<i>After 148 B.C.</i>					
<i>The four regions of Macedonia were abolished on the establishment of the Roman Province and Amphipolis again struck coins of bronze in its own name. The chronology of these pre-Imperial issues is very uncertain. For SILVER tetradrachms struck 149-8 B.C. before and after the defeat of the Roman praetor P. Juventius Thalna by the pretender Andriscus and for tetradrachms struck by the quaestor Aesillas in 93-92 B.C. see MACEDON UNDER THE ROMANS, Nos. 3710-7.</i>

<p>PHILIP II 359-336 B.C.</p> <p><i>Philip acquired the gold mines of Pangaeum in 356 B.C. and the issue by him of large quantities of gold coins on the Euboic-Attic standard, and of silver on the Phoenician, instead of on the Persic standard employed by the previous kings, has been thought to indicate the inauguration of a bi-metallic monetary policy and that the value of gold to silver at this time was as 10:1. Others maintain that there is no connection of this nature, that silver issues of Phoenician weight preceded by some years Philip's earliest gold coins and that the change to the Phoenician standard was determined on for economic and political reasons without regard to the current value of gold in relation to silver¹.</i></p> <p style="text-align: center;">GOLD</p> <p style="text-align: center;">Euboic-Attic Standard</p>

<p>¹ When Athens struck gold in 407 B.C. the value was 12:1, 24 silver drachms of 67.5 grains (Attic weight) exchanging for 1 gold stater of 135 grains, or 1 Persian daric of the same weight. Philip's tetradrachms of <i>circa</i> 225 grains preserve the European custom of exchanging 24 drachms against the gold stater and allow for the fall in the value of gold. Part of his design is to drive the Persian gold from the European market. This represents the traditional view which has lately been attacked (<i>Num. Chron.</i> 1923, pp. 169-210) by Mr A. B. West who concludes that the issue of Phoenician silver tetradrachms began in 359 B.C. because this standard was used in the Chalcidian peninsula and Philip desired a political-economic alliance with his neighbours there. The gold is not, he thinks, earlier than 352 B.C. and more probably to be dated <i>circa</i> 348-344 B.C.</p> <p>² Babington Sale Catalogue, Sotheby, 1891, No. 106.</p>

ALEXANDER THE GREAT					
336-323 B.C.					
<i>Alexander abandoned the Phoenician standard which Philip had introduced for his silver and coined silver on the Attic standard¹.</i>					
Euboic-Attic Standard					
GOLD					
Head of Athene, r., in crested Corinthian helmet adorned with coiled snake; single drop earring and necklace of pearls; hair falling in four formal curls behind neck in Nos. 3404-5, two in Nos. 3410-11 and escaping in a loose mass in Nos. 3406-9.				ΑΛΕΞΑΝΔΡΟΥ to r., inwards. Winged Nike, body and wings full-face, head l., l. leg free, about to advance l.; wreath in extended r. hand, naval standard in l. hand.	
Distater					
3404 ² I25.1	Α →	264.5 17.14	.82 21	Double plain necklace; ends of two locks of hair visible beyond l. of neck; other locks blown back over helmet above ear.	• for o in name. To l., trident-head, downwards.
<p>¹ See Philip II, Note 1, p. 44 above. It has been assumed that Alexander found that Philip's duodecimal system was unsuitable for the Eastern Empire where the practice of exchanging 24 silver drachms against the gold stater did not obtain. 20 sigloi of 86½ grains or 10 Persic stators of 173 grains were exchanged for the daric, this exchange being based on the old relation of gold to silver of 13.3 to 1. Alexander followed the custom by which 20 silver coins were changed for the daric, but provides for an increase in the value of silver by minting his coins on the standard of the Attic drachm of circa 67½ grains.</p> <p>² Messrs Sotheby, Wilkinson and Hodge, Sale Catalogue, Feb. 19, 1890, No. 2.</p>

² But see note 4 below.

³ Below the body is a mark which may be a blundered attempt at the  or the corn-ear described in Pick; there are also plain traces of the thyrsos behind the panther but none of the inscription **ΚΑΛΛΑ** in the ex.

⁴ The exact type with the inscription within the wreath is not given by Pick. Cp. his coin of Dionysopolis, *op. cit.* No. 371. From the form of the letters the coin here described should in all probability be ascribed with No. 4319 to imperial times. Indeed, the type occurs on the reverse of an imperial coin of Nero. See Ruzicka, *op. cit.* p. 302, 296 a.

				¹ Hirsch Cat. XXI. No. 810. The coin was only known to Pick from a poor example. The Π which he reads to the l. of his specimen is clearly the finish of the curved stern to which a rope of the mainsail is fastened. ² There is apparently a seated figure in the stern, but the coin is worn here and only an outline visible. The figure seems to me quite certain but is not mentioned in Pick, nor in the Hirsch Catalogue.

¹ Type not in Pick.

² The restoration ΜΑΚΡ[ΕΙΝΟC] must remain doubtful on Pick's note, but No. 4399 confirms the remnant of the reverse inscription given by him for this variety.

³ The nearest approach which Pick gives to this type is his No. 1694, "Hygieia mit Schlange und Schale r. stehend." The *legatus* here is Agrippa. I seem to see a Π and possibly the initial Α on No. 4400, but the vacant space seems too great for this name.

