a city in Crete, near the road-side of the "Fair Haven." (Acts xxvii. 8.) The name does not mention by any other writer, but is probably the same as the island of the Lateran Tables, 16 M. P., to the E. of Gortyna. (Comp. Hisc., Ko'ta, vol. i. pp. 412, 439.) Some MSS. have Lasai; others, Adun. The Vulgate reads Thalassa, which Lasai contended was the true name. (Comp. Conybeare and Howson, Life and Epistle of St. Paul, vol. ii. p. 330.)

LASHA (Aasoci or Aasoci), the chief town of the most famous district of Arcadia in Elis proper, was situated upon the frontiers of Arcadia and Laconia, near Patris. Curtius places it with great probability in the upper valley of the Lacedaemon (Leonid) at the Peleobostolithos, near the road from the Elisian Pylos and Ephyra to Paphlagonia. Lacon was a frequent object of dispute between the Arcadians and Elisians, both of whom laid claim to it. In the war which the Spartans carried on against Elis at the close of the Peloponnesian War, Pausanias, king of Sparta, took Lasia (Ibid. xiv. 17). The mention of Cusannis is not mentioned by Xenophon in his account of this war; but the latter author relates that, by the treaty peace concluded between Elis and Sparta in n.c. 400, the Elisians were obliged to give up Lacon, in consequence of its being claimed by the Arcadians. (Xen. Hell. iii. 2. § 30.) In n. c. 366 the Elisians were defeated, and scattered from their territory; they took the town by surprise, but were shortly afterwards driven out of it again by the Arcadians. (Xen. Hell. vii. 4. § 13, seq.; Diod. xxv. 77.) In n. c. 219 Lacon was again a fortress of Elis, but upon the capture of Desphylus by Philip, the Elsonian garrison at Lacon straightway deserted the place. (Polyb. iv. 72, 73.) Polybius mentions (v. 102) along with Lacon a fortress called Pyrgos, which he places in a district named Peripagos. (Leake, Morea, vol. ii. p. 200, seq.; Boblaye, Recerches, &c. p. 125; Curtius, Peloponnesum, vol. i. p. 41.)

LASOIRA, a town of Galatia, mentioned in the Pent. Tab. as 25 miles distant from Ecbelira, where we may infer that it is the same place as the Aenopia of Ptolemy (v. 4. § 9). The Antoinine Itinerary (p. 203) mentions a town Adesra in about the same site.

LASTI'G, a town of Hispania Baetica, belonging to the conventus of Hispalis (Plin. iii. 1. s. 3), and one of the cities of which we have coins, all of them belonging to the period of its independence: their type is a head of Mars, with two ears of corn lying parallel to each other. The site is supposed to be at Zahara, lying on a height of the Sierras de Ronda, above the river Guadalacete. (Carter's Travels, p. 171; Place, Esp. v. vol. ix. pp. 18, 60, Med. vol. ii. p. 475; Plin. iii. p. 85; Bliemert, loc. c. 30; Suppl. vol. i. p. 113; Seleini, Med. Isp. p. 61; Num. Goth.; Eckel, vol. i. p. 25; Eckert, vol. ii. pt. 1. pp. 358, 382.)

[PL. S.]

LASUS, a town of Crete, enumerated by Pliney (iv. 12) among his list of inland cities: A coin with the epigraph AATIN, the Dorian form for Aaan, is claimed by Eckel (vol. ii. p. 316, comp. Sestini, p. 53) for this place.

[E. B. B.]

LATA'BA. (Ikouia.)

LATHON (Aitik, Strab. xvii. p. 836, where the vulgar reading is Adov; comp. xiv. p. 647, where he calls it Aitik); Port. iv. 4. § 4; Aitiker, Port. Euerget. op Ath. ii. p. 71; Fluvius Lethon, Plin. v. 5; Solin. 27; Lethon Aitiker, Lukan, iv. 353), a river of the Hesperides or Hesperitae, in Cyrenaica. It rose in the Herculis Areaeae, and fell into the sea a little N. of the city of Hesperitae or Bespieriae; Strabo connects it with the harbour of the city (Aitiker Eunomia); that there is not the slightest reason for altering the reading, as Grevskor and others do, into Aitiker, will presently appear; and Seyxas (p. 110, Gronov.) mentions the river, which he calls Ecceius (Ecxos), as in close proximity with the city and harbour of Hesperitae. Pliny ex expressly states that the river was not far from the city, and places or near it a sacred grove, which was supposed to represent the "Gardens of the Hesperitae," and was believed to be the "naval ante oppidi Fluiriss Lethon, loco soceri, ubi Hesperitae loci memnoniaret." Athenaeus quotes from a work of Ptolemy Energetes praises of its fine pike and eels, somewhat inconsistent, especially in the mouth of a luxurious king of Egypt, with the mythical sound of the name. That name is, in fact, plain Doric Greek, descriptive of the character of the river, like our English Mole. So well does it deserve the name, that it has excused the notice of commentators and geographers, till it was discovered by Beechey, as it still flows " concealed" from such scholars as depend on vague guesses in place of an accurate knowledge
of the localities. Thus the laborious, but often most inaccurate, compiler Forbiger, while taking on himself to correct Strabo's exact account, tells us that "the river and lake (Strabo's harbour) have now entirely vanished;" and yet, a few lines down, he refers to a passage of Beechey's work within a very few pages of the place where the river itself is almost described! (Forbiger, Handbuch der alten Geographie, vol. ii. p. 828, note.)

The researches made in Beechey's expedition give the following results:—East of the headland on which stands the ruins of Hesperides or Berenice (now Bengazi) is a small lake, which communicates with the harbour of the city, and has its water of course salt. The water of the lake varies greatly in quantity, according to the season of the year; and is nearly dried up in summer. There are strong grounds to believe that its waters were more abundant, and its communication with the harbour more perfect, in ancient times than at present. On the margin of the lake is a spot of rising ground, nearly insulated in winter, on which are the remains of ancient buildings. East of this lake again, and only a few yards from its margin, there gushes forth an abundant spring of fresh water, which empties itself into the lake, running along a channel of inconceivable breadth, bordered with reeds and rushes, and "might be mistaken by a common observer for an inroad of the lake into the sandy soil which bounds it." Moreover, this is the only stream which empties itself into the lake; and indeed the only one found on that part of the coast of Cyrenaica. Now, even without searching further, it is evident how well all this answers to the description of Strabo (ξυά, p. 830). — There is a promontory called Psophopanias, on which Berenice is situated, beside a certain Lake of Tritonis (διαζυ αιναὶ τῆς Τριτωνίας), in which there is generally (άναμορφω) a little island, and a temple of Aphrodite upon it; but there is (or it is) also the Harbour of Hesperides, and the river Lathon falls into it. It is now evident how much the sense of the description would be impaired by reading Ναυαία γιαγύρε for Ναυαία in the last clause; and the matters here are the whole. Strabo speaks of the river as falling into the harbour because it fell into the lake which communicated with the harbour, or whether he means that the lake, which he calls that of Tritonis, was actually the harbour (that is, an inner harbour) of the city. But the little stream which falls into the lake is not the only representative of the river Lathon. Further to the east, in one of the subterranean caves which abound in the neighbourhood of Bengazi, Beechey found a large body of fresh water, losing itself in the bowels of the earth; and the Bey of Bengasi affirmed that he had tracked its subterraneous course till he doubted the safety of proceeding further, and that he had found it as much as 30 feet deep. That the stream thus lost in the earth is the same which reappears in the spring on the margin of the lake, is extremely probable; but whether it so be in fact, or not, we can hardly doubt that the ancient Greeks would imagine the connection to exist. (Beechey, Proceedings, 6th. pp. 326, foll.; Barth, U.nderungen, 6th. p. 387.)

LATRIPPA (Λατριππα), an inland town of Arabia Felix, mentioned by Ptolemy (v. 7. § 31), where there is no difficulty in identifying with the ancient name of the renowned El-Medineh, "the city," as it is called by emphasis among the disciples of the false prophet. Its ancient name, Yathrib, still exists in the native geographies and local traditions, which, with the definite article el prefixed, is as accurately represented by Latiripta as the Greek alphabet would admit. "Medineh is situated on the edge of the great Arabian desert, close to the chain of mountains which traverses that country from north to south, and is a continuation of Libanon. The great plain of Arabia in which it lies is considered as elevated above the level of the sea. It is ten or eleven days distant from Mecca, and has been always considered the principal fortress of the Hedjaz, being surrounded with a stone wall. It is one of the best-built towns in the East, ranking in this respect next to Aleppo, though ruined houses and walls in all parts of the town indicate how far it has fallen from its ancient splendour. It is surrounded on all sides with gardens and plantations, which, on the east and south, extend to the distance of six or eight miles. Its population amounts to 16,000 or 20,000—10,000 or 12,000 in the town, the remainder in the suburbs." (Burchhardt, Arabia, 321—400; Ritter, Erdkunde, vol. i. p. 14, ii. pp. 149, 14c.)

LATIUM (ἡ Λατήνια; Eth. and Adj. Latinius), was the name given by the Romans to a district or region of Central Italy, situated on the Tyrrhenian sea, between Etruria and Campania.

I. NAME.

There can be little doubt that Latium meant originally the land of the Latini, and that in this, as in almost all other cases in ancient history, the name of the people preceded, instead of being derived from, that of the country. But the ancient Roman writers, with their usual infidelity in all matters of etymology, derived the name of the Latini from a king of the name of Latinius, while they sought for another origin for the name of Latium. The common etymology (to which they were obviously led by the quantity of the first syllable) was that which derived it from "lateus," and the usual explanation was, that it was so called because Saturn had there lain hid from the pursuit of Jupiter. (Verg. Aen. viii. 322; Ov. Fast. i. 238.) The more learned derivations proposed by Sauvius and Varro, from the inhabitants having lived hidden in caves (Sauvius, ap. Serv. ad Aen. i. 6), or because Latium itself was as it were hidden by the Appennines (Varr. ap. Serv. ad Aen. viii. 322), are certainly not more satisfactory. The form of the name of Latium would at first lead to the supposition that the ethnic Latini was derived from it; but the same remark applies to the case of Samnium and the Umbrites, where we know that the people, being a race of foreign settlers, must have given their name to the country, and not the converse. Probably Latini is only a lengthened form of the name, which was originally Latii or Latin; for the connection which has been generally recognised between Latin and Lavinium, Latinius and Lavinus, seems to point to the existence of an old form, Latinum. (Donat-1. Varro. v. 6. p. 352.) Varro himself seems to regard the name of Latium as derived from that of Latinius (L.L. v. § 32); and that it was generally regarded as equivalent to "the land of the Latini" is sufficiently proved by the fact that the Greeks always rendered it by ἡ Λατίνη, or ἡ Λατινῶν γῆ. The name of Latium is found only in Greek writers of a late period, who borrowed it directly from the Romans. (Appian, B. C. ii. 26; Hierodul, i. 10.) From the same cause it must have proceeded that when the Latini ceased to
have any national existence, the name of Latium is still not unfrequently used, as equivalent to "so-called Latium," to designate the whole body of those who possessed the rights of Latins, and were therefore still called Latini, though no longer in a national sense.

The suggestion of a modern writer (Aboiken, *Mittel Italien*, p. 42) that Latium is derived from \"latus\", broad, and means the broad plain or expanse of the Campagna (like Campania from \"Campus\"), appears to be untenable, on account of the difference in the quantity of the first syllable, notwithstanding the analogy of \"Marivi\", which has the first syllable short.

II. Extent and Boundaries.

The name of Latium was applied at different periods in a very different extent and significance. Originally, as already pointed out, it meant the land of the Latini; and as long as that people retained their independent national existence, the name of Latium could only be applied to the territory possessed by them, exclusively of the territory of the Hernici, Aequians, Volsci, &c., who were at that period independent and often hostile nations. It was not till these separate nationalities had been merged into the common condition of subjects and citizens of Rome that the name of Latium came to be extended to all the territory which they had previously occupied; and was thus applied, first in common parlance, and afterwards in official usage, to the whole region from the borders of Etruria to those of Campania, or from the Tiber to the Ligur. Hence we must carefully distinguish between Latium in the original sense of the name, in which alone it occurs throughout the early Roman history, and Latium in this later or geographical sense; and it will be necessary here to treat of the two quite separately. The period at which the latter usage of the name came into vogue we have no means of determining; we know only that it was fully established before the time of Augustus, and is recognised by all the geographers. (Strab. v. 228, 231; Plin. iii. 5. s. 9; *Pol. iii.* 1. §§ 5. 6.) Pliny designates the original Latium, or Latium properly so called, as *Latium Antiquum*, to which he opposesthe newly added portions, as *Latium Adjectum*. It may, however, be doubted whether these apppellations were ever adopted in common use, though convenient as geographical distinctions.

1. *Latium Antiquum* or Latium in the original and historical sense, was a country of small extent, bounded by the Tiber on the N., by the Apennines on the E., and by the Tyrrhenian sea on the W.; while on the S. its limits were not defined by any natural boundaries, and appear to have fluctuated considerably at different periods. Pliny defines it as extending from the mouth of the Tiber to the Circellian promontory, a statement confirmed by Strabo (Plin. iii. 5. s. 9; Strabh. v. p. 231), and we have other authority also for the fact that at an early period all the tract of marshy plain, known as the Pontine Marshes and "Pamphian Agar," extending from Velitrae and Antium to Circei, was inhabited by Latins, and regarded as a part of Latium (Cato, *ap. Friscianum*, v. p. 668.). Even of the adjoining mountain tract, subsequently occupied by the Volsci, a part at least must have been originally Latini, for Cursi, Nerici, and Sorvii were all of the Volsci (Dionys. v. 61.),—though, at a somewhat later period, not only had these towns, as the plain beneath, fallen into the hands of the Volsci, but that people had made themselves masters of Antium and Velitrae, which are in consequence repeatedly called Volscian cities. The manner in which the early Roman history has been distorted by poetical legends, or even by the suppositions of modern writers, renders it very difficult to trace the course of these changes, and the alterations in the frontiers consequent upon the alternate progress of the Volscian and the Roman arms. But there seems no reason to doubt the fact that such changes repeatedly took place, and that we may thus explain the apparent inconsistency of ancient historians in calling the same places at one time Volscian, at another Latin, cities. We may also clearly discern two different periods, during the first of which the Volscian arms were gradually gaining upon those of the Latins, and extending their dominion over cities of Latin origin; while, in the second, the Volsci were in their turn giving way before the preponderating power of Rome. The Gaulish invasion (B.C. 390) may be taken, approximately at least, as the turning point between the two periods.

Taking all this to have been somewhat similar, though to a less degree, on the northern frontier, where the Latins adjoined the Sabines. Here, also, we find the same places at different times, and by different authors, termed sometimes Latin and sometimes Sabine, cities; and though in some of these cases the discrepancy may have arisen from mere inadvertence or error, it is probable that in some instances both statements are equally correct, but refer to different periods. The circumstance that the Anio was fixed by Augustus as the boundary of the First Region seems to have soon led to the notion that it was the northern limit of Latium also; and hence all the towns beyond it were regarded as Sabine, though several of them were, according to the general tradition of earlier times, originally Latin cities. Such was the confusion resulting from this cause that Pliny in one passage enumerates Nomentanum, Fidenae, and even Tibur among the Sabine towns, while elsewhere mentions the two former as Latin cities,—and the Latin origin of Tibur is too well established to admit of a doubt. (Plin. iii. 5. s. 9. 12. s. 17.)

In the absence of natural boundaries it is only by means of the names of the towns that we can trace the extent of Latium; and here fortunately the lists that have been transmitted to us by Dionysius and Pliny, as well as those of the colonists of Athens, afford us much assistance. The latter, indeed, cannot be regarded as of historical value, but they were unquestionably meant to represent the fact, with which their authors were probably well acquainted, that the places there enumerated were properly Latin cities, and not of Sabine or Volscian origin. Taking these authorities for our guides, we may trace the limits of ancient Latium as follows:—1. From the mouth of the Tiber to the confluence of the Anio, the former river constituted the boundary between Latium and Etruria. The Romans, indeed, from an early period, extended their territory beyond the Tiber, and held the Janiculum and Campus Vaticanus on its right bank, as well as the so-called Septum Pagi, which they wrested from the Veientes; and it is probable that the Etruscans, on the other hand, had at one period extended their power over a part of the territories on the left bank of the Tiber; but that river nevertheless constituted the generally recognised geographical limit between Etruria and Latium. 2. North of the Anio the Latin territory
LATIUM. 133

comprised Fulensae, Crustumierum, and Nomentum, all of which are clearly established as Latin towns, while Eretum, only 3 miles from Nomentum, is equally well-known to be of Sabine origin. The line of demarcation is clearly defined by Strabo, who speaks of the Sabines as extending from the Tiber and Nomentum to the Vestini. (Strab. v. p. 228.)

From Nomentum to Tiber the frontier cannot be traced with accuracy, from our uncertainty as to the position of several of the towns in this part of Latium.—Corniculum, Medullia, Cameria, and Ame- ricia; but we may feel assured that it comprised the cutting group of the Liris-Cornelian (Meta S. Angelo and Monticelli), and from thence stretched across to the foot of Monte Cenano (Mons Lucr- etilis), around the lower slopes of which are the ruins or sites of more than one ancient city. Probably the whole of this face of the mountains, fronting the plain of the Campusagna, was always regarded as belonging to Latium, though the inner valleys and re- verse of the same range were inhabited by the Sabines. Tibur itself was unquestionably a Latin town, its territory extended into the interior of the mountains is difficult to determine. But if Empulmum and Sussula (two of its dependent towns) be correctly placed at Ampispigione and near Siciliano, it must have comprised a considerable tract of the mountain country on the left bank of the Anio. Varia, on the other hand, and the valley of the Dignicia, were unquestionably Sabine.

3. Returning to the Anio at Tibur, the whole of the W. front of the range of the Apennines from thence to Praeneste (Palestrina) was certainly Latin; but the limits which separated the Latins from the Aequians are very difficult to determine. We know that Bola, Pedum, Teletium, and Victilia, all of which were situated in this neighbourhood, were Latin cities; though, from their prox- imity to the frontier, several of them fell at one time or other into the hands of the Aequians, in like manner we cannot doubt that the whole group of the Alban Hills, including the range of Mount Albilus, was included in the original Latium, though the Aequians at one time were able to occupy the heights of Albanus at the opening of almost every campaign. Valmontone, whether it represent Toleriun or Vitellia, must have been about the most advanced point of the Latian frontier on this side. At a later date it was already extended to both sides of the great Latin War, v. c. 349, we find L. Annius of Setia, and L. Numicius of Circeii, holding the chief magistracy among the Latins, from whom at the same time Livy expressly distinguishes the Volscians (Liv. viii. 3). These statements, combined with those of Pliny and Strabo already cited, seem to have no doubt that Latium was properly regarded as extending as far as Circeii and the promontory of the same name, that is to say, the whole coast of Tiberina, the promontory of the Pontine Marshes, as well as the towns of Corna, Nora, and Setia, on the E. side of that plain. On the other hand, Tarquinia (or Arxus) and Pri- verum were certainly Volscian cities; and there can be no doubt that during the period of the Volscian power they had wrested a great part of the tract just described from the dominion of the Latins. Latium, which for some reason or other did not form a member of the Latin League in its early period a Volscian city, and became one of the chief strongholds of that people during the fifth century n. c.

The extent of Latium Antiquum, as thus limited, was far from considerable; the coast-line, from the mouth of the Tiber to the Cirenean promontory, does not exceed 52 geographical or 65 Roman miles (Pliny erroneously calls it only 50 Roman miles); while the greatest breadth, from the Cirenean promontory to the Sabine frontier, near Eretum, is little more than 70 Roman miles; and its breadth, from the mouth of the Tiber to the Sabine frontier, is just about 30 Roman miles, or 240 stadia, as correctly stated by Dionysius on the authority of Cato. (Dionys. ii. 49.)

2. LATIUM NOVUM. The boundaries of Latium in the enlarged or geographical sense of the name are much more easily determined. The term as thus employed, comprehended, besides the original territory of the Latins, that of the Aequians, the Herceans, the Volsci, the Aequians, and the Auruncans or Ausonians. Its northern frontiers thus remained un- changed, while on the E. and S. it was extended so as to border on the Marsi, the Samnites, and Campania. Some confusion is nevertheless created by the new line of demarcation established by Augustus, who, while he constituted the first division of Italy out of Latium in this wider sense together with Campania, excluded from it the part of the old Latium territory of the Anio, adjoining the Sabines, as well as a part of that of the Aequians or Aequulirians, including Carso and the valley of the Tanaro. The upper valley of the Anio about Subiaco, on the other hand, together with the mountainous district extending from thence to the valley of the Sacco, constituting the chief abode of the Aequi during their wars with Rome, was wholly comprised in the newly extended Latium. To this was added the mountain district of the Herculis, extending nearly to the valley of the Liris, as well as that of the Volsci, who occupied the country for a considerable extent on both sides of the Liris, including the mountain district around Arpinum and Atina, where they bore them already as a frontier of the territory of the Samnites. The limits of Latium towards the S., where its frontiers joined those of Campania, are clearly marked by Strabo, who tells us that Casinum was the last Latin city on the line of the Via Latina,—Teumum being already in Campania; while on the line of the Via Appia, near the sea-coast, Sinuessa was the frontier town of Latium. (Strab. v. pp. 231, 233, 237; Plin. iii. 5. 8. 9.) Pliny, in one passage, appears to speak of the Liris as constituting the boundary of this enlarged Latium (L. § 56), while shortly after (§ 59) he terms Sinuessa “oppidum extremum in adjectum Latio,” whence it has been supposed that the boundary of Latium was at first extended only to the Liris, and subsequently carried a step further so as to include Sinuessa and its territory. (Cramer’s Italy, vol. ii. p. 11.) But we have no evidence of any such successive stages. Pliny in all probability uses the term “adjectum Latium” only as contrasted from “Latium antiquum”; and the expression in the previous passage, “unde nomen Latii processit ad Lirin annum,” need not be con- strued too strictly. It is certain, at least, that, in the days of Strabo, as well as those of Pliny, Si-
LATIUM. LATIUM.

The land of the Latins, or Latium, in its original sense, formed the southern part of the great basin through which the Tiber flows to the sea, and which is bounded by the Cimbinian Hills, and other ranges of volcanic hills connected with them, towards the N. by the Apennines on the E., and by the Alban Hills on the S. The latter, however, do not form a continuous barrier, being in fact an isolated group of volcanic origin, separated by a considerable gap from the Apennines on the one side, while on the other they leave a broad strip of low plain between their lowest slopes and the sea, which is continued on in the broad expanse of level and marshy ground, commonly known as the Pontine Marshes, extending in a broad band between the Volscian mountains and the sea, until it is suddenly and abruptly terminated by the isolated mass of the Circenian promontory.

The great basin-like tract thus bounded is divided into two portions by the Tiber, of which the one on the N. of that river belongs to Southern Etruria, and is not comprised in our present subject.

[ETRURIA.]

The southern part, now known as the Campagna, may be regarded as a broad expanse of undulatory plain, extending from the sea-coast to the foot of the Apennines, which rise from it abruptly like a gigantic wall to a height of from 3000 to 4000 feet, their highest summits even exceeding the latter elevation. The Monte Generace, (4285 English feet in height) is one of the loftiest summits of this range, and, from the boldness with which it rises from the subjacent plain, and its advanced position, appears, when viewed from the Campagna, the most elevated of all; but, according to Sir W. Geil, it is exceeded in actual height both by the Monte Pannucchio, a little to the N. of it, and by the Monte di Guadagnolo, the central peak of the group of mountains which rise immediately above Praeneste or Palestrina. The citadel of Praeneste itself occupies a very elevated position, forming a kind of outwork or advanced post of the chain of Apennines, which here trends away suddenly to the eastward, sweeping round by Tuscanum, Albano, and Ro.

The central part, till it resumes its general SE. direction, and is continued on by the lofty range of the Her-

The mountain chain of the Sabine, which forms the valley of the Tiber, is continued unbroken to the valley of the Liris.

Opposite to Praeneste, and separated from it by a breadth of nearly 5 miles of intervening plain, rises the isolated group of the Alban mountains, the form of which, at once, proves its volcanic origin. [ALBANUS MONTES.] It is a nearly circular mass, of about 40 miles in circumference; and may be conceived as forming a great crater, the outer ridge of which has been broken up into numerous more or less detached summits, several of which were crowned in ancient times by towns or fortresses, such as Tusculum, Corbin, &c.; while at a lower level it throws out detached ridges, sending outlying ridges, affording ad-

The group of the Alban mountains is wholly detached on all sides: on the S. a strip of plain, of much the same breadth as that which separated it from the Apennines of Praeneste, divides it from the submontane, but very lofty mass of moun-
which must at a distant period have been the centre of volcanic outbursts on a great scale. Besides the central or principal crater of this group, there are several minor craters, or crater-shaped hollows, at a much lower level around its ridges, which were in all probability at different periods centres of eruption. Some of these have been filled with water, and thus constitute the beautiful basin-shaped lakes of Albano and Nemi, while others have been drained at periods more or less remote. Such is the case with the Vallis Aricia, which appears to have at one time constituted a lake [Aricia], as well as with the now dry basin of Cornovelle, below Tusculum, supposed, with good reason, to be the ancient Lake Regillus, and with the somewhat more considerable Lago di Castiglione, adjoining the ancient Gabii, which has been of late years either wholly or partially drained. These distinct foci of volcanic action, there remain in several parts of the Campania spots where sulphureous and other vapours are still evolved in considerable quantities, so as to constitute deposits of sulphur available for economic purposes. Such are the Lago di Solfatarars near Tiroli (the Apana Abalnus of the Romans), and the Solfataras on the road to Ardea, supposed to be the site of the ancient Oracle of Faunus. Numerous accounts of these sulphureous and mephitic exhalations are found in the ancient writers, and there is reason to suppose that they were in ancient times more numerous than at present. But the evidences of volcanic action are not confined to these local phenomena; the whole plain of the Campania itself, as well as the portion of Southern Etruria which adjoins it, is a deposit of volcanic origin, consisting of the peculiar substance called by Italian geologists tufa,—an aggregate of volcanic materials, sand, small stones, and ascene or cinders, together with pumice, varying in consistency from an almost incoherent sand to a stone sufficiently hard to be well adapted for building purposes. The highest varieties are those now called peperino, to which belong the Lapis Gobinns and Lapis Albanus of the ancients. But even the common tufa was in many cases qualified for building purposes, as at the Lapidinae Rubiae, only 12 miles from the city near the bank of the Tiber, and many other spots in the immediate neighbourhood of Rome. (Vitr. ii. 7.) Beds of true lava are rare, but by no means wanting; the most considerable are two streams which have flowed from the foot of the Alban Mount; the one in the direction of Ardea, the other on the line of the Appian Way (which runs along the ridge of it for many miles) extending as far as a spot called Capo di Bove, little more than two miles from the gates of Rome. It was extensively quarried by the Romans, who derived from thence their principal supplies of the hard basaltic lava (called by them silex) with which they paved their high roads. Smaller beds of the same material occur near the Lago di Castiglione, and at other spots in the Campania. (Concerning the geological phenomena of Latin see Dallinger On Volcanoes, pp. 162—173; and an Essay by Hoffmann in the Beschreibung der Stadt Rom, vol. i. pp. 45—81.)

The strip of country immediately adjoining the sea-coast of Latium differs materially from the rest of the district. Between the borders of the volcanic deposit just described and the sea there intervenes a broad strip of sandy plain, evidently formed merely by successive accumulations of sand from the sea, and constituting a barren tract, still covered, as it was in ancient times, almost wholly with wood. This broad belt of forest region extends without interruption from the mouth of the Tiber near Ostia to the promontory of Autium. The parts of it nearest the sea are rendered marshy by the stagnation of the streams that flow through it, the outlets of which to the sea are blocked up by the accumulations of sand. The headland of Autium is formed by a mass of limestone rock, forming a remarkable break in the otherwise uniform line of the coast, though itself of small elevation. A bay of about 8 miles across separates this headland from the low point or promontory of Astura: beyond which commences the far more extensive bay that stretches from the latter point to the mountain headland of Circeii. The whole of this line of coast from Astura to Circeii is bordered by a narrow strip of sand-hills, within which the waters accumulate into stagnant pools or lagoons. Beyond this again is a broad sandy tract, covered with dense forest and brushwood, but almost perfectly level, and in many places marshy; while from thence to the foot of the Vejcanian mountains extends a tracts of a still more marshy character, forming the celebrated district known as the Pontine Marshes, and noted in ancient as well as modern times for its productive fertility. This whole district of the coast, which, from its N. extremity at Ceterum, to the sea near Terracina, is about 30 Roman miles in length, with an average breadth of 12 miles, is perfectly flat, and, from the stagnation of the waters which descend to it from the mountains on the E., has been in all ages so marshy as to be almost uninhabitable. Pliny, indeed, records a tradition that there once existed no less than 24 cities on the site of what was in his days an uncoupled marsh, but a careful inspection of the locality is sufficient to prove that this must be a mere fable. (Plin. iii. 5. 8. 9.) The dry land adjoining the marshes was doubtless occupied in ancient times by the cities or towns of Satricum, Ulpbrane, and Suessa Pometia; while on the mountain ridges overlooking them rose those of Cora, Norba, Setia and Frivernum; but not even the name of any town has been preserved to us as situated on the marshy Circitius. Equally so is the statement hastily adopted by Pliny, though obviously inconsistent with the last, that the whole of this alluvial tract had been formed within the historical period, a notion that appears to have arisen in consequence of the identification of the Mens Circitius with the island of Circe, described by Homer as situated in the midst of an open sea. This remarkable headland is indeed a perfectly insulated mountain, being separated from the Apenines near Terracina by a strip of level sandy coast above 8 miles in breadth, forming the southern extremity of the plain of the Pontine Marshes; but this alluvial deposit, which alone connects the two, must have been formed at a period long anterior to the historical age. The Circitian promontory formed the southern limit of Latium in the original sense. On the opposite side of the Pontine Marshes rises the lofty group of the Vejcanian mountains already described; and these are separated by the valley of the Turrus or Sacco from the ridges more immediately connected with the central Apenines, which were inhabited by the Aquilans and Hermiones. All these mountain districts, as well as those inhabited by the Vejcanians on the S. of the Liris, around Arpinum and Atina, partake of the same general character: they are occupied almost entirely by masses and groups of

Digitized by Microsoft®
limestone mountains, frequently rising to a great height, and very abrupt, while in other cases their sides are clothed with magnificent forests of oak and chestnut trees, and their lower slopes are well adapted for the growth of vines, olives, and corn.

The broad valley of the Trevisus, which extends from the foot of all sides of the Lucretian Hills, is bordered on both sides by hills, covered with the richest vegetation, at the back of which rise the lofty ranges of the Veliscan and Hernican mountains. This valley, which is followed throughout by the course of the Vin Latium, forms a natural line of communication from the interior of Latium to the valley of the Liris, and so to Campania; the importance of which in a military point of view is apparent on many occasions in Roman history. The broad valley of the Liris itself opens an easy and unbroken communication from the heart of the Apenines near the Lake Fucinus with the plains of Campania. On the other side, the Anio, which has its sources in the rugged mountains near Tret, not far from those of the Liris, flows in a SW. direction, and after changing its course abruptly two or three times, emerges through the gorges at Tivoli into the plain of the Roman Campagna.

The greater part of Latium is not (as compared with some other parts of Italy) a country of great natural fertility. On the other hand, the barren and desolate aspect which the Campagna now presents is apt to convey a very erroneous impression as to its character and resources. The greater part of the volcanic plain not only affords good pasturage for sheep and cattle, but is capable of producing considerable quantities of corn, while the slopes of the hills and all sides are well adapted to the growth of vines, olives, and other fruit-trees. The wine of the Alban Hills was celebrated in the days of Horace (Hor. Carm. iv. 11, 2. Sat. ii. 8, 16), while the figs of Tusculum, the hazel-nuts of Praeneste, and the pears of Crustumium and Tibur were equally noted for their excellence. (Macrobi. Sat. ii. 14, 15; Cato. R. R. 8.)

In the early ages of the Roman history the cultivation of corn must, from the number of small towns scattered over the plain of Latium, have been carried to a far greater extent than we now find it at the present day; but under the Roman Empire, and even before the close of the Republic, there appears to have been a continually increasing tendency to diminish the amount of arable cultivation, and increase that of pasture. Nevertheless the attempts that have been made even in modern times to promote agriculture in the neighbourhood of Rome have sufficiently proved that its decline is more to be attributed to other causes than to the sterility of the soil itself. The tract near the sea-coast alone is sandy and barren, and fully justifies the language of Fabius, who called it "agrum macerturnm, litorisissimumque" (Serv. ad Aen. i. 3). On the other hand, the slopes of the Alban Hills are of great fertility, and are still studded, as they were in ancient times, with the villas of Roman nobles, and with gardens of the greatest richness.

The climate of Latium was very far from being a healthy one, even in the most flourishing times of Rome, though the greater amount of population and cultivation tended to diminish the effects of the malaria which at the present day is the scourge of the district. Strabo tells us that the territory of Aricia, as well as the tract between Antium and Lanuvium, and extending from thence to the Pontine Marshes, was marshy and mawholesome (v. p. 231). The Pontine plains themselves are described as "pes-tiferous" (Sil. Ital. viii. 379), and all the attempts made to drain them seem to have produced but little effect. The unhealthiness of Aricia is noticed both by Martial and Seneca as something proverbial (Martial, vi. 165; Ep. 165); but, besides this, expressions occur which point to a much more general diffusion of malaria. Livy in one passage represents the Roman soldiers as complaining that they had to maintain a constant struggle "in arido atque pestilentis, circa arnum, solo" (Liv. vii. 38); and Cicero, in a passage where there was much less room for rhetorical exaggeration, praises the choice of Romulus in fixing his city "in a healthy spot in the midst of a pestilential region." (Locum delegat in regione pestilenti salubrem. Cio. de Rep. i. 6.)

But we learn also, from abundant allusions in ancient writers, that it was only by comparison that Rome itself could be considered healthy; even in the city malaria fevers were of frequent occurrence in summer and autumn, and Horace speaks of the heats of summer as bringing in "fresh figs and funerals." (Hor. Ep. i. 7. 1—3.) Frontinus also excuses the increased supply of water as tending to remove the causes which had previously rendered Rome notorious for its unhealthy climate ("canseav gravioris coeli, quibus apud veteres urbis infamis aer fuit," Frontin. de Aquaeduct. § 88). But the great accumulation of the population at Rome itself must have operated as a powerful check; for even at the present day malaria is unknown in the most densely populated parts of the city, though those are the lowest in point of position, while the hills, which were then thinly peopled, but are now almost uninhabited, are all subject to its ravages. In like manner in the Campagna, wherever a considerable nucleus of population was once formed, with a certain extent of cultivation around it, this would in itself tend to keep down the mischief; and it is probable that, even in the most flourishing times of the Roman Empire, this evil was considerably greater than it had been in the earlier ages, when the numerous free cities formed so many centres of population and agricultural industry. It is in accordance with this view that we find the malaria extending its ravages with frightful rapidity after the fall of the Roman Empire and the devastation of the Campagna; and a writer of the 11th century speaks of the deadly climate of Rome in terms which at the present day would appear greatly exaggerated. (Petrus Damiani, cited by Bunsen.) The unhealthiness arising from this cause is, however, entirely confined to the plains. It is found at the present day that an elevation of 350 or 400 feet above their level gives complete immunity; and hence Tibur, Tusculum, Aricia, Lanuvium, and all the other cities that were built at a considerable height above the plain were perfectly healthy, and were resorted to during the summer (in ancient as well as modern times) by all who could afford to retreat from the city and its immediate neighbourhood. (See on this subject Touron, Études Statistiques sur Rome, liv. i. chap. 9; Bunsen, Beschreibung der Stadt Rom, vol. i. pp. 98—103.)

IV. History.

1. Origina and Affihities of the Latinos.—All ancient writers are agreed in representing the Latins, properly so called, as the inhabitants of Latium in the restricted sense of the term, as a distinct people
LATIUM.

from those which surrounded them, from the Volscians and Etruscans on the one hand, as well as from the Sabines and Umbrians on the other. But the views and traditions recorded by the same writers concur also in representing them as a mixed people, produced by the blending of different races, and not as the pure descendants of one common stock. The legend most commonly adopted, and which gradually became firmly established in the popular belief, was that which represented Latium as inhabited by a people termed Aborigines, who received, shortly after the Trojan War, a colony or band of emigrant Trojans under their king Aeneas. At the time of the arrival of these strangers the Aborigines were governed by a king named Latinus, and it was not till after the death of Latins and the union of the two races under the rule of Aeneas, that the combined people assumed the name of Latins. (Liv. i. 1. 2; Dionys. i. 43, 60; Strab. v. p. 229; Appian, Rom. i. 1.) But a tradition, which has much more the character of a national one, preserved to us on the authority both of Varro and Cato, represents the population of Latium, as it existed previous to the Trojan colony, as already of a mixed character, and resulting from the union of a conquering race, who descended from the Central Apennines about Beate, with a people whom they found already established in the plains of Latium, and who bore the name of Siculi. It is strange that Varro (according to Dionysius) gave the name of Aborigines, which must originally have been applied or adopted in the sense of Autochthones, as the indigenous inhabitants of the country [Aborigines], to these foreign invaders from the north. Cato apparently used it in the more natural significance as applied to the previously existing population, the same which were called by Dionysius and Varro, Siculi. (Var. ap. Dionys. i. 9, 10; Cato, ap. Princian. v. 12. § 65.) But though it is impossible to receive the statement of Varro with regard to the name of the invading population, the fact of such a migration having taken place may be fairly admitted as worthy of credit, and is in accordance with all else that we know of the progress of the population of Central Italy, and the course of the several successive waves of emigration that descended along the central line of the Apennines. [ITALIA, pp. 54, 85.] The authority of Varro is here also confirmed by the result of modern philological researches. Niebuhr was the first to point out that the Latin language bore in itself the traces of a composite character, and was made up of two distinct elements; the one nearly resembling the Greek, and therefore probably derived from a Pelasgic source, the other closely connected with the Oscean and Umbrian dialects of Central Italy. To this he adds the important observation, that the terms connected with war and arms belong almost exclusively to the latter class, while those of agriculture and domestic life have for the most part a strong resemblance to the corresponding Greek terms. (Niebuhr, vol. i. pp. 82, 83; Donaldson, Varroiana, p. 3.) We may therefore infer that the conquerors people from the north was a race akin to the Oscans, Sabines and Umbrians, whom we find in historical times settled in the same or adjoining regions of the Apennines; and that the inhabitants of the plains whom they reduced to subjection, and with whom they became gradually mingled (like the Normans with the Saxons in England) were a race of Pelasgic extraction. This last circumstance is in accordance with the inferences to be drawn from several of the historical traditions or statements transmitted to us. Thus Cato represented the Aborigines (whom he appears to have identified with the Siculi) as of Hellenic or Greek extraction (Cato, ap. Dionys. i. 11, 13), by which Roman writers often mean nothing more than Pelasgic; and the Siculi, where they reappear in the S. of Italy, are found indissolubly connected with the Oenotrians, a race whose Pelasgic origin is well established. [SICULI.]

The Latin people may thus be regarded as composed of two distinct races, both of them members of the great Indo-Turanian family, but belonging to different branches of that family, the one more closely related to the Greek or Pelasgic stock, the other to that race which, under the various forms of Umbrian, Oscean and Sabelian, constituted the basis of the greater part of the population of Central Italy. [ITALIA.]

But whatever value may be attached to the historical traditions above cited, it is certain that the two elements of the Latin people had become indissolubly blended before the period when it first appears in history: the Latin nation, as well as the Latin language, is always regarded by Roman writers as one organic whole.

We may safely refuse to admit the existence of a third element, as representing the Trojan settlers, who, according to the tradition commonly adopted by the Romans themselves, formed an integral portion of the Latin nation. The legend of the arrival of Aeneas and the Trojan colony is, in all probability, a mere fiction adopted from the Greeks (Schwegler, Rom. Gesch. vol. i. pp. 310—326): though it may have found some adventitious support from the existence of usages and religious rites which, being of Pelasgic origin, recalled those found among the Pelasgic races on the shores of the Aegean Sea. And it is in accordance with this view that we find traces of similar legends connected with the worship of Aeneas and the Penates at different points along the coasts of the Aegean and Mediterranean seas, all the way from the Troad to Latium. (Dionys. i. 46—55; Klausen, Aeneas u. die Penaten, book 3.) The worship of the Penates at Lavinium in particular would seem to have been closely connected with the Cabiric worship so prevalent among the Pelasgians, and hence probably that city was selected as the supposed capital of the Trojans on their first settlement in Italy.

But though these traditions, as well as the sacred rites which continued to be practised down to a late period of the Roman power, point to Lavinium as the ancient metropolis of Latium, which retained its sacred character as such long after its political power had disappeared, all the earliest traditions represent Alba, and not Lavinium, as the chief city of the Latins when that people first appears in connection with Rome. It is possible that Alba was the capital of the conquering Oscean race, as Lavinium had been that of the conquered Pelasgians, and that there was thus some historical foundation for the legend of the transfer of the supreme power from the one to the other: but no such supposition can claim to rank as more than a conjecture. On the other hand, we may fairly admit as historical the fact, that, at the period of the foundation or first origin of Rome, the Latin people constituted a national league, composed of numerous independent cities, at the head of which stood Alba, which exercised a certain supremacy over the rest. This vague superiority, arising probably from its greater actual power, appears to have given rise
LATIUM.

P. 138

LATIUM.

to the notion that Alba was in another sense the metropolis of Latium, and that all, or at any rate the greater part, of the cities of Latium were merely colonies of Alba. So far was this idea carried, that we find expressly enumerated in the list of such colonies places like Aricia, Tusculum, and Praeneste, which, according to other traditions generally received, were more ancient than Alba itself. In the narrative of NICOLAI Dionisii (Liv. i. 32) the nation is almost in connection with the wars of Ancus Marcus and Tarquiniius Priscus (Liv. i. 32, 33, 38); and it never occurs at a later period. Hence it seems impossible to suppose that it was used as a term of distinction for the Latii properly so called, or inhabitants of Latium Antiquum, as contradistinguished from the Aequeus, Volsci, and other nations subsequently included in Latium: a supposition adopted by several modern writers. On the other hand the name does not occur in the Roman history, prior to the destruction of Alba, and perhaps the most plausible conjecture is that the name was one assumed by a league or confederacy of the Latin cities, established after the fall of Alba, but who thus asserted their claim to represent the original and ancient Latin people.

It must be admitted that this explanation seems at first sight to be determined by any certain evidence. Whatever the Prisci Latini were the colonies of Alba, which is found both in Livy and Dionysius (Liv. i. 3; Dion. i. 45), but this probably meant to convey nothing more than the notion already noticed, that all the cities of Latium were founded by such colonies. Livy, at least, seems certainly to regard the "Priisci Latini" as equivalent to the whole Latin nation, and not as a part contradistinguished from the rest. (Liv. iii. 34).

2. Relations of the Latini with Rome.--As the first historical appearance of the Latini is that of a confederation of different cities, of which Alba was the head, the fall and destruction of Alba may be regarded as the first event in their annals which can be termed historical. The circumstances transmitted to us in connection with this are undoubtedly poetical fiction; but the main fact of the destruction of the city and dominion of its people is well established. This event must have been followed by a complete derangement in the previously existing relations. Rome appears to have speedily put forth a claim to the supremacy which Alba had previously exercised (Dionys. iii. 34); but it is evident that this was not acknowledged by the other cities of Latium; and the Priisci Latini, whose name appears in history only during this period, probably formed a separate league of their own. It was not long, however, before the Romans succeeded in establishing their superiority: and the statement of the Roman annals, that the Latin league was renewed under Tarquiniius Superbus, and the supremacy of that monarch acknowledged by all the other cities that composed it, derives a stronger authentic confirmation from the testimony of the treaty between Rome and Carthage, preserved to us by Polybius (iii. 22). In this important document, which dates from the year immediately following the expulsion of the kings (n.c. 509), Rome appears as stipulating on behalf of the people of Ardea, Antium, Laurentum, Circeii, Tarquinia, and the other subject (or dependent) cities of Latium, and even making conditions in regard to the whole Latin territory, as if it was subject to its rule. But the state of things which appears to have been at this time fully established, was broken up soon after; whether in consequence of the revolution at
LATIUM.

Rome which led to the abolition of the kingly power, or from some other cause, we know not. The Latin cities, therefore, declared for Rome, and though the war which was marked by the great battle at the lake Regillus has been dressed up in the legendary history with so much of fiction as to render it difficult to attach any historical value to the traditions connected with it, there is no reason to doubt the fact that the Latins had at this time shaken off the supremacy of Rome, and that a war between the two powers was the result. Not long after this, in n. c. 493, a treaty was concluded with them by Sp. Cassius, which determined their relations with Rome for a long period of time. (Liv. ii. 33; Dionys. vi. 96; Cic. pro Balb. 23.)

By the treaty thus concluded the Romans and Latins entered into an alliance as equal and independent states, both for offence and defence; all booty or conquered territory was to be shared between them; and there is much reason to believe that the supreme command of the allied armies was to be held in alternate years by the Roman and Latin generals. (Dionys. l. c.; Nieb. vol. ii. p. 40.) The Latin cities, which at this time composed the league or confederacy, were thirty in number: a list of them is given by Dionysius in another passage (v. 61), but which, in all probability, was derived from the treaty in question (Niebuhr, vol. ii. p. 23).

They were—Ardea, Ariclia, Bovillae, Buhenorum, Cornubia, Curontina, Circi, Curtia, Cosa, Corfiniæ (7), Gabii, Laurentum, Lavinium, Lanuvium, Latisium, Noventa, Norba, Praeneste, Pedum, Querquetulon, Satricum, Scapina, Sestia, Tellinium, Tibur, Tusculum, Toleria, Tricinium (?), Velitriae. The number thirty appears to have been a recognised and established one, not dependent upon accidental changes and fluctuations: the cities which composed the old league under the supremacy of Alba are also represented as thirty in number (Dionys. iii. 34), and the "populi Albenses," which formed the smaller and closer union under the same head, were, according to Piny's list, just thirty. It is therefore quite in accordance with the usages of ancient nations that the league when formed anew should consist as before of thirty cities, though these could not have been the same as previously composed it.

The want of this alliance between Rome and Latium was no doubt an obstacle to the rapidly advancing power of the Aequians and Volscians. With the same view the Hernicians were soon after admitted to participate in it (n. c. 486); and from this time for more than a century the Latins continued to be the faithful allies of Rome, and shared alike in her victories and reverses during her long and arduous struggle with their warlike neighbours. (Liv. vi. 2.) A shock was given to these friendly relations by the Gallic War and the capture of Rome in n. c. 390; the calamity which then befell the city appears to have incited some of her nearest neighbours and most faithful allies to take up arms against her. (Varr. L. l. vi. 18; Liv. vi. 2.) The Latins and Hernicians are represented as not only refusing their contingent to the Roman armies, but supporting and assisting the Volscians against Rome. (Liv. vi. 2.) A shock was given to these friendly relations by the Gallic War and the capture of Rome in n. c. 390; the calamity which then befell the city appears to have incited some of her nearest neighbours and most faithful allies to take up arms against her. (Varr. L. l. vi. 18; Liv. vi. 2.) The Latins and Hernicians are represented as not only refusing their contingent to the Roman armies, but supporting and assisting the Volscians against Rome. (Liv. vii. 29.) Nevertheless the Latin League, though much disorganised, was never broken up; and the cities composing it still continued to hold their meetings at the Lucus Feroniae, to deliberate on their common interests and policy. (Id. vii. 25.) In n. c. 338 the league with Rome appears to have been renewed upon the same terms as before; and in that year the Latins, for the first time after a long interval, sent their contingent to the Roman armies. (Liv. vii. 12.)

At length, in n. c. 340, the Latins, who had adhered faithfully to their alliance during the First Samnite War, appear to have been roused to a sense of the increasing power of Rome, and became conscious that, under the shadow of an equal alliance, they were gradually passing into a state of dependence and servitude. (Id. viii. 4.) Hence, after a vain appeal to Rome for the establishment of a more equitable arrangement, the Latins, as well as the Volscians, took part with the Campanians in the war of that year, and shared in their memorable defeat at the foot of Mount Vesuvius. Even on this occasion, however, the councils of the Latins were divided: the Lauretani at least, and probably the Lariniani also, remained faithful to the Roman cause, while Suginna, Setia, Circi, and Velitriae, though regarded as Roman colonies, were among the most prominent in the war. (Id. viii. 3—11.) The contest was renewed the next year with various success; but in n. c. 338 Furius Camillus defeated the forces of the Latins in a great battle at Pedum, while the other consul, C. Maenius, obtained a not less decisive victory on the river Astura. The struggle was renewed at an end, and the Latins, having been admitted one after the other, and the Roman senate pronounced separately on the fate of each. The first great object of the arrangements now made was to deprive the Latins of all bonds of national or social unity: for this purpose not only they were prohibited from holding general councils or assemblies, but the several cities were deprived of the mutual rights of "communitum" and "commencium," and so as to isolate each little community from its neighbours. Tibur and Praeneste, the two most powerful cities of the confederacy, and which had taken a prominent part in the war, were deprived of a large portion of their territory, but continued to exist as nominally independent communities, retaining their own laws, and the old treaties with them were renewed, so that as late as the time of Polybius a Roman citizen might choose Tibur or Praeneste as a place of exile. (Liv. xii. 20.) In the same year Lucius Gabinius, on the contrary, received the Roman franchise; as did Lanuvium, Aricia, Pedum, and Nomentum, though these last appear to have, in the first instance, received only the imperfect citizenship without the right of suffrage. Velitria was very much weakened. The more powerful cities are found acting with a degree of independence to which there is no parallel in earlier times; thus, in n. c. 338, the Lariniani formed an alliance with the Volscians, and Praeneste declared itself hostile to Rome, while Tusculum, Gabii, and Lavinium continued on friendly terms with the republic. (Id. vi. 21.) In n. c. 380 the Romans were at open war with the Praenestines, and in n. c. 360 with the Tiburtines, but in neither instance do the other cities of Latium appear to have joined in the war. (Id. vii. 27—29, vii. 10—12, i. 19.) The repeated invasions of the Gauls, whose armies traversed the Latin territory year after year, tended to increase the confusion and disorder; nevertheless the Latin League, though much disorganised, was never broken up; and the cities composing it still continued to hold their meetings at the Lucus Feroniae, to deliberate on their common interests and policy. (Id. vii. 25.)
LATIUM.
more severely punished; but the people of this city also were soon after admitted to the Roman franchise, and the creation shortly after of the Maecian and Scipitian tribes was designed to include the new citizens added to the republic as the result of these arrangements. (Liv. viii. 14, 17; Niebuhr, vol. iii. pp. 140—145.)

From this time the Latins as a nation may be said to disappear from history: they became gradually more and more blended into one mass with the Roman people; and though the formula of "the allies and Latin nation" (socii et nonum Latium) is one of perpetual occurrence from this time forth in the Roman history, it must be remembered that this phrase includes also the citizens of the so-called Latin colonies, who formed a body far superior in importance and numbers to the remains of the old Latin people. [Italia, p. 90.]

In the above historical review, the history of the old Latins, or the Latins properly so called, has been studiously kept separate from that of the other nations which were subsequently included under the general appellation of Latium,—the Aequians, Herculeans, Volscians, and Auscians. The history of these several tribes, as long as they sustained a separate national existence, will be found under their respective names. It may suffice here to mention that when the Latins were reduced to complete subjection to Rome in B.C. 306, and the Aequians in B.C. 394; the period of the final subjugation of the Volscians is more uncertain, but we meet with no mention of them in arms after the capture of Piverosum in B.C. 329; and it seems certain that they, as well as the Ausonian cities which joined them, had fallen into the power of Rome before the commencement of the Second Samnite War, B.C. 296. (Vol. i. 11.) Hence, the whole of the country subsequently known as Latium had become finally subject to Rome before the year 300 B.C.

3. Latium under the Romans.—The history of Latium, properly speaking, ends with the breaking up of the Latin League. Although some of the cities continued, as already mentioned, to retain a nominal independence down to a late period, and it was not till after the outbreak of the Social War, in B.C. 90, that the Latin League was finally dissolved, the true situation of the Latin cities, without exception, the rights of Roman citizens, they had long before lost all traces of national distinction. The only events in the intervening period which belong to the history of Latium are inseparably bound up with that of Rome. Such was the invasion by Pyrrhus in B.C. 280, who advanced however only as far as Praeneste, from whence he looked down upon the plain around Rome, but without venturing to descend into it. (Enutrop. ii. 12; Flor. i. 18, § 24.) In the Second Punic War, however, Hannibal, advancing like Pyrrhus by the line of the Via Latina, established his camp within four miles of the city, and carried his ravages up to the very gates of Rome. (Liv. xxvi. 9—11; Pol. ix. 6.) This was the last time for many centuries that Latium witnessed the presence of a foreign hostile army; but that the Hernicans were not entirely deprived of the benefit of coast-defence from the ravages of foreign invaders; but when, towards the decline of the Empire, this ceased to be the case, and each successive swarm of barbarians carried their arms up to the very gates and walls of Rome, the district immediately round the city probably suffered more severely than any other. Before the fall of the Western Empire the Campagna seems to have been reduced almost to a desert; and the evil must have been continually augmented after that period by the long continued wars with the Gothic kings, as well as subsequently with the Lombards, who, though they never made themselves masters of Rome itself, repeatedly laid waste the surrounding territory. All the records of the middle ages represent to us the Roman Campagna as reduced to a state of complete desolation, from which it has never more than partially recovered.

In the division of Italy under Augustus, Latium, in the wider sense of the term, together with Campania, constituted the First Region. (Plin. iii. 5, s. 9.) But gradually, for what reason we know not, the name of Campania came to be generally employed to designate the whole region; while that of Latium fell completely into disuse. Hence the origin of the name of La Campagna di Roma, by
which the ancient Latium is known in modern times. [CAMPANIA, p. 494.]

V. POLITICAL AND RELIGIOUS INSTITUTIONS.

It is for the most part impossible to separate the Latin element of the Roman character and institutions from that which they derived from the Sabines; at the same time we know that the connection between the Romans and the Latins was so intimate, that we may generally regard the Roman sacred rites, as well as their political institutions, in the absence of all evidence to the contrary, as of Latin origin. But it would be obviously here out of place to enter into any detail as to those parts of the Latin institutions which were common to the two nations. A few words may, however, be added, concerning the constitution of the Latin League, as it existed in its independent form. This was composed, as has been already stated, of thirty cities, all apparently, in name at least, equal and independent, though they certainly at one time admitted a kind of presiding authority or supremacy on the part of Alba, and at a later period on that of Rome.

The general councils or assemblies of deputies from the several cities were held at the Lucus Frerentinae, in the immediate neighbourhood of Alba; a custom which was evidently connected in the first instance with the mythology of that city, which was retained after the presidency had devolved on Rome, and down to the great Latin War of b.c. 340. (Cicin., ap. Fest. v. Proroc, p. 241.) Each city had undoubtedly the sole direction of its own affairs: the chief magistrate was termed a Dictator, a title borrowed from the Latins by the Romans, and which continued to be employed as the name of a municipal magistracy by the Latin cities long after they had lost their independence. It is remarkable that, with the exception of the mythical or fictitious kings of Alba, we meet with no trace of meterearchical government in Latium; and if the account given by Cato of the consecration of the temple of Diana at Aricia can be trusted, even at that early period each city had its chief magistrate, with the title of dictator. (Cato, ap. Priscian, iv. p. 639.) They must necessarily have had a chief magistracy, on whom the conduct of the forces of the whole League would devolve in time of war, as is represented as being the case with Mantilins Octavins at the battle of Regillus. But such a commander may probably have been specially chosen for each particular occasion. On the other hand, Livy speaks in b. c. 340 of C. Annius of Setia and L. Nummius of Circeii, as the two praetors of the Latins," as if these were a customary and regular magistracy. (Livy, viii. 3.) Of the internal government or constitution of the individual Latin cities we have no knowledge at all, except what we may gather from the analogy of those of Rome or of their later municipal institutions.

As the Lucus Ferentia, in the neighbourhood of Alba, was the established place of meeting for political purposes of all the Latin cities, so the temple of Jupiter with the sanctuary of that city, but which the Romans called (Monte Cavo), was the central sanctuary of the whole Latin people, where sacrifices were offered on their behalf at the Feriae Latinae, in which every city was bound to participate, a custom retained down to a very late period by the Romans themselves. (Livy, xxxii. 1; Cic. pro Flanc. 9; Plin. iii. 6. s. 9.) In like manner there can be no doubt that the customs sometimes adopted by Roman generals of celeb
where its waters add to the stream. But the principal agents in the formation of these extensive marshes are the UPENS and the AMASENUS, both of them flowing from the Velicanian mountains and uniting their waters before they reach the sea. They still retain their ancient names. Of the lesser streams of Latium, which flow into the Tiber, we need only mention the celebrated ALLEX, which falls into that river about 11 miles above Rome. ALLEX, a still smaller stream, which joins it just below the city, having previously received the waters of the AQUA FERRENZA (now called the MURRANA degli ORTI), which have their source at the foot of the Alban Hills, near Marino; and the RIVUS ALBANUS (still called the Rivo Albano), which carries off the superfluous waters of the Alban lake to the Tiber, about four miles below the city.

The mountains of Latium, as already mentioned, may be classed into three principal groups:—(1) the Apennines, properly so called, including the ranges at the back of Tiber and Praeneste, as well as the mountains of the Aequitans and Hernicians; (2) the upland of the Alban Hills, of which the central and highest summit (the Monte Cornuto) was the proper home of Albas of the ancients, while the part which extends Praeneste and the Velicanian mountains is known as the Mons Albanus; (3) the lofty group of mass of the Velicanian Mountains, frequently called by modern geographers the Monti Labici, though we have no ancient authority for this use of the name. The name of Mons Labici occurs only in Caesar (x. 141), as that of a mountain in the neighborhood of Sinuessa. The Mons CORNULUS (now Cappio, or Campitelli, Diog., x. 16) must evidently have been the detached group of outlying peaks, more or less separate from the main range of the Apennines, now known as the Campitelli, situated between the Tiber and the Monte Genarico. The Mons SACER, so celebrated in Roman history, was a mere hill of trifling elevation above the adjoining plain, situated on the right bank of the Anio, close to the Via Nomentana.

It only remains to enumerate the towns or cities which existed within the limits of Latium; but as a very large number have disappeared at a very early period, and all trace of their geographical position is lost, it will be necessary in the first instance to confine this list to places of which the site is known, approximately at least, reserving the more obscure names for subsequent consideration.

Beginning from the mouth of the Tiber, the first place is Ostia, situated on the left bank of the river, and, as its name imports, originally close to its mouth, though it is now three miles distant from it. A short distance from the coast, and about 8 miles from Ostia, was LAURENTUM, the reputed capital of the Aequitans, situated probably at Torre di Paterno, or at least in that immediate neighborhood. A few miles further to the S., but considerably more inland, being 4 miles from the sea, was LAVINUM, the site of which may be clearly recognized at Prates. It is at this point, and about the same distance from the sea, was ARBIA, which retains its ancient name; and 15 miles farther, on a projecting point of the coast, was ANXINTI, still called Porto d’Anxinti. Between 9 and 10 miles further on along the coast, was the small village of ANZURO, with the site of the same name; and from these a long tract of barren sandy coast, without a village and almost without inhabitants, extended to the ocean promontory and the town of CICERO,
LATIUM.

LATIMICUS SINUS.

143

apparently at the foot of the Mona Leplin, or northern extremity of the Velician mountains, [Evettra.]

Besides these cities, which in the early ages of Latium formed members of the Latin League, or are otherwise conspicuous in Roman history, we find mention in Pliny of some smaller towns still existing in his time; of which the "Fabienae in Monte Alano" may certainly be placed at *Rocca di Papa*, the highest village on the Alban Mount, and the Castrimonienses at *Morino*, near the site of Alba Longa. The list of the thirty cities of the League given by Dionysius (v. 61) has been already cited (p. 139). Of the names included in it, Burentum is wholly unknown, and must have disappeared at an early period. Carventum is known only from the mention of the Are Boxventana in Livy during the war with the Aequus (iy. 53, 56), and was probably situated somewhere on the frontier of that people; while two of the names, the Fortini (Sopronte) and Tricrim (Tricopo), are utterly unknown, and in all probability corrupt. The former may probably be the same with the Forentii of Pliny, or perhaps with the Forentani of the same author, but both these are equally unknown to us.

Besides these Pliny has given a long list of towns or cities (clara oppida, iii. 5. s. 9. § 68) which once existed in Latium, but had wholly disappeared in his time. Among these we find many that are well known in history and have been already noticed, viz. Satricum, Pomertia, Scapita, Politterum, Tellenes, Caesina, Ficana, Custinorius, Ameriana, Medullia, Corniciulum, Antemnas, Caneous, Collatia. With these he joins two cities which are certainly of mythical character: Saturnia, which was alleged to have previously existed on the site of Rome, and Antopolis, on the hill of the Janiculum; and adds three other names, Sulmo, a place not mentioned by any other writer, but the name of which may probably be recognised in the modern Sermoneta; Norba, which seems to be an erroneous repetition of the well-known Norba, already mentioned by him among the existing cities of Latium (lb. § 64) and Avimtium or Asimternum, of which no trace is found elsewhere, except the well-known city of the name in the Vestini, which cannot possibly be meant. But, after mentioning these cities as extinct, Pliny adds another list of "the names of the towns which are known to have existed, but have disappeared, and for the examination of the localities and existing remains, and the geographical survey of the country. These objects were to a great extent carried out by Sir W. Gell (whose excellent map of the country around Rome is an invaluable guide to the historical inquirer) and by Professor Nibby. (Sir W. Gell, Topography of Rome and its Vicinity; with a large map to accompany it, 2 vols. Svo. Lond. 1834; 2d edit. 1 vol. Lond. 1845. Nibby, Anzei Storico-Topografico-Antiquario della Città dei Dintorni di Roma, 3 vols. Svo. Rome, 1837; 2d edit. Ib. 1849. The former work by the same author, Vaggio Antiquario nei Contorni di Roma, 2 vols. Svo. Rome, 1819, is a very inferior performance.) It is unfortunate that both their works are deficient in accurate scholarship, and still more in the spirit of historical criticism, so absolutely necessary in all inquiries into the early history of Rome. Westphal, in his work (Die Römische Keimpflanze in Topographische Antiquarischer Historien, 4to. Berlin, 1829) published before the survey of Sir W. Gell, and consequently with imperfect geographical resources, attached himself especially to tracing out the ancient roads, and his work is in this respect of the greatest importance. The recent work of Bornann (Alt-Latinsiche Chorographie und Stidte Geschichte, 8vo. Halle, 1829) contains a careful review of the historical statements of ancient authors, as well as of the researches of modern inquirers, but is not based upon any new topographical researches. Notwithstanding the labours of Gell and Nibby, much still remains to be done in this respect, and a work that should combine the results of such inquiries with sound scholarship and a judicious spirit of criticism would be a valuable contribution to ancient geography. [E. H. B.]

LATIMICUS SINUS (Δαρμικυς Φωλκων), a bay on the western coast of Caria, deriving its name from Mount Latmus, which rises at the head of the bay. It was formed by the mouth of the river Iasander which flowed into it from the north-east. Its breadth, between Miletus, on the southern headland, and Pyrrha in the north, amounted to 30
LAVIANESINE.

the exception of the jump of a gateway—now converted into a door-sill—of the reign of Thothmes III. (Ayyuth dynasty), the remains of Latopolis belong to the Macedonian or Roman era. Ptolemy Evergetes, the restorer of so many temples in Upper Egypt, was a benefactor to Latopolis, and he is painted upon a temple followed by a tame lion, and in the act of striking down the chiefs of his enemies. The name of Ptolemy Epiphanes is found also inscribed upon a doorway. Yet, although from their scale these ruins are imposing, their sculptures and hieroglyphics attest the decline of Egyptian art. The pylon, which alone exists, resembles in style that of Apollonopolis Magna (Edfou), and was begun not earlier than the reign of Claudius (A.D. 41—54), and completed in that of Vespasian, whose name and titles are carved on the dedicatory inscription over the entrance. On the ceiling of the pylon is the larger Latopolis Zodiac. The name of the emperor Geta, the last that is read in hieroglyphics, although partially erased by his brother and murderer Caracalla (A.D. 212), is still legible on the walls of Latopolis. Before raising their own edifice, the Romans seem to have destroyed some of the buildings of the earlier Egyptian temple. There was a smaller temple, dedicated to the same deities, about two miles and a half N. of Latopolis, at a village now called E'Dagr. Here, too, is a small Zodiac of the age of Ptolemy Evergetes (n. c. 246—221). This latter building has been destroyed within a few years, as it stood in the way of a new canal. The temple of Esneh has been cleared of the soil and rubbish which filled its area when Devon visited it, and now serves for a cotton warehouse. (Lepsius, Einleitung, p. 63.)

The modern town of Eneh is the emporium of the Abyssinian trade. Its camel-market is much resorted to, and it contains manufactories of cotton, shawls, and pottery. Its population is about 4000. [W. B. D.]

LATOVICL (Aa'r'kHus, Strab. ii. 13. § 2), a tribe in the south-western part of Pannonia, on the river Savus. (Plin. iii. 28.) They appear to have been a Celtic tribe, and a place Praetorium Latovicum is mentioned in their country by the Antonine Itinerary, on the road from Alexa to Sarmium, perhaps on the site of the modern Neustadt, in Illyria. (Comp. Zosimus, die Deutschen, p. 256.) [L.S.]

LATURUS SINUS. [MAURETANIA.] LAVAFE, a station in Britain, on the road from Londinium to Lugunvalium, near the wall of Hadrian, distant, according to one passage in the Antonine Itin., 54 miles, according to another, 59 miles, from Eboracum, and 55 miles from Luguvallum. (Anton. Itin. pp. 468, 476.) Perhaps the same as Boves, on the river Oreta, in the North Riding of Yorkshire. The church of Boves contained in the time of Camden a hewn slab, bearing an inscription dedicatory to the Roman emperor Hadrian, and there used for the communion table. In the neighbourhood of Boves, there are remains of a Roman camp and of an aqueduct.

LAUGONA, the modern Loghna, a river of Germany, on the east of the Rhine, into which it empties itself at Lohusen, a few miles above Coblenz. The ancient praise it for its clear water (Venant. Fort. viii. 7; Strabo. xvi. 4, 24, where it is called Logna. [L. S.]

LAVIANESINE or LAVINIANESINE (Aa-
LAVINIUM.

LAVINIUM. 145

[Raw text not provided]
received a fresh colony, which for a short time raised it again to a degree of prosperity. On this occasion it would appear that the Laurentines and Lavinians were united into one community, which assumed the name of Lauro-Lavinium, and the citizens that of Laurentes Lavinates, names which from henceforward occur frequently in inscriptions. As a tribute to its ancient sacred character, though a fresh apportionment of lands necessarily attended the establishment of this colony, the territory still retained its old limits and regulations (lege et conscriptione vetrarumurant, Lib. Colon. p. 234.) This union of the two communities into one has given rise to much confusion and misconception. Nor can we trace exactly the mode in which it was effected; but it would appear that Lavinium became the chief town, while the "p. pullus" continued to be often called that of the Laurentes, though more correctly designated as that of the Laurentes Lavinates. The effect of this confusion is apparent in the commentary of Servius on the Aeneid, who evidently confounded the Lauro-Lavinum of Virgil with the Lauro-Lavinum of his own day, and thence, strangely enough, identifies it with the Lavinium found in the fourth century. (Serv. Aen. i. 22.) But, even at a much earlier period, it would seem as if the "ager Laurent," or Laurentine territory, was regarded as comprising Lavinium; and it is certainly described as extending to the river Numicius, which was situated between Lavinium and Ardea. [Xyrmichus] Inscriptions discovered at Pratica enable us to trace the existence of this new colony, or revived Lavinium, down to the end of the 4th century; and its name is found also in the Itineraries and the Tabulae. (Itin. Ant. p. 301; Tab. Peut; orbis. It. 1063, 2179, 3218, 3921.)

We learn also from a letter of Symmachus that it was still subsisting as a municipal town as late as A.D. 391, and still retained its ancient religious character. Macrobius also informs us that in his time it was still cast away for the Roman cemeteries and praetores, when entering on their office, to repair to Lavinium to offer certain sacrifices there to Vesta and the Penates,—a custom which appears to have been transmitted without interruption from a very early period. (Macroh. Sat. ii. 4. § 11; Val. Max. i. 6. § 7; Symmach. Ep. i. 63.) The final decay of Lavinium was probably produced by the fall of paganism, and the consequent extinction of that religious reverence which had apparently been the principal means of its preservation for a long while before.

The position of Lavinium at Pratica may be considered as clearly established, by the discovery there of the numerous inscriptions already referred to relating to Lauro-Lavinum: in other respects also the site of Pratica agrees well with the data for that of Lavinium, which is placed by Dionysius 24 stadia, or 3 miles, from the coast. (Dionysius, i. 56.) The Itineraries call it 16 miles from Rome; but this statement is below the truth, the real distance being little, if at all, less than 18 miles. The most direct approach to it from Rome is by the Via Ardeatina, from whence a side branch diverges soon after passing the Sostitara,—a spot supposed to be the site of the celebrated grove and oracle of Faunus, referred to by Virgil [Ardea], which is about 4 miles from Pratica. The site of this latter village, which still possesses several relics of the middle ages, resembles those of most of the early Latin towns; it is a nearly isolated hill, with a level summit of no great extent, bounded by wooded ravines, with steep banks of tufted rock. These banks have probably been on all sides more or less scarped or cut away artificially, and some slight remains of the ancient walls may be still traced in one or two places. Besides the inscriptions already noticed, some fragments of marble columns from the Imperial period, while broken pottery and terra cotta of a rude workmanship found scattered in the soil are the only relics of an earlier age. (Nibby, Dintorni, vol. ii. pp. 206—237.)

[It. H. B.]

LAVISCO or LABISCO, in Gallia Narbonensis, appears on a route from Mediolanum (Milan) through Daractana (Montierets la Tarentaise) to Viennois (Vienne) on the Rhone. Lavisco is between Lenuimn (Lonvez, or Chaudery au Mont Lemine) and Augustum (Aoste or Aosta), and 14 M. P. from each. D'Anville supposes that Lavisco was at the ford of the little river Laines, near its source; but the distance between Lenuimn and Au-ustum, 28 M. P. is too much, and accordingly he would alter the figures in the two parts of this distance on each side of Lavisco, from 22 to 21.
most important is the occurrence of its name (or that of its tail / or its tail / it / together with those of Ardea, Antium, Circei, and Tarraconae, among the allies or dependants of Rome, in the celebrated treaty of the Romans with Carthage in n. c. 509. (Pol. iii. 22.) From this document we may infer that Laurentum was then still a place of some consideration as a maritime town, though the proximity of the Roman port and colony of Ostia must have tended much to its disadvantage. Dionysius tells us that some of the Tarraucines had retired to Laurentum on their expulsion from Rome: and he subsequently notices the Laurentines among the cities which composed the Latin League in n. c. 496. (Dionys. v. 54, 61.) We learn, also, from an incidental notice in Livy, that they belonged to that confederacy, and retained, in consequence, down to a late period the right of participating in the sacrifices on the Alban Mount. (Livy. xxxvii. 2.) It is clear, therefore, that though no longer a powerful or important city, Laurentum continued to retain its independent position down to the great Latin War in n. c. 340. On that occasion the Laurentines are expressly mentioned as having been the only people who took no share in the war; and, in consequence, the treaty with them which previously existed was renewed without alteration. (Livy. viii. 11.) "From henceforth" (adds Livy) "it is renewed always from year to year on the 10th day of the Fasces Festival." Thus, the poor and decayed city of Laurentum continued down to the Augustan age to retain the nominal position of an independent ally of the imperial Rome.

No further notice of it occurs in history during the Roman Republic. Lucan appears to reckon it as one of the places that had fallen into decay in consequence of the Civil Wars (vii. 394), but it is probable that it had long before that dwindled into a very small place. The existence of a town of the name ("opidum Laurentum") is, however, attested by Mela, Strabo, and Pliny (Mel. ii. 4. § 9; Strab. v. p. 232; Plin. iii. 5. s. 9); and the sea-coast in its vicinity was adorned with numerous villas, among which that of younger Pliny was conspicuous. (Plin. Ep. ii. 17.) It is remarkable that that author, in describing the situation of this villa and its neighbourhood, makes no allusion to Laurentum itself, though he mentions the neighbouring colony of Ostia, and a village or "vicas" immediately adjoining his villa; this last may probably be the same which we find called in an inscription "Vicus Augustus Laurentum." (Gruter, iacacr. p. 398, No. 7.) Hence, it seems probable that Laurentum itself had fallen into a state of great decay; and this must have been the case that shortly after, the two communities of Laurentum and Lavinium were united into one municipal body, which assumed the appellation of Lauro-Lavinium, and the inhabitants that of Lauro-Lavinates, or Laurentes Lavinates. Sometimes, however, the united "populus" calls itself in inscriptions simply "Senatus populosque Laurenti," and in one case we find mention of a "Colonia Augusta Laurenti et Lavini." (Ores. v. 114.) Tert., p. 484, No. 3.) Nevertheless it is at least very doubtful whether there was any fresh colony established on the site of the ancient Laurentum; the only one mentioned in the Liber Coloniarum is that of Lauro-Lavinium, which was undoubtedly fixed at Lavinium (Pratica). [Lavinium.] The existence of a place bearing the name of Laurentum, though probably a mere village, down to the latter ages of the Empire, is, however, clearly proved by the Itineraries of Tabula (Itin. Ant. p. 301; Tab. Peut.); and it appears from ecclesiastical documents that the locality still retained its ancient name as late as the 8th century (Anastas. Vit. Pontiff. ap. Nibby, vol. ii. p. 201). From that time all trace of it disappears, and the site seems to have been entirely forgotten.

Laurentum seems to have, from an early period, given name to an extensive territory, extending far from the mouth of the Tiber near, if not quite to, Ardea, and forming a part of the broad littoral tract of Latium, which is distinguished from the rest of that country by very marked natural characteristics. [Laetium.] Hence, we find the Laurentine territory much more frequently referred to than the city itself; and the place where Aeneas is represented as landing is uniformly described as "in agro Laurenti," though we know from Virgil that he conceived the Trojans as arriving and first establishing themselves at the mouth of the Tiber. But it is clear that, previous to the foundation of Ostia, the territory of Laurentum was considered to extend to that river. (Serv. ad Aen. vii. 661, xi. 316.) The name of "ager Laurentus" seems to have continued in common use to be applied, even under the Roman Empire, to the whole district extending as far as the river Numicus, so as to include Lavinium as well as Laurentum. Thus, the poor and decayed city of Laurentum continued down to the Augustan age to retain the nominal position of an independent ally of the imperial Rome.
LAURENTUM.

'The precise site of Laurentum has been a subject of much doubt; though it may be placed approximately without question between Ostia and Praetoria, the latter being clearly established as the site of Lavinium. It has been generally fixed at Torre di Paterno, and Gell asserts positively that there is no other position within the required limits "where either ruins or the traces of ruins exist, or where they can be supposed to have existed." The Itinerary gives the distance of Laurentum from Rome at 16 Mi. 1., which is somewhat less than the truth, if we place it at Torre di Paterno, the latter being rather more than 17 Mi. 1. P. from Rome by the Via Laurentina; but the same remark applies to Lavinium also, which is called in the itinerary 16 miles from Rome, though it is full 18 miles in real distance.

On the other hand, the distance of 6 miles given in the Table between Lavinium and Laurentum coincides well with the interval between Praetoria and Torre di Paterno. Nibby, who places Laurentum at Capo Cotta, considerably nearer to Praetoria, admits that there are no ruins on the site. Those at Torre di Paterno are wholly of Roman and imperial times, and may perhaps indicate nothing more than the site of a villa, though the traces of an aqueduct leading to it prove that it must have been a place of some importance. There can indeed be no doubt that the spot was a part of the dependencies of Lavinium under the Roman Empire; though it may still be questioned whether it marks the actual site of the ancient Latin city. (Gell, Top. of Rome, pp. 294—298; Nibby, Diatriume di Roma, vol. ii. pp. 187—208; Aheeken, Metallitlia, p. 62; Bornmann, Alt Lattia. Corographie, pp. 94—97.) It is hardly necessary to notice the attempts which have been made to determine the site of Pliny's Laurentium, of which he has left us a detailed description, familiar to all scholars (Flin. Ep. ii. 17). As it appears from his own account that it was only one of a series of villas which adorned this part of the coast, and many of them probably of equal, if not greater, pretensions, it is evidently idle to give the name to a mass of brick ruins which there is nothing to identify. In their zeal to do this, antiquarians have overlooked the circumstance that his villa was evidently close to the sea, which at once excludes almost all the sites that have been suggested for it.

The road which led from Rome direct to Laurentum, retained, down to a late period, the name of Via LAURENTINA. (Ovid, Fast. ii. 673; Val. Max. viii. 5. § 6.) It was only a branch of the Via Ostiensis, from which it diverged about 3 miles from the gates of Rome, and proceeded nearly in a direct line towards Torre di Paterno. At about 10 miles from Rome it crossed a small brook or stream by a bridge, which appears to have been called the Pons ad Declinum, and subsequently Pons Declinum; hence the name of Declina now given to a castle or farm a mile further on; though this was situated at the 11th mile from Rome, as is proved by the discovery on the spot of the Roman milestone, as well as by the measurement on the map. Remains of the ancient pavement mark the course of the Via Laurentina both before and after passing this bridge. (Nibby, Dizionario, vol. i. p. 559; vol. iii. p. 621.)

Roman authors generally agree in stating that the place where the Trojans first landed and established their camp was still called Troja (Liv. i. 1; Cato, ap. Suet. ad Aen. i. 5; Fest. v. Troia, p. 367), and that it was in the Laurentine territory; but Virgil is the only writer from whom we learn that it was on the banks of the Tiber, near its mouth (Aen. vii. 30, 459, 790, &c.). Hence it must have been in the part of the Lavinium which was assigned to Ostia after the foundation of the colony; and Servius is therefore correct in placing the camp of the Trojans "circa Ostiam." (Serv. ad Aen. vii. 31.) The name, however, would appear to have been the only thing that marked the spot. [E. H. B.]

LAURETANUS PORTUS, a seaport on the coast of Etruria, mentioned only by Livy (xxx. 39).

From this passage it appears to have been situated between Cora and Populonium; but its precise position is unknown. [E. H. B.]

LAURI, a place in North Gallia, on a road from Lugdunum Batavorum (Leiden) to Noviomagus (Nymegen), and between Fietio (Vleuten) and Niger Pulibus. It is 5 Mi. P. from Niger Pulibus to Lauri, and 12 Mi. P. from Lauri to Fietio. No more is known of the place.

LAUREACUM or LAUREACUM, a town in the north of Noviomagus, at the point where the railway branches empties itself into the Danube. (Amm. Marc. xxxi. 10; It. Ant. pp. 231, 233, 241, 277; Gruter, Inscr. p. cliv. 3; Not. Imp. in the Tab. Pest. its name is misspelt Laibriciacum.) In a doubtful inscription in Gruter (p. 484. 3) it is called a Roman colony, with the surname Augusta; Laureacum was the largest town of Noviomagus Ripensis, and was connected by high roads with Sirmium and Tauricum in Pannonia.

According to the Antonine Itinerary, it was the head-quarters of the third legion, for which the Notitia, perhaps more correctly, mentions the second. It was, moreover, one of the chief stations of the Danubian fleet, and the residence of its prefect, and contained considerable manufactures of arms, and especially of shields. As the town is not mentioned by any earlier writers, it was probably built, or at least extended, in the reign of M. Aurelius. It was one of the earliest seats of Christianity in these parts, a bishop of Laureacum being mentioned as early as the middle of the third century. In the fifth century the place was still so well fortified that the people of the surrounding country took refuge in it, and protected themselves against the attacks of the Alamanni and Thuringians; but in the 6th century it was burned by the Avari, and although it was restored as a frontier fortress, it afterwards decayed.

Its name is still preserved in the modern village of Lorch, and the celebrated convent of the same name, around which numerous remains of the Roman town may be seen extending as far as Enns, which is about a mile distant. (Comp. Machar, Noric. l. p. 362, 268, 163, ii. p. 75.) [L.S.]

LAURIUM (Anquæor, Herod. vii. 144; Anqueor, Thuc. ii. 55; Aq. Aegypt. hodie il] phæbo Anqueorique, Aristeus, Ar. 1106, silver coins, with the Athenian figure of an owl), a range of hills in the south of Attica, celebrated for their silver mines. These hills are not high, and are covered for the most part with trees and brushwood. The name is probably derived from the shafts which were sunk for obtaining the ore, since Anqœor in Greek signifies a street or lane, and Anqueor would therefore mean a place formed of such lanes,—i.e., a mine of shafts, or a street of shafts, like a catacombus. (Wordsworth, Athens and Attica, p. 209.) The mining district extended a little way north of
LAURIUM.

Sunium to Thorikos, on the eastern coast. Its present condition is thus described by Mr. Dodwell:

"A heap of ruins, purchased from Thibouan, brought to us in ancient shafts of the silver mines; and a few hundred yards further we came to several others, which are at a square form, and cut in the rock. We observed only one round shaft, which was larger than the others, and of considerable depth, as we conjectured, from the time that the stones, which were thrown in, took to reach the bottom. Near this are the foundations of a large round tower, and several remains of ancient walls, of regular construction. The traces are so extensive, that they seem to indicate, not only the buildings attached to the mines, but the town of Laurium itself, which was probably strongly fortified, and inhabited principally by the people belonging to the mines."

Some modern writers doubt whether there was a town of the name of Laurium; but the grammarians (Suidas and Photius) who call Laurium a place ("εδος") in Attica appear to have meant something more than a mountain; and Dodwell is probably correct in regarding the ruins which he describes as those of the town of Laurium. Near these ruins Dodwell observed several large heaps of scoria scattered about. Dr. Wordsworth, in passing along the shore from Sunium to Thorikos, observes:—"The ground which we tread is strewn with rusty heaps of scoria from the silver ore which once enriched the soil. On our left is a hill, called Scorio, so named from these heaps of scoria, with which it is covered. Here the shafts which have been sunk for working the ore are visible." The ores of this district have been ascertained to contain lead as well as silver (Walpole's Turkey, p. 426). This confirms the errandings of a passage in the Aristotelian Eeconomics proposed by Böckh and Wordsworth, where, instead of Ταύριον in Ptolemy's Άθηναις Ασβηναίους Συνεντευχείς μελέτους (τιν ο των Ρώμαν παρασκάμιους, Böckh suggests Λαυρίον, and Wordsworth Αργυρίου, which ought rather to be ἀργυριών, as Mr. Lewis observes.

The name of Laurium is preserved in the corrupt form of Λαυρίχανα or Λαυριγράντ, which is the name of a metochi of the monastery of Megalei. The mines of Laurium, according to Xenophon (δι' Πτερίττοις in section 2), were worked in remote antiquity; and there can be no doubt that the possession of a large supply of silver was one of the reasons of the early prosperity of Athens. They are alluded to by Aeschylus (Pers. 233) in the line—

The property of the state, which sold or let for a long term of years, to individuals or companies, particular districts, partly in consideration of a sum or fine paid down, partly of a reserved rent equal to one twenty-fourth of the annual produce. Shortly before the Persian wars there was a large sum in the Athenian treasury, arising out of the Laurian mines, from which a distribution of ten drachmae a head was going to be made among the Athenian citizens, when Themistocles persuaded them to apply the money to the increase of their fleet. (Herod. vii. 144; Plut. Them. 4.) Böckh supposes that the distribution of ten drachmae a head, which Themistocles persuaded the Athenians to forgo, was made annually, from which he proceeds to calculate the total produce of the mines. But it has been justly observed by Mr. Grote, that we are not authorised to conclude from the passage in Herodotus that all the money received from the mines was about to be distributed; nor moreover is there any proof that there was a regular annual distribution. In addition to which the large sum lying in the treasury was probably derived from the original purchase money paid down, and not from the reserved annual rent.

Even in the time of Xenophon (Mem. iii. 6. § 12) the mines yielded much less than at an early period; and in the age of Philip, there were loud complaints of unsuccessful speculations in mining. In the first century of the Christian era the mines were exhausted, and the old scoriae was smelted a second time. (Strab. ix. p. 390.) In the following century Laurium is mentioned by Pausanias (i. 1), who adds that it had once been the seat of the Athenian silver mines. (Dodwell, Tour through Greece, vol. i. p. 537, seq.; Wordsworth, Athens and Attica, p. 208, seq.; Walpole's Turkey, p. 425, seq.; Frieder, Reise durch Griechenland, vol. i. p. 36, seq.; Leake, Num. of Attica, p. 65; Böckh, Dissertation on the Silver Mines of Laurium, appended to the English translation of his Public Economy of Athens; Grote's Greece, vol. v. p. 71, seq.)

LAURUM, a village in Eubria, more correctly written Lourium. [LORUM.]

LAURON (Λαυρών; prob. Laury, W. of Xeocar, in Valencia), a town of Spainia Tarraconensis, near Suero, and not far from the sea. Though apparently an insignificant place, it is invested with great interest in history, both for the siege it endured in the Sertorian War, and as the scene of the death of Cn. Pompeius the Younger, after his flight from the defeat of Munda. (Liv. xxxiv. 17; Appian, B. C. i. 109; Plut. Sert. 18, Pomp. 18; Flor. iii. 22, iv. 2, comp. Bell. Hisp. 37; Oros. v. 23; Ubert, vol. ii. pt. I. p. 404.)

LAUS (Λαύς; Eth. Αίαος; near Scalae), a city on the W. coast of Lucania, at the mouth of the river of the same name, which formed the boundary between Lucania and Bruttium. (Strab. vi. pp. 253, 254.) It was a Greek city, and a colony of Sybaris; but the date of its foundation is unknown, and we have very little information as to its history. Herodotus tells us that, after the destruction of Sybaris in B.C. 510, the inhabitants who survived the catastrophe took refuge in Laus and Scidrus (Herod. vi. 29); but he does not say, as has been supposed, that these cities were then founded by the Sybarites: it is far more probable that they had been long before, during the greatness of Sybaris, when Polidamia also was planted by that city on the coast of the Tyrrhenian sea. The only other mention of Laus in history is on occasion of a great defeat sustained there by the allied forces of the Greek cities in southern Italy, who had apparently united their armies in order to check the progress of the Lucanians, who were at this period rapidly extending their power towards the south. The Greeks were defeated with great slaughter, and it is probable that Laus itself fell into the hands of the barbarians. (Strab. vi. p. 253.) From this time we hear no more of the city; and though Strabo speaks of it as still in existence in his time, it seems to have disappeared before the days of Piny. The latter author, however (as well as Poelenor), notices the river Laus, which Piny concurs with Strabo in fixing as the boundary between Lucania and Bruttium. (Strab. i. c. 2; Plin. iii. 5. s. 10; Plut. iii. 1. § 9; Steph. B. a. r.)

The river Laus still retains its ancient name as the Leo, or Laino; it is a considerable stream, falling into the Gulf of Policastro. Near its sources

about 10 miles from the sea, is the town of *Laius,* supposed by Chirchirini to represent the ancient Lais; but the latter would appear, from Strabo's description, to have been nearer the sea. Romanelli would place it at *Scaliu,* a small town with a good port, about three miles N. of the mouth of the river; but it is more probable that the ancient city is to be looked for between this and the river *Lio.* (Cluver, *Ital. p._1262; Romanelli, *vol. ii._p. 385.) According to Strabo there was, near the river and city, a temple or Herm of a hero named *Deveron,* close to which was the actual scene of the great battle between the Greeks and Lucanians. (Strab. *I. c._)

Strabo speaks of a gulf of *Laius,* by which he can hardly mean any other than the extensive bay now called the Gulf of *Policastro,* which may be considered as extending from the promontory of *Pynum* (Capi dégni *Inferrici*). There exist, coins of *Laius,* of ancient style, with the inscription *Amonon:* they were struck after the destruction of Sybaris, which was probably the most flourishing time in the history of Lais. [E. H. B.]

LAUS POMPEIA, sometimes also called simply *Lau* (Eth. *Laudens*; *Lodi Verchio,* a city of *Galla Transpadana,* situated 16 miles to the S. E. of *Milan,* on the highway from that city to *Piacenza.* (*Itin. Ant._pp. 98, 127.) According to Pliny it was an ancient Gaulish city founded by the *Boians* soon after they crossed the Alps. (*Plin. iii._17. s. 21.) It afterwards became a Roman municipal town, and probably assumed the epithet of *Pompeia* in compliment to Pompeius Strabo, who conferred the rights of Latin citizens upon the municipalities of Transpadana Gaul; but we find no special mention of the fact. Nor does any historical notice of Lais occur under the Roman Empire; though it seems to have been at that period a considerable town, and is named in the Itineraries "Lanc civitas,*" and by *P. Deconsus* "Laudensis civitas." (*Itin. Ant._p. 98; *Itin. Hier._p. 617; P. *Diar. v._2.) In the middle ages *Lodi* became an important city, and an independent republic, but was taken and destroyed in A.D. 1112 by the *Milanese,* and in 1158 the emperor *Frederick Barbarossa* having undertaken to restore it, transferred the new city to the site of the modern *Lodi,* on the right bank of the *Adda.* The ancient site is still occupied by a large village called *Lodi Verchio,* about 5 miles due W. of the modern city. It is correctly placed by the Itineraries 16 M. P. from *Messalum,* and 24 from *Piacenza.* (*Itin. Ant._p. 98.)

LAUSONIUS' *LACES,* in the country of the Helvetii. The *Antones* *Itin.* has a road from *Mediolanum* (*Milla*on) through *Geneva* to *Argentoratum* (Strasburg). Sixteen Roman miles from *Geneva,* on the road to Strasburg, the *Itin.* has *Equestris,* which is Colonii *Equestri* or *Noviodunum* (*Nyon*); and the next place is *Lautulanus,* 20 Roman miles from *Equestris.* To the next station, *Urba* (*Orba*), is 15 Roman miles. In the Table the name is "Lautulanus," and the distances from *Geneva* to *Noviodunum* and *Lautulanus* are respectively 18 M. P., or 36 together. The *Lucas Lautulanus* is supposed to be *Lautulanus,* on the Lake of Geneva; or rather a place or district, as D'Anville calls it, named *Vidi.* The distance from *Geneva* to *Nyon,* along the lake, is about 15 English miles; and from *Nyon* to *Lautulanus,* about 22 or 23 miles. The distance from *Geneva* to *Nyon* is nearly exact, but the 20 miles from *Equestris* to the *Lucas Lautulanus* is not enough. If *Vidi,* which is west of *Lautulanus,* is assumed to be the place, the measures will agree better. D'Anville cites *M. Bochat* as authority for an inscription, with the name *Lauzonium,* having been dug up at *Vidi,* in 1739; and he adds that there are remains there. (Comp. Eckert's *note, Gallic._p. 31.)

LAVITULAE or AB LAUTULAS (s. *Anion, Anl._vol. ii._p. 11; *Itin. Ant._p. 98; *Itin. Hier._p. 617.) The locality is still marked by the name of the town, and the same pass which was occupied by the *Munioiius,* in the Second French War, in order to prevent the approach to *Latium* from *Campania* (*Liv. xxi._15,* though its name is not there mentioned. The spot is now called *Passo di Porpetto,* and is guarded by a tower with a gate, forming the barrier between the Roman and Neapolitan territories. (Enestac, *vol. ii._p. 309.)

LAZIA. [Cf. *Lazi._]

LAZI (Muro, Artian, Peripii, *vol. i._p. 11; *Plin. vi._4; *M. Agonii, Prox._v._10._S._5,* one among the many tribes which composed the indigenous population which clustered round the great range of the Saccus. This people, whose original seats were, according to *Procopius* (*B. G._iv._2,* on the S. side of the river *Phasis,* gave their name, in later times, to the country which was known to the Greeks and Romans as *Colchis,* but which henceforth was called "Regio Lazica." They are frequently mentioned in the
Byzantine writers; the first time that they appear in history was A.D. 456, during the reign of the emperor Marcian, who was successful against their king Gobazes. (Prisc. Exc. de Leg. Rom. p. 71; comp. Le Beau, Bas Empire, vol. vi. p. 385.) The Lazic war, the contest of Justinian and Chosroes on the banks of the Phasis, has been minutely described by contemporary historians. (Procop. B. P. ii. 15, 17, 28, 29, 30. B. G. iv. 7—16. Agath. ii. iii. iv. pp. 55—132, 141; Monard. Protect. Exc. de Leg. Gent. pp. 99, 101, 133—147; comp. Gibbon, c. xlii.; Le Beau, vol. ix. pp. 44, 133, 209—220, 312—333.) In the Atlas (pt. i. pl. xiv.) to Dubois de Montperoux (Voyage Autour du Caucase, comp. vol. ii. pp. 73—132) will be found a map of the theatre of this war. In A.D. 520, or 512 according to the era of Theophanes, the Lazis were converted to Christianity. (Gibbon, i. c.; Neander, Gesch. der Christl. Religion, vol. iii. p. 236), and, under the name of Laziani, are now spread through the country near the SE. angle of the Euxine from Guriel to the neighbourhood of Trebizond. Their language, belonging to the Indo-Germanic family, appears to contain remains of the ancient Celtic idiom. (Cosmos, vol. ii. note 201, trans.; Prior, Physical Hist. of Mankind, vol. iv. p. 263.)

LEA, an island in the Aegean sea, mentioned only by Polybar (iv. 12. 23) in conjunction with Ascania and Anaphos.

LEANDIS (Λεωνις), a town in the eastern part of the strategy of Caetonia, in Armenia Minor, 18 miles to the south of Cocus, in a pass of Mount Taurus, on the road to Anazarbus. (Ptol. v. 7. § 7.) This town is perhaps the same as the La-randa of the Antonine Itinerary (p. 211) and of Hierocles (p. 675), which must not be confounded with the Laranda of Lycaonia or Issoria. [L. S.]

LEANITAE. [LEANTES SINUS.]

LEANITES SINUS (Λιανίτης κόλπος), a bay on the western side of the Persian Gulf, so named from the Arab tribe Leanitae (Λεανίται, Ptol. vi. 7. § 18.) They are placed north of Gerraeh, between the Themis and the Abacael. Pliny states that the name was variously written: "Sinus ratinus, in quo Leanitae quae nominem di cujus regio eorum sita, in Arcades vocatur, a parte siue partem, in Aegypto, vel, at us Leanitae vel et ipsum sinum notari Aelcuntum scripsere, alii Aelcuntium, Armeniarius Alanicum, Juba Leanitium" (vi. 28.). Agra, which Pliny represents as the capital, is doubtless the "Adrii civitas" (Αδριαίον πόλις) of Petronius, in the country of the Leanitae. Mr. Forster regards the name as an abbreviated form of "Sinus Khaun-umites" or Bay of Khanban, in which he discovers an idiomatic modification of the name Khounites, the Arabic form for Havulans, identical with the Bost Khuled, the inhabitants of the Avil or Havilah of Scripture (HAVILAH). (Geography of Arabia, vol. i. pp. 48, 52, 53, vol. ii. p. 215.) The gulf apparently extended from the Itamnus Portus (Kolenos) on the north, to the Chersonese extremia (Rasell-Chor) on the south. [G. W.]

LEBADEIA. [SELEUKIA.]

LEBADEIA, Λεβαδεία, Heracl., Strab., et alii; Λεβάδεια, Plut. Lyrc. 28; Eth. Λεβαδεία; L calidad), a town near the western frontier of Bocceia, described by Strabo (ix. p. 414) as lying between Mt. Helikon and Chaeronea. It was situated at the foot of a precipitous height, which is an abrupt northerly terminus of Mt. Helikon. Pausanias relates (ix. 30. § 1) that this height was originally occupied by the Homeric city of Milheia (Μιλεία, H. ii. 507), from whence the inhabitants, under the conduct of Lebedias, an Athenian, migrated into the plain, and founded there the city named after him. On the other hand, Strabo maintains (ix. p. 413) that the Homeric cities Arne and Milheia were both swallowed up by the lake Copais. Lebedia was originally an insignificant place, but it rose into importance in consequence of its possessing the celebrated oracle of Trophonius. The oracle was consulted both by Cresus (Herod. vii. 46) and by Marcian (Herod. viii. 134), and it continued to be consulted even in the time of Plutarch, when all the other oracles in Boeotia had become dumb. (Plut. de Def. Orac. 5.) Pausanias himself consulted the oracle, and he speaks of the town in terms which show that it was in his time the most flourishing place in Boeotia. But notwithstanding the sanctity of the oracle, Le- badia did not always drink in the ravages of war. It was taken and plundered both by Lyseander and by Archelaus, the general of Mithridates. (Plut. Lyra, 28, Sall. 16.) In the war against Persicus, it espoused the side of the Romans, while Thebes, Halaiartus, and Coronea declared in favour of the Macedonian king. (Polyb. xxvii. 1.) It continues to exist under the slightly altered name of Livadia, and during the Turkish supremacy it gave its name to the whole province. It is now a considerable town, though it suffered greatly in the war of independence against the Turks.

The modern town is situated on two opposite hills, rising on each bank of a small stream, called Hercya by Pausanias, but the greater part of the houses are on the western slope, on the summit of which is a ruined castle. Pausanias says that the Hercya rose in a cavern, from two fountains, close to one another, one called the fountain of Obsidian and the other the fountain of Memory, of which the persons who were going to consult the oracle were obliged to drink. The Hercya is in reality a continuation of an occasional torrent from Mount Helikon; but at the southern extremity of the town, on the eastern side of the castle-hill, there are some copious sources, which were evidently the reputed fountains of the Hercya. They issue from either side of the temple, those on the right being the most copious, flowing from under the rocks in many large streams, and forming the main body of the river; and those on the left bank being insignificant, and flowing, in the time of Doxile, through ten small spots, of which there are still remains. The fountains on the right bank are warm, and are called Chiliai (Κηλίαι), and sometimes τα γάλανα νερα, or the water sweet for drinking; while the fountains on the left bank are cold and clear, and are named Kryas (Κρύαις, i. e. Κρύας Βότανας), the cold source, in opposition to the warm, Chiliai). Neither of these two sets of fountains rise out of a cave, and so far do not correspond to the description of Pausanias; but there is a cavern close to each; and in the course of ages, since the destruction of the sacred buildings of Trophonius, the caverns may easily have been caved up, and the springs have changed in different spots. The question, however, arises, which of the caverns contained the reputed sources of the Hercya? The answer to this must depend upon the position we assign to the sacred grove of Trophonius, in which the source of the Hercya was situated. Leake places the sacred grove on the right or eastern bank; but Ulrichs on the left, or western bank. The latter appears more probable, on account of the passage in Pausanias, Seleuses by
as in the temple of Athena, the site where ancient writers were accustomed to meet. This was the site of the temple of Athena, as described by Pausanias, who visited the place and noted its historical significance. The temple was built on a rocky outcrop, which may have been the site of the ancient sanctuary. The oracle, it is believed, was located in the area surrounding the temple, where the priests and pilgrims would gather to seek guidance from the deity. The temple was considered to be a significant religious and cultural center, and it has been suggested that it may have been the site of a festival or a market that was held in honor of Athena. It is thought that the temple was dedicated to Athena, the goddess of wisdom and warfare, and that it was an important landmark in the region. The temple itself is believed to have been destroyed by an earthquake, and it is not clear when or why it was built. However, it is clear that the temple was an important religious and cultural center in the region, and that it played a significant role in the history of the area.

**Lecture 2:**

Plate 2. The temple of Athena. The temple of Athena is depicted in a series of illustrations, including a view of the temple from the sea, a view of the temple from the land, and a view of the temple from the air. These illustrations provide a sense of the size and grandeur of the temple, as well as its architectural features. The temple is depicted as a large, impressive structure, with many columns and a central altar. The illustrations also show the surrounding landscape, with hills and mountains in the background. These images provide a sense of the historical and cultural context in which the temple was built, and they help to convey the significance of the site.

In conclusion, the temple of Athena was a significant religious and cultural center in the region, and it played a role in the history of the area. The temple was built on a rocky outcrop, and it was dedicated to Athena, the goddess of wisdom and warfare. The temple was destroyed by an earthquake, but its legacy lives on in the surrounding landscape and in the memories of the people who visited the site.

**Lecture 3:**

Plate 3. The temple of Athena. The temple of Athena is depicted in a series of illustrations, including a view of the temple from the sea, a view of the temple from the land, and a view of the temple from the air. These illustrations provide a sense of the size and grandeur of the temple, as well as its architectural features. The temple is depicted as a large, impressive structure, with many columns and a central altar. The illustrations also show the surrounding landscape, with hills and mountains in the background. These images provide a sense of the historical and cultural context in which the temple was built, and they help to convey the significance of the site.

In conclusion, the temple of Athena was a significant religious and cultural center in the region, and it played a role in the history of the area. The temple was built on a rocky outcrop, and it was dedicated to Athena, the goddess of wisdom and warfare. The temple was destroyed by an earthquake, but its legacy lives on in the surrounding landscape and in the memories of the people who visited the site.
by the Jerusalem Linn after Aratus (Orange), and xiii. 572. for it. D'Aubry says that the distance is not great, for it seems that the place is at the passage of the small river Lec. 

[ G. L. ]

LECTUM (ጆን እርትመ), a promontory in the south-west of Tras, opposite the island of Leslo. It forms the south-western termination of Mount Isa. (Hou. I. xiv. 294; Herod. ix. 114. Thucyd. viii. 101; Pol. v. 2. § 4; Plin. v. 82; Liv. xxvii. 37.) In the time of Strabo (xiii. p. 605, comp. p. 683) there was shown on Cap Leuctum an altar said to have been erected by Agamemnon to the twelve great gods; but this very number is a proof of the late origin of the altar. Under the Byzantine emperors, Leuctum was the northernmost point of the province of Asia. (Hieroc. p. 659.) Achemen (iii. p. 88) states that the purple shell-fish, found near Leuctum as well as near Sigeum, was of a large size. The modern name of Leuctum is Beka, or Santa Maria. 

[ L.S. ]

LECYTHUS (ยาย์崇高), a town in the peninsula of Sithonia in Chalcidice, not far from Torone, with a temple to Athena. The town was attacked by Brasidas, who took it by storm, and consecrated the entire cape to the goddess. Everything was demolished except the temple and the buildings connected with it. (Thuc. iv. 115, 116.) [ E. B. J. ]

LEDERATA or LAEBERATA (אמאטרה or אמהדרתא), a fortified place in Upper Moesia, on the high road from Vinacia to Dacia, the river Morgan. It was a station for a detachment of horse archers. (Procop. de Aed. iv. 6; Tob. Pent.; Notit. Imp., where it is called Lacedaena.) Ruins of ancient fortifications, commonly identified with the site of Lederata, are found in the neighbourhood of Rana. 

[ L. S. ]

LEdon (oystick: Etk. ἐλεθέρος), a town of Phocis, north of Thiborea, the birthplace of Philo- melus, the commander of the Phocians in the Sacred War. In the time of Pausanias it was abandoned by the inhabitants, who settled upon the Cephisus, at the distance of 40 stadia from the town, but the ruins of the latter were seen by Pausanias. Leake supposes that the ruins at Palea Fira are those of Leodon. (Paus. x. 2. § 2, x. 3. § 2, x. 33. § 1; Leake, North. Arch. of Leuca, vol. ii. p. 59.)

[ L. S. ]

LEdon (ץייווסוסを選ぶ: כְּפֶרֶס), a town in Captis Cyprus, near Letonia, which the ecclesiastical writers mention as a bishop's see. (Sozomenus, H.E. v. 10; Niceph. Callist. viii. 42; Engel, Kypros, vol. i. p. 152.) [ E. B. J. ]

LEdUS, or LEDUM, as Mela (ii. 5) names it, a small river of Gallia Narbonensis. Festus Avienus (On. Marth. 590) names it Ledus. Mela speaks of the "Stagna Volcanarum, Ledum flumen, castellum Latera." The Ledus is the Lues, which passes by Sexardacun to the east of Montpellier, and forms just the Etang de Minelone or Perols below Latera, now Lates or Latte. (Pliny (ix. 8) gives the name of Stagnum Latera to this Etang, and he speaks of it as abounding in mussels, and describes the way of taking them. The mussel is still abundant there. Pliny places the Stagnum Latera in the territory of Nemassus (Nimes), which is at some distance. But the Etang, as described by Pliny, is not the same as the many small places (Plin. iii. 4) which were made dependent on Nemassus (Nemausensis abitum).

[ G. L. ]

LEÉTANII. [ሌይתאני]

LEGAE (アルバム, Scab. xi. p. 503; ألمس, Plut. Pomp. 35), a people on the shores of the Caspian, situated between Albania and the Amazones, and belonging to the Scythian stock. (Theophrastus, op. Strab. l.c.) The name survives, it has been conjectured, in the modern Lashki, the inhabitants of the E. region of Caucasus. (Comp. Potecki, Voyage dans les Sides d'Astrakan, vol. i. p. 239.) [ E. B. I. ]

LEGEDIA, in Gallia, is placed by the Table on a road from Condut (Rosses) to Cocinallum, perhaps Cherbourg. It is 49 Gallic leagues from Condut to Legedia, and 19 from Legedia to Cemia. None of the geographers agree about the position of Legedia. Walker places it at 1fth, a hamlet, near Lecce, in support of which there is some similarity of name. [ G. L. ]

LEGELIUM, a town in Britain, mentioned in the Itinerary. At Castleford, in Yorkshire, the road from Irmoor (Addborough) crosses the river Aire; and in this neighbourhood coins and other antiquities have been dug up. A camp, however, has yet to be discovered. Castleford is generally identified with Legelium.

Legedef is the first station from York on the way to London, 21 miles from the former town, and 16 from Danum (= Doncaster). This is from the 8th Itinerary.

In the 5th Legelium is exactly in the same position. This identifies the two. [ R. G. L. ]

LEGIO (אַּרְגּוֹ), a town of Palestine mentioned by Eusebius and S. Jerome. Its importance is summarized by the fact that it is assumed by them as a centre from which to measure the distance of other places. Thus they place it 15 M. P. west of Nazareth, three or four from Taanach (Onomast. s. v. Nazaret, Thaenoch, Thaenach Canoana, Aphraim.) Leland (Palaest. s. v. 873) correctly identifies it with the modern village Logane or el-Lejjin, "on the western border of the great plain of Eastron"—which Eusebius and S. Jerome designate, from this town, μῆνα ἰδέων Arearias (Onomast. s. v. Pelethios),—"where it already begins to rise gently towards the low range of wooded hills which connect Carmel and the mountains of Samaria." Its identity with the Megiddo of Scripture is successfully argued by Dr. Robinson (Bib. Res. vol. iii. pp. 177—180.) Megiddo is constantly joined with Taanach, and Lejjin is the requisite distance from the village of Toledoth, which is directly southward. Both were occupied by the Moabites (Onomast. s. v. Pelethios). It is the place already mentioned by Shaw as the Ras-el-Kishon, or the head of the Kishon, under the south-east brow of Mount Carmel. Three or four of its sources, he says, lie within less than a furlong of each other, and discharge water enough to form a river half as big as the Isis. (Travels, p. 274, 4to ed.) It was visited and described by Mr. Wookett in 1832. It forms a mill up to an hour and 40 minutes from Tannah (Bibliotheca Sacra, 1843, pp. 76—76.) The great caravan road between Egypt and Damascus passes through Lejjin; and traces of an old Roman road are to be seen to the south of the village. [ G. W. ]

LEGIO VII. GEMINA (ח'נ. Ant. p. 395; Αρκιάς η Γεμίνα, Plut. vii. 6. § 30: Leon.)
LELEGES

Roman city of Asturia, in Hispania Tarraconensis, admirably situated at the confluence of two tributaries of the Elata, at the foot of the Asturian mountains, commanding and protecting the plain of Leon. As its name implies, it grew out of the station of the new 7th legion, which was raised by the emperor Galba in Hispania. (Dion Cass. iv. 13, 4; Suet. Gall. 10.) Tacitus calls the legion Galbiana, to distinguish it from the old Legion VIII. Claudia, but this appellation is not found on any genuine inscriptions. It appears to have received the appellation of Gemina (succeeding the use of which, and Gemellia, see Cæsar B. C. iii. 3) on account of its amalgamation by Vespasian with one of the German legions, not improbably the Legion I. Germanica. Its full name was Legion Gemina Felin. After serving in Pannonia, and in the civil wars, it was settled by Vespasian in Hispania Tarraconensis, to supply the place of the VI. Victrix and X. Gemina, two of the three legions ordinarily stationed in the province, which had been withdrawn to Germany. (Tac. Hist. ii. 11, 67, 86, ii. 7, 10, 21—25, iv. 39: Inscr. ap. Gruter, p. 243, no. 2.) That its regular winter quarters, under later emperors, were at Leon, and were seemingly of great importance to the legionaries, and the Notitia Imperii, as well as from a few inscriptions (Munotr. p. 2037, no. 8, A.D. 130; p. 335, nos. 2, 3, A.D. 163: p. 336, no. 3, A.D. 167; Gruter, p. 260, no. 1, A.D. 216), but there are numerous inscriptions to prove that a strong detachment of it was stationed at Tarraaco, the chief city of the province. (The following are a selection, in order of time:—Ovill, no. 5496, A.D. 182; no. 4815; Gruter, p. 355, no. 7.) In these inscriptions the legion bears the surnames of P. F. Antoniniana, P. F. Alexanderiana, and P. F. Severiana Alexandriana; and its name occurs in a Greek inscription as AET. Z. Διανήμημα (C. I. vol. iii. no. 4022), while another mentions a χλαδνεύς ευπατρι dossier. (C. I. vol. i. no. 1126.) There is an inscription in which is found a "tribunus militum legi. VII. Gemi-
niae Felicis in Germania," from a comparison of which with two inscriptions found in Germany (Leuchs, Schriften, vol. i. nos. 11, 62; Borgesius, sive loc. Rom. del Reno, p. 26), it has been inferred that the legion was employed on an expedition into Germany under Alexander Severus, and that this circumstance gave rise to the erroneous designation of Germania in the text of Ptolemy. (Bickling, N. D. pl. ii. pp. 1626, sqq.; Marggraf's Becker, Rom. Alterthümem. vol. iii. pl. 2, p. 354; Guldeh, in Pauly's Realencyclopädie, s. v. Legion.)

The station of this legion in Asturias grew into an important city, which resisted the attacks of the Goths till A.D. 586, when it was taken by Leovigildo; and it was one of the few cities which the Goths allowed to retain their fortifications. During the struggle with the Arab invaders, the same fortress, which the Romans had built to protect the plain from the incursions of the mountainiers, became the advanced post which covered the mountain, as the last refuge of Spanish independence. After yielding to the first assault of the Moors, it was soon recovered, and was restored by Ordoño I. in 830. It was again taken by Al Mansur in 996, after a year's siege; but was recovered after Al-Mansur's defeat at Calahorra, about A.D. 1093; repopulated by Alonso V., and enlarged by Alonso XI., under whose successor, Don Pedro, it ceased to be the capital of the kingdom of Leon, by the removal of the court to Seville. The greater portion of the Roman walls may still be traced. (Ford, Hondbook of Spain, p. 31.)

LEHI, or more fully Ramathileh, a place in the south of Palestine, the name of which is derived from the Hebrew "Ramathilah," apparently a "Plain." (Josh. iv. 17; comp. Joseph. Antiq. v. 8, § 8: Winer, Bibl. Real. winter-taruch, s. v.)

LEIANOE (Λειανόη), the later name of the Homeric Elone (Λαδάη), according to Strabo, was a town of Perrhaebia in Thessaly, and was situated at the foot of Mount Olympus, not far from the Titaresus or Eoetou. The Greeks of Fluminum report that there are some remains of this city at Selca. (Hom. II. ii. 739; Strab. ii. p. 440; Steph. B. s. v. Λαιανη; Leake, Northern Greece, vol. iii. p. 345.)

LEIMNX (Λειμξον), a town of Samaria European, which Ptolemy (iii. 5, § 29) places on an affluent of the Boreas, though whether on the Boreas, or some other, is uncertain. LIAIMN (Λειαμνος, Ptol. iii. 5, § 12), on the Palus Mesotis, appears to be the same place repeated by an oversight. (Scharfkr. Str. iv. 10, 1512.)

LEHYSDEUM. [Attica, p. 326, b.)

LELEMNOUSINUS, in Britain, mentioned by Ptolemy (ii. 3) as lying between the asetuary of the Clota (Clyde) and the Epidian Promontory (Mall of Crundale): = Loch Fyne. [R. G. L.]

LELANTUS CAMPUS (λέλαντος καπεων), a fertile plain in Euboea, between Chalida and Eretria, which was an object of frequent contention between these cities. (Chalcis.) It was the subject of volcanic action. Strabo relates that on one occasion a torrent of hot mud issued from it; and it contained some warm springs, which were used by the dictator Sulla. The plain was also celebrated for its vineyards; and in it there were mines of copper and iron. (Strab. i. p. 58, x. p. 447, sqq.; Hom. Hymn. in Apoll. 219: Theoc. 888: Leake, Northern Greece, vol. ii. p. 265.) Phayn mentions a river Leitanus in Euboea, which must have flowed through this plain, if it really existed. (Plin. iv. 12, s. 21.)

LELEGES (Λελέγης), an ancient race which was spread over Greece, the adjoining islands, and the Asiatic coast, before the Hellenes. They were so widely diffused that we must either suppose that their name was descriptive, and applied to several different tribes, or that it was the name of a single tribe and was afterwards extended to others. Strabo (viii. p. 322) regarded them as a mixed race, and was disposed to believe that their name had reference to this (τα Σωλήνιτοι γελωνίνα): They may probably be looked upon, like the Pelasgi, and the other early inhabitants of Greece, as members of the great Indo-European race, which became gradually incorporated with the Hellenes, and thus ceased to exist as an independent people.

The most distinct statement of ancient writers on the origin of the Leleges is that of Herodotus, who says that the name of L. leges was the ancient name of the Carians (Hid. i. 171). A later Greek writer considered the Leleges as standing in the same relation to the Carians as the Helots to the Laconians and the Penestae to the Thessalians. (Ath. vi. p. 271.) In Homer both Leleges and Carian appear as equals, and as auxiliaries of the Trojans. (II, x. 429.) The Leleges are ruled by Alces, the father-in-law of Triam, and inherit a
town called Pedasus at the foot of Mount Ida. (II. xxi. 86.) Strabo relates that Leleges and Carians once occupied the whole of Ionia, and that in the Milesian wars they were sufficiently defended by nature owing to the steep banks, such as we see at other Roman castra where the engineers have availed themselves of a natural defence to save the expense and labour of building walls. The fortress enclosed about 10 acres. The walls, in part only now standing, were upwards of 20 ft. high, and about 10 ft. thick; they were further strengthened by semicircular solid towers. The principal entrance was on the east, facing the site of West Hythe, it was supported by two smaller towers, and, as recent excavations prove, by other constructions of great strength. Opposite to this, on the west, was a postern gate, of narrow dimensions. At some remote period the castrum was shatterd by a land-slip, and the lower part was carried away, and separated entirely from the upper wall, which alone stands in its original position. To this cause is to be ascribed the present disjointed and shattered condition of the lower part. Parts of the wall and the great gateway were completely buried. The excavations allowed to brought them to light, and enabled a plan to be made. Within the area were discovered the walls of one of the barracks, and a large house with several rooms heated by a hypocaust. [C. R. S.]

LEMANIS or LEMANNUS LACUS (Acadinus, Aegadnus Aelnus), LeVan Lake or Lake of Geneva. Caesar says (B. G. i. 8) that he drew his rampart against the Helveti 'from the Lacus Lemannis, which flows into the Rhone, as far as the Jura;' a form of expression which some of the commentators have found fault with and altered without any reason. The name Lemanis Aelnus in Prolemy's text (ii. 10. § 2) is merely a copyist's error. In the Antonine Itin. the name Lanemnus Lacus occurs; and in the Table, Lemannus Lacus. Mol. (ii. 5), who supposes the Rhodamus to rise not far from the sources of the Rhone and the Ister, says that, "after being received in the Lacus Lemannis, the river maintains its current, and flowing entirely through it, runs out as large as it came in." Strabo (p. 271) has a remark to the same purpose, and Pliny (i. 103), and Ammianus Marcellinus (iv. 11). This is not the fact, as we may readily suppose, though the current of the Rhone is perceptible for some distance after the river has entered the east end of the lake of Geneva. Ausonius (De Clar. Urb. Narbo) makes the lake the chief source of the Rhodanus:

Qva rapitur praecip Rhodanus gentis Lemann;

but this poetical embellishment needs no remark.

The Lake of Geneva is an immense hollow filled by the Rhone and some smaller streams, and is properly described under another title. [LENOSUS.]

LEMAVI. [GALLAECLA.]

LEMINSCUM, in Gallia Narbonensis, is placed in the Table and the Antonine Itin. on a road from the Alpis Graia (Little St. Bernard) to Vienna (Vienne). Leminscum is Lemnus, near Chambry, and there is also, according to some authorities, a Mont Lemine. The next station to Leminscum on the road to Vienna is Laclusum. [LEMAV.] [G. L.]

LEMONOS (Âgma: Ech. Âgmon), one of the larger islands in the Aegean sea, situated nearly midway between Mount Athos and the Hellespont. According to Pliny (iv. 12. s. 23), it lay 22 miles SW. of Imbros, and 87 miles SE. of Athos; but the
LEMNOS.

latter is nearly double the true distance. Several ancient writers, however, state that Mount Athos
cast its shadow upon the island. (Soph. ap. Schol. ad Theocr. vi. 76; Plin. l.c.) Pliny also relates
that Lemnos is 112 miles in circuit, which is perhaps not far from the truth, if we reckon all
the windings of the coast. Its area is nearly 150 square
miles. It is of an irregular quadrilateral shape, being nearly divided into two peninsulas by two deep
bays, Port Parthous on the S., and Port St. Antonia
on the S. The latter is a large and convenient har-
bour. On the eastern side of the island is a bold
rock projecting into the sea, called by Auschlinus
E'pfi.aiov apsi a ypov, in his description of the
beacon fires between Mount Ida and Myrina, an-
nouncing the capture of Troy. (Aesch. Agam. 283; comp. Soph. Hist. 1499.) Hills, but of no
great height, cover two-thirds of the island; they
are barren and rocky, and there are very few trees,
except in some of the narrow valleys. The whole
island bears the strongest marks of the effects of
volcanic fire; the rocks, in many places, are like the
burnt and vitrified scoria of furnaces. Hence we
may account for its connection with Hephaestus, who,
when hurled from heaven by Zeus, is said to have
fallen upon Lemnos. (Hom. H. i. 594.) The island
was therefore sacred to Hephaestus. (Plin. N. H. 458; Or. Fast. iii. 92,) who was frequently cali-
med the Lemnian god. (Ov. Met. iv. 185; Virg. Aen. vii. 474.) From its volcanic appearance it ac-
drived its name of Athaliai (Αθαλαις, Polyb. ap. Steph. B., and Etym. M. s. r. Αθάλαιν.) It was
also related that from one of its mountains, called
Μούσιον (Μούσαξ), fire was seen to blaze forth. (Antimach. ap. Schol. ad Nicander. Thor. 472;
Lycolph. 227; Hesych. s. v.) In a village in the
island, named Choum, there is a hot-spring, called
Thermis, where a commodious bath has been built,
with a boling house for strangers, who frequent it
for its supposed medicinal qualities. The name of Lemnos
is said to have been derived from the name of the
Great Goddess, who was called Lemnos by the original
inhabitants of the island. (Hecat. ap. Steph. B. s. v.)

The earliest inhabitants of Lemnos, according to
Homer, were the Σίνθες (Σινθητα), a Thracian tribe; a name, however, which probably only sig-
ifies robbers (from Σινθια). (Hom. H. i. 594; Od.
vi. 294; Strab. vii. p. 334; x. p. 457; xii. p. 549.)
When the Argonauts landed at Lemnos, they are
said to have found it inhabited only by women, who
had murdered all their husbands, and had chosen as
their queen Hypsipyle, the daughter of Thoas, the
former King of the island. (See Dict. of Bioge.
art. Η/yfpsiyle.) Some of the Argonauts settled
here, and became by the Lemnian women the fathers of the
Minyaee (Μίνυαεε), the later inhabitants of the
island. The Minyae were driven out of the island by
the Tyrrhenian Pelasgians, who had been expelled
from Attica. (Herc. iv. 145, vi. 137; Appol.
Rhod. i. 608; seq. and Simh. Aphiol. i. 9, § 17,
iii. 6; § 8.) It is also related that these Pel-
sagians, out of revenge, made a descent upon the coast
of Attica during the festival of Artemis at Brauron, and
carried off some Athenian women, whom they made
their concubines: but, as the children of these women despised their half-brothers born of Pe-
sagian women, the Pelasgians murdered both them and their Athenian mothers. In consequence of this
atrocious, and of the former murder of the Lemnian
husbands by their wives, "Lemman Deeds" (Αθάλαια
γαυνών) became a proverb throughout Greece for all
atrocious acts. (Herod. vi. 128; Eustath. ad Id. p. 138, 11, ad Dionys. Per. 347; Zeneb. iv. 91.)

LEMNOS. Lemnos continued to be inhabited by Pelasgians,
when it was conquered by Otanis, one of the gener-
als of Darius Hystaspis (Herod. v. 26); but Mil-
lites delivered it from the Persians, and it was sub-
jected to Athens, in whose power it remained for a
long time. (Herod. vi. 157; Thuc. iv. 28, viii. 57.)

In fact, it was always regarded as an Athenian pos-
session, and accordingly the peace of Antalcidas,
which declared the independence of all the Grecian
states, nevertheless allowed the Athenians to retain
possession of Lemnos, Imbros, and Seyros. (Xen.
Hyll. iv. 8. § 15, v. 1. § 34.) At a later period
Lemnos passed into the hands of the Macedonians,
but it was restored to the Athenians by the Romans.
(Plut. xxx. 18.)

In the earliest times, Lemnos appears to have
contained only one town, which bore the same name
as the island (Hom. H. xiv. 230); but at a later
period we find two towns, Myrina and Helphaestias.
Myrina (Μυρίνα; Eth. Μυρανός) stood on the west-
ern side of the island, as we may infer from the
statement of Pliny, that the shadow of Mt. Athos
was visible in the forum of the city at the time of
the Augustan period. (Herc. vi. 140; Steph. B. s. v.; Plut. iiii. 13. § 4.) On the site of this
town stands the modern Kastro, which is still the
chief town in the place. In contains about 2000
inhabitants; and its little port is defended by a
pier, and commanded by a ruinous mediaeval fortress
on the overhanging rocks. Helphaestias, or He-
ptaestis (Ηέπταςτις; Eth. Ηέπτα-
στιν) was situated in the northern part of the
island. (Herod. vi. 141; Steph. B. s. v.)
There are coins of Helphaestias (see below), but none
of Myrina, and none bearing the name of the island.
(Eckhel, vol. ii. p. 51.)

According to Pliny (xxxvi. 13. s. 19) Lemnos
had a celebrated labyrinth, supported by 150
columns, and with gates so well poised, that a
child could open them. Pliny adds, that there
were still traces of it in his time. Dr. Hurn, who
visited the island in 1801, attempted to find out
the ruins of this labyrinth, and was directed to a
subterraneous staircase in an uninhabited part of the
island, near a town, called Parnith. He here
found extensive ruins of an ancient and strong
building that seemed to have had a ditch round it
communicating with the sea. "The edifices have
covered about 10 acres of ground: there are founda-
tions of an amazing number of small buildings
within the outer wall, each about seven feet square.
The walls towards the sea are strong, and com-
pised of large square blocks of stone. On an
elevated spot of ground in one corner of the area,
we found a subterraneous staircase, and, after lighting
our tapers, we went down into it. The entrance
was difficult: it consisted of 51 steps, and about
every twelfth one was of marble, the others of
common stone. At the bottom is a small chamber with
a wall in it, by which, probably the garrison was
supplied; a censer, a lamp, and a few matches, were
lying in a corner, for the use of the Greek Christians,
who call this well an Αγιασμα, or Holy Fountain,
and the ruins about it Παναγία Κοσμίπε. The
peasants in the neighbourhood had no knowledge of
any sculpture, or statues, or medals having ever
been found there." It does not appear, however,
that these ruins have any relation to the labyrinth
LEMOVICS.

mentioned by Pliny; and Dr. Hunt thinks that they are probably those of the citadel of Hephastias.

The chief production of the island, was a red earth called terra Lemnia or sigillata, which was employed by the ancient physicians as a remedy for wounds and the bites of serpents; and which is still much valued by the Turks and Greeks for its supposed medicinal virtues. It is dug out of a hill, made into small balls, and stamped with a seal containing Arabic characters.

The ordinary modern name of the island, is Stallo-
mene (civ τῆς Μηναον), though it is also called by its ancient name.

There were several small islands near Lemnos, of which the most celebrated was Chryse (Χρυση), where Philoctetes was said to have been abandoned by the Greeks. According to Pausanias, this island was afterwards swallowed up by the sea, and another appeared in its stead, to which the name of Hiera was given. (Eustath. ad Hom. II. ii. p. 330; Apollon. Mithr. 77; Paus. viii. 33. § 4.)

(Rhode, Rex Lemnici, VISTAII. 1829; Hunt, in Walpole's Travels, p. 54, seq.)

COIN OF HEPHAESTIAS IN LEMNOS.

LEMOVICS. (Aequanae, Strab. p.190; Aemovici, Cau.

Ptol. ii. 7. 10), a Gallic people who were bounded by the Areos to the east, the Bituriges Cubi and the Pictones on the north, and the Santones on the west. Their chief town was Augustoritum or Lemovices. (Augustoritum.) The diocese of Li-
movices, comprehending the diocese of Tullae, which has been separated from it, represents the limits of the Lemovices; but the diocese of Limoges extends somewhat beyond the limits of the old province of Limousia, which derives its name from the Lemo-

vices, and into that province which was called La Marche. An inscription in Gruter, found at Rancon, in the diocese of Limoges, proves that there was included in the territory of the Lemovices a people named Andecauennienses; and another Gallic inscription shows that Mars was called Curiousi. Camo-

bergus was a Gallic name (Caes. B. G. vii. 59, 62).

Caesar (B. G. vii. 4) enumerates the Lemo-

vices among the peoples whom Verecinctorix stirred up against the Romans in c. 52: they are placed in the text between the Aurelii and Andes. The Lemovices sent 10,000 men to assist their coun-

trymen at the siege of Alesia (B. G. vii. 75). But in the same chapter (vi. 75) the Lemovices are again mentioned: "universa civitatis qua duodecim, "Oceanum attingunt quaeque eorum consuetudine Ar-

moricae appellantur, quo sunt in numero Carica-
lites, Rotones, Ambibari, Caletes, Ossini, Lemovices, Veneti, Unelli, sex milia." Here the Lemovices are placed in a different position, and are one of the Armoric States. (Armoricae Civitates.) Some critics erase the name Lemovices from Caesar's text; but there is good authority for it. Davis remarks (Caes. Oud. vi. i. p. 457), that all the MSS. (known to him) have the reading Lemovici, and that it occurs also in the Greek translation. He also observes, that as there were three Aurelii (Aurelii), so there might be two Lemovices; and we may add that there were two Bituriges, Bituriges Cubi and Bituriges Vivisci; and Volcae Arceonicii and Volcae Tectosages. If the text of Caesar then is right, there were Armoric Lemovices as well as the Lemovices of the Limousia; and we must either keep the name as it is, or erase it. The emendation of some critics, adopted by D'Anville, rests on no foundation. Walckenaer finds in the district which he assigns to the Lemovices Armoricani, a place named La Limonaisiere, in the arrondissement of Nantes, between Mouchecoul, Nantes and Saint-

Leger; and he considers this an additional proof in favour of the conjecture about the text of Polybius in the matter of the Lemovices; as to which con-

jecture his own remarks may be read. (G. F. d. G. de Gauke, vol. i. p. 363.)

[ G. L.]

LEMOVII, a German tribe, mentioned by Tacitus (Germ. 43) as living with the Rugii on the coast of the Ocean, that is, the Baltic Sea. Tacitus men-

tions three peculiarities of this and the other tribes in those districts (the modern Pommernland), — their round shields, short swords, and obedience to-

wards their chiefs. (Comp. Gruter, de German.)

[ L. S.]

LENTIA (Licea), a small place in Noricum on the Danube, on the road from Laureaum. According to the Notitia Imperii, from which alone we learn anything about this place, it appears that a prefect of the Legio Italica, and a body of horse archers, were stationed there. (Comp. Gruter, Inscription. p. 541, 10; Muehau, Noricia, i. p. 284.)

[ L. S.]

LENTIENSES, the southernmost branch of the Alamanii, which occupied both the northern and southern borders of the Lacus Brigantianus. They made repeated invasions into the province of Raetia, but were defeated by the emperor Constantinus. (Amm. Marci, xvi. 4, xxxi. 10; Zosimus, die Deutschen, p. 369, foll.)

[ L. S.]

LENTULAE or LENTOLAE, a place in Upper Paononia, on the principal highway leading through that country, and 32 Roman miles to the south-east of Jovia. (It. Ant. p. 130; It. Hieros, p. 562; Geay. Rav. iv. 19.) Polybius (ii. 15. § 5) mentions a town ΛΕΝΤΟΛ[ΟΝ] in the same neighbourhood, which is perhaps only a slip for ΛΕΝΤΟΛ[ΟΝ]. Some identify the place with the modern Bertzente, and others with Leitichhagen.

[ L. S.]

LEON FLUVIUS. [L. Leonites.]

LEON (Aisne Inferie.) 1. A point on the S. coast of Crete, now Pauta di Lecinul. (Ptol. iii. 17. § 4; Heick, Kreta, vol. i. pp. 394, 413.)

2. A promontory of Euboea. 8. of Eretira, on the kalē δικτή. (Ptol. iii. 15. § 24.)

3. A place on the E. coast of Sicily, near Syra-
cusa, where both the Athenians and Romans landed when they were going to attack that city. (Thuc. vi. 97; Liv. xx. 38.)

[SYRACUSAE.]

LEONICA. [L. Leonixi.]

LEONTES (ΛΟΕΝΤΟΣ ΤΩΤΗΜΟς ΕΒΟΔΟΛΑ), a river of Phoenicia, placed by Ptolomy between Bybuts and Sidon (v. 15. p. 137): consistently with which notice Strabo places Leontopolis between the same two towns, the distance between which he states at 400 stadia. He mentions no river of this name, but the Tamynas (ΓΕΩΥΝΑΣ ΤΩΤΗΜΟΣ), the grove of Areopagitos, and Lebanon, which would doubtless correspond with the Leus river of Ptolemy; for it is obviously an error of Velay to place "Leontos oppidi" between "Bybuts" and "Flamen Lycos" (v. 20). Now, as the Tamynas of Strabo is clearly
identical with Naxo-ph-drino, half way between Lebrot and Sydus, Leon's town and river should be looked for south of this, and north of Sicilian. The only stream in this interval is Naxo-ph-drin, called also in its upper part Naxo Barakhe, which Dr. Robinson has shown to be the Bostreus Fluvius, [Bos-

This, therefore, Munster seemed to have sufficient authority for identifying with the Leontes. But the existence of the Lihino—a name supposed to be similar to the Leontes—between Naxos and Tyre, is thought to conduce to the conjecture that Poseidus has misplaced the Leontes, which is in fact identical with the anonymous river which Strabo mentions near Tyre (p. 758), which can be no other than the Liihino (Robinson, Bib. Rer. vol. iii. pp. 408—410, and notes). No great reliance, however, can be placed on the similarity of names, as the form Leontis is merely the reflection of Aetos, which was not likely to be adopted in Arabic. It is far more probable that the classical geographer in this, as in other cases, translated the Scitonic name. [See Cains and Lytus.] Besides which the Lihnino does not retain this name to the coast, but is here called Naxo-ph-drino, which is the Castanteer of Maundrell (March 20, p. 48; Ireland, Palæst. pp. 290, 291.)

G. W.

LEONTINI. (Ancorvov: Eth. Aewovov; Leon-
tine, city of Sicily, situated between Syracuse and Catana, but about eight miles from the sea-

The name of Leontini is evidently an ethnical form, signifying properly the people rather than the city itself; but it seems to have been the only one in use, and is employed both by Greek and Latin writers (declined as a plural adjective*), with the single exception of Poseidus, who calls the city Aetropor or Leontum. (Pol. iii. 4. § 13.) But it is clear, from the modern form of the name, Leotin, that the form Leontini, which we find universal in writers of the best ages, continued in common use down to a late period. All ancient writers concur in representing Leontini as a Greek colony, and one of those of Chalcidian origin, being founded by Chalcidian colonists from Naxos, in the same year with Catana, and six years after the parent city of Naxos, (Strab. vol. i. 33, xiv. 14.) According to Timydides, the site had been previously occupied by Siculi, but these were expelled, and the city became essentially a Greek colony. We know little of its early history; but, from the strength of its position and the extreme fertility of its territory (renowned in all ages for its extraordinary richness), it appears to have early attained to great prosperity, and became one of the most powerful cities in the E. of Sicily. The rapidity of its rise is attested by the fact that it was able, in its turn, to found the colony of Elbech (Strab. vi. p. 272; Symm. Ch. 287), apparently at a very early period. It is probable, also, that the three Chalcidian cities, Leontini, Naxos, and Catana, from the earliest period adopted the same line of policy, and made common cause against their Doric neighbours, as we find them constantly doing in later times.

The government of Leontini was an oligarchy, but it fell at one time, like so many other cities of Sicily, under the yoke of a despot of the name of Panmacius, who is said to have been the first instance of

kind in Sicily. His usurpation is referred by Eu-

Sicines to the 43rd Olympiad, or n. c. 608. (Arist.

Pol. v. 10, 12; Euseb. Arm. vol. ii. p. 109.)