5102 185.7	AR ↗	131.1 8.5	.9 23		A behind helmet; above, Eros flying l. probably to tie
<p>¹ As less than one-quarter of the known varieties are here recorded a chronological arrangement has not been attempted, but the coins have been arranged according as the types look to r. or l. Thus Nos. 5099, 5100, although the Pegasus has the curled wing, probably date from the year 392 B.C. when the symbol of the reverse occurs as the type on coins of various towns. In any case these two coins are later than, for example, Nos. 5101-3.</p>

CORCYRA					
<i>In fabric and weight the coins of Corcyra differ from those of the rest of Greece and probably show the influence of the great commercial centres of Asia Minor. The earliest coins may be found in some small pieces attributed until recent years to Phocis¹. The long series of staters begins circa 550 B.C. and for about a century the coins remain anepigraphic.</i>

¹ Staters of this period with F are known. It is possible that in No. 5283 E should be read instead of <i>digamma</i> and the coin assigned to Epidamnus. It would, however, be earlier than the stater of that town with E (B.M. Cat. Corinth, etc., Intr. p. liii, on which now see P. Gardner, <i>History of Ancient Coinage</i> , p. 371). There is no doubt about the letter on No. 5284.

<i>Circa 456-431 B.C.</i>					
<i>In 456 B.C. Aegina became subject to Athens and it is thought that the crescent appearing on the reverse of the following triobols is significant of that event. It is improbable that Athens would have allowed the issue of silver stater to continue to compete with her own tetradrachms, and no other coins are assigned to this period. In 431 B.C. Athenian kleruchs occupied Aegina, the old inhabitants having been expelled, and the coinage ceases for a period.</i>

¹ Ashburnham Sale Catalogue, Sotheby, 1895, No. 117; from the Northwick collection. ² In Nos. 6240-1 the treatment of the snake-tail is notable. On other specimens the head looks the way in which the Chimaera advances and is thrust well forward in the composition; here it looks the other way and the tail becomes little more than an ordinary tail to the lion.

<p>¹ References are given to Svoronos, <i>Numismatique de la Crète ancienne</i>, 1890. For the standards employed see G. Macdonald, "The Silver Coinage of Crete," <i>Proceedings of the British Academy</i>, Vol. IX. Dr Macdonald has shown that in Crete the Aeginetic standard suffered (1) a reduction, (2) a debasement in weight. The reduction is manifested in two forms (a) in coins weighing <i>circa</i> 11.85 to 11.2 grammes (Gortyn and Phaestus), (b) in coins weighing <i>circa</i> 11.3 to 10.65 grammes (Cnossus and Cydonia). The debased form is found in particular at Cydonia, where the weights range from 9.7 to 8.9 grammes in one set of coins and from 9.52 to 8.39 grammes in another.</p> <p>These investigations have not, so far as I am aware, been followed up for the other cities of Crete and I have not here ventured to assign the coins of the other mints definitely to one or other of these classes.</p> <p>² Spratt Sale Catalogue, Sotheby, 1891, No. 30. The style appears to be reminiscent of the head of Artemis on the stater of Stymphalus (No. 7008) and the same rather unusual type of earring is employed on both coins.</p> <p>³ Hirsch Catalogue, XIII. ¹ This exceptional piece is probably Spratt Sale Catalogue, Sotheby, 1891, No. 48.

² The torso of Europa is very beautifully modelled and there is a Skopaic intensity of passion noticeable in the face although the finer details of the relief are worn away. The thick hair serves as a framework to the face in a manner recalling such late fourth century works as the Melpomene of the Vatican.

³ These anepigraphic coins have been attributed to Eretria. Svoronos, however, reads ΓΟΡΤΥΝΙΩΝ (*à peine visible*) on the reverse of his No. 90 and claims that No. 92 is from the same obverse die. Babelon still assigns these pieces to Eretria (*Traité*, Part II, Vol. III, p. 199, No. 186, Pl. CXCVIII, 9, which coin seems to be identical with the specimen figured by Svoronos, Pl. XV, 11 = p. 169, No. 92) and to be figured again by Babelon, Pl. CCLIV, 14, as a coin of Gortyn.

<p>¹ Imhoof (<i>Gr. There seem to be differences in the incuse reverse which depend on technique rather than date and I incline to the view that they issue from another mint. The cataloguer of the Pozzi Collection followed Babelon (<i>Traité</i>, Part II. Vol. I. p. 1275) in assigning them to Andros. [Since this was written Mr C. T. Seltman has suggested that they are to be identified as a pre-Solonian Athenian coinage of Aeginetic weight (<i>Athens: History and Coinage, etc.</i>, p. 7).]</p>

¹ The only coin hitherto attributed to Capsa is a tetrobol with the type of an ass. See Wroth, <i>Num. Chron.</i> 1900, p. 276, and Babelon, <i>Traité</i> , Pl. LI. 23. The suggestion that these two fine little coins belong to Capsa is due to Mr E. S. G. Robinson. I have since found that both pieces come from Hirsch Catalogue, XIII. Nos. 1628-9, where they were put with coins of Locris, with a note that they were found in the collection under the name of the unknown town of Larymna (Locris). The Hirsch cataloguer read KP on No. 1628 and AA on No. 1629, but I think Mr Robinson is correct in reading KA and in deciding that both reverses are from the same die.

¹ I cannot find this coin described elsewhere. The fact that there is a type on each side rather favours an attribution to Peparethus; moreover, the reverse type occurs on later bronze coins of that island. On the other hand, the coin seems to be an Aeginetic hemidrachm and this would favour an attribution to Iulis (see Babelon, *Traité*, Pl. LX. 13-29) or possibly Tenos (*ibid.* Pl. LXI. 13-15, and Nos. 7296-8 above), as the coins hitherto assigned to the Peparethus group are of Euboic weight (Head, *Hist. Num.*² p. 312).