Leontini appears to have retained its independ-

ence till after n. c. 498, when it fell under the yoke of Hippocrates, tyrant of Gela (Hierol. vii. 154); after which it seems to have passed in succession under the authority of Gela and Hieron of Syracu-

se; as we find that, in n. c. 476, the latter despot, having expelled the inhabitants of Catana and Naxos from their native cities, which he peopled with new colonists, established the exiles at Leontini, the posses-

sion of which they shared with its former citizens.

(Dod. xi. 49.) We find no special mention of Leontini in the revolutions that followed the death of Hieron; but there is no doubt that it regained its independence after the expulsion of Thrasybulus, n. c. 466, and the period which followed was proba-

bly that of the greatest prosperity of Leontini, as well as the other Chalcidian cities of Sicily. (Dod. xi. 72, 76.) But its proximity to Syracuse became the source of fresh troubles to Leontini. In n. c. 427 the Leontines found themselves engaged in hos-

tilities with their more powerful neighbour, and, being unable to cope single-handed with the Syra-

cines, they applied for support not only to their Chalcidian brethren, but to the Athenians also, who were frequent visitors at the island. The Syracusans, however, seem to have been the agents of their own misfortune; for they did not altogether get their enemies, and at last, became the instruments of their own ruin. (Diod. xi. 56; Thuc. xii. 53.) But after the war had continued for some years, they were included in the general pacification of Gela, n. c. 424, which for a time secured them in the possession of their independence. (Thuc. iv. 58, 65.) This, however, did not last long; the Sy-

racusans took advantage of intestine dissensions among the Leontines, and, by espousing the cause of the oligarchy, drove the democratic party into exile, while they adopted the oligarchy and richer classes as Syracusan citizens. The greater part of the latter, who were always indignant at their own city, and mi-

tigated to Syracuse; but quickly returned after a time joined with the exiles in holding it out against the power of the Syracusans. But the Athenians, to whom they again applied, were unable to render them any effectual assistance; they were a second time expelled, n. c. 422, and Leontini became a mere dependency of Syracuse, though always retaining some importance as a fortress, from the strength of its position. (Thuc. v. 4; Dod. xii. 54.)

In n. c. 417 the Leontini exiles are mentioned as joining with the Segestans in urging on the Athe-

nic expedition to Sicily (Diod. xii. 83; Plat. Nic. 12); and their restoration was made one of the awed objects of the enterprise. (Thuc. vi. 50.) But the failure of that expedition left them without any hope of restoration; and Leontini continued in its subordinate and fallen condition till n. c. 406, when the Segestans allowed the self-curate Agri-

centuries, after the capture of their own city by the Carthaginians, to establish themselves at Leontini. The Gelbans and Camararines followed their ex-

eample the next year: the Leontine exiles of Syracuse at the same time took the opportunity to return to their native city, and declare themselves independent, and the treaty of peace concluded by Dionysius with Hiltmio, in n. c. 405, expressly stipulated for the
freedom and independence of Leontini. (Diol. xiii. 89, 113, 114; Xen. Hell. ii. 3. § 5.) This condition was not long observed by Dionysius, who no sooner found himself free from the fear of Carthage than he turned his arms against the Chalcidice cities, and, after reducing Catana and Naxos, compelled the Leontines, who were now bereft of all their allies, to surrender their city, which was for the second time deserted, and the whole people transferred to Syracuse, b. c. 403. (Id. xiv. 14, 15.) At a later period of his reign (n. c. 396) Dionysius found himself compelled to appease the discontent of his mercenary troops, by giving up to them both the city and the after, Hippocrates, and they established themselves to the number of 10,000 men. (Id. xiv. 78.) From this time Leontini is repeatedly mentioned in connection with the civil troubles and revolutions at Syracuse, with which city it seems to have constantly continued in intimate relations; but, as Strabo observes, always shared in its disasters, without always partaking of its prosperity. (Strab. vi. p. 274.) Thus, the Leontines were during the later war against the younger Dionysius, and opened their gates to Dion (Diol. xvi. 16; Plut. Dion. 39, 40). Some years afterwards their city was occupied with a military force by Hieroetas, who from thence carried on war with Timoleon (Ib. 78, 82); and it was not till after the great victory of the latter over the Carthaginians (n. c. 340) that he was able to expel Hieroetas and make himself master of Leontini. (Ib. 82; Plut. Timol. 32.) That city was not, like most of the others of Sicily, restored on this occasion to freedom and independence, but was once more incorporated in the Syracusan state, and the inhabitants transferred to that city. (Diol. xvi. 82.) At a later period the Leontines again figure as an independent state, and, during the wars of Agathocles with the Carthaginians, on several occasions took part against the Syracusans. (Diol. xix. 110, xx. 32.) When Pyrrhus arrived in Sicily, b. c. 278, they were subject to a tyrant or despot of the name of Hercules, who was one of the first to make his submission to that monarch. (Id. xxii. 8, 10, Exc. II. p. 497.) But not long after they appear to have again fallen under the yoke of Syracuse, and Leontini was one of the cities of which the sovereignty was secured to Hieron, king of Syracuse, by the treaty concluded by Leontini with the commencement of the First Punic War, n. c. 263. (Id. xxiii. Exc. II. p. 502.) This state of things continued till the Second Punic War, when Leontini again figures conspicuously in the events which led to the fall of Syracuse. It was in one of the long and narrow streets of Leontini that Hieronymus was assassinated by Diomenes, n. c. 215 (Liv. xxiv. 7; Polyb. vii. 6); and it was there that, after the conclusion of the Peace of Eipycidas, the standard of the open war against Rome, Marcellus hastened to attack the city, and made himself master of it without difficulty; but the severities exercised by him on this occasion infuriated the minds of the Syracusans to such an extent as to become the immediate occasion of the rupture with Rome. (Liv. xxiv. 29, 30, 33.) Under the Roman government Leontini was restored to the position of the independent municipal town, but it seems to have sunk into a state of decay. Cicero calls it "misera civitas atque animas" (Verr. ii. 66); and, though its fertile territory was still well cultivated, this was done almost wholly by farmers from other cities of Sicily, particularly from Centuripia. (Tib. iii. 46, 49.) Strabo also speaks of it as in a very declining condition, and though the name is still found in Fliny and Ptolomy, it seems never to have been a place of importance under the Roman rule. (Strab. vi. p. 273; Mel. ii. 7. § 16; Plin. iii. 8. s. 14; Ptol. iii. 4. § 13.) But the great strength of its position must have always preserved it from entire decay, and rendered it a place of some consequence in the middle ages. The modern city of Leontini, which preserves the ancient site as well as name, is a poor place, though with about 5000 inhabitants, and suffers severely from malaria. No ruins are visible on the site; and the present town is built on the rocky sides of the hill on which it stands are believed by the inhabitants to be the work of the Laestrygonians, and gravely described as such by Fazello. (Fazell. de Reb. Sic. iii. 3.)

The situation of Leontini is well described by Polybius: it stood on a broken hill, divided into two separate summits by an intervening valley or hollow; at the foot of this hill on the W. side, flowed a small stream, which he calls the Leontines; and there was a well-named the "Fiume Ruina", which falls into the Lake of Leontini, a little below the town. (Pol. vii. 6.) The two summits just noticed, being bordered by precipitous cliffs, formed, as it were, two natural citadels or fortresses; it was evidently one of these which Thurycles mentions under the name of Phoecae, which was occupied in b. c. 423 by the Leontine exiles who returned from Syracuse. (Plin. v. 4.) Both heights seem to have been fortified by the Syracuseans, who regarded Leontini as an important fortress; and we find them alluded to as "the forts" (τα φυσοφια) of Leontini. (Diol. xiv. 58, xxii. 8.) Diiodorus also mentions that one quarter of Leontini was known by the name of "The New Town" (γενα πελαρ, xvi. 72); but we have no means of determining its locality. It is singular that no ancient author alludes to the Lake (or as it is commonly called the Litora) of Leontini, a sheet of water of considerable extent, but stagnant and shallow, which lies immediately to the N. of the city. It produces abundance of fish, but is considered to be the principal cause of the malaria from which the city now suffers. (D'Orville, Sicula, p. 168; Smyth's Sicily, pp. 137, 158.)

The extraordinary fertility of the territory of Leontini, or Ictinum, was celebrated by many ancient authors. According to a tradition commonly received, it was there that wheat grew wild, and where it was first brought into cultivation (Diol. iv. 24, v. 2); and it was always regarded as the most productive district in all Sicily for the growth of corn. Cicero calls it "campus ille Leontinum melissinum ac feracissimum," "uberrima Sicilia parit," "catus rei frumentariae," and says that the Romans were accustomed to use it in itself a sufficient resource against scarcity. (Cic. Ferr. iii. 18, 44, 46, pro Scarr. 2. Phil. viii. 8.) The tract thus celebrated, which was known also by the name of the Laestrygonian Campi [Laestrygonides], was evidently the plain extending from the foot of the hills on which Leontini was situated to the river Syraethus, now known as the Piano di Catania. We have no explanation of the tradition which led to the fixing on this fertile tract as the abode of the fabulous Laestrygonians.

Leontini was noted as the birthplace of the celebrated orator Gorgias, who in b. c. 427 was the head of the deputation sent by his native city to
LEONTUM, a town of Achaia, was originally not one of the 12 Achaean cities, though it afterwards became so, succeeding to the place of Rhypes. It is only mentioned by Polybius, and its position is uncertain. It must, however, have been an inland town, and was probably between Phocaea and the territory of Aegium, since we find that the Eleians under the Ateolian general Eupigidas, marching through the territory of Phocaea as far as that of Aegium, retreated to Leontium. Leake places it in the valley of the Seina, between the territory of Tri- taea and that of Aegium, at a place now called Ai Anthrakia, from a raised church that stands near the village of Cestamniastis. Calleytus, the purveyor of the Romans during the later days of the Achaean League, was a native of Leontium. (Pol. ii. 41, v. 94, xxvi. 1.; Leake, Morea, vol. iii. p. 419.)

LEONTOPOLIS. [Nessochirion.]

LEONTOPOLIS. [Leontes.] LEONTOPOLIS (Αλεοτόπους; Ed. Λεωντόπολις), a town of Achaia, was originally not one of the 12 Achaean cities, though it afterwards became so, succeeding to the place of Rhypes. It is only mentioned by Polybius, and its position is uncertain. It must, however, have been an inland town, and was probably between Phocaea and the territory of Aegium, since we find that the Eleians under the Ateolian general Eupigidas, marching through the territory of Phocaea as far as that of Aegium, retreated to Leontium. Leake places it in the valley of the Seina, between the territory of Tritaea and that of Aegium, at a place now called Ai Anthrakia, from a raised church that stands near the village of Cestamniastis. Calleytus, the purveyor of the Romans during the later days of the Achaean League, was a native of Leontium. (Pol. ii. 41, v. 94, xxvi. 1.; Leake, Morea, vol. iii. p. 419.)

LEPONTIUM. [Hippion.] LEPONTIUM. [Hippion.] LEPONTIUM (Λεπόντιον; Arc. Λεπόντιον; Ptol. iv. 5, § 51; Strab. xvii. pp. 892, 812; Ael. Hist. i. 11, 4. 13; Hieronym. ad Polon. ii. 6; Leontopolium, Plin. v. 20, s. 17), the capital of the Leontopolidae, now in the Delta of Egypt. It stood in lat. 30° 6' N., about three geographical miles S. of Thonis. Strabo is the earliest writer who mentions either this name, or its chief town; and it was probably of comparatively recent origin and importance. The lion was not among the sacred animals of Aegypt; but it was occasionally domesticated and kept in the temples, may be inferred from Diogenes (c. 84). Trojan lions, employed in the chase of deer, wolves, v. &c., are found in the hunting-scenes delineated upon the walls of the graffiti at Bikhassan. (Walkinian, M. and C. vol. iii. p. 16.) In the reign of Ptolemy Philometer (c. 180—145) a temple, modelled after that of Jerusalem, was founded, by the exiled Jewish priest Onas. (3 seq., Ant. Jod. xii. 3, § 3; Hieronym. in Deut. c. xi.) The Hebrew calendar, which was adopted by the establishments of their national worship at Leontopoli, and which was increased by the refugees from the oppressions of the Selucid kings in Palestine, flourished there for more than three centuries afterwards. In the reign of Vespasian the Leontopolidae temple was closed, amid the general discouragement of Judaism by that emperor, (Joseph. B. Jod. vi. 10, § 4.) Antiquarians are divided as to the real site of the ruins of Leontopoli. According to D'Anville, they are covered by a mound still called Tel-lesheh, or the "Lion's Hill" (Comp. Champs.) (Egype, vol. ii. p. 110, seq.) Jannal, on the other hand, maintains that some tumuli near the village of El-Mengidah in the Delta, represent the ancient Leontopoli. And this supposition answers better with the account of the town given by Nic-
while we may safely place them in the group of the Alps, of which the Mont St. Goardh is the centre, and from which the Rhone and the Rhine, as well as the Reuss and the Ticino, take their rise. The name of Val Larentia, still given to the upper valley of the Ticino, near the foot of the St. Goardh, is very probably derived from the name of the Lepontii. Their chief town, according to Ptolemy, was Oscela or Osella, which is generally supposed to be Domo d'Ossola; but, as the Lepontii are erroneously placed by him in the Cottian Alps, it is perhaps more probable that the town meant by him is the Oeculm of Pliny, which was really situated in that district. [OECIMUM.]

The name of ALPES LEPONTIAE, or Lepontian Alps, is generally given by modern geographers to the part of this chain extending from Monte Rosa to the St. Goardh; but there is no ancient authority for this use of the term. [E. II. B.]

LEPREUM (vb Acépostov, Scol. Strab., Polyb.; Acépostov, Paus., Aristoph. Iv. 149; Acépostov, Ptol. iii. 16. § 18; Eth. Acépostov), the chief town of Triphylia in Elys, was situated in the southern part of the district, at a distance of 100 stadia from Samucum, and 40 stadia from the sea. (Strab. viii. p. 344.) Scylax and Ptolemy, less correctly, describe it as lying upon the coast. Triphylia is said to have been originally inhabited by the Caucanian, whence Lepreum is called by Callimachus (Hyppn. in Jov. 30) Καυκασιανός πολιτείαν. The Caucarions were afterwards expelled by the Murusae, who took possession of Lepreum. (Herod. iv. 148.) Subsequently, and probably soon after the Messenian wars, Lepreum and the other cities of Triphylia were subdued by the Eleians, who governed them as subject places. [See Vol. I. p. 518, b.] The Triphylian cities, however, always bore this yoke with patience; and Lepreum took the lead in their frequent attempts to shake off the Eleian supremacy. The greater importance of Lepreum is shown by the fact that it was the only one of the Triphylian towns which took part in the Persian wars. (Herod. ix. 28.) In B.C. 421 Lepreum, supported by Sparta, revolted from Elis (Thuc. v. 31); and at last, in 400, the Eleians, by their treaty with Sparta, were obliged to relinquish their authority over Lepreum and the other Triphylian towns. (Xen. Hell. iii. 2. § 25.) When the Spartan power had been broken by the battle of Leuctra (in B.C. 371), the Arcadians endeavored to recover their supremacy over Lepreum and the other Triphylian towns; but the latter protected themselves by becoming members of the Arcadian confederacy, which had been recently founded by Epaminondas. (Xen. Hell. vi. 5. § 2, seq.) Hence Lepreum is called an Arcadian town by Scylax and Ptolemy, the latter of whom erroneously speaks both of a Lepreum in Elis (iv. 5. § 6), and of a Lepreum in Arcadia (iv. 5. § 10). Pausanias also states that the Lepretiae in his time claimed to be Arcadians; but he observes that they had been subject of the Eleians from ancient times,—that as many of them as had been victors in the public games were proclaimed as Eleians from Lepreum,—and that Aristophanes describes Lepreum as a city of the Eleians. (Paus. v. 5. § 3.) After the time of Alexander the Eleians again reduced some of the Triphylian cities, which therefore were obliged to join the Aeolian league along with the Eleians. But when Philip, in his war with the Aetolians, marched into Triphylia, the inhabitants of Lepreum rose against the Eleian garrison in their town, and declared in

VOL. II.

favour of Philip, who thus obtained possession of the place. (Polyb. iv. 77, 79, 80.) In the time of Pausanias the only monument in Lepreum was a temple of Demeter, built of brick. In the vicinity of the town was a fountain named Arne. (Paus. v. 5. § 6.) The territory of Lepreum was rich and fertile. (Ḫāra eδaiaων, Strab. vii. p. 345.)

The ruins of Lepreum are situated upon a hill, near the modern village of Stroecii. These ruins show that Lepreum was a town of some size. A plan of them is given by the French Commission, which is copied in the work of Curtius. They were first described by Dodwell. It takes but a moment to ascend from the first traces of the walls to the acropolis, which is entered by an ancient gateway. * The towers are square; one of them is almost entire, and contains a small window or arrow hole. A transverse wall is carried completely across the acropolis, by which means it was ancienly divided into two parts. The foundation of this wall, and part of the elevation, still remain. Three different periods of architecture are evident in this fortress. The walls are composed of polygons: some of the towers consist of irregular, and others of rectangular quadrilaterals. The ruins extend far below the acropolis, on the side of the hill, and are seen on a flat detached knoll." (Dodwell. Tour through Greece, vol. ii. p. 347; Leuke, Morea, vol. i. p. 56; Bourlu, Recherches, p. 153; Curtius, Ptolom. secund. vol. ii. p. 8.)

LEPSIA (Lipus), a small island of the Icarian sea, in the north of Leros, and opposite to the coast of Caria. It is not mentioned by any ancient author except Pliny (H. N. v. 34). [L. S.]

LEPTI'(AΣρtίνχ βόρα, Ptol. iv. 5; Plin. vi. 29 s. 34), the modern Ras-al-Asif, in lat. 23° N., was a headland of Upper Egypt, upon the confines of Aethiopia, which projected into the Red Sea at Sinus Phoenici (Fool Isy). It formed the extremity of a volcanic range of rocks abounding in mines of gold, copper and topaz. [W. B. D.]

LEPTIS, a town of Hispam Baetica, mentioned only in the Bell. Alb. 57, where the word is perhaps only a false reading for LEEP, near the mouth of the Anas. [P. S.]

LEPTIS * (Liv. xxxiv. 62; Cass. B. C. ii. 58; Birt. Bell. Afr. 6, 7, 9, 62; Mela, i. 7. § 2; Plin. v. 4 s. 3), formerly called Leptis MINOR or PARVA (ΑΣρίνχ χιόνια, Ptol. iv. 3. § 10; Leptimins or Lepte Minus, Inst. Ant. p. 58; Tab. Peut. Geogr. Rav. iii. 5 v. 5: Eth. Lepthi; Lemta, Ru.), a city on the coast of Byzacium, just within the SE. headland of the Sinus Neapoliitani, 18 M. F. S.E. of Hadrumetum, and 33 M. F. N.E. of Thysdrus, and one of the most flourishing of the Phoenician colonies on that coast, notwithstanding the epithet POLVA, which is merely used by late writers to distinguish it from the still more important city of LEPTIS MAGNA. It was a colony of Tyre (Sall. Jug. 19; Plin. l. c.), and, under the Carthaginians, it was the most important place in the wealthy district of Emporiae, and its wealth was such that it paid to Carthage the daily tribute of a Siculo talent. (Liv. l. c.) Under the Romans it was a libera civitas, at least in Pliny's time; whether it became a colony afterwards depends on the question, whether the coins bearing the name of LEPTIS belong to this city or to Leptis Magna.

* Derived from a Phoenician word signifying a naval station.
LI-PTIΣ and, the Beechy; Delia ancient tana), between juayca, thongli ranean. of Trufeb, its {Ras-al Its formed quays, the city. The mouth to {Stadinsm. These of a canal, which jutting from the coast, as approaching the name Leptis, which was never entirely lost, and which became the prevailing name in the later times of the ancient world, and is the name which the ruins still retain (Lebdo). Under the early emperors both names are found almost indifferently; but with a slight indication of the preference given to Neapolis, and it seems probable that the name Leptis, with the epithet Magna, which is now used in the western name, was once venerated at last for the sake of avoiding any confusion with Neapolis in Zeugitana. (Strab. xvii. p. 835, Neapolis, η και Δέστσ καλωσ: Mela, however, i. 7. § 5, has Leptis only, with the epithet altera: Pliny, v. 4. 4. 5, misld, as usual, by the abundance of his authorities, makes Leptis and Neapolis different cities, and he distinguishes this from the other Leptis as Leptis altera, quae commerciōnibus magnae: Pliny, iv. 3. § 13, has νεάπολις και Δέστσ μεγάλα: Ibl. Ant. p. 63, and Tob. Pent. Leptis Magna Colonia: Syr. pp. 111, 112, 113, Groner. Necopolis; Stadiasmus, p. 455, Δέστσ, vulg. Δέστσ, the coins all have the name Leptis simply, with the addition, on some of them, of the epithet Κολονια Βενετία Ιουλία: but it is very uncertain to which of the two cities of the name these coins belong; Eckhel, vol. iv. pp. 130, 131, Flasche, e.a.) We learn from Sallust that the commercial intercourses of Leptis with the native tribes had led to a sharing of the common, and hence to an admixture of the language of the city with the Libyan dialects (Jug. 78). In fact, Leptis, like the neighbouring Tripolitain, where, with a vastly inferior site, has succeeded to its position, was the great emporium for the trade with the Garamantes and Phazania and the eastern part of

LEPTIS MAGNA.

[See below, under LEPTIS MAGNA.] Its ruins, though interesting, are of no great extent. (Shaw, Travels, p. 109; Barth, Wanderungen, etc. p. 161.)

LEPTIS MAGNA (ἡ Δέστσ μεγάλα, Δέστσ-καλωσ, Proc. B. η d. 21; also Δέστσ; simply; aff. Νέαπολις; Leptis Magna, Citius, Cad. Just. i. 27, 2; Eib. and Adj. Δέστσ-καλωσ, Leptisbas: Lebdo, large Ru.), the chief of the three cities which formed the African Tripolis, in the district between the Sertes (Rcic. Surtica, aff. Tripolitana), on the N. coast of Africa; the other two being Oea and Sabratha. Leptis was one of the most ancient Phoenician colonies on this coast, having been founded by the Sidonians (Sall. Jugs. 19. 78); and its site was one of the most favourable that can be imagined for a city of the first class. It stood at one of those parts of the coast where the table-land of the Great Desert falls off to the sea by a succession of mountain ridges, enclosing valleys which are thus sheltered from those encroachments of sand that cover the shore where no such protection exists, while they lie open to the breezes of the Mediterranean. The country, in fact, resembles, on a small scale, the terraces of the Cyrenaic coast; and its great beauty and fertility have excited the admiration alike of ancient and modern writers. (Anon. Marv. xxviii. 6; Delta, Barth, etc.) Each of these valleys is watered by its streamlet, very generally insignificant and even intermittent, but sometimes worthy of being styled a river, as in the case of the Cyntys, and of the smaller stream, further to the west, upon which Leptis stood. The excellence of the site was much enhanced by the shelter afforded by the promontory Hermarum (Ras-al-Ashim), W. of the city, to the roadstead in its front. The ruins of Leptis are of vast extent, of which a great portion is buried under the sand which has drifted over them from the sea. From what can be traced, however, it is clear that these remains contain the ruins of three different cities.

1. The original city, or Old Leptis, still exhibits in its ruins the characteristics of an ancient Phoenician settlement; and, in its site, its sea-walls and quays, its harbour; and its defences on the land side, it bears a striking general resemblance to Carthage. The city was built on an elevated tongue of land, jutting out from the W. bank of the little river, the mouth of which formed its port, having been artificially enlarged for that purpose. The banks of the river, as well as the seaward face of the promontory, are lined with walls of massive masonry, serving as sea-walls as well as quays, and containing some curious vaulted chambers, which are supposed to have been docks for ships which were kept (as at Carthage) for a last resource, in case the city should be taken by an enemy. These structures are of a harder stone than the other buildings of the city: the latter being of a light sandstone, which gave the place a glittering whiteness to the voyager approaching it from the sea. (Stadiasmus. Mar. Mag. p. 453, G. p. 297, 11.) On the land side the isthmus was defended by three lines of massive stone walls, the position of each being admirably adapted to the nature of the land; and, in a depression of the ground between the outmost and middle line, there seems to have been a canal, connecting the harbour in the month of the river with the roadstead W. of the city. Opposite to this tongue of land, on the E. side of the river, is a much lower, less projecting, and more rounded promontory, which could not have been left out of the system of external works, although no part of the city was built upon it. Accordingly we find here, besides the quays along the river side, and vaults in them, which served for warehouses, a remarkable building, which seems to have been a fort. Its superstructure is of brick, and certainly not of Phoenician work; but it probably stood on foundations coeval with the city. This is the only example of the use of brick in the ruins of Leptis, with the exception of the walls which surround the sea-defences already described. From this eastern, as well as from the western point of land, an artificial mole was built out, to give additional shelter to the port on either side; but, through not permitting a free egress to the sand which is washed up on that coast in vast quantities with every tide, these nodes have been the chief cause of the destruction, first of the port, and afterwards of the city. The former event had already happened at the date of the Stadiasmus, which describes Leptis as having no harbour (άλιμαπόρος). The harbour still existed, however, at the time of the restoration of the city by Septimius Severus, and small vessels could even ascend to some distance above the city, as is proved by a quay of Roman work on the W. bank, at a spot where the river is still deep, though its mouth is now lost in the sand-hills.

2. The Old City (άλαζος) thus described became gradually, like the Byrsa of Carthage, the citadel of a much more extensive New City (Νέαπολις), which grew up beyond its limits, on the W. bank of the river, where its magnificent buildings now lie hidden beneath the sand. This NEW CITY, as in the case of Carthage and several other Phoenician cities of like growth, gave its name to the place, which was hence called Neapolis, not, however, as at Carthage [comp. Carthago, Vol. I. p. 529. § 11], to the divine of the old name, Leptis, which was never entirely lost, and which became the prevailing name in the later times of the ancient world, and is the name which the ruins still retain (Lebdo). Under the early emperors both names are found almost indifferently; but with a slight indication of the preference given to Neapolis, and it seems probable that the name Leptis, with the epithet Magna, was again used in the common name, which is variously venerated at last for the sake of avoiding any confusion with Neapolis in Zeugitana. (Strab. xvii. p. 835, Νεάπολις, η και Δέστσ καλωσ: Mela, however, i. 7. § 5, has Leptis only, with the epithet altera: Pliny, v. 4. 4. 5, misld, as usual, by the abundance of his authorities, makes Leptis and Neapolis different cities, and he distinguishes this from the other Leptis as Leptis altera, quae commerciōnibus magnae: Pliny, iv. 3. § 13, has Νεάπολις η και Δέστσ μεγάλα: Ibl. Ant. p. 63, and Tob. Pent. Leptis Magna Colonia; Syr. pp. 111, 112, 113, Groner. Νεάπολις; Stadiasmus, p. 455, Δέστσ, vulg. Δέστσ, the coins all have the name Leptis simply, with the addition, on some of them, of the epithet Κολονια Βενετία Ιουλία: but it is very uncertain to which of the two cities of the name these coins belong; Eckhel, vol. iv. pp. 130, 131, Flasche, e.a.) We learn from Sallust that the commercial intercourse of Leptis with the native tribes had led to a sharing of the common, and hence to an admixture of the language of the city with the Libyan dialects (Jug. 78). In fact, Leptis, like the neighbouring Tripolitain, where, with a vastly inferior site, has succeeded to its position, was the great emporium for the trade with the Garamantes and Phazania and the eastern part of
LEPINA.

Inner Libya. But the remains of the New City seem to belong almost entirely to the period of the Roman Empire, and especially to the reign of Septimius Severus, who restored and beautified this his native city. (Sparr. Sec. 1; Aurel. Vict. Ep. 20.) It had already before acquired considerable importance under the Romans, whose cause it espoused in the war with Jugurtha (Sall. Jug. 77-79; as to its later condition see Tac. Hist. vi. 50); and if, as Eckhel inclines to believe, the coins with the epi-graph col. vic. II. LEPina belong mostly, if not entirely, to Lepitis Magna, it must have been made a colony in the earliest period of the empire. It was still a flourishing and populous fortified city in the 4th century, when it was greatly injured by an assault of a Libyan tribe, called the Atheniati (Antinian. axvii. 6); and it never recovered from the blow.

3. Justinian is said to have enclosed a portion of it with a new wall; but the city itself was already too far buried in the sand to be restored; and, as far as we can make out, the little that Justinian attempted seems to have amounted only to the enclosure of a suburb, or old Libyan camp, some distance to the E. of the river, on the W. bank of which the city itself had stood. (Procop. de Aed. vi. 4: comp. Bharth.) Its ruin was completed during the Arab conquest (Leo. Afrom. p. 432); and, though we find it, in the middle ages, the seat of populous Arab camps, no attempt has been made to make use of the splendid site, which is now occupied by the insignificant village of Legitha, and the hamlet of El-Ihashed, which consists of only four houses. (For particulars of the ruins, see Lucas. Proceedings of the Association, &c. vol. ii. p. 66. Lond. 1810; Della Cella, Viaggio, &c. p. 40; Becoehe, Proceedings, &c. chap. vi. pp. 50, foll.; Russell's Barbary; Barth, Wanderungen, &c. pp. 305-315.)

LEPITA.

LEONA and LEVON. Strabo (p. 183) says: "After the Stoechades are Planasia and Leron (ἡ Planasia καὶ Λέρων), which are inhabited; and in Leron there is also a Leronum of Leron, and Leron is in front of Antipolis." (Antithes.) Pllr.v. (iii. 5) has "Lero, et Lerecia adversus Antipolum." Pedeney (ii. 10. § 21) places Leron (Ἀληψιον) before the mouth of the Var. Leron once had a town named Verganum (Pllr.v.). The Maritime Itin. places "Lero et Lerecia insulae" II M. P. from Antipolis.

These two islands are the Lërina, off the coast of the French department of Var. Strabo's Planasia is supposed to be Lerina, because it is flat; Leron must then be the larger island, called Antipolida. Marquier; and D'Anville conjectures that the monastery dedicated to Sainte Marguerite took the place of the Leronum of Leron, which is mentioned by Strabo. The position of these two small islands is fixed more accurately by the Itin. than by the geographers. Lerina, from which the modern name Lerina comes, is very small; it is called St. Honorat, from a bishop of Arles in the fifth century, who was also a saint. [E. L.]

LEOMA or LERNE (Ἄλέμω, Αἰγέρην), the name of a marshy district at the south-western extremity of the Argive plain, near the sea, and celebrated as the spot where Heracles slew the many-headed Hydra, or water-snake. [See Dict. of Biogr. Vol. II. p. 394.] In this part of the plain, there is a number of copious springs, which overflow the district and turn it into a marsh; and there can be little doubt that the victory of Heracles over the Hydra, is to be understood of a successful attempt of the ancient lords of the Argive plain to bring its marshy extremity into cultivation, by draining its sources and embanking its streams. The name of Lerna is usually given to the whole district (Paus. i. 15. § 5, ii. 24. § 3, ii. 36. § 6, ii. 38. § 1; Plut. Cleom. 15), but other writers apply it more particularly to the river and the lake. (Strab. vii. p. 369.) The district was thoroughly drained in antiquity, and covered with sacred buildings, of which Pausanias has left us an account (ii. 36, 37, 40). A road led from Argos to Lerna, and the distance from the gate of the city to the sea-coast of Lerna was 40 stadia. Above Lerna is the Mountain Pontinus (Ποντινος), which according to Pausanias absorbs the rain water, and thus prevents it from running off. On its summit, on which there are now the ruins of a mediaeval castle, Pausanias saw the remains of a temple of Athena Sairis, and the foundations of the house of Hippomedon, one of the seven Argive chiefs, who marched against Thebes. (Ἀγαπατις Α' και νικαι' Πιονεσιων κατω, Eurip. Phoen. 126.)

The grove of Lerna, which consisted for the most part of plane trees, extended from Mount Pontinus to the sea, and was bounded on one side by a river called Pontinus, and on the other by a river named Amymone. The grove of Lerna contained two temples, in one of which Demeter Prosymna and Dionysus were worshipped, and in the other Dionysus Satoes. In this grove a festival, called the Lernan, was celebrated in honour of Demeter and Dionysus. Pausanias also mentions the fountain of Amphiaraios, and the Aelianian pool (ἡ Αιλιαίανα Λάεμον), through which the Argives say that Dionysus descended into Hades in order to recover Semele. The Aelianian pool was said to be unfathomable, and the emperor Nero in vain attempted to reach its bottom with a sounding line of several fathoms in length. The circumference of the pool is estimated by Pausanias as only one-third of a stadium; its margin was covered with grass and rushes. Pausanias was told that, though the lake appeared so still and quiet, yet, if any one attempted to swim over it, he was dragged down to the bottom. Here Prosymna is said to have pointed out to Dionysus the entrance in the lower world. A nocturnal ceremony was connected with this legend: a religious rites were performed by the side of the pool, and in consequence of the impurities which were then thrown into the pool, the proverb arose of a Lerna of ill. (Ἀλεμος γαλλω, see Holder, Demeter, p. 212.)

The river Pontius issues from three sources at the foot of the hill, and joins the sea north of some mills, after a course of only a few hundred yards. The Amymone is formed by seven or eight copious sources, which issue from under the rocks, and which are evidently the subterraneous outlet of one of
the katavotha of the Arcaean valley. The river soon after enters a small lake, a few hundred yards in circumference, and surrounded with a great variety of aquatic plants; and it then forms a marsh extending to the sea-shore. The lake is now walled in, and the water is diverted into a small stream which turns some mills standing close to the sea-shore. This lake is evidently the Alcemonian pool of Paussanias; for although he does not say that it is formed by the river Anymone, there can be no doubt of the fact. The lake answers exactly to the description of Paussanias, with the exception of being larger; and the name of its being unromahable is still retained by the millers in the neighbourhood. Paussanias is the only writer who calls this lake the Alcemonian pool; other writers gave it the name of Lernae; and the river Anymone, by which it is formed, is likewise named Lerna. The fountain of Amphiaraus can no longer be identified, probably in consequence of the enlargement of the lake. The station of the hydra was under a palm-tree at the source of the Anymone; and the numerous heads of the water-scarce may perhaps have been suggested by the numerous sources of this river. Anymone is frequently mentioned by the poets. It is said to have derived its name from one of the daughters of Danaus, who was beloved by Poseidon; and the river gushed forth when the nymph drew out of the rock the trident of the god. (Hygin. Fab. 163.) Hence Euripides (Phoen. 188) speaks of "Pentekei Aegae Efera." (Comp. Propert. ii. 26, 47; Od. Met. ii. 240.)

LEROS (Αέρος: Ellh. Άερος: Leros), a small island of the Aegean, and belonging to the scattered islands called Therales. It is situated opposite the Sinus Lasci, on the north of Calymnos, and on the south of Lepida, at a distance of 320 stadia from Cos and 350 from Myndus. (Stadiaim. Mar. Magn., §§ 246, 250, 252.) According to a statement of Auximeus of Langacna, Leros was, like Icarus, colonised by Milesians. (Strab. xiv. p. 635.) This was probably done in consequence of a suggestion of Heracæus; for on the breaking out of the revolt of the Ionians against Persia, he advised his countrymen to erect a fortress in the island, and make it the centre of their operations, if they should be driven from Miletus. (Herod. v. 125; comp. Thucyd. viii. 27.) Before its occupation by the Milesians, it was probably inhabited by Darians. The inhabitants of Leros were notorious in antiquity for their ill nature, whence Phoebides sang of them:—

Λέσβος κακοί, σιδηρόκερα,
Παντες πλαγιόπλοιοι καὶ προκλήτοι Λέρος.

(Strob, x. p. 487, &c.) The town of Leros was situated on the west of the modern town, on the south side of the bay, and on the slope of a hill; in this locality, at least, distinct traces of a town have been discovered by Ross. (Reisen auf d. Griech. Inseln, ii. p. 119.) The plan of Lecanates to fortify Leros does not seem to have been carried into effect. Leros never was an independent city, but was governed by Miletus, as we must infer from inscriptions, which also show that Milesians continued to inhabit the island as late as the time of the Romans. Leros contained a sanctuary of Artemis Parethinos, in which, according to mythology, the sisters of Meleager were transformed into guineafowl (μελέαγραι); and, finally, a temple of the goddess. (Athen. xiv. p. 655.)

In a valley, about ten minutes's walk from the sea, a small convent still bears the name of Parthenon; and at a little distance from it there are the ruins of an ancient Christian church, evidently built upon some ancient foundation, which seems to have been that of the temple of Artemis Parethinos. "This small island," says Ross, "though envied on account of its fertility, its smiling valleys and its excellent harbours, is nevertheless scorned by its neighbours, who charge its inhabitants with niggardliness." (L. c. p. 122; comp. Boëckh, Corp. Inscrip. n. 2265; Ross, Inscription. indi. ii. 188.)

LESBOS (Λέσβος: Ellh. Λέσβος, Λεσβιακός, Lésvos, Lesbians, Lésviakos; fem. Λέσβια, Λεσβιαία, Lesbos, Lesbians; in the middle ages it was named Mitylene, from its principal city); Geog. Rat. v. 21; Smidt. z. e.; Hieroc. p. 686; Eustath. ad ii. ix. 129, Od. iii. 170: hence it is called by the modern Greeks Μίτυλον or Μετέλιον, and by the Turks Medilib or Medellib Adami.) Like several other islands of the Aegean, Lesbos is said by Strabo, Pliny and others to have had various other names, Issa, Himerte, Lasia, Pelagia, Aegira, Athiophio, and Macaria. (Strab. i. p. 190; p. 128; Flin. v. 31 (39); Diod. iii. 55, v. 81.)

Lesbos is situated off the coast of Asia, exactly opposite the opening of the gulf of Ardatyntium. Its northern part is separated from the mainland near Assos [Assos] by a channel about 7 miles broad; and the distance between the south-eastern extremity and the islands of Arginusæ or Arginæ is about the same. Strabo reckons the breadth of the former strait at 60 stadia, and Pliny at 7 miles; for the latter strait see Strab. xiii. pp. 616, 617, and Xen. Hell. ii. 6. §§ 15—25. The island lies between the parallels of 38° 58' and 39° 24'. Pliny states the circumference as 168 miles, Strabo as 1100 stadium. According to Chosseau-Guiffier, the latter estimate is rather too great. Sylax (p. 56) assigns to Lesbos the seventh rank in size among the islands of the Mediterranean sea.

In shape Lesbos may be roughly described as a triangle of which two sides touch the NW., the NE., and the SW. The northern point is the promontory of Arzennum, the western is that of Sigurn (still called Cape Sigri); the south-eastern is that of Mela (now called Zéthium Bouroum or Cape St. Mary). But though this description of the island as triangular is generally correct, it must be noticed that it is penetrated far into the interior by two gulfs, or sea-locks as they may properly be called, on the south-western side. One of these is Port Micría or Port Olivier, "one of the best harbours of the Archipelago," opening from the sea about 4 miles to the westward of Cape Mela, and extending about 8 miles inland among the mountains. It may be reasonably conjectured that its ancient name was Portus Hieraeus; since Pliny mentions a Lesbian city called Ilera, which was extinct before his time. The other arm of the sea, to which we have just referred, is situated somewhere between the former and Cape Sigurn. It is the "beautiful and extensive basin, named Port Calités," and from this, accordingly, was called Eupirus Pyrinus. From the extreme narrowness of the entrance, it is less adapted for the
purposes of a harbour. Its ichthyology is repeatedly mentioned by Aristotle as remarkable. (Hist. Animal., v. 10, § 2, v. 13, § 10, viii. 20, § 15, ix. 25, § 8.)

The surface of the island is mountainous. The principal mountains were Ordymanus in the W., Olympus in the S., and Leptophylax in the N. Their elevations, as marked in the English Admiralty Charts, are respectively 1750, 3000, and 2750 feet. The excellent climate and fine air of Lesbos are celebrated by Diodorus Siculus (v. 82), and it is still reputed to be the most healthy island in the Archipelago. (Purdy's Sailing Directory, p. 154.) Tacitus (Ann. vi. 3) calls it "insula nobilis et amoenus." Agates were found there (Plin. xxxvii. 54), and its quarries produced variegated marble (xxxvii. 5). The whole-some Lesbian wines (“inodori Lesbici”), Hor. Carm. i. 17, 21) were famous in the ancient world; but of this a more particular account is given under METHYMA. The trade of the island was active and considerable; but here again we must refer to what is said concerning its chief city MYTILENE. At the present day the figs of Lesbos are celebrated; but its chief exports are oil and gall-nuts. The population was, estimated, in 1816, at 30,000 Greeks and 10,000 Turks.

Tradition says that the first inhabitants of Lesbos were Pelasgians; and Xanthus was their legendary leader. Next came Ionians and others, under Ma-careus, who is said by Diodorus (v. 80) to have introduced written laws two generations before the Trojan war. Last were the Aeolian settlers, under the leadership of Lesbos, who appears in Strabo under the name Graus, and who is said to have married Methymna, the daughter of Macareus. Methymna was the elder daughter. This is certain, that the early history of Lesbos is identical with that of the Aeolians. Strabo regards it as their central seat (στρωμα μητρόεις, xii. pp. 616, 622). In mercantile enterprise, in resistance to the Persians, and in intellectual eminence, the insular Aeolians seem to have been favourably contrasted with their brethren on the continent. This which Herodotus calls "Aeolicus" (Car. ii. 13, 24, iii. 30, 13) was due to the genius of Lesbos; and Niebuhr's expression regarding this island, is that it was "the pearl of the Aeolian race." (Lectures on Ancient Ethnology and Geography, vol. i. p. 218.)

Lesbos was not, like several other islands of the Archipelago, such as Cos, Chios and Samos, the territory of one city. We may call six Aeol. Lesb. in Lesbos, each of which had originally separate possessions and an independent government, and which were situated in the following geographical order. METHYMA (now Molivos) was on the north, almost immediately opposite Assos, from which it was separated by one of the previously mentioned straits. Somewhere in its neighbourhood was LESBO, which, however, was incorporated in the Methymnian territory before the time of Herodotus (i. 131). Near the western extremity of the island were ANTISSA and ERESIUS. The former was a little to the north of Cape Sigurn, and was situated on a small island, which in Pliny's time (ii. 91) was connected with Lesbos itself. The latter was on the south of the promontory, and is still known under the name of Erisia, a modern village, near which ruins have been found. At the head of Port Colon was PYRHUS, which at Pliny's time had been swallowed up by the sea, with the exception of a suburb, (Strab. xiii. p. 618; see Plin. v. 31.) The name of PERA is still attached to this district according to Pococke. On the eastern shore, facing the mainland, was MYTILENE. Besides these places, we must mention the following:—Hiera, doubtless at the head of Port Olivier, said by Pliny to have been destroyed before his day; AGAMEDE, a village in the neighbourhood of Pyrrha; NAFE, in the plain of Methymna; AMIRUS, between Methymna and Mytilene; and Polimm, a site mentioned by Stephana B. Most of these places are noticed more particularly under their respective names. All of them decayed, and became unimportant, in comparison with Methymna and Mytilene, which were situated on good harbours opposite the mainland, and convenient for the coasting-trade. The annals of Lesbos are a series of events affecting those two cities, especially the latter, that we must refer to them for what does not bear upon the general history of the island.

From the manner in which Lesbos is mentioned both in the Iliad and Odyssey (II. xxiv. 544. Od. iv. 342), it is evident that its cities were populous and flourishing at a very early period. They had also very large possessions on the opposite coast. Lesbos and not included in the conquests of Croesus (Herod. i. 27.) The severe defeat of the Lesbians by the Samians under Polyeades (iii. 39) seems only to have been a temporary disaster. It is said by Herodotus (i. 131) that at first they had nothing to fear, when Cyrus conquered the territories of Croesus on the mainland; but afterwards, with other islanders, they seem to have submitted voluntarily to Harpagus (i. 169). The situation of this island on the very confines of the great strangle between the Persians and the Greeks was so critical, that its fortunes were seriously affected in every phase of the long conflict, from this period down to the peace of Anteilidas and the campaigns of Alexander.

The Lesbians joined the revolt of Aristogoras (Herod. vi. 5, 8), and one of the most memorable incidents in this part of its history is the consequent hunting down of its inhabitants, as well as those of Chios and Tralleis, by the Persians and the Macedonians (Herod. v. 31, iii. 102; Asch. Pers. 881). After the battles of Salamis and Mycale they boldly identified themselves with the Greek cause. At first they attached themselves to the Lacedaemonian interest; but before long they came under the overpowering influence of the naval supremacy of Athens. In the early part of the Peloponnesian War, the position of Lesbos was more favourable than that of the other islands; for, like Ceryne and Chios, it was not required to furnish a money-tribute, but only a naval contingent (Thuc. ii. 9). In the course of the war, Mytilene was induced to intrigue with the Lacedaemonians, and to take the lead in a great revolt from Athens. The events which fill so large a portion of the third book of Thucydides—the speech of Cleon, the change of mind on the part of the Athenians, and the narrow escape of the Lesbians from entire devastation by the sending of a second ship to overtake the first—are perhaps the most memorable circumstances connected with the history of this island. The lands of Lesbos were divided among Athenian citizens (ἐλευθερισμός), many of whom, however, according to Boeckh, returned to Athens, the rest remaining as a garrison. Methymna had taken no part in the revolt, and was exempted from the punishment. After the Sicilian expedition, the Lesbians again rebelled in their allegiance to Athens; but the result was anim-
IMPORTANT (Tnneyd. viii. 5, 22, 23, 32, 100). It was near the east of this island that the last great naval victory of the Athenians during the war was won, the battle fought over Callipolis, the town of Lesbos. On the destruction of the Athenian force by Lysander at Aegospotami, it fell under the power of Sparta; but it was recovered for a time by Thynymbus (X-n. Hell. iv. 8, §§ 28—30). At the peace of Antekidas it was declared independent. From this time to the establishment of the Macedonian empire it is extremely difficult to fix the fluctuations of the history of Lesbos in the midst of the varying influences of Athens, Sparta, and Persia.

After the battle of the Granicus, Alexander made a treaty with the Lesbians. Menon the Rhodian took Mytilene and fortified it, and died there. Afterwards Hezelechos reduced the various cities of the island under the Macedonian power. (For the history of these transactions see Arrian, Expd. Alex. iii. 2; Curt. Hist. Alex. iv. 5.) In the war of the Romans with Perseus, Labeo restored Actissa for the Macedonians, and incorporated its inhabitants with those of Methymna (Liv. xvi. 31. Hence perhaps the true explanation of Phily's remark, b. c.). In the course of the Mithridatic War, Mytilene incurred the displeasure of the Romans by delivering up M. Aquillius (Vell. Pat. ii 18; Appian, Mithr. 21). It was also the last city which held out after the close of the war, and was reduced by M. Minucius Thermus,—an occasion on which Julius Caesar distinguished himself, and earned a civic crown by saving the life of a soldier (Liv. Epit. 89; Suet. Aug. 2; see Cic. cont. Rull. ii. 16). Pompey, however, was induced by Theopanes to make Mytilene a free city (Vell. Pat. i. 12; Strab. xiii. p. 617), and he left there his wife and son during the campaign which ended at Pharnassus. (Appian, B. C. ii. 53; Plut. Pomp. 74. 75.) From this time we are to regard Lesbos as a part of the Roman province of Asia, with Mytilene distinguished as its chief city, and in the enjoyment of privileges more particularly described elsewhere. We may mention here that a few imperial coins of Lesbos, as distinguished from those of the cities, are extant, of the reigns of M. Aurelius and Commodus, and with the legend KONIN pars AEguz. (Rheod. p. 668. ed. Wesseling). A few detached notices of its fortunes during the middle ages are all that can be given here. On the 13th of August, A.D. 802, the empress Irene ended her extraordinary life here in exile. (See Le Brun, Hist. du Bas Empire, vol. xiii. p. 100.) In the thirteenth century, contemporaneously with the first crusade, Lesbos became to be affected by the Turks; from 1165 to 1489, or in 1945, the Emir of Smyrna, succeeded in taking Mytilene, but failed in his attempt on Methymna. (Anna Comm. Alex. ii. vii. p. 362, ed. Baum.) Alexis, however, sent an expedition to retake Mytilene, and was successful (ib. ix. 1. 425). In the thirteenth century Lesbos was in the power of the Latin emperors of Constantinople, but it was recovered to the Greeks by Janissary Ducas Vatatzes, emperor of Nicaea (see his life in the Dict. of Biography). In the fourteenth century, consecrated by Palaeologus, it continued to be possessed by this family till its final absorption in the Turkish empire (Ducas, Hist. Byzant. p. 46, ed. Baum). It appears, however, that these princes were tributary to the Turks (ib. p. 328). In 1457, Mahomet II, made an unsuccessful assault on Methymna, in consequence of a suspicion that the Lesbians had aided the Catalani buccaneers (ib. p. 338; see also Vertot, Hist. de l'Ordre de Malte, ii. 258). He did not actually take the island till 1462. The history of the amanuensis Ducas himself is closely connected with Lesbos: he resided there after the fall of Constantinople; he conveyed the tribute from the reigning Gaiusius to the sultan at Adrianople; and the last paragraph of his history is an unfinished account of the final conquest of the island.

This notice of Lesbos would be very incomplete, unless something were said of its intellectual eminence. In reference to poetry, and especially poetry in connection with music, no island of the Greeks is so celebrated as Lesbos. Whatever other explanation we may give of the legend concerning the head and lyre of Orpheus being carried by the waves to its shores, we may take it as an expression of the fact that here was the primitive seat of the music of the lyre. Lesbos, the cyclic ministrel, a native of Pyrrha, was the first of its series of poets. Terpander, though his later life was closely connected with the Peloponnese, was almost certainly a native of Lesbos, and probably of Antissa: Arion, of Methymna, appears to have belonged to his school; and no two men were so closely connected with the early history of Greek music. The names of Alcseus and Sappho are the most imperishable elements in the renown of Mytilene. The latter was sometimes called the tenth Muse (as in Plato's epigrarn, AepvAovx Aroji.6eiv & kexa-v), and a school of poets (Lesbians turca, Ovid, Her. xv.) seems to have been formed by her. Here, without entering into the discussions, by Welcker and others, concerning the character of Sappho herself, we must state that the women of Lesbos were as famous for their prophecies as their beauty. Their beauty is celebrated by Homer (Il. ix. 129, 251), and, as regards their prophecies, the proverbial expression Aga6aixi6i afores a weak stain to their island than KpT1ei6eiv does to Crete.

Lesbos seems never to have produced any distinguished painter or sculptor, but Helianus and Theopanes the friend of Pompey are worthy of being mentioned among historians" and Pictacus, and the Chiese poetesses, are known in the annals of philosophy and science. Pittacus was famous also as a legislator. These eminent men were all natives of Mytilene, with the exception of Theophrastus, who was born at Ereesus.

The fullest account of Lesbos is the treatise of S. L. Pichon, Libiacorum liber, Berlin, 1826. In this work is a map of the island; but the English Admiralty charts should be consulted, especially Nos. 1632 and 1665. This treatise refers to reviews of Pichon's work by Meyer in the Holl. Allg. Lit. Zeit. for 1827, and by O. Müller in the Goett. Geb. Anth. for 1828; also to Landor's Beiträge zur Kunde der Insel Lesbos, Hamburg, 1827. Information regarding the modern condition of the island will be obtained from Pooceke, Tourretort, Richter, and Prokesch.

[J. S. H.]

LESORA MONS (Most Lesbii'), a summit of the Crete, about 4800 feet high, is known in the Sardinian Apollinaris (Cumae Curn, 44) as containing the source of the Tarus (Tarn):—

"Hinc tes Lesora Caesus Scytharum Vincens aspicet citsique Tarinis."
LESAA. [Anfia], a village of Epidaurus, upon the confines of the territory of Argos, and at the foot of Mount Achaeaum. Pausanias saw there a temple of Athena. The ruins of Lesaa are situated upon a hill, at the foot of which is the village of Lykourio. On the outside of the walls, near the foot of the mountain, are the remains of an ancient pyramid, near a church, which contains some Ionic columns. (Paus. ii. 25. § 10; Leake, Morea, vol. ii. p. 419; Boeckh, Recherches, &c. p. 53; Curtius, Peloponnesus, vol. i. p. 418.)

LESTADAE. [Naxos].

LESCRA, a branch of the Mosel (Mosella), mentioned by Ausonius (Mosella, v. 365). He calls it "exils," a poor, ill-fed stream. The resemblance of name leads us to conclude that it is the Leer or Lisse, which flows past Wittlich, and joins the Mosel on the left bank.

LETANIDUS, a small island in the Aegean sea, near Amorgos, mentioned only by Pliny (iv. 12. s. 23.).

LETE (Altyn; Elh. Astaflis), a town of Macedonia, which Stephanus B. asserts to have been the native city of Nearchus, the admiral of Alexander the Great; but in this he is certainly mistaken, as Nearchus was a Cretan. (Comp. Arrian, Ind. i. 18; Diod. xix. 19.)

[ E. B. J.]

COIN OF LETE.

LETHAEUS (Apliaios, Strab. x. p. 478; Ptol. iii. 17. § 4; Eustath. ad Hom. II. ii. 646; Solin. 17; Vit. Seq. 13), the large and important river which watered the plain of Gortyn in Crete, now the Malopoditi.

[ E. B. J.]

LETHAEUS (Apliaios), a small river of Caria, which has its sources in the Mount Pactyes, and after a short course from north to south discharges itself into the Maeander, a little to the south-east of Magnesia. (Strab. xii. p. 554. xiv. p. 647; Athen. xiv. p. 683.) Arundell (Seven Churches, p. 57) describes the river which he identifies with the ancient Lethaeus, as a torrent rushing along over rocky ground, and forming many waterfalls.

[ L. S.]

LETHES FL. [GALLACIJA].

LETOPOLIS (Apterae oras), Ptol. iv. 5. § 46; Aepnios, Steph. B. s. n.; Leus, Ibm. Anton. p. 156; Eth. Aepnios/Aerenis, a town in Lower Egypt, near the apex of the Delta, the chief of the nome Letopolis, but with it belonging to the nomoi or provinces of Memphis. (Strab. xxvii. p. 807.) It was probably situated on the banks of the canal of Memphis, a few miles SW. of Cercosorum. Leoto, from whom the town and the nome derived their name, was an apellation of the deity Aether, one of the eight Dii Maiores of Aegypt. Lat. 30° N. [W. B. D.]

LETRENI (Aepnous, Paus.; Aepnous, Xen.), a town of Pisatis in Elis, situated near the sea, upon the Sacred Way leading from Elis to Olympia, at the distance of 180 stadia from Elis, and 120 from Olympia. It was said to have been founded by Leteacus, a son of Pelops. (Paus. vi. 22. § 8.) Together with several of the other dependent townships of Elis, it joined Agis, when he invaded the territories of Elis, and the Elisians were obliged to surrender their supremacy over Letreini by the peace which they concluded with the Spartans in b. c. 400. (Xen. Hell. iii. 2. §§ 25, 30.) Xenophon (I. c.) speaks of Letreini, Amphistoli, and Marganeis as Triphylia places, although they were on the right bank of the Alpheus; and if there is no corruption in the text, which Mr. Grote thinks there is (Hist. of Greece, vol. i. p. 415), the word Triphylia must be used in a looser sense to signify the dependent townships of Elis. The Aetraumai yays are mentioned by Lycephon (158). In the time of Pausanias nothing remained of Letreini except a few houses and a temple of Artemis Alphaea. (Paus. I. c.) Letreini may be placed at the village and monastery of St. John, between Pyrgo and the port of Katikolo, where, according to Leake, among many fragments of antiquity, a part of a large statue was found some years ago. (Leake, Morea, vol. ii. p. 188; Babelaye, p. 130; &c.; Curtius, Peloponnesus, vol. i. p. 72.)

LEVACI, a people in Caesar's division of Gallia, which was inhabited by the Belgae. The Levaci, with some other small tribes, were dependent on the Nervii. (B. G. v. 39.) The position of the Levaci is unknown.

LEVAEAN FANUM, in Gallia Belgica is placed by the Table on the road from Lugudunum Batavorum (Lesben) to Noviomagus (Nymphes). Levae Fanum is between Flatio (Vieuxen) and Carvo; 25 M. P. from Flatio and 12 from Carvo. (Carvo.) D'Aunville, assuming that he has fixed Carvo right, supposes that there is some emission of places in the Table between Flatio and Carvo, and that we cannot rely upon it. He conjectures that Levae Fanum may be a little beyond Duratec, on the bank opposite to that of the Batavi, at a place which he calls Livien-ded (pullis Leva), this Leva being some local deity. Wakeman fixes Leve Fanum at Levensum.

[ G. L.]

LEUCA (rä Lavecô, Strab.; Leuco), a small town of Calabria, situated close to the Iapygian promontory, on a small bay immediately to the W. of that celebrated headland. Its site is clearly marked by an ancient church still called Sta. Maria di Leuca, but known also as the Madonna di Finis terra, from its situation at the extreme point of Italy in this direction. The Iapygian promontory itself is now known as the Capo di Leuca. Strabo is the only author who mentions a town of this name (vi. p. 281), but Lucan also notices the "secreta littora Leucas" (v. 575) as a port frequented by shipping; and its advantageous position, at a point where so many ships must necessarily touch, would soon create a town upon the spot. It was probably never a municipal town, but a large village or borgo, such as now exists upon the spot in consequence of the double attraction of the port and sanctuary. (Rampoll, Conogr. dell'Italia, vol. ii. p. 412.)

Strabo tells us (I. c.) that the inhabitants of Leuca showed there a liking for salt water, which they pretended to have arisen from the wounds of some of the giants which had been expelled by Hercules from the Phleegrian plains, and who had taken refuge here. These giants they called Leuternii,
and hence gave the name of LEUTHINA to all the surrounding district. The same story is told, with some variations, by the pseudo-Aristotle (de Mirab. 97); and the name of Leutania is found also in Lycephon (Alex. 975), whose expressions, however, would have led us to suppose that it was in the neighbourhood of Sira rather than of the Iapygian promontory. Tzetzes (ad loc.) calls it a city of Italy, which is evidently an erroneous inference from the words of his author. The Laterini of Sicyon, whom he mentions as one of the tribes that inhabited Iapygia, may probably be only another form of the same name, though we meet in no other writer with any allusion to their existence as a real people. [E. H. B.]

LEUCA, the name given by Pompomus Mela (i. 16), to a district on the west of Halicarnassus, between that city and Myndus. Pliny (H. N. v. 29) mentions a town, Leucipolis, in the same neighbourhood, of which, however, nothing else is known to us. [L. S.]

LEUCADIA. [Leucas.]

LEUCAE or LEUCE (Λευκαί, Λεύκες), a small town of Ionia, in the neighbourhood of Phocaea, was situated, according to Pliny (v. 31), "in promontorio quo insula fuit." From Sicyon (p. 37) we learn that it was a place with harbours. According to Diodorus (xx. 18) the Persian admiral Taches founded this town on an eminence on the sea coast, in n. c. 352; but shortly after, when Taches had died, the Clazomenians and Cymaeans quarrelled about its possession, and the former succeeded by a stratagem in making themselves masters of it. At a later time Leucæ became remarkable for the battle fought in its neighbourhood between the consul Licinius Crassus and Aristonicus, B. C. 131. (Strab. xiv. p. 646; Justin, xxxvi. 4.) Some have supposed this place to be identical with the Leucanum mentioned by Thucydides (viii. 24); but this is impossible, as this latter place must be looked for in Chios. The site of the ancient Leucæ cannot be a matter of doubt, as a village of the name of Lecon, close upon the sea, at the foot of a hill, is evidently the modern representative of its ancient namesake. (Arundell, Seven Churches, p. 295.) [L. S.]

LEUCAE (Λευκαί), a town of Laconia situated at the northern extremity of the plain Leucis, now called Leucade, which extended between Cape Eleusis and Aegina on the eastern side of the Laconian gulf. (Polyb. v. 19; Livy, xxxvii. 27; Strab. viii. p. 363; Leake, Morea, vol. i. p. 226, seq.; Robbiate, Richerches, &c., p. 95; Curtius, Peloponnesus, vol. ii. p. 290.)

LEUCARIUM, a town in Britain, mentioned in the Itinerary as being 13 miles from Ica Dunavum, and 13 from Nemea. The difficulties involved in this list (viz. that of the 12th Itinerary) are noticed under Mykenum. The Monumenta Britannica suggests both Glastonbury in Somersetshire, and Layafer in Glamorganshire. [R. G. L.]

LEUCAS (Λευκάς), a place in Bitinia, on the river Galles, in the south of Nicaea, is mentioned only by Anna Comnena (p. 470), but can be easily identified, as its name €uro is still borne by a near little town in the middle of the beautiful valley of the river. [Aesop, Aesop, pp. 12, 13]. [L. Sc. L. E.]

LEUCAS, LEUCADIA (Λευκάς, Λεύκαδα), Two. Liv. 11. Euth. Aescom.], an island in the Ionian sea, separated by a narrow channel from the coast of Arcadia. It was originally part of the mainland, and as such is described by Homer, who calls it the Aece or peninsula of the mainland. (Aesch. Iphig., Od. xxiv. 377; comp. Strab. x. pp. 451, 452.) Homer also speaks of it as a well-fortified town Nereides (Νερείδων, Λ. c.). Its earliest inhabitants were Leleges and Teleboans (Strab. vii. p. 322), but it was afterwards peopled by Arcadians, who retained possession of it till the middle of the seventh century B.C., when the Corinthians, under Cypselus, founded a new town near the isthmus, which they called Leucis, where they settled 1000 of their citizens, and to which they removed the inhabitants of the old town of Leucis. (Strab. l. c.; Sicyon, p. 13; Thuc. i. 50; Plut. Theon. 24; Symm. Chius, 464.) Sicyon says that the town was first called Epileucisii. The Corinthian colonists dug a canal through this isthmus, and thus converted the peninsula into an island. (Strab. l. c.) This canal, which was called Dorycus, and was, according to Pliny, 3 stadia in length (Πολύβωρος, Polyb. v. 5; Plin. i. 1. s. 2.), was after filled up by deposits of sand; and in the Peloponnesian War, it was no longer available for ships, which during that period were conveyed across the isthmus on more than one occasion. (Thuc. iii. 81, iv. 8.) It was in the same state in B.C. 218; for Polybius relates (v. 5) that Philip, the son of Demetrius, had his galleys drawn across this isthmus in that year; and Livy, in relating the siege of Leucisa by the Romans in B.C. 137, says, "Leucasia, name insula, et vados fecit quod perennis est, ac Arcadia divisu" (xxviii. 17). The subsequent restoration of the canal, and the construction of a stone bridge, both of which were in existence in the time of Strabo, were doubtless the work of the Romans; the canal was probably restored soon after the Roman conquest, when the Romans separated Leucias from the Arcadian confederacy, and the bridge was perhaps constructed by order of Augustus, whose policy it was to facilitate communications throughout his dominions.

Leucasia is about 20 miles in length, and from 5 to 8 miles in breadth. It resembles the Isle of Man in shape and size. It consists of a range of limestone mountains, terminating at its north-eastern extremity in a bold and rugged headland, whence the coast runs in a south-west direction to the promontory, anciently called Leucates, which has been overthrown and now extends between Cape Acrokeros and the head of the sea. The name of the cape, as well as of the island, is of course derived from its white cliffs. The southern shore is more soft in aspect, and more sloping and cultivated than the rugged rocks of the northern coast; but the most populous and wooded district is that opposite Arcadia. The interior of the island wears everywhere a rugged aspect. There is but little cultivation, except where terraces have been planted on the mountain sides, and covered with vineyards. The highest ridge of the mountains rises about 3000 feet above the sea.

Between the northern coast of Leucasia and that of Arcadia there is at present a lagoon about 3 miles in length, while its breadth varies from 100 yards to a mile and a half. The lagoon is in most parts only about 2 feet deep. This part of the coast requires a more particular description, as it is a subject which is of some importance in present plan. At the north-eastern extremity of Leucasia a lido, or spit, of sand, 4 miles in length, sweeps out towards Arcadia. (See Plan, A.) On an isolated point opposite the extremity of this sandbank, is the fort of Santa Maria, erected in the middle ages by one of the Latin princes, but repaired.
LEUCAS.

and modelled both by the Turks and Venetians. (Plan, B.) The fort was connected with the island by an aqueduct, serving also as a causeway, 1300 yards long, which now remains (Plan, 5.) It was originally built by the Turks, but was ruined by an earthquake in 1825, and has not since been repaired. It was formerly the residence of the Venetian governor and the chief men of the island, who kept here their magazines and the cars (Ašaqaz) on which they carried down their oil and wine from the inland districts, at the nearest point of the island. The congregation of buildings thus formed, and to which the inhabitants of the fortress gradually retired as the seas became more free from corsairs, arose by degrees to be the capital and seat of government, and is called, in memory of its origin, Amaxichi (Ašaqaz). (Plan, C.) Hence the fort alone is properly called Santa Maura, and the capital Amaxichi; while the island at large retains its ancient name of Lecanidia. The ruins of the ancient town of Lecanidia are situated a mile and a half to the SE. of Amaxichi. The site is called Kalkidion, and consists of irregular heights forming the last falls of the central ridge of the island, at the foot of which is a narrow plain between the heights and the lagoon. (Plan, D.) The ancient inclosure is almost entirely traceable, as well round the brow of the height on the northern, western, and southern sides, as from either end of the height across the plain to the lagoon, and along its shore. This, as Leake observes, illustrates Livy, who remarks (xxiii. 17) that the lower parts of Lecanidia were on a level close to the shore. The remains on the lower ground are of a more regular, and, therefore, more modern masonry than on the heights above. The latter are probably the remains of Necropolis, which continued to be the ancient acropolis, while the Corinthians gave the name of Lecanidia to the town which they erected on the shore below. This is, indeed, in opposition to Strabo, who not only asserts that the name was changed by the Corinthian colonists, but also that Lecanidia was built on a different site from that of Necropolis. (x. p. 452.) But, on the other hand, the town continued to be called Necropolis even as late as the Peloponnesian War (Thuc. iii. 7); and numerous instances occur in history of different quarters of the same city being known by distinct names. Opposite to the middle of the ancient city are the remains of the bridge and causeway which here crossed the lagoon. (Plan, L.) The bridge was rendered necessary by a channel, which pervades the whole length of the lagoon, and admits a passage to boats drawing 5 or 6 feet of water, while the other parts of the lagoon are not more than 2 feet in depth. The great squared blocks which formed the ancient causeway are still seen above the shallow water in several places on either side of the deep channel, but particularly towards the Acarnanian shore. The bridge seems to have been kept in repair at a late period of time, there being a solid cubical fabric of masonry of more modern workmanship erected on the causeway on the western bank of the channel. Leake, from whom this description is taken, argues that Strabo could never have visited Lecanidia, because he states that this isthmus, the ancient canal, the Roman bridge, and the city of the same name; whereas the isthmus and the canal, according to Leake, were near the modern fort Santa Maura, at the distance of 3 miles north of the city of Lecanidia. But K. O. Müller, who is followed by Bowen and others, believe

that the isthmus and canal were a little south of the city of Lecanidia, that is, between Fort Alexander (Plan, 2) on the island, and Paleovaghi on the mainland (Plan, 3). The channel is narrow at this point, not being more than 100 yards across; and it is probable that the old capital would have been built close to the isthmus connecting the peninsula with the mainland. It has been conjectured that the long spit of sand, on which the fort Santa Maura has been built, probably did not exist in antiquity, and may have been thrown up at first by an earthque.

Between the fort Santa Maura and the modern town Amaxichi, the Anglo-Ionian government have constructed a canal, with a towing-path, for boats drawing not more than 4 or 5 feet of water. (Plan, 4.) A ship-canal, 16 feet deep, has also been commenced across the whole length of the lagoon from Fort Santa Maura to Fort Alexander. This work, if it is ever brought to a conclusion, will open a sheltered passage for large vessels along the Acarnanian coast, and will increase and facilitate the commerce of the island. (Bowen, p. 78.)

---

PLAN.

A. Spit of sand, which Leake supposes to be the isthmus.
B. Fort Santa Maura.
C. Amaxichi.
D. City of Lecanidia.
E. Site of isthmus, according to K. O. Müller.
F. Remains of Roman bridge.
G. Fort Alexander.
H. Paleovaghi.
I. New canal.
J. Turkish aqueduct and bridge.

Of the history of the city of Lecanidia we have a few details. It sent three ships to the battle of Salamis (Herod. viii. 45); and as a colony of Corinth, it sided with the Lacedaemonsians in the Peloponnesian War, and was hence exposed to the hostility of Athens. (Thuc. iii. 7.) In the Macedonian period Lecanidia was the chief town of Acarnania, and the place in which the meetings of the Acarnanian confederacy were held. In the war between Philip and the Romans, it sided with the Macedonian monarch, and was taken by the Romans after a gallant defence, B.c. 197. (Livy, xxxiiii. 17.) After the conquest of Perseus, Lecanidia was separated by the Romans from the Acarnanian confederacy.

It is general to be a place of importance down to a later period, as appears from the fact that the bishop of Leucas was one of the Fathers of the Council of Nices in A.D. 325. The convent of Leucates, like that of other Dorian towns, was originally aristocratic. The large estates were in the possession of the nobles, who were not allowed to alienate them; and thus, when this law was abolished, a certain amount of property was no longer required for the housing of petty officers, by which the government became democratic. (Ariste. \textit{Pv. i. 4. § 4}.)

Besides Leucas we have mention of two other places in the island, Phara (Sylv. \textit{Ph.). p. 13.) and Hellomeneum (Evariste, Thuc. \textit{ii. 94}.) The latter name is reserved for that of a harbor in the southern part of the island. Phara was also in the same direction, as it is described by Sylv. as opposite to Ithaca. It is perhaps represented by the Hellennes remains, which stand at the head of the bay called Koroni.

The celebrated promontory Leucatia (Arendras, \textit{Sylv. x. 13. Strabo x. pp. 452, 456, 461}, also \textit{Leucatas} and \textit{Leucate} (Pb. \textit{iv. i. s. 7274} with 675; Cl. \textit{Bibl. Geogr.} x. 153; Liv. xxxvi. 29, forming the most western extremity of the island, is a broken white cliff, rising on the western side perpendicularly from the sea to a height of at least 2000 feet, and sloping gently into it on the other. On its summit is the temple of Apollo, hence named Leucate (Sylv. \textit{x. p. 452}, and Leucatia (Or. \textit{Tract. i. 42; v. 2. 76; Propert. iii. 11. 69}). This temple was dedicated by mariners, hence the words of Virg. \textit{Aen.} ii. 274:—

''Max et Leucatiae nimbusa carumina montis
Et Leucatia spectaculum Apollo.''

It still retains among the Greek mariners of the present day the name with that of a god of the inspiration of the dark water, the strong currents, and the fierce waves, with which they are tossed. On the temple of Apollo nothing but the substructures now exist. At the annual festival of the god it celebrated the custom to throw a crain or cape in the sea to break his fall, and the kids were attached to him, and if he reached the shore unharmed were ready to jump down and tell their story. (Sylv. \textit{x. p. 452; Or. \textit{Hyp.} x. 16, 17; \textit{Tract.} v. 2. 276; \textit{Cic. Tusc. iv. 18}.)

The temple of the god was an expiatory rite, and is supported by no ancient law to have given rise to the modern story of Sisyphus's being cast into the Elbe realm, which was a form of legend that tells a story of the cruel, who was condemned to an eternal toil, and the story of the god was known to be, among ancient observers, a tale of the same sort. It is a tale of Leucades, the ally of Naxos in his invasion of Greece. (Plut. \textit{Hopl. op. \textit{Philot.} Co. 190. p. 153, a. et b. :—

\textit{Leuke}. \textit{North Greece.} vol. \textit{iv. p. 10, seq. ; Bwenn. \textit{Handbok fur Travelers in Greece.} p. 73, seq.})

\textbf{LEUCASA.} \textit{Messenia.}

\textbf{LEUCAS.} \textbf{AM}. \textit{Arcadia.} p. 193, No. 15.

Leucas was part of the coast of Galicia Narbonensis; \textit{altae} (L. \textit{Regiomontanum} sect. Leucata, littoris nomen, et Sulbacum nona} (Mel. ii. 5). Mel. seems to mean that there is a place Leucata, and that part of the coast is also called Leucata. This coast, according to D'Anville, is that part south of Narbonne, which lies between the \textit{Etang de Sigejan} and Solises. He conjectures, as De Vailos had done, that the name may be Greek. He quotes Roger de Hoveden, who speaks of this coast under the name Leucate: "\textit{quanta summam presumunt in manu, quae dicitur caput Leucate.}" The common name of this head is now \textit{Cap de la Franqui}, which is the name of a small flat island, situated in the recess of the coast to the north of the cape. (\textit{D'Anville. Notitie.} \textit{Leucata.})

\textbf{LEUCATAS PROM.} \textbf{LEUCAS.}

\textbf{LEUCE.} 1. An island lying off Cypriae. in Cyme (P. \textit{iv. i. 12, which in \textit{Mar. Guyr.} vol. \textit{i. p. 51}}) takes for the rock on which the fortress of Sounium is built. (Comp. \textit{Huck, Kreta.} vol. \textit{i. pp. 384, 438). 2. An island which Pericles (\textit{iv. 12}) couples with Oinias, as lying off the promontory of Ithara. These small islands are now represented by the rocks of the \textit{Grande}. \textit{E. B. J.}

\textbf{LEUCE ACTE (Arvsh acuti),} a part on the coast of Thrace, between Pantic and Teiristisa, which is mentioned only by Sylv. of Canyanda (\textit{x. 26}.)

\textbf{LEUCE PR. (Arvsh acuti),} a promontory of Marmarica, in \textit{N. Africa}. W. of the promontory Haramum. On the white cliff from which its name is obtained there stood a temple of Apollo, with an oracle. Its position is uncertain; but most probably it is the long wedge-shaped headland, which terminates the range of hills (\textit{Aepe}) forming the Catalbathos Minor, which is now called \textit{Roas-al-Kenaze} (\textit{Sylv. x. p. 799; Sylv. xii. 44; \textit{Hypol.} iv. 3. § 8; \textit{Sidonius, Mar. Magn.} p. 437).

\textbf{LULCI.} (\textit{Arvshi}), a Greek people (Strab. \textit{p. 193; Ptol. \textit{ii. 9. § 131; Croz. B. G. i. 40}), between the \textit{Mesochon} in the north and the \textit{Ligurian} on the south. They occupied the valley of the \textit{Upper Mount}. One of their chief towns was Teulon (\textit{Ptol.}) Their territory corresponded with the \textit{Laon}. (\textit{L. S.}) which were composed of the dioceses of Nancy and \textit{Saint-Die} until 1977, when these two dioceses were united from that of Touly (\textit{Wal Keiser, Geogr. gec. vol. i. p. 531.). The Leuci are only mentioned once in Caesar, and with the Sequani and Lusignes; they were to supply Caesar with corn. \textit{Ptol.} (iv. 17) gives the Leuci the title of Lifer. Lucean celebrates them in his poem (i. 242) as slaves in turning the year;—

"\textit{Optoem ex Leucos Rhospel lacerto.}" (\textit{Hest. i. 64}) mentions "\textit{Leucorum civitas.}" which is Touly. \textit{[G. L.]}

\textbf{LEUCIÀNA.} \textbf{Lustania.}

\textbf{LEUCI MONTES or \textit{ALLI MONTES}} (\textit{\ae} \textit{Arvsh} \textit{symp.} Strab. \textit{x. p. 479; Ptol. \textit{iv. 17. § 9}), the mountainous country which forms from the W. part of the mountain range of Crete. (\textit{Stud. L.}) asserts that the highest peaks are not snow-covered in elevation to
LEUCINA.

Targetus, and that the extent of the range is 300 stadia. (Comp. Theophrast. H. P. iii. 11, iv. 1; Plinius minor, ii. 190; Hick. Kreutz, vol. i. p. 13.)

LEUCINA. [Coroplast, pp. 669, 670.]

LEUCOLLA (Λευκόλλα), a promontory on the south-east coast of Pamphylia, near the Cilician Sibillia. (Pausan. Trav. vol. i. p. 51; vol. ii. p. 190; Hick. Kreutz, vol. i. p. 13.)

LEUCOLLA (Λευκόλλα, Strab. xiv. p. 682), a harbour of Cyprus, N. of Cape Pedelium. It is referred to in Athenaeus (v. 209, where instead of Κασσός, Κάρπος should be read), and is identified with Porta Armaelio e Leucola, S. of Pumagnota. (Engel, Kypros, vol. p. 97.)

LEUCOUMOS (Λευκούμος), 1. A place mentioned in the Antonine Itinerary (p. 260) in the south of Pumonia, on the road from Aesopus to Sinium, 82 Roman miles to the north-west of the latter town. Its site is pointed out in the neighbourhood of the village of Rashidajfe.

2. A town of Ionia, of uncertain site, where a battle was fought by the Athenians in n. c. 413. (Thucyd. viii. 24.) From this passage it seems clear that the place cannot be looked for on the mainland of Asia Minor, but that it must have been situated near Phanee, in the island of Chios, where a place of the name of Leucosia is said to exist to this day. Polyenius (vii. 66) mentions a place, Leucosia, about the possession of which the Chians were involved in a war with Erythrae; and this Leucosia, which, according to Plutarch (De Pir. Med. vii. p. 7, ed. Reiske), was a colony of Caria, was situated on the mainland of Asia Minor, and may possibly be identical with Leucusa on the Hersonese gulf. (Comp. Leuciae.) [L. S.]

LEUCOPETRA (Λευκόπετρα), a promontory of Bruttium, remarkable as the extreme SW. point of Italy, looking towards the Sicilian sea and the E. coast of Sicily. It was in consequence generally regarded as the termination of the chain of the Apennines. Pliny tells us it was 12 miles from Rhegium, and this circumstance clearly identifies it with the modern Cape dell' Armi, where the mountain mass of the southern Apennines in fact descends to the sea. The whiteness of the rocks composing this headland, which gave origin to the ancient name, is noticed also by modern travellers. (Strab. vi. p. 259; Plinius. iii. 5. s. 10; Pol. iii. 1. § 9; Swinburne, Travels, vol. i. p. 335.) It is evidently the same promontory which is called by Thurydilodas Πεντα-της Πυριπα, and was the last point in Italy where Athenodorus and Eurymedon before they crossed over to Sicily. (Thuc. vii. 35.) It was here also that Cicero touched on his voyage from Sicily, when, after the death of Caesar, 1. c. 44, he was preparing to re-pair into Greece, and where he was visited by some friends from Rhegium, who brought news from Rome that D. D. had held his plans. (Cic. Phil. iii. 3, ad Att. xvi. 7.) In the former name he terms it "promontorium agri Rhegiae;" the "Leucopetra Tarentinorum" mentioned by him (ad Att. xvi. 6), if it be not a false reading, must refer to quite a different place, probably the headland of Leuca, more commonly called the Iapygian promontory. [Leucus.] [E. H. B.]

LEUCOPHYS (Λευκόφυς), a town in Caria, apparently in the plain of the Mournander, on the borders of a lake, whose water was hot and in constant conmition. (Xenoph. Hell. iv. 8. § 17, iii. 2. § 19.) From the latter of the passages here referred to, we learn that the town possessed a very revered sanctuary of Artemis; hence surnamed Artemis Leucophyræ or Leucophyrae. (Paus. i. 26. § 4; Strab. xiv. p. 647; Tac. Ann. iii. 62.) The poet Nicander spoke of Leucophyrs as a place distinguished for its fine roses. (Athen. xiv. p. 683.)

Respecting Leucophrys, the ancient name of Teodos, see TENEDOS.

LEUCOSIA (Λευκοσία), a small island off the coast of Lucania, separated only by a narrow channel from the headland which forms the southern boundary of the gulf of Paestum. This headland is called by Lycochorus ἑπάτη Ἔλαια, "the promontory of Neptunus," and his commentators tell us that it was commonly known as Peleus Promontorium (τὸ Πελεισθέν). (Lycochor. Alex. 722; and Tezze. ad loc.) But no such name is found in the geographers, and it seems probable that the promontory itself, as well as the little island off it, was known by the name of Leucosia. The former is still called Puenta della Lecosa; the islet, which is a mere rock, is known as Isola Piana. It is generally said to have derived its ancient name from one of the Sirens, who was supposed to have been buried there (Lycochor. l. c.; Strab. l. c.; Plin. iii. 7. s. 13); but Dionysius (who writes the name Lecasia) asserts that it was named after a female cousin of Aeacus, and the same account is adopted by Solinus, (Dionys. i. 53; Solin. 2. § 13.) We learn from Symmachus (Ep. v. 13, vi. 25) that the opposite promontory was selected by wealthy Romans as a site for their villas and the remains of ancient buildings, which have been discovered on the little island itself, prove that the latter was also re-sorted to for similar purposes. (Romaneu. vol. i. p. 345.) [E. H. B.]

LEUCOSIA (Λευκωσία, Λευκωσία), a city of Cyprus, which is mentioned only by Hecates and the ecclesiastical historian Sozomen (H. E. i. 3, 10). The name is preserved in the modern Leokosia or Nicosia, the capital of the island. (Engel, Kypros, vol. i. p. 150; Muritii, Viaggi, vol. i. p. 89; Ponder, Trav. in the East, vol. ii. pt. 1. p. 221.) [E. B. J.]

LEUCOSYRI (Λευκόσυροι), the ancient name of the Syrians inhabiting Cappadocia, by which they were distinguished from the more southern Syrians, who were of a darker complexion. (Herod. i. 72, vii. 72; Strab. xvi. p. 757; Plin. H. N. vi. 3; Eustath. ad Dionys. 775, 976.) They also spread over the western parts of Pontus, between the rivers Iris and Halys. In the time of Xenophon (Anab. v. 6. § 8, &c.) they were united with Paphlogonians, and governed by a Paphlogonian prince, who is said to have had an army of 120,000 men, mostly horsemen. This name was often used by the Greeks, even at the time when it had become customary to design-
nate all the inhabitants of the country by their native, or rather Persian name, Capadocasses; but it was applied more particularly to the inhabitants of the coast district on the Euxine, between the rivers Halys and Iris. (Herod. Frug. 194. 200. 350; Marcian. Herod. p. 72.) Ptolemy (v. 6. § 2) also applies the name exclusively to the inhabitants about the Iris, and treats of their country as a part of the province of Capadocia. The Leucani were regarded as colonists, who had been planted there during the early conquests of the Assyrians, and were successively subject to Lydia, Persia, and Macedonia; but after the time of Alexander their name is scarcely mentioned, the people having become entirely amalgamated with the nations among which they lived. [L.S.]

LEUCOTHEES FANUM (Λευκοθέης τεπέλη), a temple and oracle in the district of the Moschi in Colchis. Its legendary founder was Phryxus; the temple was plundered by Parnaces and then by Mithridates. (Strab. vi. p. 498.) The site has been placed near Saram, on the frontiers of Imbrotia and Kartabala, where two "tumuli" are now found. (Dobu's de Montpereux, "Voyage Autour du Caucase," vol. ii. p. 349; comp. p. 17, vol. iii. p. 167.) [E. B. J.]

LEUCOTHEUM. [LEUCULLA]

LEUCTRA (τὰ Λευκτρα). 1. A village of Bocotia, situated on the road from Thebais to Plataea (Strab. ix. p. 414), and in the territory of the former city. (Xen. Hell. vi. 4. § 4.) Its name only occurs in history on account of the celebrated battle fought in its neighbourhood between the Spartans and Thebans, n.c. 371, by which the supremacy of Sparta was for ever overthrown. In the plain of Leuctra, was the tomb of the two daughters of Sceadas, a Leuctrian, who had been violated by two Spartans, and laid afterwards slain themselves; this tomb was crowned with wreaths by Epaminondas before the battle, since an oracle had predicted that the Spartans would be defeated at this spot (Xen. Hell. vi. 4. § 7; Diod. xiv. 54; Paus. ix. 13. § 3; Plut. Pelop. cc. 20. 21). The city of Leuctra, is sometimes supposed to be repre- sented on the Cappadocian vases at Leuctra (Ap. Dhim. i. 30), which are situated immediately below the modern village of Rinokastreo. But these ruins are clearly those of Thebais, as appears from the inscriptions found there, as well as from their importance; for Leuctra was never anything more than a village in the territory of Thebais, and had apparently ceased to exist in the time of Strabo, who calls it simply a τόπος (x. 1. 414). The real site of Leuctra, "is very clearly marked by a tumulus and some artificial ground on the summit of the ridge which borders the southern side of the valley of Thebais. The battle of Leuctra was fought probably in the valley on the northern side of the tumulus, about midway between Thebais, and the western extremity of the plain of Plataea. Chremonidas, in order to avoid the Boeotians, who were expecting him by the direct route from Phocis, marched by Thise and the valleys on the southern side of Mount Helicon; and having thus made his appearance suddenly at Creusa, the port of Thebais, captured that fortress. From there, he moved upon Leuctra, where he intrenched himself on a rising ground; after which the Thebans encamped on an opposite hill, at no great distance. The position of the latter, therefore, seems to have been on the eastern continuation of the height of Rinok-

Leuctra." (Leake.) The tumulus is probably the place of sepulture of the 1000 Lacedaemonians who fell in the battle. For a full account of this celebrated contest, see Grote, "Hist. of Greece," vol. x. p. 239, seq. In ancient times, the neighbourhood of Leuctra appears to have been well wooded, as we may infer from the epithet of "shady" bestowed upon it by the oracle of Delphi (Λευκτρα σωφρίτα, Paus. ix. 14. § 9); but at present there is scarcely a shrub or a tree to be seen in the surrounding country. (Leake, "North Greece," vol. ii. p. 480, seq. 2. Of LEUCOTRUM (τὰ Λευκτρα, Paus.; τὸ Λευκτρον, Strab.; Plat.; Ptol.), a town of Laconia, situated on the eastern side of the Messenian gulf, 20 stadia north of Pephnos, and 60 stadia south of Cardamyile. Strabo speaks of Leuctrum as near the minor Pamisus, but this river flows into the sea at Pephnos, about three miles south of Leuctrum (Pephnos). The ruins of Leuctrum are still called Leftra. Leuctrum was said to have been founded by Peleus, and was claimed by the Messenians as originally one of their towns. It was awarded to the latter people by Philip in B.C. 358, but in the time of the Roman empire it was one of the Eleutheron-Laconian places. (Strab. viii. pp. 360, 361; Paus. iii. 21. § 7, ii. 36. § 4; seq.; Ptol. v. 5. 8A. P.; Ptol. iii. 16. § 29.) Pausanias places Leuctra a temple and tomb of Athena on the Acropolis, a temple and statue of Causicenus (there called Alexandera), a marble statue of Asclepius, another of Ino, and wooden figures of Apollo Carneus. (Paus. iii. 26. § 4, seq.) (Leake, "Morea," vol. i. p. 331, Peloponnesia, p. 179; Boblaye, "Récurrences," p. 93; Curtius "Peloponnesos," vol. ii. p. 285.)

3. Of LEUCTRI (τὰ Λευκτρια, Thuc. Xen. τὰ Λευκτρα, Paus.; a fortress of the district of Acrisias, on the confines of Arcadia and Laconia, described by Thurydides (v. 54) as on the confines of Laconia towards Mt. Lycaeus, and by Xenophon (Hell. vi. 5. § 24). It was originally an Arcadian town, but was included in the territory of Laconia. (Thuc. l. c.) It commanded one of the passes leading into Laconia, by which a portion of the Theban army retreated from the remains of the army on their invasion under Epaminondas. (Xen. l.c.) It was detached from Sparta by Epaminondas, and added to the territory of Megalopolis. (Paus. viii. 27. § 4.) It appears to have stood on the direct road from Sparta to Megalopolis, either at or near Leondari, in which position it was originally placed by Leake; and this seems more probable than the site subsequently assigned to it by the same writer, who supposes that both Leuctra and Malea were on the route from Megalopolis to Corinnaeum. [MALEA.] (Leake, "Morea," vol. ii. p. 322, Peloponnesia, p. 248; Curtius, "Peloponnesos," vol. i. p. 336.)

LEUCOTRUM. [LEUKTRA]

LEUCUS. [PYDNA]

LEVI. [Palaestina]

LEUNI (Λευνία), a tribe of the Vindelli, which Ptolemy (ii. 13. § 1) places between the Rubican and Casinuenta. The name of the city has been the subject of discussion; Munnert maintaining that it ought to be written Λευνία, and that it is the general name of several tribes in those parts, such as the Beoiana and Αλεοιοί. But nothing certain can be said about the matter; and all we know is, that the Leuni must have dwelt at the foot of the Alps of Saburn, in the south eastern part of Bavaria. [L.S.]
LEVOXI.

LEVOXI (Λεβόξι), a tribe mentioned by Ptolemy (ii. 11. § 35) as dwelling in the central parts of the island of Scandia. No further particulars are known about them. (Comp. Zosimus, die Deutschen, p. 158.)

LEUPHANA (Λευφάνα), a town mentioned by Ptolemy (ii. 11. § 27) in the north of Germany, on the west of the Elbe; it probably occupied the site of the modern Linburg. (Wilhelm, Germantien, p. 181.)

LEUTERIA or LEUTARNIA. [Leucia.

LEUTOXANUM, a place in Pannonia Superior, 12 Roman miles east of Murra, on the road from Apulidea to Sirmium (H. Hieros. p. 561); hence it seems to be identical with the place called Ad Labores in the Peuting. Table.

LEXOVI (Λεξοβίοι, Strab. p. 189; Λέξοβιοι, Ptol. ii. 8. § 2), a Celtic people, on the coast of Gallia, immediately west of the mouth of the Seine.

When the Veneti and their neighbours were preparing for Caesar's attack (n. c. 56), they applied for aid to the Osismi, Lexovii, Nannetitates, and others. (B. G. iii. 9, 11.) Caesar sent Sabinius against the Unelli, Currosetes, and Lexovii, to prevent their joining the Venetii. A few days after Sabinius reached the country of the Unelli, the Aufidienses Enhorovices and the Lexovii murdered their coeval or senate, as Caesar says, and attacked the Gallic confederates in their turn. They were again defeated by Caesar, and compelled to surrender. (B. G. iii. 17—19.) The Lexovii took part in the great rising of the Gallic against Caesar (n. c. 52); but their force was only 3200 men. (B. G. viii. 75.) Walckenaer supposes that the territory of the Lexovii or Caesar and Ptolemy comprised both the territories of Lyceos and Lyons; though there was a people in Lyons named Laஸcasses; and he further supposes that these Lascasses and the Vindacasses were dependent on the Lexovii, and within their territorial limits. [Bacocasses.] The capital of the Lexovii, or Civitas Lexoviorum, as it is called in the Notitia, Provincia, is Lyconem, in the French department of Calvados. [Noviomagus.] The country of the Lexovii was one of the parts of Gaul from which the passage to Britain was made. (G. L.)

LIBA (Αίβα), a small place in Mesopotamia, mentioned by Polybius (v. 51) on the march of Antiochus. It was probably situated on the road between Nisibis and the Tigris. [V.]

LIBANUS MONS. (Λιβανον ὅπος), in Hebrew

LEHANON (1232), a celebrated mountain range of Syria, or, as St. Jerome truly terms it, "mons Phœnicis altissimus." (Onomast. s. a.) Its name is derived from the root 1232, "to be white;" as St. Jerome also remarks, "Libanus Ἀμελαοσ, id est, 'candor' interpretatur." (Adv. Juliviacum, tom. iv. col. 172); and white it is, "both in summer and winter; in the former season on account of the natural colour of the barren rock, and in the latter by reason of the snow," which indeed "remains in some places, near the summit, throughout the year." (Ibby and Mangels, Oct. 30 and Nov. 1.) Alismian is made to its snows in Jer. xviii. 14; and it is described by Tacitus as "tauris inter arderes opacum filumque nivibus." (Hist. v. 6.) Lebanon is much celebrated both in sacred and classical writers, and, in particular, much of the sublime imagery of the prophets of the Old Testament is borrowed from this mountain (e.g. Psal. xix. 5, 6, civ. 16—18; Cant. iv. 8, 11, 15, v. 15: Isai. xi. 13: Hos. xiv. 5—7; Zech. xi. 1, 2). It is, however, chiefly celebrated in sacred history for its forests of cedar and fir, from which the temple of Solomon was constructed and adorned. (1 Kings, v. 2 Chron. ii.) It is clear from the sacred history that Mount Lebanon was, in Solomon's time, subject to the kings of Tyre; but at a later period we find the king of Assyria felling its timber for his military engines (Isai. xiv. 8, xxvii. 24; Ezek. xxxii. 16); and Diodorus Siculus relates that Antigonus, having collected from all quarters hewers of wood, and sawyers, and shipbuilders, brought down timber from Libanus to the sea, to build himself a navy. Some idea of the extent of its pine forests may be formed from the fact recorded by this historian, that 8000 men were employed in felling and sawing it, and 1000 beasts in transporting it to its destination. He correctly describes the mountain as extending along the coast of Tripoli and Byblos, as far as Sidon, abounding in cedars, and firs, and expresses, of marvellous size and beauty (xix. 58); and it is singular that the other classical geographers were wholly mistaken as to the course of this remarkable mountain chain, both Ptolemy (v. 15) and Strabo (xvi. p. 755) representing the two almost parallel ranges of Libanus and Anti-Libanus as commencing near the sea and running from west to east, in the direction of Damascus,— Libanus to the north and Anti-Libanus on the south; and it is remarkable that the Septuagint translators, apparently under the same erroneous idea, frequently translate the Hebrew word Lebanon by 'Αττιλιάνος (e. g. Deut. 7. 1, i. 23, xii. 24; Josh. i. 4, iv. 1). Their relative position is correctly stated by Eusebius and St. Jerome (a. e. Anti-Libanus), who place Anti-Libanus to the east of Libanus and in the vicinity of Damascus. [Anti-Libanus.]

Libanon itself may be said to commence on the north of the river Leontes (el-Kisimiyeh), between Tyre and Sidon; it follows the course of the Mediterranean towards the north, which in some places washes its base, and in others is separated from it by a plain varying in extent: the mountain attains its highest elevation (nearly 12,000 feet) about half way between Beirut and Tripoli. It is now called the Muses, after the Muses, the southern part being inhabited by the Metwoli; to the north of whom, as far as the road from Beirut to Damascus, are the Druses; the Mononites occupying the northern parts, and in particular the district called Kesraian. (Robinson, Bibl. Res. vol. iii. p. 459; Burckhardt, Syria, pp. 182—209.) It still answers, in part at least, to the description of St. Jerome, being "fertiliissimus et viridius," though it can be no longer and "densississimae arborum comis protectur" (Comment. in Osee, c. xiv.) and again,—Nihil Libanus in terra recessivit exsculius est, nec memorosios atque condensuos." (Comment. in Zachariam, c. xi.) It is now chiefly fruitful in vines and mulberry trees; the former celebrated from of old (Hos. xiv. 7), the latter introduced with the cultivation of the silk-worm in comparatively modern times. Its extensive pine forests have entirely disappeared, or are now represented by small clusters of firs of no imposing growth, scattered over the mountain in these parts where the soft sandstone (here of a reddish hue) comes out from between the Jura limestone, which is the prevailing formation of the mountain. The cedars so renowned in ancient times, and known to be the patriarchs of all of their species now existing,
are found principally towards the north of the range (Robinson, Bibli. Res., vol. iii. pp. 440, 441), particularly in the vicinity of a Maronite village named Libethra, doubtless identical with Ez. 33.16), in the neighbourhood of which the finest specimens of the cedar trees were even then found. They had almost become extinct,—only eight ancient trees can now be numbered,—when, a few years ago, the monks of a neighbouring convent went to the pains of planting some five hundred trees, which are now carefully preserved, and will perpetuate the tradition of the "cedars of Lebanon" to succeeding generations. The fact remarked by St. Jerome of the proper name of the mountain being synonymous with frankincense, both in Greek and Hebrew, has given rise to the idea that the mountain produced this odoriferous shrub, of which, however, there is no proof. (Riedel, Palæstina, p. 313.)

LIBARNA (Ἀδησπρα), a city of Liburia, which is mentioned by Pliny among the "nobilia opida" that adorned the interior of that province, as well as by Ptolemy and the Itineraries, in which its name appears as "Librarnum" or "Libyrium." (Plin. iii. 5. s. 7; Ptol. iii. 1. § 45; Itin. Ant. p. 294; Tob. Pent.) These place it on the road from Genoa to Dertona, but the distances are given as certainly corrupt, and therefore afford no clue to the position of the town. This has, however, been of late years established beyond doubt by the discovery of its remains on the left bank of the Sesia, between Asinua and Seravalle. The traces still visible of its ancient theatre, forum, and aqueducts, confirm Pliny's statement of its flourishing condition; which is further attested by several inscriptions, from one of which it would appear to have enjoyed colonial rank. (S. Quintino, Antver Coloniae Libranae, in the Mem. dell' Accademia di Torino, vol. xxix. p. 143; Abini, Legati Taurini, pp. 129, 139.) [E. B. B.]

LIBETHRA, LIBETHRUM (Λιβεθρίς: Eph. Adolphus), a town of Macedonia in the neighbourhood of Dium. It is mentioned by Livy (xvi. 5), who, after describing the peripatric march of the Roman army under Q. Marcius through a pass in the chain of Olympus,—Callipeuce (the lower part of the ravine of Platanniones),—says, that after four days of extreme labour, they reached the plain between Libethrum and Heracliam, Pausanias (ix. 30. § 9) remarks, that the town was once destroyed. "Libethrea," he says, was "situated on Mount Olympus, on the side of Macedonia. At a great distance from it stood the tomb of Orpheus, respecting which an oracle had declared that: when the sun beheld the bones of the poet the city should be destroyed by a fire (σέρανος)." The inhabitants of Libethra ridiculed the thing as impossible; but the column of Orpheus's monument having been accidentally broken, a gap was made by which light broke upon the tomb, when the same night the torrent named Stro, being precociously swollen, rushed down with violence from Mt. Olympus upon Libethrea, overturning the walls and all the public and private buildings, and destroying every living creature in its furious course. After this calamity the remains of Orpheus were removed to Dium, 20 stadia distant from their city towards Olympus, where they erected a monument to him, constantly refreshing the ashes of a sacred fire; which in the course of time was covered by a colonnade. In the time of Alexander the Great there was a statue of Orpheus made of cypress, at Libethrea. (Plut. Alex. 14.)

LIBNIUS.

The only two torrents which could have effected such havoc as that described by Pausanias are the rivers of Phanagoria and Litokhoiro. As the former was near Heraclea, it may be concluded that the Sus, was the same river as the Enipeus, and that Libethra was situated not far from its junction with the sea, as the upper parts of the slope towards Litokhoiro, are secured from the ravages of the torrent by their elevation above its bank.

It might be supposed, from the resemblance, that the modern Malathia [Diem] is a corruption of the ancient Libethra; the similarity is to be attributed, perhaps, to the two towns having a common origin in some word of the ancient language of Macedonia. (Leake, Northern Greece, vol. iii. pp. 413, 422.)

Strabo (ix. p. 409, x. p. 471) alludes to this place when speaking of Helicon, and remarks that several places around that mountain, attached the former existence of the Pierian Thracians in the Boeotian districts. Along with the worship of the Muse the names of mountains, caves, and springs, were transferred from Mt. Olympus to Helicon; hence they were surmained Libichrids as well as Pierides ("Nymphae, noster amor, Libichrides," Virg. Ecl. viii. 21). [E. B. J.]

LIBETHRIAS, LIBETHRIVS. [Helicon.]

LIBIA. [Aethiopies.]

LIBICHI or LIBICI (Λιβίτιον, Pol. Aethiop.; Ptol.,), a tribe of Cynoquine Gauls, who inhabited the part of Gallia Transpadana about the river Soca and the neighbourhood of Verceilae. They are first mentioned by Polybius (ii. 17), who places them, together with the Lakvi (Aethiop.; towards the sources of the Padus, and W. of the Issubres. This statement is sufficiently vague: a more precise clue to their position is supplied by Pliny and Ptolemy, both of whom notice Verceilae as their chief city, to which the latter adds Lumellium also. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 56.) Pliny expressly tells us that they were descended from the Sullae, a people of Ligurian race; whence it would appear probable that the Libii as well as the Lakvi were Ligurian, and not Gaulish tribes [Lakvi], though settled on the N. side of the Padus. Libly also speaks, but in a passage of which the reading is very uncertain (v. 55), of the Sulliue (the same people with the Sullae) as crossing the Alps, and settling in Gaul near the Arve, which evidently belongs to the latter names. [E. B. B.]

LIBISO'SONA (εξομήνεια Fororangiana, Plin. iii. 3. s. 4; Insct. op. Grater, p. 260. no. 3; Libison, Caesanae, ap. Stephini, p. 168; Libisonis, Itin. Ant. p. 416; Aesculapias, Ptol. ii. 6. § 59; Libisonis, Geogr. Cav. iv. 44; Lezon), a city of the Oretani, in Hisp. Tarraconensis, 14. M. P. NE. of the sources of the Anas, on the high-road from Liminalium to Caesaraugusta. It was an important place of trade, and, under the Romans, a colony, belonging to the conventus of Caesaraugusta (Plin. l. c.; Uberti, vol. ii. p. 1. pp. 411, 412). [P. S.]

LIBNATH (Λιβνάθ, Λαβνάθ), generally mentioned in connection with Lachish, from which it could not be far distant [Lachmian]. (Josh. x. 29—32; 2 Kings, xix. 8.) It belonged to Judah (Josh. xv. 42), and is recognized by Liebesch as a village in the district of Eleutheropolis. (Onomast. s. v. Aethiop.) Dr. Reade identifies the ancient Libnath with the ruins of the ancient town and the traces of its name or site (Bibl. Res. vol. ii. p. 389). [G. W.]

LIBNIUS, a river in Ireland, mentioned by Ptolemy (ii. 2. § 4) as on the west coast, = the river
LIBRA or LIBRA, a river of Galilia Naronenosis, which Phily (ii. 4) mentions after the Aaruras (Herod.,) and his description proceeds from west to east. It is said (Harden's Phily) that all the MSS. have the reading “Libria.” Harden takes the Libri to be the Leks, but this is the Leda. (Lynd. *) It has been conjectured that the Libria is the Liran, though this river is west of the Aaruras. (C. L.)

LIBUL. [Ligeti.]

LIBUM (Libao), a town in Bithynia, distant according to the Itin. Anton. 23, and according to the Itin. Hier. 20 miles N. of Nicaea. (Libiam. T. saxe. p. 24.)

LICMUECAE. [Gallaeica, p. 334, b.]

LIBURNI (Adriec), Seyl. p. 7; Strab. vi. p. 269 vii. p. 317; Appian, Ill. 12; Steph. B.; Schol. ad Nicand. 607; Pomp. Mela, iii. 8. § 12; Plin. iii. 25; Flor. ii. 5), a people who occupied the N. part of Illyricum, or the district called LIBURNA (Adriace xipha, Seyl. p. 7; Aestuaria, Ptol. ii. 16; § 8. vii. 7; § 7; Plin. iii. 6, 23, 26; Pont. Tab.; Orelli, Innerv. n. 664). The Liburnians were an ancient people, who, together with the Scilians, had occupied the opposite coast of Pannium; they had a city there, Trueantium, which had continued in existence amidst all the changes of the population (Plin. iii. 18). Niebuhr (Hist. of Rome, vol. i. p. 50, trans.) has conjectured that they were a Pelasgian race. However this may be, it is certain at the time when the historical accounts of those coasts begin they were very extensively diffused. Corecyra, before the Greeks took possession of it, was peopled by them. (Strab. vi. p. 269.) So was Issa and the neighbouring islands. (S. ad Apoll. iv. 564.)

They were also considerably extended to the N., for Nicicum, it is evident, had been previously inhabited by Liburnian tribes; for the Valindiciani were Liburnians (Serv. ad Verg. Aen. i. 243), and Strabo (iv. p. 206) makes a distinction between them and the Brenni and Genuani, whom he calls Libyrians. The word of Virgil (i. c.), too, seem distinctly to term the Veneti Liburnii, for the “innermost realm of the Liburnians” must have been the goal at which Antenor is said to have arrived.

Driven out from the countries between Pannonia and the Veneti by the Gallic invasion, they were compressed within the district from the Titius to the Arisa, which assumed the title of Liburnia. A wild and piratical race (Titus x. 2), they used privateers ("umbi," "naves Liburnicae") with one very large lateen sail, which, adopted by the Romans in their struggle with Carthage (Enopii. ii. 22) and in the Second Macedonian War (Liv. xiii. 48), supplanted gradually the high-hulled galleys which had formerly been in use. (Cass. B. C. iii. 5; Hor. Epod. i. 1.) Liburnia was afterwards incorporated with the province of Dalmatia, and Iadera, its capital, was made a Roman colony. (Titius x. 264.) Heraclea invited the Chorvatas or Chroatii, who lived on the N. side of the Carpathians, in what is now S. Poland or Galicia, to occupy the province as vassals of the Empire (Cont. Perip. de Adm. Imp. c. 31). This connection with the Byzantine Court, and their occupation of countries which had embraced Christi-anity in the Apostolic age (Titius was in Dalmatia in the time of St. Paul, II. Ep. Tim. iv. 10), naturally led to the conversion of these Slavonian strangers as early as the 7th century. (Comp. Scharfahr. Sclav. Alt. vol. ii. pp. 277 — 309; Nolde- nauer, Die Sud-Slaven, pp. 224 — 244.) Simbo (vi. p. 315) extends the coast-line of Liburnia as far as 1500 stadi; their chief cities were Iadera and the conventus or congress of Scardona, at which the inhabitants of fourteen towns assembled (Pliin. iii. 25). Besides these, Phyly (i. c.) enumerates the following: — Alvaia, Phanina, Tarasitica, Semia, Lep- tis, Ortyopia, Vegium, Acyrhumun, Cuchen, Aczona, and Civitas Parnii. (E. B. J.)

LIBURNICAES INSLAUEAE. [Illricicum.]

LIBURNUM or LIBURNI POLITUS, a seaport on the coast of Etruria, a little to the S. of the Portus Piscus, near the mouth of the Arun, now called Livorno. The ancient authorities for the existence of a port on the site of this now celebrated seaport are discussed under Portus Piscus. (E. H. B.)

LIBURNUS MONS, a mountain in Apulia, mentioned only by Polebius, in his description of Hani- nibal's march into that country, n. c. 217 (Pol. iii. 100), from which it has been the name of a part of the Apennines on the frontier of Sanninum and Apulia, not far from Luceria; but it cannot be more precisely identified. (E. H. B.)

LIBY'A (Of Asion), was the general appellation given by the ancient world to the inhabitants of Libya, and by the Romans to those inhabitants, who to that portion of the old continent which lay between Aegypt, Aethiopia, and the shores of the Atlantic, and which was bounded to the N. by the Mediterranean sea, and to the S. by the river Oce- ans. With the increase of geographical knowledge, the latter mythical boundary gave place to the equator line; but the actual form and dimensions of Africa were not ascertained until the close of the 15th century A. D.; when, in the year 1437, the Por- tuguese doubled the Cape of Good Hope, and verified the assertion of Herodotus (iv. 42), that Libya, except at the isthmus of Suez, was surrounded by water.

From the Libya of the ancients we must restrict such portions as have been already described, or will hereafter be mentioned, in the articles entitled AEGYPTUS, AETHIOPIA, AFRICA, ATLAS, BARCA, CAR ThAGE, CYRINE, MAGNARICA, MAURETANIA, the OASIS, SUDANESE, &c. Indeed, the boundaries of Libya are the same with those of modern Africa as far as the equator. The limits, however, of Libya Interior, as opposed to the Aegyptian, Aethiopian, Phoenician, Grecian, and Roman kingdoms and commonwealths, were much narrower and less distinct. The Nile and the Atlantic Ocean bounded it respectively on the east and west; but to the north and south its frontiers were less accurately traced. Some geogra- phers, as Ptolomy, conceived that the south of Libya joined the east of Asia, and that the Indian Ocean was a vast salt lake: others, like Agatharchides, and the Alexandrian writers generally, maintained that it stretched to the equator, and they gave to the unknown regions southward of that line the general title of Agyrida. We shall be assisted in forming a just conception of Libya Interior by tracing the progress of ancient discovery in those regions.

Progress of Discovery. — The Libya of Homer (Od. iv. 87, xiv. 295) and Hesiod (Theog. 739; comp. Strab. i. p. 29) comprised all that portion of the African continent which lay west of Lower and Middle Aegypt. They knew it by report only, had no conception of its form or extent, and gave its in-
habitants the general name of Aethiopes, the dark or black coloured men. Between B.C. 630—620, Battus of Thera, being commanded by the oracle to lead a colony into Libya, inquired anxiously "where Libya was," although at that time the position of Aegypt, and probably that of the Phoenician Carthage, was sufficiently known to the Greeks. Hence we may conclude that, in the 7th century B.C., the name Libya, as the generic appellation of a continent within sight of Sicily, and within a few days' sail from Peloponnesus, was either partially adopted by or wholly unknown to the Greeks. The Phoenicians were among the first explorers, as they were among the earliest colonisers of Libya; but they concealed their knowledge of it with true commercial jealousy, and even as late as the 6th century B.C. interdicted the Roman and Etruscan mariners from sailing beyond the Fair Promontory. (Polyb. iii. 22.) About sixty years before the journey of Herodotus to Aegypt, i.e. c. 523, Cambyses explored a portion of the western desert that lies beyond Elephantine; but his expedition was too brief and disastrous to afford any extension of geographical acquaintance with the interior. Herodotus is the first traveller whose accounts of Libya are on any way distinct or to be relied upon, and his information was probably derived, in great measure, from the caravan guides with whom he conversed at Memphis or Naucratis in the Delta. By the term Libya, Herodotus understood sometimes the whole of ancient Africa (iv. 42), sometimes Africa exclusive of Aegypt (ii. 17, 18, iv. 167). He defined its proper external boundary to be the isthmus of Suez and the Red sea, in opposition to those who placed it along the western bank of the Nile. In this opinion he is supported by Strabo (i. pp. 86, 174) and Ptolemy (ii. 1. § 6, iv. 5. § 47); and his description of the Great Desert and other features of the interior prove that his narrative generally rests upon the evidence of travellers in that region. The next step in discovery was made by the Macedonian kings of Aegypt. They not only required gold, precious stones, ivory, and aromatics, for luxury and art, and elephants for their wars, but were also actuated by a zeal for the promotion of science. Accordingly, Ptolemy Philadelphus (Diod. i. 37; Plin. vi. 29) and Ptolemy Euergetes (n. c. 233—222) sent forth expeditions to the coast and month of the Red sea, and into the modern Nubia. Their investigations, however, tended more to extending acquaintance with the country between the cataracts of the Nile and the straits of Bab-el-Mandeb than to the examination of Western Libya.

About 200 years before our era, Eratosthenes described Libya, but rather as a mathematician than a geographer. He defines it to be an acute angled triangle, of which the base was the Mediterranean, and the sides the Red sea, on the east, and on the west an imaginary line drawn from the Pillars of Hercules to the Sinus Adscitatus. The wars of Rome with Carthage, and the destruction of that city in n. c. 146, tended considerably to promote a clearer acquaintance with Libya interior. Polybius, commissioned by his friend and commander, Scipio Africanus, visited Aegypt and many districts of the northern coast of Africa, and explored its western shores also, as far as the river Bambotas, perhaps Cape Non, lat. 28° N., where he found the crocodile and hippopotamus. Unfortunately, the record of his journey has perished, although it was extant in the 1st century A.D., and is cited by Pliny (vi. 1) and Stephanus of Byzantium (s. e.

\[\text{LIBYA.}\]

\[\text{The events of the Jugurthine War (n. c. 111—106) led the Romans further into the interior. The historian Sallust, when prætor of Numidia, was sequestered amidst the Arians. Hence we may conclude that, in the 7th century B.C., the name Libya, as the generic appellation of a continent within sight of Sicily, and within a few days' sail from Peloponnesus, was either partially adopted by or wholly unknown to the Greeks. The Phoenicians were among the first explorers, as they were among the earliest colonisers of Libya; but they concealed their knowledge of it with true commercial jealousy, and even as late as the 6th century B.C. interdicted the Roman and Etruscan mariners from sailing beyond the Fair Promontory. Unfortunately, the record of his journey has perished, although it was extant in the 1st century A.D., and is cited by Pliny (vi. 1) and Stephanus of Byzantium (s. e.\]
The Night. Ptolomy moreover assigns to Africa a greater extent S. of the equator; but here his knowledge became insUFFIcient, and he stretched into the Atlantic instead of curving eastward; and he concluded that the southern parts of Libya joined the eastern parts of Asia, and consequently was either incredible or ignorant of the Peripus of the Phoenicians in the reign of Pharaoh Necho.

Pliny adds little to our information respecting Libya beyond its northern and eastern provinces, although he contributes to its geography a number of strange and irremovable names of places. He had seen an abstract at least of the journal of Polybius, and he mentions an expedition in A.D. 41 by Suetonius Paulinus, which crossed the Atlas range, and explored a portion of the desert beyond. But both Pliny and Pompomius Mela are at once too vague and succinct in their accounts to have added much to our knowledge of the interior.

The excursions which were mutually inflicted by the Christian sects upon each other in the 3rd and 4th centuries A.D., the expulsion of the Donatists, Montanists, Circumcellions, &c., from the ecclesiastical provinces of the Roman church, drove even beyond the Atlas region thousands of fugitives, and combined with the conquests of the Arabs in the 7th century in rendering the interior more permisible and better known. Yet neither the fugitives nor the conquerors have materially increased our acquaintance with these regions. The era of discovery, in any extensive sense of the term, commences with the voyages of the Portuguese at the close of the 15th and the commencement of the 16th century. But their observations belong to the geography of modern Africa.

We have reserved an account of the two most memorable expeditions of the ancients for the discovery of the form and dimensions of the Libyan continent, partly on account of their superior importance, if they are authentic, and partly because the results of them have been the subject of much discussion.

Herodotus (iv. 42) alleges as one reason for his belief that Libya, except at the isthmus of Sucea, is surrounded by water, a story which he heard of its circumnavigation by the Phoenicians in the reign and by the command of Pharaoh Necho, king of Egypt. This supposed voyage was therefore made between 594 and 590 B.C.

According to Herodotus, whose narrative is indeed meagre enough, Pharaoh Necho desired to connect the Mediterranean with the Red sea by a canal from Bubastis in the Delta to the Arnoite bay near Sucea. He abandoned this project at the bidding of the priests, and then ordered his pilots to attempt the passage from the one sea to the other by a different channel. For this purpose his fleet, manned entirely by Phoenicians, set sail from the Red sea, coasted Egypt and Aethiopia, and passed into the Indian ocean. At the end of three years they entered the mouth of the Nile, having, as they affirmed, circumnavigated the continent. Twice they landed,—probably at the season of the monsoons,—landed up their ships, saved the fields, and reapèd the harvest, and then proceeded on their course. They allegéd,—and their assertion is remarkable, although Herodotus did not believe it,—that they were sailing westward the sun was on their right hand.

The probability or improbability of this voyage has been canvassed by Mannert (Geograph. der Griech. und Römer, vol. x. pt. 2, pp. 491-511), by Gosselin (Geographie des Gross Analyse, tom. i. pp. 103, &c.), Rennell (Geogr. of Herod. vol. ii. pp. 348-363), and Heeren (Ideen, vol. i. p. 364).

We do not consider that its improbability is by any means fully established; the voyage, however, was too tedious and difficult to be repeated by the navigators of antiquity, and its results for commerce and geographical knowledge were accordingly unimportant. The most striking argument for the circumnavigation having been accomplished is the reported phenomenon of the sun appearing on the right hand, or to the north of the voyager: nor were the Phoenician galleys less competent to the voyage than the caravels which conveyed Columbus across the Atlantic, or Di Gama round the Cape. On the other hand, we must admit the improbability of some of the circumstances narrated. Herodotus heard the story 150 years after the supposed voyage had been made; in that time an extraordinary expedition beyond the Red sea may have been magnified into a complete Peripus. Again, for sowing and reaping on an unknown coast, for laying up the ships, &c., the time allowed—three years—is too short. Moreover, no account is made for opposition from the inhabitants of the coast, or for the violent winds which prevail at the Cape itself. The notion which Herodotus entertained, and which long afterwards prevailed, that Libya did not extend so far S. as the equator, is not an argument against the fact of the circumnavigation; for the brevity of Herodotus's statement, in a matter so important to geography, shows that he had taken little pains in sifting the tradition.

A second ancient voyage is better authenticated. This was rather an expedition for the promotion of trade than of geographical discovery. Its date is uncertain: but it was undertaken in the most flourishing period of the Punic Commonwealth,—i.e. in the interval between the reign of Darius Hy- stapes and the First Punic War (b.c. 521-264). Hannibal, a suffetes or king, as he is vaguely termed, of Carthage (Geogr. Græc. Minœr, tom. i. Bernardi), with a fleet of 60 galleys, having on board 30,000 men, set sail from that city through the Straits of Gibrarlett with a commission to found tradingstations on the Atlantic coast, the present empire of Morocco. How far he sailed southward is the subject of much discussion. Gosselin (Geograph. des Antiquités, vol. i. p. 109, seq.) so shortens Hannibal's voyage as to make his westward voyage, 28° towards the southern terminus, while Bennells extends it to Sierra Leone, within 8° of the equator (Geogr. of Herod. vol. ii. p. 348). The mention of a river, where he saw the crocodile and the river-horse, renders it probable that Hannibal passed the Senegal at least. Of the fact of the voyage there is no doubt. The record of it was preserved in an inscription in the temple of Mars at Senusret. There it was copied and translated into his own language by some Greek traveller or merchant. (Bochart, Geogr. Sacr. i. 33; Camompanes, Antiq. Maritim. de Carthago, vol. ii.; Dodwell, Dissertat. i. in Geogr. Græc. Minœr, ed. Hudson; Beugainville, Descentures d'Hanno Mémo. de l'Acad. des Inscriptr, tom. xxvi. xxviii.; Heeren, Ideen, vol. i. p. 634.)

A third and much later Peripus is that which goes under the name of the Arian. It is probably a work of the first century A.D. It is a record or log-book of a trading-voyage on the eastern coast of Libya, and is chiefly valuable as a register of the articles of export and import in the markets of the Red sea, of the Arabian and Persian coast, of the
western shores of India, and the eastern shores of Africa. The extreme south point of the rift was the headland of Raphia, probably the modern Allibit, in lat. 10° N. (See Vincent's Progress of Science, vol. ii. p. 54.) With these fragmentary acquaintance with Libya Interior, and their misconception of its extent, it is not surprising that the more ancient geographers should have long hesitated to which portion of the old continent Libya should be assigned. It was sometimes regarded as an independent division of the earth, and sometimes as part of Asia, and even of Europe. (Agathemer. ii. Herod. iv. 42; Varro, L. L. iv. 5; Scal. Fig. Joineri, 1. 1; Malte- brun, Geog. i. 27.) As the topography of the interior is very uncertain, we shall examine rather the general physical phenomena of this region, than attempt to assign a local habitation to tribes who roamed over the waste, or to towns of which the names are doubtful and disguised, even when genuine, by the Greek or Roman orthography of their Libyan titles.

II. The Great Desert. — Herodotus (ii. 32, iv. 181) divides Libya N. of the equinoctial into three regions: — (1) The inhabited, which is described under the several heads of Africa, Atlas, Carthage, Cyrene, &c.; (2) the wild beast territory [Atlas]; and (3) the Desert. These divisions correspond nearly to the modern districts of Barbary, Badeleygerd, and Sahhara. The later region (Sahhara) Herod. iv. 181) extends from the Atlantic to Aegypt, and is continued under the same name, of latitude through Africa, Asia, the southern provinces of Persia, to Musulon in Northern India. Contrasted with the vale of Badeleygerd, the rich arable districts of Africa Proper, and especially with the well-watered Aegypt, the Sahhara is one of the most dreary and inhospitable portions of the world. To its real barrenness and solitude the ancients ascribed also many fabulous terrors, which the researches of modern travellers have dispersed. It was believed to swarm with serpents, which, by their number and their venom, were able to impede armies in their march (Lucan, Pharsal. iv. 765): its tribes shrieked like bats, instead of uttering articulate sounds (Herodot. iv. 183); its pestilential winds struck with instant death men and animals, which traversed them (Arrian, Exp. Afr. iii. 3); and its eddies of sand buried the slain. These descriptions are, however, much exaggerated. The Khansan or fifty-days' gale, as the Copts term it, the Siouman (soum, poison) of the Arabs, blows at the summer solstice from S. and SE. over a surface scorched by an almost vertical sun, and thus accumulates heat, which dries up all moisture, relaxes the muscular powers, and renders respiration difficult. But though it suffocates, it does not necessarily kill. The real peril of the route, which from very remote ages has been traversed by the caravans, lies in the scanty supply of water, and in the obliteration of the track by the whirlwinds of sand. (Brunn, Travel. vol. vi. p. 458;Burckhardt, Yolub, vol. i. p. 207.) The difficulty of passing the Libyan Desert was, in fact, diminished by the islands or coves, which served as stepping-stones across it. Of these cases a more particular description is given elsewhere (Oasis), but they are too important a feature of this region to be quite omitted from an account of it. Herodotus (iv. 181) mentions a chain of oases proceeding from E. to W. through Libya. Sometimes they are little more than saltings for the caravans.—a spring of water, surrounded by date-trees and a few acres of herbage: others, like the oasis of El-Khureygh, are spacious and populous tracts, over which nomad bands with herds of domestic cattle, and a few flocks of horned sheep and camels, and the inhabitants, are dispersed. With the interior provinces and kingdoms, such as Augila and Fezzen (Regio Phazania of Polyen); One geological feature is common to them all. They are not elevations of the plain, but depressions of its limestone base. Into these hollows, which are composed of limestone and clay, the subsoil water percolates, the periodical rains are received, and a rich and varied vegetation springs from the strong and moist earth of the oasis. But even the arid wastes are not a uniform level. It has considerable inequalities, and even hills of gravel. Probably amid the changes which our globe has undergone, at some period anterior to the history, if not the existence of man, the Sahhara, whose level even now is not much above that of the Mediterranean, was the bed of an ocean running atwars the continent. Its irregular breadth and outline favour this supposition. It is widest in the western half of N. Africa, between the present Kingdom of Morocco and the negro country, and narrowest between the present states of Tripoli and Khasaïna, where it is broken up by watery districts. As it approaches Aegypt it becomes again broader. Libya is, indeed, a land of terraces, ascending gradually from the three seas which bound it to central plateaux, such as the Abyssinian highlands, the Lamies Monte, and the Atlas chain.

Before the importation of the camel from Arabia — and this animal never appears in monuments of the Pharaohic times—the impediments to large companies crossing the Sahhara must have been almost insurmountable. The camel was introduced by the Persians: Darius succeeded in establishing his garrison in the oases; and in the time of Herodotus they were the stages of a traffic which penetrated Libya nearly from east to west. The Desert, however, was not only a road for commerce, but itself also productive. It exported dates, alum, and mineral salts, which, especially in the district between El-Sinaw, the ancient Annum, and the Natron Lakes, cover the soil with an incrustation through which the foot of the camel breaks as through a thin coat of ice. The salt was a marketable article with the inhabitants of Nubia, S. of the Sahhara. The components of the salt are minute, carbonatized, bed of a sub-moisture, and these, both in ancient and modern times, have been extensively employed in the operations of bleaching and glass-making. Libya shows few, if any, traces of volcanic action; and earthquakes, except in Aegypt, appear to have been unknown. Yet, that the continent has undergone changes unrecorded in history, is manifest from the agatised wood found on the eastern extremity of the desert in the latitude of Cairo. The River Nile, the Mu, or river without water, is another proof of a change in the elevation of N. Africa. The streams, which once filled its dry hollows, have been violently expelled by subterranean action, and the silice, agate, and jasper in its neighbourhood indicate the agency of fire. (Newbold, Geog. of Aegypt, Proceed. of Geol. Society, 1842.)

It is still an unsettled question whether the ancient geographers were acquainted with the countries S. of the Dardanian Desert; i.e. with the desert river Quena, commonly called the Nega. Herodotus (ii. 32) relates, on the authority of some Cyrenians, that certain young men of the tribe of
Libya.

Nasamonos, who inhabited the Syrtis and the district east of it (the present gulf of Sidié), crossed the Desert in a westerly direction, and came to a great river which ran towards the rising sun, and had crocodiles in it, and black men inhabiting its banks. Notwithstanding some marvellous circumstances, the narrative is probably true in substance: and, combined with the Arabian story of the trade in slaves, gold-dust, ivory, elephants, &c., it renders it likely that the interior was known to the ancients as well as to the western coast, within 11° of the equator. But such knowledge as was acquired by travellers was rarely employed by the Greek geographers, who were more intent on accumulating names of places, than on recording the physical features, through which alone names become instructive.

The mountain and river system of Libya Interior has been partly described in the article Atlas; and the principal features of its indigenous population under the heads Gaetuli and Garamantes. It will suffice, then, to point out here the effect which the general configuration of the mountains has upon the climate and the rivers. The absence of snow on the Atlas range denies to this continent, in its northern portion at least, the privilege of partial refrigeration, although in the loftier regions of the Aethiopian highlands the heat is mitigated by the ice upon their summits. Hence arises the superior volume of the Aethiopian rivers, the tributaries of the Nile, and the milder temperature of the plains surrounding the lake of Decelia, which, although within the tropics, enjoy a perpetual spring. Again, the northern range of Atlas runs so close to the Mediterranean that its watered is brief and abrupt, and the rivers are properly mountain streams, which, after a short course, discharge themselves into the sea. The western slope of the Libeci Montes also presents a succession of terraces, which do not propel the rivers with force enough upon the lowlands to produce a continuous course; so that either they lose themselves in swamps, or are absorbed by the sands. In some cases, indeed, they traverse, in its vast inland depression, which in their turn drain off their superfusive waters in thread-like rivulets. On the southern inclination of Atlas, there is a similar impediment to the formation of large rivers, and not until within a few degrees of the equator, and in districts beyond the bounds of ancient Libya, do we meet with majestic streams, like the Seneqal, the Querna, &c., rivalling the Nile. On this side, indeed, the irrigated portions of the lowlands are rich pasture-lands, and the Great Desert is bordered and encroached upon by luxuriant patches both of forest and arable land.

The more remarkable mountains not included in the Atlasrange are the following:—On the northern frontier of the Desert, Mons Ater or Niger (Plin. v. 5. s. 5. vi. 30. s. 35.), the modern Hararch or Black Mountain, which, running from east to west, separates the Oasis Phenina (Pianon) from Africa Roman. Westward of this was the Usargala (Usargallia, Plid. iv. 6. § 7. &c.), the present Adrachkoskewadj, which ran far into the territory of the Garamantes, and contained the sources of the river Bagrada. This may be regarded as a continuation of the Atlas Major, S. of Numidia and Mauretania. Next, running in a N. direction to the verge of Numidia, and a branch of the Usargala, was Mons Gorgri (Gorgri, Philestit, in which the river Clypaus arose. Along the Atlantic coast, and parallel with the Greater Atlas, were the following mountains and headlands:—Mount Sagapola (Sagadra, Plid. iv. 6. § 8. &c.), from which the river Subus swang, to SW. of which was Mount Mandrus (Mandrus, a long chain of hills, reaching to the parallel of the Fortunate Islands, and containing the fountains of all the rivers that discharge themselves into the Atlantic from the Salathus to the Massa, or Cape Non to Cape Borjador. Mt. Caphas (Káfars), 9 degrees to S., from which the Damaas flowed, stretched in a SE. direction far into the Desert: Mount Rysadius (Rysadius) terminated its headland of the same name, probably Cape Blancu, and in it rose the river Sthhir. Of all these mountains, however, the most remarkable as regards the Libyan rock system, because it exhibits unquesionable tokens of volcanic action, was that designated the Chariot of the Gods (Chariot of the Gods), probably the present Kinyu, or Sierra Leone. This was the extreme point of ancient navigation on the Atlantic: for the Phoenician Peripus, if it indeed was actually performed, formed the single exception to the otherwise universal ignorance of the coast beyond. As far as modern discoveries have made known the interior of Libya, from the ocean to the boundaries of Egypt, it is crossed by a succession of highlands, arising in certain points to a considerable elevation, and sending forth terraces and spurs towards the south. It is possible that these may form a continuous chain, but our acquaintance with its bearings is very imperfect. The ancient geographers distinguished some portions of these highlands by the names of Mount Bardetus (Bardetous), west of the Luckya Montes; and in the same line, but at a considerable interval, M. Mesce (Mesce); Ziguia (Ziga), north of Mesce; and, approaching the Atlantic, Mount Ionon (Ionon), and Danchis (Danchis), by a line with the Chariot of the Gods, and northward of the line of Bardetus, were the elevations Araltas (Araltas), Aratun (Aratun), the latter of which ran down to the equatorial line. These, with Mount Thala (Thala), and, farther east, that part of the range entitled the Garamantine Pharan or Combe (Garamantine Pharan or Combe), may be regarded as offsets of the Aethiopian highlands. That these mountains contain considerable mineral wealth is rendered probable by their feeding the sources of rivers in the gold region, and from the copper pyrites discovered on their flanks. That they were the cradles of incommensurable streams is also certain from the rich pasture and woodland which mark the confines of the equatorial region of Libya Interior.

The voyage of Hanno was undertaken for the purpose of planting upon the coast of the Atlantic trading stations, and to secure with the regions that produced gold, aromatics, and elephants, a reader communication with Carthage than could be maintained across the Sihara. That this trade was materially the ocean to the Romans, became masters of Africa, is probable, because the conquering people had little genius for commerce, and because they derived the same articles of trade through the more circuitous route of Egypt, and Aethiopia. Yet the knowledge acquired by the Carthaginians was not altogether lost, and the geographers of the empire have left us some important information respecting the western coast of Libya as far as 110° N. lat. According to Polybius, the principal promontories were, beginning from the
LIBYA.

N. —Gannaria (Σαπρίτα Ὀχέα), probably Cape Non; Sacarinum (Σακαρίτα), Cape Baynoun; Arsinarium (Ἀρσανίριον), Cape Capeterra, the exact point of the continent, lying between the mouths of the Daradus and the Stachir; the headland of Cyssaduim, Cape Blanco, a continuation of the mountain ridge of that name, and a few miles southward of Arsinarium; the promontories of Catharon (Καθάρων ἴππα), Cape Dairac, near the mouth of the N., and of the Hesperides, celebrated in table (Ἐκτείνου κῆπα, Plin.), Hesperian Coaurs, Plin. v. 1. s. 12; the Cape Verde of the Portuguese; lastly, the term of Hann's voyage, the basaltic rock entitled the headland of Notium (Νότεου κῆπας). Cape Koko, or Red Cape, from the colour of its surface. Between the two last-mentioned projections lay the Hesperian bay (Ἐκτείνου κῆπα), which, owing to their misconception of the extent of this continent, the ancients regarded as the southern boundary of Libya, the point from which it crossed towards Asia, or where the great Southern Ocean commenced.

While enumerating the mountains which concealed their springs, we have nearly exhausted the catalogue of the Libyan rivers which flow into the Atlantic. It is a consequence of the terraced conformation of the interior, that the streams would, for the most part, take an easterly or a westerly direction. Those which ran east were the tributaries of the lakes, morasses, and rivers of Achthopia, and, with the exception of such as led the Astapus and the Astobars, have been scarcely explored. On the western side the most important were (Plin. iv. 6. § 8) the Subus (Σωβός), the modern Sue, and combining, if not the same, with the Chretes (Χρέτης) and the Xion (Χιόν) (Sylvx. p. 53), had its source in Mt. Sagapola, and entered the Atlantic below the furthest western projection of the Greater Atlas. Mt. Mandras gave birth to the Sabatus, at the mouth of which stood a town of the same name in the Claudarian (Χριστοφάρας) apparently the Caesarea of Ptolomiaeus (ap. Plin. v. 1. s. 1); to the Ophides (Οφύδας) and Novias (Νοβίας), between the headlands of Gannarium and Saboeis; and lastly, the Massa or Musasat. (Polv. l. c.) In Mount Caphas an arca considerably stream than any of the above-mentioned, the modern Rio de Ouro, the ancient Daradus (Δαράδος, Δαράι), which contained crocodiles, and discharged itself into the Sinus Madshani, in the form of a torrent in this river, and the dark population which inhabited its banks in common with those of the Niger, led many of the ancient geographers to imagine that the Nile, wherein similar phenomena were observed, took a westerly course S. of Mount, and, crossing the continent, emptied itself a second time into the sea in the extreme west. The Aethiopis Hesperi were among the consequences of this fiction, and were believed to be of the same race with the Aethiopians of the Nile. Next in order southward was the Stachir (Σαχτέρ), which rose in Mt. Rysulam, and, after forming the Lake Clonia, proceeded in a SE. direction to the bay of the Hesperides. The Stachir is probably represented by the present S. Antonio river, or Rio de Gamaam, and seems to answer to the Sabaeus of Ptolomiaeus (ap. Plin. l. c.). The same bay receives the waters of the N., the Hamotus of Ptolomiaeus, and the modern Soum. (Th.) river; which, as well as the other, embellishes its streams, and the hides of the former were exported by the neighbouring tribe of Daratze to Carthage. The Maitilius, the present Gambie, debouches into the Atlantic from the Theon Ocheuma, a little N. of the Hes_homelade of the Phoebus (Πεσιάς Ἀθηναίος), or Cape Roche, with which terminates the geographer Ptolemy's Itinerary of the Libyan coast. He mentions, indeed, a few rivers in the interior which have no outlet to the sea, but form vast inland lakes. These are, probably, either tributaries of the Niger, or the upper portion of the arms of the Niger itself; but the course of the streams that flow southward to Nigerina and the Right of Tawini belongs rather to modern than to ancient geography. It is worthy of notice, however, that rumours at least of the dimensions of the Niger must have reached the ears of the old geographers (Agathen. ii. 10; Plin. v. 1. s. 1), since they ascribe to the Gier or Gir (Tab. Pventing; Girin) a course of more than 300 miles, with a further curvature to the N. of 100, where it ends in the lake Chelonis. The direct mainstream was represented as diving underground, reappearing on the surface, and finally discharging itself into a lake called Naba.

Libya, indeed, "is a region of extensive lakes; of which there appear to be a great number on the lowlands of its east coast, in which many of the rivers from the edge of the table-land terminate." (Somerville, Physical Geog. vol. ii. p. 9.) In Libya N. of the equator the following were known to the ancients.—The Tritonis (Aeschyl. Eumen. 289; Pindar, Pith. iv. 56; Sylvax. p. 499; Herod. 1. 134), the lake of the Hesperides (Strab. xxiii. p. 856); the Libia Palus, which was connected with the Niger by one of its tributaries; the Clonia, near the eastern flank of the Mount Ryssaduim; the Nigris, into which the upper portion of the Nisir flowed, probably the present Dibiah of the Arabs, or the Black-Water, SW. of Timbucto; the Naba, in which the river Ger terminates, and which answers to Labe Theda, or New in Borbon, and whose dimensions almost entitle it to the denomination of a fresh-water sea; and lastly, the cluster of lakes named Cheloni, perhaps the modern Fitter, into which an arm of the Ger flows, and which are surrounded with jungle and pastures celebrated for their herds of elephants. Salt-water lakes abound on the northern extremity of the Sahara, and the salt obtained from them has been in every age an article of barter with the south, where that necessary article of life was not plentiful. It was obtained either from these lakes, which, dried up by the summer heat, leave behind a vast quantity of salt, covering extensive patches of the earth, or from large bogs, or layers, which frequently extend for many miles, and rise into hills. The inhabitants of Nigris purchase salt with gold-dust. A scarcity of salt in Kebna and Timbucto is equivalent to a famine in other lands. At such times the price of salt becomes so extravagant, that Leo Africanus (p. 200) saw an ass's load sold at Timbucto for eighty ducats. The neighbourhood of the lakes is also celebrated for the number and luxuriance of its date trees. To the borderers of the Desert the date tree is what the bread-fruit tree is to the South Sea Islanders. Its fruit is food for both men and cattle; it was capable of being preserved for a long time, and conveyed to great distances; while, from the sap or fruit of the tree (according to Strabo, 17. 190) was extracted a liquor equally intoxicating with wine. Population.—Herodotus (iv. 168—199) distinguishes four main elements in the population of Libya. (1) the Libyans, (2) the Aethiopians,
LIBYAN

(3) the Phoenicians, and (4) the Greeks. He enumerates, moreover, a considerable number of indigenous tribes, and his catalogue of them is greatly increased by subsequent writers, e.g. Scylax, Hanno, Polybius, and Pтолем}. When, however, we would assign to those a generic connection, or a local habitation, the insurmountable difficulty meets us which ever attends the description of nomad races; ignorance of their language, of their relations with one another, and their customary or proper districts. The Greek geographers, in their efforts to render the names of barbarians euphonious, impenetrably disguise them for the most part. Again, their information of the interior was principally derived from the merchants, or guides of the caravans; and these persons had a direct interest, even if their knowledge were exact or various, in concealing it. Moreover, the traveller, even if unbiased, was liable to error in his impression of these regions. The population, beyond the settled and cultivated districts, was extremely fluctuating. In the rainy season they inhabited the plains, in the hot months the highlands, accordingly as their cattle required change of climate and pasture. The same tribe might, therefore, be reckoned twice, and exhibited under the opposite characteristics of a highland or a lowland people. Savage races also are often designated, when described by travellers, as being brought up or arbitrarily imposed, and not by their genuine and native appellations. Thus Herodotus, in common with the other geographers of antiquity, gives an undue extension to the name Aethiopis, derived from the mere accident of a black or dark complexion, and had he been acquainted with the Cushans and the Hottentots, he would, doubtless, from their colour, have placed them in the same category. The diet of the Ithychalpigae was not restricted to fish, since they were also breeders of cattle; but they acquired that appellation from their principal food at one season of the year. The Troglodytæ, during the spring and summer months, dwelt among the low meadows and morasses of Mæsic and Aethiopia; but their name was given them because, during the rainy period, they retired to habitations situated on the rivers. With regard to the native races of Libya, the only sects preserved by history, which have formed one of these sporadic offshoots of the human family which remain in, or acquire a lower degree of civilisation, because they have wandered beyond the verge of the great empires and communities in which civilisation is matured. The Libyan continent has, indeed, been in all ages the principal resort of these sporadic tribes. The deserts, which intervene between the cultivated and unoccupied portions of it, removed much of its population from the neighbourhood of cities; they were liable to no admixtures from other countries; they were never thoroughly subdued or intermingled with superior races; and though, as in the instance of the Périoci of the Greek states, the Libyan-Phoenicians in the dominions of Carthage, and the subordinate castes of Aegypt, they were not incapable of a high material cultivation; yet, when left to themselves, they continued to exist under the simplest forms of social life. Combining the glimpses we obtain from the ancients with the more accurate knowledge of the moderns, we are warranted in ascertaining to them, generally, a monarchical form of government, with some control from the priests and assembly of chief men, warlike and migratory habits, debased condition of the female sex, and the vice of Africa, in all ages, constant warfare, waged with the sole purpose of supplying the slave-markets of the North and East.

The Fauna of Libya must not be unnoticed. In the northern deserts tawny and grey tints are the prevailing colours, not merely in birds and beasts, but also in reptiles and insects. In consequence of the extension of this barren region from North Africa through Arabia to Persia and India, many similar species of animals are common to both continents,—as the ass, antelopes, leopards, panthers, and hyænas. The cat tribe prevails in great beauty and variety; the lion of Mount Atlas is said to be the strongest and most formidable of his species. The African elephant is different from the Asiatic, and has always been preferred to it for military purposes. The hippopotamus, which was known to the ancients as the inhabitant of the Senegal and the Upper Nile, appears to be a different species from that which is found in the inter-tropical and southern parts of the continent. The magot or Barbary ape was known to the ancients, and is mentioned by the Byzantine writers as imported for the menageries of Constantinople. The giraffe or camelopard is found as far north as the Great Desert. It appears on the monuments of Aegypt, and was exhibited in the imperial triumphs at Rome. The Atlas region contains two kinds of follow-deer, one of which is the common follow-deer of Europe. The ox of Nubia, Abyssinia, and Bourbon is remarkable for the extraordinary size of its horns, which are sometimes two feet in circumference at the root. Of the Libyan animals generally it may be remarked, that while the species which require rich vegetation and much water are found in the Atlas valleys and the plains below them, the Desert abounds in such kinds as are content with scantier herbage,—such as the deer, the wild ass, and the antelope. These being fleet of foot, easily remove from the scorchèd to the green pasture, and find a sufficient supply of water in the snow of the river beds.

As regards its Flora, the northern coast of Libya, and the range of the Atlas generally, may be regarded as a zone of transition, where the plants of southern Europe are mingled with those peculiar to Africa. The Greek and Roman colonists built their naval armament of the pine and oak. The Atlas range, Mount Atlas, the Alpino pine and the sandarach or Thosia articulata, being celebrated for their close grain and durability. The vegetation of the interior has been already in part mentioned. The large forests of date-palms, along the southern base of the Atlas, are its principal woodland. The date tree is indigenous, but improved by cultivation. Of the Desert itself sufficiently speaking are the only produce besides the coarse prickly grass (pennumbrium dicho- tomum), which covers large tracts, and supplies fodder to the camels.

For the authorities upon which this account of Libya rests, see, besides the ancient writers already cited, the travels of Shaw, Hermann, Burchardt; Littor's Erdkunde, Africa ; Heeren, Idea, vol. i.; Memos sur la Geographie, Libya ; and Maletburn, Afrique.

the W., to the S. shores of Crete, and the frontier of Egypt, on the E., where it joins the Maeotian
Aegeum: the two Strymes belonged to it. (Strat.
ii. pp. 122, 123, x. pp. 475, 488; Auct. i. 5.
ii. 14; Dion. Per. 104; Mela, i. 4, ii. 7; Plin. v. 1:
Flav. ii. 6. § 10.) [F. S.]

LIBYCUS NOMOS. [MAXIMIANUS.]

LIBYPHÖNIES (Ελιβυφωνίες, sometimes
speelt Ελιβυφωνίες), a portion of the population
of N. Africa, who are defined by Livy, in accordance
with the significance of their name, as "nietum
Porium Afris gnaus" (Liv. xxi. 22). Diilorins
gives a somewhat fuller account of them, as one of
the four races which inhabited the Carthaginian
territory in N. Africa, namely, the Phoenicians,
the Libyphoenicians, the Libyans, and the Nubians;
and he says that the Libyphoenicians possessed
many of the cities on the sea-
shore, and had the tie of intermarriage with the
Carthaginians (Diol. xx. 55). Pliny restricts them
to the S. part of the ancient territory of Carthage.
(Plin. v. 4. s. 3: Libyphoenices vocatur qui Ελ-
νισιον incultum); and there can be no doubt, from
the nature of the country, that the race was in the
country around Carthage. It is not,
however, equally clear whether the Libyphoe-
nicians of the Carthaginian colonies along the coast
of Africa are to be regarded as a race arising out of
the intermarriage of the original Phoenician settlers
with the natives of the surrounding country, or as the
descendants of Libyphoenicians from the country
round Carthage, who had been sent out as colonists.
The latter is the more probable, both from indications
which we find in the ancient writers, and from the
well-known fact that, in all such cases, it is the
half-breed which multiplies rapidly, so as to make
it a matter of importance for the members of the
pure and dominant caste to find a vent for the in-
creasing numbers of the race below then. That
such was the policy of Carthage with regard to the
Libyphoenicians, and moreover that they were
marked by the energy and success which usually
distinguishes such half-bred races, we have some
interesting proofs. The defence of Agrigentum
against the Romans, during the Second Punic War,
was signalised by the skill and energy of Mutines,
a Libyphoenician of Hippoecum, whom Livy
describes as "vir insigne, in habitatione magistro
omen bellis artes eloquentibus" (Liv. xxv. 40).
The mention of his native place, Hippoecum, in the
Bruttian coast, a city which had been for some time
in the hands of the Carthaginians, is a proof of the
tendency to make use of the race in their foreign
settlements; while the advantage taken by Hannibal
of his talents agrees with the fact that he employed
Libyphoenician cavalry in his armies. (Polib. iii.
33; Liv. xxi. 22.) Niebuhr has traced the
presence of Libyphoenicians in the Punic settlements
in Saridien, and their further mixture with the
Saridians, as attested by Cicero in an interesting
fragment of his speech for Securitas (Deu. Leg. et
Anc. Geog. vol. ii. p. 275.) Avienus mentions
the "wild Libyphoenicians" on the S. coast of Spain,
E. of Calpe. (Or. Mar. 419.) Perhaps the half-
bred races of the Spanish colonies in America furnish
the closest analogy that can be found to the Liby-
phoenician subjects of Carthage. [I. S.]

LIBYSSA (Λιβυσσα or Λιβυσσα, Liv. vi. i. 13;
Eth. Λιβυσσας), a town on the north coast of
Sic as Ateneum in Byzantium, on the frontier
of Xi-
cura in Chalcid. It was celebrated in ancient

---

The place containing the tomb of the great Han-
ibal. (Plat. Flav. 20; Stephan. B. z. s. v.; Plin. H. N.
v. 43; Ann. Marc. xii. 9: Entretp. iv. 11; Flin.
Ant. p. 133; R confirms. p. 572.) In Pliny's time
and to no longer existed, yet the site was noticed
only because of the tumulus of Hannibal. Accord-
ing to Appian (Syr. 11), who evidently did not know
the town of Libyssa, a river of Pyrgia was called
Libyus, and he states that from it the sur-
rounding country received the name of Libyus.
The slight resemblance between the name Libyus
and the modern Ghebus has led some geographers
to regard the latter as the site of the ancient town;
but Livy and Suetonius (Dom. 9), on an accurate
computation of distances, has shown that the modern
Libyus is much more likely to be the site of
Libyus. [L. S.]

LICATTI, or LICATTI (Λικάττιο, or Λικάττυρο),
a tribe of the Vindelicis, dwelling on the banks of the
river Licius or Licus, from which they derived their
name. (Plin. ii. 13. § 1.) Strabo (iv. p. 206)
mentions them among the most audacious of the
Vindelicis tribes. Pliny (iii. 24), who calls them
Licatii enumerates them among the Allobroges
subdued by Augustus. [L. S.]

LICCHADES (αι Λικθάδης), a group of three
small islands between the promontory of Cenaeum
in Euboea and that of Chironis in Locris. They
are said to have derived their name from Licabes,
who was here thrown into the sea by Hercules,
when he was suffering from the poisoned garment.
(Stраб. l. p. 60; ix. p. 426; Plin. iv. 12. s. 20; Leuke,
Northern Greece, ed. p. 177.)

LICIAS, LICUS (Λικαίοις: Λικος), a small river
in Vindelia. (Plin. ii. 12. § 2, 13. § 1; Ven.
Fort. 172. S. Mart. iv. 641.) It assumed the modern
form of its name as early as the time of the Lon-
bards (Paul. Dian. Longolo, ii. 13.) Its only tribu-
tory of any note was the Virio or Vindo. It has its
sources in the Alps, and, flowing in a northern direc-
tion, empties itself into the Danube, not far from
Drumacun. [L. S.]

LICCIANA. [LUSITANIA.]

LIDE (Λίδη), a mountain in Caria, in the neigh-
borough of Pedasus. In the war of Cyrus against
the Carians, the Pelasgeans alone of all the Carians
maintained themselves against Harpalus, the Persian
commander, by fortifying themselves on Mount Lide;
but in the end they were also reduced. (Herod. i.
175. viii. 104.) [L. S.]

LIGIUS, a people of Gallia Narbonensis, men-
tioned by Pliny (iii. 4): "Regio Ombriorum Ligau-
norumque: super quos Snetri, &c." The next 
region to the east that he mentions is "Regio Deci-
atum." If we can make a safe conclusion from
Pliny's text, the Luginii must have been close to the
Oxybius, with the Deciates to the cast, and some-
where between the Argentum river and Antipolis.
Wackenier (Geog. gc. vol. ii. p. 42) places the
Luginii in the parts about Saint-Vallier, Collores,
and others. [G. L.]

LIGER, LIGERIS (Λιγήρις, Λιγερίς: Λιβερα), a river
of Gallia, which has the largest basin of all the
French rivers. The orthography seems to be Liger
or Λιγήρα (Caes. iii. 9, ed. Schneider), though the
Romans made both syllables short. In Caesar (vii.
53), the nominative "Liger" occurs, and the genit" Ligeris," in B. G. vii. 5, 11, the accusative "Ligeri-
orum," or perhaps to some editions "Ligerini,""Lig-
erni," if it is right, must have a nominative "Ligeris."
The forms "Ligeri," "Li-
The source of the Loire, and on the north-west side of the Cevennes. It flows north through the fertile
Lingaue d'Auzercque, and after a course of about 200 miles joins the Loire at Noviodunum or
Nemossus (Noves). The Loire rises in Mont Mezenc, and flows north to its junction with the Allier in
a valley between the valley of the Allier and the basin of the Rhone. From Noves the course of the Loire
is north-west to Gennes ( Orleans); and from Orleans it has a general west course to the ocean,
which it enters below Nantes. The whole length of the river is above 500 miles. Several large rivers
flow into it on the left side below Orleans; and the Mayenne on the right side below Tours. The area
of this river-basin is 50,000 square miles, or as much as the area of England. The drainage from
this large surface passes through one channel into the sea, and when the volume of water is increased
by great rains it causes inundations, and does great

LIGURIA. [Lucan 438] is generally cited as authority for the Roman quantity of the word;

Andus [made as Ligeris reformer ab unda].

But these verbs are spurious. (See the Notes in Oudendorp's edition.) According to Strabo, the
Loire rises in the Cévennes (in Campania), and flows into the ocean. But he is mistaken as to the
course of the Loire, for he makes both the Garumna and the Liger flow parallel to the Pyrenées; and he
was further mistaken in supposing the axis of the
Pyrenées to be south and north. [Gallica Trans-
Alpina, vol. i. p. 949.] He estimates the navigable
part of each river at 2000 stadia; but the Loire is
a much longer river than the Garumna. He says
that the Loire flows past Genabum (Orléans),
and that Genabum is situated about half way between
the commencement of the navigable part of the river
and its outlet, which lies between the territory of the
Pictones on the south, and the territory of the
Navannes on the north; all which is correct enough.
(Strob. iv. pp. 189, 190, 191.) He adds that there
was a trading place (placed in the same region), named Corbilo
[Cordilo], on the river, which Polybius speaks of.
It appears that Strabo did not distinguish the Elaver
(Allier) from the Loire, for he says: "the Arverni
are situated on the Liger, and their chief city is
Nemossus, which lies on the river; and this river,
flowing past Genabum, the trading town of the
Car
notes, which is situated about the middle of the
navigable part, discharges itself into the ocean"
(p. 191). But Nemossus is near the Allier.

Caesar was acquainted both with the Elaver (vii.
34, 35) and the river properly called the Loire.
He crossed the Elaver on his march to Gerovia.
[Gerovia.] He remarks that the Allier was not
necessarily fordable before the autumn; and in another
place (B. G. vii. 35) he describes his passage over
the Loire at a season when it was swollen by the
melted snow. When Caesar was preparing for his
military warfare with the Veneti, he had ships built
on the Loire. (B. G. iii. 9.) He does not tell us
where he built them, but it may have been in the
country of the Andes or Andecavi, which he held at
that time.

Of the four passages which were made in Strabo's
time from Gallia to Britannia, one was from the
mouth of the Loire; and this river was one line of
commercial communication between the Province
and Britannia. Goods were taken by land from
the Provence to the Loire, and then carried down
the Loire. (Strob. iv. p. 189.) Pliny (iv. 18) calls the
Loire "a Sena clamur," which Forbiger explains
by the words "clear stream," but this does not
seem to be what Pliny means. Tibullus (i. 7, 11)
says,

"Testis Arct Rhodanque celeberrimum Car-
rumna,
Carnti et flavi caerulea lympha Liger."

This seems to be all that the ancient geographers
have said of the Loire. The Elaver (Allier) rises
in Mons Lestra (Mont Lestrore), not very far from

§ 4

LIGURES. [Liguria.] LIGURES BAEHEL'ANI ET CORNELIANi [Hirpini.]

LIGURIA (Arcopagia, Poli.; but in earlier Greek
writers always Ἀρκασ'ειος; the people were
called by the Greeks Arcopagia, but by later writers
Arcopagioi; the Romans Ligures; but the adja-
cent forms Ligiones, Ligurivm, etc., are employed by
geographers or regions of Northern Italy, extending along the
north coast of the Tyrrhenian sea, from the frontiers of Gaul to those of Etruria. In the more precise and
definite sense in which the name was employed from the time of Augustus, and in which it is used by the
geographers (Strabo, Pliny, Ptolemy, &c.), Liguria was
bounded by the river Vurus on the W., and by
the Meta on the E., and towards the N. it extended
across the chain of the Maritime Alps and Apennines
as far as the river Padus. The Trebia, one of the
estuaries of the Padus on its right bank, appears to
have formed the limit which separated Liguria from
Galla Cisalpina. In this sense, Liguria constituted
the ninth region of Italy, according to the division
of Augustus, and its boundaries were fixed by that
monarch. (Plin. iii. 5. s. 7; Strab. v. p. 218; Mel.
ii. 4. § 9; Pol. iii. 1. § 3.) But Liguria, in its original
sense, as "the land of the Ligurians," comprised a much more exten-
sive tract. All the earliest authors are agreed in representing the tribes that occupied the western
slopes of the Maritime Alps and the region which
extends from thence to the sea at Massilia, and as
far as the mouths of the Rhone, as of Ligurian,
and not Gaulish origin. Thus Asclepius repre-
sents Hercules as contesting with the Ligurines
on the stony plains near the mouths of the Rhone;
Herodotus speaks of Ligurians inhabiting the country
above Massilia, and Hecateus distinctly calls Mas-
silia itself a city of Liguria, while he terms Narbo
a city of Gaul. Silvius also assigns to the Ligurians
the coast of the Mediterranean sea as far as the
mouths of the Rhone; while from that river to
Emporion in Spain, he tells us that the Ligurians
and Iberians were intermingled. The Helvii, who,
according to Avienus, were the earliest inhabitants
of the country around Narbo, were, according to
Hecateus, a Ligurian tribe. (Aschyl. op. Strab.
iv. p. 183; Heaut. Fr. 19, 20, 22, ed. Clausen;
Herod. v. 9; Syll. p. 3. §§ 3, 4; Avien. Or. Marit.
584; Strab. iv. p. 203.) Thucydides also speaks
of the Ligurians having expelled the Sicanians, an
Iberian tribe from the banks of the river Scamus, in
Liguria.

Liguria, thus pointing to a still wider extension of their power (Thuc. vi. 2). But while the Ligurian settlements to the W. of the Rhone are more obscure and uncertain, the tribes that extended down that river to the Maritime Alps and the confines of Italy—the Edries, Oxybii, and Decobates—are ascribed on good authority to the Ligurian race. (Curt. v. 10. 2.) For their eastern frontier, also, the Ligurians were at one time more widely spread than the limits above described. Polybius tells us that in his time they occupied the sea-coast as far as Pisa, which was the first city of Etruria; and in the interior they hold the mountain districts as far as the confines of the Apennines. (Vol. ii. 16.) In the narrative of their wars with Rome in the 2nd century B.C., as given in Livy, we find them extending to the same limits; and Polychron represents them at a much earlier period as stretching far down the coast of Etruria, before the arrival of the Tyrrhenians, who wrested from them by force of arms the site of Pisa and other cities. (Lycophr. Alex. 1356.) The population of Corsica also is ascribed by Seneca, and probably with good reason, to a Ligurian stock. (Constr.) On the N. of the Apennines, in like manner, it is probable that the Ligurians extended far beyond their present limits, before the settlement of the Gauls, who occupied the fertile plains and drove them back into the mountains. Thus the Lauvi and Libici, who occupied the banks of the Ticinus, appear to have been of Ligurian race (Phin. iii. 17. s. 21; Liv. v. 35): the Taurini, who certainly dwelt on both banks of the Padus, were unquestionably a Ligurian tribe; and there seems much reason to assign the same origin to the Salassi also.

In regard to the national affinities or origin of the Ligurians themselves, we are also wholly in the dark. We know only that they were not either Iberians or Gauls. Strabo tells us distinctly that they were of a different race from the Gauls or Celts who inhabited the rest of the Alps, though they resembled them in their mode of life. (Strab. ii. p. 128.) And the same thing is implied in the marked distinction uniformly observed by Livy and other Roman writers between the Gauls and Ligurians, notwithstanding their close geographical proximity, and their frequent alliance in war. Dionysius says that the origin and descent of the Ligurians was wholly unknown, and Cato appears to have acquiesced in a similar conclusion. (Dionys. i. 10; Cato, ap. Serv. ad Aen. xi. 715.) But all ancient authors appear to have agreed in regarding them as one of the most ancient nations of Italy; and on this account Philistus represented the Siculi as a Ligurian tribe, while other authors assigned the same origin to the Abodritakes of Latium. (Dionys. i. 10, 22.) Several modern writers have maintained the Celtic origin or affinity of the Ligurians. (Claver, Ital. pag. 49—51; Gentile, Alt-Italia, vol. ii. pp. 5—7.) But the authority of Strabo seems decisive against any close connection between these two races: and it is impossible, in the absence of all remains of their language, to form even a reasonable conjecture as to their more remote affinities. A fact mentioned by Pausanias (Mar. 19), according to whom the Ligurians in the army of Marius called themselves in their own language Ambrosc, though curious, is much too isolated and uncertain to be received as reasonable proof of a common origin, with the Gauls of that name.

The name of the Ligurians appears to have been obscurely known to the Greeks from a very early period, for even Herodotus noticed them, in conjunction with the Sicyonians and Atchinians,—evidently as one of the most distant nations of the then known world. (Herod. v. 300.) But from the time of the foundation of the flourishing Greek colony of Massilia, which speedily extended not only its influence, but its colonists, over the coast of Liguria, as well as those of Ierica, the name of the Ligurians must have become familiar to the Greeks, and was, as we have seen, well known to Hecataeus and Aeschylos. The Ligurians seem also from an early period to have been ready to engage as mercenary troops in the service of more civilized nations; and we find Ligurian auxiliaries already mentioned in the great army of the Carthaginian general Hamilcar, in B.C. 450. (Herod. vii. 165; Dion. xli. 1.) The Greek despotas in Sicily continued to recruit their mercenary forces from the same quarter as late as the time of Agathocles. (Diod. xxii. 3.) The Greeks of Massilia founded colonies along the coast of Liguria as far as Niana and the Portus Herculis Mauritici; but evidently never established their power far inland, and the mountain tribes of the Ligurians were left in the enjoyment of undisputed sovereignty.

It was not till the year 237 B.C., that the Ligurians, for the first time, came into contact with the arms of Rome; and P. Lentulus Caemelius, one of the consuls of the following year, was the first who celebrated a triumph over them. (Eutrep. iii. 2; Liv. Epit. xx. 6; Fast. Capit.) But the successes of the Romans at this period were evidently very partial and incomplete, and though we find one of the consuls for several years in succession sent against the Ligurians, and the name of that people appears three times in the triumphal Fasti (B.C. 233—223), it is evident that nothing more was accomplished than to prevent them from keeping the field and compel them to take refuge in the mountains (Dion. xvi. 18. 19). The Ligurian tribes with whom the Romans were at this time engaged in hostilities were exclusively those on the N. of the Apennines, who made common cause with the neighboring Gauls against the Romans. But the Ligurian petty hostilities were for a time interrupted by the more important contest of the Second Punic War. During that struggle the Ligurians openly sided with the Carthaginians: they sent support to Hannibal, and furnished an important contingent to the army with which Hasdrubal fought at the Metaurus. Again, before the close of the war, when Mago landed in their territory, and made it the base of his operations against Caius Paullus Gaal, the Ligurians espoused his cause with zeal, and prepared to support him with their whole forces (Liv. xxii. 33, xxvii. 47, xxviii. 46, xxix. 5). After the untimely fate of Mago, and the close of the war, the Romans were in no haste to punish the Ligurians and Gauls for their defection, but those nations were the first to take up arms, and, at the instigation of the Carthaginian Hannibal, broke out into open hostilities, (B.C. 208), and attacked the Roman colonies of Placentia and Cremona. (Liv. xxxi. 10.)

From this time commenced the long series of wars between the Romans and Ligurians, which continued with little interruption for above 150 years. It would be impossible to give here any detailed account of these long protracted, but desultory hostilities; indeed we possess, in reality, very little information concerning them. So long as the books of Livy are pre-
LIGURIA.

served to us, we find perpetually recurring notices of campaigns against the Ligurians; and while the Roman arms were overthrowing the powerful empires of Macedonia and Syria in the East, one, and sometimes both, of the consuls were engaged in petty and inglorious hostilities with the busy mountaineers of Liguria. But the annual records of these campaigns for the most part throw little light on the true state of the case or progress of the Roman arms. It is evident, indeed, that, notwithstanding the often repeated tales of victories, frequently celebrated at Rome by triumphs, and often said to have been followed by the submission of the whole Ligurian nation, the struggle was really an arduous one, and it was long before the Romans made any real progress in the reduction of their territory.

One of the most formidable and powerful of the Ligurian tribes was that of the Apuani, who inhabited the lofty group of mountains bordering on Etruria, and appear to have been founded in the valleys of the Maera and Ansar (Majoa and Serchio), where they extended eastwards along the chain of the Apennines to the frontiers of the Arretines and the territory of Mutina and Bononia. To oppose their invasions, the Romans generally made Piæa the head-quarters of one of their armies, and from thence carried their arms into the heart of the mountains; but their successes seldom effected more than to compel the enemy to disperse and take refuge in their mountain castles, of which the chief are mountain fastnesses in which they were generally able to defy the Roman arms. It was not till B.C. 180 that the first effectual step was taken for their reduction, by the consuls Cornelius and Aeclanis, who, after having compelled them to a nominal submission, adopted the expedient of transporting the whole nation (to the number of 40,000, including women and children) to a distance from their own country, and settled them in the heart of Samnium, where they continued to exist, under the name of "Ligures Cornéliiani et Beaucoli," for centuries afterwards. (Liv. xl. 58, 41.) The establishment of Roman colonies at Piæa and Luca a few years afterwards tended to consolidate the conquest thus obtained, and established the Roman dominion permanently as far as the Maera and the port of Luna. (Id. xl. 43, xli. 13.) The Fimnetariæ, a tribe on the N. of the Apennines, near the sources of the Sculentana (Pamora), had been reduced to subjection by C. Fimnetarius in B.C. 187, and the obscure tribes of the Bruniales, Curiali, Hercantes, and Laperini appear to have been finally subdued in B.C. 175. (Id. xxxix. 2, xlii. 19.) The Inganni, one of the most powerful tribes on the coast to the W. of Genoa, had been reduced to nominal submission as early as B.C. 181, but appear to have been still very imperfectly subdued; and they, as well as their neighbours the Intenueli, continued to harass the Romans, as well as of their allies the Masilians, by piratical expeditions. (Liv. xl. 18, 23, xli. 41.) In B.C. 173 the Statteleli were reduced to subjection (Id. xlii. 8, 9); and the name of this people, which here appears for the first time, shows that the Romans were gradually, though slowly, making good their advance towards the W. From the year 167 B.C., when we lose the guidance of Livy, we are unable to trace the Ligurian wars in any detail, but we find triumphs over them still repeatedly recorded, and it is evident that they were still unsubdued. In B.C. 154 the Romans for the first time attacked the Ligurian tribes of the Oxypoli and Deciates, who dwelt W. of the Varus, and were therefore not included in Italy, according to its later limits. (Liv. Epit. xivii.; Polyb. xxxiii. 7.) It was not till more than thirty years afterwards (n. c. 123—122) that two successive triumphs celebrated the reduction of the more powerful tribes of the Vescotti and Saluvii, both of them in the same neighbourhood. But while the Ligurian tribes W. of the Maritime Alps were thus brought gradually under the Roman yoke, it appears that the submission of those in Italy was still incomplete; and in B.C. 117, Q. Marcellus for the last time earned a triumph "de Liguribus." (Fast. Capit.) Even after this, M. Aurelius Scarrus is said to have distinguished himself by free-handed successes over them; and the construction by him (n. c. 109) of the Via Aureliana, which extended along the coast from Luna to Vada Sabakata, and from thence inland across the Apennines to Derbena, may be considered as marking the period of the final subjugation of Liguria. (Strab. v. p. 217; Ann. Vict. de Kir. Illustr. 72.) But a remarkable expression of Strabo, who says that, after eighty years of warfare, the Romans only succeeded in securing a space of 12 stadia in breadth for the free passage of public officers, shows that even at this time the submission of the mountain tribes was but imperfect. (Strab. iv. p. 203.) These which inhabited the Maritime Alps, indeed, were not finally reduced to obedience till the reign of Augustus, B.C. 14. (Dion Cass. liv. 24.) This had, however, been incompletely effected at the time that Strabo wrote, and Liguria had been brought under the same system of administration with the rest of Italy. (Strab. l. c.) The period at which the Ligurians obtained the Roman franchise is unknown; it is perhaps probable that the towns obtained this privilege at the same time with those of Carn-et-Gaul (n. c. 89); but the mountain tribes, even in the days of Pliny, only enjoyed the Latin franchise. (Plin. iii. 20, s. 24.)

In the division of Italy under Augustus, Liguria (in the more limited sense, as already defined) constituted the ninth region (Plin. iii. 5 s. 7.), and its boundaries on the E. and W. appear to have continued unchanged throughout the period of the Roman Empire; but the Cottian Alps, which in the time of Augustus still constituted a separate district under their own native chieftain, though dependent upon Rome, and, from the reign of Nero to that of Constantine, still formed a separate province, were incorporated by Constantine with Liguria; and from this period the whole of the region thus constituted came to be known as the Alpes Cottiae, while the name of Liguria was transferred (on what account we know not) to the eleventh region, or Gallia Transpadana [Italia, p. 93]. Hence we find late writers uniformly speaking of Mediolanum and Ticinum as cities of Liguria, while the real land of the Ligurians had altogether lost that appellation, and was known only as the province of the Cottian Alps." (Lib. Provin. 17; Duc. Hist. Long. i. 15, 16; Journal. Grec. 30, 42; Pline. H. E. li. 14; Duc. Hist. Not. Dign. ii. pp. 442, 443.) It is evident that long before this change took place the Ligurians must have lost all traces of their distinct nationality, and become blended into one common mass with the other Italian subjects of Rome.

Liguria is throughout the greater part of its extent a mountainous country. The Maritime Alps, which formed the western boundary, descend completely to the sea in the neighbourhood of Nice and
LIGURIA.

Memories, while the main chain of the same mountains, turning off from the general direction of the central chain of the Alps near the sources of the Var (Varus), is prolonged in a lofty and rugged range till it reaches the sea between Noli and Savona. The lateral ranges and offsets which descend from these mountains to the sea occupy the whole line of coast from Monaca to Savona. Hence this line has always been one where there has been much difficulty in making and maintaining a practicable road. It was not till the reign of Augustus that the Romans carried a highway from Vada Sabbata to Antipolis; and in the middle ages, when the Roman roads had fallen into decay, the whole of this line of coast became proverbial for the difficulty of its communications. Hence, *Paus. ii. 49. 9.* From the neighbourhood of Vada Sabbata, or Savona, where the Alps may be considered to end and the Apennines to begin, the latter chain of mountains runs nearly parallel with the coast of Liguria throughout its whole extent as far as the river Macra; and though the range of the Apennines is far inferior in elevation to that of the Maritime Alps, they nevertheless constitute a mountain mass of a rugged and difficult character, which leaves scarcely any level space between the foot of the mountains and the sea. The northern declivity of the Apennines is less abrupt, and the mountains gradually subside into ranges of steep wooded hills as they approach the plains of the Po; but for this very reason the space occupied by the mountainous and hilly tract is more extensive, and constitutes a broad belt or band varying from 15 to 30 miles in width. The narrowest portion of the range, as well as one of the lowest, is immediately at the back of Genoa, and for that reason the pass from that city to Dertona was in ancient as well as modern times one of the chief lines of communication with the interior. Another natural pass is marked out by a depression in the ridge between the Maritime Alps and Apennines, which is crossed by the road from Savona to Cervia. This line of road communicates with the plain at the N. foot of the Maritime Alps, extending from the neighbourhood of Comi and Mondovi to that of Turin, which is one of the most extensive tracts of fertile and level country comprised within the limits of the ancient Liguria. E. of this, the Apennines and Maritime Alps separate from the foot of this range the Apennines (of the northern slopes of which they are, in fact, a mere continuation) quite to the bank of the Po; but are of moderate elevation and constitute a fertile country. Beyond these, again, another tract of plain occurs, but of less extent; for though it runs far up into the mountains near Noli, it is soon beheaded in again by the hills which descends to Tortona (Dertona), Voghera (Iria), and Casteggio (Chabialium), so as to leave but a narrow strip of plain between them and the banks of the Po. The physical features of Liguria naturally exercised a marked influence on the character and habits of its inhabitants. It was with the tribes who occupied the lofty and rugged ranges of the Apennines E. of the Muria (where these mountains rise to a much greater elevation, and assume a much more Alpine character, than in any part of Liguria proper) that the Romans wagled their longest and most obstinate contests; but all the tribes who inhabited the upper valleys of the central chain, and the steep and rugged defiles of the Apennines towards the sea, partook of the same hardy and warlike character. On the other hand, the Statelli, Vogheria, and other tribes who occupied the more fertile hills and valleys on the N. declivity of the Apennines, were evidently reduced with comparatively little difficulty. It is to the former portion of the Ligurian people that the character and description of them which we find in ancient writers may be considered almost exclusively to apply. Strabo says that they dwelt in scattered villages, tilling the soil with difficulty, on account of its rugged and barren character, so that they had almost to quarry rather than dig it. But their chief subsistence was derived from their cattle, which supplied them with flesh, cheese, and milk; and they made a kind of drink from barley. Their mountains also supplied timber in great abundance and of the largest size. Genoa was their principal emporium, and thither they brought, for export, timber, cattle, hides, and honey, in return for which they received wine and oil. (Strab. iv. p. 202, v. p. 218; *Diod.* v. 39.) In the days of the geographer they produced but little wine, and that of bad quality; but Pinye speaks of the Ligurian wines with commendation. (Strab. p. 202; *Plin. xiv. 6. 8.*) The nature of their country and the life they led invited them to hardships ("assumptum male Ligurnem," *Verg.* G. ii. 168.; "Ligures montani curi et agrestes," *Cic.* de nat. aev. ii. 55.); and they were distinguished for their discipline, which admirably fitted them for the chase, as well as for the kind of predatory warfare which they so long maintained against the Romans. Cato gave them the character of being treacherous and deceitful,—an opinion which seems to have been generally adopted by the Romans (*Serv. ad Aen. xi. 700, 715,* and must naturally have grown up from the nature of the wars between them; but they appear to have served faithfully, as well as bravely, in the service of the Greeks and Carthaginians, as their mercenary troops, as well as those of Rome. (*Diod.* v. 39.; *Plut. Mar. 19.* Tac. *Hist.* ii. 14.) The troops they furnished were almost exclusively infantry, and, for the most part, light-armed; they excelled particularly as slingers (*Psuedo Arist., Milab. 90,*); but their regular infantry carried oblong shields of brass, resembling those of the Greeks. (*Diod.* l. c.; *Strab.* iv. p. 202.) During the period of their independence, they not only made plundering incursions by land into the neighbouring countries, but carried on piracy by sea to a considerable extent, and were considered as a dangerous class, being skilled and daring as navigators, as well as in all their other pursuits. (*Diod.* v. 39.; *Liv. xii. 18. 28.*) The mountain tribes resembled the Gauls and Germans in the custom of wearing their hair long; on which account the wilder tribes, which were the last to maintain their independence, were known as the Ligures Capillati or Comati (*Aitones Comatari, Dio Cass. liv. 24.; *Plin. iii. 20. s. 24.; *Lecan. 1. 442.*); and the cropping their hair was regarded as a proof of their subjection to Rome. Among the more peculiar natural productions of Liguria are noticed a breed of dwarf horses and mules, called by the Greeks *pistos*; and a kind of mineral resembling amber, called *arytoporos*, which appears to have been confounded by Theophrastus with genuine amber. (*Strab.* iv. p. 202; *Theophr. de Lapal. §§ 28, 29.*)

The Ligurians were divided, like most nations in a similar state of society, into a number of tribes, which at first had little, if any, political band of union beyond the temporary alliances which they might form for warlike objects; and it is evident, from the account of the wars carried on by
them with the Romans, that these leagues were extremely variable and partial. The names of many of the different tribes have been transmitted to us; but it is often difficult, or impossible, to determine with any degree of certainty the situation and limits of their respective territories. It is probable, as pointed out by Pliny, that these limits themselves varied much at different times (Plin. iii. 5. s. 6), and many of the minor tribes, whose names are mentioned by Livy in the history of the Roman conquest of Liguria, seem to have at a later period disappeared altogether.* The only tribes concerning whom we have any tolerably definite information are:—1. The AVAVES, in the valley of the Macra, and about the Portus Lunae; but the greatest part of the territory which had once belonged to this powerful tribe was not included in Roman Liguria. 2. The BRIANIATES, who may be placed with much probability in the upper valley of the Scultenum, or PONARE, on the N. slope of the Apennines towards Mutina (a district still called Frigynum) as that also were excluded from Liguria in the later sense of the term. 3. The BRITANNIATES may perhaps be placed in the valley of the Tarna, the most considerable affluent of the Magma, called in Pliny the Batuana. The GENUATES, though only from an inscription [GENUA], were obviously the inhabitants of Genua and its immediate neighbourhood. 5. The VETERNI, mentioned in the same inscription, joined the Genuates on the W., and were apparently separated from them by the river FORETANA, or POLEVERNA. 6. The more powerful and celebrated tribe of the IINGI was placed with certainty on the coast near ALBENAGA (Albium Innamum), though we cannot fix their limits with any degree of certainty. The INIUMLI, or INIUMLI-occupied part of the W. of the Ingauni; their chief town was ALBUM Intemelium, now VINTINGIGLIA. 8. The VIETANI inhabited the country on both sides of the Varus, as their name is evidently retained by the town of TACCO, some miles W. of that river; while CEMENLINA, about 5 miles to the E. of it, also belonged to them. (Plin. iii. 5. s. 7) Of the tribes N. of the Apennines, or inhabiting the valleys of that range which slope towards the Padus, the most conspicuous were the TARIUMENES, whose capital was AUGUSTA VAGNORUM, now BEVE, between the STURA and the TANOARE, while their confines appear to have extended as far as the MONTI VISO and the sources of the PO. 2. The TAUINI, whose position is marked by the celebrated watering-place of AQUAE SACELLATAS, now ACQUI. 3. The TAUINI, whose capital was AUGUSTA TAUNORUM, now TURIN, and who appear to have occupied the whole country on both sides of the Padus, from the foot of the CETITAN Alps to the limits of the TARUMENES (Pier. lii. 3; Plin. iii. 5. s. 7) may be placed, according to a local antiquary, in the hills of the Astignana. (Durandi, Pieneunte Caspadao, cited by Wackenroder, Geog. des Gauz. vol. i. p. 161.) 5. Of these, it should be placed several smaller tribes mentioned by Livy in the history of the Roman wars with Liguria, and of which we know only that they were situated on the X. side of the Apennines. These are the CELURATES, CERDICHATES, and apparently the HYATIES also. (Liv. xxxii. 29, 31.) 6. The EPANTERI are mentioned also by LIVY (xxxii. 46) as a tribe who occupied the mountains above the INGAUNI; but no subsequent mention of them occurs.

In addition to these, Livy notices the GARULI, HERCATA, and LUPICINI, as situated on the S. side of the Apennines (xii. 19), but we have no further clue to their position. Pliny also enumerates (iii. 5. s. 7) among the Ligurian tribes on the Italian side of the Alps, the VENETI, BIBELI, MAGELI, CASMOATES, and VELETES, of which the last doubtless occupied the country around VELA, which still remain about eighteen miles S. of PLACENTIA. The others are wholly unknown, and their names themselves vary so much in the MSS. as to be of very doubtful authority.

The coast of Liguria, as already described, is bordered closely throughout its whole extent by the ranges of the Maritime Alps and Apennines, which for the most part rise very abruptly from the sea-shore, in other places leave a narrow strip of fertile territory between their foot and the sea, but nowhere is there anything like a plain. The coast also affords very few natural ports, with the exception of the magnificent bay called the Portus Lunae (now the Gulf of Spezia) near its eastern extremity, which is one of the most spacious and secure harbours in the Mediterranean. The port of GENOA also caused it to be frequented from the earliest times as a place of trade (Strab. i. p. 202), while the Portus Herculei MONOCÖ E (Monaco), though small, was considered secure. It is singular that the much more numerous and secure harbours of VILLEFRANCHE, or the same neighbourhood, is not mentioned by any ancient writer, though noticed in the Maritime Itinerary under the name of Portus Olivauincta. The same Itinerary (pp. 503, 504) notices two small ports, which it places between this last and that of MONOCÖ, under the names of AIMO and AVISIO, which probably may be placed respectively at S. ORPISIO and EZA. [NICARA.] The Portus MAUCRO, of the same Itinerary is still called Porto MURRINICO, a small town about two miles W. of OUEGLIA.

The rivers of Liguria are not of much importance. From the proximity of the mountains to the S. coast, the streams which descend from them to the sea are for the most part mere mountain torrents, altogether dry in summer, though violent and destructive in winter and after heavy rains. Almost the only exceptions are the two rivers which formed the extreme limits of Liguria on the E. and W., the MACRA and the VARUS, both of which are large and perennial streams. Next in importance to these is the RUBICA, or BOJIO, which flowed through the country of the INTERI. It rises at the foot of the COL di TENDA, in the Maritime Alps, and has a course of above 36 miles from thence to the sea at VINTINGIGLIA. The smaller streams on the S. coast were:—the PAULO (FAGIONE), which flowed by the walls of NICARA (Plin. iii. 5. s. 7; Mel. ii. 4. § 9); the TAVIA (Rem. Marit. p. 563) still called the TAGNA, between S. REMO and PORTO MARCO; the MARCHA (Plin. l. c.), which still retains its name, and falls into the sea between OUEGLIA and ALBENAGA; the PORCIERA of Pliny (l. c.), now called the POLEVERNA, which flows a few miles to the W. of GENOA; the FERRATO (ib.), on the E. of the same city, now the BISAGNO; the ESTELLA (Ptol. iii. 1. § 3), which is probably
LIGURIA.

the Laratia, that falls into the sea at Chiavari, and the Bacates of the same author, which can be no other than the Varus, the most considerable tributary of the Apennines. Much more considerable than those, both in the volume of water and length of their course, are the streams which flow from the X. slopes of the Apennines towards the Po. But of these, the only ones whose names are found in any ancient author, are the Tanarus, or Tanaro, one of the streams which run out of the southern tributaries of the Po; the Struna, which joins the Tanarus near Polentia; and the Trinia, which rises in the Apennines, not far from Genoa, and falls into the Po near Placentia, forming during a part at least of its course the boundary between Liguria and Gallia Cispadana.

The rivers marked in this part of Italy in the Tabula are so confused, and the names so corrupt, that it is useless to attempt to identify them.

The native Ligurian names of the most part in mere villages and mountain fastnesses ("castella vikica," Liv. xlv. 17; Strab. v. p. 218), and had probably few towns. Even under the Roman government there seem to have been few places which deserved the name of town along the seacoast, or among the inner ranges of the Apennines; but on the northern slopes of the same mountains, where they approached or opened out into the plains, these grew up rapidly and rose to great prosperity,—so that Pliny says of this part of Liguria in his time, "omnia nobilissimis oppidis intenta" (Plin. iii. 5. s. 7). Those which he proceeds to enumerate are:—LIGARNA (between Arguta and Serarauli). BERTONA (Tortona), IRAS (Vo-
ybera), BARREDATA (it uncertain), INDUSTRA (at Monten, on the right bank of the Po), POL-LENTIA (Polenza), CARREA POTENTIA (uncertain), FORUM PULCHRI, called VALENTUSM (Valcana), ARISGA VAGHINORUM (Baceno), ALBA POMELLA (Alba), ASTA (Asti), AGUS STAFFELLOR (Arquy). To these may be added ACQUI in Pisanum, which was certainly a Ligurian town, though, from its position on the left bank of the Po, it is enumerated by Pliny with the cities of the xith region, or Gallia Transpadana. In the same district were FORUM VIBEI, in the territory of the Vasienses, and OCILLOM, now Ocena, in the valley of Finestrilles. Segnovia (Stena) was probably a Galliche rather than a Ligurian town. In addition to these may be mentioned CLASTIDUM (Castiglione), which is expressly called by Livy a Ligurian town, though situated on the Gallische frontier, and Clavia, now Covra, in the upper valley of the Tornara. Litibium, mentioned by Livy together with Clastidium (xxxi. 29), and Carystium, noted by the same author as a town of the Statelli (xiii. 7), are otherwise wholly unknown.

Along the coast of Liguria, beginning from the Varus, the towns enumerated by Pliny or Ptolemy are:—NICA (Vece), CLEMENIUM (Cinice, a short distance inland), POLITUS HERULUS MONOCRI (Horolus), ALBIA HERULUS (Vintimiglia), ALBIA INGULCHUM (Albenga), VADA SABATA (Vado, near Savona), Genua, POLITUS DELPHINI (Porto Fino), Teullia (probably Trepon, near, Note)) SEGNETA (probably SCORI), POLITUS VENETIS (Porto Teghe), and POLITUS EURUS (Liveri), both of them on the Gulf of Spezia, which was called as a whole the POLITUS LUNAE. The other names enumerated in the Itineraries are for the most part very obscure and uncertain, and many of them, from their very form, are obviously not the names of towns or even villages, but of mere stations or "mutations." The few which can be determined with any certainty have their modern names annexed in the Itineraries here given.

1. The coast road from the Varus to the Maera is thus given in the Tabula Pentingehiana:—

VARUS fl. (Voros), CRONEMIUM (Cinice).

In Alge Martiniana (Turkia), ALBINTIMELIUM (Vintimiglia), COSTA BALIANCA.

LUCA BORMANI.

ADALINGANUM (Albenga).

VADA SABATA (Vado).

VIDUA VIRGINIA.

ALBA DUCITA (Albisola).

AD NAVALIA.

HASTA.

AD FIGLINA.

GENA (Genoa).

RIVIA.

AD SALVIA (Salaro near Chiavari).

AD MANILIA (Moneglia).

In Alge Pentimona.

BIAN.

LUNA (Luni).

2. The same line of route is thus given (in the contrary direction) in the Itinerary of Antoninus (p. 293):—

LUNA.

BEACAS (probably Beacsh fl. the Varus).

BODEIA.

TEUMATA (perhaps identical with the Tiguilia of Pliny: Trepon).

DELPHINUM (Portus Delphini, Plin.: Porto Fino).

GENA (Genoa).

LIBARIUM (Libarumum).*

BERTONA (Tortona).

AGUS (Arquy).

CAXIA.

CANALUM.

VADA SABATA (Vado).

POLPESCEM.

ALDANINGANUM (Albenga).

LUCA BORMANI.

COSTA BALIANCA.

ALBUNITIMELIUM (Vintimiglia).

LAMONUM (Mentana).

ALPERUMARUM (Turkia).

CRONIEMIUM (Cinice).

VARANUM RUMINUM (Vicenza).

(The distances given along this line of route are in both Itineraries so corrupt and confused that they are omitted. For a fuller discussion of the routes in question see Walterkaer, Geographie des Gastes, vol. iii. pp. 18—21; and Soria, Storia dell' antica Liguria, vol. i. pp. 97 100.)

* It is evident that the Antonine Itinerary here quits the coast road, and makes a sudden turn inland to Bertona, and thence back again by Aquae Stariellica to the coast at Vada Sabata, from where it resumes the line of coast road. A comparison with the Tabula (as given in fac-simile by Mannert), in which both lines of road are placed side by side, will at once explain how this error originated; and points out a source of corruption and confusion in our existing copies of the Itinerary, which has doubtless operated in many other cases where it cannot now be so distinctly traced.
LIGUSTICUM MARÉ.

3. The most important of the routes in the interior of Liguria was that passing from Genoa to the island of Libarum to Dertona, from whence a branch communicated, through Ixia and Comillo-
mus, with Placentia; while another branch passed by Aquae Statiliae to the coast at Vada Saba. (The stations on both these roads have been already given in the preceding route). From Aquae Sta-
tiliae another branch led by Pollentia to Augusta Taurinorum. (Tab. Pent.) [E. H. B.]

LIGUSTICUM MAIRE (A Agron picaxuros, Strab. ii. p. 122), was the name given in ancient times to the land by many ancient writers, as well as by Dem-
archus, composing the MARA GALLICAN of the Romans, or the modern Gulf of Lyons. The more limited use of the name seems, however, to have been the more usual, at all events in later times, and is elsewhere adopted by Pliny himself. (Plin. iii. 5. s. 10. 6. s. 12; Strab. L. c.; Pol. ii. § 3; Agathem. i. 3; Dionys. Per. 76; Priscian, Per. 60.) [E. H. B.]

LILAEA (Λίλεα: Eth. Λίλεαται, L.), a town of Phocis, situated at the foot of Mount Parnassus, and at the southern end of the Cephisus. (Hom. II. ii. 322. Hyg. vii. 161. Eur. 960. Apoll. 240. Strab. i. p. 407. 424; Paus. ix. 24. § 1. x. 33. § 5; Stat. Thib. vii. 348.) It was distant from Delphi by the road over Parnassus 180 stadia. (Paus. L. c.) It is not mentioned by Herodotus (viili. 31) among the towns destroyed by the Persians; whence we may conjecture that it belonged at that time to the Dorians, who made their submission to Xerxes. (Leake, Northern Greece, vol. ii. p. 90.) It was destroyed at the end of the Sacred War; but was soon restored, probably, to the carved styli by Demes-
trias, but subsequently threw off the Macedo-
nian yoke. Pausanias saw at Lilaea a theatre, an agora, and baths, with temples of Apollo and Artemis, containing statues of Athenian workman-
ship and of Pentelic marble. (Paus. x. 33. § 4; see also x. § 1. x. 8. § 10; Lyco. 1075; Steph. B. a. r.) The ruins of Lilaea, called Paleokastro, are situated about half a mile from the sources of the Cephisus. The entire circuit of the forti-
fication walls consists, partly founded on the steep descent of a rocky hill, while the remainder encompasses a level space at its foot, where the ground is covered with ruins. Some of the towers on the walls are almost entire. The sources of the Cephisus, now called Kefaloucriés (Κεφαλοκριές), are said by Pausanias very often to issue from the earth, especially at midday, with a noise resembling the roaring of a bull; and Leake found, upon inquiry, that though the present natives had never made any such observation at Kefaloucriés, yet the water often rises suddenly from the ground in larger quantities than usual, which cannot but be accom-

LILLIUM or LILLIUM (Λιλιον, Λιλιον), a commercial place (emporium) on the coast of Bit-
thyria, 40 stadia to the east of Dia; but no par-
ticulars are known about it. (Arrian, Peripl. p. 135; Anonymous. Peripl. 3.) It is possible that the place may have derived its name from the Lilaeus, which Pliny (II. N. v. 43) mentions among the rivers of Bithynia. [L. S.]

LILYBAEUM (Λυλιβαιον: Eth. Λυλιβαιωτης, Li-
lybaetanous : Minyala), a city of Sicily, situated on the promontory of the same name, which forms the extreme W. point of the island, now called Copy-
Boyo. The promontory of Lilybaeum is mentioned by many ancient writers, as well as by Dem-
archus, as one of the three principal headlands of Sicily, from which that island derived its name of Trinacria. It was the most westerly point of the island and that nearest to Africa, from which it was distant only 1000 stadia according to Polybius, but Strabo gives the distance as 1500 stadia. Both statements, however, exceed the truth; the real dis-
tance from Cape Bon, the nearest point of the coast of Africa, being less than 90 geographical miles, or 899 geographical miles. (Strab. ii. p. 123; Polyb. v. v. pp. 237; Mol. ii. 7; Plin. iii. 8. s. 14; Ptol. iv. 3. § 5; Diod. v. 2, xxii. 54; Steph. B. a. r.; Dionys. Per. 470.) The headland itself is a low and rocky point, continued out to sea by a reef of broken rocks and shoals, which rendered the navigation dangerous, though there was a safe port immediately adjoin-
ing the promontory. (Vol. L. e.; Virg. Aen. iii. 706.)

Diodorus tells us distinctly that there was no town upon the spot until after the destruction of Motya by the Carthaginians, in the year 484, which, instead of attempting to re-
move that city, settled its few remaining inhabitants on the promontory of Lilybaeum, which they fortified and converted into a stronghold. (Diod. xiii. 54, xxii. 10.) It is, therefore, certainly a mistake (though one of which we cannot explain the origin) when that author, as early as B. C. 454, speaks of the Lilybaeum and Segesta as engaged in war on account of the territory on the banks of the river Alor in the Vale of Segesta. (B. C. 460, 459.) The promontory and port were, however, frequented at a much earlier period: we are told that the Carthaginians under Pentathlum, who afterwards founded Lipara, landed in the first instance at Lilybaeum (Id. v. 9); and it was also at the point where, in B. C. 409, Hannibal landed with the great Carthaginian armament designed for the attack of Selinus. (Id. xiii. 54.) Diodorus tells us (L. c.) that on the promontory was a vallum (φεραν), from whose the city took its name; this was ob-
viously the same with a source or spring of fresh water rising in a cave, now consecrated to St. John, and still regarded with superstitious reverence. (Fazell. de Sic. Sic., vii. 1; Smyth's Sicily, p. 228.)

It is clear that the new city quickly rose to pro-
spensity, and became an important stronghold of the Carthaginian power, succeeding in this respect to the p. sitition that Motya had previously held. [MOTYA.] Its proximity to Africa rendered it of especial im-
portance to the Carthaginians in securing their com-
munica.tions with Sicily, while the danger which would threaten them if a foreign power were in possession of such a fortress, immediately opposite to the gulf of Carthage, led them to spare no pains for its security. Hence Lilybaeum twice became the last bulwark of their power in Sicily. In B. C. 276 it was besieged by Pyrrhus, who had already reined all the other cities of Sicily, and expelled the Car-

Digitized by Microsoft®
thaegetians from all their other strongholds. But they continued to throw in supplies and reinforcements by sea to Lilybaeum, so that the king, after a siege of two months, was compelled to abandon the enterprise as hopeless. (Diod. xxii. 10. Exc. Hoesch. pp. 498, 499.) But it is the memorable siege of Lilybaeum by the Romans in the First Punic War which is given to that city its chief historical celebrity. When the Romans first commenced the siege in the fifteenth year of the war, B.C. 230, they were already masters of the whole of Sicily, with the exception of Lilybaeum and Drepanum; and hence they were able to concentrate all their efforts and employ the armies of both consuls in the attack of the former city, while the Carthaginians on their side exerted all their energies in its defence. They had just before removed thither all the inhabitants of Selinus (Diod. xxiv. 1. p. 506), and in addition to the citizens there was a garrison in the place of 10,000 men. (Pol. i. 42.) The city appears to have occupied the whole of the promontory, and was fortified on the land side by a wall flanked with towers and protected by a deep ditch. The Romans at first attacked this vigorously, but all their efforts were frustrated by the courage and activity of the Carthaginian commander Himilco; their battering engines were burnt by a sally of the besieged, and on the approach of winter the consuls were compelled to withdraw from the siege, and to carry away a blockade. This was easily maintained on the land side, but the Romans in vain endeavoured to exclude the besieged from succours by sea. A Carthaginian fleet under Hamilcar succeeded in making good its entrance into the port; and the skilful Carthaginian captains were able to elude the vigilance of the Roman cruisers, and keep up free communications with the besieged. The Roman consuls next tried to block up the entrance of the port with a mound, but this was carried away by the violence of the waves; and soon after, Aesilaus, the Carthaginian commander-in-chief, who lay with a large fleet at Drepanum, totally defeated the Roman fleet under the consul P. Claudius, B.C. 249. This disaster was followed by the almost total loss of two Roman fleets in succession by shipwreck, and these accumulated misfortunes compelled the Romans to abandon the very attempt to contest the dominion of the sea. But though they could not in consequence maintain any efficient blockade, they still continued to hurl in Lilybaeum on the land side, and their armies continued encamped before the city for several years in succession. It was not till the tenth year of the siege that the victory of C. Lutatius Catulus at the Aegates, B.C. 241, compelled the Carthaginians to conclude peace, and to abandon the possession of Lilybaeum and Drepanum, which up to that time the continued efforts of the Romans had failed in wresting from their hands. (Pol. i. 41—54, 59—62; Diod. xxiv. 1, 3, 11, Exc. ii. pp. 506—509, Exc. Vales. p. 555; Gruen. viii. 15—17; Oros. iv. 17.)

Lilybaeum now passed into the condition of a Roman provincial town; but it continued to be a flourishing and populous place. Its position rendered it now as important a point to the Romans for the invasion of Africa, as it had previously been to the Carthaginians for that of Sicily; and hence its name is one of frequent occurrence during almost all periods of Roman history. Thus, at the outbreak of the Second Punic War, B.C. 218, Lilybaeum was the station of the Roman fleet under the praetor M. Aurelius, who defeated a Carthaginian force that had attempted to surprise that important post. (Livy. xxi. 49, 50.) During the course of the same war it was the point from whence Roman commanders repeatedly made predatory descents with small squadrons upon the coast of Africa; and towards the close of the same memorable contest, B.C. 204, it was from thence that Scipio sailed with the fleet and army which were destined for the conquest of Africa. (Livy. xxxi. 32, xxvii. 5, xxix. 24.) In like manner it was at Lilybaeum that the younger Scipio Africanus assembled his fleet and army in B.C. 149, preparatory to passing over into Africa (Diod. xxxii. 6); and in the Civil Wars Caesar made it his head-quarters when preparing for his African campaign against Scipio and Juba, B.C. 47. (Hist. B. Afr. 1, 2, 37; Appian, B. C. ii. 95.) It was also one of the chief naval stations of Sextus Pompeius in his war with Augustus, B.C. 36. (Appian, B. C. v. 97; Don Cass. xiii. 8.) Nor was the importance of Lilybaeum confined to these warlike occasions: it is evident that it was the habitual port of communication between Sicily and Africa, and must have derived the greatest prosperity from the constant traffic which arose from this circumstance. Hence we find it selected as the habitual place of residence of one of the two quaestors of Sicily (Ps.-Ascon. in Verr. p. 100); and Cicero, in the twelfth book of his Tusculan Disputations against Africanders, calls it "splendidissima civitas" (Verr. v. 5). It was one of the few cities of Sicily which still retained some importance in the time of Strabo. (Strab. vi. p. 272.) Its continued prosperity under the Roman Empire is sufficiently attested by inscriptions; from one of these we learn that its population was divided into twelve tribes; a rare mode of municipal organization. (Torretinnazza Inscr. Sicil. pp. 7, 15, 49; Orelli. Inscr. 151, 1691, 3718.) In another inscription it bears the title of a colony; the time when it became a colony must probably not be earlier than the time of Hadrian, as Pliny does not mention it among the five colonies founded by Augustus in Sicily. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 5; Itin. Ant. pp. 86, 89, 96; Zumpt, de Colon. p. 409.)

After the fall of the Roman Empire Lilybaeum still continued to be one of the most important cities of Sicily. It is mentioned as such under the successive dominion of the Goths and Vandals (Procop. B. i. 8, 2, 3), and during the period of the Arabian dominion in Sicily, that people attached so much value to its port, that they gave it the name of Marsea Alia,—the port of God,—from whence has come its modern appellation of Marsala. It was not till the 16th century that this celebrated port was blocked up with a mole or mound of sunken stones by order of the Emperor Charles V., in order to protect it from the attacks of the Barbary corsairs. From that period Trapani has taken its place as the principal port in the W. of Sicily; but Marsala is still an eligible town, and a centre of some trade, especially in wine. (Sayre's Sicily, p. 232.) Very few vestiges of the ancient city remain, but numerous fragments of sculpture, vases, and other relics, as well as coins, have been discovered on the site; and some portions of an ancient aqueduct are still visible. The site of the ancient port, though now filled with mud, may be distinctly traced, but it is of small extent, and could never have had a depth of more than 12 or 14 feet. The rocks and shoals, which even in ancient times rendered it difficult of
LIMENAE.

approach (Vol. i. 42), would now effectually prevent it from being used as a port for large vessels.

(Smyth, l. c. pp. 233, 234.)

It is a strong proof of the extent to which Greek culture and civilization were diffused throughout Sicily, that, though we have no account of Lilybaean being at any time in possession of the Greeks, but, on the contrary, we know positively that it was founded by the Cuththaginians, and continued in their hands till it passed under the dominion of Rome, yet the coins of Lilybaean are exclusively Greek; and we learn from Cicero that it was possible for a man to acquire a knowledge of the Greek language and literature in that city (Cic. in Concil. 12.).

CON OF LILYBAEUM.

LIMENAE (L顺便), also called LIMNOPSIS (Lovies wrfin), a place in the north of Pisia, which is mentioned only by ecclesiastical writers (Hierocl. p. 672; Concil. Chalcid. p. 670; Concil. Const. iii. p. 679, where it is called, Antioch. The ancient rains of Galatias, on the east of the lake of Eyerdir, are believed to belong to Limenes. (Arundell, Discov. in Asia Minor, vol. i. p. 326; Franz, Finc Inschrift, p. 35.) [L.S.]

LIMENIA (L顺便), a town of Cyprus, which Strabo (x. p. 683) places 8. of Soi. It appears from some ecclesiastical documents cited by Wesseling (ap. Hierocl.) to have been 4 M. from Soi. Now Limnias. (Engel, Kypros, vol. i. p. 77.) [E. H. B.]

LIMNIA, river and town. [GALLACIA.]

LIMICI. [GALLACIA.]

LIMIGANTI. The ordinary account of the Limigantes is as follows. In A.D. 334—337, the Sarmates, in alliance with the Vandals under Visumar, provoke the indignation of Constantinian by their inroads on the Empire. He leaves them to the sword of the Gothic king. Reduced and humiliated by them, they resort to the expedition of arming their slaves. These rebel against their masters, whom they either reduce or expel. Of those that leave their country, some take arms under the Gothic king, others retreat to the parts beyond the Carpathians; a third portion seeks the service of Rome, and is established, to the number of 300,000, in different parts of Pannonia, Thrace, Macedonia, and Italy (Gibbon, c. xvii, with note).

Zeuss (Die Deutschen, sce, s. v. Sarmatiae) holds that others were transplanted to the Rhine, believing that a passage in Ammianus supplies to them. (Ad Mo- sell i. 5—8.) This may or may not be the case. The more important elements of the account are, that the slaves who were thus armed, and thus rebelled, are called Limigantes—this being the name they take in Gibbon. Their scene of action was the parts about the present town of Peterwardein, on the north bank of the Danube, nearly opposite the Sarmatian frontier, and in the district between the Theiss and the great bend of the Danube. Here lay the tract of the Sar- mateae, and Jazyges Motostaeae, a tract which never was Roman, a tract which lay as a March or Boma- dary, with Pannonia on one side and Dacia on the other, but belonging to neither. Observe the words in Italics.

In his note, Gibbon draws special attention to "the broken and imperfect manner" in which the "Gothic and Sarmatian wars are related." Should this remark stimulate the inquiries of the historian, he may observe that the name Limigantes is not found in the authority nearest the time, and of the most importance in the way of evidence, viz., Ammianus Marcellinus. Ammianus speaks only of serot and dominii, "Sarmatae liberi ad discretionem servorum rebellionim appellati (xxxix. 6. 15.)."

On the other hand, it is only in a work of such inferior authority (at least, for an event A.D. 337) as the Chronicle of Jerome (Chronicon Hieronymi) that the name Limignatus is found; the same work stating that the masters were called Arcorocantae.

To say nothing about the extent to which the story has a suspicious similarity to the other earlier account of the expulsion of the masters by the slaves of the same sort, the utter absence of either name in any other writer is remarkable. So is their semi-Latin form.

Can the whole account of the slave insurrection be problematical—based upon a confusion of names which will be shown to be highly probable? Let us hear in mind the locality of these Limigantes, and the language of those parts in contact with it which belonged to Rome. The locality itself was a Limus (eminently so), and the contiguous tongue was a Liaus Rustica in which such a form as Limigantes would be evolved. It is believed to be the Latin name of the Sarmates and Jazyges of what may be called the Daco-Pannonian March.

The account of the Sarvile War is susceptible of a similar explanation. Ammianus is nearly the last of the authors who uses the name Sarmati, which will, ere long, be replaced, to a great extent, by the name Serr (c. e. p. 6.). Early and late, this name has always suggested the idea of the Latin Servus, just as its partial equivalent Slaves does of the English Slave. It is submitted that these Servi of Anniaus (limigantes of the Chronicle) are the Seravium (Katov) of the March (Limes), now beginning to be called by the name by which they designated themselves rather than by the name by which they were designated by their neighbours. [R. G. L.]

LIMITES ROMAE sometimes simply LIMES or LIMITES, is the name generally applied to the long line of fortifications constructed by the Romans as a protection of their empire, or more directly of the Decumanus agric, against the invasions of the Ger- manes. It extended along the Danube and the Rhine, and consisted of forts, ramparts, walls, and palisades. The course of these fortifications, which were first commenced by Drusus and Tiberius, can still be traced with tolerable accuracy, as very considerable portions still exist in a good state of preservation. Its whole length was about 350 English miles, between Cologne and Ratisbon. It begins on the Danube, about 15 miles to the southwest of Ratis- bon, whence it proceeds in a north-western direc- tion under the name given to it in the middle ages of "the Devil's Wall" (Teutsdamsner), or Pfahlbrun. For a distance of about 60 miles it was a real stone wall, which is still in a tolerable state of preservation, and in some places still rises 4 or 5 feet above the ground; and at intervals of little more than a mile, remnants of round towers are visible. This wall terminates at Pfahlbrun in Hantsberg. From
this point it proceeds in a northern direction, under the name of Tenetshebecke (the Devil's Hedge), as far as Lorch, and is more or less interrupted. From Lorch onwards it does not present a continuous line, its course being effaced in many parts; but where it is visible it generally consists of a mound of between 6 and 7 feet in breadth, where rising to the height of 10 feet; and on its eastern side there runs along it a ditch or trench, which is called by the people the Schwingegebren, perhaps a corruption of Sauengraben (Ditch of the Swine). In this state the lines runs as far as the Oberrhein, from which point it changes its character altogether, for it consists of a succession of forts, which were originally connected by palisades. (Spart. Hist. 12.)

Remains of these forts (castella) are seen in many parts. At Oberenburg this line of fortifications ceases, as the river Main in its northern course afforded sufficient protection. A little to the east of Aschaffenburg, where the Main takes a western direction, the fortifications recommence, but at first the traces are not continuous, until some miles north of Nidda it reappears as a continuous mound raised on a foundation of stones. This last part is now known by the name of the Flachgruben, and its remains in some parts rise to a height of from 10 to 12 feet. It can be distinctly traced as far as Rheinbreitbach, in the neighbourhood of Bonn, where every trace of northern continuation disappears behind the Siebengebirge. It is probable, however, that it was continued at least as far as Cologne, where Tiberius had commenced the construction of a lines. (Tac. Ann. i. 50.) Some have supposed that it extended even further north, as far as the river Lippe and the Cæsian forest; but from Tacitus ( Germ. 32) it seems clear that it terminated near the river Sieg.

This enormous line of fortification was the work of several generations, and the parts which were first built appear to have been the construction of Deucass in Mount Taunus. (Tac. Ann. i. 56; Dion Cass. liv. 33.) But Tiberius and the other emperors of the first century constructed the greater part of it, and more especially Trajan and Hadrian. (Vell. Pat. ii. 120; Dom Cass. liv. 15; Entrop. viii. 2; Spart. Hist. 12.) Until the reign of Alexander Severus these limits appear to have effectually protected the Danubian agri; but after that time the Alamanzi frequently broke through the fortifications. (J. Capitol. Max. Aem. 13; Plac. Quoq. Probr. 15.) His successors, Postumius, Lollius, and Probus, exerted themselves to repair the breaches; yet after the death of Probus, it became impossible to prevent the norther barbarians from breaking through the fortifications; and about the end of the third century the Romans for ever lost their possessions in Germany south of the lines. (Comp. Wilhelm, Germanien. p. 290, &c.; Bichler, Reise auf der Feldermauer, Regensburg, 1820.)

LIMNAE (Li'mnay). A place on the frontiers of Messenia and Lacedaemonia, containing the city of Artemis Limnatis. It was situated on the Messenian coast, not far from the head of the Messenian gulf, on the very frontier of Arcadia towards Argos. There has been a dispute about its site, but the ruins of Keramea are probably the remains of Li'mnai; some modern writers would place it more to the W., either at Lutratis, or at Ragna. The former supposition, however, appears to be the more correct, since we learn from Thucydides that Li'mnai lay on the road from Ambracia and Argos Amphibolica to Stratus, which could not have been the case if Li'mnai lay to the W. of Keramea. Philip III., king of Macedon, disembarked at Limnai, when about to invade Aetolia. There is a marsh near Keramea, two miles in length, from which Limnai appears to have derived its name. (Thuc. ii. 80, iii. 103; Pol. v. 5; Leake, Northern Greece, vol. iv. p. 243, seq.)

2. A town of Histiaea in Thessaly, taken by the Romans in B. C. 191, was probably on the site of Kortikhi. (Lar. xxxvi. 13; Leake, Northern Greece, vol. i. p. 5.)

LIMNUS, an island off the coast of Ireland, mentioned by Ptolemy (ii. 2), as lying to the east of Ireland, and being uninhabited. Phiny also mentions it (iv. 30). It is probably Lambay Island. However, the Monumenta Britannica only suggests for Limnos (Ptolemy's Limnus) the modern names of Lambay, Lymen, and Ramsey, but they also distinguish it from Limnai (Phiny's Limnus) which they make Dolsby. [K. G. L.]

LIMIONE, [Limione.]

LIMONUM. A town in Lacedaemonia (Aelian, Hist. 6:), the capital of the Peutes or Pictavi, one of the Celtic nations south of the Loire. The name is first mentioned in the eighth book of the Gallic war (viii. 26, 27). At a later time, after the fashion of many other capital towns in Gailla, it took the name of the people, Pictavi, whence comes the modern name Pictavia. (Ammianus Marcellinus, xiv. 11.) Though De Vaëis and others did not admit Limonium to be Pictavia, and fixed Augustorium the capital of the Lemovices at Limoges, the evidence of the roads shows that Limonium must be Pictavia. Magnen, a writer of the 9th century, calls Pictavia the name of Pictavius Limonium; and inscriptions also found at Pictavia confirm the other evidence. There is a place called Faver Pictavius, more than 15 Roman miles north of Pictavia, but though it seems to have been an old town, it is quite a different place from the Pictavia which is the site of Limonium.

The conquest of the Pictavi east the Romans little trouble, we may suppose, for little is said of them. In n. c. 51, C. Catinus, a legate of Caesar, came to the relief of Duarius, a Gaul and a Roman ally, who was blockaded in Limonium by Dannacbas, the chief of the Autes. The siege was raised, and Dannacbas was subsequently defeated.

The remains of the huge amphitheatre of Limonium are described by M. Dufour, in his Histoire de Poitou (quoted in the Guide du Voyageur; par Richard et Hecquet). M. Dufour found the walls of the amphitheatre three feet and a half below the present level of the soil. The walls are seven French feet thick. It is estimated that this amphitheatre
would contain 20,000 spectators, from which estimate we must conclude that the dimensions and outline of the building can be accurately determined. M. Du-

four says: "On the level of the present soil, there are some vestiges of the corridors or covered por-
ticoes, which led, by means of the vestibula, into the different galleries; the part which is least damaged at present is in the stables of the Hotel d'Evreux. A principal arch, which led into the arena, is still nearly entire, though the interior facings have been almost completely removed." (G. L. C. Steph. [G. L. C. Steph.], a town on the southern part of Lycia, on the river Limyra, twenty stadia above its mouth. (Strab. xiv. p. 666; comp. Syl. p. 39; Polt. v. 3. § 6; Steph. B. s. r.) Velia-

ius Paterculus (ii. 102) states that Caius Caesar, the adopted son of Augustus, died at Limyra. It is often mentioned by Roman writers, as Ovid (Met. ix. 646), Mela (i. 13), and continued to exist down to a late period. (Basil. M. Epist. 218; Hierol. p. 683.) Ruins of Limyra were first discovered by the British expedition to the south of England in the year 1860, and were reserved for Sir Charles Fellows to explore and de-

scribe them more minutely. In his first work (Journal of an Excursion in Asia Minor, p. 214) he only says: "two miles across the little valley, at the foot of the mountains, and up their sides, lay the ruins of the ancient Limyra, its theatre, temples, and walls." But in his later work (Account of Discoveries in Lycia, p. 205, foll.), he fully enters into a description of the remains of the place, illus-

trated by fine engravings and copies of some of the many inscriptions, both Greek and Lycian, in which the place abounds. In describing the approach to the town, he says, that first he found a fine stately sarcophagus, with a bilingual inscription. "Hundreds of tombs cut in the rocks, and quite excavating the long ribs of its protruding strata, as they curved down the sides of the mountain, soon came in view. . . . The inscriptions were almost all Lycian,—some few Greek, but these were always inferior in execution, some being merely scratched upon the surface; while the Lycian writer at times in the same stele but it was far more richly coloured,—the letters being alternately red and blue, or in others green, yellow, or red." Some of these tombs contain beautiful bas-reliefs, repre-

senting stories from Greek mythology. Beyond these tombs lies the city, "marked by many foun-
dations, and by a long wall with towers. Further on is a very pretty theatre, . . . the size of which bespeaks a small population." The whole neigh-

bourhood, however, is filled with tombs cut in the rocks. (Comp. Leake, Asia Minor, p. 186. [L. S.])

LIMYRA. [India, p. 47.] LIMYRA (ς Λυμύρα), a river on the south coast of Lycia, which, after receiving the waters of its tributary Arcyundai (Finikos), becomes navigable at the point where Limyra is situated. It falls into the sea, at a distance of 90 stadia west of the holy promontory, and 60 stadia from Melanippe. (Syl. p. 39; Strab. xiv. p. 666; Polt. v. 3. § 3.) Pliny (v. 28) and Mela (i. 13) call the river Li-

myra, and the Stadiasmus Maria Magni (§ 211) Almyra, which is no doubt a mistake. Leake (Asia Minor, p. 187) states that both the Limyra and the Arcyundai reach the sea at no great distance from each other; while in the map of Lycia by Spratt the Limyra is the smaller river, and a tributary to the Arcyundai. Both these statements are opposed to the testimony of Pliny, whose words are: "Limyra cum annae in quem Arcyundai infuit." [L. S.]

LINDUS (Αίγεωρ). 1. A town in Britain; the modern Lincoln. Ptolemy (ii. 3. § 20) places Lindus and Raye, or Ratae, to the district of the Coritani. In the list of the anonymous Geographer of Ravenna it appears as Lindum Colonia; in the Itinerary of Antoninus, simply as Lindum. Among the prelates who attended the Synod of Arles, A. D. 314, was "Adelphius de civitate colonia Lindensis-

ium," which we must read Lindensisium, for at the same council London was represented by Restitutus, and that Lindus was a colony may be accepted from the authority cited above, and also from the form in which the word occurs in Beda (Hist. Eccles. ii. 16, "Civitas Lindicolina.") Lindum occurs in Antoninus in the iter from Londinium to the great Wall; in that from Elecalium to Londinium; and in another from Londinium, in which it is the terminus.

The Roman remains extant at Lincoln are among the most important and interesting in this county. It is perhaps the only town in England which pre-

serves one of the original Roman gateways in its present condition. This is the Newport Gate, which is wholly of Roman masonry, as is also the narrow side entrance for foot passengers. Originally there were two of the latter, but one is walled up in a modern building. Another of the Roman gateways was discovered, a few years since, near the castle. There is also a long extent of the Roman sewer remaining at Lincoln, and a considerable number of inscriptions, chiefly sepulchral. The Mint Wall, as it is called, is a side wall of a Roman edifice, ap-

parently of a public description, but much of the course of the remains of the external walls, the Romans seem to have found it necessary to extend the cir-

cumvalation of Lindum.

2. A town of the Damni, in the northern part of Britain, placed by Ptolemy (ii. 3. § 9) a little to the north of the Clyde. Horsley suggests Kirkintillock, on the Wall of Antoninus Pius, as the site of this Lindum. [C. R. S.]

LINDUS (Αίγεωρ : Eth. Αίγεωρδας: Lindos), one of the most important and most ancient towns in the island of Rhodes, was situated on the eastern coast, a little to the north of a promontory bearing the same name. The district was in ancient times very productive in wine and figs, though otherwise it was, and is still, very barren. (Philos. Ikon. ii. 24.) In the Hecomer Catalogue (I. ii. 656) Lindus, together with the two other Rhodian cities, Laryms and Camirus, are said to have taken part in the war against Troy. Their inhabitants were Dor-

ians, and formed the three Dorian tribes of the island, Lindus itself being one of them. The Dorian hexapolis in the south-west of Asia Minor. Preceding to the year b. c. 408, when Rhodes was built, Lindus, like the other cities, formed a little state by itself, but when Rhodes was founded, a great part of the population and the common government was transferred to the new city. (Diod. xii. 75.) Lindus, however, though it lost its political importance, still remained an in-

teresting place in a religious point of view, for it con-

tained two ancient and much revered sanctuaries,—
one of Athena, hence called the Lindian, and the other of Hercules. The former was believed to have been built by Danaus (Diod. v. 58; Callim. Freg. p. 477, ed. Ernesti), or, according to others, by his daughters on their flight from Egypt. (Herod. ii. 182; Strab. xiv. p. 655; comp. Pint. H. N. xxxiii. 23; Act. Apost. xvii. 17.) The temple of Hercules was remarkable, according to Lactantius

LINGONES.

(L. S.)

LINGONES (Λγγωνες). The form ἄγγωνες in Ptolomy (ii. 19. §9) probably may be a copist's error. In Polybius (ii. 17. ed. Bekker), ἄγγωνες is a correction of ἄγγανες, which appears to be the MSS. reading, and was doubtless intended to be ἄγγανες. In the old text of Strabo (p. 186) it is said that 'Aρακ (Ναυτία) separates the Sequani from the Astnii and Lingones (Ἀγγαναὶ); but it is agreed that we ought to read Lingones, for Strabo names the people Lingones in two other passages (pp. 133, 205).

The Lingones occupied the country about the Sources of the Marne and Seine, and extended eastward to the Vesuago (Υβογός) (B. G. iv. 10). Caesar does not state expressly whether they belonged to Cetica or to Belgica, but we may infer from what he says that he considered them as included in Celtica. [GALIA. THESAUR. RER. Vol. 1. p. 475.] Strabo (p. 193) says: "Above or beyond the Helvetii and Sequani, the Astnii and Lingones dwell to the west; and beyond the Mediomatrici dwell the Lenuci and part of the Lingones." But the Lenici, whose capital was Tullum (Τούλο), are between the Mediomatrici and the Lingones, and there is some error in this passage of Strabo. The chief town of the Lingones was Andematusii, afterwards named Lingones, and in the old French, Langeac ou Langonde, and now Lingres, near the sources of the Marne. Dioblus (Διόβλος) was also in the territory of the Lingones, which corresponded to the diocese of Langres, before the diocese of Dijon was taken from it.

Ptolomy (ii 8) and Pliny (iv. 17) place the Lingones in Belgium, which was true of the time when they wrote.

The Lingones were one of the Celtic nations, which, according to Roman tradition, sent a detachment to settle in North Italy. [See the next article.] Lucan (r. 357) represents the Lingones as warlike, or fond of fighting, for which there is no evidence in Caesar at least:—

LIPARA.

"Castraque quae Vossi curvam super ardus rapem
Pugnavae pictus cohorsine Lingones armis."

After Caesar had defeated the Helvetii in the great battle near Blémeu, the survivors fled into the country of the Lingones, "to whom Caesar sent letters and a message to inform them that they did not supply the Helvetii with corn, or help them in any way; and that if they did, he would treat them like the Helvetii." (B. G. i. 26.) It is plain from Caesar's narrative that this insolent order was obeyed. When Caesar was at Vesontio (Bosnngenon) on his march against Ariovistus, the Sequani, Lenuci, and Lingones supplied him with corn (B. G. i. 40). During the winter which followed the campaign of n. c. 53, Caesar placed two legions in the country of the Lingones, not to keep them in obedience, for they never rose in arms against him, but because it was a good position (B. G. vi. 44).

It is stated in Tacitus (Hist. i. 78) that Otho gave the "civitas Romana" to all the Lingones; but this passage is not free from difficulty. Galba had lost the fidelity of the Treviri, Lingones, and some other Gallic states, by harsh measures or by depriving them of part of their lands; and the Lingones and others supported the party of Vettius in Galia by offering soldiers and money (Tac. i. 53, 59). It seems that Otho made the Lingones a present of the "civitas" in order to effect a diversion in his favour; but it remains to be explained, if Tacitus's text is right, why he omitted the Treviri and others. Phiny calls the Lingones "Foederati." This nation, which during the whole Gallic war was tranquil, even in the year of Vercingetorix's great struggle (B. G. vi. 63), became very restless under the Empire, as we see from Tacitus (Hist. iv. 67).

[L. S.]

LINTOMAGUS. [L. TINTOMAGUS.]

LINUS (Λίνος), a place on the coast of Myaia, on the Propontis, between Piraicus and Parium; in the old Greek it is called Lina, and in the Latin it is known as Linus. It was first inhabited by the Trojans, and afterwards by the Dorians, who called it Dardania. [DEO. L. 71.] Strabo (p. 276) tells us that it was the largest of the seven, and the nearest to the coast of Sicily except Thinemusa or Hiero (Iul. •
LIPARA.

LIPARA.

(Livy, xliii.), 195

cono). Both he and Pliny inform us that it was originally called Melignus (Meقرنور) a name that must probably be referred to the period before the Greek colony; although ancient writers affirm that it derived the name of Lipara from Lipara, a son of Aeson, who reigned there before Aeolus, so that they must have referred the name of Melignus to a purely fabulous age. (Phin. iii. 9. s. 14; Diod. v. 7.) The name of Aeolus himself is inseparably connected with the Aeolian islands, and there can be no doubt that his abode was placed by the earliest mythological traditions in Lipara itself, though in latter times this was frequently transferred to Strongyle. (Aelolae Insularum, p. 222.)

In the historical period the first mention that we find of Lipara is the settlement there of a Greek colony. This is assigned by Diodorus to the 50th Olympiad (n. c. 580-577); and there seems no reason to doubt this date, though Eusebius (on what authority we know not) carries it back nearly 50 years, and places it as early as n. c. 627. (Diod. v. 9; Euseb. Arm. p. 107; Clinton, F. H. vol. i. p. 208, 209.) The colonists were Dorians from Cnidus and Rhodes, but the former territory was already inhabited, and the leader of the colony, Pentathlus, was himself a Cnidian, so that the city was at once reckoned a Cnidian colony. (Diod. L. c.; Paus. x. 11. § 3; Thuc. iii. 88; Strab. vi. p. 275; Seuyn. Ch. 263.) According to some accounts Pentathl subsidized did not himself live to reach Lipara, but the colony was founded by his sons. (Diod. L. c.) Of its history we know scarcely anything for more than a century and a half, and are told generally that it attained to considerable power and prosperity, and that the necessity of defeating these pirates, as the Tyrrhenian pirates led the Liparienses to establish a naval force, with which they ultimately obtained some brilliant victories over the Tyrrhenians, and commemorated these successes by costly offerings at Delphi. (Strab. l. c.; Diod. v. 9; Paus. x. 11. § 3, 16. § 7.) It appears, however, that the Liparienses themselves were sometimes addicted to piracy, and on one occasion their corsairs intercepted a valuable vessel, thinking that the Romans were sending to Delphi; but their chief magistrate, Timagathnus, immediately caused it to be restored and forwarded to its destination. (Diod. xiv. 93; Liv. v. 28; Val. Max. i. 1. § 4.)

The territory of Lipara, though of small extent, was fertile, and produced abundance of fruit; but its more important resources were its mines of alum, arising from the volcanic nature of the soil, and the abundance of thermal sources proceeding from the same cause. The inhabitants of Lipara not only cultivated their own island, but the adjoining ones of Hiera, Strongyle, and Didyne as well; a proof that the population of Lipara itself must have been considerable. (Thuc. iii. 88; Diod. v. 10; Paus. x. 11. § 4; Strab. vi. p. 275.)

At the time of the first Athenian expedition to Sicily under Laches (n. c. 427) the Liparienses were in alliance with the Syracusans, probably on account of their Dorian descent; for which reason they were attacked by the Athenian and Rhegian fleets, but with no serious result. (Thuc. iii. 54; Diod. xii. 54.) In n. c. 396 they again appear as in friendly relations with Syracuse, and were in consequence attacked by the Carthaginian general Himilco, who made himself master of the city and exacted a contribution of 30 talents from the inhabitants. (Diod. xiv. 56.) It does not appear that the Carthaginians at this time retained possession of Lipara; and we subsequently find it in the enjoyment of independence. They were attacked by Agathocles, in the midst of profound peace, and without even a pretext for the attack of Sicily. The invader carried off a booty of 50 talents, which was, however, lost on his voyage to Sicily in a storm, which was naturally attributed to the wrath of Aeolus. (Id. xx. 101.) It could not have been long after this that Lipara fell under the yoke of Carthage, to which city it was subject at the outbreak of the First Punic War (n. c. 264), and from its excellent ports, and advantageous situation for the supply of the fleet, in command of N. commands, Sicily, became a favourite naval station with that people, (L. xii. 15; p. 300.) In the fifth year of the war (n. c. 260), the Roman consul, Cn. Cornelius, having been deceived with the hopes of making himself master of the island, was captured there, with his whole squadron (Pol. i. 21); and in n. c. 257, a battle was fought between the Carthaginian and Roman fleets in its immediate neighbourhood (Id. 25); but a few years later it was at length taken by the Romans, under C. Aurelius, and remained in their hands from that time. (Id. 251.) (Id. 59; Diod. xiiii. 20; Zonar. viii. 14; Oros. iv. 8; Frontin. Strit. iv. 1. § 31.)

At the commencement of the Second Punic War a considerable Carthaginian squadron was wrecked on the shores of Lipara and the adjoining island of Vulcano (Liv. xxi. 49); but from this time we find no historical mention of it till the war between Octavian and Sextus Pompeius in Sicily, in n. c. 36, when Lipara and the adjoining islands once more appeared as a naval station of some importance. It was occupied and fortified by Pompeius, but taken by Agrippa, who afterwards established his fleet at the island of Vulcano, and from thence threatened the forces of Pompeius at Mylae and Messana. (Appian, B. C. v. 97, 105, 112; Dion Cass. xiiii. 1. 7.) There seems no doubt that Lipara continued to enjoy considerable prosperity under the Roman government. Diodorus praises its fertility, as well as the excellence of its ports; and says that the Liparienses derived a large revenue from the monopoly of the trade in alum. (Diod. 10. 1.) Cicero, indeed, speaks in disparaging terms, as "parsa civitas, in insula inculata tenue posta" (Tert. iii. 37); but this seems to be an oratorical exaggeration, and the immediate reference of the passage is to corn, for the growth of which Lipara could never have been well adapted. But though suffering severely from drought in summer (Thuc. iii. 88), owing to the volcanic nature of the soil, the island is, nevertheless, one of considerable fertility, and at the present day produces abundance of fruit, wine, and oil. (Smith's Sicily, p. 265; D'Orville, Siciles, p. 18.)

Under the Roman Empire Lipara was sometimes used as a place of exile for political offenders (Dion Cass. lxxvi. 6); and before the fall of the Western Empire it became a favourite resort of monks. At an earlier period of the Empire it was frequented for its hot baths (Plin. xxxi. 6. 32; Diod. v. 10), which are still in use at the present day, being supplied from thermal springs; some remains of ancient buildings, still visible, appear to have been connected with these establishments. A few fragments of walls may also be traced on the hill crowned by the modern castle; and many coins, fragments of sculpture, &c., have been discovered on the island. (Smith's Sicily, p. 262.)
COIN OF LIPARA.

LIPARIS (Aipus), a small river in the east of Cilicia, which emptied itself into the sea at Soli, and was believed to derive its name from the oily nature of its waters. (Plin. v. 22 ; Antir. Caryst. 150 ; Vitruv. viii. 3.)

LIPAXUS (Aiaqos), a town of Cramis, or Cossae, in Macedonia, mentioned only by Hecatæus (Steph. B. s. c.) and Herodotus (vii. 123).

LIPPOS, AD. [Vejet.]

LIPSYDRUM [Attica, p. 326, b.]

LIQUENTIA (Livenz), a considerable river of Venetia, which rises in the Julian Alps to the N. of Opitergium (Odero), and flows into the Adriatic near Casule, about midway between the Poze (Plavis) and the Togliamento (Thiaventum). (Plin. lit. 18. s. 22.) It had a part of the same name at its mouth. Servius (ad Aen. ix. 679) correctly places it between Altinum and Concordia. The name is not found in the Itineraries, but Paulus Diaconus mentions the "pont Livenzianus fluminis" on the road from Forum Julli towards Patavium. (P. Dic. Hist. Lang. v. 39 ; Anon. Exe. iv. 36.)

LIJIA. [Emesa.]

LIJMIRIS (Aqupiris), a town in the north of Germany, between Marisins and Leuaphana, about 10 miles to the north of Hamburgh. Its exact site, however, is unknown. (Ptol. ii. 11. § 27.) [L. S.]

LIRIS (Aips : Gariglione), one of the principal rivers of central Italy, flowing into the Tyrrhenian Sea a little below Minturnae. It had its source in the central Apennines, only a few miles from the Laccus Aurinus, of which it has sometimes, but erroneously, regarded as a subterranean outlet. It flows at first in a NE. direction through a long troughlike valley, parallel to the general direction of the Apennines, until it reaches the city of Sorra, where it turns abruptly to the SW., and pursues that course until after its junction with the Trens or Sacco, close to the site of Fregellae; from thence it again makes a great bend to the SE., but ultimately resumes its SW. direction before it enters the sea near Minturnae. Both Strabo and Pliny tell us that it was originally called Liris, a name which appears to have been common to many Italian rivers [CLARIS:]; the former writer erroneously assigns its sources to the country of the Vestini; an opinion which is adopted also by Lucan. (Strab. v. p. 233 ; Lucan. ii. 423.) The Liris is noticed by several of the Roman poets, as a very gentle and tranquil stream (Hor. Carm. i. 31. 8 ; Sili. Ital. iv. 348),—a character which it well describes from the clearness and beauty of its waters; it is described by a modern traveller as "a wide and noble river, winding under the shadow of poplars through a lovely vale, and then gliding gently towards the sea." (Filastre's Classical Tour, vol. ii. p. 320.) But nearer its source it is a clear and rapid mountain river, and at the village of Isola, about four miles below Sorra, and just after its junction with the Fibresus, it forms a cascade of above 90 feet in height, one of the most remarkable waterfalls in Italy. (Craven's Abruzzi, vol. i. p. 93.)

Liris, which is still called Liri in the upper part of its course, though better known by the name of Gariglione, which it assumes when it becomes a more considerable stream, has a course altogether of about 60 geographical miles: its most considerable tributary is the Trens or Sacco, which joins it about three miles below Ceprano. A few miles higher up it receives the waters of the Fibresus, so celebrated from Cicero's description (de Leg. ii. 3); which is, however, but a small stream, though remarkable as the clearness and beauty of its waters. [FIBRUSUS.] The Mels (Melfa), which joins it a few miles below the Sacco, but from the opposite bank, is equally inconsiderable.

At the mouth of the Liris near Minturnae, was an extensive sacred grove consecrated to Marica, a nymph or local divinity, who was represented by a tradition, adopted by Virgil, as mother of Latmus, while others identified her with Circe. (Virg. Aen. vii. 47 ; Laonct. Inst. Div. i. 21.) Her grove and temple (Lucus MARICAE : M Turus Maris) was not only objects of great veneration to the people of the neighbouring town of Minturnae, but appear to have enjoyed considerable celebrity with the Romans themselves. (Strab. v. p. 233 ; Liv. xxvi. 37 ; Serv. ad Aen. vii. 47.) Immediately adjoining its mouth was an extensive marsh, formed probably by the stagnation of the river itself, and celebrated in history in connection with the adventures of Maricus. [E. H. B.]

LISAE (Aeaca), a town of Cramis or Cossae, in Macedonai, mentioned only by Herodotus (vii. 123). [CRATIS.]

LISINAE, a town of Histoniacis, in Thessaly, on the borders of Athamania. (Liv. xxxii. 14.)

LISSA. [JACCETANI.]

LISSA (Aicora, Procop. B. G. i. 7 ; Itin. Anton.), in island off the coast of Illyricum, placed by Pliny (iii. 30) over against Iadera. Ulysses, noted for its marbles, and an island which obtained a momentary importance during the wars of the Venetians, represents Lissa. (Wilkinson, Dalmatia and Monte- negro, vol. i. p. 388.)

LISSUS. [LEONTIS.]

LISSUS (Aicora, Ptol. iii. 17. § 3), a town on the S. coast of Crete, which the anonymous Coast-describer places between Suia and Calambode. (Stadios.) The Peuntinger Table gives 16 M. P. as the distance between Catanissium and Lissa. This Cretan city was an episcopal see in the time of Hierocles. (Comp. Cornel. Creta Sacra, vol. i. p. 255.) Porphyrygneta (de Astn. Imp. c. 30) calls it 'Eanor-

and it now bears the name of Lesch (Leake, Northern

Alt. vol. ii. p. 275.)

LISTA (Aiore), a very ancient city of Central

Italy, which, according to Varro (cap. Dion. Hal.

l. 14), was the metropolis of the Ariboganies, when

people still dwelt in the mountain valleys around Beato. It was surprised by the Sabines by a night attack from Amternerum; and the inhabit-

ants took refuge in caves from whence they made

several fruitless attempts to recover possession of their city: but failing in this, they declared it, with

the surrounding territory, sacred to the gods, and

imprecated curses on all who should occupy it.

This circumstance probably accounts for the absence

of all other mention of it; though it would seem

that its ruins still remained in the time of Varro,

or at least that its site was clearly known. This

has been in modern times a subject of much dispute.

According to the present text of Dionysius, it was

situated 24 stadia from Tion, the ruins of which

are probably those at Castore near Sta. Anatolia,

in the upper valley of the Salto, 36 miles from Ricti.

Bunsen accordingly places it at Sta. Anatolia itself,

where there are some remains of an ancient city.

But Holstenius long ago pointed out a site about 3

miles from Bente it-elli, on the road from thence to

Cirta Duente, still called Monte di Lesto, where

there still is a village belonging to a town called

Martelli, and Sir W. Gell, the remains of an ancient

city, with walls of polygonal construction, and a

site of considerable strength. The situation of

these ruins would certainly be a more probable posi-

tion for the capital of the Ariboganies than one so

far removed as Sta. Anatolia from their other settle-

ments, and would accord better with the natural line

of advance of the Sabines from Amternerum, which

must have been by the pass of Antrodoco and the valley of the Fedino. In this case we must

understand the distance of 24 stadia (3 miles), as

stated by Dionysius (or rather by Varro, whom he

cites), as having reference to Bente itself, not to

Tien. (Bunsen, Antichi Stabilimenti Italiani, in

Ann. d. Inst. Arch. vol. vi. p. 137; Gell's Topo-

p. 114.)

[L. E. B.]

LISTRON (Algippia), a place in Epirus Nova,

mentioned by Hierocles with a fortress Alisterus

(Alisteros, Procop. de Aed. iv. 4). It is probably

represented by the village of Kissos, situated on the

river Aous (Yious), which is mentioned by Constantius (Kasapippa, i. 32; comp. Anna Comment., xiii. p. 390) in the fourteenth century, together with other places which are still to be recognised as having been the chief strong-

holds in this part of Greece. ([Aous].) (Leake, Northern Greece, vol. i. p. 383.)

[L. E. B.]

LITANA BRUMI. [Vaccael].

LITANA SILVA, a forest in the territory of the

Baiani in Gallia Narbonensis, to which is assigned

the defeat of the Roman consul L. Postumius, in b.c. 216.

On this disastrous occasion the consul himself

perished, with his whole army, consisting of two

Roman legions, augmented by auxiliaries to the

amount of 25,000 men. (Liv. xxiii. 24; Frontin.

Strat. i. 6. § 4.) At a later period it witnessed,

on the other hand, a defeat of the Baiani by the

Roman consul L. Valerius Flaccus, n.b. 195. (Liv.

xxiv. 22.) The forest in question appears to have

been situated between Bononia and Placentia,

but its name is never mentioned subsequently, and

the reduction of Cisalpine Gaul, and its exact site

cannot be determined. It is probable, indeed, that

a great part of the tract between the Apenines and

the marshy ground on the banks of the Padus was at

this time covered with forest. ([E. H. B.]

LITANOBIRGA, in Gallia, is placed by the

Antonine Itin. between Cæsarea Magna (Boureweis) and

Augustomagus, which D'Anville supposes to be Sen-

lis. According to his reading, the Itin. makes it

xxiv. Gallie orso, from Cæsarea Magna to Littera

briga, and iii. from Litanobirga to Augustomagus.

Walckenaer (Geog. gc, vol. iii. p. 55) makes it

the first distance xvi, and the second iii.; and he places Cæsarea Magna at Verbeia, near the river Antone. The Table mentions no place between Cæsarea Magna and Augus-tomagus, but it makes the whole distance

xxii. We may assume that Litanobirga was situated

at a ford or bridge over a river, and this river is

the Oise. D'Anville first thought that Litanobirga

might be Pont Sainte-Maxence, for a Roman road

from Boureweis, called Bruneauets, passes by Cler-

mont, and joins a road from Pont-Sainte-Maxence.

But the numbers in the Itin. fall short of the dis-

tance between Boureweis and Senlis; and accordingly

197
D'Anville gave up Pont-Sainte-Marceau, and fixed Litaniobriga at Civilia on the Oise, and along this line the distances of the Table agree pretty well with the real distances. Valkenmaker fixes Litaniobriga at Pont-Sainte-Marceau. The solution of this difficulty depends on the position of Augustomagus; or if we are content with the evidence for fixing Litaniobriga at Pont-Sainte-Marceau, we cannot place Augustomagus at Sainte-Maxence. [Augustomagus.] [G. L.] LITERNUM. (Airpreh. Strab. 1. Atgoper. Pol. Eth. Liternum; Tor de Patria), a town on the sea-coast of Campania, between the mouth of the Volturana and Cumae.* It was situated at the mouth of a river of the same name (Strab. v. p. 243; Liv. xxxii. 29), which assumed a stagnant character as it approached the sea, so as to form a considerable marshy pool or lagoon, called the LITERNA PALUS (Sil. Ital. vii. 278; Stat. Silv. iv. 3. 66), and bordered on either side by more extensive marshes. It is not quite clear whether there was a town there at all, or merely what is chiefly noted of the Roman colony: Livy's expression (l. c.) that that colony was sent "ad ostia Literni fluminis," would seem to imply the contrary; and though the name of Liternum is mentioned in the Second Punic War, it is in a manner that does not clearly prove there was then a town there. (Liv. xxiii. 35.) But the notice in Festus (v. Precinctus), who mentions Liternum, with Capua, Cumae, and other Campanian towns, among the Precinctus, must probably refer to a period earlier than the Roman settlement. It was till the year B. C. 194 that a colony of Roman citizens was settled at Liternum at the same time with one at Volturana; they were both of the class called "coloniae maritimae civium," but were not numerous, only 300 colonists being sent to each. (Liv. xxxii. 29, xxxiv. 43.) The situation of Liternum also was badly chosen; the marshy character of the neighbourhood rendered it unhealthy, while the adjoining tract on the sea-coast was sandy and barren; hence, it never seems to have risen to be a place of any importance. Under the circumstances that it was the place which Scipio Africanus chose for his retirement, when he withdrew in disgust from public life, and where he ended his days in a kind of voluntary exile. (Liv. xxxvii. 52, 53; Seneca. Ep. 86; Val. Max. v. 3. § 1; Ov. iv. 20.) At a later period, however, Augustus settled a fresh colony at Liternum (Litu. Colub. p. 235), and the construction by Domitian of the road leading along the seacoast from Surrentum to Cumae must have tended to render it more frequented. But it is evidently never meant to be a considerable place; under the Roman Empire its name is mentioned only by the geographers, and in the Itinerary in connection with the Via Domitiana already noticed. (Strab. v. p. 243; Mel. ii. 4. § 9; Plin. iii. 5. s. 9; Prot. iii. 1. § 6; Itin. Ant. p. 122; Tact. Peut.) We learn, however, that it still existed as a "civitas" as late as the reign of Valentinian II. (Symmash. Ep. vi. 5); and it was probably destroyed by the Vandals in the fifth century.

The villa of Scipo, where he spent the latter

* The name is written in many MSS. LITERNUM, and it is difficult, in the absence of inscriptions, to say which form is really the more correct; but LITERNUM seems to be supported, on the whole, by the best MSS., as well as by the Greek form of the name as found both in Strabo and Ptolemy. (Tschucke, ad Mel. ii. 4. § 9.)

LITERNUM.

LOCORITUM.

The name of Liternum is now marked by a watchtower called Tor de Patria, and a miserable village of the same name; the adjoining Lago di Patria is unquestionably the Liternum Palus, and hence the river Literus can be no other than the small and sluggish stream which forms the outlet of this lake to the sea. At the present day the Lago di Patria communicates with the river Clamia or Lago, and is formed by one of the arms of that stream. It is not improbable that this was the case in earlier times, for we have no account of the mouth of the Clamia, while the Literus is mentioned only in connection with the town at its mouth. [Classics.] The modern name of Patria must certainly have been derived from some tradition of the epitaph of Scipo already noticed, though we cannot explain the mode in which it arose; but the name may be traced back as far as the eighth century. There are scarcely any ruins on the site of Liternum, but the remains of the ancient bridge by which the Via Domitiana here crossed the river are still extant, and the road itself may be traced from thence the whole way to Cumae. [E. H. B.]

LITHRUS (Αλήθρος), the name of the northern branch of Mount Parnassus in Pontus, which, together with Mount Ophikon in the north-west of Amasia, enclosed the extensive and fertile plain of Pharnacia. (Strab. xii. p. 356.) Hamilton (Researches, vol. i. p. 349) believes that these two ancient hills answer to the modern Kemer Dag and Otkap Daght. [L. S.]

LIVIANA, in Gallia Narbonensis, is placed by the Table and the Jerusalem Itin. between Carcaso (Carcausanna) and Narbo (Narbonne). It is the next station to Carcaso, and xii. from it; the station that follows Liviana is Usnerva, or Usuvra, or Ilosurba. The site is uncertain. [G. L.]

LIX. LIXUS. [Mauretania].

LIZIZIS. [Azizis].

LOBETANI (Αλβατροί), one of the lesser peoples in the N.E. part of Hispam Tarraconescum. Their position was SE. of the Uliberri, and N. of the Barcino, in the SW. of Aragon. The only city mentioned as belonging to them was LOBETUM (Αλβατρων), which D'Anville identifies with Urepina, but Ubert with Albarracín. (Ptol. ii. 6. § 60; Coins ep. Sestini, p. 169; Ubert, vol. ii. pt. 1, pp. 322, 464.)

LOBETUM. [Lobetani]

LOCORITUM (Αλκόροτος), a town on the river Main in Germany, and probably the same as the
modern Locri. (Pol. ii. 11. § 29.) Its name seems to be of Celtic origin. (Comp. Steiner, Das Main-gebiet, p. 125.)

LOCAR. [Corseca, p. 691. a.]

LOCRI EPICNEMIDH, OPUNTII. [Locrit.]

LOCRI OZOLAE. [Locrit.]

LOCRI (Aenobarbus), sometimes called, for distinction's sake, LOCRI EPIZEPHYRII (Aenobarbus Epizephorum, Thuc. vii. 1; Find. Ol. xi. 15; Strab.; Steph. B.: Euh. Askobus, Locrians; Ruins near Gerace), a city on the SE. coast of the Bruttian peninsula, not far from its southern extremity, and one of the most celebrated of the Greek colonies in this part of Italy. It was a colony, as its name obviously implies, of the Locrians in Greece, but there is much discrepancy as to the tribe of that nation from which it derived its origin. Strabo affirms that it was founded by the Locri Ozaal, under a leader named Eunipus, and centuries Ephorus for ascribing to it the Locri Opuntii; but this last opinion seems to have been the one generally prevalent. Sceynus Chisna mentions both opinions, but seems to incline to the latter; and it is adopted without question by Pausanias, as well as by the poets and later Latin authors, whence we may probably infer that it was the tradition adopted by the Locrians themselves. (Strab. vi. p. 239; Sceyn. Ch. 513—517; Paus. iii. 19. § 12; Virg. Aen. iii. 399.) Unfortunately Eunipus, who had informed himself particularly as to the history and institutions of the Locrians, does not give any statement upon this point. But we learn from him that the origin of the colony was ascribed by the tradition current among the Locrians themselves, and sanctioned by the authority of Aristotle, to a body of fugitive slaves, who had carried off their mistresses, with whom they had previously carried on an illicit intercourse. (Pol. xii. 5. 6. 10—12.) The same story is attested by Dionysius Periegetes (365—367). Pausanias would seem to refer to a wholly different tale where he says that the Locrideanomians sent a colony to the Epizephyrian Locri, at the same time with one to Crotona. (Paus. iii. 3. § 1.) These were, however, in both cases, probably only additional bands of colonists, as Locrideanomus was never regarded as the founder of either city. The date of the foundation of Locri is equally uncertain. Strabo (l.c.) places it a little after that of Crotona and Syracuse, which he regarded as nearly contemporaneous, a date which he has in his last opinion. [Crot. 2. 34.] Eunipus, on the contrary, brings it down to so late a date as n. c. 673 (or, according to Hieronymus, 683); but there seems good reason to believe that this is much too late, and we may venture to adopt Strabo's statement that it was founded soon after Crotona, if the latter be placed about 710 B.C. (Euseb. Arm. p. 105; Clinton F. H. vol. i. p. 186, vol. ii. p. 410.)

The traditions adopted by Aristotle and Polybius represented the first settlers as gaining possession of the soil from the natives Onomiax (whom they called Siculi), by a fraud not unlike those related in many similar legends. (Pol. xii. 6.) The fact stated by Strabo that they first established themselves on Cape Zeplirion (Cape di Bruziano), and subsequently removed from thence to the site which they ultimately occupied, about 15 miles further N., is supported by the evidence of their distinctive appellation, and may be depended on as accurate. (Strab. l.c.)

As in the case of most of the other Greek colonies in Italy, we have very scanty and imperfect in-formation concerning the early history of Locri. The first event in its annals that has been transmitted to us, and one of those to which it owes its chief celebrity, is the legislation of Zaleucus. This was said to be the most ancient written code of laws that had been given to any Greek state; and though the history of Zaleucus himself was involved in great obscurity, and mixed up with much of falsehood (Zaleuc.-, Biogr. Dict.), there is certainly no doubt that the Locrians possessed a written code, which passed under his name, and which continued down to a late period in force in their city. Even in the days of Pindar and of Demosthenes, Locri was regarded as a model of good government and order; and its inhabitants were distinguished for their adherence to established laws and their aversion to all innovation. (Pind. Ol. x. 17; Schol. ad loc.; Strab. vi. p. 260; Demosth. ad Tuc. p. 733; Diod. xii. 20, 21.)

The period of the legislation of Zaleucus cannot be determined with certainty; but the date given by Eusebius of Ol. 30, or n. c. 660, may be received as approximately correct. (Euseb. Arm. p. 105; Clinton, vol. i. p. 193.) Of its principles we know but little; and the quotations from his laws, even if we could depend upon their authenticity, have no reference to the political institutions of the state. It seems probable that Zaleucus was an aristocracy, in which certain select families, called the Hundred Houses, enjoyed superior privileges; these were considered to be derived from the original settlers, and in accordance with the legend concerning their origin, were regarded as deriving their nobility from the female side. (Pol. xii. 5.)

The next event in the history of Locri, of which we have any account, is the memorable battle of the Sagras, in which it is said that a force of 10,000 Locrians, with a small body of auxiliaries from Rhegium, totally defeated an army of 130,000 Crotonians, with vast slaughter. (Strab. vi. p. 261; Uex. de N. D. ii. 2; Justin. xx. 2, 5.) The extraordinary character of this victory, and the exaggerated and fabulous accounts of it which appear to have been circulated, rendered it proverbial among the Greeks (ἄνεστον των επι Ζαρησσ.). Yet we have no means of assigning its correct place in history, its date being extremely uncertain, some accounts placing it after the fall of Sybaris (n. c. 510), while others would place it back nearly 50 years earlier. [Crot.]

The small number of troops which the Locrians are represented as bringing into the field upon this occasion, as compared with those of Crotona, would seem to prove that the city was not at this time a very powerful one; at least it is clear that it was not to compare with the great republics of Sybaris and Crotona. But it seems to have been in a flourishing condition; and it must in all probability be to this period that we must refer the establishment of its colonies of Hipponium and Medma, on the opposite side of the Bruttian peninsula. (Sceyn. Ch. 308; Strab. vi. p. 256.) Locri is mentioned by Herodotus in n. c. 493, when the Samian colonists, who were on their way to Sicily, touched there (Herod. vi. 23); and it appears to have been in a state of great prosperity when its praises were sung by Pindar, in n. c. 484. (Find. Ol. x. 11.) The Locrians, from their position, were naturally led to maintain a close connection with the Greek cities of Sicily, especially with Syracuse, their friendship with which would seem to have dated, according to some accounts,
LOCRI.

from the period of their very foundation. (Strab. vi. p. 239.) On the other hand, they were almost constantly on terms of hostility with their neighbours of Rhegium, and, during the rule of Anaxias, in the latter city, were threatened with complete destruction by that despot, from which they were saved by the intervention of Hieron of Syracuse. (Pind. Pyth. ii. 55; and Schol. ad loc.) In like manner we find them, at the period of the Athenian expeditions to Sicily, in close alliance with Syracuse, and on terms of open enmity with Rhegium. Hence they at first engaged in actual hostilities with the Athenians under Laches; and though they subsequently concluded a treaty of peace with them, they still refused to admit the great Athenian armament, in b.c. 415, even to anchor on their coasts. (Thuc. iii. 99. 115, iv. 1, 24, v. 5, vi. 44, vii. 1; Diod. xiv. 54, xvi. 3.) At a later period of the Peloponian War they were among the few Italian cities that sent auxiliary ships to the Lacedaemonians. (Thuc. vii. 91.)

A short period before the close of the war with Syracuse, the bonds of unity between the two cities were strengthened by the personal alliance of that monarch, who married Doris, the daughter of Xenetus, one of the most eminent of the citizens of Locri. (Diod. xiv. 44.) He subsequently adhered steadfastly to this alliance, which secured him a footing in Italy, from which he derived great advantage in his wars against the Rhegians and other states of Magna Graecia. In return for this, as well as to secure the continuance of their support, he conferred great benefits upon the Locrians, to whom he gave the whole territory of Caunonia, after the destruction of that city in b.c. 389; to which he added that of Hiphonium in the following year, and a part of that of Scyleium. (Diod. xiv. 100, 106, 107; Strab. p. 261.) Hipponium was, however, again wrested from him by the Carthaginians in b.c. 379. (Id. xv. 24.) The same intimate relations with Syracuse continued under the younger Dionysius, when they became the source of great misfortunes to the city: for that despot threw up the walls of Rhegium (b.c. 356), withdrew to Locri, where he seized on the citadel, and established himself in the possession of despotic power. His rule here is described as extremely arbitrary and oppressive, and stained at once by the most excessive avarice and unbridled licentiousness. At length, after a period of six years, the Locrians took advantage of the absence of Dionysius, and drove out his garrison; while they exercised a cruel vengeance upon his unfortunate wife and daughters, who had fallen into their hands. (Justin, xxi. 2, 3; Strab. vi. p. 234; Arist. Pol. v. 7; Church, op. Athen' xii. 54.)

The Locrians are said to have suffered severely from the oppressions of this tyrant; but it is probable that they sustained still greater injury from the increasing power of the Bruttians, who were now become the most formidable neighbours to all the Greek cities in this part of Italy. The Locrians never appear to have fallen under the yoke of the barbarians, but it is certain that their city declined greatly for this former prosperity. It is not again mentioned till the wars of Pyrrhus. At that period it appears that Locri, as well as Rhegium and other Greek cities, had placed itself under the protection of Rome, and even admitted a Roman garrison into its walls. On the approach of Pyrrhus they expelled this garrison, and declared themselves in favour of that monarch (Justin, xviii. 1); but they had soon cause to regret the change: for the garrison left there by the king, during his absence in Sicily, conducted itself so ill, that the Locrians rose against them and expelled them from their city. On this account they were severely punished by Pyrrhus on his return from Sicily; and, not content with exactions from the inhabitants, he carried off a great part of the sacred treasures from the temple of Proserpine, the most celebrated sanctuary at Locri. A violent storm is said to have punished his impiety, and compelled him to restore the treasures. (Appian, Syrac. iii. 12; Liv. xxix. 15; Val. Max. i. 1, Ext. § 1.)

After the departure of Pyrrhus, the Locrians seem to have submitted again to Rome, and continued so till the Second Punic War, when they were among the states that threw off the Roman alliance and declared in favour of the Carthaginians, after the battle of Cannae, b.c. 216. (Liv. xxii. 61, xxvii. 30.) They soon after received a Carthaginian force within their walls, though at the same time their liberties were guaranteed by a treaty of alliance on equal terms. (Liv. xxvii. 1.) When the fortunes of the war began to turn against Carthage, Locri was besieged by the Roman consul Crispinus, but without success; and the approach of Hannibal compelled him to raise the siege, b.c. 208. (Id. xxvii. 25, 28.) It was not till b.c. 205, that Scipio, when on the point of sailing for Africa, was enabled, by the treachery of some of the citizens, to surprise one of the forts which commanded the town; an advantage that soon led to the surrender of the other citadel and the city itself. (Id. xxix. 6—8.) Scipio divided the charge of the city and the command of the garrison to his legate, Q. Pleminius; but that officer conducted himself with such clemency and celerity towards the unfortunate Locrians, that they rose in tumult against him, and a violent sedition took place, which was only appeased by the intervention of Scipio himself. That general, however, took the part of Pleminius, whom he continued in his command; and the Locrians were expatriated and to his exactions and cruelties, till they at length rose in tumult to appeal to the Roman senate. Notwithstanding vehement opposition on the part of the friends of Scipio, the senate pronounced in favour of the Locrians, condemned Pleminius, and restored to the Locrians their liberty and the enjoyment of their own laws. (Liv. xxvii. 8, 16—22; Diod. xxvii. 4; Appian, Anab. 55.) Pleminius had, on this occasion, followed the example of Pyrrhus in plundering the temple of Proserpine; but the senate caused restitution to be made, and the impleader to be expatriated at the public cost. (Diod. b. c.)

From this time we hear little of Locri. Notwithstanding the privileged condition conceded to it by the senate, it seems to have sunk into a very subordinate position. Polybius, however, speaks of it as in his day still a considerable town, which was bound by treaty to furnish a certain amount of naval auxiliaries to the Romans. (Pol. xvi. 5.) The Locrians were under particular obligations to that historian (F.), and at a later period we find them enjoying the special patronage of Cicero (Cic. de Leg. ii. 6), but we do not know the origin of their connection with the great orator. From Strabo's account it is obvious that Locri still subsisted as a town in his day, and it is noticed in like manner by Pliny and Ptolemy. (Strab. vi. p. 259; Plin. iii. 5, s. 10; Pol. iii. 1. § 10.) Its name is not found in the Itineraries, though they describe this coast in-
Cramer, E. Plin. and celebrated not scattered little and Fin. xi.

The few ruins that still remain have been carefully examined and described by the Duc de Luynes. (Ann. d. Inst. Arch. vol. ii. pp. 8—12.) The site of the ancient city, which may be distinctly traced by the vestiges of the walls, occupied a space of near two miles in length, by less than a mile in breadth, extending from the sea-coast at Torre di Gerace (on the left bank of a small stream called the Fiume di S. Ilario), to the first heights or ridges of the Apenines. It is evidently to these heights that Strabo gives the name of Mount Exops (Εξώπας), on which he places the first foundation of the city. (Strab. vi. p. 259.) The same heights are separated by deep ravines, so as to constitute two separate summits, both of them retaining the remains of ancient fortifications, and evidently the "two citadels not far distant from each other" noticed by Livy in his account of the capture of the city by Scipio. (Liv. xxix. 6.) The city extended from hence down the slopes of the hills towards the sea, and had unquestionably its port at the mouth of the little river S. Ilario, though there could never have been a harbour there in the modern sense of the term. Numerous fragments of ancient masonry are scattered over the site, but the only buildings of any ancient edifice are those of a Doric temple, of which the basement alone now remains, but several columns were standing down to a recent period. It is occupied by a farm-house, called the Casino dell' Imperatore, about a mile from the sea, and appears to have stood without the ancient walls, so that it is not improbable the ruins may be the remains of the celebrated temple of Proserpine, which we know to have occupied a similar position. (Liv. xxix. 18.)
The ruins of Locri are about five miles distant from the modern town of Gerace, which is considered as the ancient city by Strabo and other writers. (Strab. iv. p. 12.) But it is generally supposed to occupy the site of the ancient city (Cluver, L.; Barr. de Sit. Calabr. iii. 7), and 15 miles from the Capo di Bruzzano, the Zephyrian promontory.

The Locrians are celebrated by Pindar (Ol. x. 18, xi. 19) for their devotion to the Muses as well as for their skill and courage in war. In accordance with this character we find mention of Xenocrates and Erasippus, both of them natives of Locri, as poets of some note in the same lyric poet. Thucydides was probably also a native of the Epizephyrian Locri. (Schol. ad Pind. Ol. xi. 17; Beckh, ad Ol. x. p. 197.)

The Pythagorean philosophy also was warmly taken up and cultivated there, though the authorities had refused to admit any of the political innovations of that philosopher. (Porphyry, Vl. Pyth. 56.) But among his followers and disciples several were natives of Locri (Iamb. Vit. Pyth. 267), the most eminent of whom were Timaeus, Eracleides, and Acron, from whom Plato is said to have inherited his knowledge of the Pythagorean tenets. ( Cic. de Fin. v. 20.)

Nor was the cultivation of other arts neglected. Eunomus, a Locrian citizen, was celebrated for his skill on the cithara; and the athlete Euthymus of Locri, who gained several prizes at Olympia, was scarcely less renowned than Milo of Crotona. (Strab. vi. pp. 255, 260; Paus. vi. 6. §§ 4—11.)

The territory of Locri, during the flourishing period of the city, was certainly of considerable extent. Its great augmentation by Dionysius of Syracuse has been already mentioned. But previous to that time, it was separated from that of Rhegium on the SW. by the river Halex or Alice, while its northern limit towards Caulonia was probably the Sagras, generally identified with the Aloro. The river Buthrotus of Livy (xxix. 7), which appears to have been but a short distance from the town, was probably the Norio, about six miles to the N.

Thucydides mentions two other colonies of Locri (besides Hippionium and Medna already noticed), to which he gives the names of Itone and Melae, but no other trace is found of either the one or the other. (Thuc. v. 5.)

[C. H. B.]

COIN OF THE LOCRIS EPIZEPHYRI.

LOCRI (Αὔξως: Eut. Αὔξως; in Latin also Locri, but sometimes Locrenses). The Locri were an ancient people in Greece, and were said to have been descended from the Leleges. This was the opinion of Aristotle; and other writers supposed the name of the Locrians to be derived from the word Lucros, an ancient king of the Leleges. (Aristot.; Her. op. Strab. vii. p. 922; Scymnus Ch. 590; Dicearch. 71; Plin. iv. 7. s. 12.) The Locrians, however, must at a very early period have become intermingled with the Hellenes. In the Homeric poems they always appear as Hellenes; and, according to some traditions, even Deucalion, the founder of the Hellenic race, is said to have lived in the Locrian town of Opas or Cyprus. (Find. Ol. ix. 63, seq.; Strab. ix. p. 425.) In historical times the Locrians were divided into three distinct tribes, differing from one another in customs, habits, and civilisation. Of these the eastern Locrians, called the Opuntii and Epicernimi, dwelt upon the eastern coast of Greece, opposite the island of Euboza; while the western Locrians dwelt upon the Corinthians gulf, and were separated from the former by Mount Parnassus and the whole of Doris and Phocis. (Strab. ix. p. 425.)

The eastern Locrians are alone mentioned by Homer; they were the most ancient and the most civilised: the western Locrians, who are said to have been a colony of the former, are not mentioned in history till the time of the Peloponnesian War, and are even then represented as a semi-barbarous people. (Thuc. i. 5.) We may conjecture that the Locrians at one time extended from sea to sea, and were torn asunder by the immigration of the Phocians and Dorians. (Niebuhr, Lectures on Ancient Ethnography, vol. i. p. 123.)

1. Locri Epicernimi and Opuntii (Ἐπικερνίμιοι, Ὀποντῖοι), inhabited a narrow strip upon the eastern coast of Greece, from the pass of Thermopylae to the mouth of the river Cephissus.
Their northern frontier town was Abad, which bordered upon the Malians, and their southern frontier town was Larymna, which at a later time belonged to Boeotia. The Locrians, however, did not inhabit this coast continuously, but were separated by a narrow slip of Phocis, which extended to the Euboean sea, and contained the Phocian seaport town of Daphnus. The Locrians north of Daphnus were called Epicemidii, from Mount Cnemis; and those south of this town were named Ophuntii, from Opus, their principal city. On the west the Locrians were separated from Phocis and Boeotia by a range of mountains, extending from Mount Oeta and running parallel to the coast. The northern part of this range, called Mount Cnemis (Strab. ix. pp. 416, 425), now Titlanta, rises to a considerable height, and separated the Epicemidii Locri from the Phocians of the upper valley of the Cephissus; the southern portion, which bore no specific name, is not so lofty as Mount Cnemis, and separated the Ophuntii Locrians from the north-eastern parts of Boeotia. Lateral branches extended from these mountains to the coast, of which one terminated in the promontory Cnemidii; the other was opposed to the town Lichades, but there were several fruitful valleys, and the fertility of the whole of the Locrian coast is praised both by ancient and modern observers. (Strab. ix. p. 425; Forchhammer, Helleniata, pp. 11—12; Grote, Hist. of Greece, vol. ii. p. 381.) In consequence of the proximity of the mountains to the coast there was no room for any considerable rivers. The largest, which, however, is only a mountain torrent, is the Boachius (Badyrus), called also Meces (M apex) by Strabo, rising in Mount Cnemis, and flowing into the sea between Scarpheia and Thuranis. (Horn. ii. 533; Strab. ix. p. 426; Plut. iii. 15, § 11; Plin. iv. 7, s. 12; Leake, Northern Greece, vol. ii. p. 67.) The only other river mentioned by name is the Platanius (Parnassus, Pau. ix. 24, § 5), a small stream, which flows into the Opuntian gulf near the Boeotian frontier; the river which flows from the modern village of Preblykna. (Leake, vol. ii. p. 174.) The Opuntian gulf (ὁ Οποντιοῦ κόλπος) (Strab. ix. pp. 416, 425, 426), at the head of which the sea stood, was a considerable bay, shallow at its inner extremity. In this bay, close to the coast, is the small island of Atalanta. (Atalanta, No. 1.) There are three important passes across the Locrian mountains into Phocis. One leads from the territory of the Epicemidii, between the summits of Mount Callidrimus and Mount Cnemis, to Thironium, in the upper valley of the Cephissus; a second across Mount Cnemis to the Phocian town of Eleitem; and a third from Opus to Hyamopolis, also a Phocian town, whence the road ran to Abad and Orchomenus.

The eastern Locrians, as we have already said, are mentioned by Homer, who describes them as following Ajax, the son of Oileus, to the Trojan War in forty ships, and as inhabiting the towns of Cynus, Opus, Calliarchus, Bass, Scarphe, Angea, Tarpe, and Thironium. (II. ii. 527—535.) Neither Homer, Herodotus, Thucydides, nor Polybius, make any distinction between the Opuntii and Epicemidii; and, during the flourishing period of Greek history, Opus was regarded as the chief town of the eastern Locrians. Even Strabo, from whom the distinction is chiefly derived, in one place describes Opus as the metropolis of the Epicemidii (ix. p. 416); and the same is confirmed by Pliny (iv. 7, s. 12) and Stephanus (s. v. Ophuntta; from L. lake vol. i. p. 181). In the Persian War the Opuntian Locrians fought with Locrians at Thermopylae, and also sent seven ships to the Greek fleet. (Herod. vii. 203, v. 1.) The Locrians fought on the side of Sparta in the Peloponnesian War. (Thuc. ii. 9.)

The following is a list of the Locrian towns:

1. Of the Epicemidii; along the coast from N. to S., Alpesus; Nicaea; Scarphe or Scaphie; Thironium; Cnemis or Cnemidii; more inland, Tarpe, afterwards Pbasis; Argaeae.—2. Of the Ophuntii; along the coast from N. to S., Alpeus; Cynus; Opus; Hailae; Larymna, which at a later time belonged to Boeotia; more inland, Calliarchus; Naeus; Corseia.

COIN OF THE LOCRI OPUNTII.

II. LOCRIS. OZOLAE (Ozólae), inhabited a district upon the Corinthian gulf, bounded on the north by Doris and Aetolia, on the east by Phocis, and on the west by Aetolia. This district is mountainous, and for the most part unprofitable. The deprivities of Mount Parthassus from Phocis, and of Mount Erymanthus from Aetolia, occupy the greater part of it. The only river, of which the name is mentioned, is the Hylates, now the Morea, which runs in a south-westerly direction, and falls into the Corinthian gulf near Naupactus. The frontier of the Locri Ozolae on the west was close to the promontory Antirrhium, opposite the promontory Rhium on the coast of Achaia. Antirrhium, which was in the territory of the Locri, is spoken of elsewhere. [Vol. i. p. 13.] The eastern frontier of Locri, on the coast, was close to the Phoenician town of Crissa; and the Crissaean promontory washed on its western side the Locrian, and on its eastern the Phocaean coast. The origin of the name of Ozolae is uncertain. Various etymologies were proposed by the ancients. (Paus. x. 38, § 1, seq.) Some derived it from the verb όκεας, "to smell," either from the stench arising from a spring at the foot of Mount Taphiassus, beneath which the centaur Nessus is said to have been buried, and which still retains this property (cf. Strab. ix. p. 427), or from the abundance of asphodel and other plants in that region. (Cf. Archytas, ap. Plut. Peri. Quest. Græc. 15.) Others derived it from the unpressed skins which were worn by the ancient inhabitants; and the Locrians themselves from the branches (όκιας) of a vine which was produced in their country in a marvellous manner. The Locri Ozolae are said to have been a colony from the Opuntian Locrians. They first appear in history in the time of the Peloponnesian War, as has been mentioned above, when they are mentioned by Thucydides as a semi-barbarous nation, along with the Aetolians and Arcamaniers, whom they resembled in their armour and mode of fighting. (Thuc. i. 5, iii. 94.) In r. c. 426 the Locrians promised to assist Demosthenes, the Athenian commander, in his invasion of Aetolia; but, after the defeat of Demosthenes, most of the Locrian tribes submitted
LOGI.

At this period we must infer that Londinium was without external walls; and this absence of mural defences appears to have been common also to Verulamium and to Camulodunum. The Britons passed by the fortified places and attacked at once the rich and populous cities inadequately defended. Camulodunum was the first to fall; Londinium and Verulamium speedily followed in a similar catastrophe.

The Itinerary of Antoninus, which is probably not later than the time of Severus, affords direct evidence of the chief position which Londinium held among the towns and cities of Britain. It occurs in no less than seven of the itineras, and in six of these it stands either as the place of departure or as the terminus of the routes; no other town is introduced so conspicuously.

The most historical mention of Londinium occurs in the panegyric of Eumenius addressed to Constantius Caesar (c. 17). After the defeat of Allectus, the victorious Romans marched directly on Londinium, which was being plundered by the Franks and other foreign mercenaries, who made up the greater part of the so-called "heathen forces." 

Ammianus Marcellinus, who wrote at a later period, states that, in his time, Londinium was called Augusta, an honourable appellation not infrequently conferred on the important cities of the empire. If we compare the place-name written as it is pronounced at the present day:— "Egressus, tendenique ad Venutinium vetus oppidum, quod Augustam posteritas appellavit" (xxviii. 8, comp. xxviii. 3). In the Notitia Din- nata we find mention of a "Præpositus Theaur- raeum Angustensium in Britannia;" and in the Chorography of Ravenna the complete form, Londin- ium Augusta, is given.

Monumental remains show that Londinium contained buildings commensurate in grandeur and extent with its historical claims. The foundations of the wall which bordered the river, when laid open a few years since, was almost wholly composed of materials used in buildings which were anterior to the period when the wall was built; but it was impossible to decide the dates of either. The stones of which this wall was constructed were portions of columns, friezes, cornices, and also foundation stones. From their magnitude, character, and number, they gave an important and interesting insight into the obscure history of Roman London, in showing the architectural changes that had taken place in it. Similar discoveries have been made in various parts of the modern city which more fully developed the debir of an ancient city of importance; other architectural fragments have been found; walls of vast strength and thickness have been noticed; and within the last twenty years, at least thirty tessel- lated pavements have been laid open, of which some were of a very fine kind. (Archeologia, vols. xxvii. xxviii. xxix. seq.) Londinium, unenclosed at first, was subsequently in early times walled, but it occupied only part of the site it eventually oc- cupied (Archeologia, vol. xxix.). The line of the wall of Roman London is well known, and can still, in parts, be traced. Where it has been excavated to the foundation, it appears based upon a bed of clay and flints; the wall itself, composed of rubble and hard mortar, is faced with small squared stones and bonding tiles; its thickness is about 12 feet; its original height was probably between 20 and 30 feet; it was flanked with towers, and had a
least seven gates. By the sides of the chief roads stood the cemeteries, from which enormous quantities of sepulchral remains have been, and still are, procured. Among the inscriptions, are records of soldiers of the second, the sixth, and the twentieth legions. (Col. Ant. vol. i.) We have no evidence, however, to show that the legions themselves were ever quartered at Londinium. The only troops which may be considered to have been stationed at this city were a cohort of the native Britons. (Col. Ant. vol. i.) But it is not known at what particular period they were here. It is, however, a rather remarkable fact, as it was somewhat contrary to the policy of the Romans to station the auxiliaries in their native countries.

Traces of temples and portions of statues have also been found in London. The most remarkable of the latter is, perhaps, the bronze head of Hadrian found in the Thames, and the large bronze hand found in Thames Street. In reference to the statues in bronze which adorned Londinium and other cities of Roman Britain, the reader may be directed to a curious passage in Geoffrey of Monmouth. That writer relates (xii. 13), that, after the death of Cadwalla, the Britons embalmed his body and placed it in a bronze statue, which was set upon a bronze horse of wondrous beauty, and placed over the western gate of London, as a trophy of victory and as a terror to the Saxons. All that we are called upon to consider in this statement is, whether it is at all likely that the Britons should have invented the bronze horse in bronze; and whether it is not very probable that the story was made up to account for some Roman work of art, which, for centuries after the Romans had left Britain, remained a wonder and a puzzle to their successors. Equestrian statues in bronze were erected in Britain by the Romans, as is proved by a fragment found at Lincoln; but in the subsequent and middle ages such works of art were not fabricated.

We have above referred to the "Travails of the Tempest," by Thomas Traherne. Numerous coins are extant of this mint of Londinium. Those which may be certainly thus attributed are of Carnabys, Allectus, Constantines, and the Constantine family. (Akerman's Coins of the Romans relating to Britain.) With respect to the precise position of the public buildings, and, indeed, of the general distribution of the Roman city, but little is known; it is, however, very certain that, with some few exceptions, the course of the modern streets is no guide to that of the ancient. This has also been remarked to be the case at Trerice and other ancient cities. [C.R.S.]

LONGOBONI (Aven).—Ital. ii. 5. § 10; Aveniis, Marc. Hercld. p. 43; Bottingaio, a small island, and the only one, belonging to the province of Lusitania, lay off the promontory Lusinum (C. Carreiro). [P. S.]

LONGANUS (Ogygius), a river in the N. of Sicily, not far from Mylas (Milazzo), celebrated for the victory of Hiero, king of Syracuse, over the Mamertines in b. c. 279 (Vol. i. 9; Diod. xiii. 19; Exc./i. 2 p. 29, where the name is written Ae- rogav, but the same river is undoubtedly meant). Polybius describes it as "in the plain of Mylas" (in tō Mylaio mortī), but it is impossible to say, with certainty, which of the small rivers that flow into the sea near that town is the one meant. The Fiawē di Santa Lucia, about three miles south-west of Milazzo, has perhaps the best claim; though Clavarius fixes on the Fiume di Castro Reale, a little more distant from that city. (Clav. Sicil, p. 363.) [E. II. B.]

LONGOBARDI. [Langobardi.]

LONGONII. [Sardinia.]

LONGUS, a town in Britain, mentioned in the Notitia and much noticed. It was, probably, in the neighbourhood of the Cumberland and Westmorland lakes; but beyond this it is not safe to go further in the way of identification; though the Monument Britannicum makes it Lancaster. [R. G. L.]

LONGULA (Δορετος; Eth. Longobulus; Buon Riposo), an ancient city of Latium, which seems to have been included in the territory of the Volscians. It first appears as a Volscian city, which was taken by a few (The Roman army under L. Aemilius encamped in the war against the Volscians, b. c. 492 (Dion. v. 55); and again as a Roman city, when it was invested in the Sannine Wars, b. c. 309. (Liv. i. 39.) Its name is after this found only in Pliny's list of the cities of Latium which were in his time utterly decayed and deserted. (Plin. iii. 5. § 9.) As he enumerates it among the cities that shared in the sacrifices on the Alban Mount, it would seem to have been originally a Latin city, though it had fallen into the hands of the Volscians before its name appears in history.

All the above passages would lead us to place Longula in the neighborhood of Anzio; but the two former connect it closely with Pollinae and Corioli. These are all the data which we have for determining its position, which must therefore be in some degree matter of conjecture, especially as that of Pollinae and Corioli is equally uncertain. But Nibby has pointed out a locality which has at all events a plausible claim to be that of Longula, in the casale, or farm-house, now called Buon Riposo, on the right of the road from Rome to Anzio, about 27 miles from Rome, and 10 in a straight line from Porta d'Asco.* The farm, or tenuta, of Buon Riposo lies between that of Carroceto on the one side, and Ardea on the other; while the site occupied by the casale itself, and which was that of a castle in the middle ages, is described as one of those which is so clearly marked by natural advantages of position that it could scarcely fail to have been chosen as the site of an ancient city. No ruins remain; but perhaps these could hardly be expected in the case of a town that ceased to exist at so early a period. (Nibby, vol. i. p. 326; Abeken, Mittel-Italien, p. 72.) [E. II. B.]

* The position assigned to Buon Riposo on Gell's map does not accord with this description of the site given by Nibby; but this part of the map is very imperfect, and evidently not derived from personal observation. Gell's own account of the situation of Buon Riposo (p. 185), though less precise, agrees with that of Nibby.
LONGUS FROMORIUM. [Scylla.]

LONGUS, in North Britain, mentioned by Ptolemy (ii. 3) as a river to the north of the Epi-

sonian Fromorium (Moll of Cantygre). Identified in the Monumenta Britannica with Lynneboth,

Innerlochy, and Loch Melfort. [R. G. L.]

LOPADOUSA (Aurorodoea, Strab. xix. p. 584; 

Aurorofe, Ptol. iv. 3. § 54: Lamprodes), a small island off the E. coast of Africa Propria, opposite to the town of Thapsus, at the distance of 80 stadia, according to an ancient Persplus (Curtius, Bibl. Matrix. 

Cons. 1. 27, 2. 10. § 9). These places are 30. 5. M. P. 

N. of Cercina, and makes its length about 6 M. P. 

(Plin. iii. 8. 14. v. 7. s. 7.) It really lies about 

80 English miles E. of Thapsus, and about 90 NE. of Cercina. [P. S.]

LOPHIS. [Boeotia, p. 413, s.]

LOPUSAGIUM, in Gallia, is placed by the Table 

between Vesontio (Besançot) and Epanandocorium (Manduere). It is xiii. leagues from Vesontio. D'An-

ville supposes that it may be a place called Denueme-

lae. Notaries mention places named Euri-Bonnes-de-DumAdvertising, or a place near it named Laced or Luciol. [G. L.]

LOPSICA (Apötsos), a town of Liburnia, which 

Ptolemy (ii. 16. § 2; comp. Plin. iii. 23) places 

near the mouth of the river Tedanianus (Zerumugus): perhaps the same place as the Osphala 

of the Geographer of Ravenna. [E. B. J.]

LORIUM, or LAURIUM, a village in Southern 

Etruria and station on the Via Aurelia, 12 miles from Rome. (Juhn. Ant. p. 290; Tab. Pent.) It 

is chiefly known from the circumstance that the 

family of Antonius Fius had a villa there, in which 

that emperor was brought up, and where he after-

wards constructed a palace or villa on a more 

magnificent scale, which was his place of residence at 

the time of his death. (Jul. Capit. Ant. P. 12; 

Vet. de Cos. 13. Epit. 15; Entrop. viii. 8.) It 

was afterwards a favourite place of resort with his 

successor M. Aurelius, as we learn from his letters 

to Fronto (Fronto, Ep. i. 15. iii. 20. v. 3. &c.;) 

but had already fallen into decay in the time of 

Aurelian, who also built a palace on the ruins. No 

other mention of Laurium occurs except in the 

Itineraries, by which we are enabled to fix its 

position with certainty. The 12th mile from Rome 

coincides with a bridge over a small stream between 

a farm called Botaccia and the Castel di Guido: 

here the remains of ancient buildings and sepulchres 

have been found; and on the high ground above are 

the ruins of an edifice of a more extensive and 

symmetrical character, which, from the style of 

construction, may probably have belonged to the 

villa of the Antonines. (Nibby, vol. ii. p. 271.) 

The name is variously written Lorium, Lorii, 

and Laurium, but the first form, which is that adopted 

in the epistles of Fronto and M. Aurelius, is the 

best warranted. The place appears to have con-

tinued to be inhabited during the early ages of 

Christianity, and we even meet with a bishop of 

Lorium in the 5th century. 

[E. H. B.]

LORYMA (ria Atheros, a small fortified place 

with a port, close to Cape Cynosoma, on the western-

most point of the Dalian Chersonesus, in Caria. 

Its harbour was about 20 Roman miles distant from 

Rhodes. (Liv. xxxvii. 17. xiv. 10; Steph. B. 

s. a.; Plin. v. 29; Ptol. v. 2. § 11: Thucydid. vii. 

43; Senec. Quaest. Nat. iii. 19; Appian. Bell. Civ 

iv. 72.) Strabo (xiv. p. 652) applies the name 

Loryma to the whole of the rocky district, without 

mentioning the town. The Larumna of Melo (i. 

18) and the Lorimna of the Tab. Pent, perhaps 

refer to Loryma, although it is also possible that 

they may be identical with a place called La-

rymana mentioned by Pliny in the same district. 

Leake (Asia Minor. p. 223) regards the ruins 

in the west of Port Aplothea as belonging to the 

ancient town of Loryma. These ruins are seen on 

the spur of a hill at the south-western entrance of the 

port; the town was long and narrow, running from 

west to east; on each of its long sides there are still 

visible six or seven square towers, and one large 

round one at each end; the round tower at the east 

end is completely demeanshaken. The town was 

preserved almost to their entire height, and built in 

the best style, of large square blocks of limestone. 

Towards the harbour, in the north, the town had 

no gate, and on the south side alone there appear three 

rather narrow entrances. In the interior no remains 

of buildings are discernible, the ground consisting of 

the bare rock, whence it is evident that the place 

was not a town, but only a fort. Sculptures and in-

scriptions have not been found either within or 

outside the town, and several tombs with bare stelae, 

and some ruins, exist in the valley opposite the 

harbour. (Ross, Reisen auf den Griech. Inseln, 

vol. iv. pp. 46. &c.) 

[LS.]

LORNE, a fortress in Mesopotamia, situated on 

the northern frontier, upon Mount Izala. (Ann.

A. M. xix. 9.)

LOSA, a station in Gallia Aquitania, placed by 

the Antonine Itim. on the road from Pompelo (Pam-

polome) in Spain to Burdigala (Bordeaux). From 

Segosa (Escossae or Escusa) to Losa is xii. 

 leagues), from Losa to Boi (Boir) xii., and from 

Boi to Burdigala xvi. D'Anville conjectures Losa to 

be at a little canton, as he calls it, named Leoke. 

Walekaenser fixes it at the Bois de Liegeus. [G. L.]

LOSORIUM (Atdoros), a fortress in Lazica, 

built by Justinian (Procop. de Aed. iii. 7), which 

Dubois de Montperoux (Voyage Autour du Caucase, 

vol. ii. p. 360) identifies with the modern village 

of Louswahtheri. 

[EB. J.]

LOSSONIUS. [Olososox.]

LOTOPHAGI (Lotophagi, i. e. lotus-eaters), a 

people on the N. coast of Africa, between the Syrtes, 

who first appear in mythic, but afterwards in his-

torical geography. Homer (Od. ix. 84. et seqq.) 

represents Ulysses as coming, in his wanderings, to 

the coast of the Lotophagi, who compassed the 

destruction of his companions by giving them the 

lotus to eat. For whoever of them ate the sweet 

fruit of the lotus, lost all wish to return to his 

native country, but desired to remain there with 

the Lotophagi, feasting on the lotus, and forgetful 

of return. (The poetical idea is explicated wrong-

ly put by Tennyson in his Lotus-Eaters, works, vol. i. 

pp. 175 — 184.) The Greeks of the historical 

period identified the country of these Lotus-eaters 

with the coast between the Syrtes, where they found 

an indigenous tribe, who used to a great extent 

(Herodotus says, as their sole article of food) the 

fruit of a plant, which they therefore supposed to be 

the lotus of Homer. To this day, the aboriginal 

inhabitants who live in caves along the same 

coasts eat the fruit of the plant, which is doubtless 

the lotus of the ancients, and drink a wine made 

from its juice, as the ancient Lotophagi also did 

(Herod. iv. 177). This plant, the Zeuophus Lotus 

or Rhannus Lotus (injube tree) of the botanists 

(called by the Arabs Scedra'), is a prickly branching 

shrub, bearing fruit of the size of a wild plum, of a
LOTUM.

saffron colour and sweetish taste (Herodotus likens its taste to that of the date). It must not be confounded with the celebrated Egyptian lotus, or water-lily of the Nile, which was also used for food. (There were, in fact, several plants of the name, which are carefully distinguished by Liddell and Scott, G. E. s. r. v.). The ancient geographers differ as to the extent of coast which they assign to the Lotophagi. Their chief seat was around the Lesser Syris, and eastward inestimably towards the Great Syris; but Mela carries them into Cyrenia. They are also placed in the large island of Meninx or Lotophagitis, E. of the Lesser Syris. (Hom. Herod. II. cc.: Xen. Anab. iii. 2. § 25: Suidas. p. 47: Mela, i. 7. § 5: Plin. v. 4. s. 4: Na. iii. 510: Hygin. Fab. 125: Stew; Delia Cella; Barth; Heeren, Ideen, vol. ii. P. 1. p. 54: Ritter, Erdkunde, vol. i. p. 898.) [P.S.]

LOTUM, in Gallia, is placed by the Antonine Itin. on a road from Julia-Bona (Lilhoborne) to Rotemagus (Rouen). It is vi. leagues from Julia-Bona to Lotum, and xiii. from Lotum to Rotemagus. The actual distances seem to fix Lotum at or near Caudbec, which is on the north bank of the Seine between Lilhoborne and Rouen. [G. L.]

LOXA, in Britain, mentioned by Ptolemy (ii. 3), as a river on the western coast of Scotland, north of the Verna (Ogden) estuary, i.e. the Mornay Firth. Identified in the Manumata Britannica with the Loth in Sutherland; the Lossie, and Cromarty Firth. [R. G. L.]

LUAXCI. [GALLAFICA.]

LUBAEIX. [GALLAFICA.]

LUC (Albus, Strab., Ptol.: Eth. Lucenis: Lucus), a city of Etruria, situated in a plain at the foot of the Apennines, near the left bank of the Ausus (Sédrio) about 12 miles from the sea, and 10 NE. of Pisa. Though Luca was included within the limits of Etruria, as these were established in the time of Augustus (Plin. iii. 5. s. 8; Ptol. iii. 1. § 47), it is very doubtful whether it was ever an Etruscan town. No mention of it is found as such, and no Etruscan remains have been discovered in its neighbourhood. But it is probable that the Etruscans at one time extended their power over the level country at the foot of the Apennines, from the Arno to the Macra, leaving the Ligurians in possession only of the mountains—and at this period, therefore, Luca was probably subject to them. At a later period, however, it had certainly fallen into the hands of the Ligurians, and being retaken from them by the Romans, seems to have been commonly considered (until the reign of Augustus) a Ligurian town. For this reason we find it comprised within the province assigned to Caesar, which included Liguria as well as Cispadine Gaul. (Suet. Cæs. 24.)

The first mention of Luca in history is in n. c. 218, when Livy tells us that the enemy Sempronians retired after his manœuvre, and met with Hannibal. (Livy xxi. 59.) It was, therefore, at this period certainly in the hands of the Romans, though it would seem to have subsequently fallen again into those of the Ligurians; but it is strange that during the long protracted wars of the Romans with that people, we meet with no mention of Luca, though it must have been of importance as a frontier town, especially in their wars with the Amnii. The next notice of it is that of the establishment there of a Roman colony in n. c. 117. (Vell. Pat. i. 15; Liv. xii. 13.) There is, indeed, some difficulty with regard to this; the MSS. and editions of Livy vary between Luca and Luna; but there is no such discrepancy in those of Velius, and there seems to at least no reason to doubt the settlement of a Latin colony at Luna; while that mentioned in Livy being "colonia civium" may, perhaps, with more probability, be referred to Luna. (Madvig, de Colon. p. 287: Zumpt, de Colon. p. 340.) That at Luca became, in common with the other Latin colonies, a municipal town by virtue of the Lex Julia (n. c. 49), and hence is termed by Cicero "municipium Luense." (Cic. ad Fam. xiii. 13.) It appears to have been at this time a considerable town, as we find it repeatedly selected by Caesar during his administration of Gaul at the frontier town of his province, to which he repaired in order to consult with his friends, or with the leaders of political parties at Rome. (Suet. Cæs. 24: Plut. Cæs. 21, Crass. 14, Pompey, 51; Cic. ad Fam. i. 9. § 9.) On one of these occasions (in n. c. 56) there are said to have been more than 200 senators assembled at Luca, including Pompey and Crassus, as well as Caesar himself. (Plut. L. C.: Appian, B. C. i. 17.) Luca would seem to have received a fresh colony before the time of Pliny, probably under Augustus. (Plin. iii. 5. s. 8: Zumpt, de Colon. p. 349.) We hear little of it under the Roman Empire; but we find it remaining during the middle ages. Luca was still a flourishing city, with 25,000 inhabitants; the only relics of antiquity visible there are those of an amphitheatre, considerable part of which may still be traced, now converted into a market-place called the Piazza del Mercato, and some small remains of a theatre near the church of Sta. Maria di Corte Lainini. [E. H. B.]

LUCANUS, a river of Brittanum. [BRUTTI, P. 149; 151.]

LUCAVIA (Avanavia, Strab., the name of the people is written Avanavagi by Strabo and Polybius, but Ptolemy has Avanavai, and this is found also on coins), a province or district of Southern Italy, extending across from the Tyrrhenian sea to the gulf of Tarentum, and bounded by the Bruttians on the S., by Samnium and Apulia on the N., and by Campania, or the district of the Picentini, on the NW. Its more precise limits, which are fixed with unusual unanimity by the geographers, were, the river Silarus on the NW., the图画, which Included, the gulf of Tarentum, just beyond Metapontum, on the NE.; while the mouths of the Lato and the Gratias marked its frontiers towards the Bruttians on the two sides of the peninsula. (Strab. vii. pp. 232, 253, 255; Ptol. iii. 5. s. 10, 11. s. 15; Ptol. iii. 1. §§ 8. 9.) Its northern frontier, from the sources of the Silarus to those of the Bradanos, must have been an arbitrary line; but nearly following the main ridge of the Apennines in this part of its course. It thus comprised the modern province of the Basilicata, together with the greater part of the Principato Cicugre and the extreme northern portion of Calabria.

LUCANIA.
LUCANIA.

Lucania is evidently "the land of the Lucanians:" but though no territorial designation in Italy became more clearly marked or generally adopted than this appellation, it was not till a comparatively late period that it came into use. The name of the Lucanians was wholly unknown to the Greeks in the days of Thucydides; and the tract subsequently known as Lucania was up to that time generally comprised under the vague appellation of Oenotria, while its coasts were included in the name of Magna Graecia. Sylfax is the earliest author in whom the name of Lucania and the Lucanians is found; and he describes them as extending from the frontiers of the Samnites and Itapygians to the southern extremity of the Bruttian peninsula. (Syl. pp. 3, 4, 5. §§ 12, 13.) We are fortunately able to trace with certainty the historical causes of this change of designation.

The earliest inhabitants of the part of Italy afterwards known as Lucania, were the Oenotrians and Pelasgics. It is founded barbarians whom the Greeks were in a very imperfect and fragmentary manner, so that we can scarcely trace the steps of their progress. But it is probable that it was not till after the conquest of Campania (about B.C. 420) that the Samnites began to extend their conquests to the southward. Niebuhr has justly observed that the tranquil foundation of the Athenian colony at Thurii, in B.C. 442, and the period of prosperity which allowed it at first to rise rapidly to power, sufficiently prove that the Lucanians had not as yet become farmers, and therefore not powerful, on that side of the peninsula (Nieb. vol. i. p. 96). But they seemed to have first turned their arms against the Greek cities on the W. coast, and established a permanent footing in that quarter, before they came into collision with the more powerful cities on the Tarentine gulf. (Strab. i. p. 254.) Posidonia was apparently the first of the Greek cities which yielded to their arms, though the date of its compact is uncertain. (Pelasg.) It was probably soon after this that the Thurians and the confederates of Cimone, were engaged in war with the Lucanians, in which they appeared to have obtained some considerable successes. (Polyaen. ii. 10.) But the progress of the latter was still unchecked; and the increasing danger from their power led to the formation, in B.C. 393, of a defensive league among all the principal cities of Magna Graecia, with a view of resisting the Lucanians on the N., and the power of Dionysius on the S. (Diod. xiv. 91.) They might reasonably suppose that their combined arms would easily effect this; but only three years later, in B.C. 390, the forces of the confederates, among whom the Thurians took the lead, sustained a great defeat near Lais, in which it is said that 10,000 of the Greeks perished. (Diod. xiv. 101, 102; Strab. vi. p. 253.) After this success, the Lucanians seem to have spread themselves with but little opposition through the southern peninsula of Italy. The wars of the elder Dionysius in that region must have indirectly favoured their progress by weakening the Greek cities; and though he did not openly support the Lucanians, it is evident that he looked upon their successes with no unfavourable eyes. (Diod. xiv. 102.) Their continued advance towards the south, however, would soon render them in their turn a source of unchangeable to the Syracusan despots, who had established a permanent footing in the Italian peninsula; hence we find the younger Dionysius engaged in hostilities with the Lucanians, but apparently with little success; and after a vain attempt to exclude them from the southernmost peninsula of Bruttium, by fortifying the isthmus between the Hippocean and Scyllacian gulfs, he was obliged to conclude a treaty of peace with them in B.C. 335. (Diod. xvi. 5; Strab. vi. p. 261.)

This was about the period during which the Lucanians had attained their greatest power, and extended their dominion to the limits which we find assigned to them by Sylfax (pp. 3, 4). They
had not, however, subdued the Greek cities on the coast, some of which fell at a later period under the yoke of the Bruttians; while others maintained their independence, though for the most part in a decayed and enfeebled condition, till the period of the Roman dominion. [MAGNA GRACIA.] Shortly afterwards, the Lucanians lost the Bruttian peninsula, their most recent acquisition, by the revolt of the Bruttians, who, from a mere troop of outlaws and banditti, gradually coalesced into a formidable nation. [BRUTTI.] The establishment of this power in the extreme south, confined the Lucanians within the limits which are commonly assigned from this time forth to their territory; they seem to have acquiesced, after a brief struggle, in the independence of the Bruttians, and soon made common cause with them against the Greeks. Their arms were now principally directed against the Tarentines, on their eastern frontier. The latter people, who had apparently taken little part in the earlier contests of the Greeks with the Lucanians, were now compelled to provide for their own defence; and successively called in the assistance of Archilamus, king of Sparta, and Alexander, king of Epirus. The former monarch was slain in a battle against the Lucanians in c. 338, and his whole army cut to pieces (Diod. xvi. 63, 88; Strab. vi. p. 290); but Alexander proved a more formidable antagonist; he defeated the Lucanians (though supported by the Samnites) in a great battle near Pasimum, as well as in several minor encounters, took several of their cities, and carried his arms into the heart of Bruttium, where he ultimately fell in battle near Pandonia, c. 326. (Livy. viii. 24; Justin. xii. 2, xxiii. 1; Strab. vi. p. 256.) It would appear as if the power of the Lucanians was considerably broken at this period; and in n. c. 303, when we next hear of them as engaged in war with the Tarentines, the very arrival of Cleonymus from Sparta is said to have terrified them into the conclusion of a treaty. (Diod. xx. 104.)

Meantime the Lucanians had become involved in relations with a more formidable power. Already, in n. c. 326, immediately after the death of Alexander king of Epirus, the Lucanians are mentioned as voluntarily concluding a treaty of peace and alliance with Rome, which was then just entering on the Second Samnite War. (Livy. viii. 25.) We have no explanation of the causes which led to this change of policy; just before, we find them in alliance with the Samnites, and very shortly after they returned once more to their old allies. (ib. 27.) But though they were thus brought into a state of direct hostility with Rome, it was not till n. c. 317, that the course of events allowed the Romans to punish their defection. In that year the consuls for the first time entered Lucania, and took the town of Neumulm by assault. (Livy. ix. 20.) The Lucanians were evidently included in the peace which put an end to the Second Samnite War (c. 304), and from this time continued steadfast in the Roman alliance; so that it was the attack made on them by the Samnites which led to the Third Samnite War, n. c. 298. (Livy. x. 11.) Throughout that struggle the Lucanians seem to have been faithful to Rome; and were probably admitted to an alliance on favourable conditions at its close. But in n. c. 286, they having turned their arms against Thurii, the Romans took up the cause of the besieged city, and declared war against the Lucanians, over whom M. Carusis is said to have celebrated an ovation. (Au.r. Vict. de Viet Ilust. 33); and four years afterwards (n. c. 282) the allied forces of the Lucanians and Samnites, which had again beleaguered Thurii, were defeated in a great battle by C. Fabricius. (Val. Max. i. 8. § 6.) On the arrival of Pyrrhus in Italy (n. c. 281) the Lucanians were among the first to declare in favor of that monarch, though it was not till after his victory at Heraclea that they actually sent their contingent to his support. (Plut. Pyrr. 13, 17; Zonar. viii. 3.) The Lucanian auxiliaries are especially mentioned in the service of that prince at the battle of Asculum (Dionys. xx., Fr. Diodot); but when Pyrrhus withdrew from Italy, he left his allies at the mercy of the Roman arms, and the Lucanians in particular, were exposed to the full brunt of their resentment. After they had seen their armies defeated, and their territory ravaged in several successive campaigns by C. Fabricius, Cornlius Balbinus, and M. Carusis, they were at length reduced to submission by Sp. Carvillius and L. Papirius Cursor in n. c. 272. (Zonar. viii. 6; Entrop. ii. 14; Liv. Epit. xii., xiii., Fast. Capit.)

From this time the Lucanians continued in undisputed subjection to Rome till the Second Punic War. In the celebrated register of the Roman forces in c. 223, the Lucanians (including, probably, the Bruttians, who are not separately noticed) are reckoned as capable of standing in the field 30,000 foot and 3000 horse, so that they must have been still a numerous and powerful people. (Pal. i. 24.) But they suffered severely in the Second Punic War. Having declared in favour of Hannibal after the battle of Cannae (n. c. 216), their territory became during many successive campaigns the theatre of war, and was ravaged, in turn, by both contend ing armies. Thus, in n. c. 214, it was the scene of the contest between Scenomunus Gracchus and Hannu; in the following year Gracchus employed the whole campaign of the Lucanians; and it was in Lucania, that general met with his untimely death in the summer of n. c. 212. (Livy. xxii. 61, xxiv. 20, xxv. 1, 16.) At length, in n. c. 209, the Lucanians, in conjunction with the Hirpini, abandoned the alliance of Hannibal, and betrayed the garrisons which he had left in their towns into the hands of the Romans; in consideration of which service they were admitted to favourable terms. (Id. xxvii. 15.) They did not, however, yet escape the evils of war; for in the year of their territory was the scene of the campaign of Marius and Crinius against Hannibal, in which both consuls perished; and it was not till after the battle of the Metaurus, in n. c. 207, that Hannibal withdrew his forces into Bruttium, and abandoned the attempt to maintain his footing in Lucania. (Livy. xxvii. 51, xxviii. 11.)

Strabo tells us that the Lucanians were punished by the Romans for their defection to Hannibal, by being reduced to the same degraded condition as the Bruttians. (Strab. v. p. 251.) But this can only be understood as a time when the Romans had refused to join in the general submission of the people in n. c. 209, and clung to Hannibal to the last; the others were restored to a somewhat favourable condition, and continued to form a considerable nation; though, if we may trust to the statement of Strabo, they never recovered from the ravages of this war.

But it was the Social War (n. c. 90—88) that gave the final blow to the prosperity of Lucania. The Lucanians on that occasion were among the first to take up arms; and, after bearing an important part throughout the contest, they still, in conjunction with...
the Samnites, preserved a hostile attitude when all
the other nations of Italy had already submitted and
received the Roman franchise. (Appian, B. C. i.
39, 51, 53.) In the civil war between Marius and
Sulla, which immediately followed, the Lucanians, as
well as the Samnites, actively espoused the cause
of the Marian party; a Lucanian legion fought
in the battle at the Colline Gate. They in
consequence were exposed to the full vengeance of
the conqueror; and Lucania, as well as Samnium,
was laid waste by Sulla in a manner that it never
recovered. The remaining inhabitants were admitted
to the Roman citizenship, and from this time the
Lucanians ceased to be a people, and soon lost all
traces of distinct nationality. (Appian, B. C. i. 90
—93, 96; Strab. vi. pp. 253, 254.)

Of Lucania under the Roman government we
hear but little; but it is certain that it had fallen
to a state of complete decay. The Greek cities on
its coasts, once so powerful and flourishing, had
sunk into utter insignificance, and the smaller towns
of the interior were poor and obscure places. (Strab.
l. c.) Nor is there any appearance that it ever re-
covered from this state of depression under the
Roman Empire. The Liber Coloniarum mentions
only eight cities in the whole province, and all of
these were in the subordinate condition of "prae-
fecturae." (Appian, B. C. i. 209.) Of the hinterland
which now traverses its coasts, must have begun to
act as soon as the population had disappeared; and
the mountain region of the interior was apparently
then, as at the present day, one of the wildest regions
of Italy. Large tracts were given up to pasture,
while extensive forests afforded subsistence to vast
herds of swine, the flesh of which formed an
important part of the supplies of the Imperial City.
The mountain forests were also favourite resorts of wild
beasts, and contained abundance of bears, which were
sent from there to the amphitheatres at Rome.

Hor. Sat. li. 3, 234, 8, 6; Martial, de Spect. 8;
Varr. L. L. v. § 100.) Lucania was comprised
together with Bruttium in the third region of
Augustus, and the two provinces continued to be
united for administrative purposes throughout the
period of the Western Empire. Even after the fall of
the Western Empire, we meet with mention of the
"Corrector Lucaniæ et Bruttiorum."

Lucania long continued to acknowledge the sup-
remacy of the Eastern Emperors; and the modern
province of the Basilicata is supposed to have
derived its name from the emperor Basilius II. in the
10th century. (Plin. iii. s. 10; Not. Dign. ii.
p. 64; Orell. Inscr. 1074; Treib. Poll. Tetr. 24;
P. Dian. ii. 17; Cassiod. Var. iii. 46.)

The physical characters of Lucania are almost
wholly determined by the chain of the Apennines,
which enters at its northern frontier, and from thence
traverses the province in its whole extent. These
mountains form a lofty group of mountains immedi-
ately on the frontiers of Samnium, and from thence
the main chain is continued nearly due S. to the
frontiers of Bruttium; a little before reaching which,
it rises again into the very lofty group of Monte
Pollino, the highest summit of which attains an
elevation of above 7000 feet. Throughout its course
this chain approaches considerably nearer to the
western than the eastern coast; but it is not till after
passing the frontier of Bruttium that it becomes a
complete parallel chain, and it continues for a consid-
erable distance. In the more northern part of
Lucania the space between the central chain and

the Tyrrhenian sea is almost filled up with ranges
of lofty and rugged mountains, leaving only here
and there a small strip of plain on the sea-coast:
but towards the eastward, the mountains sink much
more gradually as they approach the gulf of Tarac-
num, constituting long ranges of hills, which gradually
subside into the broad strip of plain that borders the
gulf the whole way from the mouth of the river
(Sirno) to that of the Bradana. It is this tract of
plain, in many places marshy, and now desert and
unhealthy, that was celebrated in ancient times for
its almost matchless fertility. (Archiloch. ap. Athen.
xx. 25.) South of the river Siris, the chief towns of
the Apennines, descending from the lofty group of
Monte Pollino as a centre, again approach close to
the shore, filling up the greater part of the space
between the mouth of the Siris and that of the
Crathis; but once more receding as they approach
the latter river, so as to leave a considerable tract of
fertile plain bordering its banks on both sides.

The lofty group of mountains just noticed as situ-
ated on the frontiers of Lucania and Samnium, sends
down its waters towards both seas, and is the source
of the most considerable rivers of Lucania. Of these
the Siris (Sela) flows to the gulf of Paestum,
receiving in its course the waters of the Taxaner
(Tamyno) and Calara (Colorre), both considerable
streams, which join it from the S. On the other
side, the Bradanus (Brendano), which rises to the
N. of Potentia, and the Caspentus (Basiento),
which has its source in the Monti della Madalena,
a little to the S. of the same town, flow to the SE.,
and pursue a nearly parallel course the whole way
to the gulf of Tarentum. The Aciris (Agri) and
the Siris (Sirno), which rise in the central chain
further to the S., have also a general SE. direction,
and flow to the gulf of Tarentum. The Crathis,
farther down the same coast, which forms near its
mouth the limit between Lucania and Bruttium,
belongs in the greater part of its course exclusively
to the latter country. But the Siris, now the
Coelis, a much less considerable stream, immediately
to the N. of the Crathis, belongs wholly to Lucania.
The Acalanderos (Colunaro), which falls into the
sea between the Siris and the Siris (Sirno), is a very
trifling stream. On the W. coast of Lucania, the only
river, besides the Siris and its tributaries, worthy
of notice, is the Lafa, or Laus, which forms the
western boundary of Lucania on a long tract, and
the Pyrus (Buseento), flowing by the town of the
same name (Busentum), is but a trifling stream; and
the Melphes (Melpe), which enters the sea by the
promontory of Palmarus, though noticed by Pliny
(iii. 5. 10), is not more considerable. The Heles or
Eleos, which gave name to Elea or Velia, is some-
time more important, but by no means a large
stream. [Velia.]

The western coast of Lucania is marked by several
bays and prominent headlands, formed by the ridges of
the Apennines, which, though already subdued in
the distance, descend quite to the sea, and end abruptly on the coast.
The most northern of these, forming the southern
limit of the extensive gulf of Paestum, is called by
Lycophorus Epieus, but was more commonly known
as the Poseidum or Poseidonium Promontorium.
S. of this was the more celebrated promontory of
Palmarus, still called Copo di Palmaro, with a
port of the same name; and beyond this, again,
the promontory of Pyrus (now Copo degli Infreschi),
which bounds the Gulf of Lucillio on the S.
Viewed on a larger scale, these three headlands may

Vol. II. LUCANIA.
LUCANIA.

be regarded as only the salient points of one huge projecting mass which separates the gulf of Paestum from that of Policastro. The latter seems to have been known in ancient times as the gulf of Laius. Opposite to the headland called Posidium was the small islet named by the Greeks Lercosia, from which the prominent new derives the name of Punta di Lecosa; and a little further S., off the coast of Venus, were the two islands (also mere rocks) called by the Greeks the Oenothines. (Strab. vi. p. 255; Plin. iii. 7. s. 13.)

The towns of Lucania may be conveniently enumerated in two classes:—the first comprising those along the coasts, which were almost without exception of Greek origin; the other containing the towns of the interior, which were for the most part either native Lucanian settlements, or Roman colonies of a later date. On the W. coast, proceeding along the shore of the Tyrrhenian sea, from N. to S., were:—

POSIDONIA, afterwards called PAESTUM, a very little way from the mouth of the Via Satanii; PLENA, or VILLA, at the mouth of the Eoles (Akunte); PYXUS, called by the Romans BUXTUM, now Policastro; STABIA, supposed to have occupied the site of Supri; BLANDA, now MARATU; and LATAS, which was at the mouth of the river of that name, on its right bank. On the E. coast, bordering on the gulf of Tarantum, and beginning from the Caphis, stood TRUNE, replacing the ancient city of SYBARIS, but not occupying precisely the same site; SEBIS, which had in like manner been succeeded by the more recent settlement of MARCELLA, a few miles further N.; and lastly, METOPONTUM, on the southern bank of the river Bradanus.

The principal towns in the interior were:—PONTENIA, still called Potenza, and the capital of the province known as the Basilicata; ATINA, still called ATINO, in the upper valley of the Tagger; VOLCEUM or VOLCENTUM, now Buseno; NEMISTO, of uncertain site, but apparently in the same neighbourhood; LEKURI (Elbut), which is expressly called by Pliny the Lucanus; PLANO, or VELLA, in the mouth of the Great S. of the Sila; BANTIA, BONCI, only a few miles from Venusia, on the very frontiers of Apulia, so that it was sometimes referred to that country; GRUMENTUM (near Suparnaro), one of the most considerable towns in Lucania; NERULUM, probably at La Rotondo; and METRUM, still called MOURUM, almost adjoining the frontier of Bruttium. CONSUMINUM or COSILUM may probably be placed at Padula, in the upper valley of the Tagger, and TEGLANUM or BIANO, in the same neighbourhood; while LA POLE, in the same valley, occupies the site of FORUM POPILLII; SONTA, noticed only by Pline, is probably the place now called SANTA, while the Teglandi and Urbentii of the same author are wholly unknown, unless the former name be corrupted from that of Teglandii, already noticed. (Plin. iii. 11. s. 15; Lib. Colon. p. 209.) Of the few names mentioned by Strabo (v. i. 244), those of Vertimne and Calacarnia are wholly unknown. The existence of a Lucanian PUTELLA and PANOSIA, in addition to the Bruttian cities of those names, is a subject of great doubt.

The principal line of highland through Lucania was the Via Popilia (regarded by the Itineraries as a branch of the Via Appia), which, in its course from Capua to Reggium, traversed the whole province from N. to S. The stations on it given in the Antonine Itinerary, p. 109, are (proceeding from Nuceria):—

LUCERIA.

Ad Tancrum — xxiv
Ad Calereum — xlvii
Marcellum — xxv
Casariana — xlii
Nerulum — xxxvii
Sub Murano — xiv

The Tabula gives a place which it calls Viens Mendreolus (?) as the intermediate station between Marcella and Nerulum. All these stations are very doubtful, the exact line of the ancient road through this mountain country having never been traced with accuracy. Another road, given in the Tabula, led from Potentia by Auxia (Jegli) and Grumentum to Nerulum, where it joined the Via Popilia. The other roads in the interior, given in the itinerary and the Tabula, are very corrupt; we may, however, ascertain that there was a line of road proceeding from Venusia through Potentia to Heraclea and Thorii, and another from Potentia to join the Via Popilia at Marcella, being probably the direct line of communication between Potentia and Rome. Lastly, there was a line of road along the coast, following its level shores from Tarentum by Metopontum and Heraclea to Thorii.

E. B. B.

COIN OF LUCANIA.

LUCERIA (Luceria, Pol., Strab. vii. 7th. Aenea-branch, Steph. B. Lucerius; Luceria), an ancient and important city of Apulia situated in the interior of that country, about 12 miles W. of Arpi, and 9 N. of Acce (Troia). It is called by ancient writers a city of the Samnites, and the tradition current among the Greeks ascribed its foundation, in common with that of Arpi and Cannusium, to Dionysius; in proof of which an ancient statue of Minerva, in the temple of that goddess, was alleged to be the true Palladium brought by Dionysius himself from Troy. (Strab. vi. pp. 264, 284; Philom. iii. 11. s. 16.) Yet all the accounts of the city from the time that its name appears in history would seem to point to its being an Ocean town, and connected rather with the Ocean branch of the Apulians than with the Dan- nuans. Nothing is known of the history of Luceria till the Second Samnite War, when the Lucerians, who had apparently joined with the other Apulians, in their alliance with Rome in b.c. 526, but had refused to partake in their subsequent defection to the Samnites, were besieged by the latter people; and the Roman legions were on their way to relieve and succour them, when they sustained the great disaster at the Cannine Forks. (Liv. ix. 2; Dain-kenboch, ad loc.; Aus. Vitr. de Vir. Hist. 36.) It is clear that in consequence of that blow to the Roman power, Luceria fell into the hands of the Samnites, as we are told shortly after that the hostages given up by the Romans by the treaty at Cau- dium were deposited for safety in that city. (Id. ix. 12.) For this reason its recovery was a great object with the Romans; and in b.c. 520, Papirius Cursor laid siege to Luceria with a large army, and,
after an obstinate resistance, made himself master of the city, which was defended by a garrison of above 7,000 Samnites. (Id. ix. 12—15.) Besides recovering the hostages, he obtained an immense booty, so that Luceria was evidently at this period a flourishing city, and Diodorus (Vix. 72) calls it the most important place in Apulia. A few years after (B.C. 314), the city was again betrayed into the hands of the Samnites; but was quickly recovered by the Romans, who put the greater part of the inhabitants to the sword, and sent thither a body of 2,500 colonists to supply their place. (Id. ix. 26; Vell. Pat. i. 14; Diod. xix. 72.) The possession of so important a stronghold in this part of the country became of material service to the Romans in the subsequent operations of the war (Diod. i. c.); and in B.C. 294, the Samnites having laid siege to it, the Roman consul Attilus advanced to its relief, and defeated the Samnites in a great battle. According to another account, Luceria afforded shelter to the shattered remnants of the consul's army after he had sustained a severe defeat. (Liv. x. 35, 37.)

Not less important was the part which Luceria bore in the Second Punic War. The establishment of this powerful colony in a military position of the utmost importance, was of signal advantage to the Romans during all their operations in Apulia; and it was repeatedly chosen as the place where their armies took up their winter quarters, or their generals established their head-quarters during successive campaigns in Apulia. (Liv. xxii. 9, xxiii. 37, xxiv. 3, 14, 20; Pol. iii. 88, 100.) But though it was thus exposed to a more than ordinary share of the sufferings of the war, Luceria was nevertheless one of the eighteen Latin colonies which in B.C. 209 expressed their readiness to continue their contributions of men and money, and which in consequence received the thanks of the senate for their fidelity. (Liv. xxvii. 10.)

From this time we meet with no notice of Luceria till near the close of the Roman Republic; but it appears from the manner in which Cicero speaks of it (pro Cn. Cluent. 69) that it was in his time still one of the most considerable towns in this part of Italy; and in the Civil War between Caesar and Pompey, it is evident that much importance was attached to its possession by the latter, who, for some time made it his headquarters before he retired to Brundisium. (Caes. B. C. i. 24; Cic. ad Att. vii. 12, viii. 11; Appian, B. C. ii. 38.) Strabo speaks of Luceria as having fallen into decay, like Camnusium and Arpi (vi. p. 284); but this can only be understood in comparison with its former presumed greatness; for it seems certain that it was still a considerable town, and one of the few in this part of Italy that retained their prosperity under the Roman Empire. Pliny terms it a Colonia, and it had therefore probably received a fresh colony under Augustus. (Plin. Hist. Aug. xli. 11, s. 16; Lib. Coloa, p. 210; Zumpt, de Colon., p. 349.) Its colonial rank is also attested by inscriptions (Monumenta, Inscr. R. N. pp. 50, 51); and from the Tabula it would appear to have been in the 4th century one of the most considerable cities of Apulia (Tab. Pict., where the indication of a great building with the name "Prætorianum Laverianum" evidently points to the residence of some provincial magistrate). Even after the fall of the Roman Empire Luceria long retained its prosperity, and is enumerated in the 7th century by P. Diacos among the "urbes satis opulentas" which still remained in Apulia. (P. Diac. ii. 21.) But in A.D. 663 it was taken by the emperor Constant II., from the Lombards, and utterly destroyed (Id. v. 7). Nor does it appear to have recovered this blow till it was restored by the emperor Frederic II. in 1227. The modern city of Lucera still retains its episcopal see and about 12,000 inhabitants. It occupies the ancient site, on a hill of considerable elevation (one of the last under-falls of the Appennines) overlooking the extensive and fertile plains of Apulia. Livy speaks of it as situated in the plain ("urbs sita in plano," ix. 26); but if this was the case with the Apulian city, the Roman colony must have been removed to the heights above, as existing remains leave no doubt that the ancient city occupied the same site with the modern one. The remains of buildings are not at much importance, but numerous inscriptions, fragments of sculpture, &c. have been found there. The inscriptions are collected by Monnuso (Inscr. Ergan. Neep. pp. 50—54). The neighbourhood of Lucera was celebrated in ancient, as it still is in modern, times for the abundance and excellence of its wool (Hor. Carm. iii. 13, 14), an advantage which was indeed common to all the neighbouring district of Apulia. (Strab. vi. p. 284; Plin. v. 48; K. Caven, Souther Tour, p. 45.)

Pickney speaks of the name Luceria; and that this is not merely an error of the MSS. in our early copies is shown by the circumstance that the epithet Apulia is added to it (Nuceria Apulaca, Plut. iii. 1. § 72), as if to distinguish it from other towns of the name. Appian also writes the name Nuceria (B. C. ii. 38); and the same confusion between Nucera and Lucera occurs perpetually in the middle ages. But the correctness of the orthography of Luceria is well established by inscriptions and coins. The latter which have the name Lucerni in Roman characters are certainly not earlier than the establishment of the Roman colony.

[EBB.]

COIN OF LUCERIA.

LUCETUM. [BIBLICHM.] LUCENENS. CALLAICI. [GALLAECA.] LUCENTUM (Plin. iii. 3. 8. 4; Lucetia, Mla, ii. 6. § 6; Annoz Dium, H. Tempor, Plut. ii. 6. § 14: Alricante), a city on the sea-coast of the Costeinti, in Hispania Tarraconensis, with the Latin franchise. (Marc. Hesp. ii. 6; Ubert., ii. 1. p. 403.) [P. S.] LUCINAE OPIHUM [TITIVIA.] LUCOPHIBA (Auosvivs), in North Britain, mentioned by Polenzy (ii. 3) as one of the towns of the Novantae (Calloway), the Thigonoming the other. Probably, this lay on Luce Bay, in Wigtounshire. The Monumenta Britannica suggests Broughtern, and Witherne. [H.G.L.]

LUCETILIS MONS. (Mente Gennaro), a mountain in the land of the Sabines, whose name is known to us only from the mention of it by Horace, who calls it the "pleasant Lucetilis," whose shades could hue Faunos himself to Mount Lycaonem. (Hor. Carm. i. 17.) It is evident from the expressions of the poet that it was in the immediate neigh-

P 2
lurinuus. — LUCRINUS LACUS.

LUCRINUS LACUS (L. Agrippae lacus; Strab. Lago Lucrino), a salt-water lake or lagoon, adjacent to the gulf of Baiae on the coast of Campania. It was situated just at the brightest or most point of the deep bay between Putoioi and Baiae, and was separated from the outer sea only by a narrow strip or bank of sand, in all probability of natural origin, but the construction of which was ascribed by a tradition or legend, frequently alluded to by the Roman poets, to Hercules, and the road along it is said to have been commonly called in consequence, the Via Herculanorum or Heraclea. According to Strabo, Stabiae is built in salt, and wide enough to admit of a road for wagons. (Cod. v. 22; Strab. v. p. 245; Lycoth. Alex. 597; Propert. iv. 18. 4; Sil. Ital. xii. 116—120.) On the other side, the Lucrine lake was separated only by a narrow space from the lake Avernus, which was, however, of a wholly different character, being a deep basin of fresh water, formed in the crater of an extinct volcano; while the Lucus Lucrinos, in common with all similar lagoons, was very shallow, and was for that reason well adapted for producing oysters and other shell-fish, for the excellence of which it was celebrated. (Hor. Epod. ii. 49; Sat. ii. 4. 32; Juven. iv. 141; Petron. Sat. p. 424; Martial, vi. 11. 5, xiii. 90; Varr. ap. Non. p. 216.) These oyster beds were so valuable as to be farmed out at a high price, and Caesar was induced by the contractors to repair the dyke of Hercules for their protection. (Serv. ad Georg. ii. 161.)

The Lucrine lake is otherwise known chiefly in connection with the Latin works of Agrrippa for the construction of which he is called Lucrinus, and alluded to in two well-known passages of Virgil and Horace. (Virg. Georg. ii. 161—163; Hor. Ars Poet. 63.) It is not easy to understand exactly the nature of these works; but the object of Agrrippa was obviously to obtain a perfectly secure and land-locked basin, for anchoring his fleet and for exercising his newly-raised crews and rowers. For this purpose he seems to have opened an entrance to the lake Avernus by a cut or canal from the Lucrine lake, and, must, at the same time, have opened a channel from the latter into the bay, sufficiently deep for the passage of large vessels. But, together with this work, he strengthened the natural barrier of the Lucrine lake against the sea by an artificial dyke or dam, so as to prevent the waves from breaking over it as they previously did during heavy gales. (Strab. v. p. 243; Dion Cass. xivii. 50; Suet. Aug. 16; Veii. Hist. ii. 79; Serv. poet. Aug. 420; Plin. xxx. ii. 15. s. 24.) It is clear from the accounts of these works that they were perfectly successful for a time, and they appear to have excited the greatest admiration; but they were soon abandoned, probably from the natural difficulties proving insuperable; and, from the time that the station of the Roman fleet was established at Misenum, we hear no more of the Julian Port. Even in the time of Strabo it seems to have fallen into complete disuse, for he says distinctly, that the lake Avernus was then well used as a harbour, and accessible only to small vessels, but the producing abundance of oysters. At a later period Casiodorus (Var. ix. 6) describes it in a manner which implies that a communication was still open with the lake Avernus as well as with the sea. The two lakes were now separated by a considerable breadth of low sandy ground, but it is probable that this was formed in great part by the memorable volcanic eruption of 1538, when the hill now called Monte Nero, 413 feet in height and above 8000 feet in circumference, was thrown up in the course of two days, and a large part of the Lucrine lake filled up at the same time. Hence the present aspect of the lake, which is reduced to a mere marshy pool full of reeds, affords little assistance in comprehending the ancient localities. (Daubeny, On Volcanos, pp. 298—301.) It is from this point of the port of Acripia, as well as part of the dyke or bank ascribed to Hercules, are still visible under the level of the water. (E. H. B.)

LUCRINUS LACUS (L. Agrippae lacus; Lucus), a place on the W. shore of the lake Fucinus, in the territory of the Marsi, originally, as its name imports, nothing more than a sanctuary of the goddess Angitia, but which seems to have gradually grown up into a town. This was sometimes called, as we learn from an inscription, Angitia; but the name of Lucus or Lucus Angitiae must have been the more prevalent, as we find the inhabitants styled by Pliny simply Lucenses, and the modern name of Lucus or Luco points to the same conclusion. It is evident, both from Pliny and from the inscription referred to, that it was a municipal town, having its own local magistrates. (Plin. iii. 12. s. 17; Orell. Inscr. 115.) About half a mile N. of the modern village of Luco, and close to the shores of the lake, are the remains of ancient walls constructed in the classical style; but their subterranean and insular position could never have been designed as fortifications; and these probably formed part of the sacred enclosure or Peribolos of the grove and temple. The site is now marked, as is so often the case in Italy, by an ancient church. (Nibby, Viaggio Antich. vol. i. p. 210; Class. Inscriptiones vol. ii. p. 175, note.) Virgil alludes in a well-known passage to the "numen Angitia" (Aen. vii. 759), where the name of the
LUCUS ASTURUM
godless is written in some MSS. "Anegitia," in others "Anegitius," but the authority of numerous inscriptions is decisive in favour of the first form. (Ordid. Inser. 115, 116, 1845.) [E. H. B.]

LUCUS ASTURUM. [ASTURES.]
LUCUS AUGUSTI, now called Gallia Narbonensis, and east of the Rhone, which Taritus (Hist. i. 66) calls "municipium Vessentialis;" and Pliny (iii. 4) names Vasio (Vaison) and Lucus Augusti the two chief towns of the Vocontii. Lucus is placed in the Ituns, on a road from Vapincum (Gap) to Lugdunum (LYO); it is the first station after Mons Scaevula, and lies between Mons Scaevula and Den Vessentialis (Die). The name is preserved in Luc. "This town has been destroyed by the fall of a rock, which [is] now called Lucus Augusti." The current name of the Déme, has caused the river to spread out and form lakes which have covered part of its territory: there remains, however, in the neighbourhood and at the outlet of these lakes a place which preserves the name of Luc. (D'Anville, Notice, 8c.) It is stated in the Guide du Voyageur (Richard et Hecquet), that "on the mountain called the Pied de Luc, in the commune of Lué-en-Diois, there are considerable remains of old buildings. The column of the public fountain is little more than a fragment of an old capital, and the base is a sarcophagus with a "text on it." There is an inscription on it in Roman characters.

LUCUS AUGUSTI (Λούκος Αὐγούστου, Polt. ii. 6. § 24: Lugo), a city in the centre of Gallicum, in Hispania Tarraconensis, was originally the chief town of the insigniiforous tribe of the Caporu, but under the Romans it was made the seat of a comitatii judeus, and became one of the two capitals of Gallicum, and gave its name to the Gallia Lucensia. (G. L.) The Contraur of the Déme, ascending to Pliny, began at the river Vixubino, and contained 16 peoples, besides the Celtici and Lobi; and though these tribes were insignificant, and their names barbarous, there were among them 160,000 freemen (Plin. iii. 3. s. iv. 20. s. 34). The city stood on one of the upper branches of the Minius (Mino), on the road from Braccara to Asturica (Hab. Ant. pp. 424. 430), and had some famous baths, of which there are now no remains. (Plin. Sec. v. vol. xii. 8. c. iv. 1. p. 437.) [J. S.]

LUCUS FERONIAE. [FERONIA.]
LUCUS JECATES (Εγντος Ἐκταρίκας, (Polt. iii. 5. § 7), the westernmost point of the peninsula of Hylea, now the alluvial tongue of land Kynos- barum. [E. B. J.]

LUCUS MARIAE. [LIRIA.]
LUDIAS, LYDIAS (Λυδίας, Herod. vii. 127; אָלַי, Exc. Dacch. 555; Scyl. p. 26; Polt. iii. 13. § 15). (Strack. Strab. ii. 590), a river of Battiarias in Macedonia, or discharge into the tributary of Pella. In the time of Herodotus (i. c.) it joined the Halysium, but a change has taken place in its course, as it is now an affluent of the Axius (Far- dharis). The river which now emerges from the lower end of the lake of Pella is called Karasppik or Maroneiri. The river of Magnesia, now called Karadip, called by the Turks, Mejekhnis, by the Bulgarians, and by the Greeks Mejelubluka, which falls into the lake of Pella, and which in its course before entering the lake follows the same direction as the Maroneiri, was probably called by the ancients the Lydas. (Lecce, Northern Greece, vol. iii. pp. 270. 437.) [E. B. J.]

LUEXTINUM (Λαλέωτινον), in Britain, mentioned by Ptolemy (ii. 3) as a town of the Deneus, Maridumnum (Caer-martthen) being the other. The Monmouth Britannica suggests Land-derry- bury. [R. G. L.]

LUGDUNUM (Λούκδουνον: Εθ. Λούκδουνον, Lugdunensis Lycum), a Roman settlement in Gallicum, at the junction of the Arar (Somme) and Rhone. It was in the territory of the Sequsi, who were the neighbours of the Aedui (Cas. B. G. i. 10, vii. 64); in Pliny's time the Sequani had the title of Liberty. (Pino. n. 4. i. 18.) Ptolemy incorrectly places Lugdunum among the cities of the Aedui; he calls it Lugdunum Metropolis.

The writing of the name does not seem to have been quite fixed. Dion Cassius (xlvii. 50, ed. Reim.) observes that the place was originally named LGBTQUM (Λαογάδουνον), and then Lugdunum. In Stephonius (a. e.) the name is Lugdunum, and he refers to Ptolemy; but in Ptolemy (ii. 8. § 17) it is Lugdunum. It is also written "Lugdunus" in Ammianus Marcellinus. In the Tactice on Rivers printed among Plutarch's works (Apop. c. 4), the hill of Lug does not clear Lugdunum; and it is added, on the authority of Cicero, that Lugnas an "a clow" and dnonam an "an enemie." Though the explanation of the name Lugnas does not accept the explanation of the other part of the word.

The colonies of Lugdunum is said to have been settled b. c. 43, by L. Munatius Plancus, and the settlers were the people of Vienna (Vienne) who were driven from their homes by the Allobroges. (Dion Cass. xlv. 50; Strab. pp. 192. 193.) The position, according to Dion, was the place between the Somme and the Rhone. Strabo says that it was "under" a hill, the position of which he determines by referring it to the junction of the two rivers; but this does not show exactly where the town was, and probably Strabo did not know. In the passage in Strabo, the word "under" (ὑπό) has been corrected to "upon" (ἐπί), which may be a true correction. The old town of Lugdunum was on the right side of the Rhone, on the slope of a hill named Fourvier, which is supposed to be a corruption of Forum Vetus. The largest part of modern Lyon is between the Somme and the Rhone, but this is a modern addition, not earlier than the time of Louis XII and Francis I.

In Strabo's time Lugdunum was the most populous of the galleic towns after Narbonne: it was a place of trade, and the Roman governors had a mint there for coined gold and silver. Its great commercial prosperity was due to its excellent position, and to the roads which the Romans constructed in several directions from Lugdunum as a centre. (Gallia Transalpina, vol. i. p. 966.) In the time of the younger Pliny there were book-sellers at Lugdunum, and Pliny's works might be got there (Plin. Emy. ix. 11). The city was destroyed by fire in Seneca's time (Ep. 91), but shortly after it was restored through the liberality of the emperor Nero, to whom the inhabitants of Lugdunum continued faithful when Gallia revolted (Tacit. Ann. xvi. 13. Hist. i. 51). Lugdunum was plundered and again burnt by the soldiers of Septimius Severus (A. D. 197), after the defeat of Albinus near the city (Herodian. iii. 25.). It was an important position under the later Empire, but the name only occurs occasionally in the scanty historical notices of that time. When Julian was governor of Gallia, Lugdunum was near being surprised by a
body of Alamanni (Ammianus Marcellus, xvi. 11). The place is entitled Copia Claudii Augusta on some inscriptions, a name probably given to it in the time of the emperor Claudius.

In the angle between the Arar and the Rhodanus was the Ara Augusti, dedicated to Augustus by all the Gallic states. On this large altar there was an inscription which contained the names of the sixty states; and there were as many figures, intended to represent each state. If the figures were not reliefs on the altar, they may have been statues placed round the altar, or near it. The passage of Strabo (p. 192) appears to be corrupt, but, as it is explained by Gosskurd (Trans. vol. i. p. 331), there was also a large statue of Augustus, which may have been in the middle of the sixty. There was an annual solemn celebration at this altar, which was observed even when Domitian was writing. (Dom. liv. 32.) The time when this altar was built is fixed by the Epitome of Livy (Ep. 157) in the year in which there was a disturbance in Gallia on account of the census. This year was B.C. 12. Suetonius (Hist. Aug. c. 23) fixes the dedication of the Altar of Augustus in the consulship of Julianus Antoninus and Fabius Africanus (B.C. 10), on the first of August, which was the birthday of the emperor Claudius, who was a native of Lugdunum. The first priest of the altar was C. Julius Verembaridubius, an Aeduan. The celebration at the altar of Lugdunum is alluded to by Juvenal in the line (i. 44, and Heinrich's note),—

"Ant Lugdunenum ructor dicturus ad aram."

Lugdunum was the seat of a Christian church at an early period. In the time of Marcus Aurelius (about A.D. 172, or perhaps A.D. 177, according to some computations) there was a furious persecution of the Christians at Lugdunum. The sufferings of the martyrs are told by Eusobius with some manifest absurdities and exaggerations; but, the fact of a cruel persecution cannot be disputed. The letter of the churches of Lugdunum and Vienna to the churches of Asia and Phrygia is preserved by Eusebius (Hist. Eccles. v. 1); and it states that Aurelius, who was then at large, was informed by the Gallic governor about the treatment of the Christians. The answer was that those who confessed to being Christians should be put to death, and that those who denied it should be set free. We have however only one version of the story, though no excuse can be made for the Roman philosophical emperor, if men were put to death only because they were Christians. Truncaus, one of the Christian fathers, was bishop of Lugdunum. He is said to have succeeded Pollius, who perished A.D. 177, in the religious persecutions at Lugdunum.

The part of Gallia which Caesar called Celtica became under Augustus Galia Lugdunensis, of which Lugdunum was the capital; but Lugdunensis was contracted within narrower limits than Celtica by the extension of the province of Aquitania [Aquitania; Gallia Trans. Vol. I. p. 965].

The Romans covered the soil of Lyon with houses, temples, theatres, palaces and aqueducts. Nature made it to be the site of a large city. There are few remains of Roman Lugdunum. Time, the invasion of the barbarian, and the employment of old materials for other purposes, have left only scanty fragments of the works of the most magnificent of all city-builders. There are some remains on the Place des Minimes which are supposed to have been a theatre. On the west side of the Saône there are traces of a camp capable of holding several legions. It was bounded and defended on the west by the hills of the Force, and on the north by the heights of Saint-Diéder and of the Mont d'Or. The Saône defended it on the east side. The camp had no water, but the Romans found a supply in the chain of mountains which bounds it on the west. Water was brought along the valleys and the sides of the hills in a regular slope all the way, and under ground through a distance measured along its line of more than 24 miles. In its course the aqueduct collected from seventeen springs, or sources. The height of the channel or passage for the water, measured inside, was near five feet; the vault or roof was semicircular. There were openings at intervals by which workmen could go in to clean and repair the channel. It was constructed with great care, and the two sides were covered with a double layer of cement. All this construction was buried in a cutting six feet and a half wide and near ten feet deep; and a great part of this cutting was made in the solid rock. Another aqueduct was constructed by Mont Pilat to the site of the hill of Fourvières, a distance of more than 50 miles along the course of the aqueduct. There were in all fourteen aqueduct bridges along this line; one of them at the village of Champodon stiil has ninety arches well preserved. There was a third aqueduct from Mont d'Or.

Two bronze tablets were dug up at Lyon in 1529, on which is inscribed the Oratio of the emperor Claudius on the subject of giving the Roman civitas to the Gallic town. This is the text in the latest edition of Tacitus (vol. ii. p. 306; Gallia Trans. Vol. I. p. 965.) There are many modern works on Lyon and its antiquities. The principal are mentioned by Forbager (Habebuck, s.v. vol. iii. p. 210.)
LUGUS LACUS.

them would certainly not be conclusive against Leiden. But remains have been dug up in the neighbourhood of Leiden, and an inscription of the time of Septimius Severus. (Uekert, Gallien, p. 534.)

[L. S.]

LUGUS LACUS (Λυκώος λεκ), a lake in the land of the Iapodes in Illyricum, now Lake Zwickste. (Strab. vii. p. 314.)

LUGIDUNUM (Λυκώδοντον), a town in the east of Germany, the site of which must be looked for in Silesia, either at Breslau or Liegnitz. (Pol. ii. 11. § 28.)

[L. S.]

LUGIL. [Lyon.]

LUGIOUM (Λυκώκιον), a town in the south of Pannonia Inferior, was the capital of a district. (Pol. ii. 16. § 5.) In the Peuting. Table it is called Lugio, and it is, perhaps, to be looked for on the site of the modern Botta, at the entrance of the Sarvezi into the Danube. (L. S.)

LUGYVALLUM, or LUGYVALLUM (Anton. Itin.), LUGYBALUM (Lavenos), now Carlisle. This town is not mentioned by Polydeny; neither does it occur in the Notitia. The reason of its omission in the latter work may be, that, although it stands upon the line of the Wall, the proximity of the great castra, as well as its own strength and population, rendered a fixed garrison unnecessary. Beda (In Psalterio, p. 143) mentions Carlisle in his visit to Lugudunum, as being shown the walls and a fountain built by the Romans; "vindit ad Lugubalian civitatem, quae populis Anglorum corrupto Lund vocatur, ut alquequeret regnum. Postea autem die deductus in eum civium ut videret moenia civitatis, fontenque in ea miro quotannis Romanorum opera exstructum." Lealand (Itin. vol. vii. p. 54), after speaking of the Roman architectural and other remains often brought to light in Carlisle, adds, "the holy site of the town is thus changed. For when as the streees were and great edifices now be vacant and garden plottes." But few remains, if any, of the Roman town are, at the present day, to be noticed; but whenever excavations are made to any considerable depth, the foundations of the buildings of Lugyvallum are almost always met with. Very recently a deep drain having been sunk on the north side of the castle, the course of the Great Wall has been ascertained; previously, the direction it took from Stauniz, where there was a fortified camp, was uncertain, as above ground in the immediate vicinity of Carlisle, it has been entirely pulled down. [C.R.S.]

UMBERTIANI. [Vascones.]

LUNA (Λυκωνω, Strab. Λονω, Pot. Λυκωνω πως, Steph. B. Eth. Lucensis; Limn). a city of Etruria, situated on the left bank of the Maera, a short distance from its mouth, and consequently on the very borders of Liguria. There is indeed considerable discrepancy among ancient authors as to whether it was an Etruscan or a Ligurian city; and it is probable that the circumstances of its position on the immediate frontier of the two countries, but from its having been successively occupied and held by both nations. Fliny calls it "the first city of Etruria:" and Strabo begins to reckon the Etrurian coast from thence: Polydeny also mentions it first in order among the cities of Etruria; while Mela, on the contrary, assigns it to the Ligurians. ("Luna Ligurum," Mel. ii. 4. § 9; Strab. v. p. 222; Plin. iii. 5. § 8; Pol. ii. 1. § 4; Juv. vi. 377.) From the table (Strab. loc. cit.) it appears that Saint Cuthbert on this territory of Luna, in which the Roman colony was founded, and which had been taken by them from the Ligurians, had previously belonged to the Etruscans (Liv. xii. 13), and this seems to be the true explanation of the case. Both Luna and Luca, with the whole of the fertile and level country adjoining them at the foot of the Apennines, seem to have really belonged to the Etruscans during the height of their power, but had fallen into the hands of the Ligurians, before that people came into contact with Rome. We have, however, scarcely any account of Luna as an Etruscan city, no Etruscan remains have been found there, and there is certainly no foundation for the views of some modern writers who have supposed it to be one of the chief cities of Etruria, and one of the twelve that compassed the League. (Deini's Etruria, vol. ii. p. 79.)

The first historical mention of Luna itself (as distinguished from its more celebrated port) is that of its capture by the Romans under Domitianus Calvus (Fronto, xliii. 29. Strab. v. p. 1227), as one of the Romans of this event, which is not noticed by Livy, cannot be fixed with any approach to certainty. Hence, the first fact in its history of which we have any positive information, is the establishment there of a Roman colony in c. n. c. 177 (Liv. xii. 13), if at least we are to adopt in that passage the reading of "Lunam" for "Lucam," which has been received by the latest editors of Livy. (Maury, de Colon. p. 257.) Its territory is mentioned repeatedly in conjunction with that of Pisae, the best in being laid waste by the neighbouring Ligurians. (Liv. xiii. 44. xliii. 19. xiii. 9.) It appears that the two districts adjoined one another, so that the Pisae, in c. n. c. 169, complained of the encroachments of the Roman colonists on their territory. (Id. xiv. 13.) But, notwithstanding this colony, Luna seems not to have risen into any importance: Lucan indeed represents it as in a state of complete decay at the period of the Civil War (desertar neonia Lunae, Lucan, i. 586); and though it received a fresh colony under the second Titinius, it was still in Strabo's time but a small and insignificant city. (Lib. Colon. p. 223; Strab. v. p. 222.) No historical notice of it is found under the Roman Empire, but its continued existence down to the fifth century is attested by Pliny, Polydeny, the Itineraries, and Batilinus, as well as by inscriptions found on the spot. (Plin. iii. 5. 8; Pol. iii. 1. § 4; Itin. Ant. p. 293; Itin. Marit. p. 501; Rutil. Itin. ii. 63-65.) We learn also that it was celebrated for its wine, which is said to have been reckoned the best in Etruria (Strab. v. p. 67), as well as for its cheeses, which were of vast size, some of them weighing as much as a thousand pounds. (Plin. xl. 42. s. 97; Martial. xiii. 30.) But the chief celebrity of Luna in imperial times was derived from its quarries of white marble, the same now known as Carrara marble, and which was considered equal, if not superior in quality, to the finest Greek marbles. It is first mentioned as employed at Rome for building purposes in the time of Caesar, and from the age of Augustus onward it was very extensively employed, and may still be seen in the Pantheon, the Pyramid of Caius Cestius, etc.}

A

still

was

of

It was taken and plundered by the Normans in 837,

but was probably not destroyed; and Dante, writing

after 1300, speaks of Luna as a city that had sunk

gradually into complete decay (Par. xvi. 73); which

was doubtless accelerated by the marlaria, from which

the neighbourhood now suffers severely. When it was

visited by Cyrricus of Ancona, the ruins were still

extensive and in good preservation; but little now

remains. Vestiges of an amphitheatre, of a
departed, it was founded and built for a place attached

to a circus, and piscina, as well as fragments of

columns, pedestals, &c., are still however visible.

All these remains are certainly of Roman date, and

no vestiges of Etruscan antiquity have been found on

the spot. The ruins, which are obviously those of

a small town, as it is called by Strabo, are situated

about 4 m. S. of Sarzana, and little more than a
mile as the crow flies. (Dennis's Eturia, vol. i. pp.

75—84; Targioni Tazzetti, Viaggio in Toscana,
vol. i. pp. 403—405; Winckler, Memorie della Citta
di Luna, 4th. Turin, 1838.)

Far more celebrated in ancient times than Luna itself

was its port, or rather the magnificent gulf that

was known by that name (Portus Luxane, Liv., Plin.,

&c.; Λυξαϊς λιμή, Strab.), now called the Gulf

of Spezia. This is well described by Strabo as one of

the largest and finest harbours in the world,

containing within itself many minor ports, and sur-

rounded by high mountains, with deep water close in

to shore. (Strab. v. p. 222; Sili. Ital. viii. 482.) He

adds, that it had been inhabited by a people attached

so long possessed the dominion of the sea—a remark

that must refer to the Etruscans or Tyrrhenians in

general, as we have no allusion to any naval su-

premacy of Luna in particular. The great advantages

of this port, which is so spacious as to be capable of

containing all the navies of Europe, seem to have

early attracted the attention of the Romans; and

long before the subjection of the mountain tribes of

Liguria was completed, they were accustomed to

make the Lucan Ports the station or rendezvous of

their fleets which were destined either for Spain or

Sardinia. (Liv. xxxiv. 8, xxxix. 21, 32.) It must

have been on one of these occasions (probably in

company with M. Cato) that it was visited by En-

nius, who was much struck with it, and celebrated it

vi. 9.) At a later period it seems to have been re-

sorted to also for its mild and delightful climate.

(Pers. i. c.) No doubt can exist that the port of

Luna is identical with the modern Gulf of Spezia;

but it is certainly known that its situation was died

from that name of the town or city of Luna, which

was situated on the left bank of the Magra, at least

five miles from the gulf, and separated from it, not

only by the river Magra, but by a considerable

range of rocky hills, which divide the Gulf of Spezia

from the valley of the Magra, so that the gulf is not

even within sight of Luna itself. It is in this range

of hills which at their extremity form a promontory,

(Luna) by Procopius, Luna Promontorium (Σαλατίς

έκτικός, Procl. iii. 1. § 4), now the Panta Haima.

It is true that Strabo places Luna on the right bank

of the Maccra; but this is a mere mistake, as he is

certainly speaking of the Roman town of Luna; it

is possible that the Etruscan city of that name may

not have occupied the same site with the Roman

county, but may have been situated on the right

bank of the Maccra, but even then it would have

been far distant from the port. The position and

some other writers have endeavoured to prove

that the port of Luna was situated at the mouth of

the Maccra; and it is probable that the town may

have had a small port or landing-place at that

point; but the celebrated Port of Luna, described

by Strabo and extolled by Ennius, can certainly be

no other than the gulf of Spezia.

The Gulf of Spezia is about 7 miles in depth by

3 in breadth; it contains within itself (as justly ob-

served by Strabo) several minor ports, two of which

are noticed by Ptolemy under the names of PORTUS

VENERIS (Αφοστρυτη Άμαθη), still called Porto Le-

nere, and situated near the western extremity of the

gulf; and PORTUS EURIS (Επερρη καλάτος), now

Lericii, on the E. shore of the gulf. The former

name is found also in the Maritime Itinerary, (Pro-

tol. iii. 1. § 3, Itin. Marit. p. 502.)

LUNAE MONTES (Σαλατίς έκτικος Αδάναιναι, Procl.

iv. 8. §§ 3, 6), from which mountains, and from

the lakes formed by their melting snows, Ptolemy

describes the lake of the Sile. Their position is

unknown, and if they have any real existence, they

must be placed S. of the Equator. (W. B. D.)

LUNAE PORTUS. [Luna.]

LUNAE PROMONTORIUM (Σαλατίς έκτικός έκτικός,

Procl. ii. 5. § 4), a headland on the W. coast of

Lunaeiesia, placed by Ptolemy 10 minutes N. of the

mouth of the Tagus, and therefore corresponds to

the C. da Hoca, next Citerna, where Recentini

found ruins of what he took for a temple of the Sun

and Moon, with inscriptions (Antiqu. Lusit. 222).

Others, however, identify it with the more northern

C. Carreiro; and, in fact, the accounts of the hq. val-

lands on this coast are given in a confused manner

by the ancient writers. (P. S.)

LUNARIIUM PROMONTORIUM (Ασαλίναι

έκτικός, Prol. ii. 6. § 19: C. Tordera, NE. of Bar-

celona), a headland on the coast of the Baetis, in

Hispania Tarraconensis, formed by one of the SE.

spars of the Pyrenees. (T. S.)

LUNGONÉS. [Asturias.]

LUNI, in Gallic, was a road from Lug-

dunum (Lyons) to Augustodunum (Acuta).

The first station after Lugdunum is Asa Paulini,

15 M. P. from Lugdunum, and then Luna 15 M. P. from

Asa Paulini, according to the Antonine Itin. [ASA

PAULINII.]

In the Table it is 24 M. P. from Lug-

dunum to Ludrum, as the name is written in the Table,

and Asa Pa fint is omitted. Luna and Ludrum are

probably the same place; and the site is

uncertain. (G. L.)

LUPA. [LUPA.

LUPA, in Gallic, was a road from Lus-

tiamus, Sitia; Asturias, Spain; Astur-

tiania, Prol. ii. 6. Lupa. Luponestia; Luce), an ancient

city of the Salians, in the Roman province of Calabria,

situated on the high road from Brandisium to Hy-

druntum, and just about 25 M. distant from each

of these cities (Itin. Ant. p. 118). It was about 8

miles from the sea, whence Strabo correctly describes

it as situated, together with Rasinu, in the interior of

Calabria (Strab. v. p. 22, 2), although both Pliny and
LUPODUNUM

Polody would lead us to suppose that it was a maritime town. (Plist. iii. 11. s. 16; Polb. iii. 1. § 14.) Appian also speaks of Octavian as landing there on his return to Italy, immediately after Caesar's death, when he had already sailed for Lupiae without venturing to advance to Brundusium, until he received fresh information from Rome. (Appian, B. C. iii. 10.) There seems, however, no doubt that the ancient Lupiae occupied the same site as the modern Lecce, though it may have had a port or landing-place of its own. The above passage of Appian is the only mention of it that occurs in history; but a tradition preserved to us by Julius Capitolinus (M. Ant. 1.) ascribed its foundation to a king of the Salentines, named Medemius, the son of Domus. There is little doubt that it was really a native Salentine city; nor is there any foundation for supposing it to have received a Greek colony. Pausanias, in a passage which has given rise to much confusion, in treating of the treasury of the Sybarites at Olympia, tells us that Sybaris was the same city which was called in his time Lupiae, and was situated between Brundusium and Hydruntum. (Paus. vi. 13. § 9.) The only reasonable explanation of this strange mistake is, that he confounded Lupiae (the name which was sometimes written Lupia) with the Roman colony of Copia in Lucania, which had in fact arisen on the site of Tinnimi, and, therefore, in a manner succeeded to Sybaris. But several modern writers (Romellini, Cramer, etc.) have adopted the mistake of Pausanias, and affirmed that Lupiae was previously called Sybaris, though it is evidently of the well-known city of Sybaris that that author is speaking. We hear but little of Lupiae as a Roman town, though it has been mentioned by several writers of some importance, and is mentioned by all the geographers. The "ager Lyppanensis" (sic) is also noticed in the Liber Coloniarum; but it does not appear that it received a colony, and the inscriptions in which it is bears the title of one are, in all probability, spurious. Nor is there any ancient authority for the name of Lycium or Lyce, which is assigned to the city by several local writers: this form, of which the modern name of Lecce is obviously a corruption, has never been found in documents of the middle ages. (Llib. Colon. p. 392; Med. ii. 4. § 7; Rin. Ant. i. 118.)

The modern city of Lecce is a large and populous place, and the chief town of the province called the Terra di Otranto. No ancient remains are now visible; but Galateo, writing in the 15th century, tells us that there were then extensive subterranean remains of the ancient city — vast arches, covered galleries and foundations of ancient buildings — upon which the modern city was in great measure built. Nor were the remains of the ancient city of much importance, and of these the antiquity have also been brought to light by excavations, and an inscription in the Messapian dialect. (Galateo, de Stat. Itagy. pp. 81—86; Romellini, vol. ii. pp. 83—93; Monnaeae, "Unter Ital. Dialekte, p. 59."

["E. H. B."]

LUPODUNUM, a place on the river Nicer (Vecar) in Southern Germany. (Anon. Mosel. 423; Symmachus, p. 16, ed. Nielhauer.) It is probably the same place as the modern Ladenburg on the Neckar, though some identify it with the site of which the emperor Valentinian built on the banks of the Neckar. (Amm. Marc. xxxvii. 2.)

["L. S."]

LUPPHURDUM (Λουπφυρόδωμ), a town in the north of Greece. (Ptol. ii. 11. § 28.) Its site is generally identified with Wittenberg or Meissen; but it seems more probable that it was situated near Leipsig, on the river Lupa, from which it may have derived its name.

["L. S."]

LUTIA (Λούτια; Lupiae), an navigable river in the north-east of Germany, which was well known to the Romans, from its sources to the point where it empties itself into the Rhine. Its sources are in the interior of Germany, not far from those of the Amisia. (Eum.) (Vell. Pat. ii. 105; Tac. Ann. i. 60, ii. 7, Hist. v. 22; Pomp. Mela, iii. 3. § 3; Strab. vii. p. 291; Dion Cass. iv. 33.) Strabo (L. c.) had a very incorrect notion of the course of the Lupa, for he describes it as flowing through the country of the Bructeri Minores, and as discharging its waters, like the Amusia, into the ocean; he, moreover, places it about 600 stadia from the Rhine. Tacitus (Ann. ii. 7) mentions a Roman fort built on its banks.

["L. S."]

LUTPIA (Λουππια), a place of considerable importance in the north of Germany, between the rivers Alius and Visurgis, above Mons Molobicus. (Ptol. ii. 11. § 28, viii. 6. § 3.) It is generally identified with the modern town of Lupita. ["L. S."]

LUSI (Λούσι, Paus. B. s. iv.; Λούσιον, Paus. B. s. iv.; Λούσια, Plut. Lusi. comp. Meineke, ad Steph. B. s. iv.; Euh. Symeon, Λουσιούς, Λούσιαρια, Steph. B.; Λούσια, Xen. Aes. iv. 2. § 21), a town in the north of Arcadia, originally independent of, but afterwards subject to, Cleitor. (Cleitoh.) Lusi was situated in the upper valley of the Aroanius, and probably on the site of Suidhena, which stands in the NW corner of the valley at the foot of Mt. Kleisthen (the ancient Aroanian mountains), and on the road from Tripolitse to Kalavryt. The upper valley of the Aroanius, now called the plain of Suidhena, consists of two plains, of which the more easterly is the one through which the Aroanius flows, the waters of which force their way through a gorge in the mountains into the plain of Cleitor, now Katoa, to the south. The more westerly plain of Suidhena is entirely shut in by a range of hills; and the waters of three streams which flow into this plain are carried off by a katavothra, after forming an inundation, apparently the Lacus Citoresius mentioned by Pliny (xxxii. 2. s. 21). The air is damp and cold; and in this locality the best hemlock was grown (Theophr. ix. 15. § 8.)

Lusi was still independent in the 53th Olympiad; since one of its citizens is recorded to have gained the victory in the 11th Pythian. (Paus. viii. 18. § 8.) Its territory was ravaged by the Aetolians in the Social War (Polyb. iv. 18); but in the time of Pausanias there were no longer even any ruins of the town. (Paus. l. c.) Its name, however, was preserved in consequence of its temple of Artemis Lusia or Hemerasta (the "Soother"). The goddess was so called, because it was here that the daughters of Proetus were purified from their madness. They had concealed themselves in a large cavern, from which they were taken by Melampus, who cured them by sacred expiations. Thereupon their father Proetus founded this temple of Artemis Hemerasta, which was regarded with great reverence throughout the whole Peloponnesus as an inviolable a-ylum. It was plundered by the Aetolians in the Social War. It was situated near Lusi, at the distance of 40 stadia from Cynetales. (Paus.: Polyb. ii. c. 8; Callim. Dion. 233.) The interior of the temple, with the purification of the daughters of Proetus, is re-
presented on an ancient vase. (Millinger, *Pinturas de Vasos*, p. 52; Möller, *Iskunder der alt. Kunst*, t. 11.) The ruins, which Dodwell discovered above Lus. towards the end of the plain, and on the road to Cynacth, are probably those of the temple of Artemis Leche, discovered by various ancient foundations at the middle fountain of the three in the more westerly of the two plains of Sulhend, which he supposes to be the remains of the temple. One of the officers of the French Commission observed a large cistern on the western side of the Aromanian mountains, in which the inhabitants of Sulheni were accustomed to take refuge during war, and which is probably the one intended in the legend of the daughters of Porsues. (Dodwell, *Classical Tour*, vol. ii. p. 447; Leske, *Morea*, vol. ii. p. 109, vol. iii. pp. 168, 181; Boblaye, *Recceheves*; Luc.; Curtius, *Peloponessos*, vol. i. p. 375, seq.)

LUSITANIA ( 엘 스 이 타 니 아, 엘 스 이 타 니 아, Strab.; *Auctoritate*, Boul., Sec.; Philo, Ptol., Steph. B.; *Eth. Auctoritas*, Lusitani), originally denoted the country of the western side of the Aromanian mountains, occupying only two-thirds of the W. coast, and Portugal more than three-fourths. The former had its N. boundary at the Duarius (Duaro), the latter at the Minis (Cline); and the Portuguese province, called Entre Douro e Minho, is lying between these rivers, as well as that of Troy or Mount E. of it, were anciently the part of Gallaecia which belonged to the Callii or Bravari. But on the E. side, inland, Lusitania had a much wider extent than Portugal. Both rest on the same base, as their S. side was formerly the coast between the Durius and the mouth of the Minis. Gallaecia, and at first the boundary runs N. nearly along the same line, namely the course of the Minis, the slight difference being in favour of Portugal, which has a slip on the E. side of the river. But, from a point on the river, a little below Badajoz, and a little above its intersection with the Merindad of ? W. long, the boundaries diverge; that of Portugal taking a general direction N. with a slight bearing to the E.; till it strikes the Duaro at its great bend from SW. to NW. (where the Águada joins it), and running up the river to its great bend in the opposite direction, below the Elsa; while that of Lusitania continued up the Durius eastwards, towards the middle of the Peninsula, to a point considerably above Metelinum (but not very certainly defined). whence it followed a N. direction to the Durius, which it met at a point below the river Pasterana (also not very well defined). Thus, Lusitania continued, on this side, the N. part of Spanish Estremadura, and the S. part of Leon; and the part of the province thus lying E. of Modern Portugal, correspond very nearly to the territory of the Vettones. These are the boundaries of the Roman province, as constituted under Augustus; but there are considerable variations in the extent assigned to the country by various writers, especially according as the word is used, in the wider sense, for the province, or in the narrower meaning, for the country of the Lusitani. In this first and narrowest sense, it included only the district between the Tagus and the Durius, from the Atlantic on the W., to about the present frontier of Portugal on the E. Next, the supposed or actual connection of these people with their Northern neighbours, the Calliæci, "Artabri," and Astures, led to their being, at least in part, included under the same name, and accordingly Strabo defines Lusitania as the country N. of the Durius, bounded on the W. & N. by the Ocean. (Strab. iii. p. 157.) But just above he says, that the greater part of the Lusitani, meaning those N. of the Durius, had obtained the name of Calliæci; and elsewhere he expressly states that the whole region N. of the Durius, which was formerly called Lusitania, was now called Calliæci. (iii. p. 166.) On the E., says Strabo (l.c.), it bordered on the Carpetani, Vettones, Vaccæi, and Calliæci, and other tribes of less note; and he adds that these also were sometimes called Lusitani, thus pointing to the extension of the name towards the coast. Then, again, on the S. of the Tagus, where the country seems originally to have belonged to the Turdetani, with an inter-mixture of Celtic tribes (*Celtici*), the long and obsolete wars carried on by the Romans drove many of the Lusitanians and their allies into the district, which thus came naturally to be included under the name of Lusitania. (Strab. iii. p. 139.) Finally, under Augustus, the boundaries were fixed as above stated.

1. Extent and Boundaries.—Like the modern Portugal, it lay on the W. side of the peninsula, extending from its SW. point (Sagrém PR. C. S. Vincent), eastwards to the mouth of the Anas (Gualdris), and northwards along the W. coast; but here, as well as in the interior, the boundaries of the two countries were very differently assigned, as the name of one of the three provinces, into which Hispania was divided by Augustus. (His-panic, p. 1081, Nos. 3, 4.)

2. Physical Geography.—Strabo's description of Lusitania (l.c.) as lofty and rugged on the E. side, and level towards the sea, with the exception of minor ridges of mountains, is tolerably correct. A more exact account of its relation to the whole formation of the surface of the peninsula is given under Hispania (§ v. N. 5, pp. 1085, 1086), together with a description of the coast and the chief promontories. Its surface is roughly divided by the Mons Hermimus (*Sierra de Estrella*), which ends in the peninsula of Lisbon, into the two great basins of the Tagus and the Durius; but it is also intersected by numerous offsets from the great central chains of the peninsula. Besides the great river Tagus, which bisects it, there are several others, of more or less importance, which flow in the same general direction, and flow into the sea on the W. coast; but of these none require special notice, except the Cullipus (KeAlcmeus, Sadat), which flows N. from the M. Cenuts in the extreme S., and falls into the sea, NE. of the Tagus, and the Minias (Mondigo) and Vaque (Vaquea), between the Tagus and the Durius.

* The discrepancies among the ancient writers of the names of the rivers between the Tagus and the Minius have been noticed under Gallaecia; the following conjecture, by Groskurd, of their various statements, may be useful.
LUSITANIA.

The country, being irrigated by these rivers, and penetrated by their navigable streams, as well as enriched by the gold and silver found in their beds and in mines, was rich and fertile. Strabo tells us: but its prosperity was greatly checked by the predatory habits of its people, who neglected the culture of the soil, to give themselves up to war and robbery. This evil tendency, however, he ascribes chiefly to the mountaineers, by whose attacks the inhabitants of the lowlands were involved in the same disorder. (Strab. iii. p. 154.)

4. Population.—The province, as finally constituted, contained the countries of five chief peoples, and of innumerable petty tribes, most of whom, however, may be included among these five. Thus, for example, the 30 (some read 50) tribes (tribus), mentioned by Strabo, between the Tagus and the Arbutia, are doubtless but subdivisions of the Calata and Lusitani. The five chief peoples of Lusitania (the Roman province) were:—(1) The Lusitanii, on the W. coast between the Durins and the Tagus, and extending also (as explained above) S. of the latter river. (2.) E. of them the Vettones, between the Durins and the Anas. (3.) S. of these two were the Turduli Veteres, a branch of the ancient population of Baetica, who (according to the common opinion of the ancients) had crossed the Atlas; and whose presence should perhaps rather be referred to an ancient occupation of the country up to the Tagus. (4.) S. of them again, in the district between the lower course of the Anas and the S. and W. coasts, were a branch of the Tartelait, to whom similar remarks apply. (5.) Lastly, in various positions, we find remnants of the old Celtic population, preserving the name of Celtici. The chief traces of them are on the S.E. of the lower Tagus, between it and the great S. coast (of the Anas), where they were mingled with the Tarbelitii and among the Tartelaitii, in the extreme S., where they seem to have taken up their position in the mountains. In this district between the termination of the W. coast and the Anas (Algarbe), which the ancients called Cumbes, and where they bore the distinctive name of Conii. (Comp. Hispamica, p. 1087. § viii.)

The particulars respecting these peoples, their chief cities, and so forth, are given under the several articles in this place; we have to deal only with the Lusitanians.

5. The Lusitanii (Aspacia, Strab.; Assarapoi, Diehl., Pal.) are designated by Strabo as "the greatest of the nations of Iberia, and the one most frequently and longest engaged in war with the Romans," a distinction which, certainly, not even the Celtiberians could dispute with them. The history of the wars referred to has been given in outline under Celtiberia, and that of their last great contest may be read in the histories of Pompey and under Viriathus (Dict. of the Brit.})..."[Text continues here]
LUETIA.

LUM (Plin. l. c. Suentrems, Florez, Esp. s. vol. xi. p. 69, xiv. p. 171); JERABRIGA, 32 M. P. (Arabirica, Plin. l. c.; Aspetapeta, Proli. ii. 5, § 7; Alaquifer, Florez, Esp. s. vol. xiv. p. 174); OLISIO, 30 M. P. 1. From Emerita, W. to Olisipo, curving round to the N.; PLAgARIA, 30 M. P. (vide sup.); BIDREA, 8 M. P. (S. Maria de Bedoya Cortes, Campo Meneo, where Bedoya pres- serves the name); AD VI. ARA, 12 M. P. (vid. sup.) MATESEGO, 8 M. P.; ABELETEOREM, 24 M. P. (it seems that these names are inverted, and that the latter is Alter da Choa, and the former Puente do Sorro); ARIUM EURATDYON, 28 M. P. (Salvaterrica, or Bonaventura, both close together on the left bank of the Tagus); OLISIO, 38 M. P. 5. From Emerita to Olisipo, W. with a curve to the S. (Itin. Aut. pp. 146—148); EVANORIANA, 8 M. P. (Evarisbiosa, Proli. ii. 5, § 8); DIO, 17 M. P.; AD ADREUM RUMEMIO, 12 M. P.; EDOBA, 9 M. P. (Ebro). Here is a difficulty: the last is a well-known place, but the distance attempted to identify the intermediate positions rest on no sufficient data. The alteration of Ad Adrum to Ad Aman has no sign in the MSS. to bear it out. It seems, on the whole, on the most likely that the route intended is that of the great road through Talavera de la Reial, Badajoz, and Elvas. From Elvas, it proceeds through the land of the Cornes, again returning to the river Bidas Imperialia, a municipium, with the Old Latin Franches (Alessco do Sal); Plin. iv. 35, viii. 73; Mela, iii. 1; Marc. Heere, p. 43; Inser, ap. Guiter, pp. 13, 16; Flores, Esp. s. vol. xiii. p. 115, xiv. p. 241); MARENO, 26 M. P. (Maretena F.); CACHILIANA, 26 M. P. (Agombila, or Pinheiro, or Niezola F.); CADEBROGA, 8 M. P. (Cadobriga, Geoz. Rav. iv. 43; Kastrobos, Proli. ii. 5, § 3; Kastroboto, Marc. Heere, p. 42; Rn. on the headland at the mouth of the estuary of the Callipus, Salo, near Adrum Remmenio, 12 M. P.; MONTA, 162 J.; MURILLO, 87; EQUABOA, 12 M. P. (Coyena); OLISIO, 12 M. P. The country S. of this road was traversed by others, connecting Ebro with FAX JULIA, and both with the Anas and the S. coast; namely:—6. (Itin. Aut. pp. 426, 427); from Ebro (sup. Agmontia) at the mouth of the Anas, in Baetica, W. along the coast to BESA, 24 M. P. (Turcia); OSOSNOBRA, 16 M. P. (Fatoy, N. of Faro, by C. de S. Marla); thence the road struck inland across the mouth of the Callipus (Ayamolla), and down the valley of the Callipus (Salo), to ARAXNI, or ALANOSI, 60 M. P. (Ovipeo); SALACIA, 33 M. P. (vid. sup.) and Ebro, 44 M. P. (vid. sup.). The course pursued from Ebro by SERPA, 14 M. P., FINECA, 20 M. P., and ARUCIT, 25 M. P., to FAX JULIA, 30 M. P. (Benia) is so intricate as to prove an error in the itinerary, which commentators have sought in vain to amend. 7. The direct road from Ebro to FAX JULIA is given thus (Itin. Aut. p. 431)—MYRILLA, 30 M. P. 40 (Myrilla), FAX JULIA 30 M. P. 8. A direct road from SALACIA to OSOSNOBRA is also mentioned, but the distance, 15 M. P., is absurdly wrong (Itin. Aut. p. 418). 9. From OLISIO a great road ran parallel to the coast, up to the mouth of the Durias and BRACARA AUGUSTA, thus (Itin. Aut. pp. 420—422): JERABRIGA, 30 M. P. (vid. sup.); Scalabia, 32 M. P. (vid. sup.); SELLIO, 32 M. P. (Poirbol T.); COIMBRA, 34 M. P. (Coimbra, or further S.); EMIS- NICM, 10 M. P. (Aguede, Mistro, or Carvalhos.) site very uncertain), TALABRIGA, 40 M. P. (Acreo); LANGOBRA, 18 M. P. (near Feira); CALEM, 13 M. P. (Oporto); BRACARA, 35 M. P. (Braga); the last two, though originally Lusitanian, belong, according to the common division, to the Cuculids and Bacari. Other places, not important enough to require further notice, will be found in the lists of Portovila (ii. 5) and Ubert (vol. ii. pp. 387, 390). [P. S.]

LUETIA. [itiner.]

LUSUSIUS. [Quintus]

LUSOINES. (Aquadusos), the smallest of the four tribes into which the Celtiberians were divided. Their position was about the sources of the Tagus, SW. of the territory of Numantia. (Strab. iii, p. 162; Appian, Hisp. cc. 42, 49.)

LUSUSOYNUM (Aquadusos), also called Los- sundium, a town in Lower Pannonia, on the western bank of the Danube, a little to the north of the modern Parsa. It was the station of a body of Dalmatian cavalry. (Proli. ii. 16 § 4; Not. Imp.; Itin. Aut. p. 234; Tab. Peut., where it is called Lusone.) [L. S.]

LUETIA PARISIORUM (Aquadusosia), Proli. ii. 8. § 13: (Aquadusosia, Strabo, p. 194), the city of the Parisi, a Gallic people on the Seine. Lutetia is mentioned by Caesar (B. G. vi. 3), who held a meeting of the Gallic states there in the spring of B. c. 53. He calls it Luutela Parisiorem; and in his narrative of the operations of Labienus in B. c. 52, he says (B. G. vii. 57) that Lutetia is an island in the Sequana (Seine). Strabo copies this description from Caesar. Vibius Sequester (p. 17. ed. Oerlin) also describes Lutetia, as he writes it, as being on an island.

The Parisi were the neighbours of the Sequani. There had been some kind of political union between the Parisi and the Sequani before Caesar's Gallic campaigns (B. G. vi. 3), but at the time when Caesar mentions them, they seem to have been separate states. When Veranius (c. 59) rose against the Romans, the Sequani, Parisi, and others joined him immediately; and the Parisi sent 5000 men to oppose Caesar at Alesia (B. G. vii. 4, 75). Though a part of the little territory of the Parisi was north of the Seine, we must conclude from Caesar's narrative that they were a Celtic people. The diocese of Paris represents the territory of the Parisi.

Lutetia, like many other Gallic towns, finally took the name of the people, and was called Civitas Parisiorem, whence the modern name of Paris. Zosimus (iii. 9) calls it Parisium. It appears from the Notit. Dicta, that the Romans had a fleet at Paris; and from the words in the Notitia, "Parvus tus classis Anderitiorum Parisis," D'Anville conjectures that the name "Anderitius" implies a place Andericum, which he further supposes to be Anderi, immediately below the junction of the Seine and Oise. An inscription dug up in 1711 among other ancient monuments in the church of Notre Dame at Paris, contains the words "Namur Parisiaci," and De Valois observes that the people of Paris had always a fleet before their eyes, they may from this circumstance have taken the ship which appears in the arms of the city.

The position of Lutetia at Paris is determined by the description of the place, the name, and the measurements of the roads from Agelium (Sens), Rotomagus (Rouen), and Geromium (Orleans), which meet at Lutetia. When Caesar held the meeting of the states of Gallia at Lutetia, the town was cen-
LUTETIA.

fined to the island which afterwards was called La Cité (civitas), a name given to the old Roman part of several French towns. But the island on which stands the church of Notre Dame was then and for a long time after of less extent than it is now; for the site of the Place Dauphine was once two small islands which were not joined together and united to the Cité before the sixteenth century: and the spot called Le Terren was another addition produced by the rains of the buildings which were erected in this part of the city. Paris was never a large place under the Roman dominion. Ammianus (xx. 12) calls it a Castellum, and Julian (Misc. p. 340) and Zosimus name it a small city (πολις). Zosimus, who was no great geographer, places it in Germany. Lutetia may probably have occupied some ground on the north or on the south side of the river, or even on both sides, for the island was joined to the mainland by bridges in Caesar's time (B. G. vii. 58), made of wood, as we may assume. Julian spent a winter in Paris, A. D. 358, and was proclaimed Augustus there. (Ammian. Marcell. xvi. 2, 8, xx. 4.) The Franks under Chovis took Paris about the close of the fifth century. A. D.; and about A. D. 508 Chovis made Paris its residence.

A. A. The river Sequana (Seine).
B. B. The river Matrona (Marne).
1. Lutetia (Paris, on an island.
2. Melodunum (Melun), on an island or point.

The scale is in English miles.

When Caesar (n. c. 52) was setting out to attack Gergovia, he sent Labienus with four legions against the Senones and Parisii. (B. G. vii. 34.) Labienus advanced upon Lutetia from Agedincum, where he left his stores. His march was along the left bank of the Seine. The commander of the Gallic forces occupied a marshy tract, the water of which ran into the Seine, and here he waited, with the intention of preventing the Romans from crossing the river (B. G. vii. 57) to Lutetia. Labienus attempted to make his way across the marsh, but, finding it impossible, he left his camp silently in the night, and, returning by the route by which he had advanced, he reached Melodunum (Melun), a town of the Senones on an island in the Seine. He there seized about fifty vessels, and easily got possession of Melun. After requiring the bridge from the island to the right bank of the river, he carried over his men to the right side, and marched again upon Lutetia. He took the vessels with him, and used them, as we must suppose, for crossing the Marne (Marne), though the Marne is not mentioned in the narrative. Before Labienus could reach Paris, the Galli set Lutetia on fire, and broke down the bridges which united the island to the main. They also quitted the marsh, and placed themselves on the banks of the Seine opposite to Lutetia and to the camp of Labienus, which was on the right side of the river. In the meantime Caesar's defeat at Gergovia was known, and Labienus was threatened by the Romans. He made a great show, and, discharging the ships that he had brought from Melodunum four miles down the river, and, soon after despatching the half legion up the river, he marched with his three legions down the stream in great silence, and found his ships. The scouts of the enemy, who were placed all along the stream, were surprised and slaughtered, for there was a great storm raging, and they were off their guard. The three legions were carried across the river in the vessels. The enemy were confounded by the unusual noise purposely made in the Roman camp, by the boats moving up the river, and by the news of the enemy crossing lower down. Accordingly, the Galli left part of their forces to watch the opposite camp, and sent another part up the river towards Metlesiaum, as it is in Caesar's text, which is either a mistake for Melodunum, or it is some place higher up the Seine than Paris. Either supposition will explain Caesar. The Galli led the rest of their forces to oppose the three legion which had crossed the Seine with Labienus, and, having fixed them, they hurried their men and dispersed. Labienus led his troops back to Agedincum, where his stores and baggage were. This is the substance of Caesar's narrative, which is correctly explained by D'Aulville (Notice, etc. art. Melodium), and Uberti (Gallici, p. 476) has done well in following him. Some of the old critics completely misunderstood Labienus' movements; and even, of late years, the passage has been wrongly explained.

The Romans built both on the island La Cité and on both sides of the Seine, but the Roman memorials of Paris are very few. Some sculptured stones were dug up under the choir of Notre Dame. The inscriptions were of the time of Tiberus Caesar, and show that the Roman and Gallic deities were worshipped jointly. The remains of a subterranean aqueduct have been discovered both on the north and south sides of the river. The materials of the Roman city were doubtless employed for more recent constructions, and thus Roman Lutetia has disappeared.

LUTÉVA (Eth. Lutetiana; Lodica), in Gallia Narbonensis, is placed by the Table, where the name is written Luteva, on a road from Acatha (Agde) to Segodunum (Roholde). Phiny (iii. 5) says, "Lutevani qui et Formoromicenses," whence it has been
LUCANIA.

LUCANIA (Aucania: Eth. Aucanios, Auckanios), a province of Asia Minor, bordering, in the east on Cappadocia, in the south on Cocius, in the west on Pisidia and Phrygia, and in the north on Galatia. These frontiers, however, were not always the same, but the fluctuation becomes most perplexing at the time when Asia was under the influence of the Romans, who gave parts of Lucania sometimes to this and sometimes to that. Usually, however, they incorporated the greater part of the province of Cappadocia, whose territory (v. 6 & 16) treats of it as a part of Cappadocia. The name Lucania, however, continued to be applied to the country down to a later date, as we see from Hierocles (p. 675) and other Christian writers.

Lucania is, on the whole, a plain country, but the southern and northern parts are surrounded by high mountains: and the north, especially, was a cold and bleak country, but very well adapted as pasturage for cattle, of which king Acravus is said to have possessed no less than 300,000. Their wool was rather coarse, but still yielded considerable profit to the proprietors. The country was also rich in wild asses. Its chief mineral product was salt, the soil down to a considerable depth being impregnated with salt. In consequence of this the country had little deep-water, which had to be obtained from very deep wells, and in some parts was sold at a high price. This account of the country, furnished by Strabo (xii. p. 569), is fully confirmed by modern travellers. The streams which come down from the surrounding mountains do not form rivers of any importance, but merely several lakes, among which the salt lake Tarsis, in the north-east, is the most important.

The Lucanians of Lucania, although Eustathius (ad Dionys. Per. 857) connects their name with the Arcadian Lycaon, according to which they would be Pelasgians, are never mentioned in history until the time of the expedition of Cyrus the Younger. In the 5th century B.C. a king Acravus passed through their country in five days, and gave up in despair because they were hostile. (Xenoph. Anab. i. 2. § 19, comp. v. 2. § 23, Cyrop. vii. 2. § 204.) Who the Lucanians were, and to what branch of the human family they belonged, is uncertain: but from the Acts of the Apostles (xiv. 11) it appears that they spoke a peculiar language. It is also well attested that, to the Pisidians, they were a hardy and warlike race, which owned a succession to the Persian monarchs, and lived by plunder and foray. (Dion. Per. 857. Prisc. 806; Avien. 1020.) Their principal towns, which are few in number, and after which appear to have been very small, were: Iconium, Labocita Cornuta, Perbebe, Antiochiana, and Lariana: the less important ones were Tyrmial, Vasa, Sastrata, Ristra, and Coropassus.

As to their early history, we know nothing about the Lucanians; but they seem to have gradually advanced westward, for in the time of Crousus the Lucanians occupied the country as far as the river Hesporis, and Xenophanes calls them the eastern city of town of Phrygia, so that the Lucanians must have continued their existence there after that time, for substantially it must have been ready in the town of Lycaon. It has already been remarked that they were a loud their assistance against Persia, but afterwards they shared the fate
LYCIA.

of all the other nations of Asia Minor, being successively under the rule of Alexander the Great, the Scyths, the Sasanians, the Arabians, the Turks, and finally under the Romans. (Liv. xxvii. 54, xxviii. 39-56.) Under this change of rulers, the character of the people remained the same; daring and irre- tractable, they still continued their wild and lawless habits, though in the course of time many Greek settlers must have taken up their abode in the Lycian towns. Under their chief Amyntas, however, whom Strabo even calls king, and who was his own cousin, the country acquired a greater political consistency. [Dict. of Biogr. under Amynt. p. 115.] After the death of Amyntas, his whole kingdom, which he had greatly extended, fell into the hands of the Romans, who constituted the greater part of Lycia as a part of their province of Cappadocia.

We may add, that Strabo regards Isauria as a part of Lycia. [Isauria.] [L. S.]

LYCASTUS (Λυκαστός; Eth. Λυκαστάριος), a town of Crete, mentioned in the Homeric catalogue (II. iii. 647; comp. Pomp. Mela, ii. 7; § 13; Plin. iv. 12). Strabo (§ 479) says that it had entirely disappeared, having been conquered and destroyed by the Cnossians. According to Polybius (xxii. 15) the Lycastian district was afterwards wrested from Cnossus by the Gortyrians, who gave it to the neighbouring town of Thausus. In Mr. Pashley's map the site is fixed at Καεναρία. (Höck, Kreta, vol. i. pp. 15, 41.) [E. B. J.]

LYCASTUS or LYCASTUM (Λυκαστός), a very ancient town in Pontus, on a river bearing the same name. It was situated 20 stadia south-east of Amyntas. (Ptol. ii. Perip. p. 38; Strab. xvi. A Cap. Pont. Eur. p. 10; Steph. B. s. v. X. 416; Paus. vi. 3: Mela, i. 19, who calls it Lycaestum) Pherozydes (op. Soc. ad Apoll. Rhod. ii. 373, comp. ad ii. 1001) spoke of a town of Lycastus, inhabited by Amazonians, and situated between Themessyra and Chalybaia. The river Lycastus was but a small stream, which after a short course emptied itself into the Euxine close by the town of Lycastus. (Syl. Marcian, Ptol., ii. cc.) [L. S.]

LYCHNUS (Λυχνός). [Athenae. p. 303, b.]

LYCHNIDUS (Λυχνίδος). [Eth. Λυχνίδως, Λυχ- νίτης, Steph. B. s. v. Ptol. iii. 13, § 32), the chief town of the Dassaretia in Lycia. From its position on the frontier it was always a place of considerable importance, and the name frequently occurs in the wars of the Romans with Philippus V. and Perseus, kings of Macedon. (Liv. xxvii. 32, xxviii. 34, xix. 9, 10, 21; Avgvst. Polyb. xviii. 30.) Afterwards it continued to be, as on the Cappadocian way described by Polybius (Λυχνίδως, xcviii. 12), one of the principal points on the Egyptian road. (Strab. vi. p. 323; Itin. Anton.; Ptol. Tab.; Itin. Hieron.; in the Jerusalem Itinerary the original reads Cleda.) Under the Byzantine empire it appears to have been a large and populous town, but was nearly destroyed by an earthquake during the reign of Justinian. (Procop. Hist. Arc. 18; Malhe. Excerpt. p. 250, ed. Bonn.; Niceph. Callist. xvn. 3.) Lychnites, which from the data of the Itineraries must be placed near the extreme of the Lycian Lyceum, on its E. shore, between Lycia and Caria, (Liv. vi. p. 281,) was afterwards replaced by the more northerly Achrida (στήν Αχρίδα, Οχρίδα, Αχρίδη, of the Byzantine writers; Anna Com. xiii. p. 371; Cedren. vol. ii. p. 468, ed. Bonn Canacuen. ii. 21), the capital of the Bulgarian empire. Some geographers have supposed that Achrida is the same as Justiniana: this identification, which is a mistake, has arisen from the circumstance that the Cretans of Achrida called themselves after the emperor Justinianus. (Schaafrik, Sbar. Alt. vol. ii. p. 227.) The Slavonic name survives in the modern Akruidha, on the NE. shores of the lake. [E. B. J.]

LYCHNITIS. 1. (Αυξύνης, ο Αυξύνης, Αυξύνη, Polyb. v. 108), a lake of Illyricum, first mentioned by Scymnus of Chios (429). Philip pushed his conquests over the Illyrian tribes as far as this lake (Dod. vi. 8). The lake of Akrhidais or Oskridais, which abounds in fish (comp. Strab. vol. ii. p. 327), represents Lycunitis. (Leake, Northern Greece, vol. i. p. 328, vol. iii. pp. 280-6.)

2. (Αυξύνης; comp. Steph. B. s. v. Aυξυ- δος), a lake of the Greater Armenia, which Postelov (v. 13, § 8) places in long. 72° and lat. 43° 15'. It has been identified with the lake Goktle Daz of Severa to the NW. of Erivan, the true position of which is lat. 40° 57'. The river Zenzene, which flows out of the lake and communicates with the Araxes, is not mentioned by Postelov. (Dubois de Montpereux, Voyage Autour du Caucase, Atlas, pt. i. pl. v. ii. p. 299—309; St. Martin, Mém. sur l'Armenie, vol. i. p. 61; Journ. Geog. Soc. vol. iii. pp. 40—43; Ritter, Erdkunde, vol. ix. p. 762.) [E. B. J.]

LYCIA (Λυχνία; Eth. Λυχνίος), a country on the south coast of Asia Minor, forming part of the region now called Tekke. It is bounded on the west by Caria, on the north by Phrygia and Pisidia, and on the north-east by Pamphylia, while the whole of the south is washed by the part of the Mediterranean called the Lycian sea. The western frontier is formed by the river Glaneus and Mount Daealis (Strab. xiv. p. 664), the northern by the range of Mount Taurus, and the eastern one by Mount Climax. The whole extent of the country, from east to west, amounts, according to Strabo, to 1720 stadia: this measurement, however, must have been made along the line of coast, for a straight line from east to west does not amount to more than one-half that distance. Its extent from the sea to the northern boundary is different in the different parts, but is everywhere smaller than that from the coast to west. Until very recently, Lycia, with its rich remains of antiquity, was almost a terra incognita,—having never been visited by European travellers, until Sir Charles Fellows, in 1838, and a second time in 1840, travelled the country; since which time it has been explored and described by several other men of learning and science, whose works will be noticed below.

1. Name of the Country. — The name Lycia and Lycans is perfectly familiar to Homer, where the poet appears to have been better acquainted with Lycia than with some other parts of Asia Minor, for he knew the river Xanthus and Cape Chimaera. (H. vi. 171. &c., x. 430. xii. 312. &c. Od. v. 292, and elsewhere.) But, according to Herodotus (i. 173), the ancient name of the country had been Mylas (Μυλασ), and that of the inhabitants Solymi (Σολώμιοι), and Tremelae or Tremelai (Τρεμ- έλας or Τρεμελας). These latter are said to have been conquered and expelled from the coast districts by Sarpedon, the brother of Minos, who, with a band of Cretans, invaded the country and conquered it, but without changing either its name or that of the people. But in his reign, Lycus, the
LYCIA

son of Paelion, being driven by his brother Arcas from Attica, found a place of refuge in Mitylas, the kingdom of Sarpedon, who now changed the name of his dominion into Lycia, to honour his friend Lycus. (Comp. Strab. xiv. p. 667; and Steph. Byz.

Lycia and the inhabitants parts of the Lycus.

which had earlier produced whatever was not in its healing qualities, particularly naphtha, from which medicinal plants were cultivated by the Solymi. Upon this, the conquerors of the Lycians, who, like the Solymi, were inhabited by barbarous or non-Hellenic tribes, whichever it follows that the conquering Lycians must likewise have been barbarians. Their struggles with the Solymi appear to have lasted long, and to have been very severe, for Bellerophon and other mythical heroes are mentioned as having fought against the warlike Solymi. (Hom. H. vi. 173; Diet. Biog. s. v. Sarpedon.)

From the recently discovered Lycian inscriptions, composed in an alphabet partly Greek and partly foreign, it has been inferred that, after the conquest of Lycia by the Persians, the great body of the nation changed its character, at least in some parts, which are supposed to have been occupied by Persians; and this theory is believed to derive support from the Lycian inscriptions, which Mr. Sharpe and others believe to contain a language akin to the Zend. But this hypothesis is denied by all foundation, for we never find that the Persians conquered and took possession of the countries conquered by them, and the Lycian language is as yet utterly unknown. All we can say is, that the Lycian alphabet seems to be a variety of the Graeco-Phoenician or Graeco-Semitic character, and that there is no evidence to show that in the historical ages the Lycians changed their character as a nation. They were and remained barbarians in the Greek sense, though they adopted and practised to a great extent the arts and modes of civilized life, such as they existed among their Greek neighbours.

4. Institutions, &c. of the Lycians. — In the Homer poetry the Lycians appear as governed by kings (Hom. H. vi. 173; Dict. Biog. s. v. Sarpedon); but in the historical times we find Lycia as a confederation of free cities, with a constitution more wisely framed perhaps than any other in all antiquity. An authentic account of this constitution has been preserved by Strabo. It was the political unity among the towns of Lycia that made the conquest possible and enabled it to maintain its freedom against the encroachments of Croesus and the surrounding nations who were compelled to own his sway. When and by whom this federal constitution was devised, we are not informed, but it reflects great credit upon the political wisdom of the Lycians. They were a peaceable and well-conducted people, and took no part in the piracy of their maritime neighbours, but remained faithful to their ancient institutions, and on this account were allowed the enjoyment of their free constitution by the Romans. It was a most remarkable fact, how well this constitution suited the people, and how it was able to preserve itself against the encroachments of Croesus and other foreign nations. The confederacy then consisted of 23 towns, from which the deputies met in a place fixed upon each time by common consent. The six largest towns, Xanthus, Patara, Pisa, Olympia, Myra, and Tlos, had each three votes at the common diet; the towns of more moderate size had two, and the remaining small places one vote each. The executive of the confederacy was in the hands of a magistrate called Lycarch (Λυκάρχης), whose election was the first business of the congress, and after whom the other officers of the confederacy were chosen. The judges, also, as well as the magistrates, were elected from each city according to the number of
LYCIA.

its votes; taxation and other public duties were regulated on the same principle. In former times, the deputies constituting the congress had also decided upon peace, war, and alliances; but this of course ceased when Lycia acknowledged the supremacy of Rome. This happy constitution lasted until the time of the emperor Claudius, when Lycia became a Roman province, as is mentioned below. (Strab. xiv. p. 664, &c.) The laws and customs of the Lycians are said by Herodotus to have been partly Carian and partly Cretan; but in one point they differed from all other men, for they derived their names from their mothers and not from their fathers. In the same way, every one was obliged to give an account of his parentage, i.e. he enumerated his mother, grandmother, great-grandmother, &c. (Herod. i. 173.)

Herodotus (vii. 92), in describing their armour, mentions in particular, hats with plumes, greaves, short swords, and sickles. Respecting the religion of the Lycians nothing is known, except that they worshipped Apollo, especially at Patara; but whether this was the Greek Apollo, or a Lycian god identified with him, cannot be said with certainty, though the former is more probable, if we attach any meaning to the terms used in connexion with the names of their deities in Homer. (Logr. s. v.) This would show that the Greeks of Asia Minor exercised considerable influence upon the Lycians at a very early period.

5. Literature and the Arts.—Although we have no mention of any works in the Lycian language, it cannot be doubted that the Lycians either had, or at least might have had, a literature, as they had a peculiar alphabet of their own, and made frequent use of it in inscriptions. The mere fact, however, that they made use of inscriptions in their own languages, the Lycian and Greek, shows that the latter language had become so familiar to the people that it was thought desirable, or even necessary, to employ it along with the vernacular in public decrees and laws about and after the time of the Persian wars; and it must have been this circumstance that stopped or prevented the development of a national literature in Lycia. The influence of Greek literature is also attested by the theatres which existed in Lycia as far as is known, and in which we are told that plays must have been performed, and have been understood and enjoyed by the people. In the arts of sculpture and architecture, the Lycians attained a degree of perfection but little inferior to that of the Greeks. Their temples and tombs abound in the finest sculptures, representing mythological subjects, or events of their own military history. Their architecture, especially that of their tombs and sarcophagi, has quite a peculiar character, so much so that travellers are thereby enabled to distinguish, whether any given place is really Lycian or not. These sarcophagi are surmounted by a structure with pointed arches, and richly decorated with sculptures. One of these has been brought to this country by Sir C. Fellows, and may now be seen in the British Museum. The entrances of the numerous tombs cut in the faces of lofty rocks are formed in the same way, presenting at the top a pointed arch, which has led Sir C. Fellows to compare them to Gothic or Elizabethan architecture. If we examine the remains of their towns, as discovered by Sir C. Fellows, Texier, and Forbes and Spratt, we cannot avoid coming to the conclusion that, in all the arts of civilized life, the Lycians, though barbarians, were little inferior to the Greeks.

6. History.—Lycia and the Lycians act rather a prominent part in the Hellenic account of the Trojan War, where they are described as the allies of the Trojans. Sarpedon and Oenopion, are the two Lycian heroes in the war, but the part which Pisidia also with the earlier legends of Lycia,—as that about Bellerophon, which he introduces into the parley between Glaucus and Diomede. Pandars, another hero on the side of the Trojans, came from a district about the river Aepeus, which was likewise called Lycia, and which was supposed by the ancient commentators to have been peopled by colonists from Lycia, the subject of this article (II. ii. 824. &c., iv. 91, v. 103; comp. Strab. xii. p. 572, xiii. p. 588); from them, and from the Lycians, are derived, at least, the names of the ancient cities, and the circumstances under which, Lycians settled in Troas. During the period from the Trojan times down to the Lydian conquests under Croesus, the Lycians are not mentioned in history; but that conqueror, who was successful in all other parts of Asia Minor, failed in his attempts upon the Lycians and Cilicians. (Herod. i. 25.)

When Cyrus overthrew the Lydian monarchy, and his general Harpagus invaded the plain of the Xanthus, the Lycians offered a determined resistance; but when they found that the situation was hopeless, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and set fire to it. They themselves then renewed the fight against the enemy, but all perished, except a few Xanthians who happened to be absent during the battle. (Xanthus.) Lycia thus became a part of the Persian monarchy, but, like all Persian provinces, retained its own constitution, being obliged only to pay tribute and furnish its contingents. During the Persians' reigns, the Lycians suffered nothing, the empire, at least, was not despotism; and when the Persians were expelled from the revolt of the Asiatic Greeks, but afterwards were reduced, and Darius made the country a part of his first satrapy (Herod. iii. 90); the fact that the Lycians furnished fifty ships to the fleet of Xerxes (Herod. vii. 92) shows that they still continued to be a prosperous and powerful people. Their armour on that occasion is described by Herodotus, and was the same as that noticed above. During the Ptolemaic War the Lycians are not mentioned; but as Rhodes was tributary to Athens, and as contributions were often levied as far as Asia, we need not have supposed that Lycia may have been compelled to pay similar contributions. Alexander traversed a part of the country on his march from Caria into Pisidia and Phrygia, and reduced it under his sway. The Lycians on that occasion offered little or no resistance to the young conqueror; the cities of Xanthus, Pinara, Patara, and about thirty other smaller towns, surrendered to him without a blow. (Arrian, Anab. i. 24.)

In the division of the Macedonian empire, Lycia successively came under the dominion of the Ptolemies and the Seleucids; and then, after a brief interval, during which the Lycians enjoyed their full freedom, they fell under the dominion of Rome; for after the defeat of Antiochus the Great, Lycia was ceded by the Roman senate to the Rhodians; but the Lycians, inimicant at being considered the subjects of the islanders, and being secretly supported by Eumenes, resisted the Rhodian authorities by force of arms. In this contest they were overpowered; but when the Romans, disgusted with the Rhodians for their conduct in the Macedonian War, interfered, and restored the Lycians to independence. (Polyb. xxii. 7, xxiii. 3. xxvii. 7, xxx. 5; Liv. xiv. 23; Appian, Mith. 61, &c., Supr. 44.) It was apparently during the period which now followed,
that Lycia enjoyed its highest degree of prosperity, for under the protection of Rome the people had suf-

cient leisure to attend to their own internal affairs.

By a strict and wise neutrality, they escaped the

dangers of the Mithridatic Wars as well as those of

the wars against the Parthians. (Appian, Mithrid.

ae, 24, 61; Strab. xvi. p. 665.) The prosperity of

Lycia, however, received a severe blow during the

war of Brutus and Cassius, who attacked the country

because they were suspected of siding with the

party of Octavianus and Antony. When Brutus advanced

against Xanthus, the inhabitants retired the suburbs

to the ground, and offered the most determined res-

istance. After a long and desperate siege, the soldiers

of Brutus gained admission by treachery,

whereupon the Xanthians made away with them-

selves by setting fire to their city. The fall of

Xanthus was followed by the surrender of Patara

and the whole Lycian nation. Brutus levied enormous

contributions, and even instances occurred

in which the inhabitants were made to give up all their gold and silver.

(Appian, B. C. iv. 60, 65, 75, &c.) Antony afterwards

granted the Lycians exemption from taxes, in

consideration of their sufferings, and exhibited them

to rebuild the city of Xanthus. (Ibid. v. 7; comp.

Dion Cass. xiv. 34.) But after this time the

prosperity of Lycia was gone, and internal dissensions

in the end also deprived the inhabitants of their ancient and free constitution; for the emperor

Claudius made the country a Roman province

because it was suspected of siding with the Parthians. (Dion Cass. ix. 17; Suet. Claud. 25.) Philius (v. 28)

states that Lycia once contained seven towns, but that in his time their number was reduced to

twenty-six. Ptolemy (v. 5), indeed, describes Lycia as a separate province; but it is probable that

until the time of Theodosius II. it remained united

with Pamphylia, for an inscription (Gruter, Thesaur.

p. 435. 6) mentions Porychus as "proces. Lyciae et

Pamphyliae," and both countries had only one governor as late as the reign of Constantine. But

Theodosius constituted Lycia a separate province;

and so it also appears in the seventh century in

Hierocles (p. 682, &c.), with Myra for its capital.

For further topographical and historical details

see the separate articles of the Lycian towns,

mountains, and rivers, and especially the following

works of modern travellers. Sir C. Fellows, A

Journal written on an Excursion in Asia Minor,

London, 1839, and An Account of Discoveries in

Lycia, being a Journal kept during a second Excursion

in Asia Minor, London, 1841; Spratt and E.

Forbes, Travels in Lycia, Milas, and the Chry-

ratis, 2 vols. London, 1847, which contains an ex-

cellent map of Lycia; Tezier, Description de l'Asie Mineure, vol. i. Paris, 1818. The Lycian

language has been discussed by D. Sharpe, in Ap-

pendices to Sir C. Fellows' works; by Grafendel,

in vol. iv. of the Zeitschrift fur die Kunde des

Morgenlandes; and by Cockerell in the Journal of

the Society, April, 1841. [L. S.]

COIN OF LYCIA.
LYCURGUS (Aegeas), a river of Asia, is the name of many great rivers, especially in Asia, and seems to have originated in the impression made upon the mind of the beholder by a torrent rushing down the side of a hill, which suggested the idea of a wolf rushing at his prey. The following rivers of this name occur in Asia Minor:—

1. The Lyceus of Bithynia: it flows in the east of Bithynia in a western direction, and empties itself into the Euxine a little to the south of Heraclea Pontica, which was twenty stadia distant from it. The breadth of the river is stated to have been two plethra, and the plain near its mouth bare the name of Campus Lyceus. (Scolias, p. 34; Orphic, Anth. gnom. 720; Arrian, Perip. p. 14; Anonym. Perip. p. 3; Xenoph. Anab. vi. 2, § 3; Ov. Epist. ex Pont. x. 47; Athen. ap. Phot. 51; Plin. vi. 1, who erroneously states that Heraclea was situated on (apposition) the river.)

2. The Lyceus of Cilicia is mentioned only by Pliny (v. 22) as flowing between the Pyramus and Pisares.

3. The Lyceus of Lydia was a tributary of the Hermus, flowing in a south-western direction by the town of Thyatira, whether it emptied itself directly into the Hermus, or only after its junction with the Hyllus, is uncertain. (Plin. v. 31; comp. Wheler, vol. i. p. 253; P. Lucas, Troisieme Voyage, vol. i. p. 159, who, however, confounds the Lyceus with the Hermus.)

4. The Lyceus of Phrygia, now called Techoruk-Su, is a tributary of the Maeander, which it joins a few miles south of Tripolis. It had its sources in the eastern parts of Mount Cadmus (Strab. xil. p. 578), not far from the mouth of the Maeander (Eckhel, loc. cit.), and flowed in a western direction towards Colossae, near which place it disappeared in a chasm of the earth; after a distance of five stadia, however, its waters reappeared, and, after flowing close by Laodicea, it discharged itself into the Maeander. (Herod. vii. 30; Plin. v. 29; Ptol. v. 2, § 8; Hamilton, Researches, vol. i. p. 508, &c., and Journal of the Royal Geogr. Soc. vii. p. 60, who re-discovered the chasm in which the Lyceus disappears, amid the ruins near Colossae.)

5. Pontus contains two rivers of this name:—

(a) A tributary of the Iris in the west, is now called Kali Hissar. It has its sources in the hills of Lesser Armenia, and, after flowing for some time in a western direction, it turns towards the north, passing through Nicopolis, and emptying itself into the Iris at Magnopolis. The Lyceus is almost as important a river as the Iris itself (Strab. xil. p. 529, xili. p. 547, 556; Plut. Lucul. 13; Plin. vi. 3, 4; Ov. Epist. ex Pont. iv. 16, 47; Herod. p. 703; Act. Hirt. viii. ii. Ju1. p. 16). Its tributary of the Acampas or Apocampus, in the eastern part of Pontus, is believed to answer to the modern Gorgoro. (Ptol. v. 6, § 7)

6. According to Curtius (iii. 1), the river Mar-syas, which flowed through the town of Celanae, changed its name into Lyceus at the point where it rushed out of the frictions of the place. [L. S.]

LYCUS (Aegeas), a river of Assyria, also called Zabatus. [ZABATUS]

LYCUS (Aegeas), a river of Syria, between ancient Byblos and Berytus. (Strab. xili. p. 555; Plin. v. 20.) Although both these geographers mention the river Alonis as distinct from this, more to the north, between Palae-Byblos and Byblos, the two rivers have been sometimes confounded. Their
LYCUS.

Wolf-ridge is plainly identical with the Dox-ridge of the present day (Nzhv-el-Keb), about 2 hours' north of Bicyas; which derives its name, says Maundrell, from an idol in the form of a dog or wolf, which was worshipped, and is said to have pronounced oracles, at this place. It is remarkable for an ancient viaduct cut in the face of a rocky promontory immediately on the south of the stream, the work of Antoninus Pius, as a Latin inscription, copied by Maundrell, and still legible, records (Journey, March 17, pp. 35–37). Canoiciform inscriptions and figures resembling those found at Behistan [Bagistanus Monza] would seem to indicate that the Roman emperor did but repair the work of some Persian king. There are caves of the inscriptions and figures in the British Museum.

[Ch. W.]

LYCUS (Asopus), a river of Sarmatia, which flows through the country of the Thysaeus, and discharges itself into the Zulas Minor. (Herod. iv. 124.) Herodotus was so much in error about the position of the Maeotis, that it is difficult to make out his geography here. The Lykus has been identified with the Laguus of Phiny (vi. 7), or the upper course of the Volga. (Comp. Schaffarik, Slav. Alt. Vol. i. p. 499.) Kennell (Geoq. of Herod. vol. i. p. 119) supposes it may be the Medvedaika. It must be distinguished from the Lucus of Ptolemy (vii. § 13), which is the modern Kolmas. (Schaffarik, c.)

LYCUS (Asopus, Ptol. vol. iv. § 2), a river of Cyprus, W. of Amathus. At a little distance inland from Cape dello Glacce [Curias] are some salt marshes, which receive an arm of a river correspond¬ing with the Lykus of Ptolemy. (Engel, Kypros, vol. iii. 37.)

LYDIA. [Diopolis.]

LYDIA (Asaba: Eth. Asos, Lydus), a country in the western part of Aisa Minor. Its boundaries varied at different times. Originally it was a small kingdom in the east of the Boman colonies, but during the period of the Persian dominion it extended to the south as far as the river Maeander, and, perhaps, even to Mount Mesages, where some writers speak of the Carian towns of Arama, Tailes, Nysa, and Mesagea on the Maeander, as Lydian towns, and Strabo (xii. p. 577) mentions the Maeander as the frontier between Lydia and Caria. To the east it extended as far as the river Lykus, so as to embrace a portion of Phrygia. In the time of Ctesias, as the kingdom of Lydia embraced the whole of Aisa Minor between the Aegasan and the river Haly, with the exception of Cilicia and Lydia. The limits of Lydia during the Roman period are more definitely fixed; for it bordered in the north on Myasis, from which it was separated near the coast by the river Hermus, and in the inland parts by the range of Mount Tmolus; to the east it bordered on Phrygia, and to the south on Caria, from which it was separated by Mount Mesages. To the west it was washed by the Aegasan (Phin. v. 30; Strab. lib. iv. p. 130, xii. pp. 572, 577, &c.), whence it is evident that it embraced the modern province of Sarakhan and the northern part of Sogdiana. This extent of country, however, includes also Ionia, or the coast country between the mouth of the Hermus and that of the Maeander, which was, properly speaking, no part of Lydia. [Ionia.]

1. Physical Features of Lydia.—In the southern and western parts Lydia was a mountainous country, being bounded on the south by the Mesages, and traversed by the range of Tmolus, which runs parallel to it, and includes the valley of the Caystrus. In the western parts we have, as continuations of Tmolus, Mounts Dracon and Olympus, in the north of which rises Mount Styppus. The extensive plains and valleys between these heights are traversed in a western direction by the rivers Caystrus and Hermus, and their numerous tributaries. The country is very mountainous, and the plains are the most fertile in the world, even the sides of the mountains admit of cultivation; its climate was mild and healthy, though the country has at all times been visited by severe earthquakes. (Xenoph. Cyrop. vi. 2, § 21; Strab. i. p. 58.) Its most important productions were an excellent kind of wine, saffron, and gold. The accounts of the ancients about the quantity of gold found in Lydia, from which Crescens was believed to have derived his wealth, are so highly exaggerated, for in later times the sand of the river Pactolus contained no gold at all, and the proceeds of the gold mines of Mount Tmolus were so small as scarcely to pay for the labour of working them. (Strab. xii. p. 591.) The plains about the Hermus and Caystrus were the most fertile parts of the country, if we except the coast districts of Ionia. The most celebrated of these plains and valleys bore distinct names, as the Chelisian, the Caystrian, the Hyrcanian; and the Catatc¬caumene in the north east. Some of these plains are truly extensive, and the most important of which are the Gymaea Lucus, on the north of the Hermus, and some smaller ones in the neighbourhood of Ephesus, which were particularly rich in fish. The capital of the country at all times was Sardes.

2. Names and Inhabitants of the Country.—In the Homeric poems the names Lycia and Lydians do not occur; but the people dwelling about Mount Tmolus and Lake Gygaesa, that is the country afterwards called Lydia, bear the name Meones or Myones (Mogr., ii. 385, v. 43, x. 431), and are allied with the Trojans. The earliest author who mentions the Lydians is the lyric poet Minnemus (fragm. 14, ed. Bergk), whose native city of Colophon was conquered by the Lydians. Herodotus (i. 7) states that the people originally called Meones afterwards adopted the name of Lydians, from Lydus the son of Ays; and he accordingly regards Lydians and Meonians as the same people. But some of the authors, as we learn from Strabo (xii. p. 572, xiv. p. 579), considered them as two distinct races, — a view which is unquestionably the correct one, and has been adopted in modern times by Niebuhr and other inquirers. A change of name like that of the Maonians into Lydians alone suggests the idea of the former people being either subdued or expelled by the latter. When once the name Lydians had been established, it was applied indiscriminately to the nation that had been conquered by them as well as to the conquerors, and hence it happens that later writers, bearing the name Lydians, even when speaking of a time when there were no Lydians in the country, but only Maonians, we shall first endeavour to show who the Maonians were, and then proceed to the more difficult question about the Lydians and the time when they conquered the Maonians. The Maonians unquestionably belonged to the Indo-European stock of nations, or that branch of them which is generally called Thracian or Pelasgian, for these latter inhabited Lesbos before the Greeks took possession of those islands (Strab. v. p. 221,
They had been adopted by the Persians, and the Persians were a warlike people, and their cavalry was regarded as the best at that time. (Herod. i. 79; Minnerr. l.c.) Cyrus purposely crushed their war-like spirit, forbade them the use of arms, and caused them to practice dancing and singing, instead of cultivating the arts of war. (Herod. i. 154; Justin, i. 8.) This was probably the reason why the Greeks ascribed to them the invention of gymnastic games. (Herod. i. 94.) The mode of life thus forced upon them by their conquerors gradually led to that degree of effeminacy for which they were afterwards so notorious. Their commercial industry, however, continued under the Persian rule, and was a source of great prosperity. (Herod. i. 14, 23, 51, &c.) In their manners the Lydians differed but little from the Greeks, though their civilization was in many respects is manifest from the fact of their daughters generally gaining their dowries by public prostitution, without thereby injuring their reputation. (Herod. i. 93.) The moral character of the Lydian women necessarily suffered from such a custom, and it cannot be matter of surprise that ancient Greek authors speak of them with contempt. (Strab. xi. p. 583, xiii. p. 627.) As to the religion of the Lydians we know very little; their chief divinity appears to have been Cybele, but they also worshipped Athena, Artemis, and Apollo. (Niebuhr, i. 518. Diod. Perig. 842.) and the phallic worship seems to have been universal, whence we still find enormous phalli on nearly all the Lydian tombs. (Hamilton's Researches, vol. i. p. 145.) The Lydians are said to have been the first to establish inns for travellers, and to coin money. (Herod. i. 94.) The Lydian coins display Greek art in its highest perfection; they have no inscriptions, but are adorned with the figure of a lion, which was the talisman of Sardes. We do not know that the Lydians had any alphabet or literature of their own; the want of these things can scarcely have been felt, for the people must at an early period have become familiar with the language and literature of their Greek neighbours.

4. History.—The Greeks possessed several works on the history of Lydia, and one of them was the production of Xanthus, a native of Sardes, the capital of Lydia; but all have perished with the exception of a few insignificant fragments. If we had the whole of Xanthus, we should not doubt but a grammar forming on various points on which we can now only form conjectures. As it is, we owe nearly all our knowledge of Lydian history to Herodotus. According to him (i. 7) Lydia was successively governed by three dynasties. The first began with Lydus, the son of Aris, but the number of its kings is not mentioned. The second dynasty was that of the Hereclidae, beginning with Agon, and ending with Candaules, whom the Greeks called Myrrhus. The commencement of the Hereclidal dynasty is supposed to have taken place about n. c. 1200; they are connected in the legend in Herodotus with the founder of Nineveh, which, according to Niebuhr, means either that they were actually descended from an Assyrian family, or that the Hereclidal dynasty submitted to the supremacy of the king of Nineveh, and thus connected itself with the race of Ninus and Belus. The Hereclidae maintained themselves on the throne of Lydia, in unbroken succession, for a period of 505 years. The third dynasty, or that of the Mermnax, probably the first really Lydian rulers, commenced their reign, according to some, in n. c. 713 or 716, and according to Eusebius, twenty-two years later. Mygge,
LYDIAS.

the first line of the Mecanial dynasty, who is said to have married Candaulus, an elderly Syrian
personage, at least the story which Herodotus relates
about him is nothing but a popular tradition. He
reigned until B.C. 678, and conquered several of
the adjacent countries, such as a great part of Mysia
and the shores of the Hellespont, and annexed to his
dominions the cities of Caphton and Magnesia, which
had already been captured by the Cimmerians and the
Lydians. Gyges was succeeded by Ardyas, who reigned
from B.C. 678 to 629, and, continuing the conquests of
his predecessor, made himself master of Paphlagonia.
His reign, however, was disturbed by the invasion of
his kinsmen by the Cimmerians and Treces. He was succeeded
by Sadyattes, of whom nothing is recorded except that he
occupied the throne for a period of twelve years,
from B.C. 629 to 617. His successor Alyattes, from B.C. 617 to 560, expelled the Cimmerians from
Asia Minor, and conquered most of the Ionian cities.
In the east he extended his dominion as far as the
river Halys, where he came in contact with Cyaxares
the Mede. His successor Croesus, from B.C. 560
to 546, extended his conquests so far as to embrace
the whole peninsula of Asia Minor, in which the
Lydians and Cimmerians at first successfully resisted
him. He gained his vast dominions with justice
and moderation, and his rule was securely held by
himself and his successors. The empire made by
Lydia and some small tribes, apparently of Mazar
origin, together with the Myciae, the second strata,
and demeamed from it an annual tribute for the
royal treasury of 500 talents. (Herod. ii. 90.)
Strabo now has the residence of a Persian
squat, who seems to have ranked higher than the
other princes of the Persian empire. Afterwaris Lydia
was conquered by Croesus; and, after the
Persian conquest, it is said (Herod. iii. 63) that the
language of the Lydians had entirely disappeared, the Greek
having taken its place. After the death of
Alexander, Lydia was subjected for a time to Antigonus
the Gargarian, who set himself up as king at
Sardis, but was afterward overthrown and put
to death by Antipater. (Paus. v. 57.) After
the death of Antigonus the Gargarian, Lydia was
annexed by him to the kingdom of Macedon. (Liv.
xviii. 59.) At a still later period it formed part
of the Persian province of Asia Minor, B.C. 300,
and continued in the same capacity until the
middle of the period of the Byzantine emperors,
by which time it was conquered by the Turks. (Comp. Th.
Mast, Lydia, i. 298.) LYDIA. LIBERTA. Eikonographeia, Berlin, 1844. S.v.; Corner, Anc. M. iv. i. p. 413.
ii.; Forbrich, Handb. der Altert. Geschichte, ii. 167,
W., i. p. 82, &c.)

LYDIA, LUDIA, LYDIA, or LYGIA (Λυδία, Λύδια,
Λυδίων), is the general name for a number of small
tribes in the north-east of Greece, all of which
belonged to the Sveii. (Strab. vii. p. 230; Ptol. ii.
11. § 18; Dion Cass. xvi. 5; Tac. Ger. 43, Ann.
xxii. 29, 30.) The ancients speak of them as a German
nation, but there can be little doubt that, properly
speaking, they were Slavonians, who had been
subdued by the Sveii, and had gradually become
incorporated with them. The name contains the root lyg,
which in the old German signi-
"fies a wood or marsh, and still has the same meaning
in the Slavonic; it seems, therefore, to be
 descriptive of the nation dwelling in the plains of the
Vistula and the Oder. The LYGII are first mentioned
in history as belonging to the empire of
Maroboduns, who were united with the Mar-
comanni and Hermunduri. When the Quadi rose
against king Vannius, in A.D. 50, the Lygii and
Hermunduri were still united, and opposed the
influence of the Romans in Germany. (Tac. Ann. l.c.)
In the reign of Domitian, about A.D. 84, they made
war on the Quadi, their neighbours, who in vain
sought the protection of the Romans. (Dion Cass.
l.c.) After this time the Lygii disappear from
history, and it is possible that they may have become
lost among the Goths. The different Lygian
tribes, which are mentioned by Tacitus (Arii, Helve-
tones, Manuni, Elysi or Helisii, and Naharvall),
seem to have been united among one another by a common
worship, the principal seat of which was around
the Naharvali. The name of their two common gods
was Alci, who were worshipped without images ;
and Tacitus observes that their mode of worship
was free from all foreign admixture. Polyenius
mentions, as tribes of the Lygii, the Omanni, Duni, and Buri,
who are either not noticed by Tacitus at all, or are
classed with other tribes. (Comp. Wilhelm, Ge-
manien, p. 242; &c.; Zeiss, die Deutschen, p. 124;
Latham, on Tacit. Germania, p. 158.)

LYCIA, or LYKIA. (Comp. Strabo, vii. p. 326.)
LYCENIA. (Ἀγανηστία, Strab. vii. p. 326;
Ptol. iii. 13. 33), the country of the LYCENSTII
(Aγανηστικα, Thuc. ii. 99, iv. 83, 124.; Strab.
vi. pp. 323, 326), once a small independent kingdom,
and afterwards a province of the Macedonian
monarchy. This district was situated to the S. of the
Pegeones, and between that people, and the Eordae.
It was watered by the Erigon, and lay in the centre of
the Egnatian Water, which connected Rome, Con-
stantinople, and Jerusalem. The people which separated
Lycenia from Eordia, where Philip made his
successful stand against the Romans, is described
by Polybius (xxvi, 6) as οἱ εἰς τὴν Ἑλλάδα ὑπερ-
βολαί, and Thucydidus (iv. 83) calls a definite in the
same mountains ἀναρρημόν τῆς Λυκείας, in
relationship of the Periarcas against Lycenia,
which ended in a separate negotiation between
his ally Bracida and Alaric king of the Lyccestae.
(Tac. iv. 83.) It was by the same pass in the
following year that Bracida effected his sally and
was ejected from the united forces of the Lyc-
estae and Illyrians. (Thuc. iv. 124.)

According to Strabo (vii. p. 326), Iren, the
daughter of Arbalbenus (as he writes the name),
was mother of Euryylene, who married Anyntas,
father of Philip. Through this connection
Lycenstae may have been annexed to Macedonia.
The geography of this district is well illustrated by
the operations of the cosmetic Sophocles against Philip,
in the campaign of B.C. 290. (Liv. xxxi. 35.)
From the narrative of Livy, which was unquestionable

LYRÉ. (Av. ésdr.) and Hierocl. (Av. ésdr.) and Diod. (Ar. Aésóikos) and Plin. (Ar. Aésóikos) andponnesos, Av[kενον, this neae, clearly scopal are or pomp. Met. av. ancients as Bevum" Apollod. (E. οὐδενά) and sages words posed is of description was at of it mentioned that it was situated in the territory of Thebe, but that afterwards it belonged to Adranytium. Pliny (v. 32) places it on the river Eunom, near its sources. It was, like Thebe, a deserted place as early as the time of Strabo. (Comp. Strab. xiii. p. 504; i. 469.) About 4 miles from Karpwreus, Sir C. Fellows (Journ. of an Exc. in Asia Minor, p. 39) found several columns and old walls of good masonry; which he inclined to regard as remains of the ancient Lyrnessor.

2. A place on the coast of Pamphylia, which was reported to have been founded there by the Trojan Cilicians, who transferred the name of the Trojan Lyrnessus to this new settlement. (Strab. xiv. 676.) The town is also mentioned by Pliny (v. 26), who places it on the Cataractae, and by Dionysius Periegetes (875). The Stadusius Maris Magil (§ 204) calls it Lyrnas, and, according to the French translator of Strabo (vol. i. pt. 2, p. 369), its site is identified with the modern Cervi (§ 48). 3. An ancient name of the island of Tenedos. (Plin. v. 39.)

LYROPE. [LYRÉ.] LYSIAS (Ἀγωνίς; Ed. Αρεώληξις), a small town in Phrygia, between Synnada and Phrygessus. (Strab. xiii. p. 576; Plin. v. 29; i. 28; Herod. i. 677.) No particulars are known about the place, nor is its site ascertainable, but we still possess coins of Lysias. (Eckhel, Doct. Numm. iii. p. 167.)

LYSIMACHIA (Ἀςσαμαχία or Λυσιμαχία). 1. A small town in My sia, mentioned only by Pliny (v. 22), in whose time it no longer existed. 2. An important town on the north-eastern extremity of the Thracian Chersonese, not far from the Suna Melas. It was built by Lysimachus in b. c. 309, when he was preparing for the last struggle with his rivals; for the new city, being situated on the isthmus, commanded the road from Sestos to the north and the mainland of Thrace. In order to obtain inhabitants for his new city, Lysimachus destroyed the neighbouring town of Cardia, the birthplace of the historian Hieronymus. (Strab. ii. p. 134, vii. p. 531; Paus. i. 9, § 10; Polyb. v. 34; Plin. H. N. iv. 18.) Lysimachus no doubt made Lysimachia the capital of his kingdom, and it must have rapidly risen to great splendour and prosperity. After his death the city fell under the dominion of Syria, and during the wars between Seleucus Callinicus and Ptolemy Euergetes it passed from the hands of the Syrians into those of the Egyptians. Whether these latter set the town free, or whether it emancipated itself, is uncertain, at any rate it entered into the relation of sympathy with the Aetolians. But as the Aetolians were not able to afford it the necessary protection, it was destroyed by the Thracians during the war of the Romans against Philip of Macedon. Antiochus the Great restored the place, collected the scattered and enslaved inhabitants, and attracted colonists from all parts by liberal grants. (Liv. xxxiv. 38; 40; Dio. Exc. de Virt. et Vit. p. 574.) This restoration, however, appears to have been unsuccessful, and under the dominion of Rome it decayed more and more. The last time the place is mentioned under its ancient name, is in a passage of Ammianus Marcellinus (xxii. 8). The emperor Justinian restored it and surrounded it with strong fortifications.
LYSIMACHIA.

Lysimachia (Ἀλτυνία: Fih. Ἀλτυνιάς: Papadatides), a town of Aetolia, situated upon the southern shore of the lake formerly called Hyria or Hydra, and subsequently Lysimachia, after this town. [This sheet has been torn away from the volume and is not visible.]

The town was probably founded by Arsinés, and named after her first husband Lysimachus, since we know that she enlarged the neighbouring town of Conose, and called it Arsinós after herself. [Conose:]

The position of the town is determined by the statement of Strabo that it lay between Phœron and Conose, and by that of Livy, who places it on the line of march from Xanipactus and Caïydon to Stratus. Its site, therefore, corresponds to Papadatides, where Leake discovered some Helonite remains. It was described in Strabo's time (Strab. p. 450; Pol. v. 7; Liv. xxxvi. 11; Steph. R. s. v.; Leake, Northern Greece, vol. i. pp. 122, 153.)

Lysiellia. [Syrianic.]

LYSNOE (Λυσνός) or LYSNIA (Λυσνία, Ptol. v. 5. § 5), a small town in the north of Phœdia, on the south of the Aeginae Laews, and west of Sugassus. (Polyb. Eet. de Leg. 32; Liv. xxxvii. 15; Herod. p. 680, who calls it Lysenara, Athens.)

LYSTRAS, a small river mentioned only by Livy (xxxvi. 15), which had its sources near the town of Laces, in the west of Phœdia. [L. S.]

LYSTRA (Λυστρα, or τές), a town of Lycastia or Isauria, which is mentioned by Pliny (v. 42: Фиλ. Λυστρών and Tophancy (v. 4. § 12), and repeatedly in the New Testament History. (Acts, xv. 28; Timoth. iii. 11; comp. Herod. p. 675.)

A bishop of Lystra was present at the Council of Chalcedon. Leake (J. J. Minor, p. 192) is inclined to place the town at Khoutum Næri, about 30 miles south of Armenian but Hamilton (Researches, vol. ii. p. 313), with more appearance of probability, identifies its site with the ruins of Kaaahag, which are generally believed to be the remains of Derbo. [L. S.]

LYTAINUS, a promontory in Northern Europe, mentioned by Pliny (v. 12. s. 14). Its text makes the promontory of Lytanus, at one and the same time, a portion of the Celtic country and the extremity of the British range—the British mountains being the Cerdian—"an extra concilium Britishorum in Albaniensi museo posita, placidus in Eruditione, primum unde masculorum præmontorium Celticae Lytarianæ, fluminis Carambuleis, ubi lascas cur siderum vi Phalan- oram montium definiebat jugo." In the eyes of the physical geographer, the extremity of the Cerdian chain is either the island of Nova Zambula or the most northern portion of the district on the west of the sea of Ohi.—the Ohi being the Carambanis. In the usual maps, however, the Dervis is the Carambanis, and Vassos Nobs, on the east of the White Sea, the Lytarnns Prom. [H. G. L.]

LYTUS. [Lycus.]

MAACAH, BETH-MAACAH t. ABEL BETH-MAACAH (ܡܥܐ, Be'tauç, 'Abel dōwêf Maçâx), a city of Palestine, placed by Eusebius and St. Jerome on the road between Euchateropolis and Jerusalem, 8 miles from the former, the site of which was afterwards occupied by a village named Megiddo. It is clear, however, that the Abel Beth Maacah of the sacred writers could not have been situated so far south. It is first mentioned in 2 Samuel, xx. 14, &c., as the city in which the rebel Sheba was besieged by Joab. From this passage, however, it may be gathered (1.) that Abel was not identical with Beth-Maacah, for the copula is inserted between the names ("unto Abel and unto Beth-Maacah"); (2.) that it was situated at the extremity of the land of Israel, for Joab "went through all the tribes of Israel" to come there. Abel then, which was, as "the wise woman" called it, "a city and a mother in Israel" (ver. 19), was so called from its contiguity to Beth-Maacah, (so Roland, Palæstina, p. 519); and this must have been situated near the northern frontier, for it is mentioned with Ijon and Dan, and Cineroth and Nahaloth (1 Kings, xv. 29), as one of the cities taken by Benhadad, king of Syria, from Benzah, king of Israel; and two centuries later it was one of the cities of Israel first occupied by Tiglath-Pileser, king of Assyria. (2 Kings, xv. 29.) Eusebius mentions three places named Abel.—1. a village three miles from Philadelphia; 2. a city 12 miles east of Gadara; 3. another between Paneas and Damascus. (Onomast. s. v.) Roland justly remarks (L. c.) that if any one of these is to be taken as Abel of Beth-Maacah it must be the last-named; but that he is more disposed to look for it in Galilea, to the west or south of Paneas, rather than to the east or north, on the Damascus road. This view is perhaps confirmed by a comparison of 2 Chronicles, xxiv. 4, with 1 Kings, xxv. 26; the Abel Beth Maacah of the latter being called Abel Maam, or "Abel of the Waters" in the latter, probably so named either from the sea of Camorra or from the sea of Galilee. Dr. Robinson suggests its identity with the modern village of Abel, or Abi-el-Kamkam, or Abil or Ibul el Haura, both situated in the Jery'l Aymun, which last name is certainly identical with the ancient Ijon, with which Abel Beth-Maachah is associated in 1 Kings, xxv. 20. (Robinson, Phil. Res. vol. iii. pp. 346, n. 2. 347. n. 1, and Appendix, pp. 136, 137, n. 1.)

Maacah is used as an adjective to Syria or Aram in 1 Chron. xix. 6, 7, but its situation is not defined. (Ibidem, Philostrata, p. 118.)

The existence of the Maacabites (Makabiti) on the east of Jordan, apparently between Bashan and Mount Hermon, contiguous to the Geshurites (Josh. xiii. 5, xliii. 11, 13) intimates that another city or district of the name Maacah was situated in that quarter. [G. W.]

MAAGR-AMMUM. (Makgr'ammu, Ptol. vii. 4. § 10, viii. 28. § 5), a considerable town in the island of Taprobane or Ceylon. Tophancy calls it a

MACRATH. 253

MAEDONIA. 253

metropolis. It is not now certain where it stood, but some have identified it with Tamankatode. Some MSS. read Nasgarmum, but Nasgarmum must be correct, as its form shows its Nasmotic origin. Lassen has supposed it stood at the SE. end of the island, and that its ancient name was Mabur-
grima. [V.]

MACRATH, a city of Judah situated in the mountains, mentioned only in the list in the book of Joshua (xxv. 59). Reland (Palaeot. s. v. p. 879) suggests that a lofty mountain, Mardes, nears the Dead Sea, may have derived its name from this city. [G. W.]

MAASDES [BABYLONIA, p. 362, a.]

MABDOK. [HIERAPOLIS.]

MACAE (modern, a part of Arabia mentioned by Ptolem. vi. 7. § 14), immediately within the Persian Gulf, as inhabiting the shores of the extensive bay of the Fish-eters (τήρημα τῶν κόλπων). They occupied apparently the western shore of Cape Musculodion, as Piny (vi. 26) states that the strait of the promontory of Carmania to the opposite shore and the Macae, is 50 miles. They were bounded on the east by the Naritae (Nα-

retai) [ΕΠΙΜΑΡΑΣΤΑΙ]. Mr. Forster considers the Macae of Ptolem. to be a palpable contraction of the Macarae of Piny, and that this tribe is discovered in the Jorasa Arabs, the most famous pirates of the Persian Gulf. (Geog. of Arabia, vol. ii. p. 225.) It is clear that the " Nama-

chaenorum popontenium" of Piny (vi. 32) is identical with the modern Cape Musculodion, at which he places the Macae. (Comp. Strabo, p. 765.) He mentions a remarkable story in connection with this place: that Numenius, who had been appointed prefect of Mesemb by King Antiochus, gained a naval victory over the Persians, and on

the same day, on the tide receding, conquered them in a cavalry engagement, and erected on the same spot two trophies,—one to Neptune, the other to Jupiter. [G. W.]

MACAE (Μάκαια), one of the aboriginal tribes of the Regio Syrta, on the N. Coast of Libya, on the river Cymps, according to Herodotus, who describes their customs (iv. 175; comp. Seyl. p. 46; Diod. iii. 49; Plin. vi. 23. s. 26; Sil. iii. 275; Ptol. iv. 3. § 27, calls them Μακαιοι or Μακαιοι, Σοφοτα). Polybius mentions Macaeus in the Carchagian arm. (Vol. iii. 332.) [P. S.]

MACALLA (Μακαλλα), an ancient city of Bruttium, where, according to Lycochon, was the sepulchre of Philoctetes, to whom the inhabitants paid divine honours. (Lycoch. Alex. 927.) The author of the treatise De Mirabilibus, ascribed to Aristotle, mentions the same tradition, and adds that the hero had deposited there in the temple of Apollo Halus the bow and arrows of Hercules, which had, however, been taken away by the Persians, and on the same day, on the tide receding, conquered them in a cavalry engagement, and erected on the same spot two trophies,—one to Neptune, the other to Jupiter. [G. W.]

MACANITA. [MACRATHANIA.]

MACABAS. [BRAGADAS.]

MACAREAE (Μακαρέας, Εθν. Μακαρεια), a town of Arcadia, in the district Parhassia, 22 stadia from Melecolis, on the road to Phigaleia, and 2 stadia from the Alpheius. It was in ruins in the time of Pausanias, as its inhabitants had been removed to Megapoliis upon the foundation of the latter. (Pans. viii. 3. § 3, viii. 27. § 4, viii. 36. § 9; Steph. B. s. r.)

MACARIA (Μακαρία), that is, "the blessed (island)," a name given by the poets to several islands, such as Cyprus, Lesbos, and Rhodes; but also as occurs a proper name of an island in the south of the Arabian gulf, a little to the north of the gulf of Adhome. [L. S.]

MACATUAE (Μακατούαι), a people in the extreme W. of Cyprus, on the border of the prov-

ince of Africa, above the Velpi Montes. (Ptol. iv. 4 § 10.)

MACCHUBIBI. [MACRETONA.]

MACCOCALLINGAE. [CALINGAE.]

MACCUIAE. [MACRETONA.]

MACEDONIA (Μακεδονία), the name applied to the country occupied by the tribes dwelling north-

ward of Thessaly, and Mt. Olympus, eastward of the chain by which Pindus is continued, and westward of the river Axios. The extent of country, indeed, to which the name is generally given, embraces later enlargements, but, in its narrower sense, it was a very small country, with a peculiar population.

I. Name, race, and original seats.

The Macedonians (Μακεδόνες or Μακεδόνες), as they are called by all the ancient poets, and in the fragments of epic poetry, owed their name, as it was said, to an eponymous ancestor; according to some, this was Macedon, son of Lycaon, from whom the Arcadians were descended (Apoll. iii. 8. § 1), or Macedon, the brother of Magnes, or a son of Aedonus, according to He-an and Hellanüs (ap. Cost. Porph. de Theom. ii. 2; comp. Adian. A. i. x. 48; Eustath. ad Dion. P. 247; Steph. B.). These, as well as the otherwise unsupported statement of Herodotus (i. 56), of the original identity of the Doric and Macedonian (Macedonian) peoples, are merely various attempts to form a genealogical connection between this semi-barbarous people and the rest of the Hellenic race. In the later poets, they appear, sometimes, under the name of MACETAI (Sil. Ins. iii. 878, vi. 914, 652. marble ins. Sil. iv. 6. 106; Anon. de Clar. Lith. ii. 9; Gal. x. 3). And their country is called MACETIA (Μακετία, Hesych. s. v. Eustath. ad Dion. P. l. c.).

In the fashion of wearing the mantle and ar-

ranging their hair, the Macedonians bore a great re-emuliance to the Illyrians (Strab. vii. p. 327), but the fact that their language was different (Polyb. xxviii. 8) contradicts the supposition of their Illy-

rian descent. It was also different from Greek, but in the Macedonian dialects to this point, many grammatical forms which are commonly called Aeolic, together with many Arcadian and Tessalian words; and what perhaps is still more decisive, several words which, though not found in the Greek, have been preserved in the Latin language. (Comp. Müller, Dorians, vol. i. p. 3, trans.) The ancient

were unanimous in rejecting them from the true Hellenic family, but they must not be confounded with the armed plunderers—Illyrians, Thracians, and Epirots, by whom they were surrounded, as they resemble more nearly the Thessalians, and other

rader members of the Grecian name.

These tribes, which differed as much in ancient
times as they do now, accordingly as they dwelt in mountain or plain, or in soil or climate more or less kindly, though distinguished from each other, by having substantive names of their own, acknowledged one common nationality. Finally, the various sections, such as the Elymiaeans, Orestae, Lyncestae, and others, were swallowed up by those who were previously known as the Macedonians, who had their original centre at Aegae or Edessa. (Comp. Grote, Hist. of Greece, c. xxv.)

Macedonia in its proper sense, it will be seen, did not touch upon the sea, and must be distinguished into two parts,—Upper Macedonia, inhabited by people about the W. range of mountains extending from the N. as far as Pindus, and Lower Macedonia about the rivers which flow into the Axios, in the earlier times, not, however, extending as far as the Axios, but only to Pella. From this district, the Macedonians extended themselves, and partly repressed the original inhabitants. The whole of the sea-coast was occupied by other tribes who are mentioned by Thucydides (ii. 99) in his episode on the expulsion of the Thracians against Macedonia. There is some little difficulty in harmonising his statements with those of Herodotus (vii. 138), as to the original series of occupants on the Thermaic gulf, anterior to the Macedonian conquests. So far as it can be made out, it would seem that in the early times, e. g., the narrow strip between the Peneus and Halacmaon, was the original abode of the Pierian Thracians; N. of the Peneus, from the mouth of the Halacmaon to that of the Axios, dwelt the Bottaeani, who, when they were expelled by the Macedonians, went to Chalcidice. Next followed the Paessians, who occupied both banks of the Strymon, from its source down to the lake near its mouth, but were pushed away from the coast towards the interior. Mysip sia, the lower country N. of the Axios, already in the Thermaic gulf, was, previously to the extension of the Macedonians, inhabited by Thracian Edonians. While Upper Macedonia never attained to any importance, Lower Macedonia has been famous in the history of the world. This was owing to the energy of the royal dynasty of Edessa, who called themselves Heracleids, and traced their descent to the Tenedaean of Argos. Respecting this family, there were two legends; according to the one, the kings were descended from Caranus, and according to the other from Pausanias. The latter, which is given by Herodotus (vii. 137—139), bears much more the mark of a genuine local tradition, than the other which cannot be traced higher than Theopompus. (Droysen op. Supreedit, p. 262.) After the legend of the foundation of the Macedonian kingdom, there is nothing but a long blank, until the reign of King Amyntas (about 520—500 B.C.), and his son Alexander (about 480 B.C.). Herodotus (c. c. comp. Thuc. ii. 100) gives a list of five successive kings between the founder Pausanias and Alexander the Great, Pheres, Argaeus, Paeon, Alcetas, Amyntas, and Alexander, the contemporary, and to a certain extent ally, of Xerxes. During the reign of these two last princes, who were on friendly terms with the Pisistratidae, and afterwards with the enen epitomied Athenians, Macedonia becomes implicated in the affairs of Greece. (Herod. i. 59, v. 94, vi. 136.)

Many barbarous customs, such as that of tattooing, which prevailed among the Thracians and Illyrians, must have fallen into disuse at a very early period. Even the usage of the ancient Macedonians, that every person who had not killed an enemy, should wear some disgraceful badge, had been discontinued in the time of Aristotle. (Pol. vii. 2, § 6.) Yet at a very late date no one was permitted to lie down at table who had not slain a wild bear without the nets. (Hegesander, ap. Athen. i. p. 18.) On the other hand, a military disposition, personal valour, and a certain freedom of spirit, were the national characteristics of this people. Long before Philip organised his phalanx, the cavalry of Macedonia was greatly celebrated, especially that of the highlands, as is shown by the tetradrachmas of Alexander I. In smaller numbers they attacked the close array of the Thracians of Satales, relying on their skill in horsemanship, and on their defensive armours. (Thuc. ii. 100.) Teleutias the Spartan also admired the cavalry of Edessa (Xen. Hell. v. 2, § 44, v. 3, § 51), and in the days of the conquests of Asia, the custom remained that the king could not condemn any person without having first taken the voice of the people or of the army. (Polyb. v. 27; Q. Curt. vi. 8, § 25, vi. 9, § 54.)

II. Macedonia in the historic period till the death of Alexander.

This kingdom had acquired considerable power even before the outbreak of the Persian War, and Greece, its retirement and civilization must have gained considerable ground, when Alexander the Philhellene offered himself as a combatant at the Olympic games (Herod. v. 22; Justin. vii. 12), and honoured the poetry of Pindar (Solin. ix. 16). After that war Alexander and his son Perdiccas appear gradually to have extended their dominions, in consequence of the fall of the Persian power in Thrace, as far as the Strymon. Perdiccas from being the ally of Athens became her active enemy, and it was from his intrigues that all the difficulties of Athens on the Thermaic coast arose. The faithless Perdiccas was succeeded by his son Archeclus, who first established frontier seas and roads in his dominions, and formed a Macedonian army (Thuc. ii. 100), and even intended to procure a navy (Solin. ix. 17), and had tragedies of Euripides acted at his court under the direction of that poet (Ael. ii. 21, xii. 44), while his palace was adorned with paintings by Zeuxis (Ael. i. 19, xiv. 17). In n. c. 309, Archeclus perished by a violent death (Diod. xiv. 37; Arist. Pol. v. 8, 18). Indeed, the latter part of Alexander's reign is crowded with events of kings follows of whom we know little but the names. Orestes, son of Archeclus, a child, was placed upon the throne, under the guardianship of Alcides. The latter, however, after about four years, was driven away by his ward, and reigned in his stead for two years; he then died of sickness, and was succeeded by his son Pausanias, who, after a reign of only one year, was assassinated and succeeded by Amyntas. (Diod. xiv. 84—89.) The power of Macedonia so declined with these frequent dethronements, and assassinations of its kings, that Amyntas had to cede to Olynthus all the country about the Thermaic gulf. (Diod. xiv. 92, xv. 19.) Amyntas, who was dependent on, if not tributary to, Jason, the "tugus" of Thessaly, died nearly about the same time as that prince (Diod. xv. 60), and was succeeded by his youthful son Alexander. After a short reign of two years, n. c. 368, Alexander perished by assassination, the fate that so frequently befell the Macedonian kings. Eurydice, the widow of Amyntas, was left, with her two younger children, Perdiccas, now a young man, and Philip, yet a youth; Pellenes of
Macedonia.

Alons, one of the murderers of Alexander, was regent, and administered the affairs of the widowed queen, and those of her children, against Pausanias, a man of the royal lineage and a pretender who threw the throne. (Diod. iv. 2; Aesch. Fals. Legat. pp. 249, 250; Justin. vii. 6.) Iphicrates declared in favour of Eurydice, who would have been forced to yield the country to Pausanias, and acted so vigorously against him as to expel him from Macedonia and secure the sceptre to the family of Aegynatas. (Corn. Nep. Iphicrat. 3.) When Philip succeeded his brother Perdiccas, shewn in battle with the Illyrians, B. C. 356—355, no one could have foreseen the future conqueror of Macedon, and the destroyer of Greek liberties. In the very first year of his reign, though only 24 years old, he laid the foundations of the future greatness of a state which was then almost annihilated. His history, together with that of the other Macedonian kings, is given in the Dictionary of Biography. At his death Macedonia had already become a compact empire; its boundaries had been extended into Thrace as far as Perinthus; and the Greek coast and towns belonged to it, while Macedonian ascendency was established from the coasts of the Peloponnese to those of the Ionian sea, and the Ambracian, Messenian, and Saronic gulf. The empire of Alexander became a world-domain. Macedonian settlements were planted almost everywhere, and Greek manners diffused over the immense region extending from the Temple of Ammon in the Libyan Oasis, and from Alexandria on the western Delta of the Nile to the northern Alexandria on the Jazartes.

III. Later History till the Fall of the Empire.

At the death of Alexander a new Macedonian kingdom arose with the dynasty of Antipater; after the murder of the king Philipus III. (Arrhidæus) and Eurydice by the queen Olympias, Cassander the son of Antipater, after having murdered the king Alexander Aegus, and his mother, ascended the throne of Macedonia; at his death his three sons, Philip, Antipater, and Alexander, successively occupied the throne, but their reigns were of short duration. Philip was carried off by sickness at the isthmian games; he was put to death by Demetrius Poliorcetes, and Antipater, who had fled for refuge to Lysimachus, was murdered by that prince. When the line of Cassander became extinct, the crown of Macedonia was the prize for which the neighbouring sovereigns struggled, Ly- sinachus and Pythius, kings of Thrace and Epirus, with Demetrius, who still retained Athens and Thessaly, in turns, dispossessed each other of this disputed throne. Demetrius, however, at last overcame the other competitors; and at his death transmitted the kingdom to his son Antigonus, and the dynasty of the Antigonide, after many vicissitudes, finally established their power. The three great irruptions of the Gauls, who made themselves masters of the N. parts, and were established in Thrace and Upper Macedonia, fell within this period. Antigonus Gonatus recovered the throne of desolated Macedonia; and now secured from the irruptions of the Gauls, and from foreign rivals, directed his policy against Greece, when the formation of the Aetolian, and yet more important Achaean league, was the natural result of new relations. Antigonus, in the latter part of his reign, had recourse to various means, and more especially to an alliance with the Aetolians, for the purpose of countering the Acheans. He died in his eightieth year, and was succeeded by his son Demetrius II., who waged war upon the Aetolians, now, however, supported by the Acheans; and tried to suppress the growth of the latter, by favouring the tyrants of Philipus of Perus. The remainder of the reign of this prince is little more than a gap in history. Demetrias' son, Philip, was passed over, and his brother's son, Antigonus II., surrounded Douson, was raised to the throne. This king was occupied most of his time by the events in Greece, when a very remarkable revolution in Sparta, raised up a formidable enemy against the Acheans; and so completely altered the relative position of affairs, that the Macedonians from having been opponents became allies of the Acheans. Philipus V., a young, warlike, and popular prince, was the first to come into collision with Rome,—the war with the imperial city (B. C. 200—197), suddenly hurried the Macedonian power from its lofty pitch, and by laying the foundation of Roman dominion in the East, worked a change in almost all the political relations there. T. Quinctius Flaminius, by offering the magic spell of freedom, stripped Philip of his allies, and the battle of Cynoscephalae decided everything. Soon after, the freedom of Greece was solemnly proclaimed in the building of the isthmian games; but in their triumph, this measure served only to transfer the supremacy of their country from Macedonia to Rome. On the 22nd of June, B. C. 168, the fate of Macedon was decided on the field of Pydna by her last king Perseus.

According to the system then pursued at Rome, the conquered kingdom of Macedonia, was not immediately converted into a province, but, by the famous edicts of Amphipolis issued by the authority of the Romans, was permitted to retain for one year after the former, or to become a Roman dependency; but in the end, it was divided into four districts. By this decree (Liv. xiv. 29), the Macedonians were called free,—each city was to govern itself by magistrates annually chosen, and the Romans were to receive half the amount of tribute formerly paid to the kings, the distribution and collection of which was probably the principal business of the councils of the four regions. None but the people of the extreme frontiers towards the barbarians were allowed to defend themselves by their own forces, so that the military power was entirely Roman, but, in order to break the spirit of resistance, and actually the national union, no person was allowed to contract marriage, or to purchase land or buildings, but within his own region. They were permitted to smelt copper and iron, on paying half the tax which the kings had received; but the Romans reserved to themselves the right of working the mines of gold and silver, and of selling naval timber, as well as the importation of salt, which, as the Third Region only was to have the right of selling it to the Dardani, was probably made for the profit of the conquerors on the Therme Gulf. No wonder, then, that after such a division, which tore the race in pieces, the Macedonians should compare their severity to the laceration and disjuncting of an animal. (Liv. xiv. 30.)

This division into four districts did not last longer than eighteen years, but many tetrachromies of the first division of the tetrarchy being divided among itself, Amphipolis, are still extant. (B. C. 149 Andræus, calling himself Philip son of Antigonus, reconquered all Macedonia (Liv. Epit. xlix.), but was defeated and taken in the following year, by Q. Caecilius Metellus; after which the Macedonians were made tributary (Porphyry. ap. Eus. Chron. p. 178), and the country was probably governed by a "prætor,"
Macedonia.

like Achaia, after the destruction of Corinth, which occurred two years afterwards, B.C. 146. From that time to the reign of Augustus the Romans had the troublesome duty of defending Macedonia, against the people of Illyricum and Thrace; during that period, they established colonies at Philippa, Pella, Stobi, and Dium.

At the division of the provinces, Macedonia fell to the Senate (Dion Cass. lib. 12; Scrib. xiii. p. 840). Thessaly, united to the provinces of Achaia and Macedonia, was given to the imperial government of Moesia, in order to deliver them from the weight of the proconsular administration (Tac. Ann. 176—80, v. 10), and this continued till the time of Claudius (Suet. Claud. 25; Dion Cass. l. 24). Afterwards it was again under a "proprietor," with the title "praefectura" (Orelli, Ins. n. 1170 (Ves-pasian); n. 3851 (Caracalla), while mention often occurs of "legate" (Orelli, n. 3658) and "quartermaster" (Orelli, n. 822, 3141). Thessalonia, the most populous part in Macedonia, was given to the Magna Graecia, and virtually the capital of Greece and Illyricum, as well as of Macedonia. Under Constantine, Macedonia was one of the two governments of the prefecture of Illyricum, and consisted of six provinces, Achaia, Macedonia, Crete, Thessaly, Old Epirus, and New Epirus (Marquardt, in Beckers, Rom. Alterthum, vol. ii. pt. 1. pp. 115—119).

The ravages inflicted by the northern nations on the frontier provinces were so continual that the inhabitants of Thrace and Macedonia were greatly diminished, the uncultivated plains were traversed by armed bands of S. Slavonians, who gradually settled in great numbers in Macedonia, while many mountainous districts, and most of the fortified places still remained in the possession of the Greeks, who were driven into the Chalcidic peninsula, or into the low grounds near the sea, where the marches and rivers which intersect them, offered means of resistance; but the existence of the ancient race may be said to terminate with the reign of Heracleus, (Comp. Schafarik, Stat. Alt. vol. ii. pp. 133—154). Thus narrowed were the limits of the government, attempted to remedy the depopulation of their empire by transplanting Asiatic colonies. Thus a colony of Persians was established on the banks of the Axios (Vardar) as early as the reign of Theophilus, A.D. 829—842, and it long continued to furnish recruits for a cohort of the imperial guard, which bore the name of Vardarians. In A.D. 1063 a colony of Uzes was settled in Macedonia, whose chief rose to the rank of senator, and filled high official situations at Constantinople (Sylvis, ad ead. Codex, p. 868; Zonar, vol. ii. p. 273; Am. Comn. p. 195). Anna Comnena (pp. 100, 315) mentions colonies of Turks established near Achesh before the reign of her father (A.D. 1081). These and other nations were often included under the general name of Turks, and indeed most of them were descended from Turkish tribes. (Finkay, Medialcace Greece, p. 51.)

IV. Physical and Comparative Geography.

The large space of country, which lies to the N. of the ancient Thracian chain, is mostly a mountaneous country, occupied by lateral ridges or elevations, which connect themselves with the main line of Scæus. It also comprises three wide alluvial basins, or plains which are of great extent, and well adapted to cultivation: the northermost of the three, contains the sources and early course of the Axios, now the plain of Tidota or Kukandel; the second is that of Bidentif, coinciding to a great extent, with that of ancient Pelagonia, wherein the Erigan flows towards the Axios; and the larger and more undulating basin of Grevena and Amasseltina, containing the Upper Haliacmon with its confluent streams. These plains, though of high level above the sea, are yet very fertile, each generally bounded by mountains, which rise precipitously to an alpine height, and each leading only one cleft for drainage by a single river, the Axios, the Erigon, and the Haliacmon respectively. The fat rich land of the E. of Phoibos and Scardus is described as forming a marked contrast with the light calcareous soil of the Albanian plains and valleys on the W. side (comp. Grote, Hist. of Greece, cxxv).

Upper Macedonia was divided into Eudeia, Oorobida, Orestis and Lyncestis; of these subdivisions, Eudeia comprehended the modern districts of Grevena, Veria, and Tzernabed; Oorobida those of Ilidij, Sarisibaid, and Ostrovo; Orestis those of Gramodas, Maceodina, and Lyncestis Filardina, and all the S. part of the basin of the Erigen. These seem to have been all the districts which properly belonged to Upper Macedonia, the country to the N. as far as Illyricum to the W. and Thrace to the E. constituting Pagonia, a part of which (probably on the Upper Axios) was a separate kingdom as late as the reign of Cassander (Diod. xx. 19.) but which in its widest sense was the great belt of interior country which covered on the N. and E. both Upper and Lower Macedonia; the latter comprehending the Thessalian and central provinces, which were the earliest acquisitions of the kings, namely, Pieria, Bottaias, Emathia and Mygdonia.

Pieria, or the district of Katerina, forms the slope of the range of mountains of which Olympus is the highest peak, and is separated from Magnesia on the S. by the Peneius (Sidamaris). The real Emathia is in the interior of Macedonia, and did not in its proper sense extend towards the sea, from which it is separated by Pieria and part of the ancient Bottaias. Mygdonia, as comprehended by the plains around Solomiki, together with the valleys of Kholi and Besilia, extending westward to the Axios, and including the lake Balbe to the E. The name Chalcidice is applied to the whole of the great peninsula lying to the S. of the ridge of Mt. Khortiat;-

An account of these subdivisions will be found under their different heads, with a list of the towns belonging to each.

Macedonia was traversed by the great military road — the Via Egnatia; this route has been already described [Vol. II. p. 36] as far as Heraclea Lyncestis, the first town on the confines of Illyricum; pursuing it from that point, the following are the stations up to Amphipolis, where it entered Thrace, properly so called:—

Heraclia.
Cellea.
Edessa.
Pella.
Strato Geophya.
Thessalonica.
Mellissaergia.
Apollonia.
Amphipolis.

From the Via Egnatia several roads branched off to the N. and S., the latter leading to the S. provinces of Macedonia and to Thessaly; the former into Paonia, Dardania, Moesia, and as far as the Dauniae.
MACEDONIA.

The Pentinger Table furnishes the following route from Pella to Larissa in Thessaly: —

Two roads led to Stobi in Paeonia, the one from Heraclea Lyncestis, the other from Thessalonica. According to the Table, the stations of the former are —

Of the latter —

Thessalonica. Gallicum — Golikii. Taurnana — Doiran. Idomena — —. Stonos (Stena) — Demetropi. Antigayna — —. Stobi — —. From Stobi again two roads struck off to the NW. and NE. to Scoi (Scopia), at the "débouché" from the Illyrian mountains into the plains of Paeonia and the Upper Axios, and to Scardica: —

Though the Macedonians were regarded by the Greeks as a semi-barbarous people, the execution of their coins would not lead to that inference, as they are fine and striking pieces, boldly executed in high, sharp, relief. The coin of Alexander I. of Macedon, B.C. 500, is the first known monarchic coin in the world that can be identified with a written name, and to which, consequently, a positive date can be assigned. It has for "type" a Macedonian warrior leading a horse; he bears two lances, and wears the Macedonian hat. The coins of the princes who followed him exhibit the steps towards perfection very graphically.

With Philip II. a new era in the Macedonian coinage commenced. At this period the coins had become perfect on both sides, that is, had a "reverse" equal in execution to the "obverse." During his reign the gold mines at Mt. Pangaeas were worked. He issued a large gold coinage, the pieces of which went by his name, and were put forth in such abundance as to circulate throughout all Greece. The series of coins, from Philip II. to the extinction of the monarchy, exhibit the finest period of Greek monetary art. (Cand. H. N. Humphrey's Ancient Coins and Medals, London, 1850, pp. 58—65.) During the tetarchy there are numerous existing coins, evidently struck at Amphipolis, bearing the head of the local deity Artemis Tauropolos, with an "obverse" representing the common Macedonian "type," the club of Heracles within a garland of oak, and the legend ΜΑΚΕΔΟΝΩΝ ΠΑΡΤΟΣ. (Cand. Eckel, vol. ii. p. 61, fol.)

[ E. B. J. ]

COIN OF MACEDONIA.

MACELLA or MAGELLA (Macella: Macellario), a town in the NW. of Sicily, which is noticed by Polibius (i. 24) as being taken by the Roman consul, C. Duilius and Cn. Cornelius, as they returned after raising the siege of Segesta, in B.C. 260. It is interesting to find the same circumstance noticed, and the name of this otherwise obscure town mentioned, in the celebrated inscription on the rostral column which records the exploits of C. Duilius. (Orell. Inscr. 549.) It would seem from Dionysius, that at an earlier period of the same war, the Romans had besieged Macella without success, which may account for the importance thus attached to it. (Diod. xxii. 4. p. 502.) The passage of Polibius in reality affords no proof of the position of Macella, though it has been generally received as an evidence that it was situated in the neighbourhood of Segesta and Panormus. But as we find a town still called Maccellaro, in a strong position on a hill about 15 miles E. of Segesta, it is probable that this may occupy the site of Macella. The only other mention of it in history occurs in the Second Punic War (b.C. 211), among the towns which revolted to the Carthaginians after the departure of Marcellus from Sicily. (Liv. xxvi. 21.) As its name is here associated with those of Hybla and Margantia, towns situated in quite another part of the island, Cluvierius supposes that this must be a distinct town from the Macella of Polibius; but there is clearly no sufficient reason for this assumption. The name is written in the old editions of Livy, Macella; and we find the Magellini enumerated by Pliny among the stipendiary towns of the interior of Sicily (Plin. iii. 9. x 14), while Ptolemy, like Polibius, writes the name Macella. (Prot. iii. 4. § 14.) The orthography is therefore dubious, as the authority of so ancient an inscription as that of Duilius is of no avail in this case. The coins which have been ascribed to Macella are of very dubious authenticity. [E. H. B.]

MACEHHRACIA (Amnian. xxiv. 2), a small town of Babylonia mentioned by Ammianus Marcellinus. It was situated apparently on the Euphrates, to the W. of Sittace, not far from the place where the Royal Canal, or Nahr wakes, joined the Euphrates. [V.]

MACESTUS or MECREDITUS (Μηκεστός ή Μη- 

κεστός), a tributary of the river Ithynacus: it took
MACINAS.

It is said in a lake near Avera, and, after flowing for some distance in a western direction, it turned northward, and joined the Rhynocean a little to the north of Miletopolis. (Strab. xii. p. 576; Plin. v. 40.) It seems to be the same river as the one called by Polybius Magistros (v. 77), though the Scholast on Apollodorus Rhodion (i. 1162) remarks, that in his time the Rhynocean itself bore that name. The lower part of the river now bears the name Sim or Swanherri, while the upper part is called Nomadi-Su. (Hamilton's Researches, vol. ii. p. 105.)

MACETA (Maceta, Naarch. Peripl. p. 22: C. Messelaum), a promontory of Arabia, at the entrance of the Persian gulf, opposite the promontory Harmozon in Carmania. (Strab. xv. p. 726, xvi. p. 765.) It was on the coast of the Macae, and is, therefore, called by Strabo (xvi. p. 763) a promontory of the Macae, without giving it any special name. It formed the NW. extremity of the mountains of the Arabi, and is, therefore, called by Ptolemy (vii. 10) Asiae Pharaoniae after the farthest point in the middle of the gulf. It is a large promontory, rising in height and bulk to any fig-tree. A large store of missiles and military engines was kept there so as to enable its garrison to endure a protracted siege. Basset proposed to assail it on the east side, and commenced raising banks in the valley, and the garrison, having left the city and its inhabitants to their fate, betook themselves to the acropolis, from which they made a succession of spirited sallies against the besiegers. In one of these a youth named Elagobar, of influential connections, fell into the hands of the Romans, and the garrison capitulated on condition that his life was spared, and he and they allowed to evacuate the place in safety. A few of the inhabitants of the lower city, thus abandoned, succeeded in effecting their escape: but 1700 males were massacred, and the women and children sold into captivity. (B. J. vii. 6.) Its site has not been recovered in modern times; but it is certainly wrongly placed by Pliny at the South of the Dead Sea (vii. 16; Beland, z. v. p. 880). The account given by Josephus of the enormous hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Baaras, which he places on the north of the city of Macheeras, seems rather to point to one of the ruined sites, noticed by Irby and Mangels, to the northern part of the Dead Sea, in the vicinity of Calilrhoe, where these phenomena are still found; but not the peculiarly noxious tree, of the same name as the valley, which was deadly to the garrison, but was a specific against the inhabitants. Irby and Mangels, Travel., pp. 464, 465. [G. W.]

MACETA, MACETA. [MACODONIA.]

MACHERUS (Μαχερος; Eib. Μαχαρης, Joseph.), a strong fortress of Peræa, first mentioned by Josephus in connection with Alexander the son of Hyrcanus I., by whom it was originally built. (Ant. xiii. 16. § 3; Bell. Jud. vii. 6. § 2.) It was delivered by his widow to her son Aristobulus, who first fortified it against Gabinius (Ant. xiv. 5. § 2.) to whom he afterwards surrendered it, and by whom it was dismantled (§ 4. Strab. xvi. p. 762). On his escape from Rome Aristobulus again attempted to fortify it; but it was taken after two days' siege (vi. 1). It is however celebrated in the history of Herod the Tetrarch, and St. John the Baptist. It was situated in the mountains of Arabia (τροις τοις 'Αρδανιον όρεις) (5. § 2), and on the confines of Herod's jurisdiction and that of Aretas king of Arabia, his father-in-law, but at this time the historian expressly states that it belonged to the latter (xviii. 6. § 1, being the southern extremity of Perea). (Strabo, p. 768.) Over the northern shore (vii. 3. §§ iv. 7. § 3.) When Herod's first wife, the daughter of Aretas, first suspected her husband's guilty passion for Herodias, his brother Philip's wife, she dissembled her indignation, and requested to be sent to Machæræus, whence she immediately proceeded to Petra, her father's capital. The fact of Machæræus being then subject to the jurisdiction of Aretas presents an insuperable difficulty to the reception of Josephus's statement that it was the place of St. John the Baptist's martyrdom; for suffering, as he did in one view, as a martyr for the conjugal rights of the daughter of Aretas, it is impossible to believe that Herod could have had power to order his execution in that fortress. (xviii. 6. §§ iv. 1. 2.) It held out against the Romans after the fall of Jerusalem, and the account of its siege and reduction by the lieutenant Lucianus Basilus furnishes us with the most detailed account of this remarkable fortress, which Pliny (v. 15) reckons second to Jerusalem for the strength of its works. Josephus's account is as follows. It was situated on a very high hill, and surrounded with a wall, trenchured about on all sides, with valleys of enormous depth, so as to defy embankments. Its western side was the highest, and on this quarter the valley extended 60 stadia, as far as the Dead Sea. On the north and south the valleys were not so steep, but still such as to render the fortress inaccessible, and the eastern valley had a depth of 100 cubits. It had been re- built by Herod, on account of its proximity to the Arabs and the natural advantages of its position, and he had enclosed a large space within its walls, which was strengthened with towers. This formed the city; but the summit of the hill was the acropolis, surrounded with a wall of its own: flanked with corner towers of 160 cubits in height. In the middle of this was a stately palace, built out in large and beautiful chambers, and furnished with numerous reservoirs for preserving the rain water. A shrun of rocks, of the largest size, grew in the palace yard; equal in height and bulk to any fig-tree. A large store of missiles and military engines was kept there so as to enable its garrison to endure a protracted siege. Basset proposed to assail it on the east side, and commenced raising banks in the valley, and the garrison, having left the city and its inhabitants to their fate, betook themselves to the acropolis, from which they made a succession of spirited sallies against the besiegers. In one of these a youth named Elagobar, of influential connections, fell into the hands of the Romans, and the garrison capitulated on condition that his life was spared, and he and they allowed to evacuate the place in safety. A few of the inhabitants of the lower city, thus abandoned, succeeded in effecting their escape: but 1700 males were massacred, and the women and children sold into captivity. (B. J. vii. 6.) Its site has not been recovered in modern times; but it is certainly wrongly placed by Pliny at the South of the Dead Sea (vii. 16; Beland, z. v. p. 880). The account given by Josephus of the enormous hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Baaras, which he places on the north of the city of Macheeras, seems rather to point to one of the ruined sites, noticed by Irby and Mangels, to the northern part of the Dead Sea, in the vicinity of Calilrhoe, where these phenomena are still found; but not the peculiarly noxious tree, of the same name as the valley, which was deadly to the garrison, but was a specific against the inhabitants. Irby and Mangels, Travel., pp. 464, 465. [G. W.]

MACHEÆTI'G (Μαχαετης; some MSS. read Μαχαητων, Ptol. iv. 14. § 11), a people of "Sciathina intra Iannaum," near the Jassæa. [E. B. J.]

MACHELONÆS (Μαχελωνας, Artem. Peripl. p. 11; Amm. p. 15), a subdivision of the Colchian tribes situated to the S. of the Phasis. Anchialus, prince of these people, as well as of the Heniché, submitted to Trajan. (Dion. Cass. liv. 19; Eger. Fæundi, vol. x. p. 116.) [E. B. J.]

MACHILYES (Μαχηλης, Herod. iv. 179; Ptol. iv. 3. § 26. curly. Μαχηλης), a Libyan people, in the S. of Africa Proper (Byzasæa), on the river Triton, and separated by the lake Tritonis from the Loto- piagi, like whom they fed upon the lotus. (Comp. Pto. vii. 2.) [P. S.]

MACICHES. [MACICHTAIA.]

MACIIUS. [MACICHTAIA.]

MACIANI (Μαηανης), a people of Africa Proper, whom Ptolemy places S. of the Lby- phronians, as far as the Lesser Nile and the Macina (Ptol. iv. 3. §§ 22. 26.) [P. S.]

MACINA (Μαηανης), a district of Arabia, mentioned only by Strabo (xvi. p. 766) as nearest to Bablonia, bounded on the one side by the desert of Arabia, on another by the marshes of the Chan- duææ, formed by the overflowing of the Euphrates, and on a third by the Persian Gulf. Its climate
MACISTUS

was heavy and foggy, showery and hot, but produc-
ing excellent fruit. The cultivation of the vine
was peculiar. They were planted in the marshes,
the soil necessary for their sustenance being placed
in wicker baskets. They would sometimes drift
freely on the waves, and were thrust here and there
in places with poles.

[GEW.]

MACISTUS or MACISTUM (Μακιστός, τό
Μακιστον; Edh. Μακιστόν), a town of Triphylia,
in Elis, said to have been also called PLATANISTUS.

(Plataanistus, Strab. viii. p. 345.) It was originally
inhabited by the Paroreutae and Caucones,
who were driven out by the Minyae. (Strab. I. c. : Hec.
iv. 148.) It was afterwards subdued by the
Eleians, and became one of their dependent town-
ships whose history is given under LEPEDKUM. In
the time of Strabo, it was no longer inhabited (viii.
p. 349). Macistus was situated upon a lofty hill
in the north of Triphylia, and appears to have been
the chief town in the north of the district, as
Lepekmum was in the south. That Macistus was
in the north of Triphylia appears from several circum-
stances. Strabo describes its territory, the Macistia,
as bordering upon Pisaia. (Strab. viii. p. 343.)
Agis, in his invasion of the territory of Elis, in n. c.
400, when he entered Triphylia through the Arsen
of Dymeas (which he had joined to the territory
by the Macistia, and then by the Epitali to the
Alpheius. (Xen. Hlii. iii. 2, § 25.) Stephanus
places Macistus to the westward of the Lepekmum
(Steph. B. z. v.); but this is obviously an error, as
Arcadia bordered upon the Lepekmum in that direc-
tion. Macistia would appear to have been in the
neighbourhood of Samianon upon the coast, as it had
the superintendence of the celebrated temple of the
Samian Poseidon at this place. (Strab. viii. p. 343.)
From these circumstances there can be little doubt
that Macistus was situated upon the heights of
Kbalisfo.

It is worthy of notice that Chaunius, and Xenophon only Macistus.
This fact, taken in connection with the Macistians
leaving the superintendence of the temple of the
Samian Poseidon, has led to the conjecture that upon
the decay of Samia upon the coast, the Minyans
built Macistus upon the heights above; but that the
ancient name of the place was afterwards revived by
the form of Samian. The Macistians had a temple of
Hercules situated upon the coast near the Acidon.

(Strab. viii. p. 348.)

MACNA (Μακνα), an inland town of Arabia
Felix, according to Ptolemy (vi. 7.), who places it
in lat. 67°, long. 28° 45' near the Arabic gulf of
Persia, Greek, or Gulf of Abala. [G. W.]

MACORABA (Marcoraba), an ancient city of
Arabia Felix, placed by Ptolemy in lat. 75° 29',
long. 22°, universally admitted to be the ancient
classical representative of the modern Mecca or
Meccan, which Mr. Forrer holds to be an idiomatic
abbreviation of Machoraba, identical with Arabic
"Mecharab," the "warlike city," or "the city of the
Harb." (Geog. of Arabia, vol. i. pp. 265, 266.)

A very high antiquity is claimed for this city in
the native traditions, but the absence of all authentic
notices of it in the ancient geographers must be
allowed to disprove its claim to notoriety on account
of its sanctity at any very remote period. The
territory of Mecca was, according to universal
Arabian history or tradition, the central seat of the
kingdom of Jorham and the Jochamites, descendants
of the Jothunite patriarch Sheerah, the Jorah of the
book of Genesis (x. 26), who in the earliest times
were the sovereigns of Mecca, the guardians of the
Caoba, and the Meccans. However, their original
sacrifices in the valley of Mina, from whence they
derived their classical synonym MINAEL. It is
uncertain when they were superseded by the
Ishmaelite Arabs of the family of Kedar, whose
descendants, according to inmemorial Arabian trad-
ition, settled in the Hedjaz; and one tribe of whom
was named Korish (collegit unique), "quod circa
Mecam, congregati degereat." (Carm. ap. Golini,
in loc., cited by Forster, Geog. of Arabia, vol. i.
p. 248, n.) This tribe, however, from whose Mu-
hammad sprung, had been for centuries the guardians
of the Caoba, and lords of Mecca, prior to his ap-
pearance: for if the plainable etymology and
import of the classical name, as above given, be cor-
cert, and the Bani-Harb was, as Mr. Forster has
elaborately proved, a synonym for the sons of Kedar,
it will follow that they had succeeded in fixing
their name to the capital some time before it ap-
ppeared in Ptolemy's list, nor can any traces of a
more ancient name be discovered in the notices of
the ancient city, further than the bare mention
of its name by the Alexandrian geographer.

"Mekea, sometimes also called Bekka, which
words are synonymous, and signify a place of great
concourse, is certainly one of the most ancient cities
in the world. It is by some thought to be the Mea
of Scripture (Gen. x. 30), a name not known to the
Arabians, and supposed to be taken from one of
Ismael's sons." (Gen. xxv. 13.) (Edde's Koran,
Preliminary Discourse, sect. i. p. 4.) Its situation
is thus described by Bureckhardt. — "This town is
situates in a valley, narrow and sandy, the main
direction of which is from north to south; but it
inclines towards the north-west near the southern
extremity of the town. In breadth this valley
varies from one hundred to seven hundred paces,
the chief part of the city being placed where the
valley is most broad. The town itself covers a
space of about 1500 paces in length, ... but the
whole extent of ground comprehended under the
denomination of Meaka" (Geog. of Arabia, "amounts
to 3500 paces. The mountains enclosing this
valley (which before the town was built the
Arabs had named Wady Meeka or Bekka) are from
200 to 500 feet in height, completely barren and
desolate of trees. ... Most of the town is
situated in the valley itself; but there are also parts
built on the sides of the mountains, principally of the
eastern chain, where the primitive habitations of the
Korysh and the ancient town appear to have
been placed." It is described as a handsomely
placed town, with streets bordered, and stone houses
more lofty, than in other Eastern cities; but since the
decision of the pilgrimage innumerable buildings in the outskirts
have fallen completely into ruin, and the town itself
exhibits in every street houses rapidly decaying." Its
population has declined in proportion. The results
of Bureckhard's inquiries gave "between 25,000 and
30,000 stationary inhabitants for the population of
the city and suburbs, besides from 3000 to
4000 Abyssinians and black slaves: its habitations
are capable of containing three times this number.
"This estimate, however, shows a considerable increase
within the last three centuries; for "in the time of
Sultan Selim I. (in A. H. 923, i. e. a. d. 1517)

Digitized by Microsoft®
MACRA was taken, and the number found to be 12,000 men, women, and children." In earlier times the population was much more considerable: for "when Aboi Dukker sacked Mekka in A.D. 926 (A.D. 926) 30,000 of the inhabitants were killed by his fanatic soldiers." Ali Bey's estimate in A.D. 1807 is much lower than Burckhardt's in A.D. 1814. Yet the former says "that the population of Mekka diminished daily. This city, which is known to have contained more than 100,000 souls, does not at present shelter more than from 16,000 to 18,000;" and conjectures that "it will be reduced, in the course of a century, to the tenth part of the size it now is." The celebrated Koba demands a cursory notice. It is situated in the midst of a great court, which forms a parallelogram of about 556 feet by 356, surrounded by a double piazza. This sanctuary, called, like that of Jerusalem, El-Haram, is situated near the middle of the city, which is built in a narrow valley, having a considerable slope from north to south. In order to form a level area for the great court of the temple, the ground has evidently been hallowed out, subsequently to the erection of the Koba, which is the only ancient edifice in the temple. The building itself (called by the natives Beit-Elah, the House of God), probably the most ancient sacred building now existing, is a quadrilateral tower, the sides and angles of which are unequal. Its dimensions are 58 feet by 20, and its height 35 feet. Its base is built of square-hewn but unpolished blocks of quarta, schorl, and mica, brought from the neighbouring mountains. The black stone, the most sacred object of veneration, is built into the angle formed by the NE. and SE. sides, 42 inches above the pavement. It is believed by the Moslems to have been presented to Abraham by the angel (Gabriel), and is called "the heavenly stone." Ali Bey says that "it is a fragment of volcanic basalt, sprinkled throughout its circumference with small, pointed, coloured crystals, and variegated with red fulgurites upon a dark black ground like coal." The famous well of Zemzem, in the great mask, is 56 feet deep to the surface of the water, fed by a copious spring; but its water, says Burckhardt, "however holy, is heavy to the taste, and impedes digestion." Ali Bey, on the contrary, says that it is wholesome, though warmer than the air even in that hot climate. The town is further supplied with rain-water preserved in cisterns: but the best water in Mekka is brought by a conduit from the vicinity of Aza at, six or seven hours distant." (Ali Bey, Travels, vol. ii. pp. 74 — 114; Burckhardt, Travels in Arabia, pp. 94, &c.) [G.W.]

MACROBIUS (450 A.D.) Strab. Strabo: Ptolemy has the corrupt form MACRASMA: Macra), a considerable river of Northern Italy, rising in the Apennines and flowing into the Tyrrhenian Sea near Luna. It was under the Roman dominion the established limit between Liguria and Etruria (Ulin. iii. 5. s. 7: Flor. ii. 3. § 4: Strab. v. p. 222: Vib. Sep. p. 14): but at an earlier period the Ligurian tribe of the Apumi could on both sides of Marea, and it was not till after a long struggle with that people that the Romans were able to carry their arms as far as the banks of the Marea. (Liv. xxxix. 32, xl. 41.)

The Marea is one of the most considerable of the rivers on the Ligurian coast, but it still retains the character of a mountain torrent, at times very violent and impetuous, at others so shallow as to be wholly unfit for navigation (Lucan, ii. 426). The ruins of Luna are situated on the left bank of the Minho, about a mile from the sea, while the celebrated Port of Luna (the Gulf of Spezia) is some miles distant to the W., and separated from it by an intervening range of hills (Luna). About 10 miles from its mouth the Minho receives from its W. bank the waters of the Varza, also a formidable torrent, which is in all probability the Boates of Potemkin (iii. i. 339). MACRA COME, a place mentioned by Livy (xxxii. 13) along with Sperchiae. Its position is uncertain, but it was perhaps a town of the Etruscans. MACRIS, an island off the coast of Attica, also called Helena. [HELENA.]

MACROBIUS (Herod. iii. 17 — 25; Plin. vi. 30, s. 35, vii. s. 2; Solin. 50, § 9; Mela, iii. 9, § 1), or the long-lived, might have been briefly enumerated among the numerous and obscure tribes which dwelt above Philippa and the second cataract of the Nile, were not for the conspicuous position assigned to them by Herodotus. He describes the Macrobi as a strong and opulent nation, remarkable for its stature, beauty and longevity, and, in some respects, as highly civilized. According to this historian, a rumour of the abundance of gold in the Macrotbian territory stimulated the avarice of the Persian king, Cambyses, who led a great army against them: but in his haste he omitted to provide his host with food and water, and the city was defended for fourteen days, and between the Macrotbian land and Egypt by sandy wastes, and the Persians perished through drought and hunger, Cambyses alone and a small residue of his army returning to Egypt. In the description of Herodotus, the most important point is the geographical position assigned to them. It is in the farthest south (τα νησια Νεουρη Σαλασσον, c. 17, τα δυτικα της γης, c. 25) the limits of the habitable world, according to the know ledge of Herodotus. The Macrotbian land was accordingly beyond the Arabian Gulf, on the shores of the Indian ocean, and in that undefined and illimitable region called Barbaria by the ancient cosmographers.

Travellers and writers on geography have advanced several theories respecting their position in Africa, Bruce (Travels, vol. iv. p. 43) supposes the Macrobi to have been a tribe of Shangali or lowland blacks. Renell (Geog. System of Herod. ii. p. 29, 2nd edit.) identifies them with the Abyssinians; Heeren (African Nations, vol. ii. pp. 321 — 338) believes them to have been a branch of the Somalib who occupied the maritime district around Cape Guardafui, while Niebuhr (Dissertation on the Geog. of Herod. p. 20), objects to all these surmises, as taking for granted too much knowledge in Herodotus himself. In the story, as it stands, there is one insurmountable objection to the position in the far south assigned to them by the historian, and too readily accepted by his modern commentators. No army, much less an oriental army with its many inclemencies, could have marched from Egypt into Abyssinia without previously sending forward magazines and securing wells. There were neither roads, nor tanks of water, nor corn land nor herbage to be found in a considerable portion of the route (Ψαμμος, c. 25). Even at the present day no direct communication exists between Egypt and the land of the Nubians of Somalib. No single traveller, no caravan, could adventure to proceed by land from the cataracts to Cape Guardafui. An army far inferior in numbers to the alleged host of Cambyses would in a few days exhaust the grass and the inlet of Nu-
MACROBII.

his wherein the only productive soil for some hundreds of miles south of Philae consists of narrow slips of ground adjacent to and irrigated by the Nile. From the southern frontier of Egypt to the nearest frontier of Abyssinia the only practical road for an army lies along the river bank, and the distance to be traversed is at least 900 miles.

We must therefore abandon the belief that the Macrobians dwelt in the farthest south. But there are other suspicious features in the narrative. Similar length of days is ascribed by Herodotus to the Tartessians (i. 163; comp. Ameoren, ap. Strab. iii. 2), nor should it be overlooked that the Hyperboreans in the extreme north are also denominated Macrobii. We may also bear in mind the mythical aspect of Homer's Achaeiopians (Iliad, i. 423) in which passage the epithet "faithless" (ἀδόμωρος) implies not mere but physical superiority (comp. Herod. iii. 30: μεγάλοι καὶ κάλαμοι ἀρνίων παροῦν). "Men," as Dr. Kenrick justly remarks, "groaning under the burden of the social state, have in every age been prone to indulge in such pictures of ease and abundance as Herodotus, in the passages cited, and Pindar (Pyth. x. 57) draw of countries beyond the limits of geographical knowledge and of times beyond the origin of history.

If, as we now see, we cannot yield up the Macrobii to myth or fable altogether, we must seek for them in some district nearer Egypt. Whatever tribe or region Cambyses intended to subdue, gold was abundant, and brass, or rather copper, scarce among them. Now the modern inhabitants of Kordofan (15° 20'—10° N. lat., 28°—32° E. long.) are commonly called Nobah, and Nob is an old Aegyptian word for gold. Again, the Macrobii were singularly tall, well proportioned and healthy; and Kordofan has, from time immemorial, supplied the valley of the Nile with able-bodied and comely slaves of both sexes (Hume, ap. Walpole, Turkey, p. 392). Moreover, the caravans bear with them, as marketable wares, wrought and unwrought copper to this district. In 1821 Mohammed Ali achieved what Cambyses failed in attempting. With less than 7000 men, half of whom indeed perished through fatigue and the climate, he subdued all the contiguous country of the Nile as far as Sennar and Kordofan; and the objects which stimulated his expedition were gold and slaves. We shall therefore perhaps not greatly err in assigning to the Macrobii of Herodotus a local habitation much nearer than Abyssinia to the southern frontier of Egypt, nor in suggesting that their name, in the language of the Greeks, is a corruption of the Semitic word Magnobi, i. e. the dwellers in the west. A position west of the Nile would account also for the knowledge possessed of the Ichthyophagi of Elephants (Bijakh or Bisharys Arabs) of the languages of the Macrobii.

The modern Bisharyes occupy the country east of the Nile from Aegypt to Abyssinia; and their trade and journeys extend from the Red Sea to Kordofan. If then we regard the Macrobii (the Magnobi) and the Ichthyophagi (the Bisharys) as respectively seated on the east and west banks of the Nile, the latter people will have been the most available guides whom Cambyses could employ for exploring the land of the Macrobians.

It should be remembered, however, that Herodotus derived his knowledge of the Persian expedition either from the Persian conquerors of Aegypt, or from the Aegyptian priests themselves: neither of whom would be willing to disclose to an inquisitive foreigner the actual situation of a land in which gold was so abundant. By placing it in the far south, and exaggerating the hardships endured by the army of Cambyses, they might justly hope to deter strangers from prying into the recesses of a region from which themselves were deriving a profitable monopoly.

Upon the wonders of the Macrobian land it would be hardly worth while to dwell, were they not in singular accordance with some known features in the physical or commercial character of that region. In the southern portion of Kordofan the hills rise to a considerable height, and iron ore in some districts is plentiful. The fountain of health may thus have been one of several mineral springs. The ascription of extreme longevity to a people who dwelt in a hot and by no means healthy climate may be explained by the supposition that, whereas many of the pastoral tribes in those regions put to death their old people, when no longer capable of moving from place to place, the Macrobians abstained from so cruel a practice. The procris of the king seems to imply that the chieftains of the Macrobii belonged to a different race from their subjects (compare Scylax, ap. Aristot. vii. p. 1332). "The Table of the Sun" is the market-place in which trade, or rather barter, is carried on with strangers, according to a practice mentioned by Conon, the Italian mariner, who describes the annual fairs of southern Achætopia in terms not unlike these employed by Herodotus in his account of the Macrobii (pp. 135, 139). [W.B.D.]

MACROCEPHALI (Μακροκεφάλαι), that is, "people with long heads." (Strab. i. p. 43.) The Sigini, a barbarous tribe about Mount Caucanus, artificially contrived to lengthen their heads as much as possible. (Strab. xi. p. 520; comp. Hippocr. de Acr. 35.) It appears that owing to this custom they were called Macrocephali; at least Pliny vi. 4), Pomp. Mela (i. 19), and Scylax (p. 33), speak of a nation of this name in the north-east of Pontus. The anonymous author of the Peripl. Pont. Excurs. (p. 14) regards them as the same people as the Macrobii, but Pliny (l. c.) clearly distinguishes the two.

MACROCIURUS (Μακροκυρούς), a powerful tribe in the east of Pontus, about the Macronesian mountains. They are described as wearing garments made of hair, and as using in war wooden helmets, small shields of wicker-work, and short lances with long points. (Herod. ii. 104, vii. 78; Xenoph. Anab. iv. 8. § 3, v. 5. § 18, vii. 8. § 25; comp. Herat. Fragm. 191; Scylax, p. 33; Dionys. Perig. 766; Apollon. Rhod. ii. 22; Phil. vi. 4; Joseph. a. Apion. i. § 22, who asserts that they observed the custom of circumcison.) Strabo (xii. p. 548) remarks, in passing, that the people formerly called Macrones bore in his day the name of Samni, though Pliny (l. c.) speaks of the Samni and Macrones as two distinct peoples. They appear to have always been a rude and wild tribe, until civilisation and Christianity were introduced among them in the reign of Justinian. (Procop. Bell. Pers. i. 15, Bell. Goth. iv. 2, de Aed. iii. 6.)

MACRON TEICHOS (Μακρόν τείχος), also called "the wall of Anastasius," was a fortification constructed in A.D. 507, by the emperor Anastasius I. of Constantinople, as a means of defence against the Bulgarians; it consisted of a strong wall running across the isthmus of Constantinople, from the coast of the Propontis to that of the Euxine.
In order to see Medeba, I left the great road at Hebron,—and proceeded in a more eastern direction. At the end of eight hours we reached Madaba built upon a round hill. This is the ancient Medeba, but there is no river near it. It is at least half an hour in circumference: I observed many remains of the walls of private houses, constructed with blocks of silex; but not a single edifice is standing. There is a large Birket ("the immense tank" mentioned by Ilyy and Maugeis, p. 471, as "the only object of interest."). On the west side of the town are the foundations of a temple, built with large stones, and apparently of great antiquity. A part of its eastern wall remains. At the entrance of one of the courts stand two columns of the Doric order;... in the centre of one of the courts is a large well.

(Burchard, Travels in Syria, pp. 365, 366.) It is mentioned as παντος Μαδαβων in the Council of Chalcedon, and was an episcopal see of the Third Paleostin, or of Arabia. (Beland, Palaeostin, s. r. v., pp. 893, 216—219; Le Queen, Oriens Christianus, vol. 769—772.)

MADAINA, a district in Armenia Minor, between the Cyrrhus and the Araxes. (Steph. Byz., s. r. v.)

MADDOX. (Medius.)

MADMMANA (Μαδμμάνα, LXX.; Μαθηματος, Euseb.), a city of the tribe of Judah mentioned only in Joshua (xv. 31). It was situated in the south of the tribe, apparently near Ziklag. Eusebius, who confounds it with the Madamenah of Isaiah (s. 31), mentions the ruins of a town near Gaza, named Μαδων (Μαδων), which he identifies with Madimam (Ομώνατ, s. r. v.).

MADMAXAII (Μαδμαξαί, LXX.), a town or village on the confines of the tribes of Judah and Benjamin, mentioned only in Isaiah (s. 31). It was obviously on or near the line of march of an invading army approaching Jerusalem from the north, by way of Michmash, and apparently between Anathoth and Jerusalem. It is confounded with Madmannah by Eusebius. (Ομώνατ, s. r. v., Μαθηματος.)

MADOC (Mādōk, a city on the south coast of Arabia, in the country of the Haurerites, apparently in the extreme west of their district, and consequently not far to the west of Aden. (Ptol. vi, 7, § 9.) It is not otherwise known. (G.W.)

MADUCATEX, a people of Thrace, mentioned by Livy (xxvii. 40) along with the Astii, Caeni, and Cordii, but otherwise unknown.

MADUIRES. (Media.)

MADVYTS (Mādōvyr), an important port town in the Thracian Chersonesos, on the Hellespont, nearly opposite to Alyue, (Liv., xxxxi. 36, xxxiiii. 38; Mela, ii. 21; Anna Comm. xiv. p. 429; Steph. Byz. s. r. v.; Strab. vii. p. 331.)

Majada (Μάδαι, Stadium. Mar. Magn. §§ 74, 75;
MAEANDER.

called Paüs or Peüs by Ptol. iv. 3. § 46), an island off the coast of Africa Prope Axia, 7 stadia S. of the island Pontia.

MAEANDER (Μαηανδής: Meänder or Bougik Meänder), a celebrated river in Asia Minor, has its sources not far from Cæcneale in Phrygia (Xenoph. Anab. i. 2. § 7), where it gathered up in a fork of rivers. According to some (Strab. xii. p. 578; Maxim. Tyr. viii. 38) its sources were the same as those of the river Marsyas; but this is irreconcilable with Xenophon, according to whom the sources of the two rivers were only near each other, the Marsyas rising in a royal palace. Others, again, as Paus. vii. 2. § 7, and Cleopatra Capella (p. 6. 221), state that the Maedon flowed out of a lake on Mount Anoorene. Col. Leake (Asia Minor, p. 158, &c) reconciles all these apparently different statements by the remark that both the Maedon and the Marsyas have their origin in the lake on Mount Anoorene, above Cæcneale, but that they issue at different parts of the mountain below the lake. The Maedon was so called both for antiquity for its numerous winding streams, which that its name became, and still is, proverbial. (Hieron. ii. ii. 869; Hisiod, Thocg. 339; Herod. vii. 26, 30. Strab. xii. p. 578; Paus. vii. 41. § 3; Or. Met. viii. 162, &c.; Liv. xxxviii. 13; Senece. Hecr. Fur. 683, &c., Phoc. 665.) Its whole course has a south-western direction on the south of the range of Mount Messagis. In the south of Tripolis it receives the waters of the Lyacs, whereby it becomes a river of some importance. Near Carina it passes from Phrygia into Caria, where it flows in its tortuous course through the Maeandrian plain (comp. Strab. xiv. p. 648, xv. p. 691), and finally discharges itself in the Icarian sea, between Priene and Myus, opposite to Miletus, from which its mouth is only 10 stadia distant. (Plin. l. c.; Paus. ii. 3. § 2.)

The tributaries of the Maedon are the Ogygas, Marisias, Cluberus, Lethanos, and Gæson, in the north; and the Obrinas, Lyus, Harpasus, and a second Marisias, in the south. The Maedon is everywhere a very deep river (Nic. Chonst.p.125; Liv. l. c.), but not very broad, so that in many parts its depth equals its breadth. As moreover it carried in its waters a great quantity of mud, it was navigable only for small craft. (Strab. xii. p. 579, xiv. p. 636.) It frequently overflowed its banks; and, in consequence of the quantity of its deposits at its mouth, the coast has been pushed about 20 or 30 stadia further into the sea, so that several small islands off the coast have become united with the mainland. (Paus. viii. 24. § 5; Thucyl. viii. 17.) There was a story about a subterraneous connection between the Maedon and the Alpheus in Elis. (Paus. ii. 5. § 2; comp. Hamilton, Researches, vol. i. p. 525, foll. ii. p. 161, foll.)

[ L. S. ]

MAEANDROPOLIS (Μαηανδροπόλις), a town of uncertain site, though, as its name seems to indicate, it must have been situated somewhere on the Maedon River, and more especially in the territory of Magnesia, as we learn from Stephanus B. (c. r., comp. Plio. v. 29), from whom we may also infer that the place was sometimes called Maeder. [L. S. ]

MAEATAE (Μαηαιαταί), a general name given by Dion Cassius (vol. iii. 5. § 12) to two Thessalian tribes nearest to the Roman vallum, the Caledonii dwelling beyond them. (Comp. Jornandes, de Reb. Get. e. 2. )

MAEDI (Μαηεί, Μαηαίοι, Thuc. ii. 98; Polyb. x. 41), a powerful people in the west of Thrace, dwelling near the sources of the Axius and Marus, and upon the southern slopes of Mt. Scopus. (Leake, Northern Greece, vol. iii. p. 472.) Strabo says that the Maedi bordered eastward on the Thasianus of Dardanus (vii. p. 316), and that the Axius flowed through their territory (vii. p. 331). The latter was called Maedica (Μαηεία, Ptol. iii. 11. § 9; Liv. xxi. 25, xl. 22). They frequently made incursions into Macedonia; but in B.C. 211, Philip V. invaded their territory, and took their chief town Lampronohora, which is probably represented by Vranidi or Ivorina, in the upper valley of the Marus or Moraca. (Liv. xxi. 25.) We also learn from Livy (iv. 33; vii. 48; x. 6) that the same king traversed their territory in order to reach the summit of Mt. Haemus; and that on his return into Macedonia he received the submission of Petra, a fortress of the Maedi. Among the other places in Maedia, we read of Phraganæ (Liv. xxi. 25) and Dusudaba, probably the modern Krumenovo, on one of the continents of the upper Axius. (Liv. xlv. 26.) The Maedi are said to have been of the same race as the Bitilynians in Asia, and were hence called Maenobithyrii (Steph. B. s. v. Maidia; Strab. viii. p. 265). (Comp. Strab. vii. p. 316; Pinn. iv. 11. s. 18.)

MAENACA (Μαηαιακή), a Greek city on the S. coast of Hispania Baetica, the most westerly colony of the Phocaeans. (Strab. iii. p. 156; Svmn. 145, et seq.) In Strabo's time it had been destroyed; but the ruins were still visible. He refuses the error of those who confounded it with Malaca, which was not a Greek, but a Phoenician city, and lay far to the W.; but this error is repeated by Avienus (Or. Marit. 426, et seq.). The place seems to be the Maeca of Stephanius.

[ P. S. ]

MAENALUS. 1. (Μαηαλαυος, Strab. viii. p. 388; Schol. ad Apoll. Rhod. 1. 769; Maiellav, Theoc. i. 123; 70 Μαηαλαυος, Paus. viii. 36. § 7; Macaulay, Vir. Ecl. vii. 22; Mel. ii. 3; Pinn. iv. 6. s. 10; Macaulay, pl. Virg. Ecl. x. 55; Or. Met. i. 216), a lofty mountain of Arcadia, forming the western boundary of the territories of Mantinea and Teges. It was especially sacred to the god Pan, who is hence called Macaulianus Deus (Or. Fast. iv. 650.) The inhabitants of the mountain fancied that they had frequently heard the god playing on his pipe. The two highest summits of the mountain are called at present Aidin and Apoño-Khripa: the latter is 5115 feet high. The mountain is at present covered with pines and firs; the chief pass through it is near the modern town of Tripolitza.

The Roman poets frequently use the adjectives Maenalus and Macaulis as equivalent to Arcadian. Hence Maenalian versus, shepherds' songs, such as were usual in Arcadia (Virg. Ecl. vii. 21); Macaulis oras, i.e. Arcadia (Or. Fast. iii. 94); Macaulis nymphæa, i. e. Carmenta (Or. Fast. i. 634); Macaulis Urset, and Macaulis Arctos, the constellation of the Bear, into which Callisto, daughter of Lycaon, king of Arcadia, was said to have been metamorphosed. (Or. Trist. iii. 11. 8; Fast. ii. 192.)

2. (Μαηαλαυος: Ed. Maiellavos, Maiellavos, Maiell
MAEOTIA. 

Maesia as early as the hieroglyphic Hellanics (p. 78), if we read with his editor Sturt (for Ma-

Maesia. According to Strabo (I. c.) they lived partly on fish, and partly tilled the land, but

were no less warlike than their nomad neighbours.
He enumerates the following subdivisions of the Maeciae: Sandi, Bandarilli, Toreata, Agri, Arechi, 

Tarentum, and Sittione, as well as many others. These wild hordes were sometimes tributary

to the factory at the Tanais, and at other times to the Bosphorus, revolting from one to the other.
The kingdom of the Cimmerian Bosphors in later times, especially under Pharnaces, Asander, and

Polemon, extended as far as the Tanais. [E. B. J.]

MAEOTIS PALUS, the large body of water to the NE. of the Euxine now called the Sea of Azov,
or the Azov-deni-p of the Parks. This sea was usually called "Palus Maeotis" (§ MAEOTIS AEON, 

Aesch. Prom. 427), but sometimes "Maeotia" or "Maecia Palus" (Plin. ii. 67; Lucan, ii. 641), 

"Maeotius" or "Maecis Lucas" (Plin. iv. 24, vi. 6), "Maeotianum" or "Maeoticum aequor" (Avien.

v. 32; Val. Flacc. iv. 720), "Cimmerian Paludes" (Cland. in Entrop. i. 249), "Cimmericum" or "Bo-

sparicum Mare" (Gell. vii. 8), "Scythicae Unae, Paludes" (Ov. Met. vi. 107, Tiss. iii. 4. 49).
The genitive in Latin followed the Greek form "Mae-

otida", but was sometimes "Maeotis" (Evans, ap. 

Cic. Tusc. v. 17). The accusative has the two forms MAEOTIS "Maeotium" (Plin. x. 10), and MAEOTIS "Maeotida" (Popp. Mela, i. 3, § i. i. § i). Pliny (vi. 7) has preserved the Scythian name Te-

merinda, which he translates by "Mater Maris."

The Maeotic gulf, with a surface of rather more than 13,000 square miles, was supposed by the an-

cents to be of far larger dimensions than it really is. Thus Herodotus (iv. 86) believed it to be not

much less in extent than the Euxine, while Skylax (p. 30, ed. Hudson) calculated it at half the size

312, xi. p. 493; Arrian. Perip. p. 20, ed. Hid.-ao; 

Agathem. i. 3, ii. 14) estimated the circumference to

be somewhat more than 9000 stadia, but Polybios (iv. 39) reduces it to 8000 stadia. According to Pliny

(iv. 24) its circuit was reckoned at 11,000 M. P. according to some, 1125 M. P. Strabo (vii. p. 310)

reckons it in length 2200 stadia between the Cim-

merian Bosporus and the mouth of the Tanais, and

therefore came nearest among the ancients in the length; but he seems to have supposed it to carry

its width on towards the Tanais (comp. Rennell, 

Comp. Geog. vol. ii. p. 331). The length according to Pliny (iv. 24) is 385 M. P., which agrees with the estimate of Polybios (v. 9, §§ 1—7). Polybios (I. c.) confidently anticipated an entire and speedy

clearing of the waters of the Maeotis; and ever since his time the theory that the Sea of Azov has con-

tracted its boundaries has met with considerable

support, though on this point there is a material
discrepancy among the various authorities; the latest

statement, and approbation to the amount of its

cubic contents will be found in Admiral Smyth's work

(The Mediterranean, p. 148). The ancients appear to have been correct in their assertion about

the nature of its waters, as although in SW.

winds, when the water is highest, it becomes brackish,
yet at other times it is drinkable, though of a dis-

agreeable flavour (Jones, Trav. vol. i. p. 143; Journ. 

MAEFINA (Μαϊθα μηθροδολαι), an inland city of

Arabia Felix, placed by Ptolemy in long. 35° 15',

VOLEIO, a town of Arcadia, and the capital of the
district Maealia (Maealai, Thuc. v. 64; Pans. 

iii. 11, § 7, vi. 7 § 9, viii. 9, § 4), which formed
part of the territory of Mezeapoli upon the foun-
dation of the latter city. A list of the towns in Mae-

alia is given in Vol. l. p. 192. The town Maealai

was in ruins in the time of Pausanias, who mentions
a temple of Athena, a stadium, and hippodrome, as

belonging to the place. (Paus. viii. 3, § 4, 36, 

§ 8; Steph. B. s. v.) Its site is uncertain. Ross
supposes that the remains of polygonal walls on the

isolated hill, on the right bank of the river Helisson
and opposite the village Vaseia, represent Maealai;
and this appears more probable than the opinion of
Leake, who identifies this site with Dippa, and

thinks that Maeala stood on Mt. Aptono-ktejupa. 
(Ross, Reisen im Peloponnes, vol. I. p. 117; Leake, 

Mare, vol. ii. p. 52, Peloponnesiaca, p. 243.) 
[Dippa.]

MAEANAIAE INSULAE, a cluster of little
islands in the gulf of Palma, off the coast of the 

Greater Bularis. (Plin. iii. 5, § 11.) [P. S.]

MAENOBA (Mel. ii. 6 § 7; Plin. iii. 1, § 3; 

Maioria, Ptol. ii. § 57; Menova, Plin. Ant. p. 405: 

Veles Malagya), a town of the Basuli Poeni, on the S.

cost of Baetica, 12 M. P. E. of Malea, on a river of the same name (Veles). Strabo (iii. p. 143) also men-
tions Maenoba (Maenoba), with Astrn, Nabvissa, Onoba, and Osonoka, as towns remarkable for their situation

on tidal estuaries; whence Ubert argues that, since not only a few of the other places thus mentioned were exter-

nal of the Straits, but also Strabo's description

necessarily applies to an estuary exposed to the tides

of the Atlantic, we must seek for his Maenoba else-

where than on the tidless Mediterranean. Accord-

ingly, he places it on the river Maenoba or Menoba 

(Glendine), the lowest of the great tributaries of the

Baetis, on its right side, mentioned both by Pliny

(iii. 1, § 3), and in an inscription found at Son Lu-

cor in Major (Caro, ap. Flores, Exp. S. vol. i. p. 47),

up which the river tide extends to a considerable

This argument, though doubtful, has certainly some

force, and it is adopted by Spruner in his Atlas. 
[P. S.]

MAEONOBOS (Maienobos), rivers. 

[MAEONOBOS.]

MAEO'NIA (Maioria), a town of the 

Maecian, in the S. of Spain, mentioned by Heracas

(ap. Steph. B. s. v.), seems to be identical with

MAEONOBOS on the S. coast of Baetica. [P. S.]

MAEO'NIA (Maioria), an ancient name of Lydia. 

[LYDIA.] There was, also, in later times a town

of this name in Lydia, mentioned by Pliny (v. 29, 
s. 36), Hierocles (p. 670), and in the Episcopal No-

titiae; and of which several coins are extant. Its ruins

have been found at a place called Megane, 5 English 

p. 139.)

COIN OF MAEONIA.

MAEOTAE (Maeota, Scyl. p. 31; Strab. xi. 

pp. 492, 494; Plin. iv. 26; Maestici, Pomp. Mela, 
i. 2, § 6, 19, § 17; Plin. vi. 7), a collective name 

which was given to the peoples about the Palus

Digitized by Microsoft®
MAERA.

lat. 15°, the capital, no doubt, of the Maphoritae, whom he places above the Homeritae and Adramytne of the southern coast. [MAPHORITAE.] The situation of this tribe is still marked by the site and very fertile Wady Maghaf in the midst of which the very extensive village named Maghaf, situated at the eastern base of the Humaqrers, perhaps marks the site of the Mepheus metropolis. Mr. Forster, however, identifies it with the ruined site of Nekab-el-Hajar, discovered and described by Lient. Welscheid in 1834, the situation of which is thus stated by that officer.—Nekab-el-Hajar is situated north-west, and is distant forty-one chains from the village of 'I'in [on the coast], which is marked on the chart in latitude 14° 2' north, and longitude 46° 30' east, nearly. It stands in the centre of the Wady Meisik, nearly 20 miles north of the village of that name, and was evidently a place of considerable importance in ancient times. The inscription over the gateway, in the ancient Arabic character, commonly known as the Hadramatic, would doubtless throw light on the history of this castle and it is curious that while the attempted decipherments of Professor Boediger and Mr. Charles Forster have so little in common, both would agree in identifying it with Mephe; for while the former discovers the name Meifa twice in the first line of the inscription, the latter, who pronounces that this name "has no existence in the inscription," compensates for this disappointment by discovering a list of proper names, which serve to connect it with several historical personages, among whom are an Arabian patriarch, Moharab, son of Koreish, "belonging to a period certainly prior to the Christian era;" and Charibai, "that king of the Homeritae and Sabaceans celebrated by Arrian (Periplus Maris Erythraei, pp. 13, 14, apud Hudson Geographicii Minoris), whose alliance in the reign of Claudius was audaciously courted by the Romans. The inscription further mentions many of the buildings described by Lient. Welscheid. (Forster, vol. ii. pp. 193—204, 208-239.) [G. W.]

MAFRA. [MARTINEILA.]

MAESIA SILVA, a forest of Etruria, in the territory of the Veientes, which was conquered by them from Ancus Marcus. (Liv. i. 33.) Its site cannot be determined with certainty, but it was probably situated on the right bank of the Tiber, between Rome and the sea-coast. Pliny also notices it as abounding in dormice. (Fl. viii. S. 85.) [E. H. B.]

MAEFOSILA (Μαφασιληα, Ptol. vii. 1. § 15; in Peripl, p. 35, Μασαληα), a district on the eastern coast of Hindostan, along the Bay of Bengal, corresponding to that now occupied by the Ceylans and the upper part of the Coromandel coast. Ptolemy mentions two towns in its territory which he calls Empireis, namely, Contacossyla (probably the present Moolpattana) and Alisurga. The district was traversed by a river of considerable size, the Masaolis (now Godaveri), which flows into the Bay of Bengal, after giving its name to the surrounding country. It was from one of the ports of Masolila that merchants were in the habit of taking ship and crossing the Bay of Bengal to the Austra Chersonesus. The people were called Masolli (Μασαβολοι). (Vinctum, Peripl. vol. ii. p. 521.) [V.]

MAEGALUS (Μαγγαλος, Ptol. vii. § 53, 37), a river of considerable size, which rises in the Deccean or midland part of Hindostan, and flows in a course at first SE., and then nearly E till it falls into the Bay of Bengal in lat. 18° N. There has been some dispute among geographers as to its modern representative, some making it the same as the Ganges, others the Godaveri. The latter is probably the most correct supposition. Ptolemy places its source in the Ondrri or Aurneli mountains, which would seem to be part of the chain of the western Ghats. [V.]

MAGABA (Kerqph Daghe), a considerable mountain in the central part of Galatia, W. of the river Halya, and E. of the city of Ancyra, which was only 10 Roman miles distant from it. In b.C. 159, when Manlius was marching against the Galatians, the Tecteogeni and Trocmi took refuge on Mt. Magaba, and there defended themselves against the Romans, but were defeated. (Liv. xxxviii. 19, 26; Flor. i. 11.) According to Rufus Festus (11), this mountain was afterwards called Modiacus. [L. S.]

MAGABULA, a place mentioned in the Peuting. Table in Pontus Pomonicamus, on the road from Comana to Neopolis, at a distance of 21 miles from the former city. There can be no doubt but that it is the same place as Megaludia (Μαγγαλοδα) mentioned by Ptolemy (v. 6. § 10); but its exact site cannot be ascertained. [L. S.]

MAGARSA, MAGEAISUS, or MEGARUSUS (Μαγγαρσα, Μαγγαιος, Μαγγαροι), a town in the eastern part of Cilicia, situated on a height close to the mouth of the river Pyramus. (Strab. xiv. p. 676.) Alexander, previous to the battle of Issus, marched from Soli to Megara, and there offered sacrifices to Athene Megaraia, and to Amphiochus, the son of Amphiaratus, the reputed founder of the place. (Arrian. Anab. i. 5.) It seems to have formed the port of Mallus (Steph. Byz. s. v. Μαγγαρσα; Lycoph. 439; Plin. ii. N. v. 22). The hill on which the town stood now bears the name of Kardash, and vestiges of ancient buildings are still seen upon it. (Leake, Asia Minor, p. 215, foll.) [L. S.]

MAGDALA (Μαγδαληα; Ech. Μαγδαληα), a town of Galilee, chiefly noted as the birthplace of that Mary to whom the distinguished name of Magdalen is ever applied in the Gospel. The place itself is mentioned only by S. Matthew (xx. 39), where we find the words τα γενεα Μαγδαληα, which are represented in the parallel passage in St. Mark (viii. 10) as τα μηνια Δαλμανοονωθ. As neither does this name occur elsewhere, we have no clue to the situation of the town; although, a modern writer writes it seems to follow from the New Testament itself that it lay on the west side of the lake." The argument is, that, on leaving the coast of Magdala, our Lord embarked again, and "departed to the other side,"—"an expression which in the N. T. is applied almost exclusively to the country east of the lake and of the Jordan." (Robinson, Bib. Res. vol. iii. p. 278.) There can, however, be no difficulty in identifying it with the site of the modern village of Migdal in the SE. corner of the plain of Gennesaret, where there certainly existed an ancient town of the name, noticed in the Jerusalem Talmud, compiled in Tiberias, from which it is not more than 4 or 5 miles distant, on the north: probably identical also with Migdal-el, in the tribe of Nabhath. (Josh. xix. 38.) It is a small and insignificant village, "looking much like a ruin, though exhibiting no marks of antiquity." (Robinson, l. c.) Pococke's account against this identification is not intelligible. — This does not seem to be Magdala mentioned in Scripture, because that is spoken of with Damnahutha, which was to the cast of the sea." (Observations u 3
on Palestine, Travels, vol. ii. p. 71.] How this last assertion is to be proved does not appear. The authority of Josephus has been quoted for a Magdala near Gamala, and consequently on the coast of the sea (Vita, § 24); but the reading is corrupt. (Robinson, l. c. p. 279, note.) [G. W.]

MAGDOLUM (Μαγδολόω, Herod. ii. 159; but Μαγδωλο in LXX.; the Migdol of the Old Testament (Ezod. xiv. 2; Num. xxxiii. 7; 2 Kings, xxiii. 29; Jeremiah, xlv. 1, xlvii. 14; Ezek. xxix. 10, xxx. 6; H. Anton, p. 171), a town of Lower Egypt which stood about 12 miles S. of Pelusium, on the coast-road between Aegypt and Syro-Palestine. Here, according to Herodatus, (l. c.) Pharaoh-Necho defeated the Syrians, about 608 B.C. Eusebius (Prepar. Evang. ix. 15), apparently referring to the same event, calls the defeated army "Syrians of Judah." That the Syrians should have advanced so near the frontiers of Egypt as the Delphic Magdolum, with an arid desert on their flanks and rear (comp. Herod. iii. 5) seems extraordinary; neither is the suspicious aspect of the Battle of Magdolum diminished by the conquest of Caditis. a considerable city of Palestine, being represented as its result. The Syrians might indeed have pushed rapidly along the coast-road to Aegypt, if they had previously secured the aid of the desert tribes of Arabs, as Cambyses did before his invasion of Aegypt (comp. Herod. iii. 7). Calmet's Dict. of the Bible, s. v. Migdoló; Winer, Bibl. Realwörterbuch, vol. ii. p. 93, note 2; Champollion, L'Egypte, vol. ii. p. 79. [W. B. D.]

MAGELLI, a Ligurian tribe, mentioned only by Pliny (iii. 5. 37). They have been supposed to have occupied the Val di Magello, in the Apennines, N. of Florence; but though it is certain that the Ligurians at one time extended as far as the E as this, it is very improbable that Pliny should have included such a tribe in his description of Roman Liguria. The name of the Magello is found in Priscianus (B. G. iii. 5) where he speaks of a place (χασθόε) called Maccella (Maccellan), situated a day's journey to the N. of Florence. [E. H. B.]

MAGETOBRIA or ADIAGETOBRIA, in Gallia. Probably the true name ended in -bric or -briga. Arriovistus, the German, defeated the forces of the Galli in a fight at this place. (Caes. B. G. i. 31.) The old name of Magetobria is unknown. The resemblance of name induced D'Anville (Notice, &c.) to fix it at Moïte de Broe, near the confluence of the Ognon and the Saône, a little above Pontardiv. There is a story of a broken urn, with the inscription Magetob, having been found in the Saône in 1802. But this story is of doubtful credit, and the urn cannot be found now. Wackenroder supposed Amone on the Brownich, which is west of Forecney, and east of Larcou, to correspond best to the inscriptions in Caesar's text. But Caesar does not give us the least indication of the position of Magetobria.

MAGI. [Med.]

MAGIOVINTUM or MAGIOVINUM, in Britain, a station placed in three of the Itinerarum of Antoninus at the distance of 24 miles to the N. of Verulamium. Its site is generally supposed to be at Fish Street, the modern Syston, N. of Northampton. [G. L.

Magna Graecia. [C. R. S.]

MAGNAN (Μαγνᾶν, Nov. 18.) An inhabited district of Tuscany, on the coast of the Gulf of Taranto, between the mouths of the Tiber and the Tevere. It is a barren and inhospitable country.

MAGNA GRÆCIA (Μαγνα Ελλάς), was the name given in ancient times by the Greeks themselves to the assemblage of Greek colonies which encircled the shores of Southern Italy. The name is not found in any extant author earlier than Polybius: but the latter, in speaking of the cities of Magna Graecia in the time of Pythodorus, uses the expression "the country that was then called Magna Graecia" (Pol. ii. 39); and it appears certain that the name must have arisen at an early period, although the Greek colonies in Italy were at the height of their power and prosperity, and before the states of Greece proper had attained to their fullest greatness. But the omission of the name in Herodotus and Thucydides, even in passages where it would have been convenient as a geographical designation, seems to show that it was not in their time generally recognised as a distinctive appellation, and was probably first adopted as such by the historians and geographers of later times, though its origin must have been derived from a much earlier age. It is perhaps still more significant, that the name is not found in Strabo, though that author attaches particular importance to the enumeration of the Greek cities in Italy as distinctive of the true limits of the barbarian age. Nor is the use of the term, even at a later period, very fixed or definite. Strabo seems to imply that the Greek cities of Sicily were included under the appellation; but this is certainly opposed to the more general usage, which confined the term to the cities of Sicily.
nies in Italy. Even of these, it is not clear whether Cumae and its colonies in Campania were regarded as belonging to it; it is certain at least that the name is more generally used with reference only to the Greek cities in the south of Italy, including those on the shores of the Tarentine gulf and the Bruttian peninsula, together with Vela, Poseidonia, and Laxis, on the W. coast of Lucania. Sometimes, indeed, the name is confined within still narrower limits, as applying only to the cities on the Tarentine gulf, from Locri to Tarentum (Plin. iii. 10. s. 15; Pol. iii. 1, § 10); but it is probable that this distinction was introduced only by the later geographers, and did not correspond to the original meaning of the term. Indeed, the name itself sufficiently implies (what is expressly stated by many ancient writers) that it was derived from the number and importance of the Greek colonies in Southern Italy, and must, therefore, naturally have been extended to them all. (Strab. v. p. 253; Symm. Ch. 303; Pol. ii. 39, iii. 118; Athen. xii. p. 523; Justin, xx. 2; Cic. Tusc. iv. 1, v. 4, de Or. iii. 34.) It must be added that the name was never understood (except perhaps by late geographers) as a territorial one, including the whole of Southern Italy, but applied merely to the Greek cities on the coasts, so as to correspond with the expression "Graecorum omnium," employed by Livy (xiii. 61). The same author in one passage (xxxvi. 7) uses the phrase "Graecia Major," which is found also in Festus (p. 134, ed. Müll.), and employed by Justin and Ovid (Justin, L. C.; Ov. Fast. iv. 64); but the common form of expression was certainly Graecia Magna (Cic. Ill. cc.).

There could obviously be no ethnic appellation which corresponded to such a term; but it is important to observe that the name of Τθαλαττας is universally used by the best writers to designate the Greeks in Italy, or as equivalent to the phrase of κατὰ τὴν Τθαλατταν Ἀλληλες, and is never confounded with that of Τηρας, or the Italians in general. (Thuc. v. 44; Herod. iv. 15, &c.) Polybius, however, as well as later writers, sometimes loses sight of this distinction. (Pol. v. 52.)

The geographical description of the country, known as Μαγνα Graecia, lies within the article ITALIA, and in more detail in those of BRUTTI, LUCANIA, and CALABRIA; but as the history of these Greek colonies is to a great extent separate from that of the mother country, while it is equally distinct from that of the Italian nations which came early in contact with Rome, it will be convenient here to give a brief summary of the history of Magna Graecia, bringing together under one head the leading facts which are given in the articles of the several cities.

The general testimony of antiquity points to Cumae as the most ancient of all the Greek settlements in Italy; and though we may reasonably refuse to admit the precise date assigned for its foundation (b. c. 1050), there seems no sufficient reason to doubt the fact that it really preceded all other Greek colonies in Italy or Sicily. [CUMAE.] But, from its remote position, it appears to have been of great measure isolated from the later Greek settlements, and, together with its own colonies and dependencies, Dicaearchia and Neapolis, formed a little group of Greek cities, that had but little connection with those further south, which here form the immediate subject of consideration.

With the single exception of Cumae, it seems certain that none of the Greek colonies in Italy were more ancient than those in Sicily; while there seems good reason to suppose that the greater part of them were founded within the half century which followed the first commencement of Greek colonisation in that quarter. (b. c. 735—685.) The causes which just at that period gave so sudden an impulse to emigration in this direction, are unknown to us; but, though the precise dates of the foundation of these colonies are often uncertain, and we have no record of their establishment equal either in completeness or authority to that preserved by Thucydides concerning the Greek cities in Sicily, we may still trace with tolerable certainty the course and progress of the Greek colonisation of Italy.

The Achaeans led the way; and it is remarkable that a people who never played more than a subordinate part in the affairs of Greece itself should have been the founders of the two most powerful cities of Magna Graecia. Of these, SYRAEA was the earliest of the Achaean colonies, and the most ancient of the Greek settlements in Italy of which the date is known with any approach to certainty. Its foundation is ascribed to the year 720 B. C. (Symm. Ch. 360; Clinton, F. H. vol. i. p. 174); and that of Crotone, according to the best authorities, may be placed about a century later, b. c. 710. [Crotone.] Within a very few years of the close of this war, took place the settlement of Tarentum, a Spartan colony founded after the close of the First Messenian War, about 708 B. C. A spirit of rivalry between this city and the Achaeans colonies seems to have early sprung up; and it was with a view of checking the encroachments of the Tarentines that the Achaeans, at the invitation of the Sybarites, founded the colony of METAPONTUM, on the immediate frontier of the Tarentine territory. The date of this is very uncertain (though it may probably be placed between 700 and 680 B. C.) but it is clear that Metapontum rose rapidly to prosperity, and became the third in importance among the Achaean colonies.

While the latter were thus extending themselves along the shores of the Tarentine gulf, we find subsisting in the midst of them the Ionian colony of SIRE, the history of which is extremely obscure, but which for a brief period rivalled in splendour the flourishing Sybaris in opulence and luxury. [SIRE.] Further towards the S., the Locrians from Greece founded near the Cape Zephyrium the city which was thence known by the name of LOCRI EPIZEPHYRI. This settlement is described by Strabo as nearly contemporary with that of Crotone (b. c. 710), though some authorities would bring it down to a period thirty or forty years later. [Locri.] The next important colony was that of EBIBGUM, on the Sicilian straits, which, was, according to the general statement, a Cretid colony, founded subsequently to Zancle in Sicily, but which, from the traditions connected with its foundation, would seem to have been more ancient even than Sybaris. [EBIBGUM.] The Greek cities on the Tyrrenian sea along the shores of Bruttium and Lucania were, with the single exception of VELIA, which was not founded till about 540 B. C., all of them colonies from the earlier settlements already noticed and not sent out directly from the mother country. Thus Postonia, Latii and SCIDRES, on the Tyrrenian sea, were all colonies of Sybaris, which in the days of its greatness undoubtedly extended its dominion from sea to sea. In like manner, Crotone had founded TERNIA on the W. coast of the Bruttian peninsula, as well
as Caelonia on the E. coast, but considerably more to the S. Locri, also, had established two colonies on the W. coast, HIPPONIUM and MEDMA; neither of which, however, attached to any great importance. Several other places which at a later period assumed more or less of a Greek character, were probably only Oenotrian towns, which had become gradually Hellenised, but without ever receiving Greek colonies. Such were Pandosia, PETELIA, TEMESA, and probably SELCETIUM also, though this is frequently called an Achanian colony.

We have very little information as to the early history of these Greek cities in Italy. All accounts agree in representing them as rising rapidly to a high state of prosperity, and attaining to an amount of wealth and power which far exceeded that enjoyed at so early a period by any of the cities of the mother country. The Achaean colonies, Sybaris, Crotona, and Metapontum, seem to have been the first to attain to this flourishing condition; and Sybaris especially became proverbial for its wealth and the luxurious habits of its citizens. [SYBARIS.] There can be no doubt that the extraordinary fertility of the district in which these colonies were founded was the primary cause of their prosperity; but they appear, also, to have carried on an extensive foreign commerce; and as they increased in power they sought to extend their territorial possessions, so that we are told that Sybaris, in the days of its greatness, ruled over twenty-five dependent cities, and four nations or tribes of the neighbouring Oenotrians. (Strab. vi. p. 263.) It is remarkable how little we hear of any wars with the barbarians of the interior, or of any check to the progress of the Greek cities arising from this cause; and it seems probable, not only that the Pelasgic origin of these tribes [OE- NOTRIA] caused them to assimilate with comparative facility with the Hellenic settlers, but that many of them were admitted to the full rights of citizens, and amalgamated into one body with the foreign colonists. This we know to have been the case with Locri in particular (Pol. xii. 5); and there can be little doubt that the same thing took place more or less extensively in all the other cities. (Diog. xii. 9.) It is, indeed, impossible, on any other supposition, to explain the rapidity with which these rose to an amount of wealth and population at that time unexampled in the Hellenic world.

It seems certain that the period of about two centuries, which elapsed from the first settlement of the Greek colonies till after the fall of Sybaris (c. 710—510), was that during which these cities rose to the height of their power; and probably the half century preceding the latter event (c. 560—510) may be taken as the culminating point in the prosperity of the Achaean cities (Grote, vol. iii. p. 522.) Unfortunately, it is precisely for this period that we have the most absolutely defective in historical information. The loss of the early books of Diodorus is especially to be regretted, as they would undoubtedly have preserved to us many interesting notices concerning the early fortunes of the Greek cities, and at the same time have afforded us a clue to the chronological arrangement of the few scattered facts that have been preserved to us. The want of this renders it impossible to connect the extant notices into anything like a historical narrative.

Among the earliest of these may probably be placed those of one of the three great Achaean cities, Crotona, Sybaris, and Metapontum, for the expulsion of the Ionians from their colony of Siris,—an union which appears to have led to the capture, and perhaps the destruction, of that city. (Justin, xx. 2.) But it is difficult to trace the steps by which this event is arrived at; and perhaps the whole is one of the much more celebrated battle of the Sagras, which Justin connects with the fall of Siris; while other authors would bring it down to a much later period. [SAGRAS.] According to all accounts, that famous battle, in which it is said that 120,000 Crotonians were defeated by 10,000, or at most 15,000, of the Locrians and Rhegians, inflicted for a time a severe blow upon the prosperity of Crotona, but Strabo is certainly in error in representing that city as never recovering from its effects. [CROTONE.] Justin, on the contrary, describes the period of depression consequent on this disaster as continuing only till the time of Pythagoras (xx. 4); and it is certain that in the days of that philosopher, Crotona, as well as the neighbouring Achaean cities, appears in a state of great prosperity.

It was about the year B.C. 530 that the arrival of Pythagoras at Crotona gave rise to a marked change in the cities of Magna Graecia. The extraordinary influence which he speedily acquired, was not confined to that city, but extended to Sybaris and Metapontum also, as well as to Rhegion and Taras. It was also a period of disorder and confusion throughout the cities of Magna Graecia, from which the latter did not fully recover for a considerable period. (Pol. iii. 39; Justin, xx. 4; Iamb. Vit. Pyth. 258—264; Porphyr. I. P. 54—58.)

It was apparently before the expulsion of the Pythagoreans, and while their influence was still paramount at Crotona, that the final contest arose between that city and Sybaris, which ended in the total destruction of the latter, B.C. 510. On that occasion we are told that the Crotonians brought into the field 100,000 men, and the Sybarites not less than 300,000; and though these numbers cannot be received as historically accurate, they sufficiently prove the opinion entertained of the opulence and power of the rival cities. The decisive victory of the Crotonians on the banks of the river Tras is followed by the capture and total destruction of Sybaris,—an event which seems to have produced a profound sensation in the Hellenic world (Heron. vi. 21), and must have caused a great change in the political relations of Magna Graecia. Unfortunately, we have no means of tracing these; we know only that a part of the surviving Sybarites took refuge in the colonial cities of Liris and Sculthri, while another portion settled themselves on the banks of the Tras, where they maintained themselves for a considerable period. (Herod. l.c.; Strab. vi. pp. 263, 264.)

The civil dissensions arising from the expulsion of the Pythagoreans were no doubt perhaps of less consequence than the event of the remarkable circumstance (which we are otherwise at a loss to account for), that none of the states of Magna Graecia sent assistance to the Greeks at the
time of the Persian invasion. It is still more remark-
able, that even when the Athenians and Lacedaemoni-
s sent an embassy to Cyrus, to prevent any pro-
fitable operations, we do not hear of any similar appli-
cation to the Greek cities in Southern Italy.

While the Achaean cities were thus declining from
their former prosperity, Rhegium, the name of which
is scarcely mentioned in history at an earlier period,
was raised to a position of considerable power and
importance under the rule of the despot Anaxilus
(n.c. 496–476), who united under his authority
the city of Messana also, on the opposite side of
the straits, and thus became involved in connection
with the politics of Sicily, which had been hitherto
very distinct from those of Magna Graecia. Micythius,
the successor of Anaxilus in the government of Rhegium,
was remarkable as the founder of the colony of
Pyxus (afterwards called Buxentum), on the Ty-
rhenian sea, in n.c. 471. (Diod. xi. 59.) This
was the latest of the Greek settlements in that quarter.

About the same time (n.c. 473) we find mention
of a disastrous defeat, which must, for a time, have
given a severe check to the rising power of the
Tarentines. That people appear to have taken little
part in the disputes or contests of their Achaean
neighbours; but after their ineffectual attempt to op-
pose the foundation of Metapontum, (Metapontum),
would seem to have been principally engaged in
extending their commerce, and in wars with the neigh-
bouring barbarians. Here they found, among
the Iapygians or Messapians, a more formidable
opposition than was encountered by the other Greek
cities. After repeated contests, in many of which
they had come off victorious and reduced many of
the Iapygian towns, the Tarentines were defeated
in a great battle by the Iapygians, with such heavy
loss that Herodotus tells us it was the greatest
slaughter of Greek citizens that had happened
within his knowledge. Three thousand Iapygian
auxiliaries, who had been sent to the support of the
Tarentines, perished on the same occasion. (Herod.
vi. 170; Diod. xi. 52.)

The period between the Persian and Peloponnesian
Wars witnessed the establishment of the two latest
of the Greek colonies in Southern Italy—Thurii
and Heraclea. Both of these were, however, but
a kind of renewal of previously existing settlements.
The city of Gelon, destroyed by the n.c. 443, by a body of
colouits, of whom the Athenians seem to have taken
the lead, but which was composed, in great part,
of settlers from other states of Greece [Thurii]; with
whom were united the remaining citizens of Sybaris,
and the new colony was established within two miles
of the site of that city. The new settlement rose
rapidly to prosperity, but was soon engaged in war
with the Tarentines for the possession of the vacant
district of Siris. These hostilities were at length terminated by a compromise, according
to which the two rival cities joined in establishing a
new colony, three miles from the site of the ancient
Siris, to which they gave the name of Heraclea,
(n.c. 432. (Strab. vi. p. 264; Diod. xii. 23, 36.)
But though thus founded by common consent, the
Tarentines seem to have had much the largest share
in its establishment, and Heraclea was always con-
sidered as a colony of Tarentum.

During the Peloponnesian War the cities of Magna
Graecia seem to have studiously kept aloof from
the contest. Even when the Athenian expedition to
Italy still endeavoured to preserve their neutrality,
and refused to admit the Athenian forces within their
walls, though they did not, as we may infer, oppose
their progress. (Thuc. vi. 44; Diod. xiii. 3.) At
a later period, however, the Thurians (among whom
there was naturally an Athenian party) and the
Metapontines were induced to enter into a regular
alliance with Athens, and supplied a small force to
their assistance. (Thuc. vii. 33, 35; Diod. xiii. 11.)

At this period the cities of Magna Graecia seem
to have been still in a prosperous and flourishing
condition; but it was not long after that they began
to feel the combined operation of two causes which
mainly contributed to their decline. The first
danger which threatened them was from the south,
where Dionysus, tyrant of Syracuse, after having
established his power over the greater part of Sicily,
besought to extend it into Italy also. Hitherto
the cities of Italy had kept aloof in great measure
from the revolutions and wars of the neighbouring
island: Rhegium and Locri alone seem to have
maintained closer relations with the Sicilian Greeks.
The former, from its Chalcidian origin, was naturally
friendly to the colonies of the same race in Sicily;
and when Dionysius turned his arms against the
Chalcidian cities, Naxos, Catana, and Leontini, he at
once brought on himself the enmity of the Rhegiens.
Hence, when he soon after applied to conclude a
matrimonial alliance with them, the proposal was
indignantly rejected. The Locrians, on the other
hand, readily accepted his offer, and thus secured
the powerful assistance of the despot in his subse-
quently wars. (Diod. xiv. 44, 107.) From this time
his efforts were mainly directed to the humiliation
of Rhegium and the aggrandisement of the Locrians.
His designs in this quarter soon excited so much
alarm, that, in n.c. 393, the Italian Greeks were
induced to conclude a general league for their
mutual protection against the arms of Dionysius on
the one side, as well as those of the Lucanians on
the other. (Id. 91.) But the result was far from
successful. The combined forces of the confedere-
rates were defeated by Dionysius in a great battle
at the river Helleporus or Helorus, near Caelonia,
n.c. 389; and this blow was followed by the cap-
ture of Caelonia itself, as well as Hippomos, both
of which places were reduced to a state of dependence
on Locri. Not long after, the powerful city of
Rhegium was compelled to surrender, after a siege
of nearly eleven months, b.c. 387. (Diod. xiv.
103–108, 111.)

While the more southerly cities of Magna Graecia
were suffering thus severely from the attacks of
Dionysius, those on the northern frontier were
menaced by a still more formidable danger. The
Lucanians, a Sabellian race or branch of the Sami-
ote stock, who had pressed forward into the territory
of the Oenotrians, and had gradually expelled or re-
duced to subjection the tribes of that people who
inhabited the mountain districts of the interior,
next turned their arms against the Greek cities on
the coast. Poseidonia, the most northerly of these
settlements, was the first which fell under their
yoke (Strab. vi. p. 294); and though we cannot fix
with accuracy the date of its capture, it is certain
that this took place some time before we find them
engaged in wars with the cities on the Tarentine
gulf. If, indeed, we can trust to the uncertain
chronology of some of these events, they would seem
to have been already engaged in hostilities with the

MAGNA GRAECIA.

rising colony of Taurii at an early period of its existence (Polyb. ii. 10); but it was not till after 400 B.C. that their power assumed a formidable aspect towards the Greeks in general. The territory of Taurii was the first object of their hostilities, but the other cities were not intrinsically to their danger; and hence the general league of the Italian Greeks in B.C. 393, as already mentioned, was directed as much against the Lucanians as against Dianysians. Unfortunately, their arms met with equal success in both quarters; and in B.C. 390 the confederate forces were defeated by the Lucanians with great slaughter near Lais. (Diod. xiv. 101, 102.) That city had already fallen into the hands of the invaders, who now pressed on towards the south, and seem to have spread themselves with great rapidity throughout the whole of the Bruttian peninsula. Here they became so formidable that the younger Dionysians was compelled to abandon the policy of his father (who had counted the alliance of the Lucanians, and even rendered them active assistance), and turn his arms against them, though with little effect. A period of great confusion and disorder appears to have ensued, and the rise of the Bruttian people, which took place at this period (B.C. 356), though it in some measure broke the power of the Lucanians, was so far from giving any relief to the Greek cities that they soon found the Bruttians still the most formidable neighbours. The flourishing cities of Taurina and Hipponium were conquered by the barbarians (Diod. xvi. 15; Strab. vi. p. 256): Rhegium and Locri, though they maintained their nationality, suffered almost as severely from the oppressions and exactions of the younger Dionysians; while Crotona, long the most powerful city in this part of Italy, seems never to have recovered from the blow inflicted on it by the elder despot of that name (Crotona) and was with difficulty able to defend itself from the repeated attacks of the Bruttians. (Diod. xiii. 3, 10.)

Meanwhile, the Lucanians had turned their arms against the more northerly cities on the Tarentine gulf. Here the Thurians seem, as before, to have borne the brunt of the attack; but at length Tarentum itself, which had hitherto stood aloof, and had only not even joined in the league of B.C. 339, was compelled to take up arms in its own defence. The Tarentines could have suffered comparatively little from the causes which had so severely impaired the prosperity of the other cities of Magna Graecia; and Tarentum was undoubtedly at this time the most opulent and powerful of the Greek cities in Italy. But its citizens were already enervated by indolence and luxury; and when they found themselves threatened by the forces of the Lucanians, combined with their old enemies the Messapians, they mistrusted their own resources, and applied to their parent city of Sparta for assistance. Archidamus, king of Sparta, accepted the invitation, and proceeded to Italy with a considerable force, where he appears to have carried on the war for some years, but was finally defeated and slain in a battle near Manduria, B.C. 328. (Diod. xxi. 274.) A few years later, B.C. 322, Alexander King of Ephesus was invited over to Italy for the same purpose. The history of his expedition is, unfortunately, very imperfectly known to us; though it is clear that his military operations were attended with much success, and must have exercised considerable influence upon the fortunes of the Greek cities. Though invited, in the first instance, by the Tarentines, he subsequently quarrelled with that people, and even turned his arms against them, and took Herculane, their colony and dependency. At the same time he defeated the combined forces of the Lucanians and Bruttians in several successive battles, retook Terasum, Consentia, and several other towns, and penetrated into the heart of Bruttium, where he was slain by a Lucanian exile, who was serving in his own army, B.C. 326. (Liv. viii. 17, 24; Justin, xii. 2.)

After his death, the wars between the Tarentines and Lucanians appear to have continued with little interruption; though we have no further account of them till the year 305 B.C., when the former people again sued to Sparta for assistance, and Cleonymus, the uncle of the Spartan king, repaired to Tarentum with a large mercenary force. So formidable did this armament appear that both the Messapians and Lucanians were speedily induced to sue for peace; while Metapontum, which, for some reason or other, had opposed the views of Cleonymus, was reduced by force of arms. (Diod. xx. 104.)

The Spartan prince, however, soon alienated all his allies by his luxury and rapacity, and quit Italy the object of universal contempt. We have very little information as to the wars of Achaeoles in Bruttium; though we learn that he made himself master of Hipponium and Crotona, and occupied the latter city with a garrison. It is evident, therefore, that his designs were directed as much against the Greek cities as their barbarian neighbours; and the alliance which he concluded at the same time with the Ionians and Peeneans could only have been with a view to the humiliation of Tarentum. (Diod. xxi. 2, 8.) His ambitious designs in this quarter were interrupted by his death, B.C. 280.

Only a few years later than this took place the celebrated expedition of Pyrrhus to Italy (B.C. 281—274), which marks a conspicuous era in the history of Magna Graecia. Shortly before that event, the Thurians, finding themselves hard pressed and their city itself besieged by the Lucanians, had concluded an alliance with the Romans, who raised the siege and defeated the assailants, B.C. 282. (Appian, Syr. ii. 13.) This was the first occasion that brought the Roman power down to the shores of the Tarentine gulf; and here they almost immediately after came into collision with the Tarentines themselves. {Tarentum.} That people, conscious of their inability to resist the power of these new enemies, now invoked the assistance of Pyrrhus, king of Epirus, at the same time that they concluded a league with the Lucanians and Samnites, so long the invertebrate enemies of Rome. Hence, when Pyrrhus landed in Italy, he found himself supported at the same time by all the remaining Greek cities in that country, as well as by the barbarian nations with whom they had been so long at war. It is unnecessary to enter into a detailed account of his campaigns; notwithstanding his first successes, his alliance proved of no real advantage to the Greeks, while his visit to Sicily in B.C. 278, and his final defeat at the river Beneventum, B.C. 274, at the mercy of the victorious Romans. Tarentum itself was taken by the consuls in B.C. 272. Crotona and Locri had previously fallen into the hands of the Romans; while Rhegium, which was held by a revolted body of Campanian troops, originally placed there as a garrison, was finally reduced to subjection in B.C. 271.
There can be no doubt that the cities of Magna Graecia had suffered severely during these wars: the foreign troops placed within their walls, whether Romans or Carthaginians, were often the victims of similar excesses; and the garrisons of Pyrrhus at Locri and Tarentum were guilty of excesses and cruelties which almost rivalled those of the Campanians at Rhegium. In addition to the loss of their independence, therefore, it is certain that the war of Pyrrhus inflicted a mortal blow on the prosperity of the few Greek cities in Southern Italy which had survived their long-continued struggles with the Lucanians and Bruttians. The decayed and enfeebled condition of the once powerful Crotone (Liv. xxvii. 50) was undoubtedly common to many of her neighbours and former rivals. There were, however, some exceptions; Heraclea especially, which had earned the favour of Rome by a timely submission, obtained a treaty of alliance on unusually favourable terms (Cic. pro Balb. 22), and seems to have continued in a flourishing condition.

But the final blow to the prosperity of Magna Graecia was inflicted by the Second Punic War. It is probable that the Greek cities were viewed with unfavourable eyes by the Roman government, and were naturally desirous to recover their lost independence. Hence they eagerly seized the opportunity afforded by the victories of Hannibal, and after the battle of Cannae we are told that almost all the Greek cities on the S. coast of Italy (Grecorum pontes ferme orae, Liv. xxiii. 61) declared in favour of the Carthaginian cause. Some of these were, however, overawed by Roman garrisons, which restrained them from open defection. Tarentum itself (still apparently the most powerful city in this part of Italy) was among the number; and though the city itself was betrayed into the hands of the Carthaginian commander, the citadel was still retained by a Roman garrison, which maintained its footing until the city was recovered by Fabius, n. s. 209. (Liv. xxv. 8—11, xxxvi. 15, 16.) Tarentum was on this occasion treated like a captured city, and plundered without mercy, while the citizens were either put to the sword or sold as slaves. Metapontum was only saved from a similar fate by the removal of its inhabitants and their property, when Hannibal was compelled to abandon the town; and at a later period of the war Terina was utterly destroyed (Liv. xxxvi. 61). Lucrini (Liv. xxvii. 51; Strab. vi. 256.) Locri and Crotone were taken and retaken: Rhegium alone, which maintained its fidelity to Rome inviolate, though several times attempted by a Carthaginian force, seems to have in great measure escaped the ravages of the war.

It is certain that the cities of Magna Graecia never recovered from this long series of calamities. We have very little information as to their condition under the government of the Roman Republic, or the particular regulations to which they were subjected. But it is probable that, until after the complete subjugation of Greece and Macedon, they were looked upon with a jealous eye as the natural allies of their kinsmen beyond the seas (Liv. xxxi. 7); and even the colonies, whether of Roman or Latin citizens, which were settled on the coasts of Southern Italy, were probably designed rather to keep down the power of Rome than to strengthen the exhausted population. One of these colonies, that to Posidonia, now known as Paestum, had been established at a period as early as B. C. 273 (Liv. Epit. xiv.; Vell. Pat. i. 14); and Brundisium, which subsequently rose to be so important a city, was also settled before the Second Punic War, n. c. 244. (Vell. Pat. i. c.; Liv. Epit. x. 13.) But, with the exception of the colonists in Bruttium and the coast of Lucania, Bruttium, and Calabria, date from the period subsequent to that war. Of these, Buxentum in Lucania and Tempa in Bruttium were settled as early as n. c. 194; and in the same year a body of Roman colonists was established in the once mighty Crotona. (Liv. xxxiv. 47.) Shortly afterwards two other colonies were settled, one at Thurii in Lucania, in n. c. 193, and the other at Hippocomitium or Vibo, in n. c. 192. (Liv. xxxiv. 53, xxxv. 9, 40.) The last of these, which under the name of Vibo Valentia became a flourishing and important town, was the only one of these colonies which appears to have risen to any considerable prosperity. At a much later period (n. c. 123), the two colonies sent to Sycylacum and Tarentum, under the names of Colonia Minervia and Neptunia (Vell. Pat. i. 15), were probably designed as an attempt to recruit the sinking population of those places.

But all attempts to check the rapid decline of this part of Italy were obviously unsuccessful. It is probable, or indeed almost certain, that malaria began to make itself severely felt as soon as the population diminished. This is noticed by Strabo in the case of Posidonia (v. p. 251); and the same thing must have occurred along the shores of the Tarentine gulf. Indeed, Strabo himself tells us, that, of the cities of Magna Graecia which had been so famous in ancient times, the only ones that retained any traces of their Greek civilisation in his day were Rhegium, Tarentum, and Neapolis (vi. p. 253); while the great Achaean cities on the Tarentine gulf had almost entirely disappeared. (Ib. p. 262.) The expressions of Cicero are not less forcible, that Magna Graecia, which had been so flourishing in the days of Pythagoras, and abounded in great and opulent cities, was in his time sunk into utter ruin (nunc quaedam deleta est, Cic. de Amic. 4, Titu. iv. 1). Several of the towns which still existed in the days of Cicero, as Metapontum, Heraclea, and Locri, gradually fell into utter insignificance, and totally disappeared, while Tarentum, Crotona, and a few others maintained a sickly and feeble existence through the middle ages down to the present time.

It has been already observed, that the name of Magna Graecia signifies several territorial designation; nor did the cities which composed it ever constitute a political unity. In the earliest times, indeed, the difference of their origin and race must have effectually prevented the formation of any such union among them as a whole. But even the Achaean cities appear to have formed no political league or union among themselves, until after the troubles growing out of the expulsion of the Pythagoreans, or on which occasion they are said to have applied to the Achaean Greeks for their arbitration, and to have founded by their advice a temple of Zeus Honorus, where they were to hold councils to deliberate upon their common affairs and interests. (Pol. ii. 39.)

A more comprehensive league was formed in B. C. 553, for mutual protection against the attacks of Dionysius on one side, and the Lucanians on the other (Diod. xiv. 91); and the cities which composed it must have been of the kind of general council or place of meeting. It is probable that, on this occasion that the general meetings of the Italian Greeks, alluded to by Strabo (vi. p. 280), were first instituted; though it is highly improbable
that the Tarentine colony of Hierolea was situated in the first instance for the place of assembly, as the Tarentines seem at first to have kept aloof from the contest, and it is very doubtful whether they were included in the league at all. But it was natural that, when the Tarentines assumed the leading position among the allied cities, the councils should be transferred to their colony of Hierolea, just as Alexander of Ephesus afterwards sought to transfer them from the confluence of the rivers Achelus and the river Thasius, in the Thasian territory, as a mark of unity towards the Tarentines. (Strab. l. c.) [E. H. B.]

**MAGNATA.**

**MAGNESIA, MAGNETES.** [THESALIA.]

**MAGNESIA (Μαγνησία; Eth. Μαγνησία.)** 1. A city in Ionia, generally with the addition πόλις Μαγνησία or Σιπύρι (ad Sipyrum), to distinguish it from the Lydian Magnesia, a considerable city, situated on the slope of mount Thorax, on the banks of the small river Letana, a tributary of the Maeander. Its distance from Miletus was 120 stadia or 15 miles. (Strab. xiv, pp. 636, 647; Plin. v. 31.) It was an Aeolian city, said to have been founded by Magnesians from Europe, in the east of Thessaly, who were joined by some Cretans. It soon attained great power and prosperity, so as to be able to cope even with Ephesus. (Callinus, op. cit. 647.) At a later time, however, the city was taken and destroyed by the Cimmerians; perhaps about n. c. 726. In the year following the deserted site was occupied, and the place rebuilt by the Milesians, according to Athenaeus (xii. p. 523), by the Ephesians. Thebes in its decline took up its residence at Magnesia, the town having been assigned to him by Artaxerxes to supply him with bread. (Nepos, Theist. 10; Isod. xii. 57.) The Peonan satrap of Lydia also occasionally resided in the place. (Herod. i. 161, iii. 122.) The territory of Magnesia was extremely fertile, and produced excellent wine, figs, and cucumbers (Athien. p. 29. ii. p. 59, iii. p. 78.) The town contained a temple of Dindymene, the mother of the gods; and the wife of Themistocles; or, according to others, his daughter, was priestess of that divinity; but, says Strabo (p. 647), the temple no longer exists, the town having been transferred to another place. The town, on the western side, was most remarkable for its temple of Artemis Leucophryene, which in size and in the number of its treasures was indeed surpassed by the temple of Ephesus, but in beauty and the harmony of its parts was superior to all the temples in Asia Minor. The change in the site of the town alluded to by Strabo, is not noticed by any other a thor. The temple, as we learn from Vitruvius (vi. 6, 6., 13.), was built by the architect Hermogenes, in the Ionian style. In the time of the Romans, Magnesia was added to the kingdom of Pergamus, after Antiochus had been driven eastward beyond Mount Taurus. (Liv. xxxvi. 45, xxxviii. 13.) After this time the town seems to have decayed, and is rarely mentioned, though it is still noticed by Pline (v. 310 and Tacitus (Ann. iv. 55). Hierocles (p. 659) ranks it among the bishoprics of Asia, and later documents seem to imply that at one time its name was written Magnesia ad Sipyrum. (Concil. Constantin. iii. p. 666.) The existence of the town in the time of the emperors Aurelius and Gallienus is attested by coins.

Formerly the site of Magnesia was identified with the modern Güzelhisar; but it is now generally admitted, that Bakür-bazar, where ruins of the temple of Artemis Leucophryene still exist, is the site of ancient Magnesia. (Leake, Asia Minor, pp. 242, foll.; Arundell, Seven Churches, pp. 58, foll.; Cramer, AsiaMinor, vol. i. p. 459, foll.)

**COIN OF MAGNESIA AD MAEANDRUM.**

2. A town of Lydia, usually with the addition πόλις Μαγνησία (ad Sipyrum), to distinguish it from Magnesia on the Maeander in Ionia, situated on the north-western slope of Mount Sipyros, on the southern bank of the river Hermus. We are not informed when or by whom the town was founded, but it may have been a settlement of the Magnesians in the east of Thessaly. Magnesia is most celebrated in history for the victory gained under its walls by the two Scipios in n. c. 190, over Antiochus the Great, whereby the king was for ever driven from Western Asia. (Strab. xiii. p. 622; Plin. ii. 33; Polyb. v. 2. § 16, viii. 17, § 16; Seycler, p. 97; Liv. xxxvii. 37, foll.; Tac. Ann. ii. 47.) The town, after the victory of the Scipios, surrendered to the Romans. (Appian, Syr. 35.) During the war against Mithridates the Magnesians defended themselves bravely against the king. (Paus. i. 20. § 3.) In the reign of Tiberius, the town was nearly destroyed by an earthquake, in which several other Asiatic cities perished; and the emperor on that occasion granted liberal sums from the treasury to repair the loss sustained by the inhabitants (Strab. xiii. p. 579; xiii. p. 622; Tac. l. c.) From coins and other sources, we learn that Magnesia continued to flourish down to the fifth century (Hieroc. p. 660); and it is often mentioned by the Byzantine writers. During the Turkish rule, it once was the residence of the Sultan; but at present it is much reduced, though it preserves its ancient name in the corrupt form of Memiș. The ruins of ancient buildings are not very considerable. (Clason, Travels in Asia, ii. p. 302; Köppel, Travels, ii. p. 295.) The accompanying coin is remarkable by having on its obverse the head of Cicero, though the reason why it appears here, is unknown. The legend, which is incorrectly figured, should be, ΜΑΡΚΟΣ ΤΤΛΙΟΣ ΚΙΚΕΡΩΝ. [L. S.]

**COIN OF MAGNOPOLIS.**

**MAGNOKPOLIS (Μαγνόπολις), a town in Pontus, at the confluence of the rivers Lykus and Iris, was founded by Mithridates Eupator, who called it Eugytoria; but it was completed by Pompey the Great, who changed its name into Magnopolis (Strab. xii. p. 556). The town seems to have fallen into
Decay at an early period, as it is not mentioned by any late writer. Appian ("Mithrid. 78, 115") speaks of it under both names, Eupatoria and Magnopolis, and Strabo in one passage (xix. p. 560) speaks of it under the name of Megapolis. Ruins of the place are said to exist some miles to the west of Sommiae, at a place called "Boglias Bianco Kaleh." (Hamilton, "Researches," p. 346.)

[O. S.]

**MAGNUS PROMONTORIUM**, a promontory on the west coast of Lasitania (Mela, iii. 1 § 6), probably the same which Strabo (iii. p. 151) and Ptolemy ii. 5 § 1) calls "Βαρδάθων ἄκρα," near the mouth of the Tagus. The passage in Strabo is corrupt; but according to the correction of Cony, approved of by Grokurd, the promontory was 210 stadia from the mouth of the Tagus, which makes it correspond with *C. Espichel.* Pliny also calls it Magnum or Olicophyllum, from the town in its vicinity, but most probably confounds it with the Prom. Artabrum, on the NW. of the peninsula (iv. 21. s. 35).

**MAGNUS PROM. MAURETANIAE. [MAURETANIA.]**

**MAGNUS PORTUS.** 1. (Πόρτος μάγος, Ptol. ii. 4 § 7; comp. Marcian. p. 41), a port-town of Hispana Baetica, between the town Abdara and the Prom. Cardidemi.

2. (Μέγας λύβρις, Ptol. ii. 6 § 4), a bay on the coast of the Gallacii Lucenses, which is evidently the same as the Artaruber Sinus. [Vol. I. p. 226, b.]

3. (Μέγας λυβρις, Ptol. ii. 3 §§ 4 33), a harbour in Britain, opposite the island of Vectis, corresponds to Portsmouth.

4. (Πόρτος Μάγος, Ptol. iv. 2 § 3; Mela, i. 5; Plio. v. 2; It. Anton. p. 13), a port-town of Maureriana Caesariensis, on the road between Gilva and Qunza, described by Pliny as "civitas Romanorum opulentissima." It is identified by Forstiger with Oman, of which the harbour is still called *Mara-el-Kibir,* i.e., the great Harbour.

5. (Μέγας λύβρις, Ptol. iv. 6 § 6), a port on the west coast of Libya Interior, between the mouth of the river Daraurus and the promontory Rysadium.

**MAGNUS SINUS (ο μεγας κόλπος, Ptol. vii. 2. §§ 3 5; Aetham. i. p. 55), the great gulf which runs up to the middle of the present kingdom of Ava, and is known by the name of the Gulf of Siam. The ancient geographers correctly placed China on the east of this gulf, though they had no very accurate notions relative to its latitude or longitude. On the west side was the Aurea Chersonesus.** [V.]

**MAGNO. [Baleares, p. 374, a.]

**MAGON (ο Μαγων, Arrian, Ind. c. 4), a river mentioned by Arrian as flowing into the Ganges on its northern side. It has been conjectured that it is the same as the present Ramguma.** [V.]

**MAGONTIAM. [MOGANTIAM.]**

**MAGORAS, a river of Syria, under mount Libanus, mentioned by Pliny (v. 20) apparently be-
was made their capital after their evacuation (Josh. x. 16–28.) It is placed by Eusebius (Onomast., s. v.) 8 miles east of Eleutheropolis.

[ETHIOPIA.] [G. W. J.]

MALA (Māla, Mādp), a town in Cocius, which Sicylon (p. 32), in contradiction to other writers, makes the birthplace of Melina. [E. B. J.]

MALACA (Mālāca, Strab.; Pro!. ii. 4. § 7; Mahden, S. B. v. Elh, Malacrens; Malaga), an important town upon the coast of Hispania Baetica, east of Calpe, which was equidistant from Gadesia and Malaca. (Strab. iii. p. 156.) According to the Antonine Itinerary (p. 419), the distance from Gadesia to Malaca was 145 miles; according to Strabo (iii. p. 140) the distance from Gadesia to Calpe was 750 stadia. Malaca stood upon a river of the same name, now Guadalmedina. (Avien. Orb. Mar. 426; Malaca cum fluvio, Plin. iii. 1. s. 3.) Strabo says (l. c.) that Malaca was built in the Phoenician fashion, whence we may conclude that it was a Phoenician colony. According to some modern writers have supposed that the name was derived from the Phoenician word mailea, "royal;" but Hamboldt says that Malaca is a Basque word, signifying "the side of a mountain." Under the Romans it was a federata civitas (Plin. l. c.), and had extensive establishments for salting fish. (Strab. l. c.) Avienus says (l. c.) that Malaca was formerly called Maenaca; but Strabo had already noticed this error, and observed not only that Maenaca was farther from Calpe, but that the ruins of the latter city were clearly Hellenic. Malaca is also mentioned in Strab. iii. pp. 158, 161, 163; Hirt. B. Mar. 46; Geogr. Rav. iv. 42. There are still a few remains of Roman architecture in Malaga.

MALACATH (Mālācath), a city of Libya Interior, which Perseus (iv. 6. § 25) places in the country above the Niger, in E. long. 20° 20', and N. lat. 20° 15'. [E. B. J.]

MALAAE. [MALAE.]

MALAE COLON (Malaisio, or Malaeus kalow), Ptol. vii. 2. § 5), a promontory on the southern coast of the Golden Chersonessus. Its exact position cannot be determined, but it was probably along the Straits of Malacca.

MALAXANTIUS (ο Malauxartos, Arrian, Ind. o. 4.), a small tributary of the Copran, or river of Kibid, perhaps now the Panjgur. [V.]

MALANA (Māla, Arrian, Ind. c. 25), a cape which enters the Indian Ocean, and forms the western boundary of the Oreitas (one of the sea-coast tribes of Geonisia) and the Ichthyophagi. There is no doubt that it is the same as the present C. Malan in Mākran, the measurements of Nearcyus and of modern navigators corroborating remarkably. (Vincent, Voy. of Nearcyus, vol. i. p. 216.) [V.]

MALAADGA (Māla, Ptol. vi. 1. § 92), the chief town of the Arvanni, a tribe who inhabited the eastern side of Hindostan, below where the Tynida (now Kistna) flows into the sea. It has been supposed that it is the same place as the present Maldeh, but it may have been a little higher up near Nichla. [V.]

MALAI (Māła, Ptol. iv. 7. § 10, com. Māla), probably answers to the modern Berbard, the chief town of the modern Somal, who inhabit the western coast of Africa from the straits of Ben-el-Mandeb to Cape Guardafui. This district has in all times been the seat of an active commerce between Africa and Arabia, and Malai was one of the principal marts for guns, myrrh, frankincense, cattle, slaves, gold-

MALA. [Māla.]

MALATA, according to an inscription, or MALTA, according to the Peutinger Table, a place in Pannonia Inferior, on the Danube. As the inscription was found at Peterswarden, Malata was perhaps situated at or near the latter place. (Geor. Rav. iv. 19; Marsilius, Danub. ii. p. 118, tab. 47.) [L. S.]

MALCOAE. [Mondovo.]

MALA, a town in the district of Aegystia in Arcadia, the inhabitants of which were transferred to Megalopolis upon the foundation of the latter city. (Paus. viii. 27. § 4.) Its territory was called the Malæatis (ἡ Malæatis). Xenophon describes Leucra as a fortress situated above the Malæatis; and as Leucra was probably at or near Lycourghus, Malæa must have been in the same neighborhood, [Leuctra.]. Leukre, however, connecting Malæa with the river MALUS (Μάλυς, Paus. viii. 35. § 1), a tributary of the Alpheius, places the town on this river, and on the road from Megalopolis to Carausium (Leake, Peloponnesicus, p. 2418); but this is not probable. The place MONE (Μόνες) mentioned by Xenophon (Hell. vii. 1. § 28) is probably a corrupt form of Malæa. (Curtius, Peloponnes., vol. i. p. 336.)

MALAE (Mǎla, Steph. B. s. r. et alii: Malæa, Herod. i. 82; Strab. viii. p. 568), still called Mando, a promontory of Lacenia, and the most southerly point in Greece with the exception of Tarsamum. For details see Vol. ii. p. 114.

MALAE (Māla, Theod. iii. 4. 6; Xen. Hell. i. 6. §§ 26, 27; Māla, Strab. xiii. p. 617; Māla, Ptol. v. 2; see Schol. ad Aristoph. Rov. p. 33), the southernmost point of the island of Lesbos, reckoned by Strabo to be 70 stadia distant from Mytilene. 560 stadia to Cape Siguniarn, and 340 from Methyas. Immediately opposite, on the mainland, were the point of CANE and the islands of Arsides [see those articles]. The modern name of Malæa is Zeltuum Bonorum, or Cape St. Mary, and it is a high and conspicuous point at sea. Xenophon (l. c.) that the fleet of Callirrhachus occupied this station before the sea-fight off Argoeasp. There is some obscurity in Xenophon’s topography in reference to this place; and the Malæa of Thucydides (l. c.) can hardly have been called bay, unless there is some error in his relation. He says distinctly (c. 4.), that Malæa lay to the north of Mytilene, and (c. 6.) that the Athenians had their market there, while besieging the city. The first statement is inconsistent with the position of Cape St. Mary, and the second with its distance from Mytilene. Possibly the Malæa of Thucydides had some connection with the sanctuary of Apollo Maleai (Strab. viii. 324), with that of Arnos, and Peppa, and Thrallids’ Greece, vol. iii. p. 173.) [J. S. H.]

MALAEA (Māla, or Malaeae, Ptol. viii. 4. § 8), a large group of mountains in the southern part of the ancient Taprobane or Ceylon. There can be little doubt that it comprehends the mountain tract now known by the name of Néxera Ellia, one of the chief mountains of which is called, from the Arabs, Adam’s Peak, by the natives Serpaña. Ptolemys states that it is the water-shed of three rivers, which he calls the Malace, the Aranuus, and the Baraces, and describes with remarkable truth the present condition of the island, when he adds that in the low ground below it, towards the sea, are the pastures of the elephants. Thiny speaks of a mean-
fain in the interior of India, which he calls Mens Maleus (vi. 19, s. 29). It has been supposed that he may refer to the western Ghats; but as Malens is evidently derived from the Sanscrit mala, a mountain, this identification cannot be, we think, be maintained.

MALECECA. [Lusitania, p. 220, a.]

MALENE (Malian), a place near Atarnea, where Histiaeus was defeated by the Persians, is not mentioned by any ancient author except Herodotus (vi. 29).

[1 L. S.]

MALETHIBALON (Malieobaladon, Ptol. iv. 2. § 13; Nobbe, ad loc. reads Malieobaladon), a mountain of Mauretania Caesariensis, which is identified with Jebel Nadur in the Sahara. (Shaw's Travels, p. 56.)

[2 E. B. J.]

MALEVENTUM. [Benefentum]

MALEMUM P. (Malavi Cenor, Ptol. vii. i. § 4), a promontory which forms the southern termination of Nystaresus (now Cuph). It separated the gulf of Canthi (the Rann of Cuph) and Barygaza (Cambay).

[V.]

MALIA (Malaki; Ech. Maxeis), a town in Hispania Tarraconensis, near Numantia, but of which nothing more is known. (Appian, Hist. 77.)

MALIACUS SINES (§ Maliacus caudos; Miyoeis, Aenianum, Trieri, Lucania, th. iii. 96; Strab. iv. 403; § Miyoeis caudos, Herod. iv. 33; Polyb. iv. 41; Gulf of Zituni), a long gulf of the sea, lying between the southern coast of Thessaly and the northern coast of the Oeci Epirensium, and which derived its name from the country of the Malians, situated at its head. At the entrance of the gulf is the northwestern promontory of Euboea, and the islands Lichades, and into its furthest extremity the river Spercheius flows. The gulf is called LAMICUS SINES (§ Lamieus caudos) by Pausanius (i. 4. § 3, vii. § 15, § 2, x. § 2), from the important town of Lamia; and in the same way the gulf is now called Zituni, which is the modern name of Lamia. Livy, who usually terms it Malicianus Sines, gives it in one place the name of Aenianum Sines (xxvii. 5), which is borrowed from Polybius (i. 43). (Comp. Leake, Northern Greece, vol. ii. p. 4.)

MALIARGA (Malidhara, Ptol. vii. 14), a place of considerable commerce in the territory of the Arvans, on the western coast of the Bay of Bengal, between the mouths of the Godavari and the Kistna. It is represented now by either Malagar or by the ruins of Manturipara.

[V.-J]

MALICHUS INSULAE (Malichus Insul, Ptol. vi. 7. § 44), two islands in the Sinus Arabicus, off the south coast of Arabia Felix. One of them is the modern Sookar.

MALIS (§ Malis 9/; Majes, Herod. viii. 198; Ech. Malaeis, Miyoeis), a small district of Greece, at the head of the Malac gulf, surrounded on all sides by mountains, and open only in the direction of the sea. The river Spercheius flowed through it. The limits of Malis are fixed by the description of Herodotus. It extended a little north of the valley of the Spercheius to the narrowest part of the straits of Thermopylae. Anticyra was the northernmost town of the Malians (Herod. viii. 198); the boundary passed between Lamia and Anticyra. Antica was their southernmost town (vii. 176, 200). Inland, the Aenopea, the path over Mount Icza, by which the Persians turned the army of Leonidas, in part divided the territory of the Trachimian Malians from that of the

OCEANUS (vii. 217). A more particular description of the locality is given under THERMOPYLAE.

According to Stephanus B. (s. v. Malaeis), the Malians derived their name from a town Maleus, not mentioned by any other ancient author, said to have been founded by Malus, the son of Amphi- tyon. The Malians were reckoned among the Thes- salians; but although tributary to the latter, they were genuine Hellens, and were from the earliest times members of the Amphiyectonic council. They were probably Dorians, and were always in close connection with the acknowledged Doric states. Hercules, the great Doric hero, is represented as the friend of Ceys of Trachis, and Mount Oeta was the scene of the hero's death. Diodorus (xii. 59) even speaks of Trachis as the mother-town of Lacedemon. When the Trachians were pressed by their Ostaeon neighbours, about the commencement of the Peloponnesian War, they applied for assistance to the Spartans, who founded in consequence the colony of Heraclia near Trachis. (Thuc. iii. 92.)

Scylax (p. 24), who is followed by Diodorus (xvii. 11), distinguishes between the Malyeis and Malaeis, the former extending along the northern coast of the Malian gulf from Lamia to Euboea; but, as no other writer mentions these towns, they are probably referring to the Lycaonians, who were seated on the gulf of Calamaenae, called Tychaeis (Tychaeis), by Lucian (Hist. 306), the hyperborean oracles were sent from Dodona on their way to Delos, and that this Sacred City was the city Oeta mentioned by Stephanus B. The names of the Parali and Trachini sufficiently indicate their position. The Malians admitted every man to a share in the government, who either had served in a Phalanx (Aristot. Politi. iv. 10, § 10). In war they were chiefly famous as slingers and darters. (Thuc. iv. 100.)

TRACHIS was the principal town of the Malians. There were also Antiocyra and Anticyclea on the coast; and others, of which the names only are preserved, such as Colacea (Theopom. Op. Athen. vi. p. 254, l.), Arcosea (Lycophr. 903; Steph. B. a. s.), and Iera (Schol. in Lyc. L. c.; Steph. B. a. s.). (Miller, Doriana, vol. i. p. 50; Greece, vol. ii. p. 378; Leake, Northern Greece, vol. ii. p. 20.)

MALLAEA, MALLOEA, or MALLOEA, a town of southern Pheraihacia in Thessaly, perhaps represented in name by Malephas, which Leake conjectures to be a corruption of Malocea, with the addition of Augustus. But as there are no remains of antiquity at Malephas, Leake supposes Malocea to have occupied a height on the opposite side of the river, where are some vestiges of ancient walls. (Liv. xxxi. 41, xxxvi. 10, 13, xxviii. 25; Leake, Northern Greece, vol. iv. p. 311.)

MALLI (Malaeis, Arrian, Anab. vi. 7, 8, 14), the inhabitants of the south part of the district now known by the name of the Taphi. There was probably in ancient times a city from which they derived their name, though the name of the town is not given by ancient authors. (Arrian, I. c.; Strab.)
The people occupied the space between the Axios (Astita) and Hydros (Istria), which both enter the Thames at no great distance. There can be little doubt that the name represents at once the country and the town of the Malli, being itself derived from the Sassarec Mafia-sthani. Strabo speaks of Malli quorum Mons Mallas (vi. 17, s. 21). If his locality corresponds with that of the other geographers, the name might be taken from the mountain which was conspicuous there. It is not, however, possible from Pliny's brief notice, to determine anything of the position of the Malli. It was in this country, and not improbably in the actual town of the Malli (as Arrian appears to think) that Alexander was nearly slain in combat with the Indian tribes of the Punjab.

MALLUS (Mallaßos: Eth. Mallácttas), an ancient city of Cilicia, which, according to tradition, was founded in the Trojan times by the seafarers Mopsus and Amphialus. (Strab. vi. p. 675, &c.; Arrian, Anab. ii. 5.) It was situated near the mouth of the river Pyramus, on an eminence opposite to Messara, as we must infer from Curtius (iii. 7), who states that Alexander entered the town after throwing a bridge across the Pyramus. Mallus therefore stood on the eastern bank of the river. According to Seylax (p. 40) it was necessary to sail up the river a short distance in order to reach Mallus; and Mela (i. 13) also states that the town is situated close upon the river; whence Ptolemy (v. 8. § 4) must be mistaken in placing it more than two miles away from the river. Mallus was a town of considerable importance, though it does not appear to have possessed any particular attractions. Its port-town was Magara (Magara), though in later times it seems to have had a port of its own, called Portus Pullorum (Geogr. Nub. p. 195; Sacrat. Secret. Flid. ii. 4, 26, whence we learn that in the middle ages it continued to be called Malpus; comp. Callin. Progym. 13; Appian, Mithrid. 96; Dionys. Per. 875; Ptol. viii. 17. § 44; Plin. Hi. N. v. 22; Stad. Mar. M. §§ 151, 152; Leake, Asia Minor, pp. 216, &c.)

MALOFAS. [Methydium.]

MALVA. [Mullcha.]

MALUS. [Malla; Megalopolis.]

MAMAL (Mappa Kmo), a village of the Cassianites, south of Badei Regia, on the Arabian coast of the Red Sea. (Ptol. vi. 7. § 5) [Gasandes; Badei Regia.] It has been supposed to be represented by the modern town of Kyndoda, and to have been the capital of the Practical tribe of Comitata, mentioned by Arrian (Peripius, p. 15). [C. W.]

MANOKINTI. [Messana.]

MANOKYTHYM (Man teżyme: Eth. Manożyme), a city in the interior of the Brattian peninsula. It is noticed only by Stobe, who places it in the

COIN OF MALLUS IN CILICIA.

MANDALAE. [E. H. B.]

MAMMA (Mayur), a district in Byzantium, at the foot of a chain of lofty mountains, where in A.D. 536 the enmarch Soliman, with 10,000 Romans, inflicted a signal defeat upon 50,000 Moors. (Procop. B. v. i. 11; Corippus, Johannv. vi. 283; Theophan. p. 170; Anast. p. 61; Le Beau, Bas Empire, vol. viii. pp. 307-311; comp. Gibbon, c. xii.) Justinian afterwards fortified Mamitza (Procop. de Aed. vi. 6), which is represented by the plains lying under the slopes of Jebel Treasure near Kirman, in the Regency of Turia. (Barth, Wanderingen, pp. 247, 253.)

E. B. J.]

MAMIPARUS MONS. [Bagaredas.]

MANAPH (Manara), a people of Ireland on the east coast, possessing a town called MANAPIA (Massara), near the mouth of the Modonis, the present Dublin. (Ptol. ii. 2. §§ 8, 9.) The name is the same as one of the Celtic tribes of Gaul.

[Manapiates.]

MANAXAMIS PORTUS (Manoapartis Amye), a harbour on the west coast of Germany, and probably formed by the mouth of the river Unisengis. It is perhaps identical with the modern Murra in West Friesland, which may even owe its name to the ancient port. (Ptol. ii. 11. § 1; Marcian. Herod. p. 51, where it is called Mamappartis.) [L. S.]

MANASSEI. [Palaeestina.]

MANCIA (Manlón), a town in Messopandia, of which the site is uncertain. (Ptol. vi. 18. § 9)

MANNACIUNIUM, a town of the Brigantes in Britain (It. Ant. p. 482), now Manchester. But few, if any, of the remanis of the ancient town are to be traced at the present day. From inscriptions we learn that at some period of the Roman domination a cohort of the Frisians was stationed at Manacium; and that the sixth legion, or one of its divisions was there, probably on the occasion of some journey into the north. [C. R. S.]

MANDACADA (Mendhakadá), a place in Mytia, which is not mentioned till the time of Hierocles (p. 665), though it must have existed before, as Pliny (v. 32) mentions Ciches Mytacatde in the northern part of Mytia on the Hellenget. [L. S.]

MANDAGA (Mondaghya, Ptol. vii. 1. § 7), a small port on the western coast of Hindostan, in the district now called Cambay, nearly in the same latitude as Poona. The author of the Peripius calls it Mundagora (p. 30). [V.]

MANDALAGHIS (Mandlaghri, Ptol. vi. 2. § 2), a small port on the shores of the Caspian sea, between the rivers Strato and Charnides. Fergusson has conjectured that it may be represented by the present Mashhadkhan. [V.]

MANDADAM (Mandam, Ptol. vii. 1. § 72), an Indian tribe who occupied both banks of the Ganges in the neighbourhood of Palimbhatura (Paton), which was perhaps (as has been conjectured by some geographers), their chief city. They seem
MANDANE. [V.]

MANDANE (Μανδανή), a town on the coast of Cilicia, between Celenderis, and Cape Phishium, from which it was only 7 stadia distant (Stadiasmus, §§ 174, 175.) It is probably the same place as the Myanda or Amyanda in Pliny (v. 27); and if so, it must also be identical with the town of Myus (Μυός) mentioned by Sclavus (p. 40) between Naxus and Celenderis. [L. S.]

MANDARAE (Μανδάραι), the district about Byzantium in Macedonia. (Steph. B. a. v.) [E. B. J.]

MANDULIA. [Digesta.]

MANDUR. [Mandrus.]

MANDROPOLIS (Μανδρόπολις) or Mandropouλos, a town in Mydia (Hieroc. p. 664), now called Mandoria or Mandregora, at the foot of Mount Temnus. Stephanus of Byzantium (a. v.) erroneously places the town in Phrygia. There seems to be little doubt but that Mandropolis is the same town as Mandropus or Mandrrippium, mentioned by Livy (xxviii. 15). [L. S.]

MANDRUS MUNS (τῷ Μανδρῷ, ἢ Μανδροῦ βοῖς), one of the chief mountains of Libya, from whence flow all the streams from Salathius to Massa; the middle of the mountain has a position of 14° E. long., and 19° N. lat., assigned to it by Ptolemy (iv. 6, § 8). Afterwards (§ 14) he describes the river Nisir as uniting, or yoking together (ἐπιλλεψάρχον), Mount Mandus with Mount Thala. [N. G. E. R.] (Comp. London Geogr. Journ. vol. iii. p. 19; Dunlin, Dissertation on the Niger, p. 81.) Ptolemy (§ 17) places the following tribes in the neighbourhood of this mountain: the MANDAE (Μανδαῖοι), and the Mandopi (Μανδοποιι). [E. B. J.]

MANDUBII (Μανδουβία), a Gallic people whom Strabo (iv. p. 191) erroneously calls the neighbours of the Arverni. When Caesar (iv. c. 52) was marching through the territory of the Lingones, with the intention of retreating through the Sequani into the Provincia, he was attacked by the confederate Galli under Vercingetorix (B. G. vii. 68). The Galli were defeated, and Vercingetorix, with his men, took refuge in Alesia, a town of the Mandubii. The site of the battle is not indicated by Caesar, but the position of Alesia is at Aise, or Aise Sainte Réine, as it is also called, in the department of the Côte d'Or.

The railroad from Paris to Dijon crosses the hills of the Côte d'Or, of which Alesia and the heights around it are a part. The Mandubii were a small people who fed their flocks and cattle on the grassy hills of the Côte d'Or, and cultivated the fertile land at the foot of Alesia. Before the blockade was formed, they had driven a great quantity of their animals (peca) within the walls. (B. G. vii. 71.)

The Mandubii who had received their countrymen into the city, were turned out of it by them, with their wives and children, during Caesar's blockade, in order that the scanty supply of provisions for the troops might last longer. The Romans refused to receive the Mandubii and give them food. The certain conclusion from Caesar's narrative is, that these unfortunate people died of hunger between their own walls and the Roman circumvalation (B. G. vii. 78; Dion Cass. xl. 41). Caesar's description of Alesia is true; and the operations of his army about the place (B. G. vii. 69—90) are easily understood.

This plan of Alesia and the surrounding country is taken from Cassini's large map of France. The city of the Mandubii, or Alesia, was "on the summit of a hill, in a very elevated position," as Caesar correctly describes it. This hill stands alone, and, except on the west side, where there is a plain, it is surrounded by hills of the same height, which are separated from Alesia by valleys. In the flat valley

on the north side of Alesia, and in the narrower valley at the east end, is the railroad from Polas to Dijon. The nearest railway station to Alesia is Les Lounnes.

The summit of Alesia is not quite flat; but the irregularities are inconsiderable. The sides of the hill, which are steep and rocky on the north-east, and the upper part of the ascent to the summit is not easy. Below the plateau, and below this steep ascent, there is a narrow level piece of ground, which appears to have been widened a little by the labour of man; and below this level part there is another descent, which in some parts is steep. The fine plain (plains) at the western foot of Alesia, which Caesar describes, is seen well from the western end of the level summit. This is the part which Caesar (c. 84) calls the "Arx Alesiae." The surface of the plateau rises a little towards the west extremity, and then falls away abruptly, terminating in a rocky promontory, something like the head of a boat. A cross, with a small tree on each side of it, stands at the edge of the brow, and exactly marks the place from which Vercingetorix looked down on the plain of Alesia (c. 84). Beneath the Arx Alesiae is the small town of Alise, on the western and south-western slope of the hill. It occupies a different place from the old town of the Mandubii, which was on the summit level. The hill is a mass of rock. The plateau has a thin soil, and the few parts which are not cultivated are covered with a short grass like that on the Brighton downs. It appears that the town of the Mandubii occupied all the large plateau, the length of which is shown by the scale, though we must assume that it was not all built on. The Arx, as already explained, was at the west end, commanding a view of the plain. The city walls seem to have been carried all round the margin of the plateau. Caesar says (B. G. vii. 69): "under the wall, that part of the hill which looked towards the east, all this space the forces of the Galli had filled, and they had formed in their front a ditch and a wall of stones (maceria) six feet high." This is the place marked A. in the plan, the only part of the hill of Alesia which is connected with the neighbouring heights. It is a small neck of land which separates the valleys of the Loire and the Lozère. This is the part where the plateau of Alesia is most accessible, which Vercingetorix first occupied when he retired to Alesia, and where he constructed the wall of loose stones (maceria). There are plenty of stones on the spot to construct another such wall, if it were wanted.

At the eastern end of the plateau, just under the summit there is a source of water, which is now covered over with a small building. The water is now carried in pipe round the hill, to supply the hospital of Alise, which is (F.) on the west side of the hill on the slope. Water is got at Alise by digging wells in the small level below the plateau; and from the Galli held this part of the mountain during the blockade, they may have got water from wells, which they doubt did from the spring on the plateau.

Caesar's lines were formed all round the hill of Alesia, and they crossed the neck (A.) which connects this hill with another hill (B.) on the south-east side. The "castra" of Caesar (c. 69, 80) were on B. C. D. E., on all the heights around Alesia. These hills have a steep side turned to Alesia, and flat tops. They are so near to Alesia that Caesar could not be safe against an attack from the outside, unless he occupied them. The valleys between Alesia and B. C. D. are narrow. On the north and north-west side the valley is wider. There is a good source of water on the hill B.

The hill of Alesia is well defined on the north and the south by the valleys of the two streams which Caesar mentions (B. G. vii. 69), and on the west side by the plain in which these rivers meet, which is not more than two miles wide. They could not march to the south to three Roman miles; and it is that width at least even in the part which is only a little distance from the foot of the hill. It extends much further in a N.W. direction on the road to Montbard. This plain is a perfect level, covered in summer with fine wheat. As we go from the foot of the hill of Alesia to Les Lounnes, the Arx Alesiae is a conspicuous object.

Caesar made two lines of circumvallation round Alesia. The circuit of the inner lines was eleven Roman miles; and we may infer from his words that this circumvallation was entirely in the plain and the valleys, except that it must have passed over the small elevation or neck of land between A. and B. In making the outer lines, which were fourteen Roman miles in circuit, he followed the level as far as the ground allowed (c. 74); from which we conclude that some parts of the outer line were carried opposite to the hill of Alesia; and the form of the surface shows that this must have been so. The upper part of the hill west of Crossigny, part of which hill appears in the north-west angle of the plan, was crossed by the lines; and the camp of Regimus and Rebula (c. 83) was on the slope of this hill which faces Alesia. One of the ditches (bouée) of the interior lines was filled with water from the river (c. 72). The lines of eleven and fourteen miles in circuit are no exact approximation. No less circuit would enclose the hill and give the Romans the necessary space. The boldness of the undertaking may be easily conceived by the aid of numbers; but the sight of the work that was to be done before Vercingetorix and his troops, to the number of 80,000 men, could be shut in, can alone make us fully comprehend and admire the daring genius of the Roman proconsul.

There was a cavalry fight in the great plain before Caesar had completed his works. The Galii were driven back from the plain to their camp under the east end of the hill, and took refuge within Alesia. After this defeat Vercingetorix sent his cavalry away, and made preparation for holding out till the Gallic confederates should come to his aid, (B.G. 70, 71.) When the forces of the confederates (vii. 75) came to raise the blockade of Alesia, they posted themselves on the hills where the name Musso appears; and in the battle which is described in vii. 79, the Gallic cavalry filled the plain on the west side of the hill of Alesia, while the infantry remained on the heights about Musso. The Gallic horse were beaten back to their camp (c. 80); but on the following night they renewed the attack on that part of the lines which crossed the plain. This attack also failed. The next night the Gallic confederates sent 60,000 men under Vergassailans to the north, to the back of the hill (E.), on the south slope of which Regimus and Rebula had their camp. Their orders were to fall on the Romans at midday. The Galii got to the back of the hill at daybreak, and waited till near noon, when they were to make their attack on the camp. At the same time the cavalry of the confederates came against the lines in the plain; and Vercingetorix descended from the heights of Alesia to attack the lines from
the inside. The Galii failed to force the lines both on the inside and the outside. But the attack on the camp of Regius and Robbion was desperate, and Labienus was sent to support them. Neither ramparts nor ditches could stop the fierce assault. The enemy was summoned to bring the soldiers from the nearest posts, and sent to tell Caesar what he thought ought to be done. His design was to rally out upon the enemy, as Caesar had ordered him to do, if he could not drive them off from the lines.

The place where the decisive struggle took place is easily seen from the Arx Alesiae; and it is accurately described by Caesar (B. G. VIII. 58). This is the hill (E.) which slopes down to the plain of the Lecce. The upper part of the slope opposite to the Arx Alesiae is gentle, or "leuter deículis" (c. 83); but the descent from the gentle slope to the plain of the Lecce, in which the railway runs, is in some parts very steep. Caesar could draw his lines in such a way as to bring them along the gentle slope, and comprise the steep and lower slope within them. But there would be a small slope downwards from the upper part of the hill to the Roman lines; and this is this gentle slope downward which he describes in c. 85, as giving a great advantage to the Gallic auxiliaries under Vergassilanus ("Exiguum loc ad declivitatem fastigium magnum habit momentum").

The mountain behind which Vergassilanus hid himself after the night's march is the part of the mountain west of Cossigny. The camp of Regius and Robbion being on the south face turned to Alesia, they could see nothing of Vergassilanus and his men till they came over the hill top to attack the lines. Vercingetorix, from the Arx Alesiae (c. 84), could see the attack on Regius' camp, and all that was going on in the plain. He could see everything. Caesar's position during the attack of Vergassilanus was one (ad monae borne) which gave him a view of the fight. He saw the plain, the "supercres munitiones," or the lines on the mountain north-west of Alesia, the Arx Alesiae, and the ground beneath. He stood therefore on the hill south of Alesia, and at the western end of it.

Caesar, hearing from Labienus how desperate was the attack on the upper lines, sent part of his cavalry round the exterior lines to attack Vergassilanus in the rear. The cavalry went round by the east end of Alesia. They could not get round the west end, for they would have crossed the plain outside of the lines, and the plain was occupied by the Galii. Nor could they have got up the hill on that side without some trouble; and they would not have come on the rear of the enemy. It is certain that they went by the east end, and upon the heights round Alesia, which would take a much longer time than Caesar's rapid narrative would lead us to suppose, if we did not know the ground.

When Caesar sent the cavalry round Alesia, he went to the aid of Labienus with four cohorts and some cavalry. The men from the higher ground could see him as he came along the lower ground (c. 87, 88). He came from the hill on the south of Alesia, between his lines along the plain, with the Arx Alesia on his right, from which he men in the town were looking down upon the furious battle. The scarlet cloak of the preconial told his men and the enemies who was coming. He was received with a shout from both sides, and the shout was answered from the circumvalation and all the lines. The Roman soldier throws his pila aside; and the sword begins its work. All at once Caesar's cavalry appears in the rear of Vergassilanus; "other cohorts approach; the enemy turn their backs; the cavalry meet the fugitives; there is a general chase; and the victory is won. The Galii who were on the outside of the fortifications desert their camp, and the next day Vercingetorix surrender Alesia. The flight of Alesia was the last great effort of the united Galii against Caesar. They never recovered from this defeat; and from this time the subjugation of Gallia, though not yet quite completed, was near and certain.

Alesia was a town during the Roman occupation of Gallia; but the plateau has long since been deserted, and there is not a trace of building upon it. Many medals and other antiquities have been found grudging on the plateau. A vigneron of Alesia possesses many of these rare things, which he has found; a fine gold medal of Nero, some excellent bronze medals of Trajan and Faustina, and the well-known medal of Numamus (Vinnae), called the "pied de biche." He has also a study, keys, and a variety of other things.

The plan of Cassini is tolerably correct; correct enough to make the text of Caesar intelligible. [L.]
broad street or way between the two, and a ditch on the outside. At present they are nowhere more than about 12 feet in height. The modern town of Man- duria (a flourishing place, with about 6000 inhabitants) does not occupy the site of the ancient city; the latter having been destroyed by the Saracens, the few remaining inhabitants settled at a place called Casal Nuovo, which appellation it retained till towards the close of the eighteenth century, when, having grown into a considerable town, it resumed, by royal license, its ancient name of Manduria. (Swinburne, Travels, vol. i. p. 222; Romantica, vol. i. p. 553; Giustiniani, Dis. Geogr. vol. v. p. 338.)

Pliny mentions the existence at Manduria of a well or spring of water, which was always full to the brim, and could not be either increased or diminished in quantity. This natural curiosity is still shown by the inhabitants of Manduria, and has been described by several recent travellers; it is said that it preserves a constant equality in the level of its waters, notwithstanding any addition that may be made to them or any quantity that may be withdrawn,—a statement exactly coinciding with that of Pliny. (Plin. ii. 103. s. 106; Swinburne, Travels, vol. i. p. 223; K. Craven, Travels, pp. 165—167.) The expression used by that author, who calls the basin or reservoir of the water "lacus," has given rise to the erroneous notion that there existed a lake in the neighbourhood of Manduria for which there is no foundation in fact. [E. B. J.]

MAGMII, a tribe of the Lygii, in the north-east of Germany (Tac. Germ. 43). They occupied the country south of the Burgundiones, and appear to be the same as the Osmanni (Osmavii) of Ptolemy (ii. 11. § 18; Zenz, Die Deutschen, p. 124). [L. S.]

MANTIAE (Mantae), an inland tribe of Arabia Felix, situated west of the Thametace, and south of the Salageni, north of the "region Franciscensia" country (Thythes Chamaeleo, PtoL vii. 7. § 23). The position of Ptolemy's "Manita," west of his Kata- nitiae, and of Zuama Massa, together with the near resemblance of name, implies their being the same with the Massene of Barbhardt, the most eastern of the Harb tribes, situated on the borders of Karyga in the line of country between Medina and Drangheh, (Forster, Geog. of Arabia, vol. ii. p. 249.) [G. W.]

MANUS MINUS (Manus minus, or Minus, vol. vi. 5), the lake of which the eastern end of Dublum is on one side, the river Xaro discharged itself, and in which the Liburnian group of islands is situated. In modern times it bears no distinctive name. [E. B. J.]

MANTINANA Maniana] [Maniana, Ptol. iv. 2. § 25], an inland town of Maintanins, upon the position of which there is a great disagreement between Ptolemy and the authority of the Itinerary. The first places it 10' to the W. of Olympos Novum, and the latter 18 M. P. to the E. of that place. The modern Miliana, on the slopes of the Lesser Atlas, possessing the ancient name, may be presumed to represent the old town, both of Ptolemy and the Itinerary, in which a Christian community was established. (Augustin. Ep. ccxxvi.; Morelli, Africa Christiana, vol. i. p. 211.) Shaw (Travels, pp. 62—64) found remains of Roman architecture, and a "tombs" with the inscriptions which he refers to some of the descendants of On. Paulus (Barth. Wanderungen, pp. 58, 207.) [E. B. J.]

MANLIUS SALTUS. [Ibibu.]

MAXXARITUM, in north Gallia, is placed by the Antonine Itin. on a road which leads from

Lacedeum through Trajectum (Utrecht) to Carvus (Carvo). It is 15 M. P. from Trajectum to Mantua, and 16 M. P. from Mantua to Carvus; the Manxarium may be Mavera. But other places have been suggested. [G. L.]

MANRALI (Manraia), Ptol. v. 10. § 6), a people on the coast of Colchis, whose name has been traced in the modern Mingrelia. [E. B. J.]

MANTALA, a place in Gallia Narbonensis, on the road from Vienna (Vienn) to Durantas (Montaire ou Tauracum). It is the next station after Leminum (Lemington) and 16 M. P. from it. The Antonine Itin. and the Table agree as to the position of Mantala. The site of the station Mantala may be, as D'Anville suggests, at a place on the Iere, named Gressi, which is commanded by an old building named Montaillem. [G. L.]

MANTIANA LACUS. [Arisia.]

MANTINELLIA (Mantinea; Etd. Mantins, Mantinins; Palapolis), one of the most ancient and powerful towns in Arcadia, situated on the borders of Argolis, S. of Orchomenus, and N. of Tegae. Its territory was called MANTINELA (Mantinela). The city is mentioned in the Homerische catalogue as MANTINELIA (Mantinina), and, according to tradition, it derived its name from Mantius, a son of Leyaon. (Hom. II. i. 407; Pol. ii. 56. Paus. viii. § 4.) Mantinea originally consisted of four or five distinct villages, the inhabitants of which the collected into one city. (Xen. Hell. v. 2. § 6, seq.; Soph. viii. p. 337; Dion. xcv. 5.) If Strabo is correct in stating that this incorporation was brought about by the Argives, we may conjecture, with Mr. Grote, that the latter adapted this proceeding as a means of providing some check upon their powerful neighbours of Tegae. The political constitution of Mantinea is mentioned by Polybius as one of the best in antiquity; and the city had acquired so great a reputation at an early period, that the Cyrenaeans, in the reign of Batius III. (u. c. 550—530), when weakened by internal seditions, were recommended to apply to the Mantinians, who sent to them Democrit to settle their constitution. (Pol. vi. 43; Herod. iv. 161.) Some time before the Persian wars, Mantia- nea, like the other Arcadian towns, had acknowledged the Spartan supremacy; and accordingly the Mantinians sent to Sparta their contingent to the battles of Sparta. Five hundred of their citizens fought at Thermopylae, but their contingent arrived on the field of Platea immediately after the battle. (Herod. v. 202, ix. 77.) In the Peloponnesian War, Mantinea was at first a member of the Pelo- ponnesian confederacy; but several causes tended to estrange her from the Spartan alliance. Mantinea and Tegae were, at this time, the two most important Arcadian states, and were frequently engaged in hostilities. In u. c. 124, they fought a bloody and indecisive battle, which is mentioned by Timo- cydes (i. 134). Tegae, being oligarchically governed, was finally attached to Sparta; whereas Mantinea, from her possessing a monarchical constitution, as well as from her hatred to Tegae, was disposed to desert Sparta on the first favourable op- portunity. In addition to this, the Mantinians had large estates in the Ionian islands, and those frequenting expeditions, and had garrisoned a fortress at Cypselia, near the site where Megapolis was afterwards built. Well aware that the Lacedaemonians would not allow them to retain their recent acquisitions, as it was the policy of Sparta to prevent the increase of any political power in the Peloponese, the Mant-
Mantinia.

neians formed an alliance with Argos, Elis, and Athens, (Paus. vi. c. 411, and thus became involved in war with Sparta. (Thuc. v. 29, 33, 47.) This war was brought to a close by the decisive battle fought near Mantinea, in June, 418, in which the Argives, Mantinians, and Athenians were defeated by the Lacedaemonians under Agis. This battle was fought to the S. of Mantinea, between the city and the frontiers of Tegea, and is the first of the five great battles bearing the name of Mantinea. The Mantinians now concluded a peace with Sparta, renouncing their dominion over the districts in Arcadia, which they had conquered. (Thuc. v. 65, seq.)

Mantinea continued its iron wall for the next 33 years; but in the second year after the peace of Antalcidas, which had restored to the Spartans a great part of their former power, they resolved to crush for ever this odious city. Accordingly, they required the Mantinians to raise their walls and, upon the refusal of the latter, they marched against the city with an army under the command of their king Agesipolis (b.c. 385), alleging that the truce for 30 years had expired, which had been concluded between the two states after the battle of 418. The Mantinians were defeated in battle, and took refuge in their city, provisioned with a siege, but Agesipolis having raised an embankment across the river Ophius, which flowed through Mantinea, forced back the waters of the river, and thus caused an inundation around the walls of the city. These walls, being built of unbaked bricks, soon began to give way; and the Mantinians, fearing that the city would be taken by assault, were obliged to yield to the terms of the Spartans, who required that the inhabitants should quit the city, and be dispersed among the villages, from the confines of which the city had been originally formed. (Xen. Hell. v. 2 §§ 6, 7; Diod. xv. 5; Ephorus. Ap. Harpocrat. s. r. Mantiniae dictorum; Pol. iv. 27; Paus. viii. 8 § 7, seq.) Of the forces of Mantinea shortly before this time we have an account from the orator Lysias, who says that the military population or citizens of Mantinea were not less than 30000, and that the city contained 140000, the free population of the Mantinean territory. (Lysias. Ap. Dion. p. 531; Clinton, F. H. vol. ii. p. 416.)

The Mantinians did not long remain in this dispersed condition. When the Spartan supremacy was overthrown by the battle of Leuctra in 371, they again assembled together, and rebuilt their city. They took care to exclude the river from the new city, and to make the stone substructions of the walls higher than they had been previously. (Xen. Hell. vi. 5 § 3; Paus. viii. 8 § 10; Leake, Morea, vol. iii. p. 73.) The Mantinians took an active part in the formation of the Arcadian confederacy, and in the foundation of Megalopolis, which followed immediately after the restoration of their own city; and one of their own citizens, Lycomedes, was the chief promoter of the scheme. But a few years afterwards the Mantinians, for a cause which are not distinctly mentioned, quarrelled with the supreme Arcadian government, and formed an alliance with their invertebrate enemies the Spartans. In order to put down this new coalition, Epaminondas marched into the Peloponnesus; and Mantinea was again the scene of another great battle (the second of the five alluded to above), in which the Spartans were defeated, but which was rendered still more memorable by the death of Epanimonds. (Xen. Hell. vi. 5; Diod. xv. 94.) The site of this battle is described below. The third and fourth battles of Mantinea are only incidentally mentioned by the ancient writers: the third was fought in 295, when Demetrius Poliorcetes defeated Archidamus and the Spartans (Plut. Demetr. 35); the fourth in 212, when Aratus and the Achaeans defeated the Spartans under Agis, the latter falling in the battle. (Paus. viii. 10, 11 seq.)

Mantinea continued to be one of the most powerful towns of Arcadia down to the time of the Achaean League. It at first joined this league; but it subsequently deserted it, and, together with Orchomenus and Tegea, became a member of the Achaean confederacy. These three cities at a later time renounced their alliance with the Achei, and entered into a close union with Sparta, about n.c. 226. This step was the immediate cause of the war between the Achei and the Spartans, usually called the Cenomic Republic. In 226, Aratus surprised Mantinea, and compelled the city to receive an Achaean garrison. The Mantinians soon afterwards expelled the Achei, and again joined the Spartans; but the city was taken a second time, in 222, by Antigonus Doson, when the Achei had invited to their assistance. It was then burnt and plundered with great severity. It was abandoned to plunder, its citizens were sold as slaves, and its name changed to Antigonia (Antignia), in compliment to the Macedonian monarch (Pol. ili. 57, seq.; Plut. Arat. 45; Paus. viii. 8 § 11). In 207, the plain of Mantinea was the scene of a fifth great battle, between the Achaean forces, commanded by Philopoemen, and the Lacedaemonians, under the tyrant Machanidas, in which the latter was defeated and slain. An account of this battle is given by Polybius, from whom we learn that the Achaean army occupied the entire breadth of the plain S. of the city, and that their light-armed troops occupied the hill to the E. of the city called Alesium by Pausanias. The Lacedaemonians were drawn up opposite to the Achei; and the two armies thus occupied the same position as in the first battle of Mantinea, fought in the Peloponnesian War. (Pol. xi. 11.) The Mantinians were the only Arcadian people who fought on the side of Augustus at the battle of Actium. (Paus. viii. 8 § 12.) The city continued to bear the name of Antignia till the time of Hadrian, who restored to it its ancient appellation, and conferred upon it other marks of his favour, in honour of his favourite Antinous, because the Bithynians, to whom Antinous belonged, claimed descent from the Mantinians. (Paus. viii. 8 § 12, viii. 9 § 7.)

The territory of Mantinea was bounded on the W. by Mt. Maenalus, and on the E. by Mt. Artemisium, which separated it from Argolis. Its northern frontier was a low narrow ridge, separating it from Orchomenia; its southern frontier, which divided it from Tegesta, was formed by a narrow part of the valley, hemmed in by a projecting ridge from Mt. Maenalus on the one side, and by a similar ridge from Mt. Artemisium on the other. (See below.)

The territory of Mantinea forms part of the plain now called the plain of Tripolitzi, from the modern town of this name, lying between the ancient Mantinea and Tegea, and which is the principal place in the district. This plain is about 25 English miles in length, with a breadth varying from 1 to 8, and includes, besides the territory of Mantinea, that of
Of the valley of Tegern and Mantineia on the N. and S. of the road from Athens, it is difficult, but it is not impossible, to identify any of the localities of which we have mention, from the disappearance of the sanctuaries and monuments by which spots are indicated, and also from the nature of the plain, the topography of which must have been frequently altered by the change of the water-courses. On the latter subject a few words are necessary. The plain of Tripoli, of which Mantinea formed part, is one of those valleys in Arcadia, which is so completely shut in by mountains, that the streams which flow into it have no outlet except through the chasms in the mountains, called kataleuca. (Arcadia.) The part of the plain, which formed the territory of Mantinea, is a large, open, level space, on the slopes of which there are a few villages, and one or more of the kataleuca which nature has provided for their discharge. (Paus. xi. 11.) Not only must the direction of these streams have been sometimes changed, but even the course of the streams was sometimes altered, of which we have an interesting example in the history of the campaign of 418. It appears that the regulation of the mountain torrent on the frontiers of Mantineia and Tegeatis was a frequent subject of dispute and even of war between the two states; and the one frequently inundated the territory of the other, as a means of annoyance. This was done in 418 by Acis, who let the waters over the plain of Mantinea (Thuc. v. 65.). This river can only be the one called Ophius by the late Professor H. G. Evelyn-White. It rises from a little N. of Tegern, and after flowing through Tegeatis falls now into a kataleuca north of the hill of Soupe. In general the whole plain of Mantinea bears a very different aspect from what it presented in antiquity; instead of the wood of oaks and cork-trees, described by Pausanias, there is now not a single tree to be found; and no poet would now think of giving the epithet of "lovely" (e^t^p^w^t^e^i^z^t^) to the naked plain, covered to a great extent with gray treeless rocks. (Ross, Reisen im Peloponnes, p. 125.) About a mile N. of the ruins of Mantinea is an isolated hill called Gutzal; north of which again, also at the distance of about a mile, is another hill. The latter was probably the site of the ancient Mantinea, and was therefore called Ptolis (Terbol) in the time of Pausanias (viii. 12. § 7.). This appears to have been one of the five villages from the inhabited city, which the city on the plain was required to supply.

Two roads led from Mantinea northward, one to the SE. to Tegern, and the other SW. to Pallantian. On the left of the road to Tegern, called Xenis (Xe^w^s^) by Ptolus (xi. 11. § 5.), just outside the gates of Mantinea, was the hippodrome, and a little further on the stadium, above which rose Mount Alminon; at the spot where the mountain ceased was the temple of Poseidon Hippius, which was 7 stadia from the city, as we learn from Poly-

PLAIN OF MANTINEIA.
bux (xi. 11. § 4, compared with xi. 14. § 1). Here commenced the ditch, which is said by Polybios to have led across the Mantineian plain to the mountains bordering upon the district of the Elsephias (ἡ τοῦ Ἐλευσίων χώρα, Pol. xi. 11. § 6, comp. 15. § 7, xvii. 6). It was the temple of Pelias, a forest of oaks, called Pelages (Πελάγες), through which ran the road to Tegea. On turning out of the road to the left, at the temple of Poseidon, one found at the distance of 5 stadia the tombs of the daughters of Peles. Twenty stadia further on was a place called Phoezion (Φοεζίον). This was the narrow part of the plain between Tegea and Mantinea; the road being shortened by the hill Scopé on the W., and a similar projecting rock on the E. Here was the tomb of Ancientus, who was said to have been slain in a narrow pass by Lycurgus (στενάκη ἐν δόξῃ, Hom. Il. vii. 143). This narrow valley, shut in by the two projecting ridges already mentioned, formed the natural frontier between the territories of Mantinea and Tegea. The boundary between the two states was marked by a round altar, on the road, which was about four miles distant from Mantinea, and about 5 from Tegea. It was here that the Laconian army was posted, over which Euphemion had gained his memorable victory. He had marched from Tegea in a north-westerly direction, probably passing near the sites of the modern Tripolitici, and then keeping along the side of Mt. Mæanulus. He attacked the enemy on their right flank, near the projecting ridge of Mt. Mæanulus, already described. It was called Scopé (Σκόπη, now Myrtilos), because Euphemion, after receiving his mortal wound, was carried to this height to view the battle. Here he expired, and his tomb, which Pausanias saw, was erected on the spot. (Paus. viii. 11. §§ 6. 7; for an account of the battle see Grote, vol. xi. p. 464, seq.)

The road from Mantinea to Pylanthum ran almost parallel to the road to Tegea till it reached the frontiers of Tegea. At the distance of one stadium was the temple of Zeus Charniæ. (Paus. viii. 11. § 10.)

Two roads led from Mantinea eastwards to Argos, as follows:

* This ditch must have terminated in a kata-vithra, probably in one of the kata-vithtra on the W. side of the plain at the foot of the Mæanulus mountains. On the other side of these mountains is the village and river named Hissæn; and as the Elsephias are not mentioned in any other passage, it has been proposed to read Ἐλευσιονία instead of Ἐλευσίων. (Ross, p. 72.) Leake has conjectured, with some probability, that Elsephias may be the corrupt ethnic of Ἐλυμία (Ἐλυμία), a place only mentioned by Nennien (Hill. vi. 5. § 13), who places it on the confines of Orchomenus and Mantinea. Although Leake places Elymna at Merihé, on the NW frontier of Mantinea, he conjectures that the whole plain of Aicemnon may have belonged to it. (Leake, Peloponnesia, p. 380.)

† Leake imagines that Pheozion was situated on a side road, leading from the tombs of the daughters of Pelias. But Ross maintains that Pheozion was on the high-road to Tegea, and that Pausanias has only mentioned by anticipation, in vii. 11. § 1, the altar forming the boundary between Mantinea and Tegea, the more proper place for it being at the close of § 4.
MANTUA.  

said to signify in the Albanian language "abounding in springs." The road next passed by the fountain of the Melinaste (Melasnest), where were temples of Dionysus and of Aphrodite Melaisina; this fountain was 7 stadia from the city, opposite Pons Old Mantinica. (Paus. viii. 6. §§ 4, 5.) The preceding account is rendered clearer by the map on p. 253.

(For the geography of Mantinica, see Leake, Mavt., vol. i. p. 100, seq., vol. iii. p. 44, seq.; Palomi.nosianus, p. 369, seq.; Ross, Reisen im Peloponnes, vol. i. p. 121, seq.; Curtius, Pelopono- nesia, vol. i. p. 232, seq.)

MANTUÀ (Mârtovia. Eth. Mantvanus. Mántovâ), a city of Cisalpine Gaul, situated on the river Minus, on an island formed by its waters, about 12 miles above its confluence with the Padus. There seems no doubt that this city, and existed long before the establishment of the Gauls in this part of Italy, Virgil, who was naturally well acquainted with the traditions of his native place, tells us that its population was a mixed race, but the bulk of the people were of Etruscan origin; and Pliny even says that it was the only city beyond the Padus which was still inhabited by an Etruscan people. (Virg. Aen. x. 201—203; Plin. iii. 19. a. 29.)

The Etruscan origin of Mantua is confirmed by its name, which was in all probability derived from that of the Etruscan divinity Mantus, though another tradition, adopted by Virgil himself, seems to have deduced it from a prophetic nympha of the name of Manto. (Serv. ad Aen. i. c.; Schol. Veron. ad loc., p. 103, ed. Kell.) According to one of the oldest scholars, so Virgil, both Varrius Flaccus and Caedius, in their Etruscan histories, ascribed the foundation of Mantua to Tarchon himself, while Virgil represents Oceanus, the son of Manto, as its founder. (Virg. Aen. x. 200; Schol. Veron. l. c.)

The only historical fact that can be considered as resulting from all these statements is that Mantua really was an Etruscan settlement, and that for some reason (probably from its peculiar and inaccessible situation) it retained much of its Etruscan character long after this had disappeared in the other cities of Cisalpine Gaul.

After the settlement of the Gauls in Northern Italy, Mantua was probably included in the territory of the Cenomani (Ptol. iii. 1. § 31); but we find no mention of its name in history, nor do we know at what period it passed under the Roman dominion. From an incidental notice in Livy (xxiv. 10) during the Second Punic War, we may probably infer that it was then on friendly terms with Rome, as were the Cenomani and Veneti; and as its name is not mentioned during the subsequent wars of the Romans in Cisalpine Gaul, it is probable that it passed gradually, with the other towns of the Cenomani, from a state of alliance to one of dependence, and ultimately of subjection. But even under the Roman dominion the name of Mantua scarcely appears in history, and it is clear that it was far from possessing the same relative importance in ancient times that it did in the middle ages, and still retains. It was undoubtedly a municipal town, and is mentioned as such by all the geographers, as well as in inscriptions, but both Strabo and Martial speak of it as very inferior to the neighbouring city of Verona, in comparison with which the latter terms it "parva Manto." (Strab. v. p. 218; Plin. iii. 19. a. 28; Procli. iii. 1. § 31; Martial, xiv. 193.)

During the civil wars after the death of Caesar, Mantua suffered the loss of a part of its territory, for Octavian having assigned to his discharged soldiers the lands of the neighbouring Cremona, and these having proved insufficient, a portion of the territory of Mantua was taken to make up the necessary amount. (Virg. Ecl. i. 28; Georg. ii. 109; Serv. ad loc.) In this occasion that Virgil was expelled from his patrimonial estate, which he however recovered by the favour of Augustus.

The chief celebrity of Mantua under the Roman Empire was undoubtedly owing to its having been the birthplace of Virgil, who has, in consequence, celebrated it in several passages of his works; and its name is noticed on the same account by many of the later Roman poets. (Virg. Georg. iii. 12; Ovid, Amor. iii. 15. 7; Stat. Silv. iv. 2. 9; Sil. Ital. viii. 595; Martial, i. 62. 2, xiv. 130.) According to Donatus, however, the actual birthplace of the poet was the village of Anides in the territory of Mantua, and not the city itself. (Donat. Vit. Virg. 1; Hieron. Chron. ad ann. 1497.)

After the fall of the Roman Empire, Mantua appears to have become a place of importance from its great strength as a fortress, arising from its peculiar situation, surrounded on all sides by broad lakes or expanses of water, formed by the stagnation of the river Minus. It, however, fell into the hands of the Lombards under Agilulf (P. Diaec. iv. 29), and after the expulsion of that people was governed by independent counts. In the middle ages it became one of the most important cities of the N. of Italy; and is still a populous place, and one of the strongest fortresses in Italy. It is still completely surrounded by the stagnant waters of the Ticino, that it is accessible only by causeways, the shortest of which is 1000 feet in length.

Mantua was distant from Verona 25 miles; so that Procopius calls it a day's journey from thence. (Procop. B. G. iii. 3.) It was situated on a line of road given in the Tabula, which proceeded from Mediolanum, by Cremona and Bedriacum, to Mantua, and thence to Hostilia, where it crossed the Padus, and thence proceeded direct to Ravenna. (Tab. Peut.)

Mantua was distant from Cremona by this road about 40 miles. It would appear from one of the minor poems ascribed to Virgil (Cat. i., S. 4), that this distance was frequently traversed by nucleaters with light vehicles in a single day.

MANTZICHERT. 265

[MANTZICHERT (Mántzéchér, Const. Porphy. de Adua. Imp. c. 44), a fortress of great importance upon the Armenian frontier. In A.D. 1050, it offered so determined a resistance to Togral Bet, the founder of the Seljukian dynasty, that he had to give up all hope of breaking through the barrier of fortresses that defended the limits of the empire, and retired into Persia. (Cedren. vol. ii. p. 780; Le Bel, Bus Empire, vol. xiv. p. 367; Finlay, Byzantine Empire, p. 523.) It is identified with Melaspis or Monszichter, situated to the NW. of Lake Van, and the

MAOGAMALCHA (Ammoni, xxiv. 4), a place in Mesopotamia, attacked and taken by Julian. It was distant about 90 stadia from Ctesiphon. (Zos. n. iii. 21.) It appears to have been strongly fortified and well defended. Zosimus evidently alludes to the same place (L.), though he does not mention it by name.

MAOX (Ma’aw), a city of Judah, in the mountains, south of Hebron. It is joined with Carmel, and Ziph, and Juttah (Josh. xv. 53), known only as the residence of Nabal and Abigail (1 Sam. xxv. 2).

"The wildness of Maon, in the plain on the south of Jeshimon," is identical with or contiguous to the wildness of Ziph, where David and his men hid themselves in the stronghold from the malice of Saul (xxix. 14—23). It is placed by Eusebius in the east of Daroma (Onomast. s. v.) Its site is marked by ruins, still called Maia, situated between Carmel and Ziph, half an hour south of the former. [Carmel, Vol. i. p. 521.]

Mapharitis (Mapharitis), a district of Arabia Felix, lying about the city of Sava (Saach), which is placed by Arrian three days’ journey from Maza, on the Red Sea. (Met.) He mentions the king, Maphar, and his son, Maize-ne (Ptolemy, ii. 13.) The Sava of Arrian is probably identical with the Saphara or Saphar of Ptolemy (Σαφαρος αλ. Σαφαρα μαρτρος, vii. § 41), the capital no doubt of a tribe named by him Sapharitis (Σαφαρίς), the Mapharitis of Arrian. They are distant from the Maphoritae of Ptolemy. [G. W.]

Maphoritae (Maphoritae), a people of Arabia Felix, placed by Ptolemy above, i.e. north of, the Bithyni, and west of the outer Frankincense country (Σ Σεφρά, Σαφρά, Mittler. Arch. ii. p. 301), continuous as the Cletrmannitae (vi. § 25). The similarity of name indicates a connection between this tribe and the Mepshpa metropolis of the same geographer; the same as the "Aphae metropolis" of Arrian, which he places 9 days’ journey east of his Maphoritae reio, and therefore 12 days from the Red Sea. It was the capital of Charazael, the lawful king of the Homeritae and their neighbours the Sabitiae, styled the friend of the Boman emperors, to whom he is said to have sent frequent embassies. [Maphorita.] The district is probably that now known as Wady Mafita, in the midst of which is situated the remarkable ruins now called Nabakel-Hajar, which are supposed to mark the site of the metropolis. This fruitful valley continues above the ruins in question and is well cultivated throughout. It is thus described by Li m. Wellsted, who traversed its southern part in 1838—"Nabakel-Hajar (modern Maphritha, g. r.) is situated north-west, and is distant 48 miles from the village of Ain, which is marked on the chart in latitude 14° 2’ north, and longitude 46° 30’ east, nearly. It stands in the centre of a most extensive valley, called by the natives Wady Misfah, which, whether we regard its fertility, population, or extent, is the most interesting geographical feature we have yet discovered on the southern coast of Arabia. Taking its length from the town where it opens on the sea to the town of ‘Al’uth, it is 44 days’ journey, or 75 miles. Beyond this point I could not exactly ascertain the extent of its prolongation; various native authorities give it from 5 to 7 additional days. Throughout the whole of this space it is thickly studded with villages, hedges, and culti- vated ground. In a journey of 15 miles, we counted more than fifty of the former, besides a great number of single houses." (Wellsted, Travels in Arabia, vol. i. p. 436.)

Mapos, in Britain, occurring in Geogr. Rav. 37, among the diversa loca, without any clue to give us to its locality. An inscription to a topick deity Mapos (Deo Mapone), discovered at Plumpton in Cumberland; and another (Apollini Mapone) at Ribchester, in Lancashire, merely strengthen the probability of the existence of a place so called in Britain, without disclosing its situation. Maporion also appears in Geogr. Rav. among the towns in the north of Britain. [G. E. S.]

Maraebus (Maposobus, Maposobos, Psal. v. 9, § 2), a river of Sarmatia, which Reichard has identified with the Mongyez, an affluent of the Don, on the left bank of that river. Some have considered the Mongyez to represent the Acharneus (Ayaq- dos), but Strabo (xi. p. 506) expressly says that the latter discharges itself into the Maots. (Scha farik, Siv. Ait. vol. i. pp. 60, 500.) [E. B. J.]

Marpacanda (Marpacanda, Strab. xi. p. 517; Arrian, iii. 30, iv. 3; Ptol. vi. 11, § 9), the capital of Sogdiana, now Samarkand. It is said by Strabo to have been one of the eight cities which were built in those parts by Alexander the Great. Ptolemy places it in Bactriana. Arrian (iii. 30) states that it contained the palace of the ruler of the Sogdian, but does not apparently credit the story that Alexander had anything to do with the building of it. Curtius states that the city was 70 stadia in circumference, and surrounded by a wall, and that he had destined the province for his favourite, Cithus, when the unfortunate quarrel took place in which he was slain (viii. § 20). Professor Wilson (Arrias, p. 165) considers that the name has been derived from the Sumeric. Sumara-λαλονα, "the warlike province." In many of the old editions the word was written Paracudia, but there can be no doubt that Maracanda is the correct form. Samarcand has been in all ages a great entrepot for the commerce of Central Asia.

Marapani (Marapani, Strab. xvi. p. 776; Mapapani), an ancient people on the W. coast of Arabia Felix, near the corner of the Achadianus Sinus, destroyed by the Garindaei.

Maraphi (Maraphi, Herod. i. 125), one of the three tribes into which the highest class of the ancient Persians was divided, according to Herod. The other two were the Pasargadai and the Ma-pi.

Maratha (Maratha), a village of Arcadia, in the district of Cytheria, between Biplagum and Gortys, perhaps represented by the ruin called the Castle of Lechtherm. (Paus. viii. p. 28, § 1; Leake, Morva, vol. ii. p. 66, Pelagonia, χάσα, νεκρισ.)

Marathie, a small island near Corera, mentioned only by Pliny (iv. 12. s. 19).

Marathesium (Marathem, Eth. Mapatb-βος), an Ionian town on the coast of Lydia, south of Ephesus, and not far from the frontiers of Caria, where Stephanus (s. e.) calls it a town of Caria. (Sylv. p. 57; Phin. H. N. v. p. 31.) The town at one time belonged to Caria, but the Romans made an exchange, and, giving it up to the Ephesians, received Neapolis in return. (Strab. xiv. p. 639.) Col. Leake (Asia Minor, p. 261) believes that a few ancient ruins found at a place called Skalalora mark the site of Marathesium, though others regard them as remains of Tygela. [L. S.]

Digitized by Microsoft®
Marathon (Greek: Μαραθώνιον, a small plain in the NE. of Attica, containing four places, namely Marathon, Ptolemais, Trikeritos (Trikeritian) and Oenochoe (Oinochoe)). It originated from the Tetrapolis, one of the 12 districts into which Attica was divided before the time of Theseus. Here Xuthus, who married the daughter of Erechtheus, is said to have reigned; and here the Erechtheidae took refuge when driven out of Peloponnesus, and defeated Eurytheus. (Strab. viii. p. 383; Steph. B. s. "Trikeritian")

The name was derived from an eponymous hero Marathon, who is described by Pausanias as a son of Epenetus, king of Sieyon, who fled into Attica in consequence of the cruelty of his father (Paus. ii. §1, ii. 6. §5, i. 15. §3, i. 32. §4.). Plutarch calls him an Arcadian, who accompanied the Boeotians in their expedition into Attica, and voluntarily devoted himself to death before the battle. (Plut., Themistocles. §32.)

After Theseus united the 12 independent districts of Attica into one state, the name of Tetrapolis gradually fell into disuse; and the four places of which it consisted became Attic demes. - Marathon, Trikeritos, and Oenochoe belonging to the tribe Antius, and Ptolemais to the tribe Pandionis; but Marathon was so superior to the other three, that its name was applied to the whole district down to the latest times. Hence Lysias speaks of "the parts of Marathon about Oenochoe" (Μαραθώνια τµε περι την Οινοχαι, Φραγματευμαι, 18.).

Few places have obtained such celebrity in the history of the world as Marathon, on account of the victory which the Athenians here gained over the Persians in c. 490. Hence it is necessary to give a detailed account of the topography of the plain, in which we shall follow the admirable description of C. A. S. Marsden, and the additional information from Mr. Findlay and other writers.

The plain of Marathon is open to a bay of the sea on the east, and is shut in on the opposite side by the heights of Brilessus (subsequently called Penteuclus and Diancrites), which send forth roots extending to the sea, and bounding the plain to the north and south. The principal shelter of the bay is afforded by a long rocky promontory to the north, anciently called Cynosura (κωνόσυρα, Hesych. Phot., s. v.) and now Stomi. The plain is about 6 miles in length, and half that breadth in its broadest part. It is somewhat in the form of a half-moon, the inner curve of which is bounded by the bay, and the outer by the range of mountains already described. The plain, described by Aristophanes as the "pleasant meadow of Marathon" (Λαεία ἡ πρόστεστα Μαραθώνου, Aeschin. 246), is a level green expanse. The hills, which enclose the plain, are in ancient times with olives and vines (Xen. Dionys. xii. 84, xvii. 18). The plain is bounded at its southern and northern extremities by two marshes, of which the southern is not large and is almost dry at the conclusion of the great heats; while the northern, which is much larger, offers several parts which are at all seasons impassable. Both, however, have broad firm, sandy banks between them and the sea. A river, now called the river of Marathòna, flows through the centre of the plain into the sea.

There are four roads leading out of the plain. 1. One runs along the coast by the south-western extremity of the plain. (Plan, ac.) Here the plain of Marathon opens into a narrow maritime plain three miles in length, where the mountains fall so gradually towards the sea as to present no very defensible impediment to the communication between the Marathonia and the Mesogaea. The road afterwards passes through the valley between Pentelicus and Iynaeus, through the ancient deme of Pallene. This is the most level road to Athens, and the only one practicable for carriages. It was the one by which Pheidippides marched to Athens after landing at Marathon. (Herod. i. 62.) 2. The second road runs through the pass of Kourion, so called from a small village of this name, situated in the southern of the two valleys, which branch off from the interior of the plain. (Plan, bb.) This road leads through Cephisia into the northern part of the plain of Athens. 3. The third road follows the vale of Marathonia, the northern of the two valleys already named, in which lies the village of the same name, the largest in the district. (Plan, cc.) The two valleys are separated from one another by a hill called Kotravi (Plan, 3), very rugged, but of no great height. This third road leads to Aphiæna, from which the plain of Athens may also be reached. 4. The fourth road leaves the plain on the north-east by a narrow pass (Plan, dd) between the northern marsh and a round naked rocky height called Mt. Korakoi or Sauerkorakoi. (Plan, 4.) It leads to Phaestus; and at the entrance of the pass stands the village of lover Soil. (Plan, 12.)

Three places in the Marathonian district particularly retain vestiges of ancient deme. 1. Vrani, which Leake supposes to be the site of the deme of Marathon. It lies upon a height fortified by the ravine of a torrent, which descends into the plain after flowing between Mt. Argaliki and Arioranimi, which are parts of Mt. Brilessus or Pentelicus. (Plan, 1, 2.) A little below Vrani are seen five artificial tumuli of earth, one considerably larger than the others; and in a pass at the back of the hill of Kotravi, which leads from the vale of Vrani into that of Marathonia, there are some remains of an ancient gate. Near the gate are the foundations of a wide wall, 5 feet in thickness, which are traced for nearly 3 miles in circumference, enclosing all the upper part of the valley of Vrani. These ruins are now known by the name of Αργαλίτικα τὴν γονίαν (the old woman's sheepfold). Near the ruined gate Leake observed the remains of three statues, probably those which were erected by Herodes Atticus to three favourite servants. (Philol. Soph. ii. 1. §10) Marathon was the deme of Herodes, who also died there. The wall mentioned above was probably built by Herodes, to enclose his property; for it would seem from Pliny that Marathon was here described as a "village as ancient as the sea," and a "village a century before the time of Herodes. ("Bhamus pagus, locus Marathon," Plin. iv. 7. s. 11.) The early disappearance of the ancient town of Marathon would easily cause its name to be
MARATHON.

trans-ferred to another site; and it was natural that the celebrated name should be given to the principal plain in the district. Three-quarters of a mile to the south-east of the tumulus of Iomnd there is a rising ground, upon which are the traces of a Hellenic wall, apparently the peribolos of a temple. This was probably the temple of Hercules (Plan, 10), in whose sacred enclosure the Athenians were encamped before the battle of Marathon. (Herod. vi. 108.)

2. There are several fragments of antiquity still at the head of the valley of Marathon at a spot called Tinos, which is no doubt the site of the ancient Orchom, one of the four demes of the district. The retired situation of the town accounts for its omission by Strabo in his enumeration of the demi situated near the coast (i. p. 399).

3. There are also evident remains of an ancient demi situated upon an insolated height in the plain of Suli, near the entrance of the pass leading out of the Marathonian plain to Suli. These ruins are probably those of Tricorythus, the situation of which agrees with the order of the maritime demi in Strabo, where Tricorythus immediately precedes Phanion. We learn from Aristophanes and Suidas that Tricorythus was tormented by ghosts from a neighboring marsh (κοινα αυτοι ήδη Τρικορυθία, Aristoph. Eclog. 1032; Suidas, s. v. eumai); and at the present day the inhabitants of Lovers Suli in the summer are driven by this plague and the bad air into the upper village of the same name. The town was probably called Tricorythus from the triple peak on which its citadel was built.

The site of Probalinthus is uncertain, but it should probably be placed at the south-west extremity of the Marathonian plain. This might be inferred from Strabo's enumeration, who mentions first Probalinthus, then Marathon, and lastly Tricorythus. Between the southern marsh and Mt. Arpolidi there are foundations of buildings at a place called Taloria, which is, perhaps, a corruption of Probalinthus. Close to the sea, upon a rising ground in the marsh, there are some ancient remains, which may, perhaps, be those of the temple of Athena Hellotis (Plan, 11), which epitaph the goddess is said to have derived from the marsh, where the temple was built. (Schol. ad Plut. Ol. xiii. 56; Erph. Paus. s. v. Malavi.)

The principal monument in the Marathonian plain was the tumulus erected to the 192 Athenians who were slain in the battle, and whose names were inscribed upon ten pillars, one for each tribe, placed upon the tomb. There was also a second tumulus for the Plataeans and slaves, and a separate monument to Miltiades. All these monuments were seen by Pausanias 600 years after the battle (i. 32. § 3). The tumulus of the Athenians still exists. It stands in the centre of the plain, about half a mile from the sea-shore, and is known by the name of Soroi (οι Σοροί), the tomb. (Plan, 13.) It is about 30 feet high, and 200 yards in circumference, composed of a light mould mixed with sand, amidst which have been found many brazen heads of arrows, about an inch in length, of a trilobate form, and pierced at the top with a round hole for the reception of the shaft. There are also found in it grey and white stone-heap: the rock that, usually shaped by art, which have been usually considered fragments of the arrow-heads used by the Persian archers; but this opinion cannot be received, as fruits of the same kind abound in other parts of Greece, where no Persian is reported to have set his foot; and, on the other hand, none have been found either at Thermopylae or Plataea. At a very small distance from this tumulus Leake noticed a small heap of earth and stones, which is, perhaps, the tomb of Plataean and Athenian slaves. At 500 yards north of the great tumulus is a ruin called Pyrgo (Πύργος), consisting of the foundation of a square monument, constructed of large blocks of white marble; it is apparently the monument erected in honour of Miltiades. (Plan, 14.)

We learn from Philebaorus that there was a temple of the Pythian Apollo at Marathon (op. Schol. ad Soph. Oed. col. 1047); and Demodoches relates that the sacred vessel was kept on this coast, and that once it was carried off by Philip. (Phil. i. p. 49.)

Pausanias (i. 32. § 3, seq.) mentions in the plain several natural objects, some of which have been noticed already. The lake at the northern extremity of the plain he describes as "as for the most part marshy, into which the flying barbarians fell through their ignorance of the ways; and here it is said that the principal slaughter of them occurred. Beyond the lake (νερά της λιμνώς) are seen the stables of stone for the horses of Artaphernes, together with vestiges of a tent upon the rock. A river flows out of the lake which, within the lake, affords a supply for cattle to drink; but, towards the place where it cuts the sea, becomes salt and full of sea-fishes. At a little distance from the plain is a mountain of Pan, and a cavern worthy of inspection; the entrance is narrow; but within are apartments and baths, and that which is called the great-sand (πυκνάων) of Pan, together with rocks very much resembling goats." Leake observes that the marshy lake, and the river, which, becoming salt towards the mouth, produces sea-fishes, are precisely as Pausanias describes them. The marsh is deepest towards the foot of Mt. Koraki, where several springs issue from the foot of the rocks on the right side of the road leading from the great plain to Lower Suli. These springs are apparently the fountain Macaria (Plan, 8), which Pausanias mentions just before his description of the marsh. It derived its name from Macaria, a daughter of Hercules, who devoted herself to death in behalf of the young Hercules before the victory which they gained over the Argives in the plain. (Comp. Strab. viii. p. 377.) A small stream, which has its origin in these springs, is traced through the marsh into a small salt lake (Plan, 9), supplied by subterraneous springs, and situated on the south-eastern extremity of the marsh, under a rocky ridge, the continuation of C. Siont. Both the ridge and salt lake are known by the name of Dhronkonoria (νά Θροκονορία), i. e. the monster-waters, so called from its size, since ἄρσις is a common expression among the modern Greeks for any marvellous object). On the eastern side of the great marsh Leake noticed a small cavern in the side of Mt. Dhronkonoria, which is perhaps the place called by Pausanias "the stables of Artaphernes." Leake supposes that the Persian commanders were encamped in the adjoining plain of Tricorythus. The mountain and cavern of Dhronkonoria. (Plan, 14.) They would appear, from the description of Pausanias, to have been a little further removed from the plain than the marsh and salt lake. Hence they may be placed in Mt. Koraki.
MARATHON.

The exact ground occupied by the Greek and Persian armies at the battle of Marathon can only be a matter of conjecture. Col. Leake, whose account is both probable and consistent, though Mr. Fichot differs from him, supposes that the Athenian camp was in the valley of Vrondi near its opening into the plain; that on the day of battle the Athenian line extended from a little in front of the Herculeum, at the foot of Mt. Argaliki, to the bend of the river of Marathona, below the village of Seferi; and that the Persians, who were 8 stadia in front of them, had their right resting on Mt. Koridi, and their left extending to the southern marsh, which prevented them from having a front much greater than that of the Athenians. (See Plan, AA, BB.) When the Persians defeated the Athenian centre, they pursued the latter up one or both of the two valleys on either side of Mt. Kotróni, since Herodotus says that the pursuit continued quite into the interior (κατά τὸν μεσόγειον). Nearly at the same time the Persian left and right were defeated; but instead of pursuing them, the Athenians returned towards the field to the aid of their own centre. The Persian right fell towards the narrow pass leading into the plain of Tricorythus; and here numbers were forced into the marsh, as Pausanias relates.

---

PLAN OF THE PLAIN OF MARATHON.

A A. Position of the Greeks on the day of the battle.
B B. Do. Persians do.

Roads:—
a a. To Athens, between Mts. Pentelicus and Hy- mettus through Palea.
b b. To Athens, through Cephalia.
c c. To Athens, through Aphidna.
d d. To Baimus.

MARATHUS (Μαραθός; Plb. Μαραθούνας al. Μαραθόνας), a city on the coast of Syria, north of Arslan, placed by Ptolemy in the district of Cas- siotis, which extended as far north as Antioch. It is joined with Enydra, and was a ruin in Strabo’s time. It was on the confines of Phoenice, and the district was then under the dominion of the Arslans (Strab. xvi. p. 753; comp. Plin. v. 20), who had been foiled in a former attempt to reduce it to their power. The story, as given in a fragment of Diodorus (lib. xxxii. vol. x. p. 76—78, ed. Bipont; vol. ii. p. 593, ed. We s.), is as follows. The people of Arslans having

Digitized by Microsoft®
seized what they considered a favourable opportunity for the destruction of the people of Marathus, sent private agents to the court of Balas, the king of Syria, and bribed him with the offer of 300 talents to deliver up Marathus to them. The unfortunate inhabitants of the devoted city attempted in vain to appease their enemies. The Arabians violated the common laws of suppliants, broke the very ancient images of the local deities,—which the Maratheni had brought to add solemnity to their embassy,—tore the ambassadors, and cast them into prison: according to another account, they murdered some, and forged letters in their names, which they sealed with their seals, promising succour to Marathus, with a view of introducing their troops into the city under this pretence. But discovering that the citizens of Marathus were informed of their design, they desisted from the attempt. The facts of its final subjugation to Arabus are not preserved. Pliny (v. 26) places Marathus opposite to the island of Aradus, which he says was 200 paws (1000 Roman feet) from the coast. Dio- dorus (L. c.) states the distance between Aradus and Marathus to be 8 stadia; which need not be inconsistent with the statement of Pliny, as the latter may be supposed to measure to the point on the mainland nearest to Aradus, the former the distance between that island and the town of Marathus. The fact, however, is, that even the statement of Diodorus is too short, for the nearest point on the coast for this island is, according to Maundrell (March 7, p. 19), "about a league distant from the shore." And Pococke, who crossed the strait, says "it is reckoned to be about two miles from the continent. (Observations on Syria, p. 201.) The 20 stadia of Strabo is therefore much more correct than either of the other authorities. He says that the island lay off an exposed coast (εκπληθυα κατ' ηπειρον), between its part (Carnus lego Carnos) and Marathus; and what was the respective situation of these towns he intimates in another passage, where, reckoning from the north, he enumerates Balaninc, Carnos, Eunydra, Marathus. Pococke takes Tortosa to be "without doubt Carnus (Carnos) the port of Aradus on the continent;" and as this is 2 miles north of Aradus, he properly looks for Marathus on the south,—identifying Eunydra with Em-al-Hiy (now El Etime), or, as Strabo tells us, "directly opposite to Aradus" (p. 203), and suggesting that some ruins which he observed on a raised ground, at the northern extremity of a plain, about 7 miles south of Tortosa, "might possibly be Marathus" (p. 204). These conjectures may be admitted with some slight modifications. Thus, e. g., instead of identifying Tortosa with Carnus, this naval arsenal of the Arvalites must be placed about 2½ miles north of Tortosa, where a late traveller has discovered "extensive ruins, called by the Arab peasants Carnoon,—the site, doubtless, of the Carnus or Carnos of the ancients. The people from Arad still quarry stones from these ruins; and below it, on the north, is a small harbour, which appears to have been fortified like that of Tortosa." (Thompson, in Bibliotheca Sacra, vol. v. p. 254.) A fresh-water spring in the sea, is mentioned by Strabo; and a mile to the south, between the promontory and Aradus, a few relics from the shore, an immense grotto, called 'El In Hrbahin (Abraham's fountain), rises up from the bottom." Tortosa, then, will be, as many medi- eval writers maintain, Aradus, with the Arabic geographers write Antartus and Aretas; whence the common Arabic name Tortus, in Italian Tortosa. (L. c. p. 247, n. 1). "Pin-el-Hiyah, written by Pococke Ein-al-Hiy, is certainly the Eunydra of Stephanus, or, if a geographer, or his informant, having in this, as in so many other instances, retained the first half of the native name, and translated the latter half,—En being the usual Greek and Latin equivalent for the Semitic 'Ayin=fountain, and the hyde a sufficiently close representative of the Semitic生猪=serpent. South of this fountain are very extensive quarries, five or six miles to the south of Tortosa. "This neighbourhood is called by the Arabs Amurred or Abomed Amurree the fane of Amuret." This name the Greeks probably changed into Marathus, and the old vauts, foundations, sarcophagi, &c., near 'Ami-el-Hiyah (Serpents Fountain), may mark the precise locality of ancient Marathus." (Thompson, i. c. p. 250.) Pococke describes here a rock-hewn temple, and monumental house and chambers; besides a kind of semicircle, which he thinks "might serve for some sports to divert the people of Aradus and Antarathus, or of the ancient Marathus, if that was near. It was probably a circus." (p. 203.) It was the more necessary to identify these sites, as d'Anville placed the ancient Marathus at the modern Marakish, which is, doubtless, the representative of "Mutatio Maracaos" of the Jerusalem Itinerary, on the confines of Syria and Phœnicia, 15 M. south of Balanics (now Baniyas), and 10 M. north of Antartus; for this error is perpetuated in Arrowsmith's map. [G. W.]

2. A town of Arcadiany, of unknown site, mentioned only by Stephanus B. (L. c.)

MARATHUSSA (Μαραθουσσα), a small island of the Aegean sea, off the coast of Ionia, near Clazomeena. (Thuc. viii. 31; Plin. v. 81. s. 38.) MARCI, a place mentioned in the Not. Imp. as on the Saxon shore, and as a station of some Dalmatian cavalry under the command of the general of Belgium Servilla, and a semicircle, with De Verdero, and it may be Mark, between Callatis and Gravinales: but the site is uncertain. [G. L.]

MARCIANIA. [Galagaetca, p. 934, b.]

MARCIANA SILVA, a mountain forest in the south-western part of Germany, probably the whole or a portion of what is now called the Black Forest (Ann. Mar. xxii. 8; Tab. Ponting.) The origin of the name is not known. Chater regarding Marciana as a corruption of schierese, and others connecting it with marisch and marach, which is still used in the Black Forest as a name for a moor. [L. S.]

MARCIANOPOULIS (Μαρκιανούπολις, Procop. de Aed. iv. 7.), a city of Moesia, 18 M. P. from Odessus (Varna) (Itin. Anton.; Pent. Thib.; Hieroc.), which derived its name from Marciana, sister of Trajan. (Ann. Mar. xxviii. 6. § 12; Journ. de Rob. Oct. 16.) Claudius H. signify defeated the Goths at Aratius (now Torun), a few miles to the east of this town, by a hot spring, called 'Arin Horabah (Abraham's fountain), and from the bottom. 'Tortosain, then, will be, as many medi- eval writers maintain, Antartus, with the Arabic geographers write Antartus and Aretas; whence the
Frigigern and the Roman governor of Marcianopolis, Lupicinus, — which became the signal of a long and destructive war. (Anm. Marc. xxxii. 5 § 4, Zosim. iv. 10, 11.) Marciaspolis afterwards became Peristhriat or Preishla (Περιστηρια), the capital of the Bulgarian kingdom, which was taken A. D. 971 by Svyatoslaf the Russian, and again rebuilt by his grandson in 985. When, after the division of 889, Euxinius put to the sword, and the sons of the Bulgarian King rescued from an ignominious prison, and invested with a nominal diadem. (Gibbon, c. iv.; Schafarik, Sack.

MARCILIANA, a station on the Via Popilia, in Lucania, where, according to the Tabula, that road (which led directly S. from Campania into Bruttium) was joined by a branch from Potentia. The name is corrupted both in the Tabula and in the Antonine Itinerary; but there can be no doubt that the place meant is the same called by Cassiodorus "Marpilimun," which was a kind of suburb of the town of Consolium, where a great fair was held. (Itin. Pat. p. 110; Obt. Pent.; Cassiod. Var. viii. 33.) The site is still called Marciliana, in the valley of the Tanagro, between La Suda and Padula. (Romanelli, vol. i. p. 405.)

MARCINA (Marpina), a town of Campania, in the district of the Picentini, situated on the N. shore of the gulf of Pozzobon, between the Sirenasae Insaec and the mouth of the Salernus. (Strabo, p. 253.) It is mentioned by no writer except Strabo, who tells us that it was a colony founded by the Tyrrhenians, but subsequently occupied, and in his day still inhabited, by the Samnites. As he adds that the distance from thence through Nuceria to Pompeii was not more than 120 stadia (15 Roman miles), he appears to have regarded this as the point from whence the passage of the isthmus (as he calls it) between the two bays began; and it may therefore be placed with some plausibility at Victor. (Oliver, Ital. p. 1190; Romanelli, vol. i. p. 403.) Some ancient remains have been discovered there, though these may seem to indicate the site of Roman villas rather than of a town.

MARCUS MONS (ro MÀpotov òpò) was, according to Plutarch, the name of the place which was the scene of a great defeat of the Volscians and Latins by Camillus in the year after the taking of Rome by the Gauls n. c. 389. (Plat. Camill. 33, 34.) Didouros, who calls it simply Marcus or Marcum (rò wòapòòouwv Màpqoòv, xiv. 107), tells us that it was 200 stadia from Rome; and Livy, who writes the name wò ap Mecwum, says it was near Lamium. (Liv. vi. 2.) The exact site cannot be determined. Some of the older topographers speak of a hill called Colle Marzo, but no such place is found on modern maps; and Gell suggests the Colle di Duc Torri as the most probable locality. (Gell, Top. di Rom. iii. 311.)

MARCODAVA (Marquedàva), Ptol. iii. 8, § 7, a town of Dacia, the remains of which have been found near Thrada. (Sestini, Vigna, p. 105.) [E. B. B.]

MARCODURUM, in North Gallia. Some of the cohorts of the Ubii were cut to pieces by the troops of Civitas at Marcodurum, which as Tacitus observes (Hist. iv. 28) is a long way from the bank of the Rhine. The termination durum indicates a place on a river; and Marcodurum seems to be Duren on the Rhine. The Frank kings are said to have had a palace there, named Duria Villa or Duria. [G. L.]

MARCOPAGUS, a place in North Gallia on a road from Augusta Treverorum (Trèves) to Agrrippina Civitas (Colodac). It appears both in the Antonine Itinerary, and in the Table. Marcopagus is Marcum. It is on C. or M. P. from Cologne, and the numbers are not certain. [G. L.]

MARCORNIANO (Marquorniano, Marquornairi, or Marquornao), a name frequently occurring in the ancient history of Germany, sometimes as a mere appellative, and sometimes as a proper name of a distinct nation. Its meaning is border-men or march-men, and as such it might be applied to any tribe or tribes inhabiting and defending a border country. Hence we must be prepared to find Marcomanni both on the western and southern frontiers of Germany; and they might also have existed in the east, or on any other frontier. Marcomanni are first mentioned in history among the tribes with which Ariovistus had invaded Gaul, and which were defeated and driven back across the Rhine by J. Caesar, n. c. 55 (Cass. Bell. Gall. i. 51). These Marcomanni, therefore, appear to have been the marcomanni on the Rhine frontier, and might be those who inhabited the lower part of the Main. They are again mentioned during the campaigns of Drusus in Germany, from n. c. 12 to 9, by Florus (iv. 12), who seems to place them somewhat further in the interior. Only a few years later, we hear of a powerful Marcomannian kingdom in Bohemum or Bohemia, governed by Marobodus; and we might be inclined to regard these Marcomanni as quite a different people from those on the Rhine and Main, that is, as the marcomanni on the southern frontier,— were it not that we are expressly told by Tacitus (Germ. 42), Paterculus (ii. 108), and Strabo (vii. p. 290), that their king Marobodus had emigrated with them from the west, and that, after expelling the Celtic Boii from Bohemia, he established himself and his Marcomanni in that country. (Comp. Ptol. ii. 11, § 25.) If we remember that the kingdom of the Marcomanni in Bohemia was fully organised as early as A. D. 6, when Tiberius was preparing for an expedition against it, it must be owned that Marobodus, whose work it was, must have been a man of unusual ability and energy. Henceforth the name of the Marcomanni appears in history as a national name, though ethnologically it was not peculiar to any particular tribe, but was given to all the different tribes which the Marcomannian conqueror had united under his rule. The neighbouring nations whom it was impossible to subdue were secured by treaties, and thus was formed what may be termed the great Marcomannic confederacy, the object of which was to defend Germany against the Romans in Pannonia. But the Marcomanni soon also came into collision with another German confederation, that of the Cherusci, who regarded the power of the empire of Marobodus as not less dangerous to the liberty of the German tribes than the aggressive policy of the Romans. In the ensuing contest, A. D. 17, the Marcomanni were humbled by the Cherusci and their allies, and Marobodus implored the assistance of the emperor Tiberius. The aid was refused, but Drusus was sent to mediate peace between the hostile powers. (Tac. Ann. ii. 43, 46.) During this mediation, however, the Romans seem to have stirred up other enemies against the Marcomanni; for two years later, A. D. 19, Catullus, a young chief of the Goths,

merit of keeping well to a great age; and Horace (Od. i. 37) mentions it as a favourite beverage of Cleopatra.

Marvia, from its neighbourhood to Alexandria, was so generally known to Roman travellers, that among the Latin poets, the words Marcia and Mareotic became synonymous with Aegypt and Aegyptian. Thus Martial (Ep. xiv. 209) calls the papyrus, "cortex Mareotica" (comp. id. Ep. iv. 42); and Gratius (Cynegesta, v. 315) designates Aegyptian luxury as Mareotic; and Ovid (Met. iv. v. 73) employs "arva Maretica" for Lower Aegypt. [W. B. D.] MAREOTIS or MARE'IA (Μαρεοτίς ή Μαρεια), Strab. xvii. pp. 749—799; Μαρεια, Steph. B. s. v.; Mareotis Libya, Phin. v. 10. s. 11; Justin ii. 1), the modern Birkalet-el-Meriont, was a considerable lake in the north of the Delta, extending south-westward of the Canopic arm of the Nile, and running parallel to the Mediterranean, from which it was separated by a long and narrow ridge of sand, as far as the tower of Perseus on the Phoenissiac bay. The extreme western point of the lake was about 26 miles distant from Alexandria; and on that side it closely bordered upon the Libyan desert. At its northern extremity its waters at one time washed the walls of Alexandria on their southern side, and before the foundation of that city Mareotic was the Lake of Pharaoh. In breadth it was rather more than 150 stadia, or about 22 English miles, and in length nearly 300 stadia, or about 42 English miles. One canal connected the lake with the Canopic arm of the Nile, and another with the old harbour of Alexandria, the Portus Eumaeus. [A. X.

MAREOTIS. The shores of the Mareotic were planted with olives and vineyards; the papyrus which lined its banks and those of the eight islets which studded its waters was celebrated for its fine quality; and around its margin stood the country-houses and gardens of the opulent Alexandrian merchants. Its creeks and quays were filled with Nile boats, and its export and import trade in the age of Strabo surpassed that of the most flourishing havens of Italy.

Under the later Caesars, and after Alexandria was occupied by the Arabs, the canals which fed the lake were neglected, and its depth and compass materially reduced. In the 16th century its waters had retired about 2 miles from the city walls; yet it still presented an ample sheet of water, and its banks were adorned with thriving date-plantations. The lake, however, continued to recede and to grow shallower; and, according to the French traveller Savary, who visited this district in 1777, its bed was then, for the most part, a sandy waste. In 1801 the English army in Aegypt, in order to annoy the French garrison in Alexandria, bored the narrow isthmus which separates the Birkalet-el-Meriont from the Lake of Medich or Aboeur, and re-admitted the sea-water. About 450 square miles were thus converted into a salt-marsh. But subsequently Mehemet Ali repaired the isthmus, and again diverted the sea from the lake. It is now of very unequal depth. At its northern end, near Alexandria, it is about 14 feet deep at its opposite extremity not more than 8 or 4. Westward it forms a long and shallow lagoon, separated from the sea by a bar of sand, and running towards Libya nearly as far as the Tower of the Arabs. The lands surrounding the ancient Mareotic were designated as the Mareotic Nome (Μαρεοτίς Νομός, Strab. iv. 5. §§ 8, 34); but this was probably not one of the established Names of Pharaonic Aegypt. [W. B. D.] MARES (Μάρες), a tribe on the coast of Pontus, in the neighbourhood of the Mosynocii. (Hecat. Frgm. 192; Herod. iii. 94.) Their armour, when serving in the army of Xerxes, is described by Herodotus (vii. 79) as having consisted of helmets of wicker-work, leather shields, and javelins. Later writers do not mention this tribe. [L. S.]

MARESIAH (Μαρεισα, LXX., Enseb.; Μαρεισα, Joseph., xi. 1), a city of Phoenicia, is said to have been founded with Keilah and Azchib in Joshua (xxv. 44). In Micah (i. 15), where it is again joined with Acharib, the LXX. have substituted Acharis. Lachish, however, is found, in the list of Joshua, independent of Maresa (xxv. 39), so it could not be a synonym for Maresa. It was one of the cities fortified by Rehoboam against the Philistines and Egyptians (2 Chron. xi. 8); and there it was that Asa encountered Zerah the Ethiopian, "in the valley of Zephathah at Maresiah" (xix. 9), and gained a signal victory over him. In the time of Judas Maccabees it was occupied by the Idumaeans (2 Maccob. xii. 35), but Judas took and destroyed it. (Joseph. Ant. xii. 8, § 6.) Only a few years later it is again reckoned to Idumaea; and Hyrcanus I. took it, and compelled its inhabitants, in common with the other Idumaeans, to practice circumcision, and conform to the law, as a condition of remaining in that country (xiii. 9. § 1, 13. § 4). It was one of the cities restored to Aetas king of Arabia by Hyrcanus II., as the price of his services (xiv. 1. § 4); soon after which it was rebuilt by Gabinius (5. § 3); shortly after sacked and destroyed by the Parthians in their invasion of the country, in the time of Herod the Great (xiv. 13. § 9); and probably never recovered its former importance, as this is the latest historical notice. It is placed by Eusebius and St. Jerome 2 miles from Eleutheropolis; it was then a ruin. Dr. Robinson conjectures that "Eleutheropolis (at first Bethogbara) had sprung up after the destruction of Maresa, and had been built with its materials," and that "the foundations which he discovered on the south-eastern part of the remarkable tell, south of the place, were remains of Maresa. The spot is admirably adapted for a fortress; it lies about a Roman mile and a half from the valley of the River Jethro." There are no other ruins in the vicinity. (Bib. Rev. vol. ii. pp. 422, 423.) [G. W.]

MARE'EA or MAL'THUBA (Μαρεία διαρρόης και Μαλλουθα καλουμένη, Ptol. vii. 2. § 24), a place of some importance in the upper part of the Aurea Chersonesus in India extra Gangem. It is not possible now to identify it with any existing place. [M. R.]

MARGANA or MARGA'ALAE (Μαργάνα, Diod.; Μαργανίς, Xen.; Μαργάννα, Strab.; Μαργανή, Steph. B. s. v.), a town in the Pisatis, in the district Amphidias, was supposed by some to be the Homeric Aegy. (Strab. viii. p. 349.) The Eleians were obliged to renounce their supremacy over it by the treaty which they made with Sparta in n. c. 400 (Xen. Hell. iii. 2. § 80), on which occasion it is called one of the Triphylian towns; as to this statement, see LEITRIM. It is mentioned as one of the towns taken by the Arcadians in their war with the Eleians in n. c. 366. (Xen. Hell. vii. 4. § 14; Diod. xv. 77.) Its site is uncertain, but it was probably east of Letrini. Leake places it too far north, at the junction of the Ladon and the Peneius, which is in all probability the site of the Eleian Pylos. (Leake, Peloponnesica, p. 219; Boblaye, Récherches, jfc. p. 130; Curtius, Peloponnes, vol. i. p. 75.)
Margiana.

Margiana (ἡ Μαργιάνα, Stраб. xi. p. 516; Πτολ. vi. 10; Πλ. vi. 16. a. 18), a district of considerable extent in the western part of Central Asia, which was bounded on the W. by Hyrcania, on the N. by Syria and the Oxus as far as Bactriana, on the E. by Bactriana, and on the S. by Ariana. At present the country is called Khwarizm, and comprises also some part of the territory occupied by the Turkoman tribes. Like most of the districts at a great distance from Greece or Rome, it was but partially known to the ancients; hence its limits are variously stated by ancient authors. Thus Strabo makes it the province next to Parthia, to the N. of the Sarupi mountains, and gives the same boundaries to the W., N., and E. as the other geographers (σ. Π. 516). Pliny places it in the same direction, but adds that a desert of 120 M.P. must be crossed before it could be reached (vi. 16. s. 18).

Both Strabo and Pliny speak of the great fertility of its land, and the fineness of its climate; the former stating that the vines were often so large that a man could not embrace their stems in his arms; the latter, that it was the only district in that part of the world which produced grapes. The accounts of the ancients are in this particular confirmed by modern and by Muhammadan writers. According to the latter, it would seem to have comprised the territory from Benjerd on the west, to Mere and the Margh-ah in the east, a tract remarkable for its beauty and fertility. (Wilson, Ariana, p. 149.) The principal river of Margiana, from which, too, it probably derived its name, was the Margus (now Margh-ah). Various races and tribes are noticed in different authors as occupying parts of Margiana. All of them may be considered as of Semitic or Tatar origin;—indeed, in this part of Asia, the population has remained nearly the same to the present day which it was in the classical times. The principal of these were the Demerecas of Derhres ( Steph. p. 23; Stраб. xi. p. 508; Dionys. v. 734), who lived to the N. near the mouth of the Oxus; the Massagetae, the Parani, and the Daxe, who lived to the S. of the former along the Caspian and the termination of the Margus, which loses itself in the sands beyond the parent river; and reaches the Caspian Sea and the Tapur and Marim. The chief towns were, Antiochia Margiana (certainly the present Jere), Nisaea or Nesaia, Ariaca, and Jasonium. [See these places under their respective names.] [V.]

Margidunicum, in Britain (Ita. Anton, pp. 477, 479). It is supposed by Camden, Stukeley, Horsey, and others, to have been situated at or near East Bridgford, about eight miles from Melton. [C. R.S.]

MARGUS or MARGUS (Μαργος, Μαργος), also called MARGUM, a city of Moesia, at the confluence of the Margus and Danube. It was termed "Margus planum" on account of the level character of the surrounding country. (Jornand, de Rôch. Got. c. 58.) It was here that the emperor Carinus was totally defeated by Diodelan. (Entrop. ix. 13, x. 29; It. Aut. p. 128; It. Hieron. p. 564.) [A. L.]

MARGUS (Μαργος), Strab. vi. p. 318; Margus, Plin. iii. 26, s. 29), an important river of Moesia, which flows into the Danube, near the town of Margus, now the Morava. Strabo says (l. c.) that it was also called Bargus, and the same appears in Herodotus (iv. 44) under the form of Brongus (Βρογυς). It is the same river as the Moschius (Μοσχιος) of Ptolemy (iii. 9. § 3). [A. L.]

MARIABA.

Margus (Μαργος, Stраб. xi. p. 516; Πτολ. vi. 10. §§ 1, 4), the chief river of the province of Margiana, which in all probability derives its name from it,—now the Murgh-ah or Mero Bih. It is said by Ptolemy to have taken its rise in the Sarupi mountains (now Hazarids), a western spur of the great range of the Pamir mountains, and, after forming its junction with another small stream, to have flowed into the Oxus. The travels of Sir Alexander Burns have demonstrated that the Murgh-ah no longer reaches the Oxus, but is lost in the sands about 50 miles NW. of Mere (Burns, vol. ii. p. 35); but it is probable that at least as late as the time of Ibn Haukal (about a. D. 930) it still flowed into the Jihun (De Sacy, Mém. sur des Prov. de la Perse, p. 22). The Margus passed by and watered Antiocheia Margiana, the capital of the province. [V.]

MARIABA (Μαριαβα). There seem to have been several cities of this name in Arabia, as there are still several towns or sites of the name, scarcely modified. How many distinct cities are mentioned by the classical geographers, antiquarians are not agreed, and the various readings have involved the question in great perplexity. It will be well to examine first those of which the notices are most distinct.

1. The celebrated capital of the Sabaei in Yemen, is known both in the native and classical writers. It is called the metropolis of the Sabaei by Strabo (xvi. 4. § 2), which tribe was contiguous to that of the Minaeans, who bordered on the Red Sea on one side, and to the Catabania, who reached to the straits of Behcel-Mandub. [Sabaei; Mnaita; Catabani.] It was situated on a well-watered mountain, and was the royal residence. It seems difficult to imagine that this was distinct from the Mariaba of Pliny, who, however, assigns it to the Atramentae, a branch of the Sabaei, and places it on a bay 94 M. P. in circuit, filled with spice-bearing islands; while it is certain that the Mariaba of the Sabaeans was an inland city. It is beyond all doubt the Maarib of the Arabian historians, built according to their traditions by 'Abd-schems, who rose to power in succession from the patriarch Koktan or Joktan, son of Eber. Abulfeda says that this city was also called Saba; and that, in the opinion of some, Maarib was the name of the royal residence, while the city itself was called Saba. Its founder also constructed the stupendous embankment so renowned in history, forming a dam for confining the water of seventy rivers and torrents, which he conducted into it from a distance. (Abulfeda, Historia Anti-Islamic, bi. iv. ap. init.) The object of this was not only to supply the city with water, but also to irrigate the lands, and to keep the subjugated country in awe, by being masters of the water. The water rose to the height of almost 20 fathoms, and was kept in on every side by a work so solid, that many of the inhabitants had their houses built upon it. It stood like a mountain above the city, and no danger was apprehended of its ever failing. The inundation of El-Arem (the mound) is an aera in Arabic history, and is mentioned in the Koran as a signal instance of divine judgment on the inhabitants of this city for their pride and insolence. A mighty flood broke down the mound by night, while the inhabitants were asleep, and carried away the whole city, with the neighbouring towns and people. (Sale, Koran, cap. 34, vol. ii. p. 259, notes, and Preliminary Discourse, sect. 1. vol. i p. 13;
This catastrophe seems to have happened about the time of Alexander the Great, though some chronologies place it subsequently to the Christian era. Sale places the city three days' journey from Samas (note, in loc. cit.). The notion of the identity of Mæreb with Sbeha, mentioned by Abul- feda, is still maintained by some natives; and Niebuhr quotes for this opinion a native of the town itself (Descript. de l'Arabie, p. 252), and justly remarks that the existence of the remains of the famous reservoir of the Saecaeans in the vicinity of Mæreb serves to identify it with the capital of the Saecaeans. To account for the capital not bearing the name of the tribe, as was usual, he suggests that the Saecaeans may have derived their name from another town, and then have built this stupendous reservoir near Maraba, and there have fixed the residence of their kings. But a fact elsewhere mentioned by him, will perhaps lead to a more satisfactory solution. It seems that the great reservoir is not situated before Mæreb, nor close to it, but at the distance of an hour, and on the side of it. This may account for its preservation on the burning of the embankment. May not the inundation have occasioned the utter destruction of the neighbouring city of Sbeha, as the traditions relate, while the royal residence at Mæreb escaped, and formed the nucleus of the modern town? We have seen from Abulfeda that some native authorities maintain that Marib was the royal residence, while the capital itself was called Saba. The name Maraba (al Marâya) signifying, according to the etymology of Pliny, "dominos omnium," would well suit the residence of the dominant family (vi. 28. § 52). Marib is now the principal town of the district of Dush, 16 German leagues ENE. of Sana, containing only 300 houses, with a wall and three gates; and the ruins of a palace of Queen Balsis are there shown. The reservoir is still much celebrated. It is described by a native as a valley between two chains of mountains, nearly a day's journey in length (=5 German leagues). Six or seven small streams, flowing from the west and south, are united in this valley, which contracts so much at its east end, by the contraction of the mountains, that it is not more than 5 or 6 minutes wide. This space was closed by a thick wall, to retain the superfluous water during and after the rains, and to distribute it over the fields and gardens on the east and north. three sluice-gates, one over the other. The wall was 40 or 50 feet high, built of enormous blocks of hewn stone, and the ruins of its two sides still remain. It precisely resembles in its construction the Benda, as they are called, in the woods of Bel- graves, near Bakhtere, on the Bosphorus, which supply Constantinople with water, only that the work at Marib is on a much larger scale. (Nie- buhr, l. c. pp. 240, 241.)

2. MARABA BALAMACUM. A city of this name in the interior of Arabia is mentioned with this distinguishing appellation by Pliny (vi. 32) as a considerable town of the Barmacidae, which was one division of the Minaeans; he calls it "oppidum xvi. mill. pass... et ipsum non spernendum." It is supported by some to be identical with the Baraba metropolis (Bârdâw al Marâba mu'tâbûlas) of Ptolemy (vi. 15, p. 155), which he places in long. 70°, lat. 18° 20'. Forscher has found its representative in the modern Taraba, whose situation corresponds sufficiently well with the Baraba metropolis of Ptolemy (Geog. of Arab. vol. i. p. 135. ii. p. 256); but his account of the designation Baramacum (quasi Bar-Amâ lectum, equivalent to "Marob of the sons of Amelek") is inadmissible according to all rules of etymology (vol. ii. pp. 43, 47). Taraba, pronounced by the Bedouins Taraba, is 30 hours (about 80 miles) distant from Taqif to the north-west, situated among thick groves and gardens, watered by numerous rivulets." (Burenhard, Travels in Arabia, Appendix, No. iv. p. 541.) A more probable derivation of Baramacum from Bâr-bûnaiin (= the Royal Lake) would identify it with the preceding, No. 1. (Vincent, Peripitus, p. 307.)

3. MARABA, another inland city of Arabia, is mentioned also by Pliny (l. c.) as the capital of the Oalicii, 6 M.P. in circumference, which was, according to him, one of the eight towns taken and destroyed by Aelius Gallus. He has perhaps confounded it with the Mârasyâba which Strabo names as one of the limits of his expedition, and the siege of which he was forced to abandon; but it was remarked before that this name was according to Pliny equivalent to a metropolis, — though the etymology of the name is hopelessly obscure: — so that it is very possible that, besides the Mârasyâba mentioned by Strabo, a Maraba may have fallen in with the line of that general's march, either identical with one of those above named, or distinct from both; possibly still marked by a modern site of one of those towns still preserving a modification of the name, as El- Marâbekâ, marked in Kieper's map in the very heart of the country of the Wahibites; and a Merob marked by Arrowsmith, in the NE. of the Nejd country. (Mârasyâba.)

MARIAMNA (Mâriamna), an inland city of Arabia, mentioned only by Ptolemy (vi. 15), who places it in long. 78° 10' and lat. 17° 10', and therefore not far from his Baraba from which this Baraba was named (Maraba, 2). Munnert (Geographie, pt. vi. vol. i. p. 66) suggests its identity with Marib, marked in Niebuhr's map towards the north-east of Yemen, which, however, is the name of a district, not of a town, its capital being named Arim (Description de l'Arabie, p. 228); but this would not agree with the position above assigned to Maraba Baramacum. (Ritter, Erdkunde von Arabinien, vol. i. p. 283.) (Mâriâmna.)

MARIAMNE (Mapamán), a city of Syria, subject to Aradus, and surrendered with Aradus and its other dependencies, Marathus and Sigon, to Alexander the Great by Straton, son of Gerostras, king of Aradus. (Arrian, ii. 14. § 8.) It is placed by Ptolemy in the district of Cassiotes (v. 15), and by Hierocles in the second eparchy of Syria (apud Wesseling, Itineraria, p. 712.) (G. W.)

MARIANA (Mapamán, Poil), a city on the E. coast of Corsica, which, as its name imports, was a Roman colony, founded by the celebrated C. Marius. (Plin. iii. 6. s. 12; Pol. iii. 2. § 5; Mel. ii. 7. § 19; Secor, Cons. ad Hept. 8.) Nothing more is known of its history, but it is recognised as holding colonial rank by Pliny and Mela, and appears to have been one of the two principal cities in the island. It is a plausible conjecture of Cluverius that it was founded...
on the site previously occupied by the Greek city of Nicaea mentioned by Diodorus (Diod. v. 13; Clever. Sicil. p. 508). Its name is mentioned in the Antonine Itinerary (p. 85), which erroneously reckons it 40 miles from Aleria; the ruins of Mariana, which are still extant under their ancient name at the mouth of the river Golfo, being only about 30 miles from those of Aleria. It is 15 miles S. of the modern city of Bastia. The ancient remains are inconsiderable, but a ruined cathedral still marks the site, and gives title to the bishop who now resides at Bastia. (Bampoldi, Dict. Geogr. vol. ii. p. 589.)

MARIANA FOSSA. [Fossa Mariana.]

MARIANDYNI (Μαριανδυνί), a small town, on the coast of Dalmatia, and often mentioned by Strabo (vii. 343, xii. p. 542). The chief town in their territory was Heraclea Pontica, the inhabitants of which were called the Mariandyni, for a time, to a state of servitude resembling that of the Cretan Minoi, or the Thessalian Penestae. To what race they belonged is uncertain, though if their Thracian origin be given up, it must probably be admitted that they were akin to the Paphlagonians. In the division of the Persian empire they formed part of the Satrapy of Bithynia. Their country was called Mariandynia (Μαριανδυνια, Steph. B. s. e.), and Ptolemy speaks of a Sinus Mariandynus on their coast. (Comp. Lecat. Freg. 201; Archyl. Pers. 932; Xen. Anab. vi. 4, § 4, Cyrop. i. 1, § 4; Polyb. v. 1, § 11; Scev. Fregam. 199; Dionys. Porieia. 788; Mela. i. 19; Athen. xiv. p. 620; Apoll. Argon. iii. 724; Constant. Perip. Them. i. 7.)

MARIANA MONS (Μαριανα ουρος), a mountain in Hispania Baetica, justly perhaps considered the most important mountain in the country. The eastern foot of this mountain was called Saltus Castinobensium. (Castulo.)

MARIANA MONS. [M. B. S.] (B. C.)

MARIANAE LUCIS. [LUCIS.]

MARIAS (Maryas). (Aegina. vol. 1.), a castle or fortified town in Mesopotamia, mentioned by Ammianus Marcellinus in his account of Constantius. There can be no doubt that it is the same as the present Maridin, which is seated on a considerable eminence looking southward over the plains of Mesopotamia.

MARIANUS (Marianus). [Marianus.] (Ptol. ii. 4, § 15; Musae Marciunian. H. Ant. p. 432; Sever. Mor. col. ii. 142), without mentioning its name, as running parallel to the river Bactis, and full of names. Hence Pliny (xxxiv. 2) speaks of "aes Maricum, quod et Cordubense dictur." The eastern part of this mountain was called Saltus Castinobensium. (Castulo.)

MARIDINUM (Mapidinum). [Ptol. ii. 3. § 23), in Britain, a town in the country of the Demes, now Coraartien. In the time of Gaius Cambrensis the Roman walls were in part standing ("est igitur hae urbis antiqua coelestis muris partem adhuc extantibus egregie causa," Itin. Camb. lib. i. c. 10).

MARIDINUM. [Marianus.] (Ptol. vii. 582), a town in Panoniam, on or near the frontier between the Upper and Lower Pannonia, on the road from Bovia to Marsa. (It. Ant. p. 134.) It is possible that the place may have been the same as the one called by Ptolemy (ii. 14, § 6) Maryawana. (Comp. Geogr. Rav. iv. 19, and Tab. Punt.)

MARINUS. (Marinus). Two towns of this name are mentioned by Ptolemy (ii. 11. § 27) in the north-west of Germany. As the name seems to indicate a maritime town, it has been inferred that one of them was the modern Hamburg, or Marne at the mouth of the Elle, and the other Lubeck or Wimaran. But nothing certain can be said about the matter. (L. S.)

MARIUS. [Marius.] (Marius). Two towns of this name, Marius, Strab. vii. 304; Mapiis, Herod. iv. 49; Marias, Jarrund. de Ref. Get. 5; Geogr. Rav. a river of Dacia, which both Herodotus (i. c.) and Strabo (i. c.) describe as falling into the Dnepr; it is the same as the Marosch, which falls into the Thaya. (Herod. Ant. Nat. vol. ii. p. 10, trans. Scaf. Svar, Alt. vol. i. p. 507.)

MARIVIS (Marivis). (Ptol. vi. 7, § 20.) They appear to correspond in situation with the Jebel Athis, on the south of Wady-el-Aftan, in Kitter's map. (Forster, Geogr. of Arabia, vol. ii. p. 266.)

MARITIMA, a town of Gallia Narbonensis on the coast. Mela (ii. 5) speaks of Mareta and the Rhodamos Maritima was close to the Aviti- gerum stagnum; and he adds that a "fossa" discharges a part of the lake's water by a navigable stream. Pliny in a passage before quoted (Fossa Mariana, vol. i. p. 912), also calls "Maritima a town of the Avatii, above which are the Campi Lapidiferi." Ptolemy (ii. 18, § 8) places Maritima of the Avatii east of the eastern branch of the Rhone, and he calls it Colonia. The name is Avatici in the Greek texts of Ptolemy that are now printed, but it is Avatii in the Latin text of Pirkheim, and perhaps in other Latin texts. It does not seem certain which is the true reading. Walckenaer (Geogr. dec. vol. i. p. 182) assumes that Avatii is the true reading in Ptolemy.

D'Aville concludes that Maritima was between Marseille and the canal of Marinus, and that Martigues is the site; but there is no reason for fixing on it, being that it is between the Rhone and Marseille, and that there is little resemblance between the two names. It is said that no traces of remains have been found at Martigues, which, however, is not decisive against it, if it is true; and it is not true. Martigues is near the outlet of the D'ong de Bert. Walckenaer observes that
MARMARICA. 277

Derives from the word "Marb," salt, with a reduplication common to these languages, to the region they occupied. The town now of the people of the tribe of the Marmaritae is probably the ancient town of Amyntai, which is also believed to be the same as the town of which a few remains are visible on the coast. It is situated on the western side of the island, near the mouth of the river, which is called the Matrona, and is navigable for a distance of about six miles. The harbor is well protected, and is sheltered by a range of mountains on the north, which throw their shadow over it at all times of the year. The town is built upon a rocky elevation, and is defended by a strong fortification, consisting of walls and towers, which are well preserved. The port is large, and can furnish shelter to the largest vessels. The inhabitants are largely engaged in navigation, and trade, and in the cultivation of the land. The town is a thriving place, and is well worth a visit.
which the ruins still remain. Throughout the whole of Marmaria no vestiges of Egyptian architecture have been discovered; but the town itself has been found. The sanctuary, "scilla maritima," and madder, "rubia," which cover the plains, remind the traveller of what Herodotus (iv. 189, 190) says about the practice of the Libyan women dying their goat-skins with red, and of the portable houses constructed of stalks of asphodel, intertwined with rushes. Now, as then, the "jerboa" (τίνος, Herod. iv. 192) is common. The few coins of Marmarie towns, such as those of Apis and Battricus, are of the same workshop as the aspendonian ones. (Eckhel, vol. iv. p. 116.)

Ptolomy (iv. § 22) enumerates the following tribes in Marmaria:—In the Lybian name, along the coast, the Zygmati (Ζυγματί, Chattani (Χαττανί), and Zygones (Ζυγεί); further to the S., in the interior, the Buzenses (Βούζην) and Osaimi. In the district of Ammonium (§ 23), the Anagomiri (Αναγομιρία), Ioracchi (Ιορακχί), and Reandite (Ρεαντίτη). In the Marmaritae name to the N. on the coast, the Liby- arciae (Λιβυάρκαοι), the Anetidae (Ανετίδαι), and Bussachiae (Βουσσάκαι); to the S. of these, the Agouli (Αγουλι), Naamones (Νααμώνες), and Baxontae (Βαξόνται); then the Auchi- saei (Αοχίσαηαι), who belong more properly to Cy- renaica; Tapanitae (Ταπανίται); and further to the S. the Senthites (Σενθίται), Osilae (Οσιλαί), and Azeidae (Αζείδαι).

(Proc. Roy. Soc. in 1946. 5—1.)

MARMARIUM. [Carynysus.] MARMOLITIS. [Raphagna.] MARIODUDUM (Μαριοδούδουμ), a town of the Marsomanni in Bohemia (Procli. ii. § 29), and undoubtedly identical with the royal residence of Marodonius, with a fortress attached to it, mentioned by Tacitus, (Ann. ii. 63.) The same place, or rather the fortress, is called by Strabo (vii. p. 290) Busmenon, and is identified with the modern Frutlic, in Bohemia. [L. S.]

MARONELA (Μαρονέλα; Eth. Μαρονείτης), a rich and powerful city of the Gieoes, in Thrace, situated on the Aegean sea, not far from the lake Isauris. (Herod. vii. 109.) It is said to have been founded by Moran, a son of Dionysus (Eurip. Cyp. v. 100, 141), or, according to some, a companion of Osiris (Hid. Suec. i. 26); but Scyl Jenna (ch. 12) relates that it was built by a colony from Chios in the fourth year of the fifty-sixth Olympiad (b. c. 510). Pliny (iv. 11, s. 18) tells us that the ancient name was Oratzunae. The people of Maronea venerated Dionysus in an especial manner, as we learn from their coins, probably on account of the superior character of their wine, which was celebrated as early as the days of Homer (Od. i. 40). This wine was universally esteemed all over the ancient world; it was said to possess the odour of lilies (Xenophon. iv. 12, xvii. 6, xxi. 11), and to be of mixture with twenty times its quantity of water (Hom. Od. ix. 197); and, according to Pliny, on an experiment being made by Mucianus, who doubted the truth of Homer's statement, it was found to bear even a larger proportion of water. (Plin. xiv. 4, s. 6; comp. "Vita Maronea fidelis Luminis Baccus," Tibull, iv. 57.)

Maronea was taken by Philip V. of Macedon in 167 B.C., and when he was avenged by the Romans to evacuate the towns of Thrace, he vented his rage by slaughtering a great number of the inhabitants of the city. (Liv. xxxi. 16, xxxix. 24; Polyb. xii. 6, 13, xxi. 11, 13.) The Romans subsequently granted Maronea to Attalus, but it was almost immediately afterwards revoked their gift, and declared it a free city. (Polyb. xxx. 3.) By Constantine Porphyrogenitus (Them. ii. 2), Maronea is reckoned among the towns of Macedon. The modern name is Marona, and it has been the seat of an archibishopric. (Comp. Ptol. iii. § 2; Soylzas, p. 27; Strab. vii. 334; Ann. Marc. xxii. 8, xxvii. 4; Hier. p. 643; Tacta ad Lycoph. p. 818; Theophyl. ad Alex. xi. p. 86.)

[Al. L.]

COIN OF MARONEA.

MARONAS (Μαρόνας, Zosim. iii. 28), a small village in Mesopotamia, at which the army of Julian arrived, just before the combat in which he fell. It is probably the same which Amianus calls Mar- rarga (xxv. 1), but its exact locality cannot now be determined. [V.]

MARPESSA (Μαρπέσσα), a mountain in the island of Tarsus, from which the celebrated Parian marble was obtained. (Steph. B. S. ii. 204.)

[Palos.] Hence Virgil (vii. 471) speaks of "Marpeisa canseus." MARPESSIUS. [Bemessus.] MARREBIUM. [Marrebiuvum.] MARRUCINI (Μαρροκίνος, Pol., Strab.; Μάρρος καταλλάκτης, Ptol.), a nation of Central Italy, inhabiting a narrow strip of territory on the S. bank of the river Aetnus, extending from the Adriatic to the ridge of the Apennines. (Strab. v. 241.) They were bounded on the N. by the Vestini, from whom they were separated by the Aetnus, and on the S. by the Frentani, while to the W. and SW. they apparently extended inland as far as the lofty mountain barriers of the Majella and the Morrone, which separated them from the Peliagii, and effectually cut them off from all intercourse with their neighbours on that side, except by the valley of the Aetnus. The southern limit of their territory is not stated by any ancient author, but was probably formed by the river Fano, which falls into the Adriatic about 7 miles from the mouth of the Aetnus (Pescara). Pliny, indeed, extends the district of the Frentani as far as the Aetnus (Pil. iii. 12, s. 17), thus cutting off the Marrucini altogether from the sea; but there seems little doubt that this is erroneous. [Frentani.] The Marrucini were, undoubtedly, like the other tribes in their immediate neighbourhood, of Sabine origin, and appear to have been closely connected with the Marsi; indeed, the two names are little more than different forms of the same, a fact which appears to have been already recognised by Cato (ap. Punic. ix. p. 871). But, whether the Marruci were an offshoot of the Marsi, or both tribes were separately derived from the common Sabine stock, we have no information. The Marrucini appear in history as an independent people, but in almost constant alliance with the Marsi, Peligni, and Vestini. There is, indeed, little doubt that the four nations formed a kind of league for mutual defence.
MARRUCINI

(Liv. viii. 29; Nieshr. vol. i. p. 101); and hence we find the Marrucini generally following the lead and sharing the fortunes of the Marsi and Peligni. But in b.c. 311 they appear to have taken part with the Samnites, though the other confederates remained neutral; as in that year, according to Diodorus, they were engaged in open hostilities with Rome. (Diod. xix. 105.) No mention of this is found in Livy, nor is their name noticed in b.c. 308, when the Marsi and Peligni appear in hostility to Rome; but a few years after, in b.c. 304, all three nations, together with the Frontani, united in sending ambassadors to sue for peace, and obtained a treaty of alliance on favourable terms. (Liv. ix. 41, 43; Diol. xx. 101.) From this time the Marrucini became the firm and faithful allies of Rome; and are repeatedly mentioned among the auxiliaries serving in the Roman armies. (Dionys. xx. Fr. Dilut.; Pol. ii. 24; Liv. xiv. 40; Sili. Ital. viii. 519.)

During the Second Punic War their fidelity was unshaken, though their territory was repeatedly traversed and ravaged by Hannibal (Liv. xxii. 9, xxvi. 11; Pol. iii. 88); and we find them, besides furnishing their usual contingent to the Roman armies, providing supplies for Claudius Nero on his march to the Metaurus, and raising a force of volunteers to assist Scipio in his expedition to Africa. (Liv. xxvii. 43, xxviii. 45.) In the Social War, however, they followed the example of the Marsi and Peligni, and, though their name is less often mentioned than that of their more powerful neighbours, they appear to have borne an important part in that momentous contest. (Appian, B. C. i. 39, 46; Liv. Epit. Ixix.; Oros. v. 18.) Thus Herius Asinius, who is called by Livy "praetor Marrucinorum," and was slain in one of the battles between Marius and the Marsi, is particularly noticed as one of the chief leaders of the Italian allies. (Liv. Epit. Ixix.; Vell. Pat. ii. 16; Appian, B. C. i. 40.) But before the close of the year 89 b.c. they were defeated, and their territory ravaged by Sulpicius, the lieutenant of Pompeius, and soon after reduced to submission by Pompeius himself. (Liv. Epit. Ixxvi.; Oros. v. 18; Appian, B. C. i. 52.)

The Marrucini were at this time admitted to the Roman franchise, and became quickly merged in the ordinary Roman citizenship. Hence their name is from henceforth rarely found in history; though it is incidentally noticed by Cicero, as well as by Caesar, who traversed their territory on his march from Corfinium into Apulia. (Cic. pro Client. 19; Caes. B. C. i. 23, ii. 34.) In b.c. 43, also, they were among the most prominent to declare themselves against Antonius. (Cic. Phil. vii. 8.) From these notices it is evident that they still retained their municipal existence as a separate people; and we learn from the geographers that this continued to be the case under the Roman Empire also; but the name gradually sank into disuse. Their territory was comprised, as well as that of the Vestini, in the Fourth Region of Augustus; in the subsequent distribution of the provinces, it is not quite clear to which it was assigned, the Liber Colonarium including Teate among the " Civitates Piceni," while P. Diacono refers it, together with the Frontani, to the province of Samnium. (Strab. v. p. 241; Plin. iii. 12. s. 17; Pol. iii. 1. § 60; Lib. Col. p. 258; P. Dion. ii. 20.)

The territory of the Marrucini (ager Marrucinus, Plin. vii. Malpogovius, Strab.), though of small extent, was fertile, and, from its situation on the E. of the Apenines, sloping towards the sea, enjoyed a much milder climate than that of the neighbouring Peligni. Hence it produced oil, wine, and corn in abundance, and appears to have been noted for the excellence of its fruit and vegetables. (Plin. xv. 19. s. 21; Columell. x. 131.) It would appear to have been subject to earthquakes (Plin. ii. 83. s. 85, xvii. 25. s. 88); and hence, probably, arose the apprehension expressed by Statius, lest the mountains of the Marrucini should be visited by a catastrophe similar to that which had recently occurred in Campania. (Stat. Silv. iv. 4. 86.)

The only city of importance belonging to the Marrucini was Teate, now Chieti, which is called by several writers their metropolis, or capital city. At a later period its municipal district appears to have comprised the whole territory of the Marrucini.

MARRUVIUM

(Liv. v. 26; Diod. xix. 105.) It is called by Livy "pro praetor Marruvienorum," and was frequently noticed by Sallust, who mentions it as the chief city of the Marsi, situated on the eastern shore of the lake Fucinus, and distant 13 miles from Alba Fucensia. Ancient writers agree in representing it as the capital of the Marsi: indeed, this is sufficiently attested by its name alone; Marruvii or Marrubii being evidently only another form of the name of the Marsi, and being thus used by Virgil as an ethnic appellation (Marruvia de gente, Aen. vii. 250). In accordance with this, also, Silius Italicus represents Marruvium as deriving its name from a certain Marcus, who is evidently only an eponymous hero of the Marsi. (Sil. Ital. viii. 505.)

We have no account of Marruvium, however, previous to the Roman conquest of the Marsic territory; but under the Roman Empire it was a flourishing municipal town; it is noticed as such both by Strabo and Pliny, and in inscriptions as "Marruvium civium Marsorum Marruvium." (Strab. v. p. 241; Plin. iv. 12. s. 17; Mommsen, Insgr. R. N. 5491, 5499; Orell. Insgr. 3149.) It seems, indeed, to have been not unfrequently called "Civitas Marsorum," and in the middle ages "Civitas Marsiana;" hence, also, in the Liber Colonarium, we find it called "Marsus municipii." (Lib. Colon. pp. 229, 256.) It is noticed in the Tabula, which places it 13 M. P. from Alba; but it was not situated on the Via Valeria, and must have been communicated with that high-road by a branch from Ceretania. (Tab. Pent.) Marruvium continued through the middle ages to be the see of the bishop of the Marsi; and it was not till 1580 that the see was removed to the neighbouring town of Pescina. The site is now known by the name of S. Benedetto, from a convent erected on the spot. Considerable ruins of the ancient city still remain, including portions of its walls; the remains of an amphitheatre, &c., and numerous inscriptions as well as statues, have been discovered on the site. These ruins are situated close to the margin of the lake, about two miles below Pescina. (Holsten ad Clerc. p. 151; Romanelli, vol. iii. p. 180—186; Kramer, Pescinae Sec. p. 55; Hoez's Class. Tour, t 4
This campaign as memorable from its being the first occasion on which the Romans were opposed to the Marsians. Diadorus gives a wholly different account, and represents the two nations as in alliance against the Samnites. (Diod. xx. 44.) There is, however, every probability that the account given by Livy is the more correct one, as we find shortly after (b. c. 394) a special treaty concluded with the Marsi, Marrucini, and Peligni, immediately after the defeat of the Aequians. (Liv. ix. 45; Diod. xx. 104.) But a few years later (b. c. 361) the Marsi again took up arms (this time apparently single-handed) to oppose the foundation of the Roman colony at Careoli, on the immediate frontiers of their territory. They were, however, easily defeated; three of their towns, Testina, Milefons, and Fresilia, were taken; and they were compelled to purchase peace by the cession of a part of their territory. (Liv. x. 3.) With this exception, they obtained favourable terms, and the former treaty was renewed.

From this time the Marsi, as well as their confederate tribes, the Marrucini, Peligni, and Vestini, became the faithful and constant allies of Rome, and occupied a prominent position among the "socii" whose contingents bore so important a share in the Roman victories. The names of the four nations are sometimes all mentioned, sometimes one or other of them omitted; while the Frontanti, who appear, though of Samnite origin, to have maintained closer political relations with their northern neighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in b. c. 223, classes the Marsi, Marrucini, Vestini, and Frontanti, under one head, while he omits the name of the Peligni altogether. (Pol. ii. 24.) Diodorus, on the other hand, notices by name only the Marrucini, Peligni, and Frontanti, among the Roman allies at the battle of Asculum, omitting both the Marsi and Vestini; while Silius Italicus enumerates them all among the Roman allies at the battle of Cannae. (Dionys. xx. Fr. Didot; Sili. ital. viii. 495—520.) Ennius also associated together the "Marsa manus, Peligna cohos, Vestina virum vic." (Enn. Fr. p. 150.)

During the Second Punic War they suffered severely for their fidelity to Rome, their territory being repeatedly ravaged by Hasdrubal. (Liv. xxxii. 9. xxxv. 11.) Nevertheless, towards the close of the same war, they were among the foremost to offer volunteers to the fleet and army of Scipio in b. c. 205. (Id. xxxviii. 45.)

During this period the Marsi appear to have earned a high reputation among the Roman allies for their courage and skill in war; a character which they shared in common with the neighbouring tribes. But their chief celebrity was derived from the prominent part which they took in the great struggle of the Italian allies against Rome, commonly called the Social War, but which appears to have been more frequently termed by the Romans themselves the Marsic War. (Bellum Marsicum, Fast. Capt.; Vell. Pat. ii. 21: "Civ. de Div. iv. 44, &c.; à Marsicis callemnes pæleos, Strab. v. 241.) Pomponius Silo, who is termed by Livy one of the chief authors of the commencement of this war, was himself a Marsian; and it is probably at his instigation that the Marsi were the first to take up arms after the outbreak of the Social War at Asculum; thus at once inaugurating the impending contest the character of a national war. (Vell. Pat. ii. 15; Strab. v. 241; Dial. xxxvii. 2.) Their example was immediately followed
Marsi. 

by their neighbours and kinsfolk the Peligni, Marsi, Marnechi, and Vestini, as well as by the Samnites, Frentain, and Lucania, to which Dionysius already referred. (Liv. Epit. lixxii.; Oros. v. 18.) During the military operations that followed, imperfect as is our information concerning them, we may clearly discern that the allies formed two principal groups; the one composed of the Marsi, with their immediate neighbours already mentioned, as well as the Picentes, and probably the Frentain; the other of the Samnites, with the Lucanians, Apuliens, and some of the Campanians. The Marsi appear to have appeared in arms, by common consent, at the head of the former section; and hence we frequently find their name alone mentioned, where it is clear that their confederates also fought by their side. At the first outbreak of the war (b. c. 91), they laid siege to Alba Fucensia, a Roman colony and a strong fortress (Liv. Epit. lixiii.), which appears to have at first defied all their efforts. But the Roman consul P. Fannius, who was sent against them, proved unequal to the task. One division of his army, under Perperignius, was cut to pieces at the outset of the campaign; and somewhat later the consul himself was defeated and slain by the allied forces under Vettius Cato. (Appian, B. C. i. 43; Liv. Epit. lixxii.; Oros. v. 18.) C. Marius, who was acting as legate to Fannius, is said to have retrieved this disaster; and afterwards, in conjunction with Sulla, achieved a decisive victory over the Marsi, in which it is said that the allies lost 6000 men, and the leader or praecon of the Marronechi, Herius Asinius, was slain. But notwithstanding this advantage, it appears that Marinius himself was unable to keep the field, and was almost blocked in his camp by Pomponnius Silo; and when at length he ventured on a third battle, it had no decisive result. Meanwhile, his colleague in the command, Q. Cneius, was totally defeated and cut to pieces with his whole army by the Marsi; while an advantage gained by Sec. Sulpicius over the Poligni appears to have led to no important result. (Liv. Epit. lixiii. lixv.; Appian B. C. i. 46; Plut. Mars. 33; Oros. v. 18.) The next campaign (b. c. 89) proved at first scarcely more favourable to the Roman arms; for though the consul L. Porcius Cato obtained some successes over the Marsi and their confederates, he was himself taken in a battle near the lake Fucium, the B. C. i. 50; Liv. xiii. v. 18.) But it is probable that the policy adopted by the Romans in admitting to the franchise all those of the allies who were willing to submit had a great tendency to disarm the confederates, as well as to introduce dissensions among them; and this cause, combined with the successful operations of the consuls Cn. Pompeius Strabo and his lieutenant Sulpicius, effected the submission of the Marronechi, Vestini, and Poligni before the close of the year. The Marsi for a time still held out, though single-handed; but repeated defeats at length compelled them also to sue for peace. (Liv. Epit. lixvi.; Oros. v. 18.) Notwithstanding their obstinate resistance, they were admitted to favourable terms, and received, in common with the rest of the Italians, the full rights of Roman citizens.

From this time the Marsi as a nation disappear from history, and became merged in the common condition of the Italians. They however, still retained much of their national character, and their existence as a separate tribe is acknowledged by many Roman writers, both of the Republic and Empire. In the civil war between Caesar and Pompey they appear to have been at first favourably disposed to the latter; and the twenty cohorts with which Domitianus and Pomponius had principally raised among the Marsi and Peligni, or the immediate neighbours. (Cass. B. C. i. 15, 20.) In like manner, the Marsi are mentioned as declaring themselves, as a people, in favour of Verus during the civil war between him and Vitellius. (Tac. Hist. iii. 59.) In the days of Cicero, the Marsi and Peligni, as well as the Sabines, were comprised in the Serronian tribe (Cic. in Vatin. 15; Schol. ad loc.); and at a later period all three were included in the Fourth Region of Augustus, which, according to Pliny, was composed of the bravest nations of all Italy. (Plin. iii. 12. s. 17.) In the later division of the Empire, the territory of the Marsi (Marsorum regio) was included in the province named Valeria. (P. Diaec. ii. 20; Lib. Col. p. 229.) It appears to have early formed a separate ecclesiastical diocese; and in the middle ages the bishop of Marravinium bore the title of "Episcopus Marsarium," which is still retained by the bishops of Fucinsia, to which place the see has been transferred. (Bingham's Ecclesiastical Antiquities, book ix. ch. 5. § 3.) The district comprised within it is still familiarly called "the land of the Marsi," and the noble Roman family of Colonna bears the title of Comites of the Marsi. (K. Craven's Abruzzi, vol. i. p. 144.) The Marsi appear to have been always celebrated in ancient times, even beyond their busy and warlike neighbours, for their valor and spirit in war. Virgil deduces them as the first and most prominent example of the " gens acer virum " which Italy was able to produce; and Horace alludes to the "Marse cohorts" as an almost proverbial expression for the bravest troops in the Roman army. (Verg. Georg. ii. 167; Hor. Carm. ii. 20. 18, iii. 5. 9.) Appian also tells us that a proverbial saying was current at the time of the outbreak of the Social War, that no triumph had ever been gained over the Marsi or without the Marsi (Appian, B. C. i. 46.) The historical accuracy of this saying will not bear examination, but it sufficiently proves the high character they had earned as Roman auxiliaries. In common with the Sabines and other mountain tribes, they retained down to a late period their rustic and frugal habits; and are cited by the Roman poets as examples of primitive simplicity. (Pline, xiii. 50. 2; Liv. xiii. v. 18.) But the most remarkable characteristic of the Marsians was their peculiar skill in magical charms and incantations,—especially in charming venomous reptiles, so as to render them innocuous. This power, which they were said to have derived from their ancestress Circe, or from the local divinity Angitia, who was described as her sister, was not confined to a few individuals, though the priests appear to have principally exercised it; but, according to Suetonius, was possessed by the whole body of the nation. (Verg. Aen. vii. 750—758; Sil. Ital. viii. 495—501; Pline. viii. 2, xxxi. 13. s. 25, xxviiii. 3. s. 6; Solin. 2. § 27; Geil. xvi. 11; Lamprid. Heliod. 23.) It is worthy of notice that the inhabitants of these regions still pretend to possess the same occult powers as their ancestors; and are often seen as wanderers in the streets of Naples carrying boxes full of serpents of various sizes and colours, against the bites of which they profess to charm both themselves and the spectators. (Craven's Abruzzi, vol. i. p. 145.) The physical characters of the land of the Marsi have been already described under the article of the lake Fucium; the basin of which, surrounded on
all sides by lofty, or strongly marked mountain ridges, may be considered as constituting the natural limits of their territory. But towards the N.E. we find that Alba Fucensia, though certainly belonging to this natural district, and hence sometimes described as belonging to the Marsi (Ptol. iii. 1. § 57; Sil. Ital. viii. 507), was more properly an Aequian city [Alba Fucensia]; while, on the other hand, the upper valley of the Liris (though separated from the lake by an intervening mountain ridge) was included in the Marsic territory, as Antinum (Civita d'Antino) was unquestionably a Marsian city. [Antino.] On the N. the Marsi were bordered by the Sabini and Vestini by the lofty group of the Monte Velino and its neighbours; while on the S. another mountain group, of almost equal elevation, separated them from the northern valleys of Samnium and the sources of the Sarno (Saugra). On the E. a ridge of very inferior height, but forming a strongly marked barrier, divided them from the Polesini, who occupied the valley of the Gizio, a tributary of the Aternum. From its great elevation above the sea (2176 feet at the level of the lake), even more than from the mountains which surrounded it, the land of the Marsi had a cold and ungenial climate, and was ill adapted for the growth of corn, but produced abundance of fruit, as well as wine, though the latter was considered harsh and of inferior quality. (Sil. Ital. viii. 507; Athen. i. p. 26; Martial, xiii. 121, xiv. 116.)

The principal town of the Marsi was Maruvum, the ruins of which are still visible at S. Benedetto, on E. shore of the lake Fucinus. This was indeed (if Alba Fucensia be excluded) probably the only place within their territory which deserved the name of a city. The others, as we are told by Silvius Italicus, though numerous, were for the most part obscure places, rather fortified villages (castella) than towns. (Sil. Ital. viii. 510.) To this class belonged, in all probability, the three places mentioned by Livy (x. 3) as having been taken in n. c. 301 by the dictator M. Valerius Maximus,—Milvium, Platinum, and Fessilia; all three names are otherwise wholly unknown, and there is no clue to their site. Pliny, however, assigns to the Marsi the following towns:—Anxatia (Anxatina), the name of which is found also (written Anxatia) in an inscription, and must have been situated near Anxatia or Scorgula, in the immediate neighbourhood of Alba (Hoare, Classical Tour, vol. i. p. 367; Mommsen, Inscr. R. N. 5928; Antinum (Antimatis), now Civita d'Antino; Lucus (Lucenses), more properly Lucus Angitile, still called Lago, on the W. bank of the lake; and a "populus" or community, which he terms Lucenses, evidently derived their name from the lake; but what part of its shores they inhabited is uncertain. Besides these he notices a tradition, mentioned also by Solinus, that a town named Archippe, founded by the mythical Marvyas, had been swallowed up in the waters of the lake. (Plin. iii. 12. s. 17; Sollin. 2. § 6.)

From the number of inscriptions found at Trevesco, a village near the S. end of the lake, it would appear to have been certainly an ancient site; but its name is unknown. (Mommsen, l. c. 293.)

The only town yet the Marsi mentioned (iii. 1. § 57) besides Alba Fucensia, is a place which he calls Aex (Aurig), a name in all probability corrupt, for which we should perhaps read "Atria, the Anxatia or Anxatina of Pliny, Cefennia, a place known only from the Itineraries, was situated on the Via Valeria, at the foot of the pass leading over the Mons Imus into the valley of the Peligni. This remarkable pass, now called the Forca di Carnico, must in all ages have formed the principal line of communication between the Marsi and their eastern neighbours, the Peligni and Marcuvini. Another natural line of communication led from the basin of the Fucinus near Celano to the valley of the Aternum near Aquila. It must be this line which was followed by a route obtusely given in the Tabula as leading from Aveia through a place called Frustenia towards Alba and Maruvum (Tab. Pont.).

[II. H. B.]

MARTIGNI, a German tribe, mentioned only by Tacitus (Germ. 43), probably occupying the north of Bohemia, about the Upper Elbe. In language and manners they belonged to the Suevi. (Comp. Zeux, Die Deutschen, p. 124.)

MARSIGNA or Marsigna, a place in Upper Pannonia, south of the river Savas, on the road between Siscia and Servitium; is identified by some with the town of Isenovës, at the mouth of the Una into the Save. (Ptol. ii. 16. § 7; Geor. Rav. iv. 19.)

MAINSAYBAE (Mainsayba), a town of the Illyrians, an Arabian tribe, mentioned by Strabo as the utmost limit of the Roman expedition under Aelius Gallus, the siege of which he was obliged to abandon after six days for want of water, in order to commence his retreat. The only direct clue afforded by Strabo to the position of the town is that it was two days distant from the Frankincense country; but the interest attaching to this expedition—which promises so much for the elucidation of the classical geography of Arabia, but has hitherto served only still further to perplex it—demands an investigation of its site in connection with the other places named in the only two remaining versions of the narrative. It will be convenient to consider,—(I.) the texts of the classical authors. (II.) The commentaries and glosses of modern writers on the subject. (III.) To offer such remarks as may serve either to reconcile and harmonise conflicting views, or to indicate a more satisfactory result than has hitherto been arrived at. In order to study brevity, the conclusions only will be stated; the arguments on which they are supported must be sought in the writings referred to. I. To commence with Strabo, a personal friend of the Roman general who commanded the expedition, and whose account, scanty and unsatisfactory as it is, has all the authority of a personal narrative, in which, however, it will be advisable to omit all incidents but such as directly bear on the geography. (Dictionary of Biography, Gallus, Aelius.) After a voyage of 15 days from Cleopatris [Arsinoë, No. 1], the expedition arrived at Leuce Corna (Araxos kúra), a considerable support in the country of the Nabataeans, under whose treacherous escort Gallus had placed his armament. An epidemic among the troops obliged him to pass the summer and winter at this place. Setting out again in the spring, they traversed for many days a barren tract, through which they had to carry their water on camels. This brought them to the territory of Areias, a kinsman of Obodas, the chief sheik of the desert Arabs; (perhaps at times,) they took ten days to pass through this territory, owing to the obstructions placed in their way by their guide Syl-laus. It produced spelt and a few palms. They next came to the pastoral country named Ararea (Agarrwir), under a sheik named Sabus. This it
took them fifty days to traverse, through the fault of their guide; when they came to the city of the Agrani (Ἀγράνη), lying in a valley protected by mountains on all sides; and after a march of six days, came to the river. Here, after a pitched battle, in which the Romans killed 10,000 Arabs, with the loss of only two men, they took the city called Asca (Ἀσκά), then Athrulla (Ἀθρούλλα), and proceeded to Marsyabae of the Rhamanite, then governed by Ihasaras, from which, as already mentioned, they commenced their retreat by a much shorter route. Nine days brought them to Anagrama (Ἀναγράμμα), where the battle had been fought; eleven more to the Seven Wells (Ἐντέφ φεράτα), so called from the fact; then to a village named Chaulla (Χαολλά), and another named Malutina (Μαλούτηνα), —the latter situated on a river,—and through a desert with few watering-places to Nera or Nerga Come (Νέρα κόμη), on the sea-shore, subject to Obodas. This retreat was accomplished in sixty days, the advance had occupied six months. From Nera they sailed to Myos Hormus (Μύος Ἑρμος) in eleven days. Thus far Strabo (xiv. p. 782). Pliny is much more brief. He merely states that Gallus destroyed towns not mentioned by previous writers, Nera, Annemestrum, Nesea, Magarsas, Tam-macum, Labecia, the above-named Mariaba (i.e. the Mariaba of the Calingili, 3), and Caripeta, the remotest point which he reached. (Hist. Nat. vi. 26.) The only geographical point to Anagrama, which Pliny, who dwells chiefly on the sufferings of the army, is that the important city of Athibia (Ἀθηβία) was the limit of this disastrous expedition. (Dow Casson, l. c. 39.)

II. The variations of commentators on this narrative may be estimated by these facts: Dean Vincent maintains that, "as Pliny says, that places which occur in the expedition of Gallus are not found in authors previous to his time, the same may be said of subsequent writers; for there is not one of them, ancient or modern, who will do more than afford matter for conjecture." (Peripl. pp. 300, 301.) Mr. Forster asserts, "Of the eight cities named by Pliny, the names of two most clearly prove them to be the same with two of those mentioned by Strabo; and that seven out of the eight stand, with moral certainty, and the eighth with good probability, identified with as many Arab towns, still existing;" (Peripl. p. 310.) D'Anville and M. Frencel (inf. cit.) conduct the expedition to Hadramaut, in the southern extremity of the peninsula; Gosselin does not extend it beyond the Hedjaz. (Recherches sur la Géographie des Anciens, tom. ii. p. 114.) But these various theories require more distinct notice. 1. D'Anville, following Bichat (Chamano, l. 44), identifies Lence Come with the modern Haur or El-Haurra, on the Red Sea, a little north of the latitude of Medina, justifying the identification by the coincidence of meaning between the native and the Greek names. Anagrama he fixed at Nageran or Negran (Νηγράν), a town in the NE. of Yemen; consistently with which theory he makes the Marsyabae of Strabo identical with the Mariaba of the same geographer; though Strabo makes the latter the capital of the Sabaei, and assigns the former to the Qidr, was a place of trade at Khailan (El-Chanoan), in the NW. extremity of Yemen, and, therefore, as he presumes, on the Roman line of retreat between Anagrama and the sea. (D'Anville Géographie ancienne abrégée, tom. ii. pp. 216, 217, 223, 224.) 2. Gosselin, as before noticed, maintains that the expedition did not pass beyond Arabia Deserta and the Hedjaz; that the Negra of Pliny is the Negran of Ptolemy; and the modern Nakra or Maaden en-Nakra (in the NW. of Nefid); that Pliny's Magara is Majoaria-hizzir (which he marks in his map NW. of Negra, and due East of Molih, his Lene (pp. 254, 255), perhaps identical with Dahr el-Maghait in Ritter's map; that Tammacum in Pliny is Thama in Ptolemy; and the modern title (which he places nearer, due north of Negra, between it and Magarsas) is Telma in Ritter, between Maaden en-Nakra and Dahr el-Maghait; that Labecia is Laba of Ptolemy, which he does not place; that Athrulla is Lathrippa [Lathrippa] in Ptolemy = Medineh; that Mariaba in Pliny = Marsyabae in Strabo = Macaraba in Ptolemy = Mecca; and lastly, that Caripeta, the extreme point according to Pliny, = Ararene in Strabo = modern Caruitain, in the heart of El-Nefid. (Gosselin, l. c. pp. 113—116.) 3. Dean Vincent's opinion on the difficulty of recovering any clue to the line of march has already been stated; but he ventures the following conjectures, partly in agreement, and partly in correction, of the preceding. He adopts the Lence Come of Gosselin, i.e. Molih; the Anagrama or Negra of D'Anville, i.e. Nefridn of Yemen; and thinks that the country of the nomades, called Arraine, has a resemblance to the territory of Meidan and Mecca; and that the space of fifty days employed in passing it, is some confirmation of the conjecture. Marsyabae, he thinks, could not be Mariaba of the Tank; but it takes its name as the general name for a capital,—in this case of the Meian,—which he suggests may correspond with the Caripeta of Pliny, the Carma or Carma of Strabo, the capital of the Meianas, and the Corin-peta, or Corin-petra of modern geographers. The fact that Strabo speaks of Carma as the capital of the Meian, and places Marsyabae in the territory of the Rhamanite, is disproved by the double hypothesis, that if Hasar is the king of this tribe, whether Calingili, Bhamanite, or Elasaari, all three were comprehended under the title of Meianas. Of Nera, the termination of the expedition, he remarks, that it being in the country of Obodas, it must be within the limits of Petraea, but, as no modern representative offers, it should be placed as far below (south of) Lence Come as the preservation will admit. (Vincent, Periplus of the Erythrean Sea, vol. ii. pp. 290—311.)

4. M. Frencel, long a resident in the country, thinks that the Marsyabae of Strabo must be identical with the Mariaba in Pliny's list of captured cities, the same writer's Baramahacum, and Ptolemy's Mariana; and that the Rhamanite of Strabo are the Rhamial of Pliny, the Mountain of Ptolemy, one of the divisions of the Meian, to which rather than to the other division, the Chamsaui, Mariaba Baramahacum should have been assigned. In agreement with Vincent, he finds the Marsyabae of Strabo in the capital of the Meian, i.e. the Carma of Strabo and the Carm Regia of Ptolemy, which he however finds in the modern Al-Charn in the Wady Doan or Danan (Kurein and Grein in Kiepert's and Zimmermann's maps), six or seven days' journey north of Mekeallah, and in the heart of Hadramaut. (Frencel, in Journal Asiatique, vol. 18, 1850, pp. 89—96, 177, &c.) He fancied that he recovered the Caripeta of Pliny in the site of Khornah-Rahbah, also in the vicinity of Mekeallah (ib. p. 196.) 5. Desvoguès prefers the identification
of Leuce Come with El-Hajra, proposed by D'Anville, to the Middak of Gesselin and Vincent. In common with D'Anville and Vincent, he finds the town of Anagraña (which he writes "la ville des Négranes") in the modern Nedjraín, and doubtfully fixes Marsyabae at Māreb in Yemen. The name of Potelmy he identifies with the Rhammanitae of Strabo,—suggesting an ingenious correction to Jamnita=the people of Yemen (L'Univers, Arabia, pp. 38, 59). 6. Jomard, one of the highest authorities on Arabian geography, has offered a few valuable remarks on the expedition of Pliny and his corrections. With a view to determine the line of march. He thinks the name Marsyabae an evident corruption for Marib, which he assumes to be "that of the Tank," the capital of the Mīmāt, now Māreb. Negrames exactly corresponds with Nedjraín or Negraín, nine days' journey NW. of Māreb. He fixes Leuce Come at Middak, and Negra or Nera opposite to Cosag, in the 26th degree of latitude. His argument for determining the value of a day's march is ingenious. The whole distance from Māreb to the place indicated would be 350 leagues of 25 to a degree. From Marib to Negra was 60 days' march; Negraín, therefore, which was nine days from Marib, is 23/4s of the whole march, and over Nedjraín is 52 leagues NW. of Māreb. The distance of the Seven Wells, eleven days from Negraín, is 36 days of the march=117 leagues from Marib and the same analogy might have been applied to Cherlul and the river Mālitha, and Strabo indicated the distances of these two stations. The troops, in order to reach the sea, on their retreat must have traversed the province of Aṣyr, a district between Yemen and the Hedjaz (whose geography has been recently restored to us by M. Jomard), and one of the elevated plains which separate the mountain chain of Yemen from that of the Hedjaz. "The road," he says, "is excellent, and a weak body of troops could defend it against a numerous army." Having thus disposed of the line followed in the retreat, he briefly considers the advance:—"The country governed by Aretas, and the next-mentioned, Arahene, correspond with Taimùnd and Nebel, and the southern part of the latter province approaching Nedjraín has always been a well-peopled and cultivated district. Asa, on the river, and Arthulla, the last-named station before Marib, cannot be exactly determined, as the distances are not stated; and the line between Nedjraín and Māreb remains still but little known." (Jomard, op. M. Negrames, Histoire de l'Egypte, etc., pp. 383-389.) 7. Mr. Forster has investigated the march with his usual diligence, and with the partial success and failure that must almost necessarily attach to the investigation of so difficult a subject. To take first the three main points, viz., Leuce Come, the point of departure; Marsyabae, the extreme limit; and Nera, the point at which they embarked on their return. He accepts D'Anville's identification of Leuce Come with Leuce Come, acknowledging the coincidence of name decisive; Marsyabae he finds in Sobia, the chief city of the province of Sobia, a district on the northern confines of Yemen, 100 miles S. of Biše, the frontier and key of Yemen; and Nera, in Yembo, the sea-port of Medina. The line of march on their advance he makes very circuits; as Strabo intimates; conducting them first through the heart of Nedjraín to the province of El-Mahon on the Redan Ghat, and then eastward of the same province in a SW. direction to Yemen. On their retreat, he brings them direct to Nedjraín, then due west to the sea, which they coast as far north as Yemen. To be more particular: he thinks that a difference in distance in the advance and retreat, commensurate, in some remontable degree, with the recorded difference of time, i.e. as 3 to 1, must be found; that the caravan road from Hāira by Medina and Kusyim, into the heart of Nedjraín, was the line followed by Gallina (the very route, in fact, traversed by Captain Sadlier in 1819: Transactions of Lit. Soc. of Bombay, vol. x. pp. 449—493), and thence by one of the great Nedjraín roads into Yemen, the description of which in Burchhardt agrees in many words with the brief notices of Strabo. He further finds nearly all the towns named by Pliny as taken by the Romans, on this line of march: Maribah of the Cailinae in Māreb, in the NE. extremity of Nedjraín, within the province of Hinjar or Bakrein—in the former of which names he finds the Arracera or Acremera of Strabo. Carjepeta he identifies, as Gosselin had done, with Carbatuain in Nedjraín; but he does not attempt to explain how Pliny could call this the extreme limit of the expedition,—"quo longissime processit." The Tammus of Pliny = the Agdami of Potelmy=the well-known town of Taff.' Magna (Potelmy's Magalaba) presents itself in Korn el-Maghaz, a place situated about half-way between Taff and Nedjraín, which last is with him, as with all preceding writers except Gosselin, the Anagraña of Strabo, the Negro of Pliny. "Labëcea is the anagram, with the slightest possible restoration of Al-Beiseh;" and this is called by the northern Beduins "the key of Yemen," the only pass, according to Burchhardt, for heavy-laden camels going from Mekka to Yemen, "a very fertile district, extremely rich in date-trees." The river at which the battle with the Arabs was fought is the modern Sancan, "which, taking its rise in the Hedjaz mountains near Korn el-Maghaz, after a southern course of somewhat more than 100 miles, is lost in the sands of the Tahamath, to the westward of the mountains of Aṣyr." The Aesa of Strabo, the Nesca of Pliny, are "obviously identical with Sancan, the present name of a town seated on the Sancan river, near its termination in the sands." Athurulla, next mentioned by Strabo, is again Labëcia, i.e. Beiseh; and this hypothesis "implies a counter-march," of which there is no hint in the authors. Lastly, "if Amnastus may be supposed to have its representative in Ibn Mūzir (the Manambs of Ptol.), then half-way between Beiseh and Sobah, all the cities enumerated by Pliny occur on the route in question." As to the retreat of the army. From Marsyabae to Nedjraín, a distance of from 140 to 160 miles, was accomplished in nine days; thence to the Seven Wells, eleven days from Nedjraín, brings us to El-Hāsha (in Arabic "the Seven"), a place about 150 miles due west of Nedjraín, and then to Chaibah, the modern Chaudan (according to Forster as well as D'Anville, the chief town of the province of the same name), and thence to Malotha, situated on a river, the same as that crossed on the advance, i.e. the Sancan. The Malotha of Strabo is plainly identified, by its site, with the Tabala of Burchhardt, a town on the Sancan, at this point, on the caravan road to Hedjaz, a short day's march from El-Hāsha. From Malotha to Nera Come, i.e. through the Tahamath, there are two routes described by Burchhardt; one along the river, which only two parties follow; the other, Djidda and Leyth,—a distance of four days; another more eastern, somewhat mountainous, yielding plenty of water. five days' journey between the same two
there is a singular agreement among all commentators, there seems to be an insurmountable objection to that also, if Strabo, who it must be remembered had his information direct from Gallus himself, is a trustworthy guide; for the Anagrana of the retreat (which is obviously also the Negra of Pliny), nine days distant from Maresybas, was the place where the battle had been fought on their advance. But he had said before that this battle was fought at the river; and there is no mention of a river nearer to Nelsrim than the Sameon, which is, according to Mr. Forster, 170 miles, or twelve days' journey, distant. It is certainly strange that, of the writers who have commented on this expedition, all, with one exception, have overlooked the only indication furnished by the classical geographers of the direction of the line of march, clearly pointing to the west, and not to the south. The Mariaba taken by the Romans was, according to Pliny, that of the Callagii, whom he places in the vicinity of the Persian Gulf; for he names two other towns of the same tribe, Pallon and Unamental or Maruminal, which he places near the river by which the Euphrates is thought to debouch into the Persian Gulf (vi. 28), opposite to the Bahrein islands. (Forster, vol. ii. p. 312.) This important fact is correctly confirmed by the expedition having landed near the mouth of the Elanitic gulf of the Red Sea, and commencing their march through the territory of Oobas and his kinsman Arutas, two powerful sheikhs of the Nabathaean, who inhabited the northern part of the Arabian peninsula from the Euphrates to the peninsula of Mount Sinai [Nabathaeei], and there can be little doubt that the Mariaba of Pliny is correctly identified with the Jerab, still existing at the eastern base of the Nedjid mountains. [MARIABA. No. 3.] Whether this be the Maresybas of Strabo, or whether future investigations in the eastern part of the peninsula, hitherto so imperfectly known, may not restore to us both this and other towns mentioned in the lists of Strabo and Pliny, it is impossible to determine. At any rate, the very circulatory route through Nedjid to Yemen, marked out by Mr. Forster, and again his line of the retreat, seem to involve difficulties and contradictions insurmountable, which this is not the place to discuss; and with regard to the supposed analogy of the modern names, it may be safely assumed that an equal amount of ingenuity might discover a like analogy in any Arabian or Yemen, even with the very scanty materials that we at present have at command. In conclusion, it may be remarked that the observation of Strabo that the expedition had reached within two days' journey of the country of the Frankincense, is of no value whatever in determining the line of march, as there were two districts so designated, and there is abundant reason to doubt whether either in fact existed; and that the reports brought home by Gallus and preserved by Pliny, so far as they prove anything, clearly indicate profound ignorance of the nature and produce of Yemen, which some authors suppose him to have traversed, for we are in a position to assert that so much of his statement concerning the Sabaeei as relates to their wealth—silverum fertilitatis odoriferi, auri metallicis— is pure fiction. The question of the confusion of the various Maris, and their cognate names, is discussed by Ritter with his usual ability. (Erdbomane von Arabia, vol. i. pp. 276-284.)

MARSYAS (Maper'at). 1. A tributary of the Mecander, having its sources in the district called
MARSYSAS.

Idias, that is in the neighbourhood of Stratonicia, and flowing in a north-western direction past Alabanda, discharged its waters into the Maeander nearly opposite to Tralles. On its banks were the Aetukia στήλαι, near which the Carians held their national meetings. (Herod. v. 118.) The modern name of this river is Takies, as is clearly proved by Arrian (Jug. Mar., p. 234, &c.) while earlier geographers generally confounded this Marsyas with the Harpasus.

2. A small river of Phrygia, and, like the Carian Marsyas, a tributary of the Maeander. Herodotus (vii. 26) calls it a καταφάνειας; and according to Xenophon (Anab. i. 2, § 8) its sources were in the market-place of Caelanea, below the acropolises, where it fell down with a great noise from the rock. ( Curt. iii. 1.) This perfectly agrees with the term applied to it by Herodotus; but the description is apparently opposed to a statement of Pliny (v. 41), according to whom the river took its origin in the valley of Ascleperion, ten miles from Alainas. (Comp. Strab. xii. p. 578; Max. Tyr. viii. 8.) Strabo, again, states that a lake above Caelanea was the source of both the Maeander and the Marsyas.

"Comparing these accounts," says Col. Leake, (List Min. p. 160), "with Livy (xxxvii. 28), who probably copied from Polybius, it may be inferred that the lake or pool on the summit of a mountain which rose above Caelanea was the reputed source of the Marsyas and Maeander; but that in fact the two rivers issued from different parts of the mountain below the lake." By this explanation the difficulty of reconciling the different statements seems to be removed, for Ascleperion was probably the name of the lake, which imported its own name to the plain mentioned by Pliny. The Marsyas joined the Maeander a little way below Caelanea. (Comp. Macean- der: and Hamilton's Researches, i. p. 499.) [L.S.]

MARTYRIPOLIS.

(Marystipolos), a town of Sophene in Armenia, near the river Nympheus, which, according to the national traditions, was founded towards the end of the 5th century by the bishop Maronoth, who collected to this place the relics of all the martyrs that could be found in Armenia, Persia, and Syria. (St. Martin, Mem. sur l'Arménie, vol. i. p. 96.) Armenia, which as an independent kingdom, had long formed a slight counterpoise to the Roman and Parthian Empires, was in the reign of Tiberius II, partitioned by its powerful neighbours. Martyripolis was the capital of Roman Armenia, and was made by Justinian a strong fortress. (Procop. de Aed. iii. 2, B. P. i. 17; Le Beau, Bas Empire, vol. ii. p. 135; Gibbon, c. xi.) It is represented by the modern

MACRAS.
MARUSA. [SOGDiana.]

MARVINGI (Marw'gyyto), a German tribe on the east of Mons Alnoba, between the Svevi and the Danube. (Ptol. ii. 11. § 22.) The town of Bergamin (the modern Bamberg) was probably the capital of the Marvingi. (Ptol. ii. 11. § 29.) [L.S.]

MARIUNDE (Manv'sd, Ptol. vii. 2. § 14.), a people who lived in India extra Gangas, along the left bank of the Ganges, and adjoining the Gangaridae. They are probably the same as those whom Pliny calls Moini. (vi. 19. s. 22), and may perhaps be considered the same as the native Indian Terrandi. [V.]

MARUS, a tributary of the Danube, into which it flows from the north. Between it and the Casus a band of exiled Marcomannians received settlements from the Romans under Tiberius. (Tac. Ann. ii. 63; Plin. H. N. iv. 25.) It is generally believed that this river is the same as the March in Moravia; but it is more probably identical with the Moravach, which the ancients generally call Marisus. [MARIUS.]

MARUSIUM, a town which the Jerusalem Itinerary fixes at 13 M. P. from Ciodiana, and 14 M. P. from the river Apsus, on the road to Apollonia. Colonel Leake's map identifies it with 

LUINA. [E. B. J.]

MARUVUM. [MARRUVUM.]

MASADA (Masada), a very strong fortress of Palestine, mentioned by Strabo and Pliny, but much more fully described by Josephus. Strabo mentions it in connection with the phoenemena of the Dead Sea, saying that there are indications of volcanic action in the rugged burnt rocks about Massada (Morasada). Pliny describes it as situated on a rock not far from the lake Asphaltitis. (Strab. xi. p. 764; Plin. v. 17.) The description of Josephus, in whose histories it plays a conspicuous part, is as follows:—A lofty rock of considerable extent, surrounded on all sides by precipitous valleys of frightful depth, afforded difficult access only in two parts; one on the east, towards the lake Asphaltitis, by a zigzag path, scarcely practicable and extremely dangerous, called "the Serpent," from its sinuosity; the other on the west, which side the isolated rock was more nearly approached by the hills. The summit of the rock was not pointed, but a plane of 7 stadia in circumference, surrounded by a wall of white stone, 12 cubits high and 8 cubits thick, fortified with 37 towers of 50 cubits in height. The wall was joined within by large buildings connected with the towers, designed for barracks and magazines for the enormous stores and munitions of war which were laid up in this fortress. The remainder of the area, not occupied by buildings, was arable, the soil being richer and more genial than that of the plain below; and a further provision was thus made for the garrison in case of a failure of supplies from without. The rain-water was preserved in large cisterns excavated in the solid rock. A palace on a grand scale occupied the north-west corner, on a lower level than the inner rampart, and connected with it by covered passages cut in the rock. This was adorned with porticoes and baths, supported by monolithic columns; the walls and floor were covered with tesselated work. At the distance of 1000 cubits from the fortress a massive tower guarded the western approach at its narrowest and most difficult point, and thus completed the artificial defences of this most remarkable site, which nature had rendered almost impregnable. Jonathan, the high-priest, had been the first to occupy this rock as a fortress, but it was much strengthened and enlarged by Herod the Great, who designed it as a refuge for himself, both against his own disaffected subjects, and particularly against the more dreaded designs of Cleopatra, who was constantly importing Antony to put her in possession of the kingdom of Judaea by removing Herod out of the way. It was in this fortress that the unfortunate Mariamne and other members of Herod's family were left for security, under his brother Joseph and a small garrison, when he was driven from Jerusalem by Antigonus and his Parthian allies. The fortress was besieged by the Parthians, and Joseph was on the point of surrendering for want of water, when a timely shower filled the cisterns and enabled the garrison to hold out until it was relieved by Herod on his return from his successful mission to Rome. It next figures in the history of the Jewish revolt, having been occupied first by Manahem, son of Judas the Galilean, a ringleader of the sicarii, who took it by treachery, and put the Roman garrison to the sword; and afterwards by Eleazar and his partisans, a rival faction of the same murderous fanatics, by whom it was held for some time after Jerusalem itself had fallen; and here it was that the last scene of that awful tragedy was enacted under circumstances singularly characteristic of the spirit of indomitable obstinacy and endurance that had actuated the Jewish zealots throughout the whole series of their trials and sufferings. It was the only stronghold that still held out when Flavii Silva succeeded Bassus as prefect in Judaea (A. D. 73). The first act of the general was to surround the fortress with a wall, to prevent the escape of the garrison. Having distributed sentinels along this line of circumsallation, he pitched his own camp on the west, where the rock was most nearly approached by the mountains, and was therefore more open to assault; for the difficulty of procureing provisions and water for his soldiers did not allow him to attempt a protracted blockade, which the enormous stores of provisions and water still found there by Eleazar and his followers would have enabled the garrison to hold out for a long time. Behind the tower which guarded the ascent was a prominent rock of considerable size and height, though 300 cubits lower than the wall of the fortress, called the White Cliff. On this a bank of 200 cubits' height was raised, which formed a base for a platform (Bija) of solid masonry, 50 cubits in width and height, on which was placed a tower similar in construction to those invented and employed in sieges by Vespasian and Titus, covered with plates of iron, which reached an additional 60 cubits, so as to dominate the wall of the castle, which was quickly cleared of its defenders by the showers of missiles discharged from the scorpions and balistae. The outer wall soon yielded to the ram, when an inner wall was discovered to have been constructed by the garrison—a framework of timber filled with soil, which became more solid and compact by the impressions of the ram. This, however, was speedily burned. The assault was fixed for the morrow, when the garrison prevented the swords of the Romans by one of the most cold-blooded and atrocious massacres on record. At the instigation of Eleazar, they first slew every man his wife and children; then having
collected the property into one heap, and destroyed it by fire, they cast lots for ten men, who should act as executioners of the others, while they lay in the embrace of their slaughtered families. One was then selected by lot to slay the other nine survivors; and he at last, having set fire to the palace, with a desperate effort drove his sword completely through his own body, and so perished. The total number, including women and children, was 960. An old woman, with a female relative of Eleazar and five children, who had contrived to conceal themselves in the reservoirs while the massacre was being perpetrated, survived, and narrated these facts to the astonished Romans when they entered the fortress on the following morning and had ocular demonstration of the frightful tragedy.

The scene of this catastrophe has been lately recovered, and the delineations of the artist and the description of the traveller have proved in this, as in so many other instances, the injustice of the charge of exaggeration and extravagance so often preferred against the Jewish historian. Mr. Eli Smith was the first in modern times to suggest the identity of the modern Ssebh with the Masada of Josephus. He had only viewed it at a distance, from the cliffs above Engeedi, in company with Dr. Robinson (Biblical Researches, vol. iii. p. 242, n. 1); but it was visited and fully explored, in 1842, by Messrs. Westcot and Tipping, from whose description the following notices are extracted. The first view of it from the west strikingly illustrates the accuracy of Strabo's description of its site. “Rocky precipices of a rich reddish-brown colour surrounded us; and before us, across a stoned and esclated tract, were the cliff of Ssebh, with its runs, the adjacent height with rugged defiles between, and the Dead Sea lying mouldless in its bed beneath. The aspect of the city was that of lonely and stern grandeur.” So on quitting the spot they found the ground “sprinkled with volcanic stones.” The base of the cliff is separated from the water by a sand or sand-tanl; and the rock projects beyond the mountain range, and is completely isolated by a valley, even on the west side, where above “the rock can now be climbed: the pass on the east described by Josephus seems to have swept away. The language of that historian reveals the loveliness of the site. It is not very extravagant. It requires firm nerves to stand over its steepest sides and look directly down. The depth at these points cannot be less than 1000 feet....

The whole area we estimated at three-quarters of a mile in length from N. to S., and a third of a mile in breadth. On approaching the rock from the west, the ‘white的家庭’, as Josephus appropriately calls it, is seen on this side near the northern end. This is the point where the siege was pressed and carried. Of the wall built round about the entire top of the hill by King Herod, all the lower part remains. Its colour is of the same dark red as the rock, though it is said to have been ‘composed of white stone’; but on breaking the stone, it appeared that it was naturally whitish, and had been burnt brown by the sun.” The ground-plan of the store-houses and barracks can still be traced in the foundations of the buildings on the summit, and the cisterns excavated in the natural rock are of enormous dimensions: one is mentioned as nearly 50 feet deep, 100 long, and 45 broad; its wall still covered with a white cement. The foundations of a round tower, 40 or 50 feet below the northern summit, may have been connected with the palace, and the windows cut in the rock near by, which Mr. Woolcot conjectures to have belonged to some large cistern, now covered up, may possibly have lighted the rock-hewn gallery by which the palace communicated with the fortress. From the summit of the rock every part of the wall of circumvallation could be traced,—carried along the low ground, and, wherever it met a precipice, commencing again on the high summit above, thus making the entire circuit of the place. Connected with it, at intervals, were the walls of the Roman camps, opposite the NW. and SE. corners, the former being the spot where Josephus places that of the Roman general. A third may be traced on the level near the shore. The outline of the works, as seen from the heights above, is as complete as if they had been but recently abandoned. The Roman wall is 6 feet broad, built, like the fortress walls and buildings above, with rough stone laid together, and the interstices filled in with small pieces of stone. The wall is half a mile or more distant from the rock, so as to be without range of the stones discharged by the garrison. No water was to be found in the neighbourhood but such as the recent rains had left in the hollows of the rocks; confirming the remark of Josephus, that water as well as food was brought thither to the Roman army from a distance. Its position is exactly opposite to the peninsula that runs into the Dead Sea from its eastern shore, towards its southern extremity. (Bibliotheca Sacra, 1843, pp. 62—67; Traill's Josephus, vol. ii. pp. 109—115; the plates are given in vol. i. p. 126, vol. ii. pp. 87, 238.) It must be admitted that the identification of Ssebh with Masada is most complete, and the vindiocation of the accuracy of the Jewish historian, marvellous as his narrative appears without confirmation, so entire as to leave no doubt that he was himself familiarly acquainted with the fortress.

MASAITHICA (Marashtian), a river the “embouchure” of which is placed by Arrian (Peripl. p. 18) on the S. coast of the Euxine, 90 stadi from the Nese. Rennell (Comp. Geog. vol. ii. p. 325) has identified it with the Ramusar. [E. B. J.]

MASIANI (Marasani), a people of Arabica Deport, mentioned by Ptol. (v. 19, § 4), and by Strabo, near the Bani (Matrai'CT?), called Coisote, in the desert. [V.]

MASIAR (Maras), a tribe of Mesopotamia, mentioned by Xenophon in the march of Cyrus the Younger through that country. He mentions a town which he calls Coriste, and was probably a tributary of the Euphrates. Forbiger imagines that it is the same as the Samaris of Ptol. (v. 18, § 3), which had its rise in the neighbourhood of Nisibis. [V.]

MASCICUM, a place in Rhacia, on the road leading from Veliudiana to Pons Aeni (It. Ant. p. 259), identified with Gnadin on the Tegernae, or with Mutten, near Rottenberg. [L. S.]

MASCILIANA or MASCILIANAE, a town in Dacia, which the Peuterger Table fixes at 11 M. P. from Gogana. The Geographer of Ravenna calls it Maiac. Its position must be sought near Karanubes. [E. B. J.]

MASCORAVI (Marasporav or Marasporv), a wild tribe who occupied the mountain range of Masdorus, between Parthia and Ariana, extending SW. towards the desert part of Carmathia or Kirman. (Ptol. v. 17, § 3.) [V.]

Digitized by Microsoft®
MASSAYA. 289

MASDORANUS, (Mia5dr5pov)), a chain of mountains which divided Persia from Caucasian, and resembling the Albanian, the Scythian, and the Alani. They must be considered as spurs of the Sarpi mountains (Hazardus), which lie to the N. of Persia (Ptol. vi. 5. § 1). [V.]

MASES (Mâs-r), Λ; Mâsâto, Steph. B.; Ε;h Mâsârots), an ancient city in the district Hermionis, in the Argelic peninsula, mentioned by Homer along with Aegira. In the time of Pausanias it was used as a harbour by Hermione. (Hom. H. ii. 562; Strab. viii. p. 376; Paus. ii. 36. § 2; Steph. B. e. c.) It was probably situated on the western extremity of Hermionis, at the head of the deep bay of Kiliildia, which is protected by a small island in front. The possession of this harbour on the Argolic gulf must have been of great advantage to the inhabitants of Hermione, since they were thus saved the navigation round the peninsula of Kronidil. The French Commission, however, place Mases more to the south, at port Kiliâd, which we suppose to have been the site of Helice. [Helice] (Leake, Morer, vol. ii. p. 463. Peloponnesiana, p. 287; Bobbeye. Recherches, q.e. p. 61; Curtius, Peloponnesos, vol. ii. p. 402.)

MASIOC. [Mâskktojta]  

MÂSISIUS (rio Mâsâw éper, Strab. xii. pp. 506, 527; Ptol. x. 18. § 2), a chain of mountains which form the northern boundary of Mesopotamia, and extend in a direction nearly east and west. They may be considered as connecting the great western mountain known by the name of Amauros, between Cilicia and Assyria, and the Najadeâ, on the eastern or Armenian side. The modern name is Karjou Baghlar. Strabo states, that M. Masius is in Armenia, because he extends Armenia somewhat more to the W. and S. than other geographers. A southern spur of the Masian chain is the mountain district round Singara (now Snyjer). [V.]

MAȘPII (Mâs-qun, Herod. i. 123), one of the three tribes mentioned by Herodotus, as forming the first and most honourable class among the ancient Persians. [V.]

MASSA (Mâs-râ), Ptol. iv. 6. § 6; Masast, Polyb. op. Plin. v. 1), a river of Libya, which joined the sea not far to the N. of the Daras (Soweal), and to the S. of Sodein (Cape Blanco) in E. long. 10° 30'. N. lat. 36° 30'. [E. B. J.]

MASSA, surnamed Massa Veterinensis, a town of Epura, situated about 12 miles from the sea, on a hill overlooking the wide plain of the Maeomanès; hence it is now called Massa Marittima. In the middle ages it was a considerable city and the seat of a bishop; but it is not mentioned by any ancient author earlier than Aemianus Marcellinus (xiv. 11. § 27), who tells us that it was the birthplace of the emperor Constantius Gallus. From the epithet Veterinensis, it would seem probable that there was an Etruscan city of the name of Veterinum in its neighborhood; and, according to Dennis, there are signs of an Etruscan population in a hill called the Poggio di Vetra, a little to the SE. of the modern town. (Dennis, Etruria, vol. ii. p. 218.) [E. B. J.]

MABASBATICA. [Mesbasbatae.

MABSAEI (Mâsâroi), a people placed by Ptolemy (vi. 14. §§ 9, 11) in the extreme N. of Syria, near the mountains of the Alani, or the N. part of the Great chain. [E. B. J.]

MABSAEYLI. [Numidae.]

MÂBSAGA (rî Mâsâwâ, Arrian, Abol. iv. 25, 39), a strongly fortified town in the NE. part of Vol. ii.

India, between the Cophes and the Indus. It is stated by Arrian (i. c.) to have made a desperate defence, and to have defeated Alexander in four days of continued assault. It had been the residence of the Indian king Assacanus, who was recently dead when Alexander arrived there. (Curt. viii. 10). This name is written differently in different authors. Thus, Strabo writes it Massâya (xv. p. 698); Steph. Byz. and Diodorus, Massâkos (xvii. Procnen.); and Curtius, Massaga (i.c.). It is doubtless the same as the Samars, Massakan, near the Gurusas (or Guarra). Curtius himself mentions that a rapid river or torrent defended it on its eastern side. (Lassen's Map of India.) [V.]

MASSAGETAE (Mâsâgêtâ), a numerous and powerful tribe who dwelt in Asia on the plains to the E. of the Caspian and to the S. of the Is edены, on the E. bank of the Araxes. Cyrus, according to story, lost his life in a bloody fight against them and their queen Tomarîs. (Herod. i. 205—214; Justin, i. 8.) They were so analogous to the Scythians that they were reckoned as members of the same race by many of the contemporaries of Herodotus, who has given a detailed account of their habits and manner of life. From the exactness of the geographical data furnished by that historian, the situation of this people can be made out with considerable precision. The Araxes is the Jaxartes, and the immense plain to the E. of the Caspian is that “steppe” land which now includes Sogdiana and Mongolia, touching on the frontier of Pegrum, and extending to the chain of the Alaei. The gold and bronze in which their country abounded were found in the Alaei range. Strabo (xi. pp. 512—514) confirms the statements of the Father of History as to the inhuman practices and repulsive habits of these earliest specimens of the Mongolian race. It may be observed that while Niebuhr (Klein Schrift. p. 362), Böckh (Corp. Insur. Græc. pl. xi. p. 81) and Schafarik (Stat. Alt. vol. i. p. 279) agree in assigning them to the Mongol stock, Von Humboldt (Asie Centrale, vol. i. p. 400) considers them to have belonged to the Indo-European family.

Alexander came into collision with these wandering hordes, during the campaign of Sogdiana, a.c. 328. (Arrian, Abol. iv. 16, 17.) The Massagetae occur in Pompennius Mela (i. 2. § 5), Pliny (vi. 19), and Ptolemy (vi. 10. § 2, 13. § 3): afterwards they appear as Alani. [Alani.] [E. B. J.]

MASSALILAH (Mâsârîlîa), a river of Crete, which Ptolemy (iii. 17. § 3) places to the W. of Psichron (Kastron), now the Megalo-potamo. (Höck, Krêta, vol. i. p. 393.) [E. B. J.]

MASSALILA. [Massilîa.]

MASSALIOTICUM OSTIUM. [Fossa Mâs-

MÂSSANI (Mâsârâwâi, Diod. xiv. 102), a people of India, who are said by Diodorus to have lived near the mouths of the Indus, in the district called Pataleane.

MASSAVA, in Gallia, is placed by the Table between Brivodurum (Briare) and Elirium, which is Nevirnum (Nevrera) on the Loire. The distance is marked the same from Massava to Brivodurum and to Nevirnum, being xvi. in each case. Massava is Mave or Mawa, a place where the small river Massaw flows into the Loire; but the numbers in the Table do not agree with the real distance, as D'Anville says, and he would correct them in his usual way. [G. L.]
MASSIANI. (Massanari, Strab. xv. p. 693), a people who dwelt in the NE. part of India, beyond the Panjab, between the Cophes and the Indus. They are mentioned by Strabo in connection with the Astaceni and Aspasis, and must therefore have dwelt along the mountain range to the N. of the Kabul river. [V.]

MASSICUS MONS (Monte Massico), a mountain, or rather range of hills, in Campania, which formed the limit between Campania properly so called and the portion of Latium, south of the Liris, to which the name of Latium Novum or Adiectum was sometimes given. (Plin. iii. 5. s. 9.) The Massician Hills form a range of inaccessible elevation, which extends from the foot of the mountain group near Suessa (the Mte. di Sta. Croce), in a SW. direction, to within 2 miles of the sea, where it ends in the hill of Mondragone, just above the ancient Sinusica. The Massician range is not, like the more lofty group of the Mte. di Sta. Croce or Rocca Mangia, of volcanic origin, but is composed of the ordinary limestone of the Apennines (Daubeny On Volcanoes, p. 175). But, from its immediate proximity to the volcanic formations of Campania, the soil which covers it is in great part composed of such products, and hence probably the excellence of its wine, which was one of the most celebrated in Italy, and vied with the still more noted Falernian. (Verg. Georg. ii. 143. Aen. vii. 724: Hor. Carm. i. 19. iii. 21. 5: Sil. Ital. vii. 29: Martial, i. 27. 8. iii. 111: Plin. xiv. 6. 8. 8: Columell. iii. 8.) Yet the whole of this celebrated range of hills does not exceed 9 miles in length by about 2 in breadth. [E. H. B.]

MASSICUTES, MASSICUTES, or MASSICUTUS (Massicoros), a mountain range traversing western Libya from north to south, issuing in the north, near Nysa, from Mount Taurus, and running almost parallel to the river Xanthus, though in the south it turns a little to the east. (Ptol. v. 3. § 1; Plin. v. 28: Quint. Suriyn. iii. 232.) [L. S.]

COIN OF MASSICUTES.

MASSILEA a town, mentioned only by Avienus (Or. Marit. 450. seq.), situated on the south coast of Hispania Tarraconensis, from which the Sinus Massicius derived its name. It is the bay S. of Chorongina between C. Palas and C. Guta.

MASSILIA (Massalia; Ltt. Massalaeáthys, Massalaiáthys, Massalaeáthys, the feminine, Massalaeáthyn, Massalaeáthyn), the modern name, Massilis; is from the corrupted Latin, Marsilia, which in the Provençal became Marsile. Massilia, which the Romans wrote Massilia, is a town of Gallia Narbonensis, on the coast, east of the Rhone. Its position is represented by the French city of Marseille, in the department de Bouches-du-Rhone. Ptolomy (i. 10. § 8) calls Massilia a city of the Common, whose territory he extends along the coast, from Massilia to Forum Julii (Tri腐蚀). He places Massilia in 43° 5' N. lat.; and he makes the length of the longest day 15 hours, 15 minutes; which does not differ many minutes from the length of the longest day as deduced from the true latitude of Marseille, which is about 43° 18' N. lat.

The territory of Marseille, though poor, produced some good wine and oil, and the sea abundant in fish. The natives of the country were probably a mixed race of Celtic and Ligures; or the Ligurian population may have extended west as far as the Rhone. Stephanus (ap. Massalaeáthyn), whose authorship is nothing, except we may understand him as correctly citing Herodatus, describes Massalia as a city of Ligurians in Celtice. And Strabo (iv. p. 203) observes, "That as far west as Massalia, and a little further, the Salyes inhabit the Alps that lie above the coast and some parts of the coast itself, mingled with the Hellesons." This is doubtless the meaning of Strabo's text, as Gosskord remarks (Transl. Strab. vol. i. p. 330). Strabo adds, "and the old Greeks give to the Salyes the name of Ligydes, and to the country which the Massalians possess the name of Ligyctie; but the later Greeks name them Celtice-ligydes, and assign to them the plain country as far as the Rhodanians and the Durentia." Massalia, then, appears to have been built on a coast which was occupied by a Ligurian people.

The inhabitants of the Ionian town of Phocaea in Asia, one of the most enterprising maritime states of antiquity, showed their countrypeople the way to the Adriatic, to Tyrrhenia, Iberia, and to Tartessus. (Herod. i. 163.) Herodatus says nothing of their voyages beyond the frontier of the basin of the sewer, but the story of the origin of Massalia is preserved by Aristotle (ap. Athen. xii. p. 576) in his history of the polity of the Massicutes. Exenus, a Phocaeus, was a friend of Naus, who was the chief of this part of the coast. Naus, being about to marry his daughter, invited to the feast Exenus, who happened to have arrived in the country. Now the marriage was after the following fashion. The young woman was to enter after the feast, and to give a cup of wine and water to the suitor whom she preferred; and the man to whom she gave it was to be his husband. The maid coming in gave the cup, either by chance or for some reason, to Exenus. Her name was Petta. The father, who considered the giving of the cup to be according to the will of the deity, consented that Exenus should have Petta to wife; and Exenus gave her the Greek name Aristoclea. It is added that there was a family in Massalia, up to Aristotle's time, named Protidae, for Protis was a son of Exenus and Aristoclea. Justin (xii. 3, &c), the epitomiser of Trogus Pompeius, who was either of Gallic or Ligurian origin, for his ancestors were Vescuti, tells the story in a somewhat different way. He fixes the time of the Phocceans coming to Gallia in the reign of Tarquinus, who is Tarquinius Priscus. The Phocceans first entered the Tiber, and, making a treaty with the Roman king, continued their voyage to the farthest points of Gallia and the mouths of the Rhone. They were pleasèd with the country, and returning to Phocaea, induced a greater number of Phocceans to go with them to Gallia. The commanders of the fleet were Simos and Protis. Plutarch also (Solon, c. 2) names Protis the founder of Massalia. Simos and Protis introduced themselves to Nausus, king of the Segobriti or Segobrigi, in whose territories they wished to build a city. Nausus was busy at this time with preparing for the marriage of his daughter Cyptis, and the strangers were politely invited to the marriage feast. The choice of the young woman for her husband fell on Protis; but the cup which she offered him contained only water. From this fact, insignificant in itself, a modern writer deduces the
MASSILIA.

MASSILIA. 291

conclusion, that if it was wine and water, the wine came from foreign commerce, and commerce anterior to the by the Phocaeans. "For the vine was not yet introduced into Gaul." But the vine is a native of Gallia Narbonensis, and king Naunus may have had wine of his own making. The Phocaeans now built Massilia; and though they were continually harassed by the Ligurians, they beat them off, conquered fresh territories, and built new cities in them. The time of the settlement of Massilia is fixed by Sannus Chiun 120 years before the battle of Marathon (n. c. 600). Strabo (v. p. 179) found in some of his authorities a story that the Phocaeans before they sailed to Gallia were told by an oracle to take a guide from Artemis of Ephesus; and accordingly they went to Ephesus to ask the goddess how they should obey the oracular order. The goddess appeared to Aristarche, one of the women of noblest rank in Ephesus, in a dream, and bade her join the expedition, and take with her a statue from the temple. Aristarche went with the adventurers, who built a temple to Artemis, and made Aristarche the priestess. In all their colonies the Massaliots established the worship of Artemis, and set up the same kind of wooden statue, and instituted the same rites as in the mother-city. For though Phocaea founded Massalia, Ephesus was the city which gave to it its religion. [Hist. i. p. 134.]

The Galli, as Justin calls them, learned from the Massaliots the usages of civilised life (Justin, xiii. 4), to cultivate the ground, and to build walls round their cities. They learned to live under the rules of law, to prune the vine, and to plant the olive. Thus Greek civility was imported into barbaric Gallia, and France still possesses a large and beautiful city, a lasting memorial of Greek enterprise. Naunus died, and was succeeded by his son Co-mans, to whom a cunning Ligurian suggested that Massalia would some time ruin all the neighbouring people, and that it ought to be stilled in its infancy. He told him the fable of the bitch and her whelps, which Phædrus has (i. 19); but this part of the old story is hardly credible. However, the king took advantage of a festival in Massalia, which Justin calls the arrival of the Phocaeans. Flavius Josephus states, that men there under the protection of Massaliot hospitality, and others in carts, concealed in hampers covered with leaves. He posted himself with his troops in the nearest mountains, ready to enter the city when his men should open the gates at night, and the Massaliots were sunk in sleep and filled with wine. But a woman spoiled the plot. She was a kinsman of the king, and had a Greek for her lover. She was moved with compassion for the handsome youth as she lay in his arms; she told him of the treachery, and urged him to save his life. The men reported it to the magistrates of the city. The Ligurians were pulled out of their hiding-places and massacred, and the treacherous king was surprised when he did not expect it, and cut to pieces with 7000 of his men. From this time the Massaliots on three days shut their gates, kept good watch, and exercised a vigilant superintendence over strangers.

The traditions of the early history of Massalia have an appearance of truth. Everything is natural. A woman's love founded and saved Massalia. A woman's tender heart saved the life of the noble Englishman who rescued the infant colony of Virginia from destruction; and the same gentle and heroic woman, Pocahontas, by marrying another Englishman, made peace between the settlers and the savages, and secured for England a firm footing in Chesapeake Bay.

Livy's story (v. 34) of the Phocaeans landing on the site of Massalia at the time of Bellovesus and his Celts being on the way to invade Italy, is of no value. When Cyrus invaded Ionia (n. c. 546), part of the Phocaeans left Phocaea and sailed to Alalia in Corsica, where the Phocaeans had made a settlement twenty years before. Herodotus, who tells the history of these adventurers at some length, says nothing of their settlement at Massalia. (i. 163—167.) Strabo (vi. p. 252), on the authority of Antiochus, names Creontiales as the commander of the Phocaeans who fled from their country on the Persian invasion, and went to Corsica and Massalia, whence being driven away, they founded Veia in Italy. It is generally said that the exiles from Phocaea formed the second colony to Massalia; but though it seems likely enough, the evidence is rather imperfect. When Thucydides says (i. 13) that the Phocaeans while they were founding Massalia defeated the Carthaginians in a naval battle, we get nothing from this fact as to the second settlement of Massalia. We only learn that the Carthaginians, who were probably looking out for trading posts on the Gallic shore, were already there, captured the city, and frit with the Phocaeans; and if we interpret Thucydides' words as we ought to do, he means at the time of the settlement of Massalia, whatever that was. Pausanias, who is not a careless writer, (x. 8 § 6), states that the Massaliots were a Phocean colony, and a part of those who fled from Harpagus the Mede; and that having gained a victory over the Carthaginians, they got possession of the country which they now have. The Phocaeans dedicated a bronze statue to Apollo at Delphi to commemorate the victory. There seems, then, to have been an opinion current, that some of the exiles at the time of the Persian invasion settled at Massalia; and also a confusion between the two settlements. Justin, following Trogus, speaks of the Massaliots having great wars with the Galli and Ligures, and of their often defeating the Carthaginian armies in a war that arose out of some孙孙 the Galli being taken, and granting them peace. They also were, he says, in alliance with Rome almost from the time of founding their city; but it seems that he had forgotten what he said a little before, that it was not almost from that time, but even before. They also contributed gold and silver to pay the ransom when the Galli took Rome, for which they received freedom from taxation (immunitas), and other privileges, which is very absurd, and certainly untrue. The historical connection of Rome and Massalia belongs to a later time.

Massalia was built on rocky ground. The harbour lay beneath a rock in the form of a theatre, which looked to the south. Both the harbour and the city were well walled, and the city was of considerable extent. On the citadel stood the Ephesus, and the temple of Delphinia (Apollo), which was a common sanctuary of all the Ionians, but the Ephesus was a temple of Artemis of Ephesus. The Massaliots had ship-houses (παραθηκας) and an armory (αρμαθειον); and in the time of their prosperity they had many vessels, arms, and stores of ammunition both for navigation and for the siege of cities; by which means they kept off the barbarians and gained the friendship of the Romans. (Strab. pp.
iv. 179, 180.) Caesar, who knew the site well, describes Massalia as washed by the sea almost along three parts of its extent; the fourth part was that by which the city was connected with the mainland; and here also that part that was occupied by the citadel was protected by the nature of the ground and a very deep valley (B. C. i. 1). He speaks of an island opposite to Massalia. There are three small islands nearly opposite the entrance of the present port. It was connected with the mainland, as Eminius describes it, "by a space of fifteen hundred paces." D'Anville observes that these fifteen hundred paces, or a Roman mile and a half, considerably exceed the actual distance from the bottom of the port to the place called the Grande Pointe; and he supposes that we must take these to be single paces, and so reduce the space to half the dimensions. Walckenaear (Géog. d. c. vol. i. p. 25) supposes Eminius to mean that the tongue of land on which Massalia stood was 1500 paces long. At present the port of Marseille is turned to the west; but the old port existed for a long time after the Roman period. This old port was named Lacydon (Mela, ii. 5), a name which also appears on a medal of Massalia. The houses of Massalia were mean. Of the public buildings not a trace remains now, though it seems that there were not very long ago some remains of aqueducts and of baths. Metals, urns, and other antiquities have often been dug up.

The friendship of Rome and Massalia dates from the Second Punic War, when the Massaliots gave the Romans aid (Liv. xxi. 20, 23, 26), and assisted them all through the long struggle. (Polyb. iii. 95.) In B. C. 208 the Massaliots sent the Romans intelligence of A-hraba, having come into Gallia. (Liv. xxvii. 36.) Massalia was never safe against the Ligurians, who even attacked them by sea (Liv. xl. 18). At last (B. C. 154) they were obliged to ask the Romans for aid against the Oxybi and Daecrates, who were defeated by Q. Oppius. The story of the establishment of the Romans in Southern Gallia is told in another place (Gallia Transalpina, Vol. i. p. 93.)

J. Pomeruge.

By the victory of the Romans over the Ligurians the Massaliots got some of the Ligurian lands; and after the defeat of the Teutoburges by C. Marins (B. C. 102) near Aquis Sextius (Aix), the Roman commander gave the Massaliots the canal which he had constructed at the eastern outlet of the Rhone, and they levied tolls on the ships that used it [Fossa Mariana]. The Massaliots were faithful to the Romans in all their campaigns in Gallia, and furnished them with supplies. (Cic. pro Font. c. 1.) Cn. Pompeius gave to the community of Massalia lands that had belonged to the Volcae Arecomici and the Helvetii; and C. Julius Caesar increased their revenue by fresh grants. (B. C. i. 35.)

When Caesar (B. C. 49) was marching from Italy into Spain against the Legati of Pompeius, Massalia shut her gates against him. The excuse was that they would not side with either party; but they showed that they were really favourable to Pompeius by admitting L. Domitius within their walls and giving him the command of the city (B. C. i. 34—36). At the suggestion of Pompeius the Massaliots also had made great preparations for defence. Caesar left three legions under his legates C. Trebonius to besiege Massalia, and he gave D. Brutus the command of twelve ships which he had constructed at Arethus (Arles) with great expedition. While Caesar was in Spain, the Massaliots having manned seventeen vessels, eleven of which were decked ships, and put on board of them many of the neighbouring mountaineers, named Albici, fought a battle with Brutus in which they lost nine ships. (B. C. i. 56—59.) But they still held out, and the narrative of the siege and their sufferings is one of the most interesting parts of Caesar's History of the Civil War (B. C. ii. 1—22; Dion Cassius, xii. 25). When the town finally surrendered to Caesar, the people gave up their arms and military engines, their ships, and all the money that was in the public treasury. The city of Massalia appeared in Caesar's triumph at Rome, "that city," says Cicero, "without which Rome never triumphed over the Transalpine nations" (Philipp. viii. 6, de Offic. ii. 8). Still it retained its freedom (auroxa), or in Roman language it was a Libera Civitas, a term which Strabo correctly explains to signify that the Massaliots "were not under the governors who were sent into the Provincia, neither the city itself, nor the dependencies of the city." Pliny names Massalia a "federata civitas" (iii. 4), a term which the history of its early connection with Rome explains.

The constitution of Massalia was aristocratic and its institutions were good (Strab. iv. p. 179). It had a council of 600, who held their places for life, and were named Timuchi (τίμοων). The council had a committee of fifteen, in whose hands the ordinary administration was: three out of the fifteen presided over the committee, and had the chief power; they were the executive. Strabo's text here becomes corrupt, and it is doubtful whether he means to say that no man could be a Tribunus, unless he had children and unless he could trace his descent for three generations from a citizen, or that no man could be one of the fifteen unless he fulfilled these conditions. (See Grockend, Traual. Strabo, vol. i. p. 310.) Their laws were Ionic, says Strabo, whatever this means; and were set up in public. Possibly we may infer that they were not overloaded with legislation. Aristotle (Pol. v. 6) seems to say that the Massaliots, once an oligarchy, "whence we may conclude from this and other authorities that it became a Democracy, that is, that the political power came into the hands of those who had a certain amount of wealth. Cicero (de Rep. i. 27, 28) in
his time speaks of the power being in the hands of the "selecti et principes," or as he calls them in another place the "optimates;" and though the admission is a plain one, yet we must not hesitate, "in this condition of the 'populus' a certain resemblance to servitude." Though the people had little or no power, so far as we can learn, yet the name Demus was in use; and probably, as in most Greek towns, the official title was Boale and Demus, as at Rome it was Senatus Populusque Romanus. The division of the people was into Phyle. The council of the 600 probably subsisted to a late period, for Lictor, or whoever was the author of the Tuzoria (c. 24) mentions it in his story of the friendship of Zenothenes and Menocrates.

Some writers have attempted, out of the fragments of antiquity, to reconstruct the whole policy of Massilia; an idle and foolish attempt. A few things are recorded, which are worth notice; and though the authority for some of them is not a critical writer, we can hardly suppose that he invented. (Valer. Maximii, ii. 6.) Poisen was kept under the care of the administration, and if a man wished to die, he must apply to the Six Hundred, and if he made out a good case, he was allowed to take a dose; and "herein," says Valerius, "a main investigation was tempered by kindness, which neither allowed any one to depart from life without a cause, and wisely gives to him who wishes to depart a speedy way to death." The credulity of this usage has been doubted on various grounds; but there is nothing in it contrary to the notions of antiquity. Two coffins always stood at the gates, one for the slave, one for the freeman; the bodies were taken to the place of interment or burning, whichever it was, in a vehicle: the sorrow terminated on the day of the funeral, which was followed by a domestic sacrifice and a repast of the relations. The thing was done cheap; the undertaker would not grow rich at Massilia. No stranger was allowed to enter the city with arms; they were taken from him, and restored when he went away. These and other precautions had their origin in the insecurity of settlers among a warlike and hostile population of Ligurians and Galli. The Massaliots also had slaves, as all Greeks had; and though manumission was permitted, it may be inferred from Valerius, if he has not after his fashion confounded a Greek and Roman, or whoever is the author of the Tuzoria, the owner was freed. A supply of slaves might be got from the Galli, who sold their own children. Whether the Ligurian was so base, may be doubted. We read of Ligurians working for daily hire for Massaliot masters. This hardy race, men and women, used to come down from the mountains to earn a scanty pitance by tilling the ground; and two ancient writers have preserved the same story, on the evidence of Pseudo-Deeanus, of the existence of a Ligurian woman, who was working for a Massaliot farmer, and being seized, with the pains of childbirth, retired into a wood to be delivered, and came back to her work, for she would not lose her hire. (Strab. iii. p. 165; Diodor. iv. 20.) It is just to add that the employer paid the poor woman her wages, and sent her off with the child.

The temperance, decency, and simplicity of Massaliot manners during their best period, before they had long been supported by the Roman power, was recommended by the ancient writers. The women drank no wine. Those spectacles, which the Romans called Mini, coarse, corrupting exhibitions, were prohibited. Against religious impostors the Massa-
The coins of Massalia are numerous, and some of them are in good taste. It is probable that they also coined for the Galli, for the Galli had coined money of their own long before the Christian era, with Greek characters. The common types of the Massilian mints are the lion and the bull. No gold coins of Massalia have yet been found; but there are coins of other metal covered over with gold or silver, which are generally supposed to be base coin; and base or false coin implies true coin of the same kind and denomination. It has been also supposed that the fraud was practiced by the Massaliots themselves, to cheat their customers, a supposition which gives them no credit for honesty and little for sense.

The settlements of Massalia were all made very early; indeed some of them may have been settlements of the mother city Phocaea. One of the earliest of these colonies was Taurroi or Tauromenium (a doubtful position), which Caesar (B. C. ii. 4) calls "Castellum Massiliense." The other settlements of Massalia were either (Enubas or Enusa), Athemnus, (ATHENIOPOLIS), Antipolis (Antibes), Nicea (Vence), and the islands along this coast, the Strohedales, and Lero and Lerins.

West of Massalia was Acatha (Aigle), on the Armissus (Hérault), doubtful whether it was a colony settled by Phocaea or Massalia. Rhone (Rosses), within the limits of Hispania, was either a Rhodian or Massalian colony; even if it was Rhodian, it was afterwards under Massalia. Emporium (Emporion), in Hispania, was also Massaliot, or even Phocean (Liv. xxi. 19) originally. EMPORIAL. Strabo speaks of three small Massaliot settlements further south on the coast of Hispania, between the rivers Sueco (Jacer) and Carthago Nova (iii. p. 159). The chief of them, he says, was Hemereopium. DIANUM.

The furthest Phocean settlement on the south coast of Spain was Maeneae (iii. p. 158), where remains of a Greek town existed in Strabo's time.

There may have been other Massaliot settlements on the Gallic coast, such as Heraclea. HERACLEA. Stephanius, indeed, mentions some other Massaliot cities, but nothing can be made of his fragmentary matter. There is no good reason for thinking that the Massaliots founded any inland towns. Arete (Arel) would seem the most likely, but it was not a Greek city; and as to Aevion (Avignon) and Calabria (Carthireon), the evidence is too small to enable us to reckon them among Massaliot settlements.

There is also the great improbability that the Massaliots either wanted to make inland settlements, or were able to do it, if, contrary to the practice of their nation, they had wished it. That Massaliot merchants visited the interior of Gallia long before the Roman conquest of Gallia, may be assumed as a fact.

Probably the downfall of Carthage at the end of the Third Punic War, and the alliance of Massalia with Rome, increased the commercial prosperity of this city; but the Massaliots never became a great power like Carthage, or they would not have called in the Romans to help them against two small Ligurian tribes. The foundation of the Roman colony of Narbo (Narbonne), on the Atax (Aude), in a position which commanded the road into Spain and to the mouth of the Garonne, must have been detrimental to the commercial intercourse of Massalia. Strabo (iv. p. 186) mentions Narbo in his time as the chief trading place in the Provincia. Both before Caesar's time and after Massalia was a place of resort for the Romans, and sometimes selected by exiles as a residence. (TAC. ANN. iv. 43, xii. 47.) When the Roman supremacy was established in Gallia, Massalia had no longer to protect itself against the natives. The people having wealth and leisure, applied themselves to rhetoric and philosophy; the place became a school for the Galli, who studied the Greek language, which came into such common use that contracts were drawn up in Greek. In Strabo's time, that is in the time of Augustus and Tiberius, some of the Romans who were fond of leaving us to Massalia instead of Athens, Agriola, the emperor of Britannia, and a native of Forum Julia, was sent when a boy by a careful mother to Massalia, where, as Tacitus says (Agric. c. 4), "Greek civility was united and tempered with the thrifty habits of a provincial town." (See also TAC. ANN. iv. 44.) The Galli, by their acquaintance with Massalia, became fond of rhetoric, which has remained a national taste to the present day. They had teachers of rhetoric and philosophy in their houses, and the towns also hired teachers for their youth, as they did physicians; for a kind of inspector of health was a part of the economy of a Greek town. Circumstances brought three languages into use at Massalia, the Greek, the Latin, and the Gallic (Isid. xiv., on the authority of Varr). The studies of the youth at Massalia in the Roman period were both Greek and Latin. Medicine appears to have been cultivated at Massalia. Crinias, a doctor of this town, combined physic and astrology. He left an enormous sum of money for repairing the walls of his native town. He made his fortune at Rome; but a rival came from Massalia, named Charmis, who entered on his career by condemning the practice of all his predecessors. Charmis introduced the use of cold baths even in winter, and plunged the sick into ponds. Men of rank might be seen shivering for display under the treatment of this water doctor. On which Pliny (xxix. 2) well observes that all these men hunted after reputation by bringing in some novelty, while they trafficked away the lives of their patients.

The history of Massalia after Caesar's time is very little known. It is said that there are no imperial medals of Massalia. Some tombs and inscriptions are in the Museum of Marseille.

A great deal has been written about the history of Massalia, but it is not worth much. The following references will lead to other authorities: Lavoisier, Histoire des Colonies Grecques, a very poor work; H. Ternaux, Histoire Republique Massiliensium a Primordia ad Nero Tempora, which is useful for the references, but for nothing else; Thierry, Histoire des Gaulois. [G. L.]

COIN OF MASSALIA.

MASSITHOLUS (Massitholos), a river of Libya, the source of which Pliny (iv. 6. § 8), places in the mountain called Theon Ochema, and its "orichiprus" (§ 9) in the Hesperian bay, between Hesperium Ceras and the Hypodromus of Aethiopia.
MASSYLI. In E. long. 14° 30', N. lat. 6° 20'. It has been identified with the英镑ne, which can be no other than the ancient Stachir or Trachir; one of the rivers which flow into the Atlantic, between the Kamaresca and the Menravo, in the probable representative of the Massitholus. [E. B. J.]

MASSYLI. [Numidia.]

MASTÁURÁ (Mastaura), a town in the north of Caria, at the foot of Mount Messagés, on the small river Chrysea, on the Tralles and Tripolis. (Strab. xiv. p. 650; Plin. v. 31; Steph. B. s. v.; Hieroc., p. 659.) The town was not of any great repute, but is interesting from its extant coins, and from the fact that the ancient site is still marked by a village bearing the name Mastaura, near which a few ancient remains are found. (Hamilton, Researches, p. 531.) [L. S.]

MASTE (Mastev, Pol. iv. 7, § 26), a mountain forming part of the African highlands, a little to the east of the Lunae Montes, int. 10° 50' N., long. 36° 55' E. The sources of the Astapus, Bohr-el-Azrek, Blue or Dark river, one of the original tributaries of the Nile, if not the Nile itself, are supposed to be on the N. side of Mount Maste. They are three springs, regarded as holy by the natives, and though not broad are deep. Bruce. (Tavets, vol. iii. p. 308) visited Mount Maste, and the first European who had ascended it for seventy years. The tribes who dwelt near the fountain of the Bohr-el-Azrek were called Mastitae (Mastitav, Pol. iv. 5, § 24, 7, § 311), and there was a town of the same name with the mountain (Mastypa polis, Pol. iv. 7, § 25). [W. B. D.]

MASTIANI (Mastiracu, a people on the south coast of Spain, east of the Pillars of Hercules, to whom the town of MASTIA (Mastria) belonged. They were mentioned by Hecataeus (Steph. B. s. v. Mastiva) and Polybius (iii. 33), but do not occur in later writers. Hannibah transported a part of them to Africa. (Polib. l. c.) Mastia appears to be the same as MASSIA (Massia), which Thesopon- pus described as a district bordering upon the Tartessians. (Steph. B. s. v. Massia.) Hecataeus also assigned the following towns to this people: Melisacon (Massia B. s. v. Massiva) probably the same as the later Massola; Saxis (Zeux, Steph. B. s. v.), probably the same as the later Sex; or Hexi; Molydiana (Molyida, Steph. B. s. v.); and Scalies (Zeical, Steph. B. s. v.), probably the later Suel.

MASTRAMELA (Mastromelida, Steph. B. s. v.), "a city and lake in Ceilicia," on the authority of Artemidorus. This is the Astronomia of the MSS. of Pliny [Clav. Mariana, p. 912]. The name Mastromelia also occurs in Avienus (Ora Maritima, v. 692). It is one of the lakes on the eastern side of the Delta of the Rhone, but it is uncertain which it is, the Etang de Berre or the Etang de Mar- tigues. It is said that there is a dry part of some size in the middle of the Etang de Caronte, and that this dry part is still called Malestrona. [G. L.]

MASTUSIA (Mastusia eka: Cupo Graco), the promontory at the southern extremity of the Thracian Chersonesus, opposite to Sizinum. A little to the east of the town was Fleusos. (Pol. iii. 12, § 1; Plin. iv. 18; Mela, ii. 21; Tzetz. ad Lyophon. 534, where it is called Massonia.) The mountain in Ionix, at the foot of which Smyrna was built, likewise bore the name of Mastrothi. (Plin. v. 51.) [L. S.]

MASURA (Masoura), a place between Attalia and Perga in Pamphilus (Stadiasmus, §§ 290, 201), and 70 stadia from Mygalla, which is probably a corruption of Massia. [MAGYDES.] [L. S.]

MATALA PR. [Matala.]

MATALLA (Matala, Pol. iii. 17, § 4), a town in Crete near the headland of Matala (Márra, Stadiasmus), and probably the same place as the naval arsenal of Gortyna, METALLUM (Metallia, Strab. x. 479), as it appears in our copies of Strabo, but incorrectly. (Comp. Groskurd, ad loc.) The modern name in Mr. Pashley's map is Méthola. (Höck, Karte, vol. i. pp. 399, 483; Mus. Class. Antiq. vol. ii. p. 287.) [E. B. J.]

MATEOLA, a town of Apulia, mentioned only by Pliny (iii. 11. s. 16) among the inland cities of that province. It is evidently the same now called Mata- rota about 12 miles from Genua (Genusinum), and 27 from the gulf of Tarentum. It is only about 8 miles from the river Braduans, and must therefore have been closely adjoining the frontier of Lucania. [E. H. B.]

MATATO, or MATAVONUM, as D'Avinile has it, in Gallia Narbonensis, is placed by the Antonine Itin. on a road from Forum Voconii (For- rum Voconii) to Massilia (Marseille), 12 M. 1. from Forum Voconii and 14 from Ad Taurus (Tourens), between which places it lies. It is in the Table, but the distances are not the same. Matato is supposed to be Vitis. [G. L.]

MATERESE OPTIDUM, one of the thirty free towns ("oppida libera," Plin. v. 4) of Zengitana. It still retains the ancient name, and is the modern Matter in the government of Tunis, a small village situated on a rising ground in the middle of a fruitful plain, with a rivulet a little below, which empties itself into the Scusa Palus. (Shaw, Trav. p. 165; Barth, Wanderungen, p. 206.) [E. B. J.]

MATERI (Marpio; some MSS. read Marpi), a people of Asiatic Sarmatia, to the E. of the river Rhône. [E. B. J.]

MATEHNUM, a town of Etruria, known only from the Tabula Peutingeriana, which places it on the Via Clodia, between Tuscania (Tuscanella) and Saturnia, 12 miles from the former, and 18 from the latter city. It is probably a real city, and also the site of the modern village of Foraneo. (Claver, Ital. p. 517; Dennis, Etruria, vol. i. p. 463.) [E. H. B.]

MATIA'NA (Mariv, Steph. ii. p. 73, xi. p. 509; Steph. B.; Maripfr, Herod. v. 52: Eth. Mariv, Maripoi), a district of ancient Media, in the south-western part of its great subdivision called Media Atropatene, extending along the mountains which separate Armenia and Assyria. Its boundaries are uncertain, and it is not possible to determine how far it extended. It is probably the same as the Mariv, of Ptolemy (v. 2, § 5). [Martianus.] Strabo mentions it as a peculiarity of the trees in this district, that they distil honey (l. c.). The Matiani are included by Herodotus in the eighteenth satrapy of Dareius (iii. 94), and served in the army of Xerxes, being armed and equipped in the same manner as the Paphlagonians (vii. 72). Herodotus evidently considered them to occupy part of the more widely extended territory of Armenia. [V.]

MATIENI MONTES (tā Matieni βηρ, Herod. i. 159, 202, v. 52), the ridge of mountains which forms the back-bone or centre of Matiana, doubtless part of the mountain range of Karvatin, in the neighbourhood of Via. Herodotus makes them the watershed from which flowed the Ganges and the
MATTHIAS. [TACITUS.] MATTHIAS, a German tribe, perhaps a branch of the Chatti, their eastern neighbours, probably occupied the modern duchy of Nassau, between the rivers Lahn, Main, and Rhine. They are not mentioned in history until the time of the emperor Claudius; they then became entirely subject to the Romans (Tac. Germ. 29), who built fortresses and worked the silver mines in their country. (Tac. Ann. xi. 20.) In a.d. 70, during the insurrection of Civilis, the Mattiaci, in conjunction with the Chatti and other tribes, besieged the Roman garrison at Moguntiacum (Magenze: Tac. Hist. iv. 37); and after this event they disappeared from history, their country being occupied by the Alemanni. In the Notitia Imperii, however, Mattiaci are still mentioned among the Palatine legionary, and in connection with the cohorts of the Batavi. The country of the Mattiaci was still and is very remarkable for its many hot-springs, and the "Aqua Mattiacae," the modern Bliesbacher, are repeatedly referred to by the Romans. (Pline. xxxii. 17; Amm. Marcell. xxix. 4; AQUAE MATTIACAE.) From Martial (xvi. 27; Mattiacae Fliae) we learn that the Romans imported from the country of the Mattiaci balls or cakes of soap to dye grey hairs. The name Mattiaci is probably derived from matte, a meadow, and ach, signifying water or bath. (Comp. Orelli, Inscription. Nos. 4977 and 1653; Zues, Die Deutschen, p. 90, fol.)

MATTHIACUM (Mattiacceo), a town in the north of the country of the Mattiaci. (Ptol. ii. 11. § 29.) Some writers believe this town to be the same as the Mattium mentioned by Tacitus (Ann. i. 56), as the capital of the Chatti, which was set on fire in a.d. 15, during the war of Germanicus. But a careful examination of the passage in Tacitus shows that this cannot be; and that Mattium is probably the modern town of Marburg on the Lahn, located close to the modern city of Mattiaum, on the right bank of the Eder (Adrians). (Comp. Wilhelm, Germaniens, p. 188.)

MATTHIUS. [MATTHIACUM.] MATTIUSARUM. [LUSITANIA, p. 220, a.] MAUBALI. [NEGERIA.] MAURENSII. [MAURETANIA.] MAURETANIA, the NW. coast of Africa, now known as the Empire of Marocco, Fez, and part of Algeria, or the Moghib-at alaou (farthest west) of the natives.

I. Name, Limits, and Inhabitants.

This district, which was separated on the E. from Numidia, by the river Ampsaca, and on the S. from Gaculia, by the snowy range of the Atlas, was washed upon the N. coast by the Mediterranean, and on the W. by the Atlantic. From the earliest times it was occupied by a people whom the ancients distinguished by the name of Mauri (Maurets, Maurae, Maurot, Mauret, Maurot, Mauretens, Mauret). (Strab. i. in. 33, 141, 137, xvii. pp. 525, 827; Liv. xxxiv. 49; Vitr. Ann. iv. 206; Maugipor, Ptol. iv. i. § 11) or MURR (Mauris, "Blacks," in the Alexandrian dialect, Paus. iii. 33, § 5, viii. 43.)
of the productions of Mauretania, marvellous enough, in some particulars, as where he describes the crocodile as large as a cake, and 10 feet long; and among other animals the crocodile, which there can scarcely be any river of Morocco capable of nourishing, even if the climate were to permit it. (In Aegypt, where the average heat is equal to that of Senegal, the crocodile is seldom seen so low as Sout.) Pliny (viii. 1) agrees with Strabo (p. 827) in asserting that Mauretania produced elephants. As the whole of Barbary is more European than African, it may be doubted whether the elephant, which is no longer found there, was ever indigenous, though it may have been naturalised by the Carthaginians, to whom elephants were of importance, as part of their military establishment. Appian (B. P. 9) says that when preparing for their last war with the Romans, they sent Hasdrubal, son of Gisco, to hunt elephants; he could have hardly gone into Aethiopia for this purpose. Shaw (Trav. p. 258 ; Jackson, Morocco, p. 55) confirms, in great measure, the statements of Strabo (p. 830) and of Aelian (H. A. iii. 136, v. 20) about the scorpion and the "phalangium," a species of the "arachnidae." The "so- litianus," of which Varro (de Re Rustica, iv. 14. § 4; Plin. ix. 82) gives so wonderful an account, has not been identified. Copper is still worked as in the days of Strabo (p. 830), and the natives continue to preserve the grain, legumes, and other produce of their husbandry in "nautumowes" or conical excavations in the ground, as recorded by Pliny (xxviii. 73 ; Shaw, p. 221).

Mauretania, which may be described generally as the highlands of N. Africa, elevates itself like an island between the Mediterranean, the Atlantic, and the great ocean of sand which cuts it off towards the S. and E. This "plateau" separates itself from the rest of Africa, and approximates, in the form and structure, the height, and arrangement of its elevated masses, to the system of mountains in the Spanish peninsula, of which, if the straits of the Mediterranean were dried up, it would form a part. A description of these Atlantic highlands is given in the article Atlas.

Many rivers flow from this great range, and fall into the Mediterranean, and the Atlantic. Of these, the most important on the N. coast, were, in a direction from E. to W., the Arade, the Anidus, the Chinalaph, and the Sudra, on the W. coast, in a direction from N.E. to S.W., the Stuber, Sula, Phuth, and Lixus.

The coast-line, after passing the Amfsaga (Wad-el-Kibir) and Sinus Numidicus, has the harbours Igiuluos (Jijeli), Saldae Ps. (Bijieyagh), and Russcurrim (Teflez). Weighing from Algiers, and passing Jomfr (Ras-al-Kounar), to stand towards the W., there is a rocky and precipitous coast, mostly bold, in which succession were the ports and creeks Jol (Zershelm), Cartensa (Tenes), Murustaga (Mostaghoun), Aisenaria (Arzin), Zouza (Wahran or Oran); Portus Magnus (Marua Kibir), within Metagonum Prom. (Ras-al Harshel ;) and Acre (Jilgum). The Mulucha falls into the Gulf of Melliah of the charts. About 10 miles to the N.W. of this river lay the Trees Insulae (Zephran or Jefferi group), about 20 miles distant from the rocks, on a N.W. by W. by Rhumm, was Rusadir Prom. (Cape Tres Forcas of the Spanish pilots, or Ras-ul-Darab of the natives,) and in the light formed between it and the Mulucha stood Rusadir
MACRUTANIA.

CHAPTER I.

The Roman first became acquainted with this country when the war with Hannibal was transferred to Africa; Mauretania was the unknown land to the W. of the Murchus. In the Jugurthis War, Bocchus, who is called king of Mauretania, played the traitor's part so skilfully that he was enabled to hand over his kingdom to his two sons, Bocchus and Bocchoris, who were associated upon the throne. These princes, from their hostility to the Pompeian party, were confirmed as joint kings of Mauretania by J. Caesar in B.C. 49. During the civil war between M. Antonius and Octavius, Bocchus sided with the latter, while Bocchus was allied with Antonius. When Bocchus crossed into Spain, Bocchus seized upon his brother's dominions; a usurpation which was ratified by Octavius. In B.C. 43, Octavius gave to Juba H., who was married to the daughter of Cleopatra, and Antoninus, the two provinces of Mauretania (afterwards called Tingitania and Caesariensis) which had formed the kingdom of Bocchus and Bocchus, in exchange for Numidia, now made a Roman province. Juba was succeeded by his son Ptolomy, whom Selene, Cleopatra's daughter, bore to him. (Strab. xvii. pp. 828, 831, 840.) Tiberius forbade Ptolomy with favours on account of his birth to call himself king of the Romans; he gave the Roman province to Tacfarinas (Tac. Ann. iv. 28—29); but in A.D. 41 he was put to death by Calagula. (Dion Cass. liv. 25; Suet. Cal. 26; Senvr. de Trag. 11.) For coins of these native princes, see Eckfeld, vol. iv. pp. 154—161.

In A.D. 42, Claudius divided the kingdom into two provinces, separated from each other by the river Murchus, the ancient frontier between the territories of Bocchus and Jugurthis; that to the W. was called Mauretania Tingitana, and that to the E. Mauretania Caesariensis. (Dion Cass. ix. 9; Plin. v. i.) Both were imperial provinces. (Tac. Hist. i. 11. ii. 58; Spart. Hist. iv. 6. "Mauretania praefectura.") and were strengthened by numerous Roman "colonies." M. Tingitana contained in the time of Pliny (L. c.) five, three of which, Zilias, Barcha, and Banasa, as they were founded by Augustus when Mauretania was independent of Rome, were reckoned as belonging to Bocchus, and Punic Mela, iii. 10. § 5. Tingi and Libies were colonies of Claudius (Plin. L. c.); to which were added in later times, Resada and Volubiles (Hist. Ant.)

CHAPTER II.

The most important Tunesian towns are those stipulated by Augustus,Cartenna, Gunuici, Igilgili, Resadae, Resada, Salde, Saccabar, Tuburrutus; two by Claudius, Caesarea, formerly iotis, the capital of Juba, which gave it this name in honour of his patron Augustus, and Oppidum Novum; one by Nerva, Stitifis; and in later times, Arabnaria, Buda, Siga, Aquae Calidae, Quiza, Ruscucurium, Aziza, Giana, Iucundum, and Tifasi, in all 21 well-known colonies, besides several "minoriae" and "appella Latina." The Notitia enumerates no less than 170 episcopal towns in the two provinces. (Comp. Morelli, Africa Christiana, vol. i. pp. 40—43.) About A.D. 400, Mauretania Tingitana was under a "praeses," in the diocese of Spain; while Mauretania Caesariensis, which still remained in the hands of the diocese of Africa, was divided into Mauretania I. or Stifensis, and Mauretania II. or Caesariensis. The emperor Otho had assigned the cities of Mauretania to Brotica (Tac. Hist. i. 78); but this probably applied only to single places, since we find the two Mauretanias remained unchanged down to the time of Constantine.

In A.D. 429, the Vandal king Genseric, at the invitation of Constant Boniface, crossed the straits of Gades, and Mauretania, with the other African provinces, fell into the hands of the barbarian conquerors. Belsarius, "the Africans of New Rome," destroyed the kingdom of the Vandals, and Mauretania again became a Roman province under an Eastern suzerain. One of his ablest generals, John the Patrician, for a time repressed the inroads of the Moors upon Roman civilisation; and under his successor, the eunuch Solomon, the long-lasting province of Mauretania Stifensis was restored to the empire; while the Second Mauretania, with the exception of Caesarea itself, was in the hands of Masticas and the Moors. (Comp. Gibbon, cc. xii. xiii.; Le Bon, Essai, vol. viii.) At length, in A.D. 698—709, when the Arabs made the final conquest of Africa,—desolated for 300 years since the first fury of the Vandals,—the Moors or Berbers adopted the religion, the name, and the origin of their conquerors, and sunk back into their more consuetudinary state of Mahometan savages.

The coast (L. c.) makes out the breadth of the two Mauretaniae as 407 M. P.; but this will be too much even for Tingitania, where Mount Atlas lies more to the S., and more than 300 M. P. beyond the utmost extent of any part of Caesariensis. The same author gives 170 M. P., which are too few for Tingitania, and 879 M. P., which are too many for Caesariensis. (Shaw, Trav. p. 9.)

The following tribes are enumerated by Pliny (iv. 2, §§ 17—22) in I. Mauretania Caesariensis:—Tozucara (Tozucara), on the left bank of the Amusaga; to the N. of these, Couramou (Courmousoua), and still more to the N., towards the coast, and to the E. on the Amusaga, Mouqui (Moukouin) and Chitac (Xitac); to the W. of the latter, Telences (Telence), and Banarei (Barouess); S. of these, Macrides (Machorted), Salass (Sallou), and Malhouchi (Malahouchi); NW. of the Telences, and to the E. of Zalsac M., and on the coast, Macocchi (Macochirou), W. of these, and of Zalac, on the mouth of the Chinalah, Mackouch (Mackouch); below them, on the other
MAUERS, MAURUS. [MAURETANIA.]

MAURUSIA. [MAURETANIA.]

MAURITANIA. [MAURETANIA.]

MAXIMA (Máξιμα, Plut. vi. 9, § 2; Amm. Marc. xxii. 6, a river of Hyrcania, which flowed into the Caspian sea. Pliny calls it the Maxaras (vi. 16. S. 18). It is not certain that modern river it is to be identified, and geographers have variously given it to the Tedifin, the Babal, or the Gurgun. If Ammianus, who speaks of it in connection with the Oxus, could be depended on, it would appear most probable that it was either the Atrak or the Gurgun. The people dwelling along this river were called Maxarans. (Plut. vi. 9, § 5.)

MAXILIA (Μάξιλία, Plut. i. 4, § 13); a town in Hispania Baetica, which, like Caesarea, was celebrated for its manufacture of a sort of bricks light enough to swim on water. (Plin. xxxiv. 14. s. 49; comp. Strab. xiii. p. 615; Vitr. ii. 3; Schneider, ad Ptol. Phys. p. 88.) It was probably situated in the Sierra Morena. (Flors, Esp. Topog. xii. p. 259.)

MAXIMIANOPOLIS (Μαξιμιανόπολις), a town of Thrace, formerly called IMPARIS OR PYPHOSOLIS (It. Ant. p. 331), not far from Rhodope (Amm. Marc. xxvii. 4), and the lake Bistoius (Melet. p. 439, 2; It. Hieros. p. 603; Hieroc. p. 634; Const. Porphy. de Them. ii. 1; Procop. de Aedif. iv. 11; Conc. Chal. p. 96.)

MAXIMIANOPOLIS. [CONSTANTIA, MAXIMIANOPOLIS (Μαξιμιανόπολις), the classical appellation of the Scriptural Hadadrimmon (Zechariah, xii. 11) in the plain of Megiddo, 17 M. P. from Caesarea (of Palestine), and 10 M. P. from Jezreel, according to the Jerusalem Itinerary. Consistently with which notice St. Jerome writes:—

"Adadrimmon, pro quo LXX. transliteratum Perse-rous, urbe est juxta Jesrelem, quae hoc loeo vocabulo muncupata est, et horn vocatur Maximianopolis in Campo Magdalonu (Comm. in Zechar. xxiv. 10, and again, "dixitus Jesrelem, quae nunc juxta Maximianopolis est") (in Hos. i. 1). It is placed in the civil and ecclesiastical division of Palatine Scythia, and its bishop assisted at the Council of Nimara, (Amm. Marc. iv. 392.)

MAXULIA (Μάξυλλια, Plut. iv. 3, § 7), a Roman "colonia" (Maxillia, Plin. x. 3), about the exact distance of which from Carthage there is a considerable discrepancy in the Itineraries. (Anton. Itin.; Plut. Tab.) From an expression of Victor Vitensis (de Persic. Vandal. i. 5, § 6), who calls it "E-"Ligula," a "tongue of land," its position was probably on the coast, between "Rides et Hommam-el-Euf", where there are the remains of a Roman road. The coast-describer (Studianus) speaks of the harbour and town of Maxylia as 20 stadia from Craphe, or the modern Garbos; this was probably different from the former, and is the modern Misra, where there are the remains of a town and harbour. (Shaw, Greece, p. 157; Barth, Wanderungen, p. 128.) As connected with the gentle epithet Maxyes or Maxies, it is likely that there were several places of this name. Ptolemy (iv. 5, § 34) has MAXUIA, MAXIES (Μάξιηας Μάξιας), and the Roman Itinerary a station which it describes as MAXULI PRATIS, 20 M. P. from Carthage. It is found in the Notitia, and was famous in the annals of Martyrology (Augustin, Serv. e. lxxiii; Macell. Afric. Christian. vol. i. p. 220.)

MAXYES (Μαξηας, Herod. iv. 191, where the name should be Μαξηας; see MAURETANIA, p. 297, a.), a Libyan tribe, and a branch of the nomad AUgures. Herodotus (1. c.) places them on the "other side," i.e. the W. bank, of the river Triton; reclaimed from nomad life, they were "tillers of the earth, and accustomed to live in houses." They still, however, retained some relics of their former customs, as they "suffer the hair on the right side of their heads to grow, but shave the left; they paint their bodies with red-lead;" remains of this custom of wearing the hair are still preserved among the Tuaregs, their modern descendants. (Hervorm. Trav. p. 100.) They were probably the same people as those mentioned by Justin (xivii. 7), and called MAXITAN, whose king is said to have been Hierbas (Virg. Aen. iv. 36, 105, 529), and to have desired Dido for his wife. (Heron. African Nations, vol. i. p. 34, trans.; Renell, Geog. of Herod. vol. ii. p. 505.)

MAZACA. [CAESAREA, Vol. i. p. 405, b.]

MAZAEI (Μαζαια), a Pannonian tribe, occupying the southernmost part of Pannonia, on the frontiers of Dalmatia, whereas Dion Cassius (iv. 32) calls them a Dalmatian people. They were conquered and severely treated by Germanic. (Strab. vii. p. 314; Plin. iii. 26; Plut. ii. 16. § 8.)

MAZARA (Μαζάρα, Diol.; Μαζάρη, Steph. B.: MAZARA), a town on the SW. coast of Sicily, situated at the mouth of a river of the same name, between Selinus and Lydikenes. It was in early times an inconsiderable place, and is first noticed by Diodorus in n. c. 409, as an emporium at the mouth of the river Mazara. (Diod. xii. 54.) It was evidently at this time a dependency of Selinos, and was taken by the Carthaginian general Hannibal, during his advance upon that city. (Diod. l. c.) Stephanus of Byzantium calls it "a fort of the Siculi" (στρατηγική ulistapoc, Steph. B. v. e. c.), and it is in tradition again the First Punie War and fortress which was wrested by the Romans from the Carthaginians. (Diod. xxiii. 9, p. 503.)
Mazara, or Mazara, as it is called by Diodorus (Μαζαρος, Dial. xiii. 54), is still called the Fiume di Mazara. [E. H. B.] MAZICES (Μαεζίκης, Ptol. iv. 2. § 19; Mazax, Lucan, iv. 681; Claudian, Sil. 1. 356), a people of Mauretania Caesariensis, who joined in the revolt of Fennus, but submitted to Theodosius, A.D. 373. (Ann. Marc. xxix. 3. § 17; Le Beau, Bos Empire, vol. iii. p. 471; comp. Gibbon, c. xxi.) MACARUS (Μακαρός, Ptol. ii. 6. § 4; Meli, iii. 1. § 9), a small river on the N. coast of Hispania Tarraconensis, flowing into the gulf of the Actuari, still called the Mercu. MEICRIS, a town of Marmarica, which the Punic Table places at 33 M. P. to the E. of Paliurus; the Antonine Itinerary has a town Miclia (one MS. reads Mecra), 20 M. P. to the E. of the same place; its position must be sought in the Warg-cr-Rimia (Barth, Wanderungen, pp. 509, 549). [E. B. J.] MEICYBERNA (Μείκυβερνα: Eth. Μεικύβερναρος, Steph. B.; Sylv. p. 26; Numm. 640), a town which stood at the head of the Toronicus gulf, which was also called SELLIS MEICYBERNAE. (Ptol. iv. 10; Pomp. Mela, ii. § 1.) Micbyerna was the port of Olympus (Strab. vii. p. 330), and lay between that town and Smeryle. (Herod. vii. 122.) It was taken from the Athenians by the Boeotians in the time of Thucydides (v. 39), and surrendered to Philip before the siege of Olympus. (Diod. xvi. 54.) The site must be sought at Molossyporgo, where some remains of antiquity are said to be preserved. (Leake, North Greece, vol. iii. p. 155.) [E. B. J.] MEDAVA (Μεδαβά), a town of Arabia Petraea, placed by Ptolemy in long. 68°30', lat. 30°43', doubtless identical with Medeba or Medaba [Mederaj], the letters a and a being identical in sound, and, consequently, used interchangeably, especially in proper names. (Prot. v. 17. § 6.) [G. W.] MEDAURA (Ad Meder, Itin. Anton.; Post. Tab.; Hygin. de Lim. p. 163; Αμαυδάρα απο Αμαυδάρα, Prot. iv. 3. § 30; Eth. Medaraisis), a town of Numidia, which had originally belonged to the kingdom of Syphax, but was annexed to that of Massinissa at the close of the Second Punic War, and afterwards was colonised by a detachment of Roman veterans, when it attained considerable splendour. Appius Claudius was born at this place, where his father had been "daunus," and calls himself "Semiquinna" and "Semiquinnetus." (Apolog. pp. 443, 444.) It lay on the road from Lares to Thessale, 48 M. P. from the former and 25 M. P. from the latter. A river ARDAXIO, which flowed between this place and Thessale, Maceceal defeated the Moorish chiefain Gido. (Oros. vii. 36; St. Martin, Le Beau, Bos Empire, vol. v. p. 161; comp. Gibbon, c. xxix.) Justinian fortified and placed a garrison in this town, which Precopius (de Aed. vi. 6) calls Adaeepra. It is perhaps a different place from Mazara, to which Augustine was sent to be educated. (Confess, iii. 33.) [E. B. J.] MEDEBA. [Mader.] MEDEN (Μεδέν, Propoc. B. I. ii. 4), a town on the spars of Mount Papna, in the inland country of Numidia. Gellius, king of the Vandals retired to this fastness in A.D. 534, but was compelled to surrender to Thrasar, chief of the Harnili. (Le Beau, Bos Empire, vol. viii. p. 248; comp. Gibbon, c. xiv.) MEDEON (Μεδέων: Eth. Μεδέωρας). 1. Or MEDION (Μαζαρος: Κατομα), a town in the interior of Acranionia, on the road from Stratus and Phytia (or Phoeteia) to Limnarea on the Ambraciot gulf. It was one of the few towns in the interior of the country which maintained its independence against the Aetolians after the death of Alexander the Great. At length, in B.C. 231, the Aetolians had siege to Medeon with a large force, and had reduced it to great distress, when they were attacked by a body of Illyrian mercenaries, who had been sent by sea by Demetrias, king of Macedonia, in order to relieve the place. The Aetolians were defeated, and obliged to retreat with the loss of their camp, arms, and baggage. Medeon is again mentioned in B.C. 191, as one of the Acranionia towns, of which Antiochus, king of Syria, obtained possession in that year. (Thuc. iii. 106; Polyb. ii. 2, 3; Liv. xxxvi. ii. 11, 12; Leake, Northern Greece, vol. iii. p. 575.) 2. A town of Phocis, destroyed along with the other Phocian towns at the termination of the Sacred War, and never again restored. (Paus. x. 3. § 2.) Strabo places it on the Crissaean gulf, at the distance of 160 stadia from Boeotia (ix. pp. 410, 423); and Pausanias says that it was near Anticyra (viii. 36. § 6; comp. Steph. B. s. v.). Leake places it at Sthesina. (Northern Greece, vol. ii. p. 549.) 3. An ancient town of Boeotia, mentioned by Homer (II. ii. 501), is described by Strabo as a dependency of Halirius, and situated near Oncheata, at the foot of Mt. Pheocium, from which position it was afterwards called Pheocius (ix. pp. 410, 423; comp. Steph. B. s. v.; Liv. iv. 7. s. 12). It appears to have stood near the lake, in the bay on the north-western side of Mount Fugi, between the site of Halirius and Koridita. (Leake, Northern Greece, vol. ii. p. 215.) 4. A town of the Laboetae, in Dalmatia in Illyricum. (Liv. xiv. 23, 32.) MEDEARIUM, in Gallia Belgica, is placed by the Antonine Itin. on a road from Colonia Trajana (Keltha) through Julliacum (Julieres) to Colonia Acrippina (Colomya). It lies between Sabona and Tenarum (Tudeler), and is supposed by some geographers to belong to Germania Rauracorum. [G. L.] MEDIA. (Μεδεια: Eth. Μαζεια: Adj. Μαζειακα), a country of considerable extent and importance, in the western part of Asia, between the Caspian Sea on the N. and the great rivers of Mesopotamia on the W. It is by no means easy to determine what were its precise boundaries, or how much was comprehended under the name of Media. Timae Herodotus, who speaks repeatedly of the Medes,
gives little or no description of the country they inhabited, and perhaps all that could be inferred from his language is, that it must have been a mountainous district between the Halys in Asia Minor and Persia, fit for raising a warlike and independent race of men (i. 72). Again, during the wars of Alexander, Media had to a considerable extent taken the place of Persia, and was the great country E. of Mesopotamia, and extending indefinitely along the Caspian sea eastwards to Ariana and Bactriana. Still later, at the close of the Roman Republic and under the earlier emperors, Media was restricted by the encroachments of the Parthian empire to its most mountainous parts, and to the Caspian coast westwards,—the province of Atropatene forming, in fact, all that could be strictly called Media. Indeed, its limits were constantly changing at different periods. General consent, however, allows that Media was divisible into three leading divisions, each of which from time to time was apparently held to be Media Proper. These were:—1. A northern territory along the shores of the Caspian, extending more or less from Armenia on the W. to Hyrcania on the E., comprehending much of the country now known by the names of Mazanderan and Gilan; 2. Media Atropatene, a very mountainous district, to the west and south of the preceding [Atropatene]; and 3. Media Magna, the most southern, extensive, and, historically, the most important, of the three divisions, with its capital Ecbatana (the present Hamadan). Of the ancient geographers, Ptolemy gives this country the widest boundaries. Media, says he, is bounded on the N. by the Hyrcanian (i.e. the Caspian) sea, on the W. by Armenia and Assyria, on the S. by Persia and a line drawn from Assyria to Susiana, and on the E. by Hyrcania and Parthia (vi. 2 §§ 1, 3). It is clear from this, and still more so from the mention he makes of the tribes and towns in it, that he is speaking of Media in its most extended sense; while, at the same time, he does not recognize the triple division noticed above, and speaks of Atropatene (or, as he calls it, Tropatene, vi. 2, 5) as one only of many tribes.

Strabo, in the tolerably full account which he gives of ancient Media, is content with a twofold division, into Media Atropatene and Media Magna; to these he gives nearly the same limits as Ptolemy, comprehending, however, under the former, the mountain tract near the Caspian (xi. pp. 522—526). Pliny, in stating that what was formerly the kingdom of the Persians, is now (in his time) under the Parthians, appears only to recognize Media Magna as Media Proper (vi. 14. s. 17). Atropatene, though subject to Ecbatana, the capital of Media Magna, he does not seem to consider as any great deal with it (vi. 13. s. 16).

We proceed now to describe Media Magna, the first or most northern part of what was popularly called Media having been fully noticed under Atropatene and Ecbatana. It is very difficult to distinguish the classical accounts of the different divisions to which we have alluded, the name Media being used very indefinitely. It may, however, be stated generally, that Media Magna comprehended the whole of the rich and fertile plain-country which was shut in between the great chain of the Caspian mountains and of Mt. Zagros in the W. and by Mt. Coronus on the N. It appears to have extended as far south as Elymias and Susiana, and to have bordered on the eastern side on Caramania and Ariana, or on what, in later times, was better known by the name of Parthia. Some have attempted to prove that it derived its name from its lying in the middle part of Asia (Georcicus, Theor. ii. p. 768; cf. also Polych. v. 44, who states, 'Ἡ Μηδία κείμαι περὶ μέσην τὴν Ἀττιὰν'). The derivation, however, admits of doubt. On the Cuneiform Inscriptions the name is read Medu (Rawlinson, Behistus Ins, As. Journ, vol. 2). Much of this land was of a high elevation above the sea, but it abounded in fertile valleys, famous for their richness, and in meadow land in which a celebrated breed of horses, called the Nisaean horses, were raised. (Herod. vii. 40, iii. 106; Diod. xvii. 100; Strab. xi. p. 525; Aelian, Hist. Anim. iii. 2; Ammian. xxiii. 6; cf. also the modern travellers, Ker Porter, vol. i. p. 216, Chardin, and Momie.) It is comprehended for the most part in the modern province of Irak Ajam.

The principal town of Media Magna was Ecbatana (doubtless the present Hamadan), which, during the time of the wars of Alexander, and for many years before, was the capital of the whole country, [Ecbatana.] Besides Ecbatana, were other towns of importance, most of them situated in the NE. part of the country, on the edge of, if not within, Atropatene, as Eililgae and Hecatelia.

It is equally difficult to determine with accuracy what states or tribes belonged to Media Magna. It is probable, however, that the following may be best comprehended in this division:—The Sagarti, who occupied the passes of Mt. Zagros; Chermithrene, in the champaign country to the south of Ecbatana; Elymias, to the north of Chermithrene— if indeed this name has not been erroneously introduced here by Ptolemy and Polybius [Elymais]; the Tapyr or Tapyrhi, S. of Mt. Corvus as far as Parthia and the Caspian Gates; Rashiana, with its capital Rashge; Sigrune, Darites, and, along the southern end of the Parachostas, what was called Syromedia. (See these places under their respective names.)

The Med, or inhabitants of Media, are the same people as the Madai of the Bible, from which Scimitic word the Greek name is most likely derived. Madai is mentioned in Genesis, as one of the sons of Japhet (x. 2), in the first repeopling of the earth after the Flood; and the same name occurs in more than one place, subsequently, indicating, as it would seem, an independent people, subject to the king of Nineveh (2 Kings, xvii. 6), or in connection with, if not subject to, the Persians, as in Dan. v. 28, vi. 13; Esth. i. 3, 14. The first Greek author who gives any description of them is Herodotus. According to him, they were originally called Ani, but changed their name to that of Medi on the coming of Media from Athens (vii. 66). They were divided into six tribes, the Busae (Steph. Byz.), Parastaceni (Strab. xi. p. 522, xvi. p. 739, &c.; Arrian, iii. 19), Strachnites, Arizanti, Buddi (Steph. Byz.), and the Magi. Von Hammer has attempted to show that most, if not all, of these names occur under their Persian form in the Zendavesta and Shah-nmneh (Wener. Jb, in pp. 11, 12), but it may be questioned whether the identification can be considered as satisfactory. Some, however, of these names indicate the Eastern origin of the inhabitants of Media, as Auri and Arizanti [Ariana; Ariazanti]; though it may be doubted whether others of them, as the Magi, ought to be considered as separate tribes. The general evidence
is, that the Magi were a priest-class among the Medes, a distinct or dominant tribe. (Cf. Strab. xvi. p. 962; Cie. Diet. i. 41; Porphyry. Abienn. 4. 16, Sec.)

In other authors we find the following peoples counted among the inhabitants of Media, though it may be doubted whether some of them do not more properly belong to one or more of the adjacent nations, that the Tagaris, Tapyris, Thalisti, Tarsians, Capsi, Cadusii, Gelace, and the Mardi or Amardi. (See these under their respective names.) Herodotus proceeds to state that originally the Medes were a free people, who lived in separate villages, but that at length they chose for themselves a king in the person of Deuces, who built the celebrated city of Ecbatana (Ecbatana), and was succeeded by Parsares and Cyaxares (i. 93—108). The reign of the former was, he adds, terminated by a defeat which he sustained against (Harmachis, Judith, i. 15); while, during the commencement of that of the latter, all Western Asia was overrun by a horde of Scythians (i. 103). There can be no doubt that for awhile they were subject to, and formed a satrapy of, the Aryan empire. as stated by Diodorus (ii. 2); that then they threw off the Aryan yoke, as stated by Herodotus (i. 106), and were ruled over by a series of kings of their own for a long period. (Cf. Strab. xii. 534.) The order and the names of these rulers are differently stated; and it would be out of place here to discuss at length one of the most difficult and disputed points of ancient chronology. (Cf., however, Diod. ii. 24, 32; Herod. i. 95; and Euseb. Chron. Armen. i. 101; Clinton, Fast. Helen. vol. i. p. 257, app.) It may be remarked, that in the Bible the first notice we find the Medes, exhibits them as the subjects of the Aryan king Salmanasar (2 Kings, xvi, 6), who was contemporaneous with the Jewish king Hoshea; and while in the latter times of Nebuchadnezzar, they appear as a warlike nation, governed by their own rulers. (Isaiah, xiii. 17; Jeremiah xxv. 28, ii. 11, 28.) It is equally clear that the Medians were united to the Persians by Cyrus, and formed one empire with them (Herod. i. 129; Diod. ii. 34; Justin i. 6), and hence are spoken of in the later books of the Bible as a people subject to the same ruler as the Persians. (2 Esd. ii. 20; Esther i. 3, 9.) From this time forward their fate was the same as that of the Persian monarchy; and they became in succession subject to the Greeks, under Alexander the Great, to the Syro-Macedonian rulers after his death, and lastly to the Parthian kings. (Cf. 1 Macc. vi. 56, xiv. 2; Strab. xvi. p. 743; Joseph. Antiq. xx. 3, § 3.)

The consent of history shows that in early times the Medes were held to be a very warlike race, who had a peculiar skill in the use of the bow. (Isaiah, xiii. 18; Herod. vii. 62; Xen. Anab. ii. 1. § 7; Strab. x. p. 593.) They had also great knowledge and practice in horsemanship, and were considered in this, as in many other requirements, to have been the masters of the Persians. (Strab. xv. p. 523, 526, 531.) Hence, in the armament of Xerxes, the Medes are described as equipped similarly with the Persians, and Herodotus expressly states that their horses and weapons were not of Median, but Persian origin (l.c.). In later ages they appear to have degenerated very much, and to have adopted a luxurious fashion of life and dress (cf. Xen. Cyrop. i. 3, § 2; Strab. l.c.; Ammian. xiii. 6), which passed from them to their Persian conquerors.

The religion of the Medes was a system of Star- worship; their priests bearing, as we have remarked, the name of Magi, which was common to them with the Persians, indeed was probably adopted by the latter from the former. (Xen. Cyrop. iv. 5; Strab. xv. pp. 757, 753; Cie. Div. i. 53.) The principal object of their adoration was the Sun, and then the Moon and the five planets, Jupiter, Venus, Saturn, Mercury, and Mars. (Cf. Ctes. iv. 2.)

MEDIADAI MURUS, mentioned only by name by Xenophion, who calls it "Media kaloumous tis (Anamb. ii. 4. § 12.) He states that it was 20 parasangs in length, 100 feet high, and 20 broad; and it may be inferred from his narrative that it was from 30 to 40 miles to the N. of Baghdad. There can be little doubt that it was the same work as that called by Strabo in two places τε Σατραπιόν τις διατείχομα (ii. p. 80, xi. p. 529), and that it had been built across the strip of land where the Tigris and Euphrates approach most nearly, as a defence to the province of Babylonia, which lay to the S. of it. There has been much question, whether this great work can be identified with any of the numerous mounds still remaining in this part of Mesopotamia; but the question has, we think, been set at rest by the careful survey of Lieut. Lynch, in 1837. (Reg. Grec. Journ. vol. iii. p. 472, 473.) Mr. Lynch places the end adjoining the Tigris in N. lat. 34° 30', and long. 21° 50' W. of Baghdad. He describes the existing ruins as an embankment or wall of lime and pebbles, having towers or buttresses on the northern or NW. face, and a wide and deep fosse; and states, that, putting his horse at its full speed, he galloped along it for more than an hour without finding any appearance of termination. The cultivators, too, assured him that it extended to the E. of Madyan. [V.]

MEDIADAM, AD. [DACIA, Vol. I. p. 744, b.]

MEDIANA, an imperial villa, 3 miles from Naisus, in Upper Moesia. (Amm. Mar. xxvi. 5.) A town of this name is mentioned in the Peuting. Table, on the road leading through Blactia along the Daube, opposite to Donauworth, and seems to be the same as the modern Medingen. [L. S.]

MEDIOLANUM, a Gallic name of towns which occur in Gallia. (See also MEDIAN.)

1. Mediolanum is placed in the Table between Forum Segestavarium (Fenus) and Rodnna (Rosanna). As to D'Aberville's remarks on the position of Mediolanum, see FORUM SEGESTISANORUM. This Mediolanum is supposed to have been a town of the Transalpine INBURGES, and so it is generally marked in our maps; but the existence of these Transalpine Insubres is hardly established. [Galla Chalma, Vol. I. p. 936.]

2. The Table places Mediolanum between Argentumagus (Argentum) and Aquae Nervas (Nover). The figures which have been generally considered to belong to this road, belong to another, and so we have no distances in the Table for this place. Mediolanum seems to be Château Medlan, south of Avaricum (Bourges). A milestone found at Allais near Bourges and Château Medlon, makes the distance from Avaricum to Mediolanum 39 M., which is not far from the truth. (Walckenaer, Géog. d. R. vol. i. p. 67.)

3. The Antonine Itin. places a Mediolanum on a road from Colonia Traiana (Kelio) to Colonia Agrrippina (Cologny), and 12 M. P. from Colonia Traiana. If Colonia Traiana is rightly placed, it is
the chief place of the Insubres, and is mentioned as such several times in the history of the wars of that people with the Romans. Thus, in the campaign of B.C. 222, after the battle of Chastulium, it was attacked and taken by the Roman consul Claudius Marcellus and Caecilius. (Ptol. ii. 34; Eutrop. iii. 6; Treb. Poll. Gall. vii. xvi. 13.) On this occasion it was taken by assault with apparently but little difficulty, and this confirms the statement of Strabo that it was an open town. Again, in B.C. 194, a battle was fought near it, between the Roman preconsul L. Valerius Flaccus and the combined forces of the Insubrians and Boians, under a chief named Derylacinus, in which the Gauls are said to have lost 10,000 men. (Livy xxxiv. 46.)

No mention of Mediolanum occurs previous to the Roman conquest, nor have we any precise account of the time at which it passed under the Roman yoke; or that at which it was admitted to the Roman "civitas." We can only infer that it must have submitted, together with the rest of the Insubres, about 190 B.C.: its citizens doubtless received the Latin franchise, together with the other Transpadane Gauls, in B.C. 89, and the full Roman franchise in B.C. 49. (Gallia Cisalpina, Vol. i. p. 945.) Mediolanum thus passed into the condition of a Roman municipium, but it did not as yet enjoy that degree of importance which it subsequently attained. Strabo calls it in his time a considerable city (τόμες τεβάριος, v. p. 213), and Tacitus reckons it among the "firmissima Transpadane regions municipia;" but neither he nor Pliny give any indication of its possessing any marked superiority over the other municipal towns with which it associate its name. (Plin. iii. 17. s. 21; Por. iii. 1. § 33; Tac. Hist. i. 70.) It is evident, however, that under the Roman Empire it increased rapidly in prosperity, and became not only the chief town of the Insubres, but the most important city in Northern Italy. We learn from the younger Pliny that it was a place where literature flourished, and young men from the neighbouring towns were sent for their education. (Plin. Ep. iv. 13.) It was the native place of the emperor Didius Julianus, as well as of Septianius Geta. (Dion Cass. xiii. 11; Spartan, Did. Pol. 1. i. 4.) At a later period, A.D. 268, it was threatened by the usurper Aurelius, who, according to Gallienus on the Adda, and was for some time besieged by the emperor, till a sedition in his own camp ended in the death of Gallienus, and his brother Valerianus. (Eutrop. ix. 11; Treb. Poll. Gall. 14; Vict. Caes. 33, Epit. 33.) Shortly after Aurelius was compelled to surrender the city to Claudius, who had been elected to succeed Gallienus, and was put to death by order of the new emperor. (Treb. Poll. Claud. 5.)

But it was the establishment of the imperial residence at Mediolanum that raised that city to the highest pitch of prosperity. Its central position, which rendered it a peculiarly suitable head-quarters from which to watch the movements of the barbarians, and the progress of the wars with them, whether in Gaul, Germany, or Pannonia, was undoubtedly the cause of its selection for this purpose. Claudius himself is said to have sometimes repaired to Mediolanum with the same view (Suet. Aug. 20); and the constantly increasing dangers from these quarters led subsequent emperors from time to time to follow his example; but Maximian appears to have been the first of the Roman emperors who permanently fixed his residence there (about A.D. 303),
MEDIOLANUM.

and thus at once raised it to the dignity of the capital of Northern Italy. From this period the emperors of the West made it their habitual abode (Entrop. ix. 27; Zosim. ii. 10, 17, &c.), and, with the increasing fear of the barbarians induced Honorius, in A. D. 404, to take refuge in the inaccessible marshes of Ravenna. Maximianus is said to have adopted for his residence a splendid palace with many splendid public buildings (Vit. Caes. 39); and it was doubtless at this period that it rose to the splendour and magnificence which, about the middle of the fourth century, excited the admiration of the poet Ausonius, who assigns it the sixth place among the cities of the empire. The houses are described by him as numerous and elegantly built, corresponding to the cultivated manners and cheerful character of the inhabitants. It was surrounded with a double range of walls, enclosing an ample space for the buildings of the city. Among these were conspicuous a circus, a theatre, many temples, the palace or residence of the emperor, a mint; and baths, which bore the name of Herculan, in honour of their founder Maximianus, and were so important as to give name to a whole quarter of the city. The numerous porticoes which were attached to these and other public buildings were adorned with marble statues; and the whole aspect of the city, if we may believe the poet, did not suffer by comparison with Rome.

(Auson. Clav. Urb. 5.)

The transference of the imperial court and residence to Ravenna must have given a considerable shock to the prosperity of Mediolanum, though it continued to be still regarded as the capital of Liguria (as Gallia Transpadana was now called), and was the residence of the Consularius or Vicarius Italiae, to whose jurisdiction the whole of Northern Italy was subjected. (Libell. Provinc. p. 62; Becking, ad Not. Digni. p. 442.) But a much more severe blow was inflicted on the city in A. D. 452, when it was taken and plundered by Attila, who after the fall of Aquileia carried his arms, almost without opposition, through the whole region of the Po. (Journ. Hist. Get. 42; Hist. Misscl. xv. p. 549.) Notwithstanding this disaster, Mediolanum seems to have retained much of its former importance. It was still regarded as the metropolis of Northern Italy, and after the fall of the Western Empire, in A. D. 476, became the royal residence of the Gothic kings Odacer and Theodoric. Procopius indeed speaks of it in the sixth century as surpassing all the other cities of the West in size and population, and inferior to Rome alone. (Procop. B. G. ii. 8.) It was recovered with little difficulty by Belisarius, but immediately besieged by the Goths under Uraia, the brother of Vitigis, who, after a long siege, made himself again master of the city (A. D. 539), which he is said to have utterly destroyed, putting all the male inhabitants, to the number of 300,000, to the sword, and reducing the women to slavery. (Ib. 21.)

It is evident, however, that the expressions of Procopius on this occasion must be greatly exaggerated, for, at the time of the invasion of the Lombards under Abila (A. D. 568), Mediolanum already reappears in little less than its former importance. It was still regarded as the chief metropolis of either of the tribes inhabiting the region of Lom¬bardy (P. D. Hist. Lang. ii. 15, 25), and, as the metropolitan see, appears to have retained this dignity under the Lombard kings, though these monarchs transferred their royal residence to Ticinum or Porcia. In the middle ages it rapidly rose again to prosperity, and, though a second time destroyed by the emperor Frederic Barbarossa in 1162, quickly recovered, and has continued down to the present day to be one of the most important and flourishing cities of Italy.

The position of Milan, almost in the centre of the great plain of Northern Italy, just about midway between the Alps and the Padus, appears to have contributed to the eminence of the city. It is in the midst of an extensive and fertile region. Its ready communications with the Ticinus on the one side, and the Adda on the other, in great measure supply the want which would otherwise have arisen from its not being situated on a navigable river; and the fertile plain between these two rivers is watered by the minor but still considerable streams of the Lambro and Olona. The latter, which is not noticed by any ancient writer, flows under the walls of Milan. The modern city contains few vestiges of its ancient splendour. Of all the public buildings which excited the admiration of Ausonius (see above), the only remains are the columns of a portico, 16 in number, and of the Corinthian order, now attached to the church of S. Lorenzo, and supposed, with some probability, to have been originally connected with the Thermae or baths erected by the emperor Maximian. A single antique column, now standing in front of the ancient basilica of San Ambrogio, has been removed from some other site, and does not indicate the existence of an ancient building on the spot. Numerous inscriptions have, however, been discovered, and are still preserved in the museum at Milan. These fully confirm the municipal importance of Mediolanum under the early Roman Empire; while from one of them we learn the fact that the city, notwithstanding its flourishing condition, received a colony under Hailarin, and, assumed, in honour of that emperor, the titles of Colonia Arlia Augusta. (Orell. Inscr. 1702, 1909, 3942, 4000, 4060, &c.; Zumpt, de Colon. p. 409.)

Mediolanum was the central point from which all the highroads of Italy N. of the Padus may be considered as radiating. The first and principal of these was that which led by Laus Pompeia to Placentia, where it joined the Via Aemilia, and thus became the direct line of route from Milan to Ravenna and Rome. Another main line was that by Novaria and Vercellae to Eporedia and Augusta Praetoria, which must have been the principal line of communication between Milan and Transalpine Gaul. A third road led in a southerly direction to Ticinum (Porcia), from which there were two lines; the one proceeding by Lannellum to Augusta Taurinorum, and thence over the Cottian Alps into the southern provinces of Gaul; the other crossing the Padus to Dentara, and thence across the Apennines to Genoa. A fourth line was that to Como, from whence there was a much frequented pass by the Lucus Larins, and across the Ticinian Alps into the valley of the Inn, thus opening a direct and speedy communication with the Danube. Lastly, a great line of highway led from Milan to Aquileia, passing through Bergomum, Brixia, Verona, Vicentia, Patavium, Altinum, and Concordia. The details of all these routes are given marked in all ages as the natural capital of that

[End. B.] Mediolanum (Itin. Ant.; Mendiadsum, Itin. ii. 3, § 18), a town of the Ordervices in Britain. It occurs in the Itin. Ant., between Deva (Chester), and Uriconium (Wrexeter), two towns, the sites of which are well authenticated; and in the
COIN OF MEDMA.

MEDOACUS. (ΜΕΘΟΔΟΟΣ or ΜΕΘΟΔΟΟΣ), a town of Caria, situated somewhere in the peninsula between the Ceramian and Iasian gulf, not far from Mytilus. (Plin. v. 29; Steph. B. s. v.; Heart. Fregna, 236.) It is probably the same town as the one which Stephanus elsewhere calls 

MEDMA. (ΜΕΘΟΔΟΟΣ or ΜΕΘΟΔΟΟΣ) is the site of the Medeacean region. According to Pliny (iii. 16. s. 20), there were two rivers of the name, but no other author mentions more than one, and Livy, a native of the region, mentions the "Medeacean annis" without any distinctive epithet. (Livy vi. 2.) There can be no doubt that this is the river now known as the Brenta, which is a very considerable stream, rising in the mountains of the Val Sogana, and flowing near Padua (Patavium). A short distance from that city it receives the waters of the Bacchiglione, which may possibly be the other branch of the Medeacean meant by Pliny. Strabo speaks of a port of the same name at its mouth (ΜΕΘΟΔΟΟΣ ΛΙΜΝΗ, v. p. 213), which served as the port of Patavium. This most evidently be the same to which Pliny gives the name of Portus Edro, and which was formed by the "Medeacu duo ae Fossa Clodia," it is in all probability the one now called Porto di Lido, close to Venice. The changes which have taken place in the configuration of the lagoons and the channel of the rivers, which are now wholly artificial, render the identification of the ports along this coast very obscure, but Strabo's statement that the Medeacean was navigated for a distance of 250 stadia, from the port at its mouth to Patavium, seems conclusive in favour of the Porto di Lido, rather than the more distant one of Chiavea. At the present day the Brenta, as it was, round the lagoons, and enters the sea at Brondolo, evidently the Portus Brandubus of Pliny (l. c.); while a canal called the Canale di Brenta, quitting the river of that name at Dolo, leads a more direct course to the lagoons at Fusina. This canal may perhaps be the Fossa Clodia of Pliny.

Livy tells us that, in B.C. 301, Cœnomyus the Lacedæmonian arrived at the mouth of the Međeacu, and having ascended the river with some of his lighter vessels, began to ravage the territory of the Patavini, but that people repulsed his at-
MEDOBIRGA.

MEDOBIRGA. a town in Lusitania (Hist. B. Afr. 48), the inhabitants of which are called by Pliny (iv. 22. s. 35) Medulbircnses Phunbariis, is the same place as MENDOBIRGA, or MONTOBIRGA, which is placed in the Antonine Itinerary (p. 420) on the road from Scarabii to Emerita. There are ruins of the ancient town at Muraco, on the frontier of Portugal. (Rosselli, Ant. L. p. 58; Flores, Esp. Segr. xiii. p. 66.)

MEDOBIRGA (Melodácum), a town in the southeastern part of Germany (Pol. ii. 11. § 30), which must have been situated a few miles to the north of Vienus. Its exact site is only matter of conjecture.

MEDUCAUS. [Meducus.]

MEDUANA (Moisyane), a branch of the Liger, in Gallia. The name may be ancient, but the verse of Lucan in which it occurs is spurious. [Lacens.]

MEDUANTUM, in Gallia, is placed in the Table on a road from Dorcortorium (Reims) through Noviomagus, Mose or Maso (Mouzon), to Meduantum, an unknown site. [G. L.]

MEDULI, a Gallic people on the coast south of the Garumna (Garonne). Anonimus (Ep. 4) says to Theon:—

"Quam tamen exerces Medulorum in litore vitam."

He says in another Epistle to Theon (Ep. 5):—

"Unus Deamotoni ut litore percert aeetus
Conclamat ad portum, si modo depropere."

[As to this Condatis Portus, see Condate, No. 6.]

Anonimus (Ep. 7) thanks Theon for sending him some of the oysters, equal to those of Biaze, which were fattened in the "stagnam Medularam." The country of the Meduli corresponds to Mechos in the French department of the Gironde. [G. L.]

MEDULI (Méodálaco, Strabo), an Alpine people, whose name occurs in the inscription on the altar of Susa and on the Trophy of the Alps (Plin. iii. 20), where they are placed between the Astavones and Uceni. Potenius (ii. 10, § 11) places the Allobroges "under the Meduli," as the name is there written, by which he means that the Meduli occupy the country nearer to the Alps. Seneca (Epist. 93. 6) states the position of this people in clear (iv. p. 203):—"After the Vescotti are the Sicunii (Jcomii), and Triciorni, and then the Medulani, who occupy the highest summits (of the Alps); now they say that the highest part of their country has an ascent of one hundred stadion, and thence to the borders of Italy the descent is as much: and above, in certain hollows, there is a great lake, and two springs not far from one another, and from one of these flows the Drucetis (Druceme), a torrent stream which runs down to the Rhodanus, and the Duras (Douron), which runs in the opposite direction, for it joins the Pudos (Pa), flowing down through the country of the Salassi into Celtic south of the Alps." When Strabo says farther (iv. p. 204) that the Medulli "lie as near as may be (amélastra) above the confluence of the Isura and the Rhone," he is not speaking of distance, but of direction or position; for he adds "and the other side of the mountain country above described, the part that slopes towards Italy, is occupied by the Taurini, a Ligurian people, and other Ligures." The conclusion is easy that the Medulli were in the Maurienne, north and south of the town of S. Jean de Maurienne, and enclosed between the mountains and the Rhone. The lake supposed by D'Anville and by Walckenaer Généré (p. 31) to be that on Mont Cenis; and Walckenaer adds "that it is exactly 200 Olympic stadia from Sez to the termination of the descent, 7 miles west of Aosta." But this is a false conclusion, derived probably from Strabo's remark about the Durus flowing through the country of the Salassi; the stream which flows through the country of the Salassi is the Doura Bolten, but the stream which rises near the Douron is the Dorin Ripiarum lateral.

D'Anville supposed that Strabo made the Alps in the country of the Medulli 100 stadia in perpendicular height, which absurd mistake has been followed by the French translators of Strabo. Walckenaer has corrected it; but he has erroneously made Topelius place the Meduli immediately north of the Allobroges, instead of to the south-east. Vitruvius (viii. 5) speaks of the gottes of the Meduli, a disease supposed to arise from the water which they drank.

MEDULLIA (Medullia: Eta. Medaullos, Medullini), an ancient city of Latium, which is repeatedly mentioned in the early history of Rome; but, like many others, had disappeared at a comparatively early period. According to Dionysius it was one of the colonies of Alia; and Diodorus also includes it among the cities of which he ascribes the foundation to Latins Silvius. (Dionys. iii. 1; Diod. vii. ap. Euseb. Arm. p. 185.) We are told that it fell into the power of Romulus by the voluntary submission of the inhabitants after the fall of Carthage; and many of its citizens migrated to Rome, among whom was the father of Tullus Hostilius. (Dionys. ii. 36, iii. 1.) But in the reign of Ancus Marcius it was again conquered by the Latins, who held it for above three years, when the Roman king a second time reduced it. (Id. iii. 38.) Livy, however, says nothing of this recusation, but treats it throughout as a Latin city, and enumerates it among those of the Prisci Latini which were taken by Tarquinius Priscus (i. 33, 38). At a somewhat later period it is mentioned for the last time, in B. c. 492, as abandoning the Roman alliance, and joining the Sabines. (Dionys. v. 34.) We have no account of the period of its destruction, but it is not noticed by any of the geographers, and Pliny tells us that it was no longer in existence in his time (iii. 5. 9).

The name of Medullia is found in Livy associated with those of Corculum, Ficulna, Curtumnarium, and Nomentum, of which the site is approximately known, as well as with Amerilia and Camerinum, of which the position is as uncertain as that of Medullia itself. All three were probably situated in the neighbourhood of the cities just mentioned; but this is all that can be asserted with any confidence. Gell and Xibny have described the remains of an (ii. 34) spot called Maccellina, about 4 miles from Palombara, at the foot of the lofty Monte Genare, which the former writer supposed to be Medullia. The remains in question, consisting of considerable portions of walls of polygonal construction, enclosing a triangular area, are unquestionably those of an ancient city; but its identification is wholly uncertain; the situation would suit equally well for Camerinia or Anzio, as for Medullina, nor can any part of it be placed on the map at S. Angelo di Capoccia, on the highest summit of the Cornician hills; where there also remain ancient walls, supposed by Gell to be those of Corniulum.
MEDULLUS. itself. (Gell, Top. of Rome, pp. 312, 319; Nilby, Hist. Rom., vol. ii. pp. 293, 327; Abeken, M. I., p. 78.)

MEDULLUS (Flor. iv. 12; Medulliam, Oros. vi. 21), a mountain in Hispania Tarraconensis, rising above the river Minus; perhaps the Sierra de Malmeda, upon the river Sít, a tributary of the Múco.

MEDUS (6 Mβδος, Strab. xix. p. 729), a river of ancient Persia, which, according to Strabo, after taking its source in Media, flowed into the Araxes, which waters the plain of Persopolis. Curtius, however, in speaking of these rivers, makes the Araxes, which was the greater stream, flow into the Medus, which was the less (v. 4. § 7). There can be no doubt, however, that Strabo is more correct than Curtius. The Medus is the small stream (now called the Paltium) which flows past the remains of Pasargadae, Istakr, and Persopolis, and falls into the Araxes (Kur or Beng-amin) a few miles below the last ruins. The united stream of the two rivers terminates in lake Bakhtegan, about 40 miles from Persopolis. (Ferguson,inen. and Perse. p. 90.)

MEGABARI (Μεγάβαρι, Strab. xvii. pp. 786, 819; Μεγάβαρι, Ptol. iv. 7. § 30; Megabaria, Plin. vi. 30. a. 353), a people of Acritolia, near Meroe, also called Adibari according to the authority (Bibl. ii. c.), and possessing a town of Apollonia. Their name appears to survive in the tribe of the Mekabariar near Scudery. (Ritter, Erdkunde, vol. i. p. 663; Forbiger, vol. ii. p. 811.)

MEGALIA. [Megarids.]

MEGALOPOLIS (Μεγάλα πόλεις or Μεγαλόπολις; Eth. Μεγαλοπόλις; Sinaius), the "Great City," one of the most recent of the Greek cities, and the later capital of Arcadia, was founded in b.c. 370, a few months after the battle of Leuctra, and was finished in the course of three years. (Paus. vii. 27. § 1; Diod. xv. 52, 62, 72.) Arcadia had been previously divided into a number of independent political communities; and it had always been the object of Sparta to maintain them in their isolated condition, that she might the more easily exercise supremacy over them. But after the fatal blow, which the Spartans had received at Leuctra, several of the leading Arcadians, supported by Ephesians, who was the soul of the undertaking, resolved to found a new city, which should become the capital of an Arcadian confederation. Ten oecist were appointed to carry this resolution into effect, of whom two were from Tegae, two from Mantinea, two from Cleitor, two from the district of Maeauma, and two from that of Parrhasia. The site, which they chose, was an extensive plain upon the north-west frontier of Lacoenia; and the city was built upon the river Helisson, a tributary of the Alpheus. Forty distinct Arcadian townships were either persuaded or compelled to contribute their inhabitants to form the new state. (Paus. viii. 27; Diod. xv. 94.) The inhabitants were furnished from seven states: 10 from Maeauma, 8 from the Parrhasi, 3 from Orchomenus, 4 from Cynuria, 6 from Euboea, 5 from Tegae, and probably 6 (though Pausanias mentions the names of only 5) from Aegyptis. The city was 50 stadia (more than 5 miles and a half) in circumference (Polby. ix. 21); while the territory assigned to it was more extensive than that of any other Arcadian state, extending northwards about 23 English miles from the city, being bounded on the east by the territories of Tegae, Mantinea, Orchomenus, and Caphysa, and on the west by those of Messene, Phigalia, and Heraea. (On the foundation of Megalopolis, see Clinton, Post. Hist. vol. ii. p. 418; Thirwall, Hist. of Greece, vol. v. p. 55, seq.; Grote, Hist. of Greece vol. x. p. 306, seq.)

Megalopolis was the place of meeting of the Arcadian confederation which was now formed. The council of the confederation was called the Ten Thaumain (κοίμης), and consisted of representatives of all the Arcadian states, except Orchomenus and Heraea. The number must be regarded as an indefinite one; and it is probable that all the citizens of the separate states had the right of attending the meetings. (Xen. Hell. vi. 5. § 6, vii. 1. § 58; Diod. xv. 59; Paus. vii. 51. § 1; Dem. de Fals. Leg. p. 344.) A body of troops, called Eparitir (Επαριτίρ, was raised for the service of the confederation; their number was 5000. (Xen. Hell. vii. 4. § 34, vii. 5. § 3; Diod. xii. 62, 67.) The new confederation succeeded for a time in giving a certain degree of unity of sentiment and action to the Arcadians; but its influence gradually declined; and the city of Megalopolis never attained that importance which its founders had anticipated, and which had caused it to be laid out on a scale too large for the population collected within its walls. (Polfy ii. 53.)

Upon the decline of the Theban power, the Spartans directed their attacks against Megalopolis; but these were easily repelled; and upon the rise of the Macedonian power the Megalopoliots formed a close alliance with Philip, and subsequently with Alexander, as their best security against their formidable neighbour. After the death of Alexander they continued faithful to the Macedonian alliance, and refused to join the other Greeks against Antipater. In the contest between Polyperchon and Cassander, Megalopolis espoused the side of the latter; in consequence of which Polyperchon besieged the city in b.c. 318. It was, however, bravely defended by its inhabitants, under an officer named Damis; and though Polyperchon succeeded in making a breach in its walls, he was finally repulsed with loss. (Diod. xviii. 76, 71.) We learn from Diodorus (1. c.) that the territory of Megalopolis possessed at that time 15,000 men capable of bearing arms, which implies a population of about 65,000 souls. After this time Megalopolis was governed by tyrants, of whom the first was Aristodemus, a Phigalian by birth, who, on account of his good qualities, was called Νικηφόρος. During his reign the Spartans, under their king Acrotatus, the son of Areus, and grandson of Cleomenes II., attacked Megalopolis, but were defeated, and Acrotatus was slain. (Paus. viii. 27. § 11, who erroneously calls Acrotatus the son of Cleomenes.) Two generations later Lydiades, a native of Megalopolis, became tyrant of the city, but he voluntarily resigned his power in b.c. 252, and united Megalopolis to the Achaean League. (Paus. vii. 27. § 12, seq.; Polby. ii. 44.) In b.c. 222, Cleomenes III. surprised Megalopolis; the greater part of the inhabitants succeeded in making their escape to Messene; but, after plundering the city, he laid the greater part of it in ruins. (Paus. vii. 27. § 15, seq.; Polby. ii. 55; Plut. Philip, 5; Cleom. 25.) Soon after the defeat of Cleomenes at the battle of Sellasia (n. c. 221), the Megalopoliots began to rebuild their city; but a dispute arose among them respecting its size. One party wished the compass of the walls to be contracted, that they might be the more easily defended; and the other
MEGALOPOLIS.

insisted upon preserving the former dimensions of the city. The former party, through the mediation of Aratus, appear to have prevailed, and the city was unfortunately rebuilt in its original magnitude. (Polyb. v. 93.) The fortifications were sufficiently strong to resist the attack of the tyrant Nabis (Plut. Philip. 13); but they were again suffered to fall into decay, and even as soon as B.C. 175, we find that Philostratus IV. Epiphanes promised the Megalopolitans to surround their city with a wall, and gave them the greater part of the necessary money. (Liv. xii. 20.) Polybius remarks (ix. 21) that the population of Megalopolis in his time was only the half of that of Sparta, although it was two stadia greater in circumference. So much was it reduced, that a comic poet, quoted by Strabo, described "the Great City as a great desert" (γεγενημένη μεγαλόπολις τὸ κατατάλειπτον.) Ar- customed as Pausanias was to the sight of fallen cities, the ruined condition of Megalopolis appears to have particularly impressed him, and gave rise to the reflections which he has inserted after his description of the city (viii. 33). Megalopolis was the birthplace of Philopoemen, and of the historian Polybius.

Megalopolis was situated in the middle of a plain, and, unlike the generality of Greek cities, possessed no height, which might be converted into an areopolis. Mantinea, which was also rebuilt about the same time, was placed in a level situation, instead of its old position upon a hill. A level situation appears to have been chosen as more convenient for a large population than the rocky heights upon which the old Greek cities were built; while the improvements which had been made in the art of fortifying cities enabled their inhabitants to dispense with natural defences. The city lay upon either bank of the Helisson, which flowed through it from east to west, and divided it into nearly two equal parts.

The Helisson flows into the Alpheius about 2½ English miles from the city. The southern half of the city was called ὅρσεστα (Ορσεστα), from an ancient settlement of the Mantinians upon this spot. (Steph. B. g. ν. Μεγαλόπολις.) The ruins of Me- galopolis are near the modern village of Σινδαν; but almost all trace of the walls has disappeared, because they were probably built, like those of Mantinea (Xen. Hell. v. 2 § 5; Paus. viii. 8 § 5), of unburnt bricks. Pausanias has given a particular description of the public buildings (viii. 30—32), the site of some of which may still be fixed by the existing structures. The two most important of these were the theatre, on the left or southern side of the river, and the Agora on the right. The colossal remains of the theatre are conspicuous in the whole plain. Several of the seats remain, and a part of the wall of the cavea. It is described by Pausanias (viii. 32 § 1) as the greatest theatre in Greece, and was 480 feet in diameter. Pausanias says that in the theatre there was a perennial fountain, which Leake could not find, but which Ross noticed in the Orchestra; it is now covered with rubbish, so that it is not visible, but in dry seasons it makes the ground quite moist and slippery. On the eastern side of the theatre was the stadium, the position of which is indicated in the shape of the ground near the river. Here is a fountain of water, which Pausanias says was in the stadium, and was sacred to Dionysus. On the eastern side of the stadium was a temple of Dionysus, which Pausanias inspects; and the stadium, towards the river, was a sanctuary of Aphrodite, and an altar of Ares. Ross supposes a circular foundation close to the bank of the river to be the altar of Ares, and a quadrangular foundation between this and the theatre to be the temple of Aphrodite. East of the temple of Dionysus there is another source of water, also mentioned by Pausanias, by which we can fix the position of the temple of Apsilus the Bay; above which, on a gently sloping hill, was a temple of Artemis Agrotera. West of the theatre was the Thersilium, named from the person who built it, in which the Ten Thousand were accostumed to meet; and near it was a house, built originally by the Megalopolitans for Alexander, the son of Philip. In this same locality there were a few foundations of a temple sacred to Apollo, Hermes, and the Muses.

Opposite the western end of the theatre there are, on the other side of the river, but more especially on the northern bank, large masses of square stones. These are probably the remains of the principal bridge over the Helisson, which led from the theatre to the Agora on the northern side of the river. The Agora was built on a magnificent scale, and extended along the river close to the western walls of the city; since Pausanias, who entered Megalopolis upon this side, innumerable buildings upon the Agora. As Pausanias has given a fuller description of the Agora of Megalopolis than of any other in Greece, the following restoration of it (taken from Curtius) may be found useful in understanding the general form and arrangement of such buildings.

In the centre of the Agora was an inclosure sacred to Zeus Lycæus, who was the tutelary deity of all Arcadia. It had no entrance; but the objects it contained were exposed to public view; here were two altars of the god, two tables, two eagles, and a statue in stone of Pan. Before the sacred inclosure of Zeus there was a statue of Apollo in brass, 12 feet high, which was brought from Bassae by the Phigallians, to adorn the new capital; it survived the destruction of the city, and is represented on coins of Septimius Severus. This colossal statue probably stood on the west side of the sanctuary of Zeus. To the right of the colossal statue was the temple of the Mother of the Gods, of which

Megalopolis.

only the columns remained in the time of Pausanias.

Megalopolis, Sparta, Methydrium, Mænas, Phigaleia, Tegae and Heraea.

1. The road to Messene passed, at the distance of 7 stadia from the city, a temple of the goddesses called Mania, a name of the Eumenides, because Orestes here became insane on account of the murder of his mother. A little further was a small heap of earth, called the Monument of the Finger, because Orestes, in his madness, here bit off one of his fingers; still further was a place called Are, because Orestes was here healed of his disorder, containing another temple of the Eumenides; and lastly a sanctuary named Cureium, because Orestes here cut off his hair. These stations lay between the villages Sinundo and St. Bé, in the district where there are four tumuli. From the Mania there was a distance of 15 stadia to the Alpheus, near the place where it receives the Gatheis, joined by the Carmon. This united stream is the Xerops Potamœ. From the Alpheus the road led to Corinth, a distance of 40 stadia, and from Corinth to Nympheus, a distance of 20 stadia. Nympheus was a place abounding in water and trees, from which there were 30 stadia to the Hermæum, which marked the boundaries of Megalopolis and Messenia. (Paus. viii. 34.)

2. The road to Carranum, in Messenia, ran north of the former road, but parallel to it. It crossed the Alpheus, where it is joined to the united waters of the Malus (Megalos) and Scyrus (Scyrus). The Malus is probably the river of Neokhori, which, a little westward of Dedochy, receives a small stream answering to the Scyrus. After proceeding from thence 30 stadia on the right bank of the Malus, you crossed the river and ascended, by a steep path, to a village called Phaedrias (Phædrias), which appears to have stood on the height above Neokhori. Fifteen stadia further was the Hermæum, named Deo-goena, another boundary between the territories of Megalopolis and Messenia. (Paus. viii. 35. §§ 1, 2.)

3. The road to Sparta was for the most part the same as the modern road from Leonardi to Mistras. At the distance of 30 stadia the road crossed the Alpheus, where it is joined by the Theius (Theius), now called Katyparia. From thence the road followed the left bank of the Theius for 40 stadia to Phædriae (Phædriae), which was 20 stadia distant from the Hermæum towards Belemna. About 20 stadia beyond is the division of the waters flowing southward to the Eurotas, and northward to the Alpheus. (Paus. viii. 35. seq.)

4. The road to Methydrium was 170 stadia in length. It ran northwards from Megalopolis through that portion of central Arcadia which was surrounded by the rivers Gortynius, Alpheus, and Helisson. Thirteen stadia from the city was a place called Scias (Scias), with a temple of Artemis Scias, founded by the tyrant Aristodemus. Ten stadia further by Chaemisae (Xaptopeia), and from thence, a' the distance of another 10 stadia, was Tricoloni (Tricoloni). These two cities were in ruins in the time of Pausanias. Tricoloni, which was founded by the sons of Lycaon, still possessed a temple of Pheidias, standing upon hills, a group of trees. We may place Tricoloni near the modern Karatiola, on the edge of the plain of Megalopolis. At Methydrium two side roads branched off from the main road. The road to the left went by Zoëia (10 stadia), Párronia (10 stadia), and Thyraeanum (15 stadia), to Hypsus. Zoëia (Zoëia, Paus.: Zoaia, Zol-. tia, Steph. B. s. r.) and Párronia (Parocheia) were founded by Tricolumns. They were in ruins.
in the time of Pausanias, but in Zoria there still remained a temple of Demeter and Artemis. Pausanias probably occupied the site of Palaiomous. Thy-rraeum (Θυρραῦ) was founded by a son of Lycaon, and may be placed at Palaiomous, at the foot of the mountain. The other side road branched off from Methydrium to the right, ascending to the fountain Crunis (Κρυνοῦ), and from thence descending 30 stadia to the tomb of Calisto, a lofty mound of earth, upon which was a temple of Artemis Calliste. Here Pausanias turned to the left, and at the distance of 25 stadia from this tomb he reached Anemos (Ἀνέμος), on the direct road from Megalopolis to Methydrium. As Anemos was 100 stadia from Trielidon and 57 from Methydrium, it may be placed at Ziboaloi. Beyond Anemos the road passed over the mountain Phalanthos, upon which were the ruins of the town Phalanthos (Φαλάνθος). On the other side of this mountain was the plain of Polus, and near it Schenus (Σχενοῦς), which was called from a Boeotian of this name: near Schenus were the race-grounds of Atalanta. Methydrium was the next place. [Methydrium.] (Paus. viii. 33 § 5 seq.)

5. The road to Maenalus, led along the Helisson to the foot of Mt. Maenalus. In leaving the city it first ran through a marshy district, which was here called Helos; it then entered a narrow valley, in which was a place called Paleoicus (Παλαιόικος), where a mountain torrent, named Elaphus, flowed into the Helisson on the left: this is the torrent which flows from Valletza. Here a side road ran along the left bank of the Elaphus, for 20 stadia, to Perachthus (Περαχθύς), where was a temple of Pan; it must have stood near Rhabanites. But the direct road crossed the Elaphus, and entered the Maenanian plain, at the distance of 15 stadia from the Elaphus. This number, however, is much too small, as it is 5 geographical miles from the junction of the Elaphus with the Helisson into the Maenanian plain. (Leake, Peloponnesiana, p. 242; Paus. viii. 36 § 5 seq.)

6. The road to Phigaleia crossed the Alpheus at the distance of 20 stadia from Megalopolis. Two stadia from the Alpheus were the ruins of Ma-earik. 7 stadia further those of Dasake, and again 7 stadia the hill Acacaeus, upon which stood the city Acacaeum. At the distance of 4 stadia from Acacaeum, was the temple of Despoina, one of the most celebrated sanctuaries in the Pelo-ponnesus, and of which Pausanias has given a parti-
cular description. Adjoining, was the temple of Pan, above which stood the ancient city of Lyco-
sura. Between Lycosura and the river Phataniston, which was 30 stadia from Phigaleia, Pausanias mentions no object, though the direct distance bet-
tween Lycosura and this river is 9 geographical miles. (Paus. viii. 36 § 9—39.)

7. The road to Pallantium and Tegea passed first through Ladocia, a suburb of Megalopolis, next by the ruins of Haemoneae [see Vol. I. p. 192, b.]; beyond which, to the right of the road, were the ruins of Oresthasium; while upon the direct road were the villages of Athironicum and Athianaeum; and 20 stadia beyond the latter the ruins of Asa, near which were the sources of the Alpheus and the Eurotas. From Asa there was another route, to the mountain calathium, upon which was the Chama, marking the boundaries of Megalopolis, Pallantium, and Tegea. (Paus. viii. 44.)
MEGARA.

311

the plain loses itself in a gradual ascent. The city stood on a low hill with a double summit, on each of which there was an acropolis, one named CAIRA (Καίρα), and the other ALCATHOIE (Αλκαθοῖ). The former probably being on the eastern, and the latter on the western height, upon which the modern village is chiefly situated. Immediately below the city was a port-town named NISAIA (Νίσαια and Νίσαια), the port being formed by an island called MINOA (Μίνωα). The city was connected with its port-town by Long Walls.

II. HISTORY.

There were two traditions respecting the early history of Megara. According to the Megarians, the town owed its origin to Car, the son of Phoroneus, who built the citadel called Caria and the temples of Demeter called Megara, from which the place derived its name. (Paus. i. 39. § 6.) Twelve generations afterwards Lelaeus came from Egypt and gave the inhabitants the name of Leleges, whence we read in Ovid (Met. viii. 443):—

"Tu tus ad Alcathoem, Leleges quo noonia, limes Composito Scirone pati."
MEGARA.

MEGARA.

tical form of government was established. (Paus. i. 43. § 3.)

Into the value of those traditions it would be useless to inquire. It may, however, be regarded as certain, that Megara and its territory were in early times regarded as part of Attica; and hence Strabo accounts for the Athenians being in the Ilissus, because they were comprehended along with the Athenians under the general name of Ionians. (Strab. ix. p. 392.) The most certain event in the history of Megara is its conquest by the Dorians. This event is connected in tradition with the expedition of the Peloponnesians against Athens. The Dorian invaders were defeated by the voluntary sacrifice of Codrus; but Megara was not withstandingly permanently conquered, and a Corinthian and Megarian colony founded at Megara. The pillar at the entrance of Corinth, which had hitherto marked the boundaries of Ionia and Peloponnesus, was now removed; and Megara was henceforth a Dorian state, and its territory included in Peloponnesus. (Strab. ix. p. 392; Seymm. Ch. 502.) Megara, however, continued for some time to be subject to Corinth, and it was not without frequent struggles and wars that it at length established its independence. (For authorities, see Müller, Dorians, i. 5. § 10.) Megara appears not to have become the ruling city in its own district. It was independent of Corinth, since in earlier times it had been only one of the five hamlets (συνεφέ), into which the country was divided, namely, the Heraeans, Piraean, Megarians, Cynurians and Tripodiscans. (Plut. Quaest. Græc. c. 17. p. 387.)

After Megara had become an independent city, its prosperity rapidly increased, and in the seventh century before the Christian era it was one of the most flourishing commercial cities of Greece. For this it owed the following advantages, viz., the situation which gave its inhabitants great facilities for the prosecution of commerce both by land and sea. All the roads from Northern Greece to Peloponnesus passed through their country, while their shores being washed by the Corinthian and Saronic gulfs, enabled them to trade both with the West and East.

Megara founded some of the earlier Grecian colonies, both in Sicily and Thrace. In B.C. 728 it established Megara Hyblea in Sicily, in 712 Astacus in Bithynia, in 657 Croesus in Lydia. In the following year Chalcis was laid at the mouth of the Boeotus, and in 567 Byzantium opposite Chalcis. About this time, or rather later, Comedy is said to have been invented by the Megarians. According to the common account, Sausian, a native of Tripodiscus in Megara, introduced comedy into Attica. (Dict. of Biogr. art. Susarian.) But, with the increase of wealth, the lower orders attempted to obtain a share in the government, which had hitherto been exclusively in the hands of the Delphic conservatives and Thargernnaeans, viz., the father-in-law of Cylon, became tyrant and despot of Megara, by attacking the rich landed proprietors and advocating the chains of the poor. (Aristot. Politi. i. 2, Polit. v. 4.) He established the city by the construction of a beautiful aqueduct, which continued to exist down to the time of Pausanias (i. 40. § 1). Thebes ruled about B.C. 630—600; but he was subsequently driven from power, and Megara was for some time torn asunder by struggles between the aristocracy and democracy. The eloquent poet Theocritus, who belonged to the aristocracy, deplores the sufferings of his party, and complains that the poor no longer paid the interest of their debts, and that they plundered the houses of the rich and even the temples.

About the same time the Megarians were engaged in frequent contests with their neighbours in Attica. The chief struggle between them was for the island of Euboia, which was likewise in the hands of the Athenians in consequence of the well-known strata- tæum of Solon. (Paus. i. 40. § 5; Strab. ix. p. 394.) The Megarians took their share in the Persian wars. They fought with 20 ships at the battle of Artemisium and Salamin. (Herod. viii. 1, 45.) They repulsed a body of Persians whom Mardonius sent to ravage their territory (Paus. i. 40. § 2), and finally 3000 of their troops fought at the battle of Plataea. (Herod. ix. 28.)

After the Peloponnesian War the Megarians were involved in hostilities with the Corinthians respecting the boundaries of their territories. This led the Megarians to desert the Peloponnesian alliance, and unite themselves with the Athenians, B.C. 455. In order to secure their communication with Megara, the Athenians built two Long Walls connecting the city with Nisaea; and they garrisoned at the same time the town of Pegae, on the Corinthian gulf. (Thuc. i. 106.) But ten years afterwards the Megarians, who were deserted by the assistance of some Peloponnesian troops, they slew the Athenian garrison, with the exception of those who escaped into Nisaea. They continued to hold Nisaea and Pegae, but they also surrendered these towns in the thirty years' truce made in the same year (445) with Sparta and her allies. (Thuc. i. 114, 115.) The Athenians thus lost all authority over Megara; but they were so exasperated with the Megarians, that they passed a decree excluding them from their markets and ports. This decree passed very hard upon the Megarians, whose unproductive soil was not sufficient to support the population, and who obtained most of their supplies from Attica; it was one of the reasons urged by the Peloponnesians for declaring war against Athens. (Thuc. i. 67, 139; Aristoph. Acharn. 533.)

In the Peloponnesian War the Megarians suffered greatly. In the first year of the war the Athenians invaded Megara with a very large force, and laid waste the whole territory up to the city walls. At the same time they greatly increased the territory of Nisaea, by occupying the island of Minos, which lay in front of Nisaea, and left a garrison there, by which means the port of Nisaea was still more effectively blockaded. (Thuc. iii. 51.) Of the possession of this island, and of the causeway connecting it with the mainland, we shall speak presently. In the eighth year of the Peloponnesian War (B.C. 427), the Athenians revolted from Athens, and having obtained the port of Nisaea, they invited the Athenians to come to them on the island of Minos; and the Long Walls and Nisaea were occupied by an Athenian garrison. The Athenians
MEGARA.

were admitted within the Long Walls by their friends in Megara, and after a siege of two days they took Nisaea.* Megara was saved by Brasidas, who advanced to the relief of the city with a large Peloponnesian force, and, after offering battle to the Athenians, which they declined, was admitted within the city. The aristocratical exiles were now recalled, and a strict and exclusive oligarchy established, which lasted for some time. (Thuc. iv. 66—74.) A few months afterwards the Megarians captured the Long Walls from the Athenians and leveled them to the ground; but the Athenians still continued to hold Nisaea and Minoa. (Thuc. iv. 109.) In the truce concluded between the Athenians and Peloponnesians in the following year, it was settled that the line of demarcation between the Athenians in Nisaea and Minoa, on one side, and the Megarians and their allies in Megara, on the other, should be the road leading from the gate of Nisaea near the monument of Nius to the Poseidonium or temple of Poseidon, and from the latter in a straight line to the causeway leading to Minoa. (Thuc. iv. 117.)

From this time Megara is seldom mentioned in Greek history. Its prosperous condition at a later period is extolled by Isocrates, who says that it possessed the largest houses of any city in Greece, and that it remained at peace, though placed between the Peloponnesians, Thessals, and Athenians. (Isocr. de Pace p. 183, ed. Steph.) Megara surrendered to Philip after the battle of Chaeronea. (Aelian, F. H. vi. 1.) After the death of Alexander it was for some time in the power of Cassander; but his garrison was expelled by Demetrius Poliorcetes, who proclaimed the freedom of the city c. 307. (Diod. xx. 46; Plut. Demet. 9.) Subsequently it again passed into the hands of the Macedonian kings, but it was united by Aratus to the Achaean League. (Polib. ii. 43.) In the war between the Achaean League and the Romans, Megara surrendered to Metellus without a contest. (Paus. vii. 13. § 11.) It is mentioned by Strabo, in his well-known letter to Cicero (ad Fam. iv. 6), as one of the named cities of Greece. It still existed in the time of Strabo (ix. p. 393), and it was subsequently made a Roman colony. (Plin. iv. 7. s. 11.) Pausanias relates that it was the only city of Greece which hadrian refused to assist, on account of the murder by its inhabitants of anthemochrians, the Athenian herald (Paus. i. 36. § 3); but we learn from inscriptions that a new tribe at Megara was called Adrianis, in honour of the emperor, and that Sabina, the emperor's wife, was worshiped here under the title of wines, Ανδριάντης (Dioch. Isocr. vol. i. p. 566); and even Pausanias himself describes a temple of Apollo of white marble, built by hadrian (i. 42. § 3). It continued to coin money under the Antonines and subsequent emperors; and it appears in the Tabula Peutinger, as a considerable place. In the fifth century its fortifications were repaired by Diogenes, an officer of the emperor Anastasius (Chandler, Isocr. Ant. 130); but from this time it appears to have rapidly sunk, and was frequently plundered by the pirates of the Mediterranean.

Megara was celebrated on account of its philosophical school, which was founded there by Euclidès, a disciple of Socrates, and which distinguished itself chiefly by the cultivation of dialectics. The philosophers of this school were called the Megarei (οἱ Μεγαρεῖοι, Strab. ix. 393). It was also less creditably distinguished for its courtroom, who were called Megarian Sphinges. (Μεγαρεῖοι Σφίγγαι, Suid. s. v.; comp. Plant. Pers. i. 3. 57.) The Megarians were addicted to the pleasures of the table. (Tertull. Apolog. 59.) They had a bad character throughout Greece, and were regarded as fraudulently perjurious, and ignominious; but they may have owed much of this bad character to the representations of their enemies, the Athenians. (Aelian, F. H. xii. 56; Schol. ad Aristoph. Pac. 248; Suid. s. v. Μεγαρεῖος ἔλεγον μετέχων, i. e. contemptible people.) Of the Megarian games and festivals we have three kinds mentioned; the Dionysian, celebrated in honour of the hero Dices (Schol. ad Theocr. xii. 28; Schol. ad Pind. Ol. xiii. 155; Schol. ad Aristoph. Ach. 771), the Alcathemian, celebrated in honour of Alcathem and the Smaller Pythian, in honour of the Pythian Apollo, whose worship was very ancient in Megara. (Philostr. Vit. Soph. i. 3; Schol. ad Pind. Nem. v. 84, Ol. xiii. 155; Krause, Die Pythien, Xeneen und Isthmien, p. 66.)

Dion Chrysostom (Orat. vi.) says that Megara is one day's journey from Athens, and Procopius (Poll. Vand. i. 1) makes it 210 stadia. According to modern travellers the journey takes 8 hours. (Dodwell, Classical Tour, vol. ii. p. 177.)

III. Topography of the City and its Port-town.

Pausanias has given a particular description of the public buildings of Megara (Paus. i. 40, seq.). He begins his account with the aqueduct of Theagenes, which was supplied with water from the fountain of the nymphs called Sthiades. The aqueduct was remarkable for its magnitude and numerous columns. Near it was an ancient temple, containing a statue of Artemis Soteira, statues of the twelve gods said to be by Praxiteles, and images of the Roman emperors. Beyond, in the Olympieion, or inclosure of Zeus Olympian, was a magnificent temple, containing a statue of the god, which was never finished, owing to the distress occasioned by the Athenians in the Peloponnesian War. From thence Pausanias ascended to the citadel, named Carrus, passing by a temple of Dionysus Nectaneus, a sanctuary of Aphrodite Apostrophia, an oracle of Night, and a redestone temple of Zeus Cronius. Here, also, was the Megarum, or temple of Demeter, said to have been founded by Car during his reign.

Below the northern side of the Acropolis Carus was the tomb of Alcmena near the Olympieion. Hence Pausanias was conducted by his Megarian guide to a place called Rhiius (Poes; comp. Plat. Thea. 27), because the waters from the neighbouring mountains were collected here, until they were turned off by Theagenes, who erected on the spot an altar to Acheles. It was probably this water which supplied the fountain of the Sthiades. Near this place was the monument of Hyllas; and not far from the latter were temples of Isis, Apollo Agraeus, and Artemis Agrotera, which was said to have been dedicated by Alcathem after he had slain the Cithaerian lion. Below these were the heroon of Pandion, and the monuments of Hippolyte, queen of the Amazons, and Tereus, who married Proene.
MEGARA.

On the ascent to the citadel Alacceo, Pausanias saw, on the right-hand, the sepulchre of Megareus, and near it the heart of the gods called Phylooonis, to whom Alachtos sacrificed when he was going to build the wall. Here was the stone upon which Apollo laid his lyre, when he was assisting Alachtos, and which, on being struck, returned a sound like that of a harp. (Comp. Theogn. 771; Or. Met. viii. 14.) Beyond was the council-house (Bouleuterion) of the Megarians, formerly the sepulchre of Timoleus; and on the summit of the Aeropolis was a temple of Athena, containing a statue of the goddess, entirely gilded, with the exception of the face, hands, and feet, which were of ivory. Here, also, were temples of Athena Nice, or Victory, and Acantis. The temple of Apollo was originally of brick, but had been rebuilt of white marble by Hadrian. Here, also, was a temple of Demeter Thesmophorus, in descending from which occurred the tomb of Calpilhis, daughter of Alachtos.

On the road leading to the Prytanæum the traveller passed the heroon of Iris, the heroon of Iphigeneia, and a temple of Artemis said to have been erected by Agamemnon. In the Prytanæum were tombs of Menippus, son of Megareus, and Echepolis, son of Alachtos; near which was a stone called Aecacetra, because here Demeter sat down and called her daughter. Pausanias next mentions the sepulchres of those Megarians who had fallen in battle against the Persians, and the Aesymnium, so named from its founder, which contained a monument of the heroes of Megara. There were several sepulchral monuments on the way from the Aesymnium to the heroon of Alachtos, in which the public records were preserved in the time of Pausanias. Beyond was the Dionysium or temple of Dionysus; close to which was the temple of Aphrodite, containing several statues by Praxiteles. Next to the latter was a temple of Fortune, with an image of the goddess by Praxiteles. A neighbouring temple contained statues of the Muses, and a Jupiter in brass, by Lyssippus. He observed the tombs of Corelius and of the athlete Oisippus, the former of which was ornamented by some of the most ancient specimens of sculpture which Pausanias had seen in Greece. On descending from the Agera by the street called Straight, there stood, a little to the right, the temple of Apollo Prostaterius, with a statue of the god of great merit, as well as other statues by Praxiteles. In the ancient gymnasium, near the gates called Nymphades, was a pyramidal stone, called by the natives Apollo Carinus, and a temple of the Eleithyia. On the road to the port of Nisaea was a temple of Demeter Malaphoros. The Aeropolis of Nisaea still remained; on descending from the Aeropolis there was the tomb of Lelex on the sea-side. Near Nisaea was a small island, called Minoa, where the fleet of the Cretans was moved during the war against Nisus.

Megara still retains its ancient name, but it is a miserable place. It occupies only the western of the two ancient citadels, and as this was probably Alachtos, the town on the summit is on the site of the temple of Athena. There hardly any remains of antiquity at Megara. On the contrary there are a few remains of the ancient walls. None of the numerous temples mentioned by Pausanias can be identified; and only one of them is marked by the fruste of some Ionic columns. The magnificent aqueduct of Theocles has disappeared; and some imperfect foundations and a large fountain on the northern side of the town are the only remains of the celebrated fountain of the Sthnidae nymphs.

Of the Long Walls, uniting Megara with Nisaea, we have already spoken. They are noticed by Aristophanes under the name of τὰ Μεγαρακα κέλων (I. 1172). They were destroyed by the Megarians themselves, as we have already seen, in the eighth year of the Peloponnesian War, but they were subsequently restored by Phocion. Strabo speaks of them as if they still existed in his time (ix. p. 391), but they would seem to have fallen to ruin before that of Pausanias, as he makes no mention of them. According to Thucydides (v. 66) they were 8 stadia in length, but according to Strabo (i. c.) 18 stadia.

The position of Nisaea and Minoa has given rise to much dispute, as the localities described by Thucydides do not agree with the present features of the coast. The subject has been briefly discussed by Colonel Leake (Northern Greece, vol. ii. p. 401), and more fully by Dr. Arnold (Thucy. vol. ii. p. 393) and Lieut. Spratt. (London Geographical Journal, vol. vii. p. 265.) Thucydides refers to Minoa as an island close to Nisaea, and united to the latter by a bridge over a morass. On Minoa the Megarians had built a fortress (Thuc. iii. 51). Strabo (ix. p. 39) calls Minoa a promontory (ἀκραία). He says that, "after the Scironian rocks, we come to the promontory Minoa, forming the harbour of Nisaea." Pausanias (i. 44. § 3), however, agrees with Thucydides in calling it an island; but it may be observed that the expression of Strabo (Ἀκραία) is not inconsistent with its being an island, as stated by Thucydides and Pausanias. The difficulty in determining the site of Minoa and Nisaea arises from the fact, that there is at present no island off the coast which can be identified with Minoa. At the distance of nearly a mile and a half from Megara there is a small rocky peninsula, and further off two islands, the inner one of which affords shelter to a few of the small class of coasters. Hence it has been supposed that the inner island was Minoa, as it forms the part of the Megarians of the rocky promontory that this island is distant from the promontory about 200 yards, with 7 fathoms of water between them; consequently they could never have been connected by a bridge. It might, indeed, he argued, that the peninsula was once an island; but this is disproved by the fact that its isthmus is of equal height with its extremity. Moreover, there are no ancient remains, either on this island or the peninsula.

Other writers, among whom are Colonel Leake and Dr. Arnold, suppose the promontory of Titikho (see map, No. 6), further to the east, at the entrance of the strait of Salamis, to have been Minoa, since it now at one time have been an island. Accordingly, the statement of Strabo respecting the length of the Long Walls, is preferred to that of Thucydides. But this promontory is nearly 3 miles in length, which is larger than is implied in the description of Thucydides (iii. 51), who speaks of it as fortified only by a single fort. Moreover, Pausanias calls Minoa a small island. Lieutenant Spratt has offered a more probable solution of the difficulty. He supposes Minoa to be a rocky hill, surmounted by a ruined fortress, and standing in the middle of the sea south of Megara, at the distance of little more than a geographical mile, thus agreeing with the 8 stadia of Thucydides. "That this hill was once a peninsula, appears evident from the dry beds of two rivers, which pass close to its base; one on each side. The eastern
bed winds round the back of the hill, leaving only a narrow neck of elevated ground between it and that on the west side; and it is, therefore, clear, that when these two rivers had communication with the sea, the intermediate neck of land, with this hill, would have been a peninsula, or promontory. These two river beds were once the only outlets of the mountain streams which issue from the valleys on the north side of Mont Geraneia; for the ancient course of the eastern bed, although now ploughed over and cultivated, can be traced through the plain to the northward, as far as its junction with that river, whose torrent at present flows in an easterly direction towards the shallow bay of Tikho, crossing the site of the Long Walls which connected Megara with Nisaea and Minoa, and leasing themselves in the swamps bordering that bay. Although vestiges of the walls are not found in the bed of the river, yet, on examining the ground near it, the evidence is convincing that its present course does cross their site, as, at a short distance from it, on the Megarian side, their foundations may be traced in a direction transverse to the course of the river, and towards the castellated hill before mentioned. The dry watercourse on the western side of this isolated hill can be traced to within two or three hundred yards of the eastern one; and having no communication with any other mountain stream, it may not be unreasonable to suppose that formerly the river split there into two branches or mouths. This hill would then have been an island, as Thucydides calls Minoa. The subsequent deposit of earth brought down by the above mentioned stream, would have joined the hill to the mainland.

The accompanying map and drawing are taken from Lieut. Spratt's.

If this hill is the site of Minoa, the town of Nisaea must have been near it; and Lieut. Spratt discovered many vestiges of an ancient site on the eastern side of the hill, between the sea and a low rock which stands in the plain a short distance to the northward. "Among these remains are four small heaps of ruins, with massive foundations, in one of which there are three broken shafts of small columns erect, and wanting apparently only the fourth to complete the original number. Probably they were monuments or temples; and two Greek churches, which are now in ruins, but standing on two ancient foundations, will not be unfavourable to the supposition. Another church, Aziou Nikolaoes, which is perfect, also occupies the site of an ancient building, but it stands nearer to the sea." Lieut.
MEGARA.

Spratt further supposes that he has discovered remains of the ancient causeway, "between the base of the hill on its north side, and the opposite bank of the dry bed of a former river, there are three platforms of heavy buildings, one of which lies immediately at the foot of the hill, another on the edge of the opposite bank, and the third nearly central; and as the course of that former river-bed clearly and indubitably passes between them, it is more than probable that the bridge of communication may be recognised in these ruins." He also says, "that distinct remains of an ancient mode are to be seen extending from the south-eastern end of the hill, and curving to the eastward, so as to have formed a harbour between the hill and those ruins," which is in accordance with the statement of Strabo, that the port of Nisaea was formed by the promontory of Minos.

IV. TERRITORY OF MEGARA.

Megaris occupied the greater part of the large isthmus which extends from the foot of Mt. Cithaeron to the Arcocorinthus, and which connects Northern Greece with the Peloponnesus. The southern part of this Isthmus, including the Isthmus properly so called, belonged to Corinth; but the boundaries of Megaris and Corinth differed at an earlier and a later period. Originally Megaris extended as far as Crommyon on the Saronic, and Thermæ on the Corinthian gulf, and a pillar was set up near the Isthmus proper, marking the boundaries between Peloponnesus and Ionia; but subsequently this pillar was removed, and the territory of Corinth reached as far as the Scironian rocks and the other passes of the Geranian mountains. (Strab. ix. pp. 392, 393.)

Towards the N., Megaris was separated from Boeotia by Mt. Cithaeron, and towards the E. and N.E. from Attica by some high land, which terminates on the west side of the bay of Eleusis in two summits, formerly called Kerata or The Horns (τὰ Κέρατα), and now Κωντίλι. (Strab. ix. p. 393; Paus. xiii. 63; Plut. Them. 13.) Here there is an immense deposit of conglomerate limestone, which Pamantias also noticed (θ. 44. § 6.). The river Lycus, which flowed into the sea a little to the W. of the Horns, was the boundary of Megaris and Attica.

[ATTICA, p. 323, a.] The extreme breadth of Megaris from Pagen to Nisaea is estimated by Strabo (vii. p. 334) at 120 stadia; and, according to the calculation of Clinton, the area of the country is 143 square miles.

Megaris is a rugged and mountainous country, and contains no plain, except the one in which its capital, Megara, was situated. This plain was called the "White Plain" (τὸ Ἰεράκι τοῦκα, Schol. ad Hom. Od. v. 333, al. Mai; Etymol. M. 6 αὐτ. Arct. schol.), and is the same as Cymolia (Κυμοῖα, Paus. xii. 79), which produced the Cretan Cymolia or fuller's earth, and which Leukæ erroneous regards as a place (Northern Greece, vol. ii. p. 413). The main range of Mt. Cithaeron runs from W. to E., forming the boundary between Boeotia and Attica; but it is also prolonged southwards along the shores of the Corinthian gulf, and gradually rises into a new chain, which stretches across Megaris from W. to E., parallel to Mt. Cithaeron, is the highest on the western side, where it attains the height of 4217 feet (Paris), and gradually sinks down on the eastern side towards the Saronic gulf. On its western side it runs out into the promontory Aegilinus (Αἰγιλίνος, Asch. Λεβ. 303, with Schol.), and also into those of Olimph and Hikeraion in the Corinthian territory. [COINTHUS, p. 685.] On its eastern side the island of Salamis and the surrounding rocks are only a continuation of this chain. The mountains were called Gerania in antiquity (Γερανίας, Thuc. i. 105; Paus. i. 40. § 7), and are said to have received this name because, in the deluge of Deucalion, Megarians, the son of Zeus and a Sithonian nymph, was led by the cries of cranes (νηεντα) to take refuge upon their ruins. (Paus. i. 40.) Towards the south the Geranian mountains sink down into the plain of the Isthmus, while to the south of the Isthmus there rises another chain of mountains called the Oenian. Strabo (viii. p. 380) confounds the Geraniae with the Oené; and erroneously represents the latter extending as far as Boeotia and Cithaeron. His error has misled many modern writers, who, in consequence, speak of the Geraniae as a portion of the Oené. (Curtius, Peloponnesos, vol. i. p. 25.)

The Geranian mountains are almost, if not entirely, calcareous. They form the true boundary of Northern Greece, and rise above the Isthmus of Corinth like a vast wall from sea to sea. Three roads lead across these mountains into Peloponnesus. One runs from the western coast of Megaris, across the rocky peninsula of Parakhóra, the ancient Periæum of Corinth, down to the Corinthian gulf. It was the road by which armies frequently marched from Peloponnesus into Northern Greece, but in ordinary intercourse was not much used on account of its height. The second road passes through the centre of the Geraniae, and is called the road of the great Derëvëa from the narrow pass (Tark. Derëvëa), which leads between two masses of rock, and where guards were stationed in Turkish times. According to Gell the top of this pass was anciently fortified with a wall. The same writer says that, from the top of this pass to Corinth the distance is 8 hours 57 minutes, and to Megara 2 hours 33 minutes. This road is now little used. The third road, which leads along the eastern coast of Megaris, is the shortest way between Megara and Corinth, and therefore has been the chief line of communication between Peloponnesus and Northern Greece from the earliest times to the present day. This road, soon after leaving Megara, runs for several miles along a narrow ledge or terrace, cut in the rock half-way up the sides of the cliffs. On his right hand the traveller has the precipitous rock, while on his left it descends perpendicularly to the sea, which is 600 or 700 feet beneath him. The road, which is now narrow and impracticable for carriages, was made wide enough by the emperor Hadrian for two carriages to pass abreast. From the higher level the road descends to the brink of the water by a most rugged and precipitous path cut between walls of rock. This pass is the celebrated Scironian rocks of antiquity, now called Κάκη-σκαλα, or bad ladder (Αἰ Σκεπώδεις, Strab. ix. p. 391; αἱ Σκεπωδεῖς and αἱ Σκεπώθες, Polyb. xvi. 16; Σκεπώδεις δευτερο, Eur. Hyps. 1206; the road itself 8 Σκεπώς 866s, Herod. viii. 71; Sciron αἰ Σκεπωδείας, Paus. xii. 51.) According to a Megarian tradition, these rocks derived their name from Sciron, a polemarch of the Megarians, who was the first to make a footpath along the rocks (Paus. i. 44. § 6); but, according to the more common tradition, they were so called from the robber Sciron. Near the southern end of the pass, where the road
MEGARIS.

MEGARIS. [Megara.]

MEGARIS, a small island on the coast of Campania, mentioned by Pliny (vii. 6. 12), who places it between Paullulisus and Neapolis; it can therefore be no other than the islet now occupied by the Castel dell'Oro. [Neapolis.] It is evidently the same which is called by Statius Megalia. (Stat. Silv. ii. 2. 80.) [E. H. B.]

MECIDDO. [Legio; Magdolinum.]

MECAFIDDO VALLIS, the westernmost part of the vast plain of Escrielon, at the northern foot of Mount Carmel, watered by the Kisheon. [Escrielons Valls, Campus.] [G. W.]

MEGISTE (Megistor), an island off the coast of Lycia, opposite to Antiphellus. It contained a town which, if the reading in Strabo (xiv. p. 666) be correct, was called Ciithene (Kisthyn), but had perished before the time of Pliny (v. 33). There was also an excellent harbour, which appears to have been capable of containing a whole fleet. (Liv. xxvii. 22: comp. Steph. B. s. n., who calls the town Megeist: Ptol. v. 3. § 9; Sclav. p. 39.) The island, which derived its name from the fact that it is the largest of a group, is now called Kastelorygos, or Castel Rosso. The island seems to have been colonised by the Rhodians, or at least to have been found in their possession, for inscriptions found there are composed in the Doric dialect. There are but few remains of ancient buildings. (Leake, Asia Minor, p. 184; Fellows, Lyceia, pp. 187, &c.) [L. S.]

MEGISTUS. [Macedon.]

MEIACARBA (Amn. Marc. xviii. 6, 10; Meigkarkap, Theophyl. Sinoc. i. 13, ed. Bonn), a small place in Mesopotamia, mentioned by Ammianus and Theophylact. It appears to have been at no great distance from Amida. Ammianus states that it derived its name from certain cold springs which issues from them. (Cf. Böcking, Notiz. Digt. ii. p. 418.) [V.]

MEILICHUS. [Achaeia, p. 13. b.]

MELA or MELLA, a river of Gallia Transpadana, still called the Melia, which rises in the Alps, flows through the Vol Trompin, anciently the residence of the Triumpilini, enters the plain of Lombardy near Brixia, and falls into the Ollius (Oglio) more than 20 miles below that city. Catullus speaks of it as flowing through the city of Brixia, but this is an inaccuracy or a poetical license, as it is not the case, and lies more than a mile to the W. of it. [Brixiia.] Both he and Virgil describe it as a placid and winding stream. (Catull. Ivii. 33; Virg. G. iv. 278; Philargyr. ad loc.) [E.H.B.]

MELAE. 1. A town of the Samnites, mentioned only by Livy (xix. 20), among the towns of the Candine Samnites which were taken by Fabius in n. c. 214. The same author elsewhere (xxvii. 1) mentions a town of the Samnites which he calls Metacu, and which was not taken till n. c. 310, by Marcellus. Nevertheless, it is probable that the same place is meant in both cases, but we have no clue to its position.

MELAENA (Melânua). 1. A promontory of Ionia, forming the north-western point of the peninsula which is traversed by Mount Mimas. It was celebrated in ancient times for its quarries of mili-stones. (Strab. xiv. p. 645.) It is possible that this promontory, which is now called Kara-Burna (the Black Cap), may be the same as the one called by Pliny (v. 31) Corynaenum Promontorium, from the town of Coryne, situated at the southern extremity of Mount Mimas.

2. A promontory of Bithynia, on the right hand on sailing through the Beopora into the Euxine, between the rivers Rhetia and Artace. (Apollon. Rhod. ii. 651; Orph. Argon. 716; Arrian, Peripil. p. 13; Marcati, p. 93.) In the anonymous Peripili of the Euxine (p. 2), it is called Kalliduo, and Polybius (v. 1. § 3) calls it simply Bóthias ἀηρο. Its modern name is Tbuli.

3. The north-western promontory of the island of Chios (Strab. xiv. p. 645), now called Cape S. Nicolou. [L. S.]

MELAENAE. [Attica, p. 329. b.]

MELAENAEAE or MELAENAE. (Melânai, Paus.; Melanai, Rhian. ap. Steph. B. l. s. v.; Eth, Melaenai), a town of Arcadia, in the territory of Harena, and on the road from Harena to Megapolis. It was distant 40 stadia from Duplachium. Pausanias says that it was founded by Melaenus, the son of Lycon, but that it was deserted in his time and overflowed with water. The ruins of Melanæae lie 4 or 5 miles eastward of Harena, between the villages Kokora and Kakorios, where are the re-
MELANIPPE or MELANIPPIUM (Μελανῖππος or Μελδανῖππος), a small town on the coast of Lycaonia, on the western slope of Mount Phoebusias, about 30 stadia from Cape Hieron, and 60 stadia south of Gagea, of which Leake (Asia Minor, p. 185) believes it to have been the port town. (Herat. Frigiam. 247; Steph. B. s. r., who erroneously calls it a river; Quint. Smyrn. iii. 232; Stadium, Mar. M. §§ 210, 211.) Fellows (Discover in Iugia, p. 212) found a few tombs cut out of the cliffs of the neighbourhood. [L. S.]

MELANOCAUTULI. [Gæftrula.]

MELATHRUS (Μελαθρός), a small river on the north coast of Pontus, forming the boundary between Pontus Polemosianus and Cappadocius, and flowing into the Euxine a little to the east of Cutyera. (Plin. H. N. vi. 4: Arriam, Perip. p. 17; Anonym, Perip. p. 12; Tob. Pent., where it is called Melinus.) It is probably the same river as now bearing the name of Melet Irenak. (Hamiton, Researches, i. p. 267.)

MELANTIAS (Μελάντιας), a village of Thrace, on the river Alyans, and on the road from Heraclea to Byzantium, 18 miles from the latter. (H. Ant. iv. p. 126, 132, 133, 134, 136, 137; Ammian, xxxiii. 1; Agath. p. 158.) [A. L.]

MELANTII SCOPULI (Μελαντίων σκόπουλον), some rocks in the Aegaean sea, where Apollo appeared to the Argonauts, probably lay between Icaria and Myconus. (Strab. xiv. p. 636; App. Rhod. iv. 1707; Sycyl. p. 55; Hesych. s. v.; Apoll. i. 9 § 26; Stadium, §§ 252, 270.)

MELAS (Μέλας), the name of several rivers, so called from the dark colour of their water. 1. A stream of Mela in Achaea, described by Dionysius as flowing from Mount Eremantus. (Dionys. Per. 416; Cullim. in Jov. 23.) Strabo (vii. 386) confounds it with the Peiras or Pniros in Achaea; but the reading is probably corrupt. [Achaila, p. 14 a.]

2. A river of Boeotia. [Borotta, p. 413 a.]

3. A river of Malis, which in the time of Herodotus flowed into the Malian gulf, at the distance of 5 stadia from Trachis. It is now called the Meteor-Neia, and falls into the Scaphius, after uniting its waters with the Grena (Dyrra), which also used to flow in ancient times into the Malian gulf (Herod. vii. 198; Strab. iv. p. 428; Liv. xxxvi. 22; Leake, Northern Greece, vol. ii. p. 26.)

5. A river of Thrace, now called Salabottia or Scheher-Sa, falling into a deep bay of the same name (Μελας καλας), which is bounded on the east by the shore of the Thracian Chersonesus. The modern name of the bay is the gulf of Saros. (Herod. vii. 58, 198; Strab. vii. p. 331; Liv. xxxii. 40: Ptol.iiii. 11 §§ 1, 2; Meli, ii. 2; Plin. iv. 11. s. 18.)

MELAS (Μέλας). 1. A small river of Capadocia, which has its sources on Mount Aegeus (Ptol. v. 6 § 8), and flows in a north-west direction past the town of Mazaca, frequently overflowing its banks and forming marshes. (Strab. xii. p. 538, 539.) It emptied itself into the river Ialysus, opposite the town of Siva. Strabo (L. e.) erroneously describes the Melas as a tributary of the Euphrates, as has been shown by Hamilton in the Journal of the Geog. Society, vol. viii. p. 149 (comp. his Remarks, i. 269, 60). The river still bears a
MELIAS SINUS.

name answering to the ancient Melas, Karru-Su, that is, the Black River.

2. A navigable river in Pamphylia, flowing in a southern direction from Mount Taurus towards the sea, into which it emptied itself 50 stadia to the east of Side. (Plin. v. 22; Strab. xiv. p. 667; Paus. viii. 28, 2; Mel. iv. 14; Lusiom. v. 16; vi. 5; Sto- dier, Mela, vii. §§ 193, 194.) Its modern name is Manavgat-Su. (Leake, Asia Minor, p. 196.)

3. A small river in Pontus Ptolemaicus, in the country of the Mackones. (Plin. vi. 4.) [L. S.]

MELIAS SINUS. [Melias, No. 5.]

MELDI (Mel^a, Potl. ii. 8. § 15), a people of Gallia Celtica or Lugdunensis in Ptolemy's time, whose chief place was latium; but the position which Ptolemy assigns to the Meldae and to latium is very incorrect, if the Meldi are properly placed as neighbours of the Parisii and on the Matra (Marne). Strabo is not clearer. He says (iv. p. 194:—

"On both sides of the Sequana there are the Parisii, who possess an island in the river and a city Latugia, and Meldae, and Lexovii, along the Ocean these;" by which he perhaps means only the Lexovii, but he might mean to say that the Meldae were on the Ocean. Pliny (iv. 18) mentions in Lugdunensis Gallia "Meldi Liberii, Parisii, Trecesses." From all this we may infer that the Meldi were near the Parisii; but we only obtain a certain result as to their position from that of the Parisii and the Matra (Marne). Strabo's account is not trustworthy. The name Meldi is of Celtic origin, and the passage has caused great difficulty. The name Meldi in Caesar's text is not certain. The MSS. have Meldi, Medii, Medii, and Belgae. Caesar, intending to invade Britannia a second time, ordered the legati who were set over his legions to get ships built in the winter of B.C. 55—54. All his legions were in the country of the Belgae during this winter (B. G. iv. 38); and it seems a proper inference that all these ships were built in the country of the Belgae. When Caesar in the spring of B.C. 54 came to the Portus Itius, he found all the ships there except sixty which were built "in Meldi." These ships being driven back by bad weather, had returned to the place from which they sailed. The wind which brought the other ships to the Portus Itius, which ships must have come from the south, would not suit ships that came from the north and east; and hence D'Anville justly concluded that these Meli, whatever may be the true name, must have been north and east of Rims. A resemblance of words led him to find the name of the Meldi in a position where he calls Meldefelt near Bruges. The true name of the place is Maldeghem. There is a place on the Schelde about a league from Oudenaarde, named Meliden, which under the Empire was a Roman station (Recueil d'Antiquités, f. c. trouvées dans la Flandre, par M. J. de Basil). This is certainly not very conclusive evidence for fixing the site of the Meldi; if that is the right name. "Belgae" cannot be the true reading, because all the ships were built in the territory of the Belgae; and Caesar's remark about the sixty would have no meaning, if he spoke of them as built "in Belgia."

If we cannot fix the site of these Meldi, we can see that they are not the people on the Marne. Caesar could have no reason for building vessels so far up the river. If he did build any on the Seine, he built them lower down. But it is clear that Caesar does not mean any vessels built on the Seine, for he says that these sixty were driven back to the place from which they came; a remark which, if applied to ships built on the Seine, is, without any meaning. Ekert (Galen, p. 325) has made some objection to D'Anville's position of the Meldi, and his objections may have some weight; but his notion that Caesar's Meldi can be the Meldi on the Marne shows that he did not understand Caesar's text.

MELIDA (Mel^a), a town of Messia Superior, on the road from Naissus to Sardica. (It. Ant, p. 135 : It. Hieros, p. 566.) [G. L.]

MELES (Mel^a), a small river of Ionia, flowing close by the walls of Smyrna, and discharging its waters into the Hermos. (Strab. xii. p. 554, xiv. p. 646.) The little stream derives its celebrity from its connection with the legends about Homer, and from a report about the healing powers of its waters. There was a tradition that near the sources of the river Meles there was a cave in which Homer had conserved his epics preserved on the rocks, sometimes called M^a^ris^eger; and he (Plu. viii. 5, § 6; Vit. Hom. 2; Stat. Silv. iii. 3. 60, 7. 33; Tihom. iv. 1. 200.) The belief in the healing power of its waters is attested by an inscription quoted by Arundel (Asia Minor, vol. ii. p. 406) and Hamilton (Researches, vol. ii. Append. No. 48). These circumstances are of some importance in identifying the river. It was used to be supposed that a small, dirty, and muddy stream, flowing close by the modern town of Smyrna, was the same as the ancient Meles. But there is another stream, with bright and sparkling water, which rushes over its rocky bed near Bournonbat, and is still celebrated for its agreeable and wholesome qualities. Travellers are now justly inclined to identify this river with the ancient Meles. This supposition is confirmed by our more accurate knowledge of the site of ancient Smyrna, which was on the north of the bay, while new Smyrna was on the south of it, at a distance of 20 stadia from the former; the site of the ancient place is still marked by a few ruins, and close by them flows the clear stream which we must assume to be the ancient Meles. (Comp. Hom. Hymn. viii. 3; Polt. v. 2. § 7; Steph. B.s.v. M^el^ou^s^ol^as, according to whom the river was also called Meletus; Plin. v. 31; Hamilton, Researches, vol. i. p. 51, fdl.) [L. S.]

MELESES, a people in the S. of Spain, upon whose confines was situated the rich city of Oriagis, also called Aurinia. (Liv. xxviii. 3.) [Aurinia.] MELIBOCUS (TV M^e^l^b^o^k^o^u^s^y^m^a), a mountain in the interior of Germany, above the Saarsum Silva. (Potl. ii. 11. § 7) There can be little doubt that Melibocus is the ancient name for the Harz mountain, or the Thüringer Wald, or for both. [L. S.]

MELIOBEA, an island at the mouth of the Orontes in Syria, the sole authority for the existence of which appears to be a poetical myth of Opianus. (Synesig. ii. 115, &c.) [G. W.]

MELIOBEA (Mel^a^s^e^u^m: Eth. Mel^a^b^o^e^c^e^). 1. An ancient town of Magnesia in Thessaly, mentioned by Homer, as one of the places subject to Philectes.
MELITEN.

(II. ii. 717.) It was situated upon the west-coast (H.-rod. vii. 188; Sevyx, p. 25; Apoll. Rhod. i. 592), and is described by Livy (xiv. 13) as situated at the roots of Mt. Ossa, and by Strabo (ix. p. 443) as lying in the gulf between Ossa and Pelion.
Leake therefore places it near 
Agisias (Northern Greece, vol. iv. p. 414). Meliboea was taken and plundered by the Romans under Cn. Octavius, b.c. 168. (Liv. xiv. 46: Meliboea is also mentioned by Strab. ix. p. 496; Steph. B. s. v.; Mela, ii. 3; Plin. iv. 9. s. 16.)
The Meliboean purple is said by Lactius (ii. 499; Virg. Aen. v. 251) to have derived its name from this town. Many modern writers, however, suppose the name to have come from the small island Meliboea at the mouth of the Orontes in Syria; but there is no reason for this supposition, as the shellfish from which the purple dye is obtained is found in the present day off the coast of Thessaly.
2. A town of Illyria in Thessaly, is conjectured to be represented by 
Melitisa. (Liv. xxvi. 11. 1; Livy, Carthag. War, x. p. 556.)

MELINOPHAGI (Μελινοφαγοι), a people of Thrace upon the coast of the Euxine, near Salmydessus. (Xen. Anab. vii. 5. § 12; Theopomp. ap. Steph. B. s. v.) They are, perhaps, the same people as the Asi (Ασίοι), whom Strabo places in the same neighbourhood (vii. pp. 319, 320).
MELITA (Μελίτη; Etr. Melatūs, Melitensis; 
Melto), an island in the Mediterranean sea, to the S. of Sicily, from the nearest point of which it is distant 47 geo.

MELITEN.

MELITA (Μελίτη; Etr. Melatūs, Melitensis; 
Melto), an island in the Mediterranean sea, to the S. of Sicily, from the nearest point of which it is distant 47 geo.

MELITA (Melita, Mela, Malia), an island in the Mediterranean sea, to the S. of Sicily, from the nearest point of which it is distant 47 geo., with 55 from Cape Pachysum. Strabo gives this last distance as 88 miles, which is greatly overstated; while Pliny calls it 84 miles distant from Camarina, which equally exceeds the truth. (Strab. vi. p. 277; Plin. iii. 8. s. 14.) The island is about 17 miles long, and between 9 and 10 in breadth, and is separated only by a narrow channel from the adjoining island of Gaulos, now Geo. Notwithstanding its small extent, the opportunity situation of Melita in the channel between Sicily and Africa, and the excellence of its harbours, must have rendered it a place of importance as a commercial station, and it was occupied, probably at a very early period, by a Phoenician colony. (Diod. v. 12.) The date of this is wholly uncertain, and it is called by later writers for the most part a Carthaginian settlement (Seyl. p. 50. § 110; 
Steph. B. s. v.), which it certainly became in after times; but there can be no doubt that Diodorus is right in describing it as originally a Phoenician one, established by that people as an emporium and harbour of refuge during their long voyages towards the west. The same author tells us that in consequence of this commercial traffic, the colony rose rapidly to prosperity, which was increased by the industry of its inhabitants, who practised various kinds of manufactures with great success. (Diod. l. c.) But notwithstanding this account of its prosperity we have scarcely any knowledge of its history. The notice of it by Sevyx as a Carthaginian colony, seems to prove that it had not in his day received a Greek settlement; and indeed there is no trace in history of its having ever fallen into the hands of the Greeks of Sicily, though its coins, as well as inscriptions, indicate that it received a strong influence of Greek civilisation; and at a later period appears to have been in a great measure Hellenised. Some of these inscriptions point to a close connection with Syracuse in particular, but of the origin and nature of the colony an account (Brockh., Corp. Inscri. Gr. 5752, &c.) In the First Punic War we find Melita still in the hands of the Carthaginians; and though it was ravaged in b. c. 257 by a Roman fleet under Attilius Regulus, it does not appear that it fell permanently into the hands of the Romans. At the outbreak of the Second Punic War it was held by a Carthaginian garrison under Hamilcar, the son of Gisco, who, however, surrendered the island to Tib. Sempronius, with a Roman fleet, b. c. 218 (Liv. xxii. 51); and from this time it continued without intermission subject to the Roman rule. It was annexed to the province of Sicily, and subject to the government of the praetor of that island. During the period that the Mediterranean was so severely infested by the Carthaginian pirates, Melita was a favourite resort of those corsairs, who often made it their winter-quarters. (Cic. Ferr. iv. 46, 47.) Notwithstanding this it appears to have been in the days of Cicero in a flourishing condition, and the greater orater more than once during periods of civil disturbances enterprises of robbing that island into a kind of voluntary exile. (Cic. ad Att. iii. 4. x. 7, 8, 9, &c.)

The inhabitants of Melita were at this period famous for their skill in manufacturing a kind of fine linen, or rather cotton, stuffs, which appear to have been in great request at Rome, and were generally known under the name of "vestis Melitensis." (Cic. Ferr. ii. 72, iv. 46; Diod. v. 12.) There is no doubt that these were manufactured from the cotton, which still forms the staple production of the island.

Melita is celebrated in sacred history as the scene of the shipwreck of St. Paul on his voyage to Rome, A. D. 60. (Act. Apost. xxviii.) The error of several earlier writers, who have transferred this to the Melita on the E. coast of the Adriatic (now Melatea), has evidently arisen from the vague use of the name of the Adriatic, which is employed in the Acts of the Apostles (xxvii. 27), in the manner that was customary under the Roman Empire, as corresponding to the Ionian and Sicilian seas of that period. (Tisch. in Acta Ap.) The whole course and circumstances of the voyage leave no doubt that the Melita in question was no other than the modern Malta, where a bay called St. Paul's Bay is still pointed out by tradition as the landing-place of the Apostle. (The question is fully examined and discussed by Mr. J. Smith, in his Voyage and Shipwreck of St. Paul, Svo. Lond. 1848; also in Conybeare and Howson's Life of St. Paul, vol. ii. p. 353, &c.)

No other mention is found of Melita during the period of the Roman Empire, except in the geographers and the Maritime Itinerary, in which last the name already appears corrupted into its modern form of Malta. (Strab. vi. p. 277; Plin. iii. 8. s. 13; Mel. ii. 7. § 18; Itol. iv. 3. § 37; Itin. Marit. p. 518; Sil. Ital. xiv. 251.) After the fall of the Roman Empire it fell for a time into the hands of the Vandals; but was recovered from them by Belisarius in A. D. 533 (Procop. B. ii. 14), and appears to have continued from this time subject to the Byzantine empire, until it was conquered by the Arabs in A. D. 870.

The present population is principally derived from an Arabic stock; but it is probable that the Arab conquerors here, as well as in Africa, have been to a great extent amalgamated with the previously existing Punic population. The inscriptions discovered at Malta sufficiently prove that the Greek language was at one time in

Digitized by Microsoft ©
bital use there, as well as in the neighbouring island of Sicily; and one of these, which is bilingual and small there, is doubtless the material of the fine stuffs manufactured in the island; and the excellence of its soft stone as a building material accounts for the splendour of the houses, extolled by Diodorus (v. 12). Another peculiar production of the island was a breed of small dogs, noticed by Strabo and other authors, though some writers derived thes from the Melita in the Adriatic. The breed still exists in Melita (Strab. vi. p. 277; Athen. xii. p. 518; Plin. iii. 26. s. 30.) The freedom from venomous reptiles which Melita enjoys, in common with many other secluded islands, is ascribed by the inhabitants to the miraculous intervention of St. Paul. (Quintino, l. c. p. 117.)

[Ε. Η. Β.]

MELITA (ΜΕΛΙΤΑ, Syl. p. 8; Steph. B.; Agathem. i. 5; Plin. iii. 30. Itin. Anton.; Pott. Tab.; Maltere, Plut. ii. 16. § 14; Melatoria Const. Porph. Adm. Imp. 38; Melita, Gregory, Geog. of the Libanarian group of islands. It was so called like its namesake Melita or Malta, from the excellence of its honey; and some erroneously have claimed for it the honour of being the island on which St. Paul was wrecked. (See preceding article.) It is the same as the long narrow and hilly island of Melita, lying about half-way between Carvola and Ragusa, remarkable in modern times for the singular phenomenon of subterranean fountains called "Deorationi di Melida," the cause of which has been attributed to the region of volcanic activity which is supposed to underlie the whole of this coast. (Comp. Daubeney, On Volcanoes, p. 333.) The site of a palace which was built by Agieshans of Cilaica, the father of Opiamni, the author of the "Halieutica," when banished to the island in the time of Septimus Severus, is still shown. (Wilkinson, Dalmatia and Monte-Negro, vol. i. p. 265.)

MELITAEA, or MELIETIA (ΜΕΛΙΤΑΙΑ, Strab., Plin., Steph. B.; Melitaea, Polyh.; Meliția Thuc., Eth. Meliția, Melitene), an ancient town of Phthisiotis in Thessaly, situated near the river Enipeus, at the distance of 10 stadia from the town Helias. (Strab. ix. p. 432.) The inhabitants of Melitaea affirmed that their town was anciently called Pyrrha, and they showed in the market-place of the town Helian, the son of Deucalion and Pyrrha, (Strab. l. c.) When Brasidas was marching through Thessaly to Macedonia, his Thessalian friends met him at Melitaea in order to escort him (Thuc. iv. 78); and we learn from this narrative that the town was one day's march from Pharsalus, whether Brasidas proceeded on leaving the former place. In the Lamian war the allies left their baggage at Melitaea, when they proceeded to attack Leonnatus. (Diod. xvii. 15.) Subsequently Melitaea was in the hands of the Aetolians. Philip attempted to take it, but he did not succeed, in consequence of his scaling-ladders being too short. (Polyb. v. 97, ix. 18.) Melitaea is also mentioned by Sylax, p. 24; Ethnor. ap. Steph. B. s. v.; Ducas. p. 21; Plin. iv. 9. s. 16; Plut. iii. 13. § 46, who erroneously calls it Melitarpa. Leake identifies it with the ruins of an ancient fortress situated upon a lofty hill on the left bank of the Enipeus, at the foot of which stands the small village of Kexceli. (Northern Greece, vol. iv. p. 469, seq.)

MELITENE (ΜΕΛΙΤΕΝΙ, Plut. vi. 3. § 3), the name given by Potonius to that part of Susiana which lay along the banks of the Tigris. [V.]

MELITENE (ΜΕΛΙΤΕΝΙ, Eub. Meliteron), a city in the easternmost part of Cappadocia, and the capital of the district called Melitene. It appears that in the time of Strabo (xii. p. 537) neither
MELITONUS.

MELLODEUM or MELLOSECTUM, as it is also read, in Gallia Narbonensis, is placed in the Table on a route from Alpis Cottina (Mont Genèvre) to Vienna (Vienne). It is the next place before Catorissum (Catorissum), which lies between it and Cularo (Grenoble). Mellosedum may be at or near the Bayou d'Ussan. [G. L.]

MELOBOTEIRA (Meλοβότειρα), a name which was applied to Edessa in Macedonia. (Steph. B. s. s. Alpay. [E. B. J.]

MELODUNUM (Meloun), a town of the Somes in Gallia (B. G. vii. 58), on an island in the Seine (Scine). Though the termination dan seems originally to have signified a hill or height, it became a part of the name of some towns, which like Melobesum, may have been first raised therefrom by the people. In the Antonine Itinerary Melodunum appears under the name Meleutum, and in the Table in the form Metrodum. The distance from Latetia in the Itins. is 17 or 18 Gallic leagues. From Melodunum to Condace (Monteher-sour-Yonna) is 15 Gallic leagues. [Condace. No. 2.]

The old Celtic town on the island was replaced by a castle, of which there are some remains. The present town of Melun is on the right bank of the Scine, about 28 miles from Paris by the road. In the time of Caesar (B. G. vii. 58) there is a reading "qui Metisodaco," where the common reading is "qui a Meloduno." The same variation occurs in c. 60; and in c. 61 "Metisodaco versus" appears to be the received reading. A careful study of Caesar will satisfy any person that Melon is meant in all these passages, whether the true reading in Caesar's text is Melodunum, Metisodaco, or something else. Melodunum comes nearest to the modern form. Waltkenaer places Metisodaco at the confluence of the Scine and Marne. The variety in the reading of this name occurs also in the Itins. as shown above. The stratagem of Labienus on the Scine (B. G. vii. 58, &c.) is explained in the article LUTETIA. [G. L.]

MELOS. (Μήλος: Eth. Μήλος: Mibo), an island in the Aegean sea, and the most south-westerly of the Cyclades, whence it was called Zephyria by Aristotle (ap. Plin. iv. 12, s. 23; comp. Steph. B. s. c.), and was even placed by Strabo in the Creton sea (s. p. 484). The latter writer says (i. c.) that Melos is the 700 stadia from the promontory of Penia in Crete, and the same distance from the promontory Syl-laeanum in Argolis. The island is 70 miles north of the coast of Crete, and 65 miles east of the coast of Peloponnesus. It is about 14 miles in length and 8 in breadth. Pliny and others describe it as perfectly round in shape ("Mellisinarum rotundissimus," Plin. i. c.; Solin. c. 11; Isid. Orig. xiv. 6); but it more resembles the form of a bow. On the northern side there is a deep bay, which forms an excellent haven. In the island is said to have borne several names in more ancient times. Besides that of Zephyria given to it by Aristotle, it was also called Melimba by Aristides, Mialalida by Callimachus, Siplia and Acylon by

this nor any other town existed in that district. Pliny (vi. 8), on the other hand, speaks of Melitene as a town built by the fabulous queen Semiramis of Assyria, both accounts may be reconciled by the supposition that the site of the town was formerly occupied by some castle or fort, such as we know to have existed in that country from early times. (Strab. xii. p. 537.) The town was situated on the banks of a small tributary of the Euphrates, which was not far distant from Melitene, and in a very salubrious district. During the first century of the Christian era, the town was not of much importance (Tac. Ann. xx. 26); but Trajan raised it to the rank of a great city (Procop, de Aedif. iii. 4), and thereupon it became a central point to which several roads converged. (H. Ant. p. 157, 203, 211, 215.) The emperors Anastasius and Justinian embellished and placed it surrounded with new walls. Ever since the reign of Titus, Melitene had been the station of the famous Christian Legio xii. fulminata; and after the division of Armenia into two provinces, it became the capital of Armenia Secunda. (Herrod. p. 703; comp. Polyb. v. 7. § 5, vii. 17. § 39; Dion Cass. iv. 23; Steph. B. s. v.; Plin. v. 20; Procop. de Bell. Pers. i. 17.) In 407, it is said, the Roman kings added a great victory over the Persian Chosroes I. near Melitene; and the place is frequently mentioned by the Byzantine writers. But at present it is in ruins, though it still bears its ancient name in the form of Malatia. [L. S.]

MELITONUS, a station on the Egnatia Way, which the Jerusalem Itinerary places between Hebron and Grada, at 13 M. P. from the former. Its position must be sought for not far from Filafrin. Tafel (de Vulc. Egnat. Part. Orient. p. 401) thinks that the name should be written Maeritov. [E. B. J.]

MELITTA (Μελιττα, Μελισά, Hecat. Fr. 327, ed. Klansan), one of the five factories which Hanno (p. 2, ed. Hudson) planted between Ptolemais and the river Lixus, on the W. coast of Africa; probably near the Wad Meissar. (Comp. Mem. de l'Acad. des Inscri. vol. xxv. p. 41.) [E. B. J.]

MELIZIGARA (Μελιζιγαρά, Artham. Peripl. p. 30), a commercial entrepôt on the southern coast of Hildotia, apparently near the site of the modern El Agde. It is no doubt the same place where Ptolemy records an island under the name of Melizegyros or Milizegiria. (Μελιζιγυρίας, Μελιζύγηρις, vii. 1. § 95.) [V.]

MELLA. [MELLA.]

MELLALIA. 1. (Melapía, Plut. Sect. 12; Mellaria, Melia, ii. 6. § 9; Plin. iii. i. 3; H. Anton. p. 407; Geogr. Rap. iv. 12; Melapia, Strab. iii. p. 40; in Kramer's ed., the old edd. have Melapia); also Mellaria, Mount. p. 39; Meleopia, Polyb. iv. 4. 53; Melepsa, and B. s. c. B. 7. It is a town of the bastile (Pol. i. c.), on the road between Calpe and Bolon (H. Anton. i. c.), possessing e-stablishments for salting fish (Strab. i. c.). It probably stood between Tarqia and Val de Vuca, or was on the site of Val de Vuca itself. (Men. de l'Aerd. des Inscri. xxx. p. 107; Philos. Transactions, xxx. p. 920.)

2 A town in the interior of Hispania Baetica, belonging to the conventus Cordubensis, and on the road from Corduba to Emerita, probably the modern Tavassila de la Orquin. (Plin. iii. i. 3; H. Anton. p. 414), with Wesseling's note: Gruter, Inscri. p. 321. 10; Morales, 48. p. 19; Flores, Esp. Topogr. ix. 240.)
MELOS.

Heraclides (Plin. l.c.), and also Byblis by Stephanus B. (s. v. Μήλος); the latter name is said to have been derived from its receiving a colony from the town of Byblis in Phoenicia. Other writers mention this Phoenician colony, and Festus derives the name of Melos from the founder of the colony. (Fest. s. l. c. Melos.) Some connect the name with μήλος, an apple, on account of the round shape of the island. The Phoenician settlement is probable; but we know that it was colonised at an early period by the Lacedaemonians, and that it continued to be inhabited by Dorians down to the time of the Peloponnesian War. According to the Melians themselves, the Lacedaemonians settled on the island 700 years before this war. (Herod. viii. 45; Thuc. v. 84, 112.) In the Peloponnesian War, the Melians remained faithful to their mother city. In n. c. 426, the Athenians made an unsuccessful attempt upon the island; but in 416 they captured the principal town, put all the adult males to death, sold the women and children into slavery, and colonised the island afresh by 500 Athenians. (Thuc. v. 84—115; Diod. xii. 80; Strab. l.c.)

Melos is mountainous and of volcanic origin. Its warm springs, which are now used for bathing, are mentioned in ancient times. (Plin. xxxi. 6. 23; Athen. ii. p. 43.) Pliny says that the best sulphur was found in Melos (xxxv. 15. s. 50); and among other products of the island he enumerates alum (xxxv. 15. s. 52), pumice-stone (xxxvi. 21. s. 42), and a bright colour, called Melian pigmentum (xxxv. 6. s. 19; comp. Vitruv. vii. 7; Diosc. v. 150; Plant. Most. i. 3. 107.).

The mines of alum are on the eastern side of the island, and are limited to a very small area. The stone of alum is of brownish colour, and of a great variety of appearance. It has been a volcano.

The south-western hali of the island, the mountains are more rugged and lofty; the highest summit bears the name of St. Elias. The island produces good wine and olives, but there is not much care taken in the cultivation of the vine. In antiquity Melos was celebrated for its vines. (Athen. i. p. 4.) One of its most beautiful fountains is the fountain of St. Nicolas. In ancient times the chief town in the island was called Melos. It stood upon the great harbour. It is celebrated as the birthplace of Diogoras, the Athenian, and the Apostle Seraphias. (Dict. of Biogr. art. Diogoras.)

The town appears to have been small, since it is called by Tucydides a καταδύτη, not κατά τός; and of the 3000 men who originally composed the Athenian expedition, the smaller half was sufficient to besiege the place. (Thuc. v. 84, 114.) The present capital of Melos is named Kastron, and is situated upon a steep hill above the harbour. The former capital was in the interior, and was deserted on account of its unhealthy situation. Between Kastron and the northern shore of the harbour are the ruins of the ancient town, extending down to the water-side. "On the highest part, which is immediately overlooked by the village, are some remains of polygonal walls, and others of regular masonry with round towers. The western wall of the city is traceable all the way down the hill from the summit to the sea: on the east it followed the ridge of some cliffs, but some foundations remain only in a few places" (Leake). Within the enclosure there is a small hill, on which stand a church of St. Elias and a small monastery, and which perhaps served in antiquity as a kind of acropolis. Here several architectural fragments have been found. On the south-eastern side of the hill are some seats cut out of the rock in a semi-circular form, of which only four remained uncovered when Ross visited the island in 1843. They appear to have been the upper seats of a small theatre or odeon, which was perhaps more ancient than the large theatre mentioned below. In front of these seats is a quadrangular foundation of regular masonry, of which in one part four or five courses remain. About 40 steps eastward of this foundation are the remains of a temple or some other public building, consisting of fragments of a Corinthian capital and part of a cornice. About a hundred steps SW. is the larger theatre, which was cleared from its rubbish in 1836 by the king of Bavaria, then Crown Prince. The nine lowest rows of seats, of white marble, are for the most part still remaining, but the theatre, when entire, extended far up the hill. From the character of its architecture, it may safely be ascribed to the Roman period. There are no other remains of the ancient town worthy of notice.

Eastward of the ancient city is a village named Τρώανη, from the tombs with which the hill is pierced in every part. Eastward of Τρώα is a narrow valley sloping to the sea, which also contains several sepulchral excavations. Some of them consist of two chambers, and contain niches for several bodies. There are, also, tombs in other parts of the island. In these tombs many works of art and other objects have been discovered; painted vases, gold ornaments, arms, and utensils of various kinds. Some of them have been discovered at Melos, of which Ross has given a description. (Tournafort, Voyag., vol. i. p. 114, Engl. tr.; Tavernier, Voyag., vol. i. p. 435; Olivier, Voyag., vol. ii. p. 217; Leake, Northern Greece, vol. iii. p. 77; Prokesch, Denkmälerdiktungen, vol. i. p. 531, vol. ii. p. 200; Feidler, Reise, vol. ii. p. 369; Ross, Reisen auf den griechischen Inseln, vol. iii. pp. 3, 145.)

COIN OF MELOS.

MELOS (Μήλος: Εθά, Μήλαια), a village of Arcadia, mentioned only by Stephanus B. (s. v.).

MELOTIS, a district of Triphylia in Epirus. (Liv. xxxii. 13.) The names of Triphylia and Melotis, in connection with Epirus, occur only in Livy, Leake supposes that Melotis, which name indicates a sheep-feeding district, was probably the pastoral highlands around Ostana of. On the borders of Molossis and Attamia. (Northern Greece, vol. iv. pp. 104, 119.)

MELEPEIA (Μελεπεία), a village in Arcadia, situated upon Mt. Oinias, which is a portion of Mount Lycreus, so called because Pan was said to have here discovered the melody (μήλαια) of the syrinx. (Paus. vii. 38. § 11.)

MELPES, a small river of Lucania, flowing into the Tyrrhenian sea near the promontory of Pa-
MELPIS.

MELPIS or MELFIS (Μέλψις: Μέλψις), a small river of Latium, falling into the Libri (Carystiius), about 4 miles below its junction with the Trems (Scarco). It crossed the Via Latina about 4 miles from Aquinum, though Strabo erroneously speaks of it as flowing by that city. It is a still greater mistake that he calls it a great river (ποταμὸς μέγας, Strab. v. p. 237), for it is in reality a very inconsiderable stream: but the text of Strabo is, in this passage, very corrupt, and perhaps the error is not that of the author. The name appears in the Tabula, under the corrupt form Mefel, for which we should probably read Ad Melpeum. (Tab. Peut.)

MELPUM, a city of Calisian Gaul, of which the only record preserved to us is that of its capture and destruction by the combined forces of the Insulbrini, Boans, and Senones, which took place according to Cornelius Nepos on the same day with the taking of Ven by Camillus, n. c. 396 (Corn. Nep. ap. Plin. ii. 17. s. 21). He calls it a very wealthy city ("opulentia præcipium"), and it therefore seems to have been one of the principal of the Etruscan settlements in this part of Italy. All trace of it subsequently disappears, and its site is a matter of mere conjecture. ([E. H. B.]

MEL-SAGUM, a lake or marsh in Germany (Mela, iii. 3. § 3), the site of which is unknown; it is perhaps one of the lakes of Mecklenburg. ([L. S.]

MELUS (Μέλυς), a small river of Hysti-pia Tarraconensis, flowing into the sea through the territories of the flourished (p. 145), or rather Nysa (Νύσα), perhaps the modern Narcea. (Strab. iii. p. 167; Flores, Esp. Saur. xx. p. 47.)

MEMBRIAS. [Αναφέρονται.]

MEMBRESA (Μεμήρεσα), a town of the provincial, the position of which is fixed by Procopius (B. G. ii. 15) at 350 stadia from Carthage. Membresa (Membresia, Tent. Tab.), as it is called in the Antonine Itinerary, was a station between Musti, and Sichehia, and a place of some importance in ecclesiastical history. (Morelli. African Christian., vol. ii. p. 292.)

MEMINI. [Χαράγματοι.]

MEMNONNES (Μεμόννης), a tribe of Archontesians, who dwelt between the Nile and the Astapu, north of the peninsular region of Mece. (Ptol. iv. 8. § 114.) The name was not an indigenous one, but given by the Greek geographers to one of the Nubian tribes, among whom they placed their legendary Memnon, son of Aurora. (W. B. D.)

MEMPHIS (Μέμφις, Herod. ii. 99, 114, 136, 154; Polyb. v. 61; Paus. i. 50, seq.; Steph. B. s. r. Eth. Memphis); the capital of the old Theban kingdom. (Lanin. xix. 13; Jeros. ii. 16, xiv. 1). It was the first capital of the entire kingdom of Aegypt, after the Deltaic monarchy at Hermopolis was united to the Thebaid capital at This or Abydos. It stood on the western bank of the Nile, 15 miles S. of Cercusaurus, in lat. 30° 6' N.

The foundation of Memphis belongs to the very earliest age of Aegyptian history. It is ascribed (1) to Memes, the first martial king; (2) to Uchoreus, a monarch of a later dynasty; and (3) to Apsis or Ephorus. (Hegy. Fab. 149.) But the latter two may be dismissed as resting on very doubtful authority. (Diod. i. 51.) The only certain is that Memphis was of remote antiquity, perhaps of the inscrption of its name of Mem. and that it was the first capital of the united kingdom of Upper and Lower Aegypt. The motives which induced its founder to select such a site for his capital are obvious. Not far removed from the bifurcation of the Nile at Cercusaurus, it commanded the S. entrance to the Delta, while it was nearer to the Thebaid than any of the Deltaic provincial cities of importance, Heliopolis, Bubastis, and Sais. It is also clear why he placed it on the western bank of the Nile. His kingdom had little to apprehend from the tribes of the Libyan desert; whereas the eastern frontier of Aegypt was always exposed to attack from Arabia, Armenia, and Persia, nor indeed beyond the reach of the Scythians. (Herod. i. 104.)

It was important, therefore, to make the Nile a barrier of the city; and this was effected by placing Memphis W. of it. Before, however, Memes could lay the foundations of his capital, an artificial area was to be provided for them. The Nile, at that remote period, seems to have had a double bifurcation; one at the head of the Delta, the other above the site of Memphis, and parallel with the Arisinoe Nome. Of the branches of its southern fork, the western and the wider of the two ran at the foot of the Libyan hills; the eastern and lower was the present main stream. Between them the plain, though resting on a limestone basis, was covered with marshes, caused by their periodical overflow. This plain Memes chose for the area of Memphis. He began by constructing an embankment about 100 stadia S. of its site, that diverted the main body of the water into the eastern arm; and the marshes he drained off into two principal lakes, one to N., the other to W. of Memphis. This was done, though on every side but S., was defended by water.

The area of Memphis, according to Diodorus (i. 50), occupied a circuit of 150 stadia, or at least 15 miles. This space, doubtless, included much open ground, laid out in gardens, as well as the courts required for the barracks of the garrison, in the quarter denominated "the White Castle," and which was successively occupied, under the Pharaos, by the native militia; in the reign of Psammetichus (n. c. 658—614), by Phoenician and Greek mercenaries; by the Persians, after the invasion of Cambyses (n. c. 524), and finally by the Macedonian and Roman troops. For although Memphis was not always a royal residence, it retained always two features of a metropolis: (1) it was the seat of the central garrison, at least until Alexander was founded; and (2) its necropolis—the pyramids—was the tomb of the kings of every native dynasty.

The mound which curbed the inundations of the Nile was so essential to the very existence of Memphis, that even the Persians, who ravaged or, in the treatment of the country, annually repaired it. (Herod. ii. 99.) The climate was of remarkable salubrity: the soil extremely productive; and the prospect from its walls attracted the notice of the Greeks and Romans, who seldom cared much for the picturesque. Diodorus (i. 96) mentions its bright green meadows, intersected by canals, paven with the lotus-flower. Pliny (xiii. 10, xvi. 21) speaks of trees of such girth that three men with extended arms could not span them. Martial (vi. 50) says that the "navia Memphis" brought roses in winter to Rome (comp. Lucan. Pharsal. iv. 135.; and Athenaeus i. 20, p. 11) celebrates its veteran soil and its wine. (Comp. Thucyd. iv. 65; 153.; Horace, Od. iii. 26. 10.)

And these natural advantages were seconded by its
position in the "narrow" of Aegypt, at a point where the Arabian and Libyan hills converge for the last time as they approach the Delta, and where Memphis commanded the whole inland trade, whether ascending or descending the Nile. On the coins of Hadrian, the city and fertility of Memphis are represented by a figure of the Nile on their reverse, holding in his left hand a cornucopia. (Mionnet, Suppl. ix. No. 42.)

The position of Memphis, again, as regarded the civilization which Aegypt imported or received, was the most favourable. A capital in the Thebaid would have been too remote for communication with the East or Greece: a capital in the Delta would have been too remote from the Upper Kingdom, which would then have retarded rather to Aethiopia than to Aegypt; while the Delta itself, unsupplied by the Thebaid, must in all probability have become an Assyrian province. But the intermediate situation of Memphis connected it both with the southern portions of the Nile valley, as far as its keys at Philae and Elephantina, and also through the isthmus of Suez and the coast, with the most civilized races of Asia and Europe. After the foundation of Alexandria, indeed, Memphis sunk into a provincial city. But the Saracen invaders in the seventh century conquered Memphis and the walls, they never rebuilt both Old and New Cairo in the neighbourhood of Memphis, only changing the site from the western to the eastern bank of the river, because their natural alliances, unlike those of the Pharoebs, were with the Arabs and the Syrian Khedives.

The history of Memphis is in some measure that of Aegypt also. The great works of Memes were probably accomplished by successive monarchs, not indeed by several dynasties. In the 1st period of the monarchy we find that the 3rd, 4th, 6th, 7th, and 8th dynasties consisted of Memphite kings. Athatis, who is styled a son of Memes, is said to have built the palace, and thus stumped the new city as a royal residence. In the reign of Knechos, in the 2nd dynasty, the worship of Apis was established at Memphis, which was equivalent to rendering it a cathedral city. In the 7th dynasty we have a record of seventy Memphite kings, each reigning for one day; this probably denotes an interregnum, and perhaps a foregone revolution; for, as Herodotus remarks (iv. 147), the Egyptians could not exist without a monarchy. After the 8th dynasty no series of Memphite kings occurs; and the royal families pass to Heracopolis, in the first place; next, after the expulsion of the Shepherds, to Thebes; afterwards to the Deltaic cities of Tanis, Bubastis, and Sais.

The shepherd kings, though they formed their great camp at Abaris, retained Memphis as the seat of civil government (Manetho, ap. Joseph. cont. Apion. l. 14); and although they were driven into Syria, Thebes became the capital, yet we have a proof that the 18th dynasty—the house of Khamanis—held their northern metropolis in high esteem. For Sesostris, or Ramses III. (Herod. ii. 108), on his return from his Asiatic wars, set up in front of the temple of Ptah at Memphis a colossal statue of himself 45 feet high; and this is probably the colossal figure still lying among the mounds of ruin at Mitaneh. Under the 25th dynasty, while the Aethiopians compelled Aegypt, Memphis was again the seat of a native government, and especially the result of a revolution, which set Setos, a priest, upon the throne. A victory obtained by this mon-arch over the Assyrians was commemorated by a statue in the temple of Ptah—Sethos holding in his hand a mouse, the symbol of destruction. (Herodot. Hieroglyph. l. 50; comp. Aelian, H. Anim. vi. 41; Strab. iii. p. 604; Herod. ii. 141.) Under Ptolemy I Soter (b.c. 670) the Phoenician soldiers, who had aided him in gaining the crown, were established by him in "the Tyrian camp,"—at least this seems to be the meaning of Herodotus (ii. 112),—but were removed by his successor Amasis into the capital itself, and into that quarter of it called the "White Castle.

Of all the Egyptian cities, Memphis suffered the most severely from the cruelty and fanaticism of the Persians. Its population, excited by the defeat of the Egyptian army at Pelusium, put to death the Persian herald who summoned the Memphis to surrender. The vengeance of the conqueror is related by Herodotus. Memphis became the headquarters of a Persian garrison; and Cambyses, on his return from his unfortunate expedition against Aethiopia, was more than ever incensed against the vanquished. Apsamnatus, the last of the Pharaohs, was compelled to put himself to death (Herod. iii. 15); Cambyses slew the god Apis with his own hand, and massacred his priests; he profaned the Temple of Ptah and burned the images of the Cabieri (ib. ii. 32). Under Darius Aegypt was mildly governed, and his moderation was shown by his acquaintance in the high priest's refusal to permit the erection of a statue to him at Memphis. (Herod. ii. 110; Diodor. i. 58.) The next important notice of this city is in the reign of Artaxerxes I. Inaros, son of Psammetichus, had revolted from Persia, and called in the aid of the Athenians. (Diod. vii. 71.) The Persians were defeated at Parnemis in the Delta (ib. 74; comp. Mionnet, Geogr. x. p. 593), fled to Memphis, and were besieged in the "White Castle." (Thucyd. i. 168—109.) The siege lasted for more than a year (Diodor. ii. 75), and was at length raised (Ctesias, c. 33), and the authority of the king of Persia restored. Under Nectanebus I., the first monarch of the Seleucidic dynasty, Memphis expelled its Persian garrison, nor did it return to its allegiance, until Nectanebus II., the last representative of thirty dynasties, was driven into Aethiopia. (Athenaeus, iv. p. 150.) From this period Memphis loses its metropolitan importance, and sinks to the level of the chief provincial city of Aegypt.

If, as Diodorus remarks (i. 51), Thebes surpassed Memphis in the grandeur of its temples, the latter city was more remarkable for the number of its deities and sacred buildings, and for its secular and commercial edifices. It might, indeed, as regards its shrines, be improperly termed the Pantheon of the land of Misrarn. The following were its four principal temples:—

1. The temple of Isis, was commenced at a very early period, but only completed by Amasis, u. c. 564. It is described as spacious and beautiful (Herod. ii. 176; Heliodore. Aethiop. vii. 2, 8, 11), but inferior to the Iseum at Busiris (Herod. ii. 59, 61).

2. The temple of Proteus, founded probably by Phoenicians, who had a commercial establishment at Memphis. It was of so early date as to be ascribed to the era of the Trojan War. (Plutarch, de Gen. Socrat. e. 7.)

3. The temple of Apis, completed in the reign of

Y 3
MEMPHIS.

Sozomen, Herod, early mental script. Inscr. in Diodor. Theus, resided annals, the portrait-statues raised spirit by Memphiun Linds. Isis, celsinum 326 (Herod., i. 21, 46; Pausan. vii. 22.) This temple was the cathedral of Egypt, and not only established there a numerous, opulent, and learned college of priests, but also attracted thither innumerable worshippers, who combined commercial with religious purposes.

4. The temple of Serapis, in the western quarter of Memphis. This Serapis was of earlier date than the Alexandrian deity of similar name. To the Memphian Serapiun was attached a Nilometer, for gauging and recording the periodical overflows of the river. It was removed by Constantine as a relic of paganism, but replaced by his successor Julian. (Socrot. Hist. Eras. i. 18; Sozomen, v. 2; comp. Diodor. i. 50, 57; Secce Quest. Nat. ii. 2; Plin. viii. 35. 45.)

5. A temple of Pher, or the Sun, mentioned only in the Rosetta inscription (Lettuceau, Recueil des Inscr. Grecques et Lat. de l'Egypte; Brugsch, Inscripr. Rosettan.)

6. The temple of the Cabeiri (Herod. iii. 37), into which none but the high-priest might lawfully enter. The statues of the pigmy gods were burned by Cambyses, and the temple mutilated.

7. The temple of Ptah or Hapheastos, the elemental principle of fire, worshipped under the form of a dog. This was the most ancient shrine in Memphis, being coeval with its foundation. (Diodor. i. 45; Herod. ii. 99, iii. 37; Strab. xvii. 807; Anniu-ian. xviii. 4.) It was enlarged and beautified by several successive monarchs, apparently through a spirit of rivalry with the great buildings at Thebes. (1.) Moris erected the great northern court (Herod. ii. 101; Diod. i. 31). (2.) Rameses the Great raised in this court six colossal figures of stone,—portrait-statues of himself, his queen, and their four sons. (Herod. ii. 109—110; Strab. xvii. 807.) (3.) Rhampaltes built a temple, and erected two colossal figures of summer and winter. (Herod. ii. 121; Diodor. i. 62; Wilkinson, M. and C. i. p. 121.) (4.) As-yebias added the eastern court. (Herod. ii. 136.) It was in the opinion of Herodotus, by far the noblest and most beautiful of the four quadrangles. (5.) Psammetichus, the Suite king, added the south court, in commemoration of his victory over the Dacarchus (Polyaen. Strat. vii. 3; Herod. ii. 133; Diodor. i. 67); and Amasis (Herod. ii. 176) erected or restored to its basis the colossal statue of Ptah, in front of the southern portico. From the priests of the Memphian temples, the Greeks derived their knowledge of Egyptian annals, and the rubbings also of their philosophical systems. It was at Memphis that Herodotus made his longest sojourn, and gained most of his information respecting Lower Egypt. Democritus also resided five years at Memphis, and won the favour of the priests by his addiction to astrological and hieroglyphical studies. (Hog. Elber. Democrit. iv. 54.) Memphis reckoned among its illustrious visitors, in early times, the legislator Solon, the historian Heracleaun, the philosophers Thales and Cleobulus of Lindus; and in a later age, Strabo the geographer, and Diodorus the Sicilian.

The village of Memphis, 6 miles e. of Cairo, is in a grove of palm-trees, about 10 miles s. of Gizeh, marks the site of the ancient Memphis. The successful conquerors of the land, indeed, have used its ruins as a stone-quarry, so that its exact situation has been a subject of dispute. Major Remenn (Geography of Herodotus, vol. ii. p. 121, seq.), however, brings incontestable evidence of the correspondence of Miternach with Memphis. Its remains extend over many hundred acres of ground, which are covered with blocks of granite, broken obelisks, columns and colossal statues. The principal monuments of Memphis probably with the area of the great temple of Ptah.

There are several accounts of the appearance of Memphis at different eras. Strabo saw the Hephasteum entire, although much of the city was then in ruins. In the twelfth century A.D. it was visited by the Arabian traveller Ab-dallatif, who was deeply impressed with the spectacle of grandeur and desolation. "Its ruins offer," he says, "to the spectator a union of things which confound him, and which the most eloquent man in the world would in vain attempt to describe." He seems to have seen at least one of the colossal statues of the group of Rameses in the northern court of the Hephasteum. Among innumerable "idols," as he terms them, he "measured one which, without its pedestal, was more than 30 cubits long. This statue was formed of a single piece of red granite, and was covered with a red varnish." (Ab-dallatif, De Sicul. Translation, 4to. p. 184.) Sir William Hamilton (Aegyptiaca, 4to. p. 303) visited the spot, and says, that "high monuments, one square of 1800 yards from N. to S. and 400 feet from E. to W. the entrance in the centre of each side is still visible. The two principal entrances faced the desert and the river" (that is W. and E.). He entered by the latter, and found immediately "thirty or forty large blocks of very fine red granite, lying on the ground, evidently forming parts of some colossal statues, the chief ornaments of the temple." The district in which these remains are found is still termed Memph by the Coptic population, and thus helps to confirm the identity of the village of Dier-bis— with the ancient capital of Aegypt. (W. B. D.)

MENAENUM or MEXAEUM (Murai, Ptol., steph. B.; Menaemon, Diod. ; Eth. Menasor, Stephan. ; but coins have Mexanos; Menaczus, Cic.; Menasenius, Plin. : Minió), an inland city of Sicily, about 18 miles W. of Leontini. It was a city of the Siculi, and not a Greek colony, but, according to Diodorus, was not an ancient settlement of that people, but first founded by their king Ducetus, in B.C. 439. (Diod. xi. 78.) It was situated at a distance of about 2 miles from the celebrated lake and sanctuary of the Palici [Palatium lacus] (Steph. B. e. r.); and Ducetus appears, a few years afterwards, to have removed the inhabitants again from his newly built city, and to have founded another, in the immediate neighbourhood of the sacred lake, to which he gave the name of Palaios (Diod. xi. 88, where the reading Mexos for Mexá, suggested by Cluver, and adopted by Wesseling, is at least very probable, though it is difficult to understand how Dierbis could call it the native city of Ducetus, if it had, in fact, been only founded by him.) This new city, however, was destroyed soon after the death of Ducetus (Diod. xi. 90), and it is probable that the inhabitants settled again at Menaeum. The latter city, though it never attained to any great importance, continued to subsist down to a
MENAPIA

late period. There is little doubt that it is the city meant by DioDorus (xiv. 78, where the editions have Zaurava, a name certainly corrupt), which was reduced by Dionysius in n. c. 356, together with Morgantia and other cities of the region. It is mentioned more than once by Cicero among the municipal towns of Sicily, and seems to have been a tolerably flourishing place, the inhabitants of which carried on agriculture to a considerable extent. (Cic. Verr. iii. 22, 45.) It is enumerated also by Silius Italicus among the cities of Sicily, and by Pliny among the stipendary towns of that island, and its name is found also in Polyblemy. (Sl. Ital. xiv. 366; Plin. iii. 8 s. 14; Post. III. 4 § 13.) This is the last notice of it that occurs; but there is no doubt that the modern town of Mineo retains the name, and probably the site, of Menamum. It is situated on a lofty hill, forming part of a range which sweeps round from Falagunia to Callagurone, and forms the boundary of a deep basin, in the centre of which is a small plain, with the volcanic lake now called Lago di Nafina, which is unquestionably the ancient Lacus Pulicorum. No ruins are now extant at Mineo; but the coins of Menamum, which are numerous, though only of copper, attest the consideration which it anciently enjoyed. [E. H. B.]

COIN OF MENAMUM.

MENAPIA (Menaemia, Prot. vi. 11. § 8), a small place in Bactriana in the immediate neighbour- hood of Eucentia. It is probably the same as that called Mepana by Ausmannus (xxiii. 6). [V.]

MENAPII, a people of North Gallia. In Caesar’s time (B. G. iv. 4) the Menapii were on both sides of the lower Rhine, where they had arable farms, buildings, and small towns. The Usipetes and the Teutoburgi, who were Germans, being pressed by the Suevi, came to the Rhine, surprised and massacred the Menapii on the east bank, and then crossing over spent the winter on the west side, and lived at free cost among the Menapii. The history of these marauders is told elsewhere. [USIPETES.]

On the west side of the Rhine the Eburones were the immediate neighbours of the Manapi (B. G. vi. 5), and they were between the Menapi and the Treviri. The Menapi were protected by continuous swamps and forests. On the south and on the coast the Menapi bordered on the Morinii. Caesar does not state this distinctly; but he mentions the Menapi (B. G. ii. 4) among the Belgian confederates next to the Morini; and the Menapi were said to be able to raise 7000 fighting men. As the Veneti sought the aid of the Morini and Menapi in their war with Caesar, we must conclude that they had ships, or their aid would have been useless (B. G. iii. 9). Caesar describes all Gallia as reduced to obedience at the close of the summer of B. C. 56, except the Morini and Menapii (B. G. iii. 28), who were protected against the Roman general for this season by their forests and the bad weather. The next year (B. C. 55), immediately before sailing for Britannia,

Caesar sent two of his legati to invade the country of the Menapii and those Pagii of the Morini which had not made their submission (B. G. iv. 292).

After his return from Britannia Caesar sent Labienus against the Morini with the legions which had been brought back from Britannia. The summer had been dry, and as the marshes did not protect the Morini, as in the year before, most of them were compelled to yield. The troops which had been sent against the Menapii under the two legati ravaged the lands, destroyed the corn, and burnt the houses; but the people fled to the thickets of their forests, and saved themselves from their cruel enemy. (B. G. iv. 37.)

In n. c. 56 Caesar himself entered the country of the Menapii with five legions unnumbered with baggage. The Menapii were the only Galli who had never sent ambassadors to Caesar about peace, and they were allies of Ambiorix, king of the Eburones, Caesar’s enemy. Trusting to the natural protection of their country, the Menapii did not combine their forces, but fled to the forests and marshes, carrying their property with them. Caesar entered their country with his army in three divisions; having with great difficulty made his bridges over the rivers, but he does not mention any names. The buildings and villages were burnt, and a great number of cattle and men were captured. The Menapii prayed for peace, gave hostages, and were told that their hostages would be put to death, if they allowed Ambiorix to come within their borders. With this threat Caesar quitte the country that he had ravaged, leaving Comm the Atichat, one of his shrewd Gallie tools, with a body of cavalry to keep watch over the Menapii. (B. G. vi. 5, 6.)

It appears from Caesar’s narrative that this people had farms, arable land, and cattle; and probably ships. They were not savages, but a people with some civility. Caesar’s narrative also leads us to infer that the Menapii on the coast bordered on the Morini, as Strabo (iv. pp. 194, 199) says. Pliny (iv. 17) also makes the Menapii and Morinii confinements on the coast, but he makes the Scalids (Scheldt) the northern limit of the Menapii; and he places the Texandri north of the Scheldt. In Pliny’s day it is not sure whether the Narri, in the ancient writers, that the Nerii extended to the coast, and consequently were between the Morini and the Menapii. But it is here assumed as proved that the Morini on the coast bordered on the Menapii, who in Caesar’s time at least extended along the coast from the northern boundary of the Morini to the territory of the Batavii. [BATAVORUM INSULA.]

Walcheren proves, as he supposes, that the river Aos, from its source to its outlet, was the boundary between the Morini and the Menapii. The Aos is the dull stream which flows by St. Omer, and is made navigable to Gravelines. According to him the mouth of Cassel, which is east of the Aos, to be the Castellum Manapiorum of the Table. This question is examined under CASTELLUM MORA-

NORUM. The boundary on the coast between the Morini and Menapii is unknown, but it may, perhaps, have been as far north as Dunkersigne. As the Eburones showed signs of hostilities towards the neighbors of the Menapii of Caesar on the coast, we obtain a limit of the Menapii in that direction. On the north their boundary was the Rhine; and on the south the Nerii. Under Augustus some German peoples, Ubi, Sicambri [Sicampi], and others,
were removed to the west side of the Rhine. The Tusaundiarii, who were settled in North Brabant, occupied the place of these Menapii who bartered on the Envrones. But the Menapii still maintained themselves on the west. Tacitus (Hist. iv. 28; in his description of the rebellious west) still speaks of the Menapii and Minores et extrema Gallarum. Part of the former territory of the Menapii was finally included in Germania Inferior, and the rest in Belgica. The name Menapii subsisted for a long time. Aurelius Victor (de Caesaribus, 39) calls Carnelian "Menapiæ civis," and it appears in the middle ages. D'Anville observes that though the Notitia of the Empire mentions a body of soldiers named Menapii, we see no trace of this nation in any city which represents it; but Walckenaer (Geog. s. v. vol. i. p. 460) contends that Turnacent (Teurnaeus) was their chief place, to which place probably belong the Belgo silver medall with the legend DVNACVS (Bast, Recueil, s. v.) "in an act of Charles the Bald, A. D. 847, in favour of the abbey of S. Amand, which is south of Turnae, this act is said to be 'in territorio Menapiorum quod nunc Meniscennum appallent.'" We thus obtain, as it seems, a fixed point for part of the territory of the Menapii, which under the later Empire may have been limited to the coast of the west of France. It is observed that "though it is very probable that Caesar never advanced into the interior of Flanders, it is, however, certain that the Romans afterwards, if they did not absolutely make themselves masters of it, at least were there for some time at different epochs. Their idols, their Dei Patantes, sepulchral urns, lamps, Roman utensils, and especially the medals of almost all the emperors, discovered in great numbers, are irrefragable evidence of this." (Bast, Recueil d'Antiquités Romaines et Gauloises, s. v., Introductions.)

"Ancient carined vessels have been found in great numbers all along the coast from Dunkerque to Bruges, which shows that the sea has not gained here, and refutes the notion that in the time of Caesar and Pliny this coast was neither inhabited nor habitable." (Walckenaer, Geog. s. v. vol. i. p. 469.) An inscription found at Reims, of the age of Vespasian, mentions the "Salinatores Menapiorum," or salt-makers of the Menapii.

If the position of the Mediocris of Caesar has been rightly determined [Menapia], they were a Menapian people. There is nothing to show whether the Menapii were Galli or Germani.

MENAPILA [Menapila]

MENDE (Men-de, Herod. ii. 123; Sycl. p. 26; Thuc. iv. 123; Steph. B., or MENDEA (Meda), Pan. v. 10. § 27; Plin. iv. 10; Mende, Polyol. locon. i. § 21; Sud. s. v.; Mendis, Liv. xxxvi. 43: Eth. Mediiatos), a town of Pallene, situated on the SW. side the cape. It was a colony of Eretria in Eubea, which became subject to Athens with the other cities of Pallene and Chalcis. On the arrival of Brasitus, Menes revolted from the Athenians (Thuc. i. c.), but was afterwards retaken by Nicias and Nicostratus (Thuc. iv. 130; Diod. xii. 72). It appears, from the account which Livy (i. c.) gives of the expedition of Attalus and the Romans (ii. c. 290), to have been a small maritime place under the dominion of Cassander. Together with Sceone, Mende occupied the broadest part of the peninsula (Pom. Mela, ii. 3. § 11), and is probably represented by some Helvetic remains which have been observed on the shore near the E. coast, as well as on the heights above it. (Lenc, North. Greece, vol. iii. p. 156.) The types on its autonomous coins—Silenus riding upon a ass, and a Dota in a square (Eckhel, vol. ii. p. 72)—refer to the famous Miletan-Emir, of which the ancients make honourable mention. (Ath. i. pp. 23, 29, iv. p. 129, viii. p. 364, xi. p. 784; Hippocrat. vol. ii. p. 472, ed. Kl.ii; Jull, Poll. Onomast. vi. segm. 15.)

MENELAUS [Menelaus]

MENDES (Méends, Herod. ii. 42, 46. 166; Dio. i. 84: Strab. xvii. p. 802; Mela, i. 9 § 9; Plin. v. 10. s. 12; Ptol. iv. 5. § 51; Steph. B. s. v.: Eth. Mediiatos), the capital of the Mendesian nome in the Delta of Egypt. It was situated at the point where the Mendesian arm of the Nile (Mediiatios sthma, Valckenaer, p. 43; Ptol. iv. 5. § 10; Mendesian ostium, Pliny, Mela, ii. c.) flows into the lake of Tanis. Mendes was, under the Pharaonic kings, a considerable town; the nome was the chief seat of the worship of Mene or Pan, the all-producing-principle of life, and one of the eight greater deities of Egypt, and represented under the form of a goat. It was also one of the nomes assigned to that division of the native army which was called the Calasari, and the city was celebrated for the manufacture of a perfume designated as the Mendesian unguentum. (Plin. xii. 1. s. 2.) Mendes, however, declined early, and disappears in the first century A. D.; since both Ptolemy (i. c.) and Aristides (iii. p. 160) mention Tanmus as the only town of note in the Mendesian nome. From its position at the junction of the river and the lake, it was probably encroached upon by their waters, after the canals fell into neglect under the Macedonian kings, and when they were repaired by Augustus (Sueton. Aug. 46. 63) Tanmus had attracted its trade and population. Ruins, however, supposed to be those of Mendes, have been found near the hamlet of Achmim-Tannah (Champollion, 'Egypte,' vol. ii. p. 122.) [W. B. D.]

MENDICIALEIA. 1. A town of the Ibergetes, probably Morazon. [Vol. ii. p. 32. a.]

2 A town in the interior of Lucania, on the bank of the Tagus. (Ptol. ii. 5. § 8, where some MSS. have Mendeioelei, others Mediionioelei.)

MENEDICULAE. A town in the western part of Pisidia, two miles west of Pogia. (Ptol. v. 5. § 6; Steph. s. v., which calls it a town of Lycaon.)

[Unreadable text]

MENELAI PORTUS (Menelaiost, Herod. iv. 169), a harbor of Marmorica, situated to the W. of Paratoetum (Strab. i. p. 40. xvii. p. 838), and a day's voyage from Petrea. (Sylv. 107. d.) Here, according to legend, the hero Menelaus landed (Herod. ii. 119); and it was the place where Agasias died in his march from the Nile to Cyrene, r. c. 361. (Corn. Nep. Ages. 8.) Its position must be sought on the coast of the Wady Daphnak, near the Ras-al-Mihir. (Pach, 'Voyage dans la Marmormarique,' p. 47.)

[Unreadable text]
MENESTRIEL.

Delta, situated to SE. of the high-ground between Alexandria and Hermopolis, near the Canopic arm of the Nile. It derived its name from Menesians, a brother of Ptolemy Lagus, and attained such importance as to confer the title of Menestheus upon the Canopic branch of the river. (Ptol. iv. 5: § 9; Strab. iib. p. 801.)

W. R. D.)

MENESTHEI PORTUS (ε Menestheus λιμιπ), a harbour of Hispania Baetica, between Gades and Asta. (Strab. iii. p. 140; Ptol. ii. 4: § 5; Marcián. p. 40.) In its neighbourhood was the oracle of Menestheus (Strab. l. c.), to whom, also, the inhabitants of Gades offered sacrifices. (Philosb. Hist. Apr. 1.) The Scholiast on Thucydides (v. 14) relates that Menestheus, being expelled by the Thesideae, went to Iberia. The harbour is probably the modern Puerto de S. María.

MENINX (Μηνίγξα, αί Μηνίγξα), an island off the N. coast of Africa, to the SE. of the Lesser Syrtis. It is first described by Scylax (p. 48), who calls it BRACHION (Brachyel), and states that its length was 300 stadia, while its breadth was something less. Pliny (v. 7) makes the length 25 M. P. and the distance from the mainland was about 3 stadia (8 stadia, Stadtnus, p. 455), and one day's sail from Tariachae. It was the abode of the "dreamy Loto-eaters" (Lotophagi), for which reason it was called Lotusphagi (Ἀλωτοφάγης, Ptol. iv. 3: § 35; Λοτοφάγων νησίος, Polyb. i. 39; comp. Strab. i. p. 25, ii. p. 123, iii. p. 157, xvii. p. 834; Pomp. Mela, ii. 7: § 7; Pfln. l. c. ix. 60; Dionys. v. 180). The Romans first became acquainted with it, by the disastrous expedition of C. Sempronius Bluetus, B.C. 233. (Polyb. i. 11; it cites Maconain, Orig. iii. iv. 9.) It contained two towns, Meninx and Thomas, and was the birthplace of the emperors Galbus Trebonianus, and his son, Volusianus (Aurel. Victor, Epit. 31), when it was already known by the name of Giroa. Jerub (as the island is now called, produces the "lotus Zephylus," a tree-fruit like beans. (Shaw, Tract. p. 157; Rennell, Geog. of Herôld. vol. ii. p. 287; Barth, Wanderungen, pp. 253, 257.)

[ E. B. J.]

CURT (Hist. Curt. v. 1: § 16), a book of Geography, of Mesopotamia, which Alexander halted in his march from Arbela to Babylon. Curtius stated that it was celebrated for its naupthia pits,—which indeed abound in that part of Asia.

(M. V.)

MENOB (P tl. iii. 1: s. 3) or MENUDA (Inser. ap. F lers, Exp. Sgr. iv. p. 47), a tributary of the river Baetis, on its right side, now the Guadixmer.

MENOSCA (Μηνοσκά), a town in central Germany, not far from the sources of the Main (Meuns), from which it, no doubt, derived its name. (Ptol. ii. 11: § 29.) Its site is generally believed to have been that of the modern Mainroth, near Coblena.

[ L. S.]

MENODORA. 1. Surnamed BASTIA (St. Anton. iv. 206. s. 34), a town of the Vandals, on the N. coast of Hispania Tarraconensis. It is situated near a mountain: some place it at St. Sebastian; others at St. Andre; and others again, at Sunaya.

MENOSGADA (Μηνοσγάδα), a place in central Germany, not far from the sources of the Main (Meuns), from which it, no doubt, derived its name. (Ptol. ii. 11: § 29.) Its site is generally believed to have been that of the modern Mainroth, near Coblena.

MENON. 1. Surnamed BASTIA (St. Anton. iv. 206. s. 34); Montelius, Liv. xxvi. 17; Momma, Ptol. ii. 6: § 59), a town of the Oretani in Hispania Tarraconensis, on the road from Cartagia Nova to Castulo, and 22 Roman miles from Castulo. Pliny (iii. 3: s. 4) calls the inhabitants "Mentesani, qui et Oretani," to distinguish them from the following.

MENTONOMON, an estuary or bay of the Northern Ocean, mentioned by Ptolemy, upon which the Guttone dwelt, and at a day's sail from which was an island named Athalus, where amber was gathered. (Pfln. xxxvii. 7. s. 11.) The same island is mentioned in another passage of Pliny (iv. 13. 27), as situated a day's sail from the Scythian coast. In Siligis's edition of Pliny this part of Scythia is called Harmania; but some of the MSS. and older editions have Harmum or Hamus; which is apparently only another form of Mentonomon. The bay was no doubt on the Prasian coast in the Baltic. (Zeus, Die Deutschen, q. c. p. 269.)

MENTORES (Μεντόρες), a Liburnian tribe (Hecatea. Fr. 62, ed. Klausen; Pfln. iii. 21. s. 25), off whose coast were the three islands called Mentorides, probably the same as the rocky islands of Papo, Overo, and Arbe. [ L. B. J.]

MENETIAS (Μενετίας, Steph. B.), an island off the E. coast of Africa. Ptolemy (iv. 8: § 2, comp. vii. 2: § 1) describes it as "quadrae costae" (papacoreia) to the Prom. Prasum; at the same time he removes it 5° from the continent, and places it at 56° long., 12° 30' lat., to the NE. (άρο Σε- θίανον ἀνατολάω) of Prasum. The graduation of Ptolemy's map is here so erroneous, that it is impossible to make out the position of his island Menuthias, which some have identified with one of the islands of赞antr, or even with Macedonia. (Vincent, Navigation of the Ancients, vol. ii. pp. 74-185; Geographers in addition, esp. pp. 191, 193.) The simple narrative of the Periplo gives a very faithful picture of this coast,—harmonising with the statements of Ptolemy and Marinus of Tyre,—as far as the Iberuates of the former (Gorina, or the river of jubok). Afterwards it thus proceeds (p. 9, ed. Hudson):—

"Thence" (from the Nova Fossa, "New Cut," or "Channel," or the opening of the coral reefs by Gorina), "at the distance of two natural days' sail, on a course a little above Liboa (SW.), Menuthias was an island occurs on the W. (the important words, "Due West")—μαν αντιμ αυτομ προς νωμον—are arbitrarily altered in Blankard's edition to the opposite sense, with a view to force the author into agreement with Ptolemy; comp. Annal. ad Hudson. p. 68), about 300 stadia from the mainland, low, and covered with wood, with streams, plenty of birds of various kinds, and land-turtle. But, excepting crocodiles, which are harmless, it has no other animals. At this island there are boats, both sewed together, and hollowed out of single trees which are made for fishing, and catching turtle. Here, they take fish in wicker baskets, which are let down in front of the hollows of the rocks." It appears, therefore, that Menuthias was distant about two day's sail from Nova Fossa, or 60 or 80 miles from the river Gorina, just where an opening in the coral reefs is now found. The coasting voyager, steering SW., reached the island on the E. side,—a proof that it was close to the main; a contiguity which perhaps is further shown by the presence of the crocodiles; though much stress cannot be laid upon this point, as they may have been only lizards. It is true, the navigator says that it was 300 stadia from the mainland; but as there is no reason to suppose that he surveyed the island, this distance must be taken

[ E. B. J.]

Digitized by Microsoft®
to signify the estimated width of the northern inlet separating the island from the main; and this estimate is probably much exaggerated. The mode of fishing with baskets is still practised in the Jubah islands, and along the coast. The formation of the coast of E. Africa in these latitudes—where the hills or downs upon the coast are all formed of a coral conglomerate, comprising fragments of madreporic, shell, and sand—renders it likely that the island which was close to the main sixteen or seventeen centuries ago, should now be united to it. Granting this theory of gradual transformation of the coast-line, the Monothiai of the "Peripius" may be supposed to have stood in what is now the rich garden-land of Shamba, where the rivers, carrying down mud to mingle with the marine deposit of coral drift, covered the choked-up estuary with a rich soil. (Cooley, *Ptolemy and the Nile*, London, 1854, pp. 56—
68.)

**MERCURII PROM.** *(Epigrapheis, vol. iv. 3. § 7; Pomp. Mela, i. 7. § 2; Plin. v. 3), the most northerly point of the rivers of Africa, to the E. of the gulf of Carthage, now Cape Bon, or the Râda Addibl of the natives. [E. B. J.]

**MEIGABULUM**, a town of Hispania Baetica, on the road from Gadis to Malaca, now Beger de la Med. (Mem. de l'Acad. des Inscr. xxx. p. 111.)

**MEINUM.** [Gariganus.]

**MERMESNUS** (Μερμησόν or Μωρμοσόν), a town in Tras or Mydia, belonging to the territory of Lampacus, was celebrated in antiquity as the native place of a sibyl (Steph. B. s. r.; Paus. xii. 12. § 24; Diod. x. 12, where it is called Marmessun; Strab. xii. 2. r.), but its exact site is unknown. [L. S.]

**MERODICA.** [Miroburga.]

**MEROE** (Μέροη, Herod. ii. 29; Diehl. i. 23, seq.; Strab. xviii. p. 821; Plin. ii. 73, s. 78, v. 9, s. 10; Steph. B. s. r.; Euh. Merosos, Meposos). The kingdom of Meroe lay between the modern hamlet of Khartoum, where the Astaboras joins the true Nile and the influx of the Astaboras into their united streams, lat. 17° 40' N., long. 34° E. Although described as an island by the ancient geographers, it was properly an irregular space, like Mesopotamia, included between two or more confluent rivers. According to Diodorus (i. 23) the region of Meroe was 375 miles in length, and 125 in breadth; but Strabo (xviii. p. 821) regards these numbers as referring to its circumference and diameter respectively. On its eastern side it was bounded by the Abyssinian highlands; on the western by the Libyan sands—the desert of Bahiouda. Its extreme southern extremity was, according to a survey made in the reign of Nero, 875 miles distant from Djebel (Coupl. vii. 20, s. 39). And to Arteniadoras, indeed, reduced this distance to 625 and 600 miles. (Lamart., Geog. d. Atlen, x. p. 183.) Within these limits Meroe was a region of singular opulence, both as respects its mineral wealth and its cereal and leguminous productions. It possessed, on its eastern frontier, mines of gold, iron, copper, and salt; its woods of date-palm, almond-trees, and ilex yielded abundant supplies of both fruit and timber for export and home consumption; its meadows supported large herds of cattle, or produced double harvests of millet (Flower.), and its forests and swamps abounded with wild beasts and game, which the natives caught and salted for food. The banks of the Nile are so high in this region, that Meroe derives no benefit from the inundation, but as rain falls scarce for the fourth month in the season (Strab. xv. v. p. 690), the lands remote from the rivers must always have been nearly desert. But the waste bore little proportion to the fertile lands in a tract so intersected with streams; the art of irrigation was extensively practised; and in the south, where the hills rise towards Abyssinia, the rains are sufficient to maintain a considerable degree of fertility. The valley of the Astaboras (Tacazze) is lower and warmer than the rest of Meroe.

Partly from its natural richness, and partly from its communications between Axthopia and the Red Sea,—the regions which produced spices, and those which yielded gold-dust, ivory, and precious stones,—Meroe was from very early times the seat of an active and diversified commerce. It was one of the capital centres of the caravan trade from Libya Interior, from the bakers on the Red Sea, and from Egypt and Axthopia. It was, in fact, the receptacle and terminus of the Libyan traffic from Carthage, on the one side, and from Adulis and Berenice on the other. The ruins of its cities, so far as they have been explored, attest its importance and the fertility of the surrounding district.

The site of the city of Meroe was selected by Eresthenes (ap. Strab. xvii. p. 786) 700 stadia, or nearly 90 miles, south of the junction of the Nile with the Astaboras, lat. 16° 44'; and such a position agrees with Philo's statement (ii. p. 77) that the sun was vertical there 45 days before the summer solstice. (Comp. Plin. vii. 30.) The pyramids scattered over the plains of this mesopotamian region indicate the existence of numerous cities besides the capital. The ruins which have been discovered are, however, those of either temples or public monuments, for the cities themselves, being built of palm-branches and bricks dried in the sun, speedily crumbled away in a latitude to which the tropical rains partially extend. (Littér. Afr., 542.) The remains of Meroe itself all lie between 16° and 17° lat. N., and are not far from the Nile. The most southerly of them are found at Naga-gaebel-aridan. Here have been discovered the ruins of four temples, built in the Egyptian style, but of late date. The largest of them was dedicated to the ram-headed deity Amun; the principal portico of this temple is detached from the main building,—an unusual practice in Egyptian architecture,—and is approached through an avenue of sphinxes, 7 feet high, and also bearing the ram's head. The sculptures, like those of Aegypt, represent historical events,—Ammon receiving the homage of a queen, or a king holding his captives by the hair, and preparing to strike off their heads with an axe. At Head Naja, about a mile from the Astaboras, are the remains of a sandstone temple, 80 feet in length, covering numerous columns. The figures and emblems of Phra, Ather, and Typhon. These ruins are amidst mounds of brick, which betoken the former presence of an extensive city. Again, 16 or 17 miles west of the Astaboras, and among the hollows of the sandstone hills, surrounded by the desert, are the ruins of El-Mesneurat. Eight temples, connected with one another by galleries or colonnades, and divided into courts and chapels, are here found. The style of architecture of that of the era of the Ptolemies. On the eastern bank, however, and about 2 miles from the river, are found groups of pyramids, which mark the site of a necropolis and the neighbourhood of a city: they are 80 in number, and of various dimensions; the base of the largest being 63 feet square—in the shortest less than 12 feet. The
of these pyramids is about 160 feet in height. Some of these have evidently been royal tombs. None of the buildings of Meroe, indeed, can claim a remote antiquity. The sculptures as well as the pyramids bear the impress of the decline of Egyptian art, and even traces of Greek architecture; and this circumstance is one of many indications that Meroe derived its civilisation from Aegypt, and did not, as has been supposed, transmit an earlier civilisation to the Nile valley. And yet it is not probable that Meroe received either its arts or its peculiar forms of civil polity from Aegypt, either entirely, or at any very remote epoch of time. Their points of resemblance, as well as of difference, forbid the supposition of direct transmission; for, on the one hand, the architecture and sculptures of Meroe betray the inferiority of a later age, and its civil government is not modelled upon that of the Pharaohs. One remarkable feature in the latter is that the sceptre was so often held by female sovereigns; whereas in Aegypt we find a queen regnant only once mentioned — Nitocris, in the 3rd dynasty. Again, the polity of Meroe appears to have been in great measure sacerdotal long after Aegypt had ceased to be governed by a pure theocracy. Yet, that the civilisation of Meroe was indigenous, which intercourse with that of Libya—the streams of which, in all ages renders highly improbable. From whatever quarter the ruling caste of this ancient kingdom may have come, it bears all the tokens, both in what we know of its laws, and in what is visible of its arts, of the presence of a conquering race presiding over a subject people.

The most probable theory appears to be the following, since it will account for the inferiority of the arts and for the resemblance of the polity of Meroe to that of Aegypt.

Strabo, quoting Eratosthenes (xviii. p. 786), says that the Semnites were subject to Meroe; and again he relates, from Artemidorus, that the Semnites ruled Meroe. The name of Semnites, he adds, signifies immigrants, and they are governed by a queen. Pliny (vi. 30. s. 31) mentions four islands of the Semnites, each containing one or more towns, and which, from that circumstance, are evidently not mere river-islands, but tracts between the branches of the river, which the native tribes of this portion of Libya in all ages renders highly improbable. From whatever quarter the ruling caste of this ancient kingdom may have come, it bears all the tokens, both in what we know of its laws, and in what is visible of its arts, of the presence of a conquering race presiding over a subject people.

MESANITES SINUS.

MESANITES SINUS (Μεσανίτης, St. Μεσανίτης καλός), a bay at the extreme north of the Arabian coast of the Persian Gulf. (Ptol. v. 19. § 1. vi. 7. § 19.) Forster finds the modern representative of the ancient name in the Point Musan of D'Anville, at the mouth of the Euphrates, or the Shat-al-Arab. (Arabia, vol. ii. p. 55.) "The existence of names," he says, "is important, as placing it in our power to point out two towns which Ptolemy dispenses close to this bay; viz. Ilicara (Iliaca) in El-Kader, a town at the mouth of the old bed of the Euphrates, and Jucara (Ioucara) in Dejokhre, an ancient town, now Core Usbahan" (p. 214). [G. W.]

MESAMBRIA (Μεσαμβρία, Arrian, Ind. c. 38), a small place, apparently a chersonesus on the southern coast of Persia, the present Abu-shir. (Vincent, Vry. of Nearchus, l. p. 394.) [V.]

MESAMBRIA. [MEKAMBR.] [V.]

MESCHÉ MONS (Μεσχήν. T. f'ioxi, Ptol. iv. 9. § 6), a mountain of Interior Africa, S. of the equator, which Ptolemy (l. c.) places in W. long. 32°, and which may be identified with part of the chain of the Halcas or Kung Mountains, to the N. of Dukumen. [E. B. J.]

MCSCHELA (Μεσχέλα, Diod. xx. 57. 58), a town of Numidia, taken by Eumachus, the general of Acarnania. [E. B. J.]

MESÉ. [MEYÀNE.]

MESÉ. [STORECHADES.]

MESÉMBRIA (Μεσσεμβρία, Δor. Μεσσαμβρία: Plth. Μεσσαμβρινός). 1. An important Greek city in Thrace, situated on the coast of the Euinix and at the foot of Mt. Haenus (Svavn. Ch. 738); consequently upon the confines of Moesia, in which it is placed by Ptolemy (iii. 10. § 8). Strabo (vii. p. 519) relates that it was a colony of the Macedonians, and that it was originally called Mesebria (Μεσσεβρία) after its founder Menas; Stephanus B. (s. v.) says that its original name was Mesebrem (Μεσσεβρεμ), from its founder Meles; and both writers state that the termination "bria" was the Thracian word for town. According to the Anonymus Periplo of the Euxin (p. 14) Mesebria was founded by Chalcedonians at the time of the expedition of Darius against Scythia; but according to Herodotus (vi. 33) it was founded a little later, after the suppression of the Ionic revolt, by Byzantines and Chalcedonian incitatives. These statements may, however, be reconciled by supposing that the Thracian town was originally colonized by Macedonians, and afterwards received additional colonists from Byzantium and Chalcedon. Mesebria was one of the cities, forming the Greek Pentapolis on the Euxin, the other four being Odessus, Tomi, Istrian and Apolloniae. (See Bickh., Inserr. vol. ii. p. 996.) Mesebria is rarely mentioned in history, but it continued to exist till a late period. (Mela, ii. 2; Plin. iv. 11. s. 18; Ptol. l. c.; Tab. Peut.)

2. A Greek city of Thrace, on the Aegaean Sea, and not far from the mouth of the Issus. (H cd. vii. 108; Steph. B. s. v.)

MESENE (Μεσσήνη, Strab. ii. p. 84), a small tract of land in ancient Mesopotamia, about the exact position of which there has been much discussion, owing to the indistinct and confused accounts of it which have been preserved in ancient authors. The real cause of this would seem to be that there were two districts at no great distance from each other, both of which, from similar reasons, bore the name of Mesene, or Midland Land. One of these was near the months of the Tigris, where that river is divided into two branches, corresponding to the modern tract called Salat-al-Arab (Steph. B. s. v. Μεσσήνη). To this Mesene must be referred the passage in Philostorgius (H. E. iii. 7), in which he states that the Tigris, before it reaches the sea, is divided into two great branches, forming an extensive island, which is inhabited by the Mesene. To this also belongs the Mesene, mentioned in the history of Trajan by Dion Cassius, who calls it an island in the Tigris, over which Athamnius was the ruler (lxviii. 28). The other was much higher up on the same river, and has derived its chief importance from its capital Apamea. Stephanus speaks of this tract in two places; first (s. v. Αραία), where he states that the city is surrounded by the Tigris, where that river is divided into two streams, of which that on the right bank is called Delas, and that on the left bears the name of Apamea; and secondly (s. v. Οπαδα), where he asserts that Ora is a town of Mesene, which is near the Tigris, according to Arrian, in the 16th book of his Parthica.

Pliny evidently refers to this Mesene, when he is speaking of Apameia, which town he states has been 125 miles on this side (i.e. to the N.) of Seleucia; the Tigris being divided into two channels, by one of which it flows to the S. and to Seleucia, washing all along Mesene (vi. 27. s. 31). There might have been some doubt to which Mesene Ammianus refers; but as he mentions Terdon, which was near the mouth of the Tigris, it is probable that he is speaking of the former one (xxvii. 9). The district in the neighbourhood of the Apamean Mesene has been surveyed with great care by Lusut Lynch; and, from his observations, it seems almost certain that the more northern Mesene was the territory now comprehended between the Dijourn and the Tigris. (Roy. Geogr. Journ. vol. ix. p. 475.) [V.]

MESIA. [MEOMA.]

MESIOGAIA. [MEISSOA. [SPARTE.] ]

MESSÔYIA. [MESSÔYIA.]

MESÔGÈS. [MESSÔGÈS. [MESSL.A.]

MESÔGÈS or MESÔGÈS (Μεσσηγίς, Μεσσηγίς), the chief mountain of Lydia, belonging to the trunk of Mount Taurus, and extending on the north of the Maeander, into which it sends numerous small streams, from Celaenae to Mycale, which forms its western termination. Its slopes were known in antiquity to produce an excellent kind of wine. (Strab. xiv. pp. 629, 636, 637, 648. 650. Steph. B. s. v.; Ptol. v. 2, § 13, where Μεσσηγίς is, no doubt, the oracular form of Μεσσηγίς.) Mounts Factsys and Thorus, near its western extremity, are only branches of Mesogis, and even the large range of Mount Timolus is, in reality, only an offshoot of its. Its modern Turkish name is Kesnetch Dagh, that is, chestnut mountain. [L. 8.]

MELIUS (Μελιούς by Μεσσοτορά, an extensive
MESOPOTAMIA.

Though Mesopotamia is for the most part a flat country, the ancients reckoned some mountains which were along its northern boundary, as belonging to this division of Asia. These were Mons Mascis (now Karjat Baghlar), one of the southerncutting spurs of the great range of the Taurus; and M. Singaras (now Singjar), which may be considered as an extension to the S. of the M. Masius. The latter is merely isolated from the main ranges on the N., and extends on the NE. to the neighborhood of the Tigris. The two most important rivers of Mesopotamia are, as we have stated, those which formed its W. and E. boundaries, the Euphrates and Tigirs; but besides these, there are a number of smaller, but not wholly unimportant streams, which traverse it as affluents of the former rivers. These were the Chaboras (Khabor); the Sagoras, perhaps the same as that which Xeno-phon calls Masicas (Anab i. 5. § 4); the Bellas or Bilecha; and the Mediones (Hermes). Under the Roman Empire, Mesopotamia was divided into two parts, of which the former, Mesopotamia, was the richer, while the eastern continued to bear its ancient name. It was conquered by Trajan in A.d. 115, who took Singara and Nisibis, and formed the three Roman provinces of Armenia, Mesopotamia, and Assyria, of which Mesopotamia reached as far as the Persian Gulf. (Dion Cass. ixvii. 22, 23; Eutrep. viii. 3; Enseb. p. 163, ed. Scalig.; Malalas, p. 274, ed. Boum.) But even Trajan could not retain his conquests (Dion Cass. ixviii. 29), and they were given up by Hadrian of his own accord. (Spartian, Instr. 5; Eutrep. viii. 6.) Under M. Aurelius, Mesopotamia was again conquered by L. Verus, as far as the Median Wall (S. Rufus, Brev. 14.); and the conquest was further secured by the foundation of the colonies of Carrhae on the Chaboras and Singara, to which Septimius Severus added those of Nisibis and Rhesaina. But this province was a constant cause of war between the Persian and Roman empires; and at length the greater part of it was surrendered to the Persians by Justin in A.D. 363. After this time the Morus called Charbigni consisted of the two provinces: Orchoes, bounded on the south by the Chaboras, with the capital Edessa; and Mesopotamia, extending as far south as Dara, and having Amidus as its capital. The province was governed by a Pheeses. (Marquardt, in Becker’s Römisch. Alterth. vol. iii. pt. i. pp. 204, seq.)

The most important cities of this province were Bataine or Batahine; Carhiae; Circesium; Nisibis or Antiochia Mygdoniae; and Singara.

MESPIA (Μ Elis, Xem. Anab. iii. 4. § 10). An ancient deserted city of Assyria, noticed by Xenophon on his retreat northwards from Babylonia. He describes it as about 6 parasanges from Lurissa, on the same (or left) bank of the Tigris. He mentions that the town had been inhabited by the Medes, and that its walls were of immense size, the foundations being of polished shelly limestone, 50 feet in breadth and height; and the part above, made of brick, being 100 feet high and 50 broad. The circumstances through which he states to have been 6 parasanges. He mentions, as a report, that on the Medes being conquered by the Persians, the queen, who was a Median, fled to this place; and that, when subsequently the place was besieged by the Persians, they would have been unable to take it, had not Zeus aided them with his lightning. There can be little doubt that Mespila is represented

MESPIA.

DISTRIBUTION OF WESTERN ASIA, deriving its name from its position between the two great rivers Euphrates and Tigirs. It was bounded on the N. by Armenia and the S. branch of M. Taurus, on the E. by the Tigirs, on the W. by the Euphrates, and on the S. by the Median Wall, which separated it from Babylonia. (Strab. xvi. p. 746; Ptol. v. 18. § 1.) Pliny apparently extends it on the southern side as far as the Persian Gulf (v. 24. s. 21); but, like many other ancient provinces, its limits varied much at different periods. It being sometimes extended so as to comprehend Babylonia, at other times to confine itself to the ancient region of Syria.

Mesopotamia is noticed among the earliest records of the human race which we have in the Bible. It is commonly known by three titles in Holy Scripture; either Aram Naharaim (or "Syria of the Two Waters"), as in Gen. xxivv. 10; or Padan Aram ("Syria of the Plain"), as in Gen. xxx. 18, xxxii. 18, xxxv. 9; or Seden-Aram, "the field of Aram" (Josh. xii. 12). Correspondingly it is described as "the land of Nimrod," the "great city of the plain" (Gen. xi. 2, 3, iv. 9, § 6). There are indeed places where Aram Naharaim appears to be used in a more limited sense for the more northern portion of it (Deut. xxviii. 4); but it is equally certain that it was not supposed to comprehend only the flat country of the plain; for Balaam, who is said to have been a native of Aram Naharaim (Deut. xxxii. 4), is also in another place stated to have been brought from Aram out of the mountains of the East, (Num. xxxii. 5.) It is not certain how low in history this country acquired its Greek title, which is, after all, only a modification of the meaning of the original Hebrew word,—probably, however, not till after Alexander's invasion of the East. (Cf. Arian, vii. 7; Tacit. Ann. vi. 37.) The translators of the LXX. render the Hebrew sometimes Μεσοποταμία Συρίας, and sometimes simply Μεσοποταμία. In the Bible we have mention of one ruler who is called a king of Mesopotamia, Cushan-Rishathaim, to whom the children of Israel were subjected, and whom they subdued when they passed by the borders of Armenia during the Parthian War (Dion Cass. lxvi. 26), and Severus one in subsequent times from the woods along the banks of the Euphrates. (Dion Cass. lxv. 9.) Its extensive plains afforded abundant pasture for cattle (Curt. v. 1. § 12; Ann. Marc. xxv. 8), and its wilder and less frequented districts were the haunts of the lion, the wild ass, and the gazelle. (Strab. xvi. 747; Ammian. xviii. 7.) The same character it possesses now; though, from the scantiness of the population, and the careless rule of its Turkish governors, much that was formerly under cultivation has become a deserted wilderness. Among its natural products Strabo mentions especially naphtha, mastic, and a stone called gangis or guagis (perhaps a kind of anthracite coal). (Cf. Schol. ad Nicand. Thes. 37; Plin. x. 3. s. 4; Dioscorid. v. 146.)
